Canada. The Progress and Improvements of the Canadian Electrical Industry for the Year 1927. Elec. News, vol. 37, no. 2, Jan. 15, 1928, pp. 31-33. Nearly 7 per cent increase in hydro installations; several high-tension transmission lines constructed; automatic and supervisory principles grow apace; increasing demand for industrial electric furnaces; new construction; distribution system.

ELECTRIC LAMPS

Voltage Standardization. Voltage Standardization, M. D. Cooper. Nat. Elec. Light Assn.—Bul., vol. 15, no. 1, Jan. 1928, pp. 28-31. Voltage Standardization Subcommittee of Lamp Committee has just completed nation-wide survey of lighting voltage and has issued book showing lighting voltage in 18,868 communities in this country; table gives detailed statistical summary of new voltage book, as well as comparison with similar data for 1923.

ELECTRIC LINES

Coupling Capacitors. Coupling Capacitors for Carrier-Current Communication Over Power Lines. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 1, Jan. 1928, pp. 51-52, 2 figs. Discussion of paper by T. A. E. Belt, published in Oct. 1927 issue of journal.

High-Tension. Extra High-Tension Transmission Lines—A Review of the Leading Overhead Power Transmission of the World, S. E. Barratt. Wld. Power, vol. 8, no. 48, Dec. 1927, pp. 317-328, 6 figs. Insulators, towers and conductors used; 110- and 220-kv. lines, Pacific Gas & Electric Co.; 110-kv. distribution, Germany; 132-kv. line, Catalana; 132-kv. line, Trollhattan to Vesteras (Sweden); 120- and 150-kv. lines in France; 132-kv. line S.E.C. of Victoria (Australia); 165-kv. line of Knoxville Power Co.; 220-kv. Big Creek line, Southern California Edison Co.

110-Kv. Great Falls-Winnipeg Line, L. M. Hovey. Elec. News, vol. 37, no. 2, Jan. 15, 1928, pp. 27-29, 5 figs. Electrical characteristics of new 2-circuit steel-tower transmission line of Manitoba Power Co.; large towers and long spans a feature; method of calculating performance of lines; synchronous-condenser operation; river-crossing cables.

Simplified Diagram of Drop in Tension in a Line (Diagramme simplifié de la chute de tension dans une ligne), R. Fric. Revue Générale de l'Electricité, vol. 22, no. 25, Dec. 24, 1927, pp. 1129-1132, 7 figs. Describes simple alignment diagram of drop in tension in high-tension distribution line of moderate size.

Insulation. Transmission Line Insulation, A. O. Austin. Elec. World, vol. 90, nos. 26 and 27, Dec. 24 and 31, 1927, pp. 1293-1299, and 1345-1347, 16 figs. Dec. 24: Advantages and limitations of wood; theory of insulation developed; test data in line and field; economic balance outlined. Dec. 31: Practical considerations and successful use of wood indicate inherent advantages of this material; steel-tower and pole-construction practices compared.

Location Survey. Transmission Line Location Survey, A. C. Goodwin. Can. Engr., vol. 53, no. 23, Dec. 6, 1927, pp. 587-589, 6 figs. Ontario Hydro-Electric Power Commission employs aerial survey for locating new 220,000-volt transmission line from Gatineau river to Toronto, distance of 200 miles; method of procedure described; by use of these aerial pictures expensive preliminary field surveys were eliminated and work of line location much facilitated.

Parallel Load Distribution. Load Distribution Between Parallel Lines, E. Baughn. Elec. Wld., vol. 91, no. 2, Jan. 14, 1928, pp. 99-100, 3 figs. Simple graphical method based on Perrine-Baum line-regulation diagram has been used by writer to solve both simple parallel lines and also quite complicated networks; results for different assumed load conditions are quickly and easily determined.

Voltage Control. Load Ratio Control, L. F. Blume. West. Soc. Engrs.—Jl., vol. 32, no. 10, Nov. 1927, pp. 341-355 and (discussion) 356-360, 13 figs. Discussion on how to maintain normal voltage on transmission line or network under varying conditions of load; using simple and rugged machinery in place of rather complicated apparatus which has been in use but has now become impracticable on account of growth in size of plants and transmitted loads.

ELECTRIC LOCOMOTIVES

SWITCHING. Switching Locomotives. Type Ee 2/2 of the Swiss Federal Railways (Les locomotives de manœuvre, type Ee 2/2 des chemins de fer féderaux suisses), A. E. Muller. Bul. Technique de la Suisse Romande, vol. 53, no. 25, Dec. 17, 1927, pp. 298-302, 10 figs. Describes switching locomotive recently put in service at Sion, Switzerland; built at Geneva by Secheron Shops; weight 25½ tons, traction effort at starting 6,000 kg.; control board, transformers, trucks and motors treated.

ELECTRIC MACHINERY

WESTINGHOUSE. Westinghouse Engineering Developments for the Electrical Industry in 1927. C. K. Lee. Nat. Elec. Light Assn.—Bul., vol. 15, no. 1, Jan. 1928, pp. 35-38, 8 figs. Reviews developments in steam turbines; steam-turbine generator; synchronous converters; mercury rectifiers; transformers; big power transformers; switchgear; and circuit breakers.

ELECTRIC METERS

INDICATING AND RECORDING. Indicating and Recording Electric Meters. Power Plant Eng., vol. 32, no. 2, Jan. 15, 1928, pp. 134-138, 9 figs. In addition to development of several new types of meters, improved testing equipment has been devised; Mann short-interval timer to measure short intervals of time within accuracy of human factor; automatic timing device developed for use in calibrating master rotating standard watthour meters is shown schematically.

ELECTRIC NETWORKS

CALCULATION. Approximate Solution for Electrical Networks When These Are Highly Oscillatory, E. A. Guillemin. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 1, Jan. 1928, pp. 36-40. General solution to slightly damped network is expressed in terms of undamped solution by means of series expansions; gives method for evaluating complex roots of determinantal equation, and shows how expansions may be correlated with Heaviside formula to form complete approximate solution; example illustrates application to simple network.

ELECTRIC TRANSFORMERS

MOUNTING. Safety Features for Transformer Mounting, O. A. Perchway. Elec. World, vol. 90, no. 27, Dec. 31, 1927, p. 1351, 1 fig. Outdoor substations composed of not more than three 100-kva. power and one lighting transformer with pole mountings are used on system of Fulton Light, Heat & Power Co.; to secure greater safety for linemen and other operating and maintenance employees, company has improved type of support generally used for these installations.

TESTING. Analysis of Current Transformer Tests, E. C. Goodale. Elec. West, vol. 60, no. 1, Jan. 1, 1928, pp. 26-27, 3 figs. Effect of certain "misconnections" following single-phase tests verify "vector average" law; secondary series connections discussed are normally results of accident and not of intent.

ELECTRIC TRANSMISSION AND DISTRIBUTION

SYSTEMS. Electric Distribution Systems, L. G. Smith. Power Plant Eng., vol. 32, no. 1, Jan. 1, 1928, pp. 73-76, 6 figs. Types and voltage of primary systems; distribution feeder layouts; regulation; rural systems.

ELECTRIC WELDING, ARC

NON-FERROUS METAL. Non-Ferrous Metal Arc Welding, A. Churchward. Welding Engr., vol. 12, no. 12, Dec. 1927, pp. 41-42. Process of welding copper, brass, monel, bronze, nickel, aluminum and machinable cast-iron welds; what to do and not to do in welding non-ferrous metals; electrodes of various kinds for such welding.

ELECTRIC WELDING MACHINES

ARC. Motor-Driven Arc Welder. Boiler Maker, vol. 22, no. 12, Dec. 1927, p. 338, 1 fig. Most recent addition to Fuzon line of arc welders is d.c. machine operated by 3-phase a.c. motor, either 220 or 440 volts supply.

SINGLE-OPERATOR TYPE. General Electric Single-Operator Type Welder. Am. Mach., vol. 67, no. 26, Dec. 29, 1927, pp. 1039-1040, 1 fig. Machine includes four-bearing, ball-bearing motor-generator set with flexible coupling; generator rated at 300 amperes, one hour, 50 deg. cent., and driving motor at 15 h.p., 40 deg. cent., continuous rating; field control unnecessary; meters have metal front except for glass over scale; for stationary or portable use.

ELECTRICAL ENGINEERING

MECHANICS. Mechanics and Electrical Engineering, V. Karapetoff. Elecn., vol. 99, no. 2585, Dec. 16, 1927, p. 749. Problems in mechanics arising in 30 years of professional activity; anticipating future developments; branches for further study; research problems; electrical machinery; transmission lines; electric railways; mechanical forces due to magnetic fields; electromechanical applications; communication engineering; galvanometers and oscillographs; waves and oscillations; vector analysis; theory of elasticity; general laws of motion; statistical mechanics.

ELECTROPLATING

PROGRESS. Progress of Electroplating, W. Blum. Metal Industry (N.Y.), vol. 26, no. 1, Jan. 1928, pp. 25-27. Technical developments in past 25 years; plating processes and equipment; plating specification; future possibilities.

ELEVATORS

CHAIN. Chain Elevators, E. J. Tournier. Indus. Engr., vol. 85, no. 12, Dec. 1927, pp. 558-560, 6 figs. Description of chain elevators at U.S. Pipe & Foundry Co., Burlington, N.J., used to raise barrels; also outfit used in warehouse in Eastern N.Y., 5 storeys high, 150 by 300 ft.; tray elevator used.

RELAYS. Sequence Relay on Elevator Prevents Fuses Blowing, O. F. Dubruiel. Power, vol. 67, no. 1, Jan. 3, 1928, pp. 29-31, 3 figs. To overcome troubles experienced, author made sequence and relay and connected it into potential-switch coil circuit; controller cannot function except when landing doors are closed before controller is pulled to on position.

ENGINEERING EDUCATION

POLICIES AND PRACTICES. Opinions of Professional Engineers Concerning Educational Policies and Practices. Jl. of Eng. Education, vol. 18, no. 4, Dec. 1927, pp. 215-275, 24 figs. Summary of inquiries by A.S.C.E. and A.I.M.M.E., A.S.M.E., A.I.E.E. and A.I.C.E. arranged in two sections; first is based on inquiries and relates to engineering education in general; includes summary of general inferences and conclusions, opinions concerning extent and means of influence of engineering profession in engineering education; second, devoted to results of inquiries.

ENGINEERING MATERIALS

X-RAY TESTING. X-Raying Engineering Materials, G. L. Clark. Soc. Automotive Engrs. Jl., vol. 22, no. 1, Jan. 1928, pp. 130-131. Abstract of paper on New Advances in the Study of Engineering Materials by Means of X-Rays; work with spectroscope in study of detonation in internal-combustion engines; continuous spectrum of hydroxyl present during burning of all kinds of gasoline; knocking due to extension of radiation; applications of X-ray examination; structures of iron, steel, copper and brass; their behaviour under strains, results of annealing.

F

FACTORIES

LIGHTING. Telltales Showing Good Factory Lighting, R. A. Palmer. Mfg. Industries, vol. 14, no. 6, Dec. 1927, pp. 439-441, 5 figs. Abundance of high-power lamps does not mean best illumination; location of lights, size, brightness, contrast, diffusion, reflection, shadows, are all factors helping to increase production, reduce spoilage and accidents, and improve morale, where lighting system is good.

VENTILATION. Aeration of Industrial Buildings, W. C. Randall. Am. Soc. Heat. and Vent. Engrs.—Jl., vol. 34, no. 1, Jan. 1928, pp. 11-28, 14 figs. Treats of flow of air against, into and through industrial buildings without mechanical agencies; pressure of air against windows, movement of air due to temperature changes and factors which control flow of air are discussed; field surveys and correlation of model tests with surveys.

FLOOD CONTROL

PROTECTION. Protection of River Banks and Levees, O. S. Scheifele. Can. Engr., vol. 54, no. 2, Jan. 10, 1928, pp. 119-123, 15 figs. Employment of angular submerged willow-tree planting to stop erosion and slides of earth banks of rivers, canals, lakes, levees, cuts and fills and for general flood control; some projects in Canada and United States described; highway-bank protection; system of river control by willow-pole planting.

MISSISSIPPI RIVER. Mississippi River Flood Control, W. W. DeBerard. Eng. News-Rec., vol. 100, no. 2, Jan. 12, 1928, pp. 63-66, 3 figs. Brief summary of events and conditions; engineering problems presented by history's greatest flood in valley; some of many factors which must be considered in preparing plans for flood relief: breaking up large land holding becoming necessity; reforestation; reservoirs; channel auxiliaries; economics of land use; cost apportionment; map of portion of Mississippi river valley subject to overflow.

OHIO RIVER. Flood Control, with Special Reference to the Mississippi River—A Symposium. Am. Soc. Civ. Engrs. Proc., vol. 54, no. 1, Jan. 1928, pp. 190-199. Discussion by M. Knowles of symposium published in Dec. 1927 issue of Journal. Describes work of Pittsburgh Flood Commission and flood control in Ohio river basin; Pittsburgh problem; effect of encroachments; local solution not sufficient; reservoir possibilities; effect on lower rivers; national character of problem; no conflict with power uses; authoritative review.

FLOW METERS

AIR. A New Form of Compressed Air Meter, E. J. Laschinger. Engineer, vol. 144, no. 3755, Dec. 30, 1927, pp. 747-748, 6 figs. Summary of various types of meters; none being found suitable for underground mines, author devised one combining two strong points of gate and orifice types; theory of meter, which establishes relation of various factors, was to make equal angular movements correspond to equal increments of flow; called F.M.L. graphic recorder.

STEAM. Measuring and Recording the Flow of Steam. Power Plant Eng., vol. 32, no. 1, Jan. 1, 1928, pp. 46-49, 9 figs. Flow meters consist of primary element acted on by fluid and secondary element transforming action of primary element into indication or record of amount of flow; flow nozzles; thin-plate orifice; fundamental equation of flow.

FLOW OF AIR

EFFECT OF TEMPERATURE ON VISCOSITY OF AIR. On the Effect of Temperature on the Viscosity of Air, R. S. Edwards and A. O. Rankine. Roy. Soc.—Proc., vol. 117, no. A776, Dec. 1, 1927, pp. 245-257, 4 figs. Ratios of viscosities of air at various temperatures between 15 and 444.5 deg. cent. have been determined, using constant-volume method and vapour jackets to obtain definite temperatures; results are compared with work of previous observers.

FLOW OF STEAM

MEASUREMENT. Measurement of Steam Flow in Works Practice, H. C. Armstrong. Eng. and Boiler House Rev., vol. 41, no. 6, Dec. 1927, pp. 270-273, 2 figs. Calls attention to very valuable economies that result from use of steam meters for investigation of actual steam consumption of different steam-consuming process in factory and that of individual machines and apparatus working under plant conditions; illustrates practical method by which sound investigations may be carried out in simple and efficacious manner by any works engineer.

FOUNDRY PRACTICE

UNITED STATES. Foundry Practice in the United States of America, E. Longden. Foundry Trade Jl., vol. 37, no. 593, Dec. 29, 1927, pp. 227-231, 14 figs. Based on author's visit to American foundries in 1926; deals with industrial combinations, vocational training, methods of production, mass production, quality of metals used, etc.

FUEL ECONOMY

MANAGEMENT INTEREST AND. Fuel Economy Affected by Management Interest, H. W. Morgan. Power, vol. 67, no. 1, Jan. 3, 1928, pp. 16-18.

FURNACES

HEAT-TREATING. Furnace Development in Heat Treating and Forging, W. M. Hepburn. Am. Soc. Steel Treat.—Trans., vol. 13, no. 1, Jan. 1928, pp. 126-138 and (discussion) 138-141, 7 figs. Scientific developments in furnace equipment, with particular reference to combustion, refractories, insulation and temperature controls; outstanding modern gas-fired installations; trend of development has been to expand problem far beyond that of simple inventions into that of advancing science.

TEMPERATURE CONTROL. Combustion Control for Industrial Furnaces, J. Ryan. Iron and Steel Engr., vol. 4, no. 12, Dec. 1927, pp. 493-498, 9 figs. Treats of advantages of automatic control from both fuel and product standpoint in gas and oil-fired furnaces; control valve governs by-pass, main flow and speed of heating; cites various industries using automatic furnace control.

G

GAUGES

PLUG. Cylindrical and Thread Plug-Gauges. Soc. Automotive Engrs.—Jl., vol. 22, no. 1, Jan. 1928, pp. 24-26, 3 figs. Recommendations of independent committee offered for approval of society; dimensions for handles and gauging plugs for sizes from ¼ to 1½ in.; full-page table of thread-plug dimensions giving go and not-go diameters; general specification for thread plugs; table giving handles and cylindrical plugs; line cuts illustrating dimensions.

GEARS

BRASS CASTINGS FOR. Bronze and Brass Castings for Gears. Machy. (N.Y.), vol. 34, no. 5, Jan. 1928, p. 390. Recommended practice approved by American Gear Manufacturers' Assn.; use and chemical composition; chemical analysis; sampling; inspection; rejection.

REDUCTION. Speed Reducer Types, C. G. Wennerstrom. Concrete, vol. 32, no. 1, Jan. 1928, pp. 113-115, 8 figs. Discussion of several types of speed reducers, their design, capacities and suitability for various industrial uses.

TESTING. The Influence of Elasticity on Gear-Tooth Loads. Mech. Eng., vol. 50, no. 1. Jan. 1928, pp. 65-67. Progress report No. 9 of A.S.M.E. special research committee on Strength of Gear Teeth. Test runs with cast-iron gears; calculated amounts of separation on these gears show much greater variations than on hardened and ground steel gears; in general, cast-iron gears show greater amounts of separation than semi-steel gears.

GRINDING

SURFACE. Precision Surface Grinding, E. C. Larke and F. C. Smith. Machy. (Lond.). vol. 31, nos. 791 and 793, Dec. 8 and 22, 1927, pp. 308-312 and 351-354. 21 figs. Dec. 8: Precision surface grinding dependent upon skill of operator, accuracy of machine and correct composition of grinding wheel; fundamental rules governing choice of wheels; results of wrong choice; grades of wheels; form wheels; mounting of wheels; hollowing and cornering; wheel speeds; feeds; preparation for lapping; machine maintenance; swiveling angle plate; magnetic chucks; producing accurate angles on wheels. Dec. 22: Correcting chuck jaws; two-jaw chucks; correcting chasers for spacing of pitch; use of slip gauges; grinding of form tools of simple and more complicated type; measurement methods; dovetail-type form tool; grinding form tool; producing accurate radii on wheels; 12 line cuts showing details.

GRINDING MACHINES

EQUIPMENT. Describes Practical Devices for Grinding Balls and Handwheels, E. Viall. Abrasive Industry, vol. 9, no. 1, Jan. 1928, pp. 1-3, 5 figs. Emergency mountings for odd jobs in lathe or drilling machine; production methods on radial grinder; attachment for ball-end work on universal toolroom grinding machine; ball-end production on Cincinnati centreless grinder; handwheel grinding on special machine and by means of attachment for old-style machine.

SURFACE. New Surface Grinder. Iron Age, vol. 120, no. 26, Dec. 29, 1927, p. 1788, 3 figs. Hydraulic machine is recent addition to line of Norton Co., Worcester, Mass., and replaces open-side model previously marketed; designed to carry two lengths of tables, one for grinding work up to 36 in. in length, other for work not exceeding 48 in.

Surface Grinding Machine. Abrasive Industry, vol. 9, no. 1, Jan. 1928, p. 25, 2 figs. Hydraulic table traverse and two lengths of table for grinding work up to 36 in. and 48 in. in length are new features of Norton Co. model; table movement controlled by two levers; table speeds varied from 30 to 90 ft. per minute.

H

HEAT-TREATING EQUIPMENT

ELECTRIC. Selecting Electric Heat-Treating Equipment. Machy. (Lond.), vol. 31, nos. 790 and 791, Dec. 1 and 8, 1927, pp. 257-259 and 313-315, 11 figs. Two articles explaining points to consider in planning installations; heating elements, terminals, terminal connections, furnace voltage and furnace control discussed; heating elements as weakest parts of electric furnace; charts for determining worth of heating-element designs; furnaces for temperatures in excess of 1,850 deg. Fahr.; necessity for conservatism in rating heating units; factors limiting total radiation of coils; automatic control of temperature essential.

HOUSE. How Reduced Night Temperature Cut Fuel Bills, T. H. Smoot. Fuel Oil, vol. 6, no. 7, pp. 27-32, 2 figs. Shows exactly what economy can be derived from careful regulation of night temperature; if advantage is taken of reduced temperature operation at night over entire heating season, savings corresponding to system which develops average seasonal heating load of 33 per cent are respectively 5½, 10 and 14 per cent for night temperatures of 65, 60 and 55 deg.

HEATING, STEAM

CENTRAL. Urban Distribution of Heat. Project of Paris Distribution System (La distribution urbaine de la chaleur. Projet de réseau de distribution parisien), M. Baudot. Génie Civil, vol. 91, no. 25, Dec. 17, 1927, pp. 618-621, 5 figs. Description of installation to provide steam heat in Paris from central station; terms of concession granted for Paris distribution of steam; scale of prices and participation of city in profits.

EXHAUST STEAM. Improvements in Heating System Save Four Times Their Cost, J. C. Evans. Power, vol. 67, no. 1, Jan. 3, 1928, pp. 27-28. Exhaust steam for industrial processes used for building heating, instead of high-pressure steam, in factory engaged in manufacture of rubber products; operations of heaters made automatic.

HYDRAULIC DREDGES

INSTALLATIONS. Hydraulicking and Dredging During 1927, G. B. Massey. Pit and Quarry, vol. 15, no. 6, Dec. 21, 1927, pp. 83-89, 9 figs. Numerous hydraulic dredge installations have been made; very few steam hydraulic dredges are being constructed except in case of those for export to locations where timber is available for fuel and where fuel oil, gasoline or electricity are not to be had; most marked improvement in situation at present time is made possible by builders of Diesel engines.

HYDRAULIC PRESSES

WHEEL-FORCING. Hydraulic Wheel-Forcing Presses. Mech. Wld., vol. 82, no. 2135, Dec. 2, 1927, pp. 411-412, 2 figs. Describes machine capable of exerting a total load of 200 tons which will accommodate wheels up to 3 ft. 9 in. over tread and axles 7 ft. long; employed for mounting and demounting wheels of locomotives, railway and street cars, mine cars, etc.

VERTICAL. Defiance No. 717 Vertical 60-Ton Hydraulic Press. Am. Mach., vol. 67, no. 26, Dec. 29, 1927, p. 1031, 1 fig. For use in pressing objects together in automobile plants and wheel plants; stroke of ram does not exceed 8 in.; hydraulic pump of double-acting type; adjusted safety valve attached to pump set to release force at any desired pressure; working surface of table top 28 in. in diameter.

HYDRAULIC VALVES

INSTALLATION. How Gate Valve Chambers Are Installed in Cleveland. Water Wks. Eng., vol. 80, no. 26, Dec. 21, 1927, pp. 1797-1798, 5 figs. Detailed drawings of methods adopted; information on large valve installations, including designs of chambers, drains and drain connections for 24-inch, 30-inch and 36-inch valves; also typical section of chamber wall when depth exceeds 12 feet.

I

ICE MANUFACTURE

RAW-WATER SYSTEM. Design Features of a Raw-Water Ice-Making System, T. Mitchell. Power, vol. 67, no. 2, Jan. 10, 1928, pp. 63-65, 5 figs. Author discusses merits of various designs of agitating tubes; he claims that medium pressures are best and recommends drawing of air from over tank.

INDICATORS

STEAM ENGINE. Measurements on Steam Engines and Turbines. Power Plant Eng., vol. 32, no. 1, Jan. 1, 1928, pp. 52-54, 5 figs. Determination of pounds of steam per kw.-hr. and per indicated horse power-hour; use of indicator; tests by weighing condensed steam; use of dynamometers; measurement on steam turbines.

INDUSTRIAL RESEARCH

APPLICATION OF. Application of Research to Sales, Production and Employment Problems in New England. Textile World, vol. 72, no. 25, Dec. 17, 1927, pp. 35-36. Results of investigation made by Metropolitan Life Insurance Co. of research which has been employed in New England industries dealing with sales, production and employment; covers package sizes, labour saving, customer contact, special machines, employment co-operation, team work and research.

INSULATING MATERIALS

BRITTLENESS. Brittleness Tests for Rubber and Gutta-Percha Compounds, G. T. Kohman and R. L. Peck, Jr. Indus. and Eng. Chem., vol. 20, no. 1, Jan. 1928, pp. 81-83, 2 figs. Insulating material compounded of rubber, gutta-percha or similar substances becomes brittle at temperature characteristic of material, below which it may not be used if liable to mechanical stress; apparatus was designed for determining this temperature; highest temperature at which fracture occurs in this test (brittle temperature) has been found to be nearly independent of bending angle and sample's dimensions, provided rate of bending is maintained at nearly constant (high) rate.

INTERNAL-COMBUSTION ENGINES

EXHAUST GAS, TESTING. Interpretation of Exhaust Gas, C. C. Minter. Soc. Automotive Engrs.—Jl., vol. 22, no. 1, Jan. 1928, pp. 19-23, 3 figs. Physiochemical aspects of exhaust gas of internal-combustion engines; composition of non-homogeneous charge pictured as manifestation of law of probabilities; ideal volumes of combustion products; probability law applied to full distribution; development of general formulas; calculations of combustion products.

See also Diesel Engines.

IRON-CARBON ALLOYS

METALLURGY OF. The Metastable Nature of Iron Carbide, A. Hayes. Ohio State College of Agriculture and Mechanic Arts—Official Pub., vol. 26, no. 1, June 1, 1927, 51 pp., 21 figs. Free energy and heat of formation of iron carbide for temperature interval 650-700 deg. cent.; calorimetric determination of heat formation of iron carbide at room temperatures; graphitizing behaviour of pure iron carbon alloys in critical range.

IRON CASTINGS

DIRTY. What Causes Dirty Castings? W. F. Prince. Foundry, vol. 56, no. 1, Jan. 1, 1928, pp. 19-20.

PROPERTIES. Castings of High Resistance (Pearlitic Cast Iron) [Les fontes à resistance élélée (fontes perilitiques)], A. Le Thomas. Revue Industrielle, vol. 58, no. 2222, Jan. 1928, pp. 16-20, 6 figs. Increase in mechanical properties of high-resistance cast iron; methods of making chemical and metallographic tests; various methods of making high-resistance castings, viz., Lang, Emmel, Schuez are given; evolution of cast-iron testing.

Centrifugal Castings for Diesel Engines, J. E. Hurst. Foundry Trade Jl., vol. 37, no. 591, Dec. 15, 1927, pp. 199-201, 5 figs. Chemical composition and properties of centrifugal castings; resistance to wear and heat conditions; spun-sorbitic centrifugal castings; two most important advantages of centrifugal over vertical sand-casting processes for production of cylindrical castings are soundness and freedom from internal defects and extreme closeness and uniformity of grain size which is reflected in mechanical strength properties of this material.

IRON

CORROSION. The Action of Water, Air, Oxygen and Carbon Dioxide on the Corrosion of Iron, K. Inamura. Tohoku Imperial University—Sci. Reports, vol. 16, no. 8, Dec. 1927, pp. 979-986, 1 fig. Investigation to determine essential factor of corrosion; using Armo iron, action of distilled water, city water and sodium-chloride solution upon iron was studied; also action of air, oxygen and CO_2 was studied and it was shown that action of CO_2 is weaker than that of oxygen, while CO_2 accelerates rate of corrosion by oxygen. (In English.)

PURE. The Direct Production of Pure Iron. P. Longmuir. Iron and Steel of Can., vol. 10, no. 12, Dec. 1927, pp. 370-371. Historical sketch of various methods of making iron directly in furnaces; discusses possibilities of direct reduction and its commercial advantages; touches Thomas Rowland's proposals for production of high-purity metallic iron.

IRON METALLURGY

DEVELOPMENTS. Metallurgical Developments of 1927, S. Goodale. Blast Furnace and Steel Plant, vol. 16, no. 1, Jan. 1928, pp. 46-48. Important new advances made during year in blast-furnace and foundry practice and in steel-plant equipment and operations and rolling-mill design; electric melting, treating and welding; developments of Knowles tube that made it possible for Judge Gary, sitting in his office in New York City, to start newly electrified Homestead structural mills with mere waving of his hand over bulb on his desk.

L

LATHES

AUTOMATIC, OPERATION OF. Auto-lathe Production. Machy. (Lond.), vol. 31, no. 790, Dec. 1, 1927, pp. 283-284, 4 figs. Brief article giving examples of practice on new Herbert No. 3 machine; completely machining Whittle-type belt pulley in 20 min.; first operation described with special mounting and tools used; second operation in finishing work; two line cuts showing details of Whittle Belt pulley and friction ring carrier also machined on auto-lathe.

TURRET, CAM DESIGN. Dwell Cams and Auxiliary Slides. Machy. (Lond.), vol. 31, nos. 791 and 793, Dec. 8 and 22, 1927, pp. 292-295 and 399-401, 16 figs. Dec. 8: Development of dwell cams and auxiliary slides for automatic turret lathes; most needed on larger machines where work consists mainly of castings or forgings; two drum cams for moving turret slide and cross-slides; development of drum; auxiliary slide for mounting on back or front of cross-slide; line cuts giving design and development layout. Dec. 22: Practical examples of some of many useful applications of dwell and how, given required data, to lay out cam developments; time loss resulting from roller working around peak of cam; timing of cams to cause desired relative movements; layout for taper turning; layout for turning bevel pinion blank; case in which turret dwell was required but cross-slide dwell unnecessary; line cuts showing layout for different operations.

LEAD ALLOYS

TERNARY. Ternary Systems of Lead-Antimony and a Third Constituent, R. A. Morgen, L. G. Swenson, F. C. Nix and E. H. Roberts. Am. Inst. Min. and Met. Engrs.—Tech. Pub., no. 43, Dec 1927, 33 pp., 23 figs.

LOCOMOTIVE BOILERS

WATER-TUBE. Proposed High-Pressure Water-Tube Locomotive Boiler, L. A. Rehfuss. Boiler Maker, vol. 22, no. 12, Dec. 1927, pp. 339-342, 349, 6 figs. Boiler designed for 500-lb. pressure indicates lines along which steam locomotives of greater efficiency and higher powers may be developed; advantages are: high pressure, superior combustion efficiency, superior circulation, quick steaming, compound superheating, safety from crown or other extensive explosions.

LOCOMOTIVES

DESIGN. Development and Design of Modern Steam Locomotives, F. J. Carty. Steam Coal Buyer, vol. 8, no. 6, Dec. 1927, pp. 24-25, 35 and 43. Historical development, increase of weight; provision for American curves; introduction of link motion; high-speed passenger and freight locomotives; introduction of stokers; thermic system; latest mechanical improvements; turbine and 3-cylinder engines; advantages.

ELECTRIC. *See Electric Locomotives.*

FIREBOXES, WELDING. Repairing Copper Fireboxes by Welding (Réparation par soudure autogène des foyers en cuivre), M. Houlet. Revue Générale des Chemins de Fer, vol. 46, no. 12, Dec. 1927, pp. 552-564, 24 figs. Practice of Eastern Railway Co.; acetylene and oxygen are used at same time by two welders; various types of repairs are noted.

MAINTENANCE. Engine Handling at Terminals, H. E. Bergstrom. Ry. Jl., vol. 34, no. 1, Jan. 1928, pp. 24-26, 1 fig. Treats of process of handling engines at Northern Pacific R.R. terminals, such as inspection, cleaning, coaling, sanding, etc.; organization of forces at terminals; time occupied by engine in mechanical department and economy of quick handling in terminal.

OPERATION. Importance of Locomotive Assignment, H. J. Titus. Railway Age, vol. 83, no. 27, pp. 1323-1326. Treats of most economical methods of handling locomotives, as affected by their design, on various divisions on varying classes of service; costs of types are studied; locomotive service other than freight and factor of investment costs.

TESTING. Locomotive Tests at Purdue. Ry. Jl., vol. 34. no. 1, Jan. 1928, pp. 18-19, 4 figs. Tests being made by Am. Ry. Assn. & Purdue Univ. at Lafayette, Ind., on efficiency of air brakes; half of tests completed; brake equipment for 100-car train with trainagraph which records braking time and air pressure; 30 men are carrying on tests which will be finished in a year and a half.

THERMIC SIPHONS. Thermic Siphons on Locomotives. Ry. Jl., vol. 34, no. 1, Jan. 1928, pp. 34-36, 13 figs. Describes Nicholson siphon applied to fireboxes of locomotives; it acts to keep crown sheet covered with water and aids steaming by increasing firebox surface, increases water circulation and efficiency of locomotive.

THREE-CYLINDER COMPOUND. Some Experimental Results from a Three-Cylinder Compound Locomotive, L. H. Fry. Engineer, vol. 144, nos. 3754 and 3755, Dec. 23 and 30, 1927, pp. 718-720 and 731-734, 17 figs. Also Ry. Gaz., Dec. 23, pp. 792-793.

TRENDS, UNITED STATES. Recent American Locomotive Practice, E. C. Poultney. Ry. Engr., vol. 49, no. 576, Jan. 1928, pp. 19-23, 7 figs. Comprehensive surlocomotive features from 1892 to date giving principal dimensions of Pacific type and New York Central Hudson type; feed heating, smoke-box regulators.

LUBRICATING OILS

TESTING. Consumers' Oil Tests, A. F. Evans. Diesel Engine Users' Assn.—Paper, read at meeting, June 10, 1927, 27 pp., including discussion, 6 figs. Specification and description of lubricating-oil test and specification of apparatus; viscosity of oils at high temperatures of Diesel engine a most important characteristic of good oil; sample test sheet given.

M

MACHINE SHOPS

EQUIPMENT REPLACEMENT. What Modern Equipment Has Done—The Treadwell Eng. Co., A. A. Neave. Am. Mach., vol. 68, no. 1, Jan. 5, 1928, pp. 1-4, 9 figs. First of series of articles giving actual results achieved by replacing obsolete with up-to-date equipment; rolling-mill equipment, tube-mill machinery and hot metal and cinder cars are principal products; nine line drawings of parts with comparison of old and new operations and time saved in per cent.

MAINTENANCE COSTS. Efficient Effort by Machine-Shop and Section Men Essential for Lowered Maintenance Costs, H. H. Her. Textile World, vol. 73, no. 1, Jan. 7, 1928, pp. 71-73. Discusses maintenance of high productions and low expenses; intelligent salvaging of broken and worn machine parts, together with careful and correct installation and adjustment of both new and repaired parts from viewpoint of master mechanic.

POWER EQUIPMENT. Source of Energy in Shops (La fourniture de l'energie dans les ateliers), C. R. Dartevelle. Technique Moderne, vol. 20, no. 1, Jan. 1, 1928, pp. 63-65. Machines should be controlled individually and preferably electric; various systems of power are treated and their economical value discussed; steam, electricity and Diesel motor; and batteries are treated.

PRACTICE, PROGRESS IN. Progress in Machine-Shop Practice. Mech. Eng., vol. 50, no. 1, Jan. 1928, pp. 56-60, 3 figs. Report contributed by Machine-Shop Practice Division of A.S.M.E. Economic factors influencing metal-working industries; changes in machine tools; machine drives; advances in grinding practice; development of machine tools for use in automotive industry; advances in grinding practice; process and machines of year; standardization.

TOOL EQUIPMENT. Modern Machinery of Mechanical Industries (Le matériel moderne des industries mécanique), M. Dalbouze. Technique Moderne, vol. 20, no. 1, Jan. 1, 1928, pp. 1-40, 114 figs.

MACHINE TOOLS

DESIGN TREND, ENGLAND. The Trend of Machine Tool Design. Machy. Lond.), vol. 31, no. 792, Dec. 15, 1927, pp. 321-328, 17 figs.

ENGLAND, MODELS OF 1927. Production Machines of the Year. Machy. (Lond.), vol. 31, no. 792, Dec. 15, 1927, pp. 331-348, 40 figs. Detailed account of features that make for high output and cost reduction and samples of their application.

MATERIALS HANDLING

PROGRESS IN. Progress in Materials Handling. Mech. Eng., vol. 50, no. 1, Jan. 1928, pp. 13-18, 6 figs. Report contributed by Materials-Handling Division of A.S.M.E. Developments in cranes, hoist and tramrail equipment, elevators, electric industrial-transportation equipment, hand lift trucks, skid shipment of materials, gasoline truck and tractor equipment, conveyors and pneumatic equipment; layout in paper industry; foundry practice; construction and railway field; marine handling; ceramic industries.

METAL MINING GEOLOGY

GEOPHYSICAL EXPLORATION. Exploration for Ore by Potential Methods, E. G. Leonardon and S. F. Kelly. Can. Min. and Met. Bul., no. 189, Jan. 1928, pp. 157-158, 15 figs. From discussion of potential method and examples given, one salient feature of this method is put in evidence: this is its great flexibility; many other geophysical methods do not possess such a flexibility.

Exploring for Ore by Potential Methods, E. G. Leonardon and S. F. Kelly. Eng. and Min. Jl., vol. 125, no. 2, Jan. 14, 1928, pp. 46-49, 7 figs. Surface phenomenon; determining continuity of mineralization; field work; phenomena show permanence; some practical points. (To be concluded.)

METALLURGY

REVIEW. The Behaviour of Metals at High Temperatures, P. Henry. Metallurgist (Supp. to Engineer), Dec. 30, 1927, pp. 180-181. Review of paper published in Revue de Métallurgie, Aug. 1927, describing work carried out on rate of deformation during prolonged loading of materials in plastic state; materials used were steel and electrolytic copper in form of cylindrical test pieces; results show that, whereas mechanical strain at proportional limit decreases with temperature, total strain increases; decrease in modulus of elasticity with temperature shows that stress required to produce given spacing decreases with temperature.

METALS

COHESION. Cohesion. Metallurgist (Supp. to Engineer), Dec. 30, 1927, pp. 177-178. Refers to recent discussion on cohesion organized by Faraday Society which served to show how much still remains unknown in regard to atom and its means of attachment to its neighbours; when it is known why and how cohesion is developed to such widely varying degrees in different materials, metallurgists will have key to selection of those best suited for given purpose, and to production of new combinations of matter, but understanding of fundamental phenomena of cohesion is still very remote.

FATIGUE. Fatigue Phenomena with Relation to Cohesion Problems, H. J. Gough. Metal Industry (Lond.), vol. 31, no. 24, Dec. 16, 1927, pp. 557-561.

NITROGEN IN. Gases in Metals: III The Determination of Nitrogen in Metals by Fusion in Vacuum, L. Jordan and J. R. Eckman. U.S. Bur. Standards—Scientific Papers, no. 563, Oct. 18, 1927, pp. 468-485, 2 figs. Complete vacuum-fusion procedure was applied to analysis of several synthetic nitrides (silicon, aluminum, titanium, zirconium, chromium, vanadium) and a few irons and steels; fusion method has precision equal to that of solution method and gives higher values for nitrogen than solution method in analysis of nitrides of silicon, titanium and vanadium and in certain iron and steel samples.

MILLING MACHINES

ATTACHMENTS. Increasing the Usefulness of Milling Machines, H. Rowland. Can. Machy., vol. 38, no. 25, Dec. 22, 1927, pp. 13-14, 5 figs. Describes attachments to use on milling machines to increase variety of work done; heavy vertical milling attachment; rack milling attachment, universal spiral and circular milling attachment.

Standard Attachments for Standard Milling Machines, H. Rowland. West. Machy. Wld., vol. 18, no. 12, Dec. 1927, pp. 575-577 and 588, 8 figs.

MINE TIMBER

TREATMENT. Mine Timber, W. D. Haley. Can. Min. and Met. Bul., no. 188, Dec. 1927, pp. 1495-1505 and (discussion), 1505-1514. Discusses care after cutting, peeling, seasoning, storing; methods of treatment, and preservatives used.

MINES AND MINING

EQUIPMENT, AUTOMATIC CONTROL. Automatic Control of Mine Equipment, C. R. Seem. Engrs. Soc. Northeastern Pa., no. 5, May 1927, 12 pp. Brings out facts in regard to use of automatic equipment and savings engendered thereby, and shows that such equipment has advantages over non-automatic or manually-operated devices.

VENTILATION. Commercial Air Conditioning, E. G. Lawford. Eng. and Min. Jl., vol. 125, no. 1, Jan. 7, 1928, pp. 5-10, 5 figs. Conditions in some mines indicate that question of assisting fans by artificial changing of physical quality of circulating air is problem that will have to be faced soon.

MOULDING

CENTRE PLATE. Manufacture of a Bronze Centre Plate for a Briquetting Machine (Mémoire sur la fabrication d'un centre de plateau bronze d'appareil à fabriquer les briquettes), F. Simorre. Fonderie Moderne, vol. 21, Dec. 10, 1927, pp. 488-496, 8 figs. Details of making moulds and core boxes; sand micture; methods of pouring; charging furnaces; mixtures to use and time taken for different operations in foundry when making bronze centre plate weighing about 900 kg.

COSTS. Short-Cut Method to Find Moulding Costs, M. R. Lott. Mfg. Industries, vol. 14, no. 6, Dec. 1927, pp. 443-446, 6 figs. Author has worked out simple and satisfactory solution for moulding cost of brass and aluminum castings which are variable items.

MOULDS

WATER-COOLED. Water-Cooled Chill Moulds. Metal Industry (Lond.), vol. 31, no. 24, Dec. 16, 1927, pp. 560-561. Criticisms on article entitled "Water-Cooled Chill Moulds in Brass Foundries," in same journal for Nov. 18; author claims that for casting rolled plates, only one kind of water-cooled chill mould is recognized practically and widely adopted in brass industry, namely, cooling form made by Junker, of Solberg, Rhineland; claim can be emphatically maintained that such moulds never wear down.

MOTION STUDY

MACHINING METAL. Time Losses in Machining Practice. Mech. Wld., vol. 82, no. 2137, Dec. 16, 1927, pp. 450-451, 3 figs. Methods of speeding-up movements at specific periods, reducing non-cutting motions to briefest time, stopping drives or feeds instantly, varying either of these frequently to get best output, and using rapid-power mechanism for adjustments and clampings.

MOTOR BUSES

EXHIBITION, LONDON. International Commercial Motor Transport Exhibition. Tramway and Ry. World, vol. 62, no. 30, Dec. 15, 1927, pp. 343-357, 30 figs. Shows many photos and gives description of buses from 30 makers; many 6-wheel buses were shown; 4-wheel brakes were fitted in many cases and two types of power brakes; one vacuum servo and one compressed air.

OPERATION. Montreal Tramways Company's Bus and Coach Operations. Can. Ry. and Mar. Wld., no. 359, Jan. 1928, pp. 42-45, 7 figs. Describes buses used on city and suburban service in Montreal; a truck-mounted gas-electric coach is shown and that and others listed as to type and capacity; 70 buses in operation, 28 ordered; operating results for 1926 are given.

Pacific Coast Fleet-Maintenance Practice, E. C. Wood. Soc. Automotive Engrs.—Jl., vol. 22, no. 1, Jan. 1928, pp. 27-39. Report of West Coast Subcommittee presented at Transportation Meeting in Chicago; provisions of state laws; standardization to reduce costs; equilibrium-distillation basis for carburetors; valves and other parts; cooling and fuel systems; reconditioning bearings; changes wanted in power-transmitting parts; brakes and brake-lining failures; tires and tire trouble; maintenance of springs and lighting equipment; air-cleaner bibliography; use of governors to lessen maintenance.

SPECIFICATIONS. Condensed Specifications of Motor-Vehicle Chassis for Bus Service. Bus Transportation, vol. 7, no. 1, Jan. 1928, pp. 44-45. Two-page table giving trade name and model, chassis list price, seating capacity, weights, main dimensions, engine details, electrical equipment, transmission, axles, steering gear, brakes, wheels, tires.

MUNICIPAL ENGINEERING

PROBLEMS. Municipal Engineering Problems, E. G. Kaltenbach. Professional Engr., vol. 13, no. 1, Jan. 1928, pp. 13-17. Glimpse of engineering problems and activities of Pittsburgh Metropolitan District; department of public works, bridges, tunnels, summary of funds for municipal improvements under Pittsburgh Metropolitan District.

N

NON-FERROUS METALLURGY

PROGRESS. Marked Progress in Non-Ferrous Metallurgy Last Year. W. M. Corse. Iron Age, vol. 120. no. 1, Jan. 5, 1928, pp. 69-71. Copper—advantages broadcast; lead—no spectacular progress; zinc—new processes and alloys; zinc-base magnesium-bearing alloy designed for die casting; nickel—new outlets developed; monel metal has new fields; solid nickel-silver plumbing fixtures; aluminum and magnesium—Alclad, new aluminum sheet. has strength and corrosion resistance; trend in lighter weight in transportation; magnesium expansion; chromium and chromium plating expands.

NON-FERROUS METALS

CANADA. The Miscellaneous Non-Ferrous Metal Products Industry in Canada, 1926. Metal Industry (Lond.), vol. 31, no. 26, Dec. 30, 1927, p. 603. Production amounted, according to Dominion Bureau of Statistics, to $998,512 in value, as compared with $999,277 reported for previous year.

NON-METALLIC MINERALS

RESEARCH. Non-Metallic Minerals Station, Bureau of Mines, in Many Activities, O. Bowles. Rock Products, vol. 30. no. 26, Dec. 24, 1927, pp. 169-170. Work covered investigations in lime, gypsum, potash, metallurgical limestone, mica and slate industries: effect of steam in lime kiln; anhydrite in cement retardation; metallurgical limestone; wire saw in slate.

O

ORE TREATMENT

FLOTATION. Gas Sorption in Flotation. A. S. Adams. Am. Inst. Min. and Met. Engrs., no. 41, Dec. 1927, 10 pp., 5 figs. Contact angle and oil attraction; sorption power of solids for gas; experiments on connection between absorption and flotation; floatability if mineral depends on nature of gas in bubble, and it is therefore concluded that solid-gas sorption is factor in flotation process.

The Flotation of Oxidized Ores, T. Varley. Min. Jl., vol. 11, no. 16, Jan. 15, 1928, pp. 5-6. Paper brings up-to-date literature on flotation of oxidized ores and describes methods in use at various flotation plants; flotation of oxidized and carbonate copper ores at Ajo, Arizona. (Concluded.)

OXY-ACETYLENE CUTTING

ACETYLENE VS. CITY GAS. Acetylene and City Gas, J. K. Mabbs. Acetylene Jl., vol. 29. no. 7, Jan. 1928. pp. 275-278, 2 figs. Some laboratory studies which were made to show their relative values as fuel gases for cutting metals by oxidation; highest possible preheating temperature and ability to start cut quickly under all conditions are always of advantage, and these desirable characteristics can be obtained only through use of acetylene.

P

PAINTING

MECHANICAL. Paint Application by Mechanical Means, R. C. Sheeler. Indus. Power, vol. 14. no. 1. Jan. 1928, pp. 49-54. 8 figs. Advantages of spray painting and proper method of using equipment to gain best results are pointed out.

PAVEMENTS

ASPHALT. Sheet Asphalt Maintenance Requirements, G. F. Fisk. Can. Engr., vol. 53, no. 25. Dec. 20, 1927, pp. 617-619. Methods employed in laying and maintaining sheet-asphalt pavements in Buffalo since 1878 described in paper presented at sixth annual Asphalt Paving Conference, Atlanta. Ga.; repair costs for ten-year periods.

Sheet Asphalt Pavement Designed for Stability, V. Nicholson. Highway Engr. and Contractor, vol. 18, no. 1, Jan. 1928, pp. 67-69. 2 figs. Stability test for use in design and control of asphalt paving mixture is rapidly becoming popular because of close results obtained; tells of street designed and built following certain control methods; in effort to produce maximum-density sand from materials easily obtained in Chicago, series of stability and density tests were run on ordinary lake and torpedo sand, separately and in mixtures with each other, with results as shown in chart.

Stability of Asphalt Paving Mixtures, F. P. Smith. Can. Engr., vol. 53, no. 26. Dec. 27. 1927. pp. 647-649. Design and proportioning of mixtures discussed in paper presented at sixth annual Asphalt Paving Conference, Atlanta. Ga.; durability, manufacture and laying are also important factors; various types of filler; lack of compression is probably greatest factor of all in decreasing stability.

MAINTENANCE AND REPAIRS. Chicago's Method of Repairing Pavements. Earth Mover. vol. 15, no. 1. Jan. 1928. pp. 10-11. 5 figs. Practical and economical to use comparatively small portable road-repair machines built under original Adresen patents but now known as "Western Hot Patch Outfit."

BITUMINOUS. Bituminous Types of Pavements for Streets and Roads, H. W. Skidmore. Purdue Univ.—Bul., vol. 21. no. 3, May 1927. pp. 146-165. Discussing broad, general subject of bituminous pavements proceeding from most simple form of construction to most complex; penetration types; premixed types; hot application and plant for it; construction details.

BRICK. The Recent Study of Thin Brick Pavements by the U.S. Bureau of Public Roads, L. W. Teller. Purdue Univ.—Bul., vol. 21, no. 3, May 1927, pp. 12-22, 4 figs. Field survey was made of several million square yards of thin brick pavements which had been in use for length of time sufficient to demonstrate their serviceability; accelerated traffic test was run on series of brick wearing surfaces of different thicknesses; 2-in. and 2½-in. bricks used from one manufacture; accelerated traffic tests were carried on at Arlington, Virginia.

CONCRETE. Concrete Pavement Opened to Heavy Traffic at Age of 46 Hours. Concrete, vol. 32, no. 1. Jan. 1928. pp. 31-33. 5 figs. Description of methods used to secure high early strengths with standard portland cement on cold-weather pavement construction job; pavement at Wyandotte, Mich.; slab is 10 in. thick at edges, tapering to 8 in. at 2 ft. from edges; concrete kept at 50 deg. Fahr. during curing; concrete proportions given.

Design and Construction of Concrete Pavements. C. Older. Am. Soc. Civ. Engrs. Proc., vol. 54, no. 1. Jan. 1928, pp. 147-154, 1 fig. Computation of stresses and their application to practical design and construction practice recommended; construction details to follow.

COST. Cost and Technique of Opening Concrete Street Pavements. Concrete Products. vol. 33, no. 6. Dec. 1927, pp. 53-54, 8 figs. Rates used in various cities; method of patching described; curing; if these suggestions are followed carefully and proper materials used, patch will be produced which will unite perfectly with old concrete; temporary repairs.

PETROLEUM GEOLOGY

ALBERTA. Natural Gas Its Production and Use in the Province of Alberta, C. J. Yorath. Natural Gas, vol. 9, no. 1, Jan. 1928, pp. 20-23 and 50, 1 fig. Alberta may be divided into four major structures, extending as belts northward from international boundary; new transmission line; may recharge sands.

PIPE, CAST-IRON

JOINTS. Bronze Joints in Cast-Iron Pipe, T. C. Fetherston. Iron Age, vol. 120, no. 26. Dec. 29, 1927, pp. 1782-1784, 4 figs. Four years' service experience indicates weaknesses in butt joints with collar welds; new "shear-vee" design proves cheaper and twice as strong.

New Bronze Joint Has High Strength, T. W. Greene. Acetylene Jl., vol. 29. no. 6. Dec. 1927, pp. 246-248, 5 figs. Comparison of three types of welded pipe joints; collar-type joint failures analyzed; advantages of Shear-Vee joint in giving 100 per cent more strength than collar-joint and developing full strength of pipe, cheaper and easier to make, graphical stress transfer shown for both types of joint.

WELDING. Developments in Cast-Iron Pipe, H. Y. Carson. Am. Water Wks. Assn. —Jl., vol. 18, no. 6, Dec. 1927, pp. 721-727, 4 figs. Eliminating joints by welding; bronze-welding; one table of practical bronze-welding data; large pipe with welded tees; cement-lined cast-iron pipe.

PILE DRIVING

FORMULAS. A Critical Examination of Pile-Driving Formulas, A. J. Hunter. New Zealand Soc. Civ. Engrs.—Proc., no. 13, 1926-27, pp. 44-45 and (discussion) 55-83. Treatment of theory of pile driving with application to special cases and comparison of practice with theory; many charts are given showing bearing power of piles according to various formulas.

STRUCTURAL ENGINEERING. Piling in the Service of Structural Engineering, M. J. McCarthy. Structural Engr., vol. 5, no. 12, Dec. 1927, pp. 369-380, 17 figs. Treats of sheet piling and independent piles; methods of sinking; types of pile drives and power hammers. The advantage of hammers over drop drivers; American and English hammers described.

PIPE, WATER

RUST REMOVAL. Removal of Rust from Pipe Systems by an Acid Solvent, F. N. Speller, E. L. Chappell and R. P. Russell. Mass. Inst. Technology—Pub., vol. 63, no. 53. Oct. 1927, 7 pp., 3 figs. New method of removing rust from cold-water piping of large New York office building; method is thought to be equally applicable to removal of rust from condensers, boilers, heaters and other fabricated systems which would be expensive to take down and clean by ordinary methods; removal is accomplished by dissolving rust in acid rendered inert toward metal by addition of inhibitors. Paper presented at Am. Inst. Chem. Engrs.

POWER PLANTS

DESIGN. The Role of the Civil Engineer in Power Development, I. W. McConnell. Am. Soc. Civ. Engrs.—Proc., vol. 54. no. 1, Jan. 1928, pp. 155-164, 1 fig. Argues and demonstrates with examples from practice that civil engineer has more opportunity to effect economies in construction of works for production and distribution of power than any other type of engineer connected with design.

EQUIPMENT. Choosing Power Equipment, J. N. Landis. Elec. World, vol. 90, no. 25, Dec. 17, 1927, pp. 1237-1241, 19 figs. Method of evaluating bids based on curves plotted from operating conditions and guaranteed performance; examples of application to specific cases; basis for calculating annual carrying charges; development of load-duration curves; determination of installation costs.

MANAGEMENT. Eleven Fundamentals of Management Save Money in the Boiler Room, H. L. Griffin. Mfg. Industries, vol. 14, no. 7, Dec. 1927, pp. 461-463. Discusses fundamentals which have been successfully applied in a dozen or more factory power plants.

ELECTRIC SUBSTATIONS. Substation Construction of Los Angeles Gas & Electric Corporation, W. R. Shettel. West. Constr. News, vol. 2, no. 24, Dec. 25, 1927, pp. 54-55, 4 figs. Architectural design of Pico street substation in keeping with better type of buildings along boulevard; switch regulator, transformer cells and bus troughs of reinforced concrete; supervisory control system; brief description of Palo Alto street and Western avenue substations.

STEAM VS. WATER POWER. Relation of Steam to Water Power, A. H. Markwart. Power, vol. 67. no. 1. Jan. 3, 1928. pp. 39-41. 4 figs. With hydro equipment nearing maximum efficiency and development costs increasing and marked improvement in steam-plant economies, it would appear that ultimate development of water power must involve use of proportion of steam power; it is quite probable that combination system will generate at lower cost than either steam or hydro alone; economic study of factors involved in these two power sources.

STEAM, HIGH-PRESSURE. Experiences with 1,300-Lb. Steam Pressure. J. Anderson. Eng. and Boiler House Rev., vol. 41. no. 6. Dec. 1927, pp. 266-270, 4 figs. Though high-pressure installation at Lakeside Station, Milwaukee, has been in service 57 per cent of 11-months' period since starting, operating one continuous period at full capacity for 50 days and improving overall plant efficiency 4 per cent. major troubles have been experienced which are discussed in detail; condenser leakage; boiler-tube failure. (To be continued.)

STEAM, MANAGEMENT OF. Fundamentals of Management Save Money in the Boiler Room, L. H. Friggin. Paper Trade Jl.. vol. 85, no. 26, Dec. 29, 1927, pp. 47-49. Eleven major principles are given for boiler-room management and these are discussed; kind of equipment to add and importance of power-plant instruments and keeping of records emphasized.

PRESSURE VESSELS

WELDING. Procedure Control in Pressure Vessel Welding, H. E. Rockefeller. Boiler Maker, vol. 22, no. 12, Dec. 1927. pp. 346-348, 4 figs. Design of vessel for 300-lb. pressure; selection and preparation of material; oxy-acetylene welding of longitudinal seams and reinforcing rings. Paper presented at Int. Acetylene Assn.

PULVERIZED COAL

BURNERS. A New Pulverized Fuel Burner. Eng. and Boiler House Rev., vol. 41 no. 6. Dec. 1927, pp. 288-289, 1 fig. In new Lopulco design, fuel and air within burner are deliberately segregated; design is not influenced by any arrangement of external piping, and it operates with low air pressure; suitable for every type of boiler and also for general furnace work.

UTILIZATION. Pulverized Coal in a Large Power System, T. E. Purcell. Combustion, vol. 18. no. 1, Jan. 1928, pp. 41-45, 5 figs. Discussion of successive developments in use of pulverized fuel in plants of Duquesne Light Co., and of results obtained with this method of firing; interesting comparison is made between service hours available with pulverized fuel and stoker units.

Survey of the Present Use of Pulverized Fuel, P. Junkersfeld. Combustion, vol. 18, no. 1, Jan. 1928, pp. 31-35. Survey of growth in use of pulverized fuel for power plant work; what has been accomplished and probable future tendencies; author feels that there will be increasing use of this method of burning fuel, and that further improvements may be looked for as result of studies now being made.

PUMPS

AIR LIFT IN OIL FIELDS. Principles of Air Lift as Applied to Oil Production, H. R. Pierce and J. O. Lewis. Oil Weekly, vol. 47, no. 6, Oct. 28, 1927, pp. 43-46 and 56-60. Reviews theory of air lift, elements of mechanical efficiency, collecting and analyzing evidence, pressure and volume of air, surface flow lines, gas-oil ratio, estimating compressor capacity.

PUMPS, CENTRIFUGAL

Axial-Flow and. Low-Lift, Axial-Flow and Centrifugal Pumps, H. R. Lupton and J. H. W. Gill. Water and Water Eng., vol. 29, no. 347, Nov. 21, 1927, pp. 435-445, 17 figs. Construction and characteristics of axial and axial-radial pumps; development of method pursued in determining characteristics and losses, contrasting axial with ordinary centrifugal type; description of experimental plant being installed at Ferrybridge, Eng., and of tests it is hoped to carry out. Abstract of paper read before Brit. Assn.

Selection. Selection of Centrifugal Pumps. Can. Min. Jl., vol. 48, no. 52, Dec. 30, 1927, pp. 1054-1057, 6 figs. Selection for or application particularly to mining and milling industries; characteristics of pump suitable for drawing from Crowe tank and delivering to precipitation press; characteristics of pump suitable for mine drainage and unwatering.

R

RADIATORS

Steam, Performance of. Effect of Enclosures on Direct Steam Radiator Performance. Univ. of Ill.—Bul., vol. 25, no. 8, Oct. 25, 1927, pp. 5-37, 21 figs. Investigation to determine effect of various types of present-day commercial radiator enclosures, shields and covers on steam-condensing capacity of direct cast-iron radiator; factors studied were air inlets, air outlets, heights and grilles.

RADIO

Apparatus. Rectifiers and Smoothing Circuits, F. Record and I. N. Holmes. Wireless Wld., vol. 21, no. 26, Dec. 28, 1927, pp. 841-843, 5 figs. An experimental study of input and output wave forms by means of Duddell oscillograph; tests described were made on experimental unit employing a U.5 tube which is a full-wave rectifier.

Wavemeters. The Accuracy and Calibration Permanence of Variable Air Condensers for Precision Wavemeters, W. H. F. Griffiths. Experimental Wireless, vol. 5, no. 52, Jan. 1928, pp. 17-24, 8 figs. Capacity uncertainties are discussed in first part of article and in second part is described entirely new design of variable-air condenser by use of which it is hoped to fill, more effectively, gap which exists between good commercial heterodyne wavemeters having overall accuracy of, say, 2 parts in 1,000 and modern multi-vibrator standard of radio frequencies.

Waves. Experiments and Observations Concerning the Ionized Regions of the Atmosphere, R. A. Heising. Inst. Radio Engrs.—Proc., vol. 16, no. 1, Jan. 1928, pp. 75-99, 12 figs. Experiments are described in which virtual height of reflecting ionized region was measured, using time lag between impulses arriving over direct and reflected path; measurements were made on 57 and 111 meters; height was ascertained only at night and daylight hour before sunset; experiments and curves are mentioned that show absorption to be one of important factors causing poor daylight transmission in wavelength region contiguous to 214 meters.

RAILROADS

Curves—Surveying. String Lining of Curves Made Easy, C. H. Bartlett. Ry. Eng. and Maintenance, vol. 24, no. 1, Jan. 1928, pp. 4-6. Method of correcting alignment which is quicker and more convenient than use of engineering instruments; proposed method points out exactly what correction is needed at each point in order to make true curve; no elaborate equipment is necessary; no complicated mathematical expressions to use; several trials are required to line curve which is badly out of shape; work can be inspected in advance.

Electrification. Electric Traction Development During 1927, A. G. Oehler. Ry. Age, vol. 84, no. 1, Jan. 7, 1928, pp. 41-42, 2 figs. Treats of electrification of railroads during 1927; kind of cars and locomotives ordered; recent developments in electric locomotives, operating data and projects for railroad electrification in 1928.

Electrification, Virginian Railway. The Virginian Railway Electrification, G. Gibbs. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 1, Jan. 1928, pp. 3-59, 26 figs. Presents broad engineering features of recent electric-traction installation for long-distance freight service of heaviest character, in manner which will make clear to railway engineers generally its essentials in design, construction and operation; general description of main elements of electric-traction system and inspection and repair facilities provided for locomotives.

Roadbeds. Will a Concrete Roadbed Stand Up? Ry. Eng. and Maintenance, vol. 24, no. 1, Jan. 1928, pp. 12-13, 2 figs. Describes 1,326-ft. section for double-track main line of Pere Marquette near Detroit; conditions of concrete; improvements can be made; first year's service of Pere Marquette installation developed no serious defects.

Signals and Signalling. A New Method of Operating Semaphore Signals. Engineer, vol. 144, no. 3755, Dec. 30, 1927, pp. 745-746, 5 figs. Although system of operating semaphore signals was invented to meet and defeated predatory habits of Chinese bandits, it should prove interesting and useful under variety of normal conditions which will readily suggest themselves to railway signal engineers; system is invention of J. H. Williams.

Terminals. Canadian Roads Open Impressive Union Station at Toronto. Ry. Age, vol. 83, no. 26, Dec. 24 (Section 1) 1927, pp. 1243-1250, 10 figs. Plans and description of new Union Station containing post office, railroad offices, train concourse, waiting room, dining room, baggage room, etc.; front, 850 ft. long, 7 stories high, with two wings 250 ft. long, 4 storeys high; Bedford limestone used.

Ties, Concrete. Reinforced Concrete Sleepers, H. Stringer. Ry. Engr., vol. 49, no. 576, Jan. 1928, pp. 32-33, 4 figs. Ties used in China; tests made on 60-lb. rails with 6-coupled locomotive having 12-ton axle load, running at 15 m.p.h.; test on ties reinforced by boiler tubes or solid rod; former has shown cracks, latter none; in all cases tubes employed for reinforcement were scrap.

Train Despatching. A New Train Despatching System, New York Central Lines, B. J. Schwendt. Ry. Gaz., vol. 47, no. 25, Dec. 16, 1927, pp. 753-762, 19 figs.

RAILWAY MOTOR CARS

Diesel-Electric. Pioneering the Diesel Railcar. Oil Engine Power, vol. 6, no. 1, Jan. 1928, pp. 26-28, 4 figs. Diesel-electric railcar built jointly by New York Central Railroad and McIntosh and Seymour Corporation represents important American development in utilization of oil-electric drive for propulsion of self-contained passenger coach.

RAIN AND RAINFALL

Influence of Forests. Influence of Forests on Rainfall. Can. Engr., vol. 53, no. 26, Dec. 27, 1927, pp. 637-639. Effect of varying conditions on amount of rainfall and resultant run-off; causes of precipitation; water vapour from sea largely responsible for rainfall; forests increase local rainfall and cause more regular run-off; subject treated from European standpoint with fundamental conditions as basis.

RECTIFIERS

Mercury-Arc. Operation and Performance of Mercury-Arc Rectifier on the Chicago, North Shore and Milwaukee Railroad Company, C. Antoniono. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 1, Jan. 1928, pp. 3-7, 4 figs. Actual operating results and experiences with rectifier feeding railroad; rectifier is compared with synchronous converters in regard to efficiency, troubles, maintenance, etc.; advantages are: high efficiency over whole working range, high capacity to absorb momentary loads, insensibility to short circuits, no synchronizing, simple operation and minimum attention, noiseless operation and no vibration, low maintenance cost, reliability of service.

REFRACTORY MATERIALS

Properties. Properties of Refractories in Zinc Metallurgy, E. S. Wheeler, A. H. Kuechler and H. M. Lawrence. Univ. Missouri School of Mines and Met., vol. 10, no. 2, Feb. 1927, pp. 11-137, 94 figs. Study made of physical properties of bodies containing varying percentages of old retort material and zinc oxide as grog; preliminary tests seemed to indicate that retorts decrease in refractoriness in service, as several samples of old retort material showed very low deformation values.

REFRIGERATING MACHINERY

Corrosion. Corrosion in the Refrigerating Industry, J. K. Roberts, H. O. Forrest and R. P. Russell. Refrig. Eng., vol. 14, no. 6, Dec. 1927, pp. 173-182 and 187, 17 figs. A.S.R.E. corrosion committee presents draught of its final report; corrosion of iron, steel and galvanized steel in brine systems may be greatly reduced by addition of sodium dichromate to brine; disodium phosphate as corrosion retarder; comparison of dichromate and phosphate treatments; other materials as retarders in brine; corrosion in condenser systems and in salt water; heat-transfer measurements for paint coatings and rust films; recommendations for treatments and instructions for application.

REFRIGERATING MACHINES

Mercury-Compressor. A Hermetically Sealed Refrigerating Machine Using the Mercury Compressor, J. G. DeRemer and R. W. Ayres. Refrig. Eng., vol. 14, no. 6, Dec. 1927, pp. 169-172, 7 figs. Refers to paper published in Nov. 1926 issue of this journal and Mid-Nov. 1926 issue of Mech. Eng. (see reference in Eng. Index 1926, p. 633), in which reference was made to application of mercury compressor to refrigeration in form of sealed rigid element having no internal moving parts, requiring no internal lubricant and possessing other interesting features; present paper records recent advance made in this type of refrigerating machine.

REFRIGERATING PLANTS

Piping. Piping for Cold Storage Rooms, W. S. Huntington. Refrigeration, vol. 42, no. 6, Dec. 1927, pp. 54-56. Describes and tabulates sizes of piping used for brine and ammonia in cold-storage rooms.

REFRIGERATORS

Standardization. Engineering Standards for the Refrigerator Box. Refrig. Eng., vol. 14, no. 6, Dec. 1927, p. 183. Further steps toward standardization of refrigerators were discussed and planned at conference for this purpose held in Engineering Societies Building, New York, through offices of American Engineering Standards Committee.

RESERVOIRS

Protection. Storage of Water in Large Population Centre Requires Unusual Protection, C. Wilson. Hydraulic Eng. (West. Waterworks Section), vol. 3, no. 12, Dec. 1927, pp. 26-27 and 38. Fencing of reservoirs and elaborate by-passing system for storm waters have been installed by Los Angeles; storm-wall converts street into storm drain and prevents surface run-off from reaching lake; chlorination house at outlet of Lake Hollywood.

ROADS

Asphalt. Bases for Asphalt Wearing Courses, E. N. Seymour. Can. Engr., vol. 53, no. 26, Dec. 27, 1927, pp. 641-642. Construction of gravel- and stone-base courses on Georgia highways discussed in paper presented at sixth annual Asphalt Paving Conference, Atlanta, Ga.; type of base governed by location of project with respect to supply of base material.

Concrete. An Outstanding Concrete Paving Job, J. M. Breen. Contract Rec., vol. 41, no. 52, Dec. 28, 1927, pp. 229-232, 10 figs. Ten-mile stretch on Ontario provincial highway No. 3; completeness of mechanical equipment an important factor in success of job; work was carried on at rate of about 1,000 ft. per day.

Concrete Roads—Present Trend in Design and Construction, W. E. Barker. Contract Rec., vol. 41, no. 52, Dec. 28, 1927, pp. 1332-1335, 7 figs. Growth of thickened-edge design; safety measures; loads may be increased by adding wheels of vehicles; construction; better batch measurement; accurate water measurement; high early-strength concrete; changes in curing methods; resurfacing; core tests.

Construction. Paving Methods on an Illinois Super-Highway. Roads and Streets, vol. 67, no. 11, Nov. 1927, pp. 477-480, 9 figs. How state paved road in co-operation with villages and Federal Government after removal of old pavement; batching plant; subgrading; design of slab; paving operation; finishing, curing, inspection; forces used; road 40 ft. wide plus 4 ft. shoulder on each side.

Construction Equipment. Building the Nation's Roads with Oil Engine Power. Oil Engine Power, vol. 6, no. 1, Jan. 1928, pp. 19-25, 9 figs. Oil-engine economy and reliability establish it as standard power for road builder's equipment; Diesel shovels and draglines; road rollers, Diesel tractors and trucks; logging equipment; Diesel locomotives; air compressors and rock crushers.

Construction, Quebec. Record Year in Road Construction and Maintenance in Quebec, J. L. Boulanger. Contract Rec., vol. 42, no. 2, Jan. 11, 1928, pp. 30-32. 1,301 miles of new highways built and 7,801 maintained by Quebec Roads Department; programme of 1,000 miles of high-class pavements; large increase in traffic; progress of maintenance at Government's expense; permanent pavements, widening and other improvements; increase in tourist traffic.

Design. Structural Design of Roads. Am. Highways, vol. 7, no. 1, Jan. 1928, pp. 4-8. Report covers variety of subjects as motor-truck impact; subgrade studies; gravel, top-soil and sand-clay road material; top-dressing or dry maintenance roads; bituminous macadam; premixed types of bituminous pavement; concrete-pavement design.

Earth—Alberta. Earth and Sand-Clay Roads in Alberta, C. A. Dividson. Roads and Streets, vol. 67, no. 11, Nov. 1927, pp. 481-482. Describes roads in Alberta, problems met in their construction, cost; how divided; types of roads and kind used.

Gravel, Construction. Construction of Gravel Roads in B.C., E. R. Hoffman. Can. Engr., vol. 53, no. 23, Dec. 6, 1927, pp. 591-592. Fundamental features to be considered in construction and maintenance work; each section of highway presents distinctive problem; cost of preparing material for maintenance; principles of continuous maintenance.

Maintenance and Repairs. Recent Developments in Road Maintenance Methods, A. H. Hinkle. Purdue Univ. Bul., vol. 21, no. 3, May 1927, pp. 76-80. Indiana road methods described; treating protecting slopes against erosion by temporary use of straw followed by growing vines; spring treatment of shoulders and ditch slopes, and standard shoulder maintenance; repairing concrete pavements with quick-hardening concrete; use of penetration base for rock asphalt and bituminous concrete tops; method of smoothing rock-asphalt surface by use of long-base steel drag or planer; pulverizing rock asphalt and other bituminous mixtures; bituminous concrete top for traffic-bound gravel and stone roads.

The Development and Care of Light Asphaltic Oil Road Surfaces. Good Roads, vol. 70, no. 11, Nov. 1927, pp. 470-473. Costs of untreated roads; advantages and disadvantages of fine crushed rock and gravel roads; resistance to vehicles; surface oiling of roads in Oregon and cost of such treatment and maintenance. (To be continued.)

MAINTENANCE COSTS. A Cost Keeping System for Effecting Maintenance Economies. J. A. Edwards. Highway Mag., vol. 19, no. 1, Jan. 1928, pp. 11-13, 4 figs. Before type of construction can be called most economical, cost of maintenance entailed, as well as first cost, must be recorded systematically and comparison made with other types; only in this way can maintenance leads be avoided and lowest year-to-year cost of highway improvements be secured.

SURFACE TREATMENT. Survey of the Surface Treatment Fields, C. N. Conner. Can. Engr., vol. 53, no. 25, Dec. 20, 1927, pp. 630-632. (See also Roads and Streets, vol. 68, no. 1, Jan. 1928, pp. 5-7.) Era of low-cost road construction; principal methods of bituminous surface treatment discussed in paper presented at sixth annual Asphalt Paving Conference, Atlanta, Ga.; construction and maintenance methods.

SURFACES. The Evolution of Modern Road Surfaces. R. G. H. Clements. Surveyor (Lond.), vol. 72, no. 1874, Dec. 23, 1927, pp. 623-624. Engineering features and characteristics of perfect road surface with preliminary consideration; mechanical problems of actual construction, materials to be combined; block systems of paving are treated. (To be continued.)

ROCK PRODUCTS

RESEARCH. Cement, Lime, Gypsum and Stone at the Bureau of Standards in 1927. Rock Products, vol. 31, no. 1, Jan. 7, 1928, pp. 57-61. Control of fabricating and curing conditions for concrete and cement testing; durability of concrete aggregates; standard methods of physical tests for cements; terra-cotta wall investigation; hollow-tile and concrete floor slabs; composition of chemical lime; manufacture of lime; expansion of calcined gypsum on setting; limestone research; weathering tests on building stones.

ROOF TRUSSES

WELDED. Design for Welded Roof Trusses, W. Dalton. Welding Engr., vol. 12, no. 12, Dec. 1927, pp. 27-28, 5 figs. One-piece construction using arc-welded joint produces lighter member without loss of strength or serviceability; tests of welded joints in roof truss, made by Rensellaer Polytechnic laboratory; welds were fillet welds and tests were compressive and tensile.

S

SAND

PAVEMENT. Sands for Sheet Asphalt Pavements, P. Hubbard and F. C. Field. Can. Engr., vol. 53, no. 26, Dec. 27, 1927, pp. 643-646, 3 figs. Method of determining quality of sand discussed in paper presented at sixth Asphalt Paving Conference, Atlanta, Ga.; determination of percentage of voids in various sands; evaluation of sand by stability test; New York sand, sand from Potomac river, lake Erie, lake Michigan, Platte river; beach sands from Florida and Long Island, and others were tested.

SCREWS

WOOD, SPECIFICATIONS FOR. United States Government Master Specifications for Screws, Wood. U.S. Bur. Standards—Circular, no. 140, Oct. 8, 1927, 8 pp., 1 fig. Material and workmanship; general requirements; detail requirements.

SEWAGE

CHLORINATION. Chlorination in Sewage Treatment, L. N. Enslow. Contract Rec., vol. 42, no. 2, Jan. 11, 1928, pp. 32-34. How liquid chlorine is used in correcting odor nuisances at sewage plants; main causes of odors; prevention chief objective; pump station collecting wells and their relationship to odor control.

Three Studies of Sewage Chlorination. Eng. News-Rec., vol. 99, no. 26, Dec. 29, 1927, pp. 1030-1031. Laboratory tests of digestion at Harvard University and field studies at Independence, Kan., and Bridgeport, Conn., on odor control and on effect of chlorination on screened sewage.

SEWAGE DISPOSAL

ACTIVATED SLUDGE METHOD. Operation of Milwaukee Sewage Treatment Plant. Pub. Wks., vol. 59, no. 1, Jan. 1928, pp. 20-23. Largest activated-sludge plant in operation in world; only sewage-disposal plant that manufactures commercial fertilizer in large quantities and actually markets it successfully.

Scientific Sewage Disposal at Milwaukee, R. Cramer and J. A. Wilson. Indus. and Eng. Chem., vol. 20, no. 1, Jan. 1928, pp. 4-9, 13 figs. New activated-sludge plant is capable of separating 100,000,000 gal. of sewage per day into practically pure water and dry powder of high fertilizer value, and with no offense to surrounding community; description of plant and its operation and of some of chemical principles involved.

SLUDGE DIGESTION. Hydrogen-Ion Control of Sludge Digestion, G. M. Fair and C. L. Carlson. Eng. News-Rec., vol. 99, no. 22, Dec. 1, 1927, pp. 881-883, 4 figs. Optimum reaction of digestive sludge seems to vary with digestion and nature of sewage; use of adjusting chemical suggested; studies of variation in hydrogen-ion concentration of digesting sewage solids have resulted in discovery that pH control can be made to produce marked acceleration and improvement of digestion.

TREATMENT. Developments in Sewage Treatment, G. G. Nasmith. Contract Rec., vol. 41, no. 52, Dec. 28, 1927, pp. 1343-1345 and 1350. New knowledge during past year on activated sludge process, continuous flow vs. fill and draw system, activated sludge vs. mechanical aeration, colloiders, fine screens, removal of oil, sludge digestion in separate tanks, sludge treatment, storm water tanks, use of chlorine in sewage treatment, sewage treatment mechanisms, pollution of water supplies.

SNOW REMOVAL

EQUIPMENT. The Proper Selection of Snow Removal Equipment, G. E. Wallis. Good Roads, vol. 71, no. 1, Jan. 1928, pp. 18-19, 2 figs. New problem; use of straight blade; "V"-shaped plows; snow fencing for drift prevention; rotary-plow type; best selection.

ROADS. Snow Removal and Snow Problems, H. G. McKelvey. Highway Engr. and Contractor, vol. 17, no. 6, Dec. 1927, pp. 35-39, 7 figs. Methods of caring for snowfall by plows and tractors, trained men needed, snowfall data; effect of snow removal on spring maintenance; design that facilitates snow removal and relative costs. (Concluded.)

SOAPSTONE QUARRIES AND QUARRYING

QUEBEC. Soapstone Mining in the Province of Quebec, R. C. Rowe. Can. Min. Jl., vol. 48, no. 50, Dec. 16, 1927, pp. 1003-1004, 4 figs. From very small beginnings this company has worked up business on soapstone blocks for lining furnaces in sulphite-pulp mills; deposit in question occurs in same great serpentine belt that produces asbestos mine.

STANDARDS

ENGINEERING. Report of Divisions to Standards Committee. Soc. Automotive Engrs.—Jl., vol. 22, no. 1, Jan. 1928, pp. 113-128, 23 figs. Ball bearing radii, roller bearings, motor-coach batteries, storage-battery terminals, engine-testing forms, fan belts and pulleys, hood-ledge lacings, new S.A.E. steel heat-treatment definitions, headlamp laboratory tests, vacuum-brake manifold connection, passenger-car bumper mountings, Woodruff key specifications, oil- and grease-cup threads, rivet-cap specifications, taper-fitting tolerances, steering-gear connecting roads, round unslotted-head bolts, rims for low-pressure tires.

STAYBOLTS

MATERIALS. Staybolt Material Compared. Iron Age, vol. 120, no. 26, Dec. 29, 1927, pp. 1785 and 1829, 2 figs. Two independent investigations on wrought iron, steel and alloy steels; conditions under which staybolts are used.

STEAM ACCUMULATORS

RUTHS. Accumulators for Electric Power Station Overloads. Eng. and Boiler House Rev., vol. 41, no. 6, Dec. 1927, pp. 290-291, 2 figs. Some 330 of these accumulators are in operation, mainly in industries; by utilizing accumulator to cope with overloads in any projected extension of electric generating station, capital outlay necessary might be estimated at $30 to $35 per new kw. installed. Review of paper by Dr. Ruths before Soc. of German Elec. Engrs.

STEAM PIPE

DESIGN. Notes on the Design of the Steam Pipe Network in a Power Station, W. Eccles. Metropolitan-Vickers Gaz., vol. 10, no. 176, Nov. 1927, pp. 259-263, 3 figs. Similarity of piping and electric cable systems; provision for increase in steam pressure, space required, different systems, auxiliary steam supply; economical layout, steam velocity and pressure drop effect on design.

STEEL HIGH-PRESSURE. High-Pressure Steam: Its Demands on Piping, A. L. Walker. Mech. Wld., vol. 82, no. 2137, Dec. 16, 1927, p. 448.

STEAM POWER

HEAT LOSSES. Heat Losses from Fuel to Machine, R. E. Light. Eng. and Boiler House Rev., vol. 41, no. 6, Dec. 1927, pp. 278-280, 3 figs. Points out that only very small fraction of fuel-heat contents supplied to factory boiler is utilized as "work done" at machines; ultimate ratio of energy output at machines to input at grates is seldom moro than 6 per cent; detailed losses for three classes of installation are considered.

STEEL

ALLOY. *See Alloy Steels.*

DENSITY. Density of Hot-Rolled and Heat-Treated Carbon Steels, H. C. Cross and E. E. Hill. U.S. Bur. Standards—Sci. Papers, no. 562, Oct. 11, 1927, pp. 451-466, 7 figs. Density values for commercially pure and electrolytic iron and series of carbon steels, varying from 0.09 to 1.29 per cent carbon; values are given for these steels when hot-rolled, when annealed, when quenched and when quenched and tempered. Bibliography.

FATIGUE. On the Fatigue of Steels for Springs, Axles and Rails, S. Ikeda. (Japan) Dept. of Railways—Bul., vol. 15, no. 11, Nov. 1927, pp. 1745-1774, 32 figs. (In Japanese.)

HEAT TREATMENT. On a New Method of Quenching Steels in a High Temperature Bath, K. Honda and K. Tamuru., Am. Soc. Steel Treat.—Trans., vol. 13, no. 1, Jan. 1928, pp. 95-104, 7 figs.

STAINLESS. Stainless Iron and Steels, J. B. Green. Welding Engr., vol. 12, no. 12, Dec. 1927, pp. 34-36, 2 figs. Study of corrosion-resistant steel alloys and how changes in composition affect working qualities; scope of this article is confined to description of stainless steels from standpoint of using them in welded articles of manufacture; analyses of various brands of stainless steels.

STELLITE

USES. Two Metals Better Than One. Acetylene Jl., vol. 29, no. 6, Dec. 1927, pp. 241-243, 2 figs. Methods employed to weld stellite to oil-well drills by oxy-acetylene process; advantages in oil-drilling work; reports of bits in practice and stelliting in oil-field shops; the wearing qualities of stellite and its fitness for this kind of work. Shows how saving is made by use of stellite bits.

STOKERS

LOCOMOTIVE. How the Mechanical Locomotive Stoker Has Been Developed, W. Sperflage. Steam Coal Buyer, vol. 8, no. 6, Dec. 1927, pp. 40-42. Description of mechanical stoker operations such as crushing and distributing; economical limit of locomotive size justifying installation, maintenance charge and economy of operation cited in two cases; recent construction.

MECHANICAL. Some Characteristics of Modern Stokers and How the Requirements of To-day Can Be Met to Advantage, F. H. Daniels. Steam Coal Buyer, vol. 8, no. 5, Nov. 1927, pp. 17-20, 5 figs. Kinds of mechanical stokers and what is required of stokers; capacity to respond to sudden demands; multiple-retort and duplex firing stokers described and advantages enumerated.

STREAM FLOW

METHOD OF ANALYSIS. Stream Flow in General Terms, M. D. Casler. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 1, Jan. 1928, pp. 97-122, 8 figs. General method for analysis of stream flow in channels in which invert slope and channel cross-section are not constant and Chezy formula is not properly applicable; demonstrations of applicability of analysis to weirs, orifices and siphons; evaluation of friction factor; critical sections.

EFFECT OF. The Effect of Agricultural Drainage Upon Flood Run-Off, S. M. Woodward. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 1, Jan. 1928, pp. 164-183, 10 figs. Comparison of stream-flow conditions prior and subsequent to extensive drainage upon Des Moines river and Iowa river watersheds; shows that during flood periods there has been no significant change in their behaviour which may be attributed to drainage.

STREET LIGHTING

NEW DEVELOPMENTS. New Street Lighting Developments. Elec. West, vol. 60, no. 1, Jan. 1, 1928, pp. 9-13, 11 figs. In this article some of installations in cities in California involving new technique or novel practices are described.

PREDETERMINATION. Predetermining Illumination in Street Lighting, M. S. Gilbert. Elec. World. vol. 90, no. 26, Dec. 24, 1927, pp. 1301-1304, 7 figs. Method of making calculations for average conditions; use of data for fixing lighting-unit locations and magnitude of illumination; sample calculations.

T

TAPS AND DIES

EFFICIENT USE OF. Securing Best Results in Tapping, A. L. Valentine. Machy. (N.Y.), vol. 34, no. 5, Jan. 1928, pp. 353-358, 10 figs. One of series of articles; table of tapping speeds for machine tapping of nuts with carbon-steel taps; method of holding taps and nuts while tapping; tapping with acme and square-thread taps; friction tap holders described with diagram; die chasers and threading dies; relation between root diameter of taps and tap-drill sizes explained with diagrams.

TELEPHONE LINES

LONG DISTANCE. Telephonic Transmission Over Long Lines, F. J. Dommerque. Telephone Engr., vol. 32, no. 1, Jan. 1928, pp. 17-19. In any telephonic transmission, resistance, inductance, capacity and leakance determine attenuation of sound power entering line; for measure of attenuation in circuit, factor can be calculated which expresses losses of talking current per mile or kilometer of circuit, as case may be; gives list of transmission equivalents of various lines and pieces of apparatus, that is, mileage which gives transmission equal to that given by one mile of standard cable and equal to one transmission unit.

THERMODYNAMICS

INTEGRATING FACTORS. Thermodynamic Integrating Factors, A. Press. Lond., Edinburgh and Dublin Philosophical Mag. and Jl. of Science, vol. 4, no. 26, Dec. 1927, pp. 1245-1249. Integrating factor and its consequent equation of state; gamma-ratio and adiabatic expansion; integrating factor for adiabatic expansion; results tending to show that to each particular path thermodynamically pursued by substance there corresponds distinguishing thermodynamic integrating factor.

TINNING

CASTINGS. Tinning Cast and Malleable Iron Products, A. Eyles. Sheet Metal Worker, vol. 18, no. 24, Dec. 30, 1927, pp. 915 and 928.

TRACTORS

VARIED USES OF. Tractor Meeting Deals with Uses. Soc. Automotive Engrs.—Jl., vol. 22, no. 1, Jan. 1928, pp. 108-112, 5 figs. Brief review of papers presented at Annual Tractor Meeting in Chicago.

TUBES, STEEL

HEAT TREATMENT. The Effect of Heat Treatment on Cold-Drawn Steel Tubes, F. C. Lea. Engineering, vol. 124, no. 3232, Dec. 23, 1927, pp. 797-800, 16 figs. Experiments to determine effect of annealing at various temperatures on properties of cold-worked steel tubes and their relationship to fatigue range; compression and torsion tests; change of density by heat treatment; effect of repetition stresses; effect of gradually raising repeated stress.

TUNNELS

CONSTRUCTION. Driving the New Cascade Tunnel, H. J. King. Explosives Engr., vol. 6, no. 1, Jan. 1928, pp. 17-24, 15 figs. New Cascade tunnel, now under construction for Great Northern Railway Co. between Scenic and Berne, in state of Washington, is single-track bore 7.78 mi. in length.

W

WATER CHLORINATION

DRINKING SUPPLIES. Chlorinating Drinking Water Supplies, R. V. Donelly. Can. Engr., vol. 53, no. 25, Dec. 20, 1927, pp. 621-625, 4 figs. What every engineer and water-works superintendent should know about chlorination discussed in paper presented at annual convention of New England Water Works Association; operation of chlorinating equipment described; uses of chlorine.

WATER FILTRATION

SUGGESTED RATE. What Is the Best Rate of Filtration? R. B. Simms. Water Wks. Eng., vol. 81, no. 1, Jan. 4, 1928, pp. 19-20. Author suggests rate of 125,000,000 gal. per acre per day, and, where raw water is only slightly polluted and is of low turbidity, 150 million gal. per acre per day; loss of head; wash water; rate of flow in wash-water line.

RAPID GRAVEL. Modern Rapid Filters, A. Graumann. Eng. Progress, vol. 9, no. 1, Jan. 1928, pp. 12-14, 3 figs. Term of filtering, as used in discussion, implies work of removing suspended matter and of simultaneously destroying considerable part of bacteria contained in water; details of Bollmann rapid vertical gravel filters.

RAPID SAND. Five Years' Operation of a Rapid Sand Filtration Plant, M. C. Whipple and H. C. Chandler. Am. City, vol. 38, no. 1, Jan. 1928, pp. 133-138, 4 figs. Quality of raw water to be filtered, water sources, purification process at present time; coagulation filter operation; special treatment of beds.

PLANTS. Efficiency in Filter Plant Operation, J. L. Barron. Contract Rec., vol. 41, no. 50, Dec. 14, 1927, pp. 1257-1259. What successful operator should know about his duties; takes up continuous vs. intermittent operation, cleaning settling basin and beds; washing; chemical control; tests and records; use of control instruments.

PLANTS, CANADA. New Waterworks at Merritton, Ontario, E. H. Darling. Contract Rec. and Eng. Rev., vol. 41, no. 52, Dec. 28, 1927, pp. 242-245, 8 figs. Unusual layout for filter plant as result of necessity for speedy construction; new intake to overcome ice trouble; plant operated in open, design of sedimentation tank, pump and piping arrangements; cost of plant.

WATER PIPE LINES

DESIGN. Design of Pipe Lines, R. J. Roberts. New Zealand Soc. Civ. Engrs.—Proc., no. 13, 1926-27, pp. 147-154. It is shown that design of lines for water works, where total head may not exceed 300 ft., does not permit of great elaboration, and lines chiefly considered are those so much used in New Zealand in recent years for hydro-electric works.

WATER POWER

CANADA. Water Power for Canadian Industries. Can. Min. Jl., vol. 48, no. 50, Dec. 16, 1927, pp. 1010-1014, 2 figs. Adequate supply of low-cost power is one of two essential bases of pulp and paper industry; it is of almost equal importance to mining industry; year signalized completion of first high-tension electric power-transmission system in Canada and incidentally in British Empire.

Developing St. Lawrence River Power. Can. Engr., vol. 53, no. 23, Dec. 6, 1927, pp. 583-585. International feature of proposed power and navigation project; advantages of two-stage development; formation of ice and its effect in river; artificial control of lake Ontario; canals between lake St. Francis and Montreal.

Water Powers of Canada. Dept. of Interior, Canada—Water Resources Paper, no. 60, Nov. 1927, 90 pp., 40 figs. Review of general conditions in Canada; amount of power utilized and by what industries; review of provinces taking up developments by hydro-electric plants for central stations and pulp and paper industries and transmission of power; part played by government in investigating and administering, also legislation affecting water power.

WATER PURIFICATION

LOCOMOTIVES. The Treatment of Water for Locomotives, W. Barr and R. W. Savidge. Am. Water Wks. Assn.—Jl., vol. 18, no. 6, Dec. 1927, pp. 728-736. Discusses softening to remove scale-forming salts; boiler compounds; use of soda ash; zeolite treatment; lime-soda softener; use of sodium aluminate; methods of applying chemicals; Excelsior filter; horizontal-type water softeners; pitting corrosion and foaming.

WATER SUPPLY

BACTERIOLOGY. The Correlation Between Differential Tests for Colon Bacteria and Sanitary Quality of Water, I. M. Lewis and E. E. Pittman. Am. Water Wks. Assn.—Jl., vol. 19, no. 1, Jan. 1928, pp. 78-92. Investigation for determining which method correlates best with sanitary quality of water from fissure springs along Balcones Escarpment from Austin, Texas, to Del Rio; following methods were tested: methyl red and Voges-Proskauer reactions, indol production, ability to use sodium and ferric ammonium citrates and fermentation of cellobiose; citrate test gives better correlation than methyl red and Voges-Proskauer reactions.

WATER TREATMENT

ALUM FLOC. Effect of Salts on the Rate of Coagulation and the Optimum Precipitation of Alum Floc, H. Peterson and E. Bartow. Indus. and Eng. Chem., vol. 20, no. 1, Jan. 1928, pp. 51-55, 3 figs. Alum floc is gelatinous substance, highly absorptive, amphoteric and relatively insoluble over wide range of hydrogen-ion concentration.

SODIUM ALUMINATE. Coagulation Studies at the Washington Suburban Sanitary District, R. B. Morse, C. A. Hechmer and S. T. Powell. Indus. and Eng. Chem., vol. 20, no. 1, Jan. 1928, pp. 56-59. Experience gained at two plants during past few months has indicated clearly that combined treatment of small quantities of sodium aluminate with alum has specific value in treatment of water, especially during periods when raw water contains much colloidal clay

WATER WORKS

CHICAGO. The Distribution System of the Chicago Water Works, J. B. Eddy. Am. Water Wks. Assn.—Jl., vol. 19, no. 1, Jan. 1928, pp. 1-35, 21 figs. History of system since 1834; description of original wooden and cast-iron pipes; growth of population, increase in consumption and development of system; function and design of pumping station and distribution from it; evolution of pumping-station header pipes; operation of distribution system; underground street leakage; dye-tank apparatus used in underground-leakage surveys; meter testing and control; results of changing from 3-in. to 1½-in. meters.

WATERSHEDS

PROBLEMS. Protecting a Water Supply Where Watershed Is Used as Playground of Large City, J. Burt. Hydraulic Eng. (West. Waterworks Section). vol. 3, no. 12, Dec. 1927, pp. 25 and 35. Unusual problems of Marin Water District to maintain clean water; providing fireplaces, picnic tables, convenience stations and water taps; take samples of water, both before and after chlorination, and these samples are tested.

WATERWAYS

ST. LAWRENCE RIVER. Great Lakes to Ocean Waterways. Minn. Federation of Arch. and Eng. Soc.—Bul., vol. 12, no. 12, Dec. 1927, pp. 11-18. Considers costs and relative economic advantages of St. Lawrence route, lake Ontario-Hudson river route, all-American route; description of St. Lawrence route; present navigation; St. Lawrence river; present power developments; ice conditions; improvement proposed.

WELDING

AIRCRAFT. Principles of Aircraft Welding, P. N. Jansen. Acetylene Jl., vol. 29, no. 6, Dec. 1927, pp. 238-240, 5 figs. Methods used by Curtiss Airplane and Motor Co. are described with types of joints and personnel of welders. Strength of welded joints discussed and welding tools used. How uniformity and close limits are obtained.

Welding in Airplanes. Aviation, vol. 23, no. 26, Dec. 26, 1927, pp. 1522-1525, 9 figs. Abstracts from paper presented by R. M. Mock at 1927 International Acetylene Assn. Convention; wing with welded steel spars; welded steel tail surfaces; fuselages welded; future possibilities.

See also Airplanes, Welding.

ELECTRIC. *See Electric Welding Machines.*

PROCESSES AND USES. Welding in Mechanical Construction (La soudre autogène dans la construction mécanique), E. Delamarre. Technique Moderne, vol. 20, no. 1, Jan. 1, 1928, pp. 41-48, 27 figs. Treats of various processes of welding and their application; blowpipe, electric-arc, electric resistance; material necessary for various processes; net cost of welding; charts giving costs of various welding methods.

WIRE

MANUFACTURE. The Manufacture of Steel Wire, G. A. Alder. Iron and Coal Trades Rev., vol. 115, no. 3120, Dec. 16, 1927, pp. 891-892. Patenting; prevention of decarburization in patenting process; passage of wire through galvanizing bath; overdrawing not usually cause of failure. (Continued from Dec. 9.) Paper read before Cleveland Instn. Engrs.

Z

ZINC INDUSTRY

REVIEW OF. The Zinc Mining Industry in 1927, J. D. Conover. Min. Congress Jl., vol. 13, no. 1, Jan. 1928, pp. 34-36 and 56, 2 figs. With many forced closings, overproduction in zinc industry persists; world production for year increased 3 per cent, with tri-state district production off 20 per cent; association activities, legal restrictions, metallurgical progress and tariff necessity discussed.

ZINC ORE

LEACHING. Recent Developments in Ammonia Leaching for Zinc Ores. Chem. Age, vol. 17, no. 440, Dec. 3, 1927, pp. 41-42. Conclusions are that ammonia leaching as process for extraction of zinc from complex ores or other zinc-bearing materials has possibilities.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street. New York, N.Y.

A

AIR BRAKES

Design. Improvements in Air Brakes, C. C. Farmer. Ry. Age (Section I), vol. 84, no. 4, Jan. 28, 1928, pp. 239-241. Discusses improvements that have been made to air brakes on steam locomotive; number of improvements that have been made to air valves and cages with object of obtaining more rugged designs and reduced leakage; discusses at considerable length operation and advantages of quick-service function incorporated in passenger-car brakes; freight-car brakes; air brakes for electric locomotives.

Maintenance and Repairs. Modernization of Air Brake Maintenance, E. F. Wentworth. Ry. Age (Section I), vol. 84, no. 4, Jan. 28, 1928, pp. 241-242. Considerable number of roads handling heavy passenger traffic of freight trains on heavy grades have for years been forced by necessity to follow satisfactory system of air-brake maintenance for locomotive and car equipment; outlines what has been done in last two years to bring about practically satisfactory air-brake maintenance conditions by establishment of brake-pipe and cylinder-leakage limits.

AIR PREHEATERS

Types. Air Preheaters for Boiler Furnaces (Les réchauffeurs d'air pour foyers de chaudières). Génie Civil, vol. 92, no. 3, Jan. 21, 1928, pp. 63-67, 12 figs. Classifies air heaters and describes and discusses values of each; comparison of three different types showing preference for heaters with parallel plates instead of tubes.

Preheated Air for Boiler Furnaces, P. H. N. Ulander. Eng. and Boiler House Rev., vol. 41, no. 7, Jan. 1928, pp. 332-335, 3 figs. Relative cost of preheater installation designed for an efficiency varying between 30 to 70 per cent, and cost per 1 per cent of fuel saving effected by preheater; presents curves referring to regenerative type of preheater; temperature of preheated air. (Continuation of serial.)

AIRPLANE ENGINES

Fuel Sprays, Testing. The N.A.C.A. Photographic Apparatus for Studying Fuel Sprays from Oil Engine Injection Valves and Test Results from Several Researches, E. G. Beardsley. Nat. Advisory Com. for Aeronautics—Report, no. 274, 1927, 14 pp., 12 figs.

Manufacture. Machining Operations in Aero-Engine Production. Machy. (Lond.), vol. 31 and vol. 32, nos. 794 and 795, Dec. 29, 1927, and Jan. 5, 1928, pp. 409-412, 13 figs., and 441-445, 5 figs.

Water-Cooled. Water-Cooled Aero Engines, A. A. Rubbra. Royal Aeronautical Soc.—Jl., vol. 32, no. 205, Jan. 1928, pp. 77-85, 9 figs. Water-cooled Rolls-Royce engines and constructional details; power and weight; increasing loading factor on bearings; reduction gears; auxiliaries; cooling systems; 3-point engine suspension; simplified controls; fuel system; starting systems; supercharging; gear-driven blower.

AIRPLANE PROPELLERS

Testing. A New Type of Combined Airscrew Hub Dynamometer and Thrust Meter, F. E. Hellyer. Royal Aeronautical Soc.—Jl., vol. 31, no. 204, Dec. 1927, pp. 1150-1168, 19 figs. Designed to measure resultant force upon its hub forces due to airscrew's torque and thrust; measurement of airscrew efficiency and engine horse power method of applying force; experiments with model; friction between propeller boss and shaft on which it slides; friction between driving faces and rollers; experiments with model torque-thrust meter; finding brake horse power.

AIRPLANES

Design. In the Drawing Office—Some Notes on the Assembly of Wings, W. S. Hollyhock. Flight (Aircraft Engr.), vol. 19, no. 52, Dec. 29, 1927, pp. 880d-880e, 1 fig. Importance of combination of angles due to sweepback, dihedral, airfoil incidence and spar incidence briefly dealt with; errors small, but might cause structural failure; in case of sweepback, effect of spar incidence if neglected may upset fore-and-aft trim of machine, by giving incorrect amount of sweepback when erected; formula arranged to correct effects.

Materials, Mechanical Properties of. Mechanical Properties of Some Materials Used in Airplane Construction, E. B. Wolff and L. J. G. Van Ewijk. Nat. Advisory Com. for Aeronautics—Tech. Memorandum, no. 448, Jan. 1928, 17 pp. Results of test to determine mechanical properties of aircraft materials; aluminum and its alloys, steel, wood and fabrics tested; tables of strength ratios; ratio between allowable stress (tensile or compressive) and specific gravity; figures for spruce, pine and 3-ply wood, merawan, Carolina pine, walnut and mahogany; exceptionally low specific gravity and favourable D/S. G. ratio of balsa. Translated from Ingenieur, Aug. 7, 1926.

Performance Requirements. Notes on the Guggenheim Safety Competition, A. Klemin. Aviation, vol. 24, no. 5, Jan. 30, 1928, pp. 246-254, 13 figs, 3 tables.

ALLOY STEELS

Heat-Resisting. Heat-Resisting and Non-Corrodible Steels, S. A. Main. Fuel, vol. 7, no. 1, Jan. 1928, pp. 4-20, 17 figs. Account of progress which has taken place lately, including development and practical application of heat-resisting and non-corroding steels; deals particularly with products resulting from research carried out by author's firm, Handfields, Ltd., Sheffield, England. Reprinted from Jl. of Instn. of Aeronautical Engrs., Aug. 1927.

ALLOYS

Magnesium. *See Magnesium Alloys.*

Temperature Effect. On the Influence of Temperature on the Properties of Alloys, J. Cournot. Information on Refrigeration (Institut Int. du Froid)—Monthly Bul., no. 9-10, Sept.-Oct. and Oct.-Nov. 1927, pp. 873-874. Author summarizes present state of knowledge on variations of properties of alloys and practical consequences therefrom; study of these variations is made by means of test tubes of alloys considered, by bringing these tubes to temperatures required and determining by appropriate tests values of properties sought for. Translated from Revue Scientifique, no. 19, 1927, pp. 589-595.

AMMONIA COMPRESSORS

Control Valves. Automatic Ammonia Control Valves, H. C. Venemann. Power, vol. 67, no. 4, Jan. 24, 1928, pp. 148-151, 3 figs. Discusses shortcomings of existing automatic control valves and outlines plant conditions that influence operation of such expansion valves; there are four types of automatic control valves in common use: Stop valves, to open and close quickly; constant-pressure valves, to maintain definite suction pressure; constant liquid-level valves, to keep liquid in evaporators at definite level; and load-demand valves, to control liquid supply in proportion to load demands upon evaporator.

Rotary. The Most Powerful Refrigerating Machine in the World (La plus puissante machine frigorifique du monde), R. Villers. Nature (Paris), no. 2777, Jan. 15, 1928, pp. 66-68, 5 figs. Describes rotary ammonia compressor; scheme of operation; built by Brown-Boveri for Kaiseroda works in Germany; delivers 8 million frigories per hour if temperature of liquefaction falls to 25 deg. cent.

Volumetric Efficiency. Is Volumetric Efficiency Important? T. M. Gunn. Power, vol. 67, no. 6, Feb. 7, 1928, pp. 255-257, 2 figs.

AMMONIA CONDENSERS

Heat Transfer in. Heat Transfer in Ammonia Condensers, A. P. Kratz, H. J. MacIntire and R. E. Gould. Univ. of Ill.—Bul., vol. 25, no. 15, Dec. 13, 1927, 56 pp., 30 figs. Also (conclusions) Refrig. Eng., vol. 15, no. 2, Feb. 1928, p. 56, 1 fig. Investigation to determine coefficient of heat transfer for various types of condensers, regarding total surface exposed to saturated ammonia vapour as whole; it was also desired to obtain information on relative effectiveness of different portions of cooling surface and to develop both optimum and limiting conditions of operation for types considered.

AMPLIFIERS

Vacuum Tube. Vacuum Tube Synchronizing Equipment, T. A. E. Belt and N. Hoard. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 2, Feb. 1928, pp. 113-117, 11 figs. Points out that vacuum tube synchronizing equipment makes unnecessary costly high-voltage transformers which have been almost universally used for synchronizing in past; describes commercial apparatus, gives equations pertaining to vacuum tube amplifier and shows calculated and measured characteristic curves.

ARCHES, CIRCULAR

Stresses. A Graphic Method for Determining the Stresses in Circular Arches Under Normal Loads by the Cain Formulas, W. Cain, W. L. Huber and G. E. Edgerton. Am. Soc. Civ. Engrs.—vol. 54, no. 2, Jan. 1928, pp. 333-337. Discussion of paper by F. H. Fowler, continued from Dec. 1927 issue of Proceedings

AUTOMOBILE ENGINES

Cylinders, Casting. Aluminum Cylinder Blocks Cast in Permanent Moulds, J. A. Lucas. Am. Mach., vol. 68, no. 4, Jan. 26, 1928, pp. 173-174, 6 figs. Method used in Lancia plant for casting cylinder blocks around cylinder sleeves and other inserts; cylinders staggered, and have iron sleeves cast into aluminum block by use of permanent metal moulds; oiling tubes welded into complete unit and placed in mould; sleeves, rough bored, turned, then sand blasted and copper plated before being set in moulds, are temporarily located on pilots and handled by insides; cores located accurately by dowels.

Design. Increase in Engine Power Among Chief Trends of Year, P. M. Heldt. Automotive Industries, vol. 58, no. 2, Jan. 14, 1928, pp. 45-49, 8 figs.

Detonation. Mechanical Design and Detonation, H. R. Ricardo. Automobile Engr., vol. 18, no. 237, Jan. 1928, pp. 23-24. Question of detonation in its relation to engine design; what could be done in way of performance considered if detonation were non-existent; advantages and disadvantages of raising compression ratio; tendency to detonate depends upon four design factors; influence of turbulence upon detonation; effect of cylinder size on detonation. Paper presented to Instn. Petroleum Technologists.

Diesel. *See Diesel Engines, Automotive.*

AUTOMOBILE PLANTS

Heat-Treating Department. Heat-Treating at the Fordson Plant. Soc. Automotive Engrs.—Jl., vol. 22, no. 2, Feb. 1928, pp. 166-167, 2 figs.

Heat-Treatment Plant. Machy. (Lond.), vol. 31, no. 796, Jan. 12, 1928, pp. 485-486, 2 figs. Layout and operation of heat-treatment plant of Associated Daimler Co. at Southall; carburizing and heat-treatment of parts; 15 August muffle furnaces fired by oil fuel, and 5 quenching tanks, 3 for oil and 2 for water quenching; 9 furnaces for heat treatment; description of carburizing furnaces; each of quenching tanks connected to Heenan patent cooling machines housed outside main factory in special buildings.

AUTOMOBILES

Headlights, Specifications for. Draught of Specifications for Laboratory Tests of Optical Characteristics of Electric Headlamps for Motor Vehicles. Illum. Eng. Soc.—Trans., vol. 23, no. 1, Jan. 1928, pp. 17-22. Definitions; samples for test; incandescent lamps; set-up for testing; photometric test points; focal adjustments of incandescent lamps; dual-beam headlamps designed for 21-22 candlepower incandescent lamps; fixed-beam headlamps designed for 21 candlepower incandescent lamps.

Manufacture, Ford. Ford Production Methods. Machy. (Lond.), vol. 31, no. 794, Dec. 29, 1927, pp. 413-415, 7 figs. Commutator roller head produced by series of press operations from 14 B.W.G. sheet steel; three forming operations to give roller head its shape; first bending tools for roller head; blanking tools; press operations; after forming, roller head swaged; operations on roller clevis; punching and piercing operations.

Operations on the New Ford Car—Progressive Assembly in the Fordson Plant. Machy. (N.Y.), vol. 34, no. 6, Feb. 1928, pp. 464-465, 8 figs. Eight halftones illustrating assembling operations on new Ford car, each accompanied by brief description; individual units separately assembled and tested, ready for final assembly; assembling of clutch; engine assembly; gas-fired annealing furnace with automatic timing control for differential ring gears; fitting pistons to engine; all operations performed along assembly line as chassis proceeds; chassis completely assembled.

Manufacture, Inspection. Ford Inspection Methods. Machy. (Lond.), vol. 31, no. 796, Jan. 12, 1928, pp. 473-475, 7 figs.

B

BEARING METALS

Lead-Base. A Discussion of Lead-Base Bearing Metal, G. A. Nelson. West. Machy. Wld., vol. 19, no. 1, Jan. 1928, pp. 12 and 25, 3 figs. Lead-base bearing metals as substitute for tin-base babbitt metal, but at much lower price; use in line shaftings and parts of machines that do not receive shocks; heated up to 1,000 deg. Fahr.; at definite intervals of time, temperature readings taken; time plotted against temperature; care to prevent segregation in pouring box of this metal; use of tin bearing for lower half of box and lead bearing for upper half.

BEARINGS

Alloy-Steel. Alloy Bearings Applied to Trains, F. C. Langenberg and C. McKnight. Iron Age, vol. 121, no. 2, Jan. 12, 1928, pp. 130-131, 3 figs. Very hard wearing surface after proper treatment and strength of core result in high resistance to shock and impact; possibility of obtaining fine core and hard case after single quench; heat-treated, it is applicable for high temperatures; alloys in scrap recoverable; chart showing physical properties of core of case-hardened nickel-molybdenum steel; single treatment; table of properties of heat-treated specimens tested at 74,600 and 1,000 deg. Fahr.

White-Metal. White-Metal Bearings. Automobile Engr., vol. 18, no. 237, Jan. 1928, pp. 25-26, 1 fig. Investigation regarding adhesion between white metal and bearing shells; thorough cleaning and tinning absolutely essential for all types of surfaces and materials; adhesion between white metal and cast-iron assisted by natural roughness and porosity of surface; efficiency of joint of 50 per cent obtained between white metal and gun metal; results with mild-steel test pieces; temperature of mandrel and back plate important; sand blasting and pickling; design of bearing bushes.

BEARINGS, ROLLER

Steel Mills. Roller Bearings Cut Down Power Waste, S. M. Weckstein. Iron Age, vol. 121, no. 4, Jan. 26, 1928, pp. 259-262, 8 figs. Application of roller bearings to roll necks, pinion stands and hot saws in steel mills; roller bearings suited to roll necks, simple in construction and compact; advantages claimed; conditions for hot saws hard to meet; high speed of saw and sudden heavy-peak loads; high operating temperatures; bearing arrangements for various types of auxiliaries; hot-bed table rolls for strip mills.

BELT DRIVE

Design. Modern Theory and Practice Involved in Belt Drives, W. D. Hamerstadt. Purdue Eng. Rev., vol. 23, no. 2, Jan. 1928, pp. 11-12 and 22, 24 and 26, 5 figs. Design of belt drives; pull equal to product of pressure between driving and driven surfaces times their coefficient of friction; values of coefficient of friction; transmitting capacities; correction for different arcs of contact of belt on pulley; belt, not pulley, limiting factor; belt increased in width because greater cross-section is necessary to stand tension to which belt is to be subjected; questions and answers on belt drives.

BELTS AND BELTING

Quality Factors. Quality Factors of Leather Belts, R. C. Moore. Indus. Engr., vol. 86, no. 1, Jan. 1928, pp. 29-31, 4 figs. Life and operating reliability of leather belt depends to large extent upon selection and matching of leather strips used, as well as care exercised in its manufacture.

BLAST FURNACES

Blast Drying. The Silica Gel Blast-Drying Plant at Wishaw. Engineering, vol. 124, no. 3233, Dec. 30, 1927, pp. 836-837, 3 figs. Description of the silica gel blast-drying plant as installed at Wishaw works of Glasgow Iron & Steel Co.; method of manufacture and properties of silica gel.

Practice. Blast Furnace Developments in 1927, H. A. Berg. Blast Furnace and Steel Plant, vol. 16, no. 1, Jan. 1928, pp. 15-17. Although there have been no radical departures in furnace construction or in manner of handling furnaces, nevertheless many minor advances have been made; preparation, selection and handling of materials; thorough gas cleaning; hot-blast stoves; boiler installations.

Low-Cost Pig Iron Means Highest Output Per Furnace, W. A. Haven. Iron Age, vol. 121, no. 5, Feb. 2, 1928, pp. 334-335, 2 figs.

BOILER FEEDWATER

Regulators. Feedwater Control Equipment. Power Plant Eng., vol. 32, no. 2, Jan. 15, 1928, pp. 117-120, 6 figs. Present-day demands require quicker response from feedwater regulators; types of regulators, their application and operation.

Softening. Sodium Aluminate as an Aid to Water Softening. Am. Ry. Eng. Assn.—Bul., vol. 29, no. 300, Oct. 1927, pp. 138-142. Use of sodium aluminate on the Rock Island lines; table showing additional savings resulting from use of sodium aluminate in lime and soda plants.

BOILER FURNACES

Linings. How to Avoid Failure in Monolithic Furnace Linings, J. L. Cummings. Power, vol. 67, no. 5, Jan. 31, 1928, pp. 175-177, 4 figs. Résumé of practical experience telling why same materials cannot be used for furnace linings and baffles, importance of thoroughly mixing and proportioning refractory and bonding material, with comments on compacting, drying and use of wooden forms and reinforcing metal.

Pulverized Coal in. Heating of Steam Boilers with Pulverized Coal (La chauffe des générateurs de vapeur au charbon pulverisé), M. Emanaud. Technique Moderne, vol. 19, no. 24, Dec. 15, 1927, pp. 781-783, 7 figs. Treats of smoke-dust separators and ash arresters.

The Disposal of Grit from Boilers Fed by Pulverized Fuel, W. A. Smith. Elecn., vol. 99, no. 2587, Dec. 30, 1927, pp. 803-805, 5 figs. Station engineer's problem; soot blowers; pneumatic-dust extraction plants; grit catchers; installations for Lancashire boilers; dealing with existing plants; alternative to permanent extraction system; pneuconex; combined gravity and induction advantages; principal features of grit catchers.

Turbulence vs. Volume. Turbulence vs. Large Furnace Volume, L. W. Hayward. Power, vol. 67, no. 6, Feb. 7, 1928, p. 240. To obtain both time element for burning fixed carbon and turbulence for rapid mixing of products of conduction, furnaces should be large enough to provide necessary time element for burning fixed carbon, and burner should provide necessary turbulence for rapid mixing of gases; experience obtained in burning coal in pulverized form has demonstrated that turbulence is of importance, but that time element of combustion, which is determined by furnace volume, is of greater importance.

BOILER TUBES

Heat Transmission Through. Heat Transmission Through Boiler Tubes, H. O. Croft. Univ. of Ill.—Bul., vol. 25, no. 5, Oct. 4, 1927, 55 pp., 17 figs. Investigation to obtain heat transmission data under conditions similar to those existing in actual water-tube boiler and to study phenomena of water circulation under same conditions; conclusions drawn are that coefficient of heat transmission of apparatus is affected by: rate of gas flow, temperature difference between flue gas and water; pressure at which steam is generated; temperature of gas stream; water velocity in tube has slight effect on overall coefficient of heat transmission.

BOILERS

Design. Steam Generators at Morgan & Wright Plant, G. Burgess. Power Plant Eng., vol. 32, no. 3, Feb. 1, 1928, pp. 171-173, 2 figs.

The Characteristics of Modern Boilers, E. R. Fish. Machy. Market, no. 1419, Jan. 13, 1928, pp. 21-22. Changes in shape and design due to use of higher pressures; more powerful fabricating equipment and greater care in methods of workmanship; moderate-size moderate-pressure boilers in majority; furnace improvements; modern fuel-burning apparatus designed to use small amount of excess air; water walls must be carefully and properly designed and arranged; draught problems; details of boiler design considerably modified to accommodate superheaters sufficiently large to give desired temperatures; furnace-controlling systems.

Efficiency Diagrams. The Reflex-Ordinate Boiler-Efficiency Diagram. Power Engr., vol. 23, no. 262, Jan. 1928, p. 8. Presents diagram on supplementary plate based on Callendar's enlarged steam tables; drawn and designed by H. C. Golder and R. B. Page.

Locomotive. *See Locomotive Boilers.*

Steam Generators. *See Steam Generators.*

Steam-Heating, Testing. The Testing of Low-Pressure Steam Heating Boilers, L. S. O'Bannon. Am. Soc. Heating and Ventilating Engrs.—Jl., vol. 34, no. 2, Feb. 1928, pp. 103-115, 4 figs. Gives results of few experiments conducted at University of Kentucky, designed to furnish information bearing on several important features of tentative code for rating of low-pressure solid-fuel steam boilers; description of boiler-testing laboratory.

BORESCOPES

Holz. Holz "Borescopes." Am. Mach., vol. 68, no. 2, Jan. 12, 1928, pp. 73-74, 3 figs. Device for examining inside surfaces of gun and rifle barrels, compressed-gas steel cylinders, metal tubes, hollow shafts and axles and long borings in castings; long metal tube carries source of electric illumination and contains optical system, usually consisting of lenses, prisms, light filters and focusing eyepiece; slight structural difference clearly brought out; various types and applications.

BRIDGES

Construction Progress. Bridge Construction Gained 70 Per Cent, A. W. Welch. Iron Age, vol. 120, no. 1, Jan. 5, 1928, p. 44. Very brief discussion giving principally statistics for steel construction; total for all classes of work exceeded $7,000,000,000, as it did in 1926; outlook is for continuance of high rate of building; latter half showed greater activity than first half; reflected in domain of public works and in private work other than buildings; gain in every class except water-works; greatest gain in bridges explained; coincident with rapid increase in construction volume, strong increase in credits.

Design. Bridge Design for Various Conditions, J. A. L. Waddell. Can. Engr., vol. 54, no. 3, Jan. 17, 1928, pp. 138-140. Treats of steel arches, cantilever arches, suspension bridges, continuous-truss spans, swing spans, bascule spans, vertical-lift spans, toll bridges; also treats of studies preliminary to design of bridge such as borings for foundations and right of way. (Conclusion.)

Lift, Bascule. Railway and Vehicular Bridge Across Vancouver Harbour, B.C. (Canada), A. Don Swan. Instn. Civil Engrs.—Proc., paper no. 4638, 1928, 15 pp., 4 figs. on supp. plate. Describes sinking of piers and construction of concrete piers and caissons; erection of steel work; operating mechanisms; signals; bridge carries single-track standard-gauge railway between main trusses, with two 10-ft. highways, one on either side, outside of truss, and one 3½-ft. sidewalk; provided with 185-ft. bascule span between piers Nos. 2 and 3.

Skew Arch, Design. Crown Stresses in a Skew Arch, J. C. Rathbun. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 2, Feb. 1928, pp. 485-504, 12 figs. Purpose of investigation was to devise method of finding stresses at crown of ring of cast skew-arch model and to check results obtained by laboratory experiments with those obtained by theoretical calculations; investigation has grown out of study made by writer in 1923-24; study of effect of horizontal loads is of especial interest as brought out by A. H. Beyer.

Suspension, Eye-Bar Cable. The Eye-Bar Cable Suspension Bridge at Florianopolis, Brazil, H. Cross. Am. Soc. Civ. Engrs.—Proc., vol. 54, nos. 1 and 2, Feb. 1928, pp. 579-580. Discussion on paper by D. B. Steinman and W. G. Grove, continued from Dec. 1927 issue of Proceedings.

Suspension, Stiffening Girder. The Stiffening Girder with Variable Moment of Inertia. Engineering, vol. 125, no. 3234, Jan. 6, 1928, pp. 1-2. Refers to article by L. S. Moisseiff (Jl. Franklin Inst., Oct. 1925); it was shown that, when moment of inertia of girder varies from point to point, solution becomes very difficult, and in general can only be effected arithmetically; repeats calculation given in article cited, taking into account fact that moment of inertia of girder embodied in Delaware river bridge varies considerably from its average value; method of solving linear differential equations devised by author of this article some 35 years ago.

BUFFING

Automatic Machine for. Buffing Odd-Shaped Parts Automatically. Machy. (N.Y.), vol. 34, no. 6, Feb. 1928, pp. 429-431, 3 figs. Design of three mechanisms for buffing odd-shaped parts on type H model built by Automatic Buffing Machine Co.; mechanism for buffing automobile lamp doors; automobile rear-lamp doors pressed from brass; rotated past buffing wheel; automobile radiator shells polished and buffed; in polishing and copper buffing, production of 10 shells per hour averaged.

BUILDING CONSTRUCTION

Canada. A Phenomenal Year for Canada's Building Industries, A. R. R. Jones. Can. Machy., vol. 38, no. 26, Dec. 29, 1927, pp. 166-167, 3 figs. High value of contracts; work contemplated; residential contracts higher; industrial contracts much lower; great year for business-building construction; increase in construction well spread all over country; tables for 1924-1927 showing contracts awarded; industrial-construction awards; engineering-construction contracts.

REINFORCED-CONCRETE. The Application of Reinforced-Concrete to Structures, W. F. Zabriskie. Concrete, vol. 32, no. 2, Feb. 1928, pp. 39-42, 3 figs. Discussion of present-day trends in uses of reinforced concrete in structures; concrete in competition with other building materials; developments in construction methods; discussion of scope of usefulness of reinforced concrete; combination steel and concrete structures.

BUILDINGS

CONCRETE, FORMWORK. Form Details on a Monolithic Concrete Building, N. L. Protheroe. Concrete, vol. 32, no. 2, Feb. 1928, pp. 17-21, 8 figs. Monolithic concrete walls require careful formwork; methods used to obtain attractive bush-hammered exterior concrete surface; economical scaffolding designed; form details that secure true concrete surfaces; preventing surface irregularities caused when concrete shrinks from forms; construction methods; working drawings of form details.

REINFORCED-CONCRETE. America's Tallest Reinforced-Concrete Building, W. W. Hay. Concrete, vol. 32, no. 2, Feb. 1928, pp. 33-34, 3 figs. Design of Master Printers' Building in New York involves many interesting features; is 301 ft. high; flat-slab construction used; combination of reinforced concrete and steel in columns.

STEEL, DESIGN. Column Deflection Method for Designing Lateral Bracing, J. C. Van der Mey and F. H. Spitzer. Eng. News-Rec., vol. 100, no. 3, Jan. 19, 1928, pp. 106-108, 3 figs. Authors submit means of determining necessary lateral bracing for any assumed loadings, using method that is based on deflection of columns; claim is made for this method that it is workable, economical and more consistent with conditions that actually obtain in building submitted to lateral loadings which cause deflection in columns than in three methods of designing against horizontal loadings that are in common use.

C

CAMS

MACHINING. Machining a Cam Surface in a Drill Press, J. E. Fenno. Machy. (N.Y.), vol. 34, no. 6, Feb. 1928, pp. 447-448, 3 figs. Problems in machining switch box-control pad; two operations performed with fixtures of unique design; machining of cam surface and drilling and tapping of hole; to machine cam face, pad is placed in base of fixture bolted to drill-press table, concentric with drill-press spindle; short; hub of pad on which cam surface is to be formed first rough-faced with standard counterbore, drilling and tapping jig; jig used in machining cam surface; design of jig that can be quickly loaded and unloaded.

CANALS

SHIP. The Lake Washington Ship Canal, Washington, L. C. Sabin. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 1, Jan. 1928, pp. 273-277. Discussion on paper by W. J. Barden and A. W. Sargent, continued from Dec. 1927 Proceedings.

The Lake Washington Ship Canal, Washington, W. J. Barden and A. W. Sargent. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 2, Feb. 1928, pp. 585-586. Discussion of paper by W. J. Bardon and A. W. Sargent, continued from Jan. 1928 issue of Proceedings.

SPILLWAYS. Side Spillways for Regulating Diversion Canals, E. S. Lindley. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 2, Feb. 1928, pp. 641-642. Discussion of paper by W. H. R. Nimmo, published in Oct. 1927 issue of Proceedings.

WELLAND, CANADA. Welland Ship Canal Project Nears Completion. Can. Machy., vol. 38, no. 26, Dec. 29, 1927, pp. 217-221, 6 figs. General article dealing with history of first four canals and construction of present canal; curves eliminated; table of dimensions and notable features of canal; has eight sections; Port Weller artificial harbour; twin locks in flight; work from Port Robinson to Welland of very involved nature; western breakwater; new station erected.

CAR RETARDERS

G.R.S. SYSTEM. Car Retarders at Mechanicville. Ry. Age, vol. 84, no. 5, Feb. 4, 1928, pp. 295-298, 6 figs. Boston & Maine installs G.R.S. system in eastbound yard; 10 retarders serve 36 tracks; layout of this yard differs in many features from other yards previously equipped with car retarders; principal difference is in arrangement of ladders, whereby each group of six tracks is served by one group of retarders, yard having 36 classification tracks; description of yard; ladder arrangement; grades; car retarders; control towers; traffic economies.

CARS, DYNAMOMETER

NEW. New Dynamometer Car, South African Railways. Ry. Engr., vol. 49, no. 576, Jan. 1928, pp. 27-29, 5 figs. Description of this car and its equipment recently introduced on South African Railways; car is 3-ft. 6-in gauge; underframes and body details; mechanism of instruments; measurement of car speed; ascertaining amount of work performed; other equipment.

CARS, FREIGHT

REPAIRING. Progressive Repairs to Hopper Cars. Ry. Mech. Engr., vol. 102, no. 1. Jan. 1928, pp. 27-29, 7 figs. Reclaimed material important factor in rebuilding cars; article describes operations in connection with overhauling of series of 750 composite hopper cars of 110,000-lb. capacity at Frankfort, Ind., shops of New York, Chicago & St. Louis Co.

Rebuilding Redesigned Box Cars on the New Haven. Ry. Mech. Engr., vol. 102, no. 2, Feb. 1928, pp. 89-94, 14 figs.

CARS, PASSENGER

RECONSTRUCTION. Passenger Car Reconstruction of the D. & H. Ry. Mech. Engr., vol. 102, no. 1, Jan. 1928, pp. 23-26, 8 figs. Delaware & Hudson has incorporated number of new and unusual features of construction in design of two types of passenger cars which it has recently constructed and placed in service; two most prominent features are modified turtle-back roof, which has been adopted as standard for all passenger cars on system, and unusual interior arrangements planned to meet needs of travellers.

CARS, STREET

GEARS AND GEARING, REDUCTION. Double-Reduction Motor Drive with Spring Suspension, C. Bethel. Elec. Ry. Jl., vol. 71, no. 4, Jan. 28, 1928, pp. 152-154, 5 figs. Description of suspension of motors and double-reduction gear drive; lightening of motors; European experience proves valuable aid to design; quietness of operation of motors obtained; demands for more rapid and attractive street-car service led to development of double-reduction gear drive with spring-supported motors; oil-tight gear case is additional advantage.

CASE HARDENING

NITRIDING PROCESS. Nitralloy and the Nitriding Process, H. A. DeFries. Machy. (Lond.), vol. 31, no. 796, Jan. 12, 1928, pp. 478-479. Special alloy steels which can be surface-hardened by being subjected to action of ammonia gas while material is heated to approximately 875 deg. Fahr. without subsequent quenching; remarkable resistance to metal-to-metal wear; excellent forging properties; machined satisfactorily in both annealed and heat-treated conditions; composition and uses; heat treatment previous to nitriding; nitriding process and equipment used for it; depth and hardness of case.

Surface-Hardening by Nitrogen. Iron and Steel of Can., vol. 11, no. 1, Jan. 1928, pp. 19-21. Invention of Dr. Fry, of research laboratories of Friedrich Krupp, of Essen; process consists of subjecting parts to be hardened to action of ammonia gas at temperature of approximately 500 deg. cent. for period of time varying from 40 to 120 hr.

CAST IRON

ALLOY. Production and Uses of Nickel-Chromium-Iron and Cobalt-Chromium-Iron Castings, J. F. Kayser. Iron and Steel World, vol. 1, no. 10, Nov. 1927, pp. 717-718. Description of Ni-Cr-Fe and Co-Cr-Fe alloys suitable for castings; properties and uses of such alloy castings; "stainless" alloys. Abstract from paper read before Belgian Foundrymen's Assn.

ALUMINUM. Aluminum Cast Irons, A. B. Everest. Foundry Trade Jl., vol. 37, no. 592, Dec. 22, 1927, pp. 208-210, 1 fig. Discusses grey cast iron formed by addition of aluminum to low-silicon irons; mechanical tests were made on alloys formed by adding aluminum to American washed iron; results indicate that at moment there is no definite future for aluminum cast iron for normal purposes; no special properties have been shown which cannot be obtained by other simpler and better methods of treating cast iron.

PROPERTIES. The Influence of Nickel and Chromium on Cast Iron, A. B. Everest. Brit. Cast Iron Research Assn.—Bul., no. 19, Jan. 1928, pp. 7-9. Supplement to Bulletin No. 16, April 1927, giving details of papers on influence of nickel and chromium on cast iron; gives bibliography of recently published works.

WEAR. The Wear of Cast Iron. Brit. Cast Iron Research Assn.—Bul., no. 19, Jan. 1928, pp. 9-13. Review of recent experimental work, covering automobile pistons and cylinders; brake blocks; locomotive valve rings and work hardening.

CEMENT

PORTLAND, INTERNATIONAL STANDARDS. International Standards for Cement, D. R. Platzmann. Concrete, vol. 32, no. 2, Feb. 1928, pp. 103-108. Analysis of cement specifications of various nations, pointing out advantages and disadvantages of international standardization of cement specifications.

CHIMNEYS

REINFORCED-CONCRETE, STRESSES. Stress in Reinforced-Concrete Chimneys, P. Gillespie and W. K. Irwin. Can. Engr., vol. 54, no. 3, Jan. 24, 1928, pp. 153-156, 4 figs. Charts for approximate stress determination prepared for rapid, though approximate, determination of stress in both steel and concrete, and reinforced-concrete chimneys, due to weight, wind and temperature changes; based on studies conducted at Toronto Univ.

CHROMIUM

ALUMINUM STEEL. Physical Properties of Several Chromium-Aluminum and Chromium-Nickel-Aluminum Steels, V. O. Homerberg and I. N. Zavarine. Am. Soc. Steel Treating—Trans., vol. 8, no. 2, Feb. 1928, pp. 297-301 and (discussion) 301-304, 3 figs. Affinity of aluminum for nitrogen in ammonia case-hardening process has resulted in manufacture of special alloy steels containing aluminum with chromium or with chromium and nickel; subjection of steels to action of ammonia gas at comparatively low temperature results in production of hard surface without deformation of material and without subsequent heat treatment; curves and tables showing physical properties of steel.

CHROMIUM-VANADIUM STEEL

HEAT-TREATED. Correlating Test Data on Heat-Treated Chromium-Vanadium Steels, E. J. Janitzky. Soc. Automotive Engrs.—Jl., vol. 22, no. 1, Jan. 1928, pp. 55-59 and (discussion) 59-64, 6 figs. Work performed and procedure followed in correlating test results on specimens of heat-treated S.A.E. chromium-vanadium steel 6130, as basis for revision of physical-property charts for certain automotive steels; 115 tests, including complete chemical analysis, tensile strength and Brinell, scleroscope and Rockwell hardness tests; results given in frequency or probability curves.

CITIES AND TOWNS

PLANNING. Basic Information Needed for a Regional Plan, D. M. Baker and H. J. March. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 2, Feb. 1928, pp. 597-600. Discussion on paper by H. M. Lewis, continued from Jan 1928 issue of Proceedings

Basic Information Needed for a Regional Plan, H. Bartholomew. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 2, Jan. 1928, pp. 289-290. Discussion on paper by H. M. Lewis, continued from Dec. 1927 issued of Proceedings.

PLANNING, TORONTO. University Avenue Extension Scheme, A. G. Dalzell. Can. Engr., vol. 54, no. 3, Jan. 24, 1928, pp. 169-171, 3 figs. Proposal for extension of University avenue, Toronto, to Front street, to relieve traffic on Yonge and Bay streets; elevated roadway 100 ft. wide with eight traffic lanes suggested; straight and spiral ramps at Queen street.

COAL

CARBONIZATION, LOW-TEMPERATURE. The Dvorkovitz Low-Temperature Carbonization System. Engineering, vol. 125, no. 3236, Jan. 20, 1928, pp. 72-73, 6 figs. Method developed for minimizing extent of cracking, preventing inconvenient cohesion in charge and removing oil vapours almost immediately after they have been formed; consists in supplementing external heating of retort with producer gas by introducing into upper parts of retort, and of its downward extension, supply of gas superheated to moderate temperature.

COAL HANDLING

PLANT. Coal-Handling Plant at the Stourport Generating Station. Engineering, vol. 125, no. 3234, Ja. 6, 1928, pp. 11-13, 2 figs. Coal-handling plant installed is designed for unloading barges in canal basin and transferring coal unloaded either to store in front of boiler house or to boiler house bunkers; alternatively, it can be used for reclaiming stored coal and transferring it to bunkers; describes quay cranes, hopper, conveyors, weighing apparatus, rolling stock; capacity of plant, 50 tons per hr.

COAL MINES AND MINING

ACCIDENT PREVENTION. Safety Practices in the Swastika Mine, J. R. Barber. Min. Congress Jl., vol. 14, no. 2, Feb. 1928, pp. 89-91, 6 figs. Problem of mine safety means unceasing vigilance and alertness in spotting dangerous practices and exacting drastic penalties for violations of safety rules; safety system of St. Louis, Rocky Mountain and Pacific Co. presented.

COLD STORAGE

AIR COOLING. Notes on Cooling Air in Storage Rooms, O. Henckel. Refrig. Eng., vol. 15, no. 2, Feb. 1928, pp. 52-54, 8 figs. Author, who is chief engineer of Swiss firm of Sulzer Bros., discusses brine-spray cooling, flooded evaporator systems, defrosting of coils and air purity, covering interesting points connected with general subject of cooling air for storage and handling of foods; presents culture slides taken from air passing to and from brine-shower air cooler.

CONCRETE

AGGREGATES. Economy in the Use of Local Materials for Concrete, G. W. Hutchinson. Concrete, vol. 32, no. 2, Feb. 1928, pp. 43-44. Discussion of possible use of more easily obtained local materials in some localities; their effect on cost of concrete; their probable influence on quality of concrete; local aggregates tested in Miami paving project.

MIXTURES. Control and Special Mixtures for Road Concrete, J. H. Chubb. Eng. News-Rec., vol. 100, no. 1, Jan. 5, 1928, pp. 19-21, 2 figs. Early-strength concrete gives quick service; marked effect of volume of water in batch on strength of concrete is clearly shown by results of tests on eight batches of concrete identical in every respect except amount of mixing water; data presented show that it is practicable to obtain and to use high-early-strength concrete for paving work; test results are tabulated.

CONCRETE BLOCKS

MANUFACTURE. Distinctive Block Made with Own Design of Equipment, V. Ey. Concrete, vol. 32, no. 2, Feb. 1928, pp. 35-38, 10 figs. "Eyblock" is trade name of wet cast block made in New York plant; products manufacturer designed his own equipment and method of manufacture; wide variety of facings possible; types of block made; manufacturing methods; interesting plant layout; yard-storage methods; costs; merchandizing methods used.

CONVEYORS

BELT. Belt Conveyors Handle Materials for Chicago Sewage Works. Construction Methods, vol. 10, no. 2, Feb. 1928, pp. 10-11, 7 figs. Describes belt conveyors used in building West Side sewage treatment plant in Chicago; mostly to handle cement and aggregates.

Belt Conveyor's Part in Handling Economies. Can. Machy., vol. 38, no. 26, Dec. 29, 1927, pp. 237-238, 4 figs. Design and selection of parts that compose belt conveyor application of proper type of drive and four types in common use; effect of pulleys; hugger drive preferable for conveyors too long to be driven by lagged pulley with snub; variety of materials; in handling materials rubber belts have their limitations; troughed belts work successfully at inclination; differential band brake; spacing idlers; each belt conveyor installation constitutes separate problem.

COPPER DEPOSITS

QUEBEC. Origin of the Copper Ores of Rouyn District, Quebec, H. C. Cooke. Min. Jl., vol. 160, no. 4821, Jan. 14, 1928, p. 24. Facts all suggest that there is close connection existing between sulphite bodies and granodiorite-quartz diorite masses, but it is equally evident that much yet remains to be done toward working out exact nature of this connection and conditions under which different sulphides, pyrites, pyrrhotite, chalcopyrite and sphalerite, respectively, are formed.

CORES

OIL-SAND, MAKING. Oil-Sand Cores in the Jobbing Foundry, J. Masters. Foundry Trade Jl., vol. 37, no. 592, Dec. 22, 1927, p. 217. Notes on baking cores, avoiding unsightly markings, blacking and venting of cores, core irons, turbine-end casting, cylinder casting mould made in loam.

COTTON MILLS

POWER EQUIPMENTS. Power Requirements of Machinery Used in Cotton Mills, H. H. Bodge. Elec. Wld., vol. 91, no. 2, Jan. 14, 1928, pp. 97-99. Trends in motor-drive practice; average data on typical applications; plant-load distribution analysis offered in connection with estimate basis; presents table of horse power requirements of cotton machinery.

CRANES

ELECTRIC. Material-Handling Crane Saves Time and Labour. Elec. World, vol. 91, no. 4, Jan. 28, 1928, p. 205, 1 fig. 5-ton monorail electric crane installed at distribution headquarters of Los Angeles Gas & Electric Corporation has been found great aid in loading and unloading distribution transformers and handling other heavy material used in overhead and underground construction work.

CRANKSHAFTS

HONING. Exteral Cylindrical Honing. Soc. Automotive Engrs.—Jl., vol. 22, no. 1, Jan. 1928, p. 73. Short résumé and discussion of L. A. Becker's Production-Meeting paper printed in The Journal for Oct. 1927; machine for honing bearing surfaces of crankshafts; honing said to produce bearing surface smoother and more true to form than produced by grinding alone or by grinding and polishing; no appreciable wear on any surface that has been honed; friction reduction of 25 per cent in block tests; lubricant for honing.

DAMS

DESIGN. The Design and Construction of Dams. Eng. News-Record, vol. 100, no. 3, Jan. 19, 1928, pp. 123-124. Review of work by E. Wegmann; notable addition is section of nearly 100 pages on multiple-arch dams by F. A. Noetzli; also contains description of number of items not included in earlier edition.

EMERGENCY, NEW ORLEANS. Emergency Dam on Inner Navigation Canal at New Orleans, Louisiana, F. R. Harris and R. H. Whitehead. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 2, Feb. 1928, pp. 673-676. Discussion of paper by H. Goldmark, published in Dec. 1927 issue of Proceedings.

FAILURES. Failure of Non-State-Inspected Dam Under Construction, H. T. Critchlow. Eng. News-Rec., vol. 100, no. 3, Jan. 19, 1928, p. 116. Recent failure of small dam under construction in New Jersey illustrates need of state supervision of dams, even those impounding water from small collecting areas; dam failed during severe storm of rain, lightning and wind; experience emphasizes desirability of having more complete supervision over construction of dams than is now provided by law.

GRAVITY. Uplift Pressure in Gravity Dams, A. Floris. West. Constr. News, vol. 3, no. 2, Jan. 25, 1928, pp. 58-62, 7 figs. Study of various assumptions made on distribution of uplift pressure, and investigation of methods used for calculation of stress as regards their correctness and validity; annotes many authorities and gives graphical stress analysis of triangular profile; several examples are worked out.

MASONRY. The O'Shaughnessy Dam and Reservoir, J. H. Gregory, C. B. Hoover and C. B. Cornell. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 2, Feb. 1928, pp. 405-469, 24 figs. Design and construction of masonry dam and reservoir built to increase storage of raw water for water supply in city of Columbus, Ohio; masonry portion of dam is of overflow gravity type, spillway section, 879 ft. in length between end abutments, being spanned by a 12-arch reinforced concrete bridge; reservoir, formed by construction of dam, is 8 miles in length, has maximum width of 1,900 ft., and total available storage capacity of 5,341,000,000 gal.

MULTIPLE-ARCH. Construction of Multiple-Arch Dam in Arizona. Eng. News-Rec., vol. 100, no. 5, Feb. 2, 1928, pp. 180-183, 5 figs. Concrete multiple-arch dam 2,146 ft. long creates storage reservoir for irrigation and power purposes to serve 40,000-acre project of Maricopa County Municipal Water Conservation District No. 1; design of dam, methods of flood protection of construction work, general methods of construction and concrete pouring, spillway, power plans and water distribution.

D

DEPRECIATION

ACCOUNTING. Factors Affecting Accumulation of Depreciation Reserve, W. G. Cross. Elec. World, vol. 91, no. 4, Jan. 28, 1928, pp. 203-205. Deals with two factors pertaining to depreciation and accumulation of reserve, namely, salvage value to be obtained from unit at its expiration of life and cost of physically removing or retiring item; reserve is usually designed to take care of both, that is, to reimburse original "wearing value" or cost of item, less its salvage, and to provide sum of money sufficient to pay cost of removal.

DIE CASTING

MACHINES FOR. Die-Casting Equipment with Automatic Features. Iron Age, vol. 121, no. 6, Feb. 9, 1928, p. 407, 1 fig. Madison-Kipp Corp., Madison, Wis., has placed on market die-casting machine, operation of which is entirely automatic; feature stressed is that in no case is more than one operator necessary; molten metal delivered to die by air pressure.

NON-FERROUS METALS. The General Aspects of Die-Casting, T. P. Russell. Metal Industry (Lond.), vol. 32, no. 1, Jan. 6, 1928, pp. 5-7. Discusses history and future prospects of die-casting industry, with special reference to non-ferrous die-casting; such processes have of late years made marked progress and are among those most favoured by metal founders for machine parts and small casting. Paper read originally before Sheffield Metallurgical Assn., but revised for this journal.

DIES

QUENCHING. High-Temperature Quenching Treatment Applied to Cold Heading Ball Dies of Plain Carbon Tool Steel, F. L. Wright. Am. Soc. Steel Treating—Trans., vol. 8, no. 2, Feb. 1928, pp. 282-293 and (discussion) 293-296, 5 figs. Describes quenching treatment for cold-forming dies and submerged water-spray quenching fixture used for quenching double-end ball-heading dies; increase in quenching temperature from 1,470 to 1,620 deg. Fahr. followed by suitable tempering treatment has doubled life of dies; results of endurance tests compared to variations in chemical analysis, to normality of tool steel as determined by McQuaid-Ehn carburizing test, and to hardness penetration.

DIESEL ENGINES

AUTOMOTIVE. The Acro Diesel Engine with Air Storage (le moteur Diesel "ACRO" à emmagasinage d'air), Sribeck. Technique Automobile et Aérienne, vol. 18, no. 139, 1927, pp. 105-118, 25 figs. Describes principal characteristics of this new engine and treats of its points relative to its use as automobile or aviation engine; describes parts of engine and tests to determine cylinder-pressure variations and temperature in cylinder which are shown in several charts; influence of speed, form of compression chamber and its effect on efficiency.

The Automotive Full-Diesel Engine, R. J. Broege. Soc. Automotive Engrs.—Jl., vol. 22, no. 2, Feb. 1928, pp. 177-182, 8 figs. Description of tests with compressorless, solid-injection, full-Diesel engine of 4-cycle operation, as developed by M.A.N. of Germany, for application in all industrial automotive installations; 50-h.p. engine installed in 4-ton truck; performed as well as gasoline engine of same bore in same truck, but with greater fuel economy and more lugging ability; American-built 4-cycle engine tested; similar to heavy-duty automotive-type gasoline engine; engine started by electric starters or by two-cylinder air-cooled gasoline engine; controlled by two levers regulating fuel pump, replaces magneto.

CENTRIFUGAL CASTINGS FOR. Centrifugal Castings for Diesel Engines, J. E. Hurst Diesel Engine Users' Assn.—Paper, Nov. 25, 1927, 20 pp., 14 figs. Describes kind of castings needed for Diesel engines; behaviour of cast iron when in molten state and when cooling and treats of centrifugal casting process, chemical composition and properties of centrifugal castings, their resistance to wear and heat conditions; also spun-sorbitic centrifugal castings as used by author.

DOUBLE-ACTING. Where is the Power in a Double-Acting Diesel? W. C. Baker. Power, vol. 67, no. 5, Jan. 31, 1928, p. 199. Reply to article by D. McFee in Dec. 27, 1927, issue of this journal, pointing out that this article is misleading concerning relative merits single- and double-acting Diesel; present writer maintains that double-acting 2-stroke-cycle Diesel will undoubtedly be developed beyond all others in future; effect of gravity is of no account, except that it causes still greater amount of power to be transformed into flywheel energy, to be given up during up-stroke, in single-acting, vertical engine.

POWER PLANTS, USE IN. The Use of Diesel Engines for Peak Load Supply. Engineer, vol. 145, no. 3758, Jan. 20, 1928, pp. 78-79. Whereas writer's immediate plea is for continued use of existing oil engines, general question of use of steam turbines for basic load for which they are eminently fitted and use of oil engines for peak load should not be overlooked; oil engine costs only half as much for fuel for peak-load units and less for labour, while it is very questionable whether, when new peak-load stations have to be put up, their capital cost would be any less with steam turbines than with oil engines.

SUPERIOR-OTTO. Heavy Duty Diesels Designed for Continuous Service. Oil Engine Power, vol. 6, no. 2, Feb. 1928, pp. 94-97, 5 figs. Detailed description of Superior-Otto series of vertical, four-stroke-cycle engines; available in sizes from 60-b.h.p. to 360 b.h.p. with one, two, three, four or six cylinders; base casting; main bearings; crankshaft construction; cylinder and valve assembly; piston and connecting rod; fuel supplied from cam-actuated fuel pump; combined oil filter and cooler mounted at rear end of engine; control gear.

DROP FORGING

PRACTICE. Drop Forging Industry and Equipment, M. S. Reed. Heat Treating and Forging, vol. 14, no. 1, Jan. 1928, pp. 32-33 and 40. Present status of industry and improvements in methods and equipment to meet changed conditions; four-roll board-drop hammer; speed and accuracy of hammer operation; withdrawal of obsolete equipment; new uses found for drop forgings.

E

ELECTRIC APPARATUS AND APPLIANCES

LOAD VALUES. Utility Research Indicates Appliance Load Values, H. A. Snow. Elec. World, vol. 91, no. 3, Jan. 21, 1928, pp. 143-147, 10 figs. Tests show electric ranges, refrigerators and oil burners of great potential importance in raising average annual consumption; special metering has made it possible to determine annual consumption, daily and yearly load curves, maximum demands, load factors and diversity factors for these appliances.

ELECTRIC CABLES

HIGH-TENSION. High-Voltage Cable Problems, T. N. Riley. Elec. World, vol. 91, no. 3, Jan. 21, 1928, pp. 137-140, 8 figs. Heating and cooling stresses must be considered as well as electric stresses; loss tests should be based on load cycles; further data obtained regarding ionization phenomena; effect of insulation oil.

132,000-Volt, Single Conductor, Lead Covered Cable. Am. Inst. Elec. Egrs.—Jl., vol. 47, no. 2, Feb. 1928, pp. 118-125, 9 figs. Describes development of oil-filled type of cable; paper is divided into four parts, as follows: Introduction, Economics and Commercial Demand, P. Torchio; Theory, Design and Development of the 132,000-Volt Cable, L. Emanueli; Manufacture, Inspection and Testing of the 132,000-Volt Cable, W. S. Clark; Installation of the 132,000-Volt Cable, A. H. Kehoe, C. H. Shaw, J. B. Noe and D. W. Roper.

UNDERGROUND, TESTING. Insuring Good Performance Underground Cable Work, H. Halperin. Elec. Light and Power, vol. 6, no. 2, Feb. 1928, pp. 26-27 and 84 and 86, 2 figs. Describes methods of testing underground electric cables, especially at joints; instruments used are noted; tapes are described and their characteristics; methods of making joints and materials used.

ELECTRIC FURNACES

Annealing. Electric-Elevator Furnace Anneals Steel Castings, L. M. Bassini. Am. Mach., vol. 68, no. 4, Jan. 26, 1928, pp. 161-163, 4 figs. Construction and operation of electrically operated car-type furnace of Burnside Steel Foundry Co.; heating chamber above floor; work piled on annealing racks placed on car; car wheeled under furnace and lifted into heating chamber; special sand seals provide airtight joint between car and furnace; elevator operated by 3-cylinder pump driven by electric motor; output one ton per hour; 1,650 deg. Fahr. obtained by four Nichrome ribbons.

Control. Automatic Control of Electric Furnaces, L. G. Bean. Elec. Light and Power, vol. 6, no. 2, Feb. 1928, pp. 64-70 and 91, 10 figs. Tells what automatic control accomplishes, how it operates, what instruments are used for it and how they are connected to various kinds of furnaces; advantages of automatic control are generally conceded to be more even product; lower labour charges; longer life of furnaces due to not overheating; saving of fuel.

High-Frequency. A New Electric Steel Furnace. Elec. Rev., vol. 101, no. 2612, Dec. 16, 1927, pp. 1029-1031, 4 figs. High-frequency Ajax-Northrup furnace installed at Sheffield, England; steel produced under crucible conditions; eddy currents induced in steel itself, before and during melting; no heat is passed from exterior of crucible to metal within; supply frequency 2,200 cycles per sec. and pressure 1,200 volts; small space occupied. See description in Elec. Times, vol. 72, no. 1886, Dec. 15, 1927, pp. 780-782, 5 figs.

Melting. Presents Cost Data on Electric Furnace Melting, J. B. Meier. Foundry, vol. 56, no. 3, Feb. 1, 1928, pp. 93-98, 5 figs. Author presents unbiased and accurate continuous record of actual conditions as encountered in foundry with which he is associated, dealing solely in rough castings; includes graphic representation of electric-furnace operation over period of 8 months; résumé of cost per ton.

Miguet. New Miguet Electric Furnace with Continuous Electrodes (Le nouveau four électrique Miguet à électrode continue), R. Sevin. Jl. du Four Electrique (Supp.), vol. 37, no. 1, Jan. 1928, pp. 5-8, 5 figs. Description of electric furnace at Montricher using single-phase current; incoming current at 5,000 volts transformed by 5 transformers; operation also described and complete installation.

ELECTRIC LINES

Grounding. Protective Grounding, S. W. Bordon. Elec. World, vol. 91, no. 5, Feb. 4, 1928, pp. 255-257, 2 figs. Discussion of recommended practices of Nat. Elec. Mfrs'. Assn.; presents drawings of typical industrial-plant installation in accordance with N.E.M.A. recommendations, and ground conditions which may occur on system.

High-Tension. 1926 Lightning Experience on 132-Kv. Transmission Lines, P. Sporn. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 2, Feb. 1928, pp. 105-109, 3 figs. Transmission network in question comprises 910 mi. of actual line, about one-third of which is double-circuit; tabular data describing lines and 1926 performance; design developments during 1927; summation of experience and its application to tower-line design.

Interconnected. Advantages and Possibilities of Electric Power Line Interconnections, H. Markle. Pub. Service Mgmt., vol. 44, no. 2, Feb. 1928, pp. 62-63. Water powers of South are linked with steam stations of North in such a way that over a million kilowatts of existing generating capacity is released for future growth; benefits of interconnection; value demonstrated; public benefits; to-day, big, efficient steam plants carry base load and hydros are auxiliaries.

Theory. Some Transmission Line Fundamentals, C. A. Boddie. Elec. Jl., vol. 25, no. 1, Jan. 1928, pp. 32-35, 5 figs. In transmission of power over short lines at power frequencies, resistance and inductance of line are only factors which need to be taken into account in determining performance of line; any given line will act on sending end generator as resistance, inductance or capacity, depending on length of line and frequency applied. (To be continued.)

Sag. Calculation of Sags in a Transmission Line with a Broken Conductor, J. P. Den Hartog. Elec. Jl., vol. 25, no. 1, Jan. 1928, pp. 24-26, 5 figs. When transmission line crosses railroad or highway it is necessary to maintain sufficient clearance between level of road and overhead conductors; often definite clearance is specified, and in such cases it is important to know sag of span just above road when conductor breaks in one of neighbouring spans; gives method for calculating such sags.

Underground. Thirteen Kv. Underground Construction, E. R. Pelster. Elec. Light and Power, vol. 6, no. 2, Feb. 1928, pp. 28-34 and 90-91, 10 figs. Description of methods used by Dallas Power & Light Co. to increase and change character of their distribution system; 5-year job; all overhead wires removed and put underground; feeders and mains, vaults and transformers; transformer connections, service connections and underground services are treated and allocation of costs to consumers and power company.

ELECTRIC LOCOMOTIVES

Maintenance and Repairs. Electric Locomotive Maintenance, A. McLanahan. Ry. Mech. Engr., vol. 102, no. 2, Feb. 1928, pp. 109-112, 5 figs.

Operation. Some Points Regarding Electric Locomotive Operation, T. Rich. Elec. Times, vol. 73, no. 1891, Jan. 19, 1928, pp. 78-79, 3 figs. Describes method used on electric locomotives to keep centre of gravity from being too low and to minimize unsprung weight; how motors are geared to driving axles; advantage of electric hauling over steam.

ELECTRIC METERS

Four-Wire. Four-Wire Metering, E. A. Corum and F. L. Christenberry. Elec. Wld., vol. 91, no. 2, Jan. 14, 1928, pp. 95-97, 12 figs. Various methods available discussed, with data showing comparative accuracies obtained; 3-phase, 4-wire, 3-element meter adopted by Memphis Power & Light Co.

ELECTRIC MOTORS

Alternating-Current, Protective Relays. Phase-Balance Relays Protect Polyphase Motors, E. H. Stivender. Power, vol. 67, no. 4, Jan. 24, 1928, pp. 145-146, 2 figs. Phase-balance relays represent one of latest types of protective relays and are coming into general use for protection of important auxiliaries in power plants and other installations where continuity of service is essential; describes General Electric and Westinghouse Company types of phase-balance relays.

Rolling Mills. Synchronous Motors for Driving Steel Rolling Mills, W. T. Berkshire and H. A. Winne. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 2, Feb 1928, pp. 136-142, 14 figs. Discusses, from practical standpoint, application and design of synchronous motors for steel-mill main-roll drives, in effort to show what their advantages and disadvantages are; where they should and where they should not be used; and what special precautions must be taken in design of motors for this service.

Starting Currents. Motor Starting Current vs. Lighting Flicker, H. L. Wallau. Elec. World, vol. 91, no. 4, Jan. 28, 1928, p. 198. Discusses question of maximum draught of current which may be allowed to be suddenly imposed upon any portion of system of combined light and power underground; low-voltage networks; values of current draught are determined, from which allowable ratings of motors of different types may be determined.

Starters. The Motor Starter Is Just as Important as the Motor, B. Candlish. Power House, vol. 22, no. 1, Jan. 5, 1928, pp. 30-32 and 44. Describes types of motor starters, good and bad points; application of various types of motors, why accidents occur; motor starter or controller is just as important as motor itself, and operation of motor should not be jeopardized by poor starting and controlling equipment.

ELECTRIC POWER

National Defence. Power in National Defence, E. C. Kelton. Elec. World, vol. 91, no. 5, Feb. 4, 1928, pp. 239-242. Points out that 10 years ago there were serious power shortages in several parts of country; discusses plan, presented by Secretary of War D. F. Davis in June 1927 before Nat. Elec. Light Assn., calling for selection of executive assistant to be known as emergency power director who would be responsible for effective utilization of power facilities of country.

ELECTRIC RAILROADS

Chicago. Illinois Central Suburban Service, W. M. Vandersluis. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 2, Feb. 1928, pp. 133-135, 4 figs. Gives operating records of first year of electrical operation of suburban service of Illinois Central Railroad; it shows monthly curves of load, kw.-hr. per car-mile, maximum demand, load factor and temperature; also monthly curves for last 4 years of passengers, car-miles, seat-miles and operating income; improvements in service are enumerated and general results at this date are discussed.

ELECTRIC RELAYS

Protection of. The Application of Relays for the Protection of Power System Interconnections, L. N. Crichton and H. C. Graves, Jr. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 2, Feb. 1928, pp. 143-151, 15 figs. Compilation of many new methods for relay protection required by superpower interconnections; ideas have been obtained from various sources and represent good present-day practice; indicates usefulness of certain inverse time-limit relays on systems having dead grounded power-transformer neutrals at all switching stations; bus protection and "back-up" methods; new relays and improvements made to older types illustrate typical relay installation similar to that being placed in service on 220-kv. interconnection.

ELECTRIC TRANSFORMERS

Cooling. Emergency Cooling of Transformers, H. C. Klingenschmitt. Power, vol. 67, no. 4, Jan. 24, 1928, p. 147, 1 fig. Describes use of fire-hose sprayer for cooling overloaded transformers, as applied on single-phase transformer which suddenly failed.

ELECTRIC WELDING

Methods. Electrical Welding and Hardening Processes. AEG Progress, vol. 3, no. 12, Dec. 1927, pp. 379-384, 20 figs. Electric equipment and methods for hardening and welding; electric salt-bath furnaces for hardening cutting tools; electric hardening furnaces for hardening carbon steels; electric annealing and tempering furnaces; arc welding and resistance welding; electric fusion butt welding employed in manufacture of highly stressed machine parts; sheets of metal welded together by spot welding; elasticity depreciated by electric arc welding; atomic arc-welding process.

ELECTRIC WELDING, ARC

Cutting and. Arc Welding and Cutting. Am. Welding Soc.—Jl., vol. 6, no. 12, Dec. 1927, pp. 1-76, 61 figs. Information and instructions for making of arc welds compiled by Educational Committee of Am. Welding Soc. as source of reference of fundamentals of arc welding; comprehensive and detailed treatise on welding of all kinds of metals, apparatus and equipment and qualifications for arc welders.

Equipment. Some Considerations on Arc Welding and Choice of Equipment (Quelques considérations sur la soudure à l'arc électrique et sur le choix d'un équipement), F. Lorne. Electricité de Mécanique, no. 21, Nov.-Dec. 1927, pp. 23-30, 9 figs. Suggestions to act as guide on choice of equipment and information on method of utilizing current and electrodes for particular case at hand; application to different metals and different kinds of welding.

Rolled-Steel Parts. Welded Rolled-Steel in Machine Construction, R. H. Rogers. Can. Machy., vol. 39, no. 2, Jan. 26, 1928, pp. 33, 34, 36, 38, 39, 8 figs. Parts formerly made from pig iron now made by fabrication from finished products of steel rolling mills; application of fabricated steel made possible only by metallic arc welding; ready-finished character reduces machine work; smaller revolving weights and smaller diameters; welding on feet; stator frame containing 2,000 ft. of weld; bearing pedestals; stator frame procedure.

ELECTRIC WIRING

National Electric Code. Analysis of Proposed 1928 Code Revisions, A. L. Abbott. Electragist, vol. 27, no. 4, Feb. 1928, pp. 28-30. Proposed changes in National Electrical Code; Article 5 on Wiring Methods is perhaps most important of proposed changes; preceding installation rules for each type with clear statement of location where and conditions under which this type of wiring is approved for use; interior electrical systems; branch circuits; demand-factor data; outlet boxes; grounding; grounding portable equipment; control circuits; storage-battery rooms; low-voltage circuits.

Protective Grounding. Hazard of Grounding to Circuit Wiring, S. W. Bowden. Electragist, vol. 27, no. 4, Feb. 1928, pp. 21-24, 2 figs. Discussion of recommended practices of Nat. Elec. Manufacturers' Assn. on protective grounding; cause of shock hazard; schematic wiring diagram of industrial-plant installations; rise of potential kept within safe limits by keeping resistance of secondary ground circuit sufficiently low; artificial grounds; single-electrode grounding; grounding motor frame; objections to using grounded circuit wire for grounding metallic enclosures even where water-piping systems of known low resistance are utilized for earth electrode.

Standardization. How Standardization Procedure Affects the Industry, A. P. Denton. Elec. World, vol. 91, no. 3, Jan. 21, 1928, p. 151. Points out that standardization procedure from this time on must protect each type of wiring according to its merits and at same time permit of new developments and progress of art; basic factor underlying standards for wiring installations of code is safety from standpoint of fire and life hazards.

ELECTRICITY SUPPLY, RURAL

Ontario. Ontario Active in Rural Distribution. Elec. News, vol. 37, no. 1, Jan. 1, 1928, pp. 31-34, 5 figs. Nearly 40,000 farm and rural customers supplied with electric service; over 875 miles of primary lines built in 1927 and 1,000 expected for 1928; difficulties of rural distribution; rural financing; design of rural feeders; overhead wood pole-line construction; transformers with very low exciting current; classification of service; supplied at cost to consumer; estimated costs of electrical service by Hydro-Electric Power Commission of Ontario in rural power districts.

ELEVATORS

Electric, Door Operators for. An Elevator-Door Operator That Splits Seconds. Power, vol. 67, no. 6, Feb. 7, 1928, pp. 251-252, 4 figs. Details of new door-opening equipment developed by F. A. Boedtcher, New York City; instead of one operating door as has been previously used on elevator doors, in this equipment there are two, purpose of which is to overcome tendency that single door has to tip door and cause them to bind and in some cases break door hangers.

EROSION

Niagara Falls. Preservation of Niagara Falls. Contract Rec., vol. 42, no. 5, Feb. 1, 1928, pp. 102-105, 3 figs. Comparatively simple and inexpensive engineering works recommended by joint board; interim report of special International Niagara Board suggests measures to preserve beauty of Falls and possibly permit greater water diversion for power purposes; initial works recommended; cost estimates.

Preservation. Niagara Falls. Preservation of Horseshoe Falls, Niagara. Can. Engr., vol. 54, no. 5, Jan. 31, 1928, pp. 175-180, 5 figs. Conclusions and recommendations of special board with respect to initial remedial measures; conditions at falls; recession of horseshoe; power diversions; remedial works; submerged weir proposed; results antcipated; sequence of construction; cost estimates.

F

FLOOD CONTROL

Miami River, Ohio. Maintenance of Flood-Control Works of Miami District, C. S. Bennett. Eng. News-Rec., vol. 100, no. 5, Feb. 2, 1928, pp. 186-188, 4 figs. Current upkeep operations conducted to give improved appearance as well as maintained efficiency; describes methods of treating banks of Miami river in towns of Dayton, Hamilton and Middletown, and use of retarding dams; prohibition of dumping of refuse on river banks; uses of banks for camping and recreation purposes.

Mississippi River. Col. Potter Comments on Difference in Cost Estimate of Two Mississippi Flood Plans. Eng. News-Rec., vol. 100, no. 1, Jan. 5, 1928, p. 27. Reasons for differences between cost figure given in Chief of Engincer's flood-control plan and that given in Mississippi River Commission plan, outlined by president of commission.

Model Study. Flood Study in Europe, M. P. O'Brien. Purdue Eng. Rev., vol. 23, no. 2, Jan. 1928, pp. 9-10 and 32 and 34, 2 figs. Use of models in study of large hydraulic structures; models of canals, shiplocks and hydraulic power plants; hydraulic engineering of this sort much better known and more widely employed in Europe than in America; development and equation forms of theory governing use of models; value of model experiments; reliability of model tests; investigation of flow conditions by means of models in United States.

FLOOD DISCHARGE

Discussion on. Maximum Flood Discharge in San Joaquin Valley, California, R. Bollansbee and H. K. Fox. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 2, Feb. 1928, pp. 651-653. Discussion of paper by O. Reed published in Nov. 1927 issue of Proceedings.

FOREMAN

Qualifications. Qualifications of a Foreman, E. H. Fish. Machy. (N.Y.), vol. 34, no. 6, Feb. 1928, pp. 413-416. Qualities most valuable in foreman; limiting foreman's responsibility; how foremen themselves rate personality, character and leadership; submerging foremen in red tape; judgment and loyalty; knowledge of men not as much appreciated; health as important factor; resourcefulness and tact; what co-operation means; importance of study and technical books; sympathetic personality as asset; qualities at top of list; ways in which shop profits by better foremanship.

FORGE-SHOP PRACTICE

Methods. Forging Machine Practice, W. S. Dewell. Machy. (Lond.), vol. 31, no. 797, Jan. 19, 1928, pp. 5 3-516, 5 figs.

Forging Methods and Heating to Forge, W. M. Hepburn. Heat Treating and Forging, vol. 14, no. 1, Jan. 1928, pp. 41-43, 6 figs. Classification of forging methods; relation of proper heating to good results and certain types of furnaces that have been used to advantage; describes continuous-type furnace; end heating for upsetting. Abstract of paper presented before Am. Gas Assn.

FOUNDATIONS

Theory. The Science of Foundations—Its Present and Future, G. Paaswell, C. C. Williams and H. Chatley. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 2, Feb. 1928, pp. 655-665, 3 figs. Discussion of principles of foundations in soils of various kinds. Discussion on paper by C. Terzaghi, continued from Nov. 1927 issue of Proceedings.

FOUNDRIES

Non-Ferrous. New Plant Widens Scope of Output. Iron Age, vol. 121, no. 5, Feb. 2, 1928, pp. 328 and 329, 3 figs. New foundry and machine shop of Hills McCanna Co. described; larger sizes of individual castings and heats from wider range of non-ferrous metals obtained; 11 oil-fired furnaces; moulding machines; Pridmore stripper, 2 electrically operated sand riddles and sand mixer; small moulds made in steel flasks; core room, core ovens, gate and riser cutting-off machines and sand-blast equipment; duorail and monorail systems for handling materials; fuel oil from central pumping station.

FOUNDRY COST ACCOUNTING

Group Costs. Group Foundry Costs, D. McDanields. Am. Foundrymen's Assn. —Reprint, no. 27-28, June 7, 1927, pp. 38-42 and (discussion) 43-44. Tells of operation of particular group with which author's foundry is connected and discusses some of benefits derived from it; idea back of formation of costs groups is to make dependable cost data so easy to obtain and so low in price that no one operating foundry will consider being without it.

Runge System. Seven Years of Foundry Cost Accounting, A. Wessling. Am. Foundrymen's Assn.—Reprint, no. 27-28, June 7, 1927, pp. 32-36 and (discussion) 36-37. Experiences of jobbing foundrymen of Cincinnati with adoption of Runge system of cost accounting.

FOUNDRY PRACTICE

Developments in. Recent Developments in Cast Iron and Foundry Practice. Brit. Cast Iron Research Assn.—Bul., no. 19, Jan. 1928, pp. 14-18. Reviews paper by Moore and Lyon on fatigue tests of cast iron; paper by Schwarz on tests of cast iron, results being given in tabular form; tests carried out by British Oxygen Company on strength of cast iron at very low temperatures; malleable cast iron specifications.

Economical Methods. Foundry Effects Substantial Savings, C. H. Vivian. Brass World, vol. 23, no. 12, Dec. 1927, pp. 395-400.

FOUNDRIES

Electric Power in. Electric Power in the Foundry. Foundry Trade Jl., vol. 37, no. 592, Dec. 22, 1927, p. 214. Deals with miscellaneous application of electric power in foundry, such as driving of compressors, moulding machines, fans, sand mills, hammers, etc.; preceded by details of new all-electric charging equipment in American foundry.

FREIGHT HANDLING

Containers. Road-Rail Traffic on the L.M.S.R. Ry. Gaz., vol. 47, no. 27, Dec. 30, 1927, pp. 817-818. English practice of using containers for handling and transportation of merchandise; development of container traffic; types of containers in use; service considerations; underframes and chassis; reduction of claims for goods damaged in transit; lifting tackle and crane power.

FURNACES

Annealing, Continuous. Continuous Annealing Furnaces, F. W. Manker. Heat Treating and Forging, vol. 14, no. 1, Jan. 1928, pp. 47-50 and 54, 4 figs. Abstract of paper delivered before Engrs'. Soc. of West. Penn.

Reverberatory. Study of the Flow of Gases in Reverberatory Furnaces, W. K. Thompson. Eng. Jl., vol. 11, no. 1, Jan. 1928, pp. 25-33, 25 figs. Chemistry of reverberatory smelting of copper concentrates; combustion of oil; comparison of volume of air consumed per pound of fuel, and products of combustion; reverberatory furnaces considered as hydraulic reservoirs; flow of air through ports in bridge wall and its distribution; measurement of volume of gases flowing through furnace; draught depression necessary to remove products of combustion; paper is written from standpoint of hydraulics and hydrostatics.

G

GARBAGE INCINERATORS

Description of. Garbage Disposal at Highlands, N.J. Am. City, vol. 38, no. 1, Jan. 1928, pp. 147-148, 2 figs. Describes incinerator for borough of 2,000 to 10,000 people winter and summer; average garbage collected Aug. 1 to Sept. 10 for 36 collection days was 14 tons; cost of operation of plant during this period was 80.3 cents per ton; compares cost of incinerator with former method of disposal.

GAUGES

Inspection Devices and. Inspection Devices in the Westinghouse Plant, W. H. Miller. Machy. (N.Y.), vol. 34, no. 6, Feb. 1928, pp. 409-412, 8 figs. Gauges and inspection devices required in manufacturing at East Pittsburgh plant; 8,000 different special gauging devices; testing concentricity of motor end brackets; checking parallelism of keyways; fixture for finding angles of gauges; inspecting gas-engine pistons; determining depth of counterbored hole; device employed in inspection of crankshaft; gauge for finding angle of foot castings.

GASOLINE ENGINES

High-Power. High-Power Engines (Moteurs à grande puissance spécifique), H. R. Ricardo. Technique Automobile et Aérienne, vol. 18, no. 139, 1927, pp. 125-127, 3 figs. Treats of case of modern gasoline engine having compression ratio of 5, and having cylinder filled with air or combustible mixture at atmospheric pressure at end of suction stroke; efficiency is touched upon, also cycle of operation when air is carbureted.

GEAR CUTTING

Gear Generators. A High-Speed Gear Generator. Automobile Engr., vol. 18, no. 237, Jan. 1928, pp. 21-22, 2 figs. Features of new Maag gear generator; reciprocating speed of from 180 to 200 strokes per minute; rack type of cutter with absolute minimum of overhang; separate rack-shaped backing plate; lateral adjustment ensures face of cutter is set parallel to work slide; 3 types of cutter; taking up play in lead screw and nut and, automatically, back-lash in gears; balancing mechanism for cutter slide; locating gear blank from bore; machine for planing spiral gears.

GEARS

Design. Gearing. Automotive Abstracts, vol. 6, no. 1, Jan. 20, 1928, p. 17. Review of number of articles in Maschinenbau, Nov. 17, 1927, on gearing, both toothed and hydraulic, which cover subject very completely from point of view of general arrangement and kinematics; some of articles seem to indicate that Germans, under leadership of Burmester and Kutzbach, have developed whole new science of gearing design; this science refers to general arrangement of drives, not to tooth form.

GRINDING

Automobile Parts. Abrasive Engineering Practice in Automobile Manufacturing, F. B. Jacobs. Abrasive Industry, vol. 9, no. 2, Feb. 1928, pp. 48-52, 4 figs. Describes disk grinding with hand feed and automatic feed with abrasive wheels, use of jigs, finish allowance for various classes of work, necessity for free cutting disks, maintenance of disks, their truing and setting up.

Face. Saving Material by Face Grinding. Machy. (Lond.), vol. 31, no. 797, Jan. 19, 1928, pp. 517-518, 2 figs.

GREAT LAKES

Regulation. Regulation of the Great Lakes. Eng. News-Rec., vol. 100, no. 3, Jan. 19, 1928, pp. 121-122. Review of book by J. R. Freeman, entitled "Regulation of the Great Lakes and Effect of Diversions by Chicago Sanitary District"; describes design adopted for regulating works; conditions affecting design of regulating works; evaporation studies; meteorology and hydrology conditions in connection with evaporation studies; engineer data on Great Lakes problem.

GRINDING MACHINES

Design. Achievement in Grinding Machine Design During 1927, H. Rowland. Can. Machy., vol. 39, no. 1, Jan. 12, 1928, pp. 27-37, 22 figs. Exhaustive survey of developments in grinding machines during 1927; treats of feeds and drives and products of various manufacturers with notes on features of each machine.

Internal. A New Brake Drum Grinder. Automobile Engr., vol. 18, no. 237, Jan. 1928, p. 28, 1 fig. Features of heavy-duty machine for internal grinding; Cincinnati brake-drum grinder entirely self-contained; centralized control; permanently mounted sizing indicator; wheel-truing device; 30-h.p. motor to drive grinding-wheel spindle built into machine; new tex-rope method of transmitting power to wheel spindle; spindle unusually heavy for internal grinder; water tank enclosed within main bed casting; Carborundum Aloxite wheel used.

GYPSUM MINES AND MINING

Manitoba. Mining Gypsum in Manitoba. Can. Min. Jl., vol. 49, no. 4, Jan. 27, 1928, p. 86. Although gypsum has been found at many localities in province, it has been exploited only at Gypsumville, where large deposits occur northwest of narrows of lake St. Martin; gypsum occurs in beds which vary in thickness of ¼ in. to 3 ft. and which are often separated by film of argillaceous material; quarry methods are simple.

H

HARDNESS TESTS

Methods. A Résumé of the Magnetic Methods Employed in Studying the Mechanical Properties of Matter, S. R. Williams. Instruments, vol. 1, no. 1, Jan. 1928, pp. 29-38, 9 figs.

Methods of Hardness Testing. Am. Mach., vol. 68, no. 5, Feb. 2, 1928, p. 231, 2 figs. Comparison of Brinell and Rockwell readings; table and charts for ready shop and laboratory reference; Rockwell B readings taken using 1/16-in. diameter steel ball and 500-kg. major load; C readings taken with conical diamond penetrator and 150-kg. major load.

HEAT TREATING PLANTS

Equipment. Automatic Heating and Heat Treating Units Synchronize Auto Production, J. B. Nealey. Iron Trade Rev., vol. 82, no. 5, Feb. 2, 1928, pp. 315-317, 3 figs. Describes methods and equipment of Fordson plant of Ford Motor Co., vast majority of heating and heat-treating operations are on gas; in steel-making department are 7 basic open-hearth furnaces; main heat treating department, one of largest in world, includes 40 cyanide, 19 continuous and 6 periodic furnaces.

Equipment and Operation of a Heat-Treating Plant, M. G. Jewett. Am. Mach., vol. 68, no. 4, Jan. 26, 1928, pp. 171-172, 4 figs. Heat-treating plant of Chain Belt Co. described; temperature regulated by automatic recording controllers; portable quenching tanks equipped with revolving drums and helical conveyors to carry work through water or oil; four rotary carburizing machines, two rotary drawing furnaces and one rotary, continuous heat treating machine; Greene quenching machine; gas for heating; 14 tons per 24-hr. day; operated by two furnace tenders and foreman on each 12-hr. shift.

HEATING, STEAM

Central. By-product Generation in District Heating Plant, J. H. Walker. Power, vol. 67, no. 5, Jan. 31, 1928, pp. 182-184, 3 figs. General problem of generating by-product electricity in district heating plant and how it has been worked out in Beacon street plant of Detroit Edison Co. by means of variable back-pressure turbine; installation permits generation of considerable amount of power without sacrificing great advantage of feeder method of steam distribution.

Office Buildings. Exhaust Steam Heats the Equitable Building, J. W. Degen. Power, vol. 67, no. 3, Jan. 17, 1927, pp. 102-105, 3 figs. Steam at 150 lb. per sq. in. pressure is furnished by four Heine water-tube boilers having combined heating surface of 20,000 sq. ft.; generators are driven by Corliss engnies; during heating season, engines exhaust at from one-quarter to one pound back pressure, supplying steam to two-pipe vacuum-heating system; exhaust from engines goes to oil extractor or utility tank on engine-room level in sub-basement; riser carries steam to roof.

HIGH VOLTAGES

Testing. An Easily Made Tester for High-Voltage Circuits, M. D. Smith. Power, vol. 67, no. 6, Feb. 7, 1928, pp. 252-253, 3 figs. Describes instrument, devised by superintendent of one company using 5,000 transformers of various sizes, for testing transformer cases to determine if they are alive; instrument consists of neon-gas-filled tube 13/16 in. in diam. and 4½ in. long.

HYDRO-ELECTRIC DEVELOPMENTS

California. High-Head Hydro-Electric Project on Bucks Creek. Eng. News-Rec., vol. 100, no. 4, Jan. 26, 1928, pp. 140-143, 5 figs. Variety of operations involved in California power development that will utilize record head of 2,561 ft.; will develop 70,000 h.p. in two impulse turbines; included in project are construction of 18 miles of road, 10 miles railway, 4,800-ft. incline, several dams, two tunnels, 8 miles of welded pipe, various headworks, surge chamber, penstocks and power house; résumé of statistical information on major features is appended.

HYDROMETALLURGY

Features. Hydrometallurgy. Eng. and Min. Jl., vol. 125, no. 3, Jan. 21, 1928, pp. 119-121. In field of copper leaching, one of features of 1927 was success, metallurgic and economic, of new Inspiration leaching plant, first large-scale operation for direct leaching of copper sulphide.

I

ICE PLANTS

Unusual Features in. 12-Ton Plant Employs Unusual Features, W. W. Taylor. Refrigeration, vol. 43, no. 1, Jan. 1928, pp. 69-72, 7 figs. Machinery and equipment of plant of 12 tons capacity of Mason Brown Ice Co., Huntsville, Alabama; total horse power in this plant is 51¼; vertical compressors employed.

INDUSTRIAL MANAGEMENT

Budget Control. Production and Inventory Budgets, T. R. Jones. Am. Mgmt. Assn.—Annual Convention Series, no. 67, pp. 3-9 and (discussion) 9-14. Discusses factors which production budget should determine; relation of production budget to sales budget; how purchase of raw material and supplies should be correlated with production programme; purpose of inventory budget; how raw materials and fabricated products should be budgeted; how standards should be applied to inventory budgets; forms which should be used.

Production Control. Integrated Production. Soc. Automotive Engrs.—Jl., vol. 22, no. 1, Jan. 1928, pp. 71-73, 1 fig. Brief résumé and discussion of E. P. Blanchard's Production-Meeting paper published in Journal for Oct. 1927, p. 375; progress due to "simulation" with multiple-head machines; economical production obtained in period of reduced schedule by keeping all machines in group running but reducing speed and number of operators; setting equipment for production little greater than planned quantity; critical point at which cost per piece becomes greater with simple machine than with more refined.

Production Orders. Manufacture Effectively Co-ordinated by Simple System. Iron Age, vol. 121, no. 3, Jan. 19, 1928, pp. 194-196, 9 figs. Avoidance of over-elaboration has been fundamental consideration of Landis Machine Co., Waynesboro, Pa., in developing production order system for co-ordination of its manufacturing operations; at plant production orders are issued and returns collected by central department.

Shop Management, Co-operative. A Co-operative Shop Management System That "Works." Can. Machy., vol. 39, no. 2, Jan. 26, 1928, pp. 24-25. Co-operative idea in operation at Canadian National shops at Stratford; no labour troubles; shop council composed of 14 members, 7 from management and 7 from shops, elected by men in various departments; suggestions made by men themselves that were of value; men working in Canadian National shops using their inventive genius and their powers of observation to make conditions such that work can be carried on to very best advantage; idea to take place of strikes and lockouts.

INSULATION, ELECTRIC

Testing. Testing Insulation with High Frequency, J. L. Rylander. Elec. Jl., vol. 25, no. 1, Jan. 1928, pp. 10-13, 11 figs. It has been found that by applying single-phase, high frequency current directly to winding, location and extent of any weakness may be disclosed without destroying either defective part or adjacent parts; method is applicable to any insulated circuit, be it single coil or completely wound machine, regardless of voltage.

INTERNAL-COMBUSTION ENGINES

Crankcase Scavenging. Crankcase Scavenging of a Two-Stroke-Cycle Engine, O. Holm. Nat. Advisory Committee for Aeronautics—Tech. Memorandum, no. 446, Jan. 1928, pp. 1-11, 22 figs. Experiments to find effect variation of height of scavenge and exhaust ports on scavenging efficiency as determined by gas analysis; effect of changes in shape of scavenge channel and piston openings; smaller early exhaust favourable; results confirmed on other engines; important not to dissipate kinetic energy of gases in large mufflers, but to utilize it. Translated from V.D.I. Zeit., June 11, 1927.

Supercharging. Some Aspects of Supercharging for Sea-Level Conditions, C. F. Taylor and L. M. Porter. Soc. Automotive Engrs.—Jl., vol. 22, no. 2, Feb. 1928, pp. 195-199, 5 figs. Series of tests using internal-combustion engine with variable expansion ratio; testing at normal atmospheric pressure with supercharger to increase power output; tests indicate results in horse power and efficiency attained in automobile engines by independently varying expansion ratio and total compression ratio; theoretical horse power and efficiency computed for conditions of tests; curves show results of variations in different factors and compare test results with calculated values.

Thermal Efficiency. Standards of Thermal Efficiency for Internal-Combustion Motors, D. Clerk. Engineering, vol. 125, no. 3234, Jan. 6, 1928, p. 10. Discussion of report of Heat Engine Trials Committee, discussing ideal efficiency standards for four distinct engine cycles, (1) constant-volume; (2) constant-pressure; (3) Diesel, and (4) Atkinson; points out that Atkinson cycle gives high ideal thermal efficiency, and engines built to follow it would be very economical, but no engines existing at present carry out cycle required to produce such efficiencies. Abstract of paper read before Instn. of Civ. Engrs.

Variable-Stroke. An Analysis of the Andreau Cycle, C. W. Olliver. Power Engr., vol. 23, no. 262, Jan. 1928, pp. 6-7, 7 figs. Gives general formula for motion of both piston and knuckle-joint, from which effect of various variable quantities of problem on form of curve and cycle may be readily appreciated; relates to Andreau variable-stroke internal-combustion engine.

See also Airplane Engines; Automobile Engines; Diesel Engines; Gasoline Engines; Oil Engines.

IRON CASTINGS

Cleaning. Speed Marks Cleaning Procedure in New Buick Plant, P. Dwyer. Foundry, vol. 56, no. 3, Feb. 1, 1928, pp. 99-104, 9 figs. Methods and equipment for handling and cleaning castings in Buick foundry, Flint, Mich.; equipped with 6 long and 2 short conveyors handling 500 tons of automobile engine castings daily; methods of disposing of burned core sand and scrap knocked off castings; handling débris and reclaiming metallic content; cleaning-room equipment, including tumbling barrels, sand-blast units, etc.

Cylinders. Some Further Notes on Oil-Sand and Motor Cylinders, W. West. Foundry Trade Jl., vol. 37, no. 592, Dec. 22, 1927, pp. 211-213, 5 figs. Results given represent beginning of extensive series of practical experiments to explore nature and use of all media which might be of service to foundryman in oil-sand mixture; resin as an agglomerant; effect of mixing and milling upon grain size of sand mixture.

Diesel-Engine. The Production of Diesel Engine Castings in Pearlitic Cast Iron. Foundry Trade Jl., vol. 37, no. 592, Dec. 22, 1927, pp. 215-216. Discussion of lecture by A. J. Richman before Inst. Brit. Foundrymen; points out close relationship between resistance to wear and Brinell hardness number.

Shrinkage Holes. Shrinkage Holes in Small Grey Iron Castings, P. A. Russell. Foundry Trade Jl., vol. 38, no. 597, Jan. 26, 1928, pp. 55-59, 19 figs. Points out that there is no general agreement as to root cause of shrinkage, or drawing, as author prefers to call it; definition of phosphorus; conditions during solidification; effect of composition; drawing of semi-steel cast iron; practical examples; cause of drawing is that expansion due to formation of graphite is practically all absorbed in expanding outer shell of casting, and remaining liquid shrinks.

IRON AND STEEL INDUSTRY

Canada. Steel Production in Canada Makes Big Gain in 1927. Can. Machy., vol. 38, no. 26. Dec. 29, 1927, pp. 160-163. Less iron but considerably more steel; furnace charges; ferro-alloys output; five furnaces active; increase in steel in April; six furnaces in blast; production of pig iron, steel ingots and castings fell off sharply in June; 24 per cent gain during August; eight months' total of 629,039 tons.

J

JIGS

Design. Details of Jigs and Fixtures—Design of Push Pins and Plugs, J. A. Potter. Am. Mach., vol. 68, no. 2, Jan. 12, 1928, pp. 47-49, 10 figs. Locating work in jigs and fixtures depends upon choice of cuts taken first; push pins and plugs as locators, supports and clamps; methods of locating and binding work with push pins; consideration given to parts adaptable to plug suspension. (To be continued.)

L

LATHES

Design. Lathes, E. Pull. Machy. Market, no. 1419, Jan. 13, 1928, pp. 19-20, 6 figs. Design and operations of lathes; driving arrangement for small lathe; calculations for various speeds; triple-gear 4-step cone headstock with range of 12 speeds, progressively graded with single-speed countershaft; triple-gear rapid-reduction headstock fitted for lathes of 10½-in. centres and upwards; all-geared headstocks frequently fitted to lathes of 6-in. centres and upwards.

Properties. Physical Properties of Engineering Materials. Power Engr., vol. 23, no. 262, Jan. 1928, pp. 24-26, 1 fig. Study of lead, lead ores, commercial lead, tensile and compressive strength; hardness, specific gravity and corrosion; other physical properties; alloys of lead.

LIFTING MAGNETS

Foundries. Electric Power in the Foundry. Foundry Trade Jl., vol. 36, no. 580, Sept. 29, 1927, p. 276. Deals with lifting magnet for both external and internal use; for lifting pig and scrap iron and large solid matters a circular magnet is used, while for handling long plates two or more of these magnets may be used, spaced on beam slung from crane hook.

LOCOMOTIVE BOILERS

Foaming in. Foaming of Locomotive Boilers, with Special Reference to Influence of Suspended Matter on Foaming, and Cost of Blowdown. Am. Ry. Eng. Assn.—Bul., vol. 29, no. 300, Oct. 1927, pp. 143-157, 3 figs. Problem is to determine cause of foaming in locomotive boilers and also other causes of wet steam; for foaming tests, boilers must be divided into three classes; stationary, road locomotives and switch engines; instructing enginemen as to amount of water to be blown off; charts illustrating conditions of water from locomotive boilers on Chicago & Alton R.R.

High-Pressure. Proposed High-Pressure Water Tube Boiler, L. A. Rehfuss. Ry. Mech. Engr., vol. 102, no. 2, Feb. 1928, pp. 68-73. 3 figs Greater efficiency and tractive force may be developed with boiler designed for 500 lb. pressure; stress placed on combustion efficiency; advantage of air preheater; double superheater employed; advantages of proposed boiler; judicious use of electric welding should take care of most of joints in actual construction; steam generation.

Improving. Improving the Locomotive Boiler by Research, L. H. Fry. Boiler Maker, vol. 28, no. 1, Jan. 1928, pp. 11-14, 3 figs. Shows how research can be directed to extending existing knowledge of locomotive boiler; with this in view, fundamental processes of combustion and heat transfer are surveyed; boundaries of existing knowledge are mapped out and indications given as to how these boundaries may be enlarged and benefits that might be expected.

LOCOMOTIVE REPAIR SHOPS

Wabash Ry. Wabash Enlarges Locomotive Shops. Ry. Mech. Engr., vol. 102, no. 1, Jan. 1928, pp. 41-45, 5 figs. Wabash recently completed extensive improvements at its system shops at Decatur, Ill., which embodied enlargements of locomotive repair shop in accordance with most unusual plan; study plans for enlargements; some rearrangement necessary; method routing repair work; new shop of modern design; new power plant.

LOCOMOTIVES

COMPOUND. Some Experimental Results from a Three-Cylinder Compound Locomotive, L. H. Fry. Eng., vol. 124, no. 3233, Dec. 30, 1927, pp. 855-858, 4 figs. Determination of power by measurement of steam pressures and temperatures; quality of steam at high-pressure cut-off; heat transfer to cylinder walls; actual vs. theoretical cylinder efficiency. Paper read before Institution of Mech. Engineers.

CUT-OFF ADJUSTMENT. Back-Pressure and Cut-Off Adjustment for Locomotives, T. C. McBride. Ry. and Locomotive Eng., vol. 40, no. 12, Dec. 1927, pp. 350-352, 1 fig. Question arises as to when or under what operating conditions of locomotive back-pressure can be made useful in its indication of proper adjustment of cut-off; it is evident that something better and more exact than judgment of enginemen is needed to indicate best adjustment of cut-off in order that this adjustment may be made exactly and quickly; back-pressure gauge properly used should fill this need.

DIESEL. Dieselizing Railroads, W. Arthur. Central Ry. Club—Official Proc., vol. 35, no. 5, Jan. 1928, pp. 2500-2515, 6 figs. Description of Diesel locomotives as used in Europe; how Diesel unit compares with electric and steam locomotives, and economy in fuel; Diesel cost is 1/5 that of steam; relationship of tractive effort and speed; transmission of power to wheels is great problem; kind of Diesel best adapted to railroad work.

Swedish Diesel Locomotive with Fluid Coupling, J. W. Morton. Oil Engine Power, vol. 6, no. 2, Feb. 1928, pp. 117-119, 3 figs.

ELECTRIC. *See Electric Locomotives.*

FEEDWATER HEATING. The Willans-Luard System Locomotive Superheating and Feed Water Heating (Supp. to Locomotive, Jan. 14, 1928), pp. 132-138, 9 figs. System makes use of exhaust steam, exhaust flue gases and live steam which would be wasted at safety valves.

HIGH-PRESSURE. The Schmidt-Henschel High-Pressure Locomotive. Engineer, vol. 145, no. 3758, Jan. 20, 1928, pp. 80-82, 4 figs. Details of high-pressure, two pressures, one in neighbourhood of 900 lb. and other of 200 lb.; high-of Schmidt; feature of this engine is use of boiler which generates steam at two pressures, one ni neighbourhood of 900 lb. and other of 200 lb.; high-pressure steam, which is generated by Perkins closed-circuit method, is used in single high-pressure cylinder, and, on exhausting, is mixed with low-pressure steam and admitted to two outside cylinders; includes tabulated results of road tests.

SUPERHEATER. Brief History of the Locomotive Superheater. Locomotive Superheating and Feed Water Heating (Supp. to Locomotive, Jan. 14, 1928), pp. 12-21, 16 figs. Principal attention is given to those apparatus which have been employed in actual service, including: Hawthorn, McConnell, Aspinall, Schmidt smokebox and fire-tube superheaters, Clench and other types of superheaters; Vauclain or Baldwin, Phoenix, Drummond and Buck-Jacobs or Santa Fé superheaters; progress of fire-tube superheater; Cusack-Morton superheater.

2-8-4. 2-8-4 Type Locomotives of the Chicago & North Western. Ry. and Locomotive Eng., vol. 40, no. 12, Dec. 1927, pp. 347-348, 1 fig. Develop 79,500 lb. tractive effort with booster; description of Chicago & North Western locomotives built by American Locomotive Co.; table of weights and dimensions; weight complete, 397,000 lbs.

VIBRATION. Relation Between Bearing Springs and Vertical Vibration of the Steam Locomotive, K. Musashi. (Japan) Dept. of Railways—Bul., vol. 15, no. 11, Nov. 1927, pp. 1801-1823, 15 figs. (In Japanese.)

LOOMS

WOOL. Adjusting the Eccentric Motion and the Centre Filling Stop Motion of the Wool Automatic Loom, B. F. Hayes. Textile World, vol. 73, no. 4, Jan. 28, 1928, pp. 31 and 34, 1 fig. Advice to loom fixers as to importance of eccentric motion adjustment of wool automatic looms; attention to former will reduce smashes; broken sticks and damaged boxes; false stopping.

LUBRICANTS

TAPPING. Lubricants for Tapping, A. L. Valentine. Machy. (N.Y.), vol. 34, no. 6, Feb. 1928, pp. 418-420, 2 figs. Proper lubrication for tapping and its importance to cutting qualities and length of life of tap; power required varies considerably with different lubricants; kerosene for tapping aluminum; recent experiments on lubricants; reason for chips clinging to taps; different methods of sharpening taps; tap dull when it begins to slip in holder or chuck; necessary to sharpen taps in time; rounded off corners should not be permitted to become greater than chip thickness.

M

MACHINE SHOP

EQUIPMENT REPLACEMENT. What Modern Equipment Has Done, C. R. Britten. Am. Mach., vol. 68, no. 5, Feb. 2, 1928, pp. 201-204, 9 figs. Actual results achieved at plant of Monroe Calculating Machine Co. by replacing obsolete with up-to-date equipment; policy that replacement equipment must pay for itself within year; reducing surface-grinding operations; transfer from 4-spindle drilling machine to multiple-drilling head; savings in cutting gear teeth; centreless grinding; screws made on cold-heading and thread-rolling machines; automatic cadmium-plating outfit; improvement in quality of product.

MACHINE TOOLS

AUTOMATIC. Factors Controlling Design of the Automatic Machine, H. W. Rupple. Am. Mach., vol. 68, no. 5, Feb. 2, 1928, pp. 213-214. Problem of fitting every machine to job; standardization of product in production plants has made opposite condition necessary to machine-tool builder; entire machine built around single part machine is intended to produce; synchronizing operations on different spindles of multi-spindle machines; rotating of tool positions in turret at different speeds offers saving.

BALL BEARINGS FOR. Applications of Ball Bearings to Machine Tools. West. Machy. Wld., vol. 19, no. 1, Jan. 1928, pp. 17-20, 10 figs.

DIRECT-CURRENT DRIVE. Advantages of D.C. Drive for Machine Tools, R. C. Deale. Am. Mach., vol. 68, no. 5, Feb. 2, 1928, pp. 211-212, 2 figs. Adjustable-speed d.c. motors compared with constant-speed a.c. motors having mechanical speed changes; speeds stamped on graduated dial fastened to body of field rheostat; mechanics pay little attention to actual spindle speeds but are guided by appearance of chip and finish of work; never same ease in changing speeds mechanically; complications in changing gears; advantage of adjustable speed where machine is operated any considerable portion of time.

ELECTRIC CONTROL. Modern Machine Tools with Electric Control (Les machines-outils modernes avec commande électrique incorporée), G. Weinstein. Electricité et Mécanique, no. 21, Nov.-Dec. 1927, pp. 16-21, 9 figs. General description of recent incorporation of electric control on machine tools and shoe-making machinery, citing milling machines, vertical and radial drilling machines, lathes, shoe-soling and finishing machines; principles and method of control are described and their advantages explained.

MAGNESIUM ALLOYS

PROPERTIES. Magnesium Alloys, J. A. Gann and A. W. Winston. Metallurgist (Supp. to Engineer), Jan. 27, 1928, pp. 4-6. Deals with technique of methods used by Dow Chemical Co. in manufacture of magnesium alloys and properties of these alloys; authors claim that much of corrosion trouble previously encountered in magnesium alloys has been overcome by use of purer metal and elimination of sponginess in castings by improved technique. Abstract of paper published in Indus. and Eng. Chem., Oct. 1927.

MATERIALS HANDLING

EQUIPMENT. Mechanical Handling in Industry (Les manutentions mécaniques dans l'industrie), E. Pacoret. Vie Technique et Industrielle, vol. 10, no. 100, Jan. 1928, pp. 56-61. Latest improvements affecting applications of modern materials handling; handling of coal, such as storing, unloading; mechanical handling in ports; car haulage, conveyors and transporters, belt conveyors, screw and gravity conveyors, monorails, hoist.

FACTORS IN. Eight " Slants " on the Problem of Handling Materials, F. L. Eidmann. Can. Machy., vol. 39, no. 1, Jan. 12, 1928, pp. 46-47. Author gives general review of situation and effect of certain conditions on proper handling of materials, such as weight of material, influence of design of plant, influence on inventory, selection of equipment, safety to workers, co-ordination and flexibility and return on investment.

SCHEDULING. Mechanical Scheduling, H. V. Coes. Factory, vol. 75, no. 1, Jan. 1928, pp. 52-54, 2 figs. Material handling's important part in cutting costs and speeding turnover; transferring overhead to capital account; reducing process inventory; automatic mechanical scheduling.

METAL MINES AND MINING

STATISTICS, UNITED STATES. Metal Mining in the United States in 1927. Min. Congress Jl., vol. 14, no. 2, Feb. 1928, pp. 115-122, 6 figs. Bureau of Mines makes annual report on state of metal industry; statisticians find that marked decrease in market price of silver, copper, lead and zinc seriously affected production; such increase in production as is recorded is overshadowed by price decline.

Copper, Lead and Zinc Mining in 1927. Min. Congress Jl., vol. 14, no. 2, Feb. 1928, p. 124. Copper and lead production in United States in 1927 decreased about 3 per cent each, and zinc production decreased 8 per cent; mine production of copper, lead and zinc in United States in 1926 and 1927, in terms of recovered and recoverable metal content, in short tons (1927 estimated).

METAL MINING GEOLOGY

GEOPHYSICAL EXPLORATION. Exploring for Ore by Potential Methods, E. G. Leonardon and S. F. Kelly. Eng. and Min. Jl., vol. 125, no. 4, Jan. 28, 1928, pp. 163-166, 8 figs. Potential method must be considered, not only second process of locating minerals, but also as means of checking in independent way results obtained by self-potential method; survey will usually cost about $2.50 per acre and will rarely exceed $5.00; electrical prospecting does not supplant either geologist or diamond drill in exploration work. (Concluded.)

METALLURGY

DEVELOPMENTS. Developments in Metallurgy During 1927, J. Silverstein. Heat Treating and Forging, vol. 14, no. 1, Jan. 1928, pp. 44-46. Among topics considered are: ferrous metallurgy, centrifugal casting, silicon alloys, welding, application of X-rays, chromium plating and non-ferrous metallurgy.

The Past Year in the Metallurgical Field, S. Goodale. Heat Treating and Forging, vol. 14, no. 1, Jan. 1928, pp. 60-62. Important new advances made during year in making of iron and steel, sponge iron, use of electric heat, rust preventatives, metallography and testing; blast-furnace process.

METAL SPRAYING

COATING BY. Coating by Molten-Metal Spraying. Machy. (Lond.), vol. 31, no. 797, Jan. 19, 1928, pp. 505-510, 14 figs. Developments in coating either metallic or non-metallic parts with any metal to obtain protection against atmospheric corrosion or chemical action; method of spraying molten metal on surface to be coated; how metal spraying tool is applied; coating or enlarging cylindrical parts; coating inner surfaces of tubes; coating small parts in bulk; some general applications of metal-spraying process.

METALS

FATIGUE. Repeated-Stress Endurance of Metals. Soc. Automotive Engrs.—Jl., vol. 22, no. 2, Feb. 1928, pp. 289-291. Modern viewpoint of fatigue failure pictures metal yielding first at some point of localized weakness; it is study of elastic straining and of spreading cracks, rather than of plastic straining; design of specimens for fatigue tests; effects of speed of testing on endurance limit; physical properties; threads, shoulders and fillets; welded joints; locating cracks. From Manual, by H. F. Moore, issued by Eng. Foundation.

MILLING CUTTERS

SHARPENING. Getting Greater Production Through the Proper Sharpening of Tools and Cutters, F. B. Heitkamp. West. Machy. Wld., vol. 19, no. 1, Jan. 1928, pp. 9-11, 8 figs.

MINES AND MINING

MACHINE METHODS. Progress in Mine Mechanization. Min. Congress Jl., vol. 4, no. 2, Feb. 1928, pp. 103-107. Conference at annual convention Am. Min. Congress discusses advancement; investigation indicates machines now dependable, and that problems are now those of management and engineering; mechanical loading no longer test of machines but of ability to use them effectively under existing conditions.

MOTOR TRUCKS

DESIGN TRENDS. Improvements in Truck Construction Provide More Speed and Flexibility, D. Blanchard. Operation and Maintenance, vol. 37, no. 1, Jan. 15, 1928, pp. 10-11 and 36, 10 figs.

WHEELS, MANUFACTURE OF. Methods and Equipment Used in the Manufacture of Steel Wheels. West. Machy. Wld., vol. 19, no. 1, Jan. 1928, pp. 6-8, 8 figs.

N

NOZZLES

STEAM, FLOW IN. Fifth Report of the Steam Nozzles Research Committee. Engineering, vol. 125, no. 3237, Jan. 27, 1928, pp. 116-119, 7 figs. Decision of Committee to carry out investigation into efficiency of nozzles at different pressure ranges from those covered by first four reports involved alteration in back-pressure against which nozzles discharged; superheater and rearranged pipe work; rearrangement of pressure-measurement apparatus; preliminary tests. (To be continued.) See also editorial comment, pp. 107-108.

The Dimensional Theory of Steam Nozzle Flow, J. C. Oakden. Engineering, vol. 125, no. 3236, Jan. 20, 1928, pp. 80-82.

O

OFFICE BUILDINGS

CANADA. Handsome Office Structure in London, Ont. Contract Rec., vol. 42, no. 4, Jan. 25, 1928, pp. 72-75, 4 figs. Headquarters of London Life Insurance Co., recently completed, is striking building of classical design; faced with Indiana and Queenston limestone and richly decorated inside; describes briefly boiler and coal rooms, heating and ventilating systems, electric-elevator service.

OIL ENGINES

EXPERIMENTS. Some Fuel Experiments in a Mechanical Injection Oil Engine, E. L. Bass. Diesel Engine Users' Assn.—report for mtg., Oct. 7, 1927, 25 pp., including discussion, 14 figs. Statement of fact founded upon research conducted on particular grade of residue fuel; apparatus for experiments was 32-b.h.p. Crossley cold-starting oil engine; tests were carried out with centrifuged fuel of Venezuelan origin; further similar series of tests on another fuel called light Venezuelan very similar to that previously tested, but lower asphalt content.

MARINE. The Marine Oil-Engine, C. J. Hawkes. Engineering, vol. 125, no. 3235, Jan. 13, 1928, pp. 39-41; and Engineer, vol. 145, no. 3757, Jan. 13, 1928, pp. 40-42. Author believes that much can be expected in future developments of large oil engines; he considers Still engine most efficient for marine purposes at present time; results of tests by Marine Oil Engine Trials Committee on Still and Doxford airless-injection engines and comparison of performances of these two; trunk pistons are unsuitable for high-speed 2-stroke engines; comparison of 4-stroke and 2-stroke cycles; problems of supercharging. Lecture read before Inst. Mech. Engrs.

OPEN-HEARTH FURNACES

CONTROL. The Open-Hearth Furnace in Leash, G. A. Merkt. Blast Furnace and Steel Plant, vol. 16, no. 1, Jan. 1928, pp. 41-45, 7 figs. Isley furnace control as installed by Morgan Construction Co. in number of open-hearth furnaces; patented device is ingenious arrangement of power apparatus by regulation of which supply of elements of combustion as well as removal of their products may be altered at will to any degree of activity and accuracy desired; while Isley control apparatus produces mechanical draught of definitely adjustable value, there are no moving parts exposed to high temperature.

DESIGN. Changes in Open-Hearth Design and Practice During 1927, W. J. Priestley. Iron Age, vol. 120, no. 1, Jan. 5, 1928, pp. 37-38, 1 fig. Steel operators analyzed chemistry of their melting practice and sought means to reduce their costs without sacrificing quality of their steel; research in physics of steel; advances in furnace design—preheaters for air, sloping back wall and Isley furnace; production of acid steel—experience of cable maker; residual silicon to be avoided; slag low in iron important; high-manganese pig in basic open-hearth; rigid testing reacted favourably.

IMPROVEMENTS. Outstanding Open-Hearth Improvements, C. W. Veach. Blast Furnace and Steel Plant, vol. 16, no. 1, Jan. 1928, pp. 34-37. Summary of modifications in practice and furnace design which have been established during past year as viewed by steel maker; Stevens insulated furnace; preheating air; sloping backwall; use of chrome brick; handling large scrap at River Rouge; practice in using chrome ore.

ORES

REDUCTION. A Process for the Extraction of Zinc and Other Metals from Ores, H. E. Coley. Instn. of Min. and Met.—Bul., no. 280, Jan. 1928, pp. 1-11. Number of experiments led to idea that if it were possible to obtain carbon in extremely active condition carbon would under those conditions be far better reducing agent than carbon monoxide; advantages claimed for process where it can be applied are as follows: continuity of action, small fuel costs, in case of zinc elimination of retort; complete reduction and almost complete extraction, small power charges.

TREATMENT. Ore Tests for the Small Operator, L. O. Howard. Min. Mag., vol. 38, no. 1, Jan. 1928, pp. 53-56. Necessity for more data in devising method of ore treatment than is usually available to small operator, especially when matter is left to advice of machinery supply house; plan that had advantage of simplicity and practicability would be to try to construct metallurgical flow sheet that would show travel of ore and solutions with tonnages and assays at certain key points. Abstract from Min. & Met., Dec. 1927.

OXY-ACETYLENE CUTTING

FOUNDRIES. Notes on Oxy-Acetylene Cutting in Foundries, C. H. S. Tupholme. Foundry Trade Jl., vol. 37, no. 592, Dec. 22, 1927, p. 216. Points out that proper use of oxy-acetylene cutting flame has enabled many foundry managers to reduce their rejections, and flame, when employed for cutting risers, has exerted an important influence on casting practice; cutting flame may play important part in reclamation of defective castings, particularly where defect is minor in degree, such as blowhole, shrinkage crack or part of lug missing; another opportunity to use flame for reclamation is in case of aluminum castings.

OXY-ACETYLENE WELDING

PROCEDURE CONTROL. Procedure Control in Welding a Storage Tank. Sheet Metal Worker, vol. 18, no. 24, Dec. 30, 1927, pp. 921-923 and 929, 8 figs. Considerations involved in fabricating tank of 3/16 in. plate, to hold 1,500 gal. of fuel oil under gravity pressure; check on welders; qualification tests; design and layout of welded joints; preparation of plates for welding; welding technique; test of completed tank. (Reprinted from Oxy-Acetylene Tips.)

STAMPINGS. Stampings Welded into Complex Units, A. G. Wikoff. Iron Age, vol. 121, no. 5, Feb. 2, 1928, pp. 321-324, 9 figs.

P

PAVEMENTS

BRICK. Brick-Paved Roads. Engineering, vol. 125, no. 3237, Jan. 27, 1928, pp. 96-97. Experiments are being made in London with surfacing of concrete road foundations with bricks, in order to carry heavy road traffic; bricks were supplied from France for this purpose.

MAINTENANCE AND REPAIRS. Pavement Repairs Planned to Reduce Street Closing Time, E. A. Kemmler. Eng. News-Rec., vol. 100, no. 1, Jan. 5, 1928, p. 16, 1 fig. Plan and working schedule required of contractors carrying on street subsurface operations in Akron, Ohio; policy of requiring continuous construction day and night has produced results that are eminently satisfactory; as example of practice, account is given of very complicated situation which arose, involving construction activities at same time of three service companies in two blocks of Main street.

PHOTOGRAPHY, AERIAL

AFRICA AND ASIA. Aerial Survey Makes Good. Flight, vol. 20, no. 1, Jan. 5, 1928, p. 12. Latest developments in aerial survey and photography work of two British firms briefly discussed; Aircraft Operating Co.'s air survey of 1,000 sq. miles of territory, adjacent to Bagdad; air survey of Zambesi river; maps of 12,000 sq. mi. to be prepared for Government of Northern Rhodesia; work of Air Survey Co. in India; survey and mapping entire Malda district; radial method of plotting with close net-work of control points; 1,680 control points established by ground party; D.H. 9 aircraft and Eagle Air Cameras used.

PIERS

NEW YORK HARBOUR. Erie Builds Large Modern Pier in New York Harbour. Ry. Age, vol. 84, no. 3, Jan. 21, 1928, pp. 180-184, 7 figs. Description of pier No. 9 built in Jersey City by Erie R.R.; 2-storey steel structure, 1,250 ft. long by 150 ft. wide, carrying 2 standard-gauge railroad tracks on main deck; pier is over Holland tunnel and required special type of foundations, which are described; also machinery equipment for handling cargo and loading and unloading cars; steelwork design shown.

PIPE, CAST IRON

WELDING. Bronze Welding Cast Iron Pipe by Back-Stepping Method, H. Y. Carson. Iron Trade Rev., vol. 82, no. 2, Jan. 12, 1928, pp. 138-139, 6 figs. Bronze welding not only simplifies and reduces cost of complicated fittings such as manifold illustrated, but also is being used more extensively for general repair work. Paper presented before Am. Water Works Assn.

PLATES

FLAT DEFLECTION OF. The Deflection of Flat Plates Fixed at the Circumferences, H. Carrington. Engineering, vol. 125, no. 3235, Jan. 13, 1928, pp. 31-32, 6 figs. Gives results which were obtained with view to determining experimentally more precisely effects of strains in middle surface and approximate ratio of deflection to thickness at which Poisson's theory ceased to apply; same plate was used throughout experiments; it was of annealed mild steel 0.62 in. thick and 26.5 in. in diameter; conclusions drawn for circular elastic plates fixed at circumference and deflected at uniform pressure.

POLES

WOODEN, TESTING. Maximum Load for Treated Poles Measured in Test Series. Eng. News-Rec., vol. 100, no. 3, Jan. 19, 1928, p. 108, 1 fig. Load applied as side pull at top by locomotive crane and measured by dynamometer placed in pulling line in series of tests on Douglas fir poles treated according to present standard specifications of Creosoted Douglas Fir Pole Producers, conducted at Long Beach, Calif.; average modulus of rupture for all poles was 9,815 lb. per sq. in.

POWER PLANTS, DIESEL

EQUIPMENT. Modern Steam Plant Gives Place to Diesel Power. Oil Engine Power, vol. 6, no. 2, Feb. 1928, pp. 98-100, 6 figs. Successful municipal oil-engine central station operating under highly competitive conditions, plant of city of Cedar Falls, Iowa; savings on oil engine sufficient to finance purchase of another oil engine; McIntosh-Seymour 750-h.p. Diesel engine; water-works equipment; engines installed of 4-stroke cycle, air-injection, trunk-piston type direct-connected to General Electric alternators with exciters driven by silent chains; Bowser pressure lubricator; exhaust discharges through Maxim silencer.

NEW YORK. A Diesel Plant in Metropolitan New York, G. Grow. Power, vol. 67, no. 3, Jan. 17, 1927, pp. 98-100, 3 figs. Details of 1,060-h.p. Diesel plant of Gates Co. supplying energy used in lumber yard and planing mill; two 18,000-gal. fuel-oil storage tanks were provided and embedded in concrete in accordance with New York City Fire Underwriters' Laws; three 360-h.p. Diesel engines were installed each direct-connected to 300-kva., 40-deg., 3-phase, 60-cycle, 440-volt engine-type alternator, together with direct-connected 10-kw. excited for each alternator.

POWER PLANTS, HYDRO-ELECTRIC

BELLOWS FALLS, VT. Sixty Thousand Horse Power from the Connecticut River, R. G. Skerrett. Compressed Air Mag., vol. 33, no. 2, Feb. 1928, pp. 2305-2310, 21 figs. Construction of plant at Bellows Falls, Vt.; power drawn from Connecticut river to generate large block of electric energy for New England; effective head of about 60 ft. to drive 3 single-runner wheels, each capable of producing 20,000 h.p.; dam crossing Connecticut river in straight line; modernizing of canal; excavating for power house and tailrace; compressed air for drilling, operating pumps and blacksmith shop equipment.

LOW-HEAD. Low-Head Plant at the Falls of the Ohio to Produce 100,000 Kw. Power. vol. 67, no. 6, Feb. 7, 1928, pp. 232-236, 9 figs. Under heads of 37 to 10 ft., this plant was designed to utilize widely varying flow of Ohio river at Louisville, Ky.; turbines of propeller type and generator stators of welded steel-plate construction have effected reduction in size and weight of units and in power-plant cost; economy is maintained by operating generators star-connected above three-quarter load and delta-connected for loads below this rating.

POWER PLANTS, STEAM

EQUIPMENT, RECONDITIONING. $60,000 Per Year to Be Saved by Revamping Old Power Plants, J. J. Daley. Power, vol. 67, no. 5, Jan. 31, 1928, pp. 170-174, 7 figs. By reconditioning equipment that had been in service for years in two distinct plants, shutting down one boiler room and raising settings in other, improving water supply and purchasing current during summer, an efficient plant was produced that will effect saving in operating expense exceeding $60,000 per year.

HIGH-PRESSURE. Industrial Production of High-Pressure Steam (La production industrielle de la vapeur d'eau à haute pression), C. Roszak and M. Vernon. Chaleur et Industrie, vol. 8, no. 92, Dec. 1927, p. 703, 4 figs. Treats of addition to central station of Issy-les-Moulineaux (Paris), describing turbines, boilers, feeding and auxiliary machinery; discusses also various types of boilers with small reservoirs, marine boilers and double-circuit boilers.

Operating Experiences with 1,200-Lb. Steam Pressure, J. Anderson. Engineering, vol. 125, no. 3234-5, Jan. 6 and 13, 1928, pp. 25-28, 7 figs., and 55-58, 5 figs. Jan. 6: Experience with high-pressure installation at Lakeside station, Milwaukee.

RAILROAD REPAIR SHOPS. Northern Pacific Power Plant Effects Large Savings. Ry. Age, vol. 84, no. 3, Jan. 21, 1928, pp. 200-202, 4 figs. Nine months' operation of new plant at Brainerd, Minn., indicates fuel, labour and other savings of $66,900 per annum; power plant is used to generate steam, electric energy and compressed air for use in various buildings within shop grounds; designed to burn low-grade fuels; boiler house and equipment, coal and ash handling, engine-room equipment of steam turbines, generators (2,400-volt, 3-phase, 60-cycle) and auxiliaries; results of boiler test with Montana lignite and eastern screenings; comparative cost of old and new plants.

POWER PLANTS, STEAM-ELECTRIC

SO. CAL. EDISON CO. Construction of Steam Plant No. 3, W. D. Campbell. Nat. Engr., vol. 32, no. 1, Jan. 1928, pp. 1-3, 2 figs. Construction details of Southern California Edison Co; this will be first of unit of new million-horse power plant at Long Beach; with completion of new plant, Terminal Island will be greatest power-generating centre in world; steam turbines; boilers; condensers.

Steam Plant Development of Southern California Edison Company, R. Wilcox. Power, vol. 67, no. 4, Jan. 24, 1928, pp. 130-134, 4 figs. Third steam plant of company that eventually will have capacity of 1,000,000 kw. now under way; tandem-compound turbine rated at 94,000 kw. will be one of largest in operation and boilers having individually more than 34,000 sq. ft. of surface will be largest used for power purposes; flow diagrams for three steam stations show advance made in power-plant design.

POWER PLANTS

TRANSFORMER ROOMS, VENTILATION. Costly Alterations Avoided by Use of Fan Ventilation, M. D. Smith. Elec. World, vol. 91, no. 3, Jan. 21, 1928, p. 141. Difficult problems of providing adequate ventilation in underground transformer room which was 7 feet underground housing three 75-kva. transformers; it was found that a spare 5 in. lateral duct existed, from room to a nearby pole; method employed was to extend spare lateral 10 feet up pole and connect other end through hose to blower capable of moving 10,000 cu. ft. of air a minute.

PRESSURE VESSELS

WELDING. Control in Pressure Vessel Welding, H. E. Rockefeller. Heat Treating and Forging, vol. 14, no. 1, Jan. 1928, pp. 34-37, 3 figs. Describes material used and methods pursued in fabricating by welding six pressure vessels each six ft. in diam. and designed for working pressure of 300 lb.; results of tensile tests on qualification test specimens; preparation of material for welding; welding longitudinal seams; presents table of strain measurements. Paper presented before Int. Acetylene Assn.

Procedure Control in Pressure Vessel Welding, H. E. Rockefeller. West. Machy. Wld., vol. 19, no. 1, Jan. 1928, pp. 13-16 and 28, 5 figs. Methods used in constructing 6 large tanks designed for 300-lb. operating pressure; design of vessel and welded joints; selection of material; check of welders; results of tensile tests on qualification-test specimens; preparation of material for welding; welding longitudinal seams; welding of manhole reinforcing ring to manhead; lining up and tacking head seams; welding head seam; providing ventilation; test of tank; factor of safety.

The Application of Welding to the Construction of Large Pressure Vessels, T. McL. Jasper. Boiler Maker, vol. 28, no. 1, Jan. 1928, pp. 8-9. Fundamentals of good welding; explanation of results obtained from long series of tests on arc-welded specimens of carbon steels having yield point from 30,000 to 35,000 lb. per sq. in. and ultimate strength of from 55,000 to 60,000 lb. per sq. in.

PRESSWORK

FORMED SHELLS. Formed Shells Produced in Hydrostatic Dies, G. P. Anthes. Am. Mach., vol. 68, no. 5, Feb. 2, 1928, pp. 207-209, 4 figs. Tools and methods used in producing formed shells; drawing shell of suitable diameter and length from which to make desired stamping; bulging shell into required shape; blank drawn and redrawn in five operations; same punch holder and die shoe used for four subsequent reducing operations; die for performing bulging operations; heavy grade oil for filling shells before bulging.

PUBLIC BUILDINGS

ELECTRIC EQUIPMENT. Electrical Equipment in East Block Ontario Parliament Building, F. G. Stroud. Contract Rec., vol. 42, no. 4, Jan. 25, 1928, pp. 75-78, 4 figs. Standardized outlets throughout; economy in cost due to careful design; conduit concealed in concrete floor; connected lighting load amounts to 257,000 watts and connected power load is 350 h.p.; considers typical floor of any one of wings; main switchboard and transformer equipment, transformer room; main switchboard; exposed conduit eliminated; telephone systems.

PUNCH PRESSES

DEFLECTION. Spring or Deflection in Presses and Die, E. V. Crane. Iron and Steel Wld., vol. 1, no. 10, Nov. 1927, pp. 709-714, 5 figs. Influence of design upon deflection of frame and working parts of presses; arc spring causes heavy die wear and impressions which are not sharp due to alteration of clearances and bending; explains how, by correct selection of press, output of dies may be greatly increased, savings per year in die upkeep often exceeding several times price of press.

PYROMETALLURGY

METHODS. Pyrometallurgy—Lead and Copper, E. H. Robie. Eng. and Min. Jl., vol. 125, no. 3, Jan. 21, 1928, pp. 122-123. Though development in hydrometallurgy and in concentration of ore by flotation have received somewhat more publicity in last year or two than has progress made in pyrometallurgy, it must not be inferred that fire methods are being displaced or that operators of such plants are not improving their practice.

R

RADIO

ATMOSPHERIC DISTURBANCES. Chairman's Address to Wireless Section, A. G. Lee. Instn. Elec. Engrs.—Jl., vol. 66, no. 372, Dec. 1927, pp. 12-24, 20 figs. Defence against atmospherics considered with reference to transatlantic-telephony problems; nature of atmospherics; distribution of atmospherics in azimuth; distribution with latitude; effect of rainstorms; spectrum of atmospherics; received problem; directive reception with wave antenna; antenna arrays; leaf diagram.

Methods of Reducing the Effect of Atmospheric Disturbances, E. H. Armstrong. Inst. Radio Engrs.—Proc., vol. 16, no. 1, Jan. 1928, pp. 15-26, 10 figs. Describes method of reducing effects of atmospheric disturbances by selective means as distinguished from means which depend on geography of situation; directional reception.

APPARATUS EXHIBITION, LONDON. The Physical Society's Annual Exhibition. Wireless Wld., vol. 22, no. 4, Jan. 25, 1928, pp. 99-101, 8 figs. Some interesting radio exhibits described; stretched diaphragm loud speaker; on Marconi stand was to be seen new short-wave receiver; sensitive galvanometer of suspension type having pointer and scale in place of usual mirror; neon wavemeter of interest to transmitters.

COMMUNICATION. Radio Communication, G. Marconi. Inst. Radio Engrs.—Proc., vol. 16, no. 1, Jan. 1928, pp. 40-69, 13 figs. Brief historical sketch of investigations carried out by author and his assistants on subject of short waves, describing some of strides that have already been made in their application to radio communications over long distances.

INTERFERENCE. Tracing Radio Interference, J. H. Hanly. Elec. Wld., vol. 91, no. 2, Jan. 14, 1928, pp. 101-102, 2 figs. Details of routine method of locating various kinds of trouble; test set proves value of audio-radio selective hook-up; method of testing which can be used on high-tension systems up to 22,000 volts.

LOUD SPEAKER. The Moving Coil Loud Speaker, F. H. Haynes. Wireless Wld., vol. 22, no. 4, Jan. 25, 1928, pp. 91-95, 5 figs. Loud speaker was demonstrated and formed subject of discussion at recent meeting of Radio Society of Great Britain; moving coil loud speaker scores principally by virtue of liberal diaphragm movement which can be obtained; every endeavour has been made to render this instrument as perfect as possible, both as regards performance and convenience of construction; constructional details are elaborated and additional apparatus is described so that correct working conditions can be obtained. (To be continued.)

TRANSMISSION. Decreasing Radio Congestion, R. D. Duncan. Elec. World, vol. 91, no. 4, Jan. 28, 1928, pp. 195-197, 2 figs. Single side-band transmission offered as means of increasing number of transmitting stations without interference augmentation; transmitting filters involved in plan following proved principles; experiments indicate applicability of plan.

RAILROADS

ROADBEDS, CONCRETE. What One Year's Service on Concrete Roadbed Has Shown, P. Chipman. Ry. Age, vol. 84, no. 2, Jan. 14, 1928, pp. 129-133, 3 figs. Experimental section of concrete roadbed installed by Pere Marquette in Dec. 1926, 1,326 ft. long and located in westbound main of double-track section near Detroit; consists of thirty-four 39-ft. slab sections 21 in. thick and 10 ft. wide; discusses necessity of rail-supporting blocks; experimental installation decided on; observations from first year's use; some settlement has appeared; concrete is in excellent condition; possibilities for improvement.

TIES, TREATMENT. What the Lackawanna Has Gained by Treating Ties, G. J. Ray. Ry. Age, vol. 84, no. 5, Feb. 4, 1928, pp. 307-310. Adopt flat-bottom tie plate for use on all main track ties; from start have treated all switch timber and bridge ties; savings effected; summary of advantages; submits a comparison of maintenance ratio for few typical roads selected at random; Lackawanna shows by far lowest ratio of any of roads in table.

RAILWAY MOTOR CARS

GASOLINE. Gasoline Motor Cars on French Systems (Les automotrices à essence sur les réseaux français d'intêret local), M. Vergniole. Industrie des Voies Ferrées et des Transports Automobiles, vol. 21, no. 252, Dec. 1927, pp. 546-568 and (discussion) 569-570, 28 figs. Geographical distribution in France of gasoline motor cars and characteristics of various types; engines, gear boxes, axles, wheels, brakes, weight, etc., are taken up, also gas-electric cars; tendencies of design. Report presented at Fourth General Technical Assembly, Marseilles.

RAILROADS

REPAIR SHOPS, EQUIPMENT. Electricity in a Modern Railroad Shop, E. Sheldon. Am. Mach., vol. 68, no. 5, Feb. 2, 1928, pp. 215-217, 5 figs.

Railway Wheel Repair Shop Has Some Unique Features, D. M. Duncan. Can. Machy., vol. 39, no. 2, Jan. 26, 1928, pp. 21-23, 6 figs.

SIGNALS AND SIGNALLING. Signalling of L.A. & S.L. Completed in 1927. Ry. Signalling, vol. 21, no. 1, Jan. 1928, pp. 5-8, 7 figs. Latest construction includes a.c. floating system with line transformers at stations only; type and equipment used on signalling installed in 1927; a.c. floating system; unique a.c. distribution; signal foundations precast; signal construction; cost of installation, $3,010 a mile.

TERMINALS, MOTOR TRUCK TRANSPORTATION. Rail-Terminal Trucking to Be Investigated, G. L. Wilson. Operation and Maintenance, vol. 37, no. 1, Jan. 15, 1928, pp. 32-33. Motor trucking as part of railroad-terminal service; Interstate Commerce Commission investigations to determine rights and liabilities of rail carriers, cartage companies, shippers and consignees; extend railroad service through arrangements with cartage companies to inland or off-track stations; service offered in St. Louis, Cincinnati, Chicago and New York; how cartage companies function; demountable container shipments; cartage companies as agents.

RAIN AND RAINFALL

RUN-OFF. Rainfall and Flow-Off, River Garry, Inverness-shire. Water and Water Engineering, vol. 30, no. 349, Jan. 20, 1928, pp. 9-13. Discussion of paper by W. N. McClean in same journal, vol. 29, p. 475, which described area, rainfall and gauges installed.

RECTIFIERS

MERCURY ARC. Mercury Arc Rectifier, S. Aoki. Inst. Elec. Engrs. Japan—Jl., no. 472, Nov. 1927, pp. 1153-1168, 19 figs. Theory and construction of rectifier; oil vacuum pump, mercury-vapour pump, McLeod manometer and resistance manometer; special reference to 300-kw. set made by Shibaura Engineering Works; operating characteristics of rectifier, with its transformer connected in various ways; action of interphase reactor; principal causes of arc back, flashing, abnormal high voltage, telephone-line interference. (In Japanese, with brief English abstract.)

REFRACTORY MATERIALS

DEVELOPMENTS. The History of the Refractories Industry, J. D. Ramsay. Heat Treating and Forging, vol. 14, no. 1, Jan. 1928, pp. 62-64. Manufacturing process dependent on refractories; growth of industry traced; co-operation between producer and consumer. Paper presented before joint session of Am. Inst. of Chm. Engrs. and Am. Refractories Inst.

REFRIGERATING COMPRESSORS

DESIGN. Refrigerating Compressors—Their Design and Application, T. M. Gunn. Power House, vol. 22, no. 1, Jan. 5, 1928, pp. 25-29, 11 figs. Space requirements; speed of compressors; when compressors pound; clearance pockets; methods of regulation; separates hot and cold parts; dual back-pressures.

REFRIGERATING MACHINERY

AMMONIA CONTROL VALVES. Automatic Ammonia Control Valves, H. G. Venemann. Refrigeration, vol. 43, no. 1, Jan. 1928, pp. 46-50, 12 figs. Study of conditions affecting control valves and why no automatic valve can be made that will function properly under all of them; four types of automatic control valves in common use; stop valves, constant-pressure valves, constant-liquid level values, load-demand valves.

REFRIGERATION

DRY-ICE (CO_2). The Field of Dry Ice in Modern Refrigeration, J. W. Martin, Jr. Refrig. Eng., vol. 15, no. 2, Feb. 1928, pp. 33-34, 43 and (discussion) 55, 2 figs. Probably most noticeable characteristic of solid carbon dioxide is its extremely low temperature—109.3 deg. Fahr.—at atmospheric pressure, surrounded by its own gas; amount of heat that this ice is capable of absorbing is twice that absorbed in melting of water ice; method of producing carbon dioxide from burning of coke is by far the most important, but other methods are described, including: fermentation tubs, lime kilns, cement kilns, power-house flue gases, blast-furnace stoves, natural wells, chemical plants.

RIVERS

IMPROVEMENTS, ST. LAWRENCE. The Improvement of the River St. Lawrence, E. W. Lane. Engineering, vol. 125, no. 3237, Jan. 27, 1928, pp. 114-116, 8 figs. Improvements planned are in three sections: International Rapids section, from head of Galoup Rapids to Lake St. Francis; Soulanges section, between Lake St. Francis and Lake St. Louis; and Lachine section, between Lake St. Louis and Montreal; describes improvement of international section; includes maps of sections under discussion. (To be continued.)

The Improvement of the River St. Lawrence, E. W. Lane. Engineering, vol. 125, no. 3236, Jan. 20, 1928, pp. 62-63, 2 figs. Summary of findings of Joint Board of Engineers; general features of navigation canals; power development; general problem considered was improvement of river above Montreal for navigation by ocean ships and enlargement of existing channels of Great Lakes. (To be continued.)

ROADS

CONCRETE, TESTING. Device Detects High and Low Spots in Concrete Road Surface, H. Andrew. Eng. News-Rec., vol. 100, no. 4, Jan. 26, 1928, pp. 161-162, 2 figs. Describes machine used for detecting high and low spots in pavements and dimension of irregularity; consists of wooden frame made up of two parallel members to which cast iron end wheels are attached; indicator is swung from frame at its middle point; attached to indicator are steel scrapers; machine was developed by writer.

CONSTRUCTION. Drained Paving Used to Stabilize Road on Sliding Side Hill. Eng. News-Rec., vol. 100, no. 5, Feb. 2, 1928, pp. 199-200, 2 figs. Describes remedial measures undertaken in California to prevent side hill from sliding down on highway at its foot; excavation of 116,000 cu. yd., draining and paving slope of bench cut and oiling 200,000 sq. ft. of surface on top of hill.

GRAVEL, OILING. Oiled Subgrade Stops Frost Boils in Gravel Roads, H. G. Nicholson. Eng. News-Rec., vol. 100, no. 3, Jan. 19, 1928, p. 109. Oiling clay roadbeds reduces spring break-up, lessens loss of gravel by submergence, diminishes dust; result of experiments on gumbo and clay tried in Minnesota.

MACADAM. Penetration Macadam in Illinois Towns. Mun. News, vol. 74, no. 1, Jan. 1928, pp. 3-8, 10 figs. How contractor is paving small community streets at low cost with assurance of long service; men and equipment required; typical specifications; base course; double fork for spreading; penertation surface; double seal coat; Elmhurst work, done under supervision of Ed. Hancock Eng. Co. of Chicago, was governed by specifications that are used as standard by that engineering firm.

MAINTENANCE AND REPAIRS. Hints That Cut Cost and Time for the Contractor and Engineer. Eng. News-Rec., vol. 100, no. 1, Jan. 5, 1928, pp. 30-31, 1 fig. Contains following contributions: Broom for Roughening Concrete Road Surfaces in Delaware, C. D. Buck; Curing Concrete Paving with Asphalt Skin Coat; Comparing Parabolic and Circular Arcs for Pavement Crowns, H. O. Olson.

Hints That Cut Cost and Time for the Contractor and Engineer. Eng. News-Rec., vol. 100, no. 1, Jan. 5, 1928, pp. 28-30, 3 figs. Contains following contributions: "Easing Off" Frost Boils by Snow and Ice Ramps, H. F. Larson; Tar Paint Traffic Lines Increase Road Capacity, C. MacDonald; Patching Bituminous Macadam with Asphaltic Concrete in Ohio, H. P. Chapman; Training School and Tandem Patrol Are Maintenance Innovations in New Mexico, W. C. Davidson; Storing Snow Fence at Points Used in Michigan, H. A. Clementsen.

MATERIALS, LOCAL. Economics of Using Local Materials in Road Building, C. R. Stokes. Eng. News-Rec., vol. 100, no. 1, Jan. 5, 1928, pp. 13-15. Purposeful development of near-by gravel and stone deposits in Wisconsin has cheapened state and local road work; rail-haul and truck-haul savings amount to $3,000 per mile on 5-mile local, compared to 100-mile rail haul; development of local deposits cited and method of working; plant and operation costs of typical plant are given.

WEAR. Relation of Road Type to Tire Wear, O. L. Waller and H. E. Phelps. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 2, Feb. 1928, pp. 583-584. Discussion on paper by O. L. Waller and H. E. Phelps, continued from Nov. 1927 issue of Proceedings.

ROLLING MILLS

BLOOMING MILLS. Power Requirements and the Rolling Capacity of Blooming Mills, C. Schmitz. Iron and Steel World, vol. 2, no. 1, Jan. 1928, pp. 21-26, 6 figs.

BROAD-STRIP. The Evolution of the Broad-Strip Rolling Mill, S. Badlam. Iron and Coal Trades Rev., vol. 116, no. 3125, Jan. 20, 1928, pp. 69-70, 1 fig. Outstanding achievement of present decade; rolling of wide thin sections has developed along two distinct and originally widely separated lines: (1) rolling of strip, characterized by limitations in width and gauge, rather than in length; (2) rolling of sheets, characterized by limitations in length, rather than in width and gauge.

CHILLED ROLLS. Selection of Special Purpose Rolls, W. H. Melaney. Iron and Steel World, vol. 2, no. 1, Jan. 1928, pp. 45-46. Selection of rolls should be made according to particular service for which they are to be used; use of mild chilled and hard chilled rolls.

The Use and Abuse of Chilled Rolls, W. H. Melaney. Blast Furnace and Steel Plant, vol. 16, no. 1, Jan. 1928, pp. 12-15, 2 figs. Relates in concise form how rolls are manufactured and how they should be handled when in service; refers especially to sheet-mill rolls; chilled cast iron is most desirable because of its cheapness, its hard face and fact that heat it must stand in rolling sheets has very little effect in reducing hardness; physical characteristics.

ELECTRIC DRIVE. Electric Drives in the Steel Rolling Mills, A. F. Kenyon. Blast Furnace and Steel Plant, vol. 16, no. 1, Jan. 1928, pp. 24-27, 5 figs. Review of important installations on continuous and reversing mills, together with discussion regarding use of synchronous motors; includes table of mill-drive motors above 300 h.p. furnished by Westinghouse Elec. & Mfg. Co. from Dec. 1, 1926, to Dec. 1, 1927.

IMPROVEMENTS. New Ideas Overturn Traditions in Rolling Mill Industry. Iron Trade Rev., vol. 82, no. 1, Jan. 5, 1928, pp. 32-33, 2 figs. Opinions of authorities on 1927 developments in rolling steel briefly told; installation of mills for rolling wide strips; accurate mechanical production of sheets; many advantages of continuous process; economic status of new mills; installation of mill designed for wide flange beams; more general use of antifriction bearings; electric drives; developments in mills for rolling practically every material.

TUBE MILLS. Diagonal Rolling of Billets into Seamless Tubes. Iron and Steel World, vol. 2, no. 1, Jan. 1928, pp. 15-20 and 26, 5 figs. Interpretation of mathematical calculations by use of three-dimensional diagrams; conclusions to be drawn from mathematical investigations.

S

SAND, FOUNDRY

TESTING. Sand Tests—What Do They Mean? A. A. Grubb. Instruments, vol. 1, no. 1, Jan. 1928, pp. 39-49, 2 figs.

SANITARY ENGINEERING

HISTORY. Historic Review of the Development of Sanitary Engineering in the United States During the Past One Hundred and Fifty Years. A Symposium, G. H. Fenkell, N. T. Veatch, Jr., E. R. Jones and L. Greenburg. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 2, Feb. 1928, pp. 605-614. Discussion of symposium continued from Jan. 1928 issue of Proceedings.

SEAPLANES

DESIGN. Seaplanes—Fifteen Years of Naval Aviation, A. Guidoni. Royal Aeronautical Soc.—Jl., vol. 32, no. 205, Jan. 1928, pp. 25-64, 52 figs. Theory and calculation of hydrovaned floats; early seaplanes; work of Forlanini and Crocco; theory of seaplane floats; author's own researches; shape of hydrovaned floats; area, angle of attack and form of hydrovanes; advantages and inconveniences of hydrovanes; practical applications.

SEMI-STEEL CASTINGS

MACHINE PARTS. Casting Semi-Steel Machine Tool Parts at Galt, E. G. Brock. Can. Machy., vol. 38, no. 26, Dec. 29, 1927, pp. 182-184 and 187, 4 figs. History and manufacture of Canada Machinery Corp.; semi-steel used for parts; semi-steel castings eliminate warping; foundry practice; large castings made in green sand; means of dropping cupola bottom after daily heat; several steps in process of moulding 10-ton bulldozer frame; hard dry sand gate; reinforcing with rods; spacious core room; conditions in plant reflected in product.

SEWAGE DISPOSAL

TORONTO, ONTARIO. Scarborough Township Sewerage System. Can. Engr., vol. 54, no. 5, Jan. 31, 1928, pp. 180-182, 1 fig. Ratepayers endorse engineer's proposal few sewerage system and disposal plant; system of trunk sewers includes tunnel 1½ miles long on Blantyre avenue to activated-sludge disposal plant on Massey Creek, Canada; area drained, 1,200 acres; this sewage-disposal plant will be of activated-sludge type, will have screens, aeration chambers and mechanically operated settling basins; from disposal plant will be built trunk sewer, most of which will be done by tunneling.

STEAM

HIGH-PRESSURE. Recent High-Pressure Development in Germany, Loeffler. Power Plant Eng., vol. 32, no. 3, Feb. 1, 1928, pp. 178-179, 2 figs. Pressure above 1,500 lb. and block steam plants for power and municipal heating service are believed to be most economical; examples of new turbines using extremely high pressure; turbines are preferable to engines in large buildings. Abstract translated from V.D.I. Zeit.

STEAM ENGINES

UNIFLOW. The Uniflow Steam Engine, E. A. Allcut. Eng. Jl., vol. 11, no. 1, Jan. 1928, pp. 3-11, 16 figs. General notes including historical reference, results of tests, its application and bibliography of subject.

STEAM GENERATORS

DESIGN. The Steam Generator in Service, G. Burgess. Power, vol. 67, no. 6, Feb. 7, 1928, pp. 245-247, 5 figs.

STEAM PIPE LINES

CORROSION. Carbon Dioxide and Imposed Electromotive Force as Factors Affecting Rates of Corrosion of Iron in Return Mains of Steam Heating Systems, A. Hayes, E. L. Henderson and C. E. Staneart. Iowa State College of Agriculture and Mechanic Arts—Official Pub., vol. 26, no. 3, June 4, 1927, 27 pp., 4 figs. Explains how carbon dioxide is found in hot-water heating pipes; its influence on corrosion and how corrosion is measured.

STEAM TURBINES

BACK-PRESSURE. Back-Pressure Turbines (Les turbines à contre-pression), G. Vie. Vie Technique et Industrielle, vol. 10, no. 100, Jan. 1928, pp. 42-44, 2 figs Treats of turbines whose exhaust is used for industrial purposes in mills and factories for heating or drying, cooking, etc.; explains regulation of speed and pressure and type of turbine used.

DESIGN. New 40,000-Kilowatt Turbines for the Duquesne Light Company, J. D. Schmidt. Elec. Jl., vol. 25, no. 1, Jan. 1928, pp. 36-38, 5 figs. Turbines are connected to generators rated at 48,500 kva. at 80 per cent power factor; no direct connected exciters are provided; operating conditions are 260 lb. gauge pressure at throttle with 214 deg. Fahr. superheat and back-pressure of one inch of mercury, absolute; arrangements are provided for bleeding turbines at four points for feedwater heating.

HIGH-PRESSURE. Higher Steam Pressures and Their Application to the Steam Turbine, A. H. Law and J. P. Chittenden. Instn. Elec. Engrs.—Jl., vol. 66, no. 373, Jan. 1928, pp. 89-117 and (discussion) 117-123, 31 figs.

STEEL

ALLOY. *See Alloy Steels.*

ANNEALING. The Constitution of Steel and Cast Iron, F. T. Sisco. Am. Soc. Steel Treating—Trans., vol. 8, no. 2, Feb. 1928, pp. 305-317, 8 figs. Discusses three steps in annealing operation: (1) heating material to annealing temperature; (2) holding steel at proper temperature, and (3) cooling from annealing temperature; in each of these steps various structural changes taking place are discussed; operation of annealing as discussed is description of that process as it involves heating to temperature above critical range; includes photomicrographs and iron-carbon diagram, also diagram illustrating annealing of steel.

CHROME-VANADIUM. *See Chrome-Vanadium Steel.*

DIE. Some Suggestions for the Choice of Die-Steel, W. Oertel. Am. Soc. Steel Treating—Trans., vol. 8, no. 2, Feb. 1928, pp. 320-321. Translated from Maschinenbau, Oct. 7, 1926, pp. 878-880. See reference to original article in Eng. Index, 1926, p. 708.

HARDENING. Hardening by Reheating After Cold Working, M. A. Grossmann and C. C. Snyder. Am. Soc. Steel Treating—Trans., vol. 8, no. 2, Feb. 1928, pp. 201-215 and (discussion) 215-220 and 281, 19 figs.

LOCOMOTIVE FORGINGS. Steels for Locomotive Forgings, E. J. Edwards. Iron Age, vol. 121, no. 4, Jan. 26, 1928, pp. 255-258, 7 figs. Special care taken by American Locomotive Co. to insure better locomotive forgings; must be sound and clean under fracture and deep-etch test, heated with deliberation and finally normalized and annealed for highest qualities; sound steel selected at source; well-made acid heat preferable to basic heat; deep-etch test on forging blooms; carbon segregation limited to 15 per cent; heat-treatment practices; testing finished forgings.

PROPERTIES. The Mechanical Properties of Steel at High Temperature, H. J. Tapsell and W. J. Clenshaw. Engineering, vol. 124, no. 3233, Dec. 30, 1927, p. 837, 6 figs. Review of Eng. Research Special Report No. 2, describing work on mechanical properties of materials at high temperatures being carried out at National Physical Laboratory; work was done on .51 per cent carbon steel in rolled bars of 1 in. diam., said to have been normalized before delivery, and 0.53 per cent carbon cast steel.

TOOL. *See Tool Steel.*

BRIDGE. High-Strength Steels for Modern Bridges, L. S. Moisseiff. Eng. News-Rec., vol. 100, no. 4, Jan. 26, 1928, pp. 155-156. Trend in building, with special steels and problems metallurgists must solve for bridge engineer; as a rule, new material must be produced under special conditions, with more care and with increased rejections, all of which result in higher cost of production; kinds of high-strength steel used, where and when; wires for bridge cables and their increase in strength; rivets and castings touched upon. From paper presented to N.Y. Sec., Am. Soc. for Steel Treating.

STEEL CASTINGS

WELDING. When Should Steel Castings Be Welded? R. A. Bull. Foundry, vol. 56, no. 2, Jan. 15, 1928, pp. 48-50, 4 figs. Abstracted from Research Group News, Oct. 1927.

STEEL, HEAT TREATMENT OF

PROGRESS. Mechanics of Heat Treating Are Better Applied to Work. Iron Trade Rev., vol. 82, no. 1, Jan. 5, 1928, pp. 36-37, 2 figs.

QUENCHING. Quenching—A Practical Study of Rapid Cooling, P. J. Haler. Ry. Mech. Engr., vol. 102, no. 2, Feb. 1928, pp. 99-103, 8 figs. Discussion of methods of quenching speed plunging and effect produced on various shapes; common methods of quenching; treats of form as determining factor in methods of quenching and how these forms should be treated; relative values of quenching mediums.

SUPERHARDENING. Superhardening of Heat-Treated Steel, E. G. Herbert. Iron Age, vol. 121, no. 5, Feb. 2, 1928, pp. 332-333, 2 figs. Possibility of hard steel articles being superhardened beforehand as means of resisting wear; subjecting articles to impact of cloud of balls, thus producing work-hardened surface; any soft spot revealed by roughened area; successive tests showed progressive increase in hardness up to certain maximum, and thereafter slow softening; method of superhardening by impact; quantity testing for hardness.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street. New York, N.Y.

A

AERIAL PHOTOGRAPHY

USES. Location Survey for Transmission Line, A. C. Goodwin. Eng. and Contracting, vol. 67, no. 1, Jan. 1928, pp. 43-44. How aerial photography was used for 200-mile line; aerial photography used by Hydro-Electric Power Commission of Ontario in locating and purchasing easements for 220,000-volt transmission line now under construction from Fitzroy harbour, on Ottawa river, to Toronto; aerial survey; advantages of aerial survey. Reprinted from Can. Engr.

AIR COMPRESSORS

CENTRIFUGAL, TESTING. Centrifugal Air Compressor Testing, R. B. Ingersoll. Sibley Jl. of Eng., vol. 42, no. 2, Feb. 1928, pp. 35 and 66. Tests on centrifugal air compressor at General Electric Co.; machines treated varied from single-stage types of 1 or 2 h.p. to those of more than 7,000 h.p.; single-stage machines driven by electric motors; multi-stage machines direct connected to steam turbine; measurement of input; measuring air pressures about machines; operation of constant-volume governor; distinction between centrifugal compressor and centrifugal blower.

AIR PREHEATERS

CALCULATION. Calculation of Air Preheaters (Le calcul des réchauffeurs d'air), E. Prat and De Kergaradec. Technique Moderne, vol. 20, no. 3, Feb. 1, 1928, pp. 132-138, 8 figs. Air preheaters with parallel plates; determination of coefficient of transmission, how to increase it; up to what point can surfaces be reduced by raising resistances; cases of slight, moderate and strong recuperation are studied.

AIRPLANE ENGINE

PERFORMANCE TESTING. The Relative Performance Obtained with Several Methods of Control of an Overcompressed Engine Using Gasoline, A. W. Gardiner and W. E. Whedon. Nat. Advisory Committee for Aeronautics—Report, no. 272, 13 pp., 5 figs.

STARTERS. Aircraft-Engine Starters, J. W. Allen. Soc. Automotive Engrs.—Jl., vol. 22, no. 3, Mar. 1928, pp. 387-388.

AIRPLANE PROPELLERS

VARIABLE PITCH (TURNBULL). The Turnbull Variable Pitch Propeller. Aviation. vol. 24, no. 8, Feb. 20, 1928, pp. 446-448, 3 figs. Design features of new propeller.

AIRPLANES

AIRFOILS, SLOTTED. Results of Aerodynamic Tests on Slotted Airfoils in the Aerotechnical Laboratory (S.T. Ae.) of Rhone St. Genese, Brussels, P. Puvrez. Nat. Advisory Committee for Aeronautics—Tech. Memorandums, no. 449, Feb. 1928, 19 pp., 6 figs. Investigation of maximum lift obtainable with slotted airfoils derived from symmetrical airfoil; centre of lift travels contrary to usual direction as angle of attack is increased; tests of series of slotted airfoils derived from dissymmetrical airfoil. Translated from Service Technique de L'Aérotechnique Belge—Bul., nos. 1 and 4, Apr. and July, 1927.

AUTOMATIC SLOT (HANDLEY-PAGE). The Handley-Page Automatic Slot, O. H. Lunde. Aviation, vol. 24, no. 9, Feb. 27, 1928, pp. 506-508, 11 figs. Handley-Page slot described.

RESISTANCE. Calculation of the Resistance to Forward Motion of an Airplane Fuselage Having a Front Radiator (Calcul de la résistance à l'avancement d'un fuselage d'avion muni d'un radiateur frontal), Toussaint. Aérophile (Paris), vol. 6, nos. 3-4, Feb. 1-15, 1928, pp. 50-54, 6 figs. Calculations made from tests conducted in aerodynamic laboratories; influence of truncation of front of fuselage; influence of air discharge through radiator.

WELDING WORK ON. Welding in Airplane Construction, A. Rechtlich and M. Schrenk. Nat. Advisory Committee for Aeronautics—Tech. Memorandum, no. 453, Feb. 1928, 28 pp., 2 figs. Principles for production of perfect weld; possibilities of testing strength and reliability of welded parts; most important and dangerous stresses for welded structures are alternating or oscillating stresses; production of perfect welded joint depends on suitability of structure for welding, use of suitable material and welding wire and on knowledge and conscientiousness of welder. Translated from Schweissen im Flugzeugbau.

WIND-TUNNEL TESTS. Wind-Tunnel Tests of DH-4B Model Fitted with Various Fins and Rudders. Air Corps Information Circular, vol. 7, no. 603, Nov. 1, 1927, 11 pp., 17 figs. Tests to determine change in slipstream effects and rudder control due to variations in shape and vertical location of rudder and fin.

WING-BEAM DESIGN. The Design of Airplane Wing-Beams, J. S. Newell. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 3, part 1, Mar. 1928, pp. 725-787, 22 figs. Presents method developed by U.S. Army Air Corps for analysis and design of beams used in airplane wings; parts I and II completely cover analysis and designs of wooden beams subjected to combined loadings; part III presents and discusses results of several tests made on pin-ended struts at McCook Field, Dayton, Ohio.

WING-PRESSURE DISTRIBUTION. Pressure Distribution on Wing Ribs of the VE-7 and TS Airplanes in Flight, R. V. Rhode. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 277, Jan. 1928, 61 pp., 57 figs. Complete results of pressure-distribution tests made at Langley Field on wing and tail ribs for particular manœuvre of flight; curves show variation of pressure distribution, total loads, normal acceleration and centre of pressure with respect to time.

ALLOYS

MAGNETIC. Magnetic Alloys Named and Defined. Iron Age, vol. 121, no. 8, p. 534. Several important brands in common use described in terms of properties and composition; permalloy; hipernick; copernick; "A" metal; thermalloy; K.S. magnetic steel, cobaltcrom; permanite and nomag.

ASBESTOS MINES AND MINING

CANADA. Asbestos Mining in Canada, T. Marvin. Explosives Engr., vol. 6, no. 2, Feb. 1928, pp. 49-52, 9 figs. Asbestos veins occur in altered periodtite which, with other closely associated intrusive rocks, are in what is called serpentine belt; an asbestos deposit is worked in 35-ft. levels, faces being blasted down with 38-ft. to 40-ft. holes; movements of all trains in and out of mine are controlled by dispatcher in traffic tower.

ASPHALT

MINES AND MINING. Natural Solidified Petroleum—Its Mining, Treatment and Uses, W. F. Hartzell. Eng. and Min. Jl., vol. 125, no. 6, Feb. 11, 1928, pp. 253-254, 2 figs. Mining native lake asphalt is simple operation; another form of asphalt is known as gilsonite, found in immense deposits in western United States, most of which are in Utah.

ASTRONOMICAL INSTRUMENTS

MACHINING. Machinery Aids the Astronomer. Am. Mach., vol. 68, no. 7, Feb. 16, 1928, pp. 310-311, 8 figs. Eight half-tones of operations in producing astronomical instruments, accompanied with brief description of each; draughting room, machine shop and physical and optical laboratories of engineering department of Mount Wilson Observatory.

AUTOMOBILE ENGINES

FUEL CONSUMPTION. Relation of Fuel Consumption to Engine Compression in Cars, G. G. Brown. Oil and Gas Jl., vol. 26, no. 40, Feb. 23, 1928, pp. 196, 198 and 200. Brings out relative advantages and disadvantages inherent in different methods of increasing engine displacement in motor cars; both of these methods of increasing car performance invariably increase fuel consumption.

HIGH-COMPRESSION. Ricardo Discusses High-Compression Engines, H. R. Ricardo. Automotive Industries, vol. 58, no. 6, Feb. 11, 1928, p. 200. Abstract of paper read before Brit. Instn. of Petroleum Technologists.

VIBRATION REDUCTION. Isolating Engine Vibration. Autocar, vol. 60, no. 1683, Feb. 3, 1928, pp. 203-204, 14 figs.

AUTOMOBILES

BODIES, FINISHING. Abrasive Engineering Practice in Automobile Manufacturing Plants, F. B. Jacobs. Abrasive Industry, vol. 9, no. 3, Mar. 1928, pp. 76-77, 3 figs.

TRANSMISSIONS. Internal Gears Used in Detroit 3- and 4-Speed Gearsets, A. F. Denham. Automotive Industries, vol. 58, no. 6, Feb. 11, 1928, pp. 196-197, 3 figs. Adoption of internal gear reductions for next-to-high speed in two types of transmission manufactured by Detroit Gear & Machine Co.; both units offered for original equipment; spur and internal gear reductions located in different compartments of transmission case to facilitate lubrication.

Research on Noiseless Automobile Construction: A Machine for Studying Vibration in Gear Boxes (Le recherche du silence en construction automobile. Une machine pour l'étude des vibrations des boites de vitesses). Technique Moderne, vol. 20, no. 4, Feb. 15, 1928, pp. 174-175, 3 figs. Describes machine used for testing gear boxes to determine noises due to gears; amplification by grid tubes of vibrations in box which are detected by magnetic detector.

B

BAFFLE PIERS

HYDRAULIC MODELS. Baffle-Pier Experiments on Models of Pit River Dams, B. E. Torpen, O. Reed and H. K. Fox. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 3, part 1, Mar. 1928, pp. 857-869, 8 figs. Other unpublished data on tests of spillway models may add to value of discussions, and writer presents results of series of such tests for Bull Run dam now under construction for water supply of Portland, Ore. Discussion of paper by I. C. Steele and R. A. Monroe from Jan. issue of Proceedings.

BAKELITE

MOULDING. Bakelite Moulding Methods, F. W. Curtis. Am. Mach., vol. 68, no. 9, Mar. 1, 1928, pp. 361-364, 8 figs. Methods applied in making bakelite products and constructional features of dies and presses used by Reynolds Spring Co.

BALANCING MACHINES

DYNAMIC-STATIC. New Dynamic-Static Balancing Machines, F. Hert. Am. Soc. Naval Engrs.—Jl., vol. 40, no. 1, Feb. 1928, pp. 123-129, 6 figs. New balancing process lately developed consisting of combined dynamic-static method of balancing used in balancing machines built by Krupp in Essen, Germany; gives fundamentals of new method of balancing and apparatus used. Translated from Kruppsche Monatshefte, Oct. 1927.

BEAMS

CONTINUOUS—THEORY. Continuous Beams Over Three Spans, I. Oesterblom. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 3, part 1, Mar. 1928, pp. 709-724, 2 figs. For continuous construction, particularly prevalent on account of increasing use of reinforced concrete, proper solution of moment equations is most tedious task; author provides necessary tables showing moment factors for all most common conditions, so that moments may be found with expenditure of less effort and time; also shows significance of variables and seriousness of usual conventional errors; safety and economy of materials are obtained simultaneously.

BLAST FURNACES

CONSTRUCTION. Improvements in Blast Furnace Construction, J. P. Dovel. Am. Inst. Min. and Met. Engrs.—Tech. Pub., no. 73, 1928, 3 pp. Rebuilding lining while in operation by insertion of series of rows of bronze cooling plates from outside, attached to and supported by shell; this promptly agglomerates material about plates and rebuilds linings to desired dimensions permanently.

DESULPHURIZING. Desulphurizing in the Blast Furnace, C. H. Herty, Jr., and J. M. Gaines, Jr. Blast Furnace and Steel Plant, vol. 16, no. 2, Feb. 1928, pp. 233-237, 5 figs. Condensation of findings of Kinney, Goldberg and Michel, to which has been added data secured by authors; probable reactions in sulphur elimination explained.

BOILER FURNACES

HIGH-CAPACITY. Some Factors in Furnace Design for High-Capacity, E. G. Bailey. Universal Engr., vol. 47, no. 2, Feb. 1928, pp. 28-32. Reports progress in furnace designs for high-capacities; principal factors that should control furnace designs; stoker furnaces; ash removal; rates of heat transfer.

PULVERIZED-COAL. Boiler Tests with Unit Mills at Cahokia, E. H. Tenney. Power Plant Eng., vol. 32, no. 4, Feb. 15, 1928, pp. 238-239, 2 figs. Three-months' continuous operation of new boiler unit has proved entirely satisfactory; each boiler is fired by 2 Simplex-unit pulverizers with capacity of 15,000 lb. per hr. each, using 4-in. white-iron paddles; boiler fired with turbulent burners.

BOILERS

CONTROL. The Hagan Control System, H. E. O'Breen. Eng. and Boiler House Rev., vol. 41, no. 8, Feb. 1928, pp. 380 and 382-384, 5 figs. Outlines what automatic installation consists of; particulars of one of many plants where Hagan system has been installed; with Hagan regulators quick and accurate adjustments are made, and improved efficiency has resulted in saving of 608 tons of coal per year, equal to nearly 4 per cent of former fuel consumption.

HEAT TRANSMISSION IN. Heat Transmission in Modern Boilers; Boilers with Large Radiation and Convection Surface (Processus de la transmission de la chaleur dans les chaudières modernes; chaudières à grand rayonnement: chaudières à grande convection), Roszak and Veron. Société des Ingénieurs Civils de France—Proces-Verbal (Paris), no. 3, Feb. 24, 1928, pp. 93-98. Shows how heat-transfer laws explain and co-ordinate phenomena observed and justify success of certain devices which have been developed in steam boilers.

HIGH-PRESSURE. Some Experiences with the High-Pressure Boilers at Edgar Station (Boston). Power, vol. 67, no. 11, Mar. 13, 1928, pp. 459-461, 5 figs. Account of experiences with two boilers comprising second high-pressure unit; each designed to generate 270,000 lb. of steam per hour and fired by 16-retort, 45-tuyere underfeed stoker; troubles encountered to date have consisted chiefly of water-wall tube failures, superheater burnouts and some difficulty in operating stokers with highly preheated air.

BRASS CASTING

CUTTLEFISH METHOD. Cuttlefish Castings, C. C. Hopkins. Engineer (Lond.), vol. 145, no. 3762, Feb. 17, 1928, p. 191. Easy way to make small, single castings in brass is to use cuttlefish method; description of process; cuttlefish is material that can be used for making moulds into which molten metals can be poured to produce small castings.

BRICK

TESTING. Strength of Brick in Tension, J. W. McBurney. Am. Ceramic Soc.—Jl., vol. 11, no. 2, Feb. 1928, pp. 114-117, 2 figs. Self-aligning grip for use in testing brick in tension is described; values for tensile strength of several types of brick are given; comparison between transverse and tensile strength of brick; conclusion is that tensile strength is closely related to transverse length

BRIDGES

DESIGN. Steel vs. Reinforced Concrete for Bridges, R. Modjeski. Iron and Steel of Can., vol. 11, no. 2, Feb. 1928, pp. 53-54. Discussion of relative merits of steel and reinforced concrete construction; steel tested and relied upon to carry loads assigned better than reinforced concrete; stresses in steel calculated with more precision than in reinforced concrete; time required for steel construction shorter; steel construction when carried on during freezing weather; absolutely permanent when protected from moisture. Paper read before Am. Inst. Steel Construction.

LIFT, RAILROAD. New Bridge Replaces Car Ferry on the Maine Central. Ry. Age, vol. 84, no. 10, Mar. 10, 1928, pp. 565-569, 6 figs. Double-deck structure 2,076 ft. long over Kennebec river involved 234-ft. lift span; caisson work established new record for depth; single track on lower deck, and 20-ft. roadway with two 5-ft. sidewalks on upper deck; span involves interesting features; operation of lift span.

MOVABLE, HIGHWAY. Sabine River Highway Bridge. Pub. Works, vol. 59, no. 2, Feb. 1928, pp. 68-69.

MOVABLE, INTERLOCKING. Interlocking of Opening Bridges. Ry. Gaz., vol. 48, no. 4, Jan. 27, 1928, pp. 98-99, 3 figs. Keadby canal bridge, London & North Eastern Railway, is latest example of how opening bridge is interlocked with signals whether turning, draw or lift type; where opening bridges are providd in Great Britain their operation is controlled from signal boxes, and control levers are interlocked with fixed and block signals.

REPAIRS, WELDING. Repair Corroded Bridges, G. J. Green. Iron Age, vol. 121, no. 10, Mar. 8, 1928, p. 677. Notable structures in Pittsburgh and Rochester reinforced by welding on new metal to replace losses; bars were welded into position vertically, and tied together at close intervals with cross-bars of same section; strength of weld tested; slack diagonal eyebars and tie rods tightened for Pittsburgh & Lake Erie Railroad.

WOODEN, RAILROAD. Report on Wooden Bridges and Trestles. Ry. Age, vol. 84, no. 9B, Mar. 7, 1928, pp. 560-D82-D85. Simplication of grading rules and classification of timber for railway uses; revise present specifications for treated and untreated timber piling; specifications for timber piles; supply yards for standard trestle timbers throughout country. Abstract of report to Am. Ry. Eng. Assn.

WOODEN, STRESSES. Stress Analysis of 90-Year-Old Wooden Bridge, N. J. Bell and J. K. Grannis. Eng. News-Rec., vol. 100, no. 6, Feb. 9, 1928, pp. 234-235, 1 fig. Exactness of design and craftsmanship on 240-ft. span fits it to carry traffic far heavier than original design contemplated; at Camp Nelson, Ky., about 20 miles from Lexington, there is 90-year-old bridge, unusual in design and construction and in its preservation; description of bridge; truss is essentially an arch braced laterally and vertically by stiffener truss; in analysis, no allowance was made for impact.

SUSPENSION—HUDSON RIVER, NEW YORK CITY. The Hudson River Bridge, O. H. Ammann. Tech. Eng. News, vol. 9, no. 1, Feb. 1928, pp 7-9, 28, 34 and 38, 4 figs. Details of sixty-million-dollar structure which is to be largest of its kind; span of 3,500 ft.; bridge traffic studies; location, type and general proportions, general structural characteristics; floor structure and its traffic capacity; vertical and horizontal stiffening systems; cables; cable anchorages; towers and their foundations; loads, wind and temperature forces.

BRIDGES, CONCRETE

ARCH. The Effect of Climatic Changes Upon a Multiple-Span Reinforced Concrete Arch Bridge, W. M. Wilson. Univ. of Ill.—Bul., vol. 25, no. 24, Feb. 14, 1928, 65 pp., 35 figs. Investigation to observe change that took place in multiple-span arch bridge in order that magnitude of changes might be determined, and in order that measured and computed changes might be compared; bridge on which observations were made is six-span, two-rib highway bridge over Vermillion river at Gilbert street, Danville, Ill

SKEW-ARCH. The Design and Construction of a Skew Arch, S. C. Hollister. Am. Concrete Inst.—Advance Paper for Mtg., Feb. 28, 29 and Mar. 1, 1928, 30 pp., 17 figs. Paper deals with solution of skew-arch problem, in building of bridge in Chester, Pennsylvania, to carry West Ninth street over Chester river; span in direction of roadway is 160 ft., with theoretical rise of 12.62 ft.; width of bridge is 60 ft., and angle of skew is over 42 deg.; treats in sequence discussion of skew-arch design; design and construction of bridge; and certain strain-gauge measurements made upon span after completion.

BUILDING CODES

JOINT STANDARD. Design and Cost Data for the 1928 Joint Standard Building Code, A. R. Lord. Am. Concrete Inst.—Advance Paper for Mtg., Feb. 28, 29 and Mar. 1, 1928, 115 pp., 18 figs. Includes complete set of designers' tables and diagrams for use with proposed 1928 Joint Standard Building Code; these tables and diagrams introduce important simplifications in design of doubly reinforced beams and in spacing of stirrups.

C

CASE-HARDENING

DIFFUSION. The Diffusion of Carbon in Carburized Iron. Fuels and Furnaces, vol. 6, no. 2, Feb. 1928, pp. 211-212, 6 figs. Investigation by E. Zingg; microscopic examination showed exclusively that with steel samples within temperature range of 1,200 to 1,470 deg. Fahr., surface zones had been transformed into cementite layer; results show that true diffusion takes place only up to content of saturated mixed crystals, while with reaction diffusion, content of highest chemical composition may be attained. Translated from Stahl u. Eisen.

CAST IRON

SEMI-STEEL. The Manufacture of Steel-Mix Grey Cast Irons, with Special Reference to Their Treatment in the Foundry, A. Smith. Foundry Trade Jl., vol. 38, no. 598, Feb. 2, 1928, pp. 77-79, 2 figs. By adoption of suitable mixtures and correct melting technique, it is possible to make with perfect regularity 30 to 60 per cent steel-mix grey cast irons which will be almost entirely pearlitic in structure, readily machinable and yet possess vastly superior properties to grey cast irons made from pig irons alone or pig irons mixed with cast iron scrap; classification of semi-steel cast iron; graphite in semi-steel cast iron; cupola design.

CEMENT MORTAR

SALTS IN MIXING WATERS. Effect of Salts in Mixing Water on Compressive Strength of Mortar. Pub. Roads, vol. 8, no. 11, Jan. 1928, pp. 248-249. Investigation has recently been completed at Univ. of Texas on effect of various salts in mixing water on compressive strength of mortars; it is quite evident from results that, so far as mixing water is concerned, sulphate ion is not necessarily injurious to strength of Portland cement mortars; of three sulphates used, sodium salt is injurious, magnesium salt shows slight effect and ferrous sulphate increases strength materially.

STRENGTH. Effect on Cement of Certain Salts in Mixing Water. Pub. Works, vol. 59, no. 2, Feb. 1928, p. 74. Shows that all of sodium salts used are injurious to Portland cement mortars, chloride, sulphate and carbonate showing progressively greater reduction in strength for given percentage of negative ion; two magnesium salts used have only slight effect; calcium chloride and ferrous sulphate are beneficial.

CEMENT, PORTLAND

ANALYSIS. Effect of Different Procedures on Results of Analyses of Portland Cement. Rock Products, vol. 31, no. 3, Feb. 4, 1928, p. 77. Present tests were made to compare results of four operators and numerical values of determinations of silica and sesquioxides by two different procedures. Abstract taken from Zement, 1927, p. 974.

CITIES AND TOWNS

PLANNING, QUEBEC. Planning and Building a Modern Industrial Town in Northern Quebec. Town Planning, vol. 7, no. 1, Feb. 1928, pp. 10-12, 1 fig. New town of Dolbeau; plan for model town was prepared and building regulations were adopted; town is divided into zones, A and B; plan of Dolbeau is reproduced.

COAL

CARBONIZATION, LOW-TEMPERATURE. Low-Temperature Carbonization, H. P. Hird. Chem. and Industry, vol. 47, no. 2, Jan. 13, 1928, pp. 30-32. Discusses value of coal from standpoint of products obtained by distillation; value of by-products as compared to loss resulting from burning it as fuel; Hird process; value of products obtained by low-temperature carbonization; coke and gas produce more power than coal burned direct, leaving oil as clear profit; principal products obtained by distillation of coal are gas, coke or smokeless fuel, oils and ammonia; coke represents some 70 per cent of coal, and is of equal importance to oil, if not more so.

CLASSIFICATION. Pure Coal as a Basis for Classification, F. V. Tideswell and R. V. Wheeler. Am. Inst. Min. and Met. Engrs.—Tech. Pub., no 104, Mar. 1928, 12 pp. Inorganic materials must be regarded as impurities in coal, and their presence introduces errors into composition as found by analyses which are not adequately corrected for by usual calculation to ash-free basis; by calculation to pasis of "pure coal," that is to say, coal free from associated inorganic matter, which is greater in amount than derived ash, errors can be reduced considerably.

COAL HANDLING

RAILWAY TERMINALS. Coal Terminal Renders Unusual Service. Ry. Age, vol. 84, no. 7, Feb. 18, 1928, pp. 399-402, 3 figs. Complex business of supplying New York City with coal is much facilitated by Reading; describes terminal built principally to handle traffic of fuel jobbers of New York and vicinity; fuel moved through Port Reading terminal during 1926; facilities at Port Reading; yard operations; boat-transfer operations; cars are clamped in place at cradle, elevated and turned over, coal running through pan conveyor and movable chute into barges; total of 336 cars has been unloaded by this dumper in 10 hours; lighterage system.

COAL MINES AND MINING

STEEL PROPS. Supporting Underground Roads by Steel Arches, D. C. Gemmell. Iron and Coal Trades Rev. (Lond.), vol. 116, no. 3129, Feb. 17, 1928, p. 226, 3 figs. This system of roof support has been in use for over a year, and several thousand sets of girders have been erected under conditions stated.

VENTILATION. The Resistance of Coal-Mine Entries to the Flow of Air, H. P. Greenwald and G. E. McElroy. U.S. Bur. Mines—Reports of Investigations, no. 2853, Jan. 1928, 4 pp., 1 fig. Tests show conclusively that two bends close together, a common condition in coal-mine ventilation practice, should be considered as separate bends only when flow is reversed at second bend; for single square cornered bend loss may be figured as approximately 1.5 VP with increase to 2.0 VP for double bend of type tested, that is, 6- by 9-ft. bends on 50-ft. centres.

COAL MINING GEOLOGY

CANADA. A Note on Recent Investigations, F. W. Gray. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 8, Feb. 24, 1928, pp. 168-169, 1 fig. Outline of carboniferous stratigraphy and geologic history of Maritime provinces that contains interesting implications; astonishing thickness of some of carboniferous sediments has recently been disclosed by deep borings for oil in Prince Edward Island

COAL RESEARCH

GENERAL. Coal, Coke and Py-Production, W. A. Forbes. Min. Congress Jl., vol. 14, no. 3, Mar. 1928, pp. 185-189, 4 figs. Cleaning of coal; utilization of coal-mine dumps; coking properties of coal; by-product coke ovens; coke by-products; economical burning of gaseous fuel; low-temperature carbonization of coal.

COKE MANUFACTURE

COAL PREPARATION. Coal Preparation for Coke and Gas Manufacture, H. J. Rose. Chem. and Industry, vol. 47, no. 2, Jan. 13, 1928, pp. 32-37. Methods employed to reduce objectionable features in coal before coking begins; kind of coal best fitted for coking; treatment of coal to reduce ash and sulphur; necessity of careful sampling pointed out; coal preparation should begin in mine by selective mining, wherever that is practicable.

COLD STORAGE

WAREHOUSES. Canadian Rail and Harbour Terminals at Toronto. Ice and Refrigeration, vol. 74, no. 2, Feb. 1928, pp. 121-125, 10 figs. Description of plant erected by Canadian Rail & Harbour Terminals, Ltd.; designed to serve dual purpose of cold and dry storage warehouse; largest of its kind in British Empire; equipment most modern in character; cold-storage plant; "spira-flo" condensers; ice plant boiler room and coal-handling equipment; outstanding feature of plant is extent to which welding has been used in installing equipment.

COMMUTATORS

INSULATION BREAKDOWNS. Preventing Insulation Breakdowns in Commutators, W. E. Warner. Power, vol. 67, no. 10, Mar. 6, 1928, pp. 428-429. Frequent cause of breakdown in d.c. motors, generators and rotary converters is collecting of copper and carbon dust on surfaces at back of commutator; good results can be obtained by using thin muslin through which certain amount of air circulation is possible.

CONCRETE

CRACKS. Crazing in Concrete and the Growth of Hair Cracks into Structural Cracks, A. H. White, V. A. Aagaard and A. O. L. Christensen. Am. Concrete Inst.—Advance Paper for Mtg., Feb. 28-Mar. 1, 1928, 12 pp., 6 figs. Experimental study of formation of hair cracks; growth of hair cracks into structural cracks; crazing may be prevented by using lean mixtures, and by keeping moisture content of concrete constant.

STRENGTH. A Method for Predicting Concrete Strengths with Increased Precision, H. J. Gilkey. Am. Concrete Inst.—Advance Paper for Mtg., Feb. 28-Mar. 1, 1928, 28 pp., 8 figs. Presentation of problem, including partial analysis of certain of leading factors bearing upon strength and quality of concrete; explanation of method; tables of factors and their use; explanation of figures.

TESTING. Concrete in the Field. Engineering, vol. 125, no. 3238, Feb. 3, 1928, p. 121. Review of papers presented at meeting of Am. Soc. for Testing Matls. D. A. Abrams dealt with mixing of concrete, showing that strength is increased within range studied as time of mixing is prolonged; H. S. Mattimore dealt with transverse-beam tests as criterion of quality; other contributions briefly reviewed.

Plastic Yield, Shrinkage and Other Problems of Concrete and Their Effect on Design, O. Faber. Instn. Civil Engrs.—Proc., 1927-1928, 49 pp., 17 figs. Description of series of experiments made to determine how concrete behaves under loads for long periods, especially from standpoint of plastic yield, shrinkage and deflection and their bearing on design; effect of reinforcement.

CONCRETE CONSTRUCTION

QUALITY CONTROL. Experience with a Strength Specification Contract, R. C. Johnson. Concrete, vol. 32, no. 3, Mar. 1928, pp. 31-34, 4 figs. Detailed description of methods used on 22,000 cu. yd. quality controlled concrete job in Wisconsin; tests check quality of concrete secured; quality control brought savings in cement, aggregates and labour.

MATERIALS HANDLING. Concrete Plant Placed on Spoil Bank to Obtain Gravity Flow. Eng. News-Rec., vol. 100, no. 10, Mar. 8, 1928, pp. 396-397, 2 figs. Contractor on Amarillo water reservoir finds new use for waste-material embankment in level country; concrete distribution was made by chutes from 80-ft. mast.

CONCRETE MIXING

DESCRIPTION. Measurement of Concrete Materials, R. T. Giles. Can. Engr., vol. 54, no. 6, Feb. 7, 1928, pp. 203-204, 3 figs. Essential features in mixing of concrete for road construction; weighing method for fine and coarse aggregate; several general conditions as to requirements of measuring equipment; no equipment should be allowed which will give more material than specified amount; measuring equipment should be easy to calibrate for accuracy; weighing fine aggregate; inundation method of measuring; measurement of coarse aggregate is usually accomplished by one of two methods, volume or weight. Paper read before Am. Road Bldrs'. Assn.

CONVEYORS

BELT. Handling Mill Refuse on 1,600-Ft. Belt Conveyor Line, W. A. Scott. Power Transmission, vol. 32, no. 1, Jan. 1928, pp. 130-131, 2 figs.

COOLING TOWERS

DESIGN. Cooling Towers, C. W. Olliver. Power Engr., vol. 23, no. 263, Feb. 1928, pp. 58-60, 2 figs. Provocative discussion on theory and design, with special reference to concrete construction; "rain" or finespray effect, is of very great importance.

COPPER CASTINGS

BULKY. Presents Notes on Making Bulky Copper Castings, W. J. Clark. Foundry, vol. 56, no. 5, Mar. 1, 1928, pp. 181-184, 6 figs. Method of pouring heavy copper castings; reasons why copper is difficult metal to cast; impurities resulting from atmospheric contact; charcoal in runner box forms protective covering throughout pouring; manner of gating casting for its running; correct pouring rate; difficulty of adequately feeding against shrinkage; tenure of fluidity over that of casting depends on form, volume and temperature.

COPPER MINING GEOLOGY

SEDIMENTARY DEPOSITS. Sedimentary Metalliferous Deposits of the Red Beds, J. W. Finch. Am. Inst. Min. and Met. Engrs.—Tech. Pub., no. 51, Feb. 1928, 7 pp. Carbonate-silicate ores are not found in sufficient quantity in any one area to justify erection of milling plants for their treatment; deposits lend themselves best to purposes of individual miner and leaser who can search for lenses of ore, and ship sorted product to custom smelters.

GEOPHYSICAL EXPLORATION. Earth-Resistivity Measurements in the Lake Superior Copper Country, W. O. Hotchkiss, W. J. Rooney and J. Fisher. Am. Inst. Min. and Met. Engrs.—Tech. Pub., no. 82, Mar. 1928, 15 figs. Scheme of measurement is based on special case of four terminal conductors; if electric current is passed between any two points in homogeneous conducting material, current lines will distribute themselves according to well-established laws; apparatus used was developed by Dept. of Terrestial Magnetism of Carnegie Instn.; diagram of earth-resistivity meter, showing connections to earth.

QUEBEC. Copper in the Eastern Townships, J. A. Dresser. Can. Min. and Met. Bul. (Montreal), no. 191, Mar. 1928, pp. 341-346. Résumé indicates that Eastern Townships is not new field; yet it offers, not only possibilities, but even probabilities that further deposits will yet be disclosed.

CORES

DRY-SAND. The Effect of Moisture Absorption on the Properties of Dry-Sand, H. L. Campbell. Iron and Steel of Can., vol. 11, no. 2, Feb. 1928, pp. 48-50. Investigation to determine changes in strength and permeability of dry-sand cores when placed in green-sand moulds for different periods of time; core-sand mixtures; methods used in obtaining data; effects of moisture absorption on transverse strength and on permeability of cores; moisture absorbed by dry-sand cores.

CRANES

FOUNDRY. Foundry Jib Crane of Great Flexibility. Iron Age, vol. 121, no. 8, p. 530, 1 fig. Design fitted for work in limited space; unusual ball-bearing arrangement; electric welding employed in attaching crane supports.

TRACK. A Track Crane with New Features. Ry. Eng. and Maintenance, vol. 24, no. 2, Feb. 1928, pp. 76-77, 1 fig. Crane is mounted on flat car between other cars and loads or unloads two cars before switching, thus reducing switching to one-half of what would be required if crane could work from end of car only; power is supplied by 40-h.p., 4-cylinder gasoline engine and has two speeds in each direction; crane has capacity of 5,000 lb. with hoisting speeds of 90 ft. and 180 ft. per min.

CRUSHED STONE PLANTS

UP-TO-DATE. Bringing the Stone-Crushing Plant Up-to-Date, F. W. Westbrook. Indus. Eng., vol. 86, no. 2, Feb. 1928, pp. 79-81, 6 figs. Plant construction on slopes above Hudson river; as stone passes from operation to next it steadily progresses down hill; all of machinery is operated by individual motors; great deal of mechanical handling by means of belt conveyors is involved; all of conveyors have individual motors and are driven through De Laval worm-reduction gears.

CUTTING TOOLS

DIAMOND. Diamond Cutting Tools. Machy. (Lond.), vol. 31, no. 799, Feb. 2, 1928, pp. 577-578, 7 figs. Application of diamond cutting tools to finish turning of aluminum-alloy pistons and boring of white-metal liners for crankshaft and connecting-rod bearings; advantage in finish and accurate sizing; eliminates hand scraping or bedding bearings; feed should be about 0.001 in. per revolution of tool; design of tools for machining alloy pistons; diamond boring tools.

D

DAMS, ARCH

DESIGN. Approximate Formulas for Arch Dam Design, B. F. Jakobsen. Eng. and Contracting, vol. 67, no. 1, Jan. 1928, pp. 25-27, 4 figs. Why ordinary cylinder formula is not satisfactory; formulas used in design of 400-ft. dam; how dam may be designed roughly for cost estimates; writer presents formulas which he has used extensively in design of Pacoima dam of Los Angeles Flood Control District and which he has found to be fairly accurate when checked with more elaborate and also more accurate formulas for arches.

TESTING. Arch Dams, C. D. Marx. Engrs. and Eng., vol. 45, no. 1, Jan. 1928, pp. 16-17. Unique research in civil engineering; experimental Stevenson creek dam; completed to height of 60 ft.; shaped like symmetrical, triangular piece of side of round can; built of Portland cement concrete without steel reinforcements; announcement by U.S. Bur. of Standards; complete sets of deformations, strains and slide measurements made by varied loads; tests made at night to eliminate temperature effects; only signs of failure two vertical cracks in centre line.

DAMS

DIVERSION, WYOMING. Construction of Willwood Diversion Dam, I. E. Houk. New Reclamation Era, vol. 19, no. 2, Feb. 1928, pp. 26-28, 3 figs. Concrete gravity dam built in 1922 and 1923 diverts water for Willwood division of Shoshone project; dam is concrete gravity structure 320 ft. long, surmounted by 3-span, pony Warren, riveted, steel-truss highway bridge having reinforced-concrete floor; design of dam; foundation conditions; construction operations; cost records.

EARTH. Building a Rolled-Fill Dam of Prewetted Earth, W. Lowry. Eng. News-Rec., vol. 100, no. 10, Mar. 8, 1928, pp. 388-391, 5 figs. McKay dam 165 ft. high in Umatilla irrigation works takes advantage of stable material to cut down costs by steep slopes and concrete paving; building and paving of fill; comparison is suggested with semi-hydraulic fill method adopted by reclamation engineers at Guernsey dam.

GRAVEL-FILL. Building the Guernsey Irrigation and Power Dam, F. F. Smith. Eng. News-Rec., vol. 100, no. 7, Feb. 16, 1928, pp. 264-268, 7 figs. Semi-hydraulic method of construction adopted for gravel-fill dam built on permeable river bottom; material dumped from trestles was sluiced into place; design and construction of dam on North Platte river in Wyoming for control and conservation of river, which supplies federal irrigation project, comprising 237,000 acres of irrigated land in Wyoming and Nebraska; power penstock; concrete power house provides for two 3,400-h.p. turbines direct connected to 3,000-kv.a. generators.

IMPOUNDING, PERMEABLE MATERIAL. Reservoir Dam of Permeable Material. Pub. Works, vol. 59, no. 2, Feb. 1928, pp. 78-80, 1 fig. In connection with increasing water supply of city of Chicopee, Mass., impounding dam, 48 ft. high, was built of permeable material and resting upon permeable soil; continuous row of steel-sheet piles 30 ft. long was driven for full length of dam directly under centre of core wall; embankment is approximately 550 ft. long, height above bed of stream 48 ft.

Multiple-Arch. High Multiple-Arch Dam at Lake Pleasant, Arizona. Engineering, vol. 125, no. 3239, Feb. 10, 1928, pp. 159-161, 7 figs. Construction details of highest multiple-arch dam built up to present time; forms reservoir of 8 miles length, and has capacity of 173,000 acre-ft.; water will be used for irrigation of 40,000 acres of land; has double-wall buttresses; spaced on 60-ft. centres; there are 26 arches and 27 buttresses.

Design. New Type of Dam (Su un nuovo tipo di dighe), E. Kalman. Energia Elettrica, vol. 4, no. 12, Dec. 1927, pp. 1282-1303, 28 figs. Critical discussion of recent practice in dam design, with special reference to Noetzli's hollow-buttress multiple-arch design of Horseshoe dam in Arizona; describes and analyzes new patented types consisting of thin vertical wall held in position by one or more solid or hollow inclined slabs built upstream or downstream of vertical wall.

Italy. Italian Water-Power Plants. Engineering (Lond.), vol. 125, no. 3241, Feb. 24, 1928, pp. 237-238. Particulars concerning more important dams being built or nearing completion on April 1 of last year; information relates to condition of works in early part of 1927. Abstract translated from Annali dei Lavori Pubblici.

Upward Pressure. Upward Pressures Under Dams: Experiments by the United States Bureau of Reclamation, J. Hinds. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 3, Mar. 1928, part 1, pp. 685-708, 20 figs. Uplift measurements on three gravity diversion dams and one gravity storage dam; founded on gravel, on sandstone and shale and on columnar basalt foundation.

DEPRECIATION ACCOUNTING

Review of. Depreciation Practice and Plant Records, O. E. Fischer. Jl. of Accountancy, vol. 45, no. 3, Mar. 1928, pp. 161-174. Review of practice of estimating factory and machine depreciation and criticism of methods of keeping plant records, with suggestions for proper record keeping with minimum of labour.

DIES

Bending. Examples of V-Die Bending. Machy. (Lond.), vol. 31, no. 800, Feb. 9, 1928, pp. 606-607, 1 fig. Examples of various types of bends that may be made in V-die; construction of die and punch used is such that it will permit large variety of right-angle bends to be made on angular strips of sheet metal; gauge generally used for locating work on die; bending operations.

Brass-Forging. Characteristics of Brass-Forging Dies, F. W. Curtis. Am. Mach., vol. 68, no. 8, Feb. 23, 1928, pp. 319-320, 10 figs.

DIESEL ENGINES

Design. American and German Diesel Engines Described. Soc. Automotive Engrs.—Jl., vol. 22, no. 2, Feb. 1928, pp. 154 and 266-267. Review of Diesel Engine Session; brief abstracts of papers covering Diesel design and construction and aluminum-alloy pistons in wide size range; Diesel Engine Performance Compared, by Dr. W. Riehm; automobile Diesel engines; Horning sees no small Diesels; for aircraft, Diesel engine promises improvement in regard to fire hazard and cruising range; rail-car Diesel engine of 200 h.p.; economy of Diesel-engine locomotives.

High-Speed. High-Speed Diesel Engines, O. D. Treiber. Soc. Automotive Engrs.—Jl., vol. 22, no. 2, Feb. 1928, pp. 183-189, 7 figs. Study to determine efficiencies and mean effective pressures when Otto and Diesel cycles are combined in varying percentages; improvement in thermal efficiency up to 30 per cent of fuel burned at constant volume; new metal alloys and weight reduction; high-pressures necessitate heavy construction; time-lag serious barrier; possibilities of direct injection.

Improvements. Bringing Larger Powers Into the Diesel Electric Field, H. Becker. Oil Engine Power, vol. 6, no. 2, Feb. 1928, pp. 103-106, 5 figs. Improvements in double-acting Diesels increase speed and reduce weight; recent developments by M.A.N. Co.; increasing speed of engines and reducing weight of both engine and generator materially decreases production cost; adaptation of solid injection to high-speed double-acting Diesel; marine applications; marine types designed for air injection and stationary units for solid injection; details of high-speed type; change in cylinder-block design; cylinder heads in two parts; fuel valves; piston-cooling system.

Thermal Efficiency. Diesel Engine Thermal Efficiency and M.E.P., B. M. Thornton. Power Plant Eng., vol. 32, no. 5, Mar. 1, 1928, pp. 296-297, 1 fig. Method of quickly determining thermal efficiency of Diesel engine from its card, based upon newly-derived formula and chart.

DITCHES

Flow of Water. Flow of Water in Drainage Ditches, C. E. Ramser. Eng. and Contracting, vol. 67, no. 1, Jan. 1928, pp. 7-10, 20 figs. Describes measurements made on eleven drainage ditches and one natural river channel in central Illinois to determine roughness coefficient " n " in Kutter's formula for use in design of drainage channels, in computing discharge capacity of existing channels, and to determine effect of vegetation upon their capacity; experiments were conducted by U.S. Dept. of Agriculture in co-operation with Engineering Experiment Station of Univ. of Illinois.

E

ELECTRIC CABLES

Aluminum, Steel-Cored. Steel-Cored Aluminum Cables, W. Bode. A.E.G. Progress (Berlin), vol. 4, no. 2, Feb. 1928, pp. 40-41, 1 fig. Investigations of losses occurring in steel-cored aluminum cables.

Arcing Tests. Arcing Tests on Cables, Fuchs and Kaufmann. Elec. World, vol. 91, no. 9, Mar. 3, 1928, p. 467. Wind or sudden shedding of sleet may cause cables of overhead transmission line to clash, causing destructive arcing; authors investigated durability of 15 types of cables when subjected to heavy arcs; hollow cables lasted longer than equivalent solid sables. Brief abstract translated from Elektrotechnische Zeit., Jan. 26, 1928.

Rubber-Insulated. The Heating of Rubber-Insulated Wires and Cables, L. B. Desbleds. India-Rubber Jl., vol. 75, no. 4, Jan. 28, 1928, pp. 10-11, 4 figs. Results of French tests to establish permissible current densities; determination of heating of wire or cable in terms of current which traverses it, with view to estimating current which produces maximum permissible heating; results obtained form subject of report which is here summarized; measurement of resistance; sequence of operations.

ELECTRIC CAPACITORS

Uses. What Relief for the Overloaded System? R. C. Muir. Indus. Eng., vol. 86, no. 2, Feb. 1928, pp. 76-78, 6 figs. Describes use of capacitors for power-factor improvement; purpose of this discussion is to acquaint industrial-plant men with salient factors that must be considered in selection and application of this equipment.

ELECTRIC CURRENTS, ALTERNATING

Calculation. Chart for Solving Alternating Current Problem, C. A. Kulmann. Power, vol. 67, no. 9, Feb. 28, 1928, pp. 377-378, 1 fig. Present alignment chart designed by author for calculation of a.c. power problems; provides easy means of obtaining any of related values, power factor, kilowatts, reactive kilovolt-amperes (wattless kilowatts) and kilovolt-amperes, when any two of values are known.

ELECTRIC CIRCUITS

Ground Detection. Ground Detection, J. Auchincloss. Gen. Elec. Rev., vol. 31, no. 2, Feb. 1928, pp. 76-81, 2 figs. Means of detecting grounding faults in electric circuits; general considerations; two-wire low-voltage d.c. and a.c. circuits; Edison three-wire systems; higher voltage requirements; two-phase three- and four-wire systems; three-phase three-wire systems; 125-volt two-wire ungrounded circuit; Edison three-wire ungrounded neutral systems; three-phase electrostatic instrument for ground detection.

ELECTRIC COILS

Laying Out. Laying Out and Making Pulled Coils, A. C. Roe and D. H. Braymer. Indus. Eng., vol. 86, no. 2, Feb. 1928, pp. 65-68, 9 figs.

ELECTRIC CONDENSERS

Dielectrics. Dielectrics for Electrical Condensers, P. R. Coursey. Engineering, vol. 125, no. 3238, Feb. 3, 1928, pp. 133-134. Reviews development of dielectrics, as dependent upon research and experiment.

ELECTRIC FURNACES

Heat-Treating. Rotary Hearth Furnace Automatically Discharges Parts into Quench Tank. Fuels and Furnaces, vol. 6, no. 2, Feb. 1928, pp. 197-200, 3 figs. Electrically heated furnace with rotary hearth and automatic dumping mechanism, placed in operation in heat-treating department of the Nash Motors Co., Racine, Wis., is used in heat treatment of various types of automobile parts such as steering knuckles, gear blanks, piston pins, etc.

ELECTRIC GENERATORS

Alternating Current, Protection. Protecting Generator Fields Against Overvoltage, R. B. Greenwood. Elec. World, vol. 91, no. 10, Mar. 10, 1928, p. 508, 1 fig. Protection against excitation circuit overvoltages has been obtained in a few hydro-electric plants by installation of aluminum-cell lightning arresters; installation of this nature was made in Moccasin plant of San Fransciso and has proved very satisfactory.

Automotive. Automotive Current Generators, M. Leece. Soc. Automotive Engrs.—Jl., vol. 22, no. 3, Mar. 1928, pp. 390-392. Exacting requirements for generation of electric current for modern automotive vehicles, especially motor coaches, airplanes and dirigibles, and how these needs are met by manufacturers of generators; heavy demands on electric source; voltage-regulated versus third-brush types; why operators and makers have trouble; large equipment economical but needs space. Discussion.

Compound, Parallel Operation. Parallel Operation of Compound Generators, H. N. Blackmon. Power, vol. 67, no. 8, Feb. 21, 1928, pp. 332-335, 8 figs. Problem resolves itself into study of conditions at loads below peak of voltage curves.

Direct Current. Selecting the Most Desirable Type of Direct-Current Generator, S. Hancock. Elec. Jl., vol. 25, no. 3, Mar. 1928, pp. 141-146, 8 figs. Deals with shunt, compound, differentially compound and series generators; separately excited d.c. generators.

Sparkless Commutation. Obtaining Sparkless Commutation, E. J. Morrissey. Power Plant Eng., vol. 32, no. 5, Mar. 1, 1928, pp. 301-303, 6 figs. Points out that ordinary sparking troubles are easily corrected if care is taken in analyzing their cause and applying proper remedies.

Spring Mounting. Spring Mounting Prevents Vibration from Frequency Converter, A. P. Fugill. Power, vol. 67, no. 10, Mar. 6, 1928, pp. 427-428, 3 figs. Unit installed by New York, New Haven & Hartford Railroad, at New Haven, permits supply of power from local power company to railroad system; one of important features is use of spring mounting on single-phase generator, which has maximum rating of 10,700 kva.; spring mounting, which means that stator is mounted in flexible manner, is used to absorb vibration inherent to machine and prevent it from being transmitted to foundations.

Synchronous. Synchronous Machines, R. E. Doherty and C. A. Nickle. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 3, Mar. 1928, pp. 200-204, 5 figs. Solves general case, including salient-pole machines; principal assumption which distinguishes present theory from extensively studied cylindrical-rotor theory is that total armature self-inductance is here taken as variable with respect to rotor positions, whereas previous theory of short circuits, as represented by Boucherot, for instance, assumes this inductance to be constant, in other words that air gap is uniform.

ELECTRIC LINES

Alternating Current. The Transmission of Alternating Current, W. B. Woodhouse. Elec. Rev. (Lond.), vol. 102, no. 2621, Feb. 17, 1928, p. 269. Author advocates adoption of four-phase system for a.c. transmission as means of reducing number of wires necessary for balanced protection with other incidental but important advantages.

ELECTRIC LOCOMOTIVES

Design. Recent Electric Locomotive Designs, J. D. Airich. Sibley Jl. of Eng., vol. 42, no. 2, Feb. 1928, pp. 36-38 and 58, 60 and 62, 3 figs. Brief résumé of different types of electric locomotives; low-voltage d.c., high-voltage d.c. and single-phase a.c. locomotives; principal data on New York Central passenger locomotives.

Tri-Voltage. Tri-Voltage Locomotives, W. R. Taliaferro. Elec. Traction, vol. 24, no. 2, Feb. 1928, pp. 80-81, 1 fig. New electric locomotives built for Sacramento-Northern Railway operating on three different voltages, and power collected from third-rail trolley.

ELECTRIC MOTORS

Controllers. Features to Consider When Selecting Motor Controllers, W. H. Costello. Power, vol. 67, no. 7, Feb. 14, 1928, pp. 294-297, 5 figs.

Direct Current. A Review of the Development of Direct Current Motor Design, E. Thomson. Gen. Elec. Rev., vol. 31, no. 3, Mar. 1928, pp. 116-118, 4 figs. History of d.c. motor development, how design has been improved and developed from Gramme dynamos.

Speed Torque. High-Slip Versus High-Torque Motors, F. J. Johns. Elec. Jl., vol. 25, no. 2, Feb. 1928, pp. 100-101, 2 figs. These points discussed with reference to speed-torque curves of three typical motors, which represent probably most common variations from what might be considered normal motor; only speed torque and current characteristics of these motors discussed.

Squirrel-Cage. High-Torque Motors Permit Large Savings. Power, vol. 67, no. 7, Feb. 14, 1928, p. 297, 1 fig. Savings of approximately $100,000 are expected by Philadelphia Grain Elevator Co. as result of installation of high-torque, high-reactance, squirrel-cage induction motors for driving machinery of its new export grain elevator at Port Richmond, Philadelphia, Pa.

ELECTRIC NETWORKS

Low-Voltage. Low-Voltage, A.C. Networks, D. K. Blake. Gen. Elec. Rev., vol. 31, no. 2, Feb. 1928, pp. 82-84, 4 figs. Service possibilities of low-voltage a.c. networks; application; investigations tend to indicate that a.c. system can be devised to give at lower cost as reliable service as Edison system without storage-battery reserve; some form of secondary network necessary to approach continuity of service given by Edison system. (To be continued.)

Low-Voltage A.C. Networks, D. K. Blake. Gen. Elec. Rev., vol. 31, no. 3, Mar. 1928, pp. 140-143, 16 figs. Types of combined light and power network systems; they should permit load to be easily balanced over phases, should permit grounding to limit voltage on lighting circuits below 150 volts to ground, and should have same nominal voltage for lamps as circuits that are not in network area; about 15 of networks now installed use Y-connected transformer secondary. (Continuation of serial.)

ELECTRIC RHEOSTATS

CALCULATION. Method of Calculating Rheostats for the Control of Illumination and Its Practical Application. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 3, Mar. 1928, p. 217. Describes graphic method which easily permits exact determination of sections of conductors of rheostats for control of illumination produced by incandescent lamps.

ELECTRIC SPARK GAPS

LAG. Surge Impulse Breakdown of Air, J. J. Torok. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 3, Mar. 1928, pp. 177-181, 14 figs Describes phenomenon which is used as method of studying development of high-voltage spark-over; phenomenon described is of intense interest because it presents intermediate stages between initiation of and actual flashover between spheres; effect of time lag of flashover, with special reference to state of ionization of gas previous to flashover. Bibliography.

ELECTRIC SWITCHES

EQUIPMENT SCHEDULES. Switch-Structure Equipment Schedules, W. F. Sutherland. Elec. World, vol. 91, no. 9, Mar. 3, 1928, pp. 454-455, 3 figs. Logically and carefully arranged system of preparing drawings saves time and results in more valuable records; with practice followed by Toronto Hydro-Electric System, complete inventory of electric equipment is always available, down to nuts and bolts for fixing component details.

ELECTRIC SWITCHING

AUTOMATIC. Automatic Switching of Incoming A.C. Lines, A. R. Anderson. Power Plant Eng., vol. 32, no. 4, Feb. 15, 1928, pp. 249-253, 2 figs.

EOTVOS TORSION BALANCE

METHOD. The Eotvos Torsion Balance Method of Mapping Geologic Structure, D. C. Barton. Am. Inst. Min. and Met. Engrs.—Tech. Pub., no. 50, Feb. 1928, 51 pp., 13 figs.

ELECTRIC TRANSFORMERS

AIR BLAST EQUIPMENT. Forced Air-Blast Equipment for Oil-Immersed Transformers, L. H. Hill. Elec. Jl., vol. 25, no. 2, Feb. 1928, pp. 60-62, 9 figs.

ELECTRIC TRANSMISSION AND DISTRIBUTION

THEORIES. The Rigorous and Approximate Theories of Electrical Transmission Along Wires, J. R. Carson. Bell System Tech. Jl., vol. 7, no. 1, Jan. 1928, pp. 11-25. Problems here dealt with are to investigate conditions under which specification of system by means of its self and mutual impedances is valid and to provide general method for calculating these circuit parameters from geometry and electrical constants of system.

BULK. Some Factors Involved in the Bulk Transmission of Power, G. D. Floyd. Elec. News. vol. 37, no. 3, Feb. 1, 1928, pp. 30-33, 4 figs. How frequency, voltage and conductor size are chosen and how power-loss costs are estimated; economics of design; 100 per cent annual cost is that for transmission of 250,000 h.p., 300 miles over 6 circuits at 120 kv.; cost of power loss.

LOSSES. Reducing Distribution Losses, J. B. Moorhouse. Elec. World, vol. 91, no. 6, Feb. 11, 1928, p. 296, 1 fig. Deals with load and voltage tests; graphic instruments should be readily portable, light in weight, accurate and sturdy; charts should be continuous.

PLANNING. Simplified Distribution Planning, W. R. Bullard. Elec. World, vol. 91, no. 10, Mar. 10, 1928, pp. 499-503, 1 fig. Methods of calculating economic characteristics of electric distribution systems, particularly transformer spacing and sizes of line conductor; system of planning described was utilized in rebuilding of extensive and heavily loaded system in southern city.

ELECTRIC-WELDING, ARC

ATOMIC-HYDROGEN. Atomic Hydrogen Arc Welding, J. D. Wright. Iron and Steel Engr., vol. 5, no. 2, Feb. 1928, p. 100. Description of atomic-hydrogen method of arc welding; alternating current maintained between adjustable tungsten-wire electrodes, and hydrogen gas fed to arc around electrodes; equipment required; designed to operate from single phase, 60 cycles; welding of alloy steels and thin metals; test data.

MACHINES. Arc Welding for Machinery, A. F. Davies. Elec. World, vol. 91, no. 10, Mar. 10, 1928, pp. 513-515, 5 figs. Analysis of underlying factors governing use of arc welding, with some examples of cost comparison with cast iron; insofar as welding may be used to fabricate jobs which were formerly made using castings or riveted steel, and produce equivalent job at less cost, welding will be used.

NON-FERROUS METALS. Arc-Welding of Non-Ferrous Metals, A. Churchward. Can. Machy., vol. 39, no. 4, Feb. 23, 1928, pp. 36-37.

ELECTRICITY SUPPLY

INDUSTRIAL LOADS. Characteristics of Industrial Loads. Elec. World, vol. 91, no. 10, Mar. 10, 1928, pp. 515-516, 7 figs. Performance of individual plants departs widely from averages; useful data must be based on individual processes; to show this fact, 50 industrial plants representing five major classes of business were investigated to ascertain whether any average figures can be obtained for specific industries that mean anything.

ELEVATORS

ELECTRIC, CABLE-LOAD EQUALIZING. Equalizing the Load on Elevator Cables, D. R. Paddock. Power, vol. 67, no. 11, Mar. 13, 1928, pp. 472-473, 3 figs. Evans equalizer increases life of cables, reduces wear on sheave grooves and improves elevator operation.

EXTENSOMETERS

CONCRETE MEASUREMENT. Extensometer for the Determination of Young's Modulus for Concrete, V. C. Davies. Engineering, vol. 125, no. 3238, Feb. 3, 1928, pp. 131-132, 6 figs. It was necessary to construct instruments able to read 0.00001-in. extension with fair accuracy, and sufficiently robust to stand violent jar and sudden extension of at least ¼-in. bound to occur when specimen fractured; method of calibration employed is identical with that used in Ewing extensometer.

F

FACTORIES

BUILDINGS, REMODELING. Remodeling Old Manufacturing Buildings to Cut Operating Costs, T. S. Rogers. Mfg. Industries, vol. 15, no. 2, Feb. 1928, pp. 135-138, 4 figs. Points out that operating charges can be lowered and production costs cut either by remodeling present structures or by buying well-built but unused factory at bargain price.

LAYOUT. Plan the Plant for Its Job, M. Kahn. Factory, vol. 75, no. 2, Feb. 1928, pp. 316-318, 5 figs. Building should allow manufacturer to change his methods whenever necessity arises; he should never be called upon to accommodate his process of manufacture to layout of building; building should be constructed around ideal manufacturing layout; column spacing; proportion of glass to working-floor space; layout of plant for manufacture of automobiles considered.

FITS

FORCE. Allowance for Force-Fit, Diameter and Materials Taken into Consideration, H. Yaskawa. Soc. Mech. Engrs. (Japan) Jl., vol. 31, no. 129, Jan. 1928, pp. 1-12, 5 figs. Allowances for force-fit generally given by diameter alone independent of other factors involved, and so new chart is constructed to include all factors; stresses induced in outer and inner cylinders calculated; thickness of cylinders and elastic constants of materials computed; application of chart to calculation of maximum stresses induced by force-fit. (In English.)

FLOOD CONTROL

MISSISSIPPI RIVER. To-day in the Mississippi Flood Area, W. W. De Berard. Eng. News-Rec., vol. 100. nos. 10 and 11, Mar. 8 and 15, 1928, pp. 398-402 and 434-439, 17 figs. Mar. 8: New levee designs and their construction; construction problems; levees of larger sections to-day are built by tower machines, draglines and steam shovels with long booms, and to limited extent with tractor- and mule-hauled wagons loaded by shovel or by elevating grader. Mar. 15: Revetment and some river hydraulics; comparisons between travel of flood waves and mean velocity at bank-full stage.

FLOORS

CONCRETE. Floors Without Forms. Constr. Methods, vol. 10, no. 3, Mar. 1928, pp. 11-13, 8 figs. Contractor poured concrete directly on paper-backed steel mesh reinforcement for six-storey building; besides doing away with forms, this type of construction prevents droppings of concrete during pouring, insures proper imbedding of wire mesh reinforcement, and has certain sound-deadening properties.

FLOW OF GASES

MEASUREMENT. Thermal Volume Meter, G. W. Penney and C. J. Fechheimer. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 3, Mar. 1928, pp. 181-184, 6 figs. Originally brought out by Prof. Thomas; temperature of gas is raised by means of electric heater, change in temperature being accurately measured either by means of resistance thermometers connected in Wheatstone bridge network or by means of thermopile; possible sources of error in meter; notes on design, including means of calculating proportions of heater; advantages and disadvantages of various methods of measuring gas volumes; comparison of resistance thermometers and thermocouples for temperature measurement.

FLOW OF WATER

MEASUREMENT. Chemical-Electric Measurement of Water, A. Barbagelata. Soc. Civil Engrs.—Proc., vol. 54, no. 3, part 1, Mar. 1928, pp. 789-802, 12 figs. Accurate method of measuring flow, called "salt solution method," depends on dilution of salt liquid introduced at constant rate; this dilution may be measured chemically by titration, but better, perhaps, by its electrical conductivity; in its final development method requires knowledge only of total amount and intensity of salt solution introduced, and of time required for this mixing.

FOUNDATIONS

EXCAVATION. Tidal Marsh Excavation Aided by Well Points. Eng. News-Rec., vol. 100, no. 6, Feb. 9, 1928, p. 245, 2 figs. Well-point systems were used around pumping-station excavations, 28 by 48 ft. in plan and extending to depth of approximately 16 ft. below normal groundwater level; water was lowered by 8-in. centrifugal pump and level was maintained by 6-in. pump.

THEORY. The Science of Foundations—Its Present and Future, J. A. Holmes and J. Feld. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 3, part 1, Mar. 1928, pp. 871-879, 1 fig. Although discussion relates particularly to foundations, it has, together with author's previous investigations, bearing on another engineering activity, viz.: investigation, design and construction of earth dams. Discussion of paper by C. Terzaghi, continued from Feb. issue of Proceedings.

FOUNDRIES

REFRACTORY MATERIALS FOR. The Selection and Use of Refractories for Iron Foundries, C. Presswood. Foundry Trade Jl., vol. 38, no. 596, Jan. 19, 1928, pp. 43-47 and (discussion) 47, 3 figs.

G

GAUGES

WESTINGHOUSE PLANT. Inspection Devices in the Westinghouse Plant, W. H. Miller. Machy. (N.Y.), vol. 34, no. 7, Mar. 1928, pp. 501-503, 8 figs. More examples of 8,000 special inspection devices required in building electrical machinery and equipment at plant of Westinghouse Elec. & Mfg. Co.; two adjustable beam-type gauges; spherical and depth gauges for bearings; testing device for extension springs; fixtures for checking various drilling, boring and milling operations; checking squareness of commutator bars; device for checking flat springs.

GEARS

TOOTH MEASUREMENTS. Measurement of the Thickness of Involute Gear Teeth, A. H. Candee. Am. Mach., vol. 68, no. 9, Mar. 1, 1928, pp. 365-368, 3 figs. Formulas for pin measurement of gear-tooth thickness developed; measuring distance across round pins or plugs placed between teeth on opposite sides of gear to determine tooth thickness; tables from which dimension across pins for standard involute spur gears can be obtained very easily; direct methods of calculation given for special cases of spur gears and for helical gears.

GEOPHYSICAL EXPLORATION

METHODS. Geophysical Methods of Prospecting, A. S. Eve and D. A. Keys. Min. Rev., vol. 29, no. 22, Feb. 29, 1928, pp. 7-15 and 18, 27 figs.

EOTVOS GRAVITY EFFECTS. The Computation of Eotvos Gravity Effects, E. Lancaster-Jones. Am. Inst. Min. and Met. Engrs.—Tech. Pub., no. 75, Mar. 1928, 25 pp., 10 figs.

WORKING METHODS. Working Methods of Practical Geophysics, H. Haalck. Am. Inst. Min. and Met. Engrs.—Tech. Pub., no. 64, 9 pp.

GRINDING

CYLINDRICAL. Recent Practice in Cylindrical Grinding. Automobile Engr., vol. 18, no. 238, Feb. 1928, pp. 56-59, 9 figs. Examples of modern equipment for reducing cost; application of self-contained motor drive; grinding operations on boring bar 48 in. long; plunge-cut grinding; saddle-type grinder fitted with wide wheel or plunge-cut wheel head for grinding tapered end of axle shaft.

SURFACE. Precision Surface Grinding, E. C. Larke and F. C. Smith. Machy. (Lond.), vol. 31, no. 799, Feb. 2, 1928, pp. 579-581, 6 figs. Design of drill jig for accurate work; end face tested for parallelism with machined slot; grinding columns; obtaining accurate relative planes; figured vice jaws to enable compound gap to be milled in square compartment, shaped vees functioning as gripping units; grinding compound gaps.

H

HARDNESS TESTS

BRINELL. Does Hardness Govern? E. Bremer. Foundry, vol. 56, no. 3, Feb. 1, 1928, pp. 106-108. Points out that correlating of Brinell hardness with other hardness qualities is complicated; it is believed that definite steps should be taken to investigate various relationships and establish Brinell hardness test as indicator of certain qualities on standard basis; need for this is exemplified in number of replies received in answer to letters requesting information on value of Brinell test.

HARDNESS TESTING MACHINE. An Improved Hardness Tester. Iron Age, vol. 121, no. 9, Mar. 1, 1928, pp. 602-603, 4 figs. Accurate and proportional Brinell numerals claimed for British machine developed by Vickers, Ltd.; diamond pyramid indenter pressed into work under low load and at automatically controlled rate; machine is superior for metals of great hardness, and is applicable to finished work and very thin sheets; specially designed micrometer ocular provided; details of operating machine.

HEATING

RADIANT. Radiant Heating, A. H. Barker. Elec. Rev., vol. 102, no. 2619, Feb. 3, 1928, pp. 211-212 and (discussion) 212-213. General survey of heating problem, and description of some of more modern methods of radiant heating; radiant methods of heating divided into two classes, high-temperature, or incandescent, methods, and low-temperature, or distribution, methods; discusses various methods evolved for application of this form of heating, particularly use of metal panels on walls and ceilings, which, in addition to being heated by means of hot-water pipes, lend themselves to use with gas or electricity as heating medium and would probably become very general. Paper read before Royal Soc. of Arts.

HIGH-SPEED STEEL

QUENCHING. What Happens When High-Speed Steel Is Quenched? B. H. De Long and F. R. Palmer. Am. Soc. Steel Treating—Trans., vol. 13, no. 3, Mar. 1928, pp. 420-430 and (discussion) 430-434, 11 figs. Deals with metallography of high-speed steel when tempered at 1,100 deg. Fahr. after cooling during quenching to varying temperatures below 1,300 deg.; high-speed tools tempered (drawn) before being allowed to become sufficiently cold in quench are brittle due to mixed structures; straightening of high-speed tools may be readily carried out during quenching at between 1,300 and 700 deg.

HYDRAULIC TURBINES

HIGH-HEAD. Western Conditions Responsible for Development of High-Head Reaction Turbines, E. M. Breed. Hydraulic Eng., vol. 4, no. 2, Feb. 1928, pp. 74-76, 82 and 110-111, 8 figs. Unusual problems of design encountered when first high-head reaction turbines were considered for development; required very definite departure from accepted low-head turbine design; efficiency curve of high-head, low specific speed-reaction turbine; this type of unit permits very high efficiencies over wide range of load capacities; describes latest-type turbine installed in Portland Elec. Power Co., Oak Grove plant, Calif.

HYDRO-ELECTRIC POWER DEVELOPMENTS

BOULDER CANYON PROJECT. The Boulder Canyon Project. Elec. World, vol. 91, no. 6, Feb. 11, 1928, pp. 297-301. Proposed project includes: Dam in Colorado at Black Canyon, not far from Las Vegas, Nev., creating reservoir with storage capacity of 26,000,000 acre-ft. estimated at cost $41,500,000; power house with 1,000,000 h.p. of installed capacity, estimated to cost $31,500,000; All-American Cnaal, estimated at $31,000,000, located just north of Mexican boundary, starting from Laguna dam in Colorado at Yuma.

HYDROGEN

ATOMIC, USE IN RESEARCH. Atomic Hydrogen as an Aid to Industrial Research, I. Langmuir. Science, vol. 67, no. 1730, Feb. 24, 1928, pp. 201-208. History of gas-filled lamp research work at laboratory of General Electric Co.; peculiar phenomena observed in studying effect of hydrogen; studies of heat losses from filaments of various diameters at incandescent temperatures; invention of gas-filled lamp is nearly direct result of experiments made for purpose of studying atomic hydrogen. Address given at joint meeting of Soc. of Chemical Industry, Société de Chimie Industrielle, American Chemical Soc. and American Electrochemical Soc.

I

INDUSTRIAL MANAGEMENT

PRODUCTION CONTROL. Handling Large Production in Metal Stamping, R. Schmidt. Am. Mach., vol. 68, no. 9, Mar. 1, 1928, pp. 357-358, 5 figs. Large-scale production of sheet-metal parts invariably requires rapid movement of work in process and quick turnover of material; methods of Westinghouse Elec. & Mfg. Co. in controlling its press department; 20,000 separate items in process of manufacture every month; ratio of non-productive labour and of material higher than plant average, and must be off-set by rapidity of handling work in production.

Production Control in Pump Plant, S. G. Koon. Iron Age, vol. 121, no. 8, Feb. 23, 1928, pp. 521-524, 3 figs. Control of production in manufacture of considerable line of pumps of various descriptions is handled by Nash Engineering Co., South Norwalk, Conn.; for most part, all production machines in plant are scheduled for some time in advance, some of schedules running as far ahead as two months; visual control board occupies entire side of good-sized room and from floor to ceiling.

REORGANIZATION. Reorganization Under Scientific Management, W. R. Williamson. Soc. Indus. Engrs.—Bul., vol. 10, no. 1, Jan. 1928, pp. 3-26, 17 figs.

INSULATING OIL

ELECTRICAL. Electrical Insulating Oil, D. Harvey. Elec. Jl., vol. 25, no. 2, Feb. 1928, pp. 96-99, 3 figs. Requirements for insulating oil; production involves selection of suitable crude oil, its distillation, treatment, testing and delivering to customer in good condition; storage; placing oil in service; inspection and testing; sampling oil from shipping containers; causes of deterioration in transformers and in circuit breakers. (To be continued.)

INSULATORS, ELECTRIC

HUMIDITY EFFECT. The Effect of Humidity on the Dry Flashover, J. T. Littleton, Jr., and W. W. Shaver. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 3, Mar. 1928, pp. 189-192, 6 figs. Shows that humidity affects considerably flashover voltages of porcelain and pyrex insulators; flashover potential rises as humidity is increased; tests were made on pin-type insulators and on rods; results show that this rising characteristic is surface effect which varies with absolute water content of surrounding atmosphere.

INTERNAL-COMBUSTION ENGINES

INDICATOR FOR. An Electrical Indicator for High-Speed Internal-Combustion Engines, J. Obata and Y. Yosida. Tokyo Imperial Univ., Aeronautical Research Inst. Report, vol. 2, no. 28, Dec. 1927, pp. 397-405, 10 figs. Indicator described of simple disk form; very thick steel disk, 2 mm. thick and 5 cm. in diam.; extremely sensitive electrical means of measuring; generating valve circuit for recording minute motion of thick disk caused by pressure in cylinder; records of actual engine pressure obtained by means of Einthoven string-galvanometer, Lutz-Edelmann string electrometer and Duddell oscillograph.

PERFORMANCE TESTING. Improving Engine Performance, H. M. Jacklin. Soc. Automotive Engrs.—Jl., vol. 22, no. 3, Mar. 1928, pp. 337-344, 13 figs. Tests to secure improvement of internal-combustion engine performance; multiple ignition increases power about 9 to 10 per cent at full throttle and generally gives smoother operation; increasing compression ratio from 5.3 to 1 to 10 to 1 resulted in 13 per cent increase in power; operating engine on constant-compression principle resulted in fuel saving of as much as 34 per cent; fixed spark is entirely feasible under constant-compression operation.

PISTONS, ALUMINUM-ALLOY. Aluminum-Alloy Pistons in Gasoline and Oil Engines, H. A. Huebotter. Soc. Automotive Engrs.—Jl., vol. 22, no. 3, Mar. 1928, pp. 325-330, 8 figs. Aluminum-alloy pistons are now also made for oil engines with bores up to 18 in., as well as for small gasoline engines; expansion controlled by steel bands embedded in aluminum but not bonded thereto; slots cast in piston allow for linear expansion of alloy without corresponding increase in piston diameter and change in cylinder clearance; advantages of strut-type pistons shown by thermal diagrams.

THERMAL EFFICIENCY. Comment on Report of Heat Engine Trials Committee, D. Clark. Gas and Oil Power, vol. 23, no. 269, Feb. 2, 1928, pp. 85-87, 4 figs. Discussion of ideal efficiency standards for four distinct engine cycles; constant-volume, constant-pressure, Diesel and Atkinson cycles; abstract of paper brought forward for discussion at Institution of Civil Engineers; method of calculating formula for Diesel cycle; Atkinson cycle quite unsuitable for any engine of any other cycle.

Standards of Thermal Efficiency for Internal Combustion Motors, D. Clark. Instn. Civil Engrs.—Proc. (Lond.), no. 4670, 1928, 18 pp., 4 figs. Discussion of report of Heat Engine Trials Committee; ideal efficiency standards for four distinct engine cycles; constant-volume, constant-pressure, Diesel and Atkinson cycles taken up; points in which author disagrees with Committee and new values computed for them; necessity of calculating temperatures corresponding to each cycle; Committee's proposal to adopt Atkinson cycle instead of actual cycle of operation as standard for all types of engine criticized.

WASTE-HEAT RECOVERY. Waste-Heat Recovery and Engine Economy, W. P. Sillince. Oil Eng. and Technology, vol. 9, no. 1, Jan. 1928, pp. 19-21. Several successful exhaust-heat boilers, usually of tubular type, having efficiencies of from 50 to 75 per cent are on market, generating steam under pressures up to 180 lb. per sq. in. from exhaust gases of internal-combustion engines; certain electricity-generating stations using mixed internal-combustion engines and steam plant apply exhaust from former to heat feedwater for latter.

See also Airplane Engine; Automobile Engines; Diesel Engines; Oil Engines.

IRON CASTINGS

HEAT TREATMENT. Grey Iron Castings Heat-Treated. Iron Age, vol. 121, no. 10, Mar. 8, 1928, pp. 663-664, 3 figs.

IRON-CHROMIUM ALLOYS

INVESTIGATION OF. The Alloys of Chromium and Iron. Metallurgist (Supp. to Engineer, Lond.), Feb. 24, 1928, pp. 26-28, 2 figs. Reviews investigations made by Oberhoffer and Esser at Aachen (Stahl u. Eisen, Dec. 1, 1927), who, with aid of X-ray examination, have endeavored to rectify somewhat tentative conclusions of earlier work of Pakulla and Oberhoffer; great advance made by these investigations in knowledge of chromium-iron system is to be attributed largely to their perfection of technique of high-temperature melting under vacuum conditions.

L

LIFTING MAGNETS

DESIGN AND CONSTRUCTION. The Design and Construction of Lifting Magnets. Mech. World, vol. 83, no. 2142, Jan. 20, 1928, p. 47, — figs. Lifting magnets for handling materials in iron and steel industry; subjected to arduous service and rough handling; body of modern magnet made of high permeability dynamo steel; assembly; magnet subjected to 20-in. vacuum then pressure of 100 lb.; result of moisture in interior of magnet; lifting capacities.

LIGHTING

FACTORY. An Investigation of Electric Lighting in the Engineering Industry, J. L. H. Cooper. Illum. Engr., vol. 21, Jan. 1928, pp. 5-13 and (discussion) 13-15, 14 figs. Results of investigation in large industrial area; general attitude of employers to lighting; large engineering and manufacturing concerns more progressive; average hours of artificial light; requirements of good illumination; cleaning of lamps and equipment; daylight lamps; indirect glare in workshops; erecting shops; lighting machine tools; local lighting in machine shops. Paper read before Illum. Eng. Soc.

Lighting of High Bays in Industrial Plants, D. H. Tuck. Indus. Eng., vol. 86, no. 2, Feb. 1928, pp. 60-61, 7 figs. Tabloid presentation with illustrations of schemes for lighting high bays in shops with craneways.

LOCOMOTIVE BOILERS

DESIGN. The Design and Proportion of Locomotive Boilers, C. A. Brandt. Ry. Age, vol. 84, no. 10, Mar. 10, 1928, pp. 575-579, 7 figs. Discusses problems of boiler and superheater, or steam-producing part of locomotive; design of boiler and superheater determine not only efficiency at which steam is produced, but also efficiency and capacity of locomotive; speed factor; general boiler design; watertube firebox; results obtained with superheater.

LOCOMOTIVE REPAIR SHOPS

ILLINOIS CENTRAL SYSTEMS. A Modern Boiler Shop for Railroad Repairs. Am. Mach., vol. 68, no. 9, Mar. 1, 1928, pp. 373-375, 8 figs. Layout of boiler shop of Illinois Central System and some of production equipment used in making repairs; machines for hot and cold flanging; 2,100-ton Southwark flanging press and 66-in., 100-ton Chambersburg sectional flanging press hydraulically operated; radial drill mounted on rails; automatic machine for drilling staybolts; machine for grinding superheater joints.

Illinois Central Occupies Modern Railway Shops at Paducah, F. W. Curtis. Am. Mach., vol. 68, no. 8, Feb. 23, 1928, pp. 327-328, 4 figs.

LOCOMOTIVES

OIL-BURNING. Furnace Conditions in Oil-Burning Locomotives, G. M. Bean. Pac. Ry. Club—Proc., vol. 11, no. 9, Dec. 1927, pp. 9-23. Study of conditions in oil-burning locomotive furnace because it offers problems not met with in use of other fuels; what is required in furnace designed for proper handling of liquid fuel; flame study as pertaining to furnaces operating in higher temperature ranges.

OIL-ELECTRIC. Battery-Oil-Electric Locomotive. Ry. Age, vol. 84, no. 9, Mar. 3, 1928, pp. 525-527, 3 figs. Novel type of motive power is being tried by New York Central for operation in freight yards on west side, New York City; locomotive is equipped with storage battery of relatively large capacity; 300-h.p. oil-engine direct connected to 200-kw. generator is provided for charging battery; third-rail shoes are provided and also overhead collector; mechanical design; traction motors.

LUBRICATING OILS

AUTOMOTIVE, VISCOSITY OF. Motor Oil Characteristics and Performance at Low Temperatures, R. E. Wilkin, P. T. Oak and D. P. Barnard, 4th. Soc. Automotive Engrs.—Jl., vol. 22, no. 2, Feb. 1928, pp. 213-220, 12 figs. Experimental study of viscosity characteristics of motor oils at low temperatures; their influence upon cranking torque and circulation within engine; circulation tests in engine equipped with comparatively small-mesh screen over pump intake; circulation not obtained until oil in sump attained pour-point temperature; free circulation requires oil, effective viscosity of which does not increase too rapidly at very low shearing stresses.

Numbers for Oil Viscosities. Soc. Automotive Engrs.—Jl., vol. 22, no.

3, Mar. 1928, pp. 323-324 and 395-396. Animated discussion at Standards Committee meeting for and against S.A.E. system of numbering lubricating oils; numbers represent viscosity, not quality; not afraid of competitors' advertising; implied endorsement of Society; might use numbers without Society initials; filler stations ignorant of truck requirements; reaction of oil-manufacturing division; best system suggested for recommending oils; small oil company would capitalize system; trial alone will prove system.

M

MAGNETIC FIELDS

Graphical Determination. Graphical Determination of Magnetic Fields, A. R. Stevenson, Jr., and R. H. Park. Gen. Elec. Rev., vol. 31, no. 2, Feb. 1928, pp. 99-109, 22 figs. Calculation of magnetic-flux distribution, particularly in current-carrying region; results of American and European research; theoretical considerations; calculation of flux leakage between poles in alternator with approximately parallel pole sides; point conditions in coplanar magnetic fields; application of method to polar co-ordinate systems. (To be continued.)

Graphical Determination of Magnetic Fields, A. R. Stevenson, Jr., and R. H. Park. Gen. Elec. Rev., vol. 31, no. 3, Mar. 1928, pp. 153-164, 18 figs. Summation of most important principles in brief rules for plotting flux in air, with particular reference to pair of alternator field poles; calculation of inductance from knowledge of vector potential. (Continuation of serial.)

MANGANESE STEEL

Machining. Machining Manganese Steel on a Commercial Basis, A. S. Martin. Iron Trade Rev., vol. 82, no. 9, Mar. 1, 1928, pp. 564-565. Tests on cutting capacity of new type of high-speed steel conducted by Firth-Sterling Steel Co.; cutting medium gives greater production than standard high-speed steels; cutting manganese steel; tests carried on under ordinary machine-shop conditions; chip formed was very tight and compactly curled ribbon of deep blue or brownish gunmetal colour; film chucking desirable.

METAL MINES AND MINING

Blasting. Liquid-Oxygen Blasting at Chuquicamata, Chile, H. C. Schultz and F. K. Middleton Hunter. Am. Inst. Min. and Met. Engrs.—Tech. Pub., no. 61, 1928, 16 pp., 14 figs.

METALS

Cutting. The Relation of Depth of Cut to Feed on a Shaper, D. L. Perkins. Am. Mach., vol. 68, no. 7, Feb. 16, 1928, pp. 305-306, 6 figs. Tests to determine on power-consumption basis, advantage or disadvantage of deep cuts with light feeds over shallow cuts with heavy feeds for different numbers of strokes per minute; cutting speeds of 9, 13 and 19 strokes per min.; 32-in. Invincible Type Gould & Eberhardt shaper, motor-driven and other instruments used; power consumption least with shallow cut and wide feeds.

Deformation. Plastic Deformation and Fracture of Metals, W. Rosenhain. Iron and Steel World, vol. 2, no. 2, Feb. 1928, pp. 105-110. Straining of crystal lattice, slip and orientation of crystals in cold-worked metal. From address before Int. Congress for Testing Materials of Amsterdam.

Fatigue. Fatigue Phenomena, H. J. Gough. Engineering, vol. 125, nos. 3240 and 3241, Feb. 17 and 24, 1928, pp. 200-201 and 232-233. Feb. 17: Review of first of series of Cantor lectures presented at Roy. Soc. of Arts; fatigue of metals is defined as behaviour of metals under repeated cycles of stress; mathematical theory of elasticity indicates clearly that uniform stress distribution would not be obtained at any cross-section where form or size was changing, and that, where change was rapid, stress concentration effect produced would be large. Feb. 24: Second Cantor lecture made special reference to single crystals; reviews three epochs in history of fatigue testing; one of more interesting phenomena is fact, regarded as definitely established, that metal subjected to repetitions of safe range of stress finally achieved state in which, although no further permanent set would appear, strain hysteresis was present, and would persist indefinitely without causing fracture of material.

Internal Stresses. Internal Stresses. Metallurgist (Supp. to Engineer), Jan. 27, 1928, pp. 7-8. Review of recent works by E. Maurer, G. Sachs and Goeler, published in German periodicals; most frequent type of failure is season cracking of drawn rods and tubes made of brass or other alloys of copper; steel and aluminum members are prone to similar failures, although to less marked extent; for removal of internal stresses, low-temperature annealing is found to be most effective method; risk of season cracking can be also materially reduced in case of rods, tubes and similar articles by certain mechanical treatment.

Properties. Interatomic Forces in Metals and Alloys, R. F. Mehl. Am. Inst. Min. and Met. Engrs.—Tech. Pub., no. 57, Feb. 1928, 16 pp., 2 figs. It is shown that data on compressibility and internal pressure furnish basis for analysis of hardness of pure metals; it is suggested that electron distribution around atom periphery probably introduces slip-resistance factor in addition to that of crystalline symmetry and interatomic forces.

Rolling. Metallic Flow During Rolling, C. H. Mathewson. Iron Age, vol. 121, no. 10, Mar. 8, 1928, pp. 666-667 and 710, 4 figs. Plastic flow of metal upon rolling or forging; formation of twins in original crystals is often earliest effect of overstrain; subsequent severe deformation is combination of two processes, viz., development of crystalline twins, and of slip along crystal planes; twinning is action requiring small atomic displacements; recrystallization starts at twin boundaries. Abstract of paper presented before Inst. of Metals.

X-Ray Analysis. X-Rays: A New Tool in the Foundry. Iron Age, vol. 121, no. 10, Mar. 8, 1928, pp. 655-656, 4 figs. Examination of X-ray before machining castings reveals hidden defects and reduces foundry costs; two cases cited; with grey iron or steel castings it is now possible to X-ray through thickness of 3½ in.; such flaws as blowholes, cracks, bubbles and foreign material are relatively easy to detect in one or two exposures; X-ray equipment of low cost utilized for aluminum-alloy castings; examining first run of castings.

High-Speed, High-Voltage X-Ray Diffraction Analysis of Metals, A. St. John. Am. Soc. Steel Treating—Trans., vol. 13, no. 3, Mar. 1928, pp. 485-492, 5 figs. Quick and convenient method of X-ray diffraction analysis is modification of usual "pinhole" method using tungsten radiation at 200,000 volts as in radiographing castings, so that powerful beam passes through ⅛ inch of steel; exposures of two hours or less are sufficient; method has been applied to brass, tin and steel in study of mechanical working, heat treatment, extrusion, aging and effect of exposure to gases.

MILLING CUTTERS

Standards. Milling Cutters and Arbors. Soc. Automotive Engrs.—Jl., vol. 22, no. 3, Mar. 1928, p. 321, 1 fig. Proposed keys and keyways standards submitted for review by industrial users; drawn up by Committee on Milling Cutters; table showing figures for diameter of arbor; nominal width of key, arbor and keyseat, bore and keyway and arbor and key.

MOTOR TRANSPORTATION

Ontario. Ontario Motor Transportation, G. S. Henry. Can. Engr., vol. 54, no. 6, Feb. 7, 1928, pp. 195-196. Review of highway situation in Ontario; mileage of each type of road; total expenditure; bus service; 480 licensed vehicles are operating in province; over 3,400 miles provincial highways, county and township roads are traversed daily by public vehicles, with monthly vehicle mileage of over 700,000. Abstracted from Ont. Gaz.

N

NIAGARA FALLS

Improvement. Measures Proposed to Distribute Flow Over Niagara Falls. Eng. News-Rec., vol. 100, no. 8, Feb. 23, 1928, p. 332, 1 fig. Summary of interim report of Special International Niagara Board made public by State Department; report is of importance as being first in which plans for improving Niagara Falls, which have been under discussion for some time, are given official recognition.

NOZZLES

Steam. Fifth Report of the Steam Nozzles Research Committee. Engineering, vol. 125, no. 3238, Feb. 3, 1928, pp. 147-148, 7 figs. Tests to determine effect of surface finish; and effect of shape of exit; tests were made under different conditions as to pressure range from those which had been previously used; pressure in receiver was maintained at about 60 lb. per sq. in. and initial pressure was adjusted to give velocities of steam jet at exit extending up to velocity of sound in steam; nozzles tested were convergent impulse nozzles, with nominal angle of 20 deg.

O

OIL ENGINES

Heavy-Oil. A 1,750-B.H.P. Six-Cylinder Heavy-Oil Engine. Engineer (Lond.), vol. 145, no. 3763, Feb. 24, 1928, pp. 200-204, 13 figs. Account of origin of design, its principal technical features, together with details of engine performance; supplied by General Electric Co.; makers claim for their engine that design of parts subjected to heat brings about satisfactory solution of problem of combustion-chamber construction, as method possesses means of dissipating heat without setting up harmful heat stresses.

OIL FUEL

Combustion. Propagation of Combustion in Carbureted Mixtures (La propagation de la combustion dans les mélanges carbures), R. Duchene. Génie Civil, vol. 92, no. 6, Feb. 11, 1928, p. 146, 2 figs. Photographic study of flame propagation in carbureted mixtures and effect of anti-knock elements.

ORDNANCE MANUFACTURE

Watertown Arsenal. Making Big Guns at the Watertown Arsenal, J. B. Nealey. Machy. (N.Y.), vol. 34, no. 7, Mar. 1928, pp. 542-545, 10 figs. Some of unusual equipment and few of outstanding operations; guns ranging in size from 1½ in. to 9½ in. are manufactured, starting with making of steel, for which three large open-hearth furnaces with all necessary auxiliary equipment are provided; heat treatment of gun forgings; laboratories are engaged in research and testing; new method of making guns without outer jackets.

OXY-ACETYLENE CUTTING

Economical. Factors Involved in Economical Gas Cutting, J. C. Anderson. Am. Welding Soc.—Jl., vol. 7, no. 1, Jan. 1928, pp. 22-30, 3 figs. Deals specifically with cutting performed on steel plates, but statements made are just as applicable to cutting operations on steel castings or forgings; with these important factors which affect cutting results recognized and put into practice and conscientiously followed, there will result economical use of oxy-acetylene process.

Speed with Oxygen. Cutting Speed with Oxygen, J. L. Anderson. Rly. Jl.. vol. 34, no. 3, Mar. 1928, pp. 29-30. Standard practice in computing cutting costs, in rating operators or in otherwise establishing values, to compare time, oxygen, fuel gas and labour cost in relation to square inches cut considering one cut surface only; table is presented giving results obtained by seven different cutting operators working on same grade and thickness of material. Abstract of paper read before Univ. of Minn. Welding Conference.

OXY-ACETYLENE WELDING

Car Shops. Cutting and Welding in the Shop, W. A. Lacke and W. H. Dreis. Heat Treating and Forging, vol. 14, no. 2, Feb. 1928, pp. 150-151. Two papers that bring out importance of modern methods in car building and in manufacture of heavy machines; striking instances cited; piping from generators; cases of difficult jobs. Presented at Int. Acetylene Assn.

Power-Plant Piping. Welding of Power Plant Piping, A. W. Moulder. Welding Engr., vol. 13, no. 2, Feb. 1928, pp. 27-31, 9 figs. Research of pipe fabricator has developed design and procedure which insure satisfactory results on every welded installation; deals particularly with oxy-acetylene welding, but data may be equally applicable to arc welding; proper materials, tools, methods and instruction; shape of welded fillet; testing of welders; behaviour of welds under high pressures and temperatures. Paper presented at joint meeting of Am. Soc. Mech. Engrs. and Am. Welding Soc.

P

PAVEMENTS

Asphalt, Concrete Base. Concrete Base for Asphalt Pavements, R. M. Green. Can. Engr., vol. 54, no. 6, Feb. 7, 1928, pp. 199-201. Recent researches in Portland cement concrete and their application to design of bases for asphalt pavements; points out essential differences between use of Portland cement concrete as wearing surface and its use as foundation medium for asphalt pavement, and explains why recent researches in use of concrete for wearing surface are only of very limited value to designer of concrete base for asphalt pavement. Paper presented before Asphalt Paving Conference.

Asphaltic Concrete. Asphaltic Concrete Paving Practice in Denver, Colo. Eng. News-Rec., vol. 100, no. 6, Feb. 9, 1928, pp. 141-142, 2 figs. Black-base construction giving good service on more than 100 miles of streets paved in four years; pavement design; stone, crushed gravel or slag, is employed for sub-base and for aggregate; construction methods; conclusions from experience.

PERMEAMETERS

Saturation. Saturation Permeameter, S. L. Gokhale. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 3, Mar. 1928, pp. 196-200, 9 figs. Device for speedy and accurate measurement of saturation value of magnetic material.

PORTS

Quebec. The Port of Quebec, B. Cunningham. Engineering, vol. 125, no. 3240, Feb. 17, 1928, pp. 183-185, 8 figs. partly on p. 198. Notes on port approaches, accommodation and equipment; shipping and commerce; Wolfe's Cove terminal; historical notes on origin and development of Port Authority.

POWER

Purchased vs Generated. Analyzing Economies of Purchased Power, H. C. Thuerk. Elec. World, vol. 91, no. 9, Mar. 3, 1928, pp. 464-465. Study of power requirements of expanding industrial plant shows that it is cheaper to buy power than to make it.

POWER PLANTS, HYDRO-ELECTRIC

British Columbia. Power Development at Bridge River, B.C. Can. Engr., vol. 54, no. 6, Feb. 7, 1928, pp. 193-195, 5 figs. Preliminary work on hydro-electric power development for British Columbia electric railway; first step in project which will add approximately 625,000 h.p. to company's resources on mainland; contract let for 2½-mile tunnel; Bridge river project consists of diverting waters of Bridge river through tunnel into Seton lake and utilizing head, thus made available, for production of hydro-electric power.

POWER PLANTS, STEAM

High-Pressure. Operating Experience with High-Pressure and High-Temperature Steam, G. A. Orrok. Power, vol. 67, no. 8, Feb. 21, 1928, pp. 339-341. Author has endeavoured to collect particulars of all high-pressure installations in operation or under construction at present time and these data are given in table.

POWER PLANTS, STEAM-ELECTRIC

High-Pressure. Operating Experiences with 1,300-Lb. Pressure, J. Anderson. Power Plant Eng., vol. 32, no. 4, Feb. 15, 1928, pp. 229-232, 4 figs. Summary of operating experiences and difficulties encountered during period of 11 months at Lakeside station, Milwaukee, Wis.; experiences with tube failures from scale formation; boiler-tube corrosion troubles; chemical control of feedwater and resulting correction of trouble. Abstract of paper presented before Inst. of Fuel, London.

Norfolk, Va. Reeves Avenue Station at Norfolk, Va., J. W. Keeney. Elec. Light and Power, vol. 6, no. 3, Mar. 1928, pp. 28-29, 2 figs. Virginia Elec. and Power Co. builds $5,000,000 addition and installs new 40,000-kw. unit; all equipment pertaining to boiler and stoker operation is automatically controlled; completed plant has total generating capacity of 90,000 kv.a.; 7-mile steel tower transmission line was built, is insulated for and operates at 110,000 volts.

PRESSURE VESSELS

Welding. Fabricating Pressure Vessels from Inch-and-a-Quarter Plate. Iron Trade Rev., vol. 82, no. 10, Mar. 8, 1928, pp. 622-623, 4 figs. Construction of pressure vessels, 6 ft. in diameter by 26 ft. in length, and designed for 300-lb. operating pressure; welding reinforcing ring to manhead; welding of head seam; providing for contraction. Abstract from Oxy-Acetylene Tips.

PULVERIZED COAL

Drying. Importance of Drying Coal for Pulverizing. Power Plant Eng., vol. 32, no. 6, Mar. 15, 1928, pp. 341-344, 8 figs.

PUMPING STATIONS

Intake Pipes. Intake Well Forms Sand Catcher. Eng. News-Rec., vol. 100, no. 6, Feb. 9, 1928, p. 249, 3 figs.

R

RAILROADS

Operation. Report of Economics of Railway Operation. Ry. Age, vol. 84, no. 9C, Mar. 8, 1928, pp. 560, D131-D135. What volume of business justifies change from flat to hump switching; railway operation affected by motor trucks and bus lines. Abstract of report to Am. Ry. Eng. Assn.

Signals and Signaling, Automatic. Direct Current Automatic Block Signaling. Am. Ry. Assn. (Signal Section)—Proc., vol. 25, no. 3, Feb. 1928, pp. 576-586. Report of Committee IV. Specification for wood trunking and capping; requisites for d.c. automatic block-signaling circuits.

Alternating Current Automatic Block Signaling. Am. Ry. Assn. (Signal Section)—Proc., vol. 25, no. 3, Feb. 1928, pp. 455-470. Report of Committee VIII. Signal lighting and rectifier transformers; a.c. current circuits and apparatus as applied to train control; protection from lightning.

Signals and Signaling, Instructions. Instructions. Am. Ry. Assn. (Signal Section)—Proc., vol. 25, no. 3, Feb. 1928, pp. 471-534, 30 figs. Report of Committee V. Specifications for portable a.c. current voltmeters; instructions for installation and operation of switchboards; symbols, aspects and indications; transformers; definitions for technical terms used in signaling.

Snow Fences. Building Snow Fences of Trees. Ry. Eng. and Maintenance, vol. 24, no. 2, Feb. 1928, pp. 67-68, 6 figs. Canadian Pacific has found them effective as well as attractive; how trees are planted.

Ties, Maintenance. Care of Ties Pays Large Returns on the Lackawanna, G. J. Ray. Ry. Eng. and Maintenance, vol. 24, no. 2, Feb. 1928, pp. 59-61, 1 fig. Analysis of results secured from comprehensive programme of protection against decay and mechanical injury; large tie plates essential; records of renewals; savings effected; summary of advantages; explanation of low renewals; status of screw spikes.

REFRACTORIES

Properties of. The Important Properties and Requirements of Some Special Refractories, M. F. Beecher. Am. Soc. Steel Treating—Trans., vol. 13, no. 3, Mar. 1928, pp. 473-483 and (discussion) 483-484 and 492, 2 figs. Author points out how fused alumina, silicon carbide and combinations of silica and alumina as now manufactured offer properties which are superior to those of clay refractories; these manufactured refractories are all electric-furnace products and are obtained under variety of trade names; common causes of failure in refractories.

RESERVOIRS

Gunite Lining. Relining Payson Park Reservoir. Pub. Works, vol. 59, no. 2, Feb. 1928, pp. 49-51, 3 figs.

Concrete, Construction. Concrete Control Methods in the Construction of a Filtered Water Reservoir, W. C. Mabee. Am. Water Works Assn.—Jl., vol. 19, no. 2, Feb. 1928, pp. 193-200.

RETAINING WALLS

Earth Pressure. Graphical Determination of Earth Pressures (Détermination graphique de l'action des terres), R. de Diesbach. Schweizerische Bauzeitung (Zurich), vol. 91, no. 6, Feb. 11, 1928, pp. 69-72, 5 figs. Statical theory of retaining walls; graphical determination of stability of retaining wall with back batter on basis of Resal theory. (To be continued.)

RIVERS

Improvement, St. Lawrence. The Improvement of the River St. Lawrence, E. W. Lane. Engineering, vol. 125, no. 3239, Feb. 3, 1928, pp. 125-128, 3 figs. Deals with Soulanges and Lachine rapids sections; improvements of Great Lakes; effects of Chicago diversion and channel enlargement; methods of improving lake levels; improvement by compensation works; channel deepening; improvements on Montreal harbour and lower St. Lawrence; maps of sections discussed. (Concluded from Jan. 27.) See also editorial comment on pp. 137-138.

ROADS

Bituminous-Concrete, Hot-Mix. Hot-Mix Plant Layout. Contractors' and Engrs'. Monthly, vol. 16, no. 2, Feb. 1928, pp. 104-105, 6 figs. Duplicate plant built for State Highway bituminous-concrete projects near Chatham on Cape Cod; State Highway Department of Mass. has used hot-mix for greater part of its Cape Cod work; sand production; hot-mix plant.

Concrete, Construction. Recent Practical Development in Concrete Road Construction, J. E. Foster. Contract Rec. (Toronto), vol. 42, no. 8, Feb. 22, 1928, pp. 201-204, 7 figs.

ROLLING MILLS

Disk. Disk Rolling, with Special Reference to Steel Differential Cases. Iron Age, vol. 121, no. 10, Mar. 8, 1928, p. 659, 1 fig. New method of steel working found in production of steel differential case for automobiles; machines rolled radially; production of about 10 disks per minute; proper speed relation to prevent distortion; each disk driven by 150-h.p. motor; provision for lubrication.

ROOFS

Reinforced Concrete. Reinforced Concrete Roof Construction. Concrete and Constr. Eng., vol. 23, no. 2, Feb. 1928, pp. 176-179, 7 figs. In Germany, one of latest developments in roof construction is to use cement gun for covering roofing surfaces supported by concrete framework.

S

SANITARY ENGINEERING

Symposium. Historic Review of the Development of Sanitary Engineering in the United States During the Past One Hundred and Fifty Years. A Symposium, G. S. Webster, M. Knowles, R. A. Hart, L. L. Hidinger and R. N. Towl. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 2, Jan. 1928, pp. 303-310. Discussion symposium continued from Dec. 1927 issue of Proceedings.

SEWAGE DISPOSAL

Activated Sludge Method. The Dissolved Oxygen Absorption-Time Relation of Activated Sludge Effluents, P. Gaunt and W. E. Abbott. Chem. and Industry, vol. 47, no. 2, Jan. 13, 1928, pp. 14T-16T, 1 fig.

Sludge Digestion. Deep-Pit Sludge Digestion at Indianapolis Sewage-Works, C. K. Calvert. Eng. News-Record, vol. 100, no. 6, Feb. 9, 1928, pp. 230-231, 1 fig.

SEWAGE DISPOSAL PLANTS

Delaware, Ohio. The Sewage Treatment Works at Delaware, Ohio, W. L. Havens. Am. City, vol. 38, no. 3, Mar. 1928, pp. 78-80, 2 figs. Description of new works, designed to serve population of 14,500 persons; type of plant; pumping equipment; clarification of the sewage by Imhoff tanks; disposal of sludge.

SEWERS

Storm-Water Overflows. Some Details of Storm-Water Sewer Overflows, A. Wells. Eng. News-Rec., vol. 100, no. 10, Mar. 8, 1928, pp. 402-404, 5 figs. Actual examples from practice at Hartford, Conn., with explanations of local governing conditions; considerations that enter into selection of type of overflow suitable in particular location; required features.

Flow Control. Automatic Sewage Flow. Pub. Works, vol. 59, no. 2, Feb. 1928, p. 78. Motor-controlled sluice gate diverts flow from tributary to outfall sewer when flow in either reaches predetermined amount; there has recently gone into operation in England project which includes interesting features provided for controlling flow from one sewer to another.

SHAFTS

Force Fits. Researches Dealing with Force Fits of Steel Shafts. Soc. Mech. Engrs. (Japan)—Jl., vol. 31, no. 129, Jan. 1928, pp. 13-38, 20 figs. Experimental researches dealing with force fits of steel shafts on steel and cast-iron bosses; limiting value of allowances which practically produce permanent set on bosses; if greater allowance than limiting value should be given, both force-fit pressure and slipping resistance can never be increased at same rate; limiting value of allowance depends on material only and not on radial thickness of bosses. (In Japanese.)

SHAPERS

Power Required for Cutting. Relation of Shaper Stroke to Power Consumed, D. L. Perkins. Am. Mach., vol. 68, no. 10, Mar. 8, 1928, pp. 427-428, 5 figs. Tests showing that power decreases for increase in length of stroke; variations given for power consumed in removing definite amounts of metal at approximately constant cutting speed but for different lengths of stroke; curves show maximum power consumption on shaper with strokes of 4, 8, 12 and 18 in. for various materials under cut.

SIPHONS

Steel Pipe. Mono-Bear Creek Siphon, E. R. Davis. West. Constr. News, vol. 3, no. 4, Feb. 25, 1928, pp. 111-115, 3 figs. Big Creek-San Joaquin hydro-electric project of Southern California Edison Co.; construction of steel pipe siphon, containing approximately 5,500 tons of steel, 13,806 ft. in length; varies in diam. from 72 to 102 in. and thickness from ⅜ to 1 in.; pipe was fabricated in 17.25-ft. lengths.

SPILLWAYS

Ice Prevention. Ice Prevented Along Spillway by Compressed Air, F. A. Dale. Elec. World, vol. 91, no. 10, Mar. 10, 1928, p. 487, 2 figs. Compressed-air system for preventing ice formation along spillway flashboards has been in successful operation for two winters on Tippecanoe river in Indiana at Norway plant of Indiana Hydro-Electric Power Co.

STEAM APPARATUS

Temperature Control. Tag Steam Operated Controller. Instruments, vol. 1, no. 2, Feb. 1928, pp. 119-120, 3 figs. Device which utilizes portion of steam which heats apparatus to obtain enough power to work valve, opening and closing of which governs temperature of apparatus where one best temperature must be maintained; controller designed to operate on pressures between 5 and 100 lb.; furnished with 40-deg. range anywhere between limits of 95 and 290 deg. Fahr.

STEAM ENGINES

Uniflow vs. Counterflow. Counterflow and Uniflow Non-Condensing Engine Economies, A. D. Skinner. Power Plant Eng., vol. 32, no. 4, Feb. 15, 1928, pp. 259-261, 3 figs. Author refers to articles by A. J. Nicholas and A. F. Sheehan, published in previous issues of this journal; states that it is established fact that well-designed uniflow engine is more economical than even compound Corliss engine, either condensing or non-condensing, under varying loads which obtain in most power plants, to say nothing of its superiority over single-cylinder Corliss type.

STEAM GENERATION

Developments. Trend and Development in Steam Generation, T. E. Murray. Power Plant Eng., vol. 32, no. 5, Mar. 1, 1928, pp. 322-323. Author does not believe that it will ever be expedient to standardize on given steam pressure for power stations; reference to binary-vapour system and also to Hartmann boiler in which water in closed system is heated in furnace and circulated through coil in drum where it generates steam from independent source of water; Loeffler and Benson boilers.

STEAM GENERATORS

Design. New Steam Generator Installation. Combustion, vol. 18, no. 2, Feb. 1928, pp. 102-106 and 128, 4 figs. Installation at Morgan & Wright Detroit plant of U.S. Rubber Co.; features incorporated are full water-cooled combustion-chamber wall, integral with circulatory system of generator, practical elimination of brickwork in furnace, water-screen, tangential firing; these features are discussed.

Pulverized-Coal. Steam Generator. Feature at New Staley Plant, Decatur, Ill. Power Plant Eng., vol. 32, no. 4, Feb. 15, 1928, pp. 242-248, 11 figs.

STEAM HEATING

Vacuum. A New Idea in Heating of Buildings, M. W. Shears. Contract Rec., vol. 42, no. 7, Feb. 15, 1928, pp. 157-159. Differential vacuum system of steam heating explained; new scheme as far as Canada is concerned; effect of differential vacuum system; design of steam-piping system must be proportioned to heat demand of each radiator; to obtain wide range of heat emission, it is essential that steam be circulated through radiation under varying pressures and corresponding temperatures that will make possible this varying heat emission; operation of differential vacuum system.

STEAM TURBINES

EUROPE. Developments in European Steam Turbine Design, C. H. S. Tupholme. Power, vol. 67, no. 10, Mar. 6, 1928, pp. 419-421, 4 figs. Great efforts have been made by European designers to reduce heat consumption of these machines on account of rise in price of coal following World War and because of enormous increase in capacity of these units; latest design of Oerlikon Co., Switzerland, includes impulse type with, as a rule, partial admission in high-pressure part and full admission in low-pressure portion; acceptance test on 10,000-kw. turbine.

MIXED-PRESSURE. Developing Power from a Factory Waste. Power, vol. 67, no. 11, Mar. 13, 1928, pp. 465-467, 3 figs. Mixed-pressure turbine uses exhaust of steam hammers in Henry Vogt Machine Co.'s plant; reduction in power costs is enough to repay investment in short time; diagrams of old power layout and new hook-up.

STEAM REHEATING, EFFECT OF. Effect of Steam Reheating and Stage Feed Water Heating on Turbine Development, E. H. Brown. Power, vol. 67, no. 10, Mar. 6, 1928, pp. 443-444. Considerations given by turbine builder to problems that have arisen from application of reheat and regenerative cycles, with comment on boiler reheating vs. steam reheating. Paper presented before Mid-West Power Conference, Chicago.

STEEL

AIRCRAFT. Steel for Aircraft Construction, E. A. Richardson. Am. Inst. Min. and Met. Engrs.—Tech. Pub., no. 94, Mar. 1928, 19 pp. Principles of airplane construction; structural design; testing methods; construction practice; relative advantages of wood and metal; all-metal construction; promising steels; cost of materials. Brief abstract in Iron Age, vol. 121, no. 10, Mar. 8, 1928, p. 709.

PROPERTIES. A Contribution to the Theory of Hardening and the Constitution of Steel, Z. Jeffries. Am. Soc. Steel Treating—Trans., vol. 13, no. 3, Mar. 1928, pp. 369-404, 20 figs. Conclusions are adopted that carbon-steel austenite is gamma iron containing carbon in atomic dispersion; freshly formed carbon steel martensite is alpha iron containing carbon largely in atomic dispersion; carbon-steel martensite aged at room temperature or somewhat above contains myriads of particles of iron carbide; when acicular martensite forms orientations of new alpha iron grains have some relations to orientation of parent austenite.

STRENGTH AT HIGH TEMPERATURES. The Strength of Steel at Elevated Temperatures, with Particular Reference to Safety Factors, T. McL. Jasper. Power, vol. 67, no. 10, Mar. 6, 1928, pp. 446-447, 4 figs. Strain value in main cylinder, at unreinforced manways and ordinary dished head; strain values with reinforced manways and elliptical head; ordinary steel used in construction of pressure containers has yield point that is very pronounced; corrosion as factor; stress-time curves for two steels tested at 900 deg. Fahr. Abstract of paper read before Am. Petroleum Inst., Dec. 1927.

STEEL CASTINGS

SHRINKAGE. Shrinkage and Contraction of Steel Castings, C. W. Sherman. Can. Ry. and Mar. World, no. 360, Feb. 1928, p. 81.

STEEL, HEAT TREATMENT OF

HARDENING. The Mechanism of the Hardening of Steel, K. Honda. Fuels and Furnaces, vol. 6, no. 2, Feb. 1928, p. 191. Based upon extensive experimental investigation, author considers volume change during transformation of austentite into alpha martensite as most important factor in formation of dangerous cracks; thermic tension, on other hand, is of lesser importance; also considerable tension still exists in hardened steel. Translated from paper read at meeting of Raw Material Committee of Soc. of German Iron Founders.

HIGH-TEMPERATURE. High-Temperature Processes, J. C. Woodson. Purdue Univ. Eng. Extension Dept.—Bul., vol. 11, no. 1, June 1927, pp. 23-31. Brief summary of standard heat-treating processes that lie within temperature range of 1,000 to 2,000 deg. Fahr. and notes regarding perfected apparatus available; annealing; heat treatment of metals; carburizing; normalizing; case-hardening; malleabilizing; vitreous enameling of steel; vitreous enameling of cast iron; patenting of wire.

QUENCHING STEELS. Tempering Changes in Carbon Steel, R. Hay and R. Higgins. Roy. Tech. College—Jl., no. 4, Dec. 1927, pp. 62-76, 7 figs. Tempering for combustion; presents tables of standard setting heights for natural-determining Brinell hardness number, specific volume, yield stress, maximum stress, percentage elongation and Charpy impact value of specimens which had been water quenched from 1,000 deg. cent. and tempered from room temperature to 650 deg. cent. at 25 deg. intervals.

TEMPERATURE CONTROL. The Control of Temperature in Heat Treating, G. C. Davis. Heat Treating and Forging, vol. 14, no. 2, Feb. 1928, pp. 199-200. Final temperature of work being heated that is interesting; great steps forward have been made in approach to this ideal heating by growing use of liquids for heating; in case of carbon-steel hardening, there are great possibilities ahead for improving heating of work.

STOKERS

TRAVELLING-GRATE. Design and Application of Travelling-Grate Stokers, T. A. Marsh. Power, vol. 67, no. 8, Feb. 21, 1928, pp. 328-331, 5 figs. Natural-draught stokers; furnaces for natural-draught chain grate; supplying air for combustion; presents tables of stnadard setting heights for natural-draught chain grates, of test values with various fuels burned on natural-draught travelling stokers, and of operating records.

Design and Application of Forced-Draught Chain Grates, T. A. Marsh. Power, vol. 67, no. 10, Mar. 6, 1928, pp. 414-417, 6 figs. Forced-draught travelling grates are well suited to burning of following fuels: anthracite, coke breeze, bituminous coal (free burning), sub-bituminous coal, lignite; furnace designs for forced-draught stokers differ from those of natural-draught stokers in that not as much arch is required for ignition of given amount of coal; test results with anthracite and coke breeze; forced-draught chain-grate stoker tests.

STORAGE BATTERIES

CHARGING. The Constant-Potential System of Accumulator Charging, T. C. Gilbert. Elec. Rev., vol. 102, no. 2617, Jan. 20, 1928, pp. 94-97, 1 fig. Author discusses pros and cons of constant-pressure system of charging, and describes methods which he has found successful in practice; various difficulties enumerated indicate that straight constant-potential method requires skilled supervision, and, while difficulties are not serious, they may be completely eliminated by use of modified system of constant-potential charging.

STREET LIGHTING

GROUND RETURN. Ground Return for Series Street Lighting, J. A. Cook. Elec. World, vol. 91, no. 4, Jan. 28, 1928, pp. 201-202, 3 figs. Ground return for series street-lighting circuits is being successfully used by Lynn Co. in its recent extension of "White Way" lighting; one conductor per circuit is saved in underground cable system; lighting units on extension involve 2,500, 10,000 and 15,000-lumen incandescent lamps supplied by 20-kw., type "R.O." General Electric constant-current transformers, mounted on poles on side streets adjacent to underground district.

STREET TRAFFIC

CONTROL. Promoting the Best Use of City Streets, M. McClintock. Acra, vol. 19, no. 2, Feb. 1928, pp. 103-106. So far as congestion in larger American cities is concerned, city planning can never offer any very complete relief to problem, for reason that cost of such projects is far beyond capacity of any community to carry; other method of relief, generally called traffic control; too much red and too little green in traffic control; scientific routing of traffic needed; needless obstructions block street in busy hours, non-essential uses must yield to transportation needs.

STREETS

PAVEMENT WIDTHS. Pavement Widths. Mun. News, vol. 74, no. 1, Jan. 1928, pp. 27-28, 4 figs. Recommended for streets in Chicago region by Chicago Regional Planning Association; standards represent combined opinion of many engineers and officials of region and members of committee on highways of Chicago Regional Planning Assn. and also conform to standards now in use through United States.

STRUCTURAL STEEL

WELDING. Welding Trusses for Industrial Buildings, W. Vogel. Welding Engr., vol. 13, no. 2, Feb. 1928, pp. 33-35, 9 figs. Determination of definite strength values for structural welds makes it possible to design welded trusses with confidence.

SURVEYING

BENCH MARKS. A Combination Survey Monument and Bench Mark. Eng. News-Rec., vol. 100, no. 6, Feb. 9, 1928, p. 248, 2 figs.

BOUNDARY. Boundary Surveys, R. H. Randall and W. H. Halsey. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 2, Feb. 1928, pp. 746-749. Dsicussion of paper by C. T. Johnston, continued from Jan. 1928 issue of Proceedings.

T

TAPS AND DIES

THREAD MEASUREMENTS. Devices for Thread Measurements—Methods and Equipment for Accurately Gauging Tap Threads, A. L. Valentine. Machy. (Lond.), vol. 31, no. 794, Dec. 29, 1927, pp. 417-421, 10 figs.

Methods and Equipment for Accurate Gauging of Tap Threads, A. L. Valentine. Machy. (Lond.), vol. 31, no. 796, pp. 477-478, 4 figs.

TELEGRAPH

TRANSMISSION THEORY. Certain Topics in Telegraph Transmission Theory, H. Nyquist. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 3, Mar. 1928, pp. 214-216, 9 figs. Discussion of minimum frequency range required for transmission at given speed of signalling; in case of carrier telegraphy, discussion includes comparison of single-sideband and double-sideband transmission; sets forth results of theoretical studies of telegraph systems which have been made from time to time.

TELEPHONE LINES

CARRIER CURRENT. 220-Kv. Carrier-Telephony, R. B. Ashbrook and R. E. Henry. Elec. World, vol. 91, no. 10, Mar. 10, 1928, pp. 495-497, 4 figs. Southern California Edison Co. installation covers over 270 miles of 220-kv. transmission line; single-frequency duplex system with selective ringing used; outstanding advantage of system is that number of station can enter into full "party-line" communication; General Electric Co. type CC3D set is designed to give duplex conversation between similar sets, using the same frequency for transmission and reception; features of receiving equipment; operation of equipment.

TELEPHONES

AUTOMATIC. The Holborn Automatic Telephone Exchange. Engineering, vol. 124, no. 3233, Dec. 30, 1927, pp. 854-855, 3 figs. System of automatic telephony which is to be used in London is based on Strowger principle, combined with special piece of apparatus known as "director controller," which imposes call-storing and translating devices on Strowger step-by-step equipment, and thus gives practically same flexibility as is possible with panel system.

TELEVOX

ACTION OF. The Televox, R. J. Wensley. Tech. Eng. News, vol. 8, no. 8, Jan. 1928, pp. 340-342, 12 figs. Describes action of televox sending and receiving apparatus, how they act and function of televox in telephone work; diagrams of circuits are given and control scheme for operating substation equipment over telephone.

TEXTILE INDUSTRY

MANAGEMENT. Scientific Management in a Textile Business, H. P. Kendall. Taylor Soc.—Bul., vol. 12, no. 6, Dec. 1927, pp. 519-525. Notes on operating number of plants in different localities which are managed as horizontally and vertically integrated group carrying material from cotton bale to ultimate consumer, and which involve both continuous and intermittent processing.

TEXTILE MACHINERY

DESIGN. Important Influence of Rayon on the Design and Construction of Textile Machinery, F. W. Sturtevant. Textile World, vol. 73, no. 6, Feb. 11, 1928, pp. 29-30, 2 figs. Existing equipment refined to allow greater variety of constructions and better fabrics; shows how some of existing cotton, silk and wool machinery has been adapted to handle rayon; doubling and twisting machines; winding machinery; improvements in looms; dyeing equipment; finishing machinery.

TEXTILE MILLS

MANUFACTURING COSTS. Reduction of Manufacturing Costs by Labour Extension Methods Based on a Mill Survey, S. S. Paine. Textile Wld., vol. 73, no. 5, Feb. 4, 1928, pp. 152-153.

SERVICE EQUIPMENT. Interesting Structural and Equipment Features at New Plant of Chicopee Mfg. Corp. of Georgia. Textile Wld., vol. 73, no. 5, Feb. 4, 1928, pp. 408-409, 8 figs. Describes features of building construction and building equipment as heating, ventilating, humidifying, lighting; machinery installation is mentioned briefly.

THERMODYNAMICS

ENTROPY. The Concept of Entropy. Limits of Validity of the Second Law of Thermodynamics, R. Plank. Information on Refrigeration (Institut Int. du Froid)—Monthly Bul., nos. 9-10, Sept.-Oct. and Oct.-Nov. 1928, pp. 830-835. Points out that second law of thermodynamics is only law that is vectorial, all others being scalar; reversible and irreversible changes may be distinguished essentially by character of physical laws which govern them; application of theorem to steam engine and refrigerating machine. Abstract translated from V.D.I. Zeit., nos. 25 and 27, 1926, pp. 841 and 915. See reference to original article in Eng. Index, 1926, p. 735.

TOOLS

STANDARDIZATION. Advantages of Standard Tools for Quantity Production, M. E. Lange. Am. Mach., vol. 68, no. 6, Feb. 9, 1928, pp. 255-259, 20 figs. Examples of how careful planning can often save extra cost of special tools; special tools made costly by frequent changes in design of products; standard tools adapted to varying conditions and changes, and have longer useful lives; multiple turning head; large slide tool; no special tools used unless their reason for existence is proved on a " facts and figures " basis.

TOOL STEEL

SPECIFICATIONS. Tools and Tool Steel Specifications, E. S. Lawrence. Heat Treating and Forging, vol. 14, no. 1, Jan. 1928, pp. 26-31 and 37, 11 figs. Factors to be considered in specifying for purchase of tool steels; classification, chemical limits, hardening and tempering practice; importance of microscopic examination; presents table giving mechanical limits of carbon tool steels heat-treating features; photomicrographs. Bibliography.

TUBES, STEEL

HEAT TREATMENT. The Effect of Heat Treatment on Cold-Drawn Steel Tubes, F. C. Lea. Engineering, vol. 124, no. 3233, Dec. 30, 1927, pp. 831-834, 9 figs. Load-strain curves under repeated stress; types of failure; effect of pinch and sink on properties of tubes; cold-drawn tubes after final pass have low limit of proportionality, but strength is much higher than that of normalized material.

TUNNELS

SUBAQUEOUS. Construction Methods on Oakland Estuary Tube, S. W. Gibbs. Eng. News-Rec., vol. 100, no. 3, Jan. 19, 1928, pp. 100-105, 10 figs. Describes construction methods used on subaqueous tunnel between Oakland and Alameda, Calif., for vehicular and electric railway traffic; tubes 37 ft. in diam. and 203 ft. long were sunk to form tunnel under estuary; 90 ft. below surface of water.

V

VACUUM TUBES

DESCRIPTIONS. Vacuum Tubes as Oscillation Generators, D. C. Prince and F. B. Vogdes. Gen. Elec. Rev., vol. 31, no. 2, Feb. 1928, pp. 97-98, 2 figs. Design of simpler vacuum-tube circuits; vacuum-tube oscillating circuit contains certain amount of stored energy; energy-storage effect calculated; obtaining proper voltages and phase relations for leads to tube; Hartley circuit; determine volt-amperes in oscillating circuit; grid-leak resistance. (To be continued.)

Vacuum Tubes as Oscillation Generators, D. C. Prince and F. B. Vogdes. Gen. Elec. Rev., vol. 31, no. 3, Mar. 1928, pp. 147-152, 11 figs. Special considerations bearing on design and operation of oscillating circuits; grid phase-angle corrections; grid-bias condenser; intermittent oscillation; operating difficulties. (Continuation of serial.)

HIGH-VOLTAGES. Use of Very High-Voltage in Vacuum Tubes, W. D. Coolidge. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 3, Mar. 1928, pp. 212-213.

VEHICULAR TUNNELS (HOLLAND)

TRAFFIC CONTROL. Holland Tunnel Traffic Control System, J. P. Maxwell. Elec. Rec., vol. 43, no. 2, Feb. 1928, pp. 188-190, 3 figs. Plentiful supply of simple and easily understood signals coupled with complete supervisory system constitutes what is regarded as one of best traffic-control systems in existence; 4 kinds of traffic signals used; accident emergency trucks; fire alarms; signal voltage supply; traffic officer's signal station; supervisory control of lights; momentary contact relays.

VIADUCTS

REINFORCED-CONCRETE. Viaduct Design and Structure, S. Johannesson. Eng. News-Rec., vol. 100, no. 1, Jan. 5, 1928, pp. 5-8, 7 figs. Describes viaducts built and to be built on Holland tunnel highway in New Jersey for 25,000 ft.; 50 ft. roadway; minimum clearance of 14 ft. over public streets and 22 ft. over railroad tracks; foundations are concrete; 5,000 ft completed.

VOLTAGE REGULATION

CONTROL. System Voltage Control, C. P. Hubbard. Elec. World, vol. 91, no. 8, Feb. 25, 1928, p. 410. Control of voltage on Detroit Edison system from generator busbars to customers' outlets is direct responsibility of one man; load conditions are not permitted to affect voltages; system voltages are checked both by voltage charts and by periodical testing.

VOLTAGE REGULATORS

CONTROL BY. Voltage Control by Induction Regulators. World Power, vol. 9, no. 49, Jan. 1928, pp. 63-67, 7 figs. Economies effected by feeder-voltage control; kind of service for which induction regulator is particularly adapted; ring main regulation; operating principles of S. & C. induction regulator; strator cores and windings; 3-phase rotor core; inculation efficiency; oil and air cooled; tested for compliance with B.E.S.A. standards for pressure, dielectric resistance, over-potential, copper and iron losses, leakage, impedance and ratio; and to verify relation of boost to rotor angular displacement; methods of control.

VOLTMETERS

VACUUM-TUBE. A Two-Range Vacuum Tube Voltmeter, C. M. Jansky, Jr., and C. B. Feldman. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 2, Feb. 1928, pp. 126-132, 14 figs. Design, uses and limitations of new circuit employing three-element vacuum-tube as voltmeter; two overlapping ranges of voltage, together with single operating battery, are unique features; effect of wave form and elimination of that effect; presents schematic and wiring diagrams of voltmeter.

W

WALLS

BRICK-AND-TILE. Some Practices in Erecting Damp-Proof Tile-and-Brick Walls, P. H. Bevier. Eng. News-Rec., vol. 100, no. 7, Feb. 16, 1928, pp. 285-286, 1 fig.

CONCRETE—COLD WEATHER CONSTRUCTION. Sliding Forms Build Double Walls at High Speed. Eng. News-Rec., vol. 100, no. 10, Mar. 8, 1928, pp. 405-407, 7 figs. Four six-storey walls concreted in 12½ days, using 800 ft. of forms rising 4 in. an hour; speed of pouring and exposing concrete walls in cold weather illustrated in cold-storage plant at Cleveland, Ohio; building is 200 ft. square and 94 ft. high; concrete was exposed within nine hours after it was poured.

CONCRETE—MOVING. Reinforced Concrete Wall Moved 1,000 Ft. Eng. News-Rec., vol. 100, no. 6, Feb. 9, 1928, pp. 232-233, 3 figs. Forty sections of concrete fire wall surrounding oil tanks moved on rails to new location; steel oil tanks moved to new site by floating; wall is of vertical cantilever type with light steel reinforcement, having height of 11½ ft. and uniform thickness of 12 in.; base is 18 in. thick and extends 2 ft. on either side of centre line; sections into which wall was cut were 35 ft. long and weighed approximately 70 tons each.

WASTE

ELIMINATION OF. Four Basic Principles of Reducing Waste, W. I. Ferris. Factory, vol. 75, no. 2, Feb. 1928, pp. 311-313, 4 figs. Problem of saving losses in material solved; preventing spoiled work; reducing scrap; recovering most of unavoidable scrap and putting it immediately in best form for use over again; recovering eventually all that is possible of indefinite vanished waste; reduction of waste prime reason for designing many machines, jigs and other aids at plant of L. E. Waterman Co., of which author is vice-president.

WASTE HEAT

RECOVERY. Waste Heat Recovery, W. Gregson. Engineer (Lond.), vol. 145, no. 3763, Feb. 24, 1928, pp. 216-219, 6 figs. In first portion, author deals with theoretical and arithmetical aspects of waste-heat recovery in steel works, in gas works and on ships fitted with oil engines; in second portion, he deals with practical side of waste-heat recovery in same three connections. See also editorial comment on pp. 213-214.

WATER CHLORINATION

METHODS. Data on Applying Chlorine to Safeguard Water Systems, R. V. Donnelly. Water Works Eng., vol. 81, no. 3, Feb. 1, 1928, pp. 162-166. Steps in changing chlorine from liquid to gas; care of various mechanisms; some applications of chlorine in water works; solution and direct-feed systems; chlorine doses; some of uses for chlorine.

WATER FILTRATION PLANTS

DESCRIPTION. One Year's Operation of the Providence Filtration Plant, J. W. Bugbee and E. L. Bean. N.E. Water Works Assn.—Jl., vol. 41, no. 4, Dec. 1927, pp. 399-409 and (discussion) 410-412, 4 figs. Description of operation of Providence, R.I., filters, including analyses of water before and after filtration; quantities of coagulent used and quantity of water filtered; efficiency of filtration.

WATER METERS

TESTING. Loss of Head Through Three Types of Water Meters, C. W. Harris. Univ. of Wash. Eng. Experiments Sta.—Bul., no. 45, Aug. 15, 1927, pp. 5-30, 24 figs. Object of study was to determine amount of water capable of being delivered through average meter setting; test was made of ten separate meters, including three different makes and ranging in size from ⅝ in. to 2 in.; results of tests are shown by tabulations and diagrams.

WATER POWER

APPRAISALS. Water Power Appraisals, L. K. Sherman. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 3, part 1, Mar. 1928, pp. 837-842. Points out some of pitfalls, precautions and need for experienced judgment in applying capitalized net-earnings method to secure reasonable indication of fair market value of water power right. Discussion of paper by W. H. Cushman in Feb. issue of Proceedings.

WATER SUPPLY

COSTS. Municipal Water and Sewerage Costs in Maryland, A. Wolman. N.E. Water Works Assn.—Jl., vol. 41, no. 4, Dec. 1927, pp. 439-448 and (discussion) 448-472, 1 fig. Outline of principles of financing of State Department of Health; fixed maintenance and operation costs with statistical table of municipal costs in Maryland, 1925-26; points out low cost of these utilities to consumer and user; summary of table and deductions; methods used by various cities in United States for financing sewage systems.

CROSS-CONNECTIONS. Present Practice in Cross-Connections in California. Am. Water Works Assn.—Jl., vol. 19, no. 2, Feb. 1928, pp. 121-130. Views of the State Department of Public Health, E. A. Reinke; Cross-Connections in the East Bay Cities, J. D. De Costa; Cross-Connections in Los Angeles, C. Wilson; Pasadena's Method of Handling Cross-Connections, M. S. Jones. Presented before California Section meeting, Oct. 6, 1927.

ENGINEERING. Heading Off Sand and Ice Troubles, J. Jacques. Water Works Eng., vol. 81, no. 3, Feb. 1, 1928, pp. 139-140 and 161-162, 8 figs. Water supply of Canon City, California, involving several unusual engineering problems, is described; ice clogging, avalanches of rock periodically destroying parts of pipe line supplying city and other difficulties have been met by engineers in perfecting this water-works system.

WATER TOWERS

REINFORCED-CONCRETE. Unusual Tank and Tower Structure of Reinforced Concrete. Eng. News-Rec., vol. 100, no. 6, Feb. 9, 1928, pp. 247-248, 2 figs. Structure was built of reinforced-concrete, with tower height of 120 ft.; tank shell is 15 ft. high, with capacity of 75,000 Imp. gallons.

WATER TREATMENT

DESCRIPTION. The Treatment of the Water Supply of the City of Columbus, Ohio, C. P. Hoover. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 2, Feb. 1928, pp. 471-484, 6 figs. Describes original water supply, processes used in treatment, chemicals used and method of applying them; additions to plant and operation are treated.

DEVELOPMENTS. Recent Developments in Water Treatment and Filtration, J. R. Baylis. Water Works, vol. 67, no. 1, Jan. 1928, pp. 37-39. Type of treatment no longer influenced by public opinion; water of certain chemical balance most suitable for domestic uses; optimum conditions for coagulating water; mixing basins; settling basins; rapid sand filters; instruments to aid filter operator; aeration; excess lime treatment and recarbonation.

IRON REMOVAL. Small Iron-Removal Plant for Redbank Water Works, W. Donaldson. Eng. News-Rec., vol. 100, no. 3, Jan. 19, 1928, pp. 112-114, 3 figs. Describes purification works for eliminating staining properties of water supply of Redbank, N.J., consisting of aeration and rapid-sand filtration; history of water supply and operation of plant are treated.

WATER WORKS

COST ACCOUNTING. Water Works Cost Accounting, P. M. Kydd. Water Works, vol. 67, no. 2, Feb. 1928, p. 60. Simplicity of mechanics of cost accounting pointed out; it is possible to devise cost-accounting system that can be handled by operating force of water works with aid of few clerks; source of basic cost information; distribution of cost items; recording operating results; use of cost data. Paper read before Central State Section, Am. Water Works Assn.

RECONSTRUCTION. Water Works Reconstruction in Winter at Newton, N.J., H. G. Payrow. Eng. News-Rec., vol. 100, no. 5, Feb. 2, 1928, pp. 184-185, 4 figs. Winter conditions were utilized to place submerged concrete intake and intake pipe in Morris Lake, source of water supply of Newton, N.J.; describes building of gate house, repairing dam, hauling of concrete intake over ice and sinking to place through ice.

WATT-HOUR METERS

PRACTICE, CANADA. Canadian Watt-Hour Meter Practice, J. Showalter. Elec. News, vol. 37, no. 3, Feb. 1, 1928, pp. 35-37. Guide for those operating or establishing meter departments, application, installation, reading, records, maintenance and testing of meters; meter sizes; reasons why Canadian meter practice differs from that elsewhere is that electricity is cheap. (To be continued.)

WATERWAYS

ENGINEERING PROGRESS. Advances in Waterways Engineering During a Half Century, C. L. Hall and DeW. D. Barlow. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 2, Feb. 1928, pp. 643-645. Discussion of paper by W. M. Black, published in Oct. 1927 issue of Proceedings.

WELDING

ELECTRIC. *See Electric Welding; Electric Welding, Arc.*
OXY-ACETYLENE. *See Oxy-Acetylene Welding.*
PRESSURE VESSELS. *See Pressure Vessels.*

WELDS

BRITTLENESS OF. Red-Shortness of Weld Metal, A. H. Gooder. Welding Engr., vol. 13, no. 2, Feb. 1928, pp. 39-43, 6 figs. British welding engineers investigate causes of brittleness of some welds at red heat, and means of controlling crystalline structure; many fusion welds red-short and particularly with electric arc welds; representative compositions of fluxes in commercial use; other effects of fluxes; passage of metal through arc; effect of carbon content of electrode on red-shortness of welds; tensile strength; bend tests; carbon tents of welds; microstructure; welds made in oxygen gas. Paper read before Instn. Welding Engrs.

WIND TUNNELS

SPEED CONTROL. An Automatic Speed Control for Wind Tunnels, A. F. Zahm. Nat. Advisory Committee for Aeronautics—Tech. Note, no. 278, Feb. 1928, 15 pp., 15 figs. Automatic control apparatus used in wind tunnels at Washington Navy Yard.

TESTS. Research on Channel Wall Interference, J. H. Parkin. Royal Aeronautical Soc.—Jl., vol. 31, no. 204, Dec. 1927, pp. 1110-1149, 32 figs. Tests at University of Toronto with cylinders and airfoils, using mirror method, for ten channel sizes; theory of airfoil is unlimited and limited stream; wall interference in square and rectangular cross-section channels; two series of tests on cylindrical models; tests on airfoils; log tables and graphs show results of tests; 4 halftones of apparatus. From Aeronautical Research Paper, no. 17 (Canada).

Wind Tunnel Tests on Autorotation and the "Flat Spin," M. Knight. Nat. Advisory Committee for Aeronautics—Report, no. 273, 1927, 18 pp., 17 figs.

TESTS. The Use of the Wind Channel for Performance Prediction, R. K. Pierson. Roy. Aeronautical Soc.—Jl., vol. 32, no. 206, Feb. 1928, pp. 96-119 and (discussion) 120-126, 35 figs. Wind-channel tests on models to find most efficient combination to fulfill specific requirements; description of model; method of model support; 4-ft. National Physical Laboratory type of wind channel furnished with 20-h.p. motor; propeller driving apparatus; trim very important as large pitching moment is associated with large drag errors; slipstream effect; method of visualizing air flow as means of determining how parasitic drag can be reduced; accuracy of prediction.

WOOD PRESERVATION

EXPERIMENTS IN. Experiments in Wood Preservation, L. P. Curtin and W. Thordarson. Indus. and Eng. Chem., vol. 20, no. 1, Jan. 1928, pp. 28-30. Toxicity data not previously reported are given, also table showing a "killing points" of various inorganic preservatives experimented with; 12 additional fungi have been studied; toxicity of zinc meta-arsenite in powder form toward 14 wood-rotting fungi has also been studied.

WOOD WASTE

USE AS FUEL. Burning Hog Fuel in the Pacific Northwest, O. L. LeFever. Power, vol. 67, no. 6, Feb. 7, 1928, pp. 248-249, 2 figs. Discusses its possibilities and limitations and some of requirements for successful burning for power generation; burning hog fuel in Dutch oven; transportation of hog fuel limited to 100 miles; sturdy conveyors needed for handling.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print. Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street. New York, N.Y.

A

AERIAL PHOTOGRAPHY

MAP COMPILATION. Map Compilation from Aerial Photographs, T. P. Pendleton. U.S. Geol. Survey—Bul., no. 788-F, 1928, pp. 379-419, 12 figs. Photographic optics; control for maps compiled from aerial photographs; photographing quadrangle; successful compilation of maps from aerial photographs is largely dependent on character of traverse of triangulation upon which it is based; both types of control can be used successfully.

AERIAL SURVEYING, TOPOGRAPHIC

CANADA. Aerial Surveying in Canada, F. H. Peters. Eng. and Min. Jl., vol. 125, no. 12, Mar. 24, 1928, p. 491, 2 figs. on p. 490. Canada's pulpwood areas, water power resources and mineral possibilities are very great; necessity for maps is urgent; Topographical Survey of Canadian Dept. of Interior, in aerial surveys work for 1927, photographed 45,850 square miles, 28,650 by oblique and 17,200 by vertical photography, for mapping purposes.

AIR COMPRESSORS

DESIGN. A Contribution to the Design of the Turbo-Compressor, M. Maekawa. Tohoku Imperial University—Technology Reports (Sendai, Japan), vol. 7, no. 2, 1928, pp. 1-44, 15 figs.

AIRPLANE ENGINES

SPECIFICATIONS. Manufacturers' Specifications on Engines Available for Commercial Use as Compiled by Aviation. Aviation, vol. 24, no. 13, Mar. 26, 1928, p. 790. Table of manufacturers' specifications for airplane engines in commercial use.

AIRPLANES

SLIP-STREAM EFFECT. Slip-Stream Effect, M. Watter. Aero Digest, vol. 12, no. 2, Feb. 1928, pp. 175-177 and 297-298, 8 figs. Data accounting for mutual interaction of propeller and objects in its slip-stream; magnitude of its effect; problem in theoretical performance calculation; error in level flight analysis small; slip-stream effect causes comparatively greater error in climb; propeller-ship effect; obstruction effect.

STRESS ANALYSIS. Stress Analysis of Commercial Aircraft, A. Klemin. Aviation, vol. 24, nos. 11-14, Mar. 12-Apr. 2, 1928, pp. 632-633 and 654-660, 14 figs., 704-705 and 723-731, 17 figs., 774-775 and 794-799, 10 figs., and 838-839 and 848-853, 7 figs.

ALLOY STEELS

LOCOMOTIVE FORGINGS. Locomotive Forging Steels, O. V. Greene. Am. Soc. Steel Treating—Trans., vol. 13, no. 4, Apr. 1928, pp. 573-588 and (discussion) 588-602, 18 figs. Results of tests made on various types of heat-treated alloy steels for reciprocating locomotive parts; many railroads are using normalized steel for their forgings; normalized forging steel tends to eliminate internal fissures and cracks, internal strains, ferritic segregation due to non-metallic impurities; if weight is important factor, however, such steels as vanadium or manganese are used so that sections may be safely reduced in size.

ALLOYS

ALUMINUM. *See Aluminum Alloys.*

BRONZE. *See Bronze.*

CAST, SHRINKAGE OF. Minute Shrinkage Cavities in Some Cast Alloys of Heterogeneous Structure, W. A. Cowan. Inst. of Metals—Advance Paper, no. 451, for mtg., Mar. 8-9, 1928, 6 pp., 7 figs.

COPPER. *See Copper Alloys.*

EQUILIBRIUM DIAGRAMS. Equilibrium Diagrams, W. Rosenhain. Foundry Trade Jl. (Lond.), vol. 38, no. 603, Mar. 8, 1928, pp. 169-173. Explanation of equilibrium diagrams; simple and duplex alloys; nature of micro-constituents; transitional phases; maintaining condition of balance between solid and liquid; principle of phase rule; energy potential and metastable alloys; thermal analysis; dilatometry; alloying and its results; age hardening; equilibrium and future developments. Presidential address to Inst. of Metals. See also Metal Industry (Lond.), vol. 32, nos. 10 and 11, Mar. 9 and 16, 1928, pp. 259-261 and 275-277.

ALUMINUM ALLOYS

EGALITE. Specially Processed Aluminum Alloy Marketed as "Egalite," P. M. Heldt. Automotive Industries, vol. 58, no. 10, Mar. 10, 1928, pp. 416-417. Alloy has been subjected to special process while in molten state; process said to give greater degree of uniformity of molecular structure and to increase tensile strength and elongation; process applicable to wide variety of compositions; recommended for casting cylinder heads; reduces maximum temperature; results of tests on engine with cast iron and Egalite metal heads; effect of process explained.

AMPLIFIERS

HIGH-FREQUENCY. Good Quality in H.-F. Amplifiers, C. C. Inglis. Experimental Wireless (Lond.), vol. 5, no. 54, Mar. 1928, pp. 132-133. Analysis made to arrive at width of resonance curve at large fraction of its height; results show that care must be taken not to use tube of too high impedance with tuned anode circuit, if good quality is to be maintained.

RADIO. High-Note Loss in Resistance Amplifiers, A. L. M. Sowerby. Wireless World (Lond.), vol. 22, no. 10, Mar. 7, 1928, pp. 251-253, 3 figs. Measurement of working impedances and capacities; working impedance of tube; working value of stray capacity; magnification factor and tubes capacity; high magnification tubes and distortion. (To be concluded.)

AQUEDUCTS

LOS ANGELES-COLORADO RIVER. The Proposed Los Angeles-Colorado River Aqueduct, H. A. Van Norman. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 4, Apr. 1928, pp. 1116-1122. Discusses need, in Southern California cities, for water from Colorado river; description of several of proposed routes that would ultimately divert 1,500 cu. ft. per sec.; two of these routes are unique in being gigantic pumping schemes; two others are unusual in that they entail driving of tunnels of heretofore undreamed-of lengths; various types of aqueduct construction and economic problems related thereto.

ASBESTOS MINES AND MINING

SOUTH AFRICA. Asbestos Developments in South Africa. S. African Min. and Eng. Jl. (Johannesburg), vol. 38, no. 1899, Feb. 18, 1928, p. 665, 1 fig. Conditions in blue asbestos fields; four horizons proved; shaft sinking cheaper than drilling; prospecting parties at work in Rhodesia; keen competition for Amianthus aerial-ropeway contract.

ASPHALT

MIXTURES. Asphalt Mixtures and Gradings, E. B. Hack. Commonwealth Engr. (Melbourne), vol. 15, no. 6, Jan. 2, 1928, pp. 230-233, 7 figs. Theory and practice; sands; aggregate grading; hot-mix proportions; black base; binder course; asphalt or bituminous concrete; stone-filled sheet asphalt (modified Topeka mix) for light traffic; stone-filled sheet asphalt (modified Topeka mix) for heavy traffic; sheet asphalt for light traffic; sheet asphalt for heavy traffic.

AUTOMOBILE ENGINES

DESIGN. Automotive Fuels and Engines (Brennstoffe und Motoren fuer Kraftwagen), A. Heller. V.D.I. Zeit. (Berlin), vol. 72, no. 10, Mar. 10, 1928, pp. 335-340, 13 figs. Development of gasoline substitutes; cracking process; anti-knock fuels; selection of dimensions and number of cylinders of automotive engines; simplified construction; Rushmore method of cooling by steam condensation; electric equipment of automotive vehicles.

DETONATION. Mechanical Design in Relation to Detonation, H. R. Ricardo. Instn. Petroleum Technologists—Jl. (Lond.), vol. 14, no. 66, Feb. 1928, pp. 2-10 and (discussion) 10-26. It will not pay, at all events for automobile engines, to employ higher compression when to do so necessitates adding any extra weight to reciprocating parts; turbulence; effect of cylinder size on detonation.

DIFFERENTIAL-STROKE (Andreau). The Kinematics of the Andreau Differential-Stroke Engine, S. J. Davies. Engineering (Lond.), vol. 125, no. 3243, Mar. 9, 1928, p. 277, 4 figs. This engine of Citroën Gear Co., working on Atkinson cycle, gives extraordinarily low gasoline consumption of 0.379 lb. per b.h.p. per hr., equivalent to overall or brake thermal efficiency of about 36 per cent; investigation into kinematics of type of mechanism used in engine; includes curves showing displacement, velocity and acceleration.

GASOLINE, DETONATION OF. Results of Two Detonation Surveys, H. K. Cummings. Soc. Automotive Engrs.—Jl., vol. 22, no. 4, Apr. 1928, pp. 448-457, 7 figs. First is survey of current methods of measuring anti-detonation qualities of motor fuels; second is survey of relative detonation characteristics of available fuels as determined by routine method of fuel testing now employed by Bureau of Standards; comparative data on apparatus and methods presented in tabulation which includes 20 laboratories; knock ratings for British and American gasolines.

AUTOMOBILE PLANTS

MAINTENANCE DEPARTMENT (FORD). Maintenance Practices at the Fordson Plant, F. L. Faurote. Indus. Eng., vol. 86, no. 3, Mar. 1928, pp. 106-110 and 149, 9 figs. Work of maintenance department at Fordson plant, and manner in which it is planned and carried out; rough or semi-finished sketches; sufficient skilled workers; fabricating shop and equipment; small maintenance departments; installations of balconies and conveyors; steam fitting; reclamation of material from Government ships; care of electric motors.

B

BAFFLE PIERS

HYDRAULIC MODELS. Baffle Pier Experiments on Models of Pit River Dams. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 4, Apr. 1928, pp. 1225-1233, 4 figs. Discussion of paper by I. C. Steele and R. A. Monroe continued from Mar. 1928 issue of Proceedings; writer obtained data relative to baffle piers at toe of high overfall dams; this information is presented; experiments made at hydraulic laboratory of Cornell University indicated that relative height of tail water is of great, even of controlling, importance.

BAKELITE

MACHINING. Bakelite and How It Is Machined, P. Hagen. Machy (N.Y.), vol. 34, no. 8, Apr. 1928, pp. 622-623. Properties of bakelite; machining operation; method of turning; practice in drilling; sawing and punching bakelite; threading and milling; polishing.

BALANCING

ROTORS. The Static Balancing of Rotors, B. P. Haigh. Engineer (Lond.), vol. 145, no. 3767, Mar. 23, 1928, pp. 310-312, 7 figs.

BALLAST (RAILROADS)

DISCUSSION OF. Railway Engineers Discuss Ballast. Rock Products, vol. 31, no. 6, Mar. 17, 1928, p. 90. Report of Am. Ry. Assn. Committee on Ballast covering revision of manual; digest as to materials used on 47 railroads; comparative value of materials; pumping joints and maintenance costs; shrinkage of ballast and practice of measuring or weighing when bought.

BEAMS, REINFORCED CONCRETE

STEEL CALCULATION. Calculation of Steel Section of Reinforced Concrete Beams with Double Reinforcement Under Simple Bending (Calcul des sections d'aciers des poutres en béton arms, à double armature, soumises à la flexion simple). J. Tastet. Génie Civil (Paris), vol. 92, no. 10, Mar. 10, 1928, pp. 233-236, 2 figs. Different shapes of steel reimforcement are treated and tables of values of variables in formulas.

BEARINGS, BALL

STANDARDIZATION. Ball-Bearing Standardization. Soc. Automotive Engrs.—Jl., vol. 22, no. 4, Apr. 1928, pp. 481-483, 1 fig. Proposals for uniform world-wide standards for ball bearings discussed at International Conference on Ball Bearing Standardization; international uniformity of annular type nearly attained; others being considered; near agreement of metric thrust-bearing tables; gauging; tolerances; tolerances on widths; eccentricity; inch-dimension bearings; corner radii; roller bearings; adapter-sleeve bearings.

BEARINGS, ROLLER

UTILIZATION BY RAILROADS. Roller Bearings for Railway Equipment, W. C. Sanders. Ry. Club of Pittsburgh—Proc., vol. 27, no. 4, Feb. 23, 1928, pp. 81-92 and (discussion) 93-101, 12 figs.

BOILER FEEDWATER

SOFTENING. Lime and Soda Treatment of Feedwater, E. M. Partridge. Power, vol. 67, no. 12, Mar. 20, 1928, pp. 507-509. Result obtained by lime-soda softeners on division of Mid-Western railway; accompanying tables of analyses support statement that water may be made actually more corrosive in character by partial softening with lime and soda and that lime-soda softening does not insure formation of soft sludge in boiler unless treatment be complete.

BOILER PLATE

EMBRITTLEMENT. Embrittlement of Boiler Plate, S. W. Parr and G. F. Straub. Power Plant Eng., vol. 32, no. 7, Apr. 1, 1928, pp. 414-417. Causes and descriptions of cracks due to embrittlement and methods of inhibition; material has not been found to be at fault; design of boiler is not primary cause; operation is not to blame; sodium hydroxide is only material encountered in boiler which embrittles stressed steel; increased sulphate has been effective in stopping this trouble; new inhibiting agents have been developed. Abstract of paper presented at Mid-West Power Conference.

NICKEL-STEEL. Alloy Steel for Boiler Construction, C. McKnight. Am. Soc. Steel Treating—Trans., vol. 13, no. 4, Apr. 1928, pp. 638-657 and (discussion) 657-658, 10 figs.

BOILERS

HEAT TRANSMISSION IN. Heat Transmission in Modern Boilers, Roszak and Veron. Power Engr. (Lond.), vol. 23, no. 265, Apr. 1928, p. 152. Discusses factors influencing heat transmission, with special reference to their bearing on design of modern boilers and possibilities of further improvements; methods of increasing heat transfer by radiation and convection; typical data concerning heat absorption per unit area of heating surface under different conditions. Abstract translated from Société des Ingénieurs Civils.

MARINE, PULVERIZED COAL. Test of Pulverized Coal as Applied to Scotch Marine Boilers, C. E. Jefferson and J. S. Evans. Mar. Engr. and Motorship Bldr. (Lond.), vol. 51, no. 607, Mar. 1928, pp. 101-102, 1 fig. Report of 240-hr. test of system finally developed and installed in 9,700-ton freighter "Mercer" in order to determine by actual operation real merits of pulverized fuel when applied to existing types of cargo vessels fitted with Scotch boilers.

STEAM-HEATING. Relation Between Output and Operating Characteristics of Low-Pressure Steam-Heating Boilers, P. Nicholls. Am. Soc. Heat. and Vent. Engrs.—Jl., vol. 34, no. 3, Mar. 1928, pp. 175-188, 7 figs. Discusses relations which exist between some of the operating characteristics of low-pressure steam-heating boilers, and gives results of tests.

BRIDGES

ARCH, HIGHWAY. Highest Bridge in World Being Built Over Colorado River, N. C. Lilley. Eng. World, vol. 32, no. 3, Mar. 1928, pp. 123-124, 1 fig. Bridge 130 miles north of Flagstaff, Ariz., will be 467 ft. from low-water to roadway grade; total length 833 ft., main span being deck arch of 618 ft., end pins resting upon granite walls of canyon; arch is of usual three-hinge type, with battered trusses designed with reversal stresses for cantilever erection.

COMBINED. Conversion of Mission Bridge, Canadian Pacific Railway. Can. Ry. and Mar. World, no. 361, Mar. 1928, p. 123, 2 figs. Conversion of Canadian Pacific Ry. bridge into combined railway and highway bridge; no changes were necessary in steel part of structure; to signal system for control of trains and boats was added device for control of highway traffic.

CONCRETE, DESIGN. Steel Plates Transfer Stress in Concrete Bridge Truss. Eng. News-Rec., vol. 100, no. 11, Mar. 15, 1928, pp. 440-441, 2 figs. Seattle street carried across ravine on bridge built to half ultimate width; novel panel-connection details; points of special interest involved are design of truss and use of curved steel plates to transfer stress to and from embedded steel bars at panel-point connections.

CONSTRUCTION, ELECTRIC WELDING. Electric Welding Cuts Steel Bridge Tonnage One-Third. Elec. World, vol. 91, no. 14, Apr. 7, 1928, p. 707, 1 fig. By use of electric welding amount of steel required in Boston and Maine Railroad bridge, 175 ft. long, being built at Chicopee Falls, Mass., has been reduced at least 33.3 per cent; more than half saving is in reduction of connection material.

HIGHWAY, NEW YORK CITY. New York City Bridges, Present and Proposed, D. B. Steinman. Professional Engr., vol. 13, no. 3, Mar. 1928, pp. 9-10, 1 fig. Williamsburg Bridge, Manhattan Bridge and Queensboro Bridge; Brooklyn Bridge was opened to traffic 45 years ago; proposed bridge known as Triborough Bridge; bridge has been proposed to span Narrows between Brooklyn and Staten Island to be known as Liberty Bridge.

MOVABLE, WELLAND SHIP CANAL. Bridges Over the Welland Ship Canal, M. B. Atkinson. Eng. Jl. (Montreal), vol. 11, no. 2, Feb. 1928, pp. 73-100, 43 figs. Outline of preliminary investigations, specifications and designs and construction features of substructures and superstructures of various bridges, of which there will be two swing, seven rolling-lift and twelve vertical-lift bridges.

PIERS, SINKING. Pneumatic Caissons Sealed at Record Depths, Using Quick-Hardening Cement, C. K. Allen. Eng. News-Rec., vol. 100, no. 12, Mar. 22, 1928, pp. 484-487, 7 figs. Quick-hardening cement decided factor in rapid founding under air of Kennebec river bridge piers; caissons sealed at maximum water depths of 125 ft. on rough rock bottom; piers were sunk by pneumatic process; rapidity of construction under very difficult conditions sets precedent of interest; concrete under pressure; material supply; caissons.

RAILROAD, ARC WELDING. First All-Welded Truss Railroad Bridge Is Put in Service. Ry. Age, vol. 84, no. 12, Mar. 24, 1928, pp. 664-667, 10 figs. New bridge on Boston and Maine, built over power canal at Chicopee Falls, Mass., on important industry spur serving Westinghouse Electric Co.'s plant at that point; 72-deg. skew, length of each truss is 134 ft. 8 in.; unit stresses allowed; details of more important connections; floor system of unusual design.

RAILROAD, VIBRATION. Oscillations in a Bridge Caused by the Passage of a Locomotive, C. E. Inglis. Roy. Soc.—Proc. (Lond.), vol. 118, no. A779, Mar. 1, 1928, pp. 60-96, 18 figs. Natural periods of vibration for unloaded girder freely supported at its ends; oscillation produced by concentrated pulsating force moving at uniform speed along girder; impact effects due to hammer blow, taking into account mass of moving load and bridge damping.

SECONDARY STRESSES. Secondary Stresses. Engineering (Lond.), vol. 125, no. 3242, Mar. 2, 1928, pp. 261-262. Editorial treatment, referring to recent works on subject; it is not that secondary stresses are small, but experience has proved them to be negligible in ordinary bridge work; not a single instance has yet been brought forward to show that any bridge disaster has ever been due to these stresses; experiments are now being made by Ministry of Transport in order to determine by direct measurement stresses existing in railway bridges.

STEEL, ARCH—AUSTRALIA. Early Stages of Construction on 1,650-Ft. Arch Bridge at Sydney, Australia. Eng. News-Rec., vol. 100, no. 14, Apr. 5, 1928, pp. 538-540, 7 figs. Steel arch span to carry railway and street traffic across harbour; foundations and construction ot end bearings; travellers for arch erection; foundations; end bearings; masonry.

STEEL, WELDING. Railroad Bridge Made by Arc Welding, A. G. Bissell. Iron Age, vol. 121, no. 15, Apr. 12, 1928, p. 1013, 2 figs. Skew bridge at Turtle Creek, Pa., for heavy freight movement built of plates and standard I-beams without use of rivets; two main girders, 4 ft. 9¼ in. deep and 53 ft. 9 in. long, constructed outdoors at plant of Westinghouse Elec. & Mfg. Co.; cover plates carefully assembled on some long timbers, and edge-welded continuously on both sides.

SUSPENSION. Design of Mount Hope Wire-Cable Suspension Bridge. Eng. News-Rec., vol. 100, no. 15, Apr. 12, 1928, pp. 585-587, 3 figs. Toll structure with 1,200-ft. suspended span displaces highway ferry between Providence and Newport, R.I.; cable-bent piers and offshore anchorage necessary; silicon-steel truss chords; site and foundation conditions; general design; stiffening trusses.

SUSPENSIDN, EYE-BAR CABLE. The Eye-Bar Cable Suspension Bridge at Florianopolis, Brazil. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 4, Apr. 1928, pp. 1133-1152, 5 figs. Discussion of paper by D. B. Steinman and W. G. Grove continued from Feb. 1928 issue of Proceedings; bidding on Hudson river bridge wire design won by margin of $2,000,000, indicating that eye-bars cannot compete with wire cables for extremely long spans; Florianopolis design and its methods of erection may extend range of use of structures of suspension type.

SUSPENSION, PITTSBURGH. The Sixth, Seventh and Ninth Street Bridges, Pittsburgh, Pa., S. L. Roush. Am. Architect, vol. 133, no. 2538, Feb. 5, 1928, pp. 191-196, 8 figs. Architectural treatment of three bridges in Pittsburgh, all of suspension type; two with main span 430 ft., side spans 215, while third is 12 ft. and 6 ft. longer respectively; approaches have steep grades of 4.175 per cent.

TYPES. Suitability of the Various Types of Bridges for the Different Conditions Encountered at Crossings, J. A. L. Waddell. Assn. Chinese and Am. Engrs. —Jl. (Peking), vol. 9, no. 2, Feb. 1928, pp. 19-31. Erection methods; types of bridges; toll bridges; preliminary studies for proposed bridges; right-of-way. (Concluded.)

TOLL. Privately-Operated Toll Bridges Opposed on Economic Grounds, N. G. Shidle. Automotive Industries, vol. 58, no. 13, Mar. 31, 1928, pp. 503-505, 1 fig. Bridge profits made possible through location in relation to highways built with public funds should not be given over to private interests, highway experts say; at beginning of 1928, 233 toll bridges in operation in United States, 191 privately-owned; arguments against privately-owned toll bridge from standpoint of public interest.

WOODEN, CREOSOTING. Creosoted Timber Ideal for Highway Bridge Construction Purposes, J. F. Seiler. Wood Preserving News, vol. 6, no. 3, Mar. 1928, pp. 27-35, 3 figs. Economy vital issue; economical permanency; standard design; wearing surface; foundation problems; special methods; abutments; long life and low maintenance; high salvage value; practical construction.

BRONZE

GEAR. Developments in Gear Bronze, T. H. W. Jeacock. Can. Foundryman (Toronto), vol. 19, no. 3, Mar. 1928, pp. 30-31. Best bronze worm-gear blanks made with nickel content by process known as three-sided chill; inclusion of nickel in bronze alloy for gear blanks increases yield point considerably with but slight loss in elongation; outstanding advantages gained by inclusion of nickel are decreased pitting of wheel-teeth surface, increased wearing quality, lower operating temperatures.

BUILDINGS

FOUNDATIONS. A Foundation Job in Newark, N.J., M. H. Foley. Contractors' and Engrs'. Monthly, vol. 16, no. 3, Mar. 1928, pp. 187-190, 8 figs. Building is to be 22-storey structure with two basements; type of footing; underpinning; general excavation was done with steam shovels which were afterward converted into mobile steam cranes and used to support steam hammers and supply steam for driving sheeting; open-caisson method was used for excavating in 85 pier holes; water-proofing.

HEAT INSULATION. The Economic Thickness of Building, M. S. Wunderlich. Am. Soc. Heat. and Vent. Engrs.—Jl., vol. 34, no. 3, Mar. 1928, pp. 189-196, 2 figs. Economic thickness of insulation depends upon cost of fuel, seasonal demand, cost of insulation installed.

WIND PRESSURE. Wind Pressure Tests Made on Large Model Building, E. R. Dawley. Eng. News-Rec., vol. 100, no. 13, Mar. 29, 1928, pp. 508-510, 4 figs. Results of wind-tunnel test on largest model building ever tested indicate older formulas are too high; framework may offer greater resistance than covered building; effect of open windows; covered model, doors and windows closed; covered model, doors and windows open; wind pressure was found to vary with power of velocity slightly higher than square.

C

CABLES, HOISTING

STRESSES IN. Hoisting Cables, Stresses and Tests (Ansprueche an Foerderseile und ihre Pruefung), H. Herbst. V.D.I. Zeit. (Berlin), vol. 72, no. 10, Mar. 10, 1928, pp. 345-349, 10 figs. Great importance of effect of dynamic stresses, such as jerks and vibrations, at clip points of wire rope attachments; fatigue failures; desirability of large-diameter wires; rust protection by galvanization; standard tension, flexure and torsión tests; necessity of constant careful inspection.

CANALS

LOCK GATES, WELLAND SHIP CANAL. The Lock Gates of the Welland Ship Canal, F. E. Sterns. Eng. Jl. (Montreal), vol. 11, no. 2, Feb. 1928, pp. 101-124, 23 figs. Description of locking arrangements for canal, types of gates chosen, general features of gates, details of design, fabrication, erection and cost of steel gates, operating machinery and details and fabrication of timber gates.

CARS, ELECTRIC

GEARS AND GEARING. Attention to Gearing Reduces Maintenance of Entire Car, E. S. Sawtelle. Elec. Ry. Jl., vol. 71, no. 11, Mar. 17, 1928, pp. 444-446, 13 figs. Better maintenance of railway gears and pinions will give greater gear life, less noise and less trouble from bearings and associated parts; Am. Elec. Ry. Eng. Assn. adopted condemning gauges to show when gearing should be discarded for wear.

CAST IRON

PROPERTIES. Mechanical and Physical Properties of High-Grade Grey Cast Iron and Principles Underlying Its Production (Hochwertiger Grauguss, seine mechan.-physikal. Eigenschaften und die Grundlagen zu seiner Erzeugung), E. Zimmermann. Zeit. fuer die gesamte Giessereipraxis (Berlin), vol. 49, nos. 7, 8, 9 and 10, Feb. 12, 19, 26 and Mar. 4, 1928, pp. 64-65, 71-72, 78-80 and 91-93. Feb. 12: Structural constituents of alloys from 0 to 1.76 per cent. Feb. 19: Distribution of constituents in white and grey cast iron after solidification. Feb. 26: Iron-carbide system and iron-graphite system. Mar. 4: Lanz pearlitic cast iron. Mar. 11: Graphite eutectoid. Mar. 18: Cast iron according to Thyssen-Emmel process.

CEMENT KILNS

DESCRIPTION. Changes Undergone by Cement Materials Along the Length of Kiln, A. J. Blank and W. B. Williams. Rock Products, vol. 31, no. 6, Mar. 17, 1928, pp. 74-76, 1 fig. Breakdown of machinery gave opportunity to examine material in various positions throughout kiln and waste-heat plant; both raw material and fuel oil contain sulphur; notable rise in sulphur content found at one point in kiln; alkali content rises with distance from kiln.

CEMENT MORTAR

STEAM TREATMENT. Effect of Steam Treatment of Portland Cement Mortars on Their Resistance to Sulphate Action, T. Thorvaldson and V. A. Vigfusson. Eng. Jl. (Montreal), vol. 11, no. 3, Mar. 1928, pp. 174-179, 8 figs. Study as part of general investigation on action of sulphate waters on cements and concrete; effect of curing in hot water on sulphate resistance of mortar bars; action of sulphates on substances generally considered to be present in Portland cement clinker; effect of steam treatment on tensile strength of Portland cement mortars.

CEMENT

PORTLAND, STRENGTH. Influence of Low Temperature and Frost on the Strength of Super Cements, A. Gessner. Pit and Quarry, vol. 15, no. 12, Mar. 14, 1928, pp. 77-79. Tests indicated that frost delays, but does not destroy, setting power; tendency of sudden frost after initial set is to arrest further setting; salt may prevent freezing, but is regarded unfavorably, despite one high final strength test; conclusion is that super-cements are affected like other Portland cements, but high initial hardening is advantageous under favourable temperature conditions.

CITIES AND TOWNS

PLANNING, CANADA. Progress of Town Planning in Canada, C. Engler. Can. Engr. (Toronto), vol. 54, no. 13, Mar. 27, 1928, pp. 401-402. Niagara frontier-plan project; plan of Vancouver; influence of Vancouver spreading in western provinces; Ottawa federal district scheme; situation in Canada; British Columbia town-planning act. Report of town-planning committee presented at Dominion Land Surveyors' Assn., Ottawa.

COAL MINES AND MINING

ELECTRIFICATION. A Centralized Colliery Plant. Power Engr. (Lond.), vol. 23, no. 264, Mar. 1928, pp. 89-94, 8 figs. Describes instance of centralization of coal mine company's power plant in Scotland, whereby advantages of diversity of demand, higher quality of supervision and larger-scale operation are being obtained; details of boiler plant, switchgear, transmission lines and winding equipment; electrification scheme and central power plant recently put into commission by Fife Coal Co.

ROOF FALLS. Regulations and Inspection Prevent Accidents from Falls of Roof, J. W. Paul. Modern Mining, vol. 5, no. 3, Mar. 1928, pp. 63-64. Falls-of-roof accidents can and should be reduced; regular code of regulations on roof timbering and strict enforcement necessary; officials should not be overloaded.

SHAFT CEMENTATION. Application of Cement in Sinking of Shafts (Application de la cimentation dans le creusement d'un puits), M. H. Viatour. Annales des Mines de Belgique (Brussels), vol. 28, no. 4, 1927, pp. 1157-1162, 3 figs. Explains method used for lining shaft with cement as it was sunk, as applied to Boubier coal mine, Belgium.

VENTILATION. A Practical Solution of the High-Temperature Deep-Mining Problem by Natural Ventilation, A. Miller. Instn. Min. Engrs.—Trans. (Lond.), vol. 74, part 4, Jan. 1928, pp. 242-254 and (discussion) 254-260, 4 figs. partly on supp. plate. Natural ventilation was sufficient to provide maximum amount of comfort and efficiency; consequence of this change has been to reduce cost of production to such extent as to make it possible to continue working of coal mine as economic proposition.

COMBUSTION

CONTROL. Automatic Combustion Control. Sci. Instruments—Jl. (Lond.), vol. 5, no. 1, Jan. 1928, pp. 17-19, 5 figs.

COMPRESSED AIR

UTILIZATION IN MANUFACTURING PLANTS. Pneumatic Machine Tools and Equipment for Manufacturing Plants (Pressluftwerkzeugmaschine und Pressluftvorrichtung in der Fertigung), K. Bollinger. Maschinenbau (Berlin), vol. 7, no. 5, Mar. 1, 1928, pp. 215-218, 9 figs.

CONCRETE

ALKALI ACTION. The Condition of Field Specimens of Concrete Exposed to Alkali Soils and Waters Examined in December 1927. Eng. Jl. (Montreal), vol. 11, no. 3, Mar. 1928, pp. 184-192. Materials employed; preparation of concrete; inspection of field concretes; summary and conclusions; field investigation has indicated that with cement produced from any given clinker, durability as well as compressive strength increases as permeability decreases, up to some undetermined richness of mix, beyond which point durability in sulphates decreases rapidly. Appendix B of 1927 report of Committee on Deterioration of Concrete in Alkali Soils to council of Eng. Inst. of Canada.

DISINTEGRATION IN SALT WATER. Stability of Cements in Corrosive Waters, Haegermann. Pit and Quarry, vol. 15, no. 11, Feb. 29, 1928, pp. 67-69. All acids destroy concrete and all kinds of cement, all bases are without action, while salts are in part non-injurious, in part injurious; Portland cements with high silicic acid content (about 23 per cent and more), low alumina and oxide or iron content, with hydraulic modulus up to about 2.15, furnish concrete stable to salt water.

DURABILITY. The Requirements for a Durable Concrete as Observed from Structures in Service, R. B. Young. Eng. Jl. (Montreal), vol. 11, no. 3, Mar. 1928, pp. 161-173, 20 figs. Inquiry into question of what makes concrete good or poor based on consideration of conditions responsible for failure of existing concrete works; author shows characteristics of durable concrete are that it shall have low porosity and be made of sound ingredients; concrete shall be made of selected materials, properly proportioned, handled and placed without separation, and well cured.

PROBLEMS. American Concrete Institute Stresses Quality of Cement and Aggregates. Rock Products, vol. 31, no. 6, Mar. 17, 1928, pp. 60-65. Summaries of sessions of Am. Concrete Inst. at yearly meeting in Philadelphia, covering points of interest to producers of cement and aggregate and to manufacturers of cement products.

REINFORCED STEEL—STANDARDS. Adopts Standards for Reinforcing Steel. Iron Age, vol. 121, no. 13, Mar. 29, 1928, pp. 889-890. Concrete Reinforcing Steel Institute seeks better co-operation from mills and elimination of ruinous competitive methods; adoption of standard practices; fair profit urged; coming changes in industry.

STANDARD CODE. American Concrete Institute Adopts New Concrete Code. Concrete, vol. 32, no. 4, Apr. 1928, p. 21. New concrete code adopted at A.C.I. convention points way to construction economies; design and cost data for new code presented; skew-arch design; calculation of flat plates by elastic-web method.

STRENGTH. Influence of the Water-Cement Ratio on the Strength of Concrete. Engrs. and Eng., vol. 45, no. 2, Feb. 1928, pp. 46-47, 2 figs. Important part played by quantity of mixing water on strength of concrete; two groups of tests; in first group, quantity of water maintained constant through number of mixes; in second, mix was maintained constant with changing water content; control of water does not necessarily mean dry concrete, but means concrete of uniform strength and of any desired workability; explanation of tests.

TESTING. Some Methods of Measuring Workability of Concrete, G. A. Smith. Pit and Quarry, vol. 15, no. 12, Mar. 14, 1928, pp. 81-82. Addition of fine and coarse aggregates changes nature of cement paste; segregation of lubricating medium affects workability; penetration process, involving pulling ball through paste, gives best index of workability. Abstract of paper presented before Am. Concrete Inst.

Concrete Testing Pointed Toward Construction Problems. Eng. News-Rec., vol. 100, no. 12, Mar. 22, 1928, p. 481. A.C.I. papers record studies of crazing, hair cracking, dusting, concrete flow, bar anchors and field beam tests which hold practical interest to contractors; in group of six papers abstracted, two are on crazing and hair cracking, two other outline tests of direct usefulness to constructor, and one is on factory-floor construction.

TESTING INSTRUMENTS. Devices That Aid Laboratory Studies on Concrete. Eng. News-Rec., vol. 100, no. 11, Mar. 15, 1928, pp. 432-433, 5 figs. Permeability, plastic flow, volumetric changes and other characteristics observed with aid of novel devices; materials-testing laboratory of University of California.

CONCRETE CONSTRUCTION

ESTIMATING. Field Determination of Material Per Cu. Yd. of Concrete, D. V. Terrell. Eng. World, vol. 32, no. 3, Mar. 1928, pp. 129-130. Simple and reasonable procedure of estimating concrete work; method proposed for field use.

MECHANIZATION. Mechanical Power Instead of Manual Labour in Engineering Construction (Ersatz der Handarbeit durch Maschinenarbeit im Baugewerbe), G. Garbotz. V.D.I. Zeit. (Berlin), vol. 72, no. 8, Feb. 25, 1928, pp. 280-292, 36 figs. Economy and efficiency of machine methods in construction work, use of machinery in concrete construction and in erection of buildings; use of tractors, cranes, excavating machinery, well drilling rigs, dumping cars, scrapers, conveyors, etc.

REGULATIONS. Building Code Regulations for Concrete, F. R. McMillan. Contract Rec. (Toronto), vol. 42, no. 12, Mar. 21, 1928, pp. 312-313. Points out features of report recently adopted by Am. Concrete Inst. as tentative standard; many differences from previous reports; load tests; unit stresses; municipal authorities should take greater stock of their building codes.

REINFORCED MEMBERS, DESIGN. Design of Rectangular, Symmetrically Reinforced Members for Bending and Compression, H. Carpenter. Concrete and Constr. Eng. (Lond.), vol. 23, no. 3, Mar. 1928, pp. 235-242, 1 fig. Develops short, and, in its application, convenient, method for calculation of members with symmetrical reinforcement subjected to bending combined with compression.

CONDENSERS, STEAM

HEAT TRANSMISSION IN. Heat Transfer in Condensers, S. B. Jackson. Elec. Times (Lond.), vol. 73, no. 1897, Mar. 1, 1928, pp. 326-327, 1 fig. Determination of heat-transmission coefficient between steam and circulating water in design of turbo-alternator condensers; resistance of metal; the higher the coefficient of heat transmission which tube is designed for, the greater will be effect of heat-resisting material which may become deposited on tubes.

COPPER ALLOYS

HEAT TREATMENT. On the Quenching and Tempering of Brass, Bronze and "Aluminium-Bronze," T. Matsuda. Inst. of Metals—Advance Paper, no. 463, for mtg., Mar. 7-8, 1928, 42 pp., 20 figs.

CULVERTS, SYPHON

WELLAND CANAL. Chippewa Creek Syphon Culvert of Welland Ship Canal, A. J. Grant. Eng. and Contracting, vol. 67, no. 3, Mar. 1928, pp. 141-150, 13 figs. Deep open-pit excavation in soft-water bearing material; describes its design and construction; test borings; general description of culvert; culvert pit; steel-sheet pile cellular cofferdam; preassembly method of driving piles; braced pits; test pit; excavation; central concrete mixing plant.

Chippewa Creek Syphon Culvert of the Welland Ship Canal, A. J. Grant. Eng. Jl. (Montreal), vol. 11, no. 2, Feb. 1928, pp. 59-72, 18 figs. General description of canal; geology; test borings; aqueduct of second canal; aqueduct of third or present canal; proposed syphon in rock; general description of syphon culverts; culvert pit; steel-sheet pile cellular cofferdam; steel-sheet pile braced pits; test pit; central concrete mixing plant.

D

DAMS

FAILURES, ST. FRANCIS. St. Francis Dam Catastrophe—A Great Foundation Failure, N. A. Bowers. Eng. News-Rec., vol. 100, no. 12, Mar. 22, 1928, pp. 466-472, 12 figs. Telegraphed preliminary report by Pacific coast editor; wings of 205-ft. concrete dam washed out, but central section 100 ft. long remains; reservoir pours 38,000 acre-feet of water in torrent 100 feet deep, bringing death to hundreds; power house swept away; flood-water head bursts aqueduct below; dam and its foundations; rock face at abutment gone or covered by landslides; failure caused by sliding out rather than overturning; typical rock samples submerged in water were found to soften in short time.

FOUNDATION TESTING. Testing Rock Foundation at Dam Site. Water Works, vol. 66, no. 12, Dec. 1927, pp. 503-504, 1 fig. How core borings and hydraulic tests were made for O'Shaughnessy dam, Columbus, O.; 22 borings were made; drilling equipment; drilling; each hole was subjected to one or more hydraulic tests, water being applied under pressure equivalent to static head corresponding to elevation 860.

GRAVITY. Rational Dam Profiles (Das rationelle Profil der Staumauern), G. G. Kriwoschien. Bauingenieur (Berlin), vol. 9, no. 7, Feb. 17, 1928, pp. 107-113, 16 figs. Critical review of Levy method as used by French and Russian dam designers; analyses of trapezoidal and triangular dam profiles; author's original practical dam profile with crust profile in form of parallelogram or rectangle; numerical example.

UPLIFT PRESSURE. Uplift Pressures Under Dams: Experiments by the United States Bureau of Reclamation, E. I. Chandler. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 4, Apr. 1928, pp. 1349-1357, 3 figs. Discussion of paper by J. Hinds published in Mar. 1928 issue of Proceedings; writer offers data from his own observations on Pinhook dam at Maquoketa, Ia.; installations of apparatus of nature described by author can be accomplished at very little cost at time of construction, and are advocated as serving two worthy purposes.

UPWARD PRESSURE. Theory of Equilibrium of Heavy Walls Submitted to Under Pressure and Its Application to Stability of Dams and Embankments (La théorie de l'equilibre des massifs pésants soumis à des sous-pressins, et son application a la stabilité des barrages et des talus), E. Baticle. Génie Civil (Paris), vol. 92, no. 10, Mar. 10, 1928, p. 243. Abstract of paper presented to Académie des Sciences and printed in Comptes Rendus, Feb. 27, 1928; includes remarks by M. Mesnager.

DAMS, ARCH

DESIGN. Analysis of Arch Dams by the Trial Load Method. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 4, Apr. 1928, pp. 1311-1318, 1 fig. Discussion of paper by C. H. Howell and A. C. Jacquith published in Jan. 1928 issue of Proceedings.

TESTING. Stevenson Creek Arch Dam Experiments, F. A. Noetzli. Can. Engr. (Toronto), vol. 54, no. 13, Mar. 27, 1928, pp. 395-397, 6 figs. First series of tests on experimental dam undertaken by committee appointed by Engineering Foundation of New York; withstands flood strain; built in spring of 1926 in remote canyon in high Sierra in California; several hundred instruments were placed in concrete during construction; readings were taken at frequent intervals for determining strains, temperatures and defections on dam.

DIES

DRAWING, FOR SHEET METAL. Typical Drawing Dies for Sheet Metal. Am. Mach., vol. 68, nos. 13 and 14, Mar. 29 and Apr. 5, 1928, p. 549, 5 figs., and p. 589, 4 figs.

Producing Transformer Laminations. Machy. (Lond.), vol. 31, no. 804, Mar. 8, 1928, pp. 734-735, 4 figs. Dieing machines used in place of hand-fed machines to increase production 169 per cent; life of dies was increased 59.1 per cent; machines are equipped with double roll automatic feed; simple square-cornered transformer laminations are made; no lubricant required.

DIESEL ENGINES

AUTOMOTIVE (GERMAN). Modern Automotive Diesel Engines (Der Huetige Fahrzeugdiesel), E. Aster. Allgemeine Automobil-Zeitung (Berlin), vol. 29, no. 10, Mar. 10, 1928, pp. 29-31, 7 figs. Details of automotive Diesel engines by M.A.N. Junkers (45 h.p.), Maybach (150-h.p., six-cylinder), Mercedes-Benz, etc.

FUELS. Diesel Engine Performance on Oils Obtained from Low-Temperature Carbonization of Coal, J. S. Brown. Roy. Tech. Soc.—Jl., no. 4, Dec. 1927, pp. 76-84, 1 fig. Also Engineer (Lond.), vol. 145, no. 3765, Mar. 9, 1928, p. 274.

SUPERCHARGING. Proposed Method of Supercharging Diesel Engines. Mar. Engr. and Motorship Bldr. (Lond.), vol. 51, no. 607, Mar. 1928, pp. 103-104, 1 fig. Method of supercharging is examined in order to show how it meets conditions laid down, viz.. no increase in compression pressure, reduction in compression and combustion temperatures and jacket losses, with increase in thermal efficiency, while at same time increasing indicated mean pressure.

E

EARTH PRESSURE

THEORY. Some Earth Pressure Theories in Relation to Engineering Practice, J. Mitchell. Structural Engr. (Lond.), vol. 6, no. 3, Mar. 1928, pp. 59-84, 24 figs. Earth pressure theories referred to Coulomb, Poncelet, Rankine, Resal, Langtry, Bell; nearly all theories of earth pressure put forward so far can be expressed in very simple little equation in which thrust is equal to coefficient multiplied by weight per unit of volume of earth filling multiplied by square of height of wall; value of coefficient is great difficulty; author thinks that for practical engineering purposes Poncelet theory is probably most satisfactory.

ECONOMIZERS

EFFICIENCY. Economizers, W. F. Keenan, Jr. Engrs'. Soc. West. Pa.—Proc., vol. 43, no. 8, Nov. 1927, pp. 368-383 and (discussion) 383-388, 7 figs. Unit steel tube with extended surface is most modern type of economizer; important design requirements for this type of economizer are discussed; unit setting; design of casing; extended surface; typical examples of comparative air-heater and economizer; performances.

ELECTRIC CABLES

HIGH-TENSION. Loaded High-Voltage Cables, A. F. Puchstein. Elec. World, vol. 91, no. 14, Apr. 7. 1928, pp. 697-699, 3 figs. Calculations on 132,000-volt cable for long-distance transmission; shunt vs. series loading considered and method of calculation outlined.

INSULATION. Void Formation in Cables, W. N. Eddy. Elec. World, vol. 91, no. 14, Apr. 7, 1928, pp. 701-705, 8 figs. Shows influence on void formation of viscosity-contraction-temperature characteristics of impregnating compound and suggests that insulation quality of cables for 25- to 75-kv. working pressure can be materially improved by more general application of these fundamental relations.

SKIN EFFECT. Proximity Effect in a Seven-Strand Cable, J. E. L. Tweeddale. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 4, Apr. 1928, pp. 290-294, 5 figs. Checks calculations with tests for type of calculation recently developed, covering losses in several round wires connected in parallel, of which arrangement is such that unequal currents flow in different wires.

ELECTRIC CONDUCTORS

DIRECT CURRENT ARMATURE. Heat Losses in D.C. Armature Conductors, W. V. Lyon, E. Wayne and M. L. Henderson. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 4, Apr. 1928, pp. 286-289, 7 figs. It is generally believed that there are extra losses in armature coil of d.c. machine when it is undergoing commutation, but that during major portion of time loss in coil is correctly computed by squaring value of current and multiplying by true or ohmic resistance of coil; this view is not correct; disturbance in coil current produced by process of commutation persists throughout cycle so that at no time is current uniformly distributed over cross-section of conductor; extra losses are present at all times.

ELECTRIC EQUIPMENT

WESTINGHOUSE CO. A.I. & S.E.E. Inspection Trip. Iron and Steel Engr., vol. 5, no. 3, Mar. 1928, pp. 134-142, 9 figs. Various exhibits at Westinghouse Electric Mfg. Co. seen during inspection trip; photoelectric cell; time-limit control of motors; photo-stress analysis; grid glow tube; photosensitive cell; high-frequency testing of motor coils; induction furnaces; televox; rectox; carbon-brush xylophone; radio power transmission; absorbing vibration of machines; exponential radio and phonograph horn; chromium plating; cobalt-steel magnets; crystal control of frequency.

ELECTRIC GENERATORS

DIRECT-CURRENT, INTERPOLE. Operating Commutating-Pole Generators in Parallel, H. N. Blackman. Power, vol. 67, no. 13, Mar. 27, 1928, pp. 558-561, 6 figs. With brushes set on neutral, conditions for shunt-machine parallel operation remain as for non-interpole machines; with brushes on neutral of compound generators, additional requirement to those previously given is that equalizer lead must be connected outside interpole winding; brush lead against rotation tends to raise voltage with increased load; in direction of rotation it tends to lower voltage with increased load.

STARTING. Procedure in Starting Up a New Generator, C. O. von Dannenberg. Power Plant Eng., vol. 32, no. 7, Apr. 1, 1928, pp. 427-428. Discusses article of M. Phillips ni Feb. 15 issue of same journal, showing certain diagrams of methods for synchronizing and phasing out generators; present author described method of testing polarity of potential transformers.

ELECTRIC LINES

AERIAL SURVEYING. Seaplane Aids Line Right-of-Way Survey. Elec. World, vol. 91, no. 11, Mar. 17, 1928, p. 558. In surveying right-of-way for its 200-mi., 22,000-volt transmission line from Ottawa river to Toronto, Ontario Hydro-Electric Power Commission used speedly seaplane; aerial survey was adopted, in preference to preliminary field survey, because it was considered cheaper and quicker, and more readily assured best possible location of line.

CONSTRUCTION. Construction of Great Falls-Winnipeg 110-Kv. Transmission Line, J. C. D. Taylor. Elec. News (Toronto), vol. 36, no. 5, Mar. 1, 1928, pp. 31-33, 7 figs. Details of well-planned organization for distributing men and materials, which is important economic factor in long-distance line construction; line consists of galvanized-steel self-supporting towers 81 ft. high carrying two circuits, one on each side of tower, attached by suspension strings of 5 insulators; distribution problem; value of haulage tractor; narrow-gauge log track.

LIGHTNING PROTECTION. Apparatus for Transmission Systems, A. C. Monteith. Power Plant Eng., vol. 32, no. 7, Apr. 1, 1928, pp. 408-409. Development of klydonograph by J. F. Peters in 1923 made possible for first time measurement of lightning voltages with reasonable degree of accuracy; K. B. McEachron introduced into lightning-arrester research DuFour cathode-ray oscillograph, developed in France, which makes possible laboratory studies of performance of protective devices with as much certainty and precision as can be obtained with vibrator type of oscillograph. Abstract of paper presented at Mid-West Power Conference.

OVERHEAD. Inclined Catenary on the Great Northern, A. M. Wright. Ry. Elec. Engr., vol. 19, no. 4. Apr. 1928, pp. 112-116, 7 figs. Installation represents application of much-discussed type of overhead construction; 6,600-volt, three-phase system has been replaced by 11,000-volt, single-phase with overhead catenary contact system; overhead in snowsheds and tunnels; pole construction on curved track; design requirements; all catenary systems should be completely designed and special work taken into account before erection is begun.

POLES, REINFORCED CONCRETE. Reinforced Concrete Transmission-Line Poles. Concrete and Constr. Eng. (Lond.), vol. 23, no. 3, Mar. 1928, pp. 263-265, 1 fig. Reinforced concrete is not novelty; design; circular poles; permissible pressure of side of pole against earth; centrifugal or hollow-spun pole is in use in majority of Continental countries.

ELECTRIC FURNACES

ANNEALING. Annealing of Non-Ferrous Metals in the Electric Furnace, R. M. Keeney. Am. Electrochem. Soc.—Advance Paper, no. 8, for mtg., Apr. 26-28, 1928, pp. 59-68.

CARBURIZING. Large Carburizing Furnace Secures Recuperative Economies, W. J. Diederichs. Elec. World, vol. 91, no. 13, Mar. 31, 1928, pp. 667-668, 1 fig.

IRON-FOUNDING. Electric Furnace Iron. Iron Age, vol. 121, no. 14, Apr. 5, 1928, p. 955. Results of extended experiments show practicability, advantages and costs; electric furnace used in conjunction with cupola; possibility of producing electric furnace cast iron from cheap grades of ferrous scrap; one electric furnace can be used to produce both iron and steel; electric iron stronger.

ELECTRIC LOCOMOTIVES

COMBINED BATTERY AND TROLLEY. Dual Electric Locomotives on "North Shore" Line. Ry. Age, vol. 84, no. 12, Mar. 24, 1928, p. 668, 1 fig. Trolley is used on main line and all other trackage where overhead power connections are afforded; storage battery used for moving freight on industrial sidings and switch tracks without trolley connections; locomotive weighs 65 tons; equipped with four 205-h.p. motors and battery of 192 cells, rated 600 amp.-h.p. and capable of delivering 260 kw.-hr. on one charge.

ELECTRIC METERS

TYPES. Electric Meter History, R. C. Lanphier. Instruments, vol. 1, no. 3, Mar. 1928, pp. 151-162, 21 figs. Early types of meters; d.c. meters first developed; early types of a.c. meters; commutator-motor meters; development of mercury-motor meter; clockwork type, oscillating type and electrolytic meters; development of induction type meter; induction-meter art now standardized.

ELECTRIC MOTORS

CONDENSER. Single-Phase Condenser Motor, B. F. Bailey. Elec. World, vol. 91, no. 13, Mar. 31, 1928, pp. 647-652, 18 figs. Design, performance and operation of fractional-horse power, single-phase condenser motors; comparison of 2-phase and condenser motors; change of performance with capacitance. (Concluded.)

Single-Phase Condenser Motor, B. F. Bailey. Elec. World, vol. 91, no. 12, Mar. 24, 1928, pp. 597-599, 6 figs. Fractional-horse power motor characteristics; effect on economy of operation; application requirements; condenser-motor theory and operation; type of motor described is quieter than usual single-phase motor and causes less interference with radio reception.

ELECTRIC NETWORKS

SYNCHRONIZING. Maintaining Exact Synchronism Between Independent Power Systems, J. T. Lawson. Elec. Light and Power, vol. 6, no. 3, Mar. 1928, pp. 30 and 32, 3 figs. Adirondack Power and Light Corp. of N.Y. and Public Service Elec. and Gas Co. of N.J. requested to hold their system frequencies exactly at 60 cycles from 10 to 11 p.m.; on one day, experiment of attempting to hold exactly same frequency, without being connected.

ELECTRIC RECTIFIERS

MERCURY-ARC. Mercury-Arc Rectifiers. Power Engr. (Lond.), vol. 23, no. 264, Mar. 1928, pp. 87-88. Describes system of automatic control; regulation problem; transformer tapping switch; load relays; substation service control; unit starters.

ELECTRIC TRANSFORMERS

TESTING. Analysis of Current Transformer Test, E. C. Goodale. Elec. West, vol. 60, no. 3, Mar. 1928, pp. 150-152, 2 figs. Discussion of meter connections; standard well-known method of metering 3-phase, 3-wire circuit; in any a.c. watt-meter or watt-hour meter registration of each element is equal to voltage multiplied by "power component" of current multiplied again by transformation ratio. (Continuation of serial.)

ELECTRIC TRANSMISSION AND DISTRIBUTION

Buffalo. New Buffalo Unit Feeds 22-Kv. System Directly, C. MacIntosh. Elec. World, vol. 91, no. 11, Mar. 17, 1928, pp. 557-558, 3 figs. New turbo-generator feeds 22,000-volt system directly; it was designed for operation in conjunction with 3-phase auto-transformer, rated 66,667 kva., 12,000 to 22,500 volts, 25 cycles; transformer was constructed in single unit and is one of largest-capacity transformers ever built; system is equipped throughout with induction relays of usual type and ground relays which trip instantaneously on ground current.

ELECTRIC WELDING

Joint Testing. Static and Impact Tests of Electrically Welded Joints, R. J. Roark. Amer. Welding Society—Jl., vol. 7, no. 2, Feb. 1928, pp. 57-64, 9 figs. Tests were intended to form part of more extensive study of structural welding; results of these tests are presented in condensed form; purpose and method of testing; results.

Progress in. Progress in Electric Welding Practice (Fortschritte im elektrischen Schweissen). Elektrotechnische Zeit. (Berlin), vol. 49, no. 10, Mar. 8, 1928, pp. 381-382. Reviews recent progress in construction of spot, seam and butt-welding outfits; electric arc welding and its applications.

Spot. Spot Welding of Aluminum and Its Alloys, W. M. Dunlap. Am. Welding Soc.—Jl., vol. 7, no. 2, Feb. 1928, pp. 27-38, 7 figs. Spot-welding aluminum has been quite extensively studied in laboratories of Aluminum Co. of America.

ELECTRICITY SUPPLY

Rural, Ontario. Developments in Rural Distribution, R. E. Jones. Elec. News (Toronto), vol. 36, no. 5, Mar. 1, 1928, pp. 34-38, 9 figs. Choice of suitable voltage for rural distribution depends upon service and load requirements; Hydro-Electric Power Commission of Ontario effects economy by installing 8,000/4,000-volt, 3-phase lines; cost of available voltages compared; economical voltage for primary distribution; type of poles, 250-ft. span; measuring sag; 160-ft. span; secondaries.

Voltage Standardization. The Trend Toward 115 Volts. Elec. World, vol. 91, no. 14, Apr. 7, 1928, p. 743, 4 figs. Complete unification has not yet arrived, but strong trend toward standardization is evident from comparison of data on distribution voltages for 1928 with corresponding figures for 1923; entire state of New Jersey is served at 115 volts, with exception of four small communities.

F

FACTORY BUILDINGS

Welded Steel. Thousand-Ton Structure Welded. Iron Age, vol. 121, no. 12, Mar. 22, 1928, pp. 804-805, 5 figs. Large manufacturing building erected by General Electric Co.; structural steel fabricated and erection joints made by means of metallic arc welding; simplicity of joints in trusses and in erection details eliminates several thousand gusset plates and short angles; 11 per cent saving in steel effected; verifying skill of workmen; completed structure; five welders did work, each using single-operator motor-generator set. See also Iron Trade Rev., vol. 82, no. 12, Mar. 22, 1928, p. 780.

FLOOD CONTROL

Mississippi River. Flood Protection for the Mississippi Valley. Mech. Eng., vol. 50, no. 4, Apr. 1928, p. 333. Findings and recommendations of committee appointed by American Engineering Council to consider problems arising from Mississippi river floods.

FLOOD DISCHARGE

Discussion of. Maximum Flood Discharge in San Joaquin Valley, California, C. H. Lee. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 4, Apr. 1928, pp. 1235-1242, 1 fig. Discussion of paper by O. Reed continued from Feb. 1928 issue of Proceedings; writer's experience in estimating flood discharges from formulæ has led him to favour rational method rather than stream-group method; flood discharge depends on intensity of rainfall and amount of run-off finding its way immediately into drainage channels; rational method of estimating flood discharge was originally used in estimating maximum run-off from urban and suburban areas in connection with storm-sewer design.

FLOW OF STREAM

Orifices. Measuring Stream Flow in Pipes by Means of Ring Diaphragms (Beitrag zur Mengenmessung stroemenden Dampfes mittels Stauringen), W. Pflaum. Forschungsargeiten auf dem Gebiete des Ingenieurwesens (Berlin), no. 298, 1928, 41 pp., 59 figs. Report from mechanical laboratory of Danzig Institute of Technology on experiments for determination of discharge coefficient of steam flowing through orifices of pipe diaphragms, using ethylene bromide as pressure-indicating liquid and employing pressures from 3 to 11 atmos.; compares with results of earlier experiments, including Brandis, Spitzglass, Reschke, etc.

FLUMES

Transitions, Design. The Hydraulic Design of Flume and Syphon Transitions. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 4, Apr. 1928, pp. 1195-1215, 14 figs. Discussion of paper by J. Hinds continued from Dec. 1927 issue of Proceedings; flow of water through more common types of transition sections can be calculated quite accurately by methods which author discussed; tests were made in Hydraulic Laboratory of Technische Hochschule in Karlsruhe on two models of inlet transitions, two models of outlet transitions and three combined models of inlet and outlet connected by short piece of tunnel.

FORGING

Behaviour of Metal. The Behaviour of Metals and Alloys During Hot-Forging, W. L. Kent. Inst. of Metals—Advance Paper, no. 462, for mtg., Mar. 7-8, 1928, 18 pp., 6 figs. Also Engineering (Lond.), vol. 125, no. 3244, Mar. 16, 1928, pp. 331-333, 6 figs.

FOUNDATIONS

Theory. The Science of Foundations—Its Present and Future, W. S. Housel and F. S. Bailey. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 4, Apr. 1928, pp. 1243-1252, 3 figs. Discussion of paper by C. Terzaghi continued from Mar. 1928 issue of Proceedings; Housel describes tests to determine bearing value of soils; work done under conditions governing actual construction; every effort made to keep accuracy of data comparable to what might be obtained with similar set-up in laboratory; tests on piles and combinations of bearing plates and piles; measurements of lateral pressure and study of general phenomena of transmission of pressure in soils.

FURNACES

Electric. *See Electric Furnaces.*

Heat-Treating. Automatic Furnaces for Annealing and Heat-Treating. Am. Mach., vol. 68, no. 12, Mar. 22, 1928, p. 492, 4 figs. Four half-tones furnished by Warner Gear Co.; conveyor so timed as to maintain proper heat; hump furnaces used in heat-treating gears; each half-tone accompanied by brief description.

Forging and Heat-Treating of Long Cylinders, J. B. Nealey. Iron Age, vol. 121, no. 14, Apr. 5, 1928, p. 942, 2 figs. Special equipment installed at Miehle Printing Press & Mfg. Co.; vertical furnace to case-harden rollers and shafts; parts lowered into vertical retorts charged with small amount of carbonizing material; three-high furnace; upper chamber gets first impact of gas flame, and waste heat from it is passed down into other two; two halve hammers are used for swaging ends on press rollers.

Spring Heat-Treating Furnaces Automatically Controlled, F. Stones. Fuels and Furnaces, vol. 6, no. 3, Mar. 1928, pp. 373-376, 6 figs. Automobile spring heat-treating unit consists of hardening and tempering furnaces which are fired with oil and have temperature automatically controlled; cambering and hardening furnace of continuous type; hardening furnace of over-fired type; drawing furnace; tempering furnace of continuous type; each furnace is equipped with two controlling pyrometers and valves.

G

GAUGES

Dial Indicating. Dial Indicating Gauges. Iron Age, vol. 121, no. 13, Mar. 29, 1928, pp. 880-881 and 917, 5 figs. Devices designated as Mikrotasts for shop and inspection use show variations up to 0.00004 in. from master; used for measuring external and internal diameters and tapers; used for thread gauging; saddle gauges for checking rolls; gauges can be used on wet grinding operations; external taper gauging; checking internal tapers; pitch and root diameters of external threads checked; brought out by F. Krupp Corp., Germany.

GAS TANKS

Arc Welding. All-Welded Gas Holder Takes 258 Tons of Plates and Shapes, F. H. Beebe. Iron Age, vol. 121, no. 14, Apr. 5, 1928, pp. 941-942, 2 figs. Gas holder of 300,000 cu. ft. capacity, erected at Albion, Mich., believed to be largest all-welded low-pressure gas holder built; plates are erected with narrow overlap and held with bolts at wide spacing until welder completes seam; 4 tons of welding rod used; cups and grips were fabricated in shop, assembled in sections on ground and welded in place.

GASOLINE ENGINES

Lubrication. Petrol Engine Lubricants and Lubrication, C. I. Kelly. Instn. Petroleum Technologists—Jl. (Lond.), vol. 14, no. 66, Feb. 1928, pp. 115-132, 8 figs. There are two types of lubrication, boundary and fluid lubrication; temperature-friction curves for cylindrical bearing; most suitable oil crank-case work is one having best viscosity ratio, low carbon-forming tendencies, coupled with comparative freedom from sulphur and minimum susceptibility to oxidation.

GEARS

Involute, Tooth-Thickness Measurement. Measurement of the Thickness of Involute Gear Teeth, A. H. Candee. Am. Mach., vol. 68, nos. 11 and 14, Mar. 15 and Apr. 5, 1928, pp. 463-467, 7 figs., and 573-576, 2 figs.

Sheet-Metal, Pressed. Production of Gears, Segments and Sprockets from Sheet-Metal. Am. Mach., vol. 68, no. 14, Apr. 5, 1928, pp. 559-562, 6 figs. Gears made in pressed tools and types of dies employed; sheet-metal gears cannot be used when transmission of much power is necessary; selection of materials; limitations of sheet-metal gears; broaching internal-gear dies; producing segment gear; type-wheel segments have their teeth formed in three dies; shaving teeth handled in die; inspection gauges for punched gears.

GRINDING MACHINES

Surface. A New Heavy Surface Grinding Machine (Eine neue schwere Flaechenschleifmaschine), C. Krug. Maschinenbau (Berlin), vol. 7, no. 5, Mar. 1, 1928, pp. 224-226, 9 figs. Horizontal-shaft and vertical-shaft types of grinding machines; construction, drawings and description of new vertical-shaft grinding machine constructed by Diskus-Werke of Frankfurt, its outstanding features.

H

HACK SAWS

High-Speed Steel. Development of High-Speed Steel Hack Saws or Cutting-Off Saws, H. B. Allen. Am. Soc. Steel Treating—Trans., vol. 13, no. 4, Apr. 1928, pp. 603-613 and (discussion) 613-616 and 637, 1 fig.

HEAT TRANSMISSION

Solid to Fluid. Heat Transfer from a Hot Body Immersed in a Fluid in Motion (Waermeabgabe eines heissen Koerpers in bewegter Fluessigkeit), J. Schmekel. Zeit. fuer technische Physik (Leipzig), vol. 9, no. 2, 1928, pp. 49-57, 3 figs. Derives formula expressing effect of free cooling upon forced cooling; formula is confirmed by experiments; discrepancies between experiment and theory are accounted for by hydrodynamic factors.

Theory. Heat Transfer (Waermeuebertragung), M. Jakob. V.D.I. Zeit. (Berlin), vol. 72, no. 10, Mar. 10, 1928, pp. 341-344, 1 fig. Review of theories and experiments on heat transfer by natural convection with and without change of state, also by conduction and radiation; heat-radiation spectra; brief mention and abstracts of studies by leading German and non-German scientists.

Walls. Standard Test Code for Heat Transmission Through Walls, A. P. Kratz. Am. Soc. Heat. and Vent. Engrs.—Jl., vol. 34, no. 1, Jan. 1928, pp. 63-65. Code has been framed for purpose of defining certain standards, application of which, it is hoped, will bring results of different investigations into better conformity than is found at present time See also discussion in no. 3, Mar. 1928, pp. 267-280.

HYDRO-ELECTRIC POWER DEVELOPMENTS

Canada. The Water Powers of Western Canada, E. L. Chicanot. Water and Water Eng. (Lond.), vol. 30, no. 351, Mar. 20, 1928, pp. 117, 119-121, 3 figs. In four western provinces of Manitoba, Saskatchewan, Alberta and British Columbia, water powers with total of 6,190,395 h.p. available at ordinary minimum flow, 34 per cent of Dominion's total; Manitoba most abundantly endowed with water power resources; Alberta has within its boundaries coal reserves and important water powers; 400,000 h.p. already developed in British Columbia.

Quebec. Hydraulic Power Developments in Quebec. Engineer (Lond.), vol. 145, no. 3767, Mar. 23, 1928, pp. 313-314, 5 figs., partly on p. 322. Total water power resources is estimated to be 8,459,000 h.p. under conditions of ordinary minimum flow, or 13,064,000 h.p. available for six months of year; St. Lawrence is outstanding power river with 2 to 2½ million h.p. available; Ottawa river and its Quebec tributaries provide power possibilities of 1,000,000 to 1,600,000 h.p.; Saguenay, with its tributaries, has total of 1,260,000 h.p. to 1,530,000 h.p.; St. Maurice river is largest present source of power in province.

I

ICE PLANTS

Oil-Engine Drive. Addition to an Ice Plant Returns 100 Per Cent Profit, E. J. Kates. Power, vol. 67, no. 12, Mar. 20, 1928, pp. 516-518, 4 figs. Describes extension to oil-engine plant built in 1926 by Nassau Consumers' Ice Co. at East Rockaway, N.Y.; combined compressor-generator unit was installed; this is 60-h.p. Diesel, direct-connected both to 40-kw. generator and through flexible coupling to two-cylinder vertical single-acting Carbondale compressor of 32-ton refrigerating capacity.

INDUSTRIAL MANAGEMENT

PROSPERITY PLANNING. Must Prosperity Be Planned? H. B. Brougham. Taylor Soc.—Bul., vol. 13, no. 1, Feb. 1928, pp. 2-8 and (discussion) 12-22. Discusses problem as to whether effective demand can be adapted, controlled and graduated in step with constant increases in productive capacity; analysis indicates that savings in process, whether by superior force or organization or by improved machinery, tend to accumulate in form of unused facilities; outlets into "non-productive" public works; outside field of non-productive public work lies domain of new and productive private industries.

REORGANIZATION. More Thinking Needed at the Top, S. Norvell. Iron Age, vol. 121, no. 12, Mar. 22, 1928, pp. 797-798. Methods of manufacturer in reorganizing to cut costs; sales department reorganized with eye to profits; conservative factory superintendent blocked changes, and engineer was hired to introduce new methods; success of large companies due to emphasis on getting results; lack of thinking at top main weakness of business; competition that proved mythical.

INSULATION (ELECTRIC)

MEASUREMENT. Instruments for the Measurement of Electrical Insulation, A. Watson. Instruments, vol. 1, no. 3, Mar. 1928, pp. 141-145, 1 fig. Measurement of true insulation qualities regarding life of material; leakage over surface and through material; insulation value measured by Wheatstone bridge method, high resistance galvanometer method and by megohmmeter, which reads directly in megohms; testing high-tension cables by kenotron tube with transformers; selection of test potentials. (Concluded.)

INTERNAL-COMBUSTION ENGINES

See Airplane Engines; Automobile Engines; Diesel Engines; Gasoline Engines; Oil Engines.

IRON CASTINGS

DEFECTS. Hidden Defects in Iron Castings, P. R. Ramp. Iron Age, vol. 121, no. 12, Mar. 22, 1928, pp. 791-793 and 841, 4 figs. Method of localizing shrink cavities and blowholes to places where they can do no real harm to casting; locating hidden defects; insufficient metal pressure on surface of moulds and cores is cause; dense and strong metal occurs naturally at lowest point; where gases go; defects caused by chaplets; other types of hidden defects.

IRON ORE

ONTARIO. Is Ontario Iron Ore a Marketable Product? H. C. Braund. Can. Machy. (Toronto), vol. 39, no. 5, Mar. 8, 1928, pp. 29-31 and 65, 1 fig. Highly probable that Ontario will supply raw material for central Canadian iron and steel industry of future; Canada consumes roughly 1,500,000 tons of iron ore annually; Ontario's developed iron-ore mines; effort must be concentrated on known bodies of ore; greatest progress has been made in sintering; many reasons why iron-ore mining should be fostered in Ontario.

IRRIGATION

WATER RECOVERY. Return Water and Drainage Recovery from Irrigation. A Symposium. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 4, Apr. 1928, pp. 1097-1107, 3 figs. Contains following contributions: Return Water, North Platte River, Nebraska, R. H. Willis: To determine quantity of return water in any irrigated area, it is necessary that full co-operation be maintained between State Department and managers of those projects diverting water from stream. Drainage Recovery from Irrigations, D. W. Murphy: Quantity that can be recovered depends largely on character of underground formation; feasibility of recovering irrigation wastes through drainage.

L

LATHES

CUTTING-TIME CHARTS. Graphical Cutting-Time Charts for Lathes (Graphische Laufzeittafel fuer Drehbaenke in Verbindung mit AWF-Richtwerten), L. Boettcher. Maschinenbau (Berlin), vol. 7, no. 5, Mar. 1, 1928, pp. 227-229, 2 figs. Presents charts, based on standards adopted by German AWF (Committee on Economic Production), giving directly time of running of lathe for various materials and types of cutting; illustrative examples.

LEVELING

ANEROID. Leveling with an Aneroid, G. Hearn. Engineer (Lond.), vol. 145, nos. 3765, 3766 and 3767, Mar. 9, 16 and 23, 1928, pp. 270-271, 296-297 and 324-325, 1 fig. Mar. 9: In aneroid, pressure-gauge mercury column is replaced by chamber, usually of aluminum corrugated for greater strength and exhausted of air; specification of aneroid chosen by writer. Mar. 16: Theory of calculation of heights from differences of pressure, corrected for temperature. Mar. 23: Methods of carrying out ground survey with aneroid are summed up; aneroids procured should have open scale, extending at least inch on either side of pressures anticipated.

LIMESTONE

CONCRETE AGGREGATE. Usefulness of Petrology in the Selection of Limestone, G. F. Loughlin. Rock Products, vol. 31, no. 6, Mar. 17, 1928, pp. 50-59, 15 figs. Attention to petrology would save much money spent on misdirected quarrying; clayey limestone, used as coarse aggregate in concrete, considered unsound from standpoint of weathering; clayey character sometimes not recognized by physical tests and ordinary methods of inspection; long-time tests are essential to prove quality of stone.

LIQUIDS

FRICTION OF. A New Theory of Liquid Friction (Nuova Teoria dell'Attrito dei Liquidi), C. F. Mancini. Industria (Milan), vol. 42, no. 3, Feb. 15, 1928, pp. 66-70, 3 figs. Theoretical mathematical analysis; first chapter treats of principles of hydrodynamics bearing on this analysis. (To be continued.)

LOCOMOTIVES

BATTERY-OIL-ELECTRIC. Battery-Oil-Electric Locomotive. Ry. Elec. Engr., vol. 19, no. 3, Mar. 1928, pp. 78-80, 4 figs. Novel type of power is being tried by New York Central for service on West Side lines in New York City; since locomotive will be used mainly in yards that are not electrified, a 300-h.p. oil engine direct-connected to a 200-kw. generator is provided for charging battery; as locomotive will be called on at times to operate over tracks which are electrified, third-rail shoes are provided and also overhead collector; mechanical design; traction motors; control; battery; meters; engine and generator; weights and dimensions.

DIESEL. Diesel Engines for Railroad Traction, D. L. Bacon. Ry. Age, vol. 84, no. 11, Mar. 17, 1928, pp. 635-638. Discussion of adaptability, weight and cost per horse power and types of transmissions; Kitson-Still engine incorporates steam and Diesel cycles at opposite ends of double-acting cylinders; clutch and gear drive transmission; comments on shape of tractive-force curve. Abstract of paper presented before New England Railroad Club.

ELECTRIC. *See Electric Locomotives.*

HIGH-PRESSURE. Advancement and Advantages of High Boiler Pressures, W. G. Tawse. Ry. and Locomotive Eng., vol. 41, no. 1, Jan. 1928, pp. 5-7, 1 fig. Compounding either 2, 3 and 4 cylinders employed to secure full advantage of higher pressures; salient features of some high-pressure boilers; Berlin Machine Works, Germany, are developing 2,500-h.p. locomotive on Loeffler system with steam at 1,450 lb.; 2,000-h.p. Ljungstrom turbine locomotive for London, Midland and Scottish Ry.; Krupp Works of Germany have built 2,800-h.p. turbo-locomotive using Zoelly-type turbine.

OIL-BURNING. Furnace Conditions in Oil-Burning Locomotives, G. M. Bean. Ry. and Locomotive Eng., vol. 41, no. 1, Jan. 1928, pp. 7-9.

PULVERIZED COAL. The A.E.G. Pulverized Coal Locomotive (Die AEG-Kohlenstaub-Lokomotive), D. W. Kleinow. Glasers Annalen (Berlin), vol. 102, no. 5, Mar. 1, 1928, pp. 59-62 and (discussion) 62-70, 11 figs. Report on trial trips of first A.E.G. pulverized coal locomotive; merits of firing of locomotives with pulverized coal, economy and costs; discussion by Hinz and Landsberg. (Concluded.)

LUBRICANTS

VISCOSITY. The Viscosity of Lubricants at High Pressure. Engineering (Lond.), vol. 125, no. 3243, Mar. 9, 1928, p. 281. Review of investigation by National Physical Laboratory in hope that light might be thrown upon reason for relative inferiority of mineral lubricants, as compared with those of animal and vegetable origin; contrary to expectation, viscosity of mineral oils was found to increase more rapidly than that of their rivals.

M

MACHINE-SHOP PRACTICE

AMERICAN. American Machining Methods, J. G. Young. Automobile Engr. (Lond.), vol. 18, no. 239, Mar. 1928, pp. 93-96, 5 figs. Observations on modern machining practice with particular reference to broaching and honing; broaching small quantities; special broaching operations; hydraulic broaching; honing or grinding; possibilities of new method of grinding. Abstract of paper presented to Inst. Production Engrs.

MACHINE TOOLS

ALIGNMENT. Accuracy in Large Machine Tools, H. K. Smith and W. C. Wais. Am. Mach., vol. 68, no. 14, Apr. 5, 1928, pp. 581-583, 11 figs.

CHARTS FOR. Charts for Metal-Cutting Machine Tools (Maschinenkarten fuer spanabhebende Metallbearbeitung), F. Kresta. Sparwirtschaft (Vienna), no. 2, Feb. 1928, pp. 80-87, 12 figs. Criticizes machine charts published by German AWF (Committee for Economic Production) and offers series of original alignment charts for operation of shapers, planers and other machine tools.

ELECTRIC FEED. Modern Feed Regulation of Machine-Tools (Neuzeitliche Steuerungen fuer Werkzeugmaschinen-Antriebe), O. Pollok. Elektrotechnik und Maschinenbau (Vienna), vol. 46, no. 10, Mar. 4, 1928, pp. 215-218, 8 figs. Describes and discusses special use of A.E.G. motors for feed regulation of planers and lathes.

FINISHING BY GRINDING. Finishing by Machine Supersedes Costly Scraping by Hand, L. Sichel. Iron Trade Rev., vol. 82, no. 11, Mar. 15, 1928, pp. 685-686, 3 figs.

MANUFACTURE. Accuracy in Large Machine Tools, H. K. Smyth and W. C. Wais. Am. Mach., vol. 68, no. 13, Mar. 29, 1928, pp. 527-530, 10 figs. Methods used in Niles plant for securing accuracy in large machine tools; constant temperature maintained in room where standard gauges are kept; long measuring machine; aligning large machine tools; all cylindrical work finished by grinding; system of rigid tool inspection; all reamers are of inserted-blade type; reaming machine.

MASS PRODUCTION. Special Mass Production Machines. Am. Mach., vol. 68, no. 12, Mar. 22, 1928, p. 504, 4 figs. Details of special machine tools for mass production illustrated by 4 half-tones, each accompanied by short description; device for feeding steel tubes into centreless grinder; machine that makes wooden spoolheads from blocks containing number of holes; attachment from feeding hard rubber tubes into centreless grinder.

PNEUMATIC OPERATION. Pneumatic Machine Tools and Equipment for Manufacturing Plants (Pressluftwerkzeugmaschine und Pressluftvorrichtung in der Fertigung), K. Bollinger. Maschinenbau (Berlin), vol. 7, no. 5, Mar. 1, 1928, pp. 215-218, 9 figs.

MACHINERY

LEIPZIG EXHIBITION. The Leipzig Fair. Engineering (Lond.), vol. 125, no. 3243, Mar. 9, 1928, pp. 282-286, 23 figs., partly on supp. plates. Comparison of British Industries Fair with Leipzig Fair; main object of both is to market well-established products; this is why appeal is rather to non-expert user than to expert producer; in organization of means to attain this end, Leipzig is superior to Birmingham; permanency is keynote; most impressive section of Technical Fair is large building known as Hall 9, organized by German Assn. of Machine Tool Mfrs.; review of machine-tool exhibits and other machinery, including internal-combustion engines, concrete mixers, etc.

The Technical Fair at Leipzig. Engineer (Lond.), vol. 145, no. 3766, Mar. 16, 1928, pp. 284, 286, 10 figs. Fair is marked chiefly by construction of new hall for exhibtion of commercial road vehicles; predominant type of motor vehicles appear to be single-deck motor buses, though trucks, tipping wagons, fire-service vehicles, tradesmen's delivery tricycles, etc., were represented; bulk of exhibits were German; review of machine-tool exhibits; and exhibits of Committee for Economic Production, consisting of collection of examples of special mechanical motions.

MALLEABLE IRON

MANUFACTURE. Manufacture of Malleable Iron, D. A. E. White. Can. Foundryman (Toronto), vol. 19, no. 3, Mar. 1928, pp. 11-14, 20 figs. Composition, physical properties and structural constituents; time required to produce equilibrium in iron-carbon alloys used in making malleable cast iron varies from 4 hours at 1,800 deg. Fahr. with high-silicon alloys to 275 hours at 1,400 deg. Fahr. for medium-silicon alloys and longer for low-silicon alloys; combined carbon for equilibrium conditions; maximum cooling rate compatible with successive maintenance of equilibrium found.

METAL MINING GEOLOGY

BRITISH COLUMBIA. Silver-Lead-Zinc Veins at Atlin, B.C., H. E. McKinstry. Eng. and Min. Jl., vol. 125, no. 12, Mar. 24, 1928, pp. 495-497, 2 figs. Deposits on Vaughan mountain, 14 miles west of Atlin, B.C.; fissure veins along walls of dikes in granite or quartz monzonite; chief value of ore in silver; lead and zinc; with some gold; Prof. Berkey cited as to relative ages of some ore minerals; ruby silver conspicuous in one orebody recently opened.

MANITOBA. Copper-Zinc and Gold Mineralization in Manitoba, R. C. Wallace. Am. Zinc Inst.—Bul., vol. 11, nos. 3-4, Mar.-Apr. 1928, pp. 43-47 and 52 and 61. Reprint from Can. Min. and Met.—Bul., Feb. 1928, pp. 264-273. See also editorial and sketch map in Min. Mag., Mar. 1928, pp. 130-131. See Eng. Index card no. 28-5680.

MILLING

LARGE-RADIUS ARCS. Milling Arcs of Large Radii, E. V. Erickson. Machy. (N.Y.), vol. 34, no. 8, Apr. 1928, p. 585, 1 fig. Method of cutting arc of large radius with milling cutter of ordinary dimensions; basis for method lies in fact that portions of perimeter of ellipse approximate very closely arc of circle; if work and cutter assume some intermediate position, arc of ellipse will be cut; definite relation exists between intermediate position and radius of portion of perimeter of ellipse.

MINERALS

PRODUCTION STATISTICS, CANADA. Mineral Production of Canada During 1927. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 11, Mar. 16, 1928, pp. 232-233. Comparative figures for 1927 and 1926, provided by Dominion Bureau of Statistics; details for provinces; total values, $244,520,098, show increase over $4,000,000 compared with record production of 1926; coal is largest single item of value, amounting to $61,809,672, showing increase of nearly $2,000,000.

MOULDING MACHINES

SAND PROJECTION. A New Machine for Moulding by Projection of Sand (Une nouvelle machine à mouler par projection de sable). Pratique des Industries Mécanique (Paris), vol. 10, no. 12, Mar. 1928, p. 515, 1 fig. Describes machine which projects sand into moulds by means of compressed air; does away with hand tamping of sand in mould.

MUNICIPAL BUILDINGS

CONSTRUCTION. Handling a City Hall Job, S. Fullerton. Contractors' and Engrs'. Monthly, vol. 16, no. 3, Mar. 1928, pp. 173-175, 6 figs. In new city hall of Columbus, Ohio, walls are of buff Bedford Indiana limestone, backed up with brick; preparation and construction of foundations; stiff-leg derricks cut labour costs; concrete plant; brick laying terrace pavement; setting stone columns; self-supporting stairway.

N

NICKEL METALLURGY

HISTORY OF. Nickel, Its Metallurgy and Its Applications (Le nickel, sa metallurgie et ses applications). Revue Générale de l'Electricité (Paris), vol. 23, no. 10, Mar. 10, 1928, pp. 455-461. History of nickel; principles of nickel metallurgy; nickel from New Caledonia and from Canada; applications of nickel, casting, alloys, plating. Review of papers presented at Conservatoire National des Arts et Métiers during "Nickel Week" in Paris.

O

OFFICE BUILDINGS

FOUNDATIONS. The Foundations for the New Building of the Royal Bank of Canada, Montreal, C. S. Proctor. Eng. Jl. (Montreal), vol. 11, no. 2, Feb. 1928, pp. 133-139, 11 figs. General discussion of features of design and methods adopted for foundations of this building; choice of type of substructure design; foundation materials; types of foundation settlement in yielding material; governing features of design.

OIL ENGINES

HEAVY-OIL. Heavy-Oil Engine Working Costs. Engineer (Lond.), vol. 145, no. 3764, Mar. 2, 1928, pp. 246-247. Summary of report to Diesel Engine Users' Assn.; average total engine cost of 41 home stations with total output of 44,000,000 units and average annual plant load factor of 14.7 per cent was 0.713 pence per unit generated, which compares favorably with corresponding figure of 0.799 pence for previous year.

OPEN-HEARTH FURNACES

GAS FLOW. Gas Flow in Open-Hearth Furnaces, K. Feller. Blast Furnace and Steel Plant, vol. 16, no. 3, Mar. 1928, pp. 373-375, 1 fig. Abstract of studies made on flow of gas and gas composition in various types of open-hearth furnaces; conditions of combustion and location of flame; tilting furnace; experiments on models; as result of temperature-variations during gas period, composition of gas in port alters as function of preheating temperature.

HEAT LOSSES. Certain Relations Between Refractory Service, Insulation and the Flow of Heat in the Open-Hearth Furnace, B. M. Larsen and A. Grodner. Min. and Met. Investigations—Bul., no. 32, 20 pp., 12 figs. Irrespective of how much heat is lost through walls of open-hearth, inner surface temperatures must remain about same to make possible given rate of steel production; inner wall and bath temperatures are controlled essentially from within furnace.

ORE REDUCTION

PROCESS FOR. A Process for the Extraction of Zinc and Other Metals from Ores, H. E. Coley. Am. Zinc Inst.—Bul., vol. 11, nos. 3-4, Mar.-Apr. 1928, pp. 30-40 and 60. Reprint from Instn. of Min. and Met.—Bul, Jan. 1928, pp. 1-11, and editorial from Min. Mag. citing Dec. 1926 issue. See Eng. Index Card No. 28-2983.

OXY-ACETYLENE CUTTING

REPAIR WORK WITH. Emergency Repairs to Sheet Mill Drive Made by Cutting Blow Pipe and Oxygen Lance, W. I. Gaston. Iron Age, vol. 121, no. 11, Mar. 15, 1928, p. 735, 1 fig. Manner in which cutting blow pipe saved $1,900 in repairing main drive gear; 470 cu. in. of cast steel cut away in order to renew grip on shaft; required 14 hrs. for five men to remove bolts and do this job of cutting; cost amounted to about $110; section cut was 3 ft. 11 in. in length and 15½ in. in breadth; how shaft was protected and work done.

P

PIERS

RECONSTRUCTION. Reconstruction of New Holland Pier (England). Engineer (Lond.). vol. 145, no. 3764, Mar. 2, 1928, pp. 228-230, 8 figs. Pier, which is 1,370 ft. long and 35 ft. 6 in. wide, was originally constructed of timber, and consisted of 27 bays; reconstruction work was carried out under three contracts in 1922, 1924 and 1925, and included sinking of 44 steel and cast-iron cylinders as additional support, building of new superstructure and reconstruction of substructure.

PIPE

WELDED, MANUFACTURE OF. Modern Methods of Manufacturing Welded and Seamless Pipes (Die Neuzeitliche Fabrikation von geschweissten und nahtlosen Roehren), H. Schumacher. Werkstattstechnik, vol. 22, no. 3, Feb. 1, 1928, pp. 61-66, 17 figs. Description of modern Berman machines and processes for rolling, drawing, cutting, trimming, welding, thread cutting, etc., of metal pipes and tubes for gas and water supply.

PIPE BENDS

NEW PROCESS. Pipe Bends Made by New Process. Iron Age, vol. 121, no. 14, Apr. 5, 1928, pp. 933-934, 3 figs. Forcing hot pipe over horn-shaped mandrel produces short-radius bends without buckling at inside of turn or excessive thinning at outer diameter; methods of Pipe Bending Process Co.; manufacturers believe definite series of bends with long and short radius will take care of practically every requirement in way of fitting for welded piping; steel, copper, brass, aluminum and special alloys successfully formed into short-radius bends; equipment consists of gas furnace, special mandrels and hydraulic press.

PIPING

POWER PLANTS, WELDING. Welding of Power Plant Piping, A. W. Moulder. Am. Welding Soc.—Jl., vol. 7, no. 2, Feb. 1928, pp. 8-20, 16 figs. Presentation is intended to cover subject as it relates to fusion welding of power plant piping only and is not intended to relate to forge or hammer-welding process; discussion is based upon use of oxy-acetylene rather than electric-arc process; primarily for reason that former process is one which has been found most practical for work of this kind; advantages of welding power-plant piping.

POWER FACTOR

IMPROVEMENT. The Reactive Component in A.C. Circuit, V. E. Johnson. Power Plant Eng., vol. 32, no. 7, Apr. 1, 1928, pp. 405-408, 2 figs. General principles governing power-factor improvement; correction by rearrangement or changing of motors, by external sources of wattless current, and by addition of loads with high power factor. (Continuation of serial.)

POWER PLANTS, ELECTRIC

SUBSTATIONS. Extend Sub-Station System in Toronto. Power House (Toronto), vol. 22, no. 3, Feb. 5, 1928, pp. 25 and 44, 2 figs. Two substations are being added to Toronto Hydro-Electric System; at Parkdale substation single-phase, 1,000-kva. transformers are installed; John St. station has five transformers, water-cooled, 13,200- to 2,400-volt, 3-phase, each of 1,500 kva.; station will be remote-controlled by means of supervisory control system developed by Toronto Hydro-Electric System.

Automatic Power Supply for Cincinnati Railway. Elec. Ry. Jl., vol. 71, no. 11, Mar. 17, 1928, p. 443. Automatic substation system distributes power to trolleys by means of 19 automatic substations, without attendants; superimposed over automatic operation of these stations will be central dispatcher; each station functions in automatic sequence.

POWER PLANTS, HYDRO-ELECTRIC

IRELAND. The Shannon Power Plant. Engineer (Lond.), vol. 145, no. 3767, Mar. 23, 1928, pp. 318-320, 10 figs. Describes plant that is to be erected in generating station at Ardnacrusha; at outset there are to be three turbines, each capable of giving maximum output fo 38,600 h.p., two of which are being supplied by J. E. Escher, Wyss and Co., of Zurich; useful head of water at power station will depend on ebb and flow of tide in lower part of Shannon, and head will vary from 86.7 to 110.6 ft.

LOUISVILLE, KY. The New Ohio River Power Plant of Louisville Hydro-Electric Co. Water Works, vol. 67, no. 3, Mar. 1928, pp. 123-125, 5 figs. 100,000-kw. hydro-electric station under automatic control; present installation consists of eight 12,500-kva., vertical-shaft generators operating on terminal voltage of 14,000; principal unique feature of station is electrical layout; interesting engineering feature of station; advantages of automatic switching.

POWER PLANTS, STEAM

CHEMICAL PLANTS. A Power Station for a Chemical Works. Engineer (Lond.), vol. 145. no. 3766, Mar. 16, 1928, p. 299. Particulars of contract secured for plant of new power house by Metropolitan-Vickers Electrical Co.; contract is for 9 turbo-alternator sets, with aggregate output capacity of 93,000-kw. to form equipment of new power station for large chemical works under construction for Synthetic Ammonia and Nitrates, Ltd., at Billingham; combined power and process systems will be applied on unusually large scale.

DETROIT, MICH. The Trenton Channel Station, Detroit, Michigan, U.S.A. Engineering (Lond.), vol. 125, nos. 3245 and 3246, Mar. 23 and 30, 1928, pp. 342-345 and 369-371, 17 figs. Mar. 23: Whole of output of Trenton Channel is delivered to 120,000-volt system, mainly through two substations about equidistant from plant; output voltage is so regulated as to provide required voltage at these substations; this feature has had considerable influence on design of plant. Mar. 30: Coal unloading arrangements.

RECORDING INSTRUMENTS. RECORD STRIPS FOR. Standardized Record Strips for Boiler Instruments, H. Doevenspeck. Eng. and Boiler House Rev. (Lond.), vol. 41, no. 9, Mar. 1928, p. 447. According to form of record, recording instruments may be classified as disk, drum and continuous recorders; charts with standardized ruling can be produced more cheaply and used to greater advantage than variety of papers; author reproduces standard rulings recommended by German Industrial Standards Assn., together with particulars of rates of paper feed recommended for various purposes. Abstract translated from Waerme, Dec. 31, 1927, p. 875.

PULVERIZED COAL

COMBUSTION. Heat-Power Research (Versuche aus dem Gebiete der Waermekraftforschung), M. Jakob. V.D.I. Zeit. (Berlin), vol. 72, no. 11, Mar. 17, 1928, pp. 379-380, 1 fig. Report on papers and discussions at fourth conference of German commission for research in heat engineering; review of papers on steam-discharge measurements, specific heat of superheated high-pressure steam, combustion phenomena in engines, combustion of pulverized coal under compression, etc.

PUMPS, CENTRIFUGAL

DRAINAGE. Turbine Pumps Solve Drainage Problems of Merced Irrigation District, California, J. H. McCormick. Hydraulic Eng., vol. 4, no. 3, Mar. 1928, pp. 131-133 and 181, 5 figs. Prolonged irrigation raised water table which was successfully lowered by installation of turbine pumping equipment; type of soils; open ditch drainage; test wells; pumps are self-priming and are equipped with automatic control devices to start them; method of drainage; this system does away with waste ground and unsightly spoil banks of open ditches.

LOSSES. A New Method of Separating the Hydraulic Losses in a Centrifugal Pump, M. D. Aisenstein. Hydraulics (A.S.M.E. Trans.), vol. 50, no. 3, Jan.-Apr. 1928, 4 pp. and (discussion) pp. 4-7, 9 figs. Particulars of method by means of which friction and shock losses of given pump may be determined separately from its head-capacity curve, together with illustrative example.

PERFORMANCE. A Method of Analyzing the Performance Curves of Centrifugal Pumps, J. Lichtenstein. Hydraulics (A.S.M.E. Trans), vol. 50, no. 3, Jan.-Apr. 1928, 12 pp. and (discussion) pp. 12-16, 25 figs. Development of analytical and graphical methods of determining correction factors from test curves for use in bringing theoretical pump equations into harmony with practice; author uses five correction factors which are to be deduced from ordinary performance curves; graphical analysis of 10-in. Bethlehem centrifugal pump tested at 1,150 r.p.m., based mainly on b.h.p. curve; only curves obtained by direct measurement of b.h.p. through torsion or electrical dynamometers should be used.

R

RACKS, TRASH

ELECTRIC HEATING. Heating Trash Rack Bars Electrically, C. R. Reid. Elec. News (Toronto), vol. 36, no. 6, Mar. 15, 1928, pp. 29-32, 9 figs. Severe frazil-ice conditions successfully combated at Shawinigan Falls by using 227.1 watts per cu. ft. of water passing per sec.; details of installation and empirical formula; electric heating of racks is of particular value in locations where frazil ice trouble develops quickly and is not of long duration. Abstract of paper presented at Eng. Inst. Can.

RADIO ANTENNAS

CALCULATION. Methods, Formulæ and Tables for the Calculation of Antenna Capacity, F. W. Grover. U.S. Bur. of Standards—Sci. Papers, no. 568, Jan. 9, 1928, pp. 569-629, 13 figs. Antenna and resulting potential is calculated; formulæ are given for common types of single- and multiple-wire antennas in form convenient for numerical computation, together with tables of constants which will be found useful in such calculations; tables of capacities of both horizontal and vertical single-wire and horizontal two-wire antennas have been included.

RADIO

CHOKE COILS. The Measurement of Choke Coil Inductance. C. A. Wright and F. T. Bowditch. Inst. Radio Engrs.—Proc., vol. 16, no. 3, Mar. 1928, pp. 373-384, 6 figs. Study undertaken in order to develop reliable method suitable for comparative rating of such coils; presents modifications of such method, together with series of measurements exemplifying them; first, modification of ammeter-voltmeter method of measurement; second, modification of voltmeter-ammeter method of measurement; third, modification of ammeter-voltmeter method of inductance measurement.

RECEIVING APPARATUS. Direct-Coupled Detector and Amplifiers with Automatic Grid Bias, E. H. Loftin and S. Y. White. Inst. Radio Engrs.—Proc., vol. 16, no. 3, Mar. 1928, pp. 281-286, 6 figs. System for direct-coupling of vacuum tubes to give composite detection and amplification; unique method of automatically regulating system to be responsive to carrier currents of different intensities; includes extension of automatic effect to volume control.

RAILROADS

GRAIN TRANSPORTATION, CANADA. Moving the Canadian Grain Crop. Ry. Age, vol. 84, no. 11, Mar. 17, 1928, pp. 621-628, 8 figs. Efficient operating methods and expenditure of millions for facilities aid Canadian Pacific; car-distribution problem; distribution of locomotives; operations on grain divisions; concentration points used; methods of securing extra men; Transcona yard operations; operations at Fort William-Port Arthur. (To be concluded.)

TERMINALS, FOUNDATIONS. Deepest Open-Pit Foundations for Cleveland Union Terminal, F. W. Skinner. Bldg. Age, vol. 50, no. 3, Mar. 1928, pp. 134-135, 4 figs. Foundations were carried down 260 ft. below curb; pilot holes of small diameter were driven by earth augers in bottoms of wells in advance of their excavation.

TERMINALS, REINFORCED CONCRETE. French Railway Station Built of Reinforced Concrete, A. M. Roos. Eng. News-Rec., vol. 100, no. 11, Mar. 15, 1928, pp. 447-448, 4 figs. Paris-Orléans Railroad incorporates massive arches and beams in its new terminal at Limoges; terminal is 310 ft. by 260 ft. in plan and is built over ten tracks; illustrations giving idea of extent and character of details of structure.

TIES, CONCRETE. Concrete Ties on the Pennsylvania Railroad, F. S. Bowden. Cornell Civ. Engr., vol. 36, no. 6, Mar. 1928, pp. 145-147 and 165, 5 figs. Construction of tie is shown; designed to carry locomotive wheel of 127,200 lb.; casting ties, gang-type moulds were used, each gang consisting of about 100 moulds; railroad men have expressed various opinions about probable utility of this new type of tie.

Concrete Sleepers, R. N. Stroyer. Concrete and Constr. Eng. (Lond.), vol. 23, no. 3, Mar. 1928, pp. 256-262, 16 figs. None of usual forms of concrete ties seems to have allowed for special dynamic application of forces that occur in this kind of structural member; set of curves shown illustrates shock action on deflection of test beam; latest forms of concrete ties endeavour to embody principles of correct weight distribution and shock absorption, and do away with weak centre portion; Stent tie embodying some of these principles now being experimented with by London & North Eastern Ry.

TIES, STEEL. Steel Ties in Beam Type Base, C. A. Smith. Elec. Traction, vol. 24, no. 3, Mar. 1928, pp. 143-144, 3 figs. Georgia Power Co. constructs track, using steel ties in beam construction, designed to eliminate rail corrugation; construction is very similar to timber-tie construction, steel ties being spaced approximately 6 ft. apart, centre to centre, first steel tie construction was built about one year ago, and so far very little corrugation has developed.

TRACKS, WEEDING. Mowing Weeds by Electric Power, E. P. Roundey. Elec. Traction, vol. 24, no. 3, Mar. 1928, p. 144, 1 fig. Utica division of N.Y. State Rys. constructs power mower from bonding car; 50 miles of track to be mowed; use bonding machine for power; two standard mowing knives were purchased and rigged to car; one knife, over 5 ft. long, was used on side of car; knife 9 ft. long was fastened across front of car to cut between rails of track; heaters furnish resistance.

RAILWAY MOTOR-CARS

GASOLINE-ELECTRIC. Gas-Electric Car of the Toronto, Hamilton and Buffalo. Ry. and Locomotive Eng., vol. 41, no. 2, Feb. 1928, pp. 33-34, 2 figs. Power is supplied by Winton 6-cylinder, 275 h.p. gasoline engine; at 1,050 r.p.m. generator has continuous rating of 420 amperes at 440 volts; power plant is mounted crosswise of car, with generator directly behind operator; gearing is suitable for maximum operating speed of 60 m.p.h.

What the Gas-Electric Car Means to the Railroads, W. R. Stinemetz. Ry. Age, vol. 84, no. 13, Mar. 31, 1928, pp. 753-755, 2 figs. Typical example of average month's operation of motor car and trailer, actually substituted for branch-line steam train; multiple-unit gas-electric trains; fuel costs as compared to steam locomotives are less; provides more flexible means of handling varying crowds of traffic by always having full powered train irrespective of size.

STORAGE-BATTERY. Edison Storage-Battery Rail Car Successful in Canterbury District (N.Z.). New Zealand Rys. Mag. (Wellington), vol. 2, no. 10, Feb. 1, 1928, pp. 10-11, 1 fig. Careful consideration was given to question of comparative cost as between rail car and steam driven train before experiment was launched; car can run approximately 100 miles on one battery.

RAILWAY REPAIR SHOPS

QUEBEC. New Repair Shop at Quebec. Elec. Ry. Jl., vol. 71, no. 10, Mar. 10, 1928, pp. 389-391, 9 figs. Main shop building and carhouse were constructed; additions provide boiler room, general storeroom and lumber storage; interior transfer tables not affected by extreme winter conditions; Quebec Railway, Light, Heat and Power Co., at Limoilou, supplies all electric power and gas used in vicinity of Quebec and operates city tramway system as well as 25-mile suburban line; list of various machine tools is given on accompanying plan.

REFRIGERATING MACHINES

CARBON DIOXIDE. Carbon Dioxide Refrigerating Machines, J. C. Goosmann. Power, vol. 67, no. 12, Mar. 20, 1928, pp. 518-519. Early experiments with carbon dioxide; modern compressor designs; increasing machine output. Abstract of paper read before Milwaukee Eng. Soc.

COMPRESSOR CHARTS. Practical Tonnage Chart, G. V. Rupp and H. W. Whiting. Ice and Refrigeration, vol. 74, no. 3, Mar. 1928, p. 274, 1 fig. Presents chart with variable-compressor size, back pressures and speeds, and with volumetric efficiencies taken approximately as average of various makes of vertical single-acting compressors; calculations are based on U.S. Bureau of Standards tables.

REFRIGERATION

SILICA GEL SYSTEM. Silica Gel Refrigerating System. Ice and Refrigeration, vol. 74, no. 3, Mar. 1928, pp. 217-221, 10 figs. New dry-absorption system; composition and properties of silica gel; arrangement and operation of refrigerating system; thermostatic control; household and commercial units; apparatus in operation exhibited; application to refrigeration cars being tested in actual service.

RESERVOIRS

GUNITE LINING. Relining Payson Park Reservoir; Cambridge Water Works, L. M. Hastings. N.E. Water Works Assn.—Jl., vol. 42, no. 1, Mar. 1928, pp. 45-51 and (discussion) 51-52, 2 figs. Describes some of principal features of work as carried out; lining was of gunite not less than two inches thick at any point and reinforced in centre with wire mesh; gunite was specified to consist of one part Portland cement and 2½ parts of sand.

OUTLET GATES, HIGH-PRESSURE. Standard High-Pressure Gates, P. A. Kinzie. New Reclamation Era, vol. 19, no. 3, Mar. 1928, pp. 44-46, 1 fig. At Tieton dam on Yakima project, Washington, two high-pressure gates 5 feet wide by 6 feet high are installed beneath dam, where they work under maximum head of 200 feet of water; usual plan of gates; wide range of use; operation of emergency gates.

RETAINING WALLS

EARTH-PRESSURE ON. Earth-Pressure on Flexible Walls, R. N. Stroyer. Instn. Civ. Proc. (Lond.), no. 4619, 1928, 16 pp., 9 figs. From sheet piles in cofferdam to heavy reinforced-concrete piles in permanent retaining walls there is wide range of application of sheet wall for retaining purposes; presents special problems in connection with calculation of earth-pressure on such walls; application to new form of wharf construction; this design provides cheapest possible form of wharf construction. See also Engineering, vol. 125, no. 3243, Mar. 9, 1928, p. 303.

RIVERS

GAUGING STATIONS. The Recording of River Discharge, N. C. Grover. Military Eng., vol. 20, no. 110, Mar.-Apr. 1928, pp. 120-124, 5 figs. General stream gauging is proper function of government, either state or federal; Geological Survey is authorized federal agency for such work; use of recording gauges is becoming necessary for collection of reliable records of discharge of increasing number of rivers; shows Au recording gauge; typical river-measuring station; records of discharge obtained mechanically by applying graphic record of stage to station-rating curve by means of discharge integrator.

SEDIMENTATION. Sedimentation Studies of Turbid American River Waters, A. W. Bull and G. M. Darby. Am. Water Works Assn.—Jl., vol. 19, no. 3, Mar. 1928, pp. 284-305, 14 figs. Sedimentation studies of waters of some turbid rivers of Middle West; presents summarized results of these studies with comparison of settling behaviour of different river waters; comparative clarification rates in short cylinders; comparison of clarification tests in cylinders with tests in continuous clarifier; studies of sludge thickening and discharge.

ROAD MACHINERY

SURFACING. Mechanical Spreading, Raking, Finishing of Asphaltic Concrete Pavement, C. S. Pope. Calif. Highways, vol. 5, nos. 2-3, Feb.-Mar. 1928, pp. 16-17, 2 figs. Machine described was placed on contract for asphaltic surfacing, eight miles in length, in Kern County, Calif., near town of Delano; paving operation; advantages obtained by use of machine are, economy of material; decrease in hand labour; increase in smoothness of paving.

ROAD MATERIALS

CONCRETE. Discussion of Bureau of Public Roads' Report on Comparative Tests of Crushed Stone and Gravel Concrete in New Jersey, S. Walker. Nat. Sand and Gravel Bul., vol. 9, no. 3, Mar. 15, 1928, pp. 27-31, 1 fig. Complete study of economic advantages of different aggregates, such factors as surface wear, surface conditions, durability and general ability to withstand destructive influences of traffic and weather as measured by field surveys should be given major consideration.

CONCRETE, QUICK-HARDENING. Quick-Hardening Concrete, F. V. Regal. Pit and Quarry, vol. 15, no. 12, Mar. 14, 1928, pp. 63-66. Problem solved by special cements, and special mixes using normal cements, with or without accelerating compounds; high alumina cement feature chemical composition; super-cement results due to finer grinding; manufacture and use of quick-hardening cements not well standardized for concerted action on specifications.

SAND. Miscellaneous Uses of Sand in Highway Construction, S. Walker and C. E. Proudley. Nat. Sand and Gravel Bul., vol. 9, no. 3, Mar. 15, 1928, pp. 9-12. Specifications for sand for cushion, recommended by National Paving Brick Manufacturers' Assn., place maximum grain size as one-quarter in.; sand for cement grout filler; recommended specification for top soil or sand-clay for road surfacing; material for subgrade treatment.

TESTING. Inspection and Tests of Road Building Material, W. J. Emmons. Cement, Mill and Quarry, vol. 32, no. 5, Mar. 5, 1928, pp. 48-50 and 52. Upon laboratory organization devolves responsibility for quality of materials entering into state highways of Michigan; specifications constitute basis upon which suitability of materials is judged; tests for soft stone; training of inspectors.

ROADS

BRITISH COLUMBIA. Development of Highways in British Columbia, E. L. Harris. Commerce Reports, no. 11, Mar. 12, 1928, pp. 705-706. Advance in road building; paved roads; highway improvement affects tourist traffic; Pacific Highway; trans-provincial highway; Okanagan country; Columbia Highway.

CONCRETE, CONSTRUCTION. Some Typical Concrete Road Building in Illinois. Highway Engr. and Contractor, vol. 18, no. 3, Mar. 1928, pp. 40-42, 7 figs. Camp facilities big factor in success; two jobs carried on simultaneously; equipment and personnel.

CONSTRUCTION. Contractor in Highway Work, E. L. Miles. Can. Engr. (Toronto), vol. 54, no. 12, Mar. 20, 1928, p. 383. Construction methods in Victoria County; day labour and contract systems; question of method debatable, as both systems have their place and value. Paper presented before Ontario Good Roads Assn.

CONSTRUCTION, CALIFORNIA. The Valona Slide and Highway Reconstruction Near Carquinez Strait Highway Bridge, California, A. W. McCurdy. West. Constr. News, vol. 3, no. 5, Mar. 10, 1928, pp. 150-154, 10 figs. Methods adopted for relocating highway passing over Valona Slide and plan followed by Highway Commission of California to prevent earth from sliding over highway; details of work are given and results commented on; general change and rerouting of highway traffic made when new Carquinez highway bridge was opened to traffic.

CONSTRUCTION, SWAMPS. Blasting Muskeg for Road Construction, T. H. Michell. Roads and Streets, vol. 68, no. 3, Mar. 1928, p. 132. Methods employed to prevent settling of fill over muskeg swamp and produce solid foundation for road; blasting process produced results immediately with elimination of continued settling.

ELEVATED. Super-Tracks, S. Norris. Roads and Road Constr. (Lond.), vol. 6, no. 62, Feb. 1, 1928, pp. 46-47, 3 figs. Suggested solution of city-suburban traffic problem; unexploited sites, which would provide direct routes of easy gradient and effective width, converging upon metropolis and all large towns; writer's suggestion is that all these open near-city railway tracks being, potentially, first-class speedways, their present half-utilized capacity might be fully exploited by erection of reinforced-concrete roads directly above them.

GRAVEL. Tar-Treated Gravel Roads, G. E. Martin. Highway Engr. and Contractor, vol. 18, no. 3, Mar. 1928, pp. 34-37, 8 figs. Light tar binder saves road metal and eliminates dust; several methods of treatment; modern practice; mulch method; application of seal coat; spring treatment.

GRAVEL, SURFACE TREATMENT. Tar Treatment of Gravel Surfaces, H. Irwin. Can. Engr. (Toronto), vol. 54, no. 13, Mar. 27, 1928, pp. 398-400. Motor vehicle increase creates problems in gravel-road maintenance; two established methods of sealing road surface against weather and traffic wear; means of increasing traffic capacity and extending economic life; excessive annual wastage of gravel; over-taxed traffic capacities; sealing surface to save road; mixed "Mulch" method; surface or "Skin" treatment; choice of method quite important; cost comparisons.

MAINTENANCE AND REPAIR. Urban County Highway Maintenance, W. W. Chadsey. Roads and Streets, vol. 68, no. 3, Mar. 1928, pp. 153-154. Finds that laws of states, rules of boards of supervisors or highway committees of these boards and officers in charge of maintenance work vary greatly, and in some countries are hindrance to good practice; recommends good practical method of maintaining urban highways; uniform practice needed; county unit favoured; objection to town unit; patrol system; oiling dirt roads. Committee report presented to Am. Road Builders' Assn.

MAINTENANCE EQUIPMENT. Selection of Road Maintenance Equipment, G. A. Nikirk. Highway Engr. and Contractor, vol. 18, no. 3, Mar. 1928, pp. 43-46, 3 figs. Power equipment replaces manual labour; determining type of equipment; productive costs; non-productive costs; delays; choosing make of equipment.

MAINTENANCE ORGANIZATION. A Proper Township Road Organization, J. McVicar. Contract Rec. (Toronto), vol. 42, no. 12, Mar. 21, 1928, pp. 313-315 and 323. How construction and maintenance of township highways should be controlled; functions of council and superintendent; cost of upkeep; aim or object; construction and measure of value; wasted maintenance; how much should maintenance cost; three methods present themselves for consideration in seeking method of financing roads; highway engineer.

ROCK-ASPHALT, RESURFACING. Resurfacing Old Roads with Rock-Asphalt on Bituminous Top, A. H. Hinkle. Roads and Streets, vol. 68, no. 3, Mar. 1928, pp. 155-157, 9 figs. Account of four projects carried out in 1927 in Indiana; before resurfacing, places that were too defective in old concrete slab were patched with concrete; constructing bituminous macadam for rock-asphalt top; ¾-in. rock-asphalt top; cold pulverized-rock asphalt; steamed-rock asphalt; spreading rock asphalt on black base; rolling and planing; curing before planing.

SURFACE TREATMENT. Mixed Treatment for Rural Districts, K. D. MacDonald. Can. Engr. (Toronto), vol. 54, no. 13, Mar. 27, 1928, pp. 405-407. Suggested method of surface treatment for rapidly extending good highways to rural districts at reasonable first cost and low maintenance cost; study of new means of increasing serviceability of cheaper type of roads; analysis of present conditions; improving low-cost roads; increasing serviceability of gravel; mixed method of treatment; accompanying table from California report gives accurate idea of costs under conditions obtaining in that state.

ROLLING MILLS

BLOOMING MILLS, ELECTRIC EQUIPMENT. 40-Inch Reversing Blooming Mill, Wisconsin Steel Co., F. A. Wiley. Iron and Steel Engr., vol. 5, no. 3, Mar. 1928, pp. 120-126, 10 figs.

BLOOMING MILLS, GERMANY. Details of Reversing Blooming Mills (Eizelheiten von Umkehrblockwalzwerken), F. Funke. V.D.I. Zeit. (Berlin), vol. 72, no. 9, Mar. 3, 1928, pp. 311-316, 16 figs. Supplementary information to paper by same author in previous issue (Feb. 18, p. 197) describing reversing blooming mills of A. Thyssen metallurgical works at Hamborn and Phoenix works at Ruhrort; details of motors, pinions, pinion housings, roll housings, spindles, top-roll accessories, methods of balancing, etc.

POWER REQUIREMENTS. Calculation of Power in Rolling Mills (Calcul des efforts dans les laminoirs), L. Genfron. Pratique des Industries Mécaniques (Paris), vol. 10, no. 12, Mar. 1928, pp. 519-521, 2 figs. Shows how to calculate power necessary to drive rolls of rolling mills when rolling thin plates if pressure on upper rolls and reduction in plate thickness are known.

SHEET MILLS, CONTINUOUS. Continuous Mill Will Supply Bars for Tin Plate Division, F. B. Pletcher. Iron Trade Rev., vol. 82, no. 12, Mar. 22, 1928, pp. 749-751, 2 figs. Modern 21-in., 2-high continuous sheet bar and skelp mill of Youngstown Sheet & Tube Co.; light weight tin bars delivered by finishing rolls at high speed are made to overlap before reaching bar piler; three hot beds are provided; 21-in. mill laid out parallel to 28-in. billet mill; slab transfer with approach tables, and 1,000-ton motor-driven up-cut shear installed. See also description by R. A. Fiske in Iron Age, vol. 121, no. 12, Mar. 22, 1928, pp. 799-802, 6 figs.

ROOF TRUSSES

WELDED. A Roof Truss Designed to Be Welded. Am. Mach., vol. 68, no. 13, Mar. 29, 1928, p. 526, 5 figs. Five half-tones illustrating roof trusses designed to be welded; each cut accompanied by brief description; 2 roof trusses under construction in shop of American Bridge Co.; close-up of panel-point showing tack welds used; close-up of panel-point welds showing lugs for connection of sway-bracing rods; finished truss.

SCHOOL BUILDINGS

HEATING AND VENTILATION. Heating and Ventilating a Large Church School. Heating and Vent. Mag., vol. 25, no. 3. Mar. 1928, pp. 74-78, 7 figs. Heating and ventilating installation at St. George High School, Evanston, Ill., discussed with some detail to supply information on present trends in school ventilation; individual desk exhausts in laboratory; arrangement of direct radiation.

S

SCHOOL LIGHTING

CORRECT PRINCIPLES. Illumination, I. E. Houk. Bldg. Age, vol. 50, no. 3, Mar. 1928, pp. 110-111, 4 figs. Correct principles of lighting applied to Denver High School; auditorium is illuminated by direct diffusing units of varying size; diffused, direct lighting is system generally adopted throughout building; library illuminated by 14 units in specially designed fixtures; flood lights illuminate central portion of exterior at night.

SEA

COLD WATER AT GREAT DEPTHS, UTILIZATION OF. Utilization of Cold Water from the Depth of Oceans (Utilisation rationnelle de l'eau glacée du fond des océans), P. Boucherot. Revue Universelle des Mines (Liége), vol. 17, no. 5, Mar. 1, 1928, pp. 205-214. Points out that low temperature of ocean water at great depths is natural product, in unlimited quantities, which can be visualized as future source of low temperature, with possibilities of utilization for cooling purposes, production of energy and softening of water; in process described refrigeration may be regarded as by-product of power generation, or vice versa; water softening is effected by distillation in vacuum of surface water.

SCREWS

CAP, MANUFACTURE OF. Cap Screws Made by New Method, F. L. Prentiss. Iron Age, vol. 121, no. 14, Apr. 5, 1928, pp. 936-938, 3 figs. Recent improvements in processes of making cold-headed cap screws employed by Cleveland Cap Screw Co.; blank for threading produced by extrusion process; increase of 30 per cent in tensile strength claimed; wire reduced to proper pitch diameter simultaneously with heading; trimmed screws pass through tumbling and lubricating machine; heat-treated in electric furnace; passed through quenching machine into rustproofing solution.

SEWAGE CHLORINATION

DESCRIPTION OF. Chlorination in Sewage Treatment, L. H. Enslow. Water Works, vol. 66, no. 12, Dec. 1927, pp. 505-506. How liquid chlorine is used in correcting odor nuisances at sewage plants; main cause of odors; prevention chief objective; conditions where odor production exists; effect of course of sewage flow; pump-station collecting wells and their relationship to odor control; methods employed in prechlorination for odor correction at two Kansas plants. Paper presented at North Carolina Conference on Water Purification and Sewage Treatment.

SEWAGE DISPOSAL

ACTIVATED SLUDGE METHOD. Bulking of Activated Sludge: An Investigation as to Its Cause, W. Scott. Surveyor (Lond.), vol. 73, no. 1887, Mar. 23, 1928, pp. 345-347. Bulking is often looked upon as distinct drawback to process; suggested remedies for curing so-called bulking evil; results of experiments; analyses of sludges; Bury's sewage contains variety of trade wastes, chiefly tannery; fellmongers, dye, bleachers, brewery wastes and gas liquor; experiments with brewery waste; account of experiments which have been carried out.

SLUDGE UTILIZATION. Utilization of Sewage Sludge, S. Duxbury. Can. Engr. (Toronto), vol. 54, no. 13, Mar. 27, 1928, pp. 403-404. Advantages of sludge as fertilizer; need for intelligence; fermentation; wet sewage sludge; method of handling sludge; rate of application. Paper presented before Assn. of Mgrs. of Swage Disposal Works.

SEWAGE TREATMENT

CHEMICALS. Use of Chemicals in Sewage Treatment, J. F. Jackson. Water Works, vol. 66, no. 12, Dec. 1927, pp. 493-494. Results obtained at experimental plant in New Britain, Conn., in 1920 and 1921; some attention given to effect of iron; conversion of organic matter; oxidation of raw sewage in presence of iron without addition of any activated sludge; returned sludge richer in iron; catalytic action of iron; iron in sewage came mostly from pickling liquors and was probably discharge into sewers in sulphate form.

SEWERS

CLAY LINING. Practices in Placing Vitrified Clay Liner Plates in Sewers. Eng. News-Rec., vol. 100, no. 11, Mar. 15, 1928, pp. 428-430, 7 figs. Philadelphia building large lined concrete collector; other cities' methods in building lined precast and monolithic sewers; reviews some of construction practices involved in placing liner plates in sewers; important reasons for adopting liner plates.

CONSTRUCTION. North Toronto Sewer Construction. Contract Rec. (Toronto), vol. 42, no. 12, Mar. 21, 1928, pp. 318-320, 8 figs. Following 2 previous articles on concrete-lined and brick-lined tunnels respectively (Feb. 15 and Mar. 7), present issue deals with practical features of section of open-cut work; plant; excavations; forms and concreting; protection from frost.

CONSTRUCTION, TORONTO. North Toronto's Big Sewer System. Contract Rec. (Toronto), vol. 42, no. 13, Mar. 28, 1928, pp. 340-341, 4 figs. Practice of not using concrete in sewers in sizes smaller than some set standard (usually about 30 in.), all pipe specified for laterals is vitrified, salt-glazed shale or clay sewer pipe, varying from 6 to 30 in. in diameter; manhole shafts are being constructed either of brick or of concrete. (Concluded.)

LAYING. Laying Sewer Pipe in Water. Pub. Works, vol. 59, no. 3, Mar. 1928, pp. 102-103, 2 figs. One excavating machine, travelling on parallel dock, used for trucking, laying 48-in. pipe and backfilling; permanent conduit from hot-water outlet to intake to lie about 18 ft. from dock, mostly under water.

SNOW REMOVAL

ROADS. Review of Research, Experiment and Practice, H. C. Badder. Roads and Road Constr. (Lond.), vol. 6, no. 62, Feb. 1, 1928, pp. 39-41, 5 figs. County authorities have equipped all motor trucks and motor buses running country routes with special detachable steel plow, which is stored in their garages ready for attachment at first fall of snow; municipal snow problem; blade and rotary plows; latest type of rotary snow remover to handle snow under any conditions.

STEAM ENGINEERING

RESEARCH. Heat-Power Research (Versuche aus dem Gebiete der Waermekraftforschung), M. Jakob. V.D.I. Zeit. (Berlin), vol. 72, no. 11, Mar. 17, 1928, pp. 379-380, 1 fig. Report on papers and discussions at fourth conference of German commission for research in heat engineering; review of papers on steam-discharge measurements, specific heat of superheated high-pressure steam, combustion phenomena in engines, combustion of pulverized coal under compression, etc.

STEAM ENGINES

BINARY-VAPOUR. Working Fluids Which May Be Used in Power Generation (Die moeglichen Arbeitsmittel der Dampfkraftanlagen), A. Loschge. Archiv fuer Waermewirtschaft (Berlin), vol. 9, no. 3, Mar. 1928, pp. 75-79, 13 figs. Thermodynamics of engines using mercury vapour, ammonia, diphenyl-oxide or other vapours jointly with steam, steam being generated by condensing of fluid of higher boiling point; principal American and European systems, results of experiments.

UNIFLOW. 800-H.P. Heat-Extraction Uniflow Compound Engine. Engineering (Lond.), vol. 125, no. 3244, Mar. 16, 1928, pp. 318-319, 6 figs, partly on p. 317 and supp. plate. Cross-compound heat-extraction engine, built by Galloways, Ltd., Manchester, to replace existing set of engines in Burnley textile mill.

STEAM PIPE LINES

FLEXIBILITY. The Flexibility of Plain Pipe Lines, J. R. Finniecome. Metropolitan-Vickers Gaz. (Manchester), vol. 10, no. 179, Feb. 1928, pp. 327-333, 7 figs. Graphic method of determining flexibility of any pipe bend; method when whole pipe bend is in one plane, and when pipe does not lie in one plane; wire model method; graphical method; actual deflection-stress factor for U-bends; ratio of actual deflection-stress factor to theoretical deflection-stress factor; ratio of test and theoretical deflection-thrust factor.

STEAM TURBINES

LUBRICATION. The Circulation System in the Oiling of Steam Turbines. Power House (Toronto), vol. 22, no. 3, Feb. 5, 1928, pp. 31 and 42. Systems of lubrication decided on; individual ring-oiled bearings for small auxiliary type of turbine and improved circulation system for main units; constant circulation; needs light-bodied oil; mineral and petroleum acids; after oil is put into service in turbine circulating system, petroleum acids may be formed.

STEEL

ALLOY. *See Alloy Steels.*

AUTOMOBILE, MACHINABILITY OF. The Machinability of Steels in Automobile Construction (Die Bearbeitbarkeit der Konstruktionsstaehle im Automobilbau), G. Schlisinger. Stahl u. Eisen (Dusseldorf), vol. 48, nos. 10 and 11, Mar. 8 and 17, 1928, pp. 307-312 and 338-345, 22 figs. Determination of best cutting speeds and feeds for machining of case-hardened and high-grade standard steels; comparative investigation with ordinary mild open-hearth steels; influence of water cooling; importance of standardizing alloyed and unalloyed structural steels.

COLD WORKING. The Influence of Cold-Drawing on Mild Steel, R. M. Brown. Iron and Coal Trades Rev. (Lond., vol. 116, no. 3132, Mar. 9. 1928, p. 341.

HEAT TREATMENT, QUENCHING. On a New Method of Quenching Steels in a High-Temperature Bath, K. Honda and K. Tamaru. Tohoku Imperial Univ.—Science Reports (Sendai, Japan), vol. 17, no. 1, Jan. 1928, pp. 69-83, 7 figs. Method of obtaining tempered structures by single process without risk of internal failure in steels which might result during quenching; steels quenched in salt bath heated to high temperatures up to 570 deg., and their hardness and microstructure examined; maximum hardness at quenching temperature of 110 deg. (In English.)

MANUFACTURE, DIRECT PROCESS OF. Direct Steelmaking Process for the Manufacture of Rustless Steel. Swedish Export (Stockholm), vol. 12, no. 3, Mar. 1928, p. 32. Plan for making steel direct from iron ore instead of first reducing ore to pig iron; Flodin-Gustafson process; melting briquettes of iron concentrate and charcoal in electric furnace; intimate mixing of finely distributed iron ore with charcoal, shortens reduction process and gives product that can be rolled.

STRENGTH AT HIGH TEMPERATURES. Determining Endurance of Steel at High Temperatures (Ermittlung der Dauerstandtestigkeit von Stahl bei erhoehten Temperaturen), F. Koerber. Zeit. fuer Metallkunde (Berlin), vol. 20, no. 2, Feb. 1928, pp. 45-49 and (discussion) 49-50, 13 figs. Points to necessity of testing materials at high temperatures; inadequacy of usual hot tensile tests; influence of time; endurance strength as limit load for continuous deformation; results of new tests; study of expansion; importance of strain hardening and recrystallization; simplified method for determination of endurance.

STEEL CASTINGS

MANUFACTURE. Steel Foundry Triples Staff in Past Two Years, W. H. Martin. Can. Machy. (Toronto), vol. 39, no. 5, Mar. 8, 1928, pp. 32-33 and 63, 5 figs. Describes foundry of Joliette Steel, Ltd.; production of steel castings, largely manganese and to lesser extent carbon-steel products; all steel is made by electric-furnace process, scrap steel being used throughout; reversible dipper teeth with replaceable wearing edges; five core ovens maintained in constant use for drying moulds and cores; sand ramming accomplished by pneumatic rammers.

STONE QUARRIES AND QUARRYING

VIBRATING SCREENS. Relative Values of Various Vibrating Screens, D. W. Yambert. Cement, Mill and Quarry, vol. 32, no. 5, Mar. 5, 1928, pp. 25-28. Vibrator screens can be divided into four classes, according to means of imparting vibration to screen cloth; reference for quickly determining and comparing features of several makes of screens.

STORAGE BATTERIES

TEMPERATURE EFFECT. Effect of Temperature and Other Factors on the Performance of Storage Batteries, G. W. Vinal and C. L. Snyder. Am. Electrochem. Soc.—Advance Paper, no. 13, for mtg., Apr. 26-28, 1928, pp. 119-130, 10 figs. Experiments are described in which effect of extreme conditions, such as low temperatures and high discharge rates are determined separately for positive and negative plates of lead storage battery; it was found that temperature effects are less for higher concentrations of electrolyte in case of positives, whereas reverse is true for negatives.

STREETS

LOW COST. Low Cost Pavements for City Streets, C. N. Conner. Pub. Works, vol. 59, no. 3, Mar. 1928, pp. 92-95, 3 figs. Types are considered whose average initial cost is $2.00 or less per square yard; untreated surfaces of gravel, chert, shale and sand-clay; broken stone and lime rock base; bituminous surface treatments; mixed-in-place method; premium bituminous types; Portland cement concrete; calls attention to few of salient facts on low-cost paving for city streets.

WIDENING Effect of Street Widening on Value of Abutting and Adjoining Property. Roads and Streets, vol. 68, no. 3, Mar. 1928, pp. 133-135, 4 figs. Results of questionnaire to municipal and private engineers; well authenticated information on this question grows more important as increasing numbers of cities resort to street widening; to get such information, survey among both municipal and private engineers was conducted; brought to light numerous examples of more specific information.

STRUCTURAL STEEL

WELDING. Welding Trusses for Industrial Buildings, A. Vogel. Contractors' and Engrs'. Monthly, vol. 16, no. 3, Mar. 1928, pp. 166-167, 1 fig. It has been definitely shown that cost of welding trusses is no more than cost of riveting trusses; necessary to make various truss designs and compare them with riveted trusses in order to see what results would be obtained; simpler members can be used in welded trusses, resulting in saving of rolling cost, handling cost, paint and inspection.

SWIMMING POOLS

WATER TREATMENT. Purifying Water in Swimming Pools. Can. Engr. (Toronto), vol. 54, no. 12, Mar. 20, 1928, pp. 373-374, 3 figs. Popular size of swimming pools; rate of refiltration and turning periods; sterilizing by ultra-violet rays; removal of hair and lint by means of suction cleaner; filters and cleaning of St. Jacques Bath, Montreal; water is turned in this pool approximately every 10 hours; it passes through two 60-in. filters and then through ultra-violet ray two-lamp sterilizer; equipped with suction cleaner.

T

TIN ORE TREATMENT

LEACHING. Reduction Roast, Leaching and Electrolytic Treatment of Bolivian Tin Concentrates, C. G. Fink and C. L. Mantell. Eng. and Min. Jl., vol. 125, no. 11, Mar. 17, 1928, pp. 452-455, 4 figs. Method proposed for Bolivian concentrates consists of reduction by gas, leaching with stannous solution, electrolytic precipitation of metal and re-use of partly stripped electrolyte as solution for leaching fresh reduced concentrate; experiments indicate possible recovery higher than 96 per cent; authors close with résumé of this and five previous articles.

TOPOGRAPHIC MAPPING

UNITED STATES. Topographic Mapping of the United States, C. H. Birdseye. West. Soc. Engrs.—Jl., vol. 33, no. 1, Jan. 1928 (Tech. Sec.), pp. 5-6. Temple Act, passed by Congress in 1925, authorized completion of topographic mapping of United States in 20 years; federal appropriation for fiscal year 1927 was $453,059, for 1928, $510,200, and for 1929 budget is $505,000; Topographic Branch of Geological Survey is map-making organization; outstanding development in modern surveying is increasing use of aerial photography.

TORSION BALANCES

OERTLING. Torsion Balances and Its Applications (La balance de torsion et ses applications). Revue de l'Industrie Minérale (Paris), no. 173, Mar. 1, 1928, pp. 72-73, 3 figs. How torsion balance is used in locating underground geologic formations; Oertling balance is described.

TROLLEY LINES, OVERHEAD

MAINTENANCE AND REPAIR. Neglected Overhead, L. W. Birch. Elec. Ry. Jl., vol. 71, no. 11, Mar. 17, 1928, pp. 435-438, 9 figs. Many railways have increased car speeds and weights and added power load without improvements in overhead; small factors of safety are insufficient when deterioration occurs; a slack trolley wire is linesman's enemy; rustproofing pays; in this article, no attempt is made to discuss relative merits of direct suspension system and catenary system other than is necessary to emphasize fully thought of correcting common errors in overhead line maintenance; span wires and span insulation; association committee assists in improvement of practices.

TURBO-GENERATORS

FOUNDATIONS, VIBRATION OF. Computed and Measured Vibrations of a Turbine Foundation (Rechnerisch ermittelte und gemessene Schwingungszahlen en einen Turbinenfundament), G. Mensch. Bauingenieur (Berlin), vol. 9, no. 9, Mar. 2, 1928, pp. 152-163, 5 figs. Plan and section of 12,500-kw. turbo-generator installation at Wilmersdorf power plant of Elektricitaetswerk Sudwest A.G.; comparison of vertical and horizontal vibrations of foundation, as determined mathematically and as actually measured by means of Schenk instrument, shows that computed values are in excess of measured values.

Vibration of Turbine-Generator Foundations, T. C. Rathbone. Power, vol. 67, no. 14, Apr. 3, 1928, pp. 588-592, 6 figs. Points out that customary efforts to avoid resonance by design are quite insufficient, most structures are too complex to predetermine many modes of vibration, and many harmful or beneficial features affecting smooth running are too often overlooked; how mass and elasticity affect natural frequencies; presents chart for finding critical-speed coefficients.

V

VACUUM TUBES

HIGH-FREQUENCY. High-Frequency Current. Power, vol. 67, no. 13, Mar. 27, 1928, p. 547, 4 figs. Describes new high-frequency vacuum tube about six inches in diameter and two feet long, developed by engineers of General Electric Co. laboratories; has capacity of 15 kw. at 50,000,000 cycles and 6-meter wave length.

WATER COOLING. Water Cooling for Radio, J. O. Gargan. Bell Laboratories Rec., vol. 6, no. 1, Mar. 1928, pp. 221-225, 4 figs. Disposes of heat generated in vacuum tubes of high-power broadcasting station; development and introduction of water-cooled tubes; new type of water jacket in which thin cylindrical sheet of water passes over anode surface at very high velocity; distilled water is used for cooling.

VEHICULAR TUNNELS

CONSTRUCTION. Large-Section Tunnel Construction at Asheville, E. L. Hageman. Eng. News-Rec., vol. 100, no. 11, Mar. 15, 1928, pp. 441-443, 6 figs. Section 48 by 27 ft. opened by widening centre heading and taking out bench in two lifts, using power shovels and cars; rock tunnel of unusually large section, 920 feet long; construction methods and plant; estimated that average of 7,000 vehicles daily will pass through this tunnel.

VOLTMETERS

HARMONIC ANALYZER. Harmonic Analyzer for Power Circuits, W. V. Lovell. Elec. News (Toronto), vol. 36, no. 5, Mar. 1, 1928, pp. 41-43, 2 figs. Harmonic analyzer described is essentially voltmeter capable of measuring magnitude of any single-frequency voltage in range of 60 to 3,000 cycles in presence of voltages of other frequencies; sensitivity; selectivity; susceptibility to stray fields; calibration; method of operation.

W

WALLS, BRICK

TESTING. Brick Masonry—Its Strength and Physical Properties. Brick and Clay Rec., vol. 72, no. 6, Mar. 13, 1928, pp. 414-420, 1 fig. Contains valuable data on brick wall strength, compressive strength, both for solid and hollow walls, fire resistance, sound and moisture penetration and other properties which mean so much to builder and building official.

WATER DISTRIBUTION

SURVEY. Water Distribution Surveys Reduce Extension Costs, P. J. Hurtgen. Water Works Eng., vol. 81, no. 7, Mar. 28, 1928, pp. 408 and 442. Thousands of dollars saved where leak survey was made; results often indicated that larger mains were not necessary; probable increase in population during next 25 years; present water consumption; plans and recommendations for economical programme of construction; pitometer used on main to measure flow; pressures obtained by test gauges attached to hydrants; design of mains for present and future. Abstract of paper presented at Wis. Section, Am. Water Works Assn.

WATER FILTRATION PLANTS

OPERATION OF. One Year's Operation of the St. Catharines Filter Plant, A. Milne. Contract Rec. (Toronto), vol. 42, no. 11, Mar. 14, 1928, pp. 295-297, 5 figs. Operating staff; plant operation is performed by four men; unusual turbidity conditions; total amount of water filtered during year was 1,722,890,-000 imperial gallons; tests and records; operating costs; cost of production per million gallons works out at $16.57 at rate filtered.

St. Catharines Filter Plant Operation, A. Milne. Can. Engr. (Toronto), vol. 54, no. 11, Mar. 13, 1928, pp. 113-114, 4 figs. Records of past year show that plant could filter and chlorinate water at $9 per million imperial gallons; preliminary cleaning and sterilizing; turbidity counts frequently high; amount of chlorine used; daily bacterial tests; operating costs. Paper read before Can. Sec., Am. Water Works Assn.

CHEMICAL WATER TREATMENT. Modern Filtration Plants Depend Primarily on Chemical Water Treatment, C. A. Brown. Hydraulic Engr., vol. 4, no. 3, Mar. 1928, pp. 158, 160, 169, 171 and 175. Constantly improving methods of water purification demand more complex chemical treatment; dry and wet feed systems; filter controllers; proportional rate control; loss of head gauges; plant operation; function of operation.

WATER PIPE LINES

CONSUMPTION MEASUREMENTS. Pitometer Analysis of Distribution System Flow, P. J. Hurtgen. Am. Water Works Assn.—Jl., vol. 19, no. 3, Mar. 1928, pp. 274-279. City of Kenosha deemed it advisable to have survey made of water works distribution system in order to determine adequacy of present system and requirements 25 years hence; Pitometer Co. made chart showing average daily pumpage together with their predictions for future consumption; pitometers were placed on each of two mains to measure total consumption for 24 hours, night rate and maximum for one hour; determination of loss of head and investigation of weak points in distribution system; design of mains for present and future.

Electrolysis. Electrolysis of Water Pipes and Means of Combatting It, W. B. Buchanan. Contract Rec. (Toronto), vol. 42, no. 13, Mar. 28, 1928, pp. 335-337, 4 figs. Corrosion may occur at junction of 2 pipes of dissimilar metals due to local action or it may also occur on single piece of metal pipe which contains impurities; effects of stray currents; analyzing electrolysis conditions; survey procedure; conductivity in joints; meters and measurements.

Supporting, Bridge. Constructing Water Mains on Bridges, G. G. Routledge. Can. Engr. (Toronto), vol. 54, no. 11, Mar. 13, 1928, pp. 119-120. Experience of Toronto officials with various types of joints, supports, air valves and insulation; details which require consideration in connection with construction of water main on bridge; pipe joints; using "Victaulic" joints; location of air valves; protection from frost; mains over steam railways. Paper read before Can. Sec., Am. Water Works Assn.

WATER POWER

New Brunswick. Hydro Power in New Brunswick. Can. Engr. (Toronto), vol. 54, no. 12, Mar. 20, 1928, pp. 385-386, 3 figs. Developed and undeveloped water powers in province; largest development at Grand Falls; powers well distributed; completed developments; undeveloped sites that have been more or less investigated and subjects of reports; eight isolated central stations in province all under separate management and ownership.

WATER PURIFICATION

Sludge. Returned Sludge in Water Purification, A. W. Bull. Water Works, vol. 67, no. 3, Mar. 1928, p. 112. Reducing supersaturation or lack of chemical reaction; sludge which may be obtained from coagulation basins is suitable material for this purpose; brief summary of data obtained on this point at Columbus, Ohio, and at Pittsburgh, Pa.

WATER SOFTENING

Methods. Water Hardness: Its Effects and Removal, R. E. Thompson. Contract Rec. (Toronto), vol. 42, no. 12, Mar. 21, 1928, pp. 309-311. Temporary and permanent hardness; effects of hardness; effect in boiler operation; railroads have found water treatment to be important means of reducing operating costs; softening methods; lime-soda process; softening by base exchange; lime-zeolite method. Paper read at Can. Section, Am. Water Works Assn.

WATER WORKS

Laboratory Tests. Value of Water Works Laboratory Tests, A. E. Berry. Can. Engr. (Toronto), vol. 54, no. 11, Mar. 13, 1928, pp. 111-112 and 120. Safety of Supply depends upon adequate control; operator should keep definite records; plants laboratory frequently saves more than it costs; laboratory facilities; laboratory service required; research in plant operation; routine tests; laboratory personnel and training; keeping plant records. Paper read before Can. Sec., Am. Water Works Assn.

London, Ontario. The London Municipal Water Works System, E. V. Buchanan. Contract Rec. (Toronto), vol. 42, no. 11, Mar. 14, 1928, pp. 287-290, 7 figs. Beck Wells pumping station proper has three 2,000,000-gal., 2-stage turbine pumps running at 750 r.p.m. against pressure of 115 lbs.; all driven by 550-volt synchronous motors; Springbank pumping station; two 3,000,000-gal. turbine pumps driven by 2,300-volt synchronous motors; nature of wells; water is of excellent quality from bacteriological point of view; water works has always been self-sustaining.

Municipal Management. Management of a Municipally-Owned Water Works, F. W. Albert. Am. Water Works Assn.—Jl., vol. 19, no. 3, Mar. 1928, pp. 253-273, 1 fig. Assumes that selection of water supply has been properly handled, plant built and equipped and mains and services laid, and limits discussion to sufficiently large problem of management of municipally-owned water works as going concern; what management implies; line organization; engineering and construction unit; pumping and filtration divisions; budget; external contacts; good will of public.

WIRE, COPPER

Tensile Strength. Distribution of Tensile Strength in Hard Drawn Copper Wire, F. W. Harris. Am. Inst. and Met. Engrs.—Tech. Pub., no. 93. Mar. 1928, 18 pp., 17 figs. Strength is largely matter of physical structure, and all factors known to affect this structure, such as rolling temperature, die contours, lubricants, drawing speeds, etc., are matter of prime importance; results of experiments carried out during past year at Baltimore plant of Am. Smelting and Refining Co.; region of highest strength appears to be in zone near core; annealed rod is almost uniform throughout.

WIRE DRAWING

Power Required in. Power Consumption and Flow of Metal in Wire Drawing, J. D. Brunton. Wire, vol. 3, no. 3, Mar. 1928, pp. 79-80, 1 fig. Number of readings have been taken with idea of trying to arrive at actual horse power necessary for drawing different sizes of wire; wide range of sizes and qualities of material were taken, and formula worked out.

WIRE, STEEL

Cold Rolling. The Cold Rolling of Steel Wire (Das Kaltwalzen von Eisendraehten), M. v. Schwarz and H. Goldschmidt. Stahl u. Eisen, vol. 48, no. 9, Mar. 1, 1928, pp. 265-268, 13 figs. Account of tests whereby wire drawing was replaced by cold rolling; results demonstrate advantages of cold rolling; relative strength values of drawn and rolled wire.

ZINC METALLURGY

Cowley Process. The Cowley Process of Zinc Extraction, H. E. Colly. Metal Industry (Lond.), vol. 32, no. 9, Mar. 2, 1928, pp. 225-227. "Nascent" condition of carbon; reduction by hydrocarbons; variety of metal oxides; apparatus employed; cylinder expansion and zinc-fume difficulties.

ZINC ORE ROASTING

Australia. Drying and Roasting of Zinc Concentrate, E. H. Fraser. Am. Zinc Inst.—Bul., vol. 11, nos. 3-4, Mar.-Apr. 1928, pp. 21-23 and 60. Zinc concentrate, produced at Zeehan by flotation from Read-Rosebery ore, dried and roasted for production of calcine suitable for electrolytic zinc process at Risdon, Tasmania; roasting equipment, four 7-hearth, 10-ft. internal-diameter Herreshoff furnaces; careful control of temperatures necessary to avoid volatilization of lead and formation of zinc ferrate; undesirable in that it adversely affects extraction of zinc in electrolytic process.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street. New York, N.Y.

A

AERIAL SURVEYING

Topographic, Canada. Topographical Surveying in Canada, T. H. Bartley. Can. Engr. (Toronto), vol. 54, no. 15, Apr. 10, 1928, pp. 437-439, 3 figs. Aerial surveys under Dominion auspices; graphical methods of plotting are exclusively employed; stereoscope used with vertical aerial photographs is developing promising possibilities; operations by Ontario Surveys Branch; international boundary; precise leveling. Report of committee on topographical and exploration survey presented at Ontario Land Surveyor's Assn.

AIRPLANE ENGINES

Exhaust-Pipe Tests. Exhaust Equipment Temperature Determinations, F. W. Heckert. Air Corps Information Cir., vol. 6, no. 594, Sept. 15, 1927, 7 pp., 5 figs. Investigation of actual exhaust-pipe temperatures prevailing in flight and on ground; by means of potentiometer temperature recorded in pilot's cockpit; data obtained from aluminum stacks and standard steel exhaust equipment; built-up short aluminum finned stacks used; showed better insurance against fire hazard; highest temperatures recorded from steel whirl-chamber type exhaust manifold.

Oil Engines. The Performance of Several Combustion Chambers Designed for Aircraft Oil Engines, W. F. Joachim and C. Kemper. Nat. Advisory Committee for Aeronautics—Report, no. 282, 1928, 12 pp., 13 figs. Investigations of single-cylinder test engines to determine performance characteristics of four types of combustion chamber; increase in specific power output of high-speed aircraft oil engine depends upon ability to obtain higher mean effective pressures and improvements in mechanical efficiency of engine; best performance with bulb-type combustion chamber designed to give high degree of turbulence.

AIRPLANE PROPELLERS

Design. Propeller Data for Performance Estimates, E. M. Bertran. Aero Digest, vol. 12, nos. 3 and 4, Mar. and Apr. 1928, pp. 346-348 and 465 and 514-516 and 704, 13 figs. Mar.: Estimating combination of different propellers and engines with view to fairly accurate estimate of power available of airplane in different conditions of flight; computing horse power available for full throttle flight at sea level. Apr.: Flight at sea level with motor throttled; horse power delivered by motor at given r.p.m. decreases with altitude.

AIRPLANES

Metal, Construction of. Duralumin All-Metal Airplane Construction, W. B. Stout. Soc. Automotive Engrs.—Jl., vol 22, no. 4, Apr. 1928, pp. 430-432 and (discussion) 432-436. Structural members fashioned from sheet duralumin rather than from tubes; for compression loads, duralumin has great deal more strength for giving weight than steel, cannot be used for compression members in combination with steel in tension members; damaged parts repaired readily; built-up sections of metal riveted together give warning of coming failure; exterior protection against corrosion.

Methods of Building Metal Airplane Structures, C. W. Hall. Soc. Automotive Engrs.—Jl., vol. 22, no. 4, Apr. 1928, pp. 426-430, 5 figs. Parts of blanked and pressed metal made directly by machine in complete units ready for final assembly; methods followed by Hall-Aluminum Aircraft Corp. in forming members, building frames and assembling; making flanged-tube sections for truss chords; members secured together by riveting; high ratio of strength to weight obtained; cost of production lower; use by Navy; lightness of wing and aileron structures.

Stress Analysis. Stress Analysis of Commercial Aircraft, A. Klemin and G. F. Titterton. Aviation, vol. 24, nos. 15. 16, 17, 18 and 19, Apr. 9, 16, 23, 30 and May 7, 1928, pp. 890-891 and 896-899, 5 figs., 974 and 1034-42, 3 figs., 1148-64, 5 figs., 1244-50, 6 figs., and 1314-20, 6 figs.

Wings, Slotted. The "Slotted Moth." Flight (Lond.), vol. 20, no. 12, Mar. 22, 1928, pp. 195-197, 4 figs. Four separate flights, each made with object of showing some particular function of slotted-wing machine; demonstration of stalling machine from about 200 ft. without any power to flatten out; vertical rate of descent, 9 ft. per second; Moth appeared to descend in series of steps; under-carriage itself was entirely undamaged, but fuselage gave way; automatic slots greatly reduced seriousness of mistakes in piloting. See also Aeroplane, vol. 34, no. 12, pp. 388, 390.

ALLOY STEELS

Automotive Industry. Alloy Steels and Their Uses, B. Egeberg. Soc. Automotive Engrs.—Jl., vol. 22, no. 4, Apr. 1928, p. 484. Suitability for automotive purposes considered; automotive industry is especially interested in alloys containing up to 5 per cent of nickel and up to approximately 1.5 per cent of chromium, with carbon content ranging from 0.10 to 0.50 per cent; results of increasing nickel content; corrosive agents with which alloy steel will come into contact.

ALUMINUM

Welding. Welding of Aluminum (Bemerkenswertes ueber die Aluminiumschweissverfahren und ihre technische Bedeutung), H. Holler. Autogene Metallbearbeitung (Halle, Germany), vol. 21, nos. 4 and 5, Feb. 15 and Mar. 1, 1928, pp. 46-54 and 66-70, 30 figs. Description of methods used in welding aluminum plates, pipes, vessels, etc.; microstructure of aluminum welds; study of hammer welded joints of aluminum.

ALUMINUM CASTINGS

Properties. Influence on Mechanical Properties of Aluminum, W. Claus and F. Goederitz. Can. Foundryman (Toronto), vol. 19, no. 4, Apr. 1928, pp. 13-14 and 21, 7 figs. Investigation made by authors of influence of moulding methods, (chill, cast, green sand, dry sand), on some mechanical properties such as grain size, hardness, tensile strength and elongation; besides pure aluminum, American alloy with 8.0 per cent of copper and German alloy with 10.0 per cent of zinc and 2.0 per cent of copper wire were used. Abstract translated from Giesserei-Zeitung, Sept. 15, 1927, p. 516. See reference in Eng. Index, 1927, p. 34.

AQUEDUCTS

Hetch Hetchy, San Francisco. Construction Progress on Hetch Hetchy Aqueduct, M. M. O'Shaughnessy. Eng. News-Rec., vol. 100, no. 16, Apr. 19, 1928, pp. 614-616, 4 figs. Work approaching completion on 17 mi. of foot-hill tunnels; shafts completed for 30-mi. coast-range tunnels; aqueduct for water supply of San Francisco, Calif., is 156 mi. long; cross-sections of two sizes were used 10¼ and 14¼ ft. high, both of horseshoe shape; cost estimates on work yet to be done in San Joaquin and coast range divisions.

ARCHES, CIRCULAR

Stresses. A Graphic Method for Determining the Stresses in Circular Arches Under Normal Loads by the Cain Formulas, F. A. Noetzli. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 5, part 1, May 1928, pp. 1531-1533. Stresses in one of arch slices of Stevenson creek test dam were calculated with these curves and compared with stresses as determined from tests. Discussion of paper by F. H. Fowler, continued from Mar. 1928 issue of Proceedings.

ASH HANDLING

Hydraulic System. Removing Molten Ash by Hydro-Jet System, D. H. Scranton. Power, vol. 67, no. 18, May 1, 1928, pp. 754-757, 7 figs. Among innovations in connection with installation of pulverized-fuel-burning boilers at C. R. Huntley Station of Buffalo General Elec. Co. is hydro-jet system of ash removal applied to disposal of molten ash, where comparatively low-fusion-ash coals are being burned.

AUTOMOBILE PLANTS

Machine Tools. Single-Purpose Manufacturing, F. L. Faurote. Factory, vol. 75, no. 4, Apr. 1928, pp. 769-773, 7 figs. Machine-tool equipment in Ford plant based upon idea of one-purpose machines; standard and adapted machines and transportation and handling devices; 53,000 machine tools in Ford shops; tool-design department; new welding machines necessary; Johannson blocks made in Ford laboratory; machine-tool efficiency starts with foresight and planning, followed by accurate scheduling and routing.

AUTOMOBILES

Frames, Manufacture of. The Automatic Fabrication of Automobile Frames, J. P. Kelley. Soc. Automotive Engrs.—Jl., vol. 22, no. 5, May 1928, pp. 565-569, 5 figs. Methods of A. A. Smith Corp.; daily capacity of 7,000 frames; nearly all steel comes to plant in form of strips, which are rolled to remove curvature and inspected automatically for dimensions; operations and handling are automatic except pickling, cleaning and oiling stock and inspecting assembled frame; economical use of strip steel dependent upon offsetting operation making strip conform to vertical curves of finished frame.

B

BALANCING

Rotors. The Static Balancing of Rotors, B. P. Haigh. Engineer (Lond.), vol. 145, no. 3768, Mar. 30, 1928, pp. 338-340, 9 figs. partly on p. 350. As current method of balancing by rolling rotor on rails does not appear sufficiently sensitive or reliable for many practical purposes, author considers in detail principle and mode of operation of Martin static balancing machine. variety of work that can be balanced in such machines, with beneficial results in service appears to be almost unlimited.

BEAMS, REINFORCED CONCRETE

Stresses. An Investigation of Web Stresses in Reinforced Concrete Beams—Restrained Beams, F. E. Richart and L. J. Larson. Univ. of Ill.—Bul., vol. 25, no. 34, Apr. 24, 1928, 76 pp., 27 figs. Tests form part of extended investigation of web stresses; study of action of web reinforcement in overhanging or restrained beams in which there are both positive and negative bending moments; tests made on 59 large rectangular beams, 18 ft. long, 8 in. wide and 15 in. in effective depth.

BEARINGS

Efficiency. Factors Governing Efficiency of Various Types of Bearings. Can. Machy. (Toronto), vol. 39, no. 8, Apr. 19, 1928, pp. 46 and 48 and 50 and 77. Notable progress made; lubricating methods; provision for adjustment; post hanger; Hyatt bearing for use with high-speed shafting; greatly increased shaft life; split pillow block; alignment and expansion; adjustable bearing; safety considered when placing bearings.

Lubrication. Lubrication and Bearing-Metal Problems in Metallurgical Works (Schmiermittelund Lagermetallfragen im Huettenbetriebe), K. Hopfer. Stahl u. Eisen (Dusseldorf), vol. 48, no. 13, Mar. 29, 1928, pp. 408-410, 2 figs. Refers to early and more recent works on development of hydrodynamic bearing-friction theory, and discusses properties and suitability of different bearing alloys; claims that problem of bearing metal and lubricant cannot be treated separately.

Non-Metallic. Non-Metallic Bearings (Nichtmetallische Lagerschalen), Maschinenbau (Berlin), vol. 6, no. 24, Dec. 15. 1927, p. 1210. In review of new bearing materials German Committee for Economical Production (AWF) mentions, besides rubber and wooden bearings, new type of bearing in which carrying material is of horny character; this material is pressed on to steel backings; it is said to be resistant to acids, pressure and heat. not to break or spall and to be elastic. See brief translated abstract in Automotive Abstracts, vol. 6, no. 4, Apr. 20, 1928, p. 117.

BOILER FURNACES

IMPROVEMENTS. Progress in Burning Coal, A. G. Christie. Power, vol. 67, no. 15, Apr. 10. 1928, pp. 658-660, 1 fig. Recent progress may be credited to following influences: increased furnace size and better combustion; increased furnace temperatures; better appreciation of radiant heat transfer and of equipment and furnace requirements for various coals; improvements in stoker design and in powdered-coal systems; better instruments and improved furnace control. Abstract of address before Philadelphia Sec., A.S.M.E.

PULVERIZED COAL. A New Method of Firing Boilers With Pulverized Coal Without Furnace (Neue Kohlenstaubfeuerung fuer Flammrohrkessel ohne Brennkammer), K. Jaroschek. Braunkohle (Halle a-S. Ger.), vol. 27, no. 12, Mar. 24, 1928, pp. 221-224, 1 fig. Theory and practical method of new system of firing Lancashire boilers with pulverized lignite; tests showing efficiency of 76.7 per cent; adapting this system to firing with other pulverized coals.

BOILERS

HIGH-PRESSURE. Developments in High-Pressure Boilers, D. S. Jacobus. Engrs'. Soc. West. Penn.—Proc., vol. 43. no. 9, Dec. 1927, pp. 398-408 and discussion 409-416, 13 figs. One of boilers at Crawford Avenue station of Commonwealth Edison Co., Chicago; 650 lb. gauge; Babcock and Wilcox boiler for 1,200-lb. working pressure installed at Edgar station of Edison Electric Illum. Co. of Boston; Stirling boiler constructed for 1,390-lb. working pressure at lake-side plant of Milwaukee Electric Ry. and Light Co.; drumless boiler and its furnace.

KLINGENBERG PLANT, BERLIN. The Boiler Plant, F. Muenziger. Eng. Progress (Berlin), vol. 9, no. 3, Mar. 1928, pp. 72-79, 13 figs. Details of boilers and boiler-house equipment at Klingenberg station, Berlin, Germany; design of boilers worked out by A.E.G., on which tenders were based; system where boilers, economizers and air preheaters are arranged one above other was especially recommended; boiler heating surface, inclusive of cooling surface of combustion chamber was fixed at 18,850 sq. ft.; preparation and pulverizing of coal.

LOCOMOTIVE. *See Locomotive Boilers.*

WASTE-HEAT. Steam Generation—Waste Heat Boilers—Reduction of Steelworks Costs, J. Adamson and F. Jones. World Power (Lond.), vol. 9, no. 11, Mar. 1928, pp. 167-176, 7 figs. Effect of high-gas-velocity theories on design of modern boilers; modern waste-heat boilers; flame-tube boiler; installation of waste-heat plant; economies possible with various furnaces; construction of fire-tube waste-heat boilers and maintenance; economic aspect; value of equivalent coal saved; typical balance sheets for waste-heat boiler installations in steel works. Abstract of paper read before Instn. Mech. Engrs.

The Utilization of Waste-Heat from Large Gas Engines, Industrial Furnaces and Producers. Demag News (Duisburg), vol. 2, no. 2, Apr. 1928, pp. 31-37, 15 figs. Smoke-tube waste-heat boilers used in combination with industrial furnaces; producers with steam jackets; interpolating waste-heat boiler between cooler scourer and producer; making use of heat of water-gas producers, for generation of steam as well; diagram of water-gas producer plant with waste-heat utilization.

See also Pressure Vessels.

BORING

TEMPERATURE EFFECT VS. ACCURACY. Effect of Temperature on Bored Holes. Machy. (Lond.), vol. 32, no. 808, Apr. 5, 1928, p. 22. Effect of variations in temperature on accuracy of work; as machining progresses, casting becomes heated by work of cutting tool; if, in machining, proper attention is paid to elements of clamping, temperature and order of machine work it will be unnecessary to season castings or forgings that have been properly annealed or allowed to cool slowly.

BRICK

PAVING, TESTING. A New Method of Testing Paving Bricks, J. A. van der Kloes. Roads and Road Construction (Lond.), vol. 6, no. 63, Mar. 1, 1928, pp. 80-81, 4 figs. Most suitable test for paving bricks is ball test; has been in use in Holland for some years and is becoming increasingly popular.

BRIDGES

CONCRETE, ARCH. Long-Span Reinforced-Concrete Bridge Over the Luzhnits at Bekhynye (Eine 90 m. weit gaspannte Eisenbetonbogenbruecke ueber den Luzincfluss in Bechyne), E. Viktora. Beton u. Eisen (Berlin), vol. 27, no. 6, Mar. 20, 1928, pp. 103-109, 9 figs. Design of highway bridge also carrying one track of electric railroad, near Tabor in Czechoslovakia; bridge comprises reinforced-concrete arch of 90 m. span, 38 m. rise, approaches total over 150 m.; width of roadway, including sidewalks, 8.9 m.; estimated cost, 5.5 million crowns.

CONCRETE, GERMANY. The Hindenburg Bridge Over the Saale at Hof (Die Hindenburgbruecke ueber die Saale in Hof). Bauingenieur (Berlin), vol. 9, nos. 12, 13, Mar. 27, 1928, pp. 199-201, 9 figs. Design and construction of reinforced-concrete bridge consisting of 4 single and 2 double longitudinal bents of 34 m. span, each bent being a rigid, practically rectangular frame; design combines features of leg bridges and T-beam bridges; details of form-work and reinforcement; description, with sketches, of rigorous loading tests.

DESIGN. Bridges, E. O. Williams. Roy. Inst. Brit. Architects—Jl. (Lond.), vol. 35, no. 9, Mar. 10, 1928, pp. 296-304, 20 figs. Classified into three main types, arch, beam and suspension, with other subsidiary variations of these; various bridges of world drawn to same scale; in designing bridge, type should to some extent reflect nature of soil below; use of various materials for construction is indicated by diagram.

HIGHWAY, NEW BRUNSWICK, N.J. Contract To Be Placed for Raritan River Bridge. Port of New York, vol. 7, no. 3, Mar. 1928, p. 9. New bridge at New Brunswick, N.J., to cost $1,500,000; total length of structure will be 1,740 ft., consisting of reinforced-concrete arch rib spans and two approach solid-barrel arches having span of 70 ft. each in clear; roadway width of 50 ft. with two 6-ft. sidewalks.

PIERS, STABILITY. Movements of Débris and Shifting of Stream Beds at Midstream Piers (Grundstroemung und Geschiebebewegung an umflossenen Strompfeilern), A. Hinderks. Bautechnik (Berlin), vol. 6, no. 11, Mar. 16, 1928, pp. 133-135, 10 figs. Report on experiments with models of piers, made at hydraulic laboratory of Hanover Institute of Technology; study of stream lines and undermining tendencies at bases of plates and piers of rectangular and other cross-sections.

RAILING, MALLEABLE IRON. Malleable Iron Bridge Railing Withstands Severe Tests, F. W. Groh. Eng. News-Rec., vol. 100, no. 16, Apr. 1928, pp. 618-619, 4 figs. New railing material meets all requirements for strength and appearance in new Liberty highway bridge spanning Monongahela river in Pittsburgh; specification requirements for malleable iron castings.

SKEW ARCH, DESIGN. Crown Stresses in a Skew Arch, B. F. Jakobsen and E. Godfrey. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 5, part 1, May 1928, pp. 1639-1643. Deals with arches as applied to dams; it is claimed that if skew arch must be used it should be done by constructing separate parallel ribs not bonded in such manner as to transmit shear from one to another. Discussion of paper by J. C. Rathbun, published in Feb. 1928 issue of Proceedings.

STEEL, ARCHITECTURE. Architectural Forms of Steel Bridges (Die Gestaltung der eisernen Bruecke), K. Schaechterle. Bauingenieur (Berlin), vol. 9, nos. 14 and 15, Apr. 6 and 13, 1928, pp. 239-244 and 261-267, 28 figs. Discusses use of girder truss and arch forms in bridge building from engineering and architectural points of view; architectural features of short-span and long-span German steel bridges of following types: arch, girder, cantilever, suspension, stiffened suspension, etc.

STEEL, ARCH—NEW YORK CITY. Old Masonry Arches Give Way to New Steel Span at High Bridge. Constr. Methods, vol. 10, no. 5, May 1928, pp. 16-19, 15 figs. 426-ft. steel arch span now carries Croton aqueduct over Harlem river, New York City, in place of five of masonry arches and four of river piers of High bridge.

STEEL, ARCH—SYDNEY, AUSTRALIA. The Sydney Harbour Bridge. Engineering (Lond.), vol. 125, no. 3249, Apr. 20, 1928, pp. 467-471, 20 figs. (partly on p. 480 and supp. plate). Main bridge consists of two-hinged arch with five steel approach spans at either end; main span consists of two silicon-steel arch trusses, spaced 98 ft. 6 in. apart with span of 1,650 ft.; all material in approach spans is structural carbon steel; abutment towers are hollow rectangular concrete chambers.

STEEL, CONSTRUCTION. The Erection of the Yuma, Arizona, Bridge Over the Colorado River, J. W. Towle. Cornell Civil Engr., vol. 36, no. 7, Apr. 1928, pp. 177-180, 196 and 198, 6 figs. Tells how single-span bridge was erected on one side of river, run out over pier until one end rested on barge which was floated across river and bridge end landed in place on abutment.

SUSPENSION, DESIGN. The Stiffness of Suspension Bridges, S. Timoshenko. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 5, part 1, May 1928, pp. 1464-1478, 5 figs. Method is developed by which additional cable stress and deflection curve produced in suspension bridge either by live load or by temperature variation may be directly calculated; due to quick convergence of series used, deflections and bending moments in span truss can be calculated in much shorter time than by usual method.

SUSPENSION—HUDSON RIVER, NEW YORK CITY. The Hudson River Bridge, O. H. Ammann. Engineer (Lond.), vol. 145, no. 3771, Apr. 20, 1928, pp. 426-428, 6 figs. Abstract of first progress report on condition at beginning of year of Hudson river bridge, which is being built at New York, between Fort Washington and Fort Lee; deals specially with design of bridge, which will have span twice length of any suspension bridge constructed up to present time.

WOODEN, CREOSOTED. New Mexico's Experience with Treated Timber Highway Bridges, E. B. Van de Greyn. Wood Preserving News, vol. 6, no. 4, Apr. 1928, pp. 38-41 and 52, 2 figs. First creosoted timber bridge; reasons for adoption of creosoted timber and piles; comparison of cost of creosoted and untreated timber bridge; design basis; construction features.

BUILDING MATERIALS

HEAT INSULATION PROPERTIES. Heat Insulation Properties of Building Materials (Varmegennemgang i bygningskonstruktioner), J. T. Lundbye. Tekniske Forenings Tiddsskrift (Copenhagen), vol. 52, no. 3, Feb. 1928, pp. 85-94, 8 figs. Tells of tests made together with illustration and tables; report based on results of 250 to 300 measurements daily, totalling 500,000 items. Paper presented at meeting of Scandinavian Refrig. Engrs.

PRODUCTION STATISTICS, CANADA. Building Materials Production in Canada Sets New High Record. Contract Rec. (Toronto), vol. 42, no. 15, Apr. 11, 1928, pp. 379-382. Highest total for structural materials; clay products and other structural materials; sand-lime brick; sand and gravel; stone.

BUILDINGS

REINFORCED CONCRETE, CODES. Modern Building Regulations for Reinforced Concrete, F. R. McMillan. Eng. Jl. (Montreal, Canada), vol. 11, no. 4, Apr. 1928, pp. 291-292. Proposed standard regulations of American Concrete Institute and Concrete Reinforcing Steel Institute; points out some of more important features in which this set of regulations differs from what has generally been practice; load tests; concrete aggregates; quality of concrete; unit stresses; mixing, placing and details of construction; columns and walls.

STEEL, DESIGN. The Design of Tall Building Frames to Resist Wind, A. W. Ross and C. T. Morris. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 5, part 1, May 1928, pp. 1395-1433, 7 figs. Presents method of design for wind-resisting bents of tall buildings, which approaches accuracy and economy, and which is practical for use; calculations of wind stresses in 48-storey tower of Am. Insurance Union Bldg., in Columbus, Ohio, by slope-deflection method; results tabulated and compared with other methods.

WELDED STEEL. Electric-Arc Welding. Constr. Methods, vol. 10, no. 5, May 1928, pp. 6-9, 12 figs. Fifty-ft. high building consisting of 78- by 171-ft. head-house or transept and two main aisles 474 ft. long and 59 and 79 ft. wide respectively; saving of from 12 to 15 per cent in tonnage of steel required; design; roof trusses; welding process; shop fabrication.

C

CANALS

WELLAND, CANADA. Moving 63,000,000 Cubic Yards for Welland Ship Canal. Excavating Engr., vol. 22, no. 4, Apr. 1928, pp. 133-143, 36 figs. New Welland Ship Canal now eighty per cent completed; to be finished in 1930; total cost estimated as $115,000,000; four relocations in one hundred years; canal to take vessels of 25-ft. draught; siphon culvert carries Chippewa creek under canal; unique fastening of discharge pipes; dewatering a problem.

DIVERSION, SPILLWAYS. Side Spillways for Regulating Diversion Canals, A. P. Flockart and G. M. Bacon. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 5, part 1, May 1928, pp. 1527-1529. Discussion of paper by W. H. R. Nimmo, continued from Feb. 1928 issue of Proceedings.

CARS

STREET RAILROAD. Street Car Regenerative Control. Elec. Traction, vol. 24, no. 4, Apr. 1928, pp. 189-190, 2 figs. Europe equipping electric railways with automatic regenerative control and braking at saving of 30 per cent in energy; new system can be used in conjunction with magnetic rail-shoe brakes or electric brakes of any kind; such brakes only required for emergency braking; essential conditions required for traction regeneration; operation of system; advantages claimed for new system.

CASE HARDENING

PRINCIPLES. Facts and Principles Concerning Steel and Heat Treatment. Am. Soc. Steel Treating—Trans., vol. 13, no. 5, May 1928, pp. 848-880, 16 figs. Second series of articles on case hardening; explains mechanism of carburizing and effect of different heat treatments following it; carburizing is due to solution of carbon into steel from some carburizing gas; decarburizing may take place during carburizing; effect of five different heat treatments after carburizing.

CASTING

CENTRIFUGAL. Intricate Spun-Sorbitic Castings, J. E. Hurst. Iron Age, vol. 121, no. 15, Apr. 12, 1928, pp. 1007-1008, 2 figs. Produced in Great Britain by new process; have high strength, machinability and wear resistance; useful for engine cylinders and pistons of all kinds; desirable structure to resist wear; larger and more intricate castings may be made.

PERMANENT-MOULD. Vacuum Principle Is Applied to Permanent Mould Casting, E. Bremer. Foundry, vol. 56, no. 7, Apr. 1, 1928, pp. 256-259, 6 figs. Process developed from practices in moulding and forming glass; operations consist essentially of opening vacuum line, dipping ingress of mould into molten metal, allowing proper time for solidification, opening mould and ejecting finished casting, cooling mild, smoking joints to make proper seal for vacuum, brushing out soot and closing and clamping; control movement.

CEMENT

PORTLAND, SETTING. Setting and Hardening Processes in Cement, R. Nacken. Pit and Quarry, vol. 15, no. 13, Mar. 28, 1928, pp. 79-83, 7 figs. Author discusses use of X-ray in carrying out investigations on cements; nature of testing apparatus and details regarding its use; tells of certain studies made along these lines on composition and constitution of cement and of new experiments recently instituted, dealing with application of these methods to setting and hardening of cement.

CHROMIUM STEEL

WELDING. Welding Chromium Irons and Steels. Iron Age, vol. 121, no. 18, May 3, 1928, pp. 1242-1244, 3 figs. It is necessary to prepare clean joint, use proper flux and strictly neutral flame of minimum dimensions, ending with properly adjusted heat treatment; heat treatment of welded joints; cutlery steels infrequently welded; rustless chrome-nickel irons give ductile welds; extra high chromium induces brittleness; castings should be welded hot.

CITIES AND TOWNS

GEODETIC SURVEYS. Why Cities Need Geodetic and Topographic Surveys, R. H. Randall. Am. City, vol. 38, no. 5, May 1928, pp. 133-134, 1 fig. Inventory of physical facts concerning land and its occupation is of fundamental and prime importance; purpose of city survey to provide this sort of inventory; geodetic and topographic survey is used by city departments and by private individuals and corporations as basis for planning and constructing all general and specific improvement projects.

PLANNING. Some Legal Aspects of City Planning, C. Williams. Wis. Engr., vol. 32, no. 7, Apr. 1928, pp. 216-218, 3 figs. Important problem before city planner is question of costs, which swings to-day on very unstable pivot due to unsettled condition of law; building height regulation; property rights; setback lines in street widening cases; city planner and city attorney owe it to community and to law to hurry along some of these unsettled problems. Abstract of speech presented before Eng. Soc. of Wis.

PLANNING, QUEBEC. Town Planning Project at Chicoutimi, N. Cauchon. Can. Engr. (Toronto), vol. 54, no. 14, Apr. 3, 1928, pp. 421-422, 2 figs. Important developments contemplated at Chicoutimi, Que., to provide facilities for handling traffic from large and populous district; plan to suit peculiar topography of town; work started on extensive harbour improvements on Saguenay river; population is now about 15,000; power and industrial development; planning Chicoutimi.

PLANNING, ONTARIO. Town Plan for North Bay. Town Planning (Ottawa), vol. 7, no. 2, Apr. 1928, pp. 35-38. Appointed Town Planning Commission for town in Ontario of about 15,000 people.

COAL

CARBONIZATION. The Economics of Carbonization at Electric Central Stations, R. P. Soule. Combustion, vol. 18, no. 4, Apr. 1928, pp. 237-243 and 260. Important carbonization products are coke, gas and tar; B.t.u. in form of gas is worth more to central station than B.t.u. in form of solid fuel, because of reduction in size of furnace and boiler, more complete combustion and more automatic control; in discussing cost of carbonizing coal, distinguish between fixed charges and operating expense; conclusions reached in analysis of economics of carbonization at electric central stations is summarized.

See also Pulverized Coal.

COAL BUNKERS

REINFORCED CONCRETE, DESIGN. Coal Bunkers at the Tiefstack Plant of the Hamburg Gas Works (Kohlenbunker auf Gaswerk Tiefstack der Hamburger Gaswerke G.m.b.H. zu Hamburg), H. Kuball. Beton u. Eisen (Berlin), vol. 27, no. 6, Mar. 20, 1928, pp. 115-118, 11 figs. Detailed design of three reinforced-concrete bunkers of 600 cu. m. capacity each; reinforced-concrete water and ammonia water tanks built on top of these bunkers, etc.

COAL

CONSUMPTION, CANADA. Coal Consumption in Canada, F. W. Gray. Iron and Steel of Can. (Gardenvale, Que.), vol. 11, no. 4, Apr. 1928, pp. 100-101. Discussion of preliminary report of Dominion Bureau of Statistics on coal statistics for 1927; comparison with 1920; figure of 3.86 tons per capita use of coal in 1927; avoiding use of coal by increased output of hydro-electric installations and displacement of coal by petroleum products considered; forecast of statistics of Canadian coal usage and production for ten-year period ending 1931.

COAL MINES AND MINING

CANADA. Notes on Coal Mining in Canada, D. H. C. Briggs. Imperial Inst.—Bul. (Lond.), vol. 26, no. 1, Apr. 1928, pp. 60-65, 2 figs. on supp. plate. Estimated coal reserves of Canada; very large amount of coal seams seen, being of sub-bituminous character, contained high ash and moisture contents, but lacked good coking qualities.

COAL TIPPLES

CONCRETE CONSTRUCTION. Concrete in Tipple Construction. Coal Age, vol. 33, no. 4, Apr. 1928, pp. 230-231, 6 figs. As rule, use is confined to foundations only, structure above this point being of wood or steel and glass; main or coal tipple at Kathleen mine, Dowell, Ill., employs concrete for column footings and as support and stiffener of headframe, three sides of shaft lining being carried up from ground landing to dumping point; O'Gara No. 12 tipple, at Harrisburg, Ill., is solid-block reinforced monolithic concrete; examples of concrete tipple construction illustrated.

COLD STORAGE WAREHOUSES

HEATING AND COOLING. Continent's Most Modern Warehouse Now Serves the Port of Montreal, W. H. Martin. Power House (Toronto), vol. 22, no. 8, Apr. 20, 1928, pp. 34-38, 10 figs. Details of heating and cooling systems of Place Viger warehouse of Montreal; thoroughly insulated; two-motor-generator sets; 2-stage system of ammonia compression: advantages of intercooler; efficient lubricating system; boiler-room details; sprinkler system; electrical load.

COLUMNS

CONCRETE. The Essentials of Reinforced Concrete Design, E. S. Andrews. Structural Engr. (Lond.), vol. 6, nos. 1 and 4, Jan. and Apr. 1928, pp. 6-10 and 117-121, 6 figs. Calculation of stresses due to eccentric loading; resultant stress in tension across whole and method; tension in steel over portion of section; limits of formula; case in which reinforcement is not same on both sides; tension in steel. (Continuation of serial.)

CONCRETE, STEEL CORES. Structural Steel Column Cores, H. H. Alger. Eng. and Contracting, vol. 67, no. 3, Mar. 1928, pp. 167-168, 1 fig. Their use in concrete buildings; advantages of structural-steel column cores; long column sections now used; H-section preferred to riveted or built-up members; what column schedule should show; steel column cores can be used to advantage to carry concrete beam and girder floors. Reprinted from Turner Constructor.

DESIGN. A Proposed Formula for Columns, T. E. Hickerson. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 5, part 1, May 1928, pp. 1435-1448, 6 figs. Stresses resulting from possibility of incipient bending may reach yield point of material and produce sudden collapse of column; effect of all imperfections may be accounted for by assumed initial curvature of column axis and eccentricity of loading if applied to ideal column, will cause it to fail at same load as imperfect column of practice.

COPPER

CANADA. Canada's Future in Copper, S. J. Cook. Can. Min. and Met. Bul. (Montreal), no. 192, Apr. 1928, pp. 488-509, 6 figs. New fields of copper-bearing ore discovered in recent years; domination in world's markets exercised by United States and Chile; world-output curve provides one means of forecasting possible future; war-time outputs beyond normal industrial demand; estimated output of copper for Canada in 1937, 230,000 metric tons.

COPPER MINES AND MINING

MANITOBA. The Flin Flon District, Manitoba, F. J. Alcock. Can. Min. Jl. (Gardenvale, Que.), vol. 49, nos. 14 and 15, Apr. 6 and 13, 1928, pp. 292-294 and 307-310, 7 figs. Apr. 6: Rock exposures are plentiful throughout plateau; relation of surface features of bedrock; drainage; climate; geological history; Apr. 13: Copper-zinc-iron sulphide bodies; gold-bearing quartz veins; iron-sulphide bodies; only first type proved of economic importance; Mandy mine on west side of northwest arm of Schist lake; Flinflon ore body on north shore of southeastern bay of Flinflon lake.

CONCRETE AGGREGATES

GRAVEL. Gravel As An Aggregate for Concrete, R. W. Crum and F. H. Jackson. Pit and Quarry, vol. 15, no. 13, Mar. 28, 1928, pp. 61-62. Tests conducted by prominent engineers and investigators covered studies of effect of size and grading of sample, amount of abrasive charge, revolutions of cylinder, effect of removing dust through slots in cylinder, tests of types of abrasion machines other than Deval and other variables. Abstracted from report presented to Am. Concrete Inst.

MEASUREMENT. Measurement of Materials for Concrete, R. T. Giles. Highway Engr. and Contractor, vol. 18, no. 4, Apr. 1928, pp. 31-34, 3 figs. Specifications are outlined, and it is claimed that the nearer these specifications are approached the more ideal will be results; measuring fine aggregates by weight; inundation method; voids effect strength of mixture.

CONCRETE CONSTRUCTION

REINFORCED. Bonding and Anchorage of Reinforcing Steel, H. C. Adams. Concrete and Constr. Eng. (Lond.), vol. 23, no. 4, Apr. 1928, pp. 317-323, 8 figs. Consideration of common types of members, beams, slabs, retaining walls, column footings and columns; securing good bond; anchorage.

CONCRETE MIXING PLANTS

DESCRIPTION. Build a Special Concrete Plant to Line Tunnel. Ry. Age, vol. 84, no. 15, Apr. 14, 1928, pp. 850-854, 7 figs. How concrete materials are received; proportioning materials; cycle of operation at mixing plant; mixing plants are able to deposit about 16 cu. yd. of concrete an hour; water under pressure was encountered.

CONCRETE MIXTURES

ESTIMATING. Field Determination of Material Per Cu. Yd. of Concrete, D. V. Terrell. Cement, Mill and Quarry, vol. 2, no. 6, Mar. 20, 1928, pp. 22-23. Proposed method; list of necessary equipment; describes use of method; example of problem and solution; table of expected strength and example of designing mix to give desired strength at 28 days.

CONCRETE

POROUS. Ice Concrete and Porous Concrete. Ice and Refrig., vol. 74, no. 4, Apr. 1928, pp. 375-376. New method of making porous concrete in England; finds favour in production of certain types of building materials where low cost is prime factor and where there is no demand for high breaking strength; lukewarm water hastens setting; insulated layer prevents shrinking.

TESTING. Wear Tests of Concrete, C. H. Scholer and H. Allen. Kansas State Agric. College—Bul., no. 20, vol. 12, no. 3, Feb. 15, 1928, 36 pp., 19 figs. First object of test was to develop method of testing resistance of concrete to wear which could be used in any laboratory having standard equipment; second object to study effect of various factors on resistance of pavement concrete to wear; materials; making specimens; discussion of tests and results.

CONCRETE SLABS

STRESSES. The Strength of Flat Plates, T. A. Bryson and T. Cheeger. Rensselaer Polytechnic Inst.—Eng. and Science Series, Apr. 1928, pp. 3-19, 11 figs. Design of reinforced concrete floor slabs, especially when wire mesh reinforcement is used; suspension stresses begin at low pressures and gradually supplant bending; suspension proportional in intensity to deflection of plate and to elasticity of material; for steel, effect of suspension is not sufficient to change form of bending formula other than to reduce its coefficient.

CULVERTS

LOCATION. Culvert Design and Location, A. Sedgwick. Can. Engr. (Toronto), vol. 54, no. 14, Apr. 3, 1928, pp. 425-426. Aggregate for concrete; culverts under embankments; important to see that they are built in proper place on road. Paper presented at annual conference on Road Construction for County and Township Road Superintendents and Engineers.

CUTTING TOOLS

HARD FIBRE. Tools and Speeds for Cutting Hard Fibre, F. H. Colvin. Am. Mach., vol. 68, no. 16, Apr. 19, 1928, pp. 655, 1 fig. Machinery fibre at Spaulding co.; saws run about 3,300 r.p.m. for 12- to 14-in. saws; turning speeds of from 600 to 800 ft. per min.; threading at same speed as for brass; material punched and drawn or extruded; best materials to use for tools in cutting fibre.

D

DAMS

ARCH AND GRAVITY, OREGON. Design of the Owyhee Irrigation Dam, J. L. Savage. Eng. News-Rec., vol. 100, no. 17, Apr. 16, 1928, pp. 663-667, 5 figs. Geological and engineering investigations; strikingly new features in 405-ft. high arch-and-gravity dam to be built in Oregon; deep fracture fault in floor rock may require cut-off 100 ft. below base; floating ring-shaped spillway gate; elevator in dam; study of alternative designs; special features of structure both arch and gravity action relied upon.

ARCH, DESIGN. Analysis of Arch Dams by the Trial Load Method. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 5, part 1, May 1928, pp. 1585-1603, 8 figs. Graphic analysis is offered of opening between rock walls similar in form to experimental dam at Stevenson creek; graphic analysis of curved dam, horse mesa dam profile. Discussion of paper by C. H. Howell and A. C. Jacquith, continued from Apr. 1928 issue of Proceedings.

ARCH, INVESTIGATION. Arch Dam Investigation. Am. Soc. Civil Engrs.—Proc., vol. 1, part 3, May 1928, 275 pp., 162 figs. First instalment of experimental study of arch dams conducted by committee composed of members of Am. Soc. of Civil Engrs. to secure experimental data and other information on arch and multiple-arch dams; includes contributions by different members; report of tests on Stevenson creek dam; physical properties of concrete; tests on models at Boulder, Colo.; earthquakes, ice and deterioration of concrete; includes 8-page international bibliography.

CONCRETE, CONSTRUCTION. Problems in Concrete Dam Construction on the Pacific Coast, F. A. Noetzli. Am. Soc. of Civil Engrs.—Proc., vol. 54, no. 5, part 1, May 1928, pp. 1509-1510. Engineering plans and specifications should include as much information as practicable on peculiarities of rock formation, especially as to what extent blasting will be permitted; on stream flow and methods of river diversion, size of temporary flood openings in dam, and methods and anticipated time of closing these openings. Discussion of paper by A. S. Bent, continued from Mar. 1928 issue of Proceedings.

Concreting the Toltec Dam, Zuni Mts., New Mexico, A. F. Schramm. Eng. News-Rec., vol. 100, no. 16, Apr. 19, 1928, pp. 631-633, 2 figs. Study in designing mixes with harsh aggregates; hot water and torch give 85-deg. concrete with frozen aggregates; grouting with converted cement gun; concrete design; concrete was placed by chuting; winter concreting; hot water and torch; general procedure; grouting foundation.

EARTH, SALUDA, S.C.—The Largest Earth Dam in the World. Earth Mover, vol. 15, no. 5, May 1928, pp. 7-9, 5 figs. Saluda dam, 208 ft. high, mile and half long, quarter of mile across at river bottom; diversion of water will be necessary; description of work going on.

EMERGENCY, NEW ORLEANS. Emergency Dam on Inner Navigation Canal at New Orleans, La., T. B. Monniche. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 4, part 1, May 1928, pp. 1569-1578, 3 figs. Comparison of emergency dams in Panama canal with New Orleans dam; refuting statements made by author of paper as to superiority of New Orleans dam. Discussion of paper by H. Goldmark, continued from Apr. 1928 issue of Proceedings.

MASONRY, UPWARD PRESSURE. Calculation of Masonry Dams (Le calcul des barrages en Maçonnerie), G. Pigeaud. Génie Civil (Paris), vol. 92, no. 16, Apr. 21, 1928, pp. 379-381. Opinion of Rabut on effect of uplift diffusion; uplift according to M. Lévy.

OVERFALL, EROSION. Studies on Prevention of Scour Below Overfall Dams, G. G. Dixon. Eng. News-Rec., vol. 100, no. 18, May 3, 1928, pp. 696-698, 3 figs. Review of earlier designs made in design for Mineral Ridge dam; former studies tabulated; comparison of several types of spillways; bibliography of hydraulic-jump papers.

STORAGE, ONTARIO. Storage and River Control at Kakabeka Falls, W. L. Bird. Elec. Light and Power, vol. 6, no. 4, Apr. 1928, pp. 21 and 90, 4 figs. Kaministiquia Power Co. of Fort William, Ontario; extensive system of storage dams; changes and gauge levels are recorded on graphic chart showing tendency and timing of all changes.

UPLIFT PRESSURE. The Theory of Heavy Walls Subject to Uplift Pressures and Its Application to Stability of Dams (Sur la théorie des massifs pesants soumis à des souspressions et son application à la stabilité des barrages), J. Mesnager. Académie des Sciences—Comptes Rendus (Paris), vol. 186, no. 13, Mar. 26, 1928, pp. 845-847. Deals with dams constructed of porous or non-porous masonry.

DIES

PRECISION INDEXING. Precision Indexing Die. Machy. (Lond.), vol. 31, no. 807, Mar. 29, 1928, pp. 836-838, 2 figs. Dies for production of blade with ten small holes; distance between pairs of holes and angle between each pair held to limits of plus or minus 2 min.; indexing die maintained these basic requirements by producing single pair of holes at each stroke of press, blade being pivoted on large central hole while mounted on swinging arm indexed to five punching stations.

DIESEL ENGINES

AUTOMOTIVE. High-Speed Automotive Diesel Engines, W. Riehm. Soc. Automotive Engrs.—Jl., vol. 22, no. 5, May 1928, pp. 523-531, 12 figs. Higher pressures of Diesel cycle necessitate only inconsiderable increase in engine weight, not interfering with use for automotive purposes; M.A.N. has adopted pressure-atomization method which is particularly adapted to use in automotive engines; construction of earlier and recent M.A.N. oil engines with details of fuel injection and control; economy and flexibility make it competitor of gasoline engine for vehicle propulsion, especially where fuel cost is major item.

COMBUSTION CHAMBERS. Diesel Engine Air-Fuel Mixture Improved by New Methods, F. E. Bielefeld. Automotive Industries, vol. 58, no. 16, Apr. 21, 1928, pp. 632-633, 3 figs. Oil injected in such manner as to form "fog net" in neck of combustion chamber and air is driven through this by auxiliary piston, resulting in rapid burning; combustion chamber of entirely different shape; dividing into three sections; speed of injection of very finely atomized fuel oil and speed of turbulence of air of combustion are substituted for propagation.

EXPERIMENTAL. Experimental Diesel Engines, A. Turner. Engineering (Lond.), vol. 125, nos. 3247 and 3248, Apr. 6 and 13, 1928, pp. 425-427 and 462-464, 12 figs. Discusses recent developments that have taken place at Admiralty Engineering Laboratory at West Drayton; types of engines used for study. Apr. 13: Mechanical efficiency; effect on cylinder liner wear has not been at all marked; combustion processes are much more readily carried out in 4-stroke than in 2-stroke engines. Paper read before Instn. Naval Architects. See also Shipbldg. and Shipg. Rec. (Lond.), vol. 31, no. 14, Apr. 5, 1928, pp. 391-392, 5 figs.

SUPERCHARGING. Experimental Study of the Buechi Process of Supercharging Diesel Engines (Leistungsversuche an einem Dieselmotor mit Buechischer Aufladung), A. Stodola. V.D.I. Zeit. (Berlin), vol. 72, no. 13, Mar. 31, 1928, pp. 421-428, 20 figs. Study of process of supercharging Diesel engines by means of turbo-blower operated by gas turbine utilizing exhaust gases of engine; process effects increase of 50 per cent in average capacity and 100 per cent in maximum capacity of Diesel engine, without changing combustion or exhaust temperatures.

The Buechi System of Supercharging. Shipbuilder (Lond.), vol. 35, no. 212, Apr. 1928, pp. 238-240, 5 figs. Outstanding features of system are high degree of supercharge utilized and employment of blower directly driven by exhaust-gas turbine; tests were conducted on 6-cylinder, 4-stroke cycle engine; Diesel engines with Buechi exhaust-turbo charging built or in course of construction.

E

EARTH PRESSURES

THEORY. Some Earth Pressure Theories in Relation to Engineering Practice. Structural Engr. (Lond.), vol. 6, no. 4, Apr. 1928, pp. 112-114 and 115. Discussion of paper by J. Mitchell Moncrieff published in no. 3, Mar. 1928.

ECONOMIZERS

HIGH-PRESSURE. Exhaust-Gas Feedwater Preheaters and Air Heaters for Modern High-Pressure Boilers (Die Bedeutung des Abgasspeisewasservorwaermers und des Lufterhitzers fuer den neuzeitlichen Hochdruckkessel), K. Burwick. Waerme (Berlin), vol. 51, no. 4, Jan. 28, 1928, pp. 64-67, 12 figs. Discusses introduction of more effective and cheaper economizers; connection and calculation of economizer; types; shows scheme of boiler with economizer and air heater, examples of modern economizer installations.

Flue Gas Economizers for High-Pressure Boilers, H. F. Lichte. Eng. and Boiler House Rec. (Lond.), vol. 41, no. 9, Mar. 1928, pp. 446-447. For boilers, working at 25 atmos. and higher pressures, entirely new type of economizer is required; new German rules require economizer to be tested at 1.3 times boiler pressure plus 10 atmos.; describes Stierle economizer, novelty and superiority of which is claimed to lie in use of square ribs forming continuous closed channels. Abstract translated from Waerme, Jan. 7, 1928, p. 3.

ELECTRIC CABLES

UNDERGROUND, HIGH TENSION. Loads from Looped or Tapped High Tension Feeders, H. L. Wallau. Elec. World, vol. 91, no. 15, Apr. 14, 1928, pp. 757-758. Effect of such conditions on one of several paralleled lines, with particular reference to underground cable systems.

ELECTRIC CIRCUIT BREAKERS

OIL. Use of Oil Circuit Breakers on Power Lines, H. J. Lingaal. Power House (Toronto), vol. 22, no. 6, Mar. 20, 1928, p. 49. Important that circuit breaker shall perform its work within very definite limits of time; conditions which require special consideration in breaker application. Abstract.

OIL, STANDARDIZATION. An Attempt to Standardize Oil Circuit-Breaker Ratings by N.E.L.A. Elec. News (Toronto), vol. 37, no. 7, Apr. 1, 1928, p. 42. Tables of uniform oil circuit-breaker interrupting capacity ratings for both indoor and outdoor circuit-breakers, prepared by Sub-station Sub-committee, N.E.L.A., with hope that users of such equipment will co-operate in this programme of standardization.

ELECTRIC CONDUCTORS

INDUCED VOLTAGES. Induced Voltages in Conductors, H. B. Dwight. Elec. Jl., vol. 25, no. 4, Apr. 1928, pp. 173-176, 1 fig. Description of magnetic lines of force and rules for inducing of electromotive forces in conductors in electric power apparatus, which will apply to a.c. generators, transformers, apparatus with sliding contracts, such as d.c. generators, and also to portions of electric circuits; not satisfactory to have present lack of agreement as to rules for calculating induced voltages.

VOLTAGE DROP. Nomograph for the Determination of Voltage Drop in Conductors, C. A. Kulmann. Elec. West, vol. 60, no. 4, Apr. 1, 1928, p. 215, 1 fig. Simplified and accurate determination of various factors related to voltage drop in transmission and distribution conductors may be accomplished through use of nomograph.

ELECTRIC EQUIPMENT

STANARDIZATION. Benefits of Standard Specifications, J. D. Winans. Elec. World, vol. 91, no. 16, Apr. 21, 1928, pp. 814-815. Desirability of enlarging N.E.L.A. guides into complete purchase specifications is pointed out; broader engineering outlook is needed.

ELECTRIC FURNACES

HIGH-FREQUENCY. Steels Made Under New Conditions, F. Wever and H. Neuhauss. Iron Age, vol. 121, no. 16, Apr. 19, 1928, pp. 1073-1075, 6 figs. Results of German tests with high-frequency induction furnace; carbonless, carbon and alloy steels show unusual properties; future possibilities; refining accelerated; steel bath, under normal refining slag, brought from 0.14 per cent carbon to 0.03 per cent in 2 minutes; carbonless steel made in high-frequency furnace. Abstract of paper published in Proceedings of Kaiser Wilhelm Institute for Iron Research.

IRON-FOUNDING. Making Cast Iron in the Electric Furnace, C. E. Williams and C. E. Sims. Franklin Inst.—Jl., vol. 205, no. 4, Apr. 1928, pp. 575-577. Investigation completed by Bureau of Mines; involved year's successful operation of jobbing foundry making miscellaneous grey-iron castings from steel scrap.

ELECTRIC GENERATORS

ALTERNATING CURRENT. The A.C. Generators, R. Pohl. Eng. Progress (Berlin), vol. 9, no. 3, Mar. 1928, pp. 88-89, 5 figs. Details of generators installed in Klingenberg station, Berlin, Germany; each turbine set of 80,000 kw. output is coupled to two a.c. generators of 44,000 kva. at 1,500 r.p.m.; both generators of each main turbine are excited from external source when running up to synchronism; for this purpose, a.c. to d.c. converters are employed, which, at same time, provide excitation in case of emergency.

COMMUTATION. Elements of Commutation, V. E. Johnson. Indus. Eng., vol. 86, no. 4, Apr. 1928, pp. 173-176 and 190, 13 figs. Difficulties that had to be overcome in developing commutator and brushes to their present highly effective form; analysis specifically applied to d.c. generators; use of high-resistance brushes; many attempts made to minimize effect of armature reaction; interpole and compensated machines more sensitive to brush shifting, and rarely should be operated except with brushes on neutral. (To be continued.)

DIRECT CURRENT, TYPES. Selection of Most Suitable D.C. Generators. Power Plant Eng., vol. 32, no. 8, Apr. 15, 1928, pp. 467-469, 5 figs. Discussion of characteristics and application of all types of d.c. generators.

ELECTRIC HEATING

PRINCIPLES. Principles Involved in Electric Heating, N. R. Stansel. Heat Treating and Forging, vol. 14, no. 3, Mar. 1928, pp. 311-314, 7 figs. Apparatus and methods used in converting electricity into heat; principles of heat transfer, conduction, convection and radiation; transfer and absorption of heat; standard surface for heat radiation in balck-body condition.

ELECTRIC LINES

CALCULATION. A General Solution for Short Transmission Lines, C. M. Longbottom. Elec. Engr. (Melbourne), vol. 4, no. 11, Feb. 15, 1928, pp. 405-407, 5 figs. Effect of length of line; effect of load power factor; regulation of short line; effect of power factor upon cost; regulated and unregulated lines; method discussed introduces some new ideas which may be helpful to those handling transmission problems.

HIGH-TENSION, CALCULATION. Bases for Standardizing Calculation of High-Tension Transmission Lines (Bases para la normalizacion del calculo de lineas de transporte a muy altas tensiones), M. G. Quevedo. Anales del la Asociacion de Ingenieros (Madrid), vol. 7, no. 38, Mar. 1928, pp. 130-141, 5 figs. In connection with conferences on production and distribution of electrical energy in Spain, author submits simplified process for calculating long-distance high-voltage lines and conductors for same; graphs and formulas involving costs of material and current, amortization, resistivity, etc. (To be continued.)

HIGH-TENSION, CANADA. Construction of Great Falls-Winnipeg 110-Kv. Transmission Lines, J. C. D. Taylor. Elec. News (Toronto), vol. 37, no. 7, Apr. 1, 1928, pp. 33-36, 13 figs. Field construction work; describing difficulties encountered in muskeg country and methods used in setting footings, erecting towers and stringing cable. (Continuation of serial.)

INTERCONNECTED. The Relaying Problems of Typical Large Interconnection, B. M. Jones. Elec. Jl., vol. 25, no. 4, Apr. 1928, pp. 171-172, 2 figs. One of most important problems is adequate and proper relaying necessary to permit best use of such connections by both parties, and at same time to provide best protection for one system when trouble occurs on other; short-circuit protection; ground relaying.

OVERHEAD, LOADING. A Study of the Strength and Loading of Aerial Line Structures, R. H. Sherlock. Mich. Technic, vol. 41, no. 3, Mar. 1928, pp. 7-9 and 24-25, 4 figs. Investigation to correlate wind velocities with pole stresses and to determine correlation between wind velocities and shielding of back wires by those in front of them; anemometers used for measuring and recording velocities of wind; telemeters transmit electrically to chart house, continuous records of stresses in wires; calibration of motion-transmitting instruments.

SURGES. Transmission Line Surges and Their Effect on Operation, J. H. Cox. Elec. Light and Power, vol. 6, no. 4, Apr. 1928, pp. 24-27, 16 figs. Study of voltage surges by means of klydonograph; principles of operation and description of klydonograph, together with discussion of records obtained by it; characteristics of klydonograph figures. (To be continued.)

VOLTAGE CONTROL. Load Ratio Control, L. F. Blume. Gen. Elec. Rev., vol. 31, no. 4, Apr. 1928, pp. 191-194, 5 figs. Examines somewhat in detail various fields of application for equipments in order to give at least general idea of what is being accomplished by their use; shows that serious limitations are imposed on operation of interconnections by necessity of keeping voltages at various points of network constant for all conditions of load demand; considers briefly conditions involved when transmission line forms loop; fields of application. (Concluded.)

ELECTRIC LOCOMOTIVES

COMBINED BATTERY AND TROLLEY. Combination Switching Locomotive Meets Unusual Requirements. Elec. Ry. Jl., vol. 71, no. 13, Mar. 31, 1928, pp. 530-532, 3 figs. Locomotive of New York Central uses either battery charged by oil engine-generator or external power from overhead or third rail; 300-h.p. engine connected direct to 200-kw. generator arranged for charging battery; storage battery of 218 cells; equipped with four GE-286,600-volt d.c. single-geared commutating-pole motors; develops tractive effort of 34,000 lb.; engine is constant-speed type; has direct fuel injection.

ELECTRIC MACHINERY

RADIO TESTING. Radio Waves Search Out Insulation Faults in Machine Windings, J. L. Rylander. Power, vol. 67, no. 18, May 1, 1928, pp. 768-770, 6 figs. Application of radio waves for detecting insulation faults in coils of motors, generators, induction regulators and other electric machines; method has proved such efficient and vigilant detective that, since enlisting its services for commercial testing of coils, insulation failures have been almost eliminated.

ELECTRIC MOTORS

ENCLOSED. Special Motors Reduce Hazards in Explosive Atmospheres, R. H. Rogers. Chem. and Met. Eng., vol. 35, no. 4, Apr. 1928, pp. 232-233, 9 figs. Describes and illustrates different types of totally enclosed motors.

SQUIRREL CAGE, STARTING. Full-Voltage Motor Starting, C. W. Falls. Am. Mach., vol. 68, no. 15, Apr. 12, 1928, p. 606. High-reactance and high-resistance squirrel cage motors are now being designed for full-voltage starting; chief aim in design is to reduce starting current to roughly 70 per cent of that of ordinary squirrel cage motor; development of high-reactance motors has increased field for full-voltage starting in three ways. Excerpts from paper presented before Am. Inst. Elec. Engrs.

ELECTRIC NETWORKS

LOW VOLTAGE. Low Voltage A.C. Networks, D. K. Blake. Gen. Elec. Rev., vol. 31, no. 4, Apr. 1928, pp. 186-190, 3 figs. Lamp flicker; several tables have been prepared for study of effect of such variables as motor location, network arrangement, secondary cable sizes, transformer reactance and spacing, and use of starting taps upon voltage dip and motor size; such network systems can very well take care of virtually all squirrel cage motor applications utilizing standard starting compensators. (To be continued.)

ELECTRIC POWER FACTOR

IMPROVEMENT. Power Factor Improvement. World Power (Lond.), vol. 9, no. 52, Apr. 1928, pp. 200-204. Recent practice in France by L'Ouest Lumière, based on annual report of company's control department; goes into problem of economic choice of improvement plant and describes, with special attention to smaller plant, operation of commercial department and development engineers of that company. (To be concluded.)

ELECTRIC POWER RECORDERS

NEW PATTERN. Synchronous Motor-Driven Averaging Recorder for Electric Power Supply. Engineering (Lond.), vol. 125, no. 3246, Mar. 30, 1928, p. 393, 3 figs. New pattern of averaging recorder, in which self-contained, self-starting motor is used for operating mechanism and for driving chart.

ELECTRIC RESISTANCE, GROUND

TESTING. Ground Resistance Testing, W. B. Craigmile. Elec. World, vol. 91, no. 17, Apr. 1928, pp. 861-862, 3 figs. New method of investigation described; instruments and test procedure; results of tests and analysis of operation.

ELECTRIC TRANSFORMERS

THREE-WINDING. Three-Winding Transformer Banks and Some Features of Their Operation in Parallel, G. D. Floyd. Elec. News (Toronto), vol. 37, no. 7, Apr. 1, 1928, pp. 37-39, 5 figs. Theoretical study of simple cases of parallel operation of typical transformer banks, showing effect of various methods of operation on maximum load that can be carried on windings and consequent reduction in transformer-bank capacity.

DESIGN. Theory of Transformer Design (Zur Entwurfstheorie des Transformators), M. Vidmar. Elektrotechnik u. Maschinenbau (Vienna), vol. 46, no. 16, Apr. 15, 1928, pp. 349-358, 2 figs. Original method for computing weights of parts directly; gives formulæ for weights, costs and losses of parts.

ERRORS. The Relation of Errors in Current Transformers to the Accuracy of Watt-Hour Meters at Abnormal Loads, L. S. Carter. Purdue Eng. Rev., vol. 23, no. 3, Mar. 1928, pp. 7-8, 24 and 30, 4 figs. Study of errors of transformers throughout range of one-tenth to ten amperes secondary current; character of errors; method of Silsbee transformer test set; made for use with standard transformers whose errors are known; current transformer to operate on upper range of current rating and at overloads rather than at very light loads.

HEATING. Predetermination, Through Calculation, of Transformer Heating (Prédétermination par le calcul de l'échauffement des transformateurs), Lapine. Revue Générale de l'Electricité (Paris), vol. 23, no. 14, Apr. 7, 1928, pp. 621-625, 4 figs. Shows how to define rules for given transformer by formula giving heating in function of time.

LOAD RATIO CONTROL. Load Ratio Control Transformers, M. Cornudet. Elec. World, vol. 91, no. 16, Apr. 21, 1928, p. 823. It is claimed that transformers with voltage taps, and electro-mechanical arrangement for change of taps without load interruption, will give apparatus less expensive than induction voltage regular or synchronous converter; Swedish concern has developed such transformer tap-switching arrangement or load-ratio control for voltages up to 77 kv. and 350 amperes. Abstract translated from Bul. de la Société Française des Electriciens, vol. 77, 1928.

ELECTRIC TRANSMISSION AND DISTRIBUTION

CONSTRUCTION. The Corner Stone of a Power System, E. M. Lebkuecher. Elec. Light and Power, vol. 6, no. 4, Apr. 1928, pp. 28-32 and 93, 8 figs. Construction of 66,000-volt transmission line on steel towers; necessary to construct two substations; both to be provided with supervisory control so arranged that all oil circuit-breakers in either substation may be controlled either from 66-kv. substation or from remote station at power plant switchboard.

BRITISH COLUMBIA. The Fraser Valley Power Centre. A. Vilstrup. Elec. News (Toronto), vol. 36, no. 8, Apr. 15, 1928, pp. 27-28, 2 figs. Matsqui substation of British Columbia Electric Railway Co. is hub of power network in valley; has interesting history; important link in international chain of power connection; two systems consolidated; additional equipment installed.

ELECTRIC WELDING

ALUMINUM. Welding Aluminum and Its Alloys, W. M. Dunlap. Iron Trade Rev., vol. 82, no. 17, Apr. 26, 1928, pp. 1066-1068 and 1116, 6 figs. Allowance for higher speed of welding and for greater expansion and contraction distinguishes aluminum welding from that of steel; finishing important; flux to dissolve aluminum oxide so that coalescence may occur; selection of welding rod; avoiding contraction strains when welding duralumin; filling holes in welding castings; removing flux. Abstract from paper presented before Am. Welding Soc.

GAS PIPE LINES. High-Pressure Natural Gas Line Electrically Welded 45 Miles, B. K. Smith. Oil and Gas Jl., vol. 26, no. 45, Mar. 29, 1928, pp. 119, 122 and 126, 2 figs. Line is 7-in. pipe, pressure 1,000 lb. preliminary work tested to 1,250 lb.; no leak developed; equipment, 3 Lincoln stablearc engine-driven welders; each weld in two layers to avoid pinholes; each joint stamped with number of operator, bonus for good work; piecework on last 15 miles; in 11,000 joints only 14 pinholes found and readily sealed.

WATERWHEEL CASING. Reclaiming a Cast Iron Waterwheel Casing, C. W. Babcock. Am. Welding Soc.—Jl., vol. 7, no. 3, Mar. 1928, pp. 19-22, 3 figs. Because of extreme thinness of iron inside radius of worn section it was impossible to weld, or deposit metal, on casing itself; space bridged by series of steel rings welded together and to casing, and then remaining area welded in; high spots ground off welded section by portable grinding wheel.

ELECTRICITY ON FARMS

CONSUMPTION. Electricity Consumption on the Farm, F. D. Paine. Elec. World, vol. 91, no. 16, Apr. 21, 1928, p. 821. From records of rural electrification project at Garner, Iowa, there is presented analysis of consumption of electricity for various uses on dairy farm of 195 acres.

EXCAVATING MACHINERY

MISSISSIPPI RIVER. Earth Moving in Mississippi Flood Control, G. B. Massey. Eng. News-Rec., vol. 100, no. 15, Apr. 12, 1928, pp. 592-595, 5 figs. Available equipment types and capacities appraised in light of volumes to be handled and available sources of levee material; character of work to be done; present government floating plant; hydraulic pipe-line dredges of two general types, non-propelling and self-propelling dredges; present land plant; appraisal of machine types; costs.

F

FIRECLAY

CANADA. Saskatchewan Fire Clays, G. M. Hutt. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 14, Apr. 6, 1928, pp. 290-291, 3 figs. Most important deposits yet known of refractory and related clays in Canada occupy several areas in southwestern Saskatchewan; from viewpoint of railway facilities, there are three main areas of superior clays in southwestern Saskatchewan; Cypress Hills, valley of Lake-of-the-Rivers and vicinity of Claybank.

FLOW IN PIPES

VISCOUS LIQUIDS. The Flow of Viscous Liquids Through Pipes. Engineering (Lond.), vol. 125, no. 250, Apr. 27, 1928, pp. 498-499, 3 figs. Oils of various degrees of viscosity are frequently pumped through pipes to ships or to distant storage tanks; to determine power required in given case and to choose most economical pumping plants and pipes, frictional resistance encountered by liquids when so transported must be known; presents formula and charts by C. H. Lee for determining viscous or turbulent flow, and describes method of using them.

FLUIDS

FRICTION OF ROTATING DISKS. Study of Friction of Disks Rotating in a Viscous Fluid (Etude sur le frottement des disques en rotation dans en fluide visqueux), C. Hanocq. Revue Universelle des Mines (Liège), vol. 18, no. 1, Apr. 1, 1928, pp. 8-28, 14 figs. Analysis of experiments and determination of coefficients of formulas and application to efficiency of pump or turbine; verification of curves obtained from centrifugal pump, pumping viscous liquids.

FOUNDRIES

STEEL, PROGRESS IN. Hot Blast, Powdered Coal in Cupolas. Iron Age, vol. 121, no. 15. Apr. 12, 1928, pp. 1027-1028. Phases of recent advance of science in foundry considered; rapid changes affecting steel foundries; marked progress in sand-testing devices; late method for measuring permeability; methods that have been used effectively in Wilson Foundry; experience with hot blast and powdered coal; alloys for high-strength castings. Review of Detroit Chapter meeting of Am. Soc. Steel Treating.

FUELS

See Coal; Pulverized Coal.

FURNACES

ANNEALING, CIRCULAR. Circular Annealing Furnace Produces Good Results, J. Strauss. Foundry, vol. 56, no. 8, Apr. 15, 1928, pp. 299-300 and 303, 6 figs. Furnace erected in steel-foundry department, U.S. Naval Gun factory; one-piece roof, 26 ft. in diam. overall and weighing about 25 tons; outlets for products of combustion arraged to permit close temperature control; burners supplied with fuel oil; flue construction; improvements secured from construction.

G

GAUGES

SCREW-THREAD, MANUFACTURE OF. Manufacture of Thread Gauges (Die Herstellungsgenauigkeit der Gewindelchren und ihre Messtechnische erfuellung), G. Berndt. Werkstattstechnik (Berlin), vol. 22, no. 5, Mar. 1, 1928, pp. 131-136, 5 figs. Describes special microscopes, gauges and measuring devices; methods used in making thread gauges in accordance with German (DIN) standards.

GAS TANKS

HORTONSPHERES. Erecting Gas Storage Tanks at Windsor. Can. Engr. (Toronto), vol. 54, no. 17, Apr. 24, 1928, pp. 465-466, 5 figs. Windsor Gas Co. erects four Hortonspheres in transmission system to maintain adequate supply of gas for industries at peak periods; each sphere is 56 ft. diameter with capacity of 250,000 cu. ft. of gas at 50 lb. pressure; operation of Hortonspheres is entirely automatic.

GEAR-CUTTING MACHINES

HELICAL-GEAR. A Large Double Helical Gear Generating Machine. Engineer (Lond.), vol. 145, no. 3772, Apr. 27, 1928, pp. 462-468, 10 figs. (partly on p. 462). Built on Sykes principle; designed to cut turbine and other gear wheels up to 9 ft. 6 in. in diam. and 30 in. wide; it can be set to cut not only double-helical, but also single-helical gearing.

GEARS

HELICAL. The Accuracy of Large Hob-Cut Helical Gears, G. A. Tomlinson. Engineering (Lond.), vol. 125, no. 3249, Apr. 20, 1928, pp. 465-466, 6 figs. Results of investigation made at National Physical Laboratory into errors likely to occur in process of hobbing large helical gears; errors fall under three heads; errors inherent in hobbing process, errors produced in gear by errors present in hob and errors caused by certain errors in hobbing machine.

NOISE ELIMINATION. Eliminating Noise in High-Speed Gearing, I. Short. Power, vol. 67. no. 18. May 1, 1928, pp. 761-764, 2 figs. Adjustable resonating "stethoscope" tells number of clicks per revolution of gear; hobber noise can be avoided by perfecting hobbing machine; contact noise is reduced by designing gear with proper relation of pitch and face width; gear noise due to pump pulsations may be cured by proper couplings.

PHENOLIC LAMINATED. Laminated Phenolic Gears Show Safety Factor of 15 to 20, P. M. Heldt. Automotive Industries, vol. 58, no. 17, Apr. 28, 1928, pp. 654-657. Brief review of meeting of American Gear Mfrs'. Assn.; report of E. Buckingham relating to tests made on pinions; factor of safety of gears made of laminated phenolic materials, instead of being between three and four is actually between 15 and 20; other papers; keyway standards; gear-tooth profile modification; effect of resilience; gear lubrication; rear-axle lubrication; tooth contact in worm gears.

SPROCKETS, HOBBING. The Hobbing of Chain Wheels, B. S. Clevely. Machy. (Lond.), vol. 32, no. 809, Apr. 12, 1928, pp. 41-45, 9 figs. Cutting of chain wheels on hobbing machines, and first principles involved; for roller chain tooth, slight variation in flank accuracy is not important; for inverted tooth chain, angle must be as accurate as possible, and flank of teeth must be flat; in this case universal hob may be ruled as being out of question; opinion expressed that for high-speed chain transmissions hobbing is somewhat doubtful proposition.

GEOPHYSICAL EXPLORATION

DESCRIPTION OF. Some Applications of Potential Methods to Structural Studies, E. G. Leonardon and S. F. Kelly. Am. Inst. Min. and Met. Engrs.—Tech. Pub., no. 115, Apr. 1928, 18 pp., 13 figs. Schlumberger electric prospecting methods; notes on study of syncline in Normandy, France, salt domes in Alsace, oil prospecting in Roumania, etc; erroneous to assume potential methods limited to search for metallic ores; electrical conductivity, entirely independent of gravity, elasticity and magnetism.

Geophysical Methods of Prospecting. Modern Min., vol. 5, no. 4, Apr. 1928, p. 110. Mention of U.S. Bur. of Mines Tech. Paper No. 420 and announcement of organization of "American Society of Geophysics," as United States branch of "Int. Soc. for Advancement of Geophysics."

GOLD MINES AND MINING

BRITISH COLUMBIA. Alluvial or Placer Mining in British Columbia, H. J. Robertson. Can. Min. Jl. (Gardenvale, Canada), vol. 59, no. 13, Mar. 30, 1928, p. 268, 2 figs. Many rich superficial deposits worked out; deeply buried deposits still untouched; low-grade deposits also still unworked; only few isolated instances of suitable conditions for dredging, as narrow, steep valleys are rule, with gold-bearing gravel capped by glacial drift.

ONTARIO. Gold Mining Camps. Imperial Inst.—Bul. (Lond.), vol. 26, no. 1, Apr. 1928, pp. 53-60. Kirkland lake and Porcupine fields; gold was only discovered in Kirkland lake field in 1911; gold ores of this camp are much richer than those of Porcupine; milling practice; Porcupine field dates from 1908; milling is divided into four stages.

GRINDING

NON-METALLIC MATERIALS. Grinding Non-Metallic Materials. Am. Mach., vol. 68, no. 15, Apr. 12, 1928, p. 610, 3 figs. Three half-tones illustrating methods of grinding non-metallic materials, each cut accompanied by brief description; battery of three double head grinding machines facing six sides of insulating bricks; grinding hexagon floor-tile to tolerance of 0.007 in. of squareness; china syrup-jars being ground on four sides to make tight-fitting surfaces.

H

HIGH-SPEED STEEL

CUTTING. Tests in Machining Manganese Steel, A. S. Martin. Heat Treating and Forging, vol. 14, no. 3, Mar. 1928, pp. 282 and 296. High-speed tool steel has been found effective in machining material hitherto practically unmachineable; other applications suggested; cutting operations; with tools made of steel under test, manganese steel can be commercially machined using cutting speeds from 7½ to 15 ft. per min. with depths of cuts up to 5/32 in. and feeds of 1/60 in. to 1/50 in.

HOUSES

STEEL. Steel-Frame Construction for Residence Buildings. Eng. News-Rec., vol. 100, no. 18, May 3, 1928, pp. 690-691, 4 figs. Trusses and braced vertical members formed by shearing and stretching standard angles and I-beam sections; first building of this type has been erected and others are under construction.

HUMIDITY

PSYCHROMETRIC CHART. Revised Psychrometric Chart Assists High Temperature Design, I. Lavine and R. L. Sutherland. Chem. and Met. Eng., vol. 35, no. 4, Apr. 1928, pp. 224-228. Properly constructed humidity chart is found especially valuable in making air calculations such as in design of drying apparatus; in connection with experimental work in drying lignite, it was deemed advisable to construct high temperature psychrometric chart along conventional lines; chart represents mixtures of dry air and water vapour, total pressure of mixture being taken as 29.92 in. of mercury.

HYDRAULIC PRESSES

FORGING. Hydraulic Forging Presses (Die hydraulichen Schmiedepresseinrichtungen), A. Deutsch. Foerdertechnik u. Frachtverkehr (Wittenberg), vol. 21, no. 5, Mar. 2, 1928, pp. 95-99, 9 figs. Details of construction, pumps, valves, etc.; materials of construction and mode of operation; commercial types by Haniel & Lueg and others.

RAPID-PRODUCTION. The Most Rapid Hydraulic Press in the World (La presse hydraulique la plus rapide du monde). Revue des Matériaux de Construction et de Travaux Publics (Paris), no. 222, Mar. 1928, p. 117, 1 fig. New hydraulic press of French make gives 20,000 compressions in 8 hours; assembly of several presses which turn around fixed axis.

HYDRAULIC TURBINES

AXIAL-FLOW. Flow of Water in the Casing of An Axial Flow Turbine, K. Kanesige. Soc. Mech. Engrs. of Japan—Jl. (Tokio), vol. 31, no. 131, Mar. 1928, pp. 71-104, 25 figs. Flow of water in free whirling chamber of head casing for axial-flow turbine treated as irrotational and symmetrical with respect to vertical axis of central core rotating with constant angular velocity; ratio of radius of central core to that of circular exit of casing expressed as function of direction of flow determined by guide vanes and ratio of height of casing cover above circular exit to its radius.

HIGH-HEAD (FRANCIS). High-Head Spiral Turbines in Syria and Mexico (Die Hochdruck-Spiralturbinen der Anlagen Arnstein in Steiermark und Tepexic in Mexiko), G. von Troeltsch. V.D.I. Zeit. (Berlin), vol. 72, no. 15, Apr. 14, 1928, pp. 491-494, 7 figs. Describes horizontal-shaft Francis turbines, by J. M. Voith, of Heidenheim, installed in Teigitsch plant, at Arnstein, Austria (head, 246 m., capacity, 21,300 h.p.) and at Tepexic plant, on Necaxa river, Mexico (head, 210 m., capacity, 15,200 h.p.); acceptance tests; Allen chemical gauging apparatus used.

HYDRO-ELECTRIC PLANTS

VOLTAGE REGULATORS. Regulator Protects Penstock on Fluctuating Loads, S. C. Lindsay. Elec. World, vol. 91, no. 17, Apr. 28, 1928, pp. 858-859, 4 figs. Feeder regulator mechanism actuates water rheostat to maintain minimum water velocity in long penstock of small hydro plant; problem was to find regulating mechanism that would operate automatically to maintain minimum load on generators as function of trail-load kilowatt demand; installation was made at cost not exceeding $1,500, as compared with estimated costs of from $10,000 to $12,000 for other schemes considered.

HYDRO-ELECTRIC POWER DEVELOPMENTS

MANITOBA. Report on the Seven Sisters Power Site, T. H. Hogg. Can. Engr. (Toronto), vol. 54, no. 14, Apr. 3, 1928, pp. 417-419. Reports against development of power site at Seven Sisters Falls on Winnipeg river by Manitoba provincial government as being economically unsound; cost of alternative developments and obligations that would have to be assumed if undertaken by government; final expenditure for complete utilization of full flow of river would require total of $23,370,000 for necessary works; additional $6,500,000 for Pinawa plant.

QUEBEC. Quebec Advances Rapidly with Water-Power Development, E. G. Wilson. Power, vol. 67, no. 15, Apr. 10, 1928, pp. 636-637, 2 figs. Has estimated total of over 13,000,000 h.p., of which over 2,000,000 have been developed; among projects or extensions under active construction are 65,000-h.p. development by Montreal Island Power Co. on des Prairies river; addition of two 10,000-h.p. units to Canada Northern Power Co.'s plant on Quinze river; and 300-h.p. plant by Cie d'Enterprises Publiques near Rivière à Pièrre.

I

INDUSTRIAL MANAGEMENT

COST CONTROL. Basic Data for Setting Standard Costs, H. J. Bock. Mfg. Industries, vol. 15, no. 3, Mar. 1928, pp. 191-193. Prerequisites are thorough account classification and tie-up between cost records and general ledger; burden standards and department budgets help greatly in reducing costs with foreman's co-operation.

PRODUCTION BUDGET. Production and Inventory Budgets, T. R. Jones. Am. Mach., vol. 68, no. 14, Apr. 5, 1928, p. 587. Proper background for production budget is supplied by sales-expectancy estimate; three classes of burden; triple classification of expense, together with reduction of burden charges to dollars per labour-hour basis, permits quick adjustment of budget to production in event of unforeseen business fluctuation; inventory analysis.

PRODUCTION BUDGET. Production and Inventory Budgets, T. R. Jones. Am. Mach., Machy. (Lond.), vol. 32, no. 809, Apr. 12, 1928, pp. 54-57 and (discussion) 57-58. Single- and multi-purpose tools; antiquation factor in machine tools; jig as necessary evil; production and preparation of material; position of foundry; pressings and stampings; factory layout; economy of idle machines; high-grade goods by multiple not mass production; elasticity of transport and finance. Abstract of lecture before Inst. of Production Engrs.

TIME STUDY. Smoothing the Wrinkles from Management. Time Study the Tool, S. E. Thompson. Taylor Soc.—Bul., vol. 13, no. 2, Apr. 1928, pp. 69-80 and (discussion) 80-86, 4 figs. Present fundamental principles and practical method of using time studies in various functions of business and shows specifically place in industry to time measurement and job analysis as tool of management; fixing time standards in shoe shop; time standards in production control; rules for time study.

INTERNAL-COMBUSTION ENGINES

See Airplane Engines; Diesel Engines.

INSULATORS, ELECTRIC

PUNCTURE TESTING. Puncture Tests Affected by Strength of Oil, J. T. Littleton, Jr., and W. W. Shaver. Elec. World, vol. 91, no. 15, Apr. 14, 1928, pp. 759-760. Experiments made to determine effect of dielectric strength of oil on puncture voltage of insulator under oil; 14 Pyrex insulators with rated dry flashover of 82 kv. were selected for tests.

J

JOURNALS

DESIGN. The Design of Sliding Neck Journals (Zur Berechnung von Gleittragzapfen), E. Wellner. V.D.I. Zeit. (Berlin), vol. 72, no. 13, Mar. 31, 1928, pp. 435-440, 7 figs. On basis of Reynolds theory and Guembel studies, author analyzes conditions of sliding journal friction and works out curves for design of elements of sliding-neck journals, also curves for maximum unit surface pressure for various speeds of revolution.

K

KLYDONOGRAPHS

STUDY OF. Transmission Line Surges and Their Effect on Operation, J. H. Cox. Elec. Light and Power, vol. 6, no. 4, Apr. 1928, pp. 24-27, 16 figs. Study of voltage surges by means of klydonograph; principles of operation and description of klydonograph, together with discussion of records obtained by it; characteristics of klydonograph figures. (To be continued.)

L

LATHES

MANUFACTURE. Mass Manufacture of Lathes, B. Finney. Iron Age, vol. 121, no. 16, Apr. 19, 1928, pp. 1067-1072, 10 figs. Production-control system, routing and mechanical handling and special-purpose equipment reduce costs at Monarch Machine Tool Co.; raw materials needs estimated on basis of pending business; work tag and move card; cost record of all subassemblies; monorail and lift trucks; drilling holes in lathe beds while resting on small flat cars; toolroom system.

LOCOMOTIVE BOILERS

DESIGN. The Design and Proportion of Locomotive Boilers and Superheaters, C. A. Brandt. Can. Ry. Club—Proc. (Montreal), vol. 27, no. 2, Feb. 1928, pp. 20-58 and (discussion) 58-64, 32 figs. Boiler and superheater relation to cylinder efficiency and capacity; steam consumption; high steam pressures; water-tube firebox; grate area and furnace volume; length of flues for proper efficiency; results obtained with engines fitted with type "E" superheater; feedwater heaters; effect on boiler evaporating capacity.

NICKEL-STEEL. Nickel-Steel for Locomotive Boilers, C. McKnight. Ry. Mech. Engr., vol. 102, no. 4, Apr. 1928, pp. 193-198, 7 figs. Possesses high strength and ductility; physical properties at high temperatures and after aging superior to carbon steel; 3 per cent nickel-steel boiler plate of 70,000 lb. per sq. in. minimum tensile strength; comparison of nickel- and carbon-steel plates; high temperature characteristics of nickel-steel; uniformity; manufacture; possibility of higher strengths with nickel-steels; boiler tubes and staybolts. Paper presented before Am. Soc. Steel Treating.

LOCOMOTIVE REPAIR SHOPS

EQUIPMENT. Special Fixtures for Railroad-Shop Work, F. H. Colvin. Am. Mach., vol. 68, no. 17, Apr. 26, 1928, pp. 687-688, 5 figs. Devices for smoke box and boiler work at Delaware & Hudson Colonie Shops; fixture for drilling smoke box rings and boiler front for smoke boxes; specially shaped clamp to hold boiler front on table of less diameter; fixtures holding long string of shoes or wedges planed at once; laying out driving boxes for machining.

LOCOMOTIVES

CANADIAN NATIONAL RAILWAYS. 4-8-4 Type Locomotives for the Canadian National Railways. Engineering (Lond.), vol. 125, no. 3245, Mar. 23, 1928, pp. 347-348, 13 figs. partly on supp. plate and p. 354. Intended for handling either fast freight or passenger service and for long runs over two or three divisions; all engines are designed to take boosters.

DIESEL. Geared Diesel and Diesel-Electric Locomotive Trials, N. Dobrowolski. Engineering (Lond.), vol. 125, no. 3250, Apr. 27, 1928, p. 504. Information regarding geared Diesel locomotive of 4-8-2 type built by Firma Hohenzollern A.-G. of Dusseldorf, for use in Russia; result of trials of similar train journeys, Moscow-Baku-Moscow, with Diesel-electric locomotive and geared Diesel locomotive. Abstract translated from V.D.I. Zeit., June 18, 1928, p. 873.

ELECTRIC. *See Electric Locomotives.*

GASOLINE-ELECTRIC. Mack Develops Line of Gas-Electric Railcars and Locomotives. Automotive Industries, vol. 58, no. 14, Apr. 7, 1928, pp. 544-548, 6 figs. Numerous original features embodied in design; system of control similar to that of steam engines; new method of cooling; car seats 75; use of more than single power plant; engine is 6-cylinder one, of 5-in. bore and 6-in. stroke, with single inlet and exhaust valve and single spark-plug per cylinder; reason for larger generator; battery for starting; engine is protected against high temperature; long compressor life.

Oil-Electric. Performance Records of Oil-Engine Locomotives, H. Lemp. Power, vol. 67, no. 18, May 1, 1928, pp. 784-785, 1 fig. Reviews experiences of last three years; oil-electric locomotive is only locomotive on standard-gauge tracks that has any service records to offer in United States; used exclusively for switching purposes; passenger and main-line freight service is to be inaugurated by N.Y. Central on Putnam Division; in Europe, main-line operation is considered satisfactory; oil locomotives with mechanical transmission. Abstract of paper read before Metropolitan Sec., Am. Soc. Mech. Engrs.

Pulverized Coal Burning. Locomotives Fired by Coal Dust, D. W. Kleinmow. Colliery Guardian (Lond.), vol. 136, no. 3509, Mar. 30, 1928, p. 1237, 2 figs. Best results achieved with lignite dust, which contains high percentage of volatile constituents; fuel utilized better than in grate firing, as less than half excess air is required to heat; in one boiler, saving over 20 per cent; new type of A.E.G. dust-fired locomotive represents efficiency of 67.5 per cent; saving of fuel as compared with grate-fired boiler is 23 per cent. Abstract from Braunkohle.

Steam-Turbine (Ljungstrom). Tests of Ljungström Turbine Locomotives (Essais de locomotives à turbines Ljungström). Revue Générale des Chemins de Fer (Paris), vol. 47, no. 4, Apr. 1928, pp. 312-314, 1 fig. Test results on turbine locomotive in Sweden and in Argentina; tests of comparison with piston locomotives.

LUBRICATION

Theory and Practice. The Theory and Practice of Lubrication, J. E. Southcombe. Machy. Market (Lond.), nos. 1429 and 1430, Mar. 23 and 30, 1928, pp. 265-266 and 287-288, 6 figs. Mar. 23: Comprehensive theory of friction and lubrication for use in application of lubricants and design of bearing surfaces; theory of boundary lubrication; oiliness is property of interface. Mar. 30: Experimental work done; rotational motion at slow speed; machine for comparing lubricating value of oils; reciprocating motion and pistons; boundary friction; disturbing action of water. Paper read before North-East Coast Instn. Engrs. and Shipbldrs.

M

MACHINING METHODS

Shock Absorbers. Tooling That Is Unusual, F. H. Colvin. Am. Mach., vol. 68, no. 16, Apr. 19, 1928, pp. 657-660, 12 figs. Methods used in making Houde hydraulic shock absorbers; use of dial indicators on turret lathes; swaging splined holes to taper; body of reservoir of shock absorber contains two stationary abutments and has two moving wings; boring tools; cutting slot for abutments; finishing ends of movable wings on grinder; drilling holes in wing shaft; broaching splined holes.

METALS

Corrosion. Corrosion of Metals, G. D. Bengough. Iron and Coal Trades Rev. (Lond.), vol. 116, no. 3134, Mar. 23, 1928, p. 425. Standard test should be acceleration test; should be easily reproducible in two different laboratories, sufficiently simple to form part of ordinary works laboratory's routine and readily interpretable in terms of conditions of practice; chief factors relative to corrosion; only hope of obtaining standard test is research work of more accurate type than usually published in technical journals. Abstract from paper read before Inst. of Metals.

Machinability. Machinability of Metals, O. W. Boston. Univ. of Mich., Dept. of Eng. Research, no. 2, Feb. 1928, 38 pp. and (discussion) 38-47, 30 figs. Methods used to designate machinability; measurement of force on tool; measurement of power or energy required to remove given chip; ability of standardized tool to cut; measurement of finish left; penetration of standardized drill; torque developed by drill; cutting speed for certain tool life; hardness numbers; measurement of heat generated and hardness induced. Paper presented at Am. Soc. Steel Treating.

Pickling. Practical Features of Pickling, W. G. Imhoff. Iron Trade Rev., vol. 82, nos. 15 and 17, Apr. 12 and 26, 1928, pp. 943-945 and 978, 1 fig., and 1069-1071, 3 figs.

Surface Hardening of. New Process of Surface Hardening of Metals. The Cloud Burst Process (Un nouveau procédé de durcissement superficiel des métaux). Pratique des Industries Mécanique (Paris), vol. 11, no. 1, Apr. 1928, pp. 23-26, 9 figs. Not a chemical process but based on surface hardness from repeated blows; describes process and method of controlling hardness.

MINERAL RESOURCES

Canada. The Valuable Ore-Bearing Materials of Canada (Les richesses minières du Canada), V. Forbin. Nature (Paris), nos. 2782 and 2783, Apr. 1 and 15, 1928, pp. 289-293 and 360-364, 13 figs. Figures on mineral production of Canada for 1925; geology and physiography; description of nickel regions; Cobalt deposits; exploitation; gold deposits and exploitation. (To be continued.)

New Brunswick. Recent Development of New Brunswick Mineral Resources, C. Price-Green. Can. Chem. and Met. (Toronto), vol. 12, no. 4, Apr. 1928, pp. 94-95. Government should engage geologist to investigate boundaries of igneous intrusions in western portion of province and vicinity of pre-Cambrian along southern boundaries; rich deposits found in Ontario, Quebec and in Manitoba are in pre-Cambrian; manganese in northeastern part of province; in north, manganese is partly displaced by antimony; copper between Millidgeville and Dorchester; trial shipments made on copper development at Annidale.

MINING INDUSTRY

British Columbia. Present Status and Future Possibilities of the Mining Industry in British Columbia, V. Dolmage. Imperial Inst.—Bul. (Lond.), vol. 26, no. 1, Apr. 1928, pp. 69-74. Silver, lead, zinc and coal; copper and gold; great part of metal comes from comparatively few large mines; only two reduction works in province; coal is produced mainly from three districts.

Nova Scotia. The Mining Industry in Nova Scotia, G. S. Harrington. Imperial Inst.—Bul. (Lond.), vol. 26, no. 1, Apr. 1928, pp. 65-69. Coal mining is one of chief branches of industry; sharp revival in gold mining during past year; numerous large deposits of gypsum; deposit of rock salt.

N

NICKEL MINES AND MINING

Ontario. The Nickel Mines and Metallurgical Works. Imperial Inst.—Bul. (Lond.), vol. 26, no. 1, Apr. 1928, pp. 45-49, 1 fig. Companies chiefly engaged in working and treating ores of Sudbury are International Nickel Co. and Mond Nickel Co., who together supply 90 per cent of world's demand for nickel; visit to Creighton mine.

O

OIL FUEL

Canada. Auxiliary Sources of Liquid Fuels, A. W. Nash. Indus. Australian and Min. Standard (Melbourne), vol. 79, no. 2036, Mar. 15, 1928, pp. 273-275. Northern Alberta asphaltic material mixed with sand; 7 to 20 per cent recoverable oil; extracted by super-heated steam, resembles soft pitch with water in suspension and varying sulphur content; low-temperature carbonization of coal; Berginization; discussion of processes described; methods for utilization. Extract from paper read before Min. & Met. Congress. See reference to original paper in Eng. Index, 1917, p. 586.

ORE TREATMENT

Flotation. Fundamentals in the Flotation of Sulphidized Oxidized Ores, F. A. Bird. Eng. and Min. Jl., vol. 125, no. 16, Apr. 21, 1928, pp. 652-654. Flotation of oxidized ores frequently discussed; important references, excluding patent literature are given; author believes that type of grinding media used is important in preparation of oxidized ore for flotation process; use of activating chemical in connection with normal sulphide benefits recoveries; cites serial no. 2811, U.S. Bureau of Mines, discussing flotation of oxidized copper ores.

P

PAINTING

Mechanical—Mass Production. Mechanical Painting Processes Used in Mass Production (Anstreichverfahren im Grossbetrieb), H. Hettner. Werkstattstechnik (Berlin), vol. 22, no. 6, Mar. 15, 1928, pp. 167-171, 8 figs. Describes processes used in painting, varnishing, lacquering of grass mowers, motorcycles, iron bedsteads, automobile bodies, etc.

PAVEMENTS

Asphalt Block. Asphalt Blocks for Pavements, T. Salkield. Can. Engr. (Toronto), vol. 54, no. 15, Apr. 10, 1928, p. 432. Composition and method of manufacture; easily handled, noiseless and impervious to moisture; composition of blocks; method of laying blocks; advantages of asphalt blocks. Reprinted from Surveyor.

Asphaltic Concrete, Construction. Mechanical Spreading, Raking and Finishing of Asphaltic Concrete Pavement, C. S. Pope. West. Constr. News, vol. 3, no. 7, Apr. 10, 1928, pp. 246-247, 2 figs. Description; machine consists essentially of motor-driven steel framework running on flanged wheels resting on side forms; paving operation; advantages.

Black Base. Construction of Black Base Pavements, W. H. Booker. Can. Engr. (Toronto), vol. 54, no. 15, Apr. 10, 1928, pp. 441-443. Triaxial diagram for concrete base or black base; outstanding characteristics; improving subgrade; economy; other features. Paper presented at Sixth Annual Asphalt Paving Conference.

Concrete. Design and Construction of Concrete Pavements, G. E. Hawthorn and H. O. Root. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 5, part 1, May 1928, pp. 1617-1621, 1 fig. Calls attention to one feature of design, namely, width to which edge thickness should be extended toward centre. Discussion of paper by C. Older, continued fram Mar. 1928 issue of Proceedings.

Concrete, Curing. Curing Cement-Concrete Pavement in Los Angeles, J. C. Shaw. Am. City, vol. 38, no. 4, Apr. 1928, pp. 119-120, 3 figs. New method of curing concrete called Hunt process has been devised which has been used successfully on several paving jobs in Los Angeles; method of curing; process produced concrete of strength equal to that obtained by usual method of curing by banking and puddling.

PHOSPHATE ORE TREATMENT

Flotation. Flotation of Low-Grade Phosphate Ores, H. M. Lawrence and F. D. DeVaney. Pit and Quarry, vol. 16, no. 1, Apr. 11, 1928, pp. 54 and 78. Phosphate recovery in Florida is simple washing and screening operation; flotation has been applied to Spanish phosphates; investigation of flotation for Florida phosphates under way; work reported has been largely confined to screen-undersize products rejected by washers.

PHOTOGRAPHIC SURVEYING

Lecture on. Swedish-Danish Railway Construction in Asia Minor (De Svensk-Danske jaernbaneanlaeg i lilleasien), O. Lerche. Ingenioren (Copenhagen), vol. 37, no. 11, Mar. 17, 1928, pp. 133-144, 25 figs. Describes organization and working methods for construction of line and branch from Angora to Eregli (on Black Sea) and from Deller to Diarbekir; use of surveying instruments and of most modern makes; stereo-autograph used to show curves and grades. Lecture held at Danish Eng. Soc.

PIPE

Concrete, High-Pressure. Concrete High-Pressure Pipe at Riverside, Calif., E. R. Bowen. Water Works, vol. 67, no. 4, Apr. 1928, pp. 170-171. Specifications for pipe; tests; fabrication and construction; sections of Riverside pipe are 42 in. inside diameter, 8 ft. long and have shell thickness of 3¾ in.; installation of Hume centrifugal pipe. Paper read before Calif. Sec., Am. Water Works Assn.

Cast Iron, Manufacture. New Method of Making Cast Pipe. Iron Age, vol. 121, no. 15, Apr. 12, 1928, pp. 999-1003, 6 figs. Hand labour eliminated in McWane mechanical process; unique multiple-lip ladle pours metal; ladles equipped with 14 spouts; two 6-in. or two 8-in. pipes poured at same time; conveyors and cranes handle materials; plant scheduled like rolling mill; features of continuous operation and flexibility of output; sand handling all done by conveyors; moulds and cores handled by cranes.

Wrought, Manufacture of. Bethlehem's New Pipe Mills, G. A. Richardson. Iron Age, vol. 121, no. 16, Apr. 19, 1928, pp. 1084-1089, 7 figs. Sparrows Point plant turns out wide range of butt and lapweld product; materials move minimum distances; pipe-mill layout; automatic operation of gas-producer unit; elimination of water dip for galvanized pipe; welding rolls driven by 400-h.p. electric motor; driven roller conveyors for handling pipe from operation to operation in lap-weld mills and control system.

PIPE LINES

Calculations. The Next Size Larger, J. Blansjaar. Heating and Vent. Mag., vol. 25, no. 4, Apr. 1928, pp. 76-79 and 81-82, 3 figs. Points out uselessness of calculating exact pipe diameters when pipes of calculated sizes are not available; principles involved in water heating; principal causes of resistance to flow of steam or water; figuring typical installation; chart for figuring pipe diameter based on Brabbee friction tables; how to use curves; point of divergence between European and American practice.

Welding. *See Electric Welding, Pipe Lines.*

PLATES

FLAT, STRESSES IN. The Stresses in Flat Plates, H. H. Gorrie. Rensselaer Polytechnic Inst.—Eng. and Science Series, Apr. 1928, pp. 20-60, 29 figs. Results of investigation to determine variation in intensity of strains that occur in flat steel plates subjected to uniform loads, to determine actual principal axes of strain for various points on plates, and by actual measurement, and from theoretical considerations, to find strain along these axes. Bibliography.

POLES

REINFORCED CONCRETE. Reinforced Concrete Poles for High-Tension Transmission Lines (Eisenbetonmaste fuer Hochspannungsleitungen), A. Kleinlogel. Beton u. Eisen (Berlin), vol. 27, nos. 6 and 7, Mar. 20 and Apr. 5, 1928, pp. 120-123 and 140-144, 27 figs. Advantages of reinforced concrete transmission line poles; examples of special designs adopted in France, Norway, etc.; methods of erection of reinforced concrete poles; recent Swedish and German designs of solid and hollow poles and towers.

POTASH MINES AND MINING

SHAFT SINKING. Shaft Bored by Freezing. Institut du Froid (English Edition)—Monthly Bul. (Paris), vol. 8, no. 11, Nov.-Dec. 1927, p. 1117. In potash mine of Alsace, new shaft had to be bored to 732 m. depth, where it was necessary to go through different aqueous layers each of which gave over 3,000 litres per hour; Poetsch method was employed to overcome this difficulty; freezing machine worked with ammonia; solution of calcium chloride was used as refrigerant. Abstract translated from Iberica, Nov. 12, 1927, p. 278.

POWER PLANTS

OIL-ENGINED. Heavy-Oil Engines in Power Stations. Engineering (Lond.), vol. 125, no. 3250, Apr. 27, 1928, p. 514. Editorial remarks on place of heavy-oil engines in power generation; in one important respect, for dealing with peak loads, Diesel engines have advantage of being able to start up almost instantaneously; refers to work of Diesel Engine Users' Assn. and Prime Movers' Committee of National Electric Light Assn.

STEAM, HIGH-PRESSURE. High-Pressure Steam Generation by Superheated Steam (Hochdruckdampferzeigung durch ueberhitzten Dampf), S. Loeffler. Waerme (Berlin), vol. 51, no. 4, Jan. 28, 1928, pp. 52-54, 5 figs. Details of trial plant erected at Vienna Locomotive Works according to author's system; operates according to so-called indirect process of evaporation, distinguished by water in boiler proper not being heated by flue gases, but by superheated steam; large plant, equipped with Bruenn high-pressure turbine, is being erected at Witkowitz Iron Works in Moravia; German Rys. Co. have ordered locomotive to operate on this principle.

Story of First Commercial 1,200-Lb. Steam Plant, I. E. Moultrop. Power, vol. 67, no. 17, Apr. 24, 1928, pp. 712-718, 8 figs. Why this pressure was chosen; operating experiences at Edgar Station, Boston; results that have justified decision; regenerative cycle made 1,200 lb. worth while; why live-steam heater was not used. Abstract of paper read before Eng. Inst. of Canada and Philadelphia Sec., A.S.M.E.

STEAM-ELECTRIC, BERLIN, GERMANY. The Klingenberg Super-Power Station (Berlin, Germany), M. Rehmer. Eng. Progress (Berlin), vol. 9, no. 3, Mar. 1928, pp. 57-58, 2 figs. At present peak load of 130,000-kw., following machines and station equipment are in operation: main turbine sets working at 72 per cent of their rated load, 9 boilers, 5 coal pulverizing mills; station can be proclaimed as one of most economical producers of electrical energy, having energy consumption of only 15,600 B.t.u. per kw.-hr. of gross production.

STEAM-ELECTRIC, DETROIT, MICH. The Trenton Channel Station of the Detroit Edison Company. Engineering (Lond.), vol. 125, no. 3248, Apr. 13, 1928, pp. 433-437, 16 figs. (partly on p. 448 and supp. plate). Details of pulverized fuel preparation plant.

POWER PLANTS

ELECTRIC—SUBSTATIONS, AUTOMATIC. Induction Motor and Exciter Added to Converter for Automatic Control. R. C. Newman. Coal Age, vol. 33, no. 4, Apr. 1928, pp. 215-216, 4 figs. Full-automatic 200-kw., 275-volt, rotary-converter substation embodying new starting and operating principles; if a.c. source of supply is correct and all bearing and transformer thermostat contacts are closed, set will start by closing starting snap switch; this operation closes circuit through heating coil of thermostat relay in motor circuit and coil of motor-starting contactor which starts induction motor, driving converter armature and exciter at same speed.

HYDRO-ELECTRIC, AUTOMATIC. Largest Automatic Hydro-Electric in Canada Goes Into Operation. Power, vol. 67, no. 17, May 1, 1928, pp. 789-790, 2 figs. British Columbia Elec. Railway Co. has completed construction of 12,500-h.p. plant at Alouette, in British Columbia; plant is automatically controlled from Stave Falls plant of company, situated approximately 12 miles away.

PREFERRED NUMBERS

WAGE-RATE APPLICATION. American System of Preferred Numbers. Mfg. Industries, vol. 15, no. 3, Mar. 1928, p. 232-233. Working Committee of Am. Eng. Standards Committee, after period of study, recommended adoption of system based on German practice, reason being its simplicity of detail; application in development of wage scales; presents table of preferred numbers informally approved by Committee.

PRESSURE VESSELS

HEADS, DESIGN OF. Design of Unstayed Dished Heads of Pressure Vessels for Internal Pressure (Die Berechnung ankerloser gewoelbter Boeden von Druckbehaeltern auf Innendruck), E. Hoehn. Schweizerische Bauzeitung (Zurich), vol. 91, no. 10, 1928, pp. 128-131, 4 figs. Design of dished heads on basis of rise of meridian arch and on basis of stresses in spherical wall; shapes of dished heads.

OXY-ACETYLENE WELDING OF. Procedure Control Methods Used in Pressure Vessel Welding, H. E. Rockefeller. Boiler Maker, vol. 28. no. 2, Feb. 1928, pp. 41-42, 1 fig. Welding head seams of high-pressure tank; methods of testing pressure vessels; providing ventilation; test of tank; regular hydrostatic test 600 lb. per sq. in.; fibre stress at test pressure was 27,000 lb. per sq. in.; discussion of factor of safety; strength of welded vessels. Paper read before Int. Acetylene Assn.

PULVERIZED COAL

SAFETY REGULATIONS. Special Hazards in Pulverizing of Coal and in Firing with Pulverized Coal (Betriebsgefahren der Kohlenstaub-Aufbereitung und Kohlenstaub-Feuerung), F. Schulte. Archiv. fuer Waermewirt-schaft (Berlin), vol. 9, no. 4, Apr. 1928, pp. 107-110. Report of pulverized coal committee of Coal Council of Germany; review of special American and German reports on fire and explosion hazards of coal pulverization and firing with pulverized coal; statistics of accidents and results of questionnaire investigation in Prussia; special instructions for producers and users of pulverized coal.

PUMPS

GEARED, DESIGN OF. The Design of Geared Pumps, E. Buckingham. Am. Mach., vol. 68, no. 15, Apr. 12, 1928, pp. 603-606, 6 figs. Limitations of conventional involute form of tooth for pumping service; helical gears of segmental tooth form are proposed and calculations of form of basic rack to generate them given; tooth action must avoid trapping; gears used successfully in gas compressors on small refrigerating units, as they operate quietly and effectively at high speeds.

PUMPS, CENTRIFUGAL

FEEDWATER. Boiler Feedwater Centrifugal Pumps for High-Pressure (Kesselspeise-Krieselpumpen fuer hohen Druck), Weyland. Waerme (Berlin), vol. 51, no. 4, Jan. 28, 1928, pp. 68-71, 9 figs. Economic advantages obtained by high-temperature feedwater preheating; design of hot water pumps for large power plants; introduction of hot condensates in high-pressure stage of feedwater pump.

SUBMERGED. Submerged Pumps (Unterwasserpumpen), H. Sauveur. V.D.I. Zeit. (Berlin), vol. 72, no. 13, Mar. 31, 1928, pp. 441-444, 12 figs. Reviews early designs of submerged pumps, coupled to vertical axes, by Schorch, Gscheidlen and Cooper; problem of packing ring, especially in case of fluctuating water levels; details of recent models of submerged pumps, particularly Garvens type.

R

RADIO BROADCASTING STATIONS

DESIGN AND DISTRIBUTION. The Design and Distribution of Wireless Broadcasting Stations for a National Service, P. P. Eckersley. Experimental Wireless (Lond.), vol. 5, no. 55, Apr. 1928, pp. 189-197, 11 figs. Limitation of wave-length; linking together of stations; design of broadcasting transmitters; types of transmitter discussed; comparison between two methods described. Abstract of paper read before Instn. Elec. Engrs.

RADIO CIRCUITS

INDUCTION. Mutual Inductance in Radio Circuits, L. Hartshorn. Experimental Wireless (Lond.), vol. 5, no. 55, Apr. 1928, pp. 184-188, 2 figs. Discusses most useful properties of ordinary impure mutual inductance and points out their bearing on most common forms of mutual inductance in radio work; mutual inductance equations; application to variometers.

RAILROADS

SIGNALS AND SIGNALLING—POWER SUPPLY. Principles and Maintenance of the A.C. Floating Battery System, E. Bishop. Ry. Signaling, vol. 21, no. 4, Apr. 1928, pp. 144-145, 4 figs. Hydraulic analogy given to explain meaning of "floating charge"; proper charging voltages recommended; maintaining a.c. floating-battery system; condensed suggestions for maintainers.

TERMINALS. Modern Yards and Terminals, J. S. Morris. Ry. Age, vol. 84, no. 16, Apr. 21, 1928, pp. 919-921, 1 fig. Discusses various improvements necessary in modernizing yards and terminals; over-estimates; yard and terminal improvements; power plants; unit coal pulverizer. Abstract of paper read before West. Ry. Club.

STATIONS, TORONTO. The Viaduct Structure at the New Union Station, Toronto, A. R. Ketterson. Eng. Jl. (Montreal), vol. 11, no. 4, Apr. 1928, pp. 251-262, 16 figs. General description; lateral distribution of track live load; comparison with results based on joint committee formula; construction; foundations; concrete; plant.

RAILWAY MOTOR CARS

DIESEL. New Design of Railroad Motor Car Equipped with Compressionless Diesel Engine (Eine neue Triebwagenbauart mit kompressorlosem Dieselmotor und ihre Versuchsergebnisse), Nolde. Organ fuer die Fortschritte des Eisenbahnwesens (Munich), vol. 83, no. 6, Mar. 16, 1928, pp. 109-112, 5 figs. General description of Wegmann railroad motor car; details of six-cylinder, 75- to 90-h.p. compressionless M.A.N. Diesel engines; results of tests.

GASOLINE-ELECTRIC. Gas-Electric Unit for Rail Cars. Ry. Age, vol. 84, no. 15, Apr. 14, 1928, pp. 866-870, 11 figs. Important features of gas-electric unit designed and put in service by Mack International Motor Co., Plainfield, N.J.; for use in three sizes of rail motor cars and three sizes of locomotives; construction of base; engine develops 152 b.h.p. at 1,800 r.p.m.; cooling system; control; electrical equipment; operating data.

Rail-Cars and Their Operation, W. C. Sanders. Soc. Automotive Engrs. —Jl., vol. 22, no. 5, May 1928, pp. 541-548 and (discussion) 548-549, 4 figs. Railroads of future will supplement through passenger trains with self-propelled local cars and motor coaches; definite figures for savings from substituting gasoline propelled trains for steam trains; ideals of rail-car design; definite requirements for many units; maintenance organization of New Haven Railroad; adequate training is required for rail-car operators.

RECTIFIERS, MERCURY-ARC

INSPECTION. Mercury-Arc Rectifier Inspections, O. M. Ware. Elec. World, vol. 91, no. 18, May 5, 1928, p. 908. Presents report form of Milwaukee Electric Railway and Light Co. for mercury-arc rectifier stations.

REFRIGERATING MACHINES

IMPROVEMENT. Increasing Efficiency of Refrigerating Systems, G. Hilger. Ice and Refrig., vol. 74, no. 4, Apr. 1928, pp. 403-406, 11 figs. Apparatus and methods for increasing efficiency of refrigerating machines; relationship of temperatures and pressures of working refrigerants; effect of non-condensable gases; control and regulation of evaporators; describes and illustrates various apparatus and methods which may be used to increase operating efficiency of compression refrigerating system. (To be continued.) Abstract of paper read before Nat. Assn. Practical Refrig. Engrs.

MULTI-STAGE. Utilization of Multi-Stage Refrigerating Machines, O. Wagner. Institut du Froid (English Edition)—Monthly Bul. (Paris), vol. 8, no. 11, Nov.-Dec. 1927, pp. 1073-1078. Discusses advantages which can be hoped for from multi-stage compression of cold vapours and conditions under which it is convenient to choose machine with several stages; real field of utilization is that of very low temperatures. Abstract translated from Zeit. fuer die gasamte Kaelte-Industrie, Sept. 1927, p. 160.

REFRIGERATING PLANTS

DESIGN. The Design of Refrigeration Plants, G. W. Daniels. Can. Chem. and Met. (Toronto), vol. 12, no. 4, Apr. 1928, pp. 92-93 and 104. Ideal operations: (1) taking up, isothermally, heat from body to be cooled; (2) adiabatic compression; (3) isothermal cooling of refrigerant in condenser; (4) adiabatic expansion of refrigerant from condenser to refrigerator; in practice, ideals cannot be realized entirely; precooling of liquid refrigerant; multi-pressure systems; cascade system; choice of refrigerants; heat transmission. Abstract from Instn. Chem. Engrs.

RETAINING WALLS

ANALYSIS. The Pressure Exerted on Retaining Walls by Materials Possessing Some Cohesive Strength, C. N. Ross. Instn. Engrs., Australia (Sydney), vol. 8, no. 7, 1927, pp. 190-216, 5 figs. Analysis made of forces acting on assumed mean wedge of rupture in material at back of retaining wall; curves are plotted which give pressure exerted on wall by filling for all possible cases when top of filling is level; interesting conclusions are drawn and suggestions are made as to future experimental work on retaining walls.

DESIGN. New Methods for Determination of Earth Pressure (Neue Wege in der Erddruckforshung), F. Kann. Zentralblatt der Bauverwaltung (Berlin), vol. 48, no. 13, Mar. 28, 1928, pp. 210-215, 15 figs. Quotes criticism of old Coulomb theory of earth pressure; reviews recent investigations and theories of Krey, Petersen, Fellenius, Terzaghi and others.

RIVERS

IMPROVEMENT, ST. LAWRENCE. The Canalization of the St. Lawrence River (La canalisation du St. Laurent), R. Tanghe. Revue Trimestrielle Canadienne (Montreal), vol. 14, no. 53, Mar. 1928, pp. 82-94. Résumé of project; development of hydro-electric power; reduction of transhipment at Montreal; reasons why Montreal opposes project.

National Advisory Committee Report. Can. Engr. (Toronto), vol. 54, no. 17, Apr. 24, 1928, pp. 471-475. Dominion Government is agreeable to main proposals for joint control from head of lakes to sea; proposal to internationalize Welland and St. Lawrence canals; correspondence and report of National Advisory Committee tabled in House of Commons by Premier; technical features discussed; power development feature.

RIVETS

TESTING. Rivets in Tension—Another Formula Based on the University of Toronto Tests, W. R. Osgood. Eng. and Contracting, vol. 67, no. 3, Mar. 1928, p. 114, 1 fig. In this discussion it is assumed that parts connected by rivet are rigid; refers to article by C. R. Young published in Dec. issue of same journal and in Eng. News-Rec., Feb. 2, 1928, on tensile working stress for rivets; reproduces Young's table, but new formula has been used and values in last column are those obtained from it. See also comment by H. E. Wessman in Eng. News-Rec., vol. 100, no. 15, Apr. 12, 1928, p. 602, 2 figs.

ROADS

CONCRETE, FIELD TESTING. The Use of Field Cylinders on Concrete Construction, O. V. Adams. Good Roads, vol. 71, no. 3, Mar. 1928, pp. 161-162. Means of determining whether concrete as produced in field actually comes up to designed strength; field data furnished included project date when cylinders were made, structure and station where concrete was placed, mix and method of field storage; summary of data obtained.

CORRUGATION. A Study of Road Corrugation. Contract Rec. (Toronto), vol. 42, no. 17, Apr. 25, 1928, pp. 433-436 and 440. Definition of corrugation; effects; weaknesses of subsoil; corrugation during rolling; weight of roller; faults of mechanical vehicles; load acts as brake; corrugation of wood and sett paving; corrugation on curves; corrective measures; importance of sound sub-structure; handling tar-macadam.

GRAVEL, SURFACE TREATMENT. Bituminous Treatment of Gravel Roads, F. G. Lang. Pit and Quarry, vol. 15, no. 13, Mar. 28, 1928, pp. 69-72. Bituminous surface treatments are now in experimental or developing stage; becoming very popular for following reasons: (1) eliminate dust; (2) conserve material; (3) lower maintenance and vehicle operating costs; (4) better riding surface; (5) gradually build up surface crust which will provide better foundation for pavements; three classes of roads discussed. Presented at 14th annual Michigan Conference on Highway Engineering.

SNOW FENCES. The Possibility of Natural Snow-Fences, R. A. Drought. Am. City, vol. 38, no. 4, Apr. 1928, p. 314, 1 fig. Constructive thinking of problems of snow removal and snowdrift prevention on highways; cost of tree planting and maintenance for five-year period would be $41.30, or 13 2/3 cents per linear ft.

SURFACE TREATMENT. Surface Treatment of Roads—Need Methods and Costs, C. N. Conner. Am. City, vol. 38, no. 4, Apr. 1928, pp. 97-98. Discusses three principal methods of surface treatment, as follows: skin surface treatment, or penetration method, which for first year costs from $1,000 to $2,500 per mi. for 18-ft. widths; mixed-in-place method cold—18-ft. width costs range from $700 to $1,200 per mi. to $5,000 or $6,000; premixed method hot or cold which aims to secure top will cost less than $1 per sq. yd. or about $10,000 per mi. of 18-ft. width.

Surface Treatments Used on Highways, B. E. Gray. Can. Engr. (Toronto), vol. 54, no. 18, May 1, 1928, pp. 488-489. Methods and materials used in handling several types of surface treatment, with particular reference to specification of material, cost, traffic and annual maintenance cost; penetration macadam pavements; cold asphalt patch. Paper presented at Sixth Annual Asphalt Paving Conference.

ROLLING MILLS

ELECTRIC DRIVE. Electric Drives for Rolling Mills, L. A. Umansky. Mech. World (Manchester, Eng.), vol. 83, no. 2151, Mar. 23, 1928, p. 218. Recent improvements; when mill requires number of adjustable-speed drives d.c. motor drive used; only method of obtaining adjustable speed with a.c. motor of size involved in steel-mill work is to use slip-ring induction motor, and to regulate its speed by acting on its secondary circuit. From Am. Inst. Elec. Engrs.

OPERATION. Timken Heat Treating and Metal Working Methods Reduce Costs, F. W. Manker. Mfg. Industries, vol. 15, no. 3, Mar. 1928, pp. 217-218, 3 figs. Timken Roller Bearing Co., at its Canton plant, makes its own steel alloy in five Heroult electric furnaces which turn out 235 tons daily; steel is poured into moulds and ingots, after being heated uniformly in gas-fired soaking pits, are bloomed in 35-in., 3-high blooming mill; in piercing mill red hot rods are rotated and pulled over plug which pierces hole through them longitudinally; novel method of reclaiming scrap material.

PLATE MILLS, DRIVE. New Drive for Three-High Plate Mills, J. Taylor. Iron Age, vol. 121, no. 15, Apr. 12, 1928, p. 1004, 1 fig. Driving centre roll at high speed gives large torque with increased flywheel stored energy; customary pinions and pinion housing replaced by light nest of gears between flywheel and mill spindles; saving in first cost and in renewals; 75 per cent added momentary power; rolling power consumption is reduced; only mill provided with slip drive can make use of this method for operating three-high mill.

STRIP, COLD-ROLLING. The Cold-Rolling of Strip Steel, H. C. Uhl. Iron and Steel Engr., vol. 5, no. 4, Apr. 1928, pp. 171-177 and (discussion) 177, 12 figs. Advantage of cold rolling; uses of cold rolled strip steel; classification as to quality and finish; preparation for rolling; trend in new mills; description of mills and method of rolling; electrical equipment for cold-rolled strip steel mills; motors and control; motor sizes required for various sizes of mills; drives for reels.

S

SAND BLASTING

COSTS. The Labour and Air-Power Cost of Sand-Blasting, E. H. Stehman. Am. Ceramic Soc.—Jl., vol. 11, no. 4, Apr. 1928, pp. 227-234, 6 figs. Efficiency data are given from experience on adjustment of air and sand quantities, size and shape of nozzle from work; production data on blasting of large ware and barrel cleaning of small ware; data are shown in curves.

SAND CLASSIFIERS

DESCRIPTION OF. Sand Settling and Devices for Settling and Classifying Sand, E. Shaw. Rock Products, vol. 31, no. 7, Mar. 31, 1928, pp. 38-40, 2 figs. Commonest settling device in rock-products industry is box designed to settle out concrete fine aggregate from stream of water carrying clay and silt; example illustrated and details described; in practice, boxes seldom built except by guesswork; usually too large, but area may be reduced by partitions. (Continuation of serial.)

SEWAGE DISPOSAL

ACTIVATED SLUDGE METHOD. The North Side Sewage Treatment Plant, H. E. Larson. Armour Engr., vol. 19, no. 2, Jan. 1928, pp. 49-50 and 56, 2 figs. World's largest activated sludge plant cost will be $28,000,000; sewage, largely domestic, from north section of Chicago and suburbs; agitation, 4 to 6 hr. in tanks, air blown through batch to provide oxygen for bacteria; resultant activated sludge, alive with bacteria, hastens purification of incoming sewage; main features of plant.

SEWAGE DISPOSAL PLANTS

OPERATION. Operation of Sewage Works. Pub. Works, vol. 59, no. 4, Apr. 1928, pp. 138-139. Report of committee of American Society of Civil Engineers; funds for operation; how most sewage works that are owned and operated by municipalities and other communities are financed; question of importance pertains to qualifications and adequate compensation of personnel employed; control analysis.

SEWERS

VENTILATION. Some Investigations Into Ventilation of Sewers and Deodorization of Sewer Gases, J. M. C. Corlette. Instn. Engrs., Australia (Sydney), vol. 8, no. 3, 1927, pp. 71-86, 5 figs. Emanation of offensive smells from sewer ventilating shafts; recount steps taken to meet difficulty; investigation of extent of influence of exhaust fans along main sewers; methods of deodorizing and results attained.

SILVER MINES AND MINING

ONTARIO. Silver Mining. Imperial Inst.—Bul. (Lond.), vol. 26, no. 1, Apr. 1928, pp. 49-51. Output from Cobalt camp in 1926 totalled 4,797,832 ounces; silver occurs not only along with niccolite and other arsenides of nickel and cobalt but as native silver in lumps and plates; area is called "Cobalt" from fact that silver ores carried metal of that name as one of constituents.

SLABS

DESIGN. Stresses at the Edges of Flat Slabs Not Supported by End Beams (Yober die Randbeanspruchung von Deckenstreifen ohme Randbalken), H. Marcus. Beton u. Eisen (Berlin), vol. 27, no. 6, Mar. 20, 1928, pp. 123-128, 6 figs. Mathematical analysis, based on higher theory of elastic plates, applied to usual cases occurring in design of buildings. (To be continued.)

SLUDGE TANKS

CALCULATING CAPACITY OF. Calculating the Capacity of Sludge Digestion Tanks, K. Imhoff. Am. City, vol. 38, no. 5, May 1928, pp. 124-125, 2 figs. Determine upon correct design values for sludge-digestion tanks; size of digestion chamber must be so proportioned that sufficient time is allowed for digestion in accordance with each particular set of conditions; population; temperature; mixing or seeding; sludge liquid; special allowances.

SOILS

BEARING CAPACITY. Bearing Capacity of Soil, C. Terzaghi. Eng. News-Rec., vol. 100, no. 16, Apr. 19, 1928, pp. 629-630. Restatement of basis for rules as to bearing capacity of cohesionless and cohesive materials; variation between numerical values furnished by different theories.

SPRINGS

COIL, RECTANGULAR-SECTION. The Compression Spring of Rectangular Section, G. Ashworth. Inst. Civil Engrs.—Sessional Notices (Lond.), no. 3, Mar. 1928, pp. 88-90. Deals with helical and volute spring, particularly of sizes in general use on railway rolling stock; account of investigation which determined internal distribution of shear stress and strain for overstrained circular section. Abstract.

SPIRAL, DYNAMICS OF. Dynamic Properties of Spiral Springs (De dynamiska engenskapma hos spiralfjadrar), W. Weilbull. Ingeniors Vetenskaps Akademien—Handlingar (Stockholm), no. 70, 1927, 25 pp., 19 figs. Existing formulæ for calculating strain in springs exposed to impact loading not satisfactory; proposes new formulæ for helical springs; formulæ verified by photographically registering various movements of turns of spring.

STEAM ENGINES

HEAT TRANSMISSION IN. Heat Transmission in Reciprocating Engine Cylinders (Der Waermeuebergang zwischen Arbeits mittel und Zylinderwand in Kolbenmaschinen), W. Nusselt. V.D.I. Zeit. (Berlin), vol. 72, no. 6, Feb. 11, 1928, p. 172. Review of earlier investigations; facts indicated lead to conclusion that heat transmission during condensation with superheated steam is definitely less than with saturated steam; this fact clearly contradicts author's work; states that much further research is necessary to clear up many uncertain aspects on subject. See translated abstract in Mar. Engr. and Motorship Bldr. (Lond.), vol. 51, no. 608, Apr. 1928, p. 157.

STEAM HEATING SYSTEMS

CORROSION. Corrosion in Steam Heating Systems, F. N. Speller. Am. Soc. Heat. and Vent. Engrs.—Jl., vol. 34, no. 4, Apr. 1928, pp. 390-392, 4 figs. Series of tests carried out in Department of Metallurgy and Research of National Tube Co., using small experimental steam boiler, to getermine acidity of condensed steam with and without boiler water treatment; description of boiler and method of operation; method for testing boiler water in steam-heating plants for alkalinity; method for determining carbon dioxide in steam condensate.

STEAM TURBINES

VIBRATION. Curing Resonant Vibration in Turbine Units, T. C. Rathbone. Power, vol. 67, no. 15, Apr. 10. 1928. pp. 629-632, 5 figs. Methods of correcting resonance conditions when encountered in operating units; vibration reduced by changing supports; effect of change in foundation loading; floor vibrations; internal and external friction retards vibration.

ZOELLY. Steam Consumption of a 12,000-Kw. Zoelly Turbine (Dampfverbrauchs-Messungen an einer 12,000-Kw. Zoelly-Dampfturbine im staedtischen Kraftwerk in Leiden), D. Dresden. Schweizeizerische Bauzeitung (Zurich), vol. 91, no. 15, Apr. 14, 1928, pp. 181-183, 4 figs. Description of Zoelly steam turbine of 1,750 mm. maximum diameter, installed in municipal power plant of Leyden, Holland; details of test showing steam consumption of 4.35 to 4.71 kg. per kw.-hr.

STEEL

ALLOY. *See Alloy Steels.*

CHROMIUM STEEL. *See Chromium.*

HARDENING. Hardening by Reheating After Cold Working, M. A. Grossman and C. C. Snyder. Can. Machy. (Toronto), vol. 39, nos. 7 and 8, Apr. 5 and 19, 1928, pp. 38-39 and 75-76, and 33-34 and 73, 18 figs. Apr. 5: Theory explaining phenomenon of hardening of cold-worked and quenched steel by reheating at low temperatures; thin layer of interblock material, which increases gradually in thickness as reheating temperature is raised. Apr. 19: Decrease in toughness due to transformation of retained austenite to non-ductile alpha iron.

HIGH-SPEED. *See High-Speed Steel.*

STEEL MANUFACTURE

SEMI-DIRECT METHOD. Latest Process of Making Steel Reduces Manufacturing Cost. West. Machy. World, vol. 19, no. 3, Mar. 1928, pp. 127-128. Semi-direct method of making steel independent of coking coal and at cost of pig iron announced by American Research Corp.; first converts iron ore into sponge, which is chemically treatd, then fed continuously to retort of unique design, melted and finally alloyed.

STEEL CASTINGS

HEAT TREATMENT. A Modern Plant for the Heat Treatment of Miscellaneous Steel Castings, A. W. Lorenz. Am. Foundrymen's Assn.—Reprint, no. 28-10, for mtg. May 14, 1928, pp. 141-152, 9 figs. Describes plant, uniquely equipped for full quenching and tempering of miscellaneous steel castings; with this plant output of over 500 tons per month may be obtained at cost of about one-half cent per pound.

SHRINKAGE. The Contraction of Steel Castings, Koerber and Schitzkowski. Metallurgist (Supp. to Engineer, Lond.), Apr. 27, 1928. pp. 55-56. Investigation of shrinkage phenomena in castings carried out at two steel foundries in Dusseldorf district; relates not only to measurement of contraction in simple test bars but also to study of actual casting and especially of large wheels and pulleys. Abstract translated from Stahl u. Eisen, Feb. 2 and 9, 1928.

STOKERS

CHAIN-GRATE. Roller Bearings on Chain-Grate Stokers. Power Plant Eng., vol. 32, no. 9, May 1, 1928, p. 526. Tests were made at Moabit central station, Berlin, to determine how roller bearings would work under heavy service of old chain-grate stokers, how much fuel could be saved and how well lubrication with dry graphite would satisfy. Abstract translated from Archiv. fuer Waermewirtschaft.

UNDERFEED. Detroit Edison Company Selects Stokers for New Plant at Delray. Power, vol. 67, no. 18, May 1, 1928, pp. 788-789, 1 fig. Underfeed stokers for first six boiler units of new plant, now in course of construction; lack of ash-disposal facilities influenced decision to use stokers; experience with pulverized coal at Trenton Channel satisfactory.

STORAGE BATTERIES

LEAD. The Lead-Acid Storage Cell, H. G. Brown. Elec. Rev. (Lond.), vol. 102, no. 2627, Mar. 30, 1928, p. 549 and (discussion) 549. Electric accumulator and some of its uses; Plante and Faure types of lead cell; storage batteries used in modern telephone exchanges were largest; use of secondary batteries in submarines for propulsion; application of batteries to traction; two-battery locomotives. Abstract of paper presented at Royal Soc. of Arts.

STANDARDS. Storage Batteries. Am. Inst. of Elec. Engrs. Standards, no. 36, Feb. 1928, 4 pp. Standards in this section apply to storage batteries of lead-acid type and of nickel-iron alkaline type; they are suitable for large and small batteries in either stationary or portable service.

STREAM FLOW

DISCUSSION OF. Stream Flow in General Terms, F. S. Bailey and C. E. Pearce. Am. Soc. Civ. Engrs.—Proc., vol. 54, no. 5, part 1, May 1928, pp. 1605-1616, 4 figs. Writers, calculating flood discharge through Exchequer dam and power house in 1926. used step-by-step process, with Chezy's formula; obtaining proper elements by trial and error; Casler's method is much shorter and more direct and gives clearer vision of whole problem. Discussion of paper by M. D. Casler, published in Jan. 1928 issue of Proceedings.

STREET LIGHTING

CARRIER-CURRENT CONTROL. Carrier-Current Control, R. R. Cowles. Elec. World, vol. 91, no. 17, Apr. 28, 1928, pp. 863-866, 8 figs. Although remote control of street-lighting circuits by carrier-current has been under development for more than four years, one of first commercial installations has just been completed in San Francisco by Pacific Gas and Electric Co.; system consists essentially of transmitting set in substation and receiving set centrally located with respect to circuits to be controlled; carrier-current equipment operates over one phase of three-phase, 4,000-volt feeder through capacitor couplers in substation and out on line.

STREETS

MAINTENANCE AND REPAIR. Street Maintenance in Small City, C. Draper. Mun. News, vol. 74, no. 3, Mar. 1928, pp. 62-63. Methods employed at Lafayette, Ind.; filling pot holes with oiled gravel; resurfacing old pavement with rock asphalt; effect of tire chains on pavements; repairs along street railway tracks; importance of competent inspection. Paper presented at Purdue Road School.

STRUCTURES

EARTHQUAKE EFFECT. Effect of Earth Shocks on Structures, M. DeBussy. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 5, part 1, May 1928, pp. 1449-1463, 11 figs. Study of stresses that affect simple structures as result of movements caused by earthquake shocks; problem in general, attacking easiest questions first with methods of computation that are available so as to attain better understanding of phenomena that occur; after obtaining this result, author considers more complicated cases.

WELDED STEEL. Examples of Arc Welded Steel Construction, G. B. Fish. Am. Welding Soc.—Jl., vol. 7, no. 3, Mar. 1928, pp. 10-19, 7 figs. Tests of arc-welded structural steel joints; cost savings in welded construction; Sharon Building; complete continuity of floor beams and girders obtained by welded joints of cantilever type; saving of 100 tons; continuity tested with hydraulic jacks; Derry Building; Chicopee falls bridge; plate-girder railroad bridge.

T

TELEGRAPH, CARRIER

CANADA. Carrier Telegraph in Canada, J. C. Burkholder. Bell Laboratories Rec., vol. 6, no. 2, Apr. 1928, pp. 248-252, 7 figs. Complete carrier system consisting of five terminal stations, twelve repeater stations and repeatered telephone circuit between Montreal and Winnipeg by way of Toronto, all to operate on same pair of wires; carrier has almost complete immunity from auroral disturbances, due to its being ungrounded system operating through transformers; tests and inspections made.

THERMIT WELDING

PROCESS. The Science and Applications of the Thermit Welding Process. Can. Machy. (Toronto), vol. 39, no. 6, Mar. 22, 1928, pp. 35-36 and 38-39, 6 figs. Thermit process adapted to uniting ferrous material, where large sections are involved; history thermit is mixture of finely-divided aluminum and iron oxide; high chemical affinity of aluminum for oxygen; kinds of thermit for welding; making thermit weld; sand mould and wax pattern; thermit single- and double-burner preheater; locomotive repairs.

TUNGSTEN ORES

REDUCTION. The Gaseous Reduction of Tungsten and Molybdenum, E. W. Engle. Am. Electrochem. Soc.—Advance Paper, no. 35, for mtg., Apr. 28, 1928, pp. 345-349. Non-gaseous reduction methods are used for producing tungsten and molybdenum where extreme purity is not essential; for pure metals reduction is from oxides with hydrogen; proper physical structure of reduced metals is necessary; intermittently operating processes in tube furnaces have advantages over continuously operating units.

V

VACUUM TUBES

CAPACITY MEASUREMENT. Measurement of Vacuum-Tube Capacities by a Transformer Balance, H. A. Wheeler. Inst. Radio Engrs.—Proc., vol. 16, no. 4, Apr. 1928, pp. 476-481, 3 figs. Complete portable equipment for measurement of direct capacities of vacuum tubes in laboratory or factory testing; tube capacity is compared with standard variable condenser by means of transformer-balance (Neutrodyne) circuit, whose balance is independent of frequency, about 1,500 kc. being preferred.

HIGH-VOLTAGE. Some Past Developments and Future Possibilities in Very High-Voltage Vacuum Tubes, W. C. Coolidge. Gen. Elec. Rev., vol. 31, no. 4, Apr. 1928, pp. 184-185, 3 figs. Describes experiments on discharge from tube operating at 900,000 volts.

VOLTAGE REGULATION

METHODS. Voltage Regulation Systems, G. Rattenbury. Elec. Rev. (Lond.), vol. 102, no. 2628, Apr. 6, 1928, pp. 586-589, 8 figs. Methods of voltage regulation on a.c. systems compared; tapped-transformer principle; synchronous condenser in industrial plants, for power-factor correction, where suitable mechanical load is available; induction regulator minimizes switchgear and gives smooth regulation, but is not as robust as tapped transformer; tapped transformer is most suitable for transmission purposes generally.

W

WELDING

ELECTRIC. *See Electric Welding; Pressure Vessels.*

WIND POWER

UTILIZATION. Electric Current from Wind. Compressed Air Mag., vol. 33. no. 4, Apr. 1928, p. 2380, 1 fig. Unique contrivance has been erected in southern California; wind motors are capable of developing 200 h.p.; structure is mounted on circular track base so that it may be swung in direction of wind; second plant of this kind now in course of construction and is designed to produce 1,400 h.p.

WIRE ROPE

RESEARCH. Wire Ropes Research, A. W. Scoble. Engineering (Lond.), vol. 125, no. 3250. Apr. 27, 1928, pp. 522-525, 7 figs. Third report of Wire Ropes Research Committee. All specimens were of 80 to 90 tons per sq. in. tenacity, four being made of 0.021 in. and three of 0.036 in. diameter wire; ropes were made in pairs, one of which was of Lang's and other of ordinary lay; repeated bending tests; comparison of all ropes of both tensile strengths; reversed bending of ropes; experiments with single wires.

WATER CHLORINATION

DISCUSSION OF. Is Prechlorination Worth Using? J. S. Whitener. Am. City, vol. 38, no. 5, May 1928, p. 123. Chlorination of raw water and of coagulated water; clear, sparkling effluent was first advantage charged to prechlorination; after prechlorination, samples of filtered water, tested for B. coli in lactose broth, showed no gas.

WATER FILTRATION PLANTS

DESIGN. The Design and Construction of Small Filtration Plants, H. K. Bell. Water Works, vol. 67, no. 4, Apr. 1928, pp. 149-153, 8 figs. Principal design factors; probable demand; character of supply; operating force; character of power for pumping; new layout or addition to old plants; topographic characteristics of site; special features in design of small plants; gauges, controllers and meters; filter wash; settling basins.

The Design of Small Filtration Plants. Contract Rec. (Toronto), vol 42, nos. 17 and 18, Apr. 25 and May 2, 1928, pp. 430-432 and 459-460. Factors that modify arrangement of works serving municipalities under 10,000 population; funds for such plants are usually limited and consequently design is restricted; principal design factors; character of supply; reservoir storage; operating force; topographic characteristics of site; fire services; design of small filtration plant differs entirely from that of large plant.

WATER PIPE LINES

SUBAQUEOUS, LAYING. Laying a Subaqueous Water Supply Pipe Line Under the Maas (Meuse) River at Rotterdam (Verlegung eines Duekers durch die Maas), Wirtz. Gas- u. Wasserfach (Munich), vol. 71, no. 9, Mar. 3, 1928, pp. 200-203, 7 figs. Describes equipment and method of laying 60-cm. Mannesmann seamless pipe line in 50-m. lengths, across river channel about 400 m. long; details of flexible joints.

Ingenious Method of Laying Pipe Under Water. Concrete Products, vol. 34, no. 4, Apr. 1928, pp. 35-36, 3 figs. 512 ft. of pipe laid; pipe was double ring reinforced concrete 5½ in. thick, 48 in. diam., 4 ft. long and weighed 1,900 lb. per section.

WATER POWER

CANADA. Water Power Resources in Dominion. Can. Engr. (Toronto), vol. 54, no. 15, Apr. 10, 1928, pp. 433-436. Review of Dominion Water Power and Reclamation Service of Developed Water Powers; during 1927, 221,000 h.p. was installed; basis of computation; available and developed totals; utilization of developed water power; central electric station industry; pulp and paper industry.

WATER SUPPLY

LONDON, CANADA. London Municipal Water Works System, E. V. Buchanan. Can. Engr. (Toronto), vol. 54, no. 11, Mar. 13, 1928, pp. 123-126, 6 figs. Water supply obtained from wells in sand and gravel strata motor-driven turbine pumps at both plants; distribution system; Beck Wells plant has 3 two-million gallon 2-stage turbine pumps at 750 r.p.m. against pressure of 115 lb.; all driven by 550-volt synchronous motors; bearings equipped with thermostats; Springbank Station electrified by installation of two 3,000,000-gal. turbine pumps driven by 2,300-volt synchronous motors.

WATER TANKS

ELEVATED. The Uses of Elevated Tanks in Water Supply Systems, G. H. Fenkell. Am. Water Works Assn.—Jl., vol. 19, no. 4, Apr. 1928, pp. 347-357. Tanks are used quite generally by large consumers to guard against interruption of service; method for control of flow in and out of tank; design of elevated tanks.

STEEL, CONSTRUCTION. Steel Tank Construction, I. E. Flaa. Am. Water Works Assn.—Jl., vol. 19, no. 4, Apr. 1928, pp. 374-381, 3 figs. San Francisco has 14 tanks; four are of steel or iron, one of reinforced concrete and remainder are wood; design of Forest Hill steel tank was influenced by fact that company had on hand sufficient plates, rivets and material to build 45-foot diameter by 40-foot high tank; cost of Forest Hill tank.

WATER TREATMENT

DECOLOURIZATION. The Decolorization of Soft, Coloured Waters, R. S. Weston. Am. Water Works Assn.—Jl., vol. 19, no. 4, Apr. 1928, pp. 416-427, 2 figs. Account of certain detached experiences in treating soft, coloured waters in laboratory and in practice; nature of colour; methods of colour removal; range in dose of chemicals.

WEIRS

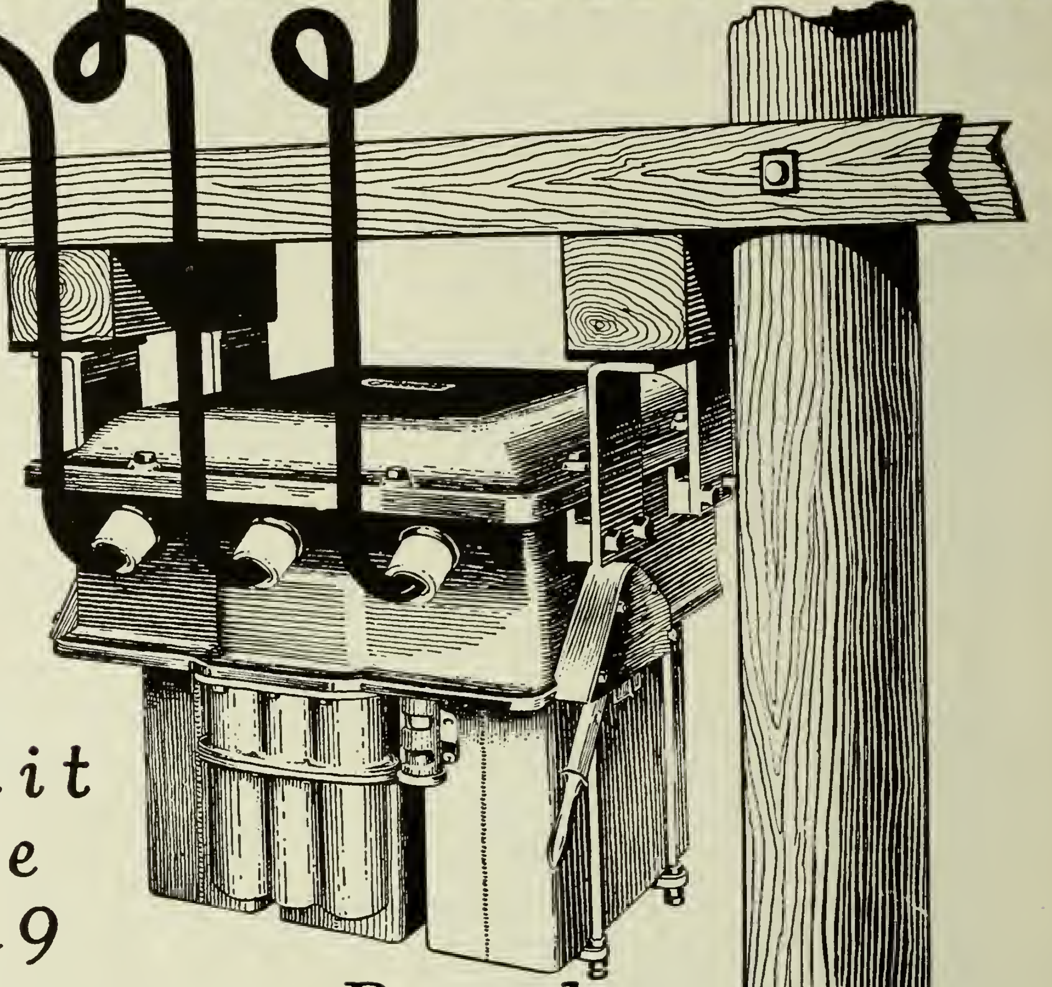
MEASUREMENTS. Precise Weir Measurements, R. E. Ballester and G. S. Williams. Am. Soc. of Civil Engrs.—Proc., vol. 54, no. 5, part 1, May 1928, pp. 1493-1500, 2 figs. Writer has determined formula for discharge over broad-crested weir with cylindrical up-stream face and present results of his observations as to influence of velocity of approach and determination of Bazin's coefficient; weir is located in main canal of Rio Negro irrigation works, Argentina. Discussion of paper by E. W. Schoder and K. B. Turner, continued from Apr. 1928 issue of Proceedings.

Z

ZINC ORE

LEACHING. Recent Developments in Ammonia Leaching for Zinc Ores, H. M. Lawrence. Assn. of Chinese and Am. Engrs.—Jl. (Pekin), vol. 9, no. 3, Mar. 1928, pp. 29-37. Deals with history of development of process; reviews present-day operations and gives tables showing results of experiments on roasted zinc ores, zinc-lead fume and effect of improper roasting on zinc extractions; conclusions are that ammonia leaching has certain possibilities, of which number are listed.

For Your Pole Lines



The Condit Type PK~9 Oil Circuit Breaker

A powerfully built, weather-proof breaker—just the thing for outdoor service of moderate interrupting capacity on pressure up to 7,500 volts.

Furnish single or triple pole non-automatic or automatic. Normal current ratings are 400, 600 and 800 amperes; 7,500 volts.

Write the nearest Northern Electric Branch for full information.

Power apparatus specialists at any Northern Electric Branch will gladly consult with you at any time on the planning or installation of the most suitable equipment for your purpose.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street. New York, N.Y.

A

AIRPLANE ENGINES

MAGNETOS. New Special Light-Weight Magneto Developed by Splitdorf Engineers, E. B. Nowosielski. U. S. Air Services, vol. 13, no. 5, May 1928, p. 36, 1 fig. New special lightweight magneto Model NS-9; improved inductor type producing four equal sparks per revolution.

SUPERCHARGERS. Superchargers Are Standard on New Aircraft Engines. Aero Digest, vol. 12, no. 5, May 1928, p. 808. Superchargers especially designed by General Electric Co. will be built as standard equipment into three new types of Wright aircraft engines; maximum efficiency in operation is expected; supercharger arranged so that it can be used to maintain sea level power when flying at moderate altitudes.

AIRPLANE PROPELLERS

EFFICIENCY. Efficiency of Aircraft Propellers (Der Wirkungsgradbegriff beim Propeller), A. Betz. Zeit. fuer Flugtechnik und Motorluftschiffahrt (Munich), vol. 19, no. 8, Apr. 28, 1928, pp. 171-177, 12 figs. Theoretical report from Kaiser Wilhelm Institute for Research in Dynamics of Fluids.

NEW TYPE. Novel Airscrew. Times Trade and Eng. Supp. (Lond.), vol. 22, no. 514, May 12, 1928, p. 218. Brief reference to airscrew designed to make use of energy of exhaust gases from engine.

VARIABLE PITCH. The Hele-Shaw—Beacham Variable Pitch Airscrew, Hele-Shaw and Beacham. Aeroplane (Lond.), vol. 34, no. 16, Apr. 18, 1928, p. 562, 1 fig. Also Flight (Lond.), vol. 20, no. 16, Apr. 19, 1928, pp. 265-270. Airscrew developed by Gloster Aircraft Co.

AIRPLANES

GIANT—DESIGN. Prospective Development of Giant Airplanes, B. Von Roemer. Nat. Advisory Committee for Aeronautics—Tech. Memorandums, no. 463, May 1928, 7 pp., 6 figs. Survey of latest German projects shows giant airplane is being sought.

HELICOPTERS. *See Helicopters.*

STREAMLINING. Streamlining Adjustments While in Flight as Illustrated by the Behavior of Birds, J. Prentice. U. S. Air Services, vol. 13, no. 5, May 1928, pp. 25-27, 4 figs. Flow of air around airplane of today is turbulent and indicates waste of energy.

STRESS ANALYSIS. Stress Analysis of Commercial Aircraft, S. Klemin and G. F. Titterton. Aviation, vol. 24, nos. 20, 21, and 22, May 14, 21, and 28, 1928, pp. 1367 and 1404-11, 4 figs., 1455 and 1472-75, 3 figs., and 1524-25, 34 and 1536-38, 7 figs. May 14.

WING PRESSURE DISTRIBUTION. Study of Pressure Distribution Data. Air Corps Information Cir., vol. 7, no. 604, Nov. 1, 1927, 24 pp., 20 figs. Study to determine extent to which available pressure-distribution data justify rules for computation of external loads on wing cellule now in use by Air Corps and Bureau of Aeronautics; effect of air speed on pressure distribution; factors affecting distribution along span; effect of taper, tip shape, aileron movement, and of change in airfoil section; outline of proposed research. Bibliography.

WINGS, SLOTTED. The Slotted Wing and Safety of the Airplane (L'aile à fente et la securité de l'avion). Aeronautique (Paris), vol. 10, no. 107, Apr. 1928, pp. 117-120, 6 figs.

ALLOYS

AGE-HARDENING OF. Age-Hardening of Alloys, Hay. Iron and Steel of Canada (Gardenvale, Que.), vol. 11, no. 5, May 1928, pp. 148-150. General mechanism of age hardening depended upon size of particles present in alloy; depression after quenching and before hardening commenced; temperature of precipitation caused difference in amount of hardening; time of soaking at high temperature before quenching; size of article influences degree of hardness age-hardening attainable; volume change due to precipitation of compound from solution caused by age-hardening. Paper read at Inst. of Metals.

ALUMINUM. *See Aluminum Alloys.*
CHROMIUM. *See Chromium Alloys.*
NICKEL-COPPER. *See Nickel-Copper.*

ALUMINUM ALLOYS

ALMELEC. Almelec, A New Light Alloy for Wires and Cable Conductors. Mech. World (Lond.), vol. 83, no. 2158, May 11, 1928, p. 347. Details of physical constants of aluminum alloy developed in France for aerial power-transmission and telephone lines; contains 98.5 per cent pure aluminum and 1.2 per cent of magnesium and silicon and is subjected to special heat treatment in addition to being hard drawn; resistance to corrosion under atmospheric conditions is stated to be comparable with that of pure aluminum. Brief abstract translated from Revue Générale d'Electricité.

AMMONIA CONDENSERS

HEAT TRANSFER IN. Heat Transfer in Ammonia Condensers. Power, vol. 67, no. 20, May 15, 1928, pp. 862-863, 1 fig. Results of research undertaken at Univ. of Illinois in order to correlate and give proper weight to various factors entering into design and operation of outstanding types of ammonia condensers. Abstracted from Univ. of Illinois Bul. No. 25.

AUTOMOBILE ENGINES

CYLINDERS, CHROMIUM STEEL. Nitrated Chrome Steel Cylinders, L. Guillet. Foundry Trade Jl. (Lond.), vol. 38, no. 611, May 3, 1928, p. 314. According to experiments, employment of nitrated steel for cylinders gives results never before attained.

CRANKSHAFTS. Some Notes on Crankshafts, F. Strickland. Automobile Engr. (Lond.), vol. 18, no. 241, May 1928, pp. 182-184, 10 figs. Strength necessary to provide against fracture; rigidity to prevent distortion when running; bearing surface to give durability; distortion due to springing thin webs is likely to be serious matter; two-bearing 4-cylinder crankshaft; enormous advantage of two-bearing shaft; engines with more than four cylinders; method of balancing engine; worth while to machine crankshaft all over.

AUTOMOBILE PLANTS

HEAT TREATING DEPARTMENT. Heat Treating at Dodge Brothers Plant, H. E. Martin. Heat Treating and Forging, vol. 14, no. 5, May 1928, pp. 525-528, 2 figs. Electric furnaces of various types are successfully used in many heat-treating operations.

Modernized Equipment for Heat Treating, F. W. Manker. Heat Treating and Forging, vol. 14, no. 4, Apr. 1928, pp. 386-387, 3 figs. Mechanization in handling pieces in process of heat treating in forge and treating departments of Willys-Overland Co.; hardening miscellaneous parts; annealing after drop forging.

AUTOMOTIVE FUELS

DETONATION. Comparison of Methods of Measuring Knock Characteristics of Fuels, G. Edgar. Am. Petroleum Inst.—Bul., vol. 9, no. 7, Jan. 31, 1928, pp. 90-99 and (discussion) 99-102, 4 figs. October 1926, conference for discussing present methods of measuring knock characteristics.

B

BEARINGS

LUBRICATION. An Experimental Determination of the Distribution and Thickness of the Oil-Film in a Flooded Cylindrical Bearing, J. Goodman. Instn. Civil Engrs.—Sessional Notices (Lond.), no. 3, Mar. 1928, pp. 79-80. Mathematical theory of lubrication as set forth by Reynolds and extended by Sommerfeld is now very widely recognized, but, owing to lack of data when theory was first set forth, it is considered that some of assumed conditions are not altogether justified; account of recent experiments made with object of supplying such data.

BELTS

STRETCH. Measurement of Elastic Stretch of High-Speed Belts (Messung der elastischen Nachdehnung des laufenden Riemens), O. Kammerer. Maschinenbau (Berlin), vol. 7, no. 9, May 3, 1928, pp. 413-414, 3 figs. Brief report on experimental studies of belt stretch, made at Berlin Institute of Technology.

BOILER FURNACES

FLUE DUST, ELECTRIC PRECIPITATION. Flue Dust Recovery, H. W. C. Henderson. World Power (Lond.), vol. 9, no. 53, May 1928, pp. 284-289, 5 figs. Application of electric precipitation to powdered-fuel installations; general principles of process; Trenton Channel plant; results of tests made to determine efficiency; coal-drying operations.

BOILER PLATE

PROPERTIES. Investigations of Boiler Plate (Untersuchungen an Kesselblechen), A. Pomp. Stahl u. Eisen (Duesseldorf), vol. 48, no. 21, May 24, 1928, pp. 681-689, 17 figs. Results of tests show that the harder boiler plates, especially those of nickel steels, are superior to plates poorer in carbon, with regard to behavior at elevated temperatures, aging properties, and tendency to coarse-grained recrystallization.

BOILERS

DESIGN. Modern Boiler Problem, A. G. Christie. Power, vol. 67, no. 22, May 29, 1928, pp. 946-949. Boilers must now be designed for both convection and radiant-heat transfer and for much higher ratings; regulation of boiler feed-water; radiant heat.

ELECTRIC. 147,000 kw. in Electric Steam Boilers at Gatineau Paper Mill, W. P. Muir. Elec. News (Toronto), vol. 37, no. 10, May 15, 1928, pp. 55-57, 1 fig. Largest installation and largest units ever constructed produce practically dry saturated steam; installation consists of four units, three of 42,000 kw. each, and one of 21,000 kw.; boilers deliver 190 lb. of steam to steam accumulator from which it is drawn at 125 lb.; high-grade porcelain insulators; new type of electrodes.

EFFICIENCY DIAGRAMS. The Low-Range Reflex-Ordinate Boiler-Efficiency Diagram. Power Engr. (Lond.), vol. 23, no. 266, May 1928, pp. 204 and 209, 1 fig. on supp. plate. Presents diagram having pressure lines which have been carried down to points opposite their corresponding saturation temperatures, and these points have been joined up to form "saturation curve."

FEED CONTROLLERS. A Boiler Feed Controller for High Pressures. Engineer (Lond.), vol. 145, no. 3776, May 25, 1928, p. 582, 2 figs. Improved type of feed controller specially designed for service on high pressure boilers; known as "Stets" feed controller, and is already in use in number of largest power stations in America.

HEADS, DESIGN. Boiler-Head Calculation According to Latest German Specifications (Die Kesselbodenberechnung nach den neuesten Vorschriften), G. Hoennicke. Waerme (Berlin), vol. 51, nos. 16 and 17, Apr. 21 and 28, 1928, pp. 297-300 and 322-327, 6 figs. Supplement of specifications of Oct. 1926; pressure stages; points in which revised specifications differ from those of 1926; recommendations for retention of Goldesberger formula; the best basket-head meridian.

Calculation of Strength and Most Favorable Shape of Dished Heads of Cylindrical Boilers of Uniform Plate Thickness (Ueber die guenstigste Gestalt des vollen, gewoelbten Bodens zylindrischer Kesseltrommeln gleicher Dicke und ihre Festigkeitsberechnung), A. Muggenberger. Schweizerische Bauzeitung (Zurich), vol. 91, nos. 17 and 18, Apr. 28 and May 5, 1928, pp. 203-208 and 217-221, 27 figs. Theoretical mathematical analysis checked by precise tests in which deformations were measured by means of special electro-magnetic extensometers; derives formulas for most convenient shape and maximum stresses.

HEAT TRANSMISSION IN. Process of Heat Transmission in Boilers (Processus de la transmission de la chaleur dans les chaudières modernes, etc.), Roszak and Veron. Génie Civil (Paris), vol. 92, no. 8, Feb. 25, 1928, pp. 195-196. Authors show how laws of transmission of heat explain and coördinate phenomena observed in boilers, and justify success of methods which have resulted in radical modifications in design; data on proportions of heat absorbed by radiation and convection in boilers of various types. See translated abstract in Eng. and Boiler House Rev. (Lond.), vol. 41, no. 10, Apr. 1928, p. 504.

LOCOMOTIVE. *See Locomotive Boilers.*

BOLTS

THIN-HEADED DESIGN. The Design of Thin Bolt Heads, W. Richards. Machy. (Lond.), vol. 32, no. 812, May 3, 1928, pp. 137-138, 2 figs. Discussion of how far thinning of head may proceed without actual loss of strength to whole bolt; untreated bolts produced from ordinary commercial bright-drawn hexagon mild steel; formulas required to determine proportions of bolt having equal strength in both shear and tension.

BUILDINGS

HEAT LOSSES IN. Determination of K Coefficients in Calculation of Heat Losses from Heated Buildings (Détermination des coefficients K employés dans le calcul des déperditions de chaleur des batiments chauffés), G. Prud'hon. Jl. des Usines à Gaz (Paris), vol. 52, no. 9, May 5, 1928, pp. 204-209, 3 figs. Description of apparatus for measuring calories absorbed by wall under test for obtaining value of coefficient K in formula for heat losses from walls of building; when and how apparatus is used.

C

CABLEWAYS

DESIGN. The Design of Cableways (Il calcolo delle funivie), U. Vallecchi and C. Carretto. Rivista Technica delle Ferrovie Italiane (Rome), vol. 33, no. 17, Apr. 15, 1928, pp. 152-176, 2 figs. Extensive compilation on theoretical principles and practical methods of design of cableways, telphers, etc., based on works of Isaachsen, Findeis, Stabilini and others.

CAST IRON

HIGH-TEST, MANUFACTURE OF. Developments in Furnace Practice for Production of High-Test Cast Iron, R. Moldenke. Fuels and Furnaces, vol. 6, no. 5, May 1928, pp. 726-730.

NICKEL. Economic Value of Nickel in Gray Cast Iron, D. M. Houston. Can. Foundryman (Toronto), vol. 19, no. 5, May 1928, pp. 33-36, 18 figs. Wide gulf existing between laboratory and foundry practice; problem of uniformity; structure building.

CASTING

VACUUM SYSTEM. Casting Metals by the Vacuum System. Metal Industry (N.Y.), vol. 26, no. 5, May 1928, p. 228, 1 fig. Vacuum principle, which is basis of methods used in casting glass automatically, has been applied to permanent-mold casting of metals in machine developed by A. Kadow, chief engineer of Owens Bottle Co., who applied his knowledge of glass casting to perfection of metal-casting machine that would embody vacuum-casting idea.

CHIMNEYS

HEAT LOSSES. A Simplified, Exact Method of Calculating Stack Losses (Eine vereinfachte und eine genaue Berechnung des Schornsteinverlustes), H. Kolbe. Brennstoff und Waermewirtschaft (Berlin), vol. 10, no. 5, Mar. 1, 1928, pp. 91-98, 8 figs. Formulas, tables of constants and charts for exact computation of loss of heat through smoke stacks; several of numerical examples.

CHROMIUM ALLOYS

WELDING. Welding of High Chromium Alloys. Heat Treating and Forging, vol. 14, no. 5, May 1928, pp. 502-504 and 524, 7 figs. Review of procedure for welding various types of corrosion resisting alloys.

CHROMIUM PLATING

AUTOMATIC. Chromium Plating Applied Automatically, F. W. Curtis. Am. Mach., vol. 68, no. 19, May 10, 1928, pp. 765-767, 5 figs. Chromium plating of brake cams on production basis, by means of conveyor-type unit is being carried out by Chevrolet Gear and Axle Co.

CHROMIUM STEEL

HEAT RESISTING. Heat Resisting Steels—Mechanical Properties, W. H. Hatfield. Iron and Steel Inst.—advance paper (Lond.), no. 6, May 1928, 22 pp. Deals with mechanical strength of steels at high temperature, as affected by introduction of special elements; steels investigated include chromium, silicon-chromium, chromium-nickel, chromium-nickel-silicon and chromium nickel-tungsten series. See abstract in Engineering (Lond.), vol. 125, nos. 3252 and 3253, May 11 and 18, 1928, pp. 589 and 622 and discussion on pp. 601-602.

CLUTCHES

ELECTROMAGNETIC. Electro-magnetic Clutches, H. T. Wright. Machy. (Lond.), vol. 32, no. 812, May 3, 1928, pp. 132-134, 7 figs. Methods of calculation and practical examples of designs; for large powers, refinement in design is necessary.

COAL

CARBONIZATION, LURGI PROCESS. Features of Construction and Process Application of Lurgi Methods at Wyoming Coal Briquetting Plant. Min. Rec., vol. 30, no. 2, Apr. 30, 1928, pp. 13-15, 3 figs. Résumé of article published in Mar. 31 issue of same journal; reproductions of drawings and charts showing what plant is designed to accomplish and how it is to function; economies of Lurgi process are based on efficient utilization of gas mixtures by means of circulatory system; claims made for processed Wyoming lignite fuel.

COAL HANDLING

CONVEYORS. Long Distance Coal Conveying on Belt Conveyors, E. C. Auld. Cassier's Indus. Mgmt. (Lond.), vol. 15, no. 5, May 1928, pp. 160-161. Data for 3½ years' operation of equipment handling total of 9,390,000 tons of coal; daily capacity as high as 13,866 tons; length 15,398 ft.; total lift 353.3 ft.; 57 per cent of belts originally supplied are still in service. Abstract of paper before Am. Inst. of Min. and Met. Engrs.

CONTAINERS

DESIGN. The Building of Containers for Severe Service, T. M. Jasper. Indus. and Eng. Chem., vol. 20, no. 5, May 1928, pp. 466-470, 8 figs. Containers used in chemical, oil-cracking, and steam engineering are required to carry increasingly high pressures, withstand great variations of temperature, and resist corrosive effects of great variety of conditions; problem divides itself into four parts; knowledge of working conditions and materials; design of apparatus to insure strength; protection of vessels during construction; testing vessels.

CORES

ELECTRIC BAKING. Core Baking With Electric Heat, J. S. Keenan. Can. Foundryman (Toronto), vol. 19, no. 5, May 1928, pp. 36-37, 3 figs. Heat-treatment process in core making is dual operation of drying and baking.

COPPER ALLOYS

HEAT TREATMENT. The Effect of Heat Treatment on Some Mechanical Properties of 90:6:3:1 Copper-Tin-Zinc-Lead Alloy, R. J. Anderson. Am. Metal Market, vol. 35, no. 55, Mar. 22, 1928, pp. 3-5, 19 figs. Selected bibliography.

D

DIES

FORGING. Die Design for Progressive Deep Piercing, E. R. Frost. Heat Treating and Forging, vol. 14, no. 5, May 1928, pp. 507-512, 30 figs. Method of forming hot-forged articles directly from bar stock by progressive piercing operations. Abstract of paper read before Am. Soc. Steel Treating.

DIESEL ENGINES

AIRLESS INJECTION. First Airless Injection, Double Acting Engine. Mar. Eng. and Shipg. Age, vol. 33, no. 6, June 1928, pp. 326-327, 3 figs. Built on Hesselman system of fuel injection designed to develop 4500 b.hp. at 90 r.p.m. in normal service; six cylinders 700 mm. in diameter with piston stroke of 1200 mm.; new cylinder construction.

AUTOMOTIVE. The Automotive Full-Diesel Engine, R. J. Broege. Ry. Age (Motor Transport Sec.), vol. 84, no. 21, May 26, 1928, pp. 1245-1248, 6 figs. Operating performance compared with gasoline engine. Abstract of paper presented before Soc. Automotive Engrs.

DESIGN. Co-operative Design, C. E. Cox. Am. Mach., vol. 68, no. 22, May 31, 1928, pp. 869-871, 2 figs. Factors influencing design of bearings, gears, drives and lubrication of Diesel engines.

HIGH-SPEED. High-Speed Diesel Engines, O. D. Treiber. Eng. Soc. of Buffalo—Bul., vol. 8, no. 3, Mar. 1928, pp. 3-9 and (discussion) 9-12. Air injection; solid injection; self-ignition; semi-self-ignition; mechanics of Diesel engine.

POWER PLANTS. High Powered Diesel Engines for Peak Loads, M. Gercke. Engineer (Lond.), vol. 145, no. 3773, May 4, 1928, pp. 496-497, 2 figs. Deals with aspects of peak load problem and its solution by adoption of Diesel engine of high power; economic effect of peak loads on efficiency of steam power plants; installation of peak-demand Diesel engines.

RESEARCH. Automobile Pioneer Develops New Diesel Engine. Oil Engine Power, vol. 6, no. 5, May 1928, pp. 314-317, 10 figs. Exhaustive investigation in producing high-speed two-cycle engine conducted by F. B. Stearns.

DRILLING MACHINES

MULTIPLE-SPINDLE. Archdale Motor-Driven Units Multi-Drilling and Multi-Tapping Machines. Brit. Machine Tool Eng. (Lond.), vol. 5, no. 51, May and June 1928, pp. 49-52, 4 figs. Advantages of standardization, although only capable of being applied in limited way, are very evident in construction of multi-spindle drilling machines described; each drilling or tapping head is complete unit with self-contained motor drive.

E

ECONOMIZERS

GALLOWAY. The Galloway Supermiser. Mech. World (Manchester), vol. 83, no. 2156, Apr. 27, 1928, pp. 310-311, 3 figs. Invention designed to abstract maximum amount of heat from boiler-fuel gases before they are discharged into chimney; feature of design is use of concentric tubes; hot gases pass through annular space between inner and outer tubes; feed-water passes through inner tubes, while air to be heated sweeps over outer surface of outer tubes.

ELECTRIC FURNACES

HEAT TREATING. Furnaces for Continuous Heat Treatment, W. C. Stevens. Heat Treating and Forging, vol. 14, no. 4, Apr. 1928, pp. 423-424, 2 figs. Construction and operation of electric furnace for hardening small parts of quantity production.

ELECTRIC LOCOMOTIVES

FRANCE. High-Speed Electric Locomotives (Locomotive électrique à grande vitesse). Génie Civil (Paris), vol. 92, no. 2386, May 5, 1928, pp. 429-433, 12 figs. Constructed by Société Alsacienne de Constructions Mécaniques for P. L. M. Railroad Co.; feed wire current 1300 volts; length 21 m.; weight 130 tons; motors have forced ventilation; eight motors in four groups of 550 hp. each, revolving 630 r.p.m. for speed of 50 km. per hr.; recuperative braking is used.

INDIVIDUAL AXLE DRIVE. Locomotive with Vertical Motors, H. Furst. Elec. World, vol. 19, no. 22, June 2, 1928, p. 1158. Austrian Federal Railways operate novel type of express locomotive of their electrified valley lines, which has given unusually good performance.

ELECTRIC WELDING, ARC

DEVELOPMENTS. A Brief History of Arc-Welding, A. Churchward. Heat Treating and Forging, vol. 14, no. 5, May 1928, pp. 522-524, 1 fig. Steps in development of art that is now indispensable.

NEW PROCESS. A New Principle Applied to Carbon-Arc Welding. Am. Mach., vol. 68, no. 22, May 31, 1928, pp. 891-892, 4 figs. Clean ductile welds produced by Electronic Tornado process.

F

FLOW OF GASES

ORIFICES. Flow of Gases Through Small Orifices, E. L. Rawlins. Oil and Gas Jl., vol. 26, no. 51, May 10, 1928, pp. 111-112, 125-126 and 128, 5 figs. Bureau of Mines completes careful study of various conditions of flow under high and low differential pressures; summary of important information contained in Technical Paper of U. S. Bureau of Mines.

FLOW OF WATER

PIPES. An Experimental Study of the Flow of Water in Pipes of Rectangular Section, S. J. Davies and C. M. White. Roy. Soc.—Proc. (Lond.), vol. 119, no. A781, May 1, 1928, pp. 92-107, 3 figs. Investigation to determine range over which equations of viscous flow could be applied to flow of fluids in small clearances between moving and fixed parts of certain machine tests made in Engineering Laboratories, King's College, London; 400 tests on pipes varying in section from 2.54 cm. broad by 0.0154 cm. deep to 2.54 cm. broad by 0.0681 cm. deep.

FLUIDS

RESISTANCE TO MOVING SPHERES. Fluid Resistance to Moving Spheres, R. G. Lunnon. Roy. Soc.—Proc. (Lond.), vol. 118, no. A780, pp. 681-684, 6 figs. Timing falls of metal spheres in water through distances up to two meters, resistance if fluid at high speeds was measured both for accelerated and for uniform motion; during accelerated motion resistance is increased in regular way; effect of cylindrical walls measured; motion of fluid behind sphere.

FORGINGS

STEEL, HEAT TREATMENT OF. Mass Effect in the Heat-Treatment of Large Forgings, J. A. Jones. Metallurgist (supp. to Engineer, Lond.), May 25, 1928, pp. 70-72. Influence of mass in heat treatment of alloy steels can be illustrated by tests taken from properly treated forgings of different compositions, gives tables of mechanical properties at middle of wall and at outside, and mechanical properties of large forgings and of small pieces which have received same treatment. (To be continued.) Communication from Research Department, Woolwich.

FURNACES

ANNEALING—NORMALIZING. New Type Sheet Normalizing Furnaces Installed at Newton Steel Company, C. P. Mills. Fuels and Furnaces, vol. 6, no. 5, May 1928, pp. 603-606 and 646, 2 figs. Two continuous furnaces of sectional construction, each 155 ft. long, equipped with special insulated disk rollers and arranged for burning gas or oil, normalize deep drawing steel sheet with fuel consumption of 5,525 cu. ft. coke-oven gas per ton. From paper presented before Engrs. Soc. West. Pa.

The Kathner Normalizing Furnace, C. P. Mills. Heat Treating and Forging, vol. 14, no. 4, Apr. 1928, pp. 428-431, 4 figs. Continuous-type gas furnace for sheets. Abstract of paper presented before Am. Soc. Mech. Engrs. and Engrs.' Soc. of West. Pa. See also Blast Furnace and Steel Plant, vol. 16, no. 4, Apr. 1928, p. 502.

FORGING, PULVERIZED-COAL. Forging Furnaces Operated with Powdered Coal, W. C. Rehfuss. Ry. Mech. Engr., vol. 102, no. 5, May 1928, pp. 279-282, 8 figs. Method has reduced maintenance costs and number of furnaces required.

HEATING. The Mechanization of Heating Furnaces, J. R. Miller. Heat Treating and Forging, vol. 14, no. 5, May 1928, pp. 546. Devices for handling material into and out of furnace and for manipulating pieces in furnace lead to labor and fuel saving as well as better quality; earlier progress made in steel mills; mechanization in forge shop.

HEAT-TREATING, CONTINUOUS. Mass-production Heat Treatment, J. W. Urquhart. Machy. (Lond.), vol. 32, no. 812, May 3, 1928, p. 155. Continuous-action automatic furnace.

G

GEARS

HELICAL. The Accuracy of Large Hob-Cut Helical Gears, G. A. Tomlinson. Engineering (Lond.), vol. 125, nos. 3251 and 3253, May 4 and 18, 1928, pp. 531-532 and 598-600, 9 figs. May 4: Number of hob teeth engaged; distribution of cutting work; effects of errors in hob. May 18: Effect of certain errors in hobbing machine.

INTEGRAL-CONTACT. Mechanical Resonance One Cause of Gear Noise and Wear, A. B. Cox. Am. Mach., vol. 68, no. 21, May 24, 1928, pp. 848-851, 7 figs. Integral contact gears are proposed to eliminate torsional vibration.

TEETH, FINISHING. A New Process of Finishing Gear Teeth, E. Sheldon. Am. Mach., vol. 68, no. 20, May 17, 1928, pp. 810-814, 11 figs. Process of finishing teeth of unhardened gears in exact conformity with theoretically correct involute curve, developed by Pratt and Whitney Co.

GRAIN HANDLING

PNEUMATIC. Pneumatic Handling of Grain. Modern Transport (Lond.), vol. 19, no. 478, May 12, 1928, pp. 2627, 2 figs. Pneumatic plants recently installed for discharging large grain ships at new Beaufort Road Mills, Birkenhead.

H

HEAT, FLOW OF

FLUCTUATING TEMPERATURE. Temperature and Flow of Heat in Periodically Heated Bodies (Temperaturverlauf und Waermestroemungen in periodisch erwaermten Koerpern), H. Groeber. Forschungsarbeiten auf dem Gebiete des Ingenieurwesens (Berlin), no. 300, 1928, pp. 3-13, 8 figs. General mathematical theory of thermal storage in bodies located in media of regularly fluctuating temperatures; considers case of infinitely thick body bounded by planes and case of infinitely long cylinder; comparison between cylinder and plate. Paper read at session of Committee on Thermodynamic Research of German Society of Engineers. (V.D.I.)

HEAT PUMPS

APPLICATIONS. Heat Pumps for the Operation of Evaporators (Vapor Compressors) and as Steam-Pressure Converters (Die Waermepumpe fuer den Betrieb von Verdampfern (Bruedenkompression und als Dampfdruckumformer), A. Oetken. Waerme (Berlin), vol. 51, no. 17, Apr. 28, 1928, pp. 315-321, 16 figs. Discusses principle of design and different types of heat pumps; their significance in comparison with single-effect and multiple-effect evaporators; application of heat pump and examples of actual installations; advantages of steam-pressure conversion.

HEAT TRANSMISSION

ENGINE CYLINDERS. Heat Transfer Between Working Substance and Cylinder Walls of Reciprocating Engines (Der Waermeuebergang zwischen Arbeitsmedium und Zylinderwand in Kolbenmaschinen), W. Nusselt. Forschungsarbeiten auf dem Gebiete des Ingenieurwesens (Berlin), no. 300, 1928, pp. 15-32, 5 figs. Summarizes European theoretical and experimental studies of heat transfer in cylinders of steam engines, gas compressors and liquefiers and internal combustion engines. Paper read at session of Committee on Thermodynamic Research of German Society of Engineers. (V.D.I.)

HELICOPTERS

LIFTING PROPELLERS, THEORY OF. The Theory of Lifting Propellers (Theorie der Hubschraube), O. Flachsbart. Zeit. fuer Flugtechnik und Motorluftschiffahrt (Munich), vol. 19, no. 8, Apr. 28, 1928, pp. 177-183, 8 figs. Theoretical report from Kaiser Wilhelm Institute for Research in Dynamics of Fluids, on helicopter propellers; formulas and curves of capacities, thrust stresses, effect of hub, etc.; numerical example illustrating method of design.

HYDRAULIC TURBINES

HIGH-HEAD. Application of Impulse and Reaction Turbines to Modern Hydroelectric Installations, E. M. Breed. Hydraulic Eng., vol. 4, no. 5, May 1928, pp. 255-257 and 264-267, 10 figs. Lubrication; water lubrication; design of draft tube; primary control; governor actuator; low-head turbines; automatic and remote control; application of various types of units thoroughly discussed and relative efficiencies of impulse and reaction types indicated. (Concluded.)

VERTICAL vs. HORIZONTAL SHAFTS. Note on the Comparative Advantages and Disadvantages of Hydraulic Machines with Vertical or Horizontal Axes (Note sur les avantages et les inconvénients comparés des groupes hydroélectriques à axe vertical et à axe horizontal), E. Dusaugey. Revue Générale de l'Electricité (Paris), vol. 23, no. 17, Apr. 28, 1928, pp. 395-396. Notes of turbine construction, from hydraulic, mechanical and civil-engineering standpoints.

I

INDICATORS

INTERNAL-COMBUSTION-ENGINE. A New High Speed Engine Indicator, K. J. De Juhasz. Instruments, vol. 1, no. 4, Apr. 1928, pp. 179-185, 5 figs. New indicator for taking accurate pressure diagrams of internal-combustion engines up to highest speeds; principle of De Juhasz indicator; consists of pressure measuring indicator, valve element, phase timing planetary gear, and drum actuating gear; small pressure variations in intake manifold, or carbureter jet, or high pressures in Diesel engine measured.

INDUSTRIAL MANAGEMENT

APPRAISALS. The Scope and Application of Certified Appraisals, G. B. Waterstraat. Jl. of Accountancy, vol. 45, no. 5, May 1928, pp. 335-350. Fundamentally appraisal of today is inventory of plant assets and if properly applied and followed will serve as plant record; appraiser's practice; considers how cost of production would be affected by depreciation.

INVENTORY CONTROL. Ready means for Inventory Control, L. I. Thomas. Mfg. Industries, vol. 16, no. 1, May 1928, pp. 33-36, 3 figs. Methods of operating purchasing and stores departments to assure adequate stocks with small inventories, minimum records and low costs.

PRODUCTION CONTROL. Modern Production Methods, E. W. Hancock. Automobile Engr. (Lond.), vol. 18, no. 241, May 1928, pp. 179-181. Present trend and future possibilities of work of production engineer.

PRODUCTION PLANNING, FORD PLANT. Planning and Mass Production Coordinated, F. L. Faurote. Factory and Indus. Mgmt., vol. 75, no. 5, May 1928, pp. 984-987, 5 figs. Channels of parts-supply kept open to insure even flow at assembly line.

TOOL-ROOM PRACTICE. How the Ford Tool Rooms are Organized, F. I. Faurote. Mill and Factory Illustrated, vol. 1, no. 2, Feb. 15, 1928, pp. 21-25, 9 figs.

INGOT MOLDS

DESIGN. Trend in Ingot Mold Design, R. H. Watson. Iron Age, vol. 121, no. 22, May 31, 1928, pp. 1579-1580, 2 figs.

INTERNAL COMBUSTION ENGINES

VIBRATION. Vibration from Internal Combustion Engines, J. M. Bloomfield. Power House (Toronto), vol. 22, no. 10, May 20, 1928, pp. 35-36. Causes of vibration are subsoil, periodic forces and misfiring; primary and secondary forces.

See also Airplane Engines; Automobile Engines; Diesel Engines.

IRON CASTINGS

DEFECTS. Hidden Defects in Iron Castings, P. R. Ramp. Iron and Steel (Gardenvale, Que.), vol. 11, no. 5, May 1928, pp. 140-143, 4 figs. Method of localizing shrink cavities and blowholes to places where they cannot harm casting.

L

LOCOMOTIVE BOILERS

CORROSION PREVENTION. Prevention of Sub-Aqueous Corrosion by Electro-Chemical Polarization Process, O. W. Carrick. Am. Water Works Assn.—Jl., vol. 19, no. 6, June 1928, pp. 704-713, 3 figs. Development stages of electro-chemical polarization system as applied to locomotives; effectiveness of anti-corrosion scheme polarization system installed in engines; workings of this system of protection described; process is being applied to all Chicago and Alton Railroad Company's locomotives.

DESIGN. The Design and Proportion of Locomotive Boilers, C. A. Brandt. Ry. Mech. Engr., vol. 102, no. 5, May 1928, pp. 254-258, 12 figs. Discussion of boiler ratios, firebox heating surface, superheaters and feedwater heaters; gas area through boiler; length of flues for proper efficiency.

LOCOMOTIVE REPAIR SHOPS

MONTREAL. Montreal Locomotive Erection and Machine Shop, Canadian National Railway. Can. Ry. and Mar. World (Toronto), no. 363, May 1928, p. 253, 2 figs.

LOCOMOTIVES

DESIGN. The Locomotive as a Factor in Fuel Economy, A. W. Bruce. Ry. Age, vol. 84, no. 20, May 19, 1928, pp. 1153-1155, 3 figs. Possibilities of future and of designs now available; suggested basis for retirements.

DIESEL. Diesel Locomotives. Ry. Age, vol. 84, no. 19, May 12, 1928, pp. 1107-1108. Committee on Diesel locomotives presented very complete report of developments in Diesel locomotive field during past year.

Diesel Locomotives with Schwartzkopff-Huwiler Hydraulic Gears (Diesellokomotive mit Fluessigkeitsgetriebe, Bauart Schwartzkopff-Huwiler), K. Vetter. V.D.I. Zeit. (Berlin), vol. 72, no. 18, May 5, 1928, pp. 603-604, 4 figs.

ELECTRIC. *See Electric Locomotives.*

INTERNAL-COMBUSTION (KITSON-STILL). The Kitson-Still Locomotive. Engineer (Lond.), vol. 145, no. 3773, May 4, 1928, pp. 484-485, 4 figs. Results of trial runs with complete train; on neither run did engine maintain schedule times, but on both she demonstrated her ability to haul train and ease with which she can be handled. See editorial comment on pp. 491-492.

STEAM-TURBINE. Report on Steam Turbine Locomotives. Ry. Age, vol. 84, no. 19, May 12, 1928, pp. 1106-1107, 2 figs. Condensing turbo-locomotives show horsepowers ranging from 4,000 to 8,000 with tractive forces from 78,000 to 191,000 lb.; advantages of turbo-electric locomotive; high tractive force at low speeds; bibliography of articles in American and European technical journals covering design and development of steam-turbine locomotive.

LUBRICATION

LOW TEMPERATURES. Lubrication Problems at Low Temperatures. Chem. and Met. Eng., vol. 35, no. 5, May 1928, pp. 275-276. Petroleum and industrial divisions of American Chemical Society hold joint session on recent developments of interest to maker and user; account of investigation carried out for determining effects of viscosity and pour test upon performance characteristics of automotive-engine oils; results of similar investigation carried out by Atlantic Refining Co.; results of research along different line with lightly loaded bearings operated at very high speeds; possibility of improving locomotive-journal lubrication.

M

MACHINE DESIGN

ERRORS. Common Errors in Machine Design. Machy. (Lond.), vol. 32, no. 813, May 10, 1928, pp. 174-175. Centrifugal force, vibration, gravity, friction, distortion, variation in product, expansion and contraction, and in accessibility for repairs and adjustment are common factors responsible for failure of machines to function properly; factors that cause vibration; failure of gravity as usable force; expansion caused by heat; avoiding trouble caused by variations in stock.

MACHINE TOOLS

LABOR-SAVING DEVICES. Time-Saving Devices in the Landis Shop. Machy. (Lond.), vol. 32, no. 812, May 3, 1928, pp. 148-150, 6 figs. Number of time and labor-saving devices, tools, and fixtures employed in shops of Landis Machine Co.

MATERIALS HANDLING

FOUNDRIES. Revising Handling Methods in a Modern Foundry, F. D. Campbell. Can. Machy. (Toronto), vol. 39, no. 9, May 3, 1928, pp. 50, 52, 54 and 56, 3 figs. Describes conversion of job-shop steel-foundry work to mass-production basis.

MATERIALS

X-RAY ANALYSIS. Analysis of Minerals, Ores and Industrial Products by Means of X-Rays (La détermination à l'aide des rayons X des minéraux minérals et de quelques produits industriels), R. van Aubel. Revue de l'Industrie Minérale (Paris), no. 177, May 1, 1928, pp. 189-195, 8 figs. Qualitative analysis, how made; identification, minerals; alloys, colloidal materials; ceramic products. Bibliography.

METALS

CORROSION RESISTANCE. Effect of the Testing Method of the Determination of Corrosion Resistance, H. S. Rawdon and E. C. Groesbeck. U. S. Bur. Standards—Tech. Paper, vol. 22, no. 367, Mar. 6, 1928, pp. 409-446, 25 figs. Determination of corrosion resistance of metals; tests were carried out on copper-nickel series, consisting of copper, nickel, and three copper-nickel alloys; methods tried out were simple immersion in non-aerated and aerated solutions repeated immersion both continuous and intermittent, spray, and accelerated electrolytic test.

The Application of Oxygen and Hydrogen to Industrial Operations, F. P. Wilson. Gen. Elec. Rev., vol. 31, no. 5, May 1928, pp. 279-282, 1 fig. Selection of fuel gas for metal cutting; discussion of economic factors involved in selection of gas for this purpose; nature of cutting work classified; substitute fuel gases available; time study of cutting activities; cost of oxygen and source of supply; comparative tests on laboratory basis.

FLOW. Effect of Average Principal Stress on the Flow of Metals (Der Einfluss der mittleren Hauptspannung auf das Fliessen der Metalle), W. Lode. Forschungsarbeiten auf dem Gebiete des Ingenieur-wesens (Berlin), no. 303, 1928, 15 pp., 12 figs. Reports of study, suggested by Nadai, made at Institute of Applied Mechanics of University of Goettingen; review of German, English, French and American work on plasticity of metals and on stresses causing metals to flow; author's original experimental study of flow of iron and copper; speed of flow of metals.

FORGING PROPERTIES. Behavior of Metals and Alloys in Forging, W. L. Kent. Heat Treating and Forging, vol. 14, no. 4, Apr. 1928, pp. 393-398, 5 figs. Investigations made on aluminum, copper and brasses are described showing properties of these materials during and after hot working; forging test as measurement of malleability at high temperatures investigated mechanism of hot forging; effect of quenching hot-forged samples effect of annealing cold-worked samples.

PICKLING. Practical Features of Pickling, W. G. Imhoff. Iron Trade Rev., vol. 82, no. 19, May 10, 1928, pp. 1206-1209, 10 figs. Pickling for black tinning, tinning of copper and enameling.

X-RAY ANALYSIS. X-ray Inspection in the Machine Shop. Machy. (Lond.), vol. 32, no. 815, May 24, 1928, pp. 233-235, 9 figs. New x-ray inspection device profitably used in machine shop; x-rays produced at 100,000 volts may penetrate inch of steel, several inches of aluminum or foot or more of wood.

N

NICKEL-COPPER ALLOYS

EFFECT OF HIGH STEAM TEMPERATURES ON. Change Occurring in a Nickel-Copper Alloy in Superheated Steam of 350 to 400 deg. (Altération profonde d'un alliage nickel-cuivre dans la vapeur d'eau surchauffée vers 350 à 400 deg.), J. F. Saffy. Académie des Sciences—Comptes Rendus (Paris), vol. 186, no. 17, Apr. 23, 1928, pp. 1116-1118, 3 figs. Effects produced by exposing alloys for several weeks to steam temperatures of 350 to 500 deg.; investigations were made with view to selecting best material for steam-turbine blades.

NICKEL STEEL

PROPERTIES. The Properties of Nickel Steel, With Special Reference to the Influence of Manganese, J. A. Jones. Iron and Steel Inst. (Lond.)—Advance Paper, no. 8, May 1928, 36 pp., 20 figs. Steels containing carbon 0.2 to 0.55 per cent and nickel 3 to 12 per cent were examined; with low manganese contents there is no advantage in increasing nickel beyond 6 per cent; effect of manganese up to 0.8 per cent is small; manganese has marked influence on mass effect in 3 to 4 per cent nickel steel; bibliography. See Iron & Coal Trades Rev., vol. 116, no. 3141, May 11, 1928, p. 706, and Foundry Trades Jl., vol. 38, no. 613, May 17, 1928, p. 362.

P

PIPE JOINTS

NEW METHOD. A New Method of Making Joints, E. E. Thum. Iron Age, vol. 121, no. 19, May 10, 1928, pp. 1305-1308, 5 figs. New automatic method of making gaspipe joints in fitted assemblies of smaller steel parts developed by General Electric Co.; assemblies of simple parts, snugly fitted, are heated in hydrogen atmosphere; powdered copper, painted on, runs into joints, alloys, and makes tight weld; hydrogen atmosphere cleans steel and protects copper; smaller furnaces for intermittent working; metallurgical considerations.

PNEUMATIC TOOLS

TESTING. Apparatus and Methods for Testing Compressed-Air Machines (Pruefmethoden und Messvorrichtungen fuer Pressluftmaschinen), E. Pallas. Zeit. des Oesterr. Ingenieur-u. Architekten-Vereines (Vienna), vol. 80, no. 19-20, May 11, 1928, pp. 162-166, 9 figs. Reviews papers by Wilson and Pallas on methods and apparatus for testing of pneumatic riveting hammers and similar tools; calibration of testing of friction brakes.

POWER PLANTS

INSTRUMENTS. Power House Measurements. World Power (Lond.), vol. 9, no. 53, May 1928, pp. 290-292, 5 figs. Automatic control systems; feedwater regulators; steam flow meters; indicating and recording instruments; water-measuring devices.

POWER PLANTS, HYDRO-ELECTRIC

DATA ON. Some Remarks on Hydroelectric Stations (Quelques remarques sur les centrales hydrauliques), V. Clerin. Union des Ingénieurs Sortis Des Ecoles Spéciales De Louvain—Bul. Technique (Louvain), vol. 55, no. 1928, pp. 73-86, 13 figs. Discusses radius of action of hydroelectric plants and variation of power in course of year; efficiency of plant; charges for hydraulic kw-hr.

MARYLAND. Conowingo Hydro-electric Development. Power Plant Eng., vol. 32, no. 11, June 1, 1928, pp. 632-638, 9 figs. Exceptional speed of construction is feature of great Susquehanna River development.

OPERATION. Operation and Maintenance of Hydroelectric Power Plants (Die Betrieb und die Instandhaltung von Wasserkraftanlagen), F. Kammerer. Zeit. des Bayerischen Revisions-Vereins (Munich), vol. 32, nos. 7 and 9, Apr. 15 and May 15, 1928, pp. 77-80 and 109-112.

QUEBEC. The Paugan Falls Power Plant. Engineer (Lond.), vol. 145, no. 3774, May 11, 1928, pp. 522-524, 7 figs.

TRASH RACKS, ELECTRIC HEATING OF. Electric Heating of Rack Bars in Hydro-Electric Plants. Eng. Jl. (Montreal), vol. 11, no. 5, May 1928, pp. 330-331. Discussion of paper by C. R. Reid published in Apr. 1928 issue of same journal.

POWER PLANTS, INDUSTRIAL

INTERCONNECTION. Economies of Combining Industrial Power Plants, W. W. Gaylord. Power Plant Eng., vol. 32, no. 10, May 15, 1928, pp. 551-555. Advantages to be gained by providing central power and heating plant for several adjacent industries are set forth.

POWER PLANTS, STEAM

HIGH-PRESSURE. Solvay Process Company Uses High Pressure. Power Plant Eng., vol. 32, no. 7, Apr. 1, 1928, pp. 401-402, 2 figs. Probably most interesting industrial power plant has yet been installed is at Solvay Process Co., Solvay, N.Y.

POWER PLANTS, STEAM AND GAS

COMBINED. A Combined Boiler and Producer Plant, C. Longenecker. Blast Furnace and Steel Plant, vol. 16, no. 5, May 1928, pp. 642-645, 4 figs. Steam and gas generated in central building at Sharon Steel Hoop Co.; arrangement assures sufficient service and is economically attractive; coal-handling equipment; method of firing boilers with powdered coal; gas-producer department; boiler and gas-house equipment; labor required at producers and boilers; electric control.

PAPER MILLS. Process Steam for Paper Mill Produced by Hog Fuel and Oil, P. Sandwell. Power, vol. 67, no. 20, May 15, 1928, pp. 849-852, 4 figs. At newsprint plant of Powell River Co., Powell River, B.C., modern 12-boiler plant supplies daily 5,000,000 lb. of process steam to paper mill; all necessary power is generated hydroelectrically; hog fuel, burned in Dutch ovens on either flat or inclined grates, supplied 30 per cent of steam and rest is supplied by fuel oil, burners being mounted on rear wall of common combustion chamber.

POWER PLANTS, STEAM-ELECTRIC

ASH HANDLING. Recent Progress in Methods of Ash Handling in Power Plants (Die neuere Entwicklung der Einrichtungen und Anlagen zur Entaschung von Kraftwerken), Neumann. Brennstoff- und Waermewirtschaft (Berlin), vol. 10, no. 3, Feb. (1st no.) 1928, pp. 54-56, 6 figs. Describes recent types of scraper and bucket conveyors, pneumatic and hydraulic methods for removal of ashes, representing modern European and American power-plant practice.

COAL STORAGE. Methods of Storing Coal (Zur Frage der zweckmaessigsten Kohlenlagerung), M. Schmelzer. Brennstoff- und Waermewirtschaft (Berlin), vol. 10, no. 3, Feb. (1st no.) 1928, pp. 59-63, 4 figs. Describes bunker arrangement of Tiefstack (Hamburg) power plant; details of gage for indicating level of coal stored in bunker.

DETROIT. The Trenton Channel Station of the Detroit Edison Co. Engineering (Lond.), vol. 125, no. 3250 and 3251, Apr. 27 and May 4, 1928, pp. 499-502 and 532-536, 42 figs. (partly on p. 512 and supp. plate). Apr. 27: Details of boiler plant.

The Trenton Channel Station of the Detroit Edison Co. Engineering (Lond.), vol. 125, nos. 3253 and 3254, May 18 and 25, 1928, pp. 603-606 and 629-631, 22 figs. partly on p. 608 and supp. plate. May 18: Details of turbine house.

GERMANY. The Cuno High-Pressure Steam-Electric Plant at Hagen in Westphalia [Das Cunowerk, ein Hochdruckdampfkraftwerk des Kommunalen Elektrizitaetswerkes Mark A. G. Hagen (Westfalen)], O. L. Kollbohm. Elektrizitaetswirtschaft (Berlin), vol. 27, no. 455, Apr. 1, 1928, pp. 153-163, 23 figs.

HOLLAND, N. J. Holland Plant, N. J., to Operate at 1,200 lb. Pressure. Power, vol. 67, no. 21, May 22, 1928, pp. 932-933. New Jersey Power & Light Co. is building first 50,000-kw. unit of 200,000-kw. ultimate-capacity plant on Delaware River, 8 miles below Easton, Pa.

RIVER BEND, N.C. $12,000,000 Unit of Power Project. Mfrs. Rec., vol. 93, no. 21, May 24, 1928, p. 65, 1 fig. Steam plant of Duke system to be located on Catawba river in North Carolina; one of largest steam stations in southeast; its ultimate capacity probably to be 600,000 hp. in 8 units of 75,000 hp. each; each turbine will be of single-cylinder, impulse-reaction type, operating at 1,800 r.p.m.

ST. LOUIS. Operating Experience with Latest Section of Cahokia Station, E. H. Tenney and H. G. Thielscher. Power Plant Eng., vol. 32, no. 11, June 1, 1928, pp. 600-606, 6 figs. Fifth unit, with capacity of 50,000 kw., brings total capacity to 195,000 kw.

TORONTO, ONT. Toronto Station Doubles Generating Capacity, G. S. Coffin. Power Plant Eng., vol. 32, no. 11, June 1, 1928, pp. 613-620, 7 figs. Performance record for 2½ years shows steady improvement to present low value of 15,000 B.t.u. per kw. sendout; in 1927, first extension was completed, increasing capacity of station 33,000 kw.; auxiliary turbine for this unit is 2,000-kw. machine, and two boilers with total heating surface of 21,620 sq. ft. each; in 1928 fourth 33,000-kw. turbine, 2,000-kw. auxiliary turbine and two additional boilers will be installed.

PUMPS, CENTRIFUGAL

INSTALLATION. The Installation of Centrifugal Pumps, J. H. Jones. Blast Furnace and Steel Plant, vol. 16, no. 5, May 1928, p. 649. Correct procedure in installing and operating centrifugal pumps to secure efficient and satisfactory service.

R

RAILWAY MOTOR CARS

DIESEL-ELECTRIC. Diesel Oil Electric Train Development. Modern Transport (Lond.), vol. 19, no. 478, May 12, 1928, pp. 3-4, 9 figs. Four-coach unit converted from electric rolling stock into Diesel oil-electric train for London, Midland and Scottish Railway.

GASOLINE ELECTRIC. Gas-Electric Car, Manitoba Power Co. Can. Ry. and Mar. World (Toronto), no. 363, May 1928, pp. 249-250, 2 figs. Known as type AS; electric generator, driven by engine is of 5-kw. capacity; motors on power truck are suspended by patented Mack rubber shock insulators.

Gas-Electric Unit for Rail Cars. Ry. Mech. Engr., vol. 102, no. 5, May 1928, pp. 250-253, 10 figs. High-compression, compact engine operated at full torque at varying speed.

OIL-ELECTRIC. 500 B.H.P. Oil-Electric Train. Engineer (Lond.), vol. 145, no. 3774, May 11, 1928, pp. 514-516, 8 figs. partly on p. 518. Description of new oil-electric train which, after undergoing official inspection by London, Midland and Scottish Railway officials, ran successful trial between Manchester and Blackpool.

ROLLING MILLS

ROLLER BEARINGS. Timken Roller Bearings for Steel Mills, F. Waldorf. Blast Furnace and Steel Plant, vol. 16, no. 5, May 1928, pp. 611-614, 5 figs. Information is presented from tests run on 22-in. bar mill, 10-in. rod mill, 26-in. tube mill and 4-high mills; lubrication and life of bearings considered; loads determined by Brinell tests; bearings on tube mills; life from antifriction bearings. Abstract of paper read before Engrs. Soc. of West. Penn.

ROTORS

INERTIA. Measuring Moments of Inertia of Heavy Rotors, H. W. Ritchie. Engineering (Lond.), vol. 125, no. 3253, May 18, 1928, pp. 614-615. Refers to article by Wall in Feb. 24 issue of same journal; describes two methods which are sufficiently accurate for general problems of acceleration, and are essentially practical and speedy.

S

SAND, FOUNDRY

TESTING. The Influence of Ferric Hydrogel in the Bond of Natural Moulding Sands, C. C. de Witt and G. G. Brown. Am. Foundrymen's Assn.—Reprint, no. 28-16, for mtg. May 14, 1928, pp. 247-276, 9 figs.

STEAM ACCUMULATORS

FLASH-TYPE. High-Pressure Flash-Type Accumulator, C. M. Garland. Power, vol. 67, no. 23, June 5, 1928, pp. 1014-1015, 2 figs. Designed primarily for high pressures, with water divided up into large areas of small volume, this accumulator flattens out sudden and intermittent demands for steam, such as are imposed by steam hammers, hoisting and rolling-mill engines, maintains uniform load on boilers and reduces boiler capacity otherwise necessary for this class of work.

STEAM CONDENSERS

DESIGN. Economic Condensation for Power Plants (Kondesatwirtschaft fuer Kraftanalgen), Blacke. Waerme (Berlin), vol. 51, nos. 14 and 15, Apr. 7 and 14, pp. 260-268 and 281-285, 26 figs. Discusses conditions underlying design and construction of modern steam condensers, and describes modern condensation plants and their auxiliaries.

STEAM GENERATORS

ELECTRIC. Steam Generation—Electric Boilers and Steam Accumulators, C. J. Wharton. World Power (Lond.), vol. 9, no. 53, May 1928, pp. 256-260, 4 figs. Shows that in circumstances of very cheap current, steam generation for process purposes by use of electric boilers is economic proposition. Abstract of paper read before Instn. Eng. Inspection.

STEAM TURBINES

DESIGN. Practical Experiences with Steam Turbines (Betriebserfahrungen mit Dampfturbinen), F. Gropp. Waerme (Berlin), vol. 51, no. 13, Mar. 31, 1928, pp. 230-231. Discusses materials and shapes of blades; important details proper starting and overload capacity.

STEEL

CASE-HARDENING. A New Free-Cutting Case-Hardening Steel. Machy. (Lond.), vol. 32, no. 814, May 17, 1928, pp. 213-214. Samples of new mild steel under name of Jalcase have been tested at City of Birmingham Industrial Research Laboratories and results of these tests, together with comments made thereon are reproduced.

CHROMIUM. *See Chromium Steel.*

NICKEL. *See Nickel Steel.*

STEEL CASTINGS

HEAT TREATMENT. How a Milwaukee Plant Heat Treats Miscellaneous Steel Castings, A. W. Lorenz. Iron Trade Rev., vol. 82, no. 20, May 17, 1928, pp. 1269-1272, 7 figs. Experience of Bucyrus-Erie Co. with heat-treated steel castings; one-third of foundry's output is quenched and tempered in electrically heated furnaces having novel charging devices; furnaces and equipment used; loading racks; entire cycle, including opening of doors, handled by one man on platform of charging machine.

CASTING TEMPERATURE. Casting Temperature and Speed (Ueber Giesstemperature und Giessgeschwindigkeit), F. Beitter. Stahl u. Eisen (Duesseldorf), vol. 48, no. 18, May 3, 1928, pp. 577-583 and (discussion) 583-585, 11 figs. Points out that casting temperature is in close relationship with casting speed; determination of melting temperature in furnace; cooling of steel to proper casting temperature; temperature drop of steel while in ladle; control of casting speed.

STEEL, HEAT TREATMENT OF

ELECTRIC. Hardening and Tempering by Electricity. Heat Treating and Forging, vol. 14, no. 4, Apr. 1928, pp. 400-404. Heat-treatment and application of electric heat as medium. Abstract of serial report of Industrial Heating Committee 1926-1927, Nat. Elec. Light Assn.

STRAIN GAUGES

MAIHAK. New Maihak Acoustical Strain Gauge. Instruments, vol. 1, no. 5, May 1928, pp. 251-252, 2 figs. Designed to measure strain and accompanying stress induced in machine parts (flywheels, propellers, shafts), steel structures, foundations, bridges, etc., acted upon by live loads or superimposed loads and dynamic forces.

T

TOLERANCES

SKODA VS. D.I.N. SYSTEM. Is an International Tolerance Standard Possible? (Ist Internationale Vereinheitlichung der Passysteme moeglich?). Werkstattstechnik (Berlin), vol. 22, no. 8, Apr. 15, 1928, pp. 217-260, 5 figs. Symposium containing paper on Skoda tolerance system, by its originator N. N. Sawin; also number of discussions and reports from machine-building, automobile-manufacturing and other plants on working of German D.I.N. and Skoda tolerance systems in practice.

TOOLS, METAL-CUTTING

CHROMIUM PLATING. Chromium-plating Metal-working Tools, P. Cattucci. Machy. (N.Y.), vol. 34, no. 10, June 1928, pp. 764-766, 2 figs. Hardness of chromium plate; chromium plated cutting tools show greatly increased resistance to wear; dies and metal-spinning tools; building up worn plug gauges; experience is necessary factor; cleaning work to be plated; electric-current requirements; cost of chromium plating.

HIGH-SPEED, TESTING. Endurance of High-Speed Cut-off Tools in Relation to Magnetic and Other Measurements, H. Styri. Am. Soc. Testing Matls.—Reprint, no. 30, for mtg. June 25, 1928, 10 pp. Number of standard cut-off tools hardened in groups from different temperatures have been used in cutting off rings of high-carbon chromium steel having Brinell hardness of about 180; magnetic and electric tests, and Rockwell hardness and duroscope readings were made on these tools, and relation between these values and number of rings cut per grind are shown; methods of measurement are described and possible reasons for irregularities in results are indicated.

NEW METAL FOR. New High-Speed Cutting-Tool Metals Interest British Metal Workers. Am. Mach., vol. 68, no. 21, May 24, 1928, p. 868b. Some records established by German and English products; metal cutting at unusually high speeds shown at recent Leipzig Fair; in Great Britain, new material B. V. introduced which can be heat treated and machined in much the same manner as ordinary 18 per cent tungsten high-speed steel.

TURBO-GENERATORS

BROWN-BOVERI. 20,000-kw. Brown-Boveri Turbo-Generator at Rotterdam. Engineer (Lond.), vol. 145, no. 3774, May 11, 1928, pp. 506-508, 11 figs. and diagram on supp. plate. Three-cylinder turbo-generator installed in Schiehaven power station at Rotterdam has speed of 3,000 r.p.m.; turbine was designed for steam at pressure of 170 lb. per sq. in. at stop valve, superheated to 350 deg. cent.

W

WATER TREATMENT

DEVELOPMENTS. Developments in Water Treatment, J. R. Baylis. Contract Rec. (Toronto), vol. 42, no. 20, May 16, 1928, pp. 508-510. Progress made recently in science of water purification; public more appreciative of efforts of water-works engineers and chemists; improvements in mechanical equipment; proper chemical balance; hydrogen-ion test; mechanical mixers; settling basins; filter improvements; filter-bed troubles; improved instruments; aeration; excess lime treatment and recarbonation.

WELDING

ELECTRIC. *See Electric Welding, Arc.*

INFLUENCE ON DESIGN. The Influence of Welding on Design. W. Hoenisch. Eng. Progress (Berlin), vol. 11, no. 4, Apr. 1928, pp. 111-116, 32 figs. Electric resistance welding; spot and line welding; most important kinds of fusion welding are: oxyacetylene and electric arc welding; in both processes, temperatures of more than 3,000 deg. cent. are developed; 5,432 deg. fahr.; welding replaces riveted joints; welding in aircraft and structural work; pipe welding; welded material to replace castings; padding.

WOODWORKING PLANTS

WASTE ELIMINATION. Waste Reduction with Greater Unit Production in Woodworking Plants, C. M. Bigelow. Mfg. Industries, vol. 16, no. 1, May 1928, pp. 29-32, 3 figs. Six steps of prime importance in economical utilization of lumber previously discussed; remaining four steps are: determination of past average percentage of waste and production, decide on bonus and construct bonus chart, preparation of report outlining plan, and maintain graphic chart of results; improper piling and kiln drying causes considerable wastage of lumber. (To be Continued.)

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street. New York, N.Y.

A

AERIAL TRANSPORTATION

Costs. Information as to Cost of Aerial Transportation, H. V. Shebat. Stone and Webster Jl., vol. 42, no. 6, June 1928, pp. 792-796. Planes which have been most successful in recent demonstrations; cost of operating airplane 200,000 mi., 250 round trips; aerial transportation is justified on basis of economy alone if it is required that eight persons travel over line in each direction each month.

AERONAUTICAL INSTRUMENTS

Design. Modern Developments in Aircraft Instruments, C. J. Stewart. Roy. Aeronautical Soc.—Jl. (Lond.), vol. 32, no. 210, June 1928, pp. 425-465 and discussion 465-481, 35 figs.

AERONAUTICS

Military and Naval. Military Aviation, W. E. Gillmore. Am. Soc. Mech. Engrs. —Aeronautic Division—advance paper for meeting, June 28, 29, 1928, 7 pp., 13 figs. Survey of development of engineering material for aviation uses, air-cooled engine, and bombing equipment; engine materials; laboratory performance and endurance tests of aircraft engines; standard Air Corps endurance test; attack and observation airplanes; radio communications.

AIRCRAFT ENGINES

Progress. Airplane Engine Designers Following Diverse Lines, A. F. Denham. Automotive Industries, vol. 58, no. 25, June 23, 1928, pp. 952-956 and 985, 7 figs. Experimental work undertaken by various aircraft-engine manufacturers discussed; progress made in air-cooled Vee and incline engines; chief problems involved are to obtain adequate cooling for rear cylinders and location of accessories so as not to interfere with cooling system; nearly all such engines are of inverted type; anti-friction bearings; serious effort made to lower production costs.

AIRCRAFT MANUFACTURE

Gluing. Gluing Wood in Aircraft Work, T. R. Truax. Am. Soc. Mech. Engrs. —Aeronautic Division—advanced paper for meeting, June 28, 29, 1928, 3 pp., 3 figs.

AIRCRAFT METALLURGY

Progress of. Metallurgy and Influence on Aeronautics (Progrès de la metallurgie et leur influence sur l'aéronautique), G. Py. Société des Ingénieurs Civils de France (Paris), Mémoires, vol. 81, nos. 1 and 2, Jan. and Feb. 1928, pp. 113-170, 29 figs. partly on supp. plates. Metallurgy in general, working and use of metals with particular application to metallic construction of airplanes; steels for engines.

AIRCRAFT PARTS

Standardization. Many Changes are Recommended in S.A.E. Standards. Automotive Industries, vol. 58, no. 26, June 30, 1928, pp. 1007-1009, 4 figs. Discussion of reports of Standards Committee of Soc. of Automotive Engrs., submitted at Quebec meeting, which were ratified with few exceptions; revisions made in small aircraft parts in accordance with latest Army-Navy practice.

AIRCRAFT PROPELLERS

Reed. The Technical Development of the Reed Metal Propeller, S. A. Reed. Am. Soc. Mech. Engrs.—Aeronautic Division—advance paper for meeting, June 28, 29, 1928, 10 pp. Reed aircraft propeller has solid, thin, and almost knifelike blades of forged or rolled duralumin, or other similar aluminum alloys; development of metal propellers; propeller and its function; advantage of Reed type over wooden propeller; types of Reed metal propellers; materials of construction; methods of manufacture; table of propeller stress calculation.

AIRPLANES

Protective Coatings. Protecting and Finishing Aircraft Structures, T. B. Colby. Aviation, vol. 25, no. 1, July 2, 1928, pp. 26 and 61-62, 4 figs. Commercial finishing practices for aircraft structures; finish for steel tubing for fuselage before assembling and welding; protection of exterior of welded unit; finish for duralumin tubing; treating metal flying boats and pontoons; finishes for all-metal planes; method of finishing all-metal wing construction.

Wing Flutter. An Introduction to the Problem of Wing Flutter, C. F. Greene. Am. Soc. Mech. Engrs.—Aeronautic Division—advance paper for meeting, June 28, 29, 1928, 6 pp., 5 figs.

Wings, Slotted. Slotted Wings, F. Handley Page. Am. Soc. Mech. Engrs.—Aeronautic Division—advance paper for meeting, June 28, 29, 1928, 11 pp.

AIRSHIPS

United States. The Status of the Airship in America, G. Betancourt. Am. Soc. Mech. Engrs.—Aeronautic Division—advance paper for meeting, June 28, 29, 1928, 7 pp.

AIRWAYS

Weather Forecasting Stations. Meteorological Service for Commercial Airways, C. G. Rossby. Am. Soc. Mech. Engrs.—Aeronautic Division—advance paper for meeting, June 28, 29, 1928, 7 pp., 1 fig.

ALLOY STEEL

Manufacture. The Manufacture of Alloy Steel, E. C. Smith. Am. Metal Market, vol. 35, no. 111, June 12, 1928, pp. 20-22, 43 and 47. Discusses important phases of those steels whose tonnage has established them as production materials; type of pig iron most suitable; alloy steels are dependent upon special elements for their peculiar properties; special elements involved; probable future combinations. Paper read before Am. Iron & Steel Inst.

Electric Furnace Widely Employed for Making Alloy Steel, W. H. Priestley. Iron Trade Rev., vol. 82, no. 23, June 7, 1928, pp. 1472-1474, 2 figs. Discussion of paper on "The Manufacture of Alloy Steels" by E. C. Smith, presented before Am. Iron and Steel Inst.; good practice to melt with heavier slags, rich in lime and low in iron oxide; much cracking and tearing of ingots in rolling might be eliminated if steel were poured through small nozzles at as low temperature as consistent with good practice; changes taking place in methods of melting alloy-steel tonnage.

ALLOYS

Aluminum. *See Aluminum Alloys.*
Chromium. *See Chromium Steel.*
Copper. *See Copper Alloys.*
Iron. *See Iron Alloys.*

ALUMINUM ALLOYS

Electroplating. Electroplating on Aluminum and Its Alloys, H. K. Work. Eng. and Min. Jl., vol. 125, no. 23, June 9, 1928, p. 931. Successful method developed by author; chemical etching in acid metal or acid dip; surface of aluminum is pitted by action of dip; immersion layer surface is formed which greatly facilitates plating; roughened metal is then immersed for first coat in nickel-plating bath, to which electric current is applied.

ANTIMONY ORE TREATMENT

New Brunswick. The Lake George Antimony Ores and Their Concentration, C. S. Parsons. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 20, May 18, 1928, pp. 405-408, 3 figs. Antimony deposit at Lake George, York Co., New Brunswick; historical and geological notes; samples of ore submitted to laboratories of Mines Branch for tests; gravity concentration; flotation; hand sorting; jigging; table concentration; large-scale pilot tests; flow sheet recommended as simplest and most feasible method of concentrating ore; outline mineral map of province.

ARCHES, WOODEN

Design. Progress in the Design and Construction of Modern Timber Structures (Fortschritte in der Ausfuehrung neuzeitlicher Holzkonstruktionen), T. Gesteschi. Bautechnik (Berlin), vol. 6, no. 25, June 12, 1928, pp. 327-344, 67 figs. Typical structural details of wooden roof trusses and frames, latticed wooden arches, vaults and domes and their application in construction of shops, churches, athletic halls, auditoriums; number of notable examples from recent German practice.

ARTESIAN WELLS

Tube Wells. H. B. Saxby and A. S. Knox. Indian Eng. (Calcutta), vol. 83, no. 19, May 12, 1928, pp. 263-265. Term tube well has originated in India, and in other parts of world term artesian or borehole is usually applied; there is, as far as writers are aware, no material difference; in authors' opinion great future of tube wells lies in agriculture, for irrigating such land that is not periodically flooded and for growing crops in cold-weather season.

ASBESTOS

Milling. Milling Practice. Asbestos, vol. 9, no. 12, June 1928, pp. 25, 27-28, 30-32. Effect on distribution of asbestos; two typical flow sheets for asbestos milling in Canada; milling method employed in Cyprus; milling methods in use at Amianthus Mine.

AUTOMOBILE PLANTS

Layout. Line-Production Layout, C. R. F. Engelbach. Soc. Automotive Engrs. —Jl., vol. 22, no. 6, June 1928, p. 692. Principles adopted in layout of plant for continuous production; even gear-cutting and grinding machines are placed in their correct positions in spite of difficulties of supervision; enameling ovens usually installed in enameling department are placed in line of operation wherever required. Abstract of paper presented before Instn. Automobile Engrs., Lond.

AUTOMOBILES

Brakes. Vacuum Brake for Motor Vehicles. Engineering (Lond.), vol. 125, no. 3255, June 1, 1928, pp. 667-668, 4 figs. Developed by Westinghouse Brake and Saxby Signal Co.; most important requirements of servo system are that comparatively light pressure on control pedal shall provide any braking effort required, that braking effort shall be in proportion to pressure.

Multiple Reactive Gears. Multiple Reactive Gears, E. K. Sandeman. Lond., Edinburgh and Dublin Philosophical Mag. and Jl. of Science (Lond.), vol. 5, no. 31, May 1928 (Supp. no.), pp. 946-958, 6 figs. This gear follows as logical outcome of theory of torque converter; plans of two mechanical networks with equivalent electric circuits are shown.

Standardization. Many Changes are Recommended in S.A.E. Standards. Automotive Industries, vol. 58, no. 26, June 30, 1928, pp. 1007-1009, 4 figs. Discussion of reports of Standards Committee of Soc. of Automotive Engrs., submitted at Quebec meeting which were ratified with few exceptions; revisions made in small aircraft parts in accordance with latest Army-Navy practice.

Transmission Gears, Progress. Internal Gear Outstanding Transmission Development, S. O. White. Automotive Industries, vol. 58, no. 25, June 23, 1928, pp. 938-941.

B

BAKELITE

MOULDING. Bakelite Moulding Methods, R. A. Lowe. Machy. (Lond.), vol. 32, no. 816, May 31, 1928, pp. 259-263, 8 figs. Description of processes and appliances used in bakelite moulding; presses used for moulding in most cases are hydraulic; flash, positive, and positive flash moulds; thread moulding; undercuts and projections; recessing and coring; question of flow; trapped air; bakelite tests; table of mechanical and electrical properties of bakelite.

BEAMS

THEORY. Load Carried By Two Beams Crossing, H. Adams. Structural Engr. (Lond.), vol. 6, no. 6, June 1928, pp. 183-185. In investigating this case, simpler formulas are recapitulated first; presents formulas for case in which rolled steel joists be required instead of fir beams.

BEARING METALS

RESEARCH. Bearing Metals, E. C. Wadlow. Automobile Engr. (Lond.), vol. 18, no. 242, June 1928, pp. 221-225, 16 figs. Practical investigation of load-carrying properties of bearing metals; research dealing with materials and lubricants as they are obtained commercially; tests to obtain information regarding suitability of cold-drawn and extruded tubes for plain journal bearings; microstructure and general performance; correlation of bearing factors with chemical and physical properties.

BRONZE, TESTING. Wear and Mechanical Tests of Some Railroad Bearing Bronzes, H. J. French. Am. Soc. Testing Matls.—Preprint, no. 34, for mtg. June 25, 1928, 28 pp., 18 figs.

BEARINGS

ANTI-FRICTION. Anti-Friction Bearings for Auxiliaries in the Iron and Steel Industry, E. S. Jefferies. Iron and Steel Engr., vol. 5, no. 6, June 1928, pp. 242-243. Reviews most prominent applications; adoption of anti-friction bearings in transportation equipment; ideal application for anti-friction bearings is on pinion and gear shafts of large mill gear reducing units.

BRONZE. Bronze Bearings for Heavy Duty, N. K. B. Patch. Iron Age, vol. 121, no. 23, June 7, 1928, pp. 1599-1600.

JOURNAL. The Effect of Running In on Journal-Bearing Performance, S. A. McKee. Mech. Eng., vol. 50, no. 7, July 1928, pp. 528-533, 4 figs. Discussion of paper published in Mech. Eng., Dec. 1927, p. 1335, describing investigation at Bureau of Standards, object of which was to evaluate effect of running in upon performance of babbitted, full-journal bearings.

Modern Methods for Testing of Bearings (Die neuzeitliche Lagerpruefung), E. v. Ende. Zeit. fuer technische Physik (Leipzig), vol. 9, no. 4, 1928, pp. 121-126, 7 figs. Reviews theory of journal friction; principles of apparatus for testing of journal friction with special reference to Kammerer and Vieweg designs.

BOILER CODE

ITALY. The Boiler Code of Italy (Italienische Dampfkesselvorschriften). Archiv für Wärmewirtschaft (Berlin), vol. 9, no. 5, May 1928, pp. 159-160. Extract from text of official code on construction and testing of boilers and steam vessels; notes differences between Italian and German codes.

BOILER FURNACES

FIRING SYSTEMS, STEEL PLANTS. Four Fuels Burned Under Boilers, J. R. Miller. Blast Furnace and Steel Plant, vol. 16, no. 6, June 1928, pp. 787-789 and 793, 2 figs. Equipment and operation of steam-generating equipment at blast-furnace power house of Otis Steel Co.'s Riverside Works; blast-furnace gas, powdered coal, coke gas or oil may be used; high pressure steam plant.

Practice and Progress in Combustion of Coal as Applied to Steam Generation, F. H. Rosencrants. Fuel (Lond.), vol. 7, no. 6, June 1928, pp. 272-281, 2 figs. Position of pulverized-fuel firing in relation to stoker firing; discusses two systems of pulverized-coal firing, bin-and-feeder and unit system; traveling-grate stokers and stoker furnaces; ash problem. Abstract of paper read before Instn. Elec. Engrs.

FUEL ECONOMY. Low Grade Heat Proclamation, W. D. Wylde. Eng. and Boiler House Rev. (Lond.), vol. 41, no. 12, June 1928, pp. 577-579, 3 figs.

PULVERIZED COAL. Practice and Progress in Combustion of Coal as Applied to Steam Generation, F. H. Rosencrants. Eng. and Boiler House Rev. (Lond.), vol. 41, no. 12, June 1928, pp. 594-597, 3 figs. Extracts from paper read before Instn. Elec. Engrs. previously annotated. Present abstract deals only with section of paper dealing with pulverized-coal firing. See also Editorial comments, pp. 575-576, 1 fig.

REFRACTORY MATERIALS, TESTING. Fire Brick for Boiler Furnaces, W. A. Carter. Blast Furnace and Steel Plant, vol. 16, no. 6, June 1928, p. 816. Tests and investigations advisable in selecting proper refractory for boiler-furnace walls are outlined; methods for making up specifications described. Abstract of paper from Am. Refractories Inst.—Tech. Bul. 22.

Testing Refractories for the Furnace, W. B. Mitchell. Blast Furnace and Steel Plant, vol. 16, no. 6, June 1928, p. 815. Responsibility of manufacturer of firebrick and of purchaser in selecting appropriate brand is defined and suggestions offered.

BOILER PLATES

NICKEL STEEL. Alloy Steel for Boiler Construction, C. McKnight. Int. Nickel Co.—Bul., no. 12, 11 pp., 17 figs. Paper presented before Am. Soc. Steel Treating, previously annotated.

TEMPERATURE EFFECT. The Properties of Materials for Use at High Temperatures With Special Reference to Boilers for Superheated Steam, R. G. C. Batson. Engineering (Lond.), vol. 125, no. 3256, June 8, 1928, pp. 723 and (discussion) 702-703.

DESIGN. The Present Trend in Boiler Practice, W. H. Patchell. Engineering (Lond.), vol. 125, no. 3256, June 8, 1928, pp. 723-724 and (discussion) 703-704. Modern tendency appears to be development of still larger steam-generating units, which will utilize to better advantage space they occupy, and of still higher steam pressures to meet more exacting demands of steam cycles that are now becoming fashionable. Abstract of paper read before Instn. Civil Engrs. See also Engineer (Lond.), vol. 145, no. 3779, June 15, 1928, pp. 653-654.

HIGH PRESSURE. High-Pressure Boiler. Times Trade and Eng. Supp. (Lond.), vol. 22, no. 517, June 2, 1928, p. 296, 1 fig. In design of new type of boiler for generation of high-pressure steam developed by Brown Boveri, leading points aimed at are reliability, low cost, possibility of considerable overload, insensibility to fluctuation of load, and low consumption at small load; to avoid heavy drums perforated by many holes for tubes and thick parts exposed to fire and to heat stresses, heat is transferred to steam in indirect way by means of superheated steam in tube coils of small diameter and thickness.

LOCOMOTIVE. *See Locomotive Boilers.*

WASTE HEAT. Waste-Heat Boilers in the Steel Mill, R. H. Stevens. Iron Age, vol. 121, no. 23, June 7, 1918, pp. 1605, and (discussion) 1605-1606.

BRAZING

HYDROGEN. Brazing by the Hydrogen Process. Machy. (N.Y.), vol. 34, no. 11, July 1928, p. 813. Methods of hydrogen brazing involves welding together of parts to be joined by means of copper flux and is result of considerable development work by General Electric Co.; by use of atmospheres of protective gas in electric furnaces, steel parts used in manufacture of complicated assemblies can be united by strong alloy weld. See also Automotive Industries, vol. 58, no. 24, June 16, 1928, p. 917, 1 fig.; and Brass World, vol. 24, no. 6, June 1928, p. 188, 1 fig.

BREAKWATERS

DESIGN. Harbour Breakwaters, H. H. G. Mitchell. Engineering (Lond.), vol. 125, no. 3257, June 15, 1928, pp. 749-750, and (discussion) 725-726. Breakwaters are here divided into three types, namely, mound breakwaters, mounds with solid superstructure, and solid breakwaters. Abstract of paper presented before Instn. Civil Engrs. See also Engineer (Lond.), vol. 145, no. 3779, June 15, 1928, p. 655.

BRIDGES

ARCH, DESIGN. Algebraic Determination and Comparison of Stress in an Arch of Two Joints and in a Fixed Arch of Certain Type (Determination algebrique et comparison des efforts dans un arc à deux articulations et dans un arc encastre, de type particulier), Wahl. Génie Civil (Paris), vol. 92, no. 23, June 9, 1928, pp. 562-564, 1 fig. Application of theory to determine sections of two bridges on Marne at Issy and at Lagny; formulas for fixed and jointed arches.

CANTILEVER. Bridge Across Upper Columbia. Eng. World, vol. 32, no. 6, June 1928, pp. 279-280, 1 fig. Design and construction; five steel spans of combined length of 1112 fet., with 475 ft. of timber-panel approaches; pier construction; steel spans.

CONCRETE. Rigid Frame Construction for Westchester County Park Commission, A. G. Hayden. Pub. Works, vol. 59, no. 6, June 1928, pp. 217-221, 9 figs. Principle of continuity was deliberately applied in invention of new structural form calculated to best meet conditions imposed by restricted headroom at highway crossings; new type of structure showed substantial economy; reason for inherent economy; careful comparison of cost of reinforced-concrete frame bridge, reinforced-concrete arch, and steel girder bridge with concrete abutments.

CONCRETE, ARCH. Reinforced Concrete Bridge over the Elorn, Brest, L. Turner. Concrete and Constr. Eng. (Lond.), vol. 23, no. 6, June 1928, pp. 419-422, 3 figs. Construction of three arch spans each of approximately 600-ft. span on centres or formwork spanning gaps between piers, without intervening support from river bed; centre was built on timber bents erected on shore of estuary few hundred yards upstream from bridge; two barges with arch connecting them were floated out into stream.

CONCRETE CONSTRUCTION. Erect 92-Ton Slabs with Derricks. Ry. Eng. and Maintenance, vol. 24, no. 6, June 1928, pp. 244-245, 2 figs. Heavy members for Pennsylvania bridge were delivered on cars and set in place between trains; concrete structure consists of six spans ranging from 22 ft. 3 in. to 35 ft. long end-to-end of slabs with four slabs per span; slab cast two miles from bridge.

DESIGN. Bridges and Structures (Bruecken und Baukonstruktionen), K. Bernhard. V.D.I. Zeit (Berlin), vol. 72, no. 23, June 9, 1928, p. 798, 1 fig. Annual review of engineering progress in bridge construction; steel and concrete construction in Germany; new structural steels and high-grade cements.

MOVABLE. Movable Bridges. Demag News (Duisburg), vol. 2, no. 3, 1928, pp. 75-76, 6 figs. Bridges with movable sections allowing shipping to pass through when open; swing and bascule bridges; different method of constructing Skandsen Bridge crossing Trondhjem Canal in Norway; roller bridges.

RAILROAD, ARC WELDING. Railway Bridge Electrically Welded (Puente ferroviario soldado electricamente). Ingenieria Internacional, vol. 16, no. 6, June 1928, p. 291, 1 fig. Brief description of arc welding of railway bridge at Chicopee Falls, Mass.; cost of erection was less than half of riveting similar structure; several other advantages of method enumerated.

Members Welded Into "One-Piece" Bridge. Constr. Methods, vol. 10, no. 7, July 1928, pp. 16-17, 7 figs. Single-track bridge, 180 ft. long, which carries Boston and Maine Railroad over power canal at Chicopee Falls, Mass.; steel tonnage saving 33 per cent; outstanding advantage secured by use of arc welding; bridge was designed exclusively for arc welding; welding details.

SUSPENSION, HUDSON RIVER. Notes on Recent Developments in Bridge Engineering, J. Husband. Structural Engr. (Lond.), vol. 6, no. 6, June 1928, pp. 179-182. Hudson River bridge of 3,500 ft. span; feasible limit of span; quotes from First Progress Report on Hudson River Bridge recently issued; table exhibits leading dimensions of Hudson River, Delaware River and Brooklyn bridges; quantities involved in construction of bridge are listed. (Continuation of serial.)

WOODEN, CREOSOTED. Creosoted Timber Bridge Spans Sweetwater River Along Old Oregon Trail. Wood Preserving News, vol. 6, no. 6, June 1928, pp. 77-79, 2 figs. Bridge is 437 ft. long; nineteen 23-ft. spans on 4-pile bents; all lumber used in structure is pressure creosoted with exception of guard rails; built at cost of $16,000.

C

CADMIUM PLATING

QUANTITY PRODUCTION. Cadmium Plating in Quantity Production, C. H. Loven. Metal Industry (N.Y.), vol. 26, no. 6, June 1928, pp. 252-255, 2 figs. Its value as protection against rust; description of methods of plating; means of control; analysis of cadmium-plating solutions.

CALORIMETERS

GAS. Gas Calorimeters, C. H. Lander. Times Trade and Eng. Supp. (Lond.), vol. 22, no. 518, June 9, 1928, p. 319. Report of investigation carried out with assistance of laboratory staff of Fuel Research Station of Thomas recording gas calorimeter; instrument is of American origin but in essential respects has been redesigned by Cambridge Instrument Co. Abstract from special report no. 20, Department Sci. and Indus. Research.

CANALS

LOCKS, CONCRETE CONSTRUCTION, GERMANY. Experience with Concrete in the Construction of the Fuerstenberg Twin Shaft Locks on the Oder (Erfahrungen im Gussbetonbau bei der Herstellung der Zwillingschachtschleuse bei Fuerstenberg Oder), Moeller and F. Albrecht. Bauingenieur (Berlin), vol. 9, nos. 20 and 21, May 18 and 25, 1928, pp. 364-370 and 386-392, 19 figs. Brief description of works and detailed report on composition making and pouring of 120,000 cu. m. of concrete; analyses of aggregates, water ratio; tests of strength and imperviousness; construction plant and methods of laying reinforcement, pouring of concrete, construction of forms and timber falsework. (To be concluded.)

WELLAND, CANADA. $13,750,000 for Welland Ship Canal This Year. Contract Rec. (Toronto), vol. 42, no. 22, May 30, 1928, pp. 572-574, 8 figs. Details of work to be carried out during present season; permanent operating buildings.

CAR COUPLINGS

Automatic. The Development of the Automatic Coupler in America, A. G. Williams. Baldwin Locomotives, vol. 7, no. 1, July 1928, pp. 25-31, 14 figs.

CAST IRON

Electric Conductivity. The Electrical Conductivity of Cast Iron, H. Pinsl. Iron and Steel Industry (Lond.), vol. 1, no. 7, Apr. 1928, p. 224. Study of electrical conductivity of cast iron; factors which govern specific resistance; influence of phosphorus, manganese and sulphur. Abstract translated from Giesserei—Zeitung, no. 3, 1928.

Graphitization. The Graphitization of Cast Iron, R. Stumper. Iron and Steel Industry (Lond.), vol. 1, no. 8, May 1928, pp. 247-249. Discussion of article entitled "Die Spongiose des Gusseisens," appearing in Korrosion und Metallschutz; graphitization of cast iron is one of most typical examples of selective corrosion; chemical constitution; earlier investigations; graphitic disintegration in grey cast-iron pipes.

Graphite in Gray Cast Iron and Its Influence on Strength (Beiträge zur Kenntnis des Graphits im Grauen Gusseisen und seines Einflusses auf die Festigkeit), P. Bardenheuer and K. L. Zeyen. Mitteilungen aus dem Kaiser-Wilhelm-Institut fuer Eisenforschung (Düsseldorf), vol. 10, no. 3, 1928, pp. 23-53, 176 figs. partly on supp. plates. Full report of investigations carried out at Technical Academy of Aachen, previously annotated.

Machinability. Data on Wear and Machinability of Cast Iron, T. H. Wickenden. Am. Metal Market, vol. 35, no. 111, June 12, 1928, pp. 13-17 and 42, 9 figs.

Nickel. The Future of Alloy Cast Iron. Foundry Trade Jl. (Lond.), vol. 38, no. 617, June 14, 1928, p. 430. It is clear that to produce very best results from alloy addition conditions under which it should be used must be well understood; basis of development must lie in control of cast iron itself before it leaves melting furnace; general effect of nickel on cast iron.

Oxyacetylene Welding. Strength of Cast Iron Welds, R. H. Hobrock and J. P. Walsted. Welding Engr., vol. 13, no. 6, June 1928, pp. 31-34. Study of some of the effects of thermal treatment on cast iron welded by oxyacetylene process; physical effects of heating welded sections; effects of heating and fusion on chemical composition of welded section and on welding rod; research carried on by Engineering Experiment Station at Purdue University.

Properties. The Static and Fatigue Properties of Some Cast Irons, J. B. Kommers. Am. Soc. Testing Matls.—Preprint, no. 40, for mtg. June 25, 1928, 24 pp., 15 figs. Tests include tension tests on two different sizes of specimens, compression, impact transverse, Rockwell and Brinell hardness, and fatigue tests; several properties of irons are compared, and it is shown that while fatigue endurance limit of cast irons may be roughly estimated from properties such as tensile strength, hardness, and modulus of rupture, knowledge of effect of available factors in influencing properties of cast iron is meagre.

CEMENT KILNS

Fuel Economy. Portland Cement Industry, J. Watson. Inst. Fuel—Jl. (Lond.), vol. 1, no. 3, Apr. 1928, pp. 309-312. Claims need for totally new form of kiln; progress in fuel economy in manufacture of portland cement is very slight and will be until new process is evolved; at present there is no cheaper or better method of producing cement clinker than by means of rotary kiln.

Portland, Setting. Digest of Literature on Nature of Setting and Hardening Process in Portland Cement, R. H. Bogue. Rock Products, vol. 31, no. 12, June 9, 1928, pp. 62-63. Theory of crystallization from supersaturated solution; application to portland cement; sums up generalizations of LeChatelier on setting and hardening of cements. (Continuation of serial.)

CHEMICAL ENGINEERING

Fuel Industry. Fuel Industries and Work of Chemical Engineer, A. Duckham. Chem. and Met. Eng., vol. 35, no. 6, June 1928, pp. 347. Discusses relation of chemical engineer to fuel-using industries. Abstract of paper read before Soc. of Chem. Industry Conference.

CHROMIUM PLATING

Influence of Cathode. Influence of the Cathode on the Electrodeposition of Chromium. H. S. Lukens. Metal Industry (Lond.), vol. 32, no. 23, June 8, 1928, pp. 567-568. Abstract of paper read before Am. Electrochem. Soc., previously annotated.

Polishing and Buffing. Polishing and Buffing for Chromium Plating, C. H. Eldridge. Metal Industry (N.Y.), vol. 26, no. 6, June 1928, pp. 258-259. Methods used and recommended by General Chromium Corp.

CHROMIUM STEEL

Heat Resisting. Heat-Resisting Steels—Mechanical Properties, W. H. Hatfield. Iron and Coal Trades Rev. (Lond.), vol. 116, no. 3142, May 18, 1928, pp. 739-742. Abstract of paper read before Iron and Steel Inst.

Refining. Refine Chrome Steel at Low Heat, N. N. Menshih. Iron Age, vol. 121, no. 26, June 28, 1928, pp. 1817-1818. Low temperature essential in basic open-hearth furnace if chromium-bearing scrap is used and if high ballistic tests must be met; deleterious effect of chromium when present from beginning of heat mitigated considerably if certain properties of element and its slag-forming oxides are known and provided for; residual chromium depends upon furnace practice.

COAL

Carbonization. Liquid Fuel From Coal, D. Brownlie. Diesel Engine Users Assn. (Lond.)—Paper, no. 584, read at mtg. Mar. 30, 1928, 40 pp., including discussion. Outstanding national problem in Great Britain; four general methods that may be used for production of liquid fuel from bituminous coal and similar material; high-temperature and low-temperature carbonization; hydrogenation; synthetic liquid fuels.

Research. Studies in Carbonization. Gas Jl. (Lond.), vol. 182, no. 3396, June 20, 1928, pp. 883-888 and (discussion) 888, 5 figs. Temperature, size of coal, blending with coke and inorganic compounds; experimental plant includes horizontal retort closed at one end, condensers, ammonia scrubbers, purifiers, gas meters, and gas sample holders; experimental results; size of coal; temperature of retort; mixtures of coal and coke; mixtures of coal with inorganic compounds; physical structure and reactivity of coke. Abstract of report to Instn. Gas Engrs. See also Gas World (Lond.), vol. 88, no. 2289, June 16, 1928, pp. 633-635.

Liquefaction, Bergius Process. The Conversion of Coal Into Oil by the Bergius Method, J. I. Graham and D. G. Skinner. Inst. Fuel—Jl. (Lond.), vol. 1, no. 3, Apr. 1928, pp. 246-255 and (discussion) 255-261, 3 figs. Full text of paper previously annotated from Instn. Petroleum Technologists—Jl., Feb. 1928.

Coking Heat. The Coking Heat of Gas and Coke Coals (Ueber die Verkokungwaermen von Gas- une Kokskohlen), E. Terres and M. Meier. Gas- und Wasserfach (Munich), vol. 71, nos. 20 and 21, May 19 and 26, 1928, pp. 457-461 and 490-495, 10 figs. Second report from department of chemical engineering of Brunswick Institute of Technology, continuing previously published investigation by Terres and Wolter; verifies previous determinations; calibration of apparatus; determination of coking heat of several German and English coals. (To be concluded.)

Cutters. A New German Coal Cutter. Colliery Guardian (Lond.), vol. 136, no. 13516, May 18, 1928, pp. 1938-1939, 5 figs. "SKS" coal cutter is being introduced into German coal mines; coal is holed by set of three twist drills placed side by side and running simultaneously; two outer ones in same direction and middle one in opposite direction; machine weighs 326 lb.; on comparative trials carried out in conjunction with percussion type, coal cutter exhibited advantages, such as speed of cutting, reduced power consumption, etc. Abstract from Glueckauf.

Industry. Collieries, K. N. Moss. Inst. Fuel—Jl. (Lond.), vol. 1, no. 3, Apr. 1928, pp. 303-307. Statistical data and tables; cost of coal and power purchased at coal mines, July-Sept. 1927; level of wholesale prices of coal and other commodities, Jan. 1928; comparative levels of wages in coal industry, 1921 and 1927; railway rates on coal in Great Britain, 1913 and 1927.

COAL MINES AND MINING

Explosives. A Step Forward in Explosives, E. E. Jones. Explosives Engr., vol. 6, no. 6, June 1928, pp. 213-215 and 226, 3 figs. Selection of explosive for blasting coal; comparison is difficult; shot firers not cure-all; air spacing within cartridge; important factors in producing lump coal; conclusions relative to shooting coal. Presented at convention of Practical Operating Men, Cincinnati.

Mechanization. Developments in Coal Mine Mechanization in 1927. Min. Congress Jl., vol. 14, no. 6, June 1928, pp. 417-422 and 446. States showing developments in mechanical production during 1927; many states show increase in adoption of mechanical production methods; others still in experimental stage; review indicates live interest and steady advancement in use of mechanical loaders, scrapers and conveyors.

Steel Supports. Five Years' Experience with Steel Arches as Roadway Supports, R. Bennett and M. B. Gardner. Instn. Min. Engrs.—Trans. (Lond.), vol. 75, part 2, May 1928, pp. 93-115 and (discussion) 126-135, 33 figs. Paper previously annotated from Iron and Coal Trades Rev. and Colliery Guardian.

COKE INDUSTRY

Improvements. The British Coking Industry and Some of Its Products, R. Ray. Inst. Fuel—Jl. (London.), vol. 1, no. 3, Apr. 1928, pp. 220-225 and (discussion) 226-233. Deals with points which affect necessity for modernization of coking industry and shows how, by adoption of such enlightened policy, great benefit would result to user and to producer of coke; considers how further economies could be made by production of more suitable coke for both blast-furnace and domestic purposes, and by utilization to better advantage of certain by-products of coking process; concludes that coking and iron and steel industries must stand or fall together.

CONCRETE AGGREGATES

Sizes. Separate Sizes of Coarse Aggregate for Concrete, R. T. Giles. Cement, Mill and Quarry, vol. 32, no. 3. Feb. 5, 1928, pp. 26-28. Separating coarse aggregate into several sizes for manufacture of concrete is subject of extreme importance rapidly attracting more and more attention; how segration occurs; rejection; using local material; satisfactory specification. Paper presented before Nat. Crushed Stone Assn.

Testing. Comparative Tests of Crushed Stone and Gravel Concrete in New Jersey. Concrete, vol. 32, no. 6, June 1928, pp. 23-24. Summary of results of tests of crushed stone and gravel concrete as reported by U. S. Bureau of Public Roads; discussions by S. Walker and A. T. Goldbeck.

CONCRETE CONSTRUCTION

Belt Conveyors. Belt Conveyors Place Concrete. Concrete, vol. 32, no. 6, June 1928, pp. 21-22. 4 figs. Concrete placed in 2700-ft. Seventh Street viaduct at Decatur, Ill., and in California flood control job taken from mixer to forms on portable belt conveyors: two jobs presenting varying conditions are described.

CONCRETE

Deterioration by Oil. Effect of Oil on Concrete, O. Colberg. Rock Products, vol. 52, no. 34, Apr. 25, 1928, p. 88. Observations made on arched concrete slab, which deteriorated after 20 years' exposure to effect of lubricating oils; it was concluded that detrimental effect of oil was mainly due to adulteration of lubricating oils during war by fatty oils of animal and vegetable origin; protective measures suggested are density of concrete, cement of low lime content and possibly admixture of trass. Abstract translated from Beton u. Eisen, Apr. 20, 1928.

Mixing. Designing a Concrete, J. G. Bragg. Bldg. Age, vol. 50, no. 6, June 1928, pp. 92-93. Method of design is simply method of selecting proper proportions of cement, fine and coarse aggregates to produce concrete having necessary compressive or tensile strength: covers four basic principles in production of good concrete; ratio of fine to coarse aggregate, quantity of mixing water, thorough mixing and curing.

Proportioning. Water-Cement Ratio Concrete, R. P. V. Marquardsen. Eng. and Contracting, vol. 67, no. 6. June 1928, pp. 313-318, 1 fig. Formulas and forms based on field-condition aggregates; water-cement ratio; grading of aggregates; proportioning for economy; basic theory.

Reinforced, Testing. Experimental Tests of Concrete-Steel Bond, L. N. Edwards and H. L. Greenleaf. Am. Soc. for Testing Matls.—Preprint, no. 65, for mtg. June 25, 1928, 14 pp., 11 figs. Results obtained show; (1) wide range of bond strength, probably indicating effect of "mother rock" origin of sands and of their granulometric composition; (2) general effect of use of excessive water content in concrete mix; (3) desirability of more complete investigation of factors affecting concrete-steel bond and its reliability under conditions involving variations in application of loads and impact.

COPPER

Fatigue. A Metallographic Study of the Path of Fatigue Failure in Copper, H. F. Moore and F. C. Howard. Metal Industry (Lond.), vol. 22, no. 24, June 15, 1928, pp. 589-592. 9 figs. Reprint of paper published in Univ. of Ill.—Bul., no. 37, 1928, previously annotated.

COPPER ALLOYS

Review of Progress. Metals and Alloys (Metalle und Legierungen), Masing. V.D.I. Zeit. (Berlin), vol. 72, no. 23, June 9, 1928, p. 787. Brief annual review of progress in production of aluminum and copper alloys; scientific research in alloys.

COPPER MINES AND MINING

Dust Collection. Dust Control in Southwestern Ore-Milling Plants, G. E. Lynch. Eng. and Min. Jl., vol. 125, no. 22, June 1928, pp. 887-889. First plant to use it was Moctezuma Copper Co. of Phelps Dodge Corp., cost about $6,000; copper queen mill at Warren, Ariz., dust-collection plant cost about $12,500; daily operating cost about $4; Ray plant of Nevada Consolidated Copper Co. cost about $6,000 complete; New Cornelia plant at Ajo, Ariz.; Allenby Copper plant in British Columbia; dust control is good business.

CRANES

Bridges. Loading Bridges With Belt Conveyors and Screeners. Demag News (Duisburg), vol. 2, no. 3, 1928, pp. 76-78, 7 figs. Subdividing work of loading-bridge crane devoted to pure hoisting and only traveling quite short distances horizontally while subsequent transportation of goods to storage-yard is performed by some other conveying appliance working quite independently of crane.

Floating. Large Floating Cranes and Their Work. Demag News (Duisburg), vol. 2, no. 3, 1928, pp. 69-74, 16 figs. Details of two floating cranes of 250-ton capacity employed for salvage repairs to ships and work in which they have been engaged.

CUPOLAS

CONTROL. Cupola Control by Auxiliary Tuyeres. Engineering (Lond.), vol. 125, no. 3257, June 15, 1928, p. 744, 3 figs. Improved efficiency of cupolas resulting from Poumay system of auxiliary tuyeres for control of combustion in them; system aims at producing carbon monoxide under fusion zone and in completing combustion of this gas inside charge itself so that discharged gases consist almost wholly of carbon dioxide.

DESIGN. Melting Plant and Appliances in Modern Iron Foundries, J. McLachlan and C. A. Otto. Iron and Steel Industry (Lond.), vol. 1, no. 9, June 1928, pp. 275-279, 3 figs. Supremacy of cupola for remelting pig iron in foundry never seriously threatened; comparison with air furnace and electric furnace; Dutch bell founders; various types of cupolas in use in British iron foundries; solid-bottom cupola; tilting spout; receiver type of cupola; continuous casting during length of blow; connection between pressure and volume of blast and quality of castings. (To be continued.)

D

DAMS

ARCH, THEORY. Arch Dams With Rings of Variable Thickness, F. W. Hanna and T. L. E. Haug. West Constr. News, vol. 3, no. 10, May 25, 1928, pp. 336-339, 3 figs. In method of archanalysis described, theory of elastic displacements have been used; extended to apply to arches under water pressure and to include effects of both rib shortening and shear.

MASONRY, CALCULATION. Calculation of Masonry Dams (Le calcul des barrages en maçonnerie), G. Pigeaud. Génie Civil (Paris), vol. 92, no. 13, Mar. 1928, pp. 314-317. Observations of some recent notes of Baticle concerning gravity dams with triangular sections; general conditions; application to dams with vertical upstream face.

SPILLWAY GATES. Relative Merits of various Types of Spillway Gates on or Adjacent to Dams. Elec. West, vol. 60, no. 6, May 15, 1928, pp. 362-376, 17 figs. Consideration of experiences of design, manufacture and operation of spillway gates on dams of operating companies of Pacific Coast States; formulas and coefficients; flashboards, needles and stop logs; collapsible gates; sector or drum gates; butterfly gates; roller gates; automatic gates. Bibliography. Committee report to Pac. Coast Elec. Assn.

DIESEL ENGINES

PENN. STATE CONFERENCE. Diesel Engineers Gather for Penn. State Conference. Power, vol. 67, no. 26, 1928, pp. 1162-1163. Review of papers and discussions at Oil Power Conference June 14 to 16 by Oil & Gas Power Division of Am. Soc. of Mech. Engrs.; manufacturing and sales problems studied; mechanical injection used for 11,000-hp. unit; trend toward lightness and higher speeds; demand for standardized Diesel-fuel specifications; standardization of certain engine parts proposed.

AUTOMOTIVE, RESEARCH IN. The Diesel As a Vehicle Engine, K. Neumann. Nat. Advisory Committee for Aeronautics—Tech. Mem., no. 467, June 1928, 43 pp., 21 figs. Operation of Diesel as vehicle engine investigated for development possibilities; working process of Diesel vehicle engine considered on basis of theoretical indicator diagram; experiments with 4-cylinder four-stroke-cycle Dorner oil engine. Translated from V.D.I. Zeit., May 28, 1927.

COMPRESSORLESS. The Governing of Compressorless Diesel Engines (Methoden der Regulierung von kompressorlosen Dieselmotoren), O. Holm. Werft—Reederei—Hafen (Berlin), vol. 9, no. 9, May 7, 1928, pp. 173-177, 8 figs. See translated abstract in Mar. Engr. and Motorship Bldr. (Lond.), vol. 51, no. 610, June 1928, p. 231.

POWER PLANTS. Industrial Use of Oil Engines, E. J. Kates. Oil Engine Power, vol. 6, no. 4, Apr. 1928, pp. 241-249, 8 figs.

TWO-CYCLE. An Answer to the Question Is the High-Speed Two-Cycle Diesel Possible? P. H. Schweitzer. Power, vol. 67, no. 25, June 19, 1928, pp. 1102-1104, 5 figs. Conclusions reached by O. Holm based on his study of mechanics of scavenging; he found that in 2-stroke-cycle engine neither r.p.m. nor piston speed is determining factor, as it is for 4-stroke-cycle engine; information regarding most favorable port dimensions and charging pressures for various engine speeds.

ELECTRIC LOCOMOTIVES. The Diesel-Electric Locomotive of the Compagnie Fermière Des Chemins De Fer Tunisiens, O. Schlapfer. Brown Boveri Rev. (Baden, Switzerland), vol. 15, no. 6, June 1928, pp. 188-191, 4 figs. Particulars regarding section of railway in Tunis and Diesel locomotive used; gauge 1,000 mm.; maximum gradient 2 per cent; engine rated at 250 hp. at 550 r.p.m.; economy of Diesel-electric locomotive as compared with steam shown in few figures.

The Diesel Locomotive in North Africa. Oil Engine Power, vol. 6, no. 4, Apr. 1928, pp. 255-258 and 268, 7 figs. Details of Diesel motive power on Tunisian railroad and searching tests made; fuel-consumption trials; speed trials on various gradients.

AUTOMOTIVE. German Automotive Developments, A. Nagel. Oil Engine Power, vol. 6, no. 4, Apr. 1928, pp. 263-267, 14 figs. Development of vertical stationary Junkers engine; Junkers car engine is two-cylinder opposed-piston engine with rated output of 45 hp. at 1,000 r.p.m.; exhaustive tests on test bed of Dessau Works. Abstract translated from V.D.I. Zeit.

DIRECTION FINDING

RADIO BEACONS. Direction Finding at Sea, R. L. Smith-Rose and S. R. Chapman. Times Trade and Eng. Supp. (Lond.), vol. 22, no. 518, June 9, 1928, p. 319. Method of direction-finding at sea has been under examination both by Air Ministry and by Committee on Directional Wireless; which involves erection of rotating beacons at shore stations; results of investigations of such beacon carried out in ships under seagoing conditions. Abstract of Special report, no. 6, Department Sci. and Indus. Research.

DIRECTION FINDING APPARATUS

RADIO. Directional Wireless Marine Navigation, R. L. Smith-Rose. Elec. Rev. (Lond.), vol. 102, no. 2637, June 8, 1928, pp. 994-995. Relative merits of directional transmission and reception are discussed and apparent technical superiority of rotating beacon over mean direction finder is pointed out.

DIE CASTING

DESIGN. Die-Casting Dies, F. W. Curtis. Am. Mach., vol. 68, nos. 23 and 24, June 7 and 14, 1928, pp. 911-913 and 959-961, 10 figs. June 7: Design and construction of dies and metal used; accuracy depends upon dimensions, taper or draft necessary for extraction and kind of metal being cast; double-impression die for casting external spur gears; casting external threads; use of vents at matching faces. June 14: Group of dies for intricately shaped parts and characteristics of various alloys; casting made with inserts; forming internal threads; die made with radial core; casting dovetail. (To be continued.)

DILATOMETERS

APPLICATION. The Dilatometer and Its Application. Am. Mach., vol. 68, no. 25, June 21, 1928, p. 1019, 3 figs. Operation details of dilatometer by means of which correct quenching temperature is mechanically indicated regardless of type of steel; by arrangement of recording chart to show amount of expansion during heating period, rate of heating is also definitely recorded; by comparison with known rates for steels, proper heating rate for given steel can be controlled.

DRILLING MACHINES

JIGS AND FIXTURES. Pneumatically controlled Continuous Drilling Machine. Machy. (Lond.), vol. 32, no. 817, June 7, 1928, pp. 289-293, 6 figs. Pneumatically controlled jigs and fixtures used on continuous drilling machine for drilling two holes for feather pins; machine is of rotating type having six heads which carry drill spindles; jigs are primarily air-operated compound cross-slides on which locating pins and drill bushing are mounted.

E

EARTH PRESSURE

THEORY. Earth Pressure, J. M. Moncrieff. Engineering (Lond.), vol. 125, no. 3255, June 1, 1928, pp. 674-675. Reviews various mathematical theories that have been formulated for computation of earth pressures, and points out that, in certain cases, notably that of Rankine, conditions postulated as basis of mathematical development are not, in general, satisfied in case of retaining walls. Abstract of address before Instn. Structural Engrs.

ELECTRIC APPARATUS

MARINE. Special Marine Electric Apparatus, K. Yamada. Inst. Elec. Engrs. of Japan—Jl. (Tokyo), no. 478, May 1928, pp. 512-522, 6 figs. Gyro Compass, Gyro stabilizer and fathometer which are only used on board ship and are not familiar to general public are popularly explained in order to give general idea about their mode of utilization and action. (In Japanese.)

ELECTRIC CABLES

ARC PROOFING. Arc Proofing Cables, C. H. Shaw. Elec. World, vol. 91, no. 25, June 23, 1928, pp. 1338-1339. Extensive series of experiments was undertaken by New York Edison Co. to determine relative protective values of different combinations of refractory materials through exposure of specially prepared test; samples to controlled electric arcs in which energy at arc and distance of test material from arc were maintained uniform, thereby providing test data that permit direct comparisons.

HIGH TENSION. High-Tension Cable for Power Transmission (Hochspannungskabel fuer elektrische Kraftuebertragungen), R. Apt. V.D.I. Zeit. (Berlin), vol. 72, no. 24, June 16, 1928, pp. 844-850, 23 figs. Discusses problems of manufacture, laying and testing of high-tension cables; Krupp and Passburg methods of manufacture; use of single-core cables for high voltages; cable couplings; standard specifications and tests of German Society of Electrical Engineers.

Electrical Fields of Some High Tension Cables (Elektrische Felder einiger Hochspannungskabel), V. Fock, W. Malyschew and A. Walther. Archiv fuer Elektrotechnik (Berlin), vol. 19, no. 4, Mar. 15, 1928, pp. 463-471, 12 figs. Report from Leningrad Physico-Technical laboratory on experimental determinations of electric fields in cables, of practical interest to cable manufacturers, by means of capacity sounding apparatus suggested by N. Semenoff; comparison of empirical with theoretically deduced results.

UNDERGROUND, FAULT LOCATING. Locating Underground Network Cable Faults. Elec. World, vol. 91, no. 25, June 23, 1928, pp. 1344-1345, 2 figs. Testing equipment consists of 15-kw. transformer reactor and necessary control and measuring equipment which is mounted on truck.

UNGERGROUND, LAYING. An Automatic Underground Cable Layer. Telegraph and Telephone Jl. (Lond.), vol. 14, no. 159, June 1928, pp. 196-197, 3 figs. Machine can actually lay up to 300 ft. of cable per hour, performing three other operations at same time; excavator is driven by four-cylinder Diesel engine of 40/45 hp., running on crude oil.

ELECTRIC CIRCUIT BREAKERS

OIL. Oil Circuit Breaker Developments. Elec. West, vol. 60, no. 6, May 15, 1928, pp. 343-349, 13 figs. Trend of design and manufacture; manufacturing companies submit descriptions of high-voltage circuit breakers and their operation; reports from various electric companies regarding their practice. Committee report to Pac. Coast Elec. Assn.

ELECTRIC CONDUITS

THREADING. Threading Conduit, R. L. Dodd. Elec. World, vol. 91, no. 25, 1928, p. 1334, 1 fig. Method now in use on system of Milwaukee Elec. Ry. and Light Co., of threading line from one manhole or pull box to another through conduit so that cable may be pulled through it; air compressors, mounted on truck, furnish power.

ELECTRIC CONVERTERS

ROTARY, SHORT CIRCUITS. Short-Circuit Phenomena in Rotary Converters (Kurzschlussvortechnik) (Berlin), vol. 19, no. 4, Mar. 15, 1928, pp. 437-443, 13 figs. Report from Government Electrotechnical Experiment Institute, of Moscow, continuing analysis and discussion of phenomena accompanying short circuiting of rotary converters.

ELECTRIC FURNACES

ANNEALING. Electric Annealing of Non-Ferrous Metals, R. M. Keeney. Heat Treating and Forging, vol. 14, no. 6, June 1928, pp. 630-632. Problem of economies in heating covering heat treatments of brass, copper and nickel-silver products; rolling-mill operations a possibility. Abstract of paper presented before Am. Electro-Chem. Soc.

APPLICATIONS. Some New Applications of Electric Furnaces, A. N. Otis. Am. Metal Market, vol. 35, no. 111, June 12, 1928, pp. 6-8 and 23, 9 figs. Work now being done with newer types of equipment; developments in use of electric furnaces, with atmospheres of protective gas, for copper-brazing steel parts together; furnace of elevator type used for annealing sheet steel and punchings for motors and generators; use in nitriding process for case-hardening; use of electric heating for processes considered unusual.

HIGH FREQUENCY. High-Frequency Heating. Elec. Rev. (Lond.), vol. 102, no. 2636, June 1, 1928, pp. 943-945, 3 figs. Comparative review of methods of generating currents necessary for supplying high-frequency furnaces; salient advantages of high-frequency heating; Tesla type of generator; tube-type generator; shows diagrammatically lay-out for h.f. furnace installation with thermionic-tube generator.

ELECTRIC LINES

CONTROL CIRCUITS. Protection of Control Circuits, J. H. Nelzen. Elec. World. vol. 91, no. 24, June 16, 1928, p. 1293, 1 fig. Control circuits used by Wisconsin Public Service Co. tried out and found to be quite successful; so devised that all operations are performed through functioning of single master relay connected across control pair.

DESIGN. Electric Transmission of Power as Applied to Large Areas, A. Page. Engineering (Lond.), vol. 125, no. 3256, June 8, 1928, pp. 724 and (discussion) 704; also Elec. Rev. (Lond.), vol. 102, no. 2638, June 15, 1928, pp. 1069-1071, including discussion. For main systems there is no alternative to overhead lines; voltage and carrying capacity of grid lines are fixed at 132 kv. and 50,000 kw. respectively; stability of grid system is intimately connected with problem of voltage control; in secondary transmission, pressures range from 11,000 to 66,000 volts; underground cables will continue to be extensively used. Abstract of paper read before Instn. Civil Engrs.

FLASHOVER. Flashover Investigation on 220-kv. Lines, L. L. Conrad. Elec. West, vol. 60, no. 6, May 15, 1928, pp. 458-460, 3 figs. Two standard 3-element oscillographs, regular test department equipment, were at hand for immediate use, which, with some modifications, could be put into service with least delay. Committee report to Pacific Coast Elec. Assn.

Lightning Protection. A Theory of Lightning, G. LeG. Fortescue. Elec. Jl., vol. 26, no. 6, June 1928, pp. 291-294, 4 figs. Protection of lines against lightning; influence of topography of line construction; ground wires for protection; other remedial measures; flashover and its relation to transformer insulation.

Maintenance. Operation and Maintenance of Rocky Mountain Transmission Line, V. M. McDonald. Elec. West, vol. 60, no. 7, June 1, 1928, pp. 595-599, 8 figs. Discussion of difficulties incident to maintaining service over 110-kv. Shoshone-Denver transmission line in Colorado; conductors and hardware; ground wires; telephone and transportation; line maintenance in Rocky Mountains.

Overhead. Pole-Line Structures, Devices and Maintenance. Elec. West, vol. 60, no. 6, May 15, 1928, pp. 471-477, 3 figs. Methods used to prevent grass fires from burning poles; use of solderless connectors; maintenance of distribution transformers and devices; bakelite tubes vs. porcelain tubes for 11 and 16-kv. fuses; painted vs. unpainted cross-arms; methods of stubbing poles; tree-trimming methods and procedure; wooden vs. steel poles for distribution work. Committee report to Pacific Coast Elec. Assn.

Power-Arcs. Transmission Line Power-Arcs, P. Ackerman. Elec. Rev. (Lond.), vol. 102, no. 2637, June 8, 1928, pp. 1019-1020. Practical results of series of power-arc tests carried out by Shawinigan Water Co.; general characteristics of power-arc; tests show clearly that duration of arc is more serious and more damaging than current magnitude; explosive expansion of arc; chimney effect; wind effect on arc; persistency of power arcs.

Voltage Drop Calculation. Rough Check for Voltage-Drop Components, R. C. R. Schulze. Elec. World, vol. 91, no. 22, June 2, 1928, pp. 1136-1137, 1 fig. Presents chart which provides quick way to determine roughly in phase and quadrature components of voltage drop along transmission line.

ELECTRIC LOCOMOTIVES

Sweden. The 1-C-1 Class D Locomotives for the Stockholm-Gottenborg Railroad (Die 1-C-1 Lokomotiven Klasse D fuer Stockholm-Gothenburg), P. Friebel. Elektrische Bahnen (Charlottenburg), vol. 4, no. 3, Mar. 15, 1928, pp. 45-58, 38 figs. Construction and details of motors, transformers and other electric equipment of 80-ton, 1,660-hp. locomotives, 13 m. long, able to develop maximum tractive power of 16 tons and speed of 90 km. per hr., manufactured by Almanna Svenska Elektriska Aktiebolaget.

ELECTRIC MEASURING INSTRUMENTS

Automatic. The Hall High-Speed Recorder, C. I. Hall. Gen. Elec. Rev., vol. 31, no. 6, June 1928, pp. 328-331, 9 figs. Automatic device which gives complete record of characteristics developed in electrical circuit; such as transmission or distribution line, during and immediately following occurrence of accidental fault.

ELECTRIC MOTORS

Control. Some Recent Developments in Motor Control, B. W. Jones. Gen. Elec. Rev., vol. 31, no. 6, June 1928, pp. 315-318, 8 figs. Primary purpose of control to make motor work; trend from current-limit to time control; non-reversing and plugging operations; a.c. and d.c. equipment.

Control Apparatus. Motor Control Gear, G. W. Stubbings. Electricity (Lond.), vol. 42, no. 1963, June 21, 1928, p. 21, 1 fig. Brief description of three types of protective gear which have been evolved to protect 3-phase motors against effects of single phasing, each of which devices depends on different principle; conclusion points out that phase-balance relays give protection against faults other than single phasing.

Induction. Circle Diagram of Induction Motor (Die Entnahme der Leistung und des Drehmomentes aus dem Kreisdiagramm des Lnduktions-motors), E. Siegel and J. Labus. Elektrotechnik u. Maschinenbau (Vienna), vol. 46, no. 9, Feb. 26, 1928, pp. 189-193, 3 figs. Gives simplified construction, whereby load and torque can be sealed directly from circle diagram.

Intermediate Rotor. Electric Motors with Intermediary Rotors, H. dePistoye. Mech. Eng., vol. 50, no. 7, July 1928, pp. 545-546. Such motor permits increasing speed but at cost of considerable mechanical complication; describes several types of these motors, one of which can be run at speed triple that of synchronism while another can be run at speed either greater or less than that of synchronism. Abstract translated from Technique Moderne, no. 8, p. 286.

Synchronous. Definition of An Ideal Synchronous Machine and Formula for the Armature Flux-Linkage, R. H. Park. Gen. Elec. Rev., vol. 31, no. 6, June 1928, pp. 332-334, 1 fig. Flux in every circuit of synchronous machine depends in complicated way on currents in every circuit of machine and on relative position of armature phases and rotor.

ELECTRIC REGULATORS

Feeder. 2,400-Volt Regulators Used for 11-Kv. Line, E. F. Pearson. Elec. World, vol. 91, no. 26, June 30, 1928, p. 1390, 1 fig. Advantages of using standard stock 2,400-volt feeder regulator equipment and saving cost of over 11,000-volt regulator led Northwestern Electric Co. to develop an ingenious scheme for regulating voltage on 11-kv. feeder.

ELECTRICITY SUPPLY

Rural. The Distribution of Electricity in Rural Districts, H. F. G. Woods. Elec. Rev., vol. 102, no. 2639, June 22, 1928, pp. 1108-1110, 3 figs. Employment of overhead lines for distribution and transmission is of necessity imposed by financial considerations; it is unnecessary that main supply pressure exceed 3,300 volts; village community is supplied by installing supply transformer, of outdoor type, upon suitably constructed platform, mounted upon H-pole at terminus of high-tension line. Abstract of paper read before Incorporated Mun. Elec. Engrs.

ELECTRIC TRANSFORMERS

Design. Notes on Transformers, C. W. Olliver. Colliery Eng. (Lond.), vol. 5, no. 52, June 1928, pp. 245-248, 6 figs. Brief exposition of important factors affecting transformer installation and design; methods of connection; interconnected-star connection; earthed neutrals; insulation tests between low and high-tension windings; oil conservators.

Loading. Transformer Loading—Ratio of Connected Load to Demand, K. B. Ayres. Elec. West. vol. 60, no. 6, May 15, 1928, pp. 465-469, 12 figs. Tabulates data received from members to give ready reference which will show within reasonable limits ratio between connected load and demand for light and for power for many different classes of business; distribution-transformer capacity for cooking and heating loads; outline of methods used by San Joaquin Light & Power Corp. to determine transformer capacity that is necessary to serve range and water-heater loads. Committee report to Pacific Coast Elec. Assn.

Short Circuits. Determining Short-Circuits in Current-Transformer While in Service. Elec. News (Toronto), vol. 37, no. 12, June 15, 1928, pp. 89-90, 5 figs. Adaptable to circuits preferably above 6,600 volts; faults are immediately indicated by ammeter reading of secondary load with and without resistor. Report by Meter Committee of Nat. Elec. Light Assn.

Testing. Analysis of Current Transformer Tests, E. C. Goodale. Elec. West, vol. 60, no. 7, June 1, 1928, pp. 612-613, 1 fig. Transformation laws, autotransformers; transformer having two primary windings; case of three primary windings feeding from common source; expressions may be derived for division of load among any number of primaries. (Continuation of serial.)

ELECTRIC TRANSMISSION AND DISTRIBUTION

Planning. Simplified Distribution Planning, W. R. Bullard. Elec. World, vol. 91, no. 25, June 23, 1928, pp. 1341-1344, 5 figs. Methods of calculating economic characteristics of electric distribution systems, particularly transformer spacing and sizes of line conductor.

ELECTRIC WELDING, RESISTANCE

Miter. Improving the Miter Weld. Welding Engr., vol. 13, no. 6, June 1928, pp. 39-40, 6 figs. New types of resistance welders are designed to produce miter welds meeting exacting requirements of manufacturing plants.

Electric Welding. Electric Welding, H. E. Grove. Commonwealth Engr. (Melbourne), vol. 15, no. 9, Apr. 2, 1928, pp. 329-336, 17 figs. Describes various types of welded joints and tests made on them to determine strength of joint; consideration of butt welds, especially those in tension; test relating to investigations on tubular jib for Scotch derrick crane. (Continuation of serial.)

ELECTRIC WELDING, ARC

Electronic Tornado. Electronic-Welded Materials Stand Severe Test. Heat. and Vent. Mag., vol. 25, no. 6, June 1928, p. 99, 4 figs. Applications of electronic-arc welding process in field of boiler maker and heating contractor have produced results that apparently justify extravagant claims.

ELECTRICITY ON FARMS

Motors. Electricity in Agriculture, R. B. Matthews. Rugby Eng. Soc.—Proc. (Rugby), vol. 22, 1927-1928, pp. 1-9 and (discussion) 9-10. Electric motors in farm buildings; plowing; tractor or rope-haulage plows; advantages with electric plowing; increasing egg supply; electric incubators; good for cow milking machines; efficiency in dairy; ultra-violet-ray treatment of farm stock.

ENGINEERING RESEARCH

Organization. Organizing the Industry's Engineering Research, A. D. Bailey. Nat. Elec. Light Assn.—Advance Paper for mtg. June 4-8, 1928, 6 pp. Operating companies interested in certain lines of engineering research are encouraging and supporting such work at universities or in private laboratories; research projects typical of work being done by Am. Soc. Mech. Engrs.; Am. Soc. Civ. Engrs. has research committees; Am. Ry. Assn., with its organized research and programme for year involving expenditure of two million dollars; recommended that research committee be set up in Engineering National Section.

ETHYL CHLORIDE COMPRESSORS

Rotary. Ethyl Chloride Rotary Compressors, W. W. O'Mahony. Ice and Cold Storage (Lond.), vol. 31, no. 362, May 1928, pp. 123-124, 3 figs. Details of French machine and its use in aviation; direct-coupled driving and special system of automatic lubrication, with complete recovery of oil, are outstanding features; superiority is claimed from standpoint of mechanical efficiency; remarkable applications of this rotary compressor in Bourget Aerodrome Laboratory of medical studies.

F

FEEDWATER

Degasification. The Degasification of Feedwater (Entgasung des Speisewassers), Schlicke. Wärme (Berlin). vol. 51, no. 20, May 19, 1928, pp. 373-374, 1 fig. Description of process for removal of injurious gases at 100 to 120 deg. cent.; its use in industrial power plants.

Treatment. Boiler Scale Prevention. A. T. Ridout. Machy. Market (Lond.), no. 2439, June 1, 1928, pp. 495-496. Physical system of treating water for boilers; by its use seawater may be used for make up feed; system utilizes colloids; coagulation and absorption of colloids fairly important; treatment of linseed oil; elimination of oil in feedwater. Paper read before Inst. Marine Engrs.

Treatment of Evaporator Feed Water, T. A. Solberg. Power, vol. 67, no. 26, June 26, 1928, pp. 1154-1155.

FEEDWATER HEATERS

Control. Automatic Control of Stage Feedwater Heaters, J. M. Drabelle. Power Plant Eng., vol. 32, no. 12. June 15, 1928. pp. 662-663, 4 figs. Method of controlling temperature of feedwater when extraction turbines are added to old plant using open heaters.

FIRE PROTECTION SURVEYS

Results. What a Fire Protection Survey Revealed, A. C. Carruthers. Safety Eng., vol. 60, no. 6, June 1928, pp. 219-221, 1 fig. Results of survey to determine extent of fire-fighting facilities in 20,703 buildings of various types in 157 villages, towns and cities in 28 states; 90 per cent were found without fire protection.

FLOW OF FLUIDS

Significance of Static Pressure. Dynamic Significance of Static Pressure, G. De Bothezat. Heat. and Vent. Mag., vol. 25, nos. 5 and 6, May and June 1928, pp. 65-67 and 75 and 79-83, 3 figs. Defines terms and explains phenomena fundamental in ventilation; qualitative relation between pressure and flow velocity in steady stream; quantitative relation between fluid velocity and fluid pressure; flow of air in ducts; air flow through fan; air flow through wind-mill.

FLOW OF STEAM

Measurement. Measurement of Steam Flow in Works Practice, H. C. Armstrong and T. Nordenson. Inst. Fuel—Jl. (Lond.), vol. 1, no. 2, Jan. 1928, pp. 161-177 and (discussion) 177-186, 32 figs. partly on supp. plate. Full text of paper previously annotated from Eng. and Boiler House Rev., Dec. 1927.

FLOW OF WATER

Measurement. Applying the Theory of Similitude to Discharge Measurements (Anwendung der Aehnlichkeitstheorie auf Durchflussmessungen), A. Grunwald and F. Engel. V.D.I. Zeit. (Berlin), vol. 72, no. 21, May 26, 1928, pp. 699-702, 9 figs. Review of Reynold's theory of similitude and its application to problems of discharge from orifices, nozzles, Poncelet apertures, etc.; transition from laminary to turbulent flow in case of Venturi meters.

Pipe. Formulæ For Estimating the Flow of Water in Pipes. New Reclamation Era, vol. 19, no. 6, June 1928, p. 93. Formulas used by Bureau of Reclamation engineers for estimating flow of water in pipe lines of various materials; wood-stave pipe; cast-iron pipe; precast concrete pipe; monolithic-concrete pipe; riveted-steel pipe; drain tile.

FLUE DUST

Electric Precipitation. Flue Dust Recovery, H. W. C. Henderson. World Power, vol. 9, no. 54. June 1928, pp. 340-347, 7 figs. Application of electric precipitation; describes installations for cleaning blast-furnace gas, coke-oven and producer gas sulphur-dioxide gases in acid industry, and plants working in conjunction with smelting processes, alumina calcining and cement kilns. (Concluded.)

FLUMES

DESIGN. Flumes. Elec. West, vol. 60, no. 6, May 15, 1928, pp. 376-396, 22 figs. Present-day methods of design, erection and maintenance; flow in flumes; inlets to flumes; outlets; short and long flumes; typical hydraulic computations for replacement of old flumes on existing canals; mechanics; metal; maintenance of wood flumes, lining and belting. Committee report to Pac. Elec. Assn.

FOUNDRIES

MATERIALS HANDLING. Handling Plant in the Foundry. Iron and Steel Industry (Lond.), vol. 1, no. 8, May 1928, pp. 253-255, 3 figs. Materials-handling equipment shown at international Foundry Trades Congress and Exhibition in Paris last autumn; diagrams of Bonvillain & Ronceray modern foundry continuous-flow system, continuous-working Rosieres roller moulding press, and sand-jet moulding machine. Based on account published in V.D.I. Zeit.

Materials-Handling Engineers Consider Foundry Work. Foundry, vol. 56, no. 12, June 15, 1928, p. 493. Review of meeting of materials-handling division of Am. Soc. of Mech. Engrs.; system developed for handling small castings speeds up work; unit containers suggested for less than carload lots of freight.

FREQUENCY CHANGERS

VARIABLE-RATIO. Variable-Ratio Frequency-Changer Sets, C. W. Kineaid. Elec. Jl., vol. 26, no. 6, June 1928, pp. 279-284, 7 figs. Variable-ratio frequency changer was developed to suit cases where certain features are desired; description of various types of variable-ratio sets.

FUEL ECONOMY

PROGRESS. Fuel Economy in 1927 (Zur Bilanz der Wärmewirtschaft im Jahre 1927), D. Przygode. Wärme (Berlin), vol. 51, nos. 20 and 21, May 19 and 26, pp. 368-372 and 384-388, 13 figs. Review of progress in high-pressure steam for peak loads in power plants; interconnection of power and heating plants; long-distance heat installations; refinement of fuel; long-distance gas supply; gas works; coal liquefaction; high-speed compressorless Diesel engines; mercury-vapor steam plants; pulverized coal firing, etc.

FUEL UTILIZATION

SOLID AND LIQUID. Utilization of Solid and Liquid Fuels, C. H. Lander. Engineering (Lond.), vol. 125, no. 3256, June 8, 1928, pp. 722 and (discussion) 701-702. Abstract of paper read before Instn. Civil Engrs. See also Engineer (Lond.), vol. 145, no. 3778, June 8, 1928, p. 628.

FURNACES, ANNEALING

STOKERS. Stokers Applied to Annealing Furnaces, J. B. Whitlock. Blast Furnace and Steel Plant, vol. 16, no. 6, June 1928, pp. 776-778, 5 figs. Annealing-furnace stokers with boiler-type grates effect important improvements in annealing practice; fuel saving considerable; temperature control easily maintained; 12 new box-annealing furnaces arranged in six batteries at plant of American Rolling Mill Co.; furnace construction.

FURNACES, METALLURGICAL

OIL FIRING. Oil Fuel as Applied to Metallurgical Works. Metal Industry (Lond.), vol. 32, no. 23, June 8, 1928, pp. 572-573. Advantages of oil over solid fuels in industrial furnaces may be summed up as follows: increase of output, economy of fuel, less material wastage, much higher temperatures obtained in shorter periods, temperature under instant control, saving in furnace attendance and less floor space.

G

GAUGES

INTERFEROMETER (ZEISS). Measuring Gaugeblocks by Light Waves, F. Konig. Machy. (N.Y.), vol. 34, no. 11, July 1928, pp. 809-813, 8 figs. Details of new interferometer developed by Carl Zeiss, Jena, Germany, for making absolute measurements; device can also be converted into comparator; measurements to millionths of an inch made; conditions involved in use of polychromic light; swiveling prism for effecting spectral dispersion; adjustable virtual plane of reference about midway between two surfaces of gauge block; slide rule used in conjunction with interferometer.

GARBAGE

DISPOSAL. Garbage Collection and Disposal—Methods and Costs. Am. City, vol. 38, no. 6, June 1928, pp. 167-169. Prepared from report presented at annual conference of International Association of Street Sanitation Officials; generally agreed that collection and disposal of garbage is necessary function of municipal government.

GAS INDUSTRY

PRODUCTION PROBLEMS. American Gas Association Studies Production Problems. Chem. and Met. Eng., vol. 35, no. 6, June 1928, pp. 345-347, 4 figs. Editorial staff report of joint Production and Chemical Conference of American Gas Association held May 22 to 24 in Rochester; this meeting dealt with engineering and chemical problems; manufacture of water gas; operating results on Sterling, Ill., plant of Koppers continuous vertical ovens; coking-plant tests; plant-control equipment.

GAS PRODUCERS

ARC WELDING. Fabricating Special Equipment by Arc Welding Proves Economical, R. R. Smith. Iron Trade Rev., vol. 82, no. 25, June 21, 1928, p. 1601, 2 figs. Details of gas-producer feed mechanism and its fabrication by arc welding. Paper submitted in Lincoln arc welding prize competition.

GAS UTILIZATION

INDUSTRIAL PLANTS. Town's Gas and Industry, H. R. Hems. Gas World (Lond.), vol. 88, no. 2286, May 26, 1928, pp. 525-528, 2 figs. Fuel costs; method of charging; use of gas for industrial purposes; special service; design of furnaces; "Revergen" furnace; improved refractories and insulation; installations at Redditch; drying stoves; hardening and tempering of springs; manufacture of needles and fish hooks; gas-sealed furnace. Extracts from paper read before Brit. Commercial Gas Assn.

GEARS AND GEARING

FRICTION. Friction Gearing. Can. Machy. (Toronto), vol. 39, nos. 10 and 11, May 17 and 31, 1928, pp. 31 and 68, and 35 and 75-76, 3 figs. May 17: Friction gearing employed where positive and definite velocity ratio is not necessary and in cases where small powers are being transmitted; composition wheels; Goss' conclusions; spur-friction gearing; conditions to be observed. May 31: Plain spur-friction gears used as part of mechanism of power drop hammers used on forging work; Billing and Spencer friction board drop hammer.

STANDARDIZATION. Tentative American Standard. Machy. (N.Y.), vol. 34, no. 11, July 1928, supp. sheets nos. 133 and 134, 2 figs. Standard spur-gear tooth form, approved by Am. Eng. Standards Committee, Am. Gear Manufacturers' Assn. and Am. Soc. of Mech. Engrs., covering 14½-deg. composite system (full-depth tooth) and 20-deg. stub involute system; diagrams of basic racks for both systems.

THRUST. Direction of Rotation and Thrust in Worm and Spiral Gearing. Machy. (Lond.), vol. 32, no. 817, June 7, 1928, supp. sheet no. 66, 8 figs. Diagrams show direction of rotation and thrust for both driver and driven wheels, and cover all cases of these two forms of power transmission.

GEOPHYSICAL EXPLORATION

PROSPECTING. Electrical Prospecting, J. J. Jakosky. Engrs. Bul., vol. 12, no. 6, June 1928, pp. 10 and 26, 1 fig. Reliable method of locating conductive ores; effectiveness of any electric process depends almost solely on electric conductivities of ore-body; extensive research is being carried on to obtain more fundamental data regarding wave propagation and effects of various mineralized zones and surrounding earth.

GOLD DEPOSITS

MANITOBA. Province of Manitoba. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 6, Feb. 10, 1928, p. 137, 1 fig. Map of Eastern Manitoba gold areas, scale 25 miles to inch, accompanies development news items; for geology, refers to Geological Survey, Ottawa, reports, 1922, part C, and 1923, part B.

ONTARIO. Province of Ontario. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 6, Feb. 10, 1928, pp. 138-139, 1 fig. Map of Red Lake Gold area, Ontario, scale 25 miles to inch, accompanies development news items; for geology, refers to Ontario Dept. of Mines Report, vol. 33, part 4, 1924; also Geol. Survey, Canada, report no. 578, 1896.

QUEBEC. Gold Deposits of Cadillac, Fourniere and Malartic Townships, Quebec, W. F. James and J. B. Mawdsley. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 6, Feb. 10, 1928, pp. 132-134. General account of geology of area; field work done in 1925; operations have been undertaken by some companies; best known properties are O'Brien, Malartic and Thompson. Extracts from report published by Geological Survey of Quebec.

GRAIN ELEVATORS

BRITISH COLUMBIA. Four New Grain Elevators of Large Capacity of British Columbia Ports, W. F. Findlay. Contract Rec. (Toronto), vol. 42, no. 23, June 6, 1928, pp. 627-630, 3 figs. Additional facilities for handling of grain are now in course of construction at Vancouver, Victoria and New Westminster; $5,000,000 expenditure involved; North Shore elevator; Fraser River elevator; advantages of fresh water; storage section.

GRINDING

SURFACE. Finish Grinding Flat-Surface Work. Am. Mach., vol. 68, no. 24, June 14, 1928, pp. 967-970, 8 figs. Groups of efficient disk or flat surface grinding operations of automatic and semi-automatic type; Gardner grinder equipped with rotary drum that has eight fixtures attached to it; Besly double-ended machine; Badger double-spindle grinder.

H

HARBORS

TORONTO. Further Improvements to be Undertaken by Toronto Harbor Commissioners, J. G. Langton. Contract Rec. (Toronto), vol. 42, no. 22, May 30, 1928, pp. 580-581, 3 figs. Principal industries locating on harbor properties; tables set forth work accomplished to date.

HARDNESS TESTING MACHINE

NEW TYPE. A New Hardness Testing Machine. Engineer (Lond.), vol. 145, no. 3780, June 22, 1928, pp. 696-697, 3 figs. Details of simple form of machine for carrying out tests on number of articles simultaneously; it is patented invention of E. G. Herbert; principle of operation of "Cloudburst" machine is to "rain down" vast number of small hard steel balls from height adjustable to hardness requirements of particular ease upon whole surface under test.

HEAT CONDUCTIVITY

THERMAL. Thermal Conductivity Standards. Franklin Inst.—Jl., vol. 206, no. 5, May 1928, pp. 709-710. As part of co-operative programme with Celotex Co., attempt is being made to determine accuracy which can be expected from various devices in use for measuring thermal conductivity; number of test specimens have been prepared which may be termed thermal-conductivity standards and are being furnished to various institutions possessing hot-plate conductivity apparatus.

HIGH BUILDINGS

WIND STRESSES. Wind Stresses in Many-Storied Buildings, R. Fleming. Engineering (Lond.), vol. 125, no. 3254, May 25, 1928, pp. 625-628, 9 figs. Subject of wind resistance in tier buildings of many stories may be divided into three parts; wind pressure to be assumed, determination of stresses in structure due to assumed pressure, working or unit stresses to be used in proportioning members of structure.

HIGH-SPEED STEEL

MAGNETIC ANALYSIS. The Incremental Permeability Method for the Magnetic Analysis of High-Speed Steel, W. B. Kouwenhoven and J. D. Tebo. Am. Soc. Testing Matls.—Preprint, no. 31. for mtg. June 25, 1928, 19 pp. 11 figs.

HYDRO-ELECTRIC POWER DEVELOPMENTS

PROGRESS. Progress in Hydro-Electric Installations, Including Intakes, Leads, Tunnels, Dams, Headraces, Pipe-Lines and Tailraces, J. McLellan. Engineering (Lond.), vol. 125, no. 3258, June 22, 1928, pp. 786-787 and (discussion) 759. In 1920 total water power developed and in course of development throughout world was approximately 23,000,000 hp.; it is now approximately 35,000,000 and is increasing at rate of 1,500,000 hp. a year; size of installations has grown immensely. Abstract of paper read before Instn. Civil Engrs. See also Engineer (Lond.), vol. 145, no. 3780, June 22, 1928, pp. 680-681.

Progress and Trend in Hydraulic Power Development, H. A. Hageman. Universal Engr., vol. 47, no. 6, June 1928, pp. 33-36. Progress in hydroelectric development in past 25 years; more knowledge is available on characteristics of pipe lines, surge tanks, and transmission systems; examples of developed water powers operating in parallel with other prime movers; benefit of storage development; automatic hydroelectric stations.

CANADA. Hydro-electric Construction in Canada, Active and Prospective. Contract Rec. (Toronto), vol. 42, no. 22, May 30, 1928, pp. 557-560, 5 figs. $200,000,000 will be required for works under way or contemplated; large developments at present under construction reviewed by provinces.

BRITISH COLUMBIA. A Great Hydro-Electric Scheme for British Columbia, R. E. Turnbull. Water and Water Eng. (Lond.), vol. 30, no. 353, May 21, 1928, pp. 219-221, 1 fig. History of British Columbia Electric Railway Co.; existing power plants; need of Bridge River scheme; details of scheme; progress of work.

I

ICE PLANTS

MAINTENANCE AND REPAIR. Operation and Maintenance of Ice Manufacturing Plants, J. A. Hawkins. Ice and Refrig., vol. 74, no. 6, June 1928, pp. 543-544. First considers "Water"; must understand ammonia; condensing pressure; rate of harvesting an individual problem. Paper read before S. Calif. Assn. of Ice Industries.

INDUSTRIAL PLANTS

MAINTENANCE AND REPAIR. Maintenance of Shop Equipment, G. H. Ashman. Indus. Mgmt. (Lond.), vol. 15, no. 6, June 1928, pp. 206-208. Organization of maintenance department with discussion of various functions and responsibilities such as care of buildings, continuous inspection, building foundations, repairs, power, heat and light upkeep, storage of dies, patterns and jigs, safety devices. Abstract of paper presented before Am. Soc. Mech. Engrs.

INTERNAL-COMBUSTION ENGINES

HIGH-SPEED. The Internal Combustion Engine, H. R. Ricardo and G. Porter. Modern Transport (Lond.), vol. 19, no. 482, June 9, 1928, pp. 15 and 17. Brief review of papers dealing with light high-speed and heavy types presented before Instn. Civil Engrs.

Light High-Speed Internal-Combustion Engines, H. R. Ricardo. Engineering (Lond.), vol. 125, no. 3257, June 15, 1928, pp. 751-752 and (discussion) 727. Speed of engines is limited by (1) breathing capacity, (2) dissipation of heat from connecting-rod big-end bearings, and (3) mechanical operation of valves. Abstract of paper read before Instn. Civil Engrs.

OIL CORROSION. Oil and Corrosion, H. J. Young. Mar. Engr. and Motorship Bldr. (Lond.), vol. 51, no. 610, June 1928, pp. 206-207.

PISTONS, ALUMINUM ALLOY. Light Piston Alloys, H. Reimger. Automotive Abstracts, vol. 6, no. 6, June 20, 1928, p. 178. Attempts have been made to manufacture pistons from organic compounds probably similar to bakelite, etc., but have led to no results; aluminum and magnesium are still only basic materials; discusses different metals used for alloying with aluminum. Brief abstract translated from Motorwagen, Apr. 10, 1928, p. 217.

IRON

PHOTOELECTRIC PROPERTIES. The Photoelectric and Thermionic Properties of Iron, A. B. Cardwell. Nat. Acad. of Sciences—Proc., vol. 14, no. 6, June 15, 1928, pp. 439-445, 3 figs. Preliminary report of investigations on variation of photoelectric sensitivity of iron as it undergoes extended process of outgassing by heat treatment; effect of crystallographic changes on photoelectric sensitivity of thoroughly out-gassed iron; effect of crystallographic change on thermionic emission from outgassed iron and variation of long-wave-length limit through outgassing process.

IRON ALLOYS

NICKEL. The Influence of Nickel and Silicon on an Iron-Carbon Alloy, A. B. Everest, T. H. Turner and D. Hanson. Iron and Steel Industry (Lond.), vol. 1, no. 6, Mar. 1928, p. 194. Account of preliminary work on effect of nickel on simple iron-carbon-silicon alloys, over ranges of nickel between 0 and 40 per cent, and of silicon between 0 and 3.6 per cent. Abstract of paper read before Iron and Steel Inst.

IRON CASTING

GRAY. Ways to Improve Gray Iron Castings, R. Moldenke. Iron Age, vol. 121, no. 25, June 21, 1928, pp. 1747-1749. High strength of superheat or high-test irons points to recapture of lost markets; high malleability attainable also; superheating destroys graphite nuclei; hold superheated metal before pouring; composition of high-test irons; results of alloy additions; advances summarized.

IRON AND STEEL INDUSTRY

CANADA. Iron Smelting and Steel Making in Canada, F. W. Gray. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 6, Feb. 10, 1928, pp. 125-128, 3 figs. In 1913 there were in Canada 22 blast furnaces, of which five had for some years been idle; in autumn of 1927 only four in blast; number and operating condition of Canadian blast furnaces in 1913, as given by Director of Mines Branch at Ottawa, and present conditions, as nearly as can be ascertained.

CONTROL INSTRUMENTS. Recording and Controlling Instruments in the Iron and Steel Industry, C. C. Eage and R. M. Walker. Iron and Steel Engr., vol. 5, no. 6, June 1928, pp. 263-277, 16 figs. Applications bearing upon metallurgical phase of industry; iron and coal mines and limestone-quarry applications; coke ovens and by-products department; blast-furnace department recording instruments employed are given in list; steel mill; producer-gas machines.

CHANGES IN. Iron Industry Facing Great Changes, E. C. Eckel. Iron Age, vol. 121, no. 24, June 14, 1928, pp. 1669-1671, 1 fig.

IRON AND STEEL PLANTS

OXYACETYLENE WELDING REPAIRS. Oxywelding Heavy Mill Engines. Iron Age, vol. 121, no. 25, June 21, 1928, p. 1751, 5 figs. Five halftones illustrating oxyacetylene welding and cutting repairs in steel mills, each accompanied by brief description.

ELECTRIC MOTORS. Service Records of Auxiliary Motors in the Steel Mills, A. C. Cummins. Gen. Elec. Rev., vol. 31, no. 6, June 1928, pp. 303-308, 9 figs. Detailed and accurate maintenance data essential to economical production; pre-mill-type, early-mill-type, and modern-mill-type motors; average service of bearings, armature coils, commutators, and shaft.

ENGLAND. Famous British Works. Iron and Steel Industry (Lond.), vol. 1, no. 9, June 1928, pp. 281-286, 6 figs. Description of Redcar Works of Dorman, Long & Co.; one of largest and most perfectly equipped rolling-mill installations in Great Britain; blast furnaces; coke ovens; steel works; soaking pits; cogging mill; 9-ft. 6-in. plate mill; handling plates; universal plate mill; sound edges and dead straightness.

TURBO-BLOWERS. Performance Data Should Include All Facts. Power Plant Eng., vol. 32, no. 12, June 15, 1928, pp. 668-669. In order to analyze properly performance of turbo-blower with its governing mechanism not only records of air pressure and air volume, but also records of steam pressure, steam temperature, vacuum, atmospheric temperature and atmospheric pressure should be available; faulty action of instruments affects readings.

J

JAPANNING OVENS

EXPLOSION PREVENTION. Oven Fires and Explosions, A. E. Maehler. Brass World, vol. 24, no. 16, June 1928, pp. 177-178, 2 figs. Steps taken to eliminate definitely cause of japan-oven fires and explosions.

JIGS

DESIGN. Boring, Facing and Tapping Fixture, B. J. Stern. Machy. (N.Y.), vol. 34, no. 11, July 1928, pp. 835-836, 1 fig. Fixture for use in finishing face and tapping pipe thread in hole of cast-iron pipe flange.

L

LIGHT AND LIGHTING

PSYCHOLOGICAL EFFECT. The Psychological Foundations of Light Perception and the Importance of a Psychological Theory of Lighting for Illumination Engineering (Die psychologischen Grundlagen der Beleuchtungswahrnehmung und die Bedeutung der psychologischen Beleuchtungslehre fuer die Lichttechnik), S. Krauss. Licht u. Lampe (Berlin), vol. 17, no. 11, May 31, 1928, pp. 385-390, 4 figs. Common ground of vision psychology and illumination engineering; laboratory experiments on light perception and tentative psychological theory of vision and lighting; German bibliography on subject.

LOCOMOTIVE BOILERS

NICKEL STEEL. Nickel Steel for Locomotive Boilers, C. McKnight. Boiler Maker, vol. 28, no. 6, June 1928, pp. 152-157, 7 figs. Possesses high strength and ductility; Canadian Pacific Railway locomotives; comparison of nickel and carbon steel plates; high-temperature characteristics of nickel steel; embrittlement in service; uniformity of nickel steel; corrosion and firebox cracks; boiler tubes and staybolts.

DESIGN. The Design and Proportion of Locomotive Boilers and Superheaters, C. A. Brandt. Ry. and Locomotive Eng., vol. 41, no. 4, Apr. 1928, pp. 101-105, 7 figs. Boiler design for increased locomotive capacity; efforts must be directed towards production of locomotive which will develop highest possible power per unit of total weight; discusses problems of boiler and superheater or steam-producing part of locomotive; boiler design; high steam pressures; water-tube firebox; superheater; results obtained with type E superheater. Abstract of paper presented to Can. Ry. Club.

LOCOMOTIVES

DEVELOPMENT. Latest Types of Steam and Internal-Combustion Locomotives, H. Fowler and H. N. Gresley. Engineering (Lond.), vol. 125, no. 3257, June 15, 1928, pp. 751 and (discussion) 726-727. Tabular data giving recent practice as regards express passenger and powerful freight locomotives; Schmidt-Henschel and Winterthur high-pressure locomotives; steam-turbine, Diesel, and Kitson-Still locomotives. Abstract of paper read before Instn. Civil Engrs. See also Ry. Gaz. (Lond.), vol. 48, no. 23, June 8, pp. 773-774 and 788, and Engineer (Lond.), vol. 145, no. 3779, June 15, pp. 656-657, and Motor Transport (Lond.), vol. 19, no. 482, June 9, pp. 11 and 20.

FEEDWATER HEATERS. Effect of the Feed-Water Heater on Overall Engine Efficiency, Railroad Herald, vol. 32, no. 7, June 1928, pp. 31-32, 2 figs. Effect of feedwater heater on boiler; effect of heater on overall engine performance.

FRAMES. A Novel Method of Frame Construction, L. L. Neebe. Baldwin Locomotives, vol. 7, no. 1, July 1928, p. 55, 2 figs. New method of locomotive frame construction, that eliminates splices between upper and lower front rails and main frames; shows old design of frame with bolted joints, and new design; both front rails are cast integral with main frame; after bolting to cylinder, rail is welded to main frame.

OIL BURNING, FIREBOXES. T. & P. Tests Special Firebox for Oil-Burning Locomotives. Ry. Age, vol. 84, no. 23, June 8, 1928, pp. 1324-1326, 4 figs. Comparative test runs with locomotive equipped with standard firebox shows nine per cent fuel saving; results of tests comparing Martin water-tables with firebox of conventional construction; installation provides additional features; table and firebox construction; circulation of water.

STEAM TURBINE. Report on Steam Turbine Locomotives. Ry. Mech. Engr., vol. 102, no. 6, June 1928, pp. 331-335, 5 figs. Proposed turbine-locomotive design; transmission; steam boiler; pulverized-coal burners; turbine and generator; condensers; feedwater heater, pump and injector. Abstract of report presented to Int. Ry. Fuel Assn.

VALVE GEARS (CAPROTTI). A Locomotive With Poppet Valves, A. Caprotti. Baldwin Locomotives, vol. 6, no. 3, Jan. 1928, pp. 67-68, 2 figs. Points out principal details of its construction; largest engines require no power reverse and cab lever is entirely free from all kicking.

LOOMS

BEARINGS. Comparative Performance of Looms with Plain and Roller Bearings, G. H. Perkins. Am. Soc. Mech. Engrs.—Textile Div. Paper, for mtg. May 22, 1928, 5 pp., 2 figs. Full text of paper, previously annotated from Textile World, May 26, 1928.

LUBRICATING OILS

PROPERTIES. The Viscosity-Gravity Constant of Petroleum Lubricating Oils, J. B. Hill and H. B. Coats. Indus. and Eng. Chem., vol. 20, no. 6, June 1928, pp. 641-644, 5 figs. Viscosity-gravity constant is low for paraffinic crudes and high for naphthenic crudes; its value for any oil is direct index of degree of paraffinic or naphthenic character which it possesses.

LUMBER UTILIZATION

POSSIBILITIES. Possibilities of More Complete Forest Utilization in the Lake States by Integration of Industries, R. D. Garver. Am. Lumberman, no. 2770, June 16, 1928, pp. 43 and 53. Integration schemes; improved methods of manufacture; suitability of waste as raw material; supply of raw material; business-organization side; closer correlation of lumber and pulp interests.

M

MACHINE TOOLS

FOR CENTRIFUGAL PUMPS. Machining Covers for Centrifugal Pumps, J. E. Fenno. Machy. (N.Y.), vol. 34, no. 11, July 1928, pp. 816-818, 4 figs. Tools designed for machining cast-iron volute covers; special tool holder and cam constructed to guide tool according to eccentricity and depth of groove; drill jigs.

IMPROVEMENTS. Machine Tools and Tools (Werkzeugmaschinen und Werkzeuge), Buxbaum. V.D.I. Zeit. (Berlin), vol. 72, no. 23, June 9, 1928, p. 790. Annual review of progress in design and construction of drilling, milling, grinding, shearing, punching, planing machines and tools, lathes, etc.

OBSOLESCENCE. Data on Machine Tool Obsolescence to be Sought in Survey, K. W. Stillman. Automotive Industries, vol. 58, no. 24, June 16, 1928, pp. 903-904, 1 fig. Machine-tool obsolescence considered of vital importance in enabling factories to take proper account of operating costs; ordinary depreciation write-off doesn't meet situation; individual investigations; difficult problem is development of method for using data for future protection and is one in accounting.

STANDARDIZATION. Reports of Divisions to Standards Committee—Production Division. Soc. Automotive Engrs.—Jl., vol. 22, no. 6, June 1928, pp. 719-725, 7 figs. Report submitted for approval after having been considered carefully by Division; tool-holder shanks and tool-post openings; terminology; taps, cut and ground threads; cylindrical plug and thread gauges; ring thread-gauges; line drawings and tables of dimensions given.

STEEL CASTINGS. Substitution of Steel Castings for Cast Iron in Machine Tool Construction, H. J. Hart. Am. Mach., vol. 68, no. 15, Apr. 12, 1928, p. 626. Electric steel castings run from 70,000 to 240,000 lb. per sq. in. in tensile strength, with toughness of elongation many times that of cast iron, generally showing ductility of 20 to 40 times that of cast iron; with steel castings it is quite possible to obtain annealed casting that can readily be worked and machined cheaply. See discussion by J. B. Armitage, E. Stubbs and B. P. Graves in June 28 issue of same journal.

MANGANESE STEEL

MACHINING. Progress in Machining Manganese Steel, A. S. Martin. Machy. (N.Y.), vol. 34, no. 11, July 1928, pp. 862-863, 3 figs. Examples of what is now being accomplished in way of machining cast and rolled manganese steel; proper tool angles, feeds, and speeds determined by experiments; shape of drill points for manganese steel; cutting keyways; shaping, planing and boring operations. (Continuation of serial.)

MATERIALS HANDLING

Cost Reduction. Effective Materials Handling Reduces Production Costs, H. V. Coes. Wire. vol. 3, no. 6, June 1928, pp. 201 and 204-205. Chicago wire manufacturer analyzes fundamental principles of material; handling for A.S.M.E.; sets down known facts, such as will guide to correct solution of materials-handling problem. and right use of materials-handling devices; quotes rules. Paper presented before Am. Soc. Mech. Engrs.

METAL WORKING INDUSTRY

Research. Research in Metal Working Industries. Am. Mach., vol. 68, no. 26, June 28, 1928, pp. 1041-1042. Summary of research policies of 187 "millionaire" manufacturing companies in metal-working industries; average expenditure for research is $68,300 per year; benefits of at least one-third of industrial research passed on to consumer in form of improved products; development of new fields for standard products is of major interest to 25 per cent of metal-working companies; profits of research.

METALS

Corrosion. Some Factors Involved in Corrosion and Corrosion-Fatigue of Metals, D. J. McAdam, Jr. Am. Soc. Testing Matls.—Preprint, no. 41, for mtg. June 25, 1928, 42 pp., 15 figs. Résumé of previous work; interaction of cyclic stress-range, number of cycles, and time, in causing penetration of steel under corrosion; effect of varying cyclic stress range, with constant time and number of cycles; effect of time and number of cycles on penetration of metal under corrosion; effect of diameter or thickness of specimen on corrosion-fatigue limit; torsional corrosion fatigue.

MINE TIMBER

Preservation. Preservation of Mine Timber, J. Foster. Colliery Eng. (Lond.), vol. 5, no. 52, June 1928, pp. 236-237, 4 figs. Brief account of Wolman system of timber impregnation.

MINES AND MINING

Aerial Exploration, Canada. Exploring the North Country. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 21, May 25, 1928, pp. 425-426, 2 figs. North Country experiments in prospecting portend active season; most ambitious known as Northern Aerial Minerals Exploration, Ltd.; average wage prospector $150 a month with ten per cent interest; 40 to 50 prospectors by airplane to each base, with collapsible canoes and provisions; in event of important discovery other prospectors rushed by canoe to stake surrounding ground for organization.

What Canada's Mining Development Means to the Construction Industry, C. E. L'Ami. Contract Rec. (Toronto), vol. 42, no. 22, May 30, 1928, pp. 565-567, 5 figs. Huge building programme in North Country as result of present boom in mines; new towns are springing up that demand modern facilities; railways are rushing extensions into mining areas; millions of dollars are being spent.

Diesel Engines. The Use of Diesel Engines in Mining Operations, R. C. Rowe. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 20, May 18, 1928, pp. 402-403, 3 figs. Source of mine power through medium of compressed air; driving milling plants either through medium of electricity or direct driven; Diesels and direct Diesel-driven compressors have now been brought down to reasonable weights; mines, using electrical energy for mining power, must have auxiliary plant to maintain main service of mine in case of current failure; for this purpose, Diesel plant is admirable.

MINING INDUSTRY

Quebec. Mining Development in Western Quebec in 1927, W. F. James. Can. Min. Jl. (Gardenvale, Que.), vol. 49 no. 6, Feb. 10, 1928, pp. 121-123, 4 figs. Important feature is increased prospecting; settlement is concentrated chiefly in vicinity of Osisko Lake; Rouyn and Noranda are estimated to have combined population of more than 5,000; large developed copper orebodies are Noranda Mines, Waite-Montgomery, Aldermac and Amulet; spectacular gold-bearing quartz veins in Cadillac township; discovery of chalcopyrite in Dufay township; most encouraging feature has been increase of public interest.

MOTOR BUSES

Specifications. Uniform Motor Bus Specifications Code. Can. Ry. and Marine World (Toronto). no. 364, June 1928, p. 367. Committee has formulated code of uniform motor-bus specifications, which has been submitted to 18 national organizations in United States for endorsement; code is divided into four parts; chief recommendations; part 4, really code proper, defines various types of motor buses.

MOTOR CARS (RAILROAD)

Gasoline-Electric. Gas-Electric Motor Cars as Applied to Steam Railroads, P. M. Gillilan. Ry. Age, vol. 84, no. 22, June 2, 1928, pp. 1273-1275, 1 fig.

Oil-Electric. Oil-Electric Motive Power on the Canadian National, C. E. Brooks. Ry. Age, vol. 84, no. 23, June 9, 1928, pp. 1319-1323, 3 figs. Influence of three years' operating experience on development of cars and locomotives driven by internal-combustion engines; cars equipped with 4-6- and 8-cylinder engines; 14 oil-electric car equipments in service on Canadian National system; effect of experience on design; details of problems encountered with engines, and how solved.

N

NATURAL GASOLINE INDUSTRY

Progress in. Progress of the Natural-Gasoline Industry for 1926-1927, H. B. Bernard. Petroleum (A.S.M.E. Trans.), vol. 50, no. 12, Jan.-Apr. 1928, pp. 3-5, 5 figs. In Seminole Field, air or gas lift used for producing oil and for producing oil and extracting gasoline with same equipment; use of superheated steam for power and process requirements; gas injection on two-cycle engines.

NITROGEN INDUSTRY

International Conference. The Nitrogen Conference on Adriatic. Chem. and Industry (Lond.), vol. 47, no. 22, June 1, 1928, pp. 575-577. Second International Nitrogen Conference took place from Apr. 30 to May 8, on board S.S. Lutzow; review of papers read covering subject of nitrogen economies and problems, nitrogen fertilizers, etc.

Heavy. Heavy Internal-Combustion Engines, G. Porter. Engineering (Lond.), vol. 125, no. 3257, June 15, 1928, pp. 752 and (discussion) 727. Abstract of paper read before Instn. Civil Engrs.

Standby Service. Oil Engines Serve Well for Standby Loads. Power Plant Eng., vol. 32, no. 12, June 15, 1928, pp. 670-672, 3 figs. Low standby loss, high efficiency of operation and rapid starting ability make oil engine well suited as auxiliary in large stations.

O

OIL ENGINE CASTINGS

Oxyacetylene Welding. Oxy-Acetylene Welding of Oil Engine Castings. Can. Machy. (Toronto), vol. 39, no. 10, May 17, 1928, pp. 38 and 40. 1 fig. Problems involved in welding large complicated gray-iron castings such as are used in oil engines consist mainly in controlling heat of welding operations so that there will be no warping out of true nor cracking due to internal stresses; casting generally preheated over its entire mass; internal stresses; welding equipment; important preparation; weld must penetrate; welding with bronze.

OIL FUEL

Synthetic. Liquid Fuels Other Than Petroleum, A. E. Dunstan and H. G. Shatwell. Inst. Fuel—Jl. (Lond.), vol. 1, no. 3, Apr. 1928, pp. 262-268 and (discussion) 268-271. Full text of paper previously annotated from Instn. Petroleum Technologists—Jl., Feb. 1928.

OIL TANKS

Design. Design of Pressure Vessels for Oil, T. Mc. Jasper. Oil and Gas Jl., vol. 27, no. 4, June 14, 1928, pp. 128-129, 6 figs. Strength of steel; resistance of corrosion; resistant lining; conditions for testing; effect of temperature; effect of shape of heads and lack of reinforcement; vessel design; test results; correct shape of head; ductile leak proof joint. Paper presented before Western Petroleum Refiners' Assn.

OPEN HEARTH FURNACES

Refractory Materials. Refractories and the Open-Hearth, J. R. Miller. Blast Furnace and Steel Plant, vol. 16, no. 6, June 1928, pp. 807-808. Severe conditions of service at vital points make refractory problem one involving not only material quality but utmost care on part of user; run of furnace is determined by life of roof; front-wall failure; high-temperature currents; joints and air filtration; furnace life and production.

Silica Brick. Silica Brick in the Open-Hearth Furnace, B. M. Larsen. Blast Furnace and Steel Plant, vol. 16, no. 6, June 1928, pp. 803-807, 6 figs. Investigation of changes that take place in silica brick under conditions that are met with in service, particularly in open-hearth roof; forms of silica; recrystallization in silica brick; immiscibility in silicate systems; kinds of wear or deterioration of roof brick; causes of spalling in roof blocks; seasoning of roof brick by flux saturation and recrystallization.

ORE TREATMENT

Flotation. The Trend of Flotation, A. J. Weinig and I. A. Palmer. Colo. School of Mines Quarterly, vol. 23, no. 2, Apr. 1928, 90 pp. Ores adapted to flotation; discussion of methods; kinds of flotation; theory; reagents; consumption of reagents; operations; equipment; testing; practice; custom plants; concentrating plants using selective flotation; milling and reagent costs; royalties and patents; marketing of concentrates; manufacturers of flotation machines in United States; freight rates on metals, ores, and concentrates; wage scales. Bibliography.

Flotation Reagents. Flotation Reagents, A. F. Taggart. Min. and Met., vol. 9, no. 258, June 1928, pp. 257-261, 4 figs. Historical notes; frothing agents; collection of froth differs from Elmore process; dynamic force of bubbles; chemical collecting agents; surface tension; water-avid and water-repellent properties; solubility and structural formulas as guides to selection of organic reagents; control of slime movement; behavior of some reagents resembles chemical affinity.

OXYACETYLENE WELDING

Application. Welding and the Engineer, C. A. Daley. Welding Engr., vol. 13, no. 6, June 1928, pp. 41-43. Survey of oxyacetylene welding and cutting processes which are of particular interest to civil engineers; oxyacetylene welding and cutting as applied to railroad maintenance; frog welding; switch point welding; structural steel cutting; cutting under air pressure; contractor equipment easily repaired; bridge repair; pipe welding. Paper read at joint meeting of Am. Soc. of Civil Engrs. and Am. Welding Soc.

P

PAINT SPRAYING

Hazards. Spraying Troubles. Labor and Industry, vol. 15, no. 5, May 1928, pp. 3-10, 2 figs. Discussion of some factors in spray finishing which involve danger of explosion and fire, and means of preventing accidents.

PAPER RESEARCH LABORATORIES

Iowa. An Outstanding Paper Research Laboratory, L. K. Arnold. Paper Industry, vol. 10, no. 3, June 1928, pp. 446d-446f, 4 figs. Iowa State College, Ames, Iowa, laboratory equipped not only with small-scale research equipment, but with large semi-commercial unit for production of wallboard; research equipment; semi-commercial unit; laboratories of department are also equipped with much small-scale equipment such as is used in paper mills.

PAVEMENTS, CONCRETE

Construction. California Job Shows Modern Methods of Concrete Pavement Construction. Concrete, vol. 32, no. 6, June 1928, pp. 13-16, 8 figs. Proportioning aggregates by weight or volume; design mix using three sizes of coarse aggregate; graded aggregates taken from commercial central batching plant; "weakened plane" joints; joint-construction details; longitudinal float finishing.

Specifications. Strength Specification Concrete for Street Paving, F. A. Hess. Eng. News-Rec., vol. 100, no. 25, June 21, 1928, pp. 968-969, 1 fig. Unusual water-cement ratio requirements caused little additional work and no additional cost; at Mundelein, Ill., minimum compressive strength was specified; ratio of coarse to fine aggregate specified.

PETROLEUM

Production Methods. Progress in the Production of Oil, H. R. Pierce. Petroleum (A.S.M.E. Trans.), vol. 50, no. 12, Jan.-Apr. 1928, pp. 1-2.

Refining. Progress in Refining, W. Samans. Petroleum (A.S.M.E. Trans.), vol. 50, no. 12, Jan.-Apr. 1928, pp. 6-9. Governing factor in progress is supply and demand; savings possible in manufacture; construction and engineering problems; various processes in vogue; developments in manufacture and use of steam and power; research work under way.

Transportation. Development of Transportation of Crude Oil in 1927, B. P. Sibole. Petroleum (A.S.M.E. Trans.), vol. 50, no. 12, Jan.-Apr. 1928, pp. 5-6. Conservation has been keynote in transportation of crude oil, especially by pipe line; gathered from wells by pipe lines; while small portion is carried to delivery or tidewater by tank cars, most of it goes on to such delivery by pipe line; conservation of oil; conservation of equipment; economy in movement.

PIPE, STEEL

Arc Welding. Electric Welding of Pipe Lines, J. D. Wright. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 6, June 1928, pp. 407-410, 10 figs. Outlines process of manufacture of steel pipe from flat rolled steel plates by automatic metallic arc welding; data are given showing physical and chemical analysis of plate, weld, and welding wire, as well as speed of welding and electrode and power consumption.

PLASTICS

Properties. The Effect of Mechanical Working on the Plastic Properties of Materials. O. Manfred and J. Obrist. Plastics, vol. 4, nos. 3, 4 and 5, Mar., Apr. and May 1928, pp. 131-135, 189-190 and 209-210, and 252-253 and 270. 7 figs. Mar.: Optical structure of plastic materials; commercial plasticizing methods; extrusion; use of cones; loose spheres. Apr.: Differences in structure of various products is explained, using modern casein solids as examples. May: Similarity in effects of drawing and cold working of metals and plastification of raw materials employed in plastics.

PLATE MILLS

ELECTRIC DRIVE. The New 84-in. Tandem Plate Mill of the Lukens Steel Company, J. H. McElhinney and W. H. Burr. Gen. Elec. Rev., vol. 31, no. 6, June 1928, pp. 297-302, 14 figs. General description of plant and products; electric equipment; roughing and finishing mills; heat-treating and charging operations; finishing processes in plate production.

PLOWS

BOLTS, STANDARDS. Plow Bolts. Mech. Eng., vol. 50, no. 7, July 1928, pp. 565, 1 fig. Tentative American Standards for Plow Bolts was approved in Apr. 1928, by American Eng. Standards Committee; this standard was developed by Sectional Committee on Standardization of Bolt, Nut, and Rivet Proportions; reproduces typical page of standard plow bolts.

ELECTRIC. Some Observations Regarding the Use of the "Electric Plow," T. A. Wood. Elec. West, vol. 60, no. 7, June 1, 1928, p. 607. Charging plowed soil with 500,000-cycle, 104-kv. energy apparently kills insect life and weeds; during summer of 1927 plow was used on test fields of buckwheat and potatoes; electric discharges in soil and air create considerable ozone; possibilities of this method of soil treatment.

PORT TERMINALS

OPERATION. Marine Terminal Operation, W. C. Brinton. Pac. Mar. Rev., vol. 25, no. 6, June 1928, pp. 250-251. Suggestions for reduction of costs at that point in steamship operation where waste is most apparent and economy is least stressed; relatively few men in terminal operations of shipping companies with mechanical training, not to mention engineering education; few trenchant remarks on sorting evil; packages. Excerpts from paper presented before Matls. Handling Division of Am. Soc. Mech. Engrs.

PORTS

MONTREAL. The Port of Montreal, L. Chalmers Tombs. Dock and Harbour Authority (Lond.), vol. 8, nos. 89 and 91, Mar. and May, 1928, pp. 138-142 and 204-207, 2 figs. Apr.: History and facilities of great inland harbor; railways; trade; flour; packing-house products; butter; cheese; livestock; pulp and paper; automobiles; specimen export cargoes. May: Freight rates and charges; port charges; exceedingly reasonable, in fact lower than at many other ports; north Atlantic steamship conference; advantages of system. (To be continued.)

PRINCE RUPERT, B.C. Prince Rupert Harbour. Dock and Harbour Authority (Lond.), vol. 8, no. 91, May 1928, pp. 201-203, 8 figs. Growing British Columbian fishing port; natural harbour; there are eight wharves; natural outlet; fisheries; cold-storage plant; lumbering and logging; pulp possibilities; transportation.

POWER PLANTS

ELECTRIC, SUBSTATIONS. Non-Supervised Substations, S. J. Spurgeon. Elec. World, vol. 91, no. 22, June 2, 1928, pp. 1145-1149, 9 figs. Economic and public relations considerations; steel structures for 22-kv.. and 44-kv., used by Alabama Power Co. are simple in design and operation.

ENGINEERING. How the Power Engineer Serves the Industrial Plant, T. R. C. Flint. Elec. News (Toronto), vol. 37, no. 11, June 1, 1928, pp. 41-43. Object of central-station power engineer is to eliminate waste, improve efficiency and power factor, and generally decrease operating costs for consumer; power-factor difficulty; reduced load gives poor power factor; increasing heating load; real industrial-heating service.

HEAT BALANCE. A Method for Calculating Central Station Heat Balance, E. B. Hyde, Jr., and M. A. Guigou. Power, vol. 68, no. 1, July 3, 1928, pp. 12-17, 16 figs. Article presents simplified method of calculating heat balance for proposed power station, indicates data required, and tells how to obtain it; finding amount of steam taken by turbines; heat-balance calculations.

HOTELS. New York's Largest Hotel to Generate Power and Burn Pulverized Fuel. Power, vol. 67, no. 25, June 19, 1928, p. 1122, 1 fig. Forty-four storey "New Yorker" now under construction will install four boilers with unit pulverizers and 2,200-kw. of generating capacity; boilers will be horizontally fired.

HYDROELECTRIC. Possible Improvements in Design to Reduce Cost of Hydro-Electric Projects, L. F. Harza. Power, vol. 67, no. 22, May 29, 1928, pp. 991-992, 1 fig. Generators built by welding structural shapes are being used as economy in construction; hydroelectric station is best suited for operation on peak load.

HYDROELECTRIC, AUTOMATIC. Automatic and Semi-Automatic Hydro Plants of Pacific Gas and Electric Company, E. F. Maryatt. Elec. West, vol. 60, no. 6, May 15, 1928, pp. 428-435, 6 figs. Hydraulic features; plant equipment; hydraulic turbine controller and shutdown device; butterfly-valve control; emergency overspeed shutdown; automatic operation of plant; operation sequence; protective features; preceding developments. Committee report to Pacific Coast Elec. Assn.

HYDRO-ELECTRIC, KENTUCKY. Hydro-Electric Plant Built on High Piers, L. F. Harza. Power, vol. 67, no. 26, June 26, 1928, pp. 1132-1133, 2 figs. Four miles distant and operating in water synchronism with Dix River station, new 2,000-kw. hydro station at Dam No. 7 on Kentucky River, makes available additional 15-ft. head; three generating units and auxiliaries housed in low buildings mounted on high piers; automatic float control of propeller-type turbines provides for operation at gate opening, giving best efficiency.

HYDROELECTRIC, QUEBEC. The Upper Saguenay a Big Power and Industrial Centre. Elec. News (Toronto), vol. 37, no. 12. June 15, 1928, pp. 58-65, 32 figs. Hydro plant of 540,000 hp. operating; second plant of more than million hp. under construction; modern pulp and paper mills; aluminum production on tremendous scale; Chute-a-Caron; Arvida and Aluminum.

STEAM, COAL TESTING. Selecting Coal by Actual Test. Eng. Times (Toronto), vol. 1, no. 20, May 16, 1928, p. 1, 1 fig. Cost per thousand pounds of steam and capacity developed are two determining factors in selecting coal; average fuel cost per thousand pounds of steam for entire year was approximately 26 cents; table of economy test of coal.

POWER PLANTS, HYDROELECTRIC

EQUIPMENT. Hydraulic Power Plants and Machinery (Wasserkraftmaschinen und-Anlagen), Oesterlen. V.D.I. Zeit. (Berlin), vol. 72, no. 23, June 9, 1928, pp. 776-777, 1 fig. Annual review of progress in design and construction of propeller and Kaplan turbines, Francis turbines, waterwheels; pumped storage plants.

MARYLAND. Construction Problems, W. L. Locke. Stone and Webster Jl., vol. 42, no. 6, June 1928, pp. 827-838, 5 figs. General scheme of constructing Conowingo developments; master progress chart was prepared; transportation is keynote to all operations such as Conowingo; water diversion was major problem; traveling derrick which erected structural steel in power station.

POWER PLANTS, STEAM

DESIGN. Prospective Development in the Generation of Electricity and its Influence on the Design of Station-Plant, S. L. Pearce. Engineering (Lond.), vol. 125, no. 3257, June 15, 1928, pp. 753-754 and (discussion) 728-729, 2 figs. Abstract of paper read before Instn. Civil Engrs.

The Trend of Power Plant Design, F. H. Daniels. Blast Furnace and Steel Plant, vol. 16, no. 6, June 1928, pp. 790-793, 5 figs. Increased boiler pressures and higher degrees of superheat in modern installations have brought about improvements in design of boiler settings and in methods of burning fuel; types of stokers for various fuels; controlling air for combustion; progress in burning of pulverized coal.

HIGH PRESSURE. Operating Experiences with 1300-Pound Steam Pressure, J. Anderson. Inst. Fuel- Jl. (Lond.), vol. 1, no. 2, Jan. 1928, pp. 131-149 and (discussion) 149-160, 18 figs. Full text of paper previously annotated from Engineering, Jan. 6 and 13, 1928.

POWER PLANTS, STEAM ELECTRIC

EQUIPMENT, PURCHASING. Competitive Purchasing and Evaluation of Proposals for Power-Plant Equipment, L. B. Bonnett. Mech. Eng., vol. 50, no. 7, July 1928, pp. 521-522. Describes procedure employed by Brooklyn Edison Co., which it is believed encourages manufacturers to propose best equipment they know how to build; it is believed to result in fairest judgment of merits of different proposals and therefore in purchase of most satisfactory equipment for physical conditions which have to be met.

PULVERIZED COAL

DEVELOPMENTS. Pulverized-Fuel Developments in the United States, L. M. Jockel. Elec. Rev. (Lond.), vol. 102, no. 2637, June 8, 1928, pp. 1013-1014. Notes from serial report of Prime Movers Committee of N.E.L.A.; facts relating to successes and to failures; details as to furnace walls, preheaters, burners, etc., are stated in tables; valuable information relating to operation and maintenance of various plants; report contains useful proximate analyses of various coals used, which are generally high grade bituminous varieties.

PUMPING STATIONS

AUTOMATIC CONTROL. Automatic Control for Water Pumping, H. A. Tolburg. Elec. World, vol. 91, no. 22, June 2, 1928, pp. 1152-1153, 5 figs. Pumping plant of new municipal water plant for city of Monmouth, Ill.; includes two deep-well turbine pumps, two 3-in. horizontal centrifugal service pumps, one 6-in. horizontal centrifugal fire pump, all pumps being driven by 2300-volt, slip-ring induction motors; automatic features are controlled by pressure regulators and float switches placed in reservoir and on distribution system.

MILWAUKEE, WIS. New Pumping Equipment for Milwaukee Water-Works, H. H. Brown. Eng. News-Rec., vol. 100, no. 22, May 31, 1928, pp. 843-845, 3 figs. Deals with three new 400-hp. 2-pass boilers and new 40-m.g.d. steam-turbine-driven centrifugal pump; shows progress that is being made in Milwaukee water-works.

PUMPS

AIR LIFT, AUTOMATIC. Applications of the Hydrautomat. Power Engr. (Lond.), vol. 23, no. 267, June 1928, pp. 241-242. Basic principles of hydrautomat as air compressor and air extractor; compressed air is produced when water falls down vertical pipe from upper reach into closed tank, drawing air with it through small pipes; by combining compressor and aspirator, equipment is made practically independent of variations in level of head and tail races; overall efficiency is from 50 to 60 per cent; hydrautomat has no wearing parts and needs no attention. Abstract translated from Génie Civil, Apr. 7, 1928, p. 335.

PYREX

DIELECTRIC PROPERTIES. Dielectric Data on "Pyrex," C. L. Dawes and P. H. Humphries. Elec. World, vol. 91, no. 25, June 23, 1928, pp. 1331-1332, 8 figs. Tests of material over wide range of frequency and temperature establish standard of comparison for dielectrics exhibiting ionization and hysteresis lag.

R

RADIO

ATMOSPHERIC CONDITIONS. Some Correlations of Radio Reception with Atmospheric Temperature and Pressure, G. W. Pickard. Inst. Radio Engrs.—Proc., vol. 16, no. 6, June 1928, pp. 765-772, 9 figs. Correlation between night reception and pressure was found; signal strength increasing as areas of low pressure passed over receiver and decreasing with passages of high pressures; meteorological relations, particularly those with temperature and pressure; two series of reception measurements were available for comparison.

RADIO TRANSMISSION

SHORT WAVE. Beam Transmission of Ultra Short Waves, H. Yagi. Inst. of Radio Engrs.—Proc., vol. 16, no. 6, June 1928, pp. 715-741, 38 figs. Description of various experiments performed at wavelengths below 200 cm.; effect of earth and various types of inductively excited antennas; discussion of beam and horizontally polarized radiation; magnetron tubes used for production of very short wavelengths as low as 12 cm.; circuit arrangements employed; effect of variation of plate voltage, magnetic field strength and other factors on high-frequency output.

RAILROADS

CURVES, CHANGING. Determining the Throw for a Curve, C. H. Bartlett. Ry. Engr. and Maintenance, vol. 24, no. 6, June 1928, pp. 258-261, 2 figs. Explanation of steps entering into selection of ordinates for revision of alignment; methods of compounding curve; spirals for operation at fixed speed; discussion of spiral; relation of spirals to grade lines and to direction of traffic.

REPAIR SHOPS, HEAT TREATING. Heat Treating Methods and Equipment for Railroad Shops. Ry. and Locomotive Eng., vol. 41, no. 4, Apr. 1928, pp. 113-114. Suggestions on preheating; manufacture and repairs to high-speed machine tools; chisels, caulking and similar tools; and reamers, taps, rivet sets, etc. Committee report to Am. Ry. Tool Foremen's Assn.

SIGNALS AND SIGNALING. Automatic Signals Reduce Operating Costs on Double Track. Ry. Age, vol. 84, no. 22, June 2, 1928, pp. 1291-1292, 2 figs. Big Four eliminates five of nine manual block stations with cross-over interlockings on 60-mile double-track section; explains why change was benefit.

SIGNALS AND SIGNALING, INTERLOCKING. Rock Island Completes 33-Lever Electric Interlocker, J. H. Molloy. Ry. Signaling, vol. 21, no. 6, June 1928, pp. 220-223, 6 figs. Plant in Chicago terminal relieves five switchtenders; storage battery used for track circuits; special circuits for dwarf signals; facilitates handling of traffic in busy Rock Island-New York Central joint terminal zone in Chicago; type of machine and control; switch operation and indication; interlocking tower is 15 by 34 ft. in size and two storeys high, with English basement; two types of wire distribution used.

TRACKS, CONCRETE BASE. Is Concrete Better Than Cross-Ties? F. D. McHugh. Sci. Am., vol. 139, no. 1, July 1928, pp. 54-55, 6 figs. Test section of rigid concrete slab roadbed on quarter-mile stretch of Pere Marquette, used for year, indicates certain advantages over ballasted track.

RAILS

CHROMIUM STEEL. Chromium Steel Rails, T. Swiden and P. H. Johnson. Iron and Steel Can. (Gardenvale, Que.), vol. 11, no. 6, June 1928, pp. 174-176. Influence of reheating and cooling in air; influence of simple heat treatment; typical carbon-steel rails; service reports on chromium-steel rails; chromium-steel fishplates. Abstract of paper read before Iron and Steel Inst.

RAILS, STEEL

RESEARCH. Fatigue Resistance of Rail Steel, J. R. Freeman, Jr. Iron Age, vol. 121, no. 25. June 21, 1928, pp. 1743-1745, 3 figs. Discussion of test data secured from Bureau of Standards investigations of comparative properties of rails made from rising steel in standard big-end-down ingot moulds and rails from fully piping (killed), steel made in big-end-up sinkhead ingot endurance ranges from 46,000 to 59,000 lb. per sq. in.; rail steel killed with aluminum can be poured free from pipe and excessive segregation in sinkhead moulds of Gathmann type.

REFRACTORY MATERIALS

PROBLEMS. The Problem of the Refractory. Eng. and Boiler House Rev. (Lond.), vol. 41, no. 12, June 1928, pp. 590 and 593. Author attempts to state point of view of progressive manufacturer of refractories; conditions which tend to destroy refractories in actual service fall mainly under two headings; erosion by fuel slag, clinker, dust-carrying gases or other fluxes and problem of spalling and cracking in service.

REFRIGERATING PLANTS

CORROSION. Corrosion in Refrigerating Plants. Refrig. World, vol. 62, no. 6, June 1928, p. 23. For calcium-chloride brine; open brine systems; condenser systems. Technical staff of Mass. Inst. Tech. submitted recommendations to Am. Soc. Refrig. Engrs.

REFRIGERATION

PROGRESS. Refrigerating Engineering (Kaeltetechnik), R. Plank. V.D.I. Zeit. (Berlin), vol. 72, no. 23, June 9, 1928, pp. 780-781. Brief annual review of progress in design and construction of refrigerating plants; applications of refrigeration.

REFUSE AS FUEL

UTILIZATION. The Utilization of Town's Refuse and Refuse Fuels, A. B. Scorer. Inst. Fuel—Jl. (Lond.), vol. 1, no. 3. Apr. 1928, pp. 288-296 and (discussion) 296-300. Full text of paper previously annotated from Surveyor (Lond.), Jan. 20, 1928.

RIVERS

ST. LAWRENCE. The St. Lawrence Waterway, W. Kelly, E. A. Forward and J. P. Hogan. Mech. Eng., vol. 50, no. 7, July 1928, pp. 509-512, 3 figs. Symposium dealing with waterway itself and with its power and navigation potentialities; first paper gives particulars of waterway and its five sections of improvements recommended by Joint Board of Engineers of United States and Canada and of ice conditions which will have to be overcome; second paper deals with transportation problems, character of traffic, improvements necessary; in third paper estimates are made of cost of generating power at most favorable site, and questions involved in problem of marketing power are discussed.

IMPROVEMENT, ST. LAWRENCE. St. Lawrence River Dredging, Water Levels, Etc. Can. Ry. and Marine World (Toronto), no. 364. June 1928, p. 370. Department has designed, and proposes to construct, 7 submerged weirs in St. Lawrence River between Montreal and Sorel to provide greater depth of water in Montreal harbor; proposed location of weirs.

ROAD MATERIALS

TESTING. Report of Committee D-4 on Road and Paving Materials. Am. Soc. Testing Matls.—Preprint, no. 73, for mtg. June 25, 1928, 34 pp., 1 fig. Proposed revisions of existing tentative specifications; proposed tentative methods of abrasion testing of gravel; proposed specifications for concrete pavements and bases; proposed tentative recommended practice for bituminous paving-plant inspection.

ROADS

NEW BRUNSWICK. New Brunswick Spending More than $3,000,000 for Further Improvement of Highways System, J. D. Black. Contract Rec. (Toronto), vol. 42, no. 22, May 30, 1928, pp. 585-588, 1 fig. New high figures for expenditure in any one year from provincial funds for roads and bridges; nine contracts for rebuilding 65 mi. of trunk highways in seven counties already awarded and many bridges being replaced by modern structures to take care of rapidly increasing automobile traffic.

ONTARIO. $7,000,000 for Ontario Provincial Highways, G. S. Henry. Contract Rec. (Toronto), vol. 42, no. 22, May 30, 1928, pp. 582-583. This year's programme of Ontario department of Public Highways contemplates extensive grading and paving work; one large bridge and several smaller ones.

Important Road Projects in Northern Ontario, J. Sinton. Contract Rec. (Toronto), vol. 42. no. 22, May 30. 1928, pp. 583-584. Ontario Department of Northern Developments has several major schemes in hand as well as general improvement and maintenance of 12,500 mi. of roads in north.

SURVEYING. Accuracy in Highway Surveys Should be Consistent with Purpose, W. H. Spindler. Highway Mag., vol. 19, no. 6, June 1928, pp. 152-153, 1 fig. Rules indicating requirements of one district state highway office in Illinois for preliminary surveys for paving and grading; distances; centre-line distances; other distances; preliminary levels; check levels; curves; intersection angle; degree of curve; deflections; important measurements in preliminary surveys.

RUBBER

RESEARCH. Effects of Temperature and Humidity During the Preparation and Testing of Rubber Compounds. Franklin Inst.—Jl., vol. 206, no. 5, May 1928, pp. 719-720. Abstract of report by physical testing committee of rubber division of American Chemical Society; report presents complete data and final conclusions based on investigation conducted at Bureau of Standards in accordance with programme drawn up by physical testing committee.

RUBBER FACTORIES

MATERIALS-HANDLING. Cutting the "Hidden Cost" of Handling Materials. Can. Machy. (Toronto), vol. 39, no. 11, May 31, 1928, pp. 44 and 46 and 48 and 50, 6 figs. Few ideas taken from plant of Gutta Percha and Rubber Ltd., in Toronto; trucking accomplished by several gas and electric lift trucks, and yard auto truck; all trucking is done by service department; hoist and monorail system; escalator; delivering material to each worker at rate at which he can use it.

S

SEWAGE DISPOSAL

ACTIVATED SLUDGE METHOD. Bulking of Activated Sludge, W. Scott. Pub. Works, vol. 59, no. 6, June 1928, p. 228. English investigation indicates it is due to constituents of sewage and not to under or over-aeration; describes result of investigation into cause of bulking of activated sludge. Abstract of paper read at Assn. of Mgrs. of Sewage Disposal Works of England.

SEWAGE DISPOSAL PLANTS

OPERATION. Schenectady Sewage Plant Operation. Pub. Works, vol. 59, no. 6, June 1928, pp. 223-225. Details of 1927 experiences; hosing gas-vent scum reduced; spring operation of Imhoff tanks; chlorinating sewage; sludge as fertilizer; animal life in trickling filters.

SEWAGE TREATMENT

METHODS. Novel Sewage Treatment Methods in Small Plant. Pub. Works, vol. 59, no. 6, June 1928, pp. 246-248, 5 figs. Modified Imhoff tank with sprinkling filter and cylindrical sludge-digestion tank, with capacity of 250,000 gal.; sprinkling filter without side walls; plant serves Gaithersburg and Washington Grove, Md.

SEWERAGE

RUN-OFF. Sewerage, With Special Relation to Run-Off, J. B. L. Meek. Engineering (Lond.), vol. 125, no. 3258, June 22, 1928, pp. 789-790 and (discussion) 760-761, 6 figs. Several areas differing in character and population were selected for experiment; all inlets to sewers in each area were traced, in order to be certain that only drainage from selected area was entering sewer; rainfall was gauged by means of automatic recorder, and quantity falling was compared directly with run-off. Abstract of paper read before Instn. Civil Engrs. See also Surveyor (Lond.), vol. 73, no. 1899, June 15, 1928, pp. 647-648, 6 figs.

SHIP PROPULSION

SUPERHEATED STEAM. The Generation and Utilization of High-Pressure Superheated Steam for Marine Propulsion, Weir and H. E. Yarrow. Engineering (Lond.), vol. 125, no. 3256, June 8, 1928, pp. 721 and (discussion) 701. From thermodynamic aspect, there is no maximum limit to temperature which might be used, but there is practical limit fixed by nature of materials available; corrosive and erosive effects of working fluid are tensified by high temperature, but definite limitations are imposed in main by weakening influence of temperature on constructional materials in use. Abstract of paper read before Instn. Civil Engrs. See also Engineer (Lond.), vol. 145, no. 3778, June 8, 1928, p. 627.

SHIPS

REFRIGERATION. Nine New Modern Steamships Refrigerated, J. D. Blanke. Ice and Refrig., vol. 74, no. 6, June 1928, pp. 537-542, 20 figs. Net insulated space capacity of 510,000 cu. ft.; refrigeration of all space is effected by brine circulation; insulation in these ships consists of wood linings and granulated cork on panel system; refrigerating machinery in duplicate; capacity of carbon-dioxide machinery system; control of brine system.

New Experiments on the Refrigerating Plants of Merchant Vessels, E. Goos. Information on Refrigeration (Institut Int. du Froid)—Monthly Bul., vol. 8, no. 12, Dec. 1927, p. 1141. On board ships, in majority of carbon-dioxide machines, leather linings of stuffing boxes have been replaced by cast-iron segments or metallic linings; double pipe liquefiers are used, internal tube of which, in contact with seawater, is lined with 1.5 to 2 mm. of copper; recently Raschig rings have been utilized for damp refrigerators. Abstract translated from Werft-Reederei-Hafen, 1926, no. 4, p. 7.

SILT DEPOSITS

PREVENTION. Prevention of Silt Deposits in Conduits. Elec. West, vol. 60, no. 6, May 15, 1928, pp. 396-406, 12 figs. Transportation of debris by flowing water; suspension; theoretical settler design; types of settlers in use; tests on Kern River no. 3 settling basin; method of analyzing samples. Committee report to Pac. Coast Elec. Assn.

SMOKE ABATEMENT

PUBLIC HEALTH. Relation of Some Combustion Problems to Public Health, S. W. Parr. Iron and Steel of Can. (Gardenvale, Que.), vol. 11, no. 6, June 1928, pp. 178-180. Smoke evil; brief analysis of situation; sanitation of air.

STAINLESS STEEL PROPERTIES

CORROSION RESISTING. The A-B-C of Corrosion Resisting Steels, F. R. Palmer. Chem. and Met. Eng., vol. 35, no. 6, June 1928, pp. 364-365. Critical comment by W. Mitchell on article in March issue of same journal; includes reply by Palmer.

STEAM ACCUMULATORS (RUTHS)

HAMBURG, GERMANY. An Electric Railway Stores Steam, W. Mattersdorff. Power, vol. 68, no. 1, July 3, 1928, pp. 8-9, 4 figs. Modern steam accumulator displaces storage batteries and banked boilers at Hamburg Elevated Railway Plant; boiler equipment; two Ruths accumulators installed; method of governing turbine is illustrated; instances illustrate how functioning of accumulator offsets service troubles.

STEAM CONDENSERS

SCALE PREVENTION. Scale Prevention in Surface Condensers (Kühlwasser-im pfung), Eschmann. Wärme (Berlin), vol. 51, no. 14, Apr. 7, 1928, pp. 269-272, 7 figs.

STEAM ENGINES

BLEEDING. New Design for Bleeding Steam Reduce Industrial Power Costs. Power, vol. 67, no. 22, May 29, 1928, pp. 972-975, 5 figs. Bleeder-type engines in general comprise control mechanism to furnish automatically desired amount of heating steam as function of its pressure; problem of incorporating bleeding mechanism in uniflow engines.

STEAM, HIGH PRESSURE

EFFICIENCY. Higher Steam Pressures and Temperatures. Nat. Elec. Light Assn.—Serial Report of Prime Movers Committee, June 1928, 38 pp., 36 figs. Economy; station thermal efficiency; turbine efficiency ratio; auxiliary power requirements; economy considerations; design and operating features; actual operating experiences; design considerations; manufacturers' statements; study of reheat economies; some effects of reheating on station economy.

UTILIZATION. Use of High Pressures and Superheat (Emploi des hautes pressions et surchauffes), Duberstret. Société des Ingénieurs Civils de France (Paris)—Memoirs, vol. 81, nos. 1 and 2, Jan. and Feb. 1928. pp. 219-265, 39 figs. partly on supp. plates. Review of principal theories and applications; superheating; projects and plants and description of turbines; conclusions.

STEAM PIPE

HIGH PRESSURE, FITTINGS. Valves and Fittings for High Pressure Steam Piping, F. H. Morehead. South. Power Jl., vol. 46, no. 6, June 1928, pp. 65-72, 19 figs.

STEAM PIPE LINES

JOINTS. Pipe Joints that Will Hold at High Pressures and Temperatures, I. W. Whittle. Power, vol. 67, no. 24, June 12, 1928, pp. 1051-1052, 3 figs. Weld-sealed pipe joints for high steam pressures and temperatures insure both tightness and strength; these joints may take many forms, each having its advantages.

STEAM TURBINES

MULTIPLE-CYLINDER. Multi-Cylinder Steam Proc. (Rugby), vol. 22, 1927-1928, pp. 75-104, 14 figs. Description of various types of multi-cylinder turbines; impulse reaction type; reaction type; example of pure reaction multi-cylinder turbine; two impulse-type turbines discussed in detail; influence of details of design on turbine efficiency; features of many of impulse turbines in multi-cylinder designs.

PRACTICE. The General Trend of Modern Development in Steam-Turbine Practice, H. L. Guy. Engineering (Lond.), vol. 125, no. 3257, June 15, 1928, pp. 752-753 and (discussion) 727-728. Of tendencies affecting thermal efficiency of steam plant perhaps most evident is pronounced movement toward higher steam pressures; regenerative feed heating; introduction of feed heaters, evaporator and ejectors. Abstract of paper read before Instn. Civil Engrs.

STEEL

TEMPERATURE EFFECT. Fatigue-Resisting Properties of 0.17 per cent. Carbon Steel at Different Temperatures and at Different Mean Tensile Stresses, H. J. Tapsell. Iron and Coal Trades Rev. (Lond.), vol. 1.6, no. 3140, May 4, 1928, pp. 650-651, 4 figs., and discussion in no. 3142, May 18, p. 759. Little published information relating to fatigue-resisting properties of steel at high temperatures; description of tensile, creep, and fatigue tests undertaken to estimate practical fatigue limits for different temperatures; discussion of results. Abridgment of paper read at Iron and Steel Inst.

STEEL HEAT TREATMENT

TEMPERING. The Tempering of Steel. Iron and Steel Industry (Lond.), vol. 1, no. 8, pp. 261-262, 3 figs. Process of tempering over which complete control achieved by scientific methods is necessary in order to secure uniformity of results, economy and efficiency; difficulties encountered in practice; Homo electric tempering furnace.

STEEL INGOTS

HETEROGENEITY. Second Report on the Heterogeneity of Steel Ingots. Foundry Trade Jl. (Lond.), vol. 38, nos. 613, 614 and 615, May 17, 24 and 31, 1928, pp. 354-356, 369-372 and 383-389, 19 figs. Account of alloy-steel ingots produced from fully killed steel containing nickel, nickel and chromium, and nickel, chromium, and molybdenum; ingots studied indicate that high technical standard has been attained in production of such material. See also Iron and Coal Trades Rev. (Lond.), vol. 116, no. 3140, May 4, 1928, pp. 635-646, 26 figs., and discussion in no. 3140, May 11, pp. 714-715.

STEEL, LOW CARBON

TESTING. Flow in a Low-Carbon Steel at Various Temperatures, French and Tucker. Can. Machy. (Toronto), vol. 39, no. 11, May 31, 1928, p. 31. Discussion of Bureau of Standards paper giving account of investigation of flow of low-carbon steel at various temperatures; relation between load and life; one of principal effects of increase of temperature is reduction of strain-hardening ability of steel.

STEEL MANUFACTURE

CRUCIBLE PROCESS. The Use of High-Class Swedish Iron in the Manufacture of Crucible Steel. Iron and Steel Industry (Lond.), vol. 1, no. 8, May 1928, p. 249. Ever since crucible process was started in Sheffield, Swedish bar iron has constituted main raw material; two main methods used in crucible process; charging crucibles; nature of slag.

STEEL RESEARCH

SAFE LOADS. Safe Loads for Steel Working at High Temperatures. Iron Age, vol. 121, no. 25, June 21, 1928, pp. 1749-1750, 4 figs. U. S. Bureau of Standards publication gives data whereby superheated steam or chemical equipment may be designed; discussion of tests reported by H. J. French, H. C. Cross, and A. A. Peterson; five steels studied; at 800 deg. fahr. boiler steel must be stressed considerably below 10,900 lb. per sq. in. if it is to remain in service indefinitely.

STOKERS

LOCOMOTIVE. Mechanical Stokers for Locomotives, W. G. Clark. Baldwin Locomotives, vol. 6, no. 3, Jan. 1928, pp. 29-41, 25 figs. First stokers; several of underfeed type; limit in stoker firing of large locomotives is about reached, and present trend is backward toward firing of smaller locomotives with mechanical stokers; present stokers grouped into two general classes, steam jet type, and shovel type.

UNDERFEED. Burning Coal on Underfeed Stokers, J. G. Worker. Blast Furnace and Steel Plant, vol. 16, no. 6, June 1928, pp. 784-786. 2 figs. Includes excerpts from paper presented by Am. Eng. Co. before Mech. Division of Stone and Webster, Inc.

STREAM POLLUTION

OXYGEN-DEMAND DETERMINATION. Running Water not Always Pure. Can. Engr. (Toronto), vol. 54, no. 23, June 5, 1928, p. 584. Results of extensive series of experiments conducted in stream pollution laboratories of U. S. Public Health Service; reference given to publication entitled "The Oxygen Demand of Polluted Waters" recently issued by U. S. Public Health Service, No. 173; self-purification of water; water contaminated with organic matters found in sewage and in various industrial wastes does gradually rid itself of such pollution, if allowed free access to air; deoxygenation of polluted water.

STREET CLEANING

TOLEDO, OHIO. Street Cleaning in Toledo. Pub. Works, vol. 59, no. 6, June 1928, pp. 229-231, 1 fig. Survey of city's methods and practices, with recommendations for improving organization, equipment and financing; records.

STREET LIGHTING

SERIAL REPORT. Street and Highway Lighting. Elec. West, vol. 60, no. 6, May 15, 1928, pp. 571-576. Second installment of 3-year serial report; how much cities are spending; cost of auto accidents; recommended practice for overhead street-lighting system; street light for every intersection; highway lighting. Committee report to Pacific Coast Elec. Assn.

STREET TRAFFIC CONTROL

INCREASING CAPACITY. Increasing the Capacity of a Secret System, H. S. Simpson. Elec. Ry. Jl., vol. 71, no. 25, June 23, 1928, pp. 1039-1041. How passenger-carrying capacity of street system may be increased; immediately available method of relief is using to maximum capacity that which now possessed; unnecessary street obstructions; curb parking; street storage in any business district should never be permitted; signals often hinder traffic movement. Discussion of paper presented before N. Y. Elec. Ry. Assn.

STRUCTURAL ENGINEERING

PROBLEMS. Problems for the Structural Engineer, R. Fleming. Can. Engr. (Toronto), vol. 54, no. 23, June 5. 1928, pp. 579-582, 6 figs. Problems discussed in series of pertinent questions which might conceivably be asked structural engineer; riveting vertical flanges; width of cover plates; glazed steel sash; framing in floors; load on wooden bridge floor.

STRUCTURAL STEEL

BRIDGES. High-Strength Steel for Modern Bridges, L. S. Moisseiff. Am. Soc. Steel Treating—Trans., vol. 13, no. 6, June 1928, pp. 941-949. Indications of trend in bridge building and brief history of use of alloy steels; use of nickel steel for bridges; heat treated steel in bridge building.

SWIMMING POOLS

WATER CHLORINATION. Swimming Bath Purification by Chlorine. Contract Rec. (Toronto), vol. 42, no. 23, June 6 1928, pp. 6 5-616, 3 figs. Description of sterilization installation in large English pool to indicate trend of British practice in this respect; advantages of liquid chlorine; circulation equivalent to complete replacement of contents of bath every 3½ hours.

T

TELEPHONE SWITCHBOARDS

TERMINAL STRIPS. Terminal Strips, E. S. Savage. Bell Laboratories Rec., vol. 6, no. 4, June 1928, pp. 333-336, 5 figs. Type of strip, used for terminating subscribers' lines on main distributing frames; great majority of terminal strips are of general type shown.

TEXTILE MILLS

WATER UTILIZATION. The Value of Water in Textile Mills for Purposes Other Than Water Power, C. T. Main. Am. Soc. Mech. Engrs.—Textile Div. Paper for mtg. May 22, 1928, 5 pp. Full text of paper previously annotated from Textile World, May 26, 1928. See also Textile World, vol. 73, no. 21, May 26, 1928, pp. 121-122, 145 and 147.

THERMOMETERS, TESTING

SPECIFICATIONS. Report of Committee D-15 on Thermometers. Am. Soc. for Testing Matls.—Preprint for mtg. June 25, 1928, 5 pp. Proposed specifications for thermometers for heating test of raw tung oil for specific gravity determination, and for Engler viscosimeters.

TIDAL POWER

UTILIZATION. Tidal Power, and Turbines Suitable for Its Utilization, A. H. Gibson. Engineering (Lond.), vol. 125, no. 3258, June 22, 1928, pp. 785-786 and (discussion) 759. One of most important problems is that of storage; enumerates various systems; another problem is that of best size and type of turbine and turbine setting for use in tidal scheme; question of d.c. versus a.c. generation. Abstract of paper read before Instn. Civil Engrs. See also Engineer (Lond.), vol. 145, no. 3780, June 22, 1928, p. 680.

TOOLMAKING

COST CONTROL. Control of Costs of Building Tools, G. A. Pennock. Mech. Eng., vol. 50, no. 7, July 1928, pp. 534-536. Outline of plan employed by Hawthorne Works of Western Electric Company in accelerating output of work involved in manufacture and repair of tools; estimating plan; application of time standards; examples illustrating economies effected.

TOOLS

MAINTENANCE AND REPAIR. Make Tool Repair Costs Part of Production, A. Stuber. Factory and Indus. Mgmt., vol. 76, no. 1, July 1928, pp. 70-73, 4 figs. Account of system by which Eastman Kodak Co. not only estimates costs but controls in advance repairs of large variety of dies and other tools.

TRAIN CONTROL

TEST SWITCHBOARDS. Train Control Test Board. Ry. Elec. Engr., vol. 19, no. 6, June 1928, pp. 195-196, 1 fig. Arrangement of switches and valves makes it possible to compare any piece of equipment with another already tested; complete switchboard for testing General Railway Signal, auto-manual train stop apparatus has been developed in Springfield, Mass., shop of Boston & Albany; moving-track element; power supply; switches; other electrical apparatus.

TUBES, SEAMLESS

MANUFACTURE. Compare Economic Features of Seamless Tube Manufacture, R. C. Stiefel and G. A. Pugh. Iron Trade Rev., vol. 82, no. 25, June 21, 1928, pp. 1602-1605, 6 figs. Pilger and automatic-mill processes of manufacturing seamless tube compared; pilger process in use chiefly in Europe and automatic or plug-mill process in United States; expanding method will permit production of large-size tubes up to about 24-in. diam. at little additional power requirement and with initial plant cost equal to cost of plant for direct production of tubes. From paper presented before Am. Soc. Mech. Engrs.

TUNNELS, PRESSURE

SUMMARY OF INFORMATION. Pressure Tunnels. Elec. West, vol. 60, no. 6, May 15, 1928, pp. 406-417, 7 figs. Summary of information concerning all pressure tunnels reported by member companies of Pacific Coast Electrical Assn.; lined and unlined tunnel; shapes; reinforced lining; leakage tests in Pacific Coast practice; flow coefficients; failures and partial failures. Committee report to Pac. Coast Elec. Assn.

TURBO-GENERATORS

IMPROVEMENTS. Recent Improvements in Turbine Generators, S. L. Henderson and C. R. Soderberg. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 6, June 1928, pp. 411-415, 6 figs. During last few years there has been very rapid increase in rating of turbo-generators; summary of problems which have been encountered, and solved, by engineers of Westinghouse Elec. & Mfg. Co.; present status of design of turbo-generators and probable directions of future developments.

BROWN-BOVERI. Turbo-Generator at Rotterdam. Engineer (Lond.), vol. 145, no. 3775, May 18, 1928, pp. 549-551, 10 figs. Further details of Brown-Boveri set installed at Rotterdam; rotor of high-pressure cylinder consists of two single-phase impulse wheels with mean diameter of 1,000 mm., followed by ten rows of reaction blading with mean diameter of 823 mm.; all blading in this cylinder is of stainless steel; alternator has maximum continuous capacity of 25,000 kva. or 20,000 kw. at power factor of 80 per cent; tests of machine by Professor Dresden. (Concluded.)

V

VACUUM TUBES

FOUR ELEMENT. Four-Element Tube Characteristics As Affecting Efficiency, D. C. Prince. Inst. Radio Engrs.—Proc., vol. 16, no. 6, June 1928, pp. 805-821, 14 figs. Work undertaken because of apparent lack of any logical proved explanation for amount of current collected by grid of three-element tube of standard design when grid and plate are at nearly same potential; report covers making of tests and calculations in search for requirements of low-loss tube; work performed.

TRIODE. Influence of Secondary Discharges from Metals on the Operation of Three-Electrode Lamps (L'Influence des émissions secondaires des métaux sur le fonctionnement des lampes à trois électrodes), H. Le Boiteux. Revue Générale de l' Electricité (Paris), vol. 23, no. 22, June 2, 1928, pp. 939-946, 11 figs. June 2: Treats of secondary currents in grid of three-electrodes tubes; characteristics of plate currents in function of plate tension; curves and data which fix relative importance of currents. June 9: Phenomenon of secondary discharge; form of secondary current during oscillation; application to certain types of tubes.

VENTILATION

STATIC PRESSURE. Dynamic Significance of Static Pressure, G. De Bothezat. Heat. and Vent. Mag., vol. 25, nos. 5 and 6, May and June 1928, pp. 65-67 and 75 and 79-83, 3 figs. Defines terms and explains phenomena fundamental in ventilation; qualitative relation between pressure and flow velocity in steady stream; quantitative relation between fluid velocity and fluid pressure; flow of air in ducts; air flow through fan; air flow through wind-mill.

VOLTAGE REGULATORS

COMPUTATIONS. Computing Compensator Settings for Voltage Regulators, V. W. Palen. Elec. World, vol. 91, no. 25, June 23, 1928, p. 1334, 1 fig. Computations for double loop circuits. (Continuation of serial.)

W

WALLS, TILE

STRENGTH. Stronger Walls With a New Form of Tile, A. B. McDaniel. Mfrs. Rec., vol. 93, no. 25, June 21, 1928, pp. 73-74, 2 figs. Describes investigation of strength of walls built with interlocking-rib clay building tile which has recently been devised by L. S. Munson for purpose of giving walls greater transverse and compression tests.

WATER CHLORINATION

PROGRESS. Water Purified by Chlorination, W. J. Orchard. Can. Engr. (Toronto), vol. 54, no. 22, May 29, 1928, p. 562. Progress in chlorination of water supplies; sanitation of swimming pools; treatment of sewage and wastes; duplicate installations advisable. Paper presented before Southwest Water Works Assn.

EMERGENCY. Emergency Water Disinfection During Recent Floods in California, C. G. Gillespie. West. Constr. News, vol. 3, no. 11, June 10, 1928, pp. 376-377, 2 figs. Author installed barrel for emergency chlorination; ordinary kitchen chlorox, containing about 0.5 lb. of active chlorine, was diluted into this barrel; spigot regulated to feed about one pint of original solution into 20,000 gal. of water.

WATER FILTRATION

DEVELOPMENTS. Developments in Water Filtration, J. R. Baylis. Can. Engr. (Toronto), vol. 54, no. 23, June 5, 1928, p. 588-590. Recent developments which have been made in treatment and filtration of water; recent practice in treatment of hard waters; outline of progress in water purification, giving few developments that stand out most prominently.

SAND. The Sand Filter and Filter Sand, A. L. Collins. West. Constr. News, vol. 3, no. 11, June 10, 1928, pp. 370-373, 3 figs. Filter plants for various classes of service; principles involved in operation of sand-filter unit; part which filter sand plays in process; defines filter; art of modern filtration for domestic purposes; chief purpose of sand filter in connection with water for domestic supply; controls; sand problem; test sample defined.

WATER FILTRATION PLANTS

DESIGN. The Design and Construction of Small Filtration Plants, H. K. Bell. Am. Water Works Assn.—Jl., vol. 19, no. 6, June 1928, pp. 653-664. Capacity of filtration works covered are those ranging from 100 to 1,400 gal. per minute and serving communities of from 1,000 to 10,000 population; explains these problems and shows how they have been worked out.

Filter Plant Operation Trials, W. H. Johnson. Can. Engr. (Toronto), vol. 54, no. 22, May 29, 1928, p. 575. Troubles met with small plants discussed; superintendent must be versatile; operating troubles. Paper presented before Kentucky-Tennessee Section, Am. Water Works Assn.

EXPERIMENTAL. Experimental Water-Filtration Plant for Chicago, L. D. Gayton. Eng. News-Rec., vol. 100, no. 22, May 31, 1928, pp. 861-863, 5 figs. City builds $150,000 plant to determine most efficient and economical plan of coagulation, sedimentation, filtration, carbonation and chlorination of billion gallons daily; range of experiments; dispensing filtered water to public.

HARTFORD, CONN. Innovations Increase Output of Filters, C. M. Saville. Water Works Eng., vol. 81, no. 12, June 6, 1928, pp. 779-780 and 857, 2 figs. Several important innovations introduced into filtration system of Hartford, Conn., which are expected to increase efficiency of operation; two new filter beds under construction; rate of filtration and color; no chemicals used; several innovations in operation procedure; cost of operation of plant; use of copper sulphate.

WATER PIPE LINES

COPPER. Service Pipe Practices in Washington Suburban Districts, R. B. Morse. Water Works Eng., vol. 81, no. 13, June 20, 1928, pp. 943-944. Flexibility of soft copper tubing; no perceptible distortion results from bending; earth augur used under approved paving; early connections of galvanized steel; all services metered; water and sewer connections in same trench; decide to standardize on copper service pipe; soft copper tubing saves expense; how tubing is fitted.

WATER SUPPLY

OTTAWA, ONT. Report on Water Supply for Ottawa, A. F. Macallum. Can. Engr. (Toronto), vol. 54, no. 23, June 5, 1928, pp. 591-592. Works Commissioner reports in favor of rapid-sand filtration plant at Lemieux Island to cost $1,275,000; plant would have capacity of 32,000,000 gal.; commissioner also suggests metering every service in city; experimental plant proposed in addition.

WATER TANKS, CONCRETE

DESIGN. Some Points Concerning the Design of Concrete Tanks, E. C. Snelgrove. Surveyor (Lond.), vol. 73, no. 1896, May 25, 1928, p. 566. Under drainage; type of design; tanks or reservoirs may be covered or uncovered; elevated tanks. Abstract of paper presented before Instn. Structural Engrs.

Some Points Concerning the Design of Concrete Tanks, E. C. Snelgrove. Structural Engr. (Lond.), vol. 6, no. 6, June 1928, pp. 165-176 and (discussion) 176-178, 23 figs. Observations upon certain details of tank design; two examples, of recent date; points to be considered in first general survey are location, foundations, type of design shuttering, cleaning facilities, provision against expansion and contraction, concrete test, protection against frost, etc.

WATER WELLS, DEEP

QUALITIES. Qualities of Waters from Deep Wells, H. F. Blomquist. Can. Engr. (Toronto), vol. 54, no. 23, June 5, 1928, pp. 583-584. Supplies from water-bearing formations more than 200 ft. deep discussed; desirable qualities of water; sampling water at varying depths in wells; groundwaters vary widely. Paper presented at Water Works Conference.

WELDS

HEAT TREATMENT. The Heat Treatment of Welds, G. R. Brophy. Welding Engr., vol. 13, no. 6, June 1928, pp. 35-36. Although heat treatment does improve results, necessity for it can usually be avoided by adopting correct welding procedure; heat treatment of weld holds great promise of improvement to physical properties; normalizing treatment, consisting of heating to from 950 to 1,000 deg. cent., for from two to three hours (in case of ½-in. plates) followed by rapid air cooling; role of manganese and carbon.

WOOD PRESERVATIVES

TESTING. Report of Committee D-7 on Timber. Am. Soc. Testing Matls.—Preprint, no. 75, for mtg. June 25, 1928, 8 pp. Tables prepared by U. S. Bureau of Standards for correcting density and volume of creosote oil from observed to standard temperatures.

WOODWORKING PLANTS

ELECTRIC DRIVE. Some Actual Savings Through Motor Drive, W. A. Marshall. Wood-Worker, vol. 47, no. 4, June 1928, pp. 39-40, 1 fig. As result of change to motor drive, feature that appeals most to owners of establishment referred to is fact that plant is much more flexible; one machine or one department can be operated if desired without having to run entire equipment; careful tests were made before motor installations, to see if motors of correct ratings were used; ball-bearing motors were specified throughout.

Z

ZINC-NICKEL ALLOYS

ELECTRODEPOSITION. The Effect of Superposed Alternating Current on the Deposition of Zinc-Nickel Alloys, H. C. Cocks. Faraday Soc.—Trans.—(Lond.), vol. 24, part 6, June 1928, pp. 348-358, 6 figs. Outline of phenomena attending cathodic deposition of zinc and nickel separately and together; investigation of deposition of alloy, zinc-nickel from acid sulphate electrolyte using d.c. and superposed a.c.; explanation of effect of superposed a.c.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street. New York, N.Y.

A

ABRASIVES

Specifications. Coated Abrasive Data Prepared. Abrasive Industry, vol. 9, no. 8, Aug. 1928, pp. 210-212. United States government issues proposed master specifications for materials purchased for various Federal departments; comments and criticism invited; proposed United States government master specifications for waterproof garnet paper, artificial waterproof abrasive paper, and revision of master specifications for emery cloth.

AERIAL PHOTOGRAPHY

Canada. A Challenge to the Canadian Pilot, A. M. Narraway. Can. Aviation (Toronto), vol. 1, no. 2, July 1928, pp. 18-19 and 45-46, 3 figs. Experiences of last six years in photographing Canada's unexplored and inaccessible regions; part which airman is expected to play in development of this work; Dominion leads in aerial photography; greatest development in aerial surveys during past year has been investigation and development of Canada's vast waterpower resources.

AERONAUTICAL EDUCATION

University of Toronto. Canadian Aviation and the University of Toronto, J. H. Parkin. Can. Aviation (Toronto), vol. 1, no. 2, July 1928, pp. 14-15 and 44, 5 figs. Aerodynamic laboratory established at University of Toronto ten years ago has been invaluable; courses started for undergraduates; researches conducted at University; test work of laboratory; instruction in aeronautical engineering; course, while sacrificing little in general training in mechanical engineering subjects, increases instruction in mathematics and provides sufficient specialized instruction in aeronautical subjects to enable student to enter industry.

AERONAUTICAL ENGINEERING EDUCATION

Training. Training Aeronautical Engineers, E. W. Stedman. Can. Aviation (Toronto), vol. 1, no. 1, June 1928, pp. 26 and 28. Chief branches of aeronautical engineering outlined with main essentials for training engineers for aircraft industry; experimental aeronautics; aircraft and aircraft-engine construction; aircraft operation allied with engineering; post-graduate courses recommended for each branch; aeronautical engineer needs all training of mechanical or civil engineer without omission of any part; when teaching ordinary engineering principles examples should be taken from aeronautical engineering practice.

AERONAUTICAL INSTRUMENTS

Naval. Aircraft Instruments, T. C. Lonnquest. Aviation, vol. 25, no. 2, July 9, 1928, pp. 107 and 129-134, 4 figs.

AERONAUTICS

Canada. Air Services in Canada, J. S. Scott. Can. Aviation (Toronto), vol. 1, no. 1, June 1928, pp. 38-40. Work of Directorate of Civil Government Air Operations, Controller of Civil Aviation, Aeronautical Engineering Division and Royal Canadian Air Force which comprise Air Services of Canada, and are part of Department of National Defence; aerial photography; aerial protection of forests; aerial dusting; examination of personnel and inspection of aircraft; formation of light airplane clubs; inspection of aircraft during construction. (To be continued.)

Air Services in Canada, J. S. Scott. Can. Aviation (Ottawa), vol. 1, no. 2, July 1928, p. 38, 2 figs. Policy and service of Royal Canadian Air Force which administers and controls all military air operations; almost endless training of personnel necessary; students of applied science and engineering trained at Camp Borden in summer; training of N. C. O. pilots; advanced, service, and refresher flying training; winter training important; technical training for boys; civilian flying training. (Concluded.)

Aviation in Canada During 1927, C. P. C. Downman. Aero Digest, vol. 13, no. 2, Aug. 1928, p. 338, 1 fig. Developments in Canada during 1927 are taken up; air mail services; sudden demand for light aircraft; statistics of flights made and passengers carried; flying clubs established.

Canadian Aviation League. Popular Aviation, vol. 3, no. 1, July 1928. p. 33. Aims of Aviation League of Canada.

AERONAUTICS, COMMERCIAL

Canada. Commercial Aviation of Today, J. H. MacBrien. Can. Aviation (Toronto), vol. 1, no. 1, June 1928, pp. 14-15, 2 figs. Comparison of progress in other countries reveals Canada as lagging far behind; rapid development in United States; it is abundantly clear that Canada must develop her airways rapidly so that manufacturers and business men may not have to work under a handicap with their competitors in other countries; great regularity necessary; maps show tremendous growth of European air service in six years; advantages of aerial transportation.

Progress of Civil Aviation in Canada, J. A. Wilson. Can. Aviation (Toronto), vol. 1, no. 2, July 1928, pp. 12 and 46. In no country is there greater scope for useful and profitable employment of aircraft; no civil aviation in Canada not now self-supporting; aviation is playing important part in development of Dominion; Canada had demand for flying; air services are recognized; by end of 1929 no district in continental Canada will be beyond flying distance of one of commercial company's bases.

AIR BRAKES

Report. Report of Committee on Brakes and Brake Equipment. Ry. Age (Daily Edition), vol. 84, no. 25C, June 26, 1928, pp. D114-D118, 9 figs. Analysis is made of paper on braking power presented at 1927 convention of Air Brake Assn.; braking power on refrigerator cars; loaded weights have wide variation; coefficient of friction for cast-iron and steel wheels; standardization of brake levers now impracticable; braking ratio recommendations.

AIR COMPRESSORS

Centrifugal. Centrifugal Compressors with Cooled Casings (AEG-Electro Kreiselkompressoren mit Gehaeuskuehlung). V.D.I. Zeit. (Berlin), vol. 72, no. 17, Apr. 28, 1928, p. 57, 3 figs. Use of electrically driven centrifugal compressors is steadily extending in coal mines; A.E.G. of Germany has developed range of machines in capacities from 180,000 to 1,050,000 cu. ft. of free air per hour, with delivery pressures up to 120 lb. per sq. in.; cooled casings are employed; construction has only been made possible by refinements in foundry practice. See brief translated abstract in Colliery Eng. (Lond.), vol. 5, no. 52, June 1928, p. 252.

AIR CONDITIONING

Evaporation Charts. Solution of Evaporation Problems in Light of Modern Research (Die Berechnung der Verdungstungsvorgaenge auf Grund neuerer Forschungen), F. Merkel. Sparwirtschaft (Vienna), no. 6, June 1928, pp. 312-317, 18 figs. Use of charts for solving problems in evaporation; diagrams and formulas for various cases of evaporation encountered in air conditioning; humidification and dehumidification; heating and ventilation; drying process studied graphically.

AIR MAIL SERVICE

Canada. Air Mail Service in Canada. Can. Aviation (Toronto), vol. 1, no. 1, June 1928, pp. 34 and 36. Description of mail services inaugurated in Canada; work of Canadian Transcontinental Airways, and Western Canada Airways in transporting mail; great saving of time in reaching remote parts of Canada and unusual conditions encountered.

AIRCRAFT ENGINES

Compression-Ignition Research. High-Speed Compression-Ignition Engine Research, H. B. Taylor. Royal Aeronautical Soc.—Jl. (Lond.), vol. 32, no. 211, July 1928, pp. 555-570 and (discussion) 571-595, 18 figs. Tests of high-speed compression-ignition engines at Royal Aircraft Establishment described and prospects of such engines for aeronautical use shown; main problem in development was that of fuel-injection system; tests of various sprayers; as torque is reduced so is specific fuel consumption; utilization of cheap fuels having high flash point. Paper presented at joint meeting of Instn. of Automobile Engrs. and Royal Aeronautical Soc.

Exhaust Silencers. Engine Exhaust Silencers. U. S. Naval Inst.—Proc., vol. 54, no. 8, Aug. 1928, pp. 701-706, 9 figs.

Manufacturers' Specifications. Manufacturers' Specifications on Engines Available for Commercial Use As Compiled by Aviation. Aviation, vol. 25, no. 2, July 9, 1928, p. 122. One-page table of manufacturers' specifications for aircraft engines.

Supercharging. Aircraft Engine Superchargers, A. L. Berger. Aero Digest, vol. 13, no. 1, July 1928, pp. 98 and 100, 7 figs.

AIRCRAFT EXHIBITION

Montreal. Montreal Aircraft Show Proves Big Success. Can. Aviation (Toronto), vol. 1, no. 2, July 1928, p. 17, 4 figs. Opening of Exhibition, June 7, is described with brief abstracts of addresses presented by Major-General MacBrien and J. A. Wilson.

AIRCRAFT PROPELLERS

Design of Airfoil Sections. Section Properties of a Series of Airfoils Suitable for Propeller Design, F. W. Caldwell. Air Corps Information Circular, vol. 6, no. 597, Nov. 1, 1928, 21 pp., 23 figs. Section properties for series of sections similar to Clark Y section are given for use in propeller design; sections based on same median line, camber ratio being increased above and below; areas, centre of gravity location, and moment of inertia determined by integrating machine; moment of inertia about axis parallel to chord checked by computation.

AIRPLANES

Brakes. Landing and Braking of Airplanes (L'atterrissage et le freinage des avions), L. Breguet. Académie des Sciences—Comptes Rendus (Paris), vol. 186, no. 23, June 4, 1928, pp. 1516-1518. Braking in air is described and some experiments with planes landing with wheel brakes.

Control, Automatic. Semi-Automatic Piloting of Airplanes (Le pilotage semi-automatique des avions), R. Mioche. Aeronautique (Paris), vol. 10, no. 108, May 1928, pp. 155-158, 5 figs. Three types of servo-pilots in use: electric, compressed air, or oil; description of each and its method of controlling flight.

Design. The Application of Aerodynamic Data to the Structural Design of Aircraft, F. Radcliffe. Flight (Lond.), vol. 20, no. 25, June 21, 1928; (Aircraft Engr.), pp. 464c-464g, 7 figs.

Metal. Uses of Metal Grow in Canadian Aeroplane Plant. Can. Machy. (Toronto), vol. 39, no. 13, June 28, 1928, pp. 87-88, 2 figs. Designers are turning more and more towards metal construction; metal construction, however, offers many difficulties; large use of dies; rust prevention; ordinary acid-bath methods of rust prevention quite unsuitable for airplane manufacture; metal construction calls for welded joints.

AIRPLANE TRAINS

GERMANY. Airplane Trains Tested in Germany. Can. Aviation (Toronto), vol. 1, no. 1, June 1928, p. 45. Very brief announcement of tests of small motorless gliders attached to airplanes just as coaches are attached to engines on railroads.

WIND-TUNNEL TESTS. Preliminary Biplane Tests in the Variable Density Wind Tunnel, J. M. Shoemaker. Nat. Advisory Committee for Aeronautics—Tech. Note, no. 289, June 1928, 15 pp., 7 figs. on supp. plates. Biplane cellules using N.A.C.A.-M6 airfoil section tested in N.A.C.A. variable-density wind tunnel; three cellules differing in amount of stagger tested at two air densities; indications that positive stagger increases induced drag, decreases maximum lift at Reynolds numbers near full scale, and displaces moment coefficient in positive direction.

WINGS. Aerodynamic Characteristics of Thin Empirical Profiles (Caracteristiques aérodynamiques des profils empiriques minces), M. Toussaint and M. Carafoli. Aérophile (Paris), vol. 36, nos. 11-12, June 1-15, 1928, pp. 179-183, 4 figs. Applications to fins and curved ailerons of method proposed by Munk; principle of method; aerodynamic characteristics.

AIRPORTS

HARBOR GRACE. International Airport at Harbor Grace. Can. Aviation (Toronto), vol. 1, no. 1, June 1928, p. 15. Realizing importance of Newfoundland as safety point on transatlantic flight, association of some 20 citizens of that country, mostly of Harbor Grace, has formed Harbor Grace airport.

MARKINGS. Size and Marking of Airports. Can. Aviation (Toronto), vol. 1, no. 1, June 1928, pp. 18 and 44-45. Directions given by Canadian Air Board with regard to ground marking of air harbors; cases where no marker is needed; information received recommending runways to be not less than 3,000 ft. in length and to have good approaches; planning for future; Board gives full information to civic authorities planning airports. (To be continued.)

RAILROAD CONTROL. Railroads and Airplanes, H. H. Thompson. Ry. Jl., vol. 34, no. 7, July 1928, pp. 33-35, 2 figs. Need at present time for proper guidance of various towns and cities of United States in selecting sites and determining what prospects of such airport will be; assuming that railroads will sometime in future operate air transport lines; airport will be located near or on main line of operating railroad company; cities which are railroad and shipping centres should locate and set aside one or more sections of ground large enough to qualify in future as AAA airport.

AIRSHIPS

BALLAST RECOVERY. Recovery of Ballast on Board Dirigibles (La récupération du lest à bord des dirigeables), A. Tourrette. Aeronautique (Paris), vol. 10, no. 108, May 1928, pp. 160-164, 4 figs. Examines possible solutions of problem of increasing or reducing powers of dirigible; recovery of ballast in flight; air and water radiators; choice of systems.

ALLOYS

AGE HARDENING. Age-Hardening of Alloys, R. Hay. Am. Metal Market, vol. 35, no. 134 (2nd section), July 14, 1928, pp. 10-11 and 23. Treats of influence of various operations on age-hardening effect; temperature, size of particles; application of age-hardening. Paper presented before Scottish Local Section of Inst. on Metals.

ALUMINUM. *See Aluminum Alloys.*

BRONZES. *See Bronze.*

MANGANESE. *See Manganese Steel.*

COPPER. *See Copper Alloys.*

CHROMIUM. *See Chromium Alloys.*

NICKEL. *See Nickel Alloys.*

ALUMINUM ALLOYS

AUTOMOTIVE ENGINES. Aluminum Alloys in Engine Construction (Aluminiumlegierungen im Motorbau), H. Steudel. Zeit. fuer Metallkunde (Berlin), vol. 20, no. 5, May 1928, pp. 165-178, 29 figs. Discussion of general advantages of light metals; presents table showing parts of engine which can or cannot be produced from light metal, conditions governing its use and reasons why it can or cannot be used; light-metal pistons; use of malleable alloys; properties of most commonly used alloys.

CRYSTALS. Elastic Properties of Crystals of a Heat-Treated Aluminum Alloy (Festigkeitseigenschaften von Kristallen einer veredelbaren Aluminiumlegierung), R. Karnop and G. Sachs. Zeit. fuer Physik (Berlin), vol. 49, nos. 7 and 8, 1928, pp. 480-497, 20 figs. Report from Kaiser Wilhelm Institute of Metals, of Berlin-Dahlem on method of production and on tensile strength, elastic limit and other properties of single crystals of heat treated aluminum alloy containing 5 per cent of copper; X-ray photographs of crystal structure.

ELECTROPLATING. Electroplating on Aluminum and Its Alloys, H. K. Work. Metal Industry (N.Y.), vol. 26, no. 7, July 1928, pp. 313-315. Abstract of paper read before Am. Electrochemical Soc., previously annotated.

ARCHES

STRESS MEASUREMENT. The Beggs Deformeter. Engineering (Lond.), vol. 126, no. 3261, July 13, 1928, pp. 31-35, 9 figs. Ingenious method of determining stresses by direct measurement of deformation of model, devised four or five years ago by G. E. Beggs; apparatus has already been employed in Europe and America for finding stresses in highly redundant arch bridges; apparatus is based on Clerk Maxwell's reciprocal deflection thereon; employed to determine stresses in arches of Arlington Memorial Bridge; other applications.

AUTOMOBILES

BODIES, ALUMINUM STANDARDS. S.M.M.T. Provisional Standards. Automobile Engr. (Lond.), vol. 18, no. 243, July 1928, p. 260, 5 figs. Provisional standards of Society of Motor Manufacturers and Traders for use of aluminum in automobile body construction; bimetallic contracts, method of fixing aluminum painting, dopes, and condition of wood are covered.

SPRINGS AND SUSPENSION. Researches on Springs. Dept. of Sci. & Indus. Research, Eng. Research—Special Report, no. 8, 1928 (Lond.), 42 pp., 32 figs. partly on supp. plates. Results of experiments with 30-cwt. and 60-cwt. army truck and with 2-seater high-speed automobile; National Physical Laboratory was asked to design mechanism which could be fitted to vehicle and which would give continuous record with time of displacement of springs relative to body of vehicle when run at different speeds and on different road surfaces; gives description of apparatus and results obtained.

STEERING KNUCKLE PIVOTS. Mechanical Principles of Inclined Knuckle Pivots, A. L. Vargha. Automotive Industries, vol. 59, no. 4, July 28, 1928, pp. 130-131, 4 figs.

TRANSMISSION GEARS, LAPPING. Transmission Gear Lapping. Machy. (Lond.), vol. 32, no. 822, July 12, 1928, pp. 470-472, 4 figs. Improved method of lapping transmission gears is described; why gears wear less at pitch line; advantages of shifting gears while lapping; arrangements of lapping fixture; how lapping motions are derived; many gears previously scrapped were salvaged by method; gear noises reduced.

AUTOMOTIVE FUELS

ANTI-KNOCK COMPOUNDS. Engine Knock and Related Problems, A. C. Egerton. Nature (Lond.), vol. 122, no. 3062, July 7, 1928, pp. 20-26, 2 figs. Results of test show that anti-knocks do not affect a rapidly accelerating explosion in tube; that this influences igniting temperatures and it is metal part of organo-metallic anti-knock which is mainly instrumental in action. Discourse delivered at Royal Instn.

AVIATION

CANADA. The Aviation League of Canada. Can. Aviation (Toronto), vol. 1, no. 1, June 1928, pp. 8-9 and 44. League should be greatest single factor in promoting commercial aviation; charter received from Government; aims and objects of League; spreading gospel of aviation; encouraging aviation among boys; education of air mechanics; necessity for technical training in aeronautical engineering.

B

BAKELITE

MOULDS. Sectional Bakelite Mould for Radio Parts, F. Martindell. Machy. (N.Y.), vol. 34, no. 11, July 1928, pp. 829-830, 2 figs. Construction of moulds for bakelite where several parts are to be made in single mould; matching of number of separate impressions calls for skill; duplicate sections simplify construction; machining mould sections; assembling mould.

BEAMS, CONTINUOUS

MOMENTS. Moments in Two-span Continuous Beams with Varying Span Ratios, C. S. Gray. Concrete and Constr. Eng. (Lond.), vol. 23, no. 6, June 1928, pp. 427-435, 8 figs. Considers beams of two spans only; with each type of loading there are three methods of loading beams, namely: (1) both spans fully loaded; this case gives maximum negative moment at centre support; (2) loading applied only to longer span; this gives maximum positive moment in that span; (3) loading applied only to shorter span; this gives minimum support moment.

BEAMS, STEEL

STRUCTURAL SHAPES (BETHLEHEM). Elements of the New 33-In. Rolled Structural Sections. Eng. News-Rec., vol. 101, no. 1, July 5, 1928, p. 16, 1 fig. 33-in. beams and girders recently added to line of wide-flanged structural shapes of Bethlehem Steel Co. are deepest sections that have yet been rolled in United States; weights ranging from 125 to 152 lb. per ft., and section moduli from 394.3 to 478.4; girders are in four weights, of from 202 to 230 lb. per ft., and section moduli from 676.0 to 778.0; table of dimensions and properties.

BEARING METALS

CASTING. Pouring and Casting of Bearing Metals. Lubrication, vol. 14, no. 6, June 1928, pp. 62-64, 2 figs. Extent to which bearing can be expected to function effectively will depend upon its initial formation; melting metal; preheating of bearing parts; treatment of shells; pouring bearing metals.

BENZOL

RECOVERY PLANTS. Modern Coke Plants, Recovery of By-Products; Benzol (Les cokeries modernes. La récupération des sous-produits: Le Benzol). Nature (Paris), no. 2787, June 15, 1928, pp. 535-542, 10 figs. Extractors; removing benzol by washing gas; methods of obtaining benzol and apparatus used are described; also refining of raw benzol.

BLAST FURNACES

PRODUCTIVITY. Productivity Per Man Employed, E. Stewart. Iron Age, vol. 122, no. 1, July 5, 1928, pp. 33-34, 1 fig. Great and continuous spread over three-quarters of century between number of employees and volume of production; study of pig-iron output as symptomatic of manufacturing in general; enormous gain in 75 years. From Monthly Labor Rev.

BOILER FURNACES

DESIGN. N. E. L. A. Report on Stokers and Furnaces. Combustion, vol. 19, no. 1, July 1928, pp. 33-34. Report is arranged in standard form adopted; principal phase is in application of automatic combustion control; stokers; water walls and furnaces; air preheaters.

ELECTRIC. Utilizing Off-peak Power in Automatic Electric Steam Generator, E. V. Buchanan. Elec. News (Toronto), vol. 37, no. 14, July 15, 1928, pp. 44-46, 4 figs. London, Ont., Public Utilities Commission dispenses with coal and uses 300-kw. electric boiler, max. steam pressure 15 lb., for heating large office building; economic installation while power is available; describes use of steam generator in special case of making use of surplus or off-peak power; alternating current is always used, and voltage may vary from 110 up to 13,000 volts; satisfactory operation.

HEAT TRANSMISSION. Heat-Transmission Laws and Conceptions of Modern Boilers (Les lois de la transmission de la chaleur et la conception des chaudieres modernes), C. Roszak and M. Veron. Société des Ingenieurs Civils de France—Compte Rendu Des Travaux (Paris), vol. 81, no. 3-4, 1928, pp. 341-383, 16 figs. General summary of laws of heat transmission in steam boilers; grates with large angular factor of radiation and some examples; means of promoting convection from gas to walls; superheaters.

HIGH PRESSURE (BENSON). The Benson Process of Generating High-Pressure Steam (Das Benson-Verfahren zur erzeugung hoechstgespannten dampfes), H. Gleichmann. V.D.I. Zeit. (Berlin), vol. 72, no. 30, July 28, 1928, pp. 1037-1046, 21 figs. Principles of Benson process; details of experimental Benson boilers of Siemens-Schuckert plant and Charlottenburg Institute of Technology, generating as much as 3.5 tons of steam per hour; oil, lignite, and pulverized-coal firing of Benson boilers; test data; feedwater problems; design of high-pressure steam plants.

HIGH PRESSURE, PARIS. A Big Boiler in Paris. Power, vol. 68, no. 3, July 17, 1928, pp. 98-99, 2 figs. Compagnie Parisienne de Distribution d'Electricté 19,400-sq. ft. boiler to evaporate 265,000 lb. of water hour at 615 lb. gauge superheated to final temperature of 824 deg. fahr.; this boiler is fired by pulverized coal and equipped with air preheaters and fin-tube walls.

LOCOMOTIVE. *See Locomotive Boilers.*

WASTE-HEAT. Recovery of Waste Heat and Waste-Heat Boilers (La récupération des chaleurs perdues et les chaudières de récupération), M. Varinois. Vie Technique et Industrielle (Paris), vol. 9, no. 105, June 1928, pp. 337-341, 6 figs. Utilization of heat from steel furnaces, recovery of heat lost from gas and Diesel engines; design of boilers for recovery of heat.

WOOD-WASTE FIRED. Wood Refuse Burning Over Underfeed Stokers. Power, vol. 68, no. 4, July 24, 1928, pp. 142-143, 1 fig. Boilers are of three-pass, bent-tube type with furnace volume approximately 4,200 cu. ft.; wood refuse available from manufacturing plant as valuable auxiliary fuel to be burned practically in suspension on top of stoker fire.

BOILER PLATES

TEMPERATURE EFFECT. Boiler and Container Materials with Increased Resistance at High Working Temperatures (Kessel- und Behälterhaustoffe mit gesteigerter Widerstandsfaehigkeit bei hohen Betriebstemperaturen), P. Proemper and E. Pohl. Archiv. für das Eisenhüttenwesen (Düsseldorf), vol. 1, no. 12, June 1928, pp. 785-793, 23 figs. Notes on properties of soft vanadium and molybdenum steels at temperatures of 500 deg. cent., in form of rolled steel; short-time tests, and prolonged load tests; machinability; aging; metallographic analysis; corrosion and weldability. See brief abstract in Stahl u. Eisen (Düsseldorf), vol. 48, no. 27, July 5, 1928, pp. 908-909, 1 fig.

BRIDGES

CONCRETE, ARCH. Method of Concrete Control and Some Test Results in the Construction of Concrete Arch Bridges Across the Mississippi River between St. Paul and Minneapolis, Minnesota, C. R. Hansen. Minn. Federation of Arch. and Eng. Soc.—Bul., vol. 8, no. 7, July 1928, pp. 21-28, 3 figs. Project locally known as Inter-City Bridge; notes on methods and results of concrete control in construction of this project; specifications; design and control of mix; concreting plant and pouring.

DESIGN. The Architect as Collaborator With the Engineer, P. P. Cret. Arch. Forum, vol. 49, no. 1, part 2, July 1928, pp. 97-104, 18 figs. Outlines place of architect in design of bridges from æsthetic standpoint and effect on engineer and illustrates how this was applied in case of Delaware River Bridge at Philadelphia.

MOVABLE, WELLAND SHIP CANAL. Discussion of Paper on Bridges Over the Welland Ship Canal by M. B. Atkinson. Eng. Jl. (Montreal), vol. 11, no. 7, July 1928, pp. 431-433. Discussed by W. C. Thomson, P. Gillespie, P. L. Pratley and author. Paper presented published in Eng. Jl., Feb. 1928.

RAILROAD, ARC WELDING. Arc-Welding Strengthens Railway Bridge. Can. Machy. (Toronto), vol. 39, no. 12, June 14, 1928, p. 42. Welding new plates and angles to old members of 110-ft. bridge over Missouri river at Leavenworth, Kan.

First Arc-Welded Railway Truss Bridge, G. D. Fish. Eng. News-Rec., vol. 101, no. 4, July 26, 1928, pp. 120-123, 4 figs. Structure at Chicopee Falls, Mass., utilizes practically all classes of welding; excessive skew complicated design; 72-deg. skew required span of 134 ft. 8 in.; design for welding; joint details; butt welds vs. fillet welds; criticism of design.

STEEL, ARCH CONSTRUCTION. Erecting a Large Steel Arch Bridge in England. Eng. News-Rec., vol. 101, no. 1, July 5, 1928, pp. 28-29, 2 figs. Steel arch highway bridge, over Tyne River between Newcastle and Gateshead, is of two-hinged type of 531-ft. span and 170-ft. rise and gives shipway clearance of 84 ft.; cost of bridge about $6,250,000; erection from both ends, first six panels of each rib supported by falsework, but as erection proceeded weight transferred to cables connected to top chord and carried back over temporary cable bents to anchorage in web of approach spans.

STEEL EADS, ST. LOUIS. Eads Bridge Strength and Safety Indorsed by Engineers. Eng. News-Rec., vol. 100, no. 26, June 28, 1928, pp. 1009-1010, 1 fig. Steel unimpaired after 54 years' service and stresses from maximum modern loads are within designed stresses; safety of famous arch bridge, built in 1874, questioned last year, has been indorsed by engineering board of investigation.

STRESSES. Bridge Stresses, E. G. Coker. Engineering (Lond.), vol. 125, no. 3259, June 29, 1928, p. 810, 3 figs. Discovery by David Brewster, about 1815, of artificial double refraction produced in glass when loaded, led to discovery that stresses in arches could be determined by aid of glass models; Mesnager in 1913 constructed glass model of reinforced-concrete bridge over Rhone, of 95 m. span, to check calculations of designers; noteworthy feature was use of Babinet compensator to measure artificial double refraction produced in stressed members; drawings of indications of Babinet compensator are given confirming stresses measured.

BRONZE

ALLOYS. Alloys Affect Properties, E. R. Thews. Foundry, vol. 56, no. 13, July 1, 1928, pp. 532-535. Gives effect of various metallic additions such as zinc, lead, nickel, cobalt, manganese, phosphorus, silicon, etc., on casting properties of bronze; cobalt bronzes; tin replaces nickel; Brinell hardness of bronzes is increased from 63 to 71 decreasing to 60 if phosphorus content rises to 0.50 per cent.

BUILDINGS

RADIANT HEATING. Radiant Heating in Buildings, H. M. Vernon and M. D. Vernon. Engineering (Lond.), vol. 125, no. 3259, June 29, 1928, p. 791. Account of investigation to ascertain practical merits of panel heating as compared with other methods; authors conclude from their observations that panel heating, or its equivalent, is likely to replace to considerable extent systems of convection heating, such as hot-water radiators and plenum air installations.

WELDED STEEL. Welding and Industrial Building, A. Vogel. Engrs. and Eng., vol. 45, no. 7, July 1928, pp. 156-162 and (discussion) 162-165, 13 figs. Design of trusses and other structural features of building at West Philadelphia; two essentials of truss design; two main incentives to welding, saving in cost and silence; development of trusses interesting study; in design of welded trusses it is desirable that symmetrical sections be stiff in two planes. In discussion, some points of interest to structural designer and fabricator are added.

C

CABLEWAYS

ELECTRIC TRAMWAY. Mammoth Tramway to Span Western Canyon. Eng. World, vol. 33, no. 1, July 1928, p. 3. Electric tramway to be erected by Michigan California Lumber Co., at Camino, Cal.; single loaded with maximum of 24,000 lb. of sawed lumber; distance between terminals is approximately 2,700 ft.; speed of operation 20 mi. per hr.; four steel cables support tram carried.

CADMIUM

PLATING. Corrosion Protection of Light Metals by Cadmium (Cadmium als Korrosionsschutz für Leichtmetalle), J. Dornauf. Korrosion u. Metallschutz (Berlin), vol. 4, no. 5, May 1928, pp. 98-102, 20 figs. Corrosion tests of light metals used in aviation, mostly aluminum alloys, protected by cadmium coating vs. other protective coatings show considerable advantages of cadmium.

CARBON DIOXIDE

MOLLIER DIAGRAM. A Mollier Diagram for Carbon Dioxide, N. H. Hiller, Jr. Ice and Refrig., vol. 75, no. 1, July 1928, pp. 45-50, 8 figs. Its use with regard to simple and multiple-effect compression; charts and indicator diagrams based on Mollier's law on same basis as ammonia charts. Paper read at 5th Int. Congress of Refrigeration held in Rome, Italy.

REFRIGERANT. Recent Improvements in Carbon-Dioxide Equipment, J. C. Goosmann and F. R. Zumbro. Refrig. Eng., vol. 16, no. 1, July 1928, pp. 1-10, 18 figs. Various features of carbon-dioxide compression system are considered in descriptive fashion; experimental questions previously considered are discussed by author and others; liquefaction of carbon dioxide; carbon dioxide as refrigerant; selective cycle; displacement, theoretical and actual, condensers.

CARDBOARD TESTING MACHINES

DESCRIPTION. New Instrument for Testing the Bending Strength and Bending Angle of Boards. Instruments, vol. 1, no. 6, June 1928, pp. 291-292, 2 figs. Detailed description of machine of service to card-board and folding-box industries for controlling manufacturing process, determining influences of thickness of layers, obtaining comparative data on methods of grinding, check on raw materials, etc.

CARGO HANDLING

BULK, GREAT LAKES. Shipping on the Great Lakes is An Indispensable Asset to Business, J. F. Froggett. Mar. Rev., vol. 58, no. 7, July 1928, pp. 78-82, 10 figs. Unloading by machinery; story of development of lake port equipment for handling materials in bulk; efficient bulk material handling shapes destiny of lake shipping; number of fast coal-loading plants at lower lake ports which pick up entire car, turn it over and dump contents at one operation into hold of vessel; records for unloading at upper lake docks.

CARS

BRAKES. Brakes and Brake Equipment Committee's Report. Can. Ry. and Mar. World (Toronto), no. 365, July 1928, pp. 388-389, 1 fig. Braking power on refrigerator cars; triple valve gaskets; brake leverage ratio for passenger cars; bushing triple-valve exhaust ports; centrifugal dirt collectors; cleaning, lubricating and testing air brakes on passenger equipment cars. Report to Am. Ry. Assn.

CASE HARDENING

FACTS. Facts and Principles Concerning Steel and Heat Treatment, H. B. Knowlton. Am. Soc. Steel Treating—Trans., vol. 14, no. 1, July 1928, pp. 127-148. Discussion of solid carburizing materials, method of packing carburizing, carburizing protection, reuses of carburizing materials, carburizing furnaces, carburizing containers, gas carburizing, and methods of control of depth of case; action of base materials and chemical energizers in carburizing compounds is explained.

NITRATION. Steels for Case Nitrification, A. B. Kinzel. Am. Soc. Steel Treating—Trans., vol. 14, no. 2, Aug. 1928, pp. 248-253 and (discussion) 253-254.

CASEIN

MANUFACTURE. Casein Plastic Material (La caséine matière plastique), M. Fouassier. Nature (Paris), no. 2788, July 1, 1928, pp. 20-22, 5 figs. Manufacture of casein in plates or rods; formaldehyde treatment; uses of hardened casein; market for casein.

CAST IRON

IMPROVEMENT. High-Grade Cupola Cast Iron (Hochwertiges Kupolofengusseisen), F. Dengler. Zeit. für die Gesamte Giessereipraxis (Berlin), vol. 49, nos. 26 and 27, June 24 and July 1, 1928, pp. 221-223 and 229-231, 17 figs.

Manufacture of High-Grade Cast Iron (La fabrication des fontes résistantes), M. Girardet. Société Industrielle de l'Est—Bul. (Nancy, France), no. 188, Jan.-Feb.-Mar. 1928, pp. 5-23, 1 fig. Composition of mixture; action on graphite; use of single cupola; accessories to improve cupola castings; shaking hearth of Dechesne for desulphurizing of cast iron, and its mode of operation; gyratory hearth according to author's system. Bibliography.

TESTING. Engineering Tests for Cast Iron, J. G. Pearce. West of Scotland Iron and Steel Inst.—Jl. (Glasgow), vol. 35, part 5, Feb. 1928, pp. 80-90, 4 figs. partly on supp. plates.

CEMENT INDUSTRY

HEALTH OF WORKERS. The Health of Workers in Dusty Trades. Pub. Health Reports, vol. 43, no. 24, June 15, 1928, pp. 1497-1498. Brief digest of investigation of effect of dust upon health of workers in large portland-cement plant made by U. S. Public Health Service; complete report published as Public Health Bulletin, No. 176.

CHEMICAL ENGINEERING

DEVELOPMENTS. The Genesis of Industrial Chemistry, A. D. Little. Technology Rev., vol. 30, no. 8, July 1928, pp. 481-485, 7 figs.

CHEMICAL INDUSTRIES

ONTARIO. London's Contribution to the History of Chemical Industry, J. H. Bowman. Can. Chem. and Met. (Toronto), vol. 12, no. 7, July 1928, pp. 193-195. Article deals chiefly with manufacture of sulphuric acid by Canada Chemical Co. at London, Ontario; works erected in 1866; review of progress; enumerates other chemicals manufactured and also mentions soap and other industries established in same city in Ontario.

CHIMNEYS

REINFORCED CONCRETE. Noranda's Reinforced Concrete Chimney, E. H. Macdermott. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 24, June 15, 1928, pp. 486-487, 1 fig. Tallest reinforced-concrete chimney on American continent erected during 1927 at plant of Horne Copper Corp., Noranda, Rouyn District, Province of Quebec, Canada; 442 ft. 6 in. high from bottom of base to top of shaft, and 18 ft. in diameter inside lining at top; lined with 4-in. acid-resisting, vitreous brick laid up in special acid-proof mortar; 110 ft. of outside and entire inside of concrete wall is covered with acid-resisting bitumastic paint.

CHROMIUM ALLOYS

CHROMIUM-COPPER STEEL. The Development of High-Grade Structural Steel (Zur Fortentwicklung des hochwertigen Baustahles), E. H. Schulz. Stahl u. Eisen (Düsseldorf), vol. 48, no. 26, June 28, 1928, pp. 849-853, 4 figs. Discussion of development and properties of structural steel; strength, corrosion resistance, and technological properties of new chromium-copper structural steel with 0.5 to 0.8 per cent copper, 0.4 per cent chromium, and 0.15 per cent carbon, having strength properties of silicon steel with 1 per cent silicon.

CHROMIUM-NICKEL STEEL. A Note on the Hardness and Impact Resistance of Chromium-Nickel Steel, B. F. Shepherd. Am. Soc. Steel Treating—Trans., vol. 14, no. 1, July 1928, pp. 67-71, 1 fig. Results are given of Izod impact, hardness, and tensile tests of chromium-nickel steel of S.A.E. 3250 type with varying nickel and carbon content; higher carbon reduces resistance to impact without production of increased hardness; tempering to 300 deg. fahr. increases impact resistance without materially affecting hardness, but best use of this type of steel is with 550-deg. fahr. temperature.

CHROMIUM STEEL

OXYACETYLENE WELDING. Welding Chrome Irons and Steels. Iron and Steel of Can. (Gardenvale, Que.), vol. 11, no. 6, June 1928, pp. 182-183. Must prepare clean joints, use proper flux and strictly neutral flame of minimum dimensions, ending with properly adjusted heat treatment; commercial high-chromium alloys can be welded with oxyacetylene flame; heat treatment of welded joints; rustless chrome-nickel irons give ductile welds; castings should be welded hot. Abstracted from Oxy-Acetylene Tips, Apr. 1928.

CITIES AND TOWNS

SANITATION. Place of Sanitation in City Planning, G. W. Hayler. Can. Engr. (Toronto), vol. 55, no. 2, July 10, 1928, p. 127. Sanitation must be considered in any system of town planning when sewage-disposal plans or sewer outfalls come outside municipal boundary; creation of metropolitan districts to amalgamate various sanitary units within given areas; regional planning now thinks of sanitation as regional and bound up with many other subjects and in this sense it is being placed on equal footing with regional highways, transportation, parks, etc.

COAL

BY-PRODUCTS. Increasing Coal Value (Die Auswertung der Kohle), O. Huppert. V.D.I. Zeit. (Berlin), vol. 72, no. 28, July 14, 1928, pp. 975-983, 8 figs. Synthetic ammonia by Haber-Bosch process; sulphate of ammonia and sodium salpeter as by-products; distillation of coal; hydrogen by Bronn-Linde-Concordia process; low-temperature-tar process; Prudhomme process; obtaining liquid fuels with carbon monoxyde; gas generators working with oxygen; hydrogenation of coal and tars; coke-oven water gas.

CARBONIZATION, LOW TEMPERATURE. A General Review of Low-Temperature Carbonization, F. S. Sinnatt. Fuel (Lond.), vol. 7, no. 7, July 1928, pp. 305-317. Objects of paper are to examine products of chief processes of low-temperature carbonization, and to collect suggestions as to ways in which products can be utilized; gives list of plants of which large-scale units exist in Great Britain using different processes.

CARBONIZATION, LURGI PROCESS. Lurgi's Distillation Process (Das Lurgi-Schwelverfahren), F. A. Oetken and O. Hubmann. Montanistische Rundschau (Berlin), vol. 20, no. 14, July 16, 1928, pp. 525-530, 5 figs. Description of modern German method of coal distillation introduced by Lurgi Combustion Engrg. Co. of Frankfort-on-Main, used for lignite, peat, and similar fuels in current of hot gases; examples of installations for daily capacities of, respectively, 25, 120, 360, and 500 tons per 24 hrs.

CARBONIZATION, RESEARCH. The Influence of Inorganic Constituents in the Carbonization and Gasification of Coal, J. J. Priestley and J. W. Cobb. Gas Jl. (Lond.), vol. 182, no. 3396, June 16, 1928, pp. 951-954, 5 figs.

DISTILLATION. Oils From Shale, Lignite and Coal, J. W. Horne and A. D. Bauer. Oil and Gas Jl., vol. 27, no. 7, July 5, 1928, pp. 168 and 170 and 172 and 174-177, 1 fig.

DISTILLATION, LOW TEMPERATURE. Manufacturing Oil from Oil Shale and Bituminous Coal, G. W. Wallace. Combustion, vol. 19, no. 1, July 1928, pp. 23-28, 4 figs. Description of Dundas-Howes process; low-temperature distillation of oil shale and bituminous coal; units in Santa Barbara County, Calif.; general arrangement of N-T-U Company's plant in California; capacity of plant is 200 tons per day; cost of operating plant.

PULVERIZERS. How Does a Coal Pulverizer Do Its Job? J. K. Blum. Power, vol. 68, no. 3, July 17, 1928, pp. 100-102. Author analyzes performance of coal pulverizing mills and shows how to study given mill and how to estimate its measure of excellence; fundamentals; practical application.

SPONTANEOUS COMBUSTION. Spontaneous Heating of Coal, J. D. Davis and D. A. Reynolds. U. S. Bur. of Mines—Tech. paper, no. 409, 1928, 74 pp. 20 figs. Purpose of paper is to assemble results of investigations, previously reported on in part, and correlate with those of other investigations; review of previous investigations; theory of spontaneous heating; relative tendency of various coals to oxidize; methods for determining such tendency; oxidation of banded constituents and of those separable by solvents; weathering; effect of preheating; factors affecting spontaneous heating of coal; recapitulation. Bibliography.

COAL INDUSTRY

STATISTICS, CANADA. Coal and Coke Statistics for Canada. Can. Dominion Bur. of Statistics (Ottawa), vol. 7, no. 1, Jan., Feb., Mar. 1928, 15 pp. Increase of 3 per cent in output from Canadian mines; total 4,498,561 tons produced in first quarter of 1928; imports; exports; men employed; statistical tables; key map of principal importing areas.

COAL MINES AND MINING

ELECTRIC POWER. Electricity in Coal Mines, E. L. Martheleur. Can. Min. and Met. Bul. (Montreal), no. 195, July 1928, pp. 865-915, 21 figs. Great progress in development of electric mining apparatus in last decade; potential dangers of electricity in coal mines; shocks; fire; explosions of gas or coal dust, or of circuit-breaker apparatus; alternating or direct current; transmission; substations; transformers; switchgear; motors; enclosures; control; earthing; testing and records.

UNDERGROUND TRANSPORTATION. A New Portable Turnout, B. E. Schonthal. Coal Mine Mgmt., vol. 7, no. 5, June 1928, pp. 42-44, 4 figs. Describes advantages of special track necessary in increasing efficiency of loading machines.

COAL TAR

BY-PRODUCT. Values in By-Product Tar, J. M. Weiss. Iron and Steel of Canada (Gardenvale, Que.), vol. 11, no. 7, July 1928, p. 215. Coal-tar disposal in steel industry is discussed; special conditions of plant location, quality of tar, and location of markets may combine to set minimum profitable tonnage either somewhat above or below figure stated; marketing proposition very easy as only product to sell is creosote oil; supply limits use of creosote at present time; profit figures are given.

CONCRETE

PAINTING. The Proper Way in Which to Paint Concrete, M. Toch. Contract Rec. (Toronto), vol. 42, no. 29, July 18, 1928, pp. 751-752. Colors that are safe to use and how they should be applied; treatment of concrete to prevent peeling; list of colors that are not acted upon by ordinary alkali can be furnished by any reputable manufacturer of oil colors; method of described decorating concrete also applies to new plaster.

TESTING. A New Mold and Concrete Test Methods on Port of N. Y. Authority Bridges, A. W. Munsell. Eng. News-Rec., vol. 101, no. 4, July 26, 1928, pp. 140-141, 2 figs. Description of type of mould used by bridge department of Port of New York Authority for making test cylinders in field, and form used for recording necessary data; mould consists of three pieces, 8 x 16-in. cylinder, bottom plate with band attached, and top plate.

VIBROLITHIC, TESTING. Beam Tests of Pavement Concrete Placed by Two Methods, T. R. Beeman. Eng. News-Rec., vol. 101, no. 6, Aug. 9, 1928, pp. 200-202, 2 figs. Tests of slabs of standard 1:2:3 concrete and of slabs of compacted (vibrolithic) 1:2:4½ concrete showing that standard specimens carried average applied load 12.1 to 15 per cent greater than that shown by compacted; comments by A. R. Hirst, chief engineer of Am. Vibrolithic Corp., stating that these tests cannot be considered as of standard vibrolithic construction; recalls satisfactory results of tests of vibrolithic concrete by U. S. Bur. of Pub. Roads.

CONCRETE CONSTRUCTION

REINFORCED, DESIGN. Designing Reinforced Concrete Against Bending and Compression, C. L. Christensen. Eng. News-Rec., vol. 101, no. 4, July 26, 1928, pp. 127-128, 2 figs. Method of designing beams and columns permits direct calculation of steel without preliminary computations; presents direct method which is believed to be both simple and usable; reinforcement on tension side only; reinforcement at both faces; factor of safety.

Reinforced Concrete Design Simplified, J. R. Griffith. Concrete, vol. 33, no. 1, July 1928, pp. 27-31, 8 figs. Diagonal tension and shear; chart D-1 is designed to determine unit shear in reinforced-concrete beams; web stresses; continuous beams with concentrated loads.

COPPER ALLOYS

COPPER-NICKEL ALLOYS. Copper-Nickel Alloys. Machy. (Lond.), vol. 32, no. 821, July 5, 1928, pp. 450-451. Properties and industrial applications of copper-nickel alloys; addition of relatively small amounts of nickel increases hardness of copper and its resistance of oxidation at elevated temperatures; influence of carbon, sulphur, and manganese; corrosion-resisting property.

HEAT TREATMENT. The Effect of Heat Treatment on Some Mechanical Properties of 86:4:6:3:1 Copper-Nickel-Tin-Zinc-Lead Alloy, R. J. Anderson. Am. Metal, vol. 35, no. 134 (2nd Section), July 14, 1928, pp. 1-3 and 14, 12 figs. Object of present investigation was to examine effect of heating at different temperatures and for various periods of time, followed by air cooling, on tensile properties and hardness of sand-cast alloy having nominal composition 86:4:6:3:1 copper-nickel-tin-zinc-lead; method of investigation; results of tests. Selected bibliography.

CRANKSHAFTS

STIFFNESS CALCULATION. An Empirical Formula for Crankshaft Stiffness in Torsion, B. C. Carter. Engineering (Lond.), vol. 126, no. 3261, July 13, 1928, pp. 36-39, 2 figs. Formula put forward was evolved from results of stiffness tests on crankshafts of marine, aircraft and automobile types; in all cases shafts were twisted in bearings with clearances approximating to those used in ordinary working, and all stiffness relate to transmitted torque.

CULVERTS

DESIGN. Design and Location of Culverts, A. Sedgwick. Contract Rec. (Toronto), vol. 42, no. 30, July 25, 1928, pp. 782-783. Important points for highway engineer to take into consideration when making provision for carrying watercourses across road site; results of inexperience and carelessness; wide culverts are safer; culverts beneath embankments.

SIPHON, WELLAND SHIP CANAL. Discussion of paper on the Chippewa Creek Syphon Culvert of the Welland Ship Canal by A. H. Grant. Eng. Jl. (Montreal), vol. 11, no. 7, July 1928, pp. 427-431. Discussion by A. S. Dawes, O. O. Lefebvre, T. K. Thomson, G. S. G. Rogers, D. W. McLachlan. Published in Eng. Jl., Feb. 1928.

D

DAMS

ARCH, DESIGN. Multi-Centred Fixed Ended Arch Rings of Arch Dams, and Their Analysis, F. W. Hanna and T. L. E. Haug. West. Const. News, vol. 3, no. 12, June 25, 1928, pp. 414-417, 5 figs. Important to have convenient method for analysis of multi-centred arch rings of dams, and there are presented in this article two such methods; second method is especially adapted to inclined arches of multiple-arch dams, whereon water loading is not uniform; three centred multi-centred arch rings.

FAILURES, ST. FRANCIS. Deficiencies in Dam Design as Illustrated by the St. Francis Failure, M. H. Gerry, Jr. Eng. News-Rec., vol. 100, no. 25, June 21, 1928, p. 983. Author holds strongly to following tenets: (1) that failure of St. Francis dam was due, primarily, to deficiencies in design; (2) that design used was result of unwise confidence in theory now generally applied to masonry dams; (3) that this theory ought to be replaced by more accurate and logical methods of design.

DIE CASTING

METALS AND ALLOYS. A.S.T.M. Report on Die Cast Metals and Alloys. Am. Metal Market, vol. 35, no. 134 (2nd section), July 14, 1928, pp. 16-21, 1 fig. Co-operating producers; co-operating testing laboratories; standardize certain variables; standardization of tension testing procedure; information is also needed regarding relative corrosion resistance of various die-casting alloys; standard testing procedure specifications for Rockwell special "E" scale. Report presented before Am. Soc. of Testing Materials.

DIES

HARDENING. Hardening Cold Heading Dies, L. S. Cope. Am. Soc. Treating—Trans., vol. 14, no. 1, July 1928, pp. 51-60, 11 figs. Author describes quenching apparatus which has been successfully used to quench die so that portion around hole will be hard to withstand wear and remainder of die will be soft enough to withstand shock produced by cold heading; pair of tongs is also described by which header hammers may be quenched so that ends only will be hardened.

DIESEL ENGINES

FUEL INJECTORS. Manufacture of Diesel Fuel Injectors, C. R. Alden. Am. Soc. Mech. Engrs.—Advance paper for mtg., June 14-16, 1928, 5 pp., 7 figs. Need for extreme accuracy in certain parts of fuel-injection system is keenly realized; it is author's opinion that designer and builder have been slow to co-operate to their maximum advantage. Read at National Oil and Gas Power Mtg. See also Motorship, vol. 13, no. 7, July 1928, p. 581.

HEAT TRANSMISSION. Variation in the Rate of Heat Transmission in a Sulzer Marine Diesel Engine During One Revolution. Sulzer Tech. Rev. (Winterthur, Switzerland), no. 2, 1928, pp. 11-15, 19 figs. Rate of heat transmission between products of combustion and cylinder walls; actual flow in cylinder can be subdivided according to manner in which it originates.

HIGH SPEED. The High-Speed Diesel Engine as a Competitive Power Generator, C. E. Lucke. Soc. Automotive Engrs.—Jl., vol. 23, no. 1, July 1928, pp. 46-49, 2 figs.

LARGE. The Economic Field for Large Diesel Engines, E. B. Pollister. Am. Soc. Mech. Engrs.—advance paper for mtg., June 14-16, 1928, 7 pp., 10 figs. Important market analysis by one of foremost executives in Diesel industry; large Diesel may be considered as of from 2,500 to 25,000 b.hp.; estimate of cost of 4-unit 15,000-b.hp. 10,000-kw. Diesel installation; use of large Diesel by public utilities has been alone considered. See also Motorship, vol. 13, no. 7, July 1928, p. 582; and Oil Engine Power, vol. 6, no. 7, July 11, pp. 446-452, 7 figs. Read at Nat. Oil and Gas Power Mtg.

MANUFACTURE. Specialization in Manufacturing Diesel Engines, O. D. Treiber. Am. Soc. Mech. Engrs.—advance paper for mtg., June 14-16, 1928, 2 pp. See also Motorship, vol. 13, no. 7, July 1928, p. 579.

POWER PLANTS. Some Considerations Regarding the Peak-Load Problem and High-Powered Peak-Load Diesel Engines, M. Gercke. Diesel Engine Users' Assn. (Lond.)—Paper no. S85, 1928, pp. 1-22 and (discussion) 23-51, 17 figs. Load conditions of some typical German electric power plants; economical effect of peak loads on efficiency of steam power plants; peak-load equipments; general comparison of "primary" and "secondary" peak-load installations; individual comparison of primary peak-load units; application of high-powered gas engines for peak-load purposes. See abstract in Combustion, vol. 19, no. 1, July 1928, pp. 33-34.

PULVERIZED FUEL. The Coal-Dust Engine Upsets Traditions, R. Pavolikowski. Power, vol. 68, no. 4, July 24, 1928, pp. 136-138, 4 figs. Engine burning pulverized coal has been developed in Germany; operates equally well with pulverized coal or oil or with mixture of two; initial compression of 440 lb. abs.; delivers 1 b.hp. on 8,000 B.t.u. of pulverized coal; 3-cylinder Diesel arranged with pulverized-coal attachments; operation described briefly; Diesel advantages retained.

Powdered Fuel in Diesel Engines. Times Trade and Eng. Supp. (Lond.), vol. 2, no. 521, June 30, 1928, p. 395. Of recent years progress has been made at Kosmos works and trial engine of fair size built to plans of R. Pawlikowski has been running for some time; combustion is now so good that only entirely non-combustible matter remains as very fine dust, which is blown out with combustion gases; only about 8,000 B.t.u. required for one horsepower per hour.

SUPERCHARGING. Tests on a Diesel Engine With Büchi Turbo-Charging. Analysis of Results, A. Stodola. Mar. Engr. and Motorship Bldr. (Lond.), vol. 51, no. 611, July 1928, pp. 265-268, 9 figs. Fuel consumption amounts to 0.391 lb. per b.hp. per hour; turbo-supercharging improves specific fuel consumption of engine tested by about 4 per cent; calculation of charging air quantity; results of tests on six-cylinder four stroke-cycle single-acting Diesel with Büchi exhaust-gas turbine charging.

DISKS, ROTATING

STRESS ANALYSIS. A Simplified Method of Determining Stresses in Rotating Disks, M. G. Driessen. Am. Soc. Mech. Engrs.—advanced paper for mtg., Aug. 27-30, 1928, 5 pp., 7 figs. Problem of determination of stresses in revolving disk is discussed; manner by which results once obtained can be used for different loads at circumference and for different speeds is indicated disadvantages in Donath method of determining stresses in rotating disks, such as disks of steam turbine rotors, are shown.

DOCKS

MATERIALS HANDLING. Modern Equipment Speeds Work on Lake Docks. Can. Machy. (Toronto), vol. 39, no. 13, June 1928, pp. 90, 92 and 94. Scope of this paper does not include handling of bulk commodities in small capacities, but rather methods which have resulted in vast production of today; reviews briefly historical side of development of modern equipment; latest plant of Western Maryland Railway is first step in revolutionary revision of modern coal-loading methods; superior advantages; loading of ore; almost eliminates shovel; progressive steps.

E

ELECTRICAL ENGINEERING

CALCULUS APPLICATIONS. Heaviside's Operational Calculus as Applied to Engineering and Physics, E. J. Berg. Gen. Elec. Rev., vol. 31, nos. 2 and 3, Feb. and Mar. 1928, pp. 93-96 and 143-146, 8 figs. Feb.: Nature and practical value of operational solution; expansion theorem. Mar.: Expansion theorem applied to some definite problems; operations on unit function squared have no physical significance; additional operators employed when network is suddenly connected to alternator instead of to battery of constant voltage. (Continuation of serial.)

RESEARCH. Annual Report of the Committee on Research. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 7, July 1928, pp. 531-533. Examples of outstanding research during year; advance in television; Knowles tube and its application to televox; radio beacon system for aviators; researches of fundamental nature; operation by Coolidge of three cathode-ray tubes in series at 900,000 volts; lightning generator; work on insulation and lightning measurements on transmission lines; research organizations; Public Utilities are entering research field; training of research workers.

ELECTRIC APPARATUS

DIELECTRIC TESTING. Measurement of Test Voltage in Dielectric Tests. Am. Inst. Elec. Engrs. (A.I.E.E. Standards), no. 4, May 1928, pp. 5-10. Standards are set forth for measurement of test voltage in dielectric tests of electric apparatus; voltage measurement; needle spark gap; sphere spark gap; testing equipment and arrangement.

ELECTRIC BUSBARS

CONCRETE, TESTING. Concrete Bus-Structure Tests, W. A. Kates. Elec. World, vol. 91, no. 26, June 30, 1928, pp. 1379-1382, 17 figs. Characteristic failures of monolithic, thin-wall bus structures and supporting equipment developed in laboratory tests; tension and compression strength values established.

ELECTRIC CABLES

HIGH TENSION, INSULATION. Residual Air and Moisture in Impregnated Paper Insulation, J. B. Whitehead, W. B. Kouwenhoven and F. Hamburger, Jr. Am. Inst. Elec. Engrs.—advance paper, no. 53, for mtg. Apr. 17-20, 1928, 11 pp., 14 figs. Paper describes further experiments on drying and impregnating processes of impregnated paper insulation for high-voltage cables; qualities of product are discussed from standpoint of conductivity, dielectric absorption and power factor.

LEAD SHEATHING. The Physical Properties of Lead Cable-Sheaths. Instn. Elec. Engrs.—Jl. (Lond.), vol. 6, no. 378, June 1928, pp. 638-641, 2 figs. Discussion of paper which appeared in Mar. 1928 issue of same journal, previously annotated.

SPLICING. Electricity Used in Cable Splicing. Elec. World, vol. 92, no. 2, July 14, 1928, p. 60, 2 figs. Recent development of successful electric solder pot for field use has led New York Edison Co. to equip several tool carts so that power can be supplied to solder pots, compound kettles, soldering irons, portable lamps and other appliances required for cable splicing; current is taken from nearest lamp post over 250-ft. flexible cable wound on reel inside of tool cart.

ELECTRIC CAPACITORS

SERIES. The Series Capacitor Installation at Ballston, N.Y., E. K. Shelton. Gen. Elec. Rev., vol. 31, no. 8, Aug. 1928, pp. 432-434, 4 figs. Three-phase 1,245-kva. rating; connected in loop circuit; increases load-carrying capacity of line; improves voltage regulation; equipment and operation; first installation of its kind in world; series capacitor for compensator of transmission-line reactance.

TRANSMISSION. Direct-Current Transmission Approximated with Alternating Current. Power, vol. 68, no. 2, July 10, 1928, p. 80, 1 fig. Transmission characteristics closely approaching those of high-voltage direct current were realized for first time with installation by General Electric Co. of three series capacitors (static condensers) on tie-line operated by New York Power & Light Corp.; at Ballston Spa, N.Y.; capacitors, connected directly in series with 33,000-volt 7,500-kva. line running from Amsterdam to Ballston substation, compensate completely for transformer and line reactance at all loads.

ELECTRIC CIRCUIT BREAKERS

ALARM SWITCHES. Circuit-Breaker Alarm-Switch, A. Lekstrom. Power, vol. 67, no. 26, June 26, 1928, p. 1152, 1 fig. In plant where author is employed it sometimes happens that circuit breaker releases while engineer is in boiler room, and as there is nothing to indicate position of circuit breaker without looking at it, electrician built alarm-switch described.

OIL. Operating Experience with High-Speed Oil Circuit Breakers, B. F. Bardo. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 7, July 1928, pp. 496-499, 7 figs. Outlines experience of New York, New Haven and Hartford Railroad with three high-speed oil circuit breakers serving electrified branch line; electrical and mechanical characteristics of these are set forth in detail and illustrated; detailed record of service operations of circuit breakers along with statement of failures.

ELECTRIC COMMUNICATION

INFORMATION. Transmission of Information. R. V. L. Hartley. Bell System Tech. Jl., vol. 7, no. 3, July 1928, pp. 535-563, 7 figs. Quantitative measure of information is developed based on physical as contrasted with psychological considerations; how rate of transmission of this information over system is limited by distortion resulting from storage of energy is discussed from transient viewpoint; several illustrations of application of this principle to practical systems; in case of picture transmission and television, special variation of intensity is analyzed by steady-state method.

ELECTRIC CONVERTERS

WINDINGS. Synchronous Converter Armature Windings, B. L. Robertson. Gen. Elec. Rev., vol. 31, no. 8, Aug. 1928, pp. 436-439, 10 figs. Article is written for purpose of clarifying some of details of construction of converter windings; treatment of wave windings in converters; definitions; lap-wound and wave-wound converters.

ELECTRIC FURNACES

ANNEALING. Annealing of Non-Ferrous Metals in the Electric Furnace, R. M. Keeney. Am. Metal Market, vol. 35, no. 111, June 12, 1928, pp. 24-26. Non-ferrous metal-annealing furnaces in Connecticut; brass; copper; nickel-silver; rolling mill. Paper presented before Am. Electrochem. Soc.

FOUNDRY. The Electric Furnace in Making Cast Iron. Heat Treating and Forging, vol. 14, no. 6, June 1928, p. 648. Cheap grades of scrap may be used in making synthetic cast iron of superior quality in any desired composition; product is of high strength, toughness and easily machined; investigation involved year's successful operation of jobbing foundry; in electric furnace superior iron, having about twice strength of ordinary cupola iron, can be made; total cost of iron in ladle would be $28 per ton.

New Products from an Old Iron Foundry. Iron Age, vol. 122, no. 2, July 12, 1928, pp. 78-80, 5 figs. Modern equipment transforms Chicago plant for American Manganese Steel Co., so that electric manganese steel castings can be made; sand-handling and annealing-furnace features; ball and roller bearings used throughout electrode-operating gear mechanism; electrodes are counterbalanced; annealing furnace has reducing atmosphere.

HIGH FREQUENCY. Small High-Frequency Induction Furnaces. Metallurgist (Supp. to Engineer, Lond.), June 29, 1928, p. 83. Reference is made to furnace described by J. R. Cain and A. A. Peterson (Jl. of Am. Electrochem. Soc., 1925, vol. 48, p. 139) in which inductor coil and supports, as well as charge, crucible, lagging, etc., were all contained within evacuated bell jar; and also to a furnace inside a bell jar, developed by E. W. Fell (Archiv füer das Eisenhuettenwesen, Apr. 1928) for preparation of iron and steel meltings of 1 kg.

ELECTRIC GENERATORS

EXCITER DRIVE. Drive for Engine Generator Set Exciters, G. E. Leavitt, Jr. Power, vol. 67, no. 26, June 26, 1928, p. 1153, 1 fig. Comparison of chain and belt drives may be summarized as follows: chain drive is more economical of space, has lower first cost, is cheaper to maintain, has longer life, is more efficient, and is more reliable than belt; with belt drive there is belt slipping and tightening to contend with.

LOAD DROPPING. Effect of Sudden Loss of Load, C. B. Hawkins, S. M. Jones and O. E. Charlton. Elec. World, vol. 91, no. 26, June 30, 1928, pp. 1385-1389, 21 figs. To determine increase in voltage and speed when full load is suddenly dropped from generator and to obtain data on operation of over-voltage, overfrequency relay, tests were made by Alabama Power Co. at its Mitchell Dam plant on Coosa River; overvoltage, overfrequency relay used was designed to open main field circuit and low-tension breaker when speed and voltage had increased to some predetermined value.

ELECTRIC INDUSTRY

DEVELOPMENTS. Development in the Past Year, S. E. M. Henderson. Elec. News (Toronto), vol. 37, no. 13, July 1, 1928, pp. 44-45. Welded-steel construction; mercury-arc power rectifiers; summary of advantages and disadvantages of rectifier as compared with synchronous converter.

ELECTRIC LINES

CONSTRUCTION, ONTARIO. Gatineau-Toronto Power Line. Can. Engr. (Toronto), vol. 54, no. 25, June 19, 1928, p. 627, 1 fig. Progress on construction of 200-mile transmission line being built between Gatineau River and Toronto for Ontario Hydro Commission.

INTERCONNECTED. Best Service, Fewest Interruptions, G. N. Tidd. Pub. Service Mgmt., vol. 45, no. 1, July 1928, pp. 9-10. Brief discussion of some of advantages of interconnection which is more matter of distribution than long-distance transmission.

OVERHEAD CONSTRUCTION. The Construction of Isle Maligne Transmission Line, T. M. Montague. Eng. Jl. (Montreal), vol. 11, no. 7, July 1928, pp. 424-427, 6 figs. General features of design, organization and construction of 3-phase, 60-cycle, 165,000-volt line through 130 mi. of undeveloped territory; construction organization and equipment; construction of tower bases; paper is written from construction viewpoint; erection of towers; stringing of conductors; method of hauling tower material.

OVERHEAD, ONTARIO. Developments in Distribution Line Construction, E. F. Hinch. Elec. News (Toronto), vol. 37, no. 14, July 15, 1928, pp. 36-39, 5 figs. Scheme evolved by Ontario Commission and Manufacturers; wet-process porcelain cutout; steel insulator pins; strain insulator clevis; solderless connectors; universal 8,000-volt transformer; wood poles; choice of voltage; 4,000 volts, 3-phase, 3-wire.

SURGES. Lightning Investigation on New England Power Company System, E. W. Dillard. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 7, July 1928, pp. 489-491, 7 figs. Analysis of surges recorded during 1927 on 75-mi. 110-kv. double-circuit transmission line of New England power system; surges are classified according to cause of surge-voltage damping, extent, etc.; general conclusions are drawn regarding nature of surges and protection afforded by ground wires.

Surge-Voltage Investigations. Elec. World, vol. 92, no. 1, July 7, 1928, pp. 5-8, 13 figs. Observations on six different systems reported at convention of Am. Inst. Elec. Engrs.; effect of ground wires, choke coils and lightning arresters; polarity, magnitude, wave front and attenuation. See also brief review of papers on p. 10.

ELECTRIC LOCOMOTIVES

MINE, STORAGE BATTERY. Storage Battery Locomotives for Mine Safety. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 7, July 1928, p. 487. Editorial comment on report by L. C. Ilsley issued by Bureau of Mines; Bureau of Mines has always looked upon permissible-type storage-battery locomotive with favor because of its inherent safety advantages; that its energy is self-contained and limited to immediate zone of locomotive is a safety factor of great importance; it can operate in any part of mine with same factor of safety.

ELECTRIC MEASURING INSTRUMENTS

DESCRIPTION. Electrical Measuring Instruments Other than Integrating Meters, C. V. Drysdale. Instn. Elec. Engrs.—Jl. (Lond.), vol. 66, no. 378, June 1928, pp. 596-616. Commercial indicating and recording instruments; electro-magnetic ammeters and voltmeters; induction, thermal, and electrostatic instruments; phase or power-factor indicators; frequency meters; leakage indicator; portable insulation-resistance and conductor-resistance testing sets; recording instruments; carbon-dioxide recorders; electric gas meters; water-testing apparatus.

ELECTRIC METERS

METHODS. Totalizing and Remote Metering Methods, H. S. Baker. Elec. News (Toronto), vol. 37, no. 13, July 1, 1928, pp. 51-53, 7 figs. Author explains details of multi-element totalizing graphic meters developed by him and outlines few methods of remote metering and totalizing of power. (Continuation of serial.) Read before New England branch of N.E.L.A. at Boston.

ELECTRIC MOTORS

BEARINGS. Industrial Motor Bearings, J. L. Brown. West Machy. World, vol. 19, no. 6, June 1928, pp. 242-245, 4 figs. Great bulk of industrial-motor applications successfully served by either ball, roller, or sleeve bearings when mounted in modern housings, and given care; considerations which influence choice of bearing for given application; sleeve bearing with appropriate housing is most suitable type for general-purpose motors; details of sealed-sleeve bearing.

DIRECT CURRENT, REVERSING. Structural Features of an 8,000 H.P. Reversing Direct-Current Mill Motor, H. E. Stokes and C. P. Croco. Elec. Jl., vol. 25, no. 7, July 1928, pp. 348-350, 4 figs. Built for Homestead Steel Works of Carnegie Steel Co.; weight of motor complete is 646,735 lb.; motor has continuous rating of 8,000 hp., 700 volts, 40 to 80 r.p.m.; magnet frame is of cast steel heavily ribbed on outer diameter; construction of commutator, armature coil supports and cross connections described.

INDUCTION. The Wound-Rotor Induction Motor, R. R. Sheely. Elec. Jl., vol. 25, no. 7, July 1928, pp. 342-344, 5 figs. Its performance and operation at reduced speeds; ratio of mechanical and electrical components of rotor output; very great speed reductions are undesirable on account of low efficiency; curves shown determined from tests on several motors.

INDUCTION STARTERS. Induction Motor Starter. Engineering (Lond.), vol. 126, no. 3260, July 6, 1928, p. 12, 2 figs. Details of starter put out by Igranic Electric Co.; switch is controlled by two push buttons, which are visible in open cover; upper of these is used for starting and lower, which is colored red, is employed for stopping and also for resetting overload trip mechanism.

MATERIALS. Changing from Cast Iron and Steel to Fabricated Steel, H. V. Putman and C. C. Brinton. Elec. Jl., vol. 25, no. 7, July 1928, pp. 331-339, 15 figs. Substitution of punched, pressed and rolled steel for castings; supplemented by further substitution of fabricated (usually arc-welded) structural steel instead of castings for largest and most complicated frames; equipment; tolerances; design; limitations of fabricated-steel construction.

SYNCHRONOUS. Design and Application of Two-Pole Synchronous Motors, D. W. McLenegan and I. H. Summers. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 8, Aug. 1928, pp. 585-590, 10 figs. Paper presents brief résumé of problems encountered in design of two-pole high-speed synchronous motors, and description of how they are met; satisfactory design is worked out; theory of starting winding is given in non-mathematical language, and curves showing results obtained insofar as current and torque are concerned; operating characteristics and method of controlling motors. Bibliography.

Synchronous Motors and Magnetic Clutches. Mech. World (Manchester), vol. 83, no. 2165, June 29, 1928, p. 465, 1 fig. Installation of synchronous motors in conjunction with magnetic clutches to permit starting without load, so that extra power load may be added without necessity for additional generators or transformers.

SYNCHRONOUS CONTROL. What It Pays to Know About Control Equipment for Synchronous Motors, D. W. McLenegan. Indus. Eng., vol. 86, no. 7, July 1928, pp. 333-336, 5 figs. Elements necessary for starting and operating any synchronous motor; advantages of remote control; semi-automatic starting has been developed; load interruption and resynchronizing; failure of excitation; use of panel meters.

ELECTRIC RAILROADS

REGENERATIVE CONTROL. Regeneration and Its Effect on Virtual Lengths on Electric Railways, F. Corini. Int. Ry. Congress—Bul. (Lond.), vol. 10, no. 6, June 1928, pp. 453-470, 9 figs. What it is in concrete terms; importance of regeneration and in what way its characteristics are shown; formulas can be applied approximately to lines operated by electric traction using locomotives which do not admit of regeneration; formulas given cannot be applied in case in which line is operated with locomotives which regenerate current; purpose to determine formulas for calculating virtual lengths to be applied in such case.

ELECTRIC STOVES

WIRING. California Range Wiring Requirements. Electragist, vol. 27, no. 9, July 1928, p. 31, 1 fig. Minimum has now been approved for State and typical layout is shown; requirements apply only to already wired buildings which are about to be wired for range.

ELECTRIC TRANSFORMERS

CUT-OUTS. Low Voltage Cut-Outs for Series Street-Lighting Transformers, E. J. Haverstick. Elec. Jl., vol. 25, no. 7, July 1928, pp. 340-342, 8 figs. Requirements for satisfactory cut-out; form of cut-out; effect of radiated discharge.

METHOD OF MEASURING. A Method of Measuring the Ratio and Phase Angle of a Current Transformer, W. I. Place. Instn. Elec. Engrs.—Jl. (Lond.), vol. 66, no. 378, June 1928, pp. 657-662, 8 figs. Method introduced in 1923 by E. Biffi is discussed; formulas are obtained for ratio and phase angle and for galvanometer current; application of method to comparative tests.

VOLTAGE REGULATORS. The Step Induction Regulator for Transformer Voltage Control, R. M. Field. Elec. Jl., vol. 25, no. 7, July 1928, pp. 351-354, 8 figs. Typical step-induction regulators are shown; schematic diagram of transformer winding with its taps connected through switching equipment to series transformer and induction regulator is shown; contactor switching equipment; equipment is normally motor operated and remotely controlled.

ELECTRIC TRANSMISSION AND DISTRIBUTION

AUTOMATIC SUBSTATIONS. Transmission and Automatic Substations. Elec. World, vol. 92, no. 1, July 7, 1928, pp. 11-12, 1 fig. Review of reports and discussion at session of Am. Inst. Elec. Engrs.; proposed standards for lightning arresters prepared by subcommittee; developments in current-limiting reactor practice; work of subcommittee on relays; report on automatic stations; general power applications; mechanization of mines, etc.; application of electricity to transportation, etc.

ELECTRIC WELDING

ARC, ELECTRONIC TORNADO. Magnetics Control Welding Arc, A. F. Davis. Iron Age, vol. 121, no. 26, June 28, 1928, pp. 1810-1811, 5 figs. Magnets produce electronic tornado and stabilize carbon arc; joints welded at high speed have superior ductility, appearance and strength; automatic machine for welding special piece of oil-field equipment; two new types of welding heads with their electrode holders crossing each other at sharp angle; cost of welding ½-in. plates.

ARC. Stability of the Welding Arc, P. Alexander. Can. Machy. (Toronto), vol. 39, no. 13, June 28, 1928, pp. 112-113, 132-134, 1 fig. Metallic welding arc is combination of two factors; conduction of electric current, and transfer of material across arc stream; first factor is discussed in this paper; thermionic emission; cooling of arc; series of experiments; conclusions drawn from above observations.

ELECTRICITY SUPPLY

INTERCONNECTION. Conowingo Hydroelectric Project With Particular Reference to Interconnection, W. C. L. Eglin. Am. Inst. Elec. Engrs.—advance paper, no. 24, for mtg. Feb. 13-17, 1928, 10 pp., 22 figs. Paper discusses interconnection between three of leading power-supply companies in eastern part of country; outlines physical aspects of tie-in between companies which is 220-kv. ring of high-load capacity, triangular in shape with sides respectively 49 mi. and 77 mi. long; advantages of interconnection are enumerated as well as some of operating problems; discusses Conowingo hydroelectric project.

ELEVATORS

ELECTRIC, OPERATION. Are Your Elevators Giving the Service That They Should? F. A. Annett. Power, vol. 68, no. 1, July 3, 1928, pp. 18-21, 4 figs. Author tells how practically 100 per cent elevator service is obtained by one large office building; operating records kept; car schedules maintained; inspection and maintenance procedure and costs of operation are given.

ENGINEERING MATERIALS

SPECIFICATIONS. Specifications and Procurement of Manufacturing Materials, D. F. Miner. Am. Mach., vol. 69, no. 2, July 12, 1928, pp. 37-40. Description of methods employed by Westinghouse Elec. & Mfg. Co., showing how design engineer co-ordinates efforts to obtain best material for products; although responsibility for material rests on one capable executive, choice is actually result of suggestions from all departments.

ENGINEERS

FAILURES. Too Many Engineers? Iron and Steel of Canada (Gardenvale, Que.), vol. 11, no. 7, July 1928, p. 209. Men who drift out of engineering are failures as engineers; if entering freshmen students could be weeded out by more searching entrance test, both mental and physical, enormous amount of misspent energy on part of those foredoomed to failure in engineering would be saved.

F

FACTORY BUILDINGS

WELDED STEEL. Factory Building is of All-Welded Steel Construction. Can. Machy. (Toronto), vol. 34, no. 14, July 12, 1928, pp. 36, 38, 3 figs. Steel-frame factory building, welded instead of riveted, is being erected by General Electric Co., at its new plant in Philadelphia; 140 feet wide, 600 feet long and 50 feet high; will cost less; results of tests; principal elements from which building framework was constructed were welded in shops of American Bridge Co., in Trenton, N.J.

FEEDWATER HEATERS

HIGH-PRESSURE. High Pressure Feed Water Heaters for Philo. Heat. Eng., vol. 3, no. 6, June 1928, pp. 10-11, 2 figs. Feedwater will be heated by stage feedwater heaters to temperature of 320 deg. fahr.; each heater will be supplied with bled steam at 100 lb. per sq. in. absolute; water spaces of heaters designed for 900 lb. working pressure; water ends made up entirely of rolled steel.

FLOOD CONTROL

SLOPE CORRECTION, MISSISSIPPI. Flood Control Through Slope Correction, W. E. Elam. Eng. News-Rec., vol. 100, no. 26, June 28, 1928, pp. 996-1001, 9 figs. Principle of uniform discharge through uniform slope and channel width applied to Mississippi; control may be attained through revetment, levees, delta reservoirs, and possibly channel shortening; twelve main reaches of Mississippi proposed for study of straightening and shortening river channel; coincident high- and low-water channels desirable; swiftest currents in bends causing caving where slopes are flattest; high-water profiles of Mississippi from Cairo to Gulf; where cutoffs are possible.

FLOORS

CONCRETE, CODES. Code Provisions for Concrete Floors. Concrete, vol. 33, no. 1, July 1928, pp. 23-24, 1 fig. Analysis of provisions in several building codes; new formula now proposed by Building Code Committee of Syracuse, N.Y.; reduced live-load chart; purpose of formula and recognition it gives to heavier dead weight of certain types of floor.

FLOW OF FLUIDS

PIPES. The Flow and Measurement of Petroleum Products in Pipe-Lines, S. W. Adey. Inst. Petroleum Technologists—Jl. (Lond.), vol. 14, no. 67, Apr. 1928, pp. 222-235, 3 figs. Mathematical discussion on measurement of flowing gas and oil.

The Flow of Fluids in Pipes, E. S. L. Beale and P. Docksey. Instn. Petroleum Technologists—Jl. (Lond.), vol. 14, no. 67, Apr. 1928, pp. 236-232, 3 figs. Mathematical discussion on theory of flow of fluids of different viscosities in pipes of various materials; temperature factors; viscosity-temperature charts; example of calculation, using given conversion formulas and graphs.

FORESTRY

BRITISH COLUMBIA. Forest Conservation in British Columbia, P. Z. Caverhill. Eng. Jl. (Montreal), vol. 11, no. 6, June 1928, pp. 366-370, 6 figs. Résumé of work being carried on by British Columbia Forest Service; forest protection; forest reserves; forest research.

FOUNDRY PRACTICE

FOUNDRYMEN CONFER. British Foundrymen Confer. Can. Foundrymen (Toronto), vol. 19, no. 7, July 1928, pp. 30-31 and 35. Review of papers presented at annual conference of Institute of British Foundrymen at Leicester; "Aluminum Casting Alloys," G. Mortimer; "The Cohesion of Rammed Sand," M. Lamoreaux; "Steel Castings for Severe Service," J. H. Hall; "Malleable Castings," W. T. Evans and H. E. Peace; "Iron Foundry Casting," W. R. Wintle.

FOUNDRIES

LAYOUT. Circular Foundry Built in Denmark Uses Every Inch of Space, V. Delport. Iron Trade Rev., vol. 83, no. 3, July 19, 1928, pp. 143-145, 6 figs. Circular foundry erected by Burmeister and Wain, Copenhagen, is 265 ft. in diam. and is connected to harbor on one side by canal extending into shop for 60 ft.; locomotive cranes on circular track outside handle flasks and other materials; two-storey structure of building houses office, store department, canteen and sanitary stations; steel mast serves as pivot for six electric traveling cranes.

FREQUENCY CHANGERS

VARIABLE RATIO. Interconnection of Power and Railroad Traction Systems by Means of Frequency Changers, L. Encke. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 7, July 1928, pp. 507-511, 20 figs. Several types of variable-ratio frequency changers are discussed and installations of such apparatus on electrified section of New York, New Haven & Hartford Railroad are described in some detail; functioning of regulating machines and auxiliary equipment to obtain desired results is explained, together with description of switching equipment installed in connection with main units.

FUEL UTILIZATION

SOLID AND LIQUID. Utilization of Solid and Liquid Fuels, C. H. Lander. Gas Jl. (Lond.), vol. 182, no. 3395, June 13, 1928, p. 719. Gas has greatest availability and highest efficiency; motor fuel and heavy oils gasified simply; pulverized fuel analogous to gas; modern boiler furnaces extract more energy from coal than can processes involving treatment before combustion; economic application of pretreatment depends upon local conditions. Abstract of paper read at Instn. Civil Engrs. See Colliery Guardian (Lond.), vol. 163, no. 3520, June 15, 1928, pp. 2349-2350, and Iron and Coal Trades Rev. (Lond.), vol. 116, no. 3144, June 1, p. 833.

FUELS

TECHNOLOGY. Modern Fuel Technology, D. Brownlie. Motor Transport (Lond.), vol. 46, no. 1215, June 25, 1928, pp. 781-782. Rapid advances in fuel research of great importance to British development of motor transport because of tax on imported motor fuel; fuels from bituminous coal; low-temperature carbonization; hydrogenation and synthetic processes; activity on Continent; steam vehicles and producer gas fuel; need for intensified research.

FURNACES, INDUSTRIAL

WALLS. Optimum Thickness of Furnace Walls (Ermittlung günstigster Wanddicken von Industrieöfen), H. Repky. Archiv. für Wärmewirtschaft (Berlin), vol. 9, no. 5, May 1928, pp. 145-149, 9 figs. Mathematical discussion dealing with heat losses by conductivity radiation, etc.; proper wall thickness for various operating conditions; analysis balancing cost of masonry and thermal insulation against higher operating costs due to heat losses.

FURNACES, REVERBERATORY

COPPER SMELTING. The Development of Reverberatory Furnace Smelting of Copper Ores and Concentrates, J. N. Anderson. Can. Min. Jl. (Gardenvale, Que.), vol. 49, nos. 21 and 22, May 25 and June 1, 1928, pp. 420-423 and 440-442, 5 figs. May 25: First practised on large scale at Swansea in Wales; practise in Chile, Montana, Colorado, Arizona, Utah and Mexico; first successful application of pulverized-coal firing, 1911, by D. H. Browne. June 1: Side feeding; fuel saving effected by charging calcines at higher temperature.

G

GARAGES

VENTILATION. Ventilating Garages to Remove Exhaust Fumes. Travelers Standard, vol. 16, no. 7, July 1928, pp. 147-150, 1 fig. Description of satisfactory systems installed garages to remove dangerous fumes and thus prevent carbon-monoxide poisoning.

GAS HEATING

DOMESTIC. Gas Heating for the Heating Contractor, G. C. Carnahan. Heat. & Vent. Mag., vol. 25, no. 7, July 1928, pp. 68-71 and 84, 6 figs. Climatic conditions on Pacific Coast favor gas heating and southwestern states enjoy advantages of natural gas; gas heating is further advanced on Pacific Coast than elsewhere; development slow in mountain states; Denver may be all-gas city; Texas uses local fuel; oil heating is popular in New Orleans; gas leads as domestic fuel in Oklahoma; low heat requirements permit use of small fixed and portable heating units. (Continuation of serial.)

GAS PIPE LINES

CORROSION. Corrosion in Gas Supply Practice, F. C. Smith. Gas Age Rec., vol. 44, no. 626, June 1928, pp. 155-158, 2 figs. Method of setting up cell in test to determine usefulness of method rather than effect of sulphur and manganese upon rate of corrosion; effect of admission of oxygen into cell upon resistance; detailed statement of basis of calculation for conductivity of solution; detailed results with discussion.

GAS PURIFICATION

DETAILS. Purification, L. G. Slack. Gas Jl. (Lond.), vol. 182, no. 3394, June 6, 1928, pp. 669-672 and (discussion) 672. Paper does not go into details of wet purification; deals with gas as it enters oxide boxes; suspended tarry matter; ammonia; sulphur compounds; sulphuretted hydrogen; description of plant; factors influencing oxide purification; alterations to purifying plants. Paper read before North of England Gas Mgrs. Assn. See also Gas World (Lond.), vol. 88, no. 2288, June 9, 1928, pp. 586-588.

GAS TANKS

WATERLESS. Waterless Gasholders, F. Prentice. Gas Jl. (Lond.), vol. 182, no. 3395, June 13, 1928, pp. 720-723, 1 fig. Lutes to cup and uncup; pressure remains constant and can be varied within limits to suit individual requirements; especially suitable for ground liable to subsidence; painting each year is no longer necessary; easily erected; in cold climates, absence of water in lutes and tanks minimizes all difficulties arising from low temperatures; figures of costs. Abstract of debate at Instn. Civil Engrs. Conference.

The Waterless Holder at Toronto, W. R. Gardner. Gas World (Lond.), vol. 89, no. 2293, July 14, 1928, p. 35. Description of construction and operation of holder with capacity of 4 million cu. ft., 161 ft. diam. and 222 ft. high, installed by Consumers Gas Co. Digest of papers presented before Canadian Gas Assn. See also Gas Jl. (Lond.), vol. 183, no. 3400, July 18, 1928, p. 142.

GASES

COMBUSTION. Gaseous Combustion at High Pressures, D. M. Newitt. Roy. Soc. Proc. (Lond.), vol. A119, no. A782, June 1, 1928, pp. 464-480, 2 figs. Discussion of co-volume corrections, maximum temperatures and dislocation of steam and carbon dioxide in explosions.

GASOLINE

PROPERTIES. How and Why of Gasoline Performance, J. B. Hill. Oil and Gas Jl., vol. 27, no. 8, July 12, 1928, pp. 78 and 116 and 119-120, 2 figs. Properties required by engine are points covered suitably by volatility and detonation tests; odor, corrosive qualities of fuel or exhaust gases, crankcase dilution and formation of solid deposits are important secondary requirements of automobile; color and gravity are not considered in modern tests. Paper presented before Am. Soc. Testing Materials.

GAS TURBINES

EXHAUST GAS. The Diesel-Engine Exhaust, H. A. Hepburn. Brit. Motorship (Lond.), vol. 9, no. 100, July 1928, pp. 150-151, 2 figs. Suggested method of increasing efficiency by 10 per cent; appears to be sounder proposition for large Diesel engines of 10,000 b.hp. and upwards to discharge at constant-exhaust pressure of say two to three atmospheres into receiver from which gases would expand from constant-pressure conditions through nozzle into turbine moving blades shows diagrammatically combined engine and turbine, latter being placed in line with cylinders and geared on to main engine shaft.

GEAR CUTTERS

REVIEW OF. Gear Cutting and Testing Machines. Am. Mach., vol. 69, no. 3, July 19, 1928, pp. 80-81, 6 figs. Semi-annual résumé of gear-cutting machines described in shop equipment news section during first six months of 1928; details of hobbers, shapers and generators and testing machines are given.

GEARS

POLISHERS. Gear Tooth Burnishing. Automobile Engr. (Lond.), vol. 18, no. 243, July 1928, pp. 255-256, 2 figs. Design and operation of machine made by Fellows Gear Shaper Co. for finishing gears of oil-hardening steels; chief object is to smooth working surfaces of gear teeth to reduce frictional resistance of teeth during period of sliding contact; gear to be burnished is supported entirely by burnishing gears and has no bearing on centre hole.

GEARS AND GEARING

FRICTION. Friction Gearing, L. T. Rutledge. Can. Machy. (Toronto), vol. 39, no. 12, June 14, 1928, pp. 30-31 and 68, 1 fig. Bevel friction gearing used to transmit power from one shaft to another; starting and running conditions; thrust on shafts.

LAMINATED. Laminated Gears in Industry. Plastics, vol. 4, no. 6, June 1928, pp. 342-349, 1 fig. Contrary to usual lay idea, laminated gears are in use for other and much heavier duties than auto timers; industrial applications; gear types installation.

LUBRICATION. Influence of Tooth Profile on Gear Lubrication (Einfluss der Zahnform auf die Schmierung bei Wälzzahnraidern), F. G. Altmann. Maschinenbau (Berlin), vol. 7, no. 12, June 21, 1928, pp. 596-600, 14 figs.

STRENGTH FORMULAS. Modification of the Lewis Formula for Determination of the Strength of Gears, H. T. Davey. Machy. (Lond.), vol. 32, no. 822, July 12, 1928, pp. 465-466. Discussion of formula for determining strength of gears with modifications to provide direct means of solving practical problems; tabulated values of formulas to give direct reading number of teeth.

GEOPHYSICAL EXPLORATION

METHODS. Gravitational Methods of Geophysical Prospecting, A. H. Miller. Can. Min. Jl. (Gardenvale, Que.), vol. 49. no. 24, June 15, 1928, pp. 476-481, 11 figs. Variation of gravity over earth's surface; pendulum; torsion balance and quantities it measures; principles upon which balance depends; survey of area with torsion balance; interpretation of results; corrections; difficulties and disadvantages; deflection of vertical or deviation of plumb line.

GIRDERS, PLATE

WELDING. A Study in Welded Plate Girders, F. P. McKibben. Am. Welding Soc.—Jl., vol. 7, no. 7, July 1928, pp. 13-21, 7 figs. Complete calculation for typical welded girder is presented, together with comparison between weights of several welded and riveted types.

GOLD MINES AND MINING

ONTARIO. Hollinger and McIntyre Compared. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 23, June 8, 1928, p. 463. Tabulation of total and per share data on issued capital, ore reserves, surplus, dividends and market value of shares; Hollinger stock is valued on exchange at value of its known ore reserves plus surplus, whereas McIntyre stock is valued at figure which is about $5.50 per share higher than total of ore reserves and surplus.

GRAIN ELEVATORS

SARNIA, ONTARIO. New Grain Elevator at Sarnia, Ontario, W. B. Beatty. Can. Engr. (Toronto), vol. 54, no. 26, June 26, 1928, pp. 635-637, 6 figs. First unit of 4,000,000-bu. elevator constructed at Sarnia Bay; present storage capacity is 1,004,000 bushels; elevator is of reinforced-concrete construction; principal features of piling and construction contracts and equipment; 22 main circular bins 22 ft. 6 in. in diameter and 108 ft. deep; 14 smaller bins; concrete was 1:2:4 mix; marine unloading leg designed to handle 25,000 bushels of wheat per hour on dip.

GREAT LAKES

CHARTS. Survey of Northern and North-Western Lakes. U. S. Lake Survey Office—Bul., No. 37, Supp. No. 2, June 22, 1928, p. 11. To supplement information given upon charts of Great Lakes and issued with those charts from U. S. Lake Survey Office, Detroit, Mich.

GRINDING MACHINES

REVIEW OF. Grinding Machines. Am. Mach., vol. 69, no. 3, July 19, 1928, pp. 81-86, 28 figs. Semi-annual résumé of grinding machines described in shop equipment news section during first six months of 1928; details of surface, cylindrical, internal, portable, tool, and special-purpose machines are given as well as attachments. For grinding machines in European editions see pp. 129-131.

H

HANGARS

CONSTRUCTION. Airplane Hangar Door Construction. Contract Rec. (Toronto), vol. 42, no. 26, June 27, 1928, pp. 687-689, 3 figs. Arrangements of doors and tracks recommended by company that has made special study of hangar requirements; floor rollers and floor track eliminated; in two articles appearing in Contract Rec. of May 9 and 16, airplane-hangar construction was discussed as new field for contractors; drawings were shown and descriptions given of accordion-folding and sliding doors; in this article supplementary information concerning these types of doors is given; two methods of hanging the track are shown.

HEAT CONVECTION

LAWS OF. Laws of Heat Transmission by Convection (Les lois de la transmission de chaleur par convection), A. Leveque. Annales des Mines (Paris), vol. 13, no. 5, May 1928, pp. 305-362, 34 figs. Examination and interpretation of principal works on transmission of heat by convection; tests of M. V. Kammerer; problem of gas current inside a tube; experiments of Ser. Nicholson, Josse, Jordan, Nusselt, Poensgen, and comparison of them. (Continuation of serial.)

HEAT TRANSMISSION

SOLIDS. Heat Conduction in Solids (Zeichmerische Verfolgung der Wärmeleitung in Festen Koerpern), F. Nussbaum. Zeit. für angewandte Mathematik u. Mechanik (Berlin), vol. 8, no. 2, Apr. 1928, pp. 133-142, 7 figs. Author has developed graphic method of calculating flow of heat through solids which permits fairly accurate solution of uni-dimensional problems, and is also applicable to two-dimensional cases, although procedure is more complicated. See brief abstract in Archiv. fuer Wärmewirtschaft (Berlin), vol. 9, no. 6, June 1928, p. 179.

HEATING

RADIATION TABLES. Standard Radiation Estimating Table. Heat. and Piping Contractors Nat. Assn.—Official Bul., vol. 35, no. 7, July 1928, p. 69. Heating and Piping Contractors National Association standard radiation estimating table, showing radiation required for quantities indicated.

HIGH BUILDINGS

WIND STRESSES. Wind Stresses in Many-Storied Buildings, R. Fleming. Eng. and Contracting, vol. 6, no. 7, July 1928, pp. 371-375, 4 figs. Summary of engineering practice given; wind pressure on structures; surprising variation is found in requirements of codes; methods of determining stress; cantilever method; portal method; design of details; unit or working stresses.

HOTELS, CONSTRUCTION

OTTAWA. The Chateau Laurier Extension—One of Canada's Outstanding Pieces of Construction. Contract Rec. (Toronto), vol. 42, no. 30, July 25, 1928, pp. 769-774, 10 figs. Rapid progress is being made in erection of new wing to C.N.R. Hotel in Ottawa; steel-frame construction on concrete footings with floors of concrete; records progress that has been made to date; construction methods described commencing with excavating and foundation work; aerocrete for roof, partitions and floor fill; stone and sand supplies; stonework.

HOT WATER HEATING SYSTEMS

OXYACETYLENE WELDING. Construction Industry Welds Awkward Corners. Can. Machy. (Toronto), vol. 34, no. 14, July 12, 1928, pp. 40 and 42-45, 18 figs. Methods of applying oxyacetylene process to best advantages; tees, branches and special fittings are quickly made as desired; hot-water heating system of residence was welded; evident that oxyacetylene process offers plumbing and heating contractors new tool. Reprinted from Dominion Service Tips.

HOUSES

INSULATION. The Insulation of Dwellings. Eng. and Contracting, vol. 67, no. 8, Aug. 1928, p. 413. Example of heat saving; advantages not problematical; constant-temperature houses; there are in United States four private homes so planned that they have uniform temperature throughout year; factors needed to attain this. Abstract of paper presented before Int. Congress of Refrigeration, Rome, Italy.

HYDRAULIC PRESSES

TYPES. Guide Apparatus, Pressure Reducers and Pressure Transmitters for Hydraulic Presses and Machines (Les distributeurs, réducteurs et multiplicateurs pour presses et machines hydrauliques), A. Lambrette. Technique Moderne (Paris), vol. 20, no. 12, June 15, 1928, pp. 418-424, 17 figs. Treats of types of apparatus used for distribution of water under pressure and indicates their advantage and disadvantages; classification.

HYDRAULIC RAMS

OPERATION. Operation of the Hydraulic Ram, J. A. MacDonald. Can. Engr. (Toronto), vol. 54, no. 25, June 19, 1928, pp. 625-626, 2 figs. Cheap and efficient method of conveying water where there are no water works; how ram is installed; construction, operation and installation of ram.

HYDRAULIC TURBINES

TESTING, SWEDEN. Arrangements for Tests at the Machine Works in Kristinehamn (Anordningar for provning av turbiner vid Verkstaden Kristinehamn), H. Lind. Tekniska Foreningens I Finland Forhandlingar (Helsingfors), vol. 48, no. 5, May 1928, pp. 103-108, 4 figs. Causes of cavitation; description of cavitation laboratory completed in 1924, and its testing methods; description of high-pressure laboratory and its operation.

HYDRAULIC TURBINES

CAPACITY, EUROPE. Capacity of European Turbines, J. V. Zahlen. Eng. News-Rec., vol. 100, no. 26, June 28, 1928, pp. 1017-1018. Letter to editor noting large recent increase in number of Kaplan installations in Europe, particularly in Germany, Austria, Switzerland, Italy, Sweden and Finland; capacity of European Francis turbines and of high-pressure spiral type turbines; efficiencies of Francis and Kaplan installations.

HYDRO-ELECTRIC POWER DEVELOPMENTS

BRITISH COLUMBIA. Some Engineering Aspects of the Bridge River Project, E. E. Carpenter. Eng. Jl. (Montreal), vol. 11, no. 7, July 1928, pp. 410-423, 14 figs. Description of hydro-electric power development of British Columbia Elec. Ry. Co.; power possibilities of river; proposed programme of stages of development and progress of construction.

CANADA. Canada Active on Hydro Plants. Elec. World, vol. 92, no. 4, July 28, 1928, p. 183. Chute-a-Caron project to occupy three years; Gatineau power augmented; Ontario Commission to add 14,300 hp.

Year's Hydro Growth in the Dominion. Elec. World, vol. 92, no. 2, July 14, 1928, p. 83. Increase of 11½ per cent in 1928 by addition of well over a half-million horsepower; all provinces share.

NOVA SCOTIA. Hydro-Electric Power in Nova Scotia. Can. Engr. (Toronto), vol. 55, no. 1, July 3, 1928, pp. 101-103, 4 figs. Over 350,000 hp. available in province of which 71,000 hp. has been developed; some water powers are developed by Nova Scotia Power Commission and some by private interests; lakes aid in maintaining uniform flow; large proportion of total developed waterpower in Nova Scotia is used in hydraulic turbines which transmit power mechanically to various industrial operations, particularly to pulp and saw mills; table shows some large undeveloped water powers in province.

ONTARIO. Capacity of Bryson Power Development Increased by 25,000 Hp. Power, vol. 68, no. 6, Aug. 7, 1928, p. 255, 1 fig. International Paper Co. recently added what is known as Bryson plant, on Ottawa River; plant has installed capacity of 25,000 hp. and possible development of 75,000 hp.; dam is concrete gravity section 380 ft. long and 70 ft. high, containing 12 sluices and log slide of V-section, all covered by reinforced-concrete deck.

I

INDUSTRY

CANADA. Canada Prospering in 61st Year, C.M.A. Annual Meeting Hears. Can. Machy. (Toronto), vol. 39, no. 12, June 14, 1928, pp. 46-47. Review of annual meeting of Can. Mfrs. Assn.; international trend during past year has indicated growing political stability throughout world; research in business; industry needs safeguards.

Commercial and Industrial Conditions in Canada. Engineering (Lond.), vol. 126, no. 2360, July 6, 1928, pp. 4-6. For past year, regarded as ending in March 1928, sufficient data have been compiled to render possible fairly accurate estimate of year's trading; imports show heavy increase as compared with those of preceding year, and are in neighborhood of 225,000,000 pounds; striking feature is growing predominance of United States in Canadian commerce; British manufacturers do not, as a class, adapt their products and selling methods to requirements and practices of Canada; mineral resources; lumber and motor industry.

INGOT IRON

CREEP. Creep Tests as Made on Armco Iron, H. J. Tapsell. Heat Treating and Forging, vol. 14, no. 7, July 1928, pp. 746-750 and 756, 2 figs. Description of experiments on creep characteristics of metals at high temperatures, being made at National Physical Laboratory; conclusion that strain-hardened Armco iron may be further hardened by temperatures at least between 150 and 390 deg. cent., and both strain and temperature hardening occur during creep tests. Abstract of special report No. 6, Department of Scientific and Industrial Research, Eng. Research.

INSULATING MATERIALS, ELECTRIC

TESTING. Report of Committee D-9 on Electrical Insulating Materials. Am. Soc. Testing Matls.—Preprint, no. 77, for mtg. June 25, 1928, 34 pp., 5 figs. Recommended revisions of existing and tentative standards; proposed methods of test for volatile matter and dielectric strength of insulating varnishes; proposed methods of testing laminated sheet insulating materials; proposed tentative methods of testing insulating materials for resistance to impact, and of testing varnished cloth tapes.

INTERNAL COMBUSTION ENGINES

HIGH SPEED. Light High-Speed Internal-Combustion Engines, H. R. Ricardo. Automobile Engr. (Lond.), vol. 18, no. 243, July 1928, p. 263. Thermal efficiency, fuel requirements, weight, durability, and speed limitations of various types of internal-combustion engines are discussed; speed of engines limited by breathing capacity, dissipation of heat from connecting-rod big-end bearings, and mechanical operation of valves; reducing limitations. Abstract of paper presented to Instn. Civil Engrs.

[*See also Aircraft Engines, Diesel Engines, Oil Engines.*]

IRON

ANALYSIS. An Assumption as to the Cause of the Allotropic Changes of Iron, D. Jones. Am. Soc. Steel Treating—Trans., vol. 14, no. 2, Aug. 1928, pp. 199-210, 8 figs. Author attempts to show that changes occurring in iron when heated and cooled are due to changes in iron atom and suggests probable changes with their cause and mechanism; it is postulated that crystal structure and properties of other metals may be similarly connected with their atom structure.

IRON ALLOYS

NICKEL. The Influence of Nickel on Iron-Carbon-Silicon Alloys Containing Phosphorus, A. B. Everest and D. Hanson. Iron and Coal Trades Rev. (Lond.), vol. 116, no. 3145, June 8, 1928, pp. 862-866, 20 figs. Refers to paper on earlier investigations; recent experiments involve phosphorus; phosphorus increases hardness, tendency to chill, and difficulty of machining; more nickel required to produce given result in presence of high phosphorus, where there is tendency to chill, than would be required in presence of lower phosphorus. Paper read before Iron and Steel Inst. previously annotated.

IRON AND STEEL

TESTING. Creep in Ferrous Materials, H. J. Tapsell and W. J. Clenshaw. Iron and Steel Industry (Lond.), vol. 1, no. 5, Feb. 1928, pp. 164-165, 1 fig. Discussion of report on properties of materials at high temperatures, issued by Department of Scientific and Industrial Research; results of tensile, creep, torsion and hardness tests on Armco iron and 0.17 per cent carbon steel.

IRON AND STEEL INDUSTRY

ELECTRIC DEVELOPMENTS. Yearly Review Electrical Developments Iron and Steel Industry, W. H. Burr. Iron and Steel Engr., vol. 5, no. 6, June 1928, pp. 211-217. Review of main-roll motor installations made in steel mills in 1927; cranes; improvements to old equipment made during 1927; centralized switchboard control has been developed for air-blast valves on blast-furnace plants; oil-switching equipment.

ELIMINATING WASTE. Eliminating Waste in Distribution, C. M. Schwab. Iron and Steel of Canada (Gardenvale, Que.), vol. 11, no. 7, pp. 206-207. Outstanding facts of economic ills of steel industry; low margin of profit in steel industry is not conducive to sustained national prosperity; hunger for tonnage and desire to operate at capacity chief causes of cross hauling of steel products; committee of expert steel men proposed to study problem and recommend plan for eliminating waste in distribution. From address of President, Am. Iron and Steel Inst.

PRODUCTION STATISTICS, CANADA. May Canadian Output of Pig Iron and Steel. Iron Age, vol. 121, no. 26, June 28, 1928, p. 1861. Production of pig iron in Canada in May amounted to 87,811 gross tons, which was 18 per cent over 74,736 tons produced in preceding month and compares with 78,987 tons reported for May 1927; production of foundry iron fell off sharply; increased output of basic and malleable iron.

IRON AND STEEL PLANTS

ELECTRIC DRIVE. Motor Selection, Anti-Friction Bearing and Power Cost Feature Proceedings at A.I.S.E.E. Convention. Power, vol. 68, no. 1, July 3, 1928, pp. 36-37. Review of papers read at meeting of Assn. Iron and Steel Elec. Engrs.; increasing use of electric drives on main rolls in steel plants and trends toward synchronous motors for constant-speed and d.c. motors for variable speed; full sessions were devoted to motor selection for main drives and use of anti-friction bearings; papers on purchase of coal and new method figuring steam and power costs.

ELECTRIC MOTORS. Inductive Time Limit Control, W. G. Cook. Elec. Jl., vol. 25, no. 7, July 1928, pp. 327-332, 13 figs. Author discusses recent developments in auxiliary motor control; equipment for operation must be electrically adequate, must be easy to manufacture, and have long life; most promising of such control schemes is described; several types of relay which are giving good service when correctly applied; application of relays.

ELECTRIFICATION. Electrification of the Minnequa Works of the Colorado Fuel and Iron Company. Engrs. Bul., vol. 12, no. 6, June 1928, pp. 10 and 28. Largest steel-mill electrification ever carried out at one time; programme of electrification; feature of fuel supply for this plant is use of blast-furnace gas which is cleaned by electric precipitators; equipment for electrification; tremendous savings in power costs have resulted.

IRON

INCLUSIONS. Inclusions in Iron, C. R. Wohrman. Am. Soc. Steel Treating—Trans., vol. 14, no. 1, July 1928, pp. 81-126, 39 figs. Photomicrographic study; outline of inclusion problem and of author's work; preparation of artificial known inclusions; polishing for inclusions; microscopic examination; oxide inclusions (and silicates); 2-page bibliography.

IRON MINES AND MINING

ELECTRIC POWER. Use of Electric Power in Iron Mining, A. C. Butterworth. Am. Soc. Mech. Engrs.—advanced paper for meeting Aug. 27 to 30, 1928, 3 pp.

MECHANIZATION. Mechanical Engineering in Iron-Ore Industry, A. Tancig. Am. Soc. Mech. Engrs.—advanced papers for meeting Aug. 27-30, 1928, 4 pp. Modernization of mines on iron range of Minnesota, with their almost complete mechanization, credited to ability of profession in solving complex problems as operation developed; steam hoist of nineties; advent of steam shovel; mechanizing under-ground operations; pumping equipment of today; electric power shovel; types of ore-hauling cars; modernization without accident increase.

NEWFOUNDLAND. Wabana Iron Mines and Deposits, Newfoundland, A. O. Hayes. Min. and Met., vol. 9, no. 260, Aug. 1928, pp. 361-366, 8 figs. Extensive beds of iron ore are worked under sea from Bell Island; they are of sedimentary origin; constitute great reserve strategically well situated; working methods described. Paper to be read before Am. Inst. Min. & Met. Engrs.

IRON ORES

MICROSCOPY. Technique of the Investigation of Iron Ores, F. F. Osborne. Economic Geology, vol. 23, no. 4, June-July 1928, pp. 442-450, 4 figs. Paper based on results of study of titaniferous iron ore deposits in New York, Quebec and Ontario; etching, by placing mineral surface in contact with considerable volume of reagent, proved helpful in mineral identification under microscope and in revealing texture of minerals; use of polarized reflected light.

L

LACQUER

NITROCELLULOSE. Formulation of Nitrocellulose Lacquers, H. E. Hofmann and E. W. Reid. Indus. and Eng. Chem., vol. 20, no. 7, July 1928, pp. 687-693, 12 figs.

LATHES

REPORT ON. Lathes. Am. Mach., vol. 69, no. 3, July 19, 1928, pp. 86-89, 16 figs. Semi-annual résumé of lathes described in shop equipment news section during first six months of 1928; details of engine, speed, turret, and special lathes are given, as well as attachments. For lathes in European edition see pp. 131-133.

LIGHTHOUSES

CONSTRUCTION. Building an Offshore Lighthouse in Lake Huron, I. L. Gill. Eng. News-Rec., vol. 101, no. 4, July 26, 1928, pp. 129-131, 5 figs. Crib and concrete base carries steel-frame structure for living quarters and lamp; construction methods; lighthouse to replace lightship at Martin Reef in Lake Huron; located in 6 ft. of water over dangerous reef composed of boulders overlying hard pan; tower 25 ft. sq. and over 70 ft. high is founded on heavy concrete pier with top or deck.

LIME, HYDRATED

MANUFACTURE. Another Patented Process for Making High Calcium Finishing Hydrate. Rock Products, vol. 31, no. 13, June 23, 1928, pp. 74-75. Description of U. S. patent no. 1,670,425 granted E. O. Schnell, of process based on use of bentonite with urea as protective colloid; invention relates generally to finishing lime and process of making same, and more particularly to high plastic, hydrated finishing lime which is produced from high calcium or any other kind of limestone.

LOCOMOTIVE BOILERS

CORROSION PREVENTION. Electro-Chemical Method for the Prevention of Locomotive Boiler Corrosion. West. Ry. Club—Proc., vol. 40, no. 7, Mar. 1928, pp. 12-48, 4 figs. Article clarifies function of chemical arsenic used in coordination with electric current; conception of process which has proved so successful in overcoming pitting and corrosion-electrochemical polarization system of corrosion prevention; system requires that current shall be supplied to electrodes at all times locomotive is in service.

CORROSION. Boiler Corrosion and Pitting. Ry. Jl., vol. 34, no. 7, July 1928, pp. 26-28. Committee report before Master Boiler Makers Assn.; inquiries sent to 17 railroads having total number of locomotives of 22,392; comparison of conditions on pitting and non-pitting territory; effect of trouble and extent; preventive measures; pitting resistance of various boiler metals; progress as to control of corrosion and pitting.

THERMIC SIPHONS. Water Circulation in Relation to Steaming Capacity, C. A. Seley. Baldwin Locomotives, vol. 7, no. 1, July 1928, pp. 73-74, 1 fig. Demand for increased power in locomotive boiler met by increasing dimensions of active and secondary heat-transfer surfaces and by making steam more fluid by superheat; provision for adequate circulation to cover these needs in locomotive boilers has been provided by installation of Nicholson thermic siphons in firebox; thermic siphons have also demonstrated their value as safety appliance in preventing explosion of boiler in event of low water.

LOCOMOTIVE TERMINALS

RECOMMENDATIONS. Recommendations for the Design of a Locomotive Terminal. Can. Ry. and Mar. World (Toronto), no. 366, Aug. 1928, pp. 458-461, 1 fig. Committee on Shop and Locomotive Terminal Design recommendations for layout of locomotive terminal capable of handling from 75 to 90 locomotives in each 24-hr. period; capacity of terminal; turntable; building floors and smoke jacks; stalls, pits and clearances; drop tables; material and stores; cranes; heating and ventilating; washing platform or inspection pits. Presented before Am. Ry. Assn.

LOCOMOTIVES

DESIGN. Locomotive Design and Construction Committee's Report. Can. Ry. and Mar. World (Toronto), no. 365, July 1928, pp. 385-387. Exhaust-steam injectors and exhaust-steam feedwater heaters; example of use of poppet valves is Buechli locomotive which represents simplest possible conception of ultra-high-pressure locomotive; oil-electric locomotive development; back pressure and initial pressure gauges, and cut-off control. Report to Am. Ry. Assn.

OIL ELECTRIC. New Three-power Locomotive. Gen. Elec. Rev., vol. 31, no. 7, July 1928, p. 372, 1 fig. Locomotive carrying its own power plant and first of its kind ever built, was recently tested in New York by New York Central Railroad for which it was constructed to serve in freight yards that are not completely electrified and where part of time it is required to operate through city streets; battery is charged by 300-hp. Ingersoll Rand oil engine connected directly to 200-kw. General Electric generator; four available methods of operations.

VALVE GEARS. Caprotti Valve Gear. Engineer (Lond.), vol. 145, no. 3781, June 29, 1928, pp. 720-721, 4 figs. Gear consists of one admission and one exhaust valve of double-beat poppet-valve type for inlet and outlet of steam from each end of each cylinder, i.e., in all four valves per cylinder; in newer designs springs on admission and exhaust valves are superseded by small steam receptacle into which downward elongation of valve spindle fits; most noticeable feature of gear is gear box itself; each box acts on eight valves of one pair of cylinders, one outside and one inside cylinder next to it.

LOGS

HIGH PRESSURE. High Steam Pressure and Condensing Exhaust for Locomotives, J. M. Taggart. Railroads (A.S.M.E. Trans.), vol. 50, no. 13, May-Aug. 1928, pp. 33-43 and (discussion) 43-49, 22 figs. Discussion of present progress; cycle efficiencies; auxiliary requirements; machine, transmission and thermal efficiencies; value of locomotives; possible turbine arrangements; tentative design of super-pressure locomotives.

High Steam Pressures in Locomotive Cylinders, L. H. Fry. Railroads (A.S.M.E. Trans.), vol. 50, no. 13, May-Aug. 1928, pp. 5-9 and (discussion) 9-12, 11 figs.

MAINTENANCE. Locomotive Maintenance. C. F. Adams. Junior Instn. Engrs.—Jl. (Lond.), vol. 33, part 9, June 1928, pp. 425-447, 5 figs. Washing out of boilers; economical boiler-washing plant; engine cleaning; firelighting and preparing engine; running repairs to engine; hot axleboxes and crankpins; lubrication troubles; boiler repairs; superheater elements; heavy running repairs; repair shop.

MECHANICAL HANDLING. Odd Shapes and Sizes Are No Obstacle to Mechanical Handling, E. J. Tôurnier. Indus. Eng., vol. 86, no. 7, July 1928, pp. 357-359 and 367, 7 figs. Handling of logs and wood chips; storing logs by means of conveyor over storage area; piled by movable stacker; conversion to new uses of well-known forms of conveying apparatus is exemplified by application of modified flight conveyors referred to in present article.

STEAM TURBINE. German Condensing Steam-Turbine Locomotive, F. W. Allport. Commerce Report, no. 29, July 16, 1928, pp. 148-149, 1 fig. Krupp Works, Berlin, have recently developed condensing steam-turbine locomotive along novel lines, incorporating many new elements; technical details of locomotive; turbines used are Zoelly type, supplied by Escher Wyss & Co., Zurich; normal capacity is 2,000 b.hp. at speed of 6,800 r.p.m.; operation of locomotive.

LUBRICATING OILS

AIR COMPRESSORS. Essential Requirements of Air Compressor Oils. Lubrication, vol. 14, no. 5, May 1928, pp. 52-57, 7 figs. Relation of viscosity; flash and fire points; carbon deposits; methods of air-cylinder lubrication; type of compressor must be considered; effects of unsuitable oils; amount of oil required.

STEAM TURBINES. Chemist Tells Engineer About Turbine, H. L. Kauffman. Power Plant Eng., vol. 32, no. 14, July 15, 1928, pp. 762-764.

LUBRICATION

THEORIES. Spreading of Lubricants on Solid Surfaces (De l'extension des lubrifiants sur les surfaces solides), P. Woog. Académie des Sciences—Comptes Rendus (Paris), vol. 186, no. 2, Jan. 9, 1928, pp. 71-73. Consideration of effect of very low temperatures, when all that is necessary is to choose oil which remains liquid when cold and at very high temperatures; it was shown that at 100 deg. cent. stearic acid reacts with steel, so that thin neutralizing layer no longer has properties of polarity and orientation which are necessary to prevent oil from spreading; other metals than steel have been experimented with and some non-metallic substances.

M

MACHINE SHOP

EQUIPMENT. Miscellaneous Equipment, Materials and Supplies. Am. Mach., vol. 69, no. 3, July 19, 1928, pp. 116-119, 17 figs. Semi-annual résumé of miscellaneous equipment, materials and supplies for machine shops described in shop equipment news section during first six months of 1928. For miscellaneous equipment in European edition see pp. 140-141.

MATERIALS HANDLING EQUIPMENT. Material Handling Equipment. Am. Mach., vol. 69, no. 3, July 19, 1928, pp. 102-103, 5 figs. Semi-annual résumé of materials handling equipment described in shop equipment news section during first six months of 1928; details of tractor, lift trucks, hoist chain and crane are given.

MACHINE TOOLS

LUBRICATION. Modern Methods of Lubrication. Machy. (Lond.), vol. 32, no. 819, June 21, 1928, pp. 369-370, 3 figs. General plan for organizing for proper lubrication of machine tools; capable man needed to attend to lubrication; reasons why machinery is not successfully lubricated by operators; examples of what has been accomplished by modern lubricating methods; lubricating large machines.

MACHINERY

ELECTRIC WELDING. Using Electrically Welded Steel Construction for Machinery, B. L. Barnes. Elec. News (Toronto), vol. 37, no. 15, Aug. 1, 1928, pp. 49-50, 4 figs. Manufacturers, by adopting welding as standard practice in large machine design and utilizing standard structural-steel shapes, are developing electric welding in industry.

MALLEABLE CASTINGS

CORRECT METHODS. Malleable Castings, W. T. Evans and A. E. Peace. Foundry Trade Jl. (Lond.), vol. 38, nos. 617 and 618, June 14 and 21, 1928, pp. 423-426 and 453-457, 21 figs. Authors endeavor to convince engineers and users of malleable castings that reliable product from black-heart and white-heart varieties is being produced by application of correct methods; air-furnace melting for black-heart; conditions influencing life of refractories; melting for white-heart; use of refined irons; common defects; moulding, feeding, annealing. (To be continued.)

OBSOLESCENCE. To Appraise Obsolescence of Machinery. Iron Age, vol. 122, no. 3, July 19, 1928, p. 165. Explanation of difference between obsolescence and depreciation given with object and plans for industrial-equipment survey to be undertaken by Department of Commerce under direction of H. C. Dunn; conditions affecting cost-accounting allowance for obsolescence factor in machinery to be studied.

WHITE-HEART. Malleable Iron, F. H. Hurren. Iron and Steel of Canada (Gardenvale, Que.), vol. 11, no. 7, July 1928, pp. 196-199. Effect of different elements in whiteheart malleable iron castings used for general engineering work and conforming to B.E.S.A., standard of 20 tons tensile with 5 per cent elongation on 2 in.; in author's opinion best results are secured when silicon lies between 0.40 and 0.80 per cent; the longer the annealing time, the greater the elimination of carbon; grain size persists; influence of sulphur, phosphorus, manganese, nickel, and chromium; troubles peculiar to malleable castings. Paper read before Inst. Brit. Foundrymen.

WORK METERS. Idleness and Output Recorders. Engineer (Lond.), vol. 146, no. 3785, July 27, 1928, pp. 97-99, 6 figs. Details of device known as "Pul-syn-etic" idle machine recorder, made by Gent & Co., Ltd., Faraday Works, Leicester; it fulfills duty of indicating when and for how long machine is idle; it does not, however, provide measure of output of machine, or whether it is working above or below its normal speed; to fulfil that duty, different but related device, the "Pul-syn-etic" output recorder is available.

MANGANESE STEEL

CASTING. Make Steel in a Converted Iron Foundry, F. B. Fletcher. Foundry, vol. 56, no. 14, July 15, 1928, pp. 572-575, 6 figs. Conversion of gray-iron foundry into plant for production largely of manganese and other alloy-steel castings; new unit known as Plant D of American Manganese Steel Co.; steel melted in 1½-ton electric furnace; sand handling, cleaning room and moulding-machine equipment; 12 ovens in coreroom; 2 generators for oxyacetylene welding.

PROPERTIES. Medium Carbon Pearlitic Manganese Steels, J. Strauss. Am. Soc. Steel Treating—Trans., vol. 14, no. 1, July 1928, pp. 1-25 and (discussion) 25-26, 7 figs. Discussion of metallurgical and mechanical characteristics of steel of 0.30 to 0.50 per cent carbon and 1.00 to 2.00 per cent manganese; both wrought and cast forms are considered in both light and heavy sections; author points out similarity of these steels to other structural alloy combinations, limitations of heavy sections and of low tempering temperatures and advantages in respect to cutting qualities, resistance to corrosion, and strength at moderate temperatures. Bibliography.

METALS

X-RAY ANALYSIS. Applied X-Rays in the Metal Industry, H. R. Isenburger. Metal Industry (N.Y.), vol. 26, no. 6, June 1928, pp. 271-272, 5 figs. Inspection of rough structure of metals by means of X-rays serves to discover slags, shrinkage, blowholes and like in unfinished, semi, and manufactured products; method is based upon capacity of X-rays to penetrate materials; most important practical applications of X-rays in metal-working industry are enumerated.

MINERAL RESOURCES

CANADA. Pre-Cambrian Misconceptions Canadian Mineral Resources, Admittedly Large, Grossly Exaggerated in Propaganda, C. M. Campbell. Eng. and Min. Jl., vol. 126, no. 5, Aug. 4, 1928, pp. 165-171, 4 figs. Discusses geological conditions, shows extent of precambrian area, and states that only 5 per cent of area is favourable as mineral-bearing ground; quotes various items of propaganda and of geological reports; arraigns optimists as illogical; suggests that mine hunters stop off 50 to 200 miles from Toronto, instead of rushing 1,000 miles to north.

NEWFOUNDLAND. Mining in Newfoundland, D. J. Davies. Can. Min. Jl. (Gardenvale, Que.), vol. 49, nos. 30 and 31, July 27 and Aug. 3, 1928, pp. 603-606 and 620-622, 5 figs. Extract from pamphlet arranged for Empire Mining Congress; brief history review; iron deposits and four operating mines; copper mining at standstill since 1918; three principal copper areas described, with notes on some individual mines; silver-lead-zinc district at Placentia Bay; minor occurrences of lead ores; pyrite deposits mentioned in connection with copper; existence of chrome iron and molybdenite ores is noted.

MOTOR TRUCKS

SPRINGS AND SUSPENSION. Researches on Springs. Dept. of Sci. & Indus. Research, Eng. Research—Special Report no. 8, 1928 (Lond.), 42 pp., 32 figs. partly on supp. plates. Results of Experiments with 30-cwt. and 60-cwt. army truck and with 2-seater high-speed automobile; National Physical Laboratory was asked to design mechanism which could be fitted to vehicle and which would give continuous record with time of displacements of springs relative to body of vehicle when run at different speeds and on different road surfaces; gives description of apparatus and results obtained.

MOTOR VEHICLES

BRAKES. Are Two Entirely Separate Braking Systems Necessary? Operation and Maintenance, vol. 38, no. 1, July 5, 1928, p. 20. Question of whether it is desirable with four-wheel brakes, under present conditions, to require complete separation of service and parking brakes; recommendation made by Eastern Conference of Motor Vehicle Administrators, representing Eastern states and provinces; proposed brake law considered by other states.

EXPORTS. UNITED STATES AND CANADA. U. S. Exports of Cars, Trucks, Tires and Parts for April, 1928—Canadian Exports. Automotive Industries, vol. 58, no. 26, June 30, 1928, pp. 1020-1021. Two-page table of exports of passenger cars, motor trucks, tires and parts for United States and Canada for April 1928, showing destination, number and value.

MOTOR VEHICLE TRANSPORTATION

Railroad Operation. Executives Comment on Results of Motor Coach and Truck Operation. Ry. Age (Sec. 2), vol. 84, no. 25, June 23, 1928, pp. 1476-1481, 12 figs. Presidents of railways operating motor vehicles report increased passenger and freight traffic; Atchison, Topeka and Santa Fe; Baltimore and Ohio; Boston and Maine; Central of Georgia; Chicago, Milwaukee, St. Paul and Pacific; Chicago, Rock Island and Pacific; Great Northern; Maine Central; Nashville, Chattanooga and St. Louis; New York, New Haven and Hartford; other lines.

N

NICKEL

Electrodeposition. The Hardness of Electro-Deposited Nickel, D. J. MacNaughtan and A. W. Hothersall. Faraday Soc.—Trans. (Lond.), vol. 24, no. 7, July 1928, pp. 387-400, 8 figs. Results of investigation to develop practical methods of determining hardness and stress in deposits and to ascertain value of such tests for control of condition of deposition for production of deposits for specific purposes; influence of composition, temperatures, etc., of electrolyte on hardness and stress in electro-deposited nickel.

NICKEL ALLOYS

Properties. Nickel, An Account of Its Alloys and Its Uses, A. C. Sturney. Min. Mag. (Lond.), vol. 38, no. 6, June 1928, pp. 341-347. Properties of nickel; commercially pure metal is generally brittle and non-malleable; small percentage magnesium renders it ductile, malleable, and amenable to fabrication, soldering, and welding by arc or acetylene; uses enumerated; nickel steels; ferronickel alloys of low thermal expansion, and of high magnetic permeability; non-magnetic nickel iron; nickel cast iron; nickel-copper alloys; nickel-brass, bronze and aluminum bronze; heat-resistance alloys; nickel in aluminum.

NICKEL SILVER

Press Work. Press Work on Nickel Silver, A. L. Walker. Machy. (Lond.), vol. 32, no. 822, July 12, 1928, pp. 466-467. Composition of nickel-silver sheet commonly adopted for drawing and forming operations; nickel silver possesses to great extent property of work hardening; methods of avoiding overwork on nickel-silver parts; rules for forming and drawing nickel silver; press-tool design.

O

OFFICE BUILDINGS

Steel. Steelwork for the 23-Storey Royal Bank Building, Montreal, Que., R. M. Robertson. Eng. and Contracting, vol. 67, no. 7, July 1928, pp. 359-365, 12 figs. Design features outlined; floor construction; loading and unit stresses; main stresses; columns and slabs; wind stresses; tanks, etc. Paper presented before Eng. Inst. of Canada.

Toronto. The Atlas Building, Toronto. Contract Rec., vol. 42, no. 27, July 4, 1928, pp. 705-708, 10 figs. Recently completed office structure, 13 storeys high, of reinforced-concrete with some steel girders, dignified architectural treatment.

OIL BURNERS

Domestic. A.P.I. Committee Report Recommends Support of Oil Heating Institute. Fuel Oil, vol. 7, no. 1, July 1928, pp. 21-22. Recommendations made by committee appointed by president of Am. Petroleum Inst. to investigate programme of Oil Heating Inst.; urge complete endorsement of oil heating by Am. Petroleum Inst., and contribution of $175,000 for support of Oil Heating Institute's 1928 programme.

Design and Performance of Domestic Oil Burners, W. C. McTarnahan. Plumbers Trade Jl., vol. 85, no. 2, July 15, 1928, pp. 194-197 and 205. Natural-draft vaporizing burners; mechanical atomizing burners; mechanical-draft burners; atomizing from vertical rotary cup or disk. Paper read at Am. Soc. Heat. and Vent. Engrs.

OIL ENGINES

Marine. Progress in the Adoption of the Internal-Combustion Engine for Marine Purposes, C. J. Hawkes. Engineering (Lond.), vol. 125, no. 3256, June 8, 1928, pp. 721 and (discussion) 701. While early difficulties with marine oil engine have been largely overcome, increase in dimensions of cylinders has introduced further difficulties; more attention is being given to balancing of engines and to scantlings of shafts; author does not think that any appreciable increase in efficiency of oil engine can be expected without further complication. Abstract of paper read before Instn. Civil Engrs. See also Engineer (Lond.), vol. 145, no. 3778, June 8, 1928, pp. 627-628.

Rating. Is a Uniform Rating Desirable for Oil Engines? P. H. Schweitzer. Power, vol. 68, no. 3, July 17, pp. 108-109, 1 fig. Absolute maximum horsepower that engine is capable of delivering is never used for rating; formula used for rating automobile engines in United States except California and England mostly for taxation purposes; standard rating of same general principle refers to tractors; fixing different m.e.p. ratings for various types of oil engines is not very promising.

OIL HEATING EQUIPMENT

Points. Essential Points in Selecting Oil Heating Equipment, R. Richart. Contract Rec. (Toronto), vol. 42, no. 31, Aug. 1, 1928, p. 805. Principal importance of mechanical design is in its relation to safety; probably 30 heaters now on market will satisfactorily measure up to all of requirements which are given; making choice.

OIL SHALE

Distillation, Low Temperature. Manufacturing Oil from Oil Shale and Bituminous Coal, G. W. Wallace. Combustion, vol. 19, no. 1, July 1928, pp. 23-28, 4 figs. Description of Dundas-Howes process; low-temperature distillation of oil shale and bituminous coal; units in Santa Barbara County, Calif.; general arrangement of N-T-U Company's plant in California; capacity of plant is 200 tons per day; cost of operating plant.

OPEN HEARTH FURNACES

Regenerator Insulation. The Insulation of Open-Hearth Furnace Regenerators, L. B. McMillan. Iron and Steel Engr., vol. 5, no. 6, June 1928, pp. 257-262, 9 figs. Calls attention to highly satisfactory and very practical results which are being accomplished on actual installations; advantageous results attained through use of insulation on checker chambers; heat losses from walls and roofs; value of savings effected by insulation; savings expressed as percentages of total fuel cost; insulation of new and old checker chambers; conclusions.

ORE DEPOSITS

Theory. Operative Causes in Ore Deposition, H. C. Boydell. Instn. Min. and Met. Bul. (Lond.), no. 285, June 1928, pp. 1-5. Contributed remarks on paper read before Instn. Min. and Met. at earlier meeting; influence of pressure on composition of solutions where soluble gases are present; influence of silica; chemical influence of rockwall; electrolytic influence.

P

PACKING

Fibrous and Metallic. The Story of Packing, Fibrous and Metallic, C. J. Mason. South. Power Jl., vol. 49, no. 7, July 1928, pp. 58-63, 13 figs. Rod, stem and shaft metallic packing; requirements of metallic packing; principle involved; flexible ring type; metallic packing for ammonia; France vanadium metallic packing; description of Cooke seal ring; choosing metallic packing.

PAPER

Discoloration. The Yellowing of Paper, M. Marini. Paper Trade Jl., vol. 87, no. 5, Aug. 2, 1928, pp. 59-60. Causes of alteration in color with time are varied in nature and depend on oxidation of certain substances contained naturally or accidentally in paper; pressure of groundwood; presence of iron; effect of rosin.

PAPER MAKING

Newsprint. Making News Print at Higher Speeds, C. O. Bachman. Paper Mill, vol. 51, no. 29, July 21, 1928, p. 4. Writer figures that at present time it is possible to obtain speed of 1,500 ft. per min. and in near future speed in excess of 2,000 ft. will be attached on some grades of paper; brief outline of few of fundamental changes and requirements; construction of vacuum drier press is along entirely new principles; layout is not only applicable to newsprint but to practically all grades of paper.

PAPER MILLS, NEWSPRINT

Quebec. Modern Engineering Answers the Call for Lower Costs in News Print, A. E. Buchanan, Jr. Paper Trade Jl., vol. 86, no. 26, June 28, 1928, pp. 45-49, 5 figs. Describes new mill of Ste. Anne Paper Co., Ltd., at Beaupre, Quebec; Ste. Anne mill producing 240 tons per day at present, at speed of 950 ft. per min.; system of drier drive; there are 46 steam-heated drying rolls, 60 in. in diameter, over which paper is carried by broad felt belts; electric boiler of 100,000 kw.-hr. per day capacity is used as auxiliary source of process steam.

PAPER MILLS

Process Steam. Stabilizing Low-Pressure Steam Saves Money In a Paper Mill, D. Ross-Ross. Power, vol. 67, no. 26, June 26, 1928, pp. 1134-1137, 6 figs. Uniformity of steaming conditions does not exist to any extent in paper mills manufacturing high-grade papers, especially where product is particularly diversified; problem resolves down to putting entire exhaust steam into such form that it can be used not only for drying steam, but for such other low-pressure purposes as are required around mill; in specific instance first step was joining up of all engine exhausts to common steam line.

Pumps Trash. The Wood Trash Pump in Paper Mills, R. K. Annis. Paper Mill, vol. 51, no. 26, June 30, 1928, pp. 9, 12 and 14. Wood trash pump was first applied to problem of pumping paper stock in paper mill; analysis of over 70 installations shows that 3-in. pumps have been used principally on lime sludge and white water; experience of Great Northern Power Co. at its East Millinocket, Me., plant with Fairbanks-Morse stock pumps; size of motor; series of tests were run on 8-in. Fairbanks-Morse wood-paper stock pump and chart has been prepared. Paper read before Am. Pulp and Paper Mill Superintendents' Assn.

PAPER AND PULP MILLS

Oxyacetylene Welding. Oxy-Acetylene Welding Reduces Overhead in Paper Mill. Paper Trade Jl., vol. 87, no. 4, July 26, 1928, pp. 55-58, 6 figs. Brief survey of application of oxyacetylene welding; groundwood mill; sulphite mill; beater room; wet machines; paper machine; machine shop; overhead trolleys; emergency work; typical examples of what may be accomplished in various departments of paper mill have been cited.

PAVEMENTS

Black Base. Black Base in Southern States, W. H. Booker. Mun. News, vol. 74, no. 5, May 1928, pp. 127-128. Triaxial diagram for black base issued by Asphalt Assn. for selecting and proportioning sheet-asphalt sands; improving subgrade; green fills; sewer trenches; water trenches; examples of bad subgrade. Extracts from paper presented at Asphalt Paving Conference.

Concrete, Drilling. Studies of Concrete Pavement Cores, C. E. Foster. Can. Engr. (Toronto), vol. 55, no. 2, July 10, 1928, pp. 129-132, 6 figs. Value of drill core to highway engineer; factors involved in successful construction of concrete pavement; subject is limited in scope having to do principally with quality of work performed; information secured from study of specimen taken from concrete roads; core-drill outfit; object of core drilling; tolerances in thickness of pavement; studies from special cores; facts briefly reviewed. Paper read before Mich. Highway Conference, Univ. of Mich.

Wood, Failures. Water Under Wood Pavement: Its Cause and Prevention. Surveyor (Lond.), vol. 73, no. 1899, June 15, 1928, pp. 627-629. Views and experience of metropolitan engineers and surveyors; observations on various details of wood-pavement construction, jointing, sealing and surfacing; main causes of water logging; water finding its way beneath wood-block paving, causing looseness and upheaval.

PETROLEUM INDUSTRY

Equipment, Welding. Welding in the Oil Field, R. R. Robinson. Oil Field Eng., vol. 4, no. 1, July 1, 1928, pp. 17-22, 12 figs.

Fire Prevention. Causes of Fire in the Petroleum Industry With Methods of Prevention, C. Dalley. Instn. Petroleum Technologists—Jl. (Lond.), vol. 14, no. 67, Apr. 1928, pp. 154-166 and (discussion) 166-173. First precautions are reduction of leakage to minimum, control of gas, and provision of high-grade fittings and plant; storage tanks; spontaneous combustion; static electricity; frictional sparks; lightning; foam solutions as extinguishers. Full text of paper previously annotated from abstracts.

PHOTOELECTRIC CELLS

Rubidium. Very Thin Films of Rubidium, A. L. Johnsrud. Bell Laboratories Rec., vol. 6, no. 5, July 1928, pp. 371-373. Describes relation between film thickness and photoelectric response; thickness of film to be measured as little as one atomic diameter one half of one millionth of millimeter.

PILE DRIVERS

Mounting. Simple Roller Mounting for Piledriver, E. Smith. Eng. News-Rec., vol. 101, no. 1, July 5, 1928, p. 21, 1 fig. Pile driver mounting of two round oak logs 12 in. in diameter and 24 ft. long; framework 24 ft. long and 5 ft. wide, made of 12 x 12-in. timber, rests directly on rollers and is held in place by recessed blocks bolted to under side; upon this framework pile driver is set up, leads at one end and boiler at other; it can be moved by its own power forward, backward, or to side.

PILES

Concrete. Water Jets Help Pull Concrete Piles. Eng. News-Rec., vol. 101, no. 4, July 26, 1928, p. 143, 1 fig. Using water jets to assist in pulling old concrete foundation piles was tried with success in preparing for erection of 25-storey apartment building on Lake Shore Drive, Chicago; water jets loosened sand so that power shovel could easily pull piles.

Steel, Beach Protection. Save Beaches With Steel Piling. Constr. Methods, vol. 10, no. 7, July 1928, pp. 30-32, 10 figs. Details of 3,900 ft. of bulkhead and total of 3,000 ft. of groins constructed by City of Miami Beach, Fla.; built of Larssen deep-section copper-bearing steel-sheet piling; groins extending into water at right angles to bulkhead were 200 ft. long.

PLUMBING SYSTEMS

Design. Design of Plumbing Systems. Contract Rec. (Toronto), vol. 42, no. 28, July 11, 1928, pp. 729-731, 1 fig. Important conclusions developed as result of series of tests carried out to determine effectiveness of various of traps stack connections and venting; purposes of tests conducted by Engineering Experiment Station of University of Illinois and reported in recently issued bul. No. 178.

PNEUMATIC TOOLS

Lubrication. Air Tool Lubrication. Lubrication, vol. 14, no. 5, May 1928, pp. 57-60, 6 figs. Lubrication under water conditions; abrasive material is detrimental; method of lubrication a factor; lubricating requirements; application of pneumatic-tool lubricants; air-line lubricators.

PORTS

Montreal. The Port of Montreal, L. C. Tombs. Dock and Harbour Authority (Lond.), vol. 18, no. 93, July 1928, p. 273. History and facilities of great inland harbour; marine insurance; rates on cargo out of St. Lawrence to Europe during summer season; passenger service; comparison of Canadian Pacific Atlantic fleets of 1905 and 1925; railway facilities. (Concluded.)

POTASH DEPOSITS

Canada. Discovery of Potash Salts in New Brunswick, L. H. Cole. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 24, June 15, 1928, p. 481. At Gautreau village, Westmorland County, New Brunswick, well was drilled in research of oil and gas; sunk 1,878 ft. and penetrated bed of rock salt 485 ft. thick; chip samples taken every five ft.; twelve analyzed for potassium with results ranging from .25 to 1.77 per cent and averaging .59 per cent.

POWER GENERATION

Tropical Seas. Utilization of Thermal Power of Oceans (Sur l'utilisation de l'énergie thermique des mers), G. Claude and P. Boucherot. Académie des Sciences—Comptes Rendus (Paris), vol. 186, no. 23, June 4, 1928, pp. 1491-1495, 1 fig. Information on installation at Ougrée of plant built according to process developed by Claude and Boucherot; plan of installation and system of operation; gives results of test carried out on new plant, which show that in large installations, power available would be about three-quarters of total power supplied by turbines.

POWER PLANTS

Ash Handling. Development of Ash Handling Plant for Power Station Boilers, A. Powell. Indus. Mgmt. (Lond.), vol. 15, no. 7, July 1928, pp. 246-247, 249, 251 and 253, 2 figs. Data concerning various mechanical methods of disposing of boiler-house refuse, principally ashes; handling of ash by manual labor; suction ash-handling plant; soot disposal; drag-link conveyors; paddle type and sluicing type of ash conveyor; ash trough; dumping of ash direct into railway cars; capital and operating costs. Paper read before Junior Instn. Engrs.

Auxiliary Equipment, Control. Control Equipment for Central Station Auxiliaries, W. C. Plumer. Power House, vol. 22, no. 13, July 5, 1928. pp. 33-35, 4 figs. Control for central-station auxiliaries presents inherently different problems than in industrial applications; chief features wherein this control differs from industrial; slip-ring induction motors; synchronous motors; shunt characteristics; automatic combustion control.

Baltimore. Design Studies for Gould Street Generating Station, F. T. Leilich, C. L. Follmer and R. C. Dannettel. Am. Inst. Elec. Engrs.—advance paper, no. 49, for mtg. Apr. 17-19, 1928, 6 pp., 6 figs. This paper covers briefly various studies and investigations upon which design was based; number and size of steam generators; type of firing.

Conowingo, Md. Electrical Features of the Conowingo Generating Station and the Receiving Substations at Philadelphia, R. A. Hentz. Am. Inst. Elec Engrs.—advance paper no. 54 for mtg. Apr. 17-20, 1928, 10 pp., 16 figs.

Electric, Substations. Transformer Station at Leaside. Can. Engr. (Toronto), vol. 55, no. 1, July 3, 1928, pp. 114-115, 1 fig. Progress on transformer station for Ontario Hydro-electric Power Commission to receive power from Gatineau River; site of this station is in town of Leaside, south of C.P.R. main line between Toronto and Montreal; 220,000-volt circuits and apparatus; transformers; 110,000-volt and 13,200-volt circuits and bus; control room.

Hydro-Electric. Mechanical Reliability of Hydro-Electric Units—1926. Nat. Elec. Light Assn.—Serial Report no. 278-79, July 1928, 13 pp., 3 figs. Results of third year's study of subject by Hydraulic Power Committee are summarized; table lists principal characteristics of all units comprised in 1926 investigation. Serial report of the Hydraulic Power Committee 1927-1928, Engineering National Section.

Hydro-Electric, Ice Jams. Ice Jam Relief, H. T. Barnes. Power Plant Eng., vol. 32, no. 13, July 1, 1928, pp. 736-737. Use of Thermit in breaking jams; Thermit is mixture of finely powdered aluminum and oxide of iron; when ignited, it burns, generating very high temperatures, producing liquid steel and giving off radiant heat rays that penetrate ice for many feet; in Norway and Sweden, and at Shawinigan Falls plant, heating racks by means of electric current has been used effectively.

Hydro-Electric, Location. Power House Supported on Piers Over Dam. Eng. News-Rec., vol. 100, no. 26, June 28, 1928, pp. 1003-1005, 2 figs. Elevated power house supported on tall piers above dam in order to avoid shortening spillway length, adopted for hydro-electric development at Lock and Dam No. 7 on Kentucky River by Kentucky Hydro-electric Co., to supplement its main power development at Dix River dam; three piers about 50 ft. high, supporting power house; three wheel pits beneath piers, turbine shafts passing up through piers into generator room; roof of wheel pits level with crest of dam.

Hydro-Electric, Quebec. Another 600,000 hp. for Quebec. Elec. News (Toronto), vol. 37, no. 15, Aug. 1, 1928, pp. 33-34, 2 figs. Early development of Upper St. Maurice by Shawinigan Co.; contract with provincial government may involve $45,000,000 expenditure in ten or twelve years; power will be produced by 1932; this power is all within distance of 150 mi. from Montreal; present developments on St. Maurice; power to be developed has river mileage of 75 mi.

Low-Pressure Steam. Utilizing Low-Pressure Steam, W. B. Lewis. Power, vol. 68, no. 1, July 3, 1928, pp. 34-35. Author claims that power installations in industries using process steam should be based on industrial heat requirements and not on considerations of power-house efficiency; emphasizes following points: (1) temporarily forget mechanical power requirements and boiler plant and study uses of heat; (2) every operation requiring heat should be done with low-pressure steam wherever possible; (3) reduce amount of low-pressure steam through study of machine and processes, etc.

Paper Mills. Installing Modern Power Plant. Paper Mill, vol. 51, no. 26, June 30, 1928, p. 8. New central plant designed to supply power and steam for both mills of Crooker-Burbank Co.; pulverized-coal system to be supplemented by oil burners; three Babcock & Wilcox boilers with 500-hp. rating; three 36,000-lb. aero-type impact pulverizers.

Pulverized Lignite. Pulverized Lignite Experiments At the University of North Dakota, R. L. Sutherland, N. T. Bourke and E. J. O'Keefe. Power, vol. 67, no. 26, June 26, 1928, pp. 141-144, 5 figs. University has been conducting experiments with pulverized lignite for steam generation; late experiments have been carried on with unit of commercial size installed in University power plant; boiler used was Babcock & Wilcox type F-14 Stirling with 2,400 sq. ft. of heating surface, set 6 ft. 11.5 in. above floor; furnace volume of 1,140 cu. ft. and burner of fishtail type.

Reheat Cycle. Reheat Cycle Practice Not Yet Standardized. Power Plant Eng., vol. 32, no. 14, July 15, 1928, p. 775. No uniformity of reheating pressure temperature or practice is apparent from conditions reported by Nat. Elec. Light Assn.; tabulation of operating conditions at five stations using reheat cycle; no difficulty experienced with excessive superheat.

Steam Electric, Alberta. A New Western Steam Station. Elec. News (Toronto), vol. 37, no. 14, July 15, 1928, pp. 29-35, 11 figs. First 5,000-kw. high-speed turbo-alternator at East Kootenay Power Co.'s supplementary generating plant, Crow's Nest Lake, Alberta, produces kw.-hr. at switchboard with less than 20,000 B.t.u.; design of building; turbo-alternator; pump room and intake; cooling-water system; boiler room; coal handling; feedwater; combustion and steam-control instruments; electrical features.

Steam Electric, Toronto. Unit Costs and Performance of Toronto Station. Elec. World, vol. 92, no. 4, July 1928, p. 156, 1 fig. Data on equipment and performance of Toronto station of Ohio River Edison Co. have recently been made available in booklet form; accompanying graph and figures are based on data reported.

Steam, High Pressure. The First Commercial 1,200-Pound Steam Plant in the World, I. E. Moultrop. Eng. Jl. (Montreal), vol. 11, no. 6, June 1928, pp. 357-365, 14 figs. Features of ultra-high-pressure steam-electric generating station of Edison Electric Illuminating Co. of Boston, Mass.; progress in increasing thermal efficiency; steam pressures and temperatures studied; comparison of costs; operating features; equipment of extension.

Steam, Oil Firing. Oil Fuel for Toronto's New Boxboard Plant, D. M. Duncan. Power House (Toronto), vol. 22, no. 1, July 20, 1928, pp. 21-23 and 26-28, 9 figs. Steam generating plant is definite precedent in design of medium-power boiler installation in Canada; air-cooled walls; simple boiler frontage; fuel supplied to boilers is heavy tar oil delivered to burners at pressure of 60 lb. per sq. in. and temperature of 212 deg. fahr.; feedwater treatment; electrical equipment.

Steam, Paper Mills. Modernizing the Mill and Power Plant. Paper Trade Jl., vol. 86, no. 26, June 28, pp. 34, 38 and 40. Illustrates weight of characteristics of high-pressure steam in paper-mill practice by abstract from report made some time ago by Superheater Co. of New York; predominance of water-tube boilers; mean rated capacity of 250 units installed in paper-mill power plants relatively recently being 384 hp.; new boiler plant of Fitchburg Paper Co. fired on pulverized coal; steam regeneration and resuperheating steam accumulator economies.

PRESSES

Report on. Presses. Am. Mach., vol. 69, no. 3, July 19, 1928, pp. 90-92, 13 figs. Semi-annual résumé of presses described in shop equipment news section during first six months of 1928; details of inclinable, pneumatic, embossing, screw, and punch presses are given. For presses in European edition see pp. 135-136.

PRESSURE VESSELS

Welding. Design of Pressure Vessels for Petroleum Industry, T. McL. Jasper. Power, vol. 68, no. 4, July 24, 1928, pp. 164-167, 8 figs. Question of vessel design; strength of various steels at elevated operating temperatures; principal underlying tests described briefly; correct shape of head to develop full strength of cylinder of vessel; paper does not deal with question of theory except so far as it has been used to arrive at what might be considered best shape in design. Abridgment of paper presented before West. Refiners Assn.

PROTECTIVE COATINGS

Testing. Report of Committee D-1 on Preservative Coatings for Structural Materials. Am. Soc. Testing Matls.—Preprint, no. 71, for mtg. June 25, 1928, 53 pp., 7 figs. Reports of sub-committees on linseed oil, on definitions, on accelerated tests for protective coatings, on methods of analysis of paint materials, on varnish, on shellac, on preparation of iron and steel surfaces for painting, on specifications for pigments dry and in oil when marketed in that form, and on method of application of paint by spraying.

PUBLIC BUILDINGS

Mechanical Equipment. Operating Data on Federal Buildings, N. Thompson. Am. Soc. Heat. and Vent. Engrs.—Jl., vol. 34, no. 7, July 1928, pp. 555-564. Author gives certain data concerning operation of mechanical equipment in buildings which are under control of U. S. Treasury Department; repairs; operating supplies; conservation of coal. isolated plants and street service; examples of isolated plant and outside service conditions.

PULP DIGESTERS

Requirements. Steam Consumption in Digesters. Paper Trade Jl., vol. 87, no. 5, Aug. 2, 1928, pp. 54-56. Calculation of steam requirements; amount of heat required for cooking; value of coefficient K; comparison of heat and steam consumption of lagged and unlagged boilers.

PULP GRINDING MACHINES

Control. Pulp-Grinder Control Reduces Paper Costs, A. F. Meyer. Am. Soc. Mech. Engrs.—advance paper for mtg. Aug. 27-30, 1928, 8 pp., 12 figs. Paper describes governor for controlling water-wheel-driven and motor-driven pulp grinders and points out economies effected through such regulation; Meyer governor maintains uniform friction load, and thereby uniform speed, by varying pressure with which wood is pushed against grindstones; also describes master regulator by means of which total kilowatt load on given system is maintained constant; no electrical contacts or relays are used, yet great sensitiveness is secured.

PULP MANUFACTURE

Quality Control. Quality Control in the Sulphite Pulp Industry, A. Lampen. Paper Trade Jl., vol. 87, no. 1, July 5, 1928, pp. 55-61. Uniformity prime requisite; chemical pulp on market is produced by heating raw material under pressure with solutions of certain chemicals; digesters used in modern sulphite mills; pressure, temperature and time; old method; variations in pulp wood; paper requirements. relation to pulp; length of fibers; testing chemical purity of pulp; use of oxidizing agents; rayon pulp; T.A.P.P.I. strength testing of pulp; Lampen mill; hydraulic pressing of sheets.

ROD MILLS. Some Experiments in Processing Pulp in the Rod Mill, G. H. Chidister. Paper Trade Jl., vol. 86, no. 25, June 21, 1928, pp. 51-64, 26 figs. Paper describes attempts made to measure accurately effect of varying conditions of milling and effect of rod mill on various raw materials; development of semi-chemical pulping processes at Forest Products Laboratory involved reduction of partially softened chips into pulp form suitable for making paper; milling experiments; comparison of rod and beater; refining for Kraft wrapping paper; milling tests.

PULP MILLS, SULPHITE

CONTROL. Modernizing the Mill and Power Plant. Paper Trade Jl., vol. 87, no. 2, July 12, 1928, pp. 44, 46 and 48. Instrument control for sulphite-pulp mills; instruments for sulphur-dioxide control; instrument control of tower processes; control of digester operations; instrument control for commercial pulp preparation.

PUMPS, CENTRIFUGAL

AIR LEAKAGE. What Air Leakage Does to a Centrifugal Pump, R. W. Angus and C. V. Armour. Power, vol. 68, no. 4, July 24, 1928, pp. 149-151, 5 figs. Experiments made in hydraulic laboratory of Department of Mechanical Engineering, University of Toronto; 3-in. four-stage Rees pump; curves show method of procedure; experiments bring information forward in marked way.

EFFICIENCY. Methods of Computing Efficiencies of Centrifugal Pumping Machinery, J. L. Hunter. Hydraulic Eng., vol. 4, no. 7, July 1928, pp. 456 and 459. Summation of mathematics used in computing pump efficiencies, some steps of which are sometimes overlooked.

PUMPING STATIONS

PRACTICE. Pumping Station Practice, F. W. Dean. New England Water Works Assn.—Jl., vol. 42, no. 2, June 1928, pp. 109-131. Economy of fuel is given great consideration in pumping plants; pumping engines driven by steam; classes of toilers; reciprocating pumps; results of tests of certain three-crank vertical triple-expansion pumping engines; direct-acting pumps; means of driving centrifugal pumps; condensers.

PUNCHING AND SHEARING MACHINES

REPORT ON. Shearing and Punching Machines. Am. Mach., vol. 69, no. 3, July 1928, pp. 92-93, 7 figs. Semi-annual résumé of shearing and punching machines described in shop equipment news section during first six months of 1928; details of shearing, notching and combination machines are given.

Q

QUARRIES AND QUARRYING

AIR COMPRESSORS, DIESEL. Diesel Driven Compressor Serves Quarry. Power Plant Eng., vol. 32, no. 14, July 15, 1928, pp. 776-777, 2 figs. Cost of compresed air is important item in quarry operation; advantages of Diesel operated compressor that are of peculiar importance in plant of this type; unit characterized by small number of parts; economy of operation; cost of operation per 10-hr. day was $9.40.

R

RADIO APPARATUS ON AIRCRAFT

BIBLIOGRAPHY. Bibliography On Aircraft Radio, C. B. Jolliffe and E. M. Zandonini. Inst. Radio Engrs.—Proc., vol. 16, no. 7, July 1928, pp. 985-999. References on file in Bureau of Standards have been compiled in this bibliography, which is fairly complete on subject up to June 1928.

RADIO RESEARCH STATIONS

EXPERIMENTAL. IXV-IXAN, An Experimental Station with the World as Its Laboratory, G. G. Macintosh. QST Amateur Radio, vol. 12, no. 7, July 1928, pp. 19-22, 6 figs. Some of experimental work conducted formed basis of treatment of antenna problems; station has means and facilities for short-wave radio experimentation under supervision of Electric Engineering Department, Communications Division, of Mass. Inst. of Technology; description of apparatus; arrangement of station and experimental work carried on at South Dartmouth, Mass.

RADIO TELEPHONE

TRANSATLANTIC. Special Joint Meeting with the American Institute of Electrical Engineers (Through the Medium of Transatlantic Wireless Telephony), 16th February, 1928. Instn. Elec. Engrs.—Jl. (Lond.), vol. 66, no. 378, June 1928, pp. 663-666. Brief speeches by T. F. Purves, B. Gherardi, A. Page, F. B. Jewett, J. J. Carty and Oliver Lodge.

RADIO WAVES, SHORT

TRANSMISSION. Radiotelephony by Directed Short Waves and Test Station for Paris-Algeria Communication (La transmission radiotélèphonique par ondes courtes dirigées et la station d'essais de communication Paris-Alger), R. Villem. Revue Générale de l'Electricité (Paris), vol. 23, no. 24, June 16, 1928, pp. 1035-1043, 8 figs. Study of transmitter; stages of amplification, system of modulation and description of installation; use of directive antennas; system of Chireix and Mesny.

RAILROADS

CONSTRUCTION, CANADA. Flin Flon Railway Being Built With Unusual Speed. Eng. News-Rec., vol. 100, no. 26, June 28, 1928, p. 1008. Building of railway from The Pas, in Manitoba, to Flin Flon mining property, distance 90 miles; bonus of $250,000 if line completed and trains running before Dec. 31, 1928; laying ties and rails on frozen ground for first 50 miles, to reach system of lakes navigable for scows and rafts, along shores of which runs final stretch of this line; three gravel pits opened up along first section; ballasting and lifting roadbed pushed in both directions from each of these three points.

CONSTRUCTION, HUDSON BAY. Work on Hudson Bay Railroad Progressing Rapidly. Eng. News-Rec., vol. 101, no. 2, July 12, 1928, pp. 58-59, 2 figs. Character of country; in entire line there will be 6 steel bridges and 72 timber trestles; 19 water stations planned; estimated that full expenditure will be $28,500,000, not including costs of ocean terminal port.

ROADBEDS, CONCRETE. Forty Miles of Concrete Road Bed and Results Obtained, P. Chipman. Central Ry. Club of Buffalo—Official Proc., vol. 36, no. 3, June 1928, pp. 2672-2683 and (discussion) 2684-2693. Account of experiment Pere Marquette is making with concrete roadbed; located between Detroit and Plymouth, Michigan; 1326 ft. long, 10 ft. wide and 21 in. thick; proves whether or not permanent roadbed is practicable; probable that this design can be so improved and simplified that cost will be reduced to $40,000 or $45,000 per mile; experience with test section has brought to light number of ways in which present design can be improved.

TERMINALS, CANADA. Passenger Terminal at Hamilton for Canadian National Railway. Can. Ry. and Mar. World (Toronto), no. 366, Aug. 1928, pp. 474. Plans provide for stone structure of 90 x 180 ft. together with concourse 140 x 50 ft.; station will be operated wholly on through-track principle, and there will be six station tracks, most northerly to have capacity for locomotive and 20 passenger cars; 3 passenger and 3 baggage and express platforms to be 20 ft. wide and others 14 ft. wide.

WATER SUPPLY. Use of Exchange Silicate (Zeolite) Water Softeners in Railroad Practice, G. L. Baxter. Indus. and Eng. Chem., vol. 20, no. 7, July 1928, pp. 755-758. Exchange silicate (zeolite) treatment at certain points on Southern Pacific Lines has been found less expensive than treatment with lime and soda ash and has resulted in more satisfactory operation of stationary and locomotive boilers.

RAILS, STEEL

HEAT TREATMENT. Improvement of Rail Steel (Wege zur Verbesserung des Schienenbaustoffes), H. Viteaux. Stahl u. Eisen (Düsseldorf), vol. 48, no. 28, July 12, 1928, pp. 940-945, 11 figs. Author refers to article by O. Pilz, published in same journal, 1927, p. 1645, in which he deals with different methods of heat treatment of rails and increase of wear resistance; present author points to great improvement in resistance against widening of cracks, which has been accomplished by heat treatment at Neuves-Maison; includes reply by Pilz.

SECTIONS (ROACH). A Proposed New Rail Section. Eng. News-Rec., vol. 100, no. 26, June 28, 1928, p. 1016, 1 fig. New form designed by H. F. Roach with special aim of preventing arching of rail on cooling beds and thus eliminating certain stresses in rails; comparison of Roach and A.R.E.A. rail sections; Roach rail section weighs 133.36 lb. per yard as against 130 lb. per yard of A.R.E.A. section; thickening web in proposed section minimizes internal strains and affords opportunity for better metal in head of rail.

RECTIFIERS

ELECTRIC, MERCURY-ARC. Effect of Street Railway Mercury Arc Rectifiers on Communication Circuits, C. J. Daly. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 7, July 1928, pp. 503-506, 3 figs. Paper describes effects experienced on telephone circuits from two mercury-arc rectifier substations recently installed in Bridgeport, Conn., and shows in table form relative magnitude of interfering effects between rotating equipment and mercury-arc rectifiers as means of energizing street-railway system; method and type of apparatus used to reduce effects experienced from rectifiers are also described.

MERCURY-ARC. Advantages of Mercury Arc Rectifiers, M. L. de Angelis. Elec. Ry. Jl., vol. 2, no. 2, July 14, 1928, pp. 66-67. Advantages of this type of apparatus, from operating point of view; less switching equipment needed; limitations of rectifiers; backfires have now been diminished by means of newly developed devices; telephone interference most serious trouble. Abstract of paper presented before Can. Elec. Ry. Assn.

MERCURY-ARC, RAPID TRANSIT, BERLIN. Mercury Arc Rectifiers for Electric Traction. Elec. News (Toronto), vol. 37, no. 15, Aug. 1, 1928, pp. 41-42 and 48, 4 figs. Thirty-four substations with total installed capacity of 117,000 kw. on Berlin rapid transit railway, largest installation in world; sectionalized distribution under complete supervisory control; installation of rectifier apparatus under arches of elevated urban rapid-transit line; carefully studied decision arrived at by railway company to use mercury-arc rectifiers for electrification of important rapid transit railway system of Berlin.

REFRIGERATION

EVAPORATING SYSTEMS. Evaporating Systems, T. Shipley. Ice and Refrig., vol. 75, no. 1, July 1928, pp. 57-65, 10 figs. Purpose of this paper is to make known data which have been compiled since Nov. 1926, from results which were obtained in operation of ice-making plants in which evaporating systems were based upon heat transformer of 75 B.t.u. per sq. ft. deg. per hr.; and also to call attention to further development of such apparatus. Paper read before Phila. Chapter of Nat. Assn. of Practical Refrig. Engrs.

RESERVOIRS

COVERED. Reservoir Covering Pays Dividends, C. W. Klassen and H. F. Ferguson. Mun. News, vol. 74, no. 5, May 1928, pp. 137-138, 3 figs. Experiences of Edwardsville Water Co., Edwardsville, Ill.; conditions before reservoir was covered; total capitalized cost comparison; analyses before and after covering.

ROADS

ASPHALT. Asphalt in the Paving Industry, L. M. Law. Louisiana Eng. Soc.—Proc., vol. 14, no. 2, Apr. 1928, pp. 77-93 and (discussion) 93-103. Endeavors to show what asphalt is; describes briefly its primitive uses and its modern applications in paving industry; early uses of asphalt; kinds of asphalt.

CONCRETE CONSTRUCTION, QUEBEC. Concrete Road Construction in Quebec. Can. Engr. (Toronto), vol. 55, no. 4, July 24, 1928, pp. 168-169, 8 figs. Construction of 10.64 mi. of concrete road from St. John to Rouses Point; central mixing plant installed at St. Blaise; handling concrete on long hauls; tests show high quality concrete. Abstracted from Mun. Improvements.

CONCRETE, FIELD CONTROL. Field Control of Pavement Concrete, H. S. Mattimore. Crushed Stone Jl., vol. 4, no. 5, June 1928, pp. 1-3 and 5. Concrete quality; materials; material inspection; proportioning; placing; finishing; curing; tests on finished concrete. Presented before 14th annual Highway Conference, University of Mich.

CONCRETE, RESEARCH. Review of Research, Experiment and Practice, H. C. Badder. Roads and Road Constr. (Lond.), vol. 6, no. 65, May 1, 1928, pp. 140-141. Effects of vibration on concrete; recent tests of vibrolithic concrete; methods of fabrication; if method of applying vibration to large surfaces of concrete is used, it will mean that concrete will be denser, more even in quality than tired labor can make it, and also cost less per yard; low-cost road surfaces.

CONSTRUCTION, CALCIUM CHLORIDE. The Use of Calcium Chloride in Highway Construction. Contract Rec. (Toronto), vol. 42, no. 24, June 13, 1928, pp. 644-645. Calcium chloride has replaced old method of curing with wetted dirt or straw; speeds up setting; as dust preventive; cost of treating 16-ft. graveled road surface.

CONSTRUCTION, BRITISH COLUMBIA. The Cariboo Road, Its Origin, History and Re-construction, P. Philip. Eng. Jl. (Montreal), vol. 11, no. 7, July 1928, pp. 399-409, 10 figs. Introductory and historical; construction; Alexandra suspension bridge; Boothroyd-Lytton section; signing and patrolling of highway; reconstruction of 100 mi. of Cariboo road, when completed in fall of 1928, will have cost $2,500,000, average of $25,000 per mile; analysis of cost and classified distribution of Alexandra Bridge.

CONSTRUCTION, CANADA. Road Construction in the Fraser Canyon, P. Philip. Contract Rec. (Toronto), vol. 42, no. 31, Aug. 1, 1928, pp. 793-799, 5 figs. Rebuilding of famous Cariboo Road in British Columbia from Hope to Prince George, distance of 432 mi., involved tremendous difficulties; details of construction methods and costs; location; Alexandra suspension bridge; construction of two tunnels; large bridges.

CONSTRUCTION, SASKATCHEWAN. Highway Construction in Saskatchewan. Can. Engr. (Toronto), vol. 55, no. 3, July 17, 1928, pp. 139-141, 13 figs. Methods of building roads in province; width of main market roads; trench and featheredge construction; spreading gravel; supplies of gravel are limited; cost per mile of gravel road.

DESIGN. Forty Years' Progress in Road Design and Construction, A. W. Cross. Surveyor (Lond.), vol. 73, no. 1898, June 8, 1928, pp. 601-603. Foundations; provision for underground services; curb drains; surfacings compared; tarred macadam; asphalts; wood blocks; granite and other stone sett pavements; concrete surfaces; blue brick paving; theory and practices. From paper entitled "Roads, 1888-1928," presented before West-Midland District of Instn. of Mun. & County Engrs.

MAINTENANCE AND REPAIR. Sand-Clay and Earth Roads, H. R. Mackenzie. Mun. News, vol. 74, no. 6, June 1928, p. 169. Describes construction and maintenance methods in Saskatchewan; earth roads, crowns, slopes and alignment of earth roads; costs. Paper presented before Can. Good Roads Assn.

MAINTENANCE AND REPAIR, QUEBEC. Quebec System of Provincial Highways. Can. Engr. (Toronto), vol. 54, no. 25, June 19, 1928, pp. 615-621, 4 figs. Maintenance in 1927; dust prevention; damage due to temperature; permanent resurfacing; road signs; tree planting; main-highways system; secondary highways. Abstract of report by Department of Roads Dealing with Principal Features of Provincial Highway System and Progress on Construction and Maintenance.

MOUNTAIN CONSTRUCTION. Transmountain Highway Construction in Glacier National Park, W. G. Peters. Contractors and Engr. Monthly, vol. 16, no. 5, May 1928, pp. 321-327, 19 figs. Length of project 12.4 mi.; goes from elevation 3,537 at beginning to 6,650 at Continental Divide on Logan Pass; excavation; snow fall; rubble masonry; surfacing; tunneling; work accomplished; personnel and equipment.

STONE, MAINTENANCE AND REPAIR. Secondary Road Maintenance, R. B. F. Chisholm. Can. Engr. (Toronto), vol. 55, no. 2, July 10, 1928, p. 128. Maintenance of stone roads discussed; hard stone for roads; laying stone on road; keep road smooth; cementing value of stone. Paper read at Annual Road School, Purdue Univ.

ROAD MATERIALS

BITUMINOUS, ALBERTA. Bituminous Sands for Road Surfaces, S. C. Ells. Engineering (Lond.), vol. 126, no. 3261, July 13, 1928, pp. 55-56. Review of report on results of investigations by Canadian Department of Mines of properties and practical application of enormous deposits of bituminous sands of Alberta, which comprise largest occurrence of solid asphaltic material known to exist.

ROLLING MILLS

BEARINGS, ANTI-FRICTION. Anti-Friction Bearings, for Roll Necks, J. H. van Campen. Iron and Steel World, vol. 2, no. 7, July 1928, pp. 339-341, 4 figs. Selection and care of bearings; success depends upon three factors: selection of proper type and size of bearing; proper mounting and lubrication. Abstract of paper presented at Assn. Iron and Steel Elec. Engrs.

ELECTRIC DRIVE. Individual Roller Table Drives, J. C. Dobelbower. Iron Age, vol. 122, no. 2, July 12, 1928, p. 84. Improvement in control obtained with individual roller-table drives, is compared with inflexibility of group drives; break-down of one roller does not cripple train. Abstract of address presented before Assn. Iron and Steel Elec. Engrs.

Electrically-Driven Rolling Mills and Wire-Drawing Plant at Bromford Mills, Erdington. Iron and Coal Trades Rev. (Lond.), vol. 116, no. 3146, June 15, 1928, p. 895, 4 figs. partly on p. 896. Plant includes producer gas-fired steel furnaces, electric drive for rolling mills and novel features in wire drawing; machines driven by variable-speed motors; capacity increased, as the finer the wire, the faster may machine be operated; automatic stop when machine jams.

RUBBER

BRITTLENESS TESTING. A Device for Measuring the Brittleness of Rubber and Gutta Percha Compounds, G. T. Kohman and R. L. Peek, Jr. Instruments, vol. 1, no. 6, June 1928, pp. 275-279, 2 figs. Description of apparatus and methods used to determine brittleness by bending of strip and determination of highest temperature at which strip fractures.

S

SAND, BITUMINOUS

CANADA. The Bituminous Sand of Alberta, H. Norbury. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 27, July 6, 1928, pp. 543-545, 3 figs. Retardation of development ascribed to market conditions as to petroleum and asphalt; probably not exploited until change occurs in oil industry; practically all technical problems overcome; one process described; productive area estimated 15,000 sq. mi.; mining process devised involves introduction of superheated steam through pipes similar to Frasch sulphur process.

SAWS, WOODWORKING

PATTERNMAKING. Circular Saws in the Pattern Shop. Can. Foundrymen (Toronto), vol. 19, no. 6, June 1928, pp. 10-12, 10 figs. Setting saw teeth; for fine work; sharp saws essential; packing of circular saws; some representative circular-saw jobs.

SEWAGE CHLORINATION

IMPROVES OPERATION. Chlorination of Sewerage Greatly Improves Operation of Disposal Plants, A. L. Frick. Hydraulic Eng., vol. 4, no. 6, June 1928, p. 402. Among beneficial results are elimination of odors; control of foaming in tanks; reduction of fly nuisance and clogging of filters; disinfection; reduction of oxygen demand.

SEWAGE DISPOSAL

ACTIVATED SLUDGE. Activated Sludge Disposal Plants at Charlotte, N.C., E. G. McConnell. Pub. Works, vol. 59, no. 7, July 1928, pp. 268-274, 16 figs. One dewaters sludge by means of vacuum filters, other digests it in separate digestion tanks and utilizes resulting gas; bottom-dump screen chambers, sludge-removal details in sedimentation tank; general type of construction and appointments of entire plant are of radical departure; preliminary operating results; construction and operating costs.

CANADA. Treatment of Waste Water (Le traitment des eaux usées), T. J. Lafreniere. Can. Chem. and Met. (Toronto), vol. 12, no. 7, July 1928, pp. 196-197. Classification of treatment methods of sewage divided into two groups; sanitary control in Quebec province.

KITCHENER, ONT. Kitchener Sewage Disposal Problem. Can. Engr. (Toronto), vol. 54, no. 25, June 19, 1928, p. 623. Report by Gore, Nasmith and Storrie on sewage-treatment situation; site at Schneider's Creek proposed for plant; sewage very strong due to tannery wastes; aeration tanks with preliminary and secondary sedimentation tanks and sludge-digestion tanks proposed; city of Kitchener, Ont.

SEWAGE DISPOSAL PLANTS

SLUDGE TREATMENT. Beddington Sewage Works, Croydon: Activated Sludge Treatment, F. E. Pipe. Surveyor (Lond.), vol. 73, no. 1900, June 22, 1928, pp. 655-656, 2 figs. Present works and process; requirements to be fulfilled by new plant; completed design is departure from usual orthodox plan, and may be described as partial purification plant in stages; operation of plant designed to treat 1,000,000 gal. per day; estimate for whole of work was 12,900 pounds sterling; further works are contemplated. Extract from paper presented before Instn. Mun. & County Engrs.

SHAFTING

CONSIDERATIONS. Considerations in Selection of Shafting. Can. Machy. (Toronto), vol. 39, no. 12, June 14, 1928, pp. 31-32 and 67-68. Cold-drawn steel shafting almost universally used for power-transmission purposes; standard shaft diameters and weights; horsepower capacities of shafting; forged steel and alloy-steel shafting for exceptional conditions; shaft keys and keyways.

SHEET STEEL

HEAT TREATMENT. Effect of Heat Treatment on the Properties of Chromium-Molybdenum Sheet Steel, F. T. Sisco and D. M. Warner. Am. Soc. Steel Treating—Trans., vol. 14, no. 2, Aug. 1928, pp. 177-192, 18 figs. Test results on chromium-molybdenum sheet of composition suitable for use in aircraft construction; effects of heat treatment on physical properties and structure are shown for sheet of several gauges; for best combination of strength and ductility sheet should be normalized, hardened by quenching in water from 1,600 deg. fahr., and tempered between 1,000 and 1,200 deg.; elongation after heat treatment decreases materially as gauge becomes thinner.

SHIP PROPULSION

ELECTRIC. Annual Report of Committee on Applications to Marine Works. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 7, July 1928, p. 524. Outstanding electrical developments in marine field during past year are: construction of five 3,000-ship-hp. turbine-electric drive U. S. Coast Guard cutters; placing in service of S. S. California 18,000-ship-hp. twin-screw turbine-electric drive passenger ship; conversion by U. S. Shipping Board of three of their largest cargo vessels to Diesel-electric drive; there have been number of smaller craft equipped with electric propulsion.

SHIPS

AUXILIARY EQUIPMENT, GREAT LAKES. Install Modern Machinery on Lake Vessels to Reduce Operating Costs, W. E. Thau. Mar. Rev., vol. 58, no. 6, June 1928, pp. 28-33, 7 figs. Author discusses application of modern propelling and engine-room auxiliary machinery to Great Lakes vessels; three principal types of vessels considered; auxiliary power from main unit; freighters for canals and rivers; Diesel-electric drive advantages; standard lake ore carriers; greater thermal efficiency; saving with electric auxiliaries. Paper before Detroit Eng. Soc.

PASSENGER. Canadian National Steamships for Canada-West Indies Service. Can. Ry. and Mar. World (Toronto), no. 366, Aug. 1928, pp. 507-509, 1 fig. Length overall 438 ft.; gross tonnage 7,650 tons; service speed 14 knots; cargo spaces; passenger accommodation; propelling machinery will consist of 2 sets of Parsons combined single-reduction steam turbines consisting of high-pressure and low-pressure turbine coupled to main shaft by single-reduction gear; steam working pressure of 220 lb. per sq. in. in 4-single-ended Scotch boilers each 16½ ft. diam., 12 ft. long; Howden system of forced draft with oil fuel.

Canadian Pacific Expansion. Shipbldg. and Shipg. Rec. (Lond.), vol. 32, no. 2, July 12, 1928, pp. 43-44, 2 figs. Second of "Duchess" class liners, Duchess of Atholl; substantially same as Duchess of Bedford; length 600 ft.; most economical steamships afloat today, having consumption of under 0.7 lb. of oil per shaft horse power per hour; two sets of single-reduction geared turbines with Yarrow water-tube boilers in combination with Scotch cylindrical boilers.

PASSENGER, TURBO-ELECTRIC VS. DIESEL. Turbo-Electric vs. Diesel Drive for Large Passenger Ships. Elec. Rev. (Lond.), vol. 102, no. 2637, June 8, 1928, p. 1022. Figures as to cost of operation of large passenger ship equipped with turbo-electric drive and similar vessel driven by direct-coupled Diesel engines; vessels in question are new liner California of 30,250 tons displacement and Swedish-American liner Gripsholm of 23,600 tons displacement.

SHOVELS

ELECTRIC. Largest Shovel Ever Built. Pit and Quarry, vol. 16, no. 6, June 20, 1928, p. 95, 1 fig. Shovel carries 12 cu. yd. dipper on 90-ft. boom and 60-ft. dipper handle; operated electrically from power lines of public-utility company serving that territory; 750-hp. motor drives motor-generator set for furnishing power to various motions.

SILK, ARTIFICIAL

UTILIZATION, WOOLENS. The Use of Spun Rayon in Woolens, J. W. Cox, Jr. Black and White, vol. 1, no. 6, July 1928, pp. 3-8, 5 figs. Brief outline of development of spun rayon yarns, and two types of yarns most used for woolens, and woolen mixes, is given; two methods of manufacture; preparation and processes.

SILVER MINING GEOLOGY

BRITISH COLUMBIA. Silver Mineralization at Beaverdell, B.C., H. E. McKinstry. Economic Geology, vol. 23, no. 4, June-July 1928, pp. 434-441. Mines located on Wallace mountain, in Boundary district of southern British Columbia; general geology; ore deposits; primary and secondary minerals; supergene processes; wall rock alteration; origin of ore attributed to Beaverdell batholith causing fractures by its intrusion and cooling, after which ore-bearing solutions entered fractures and deposited minerals; after such crystallization, faulting took place; solutions, perhaps of changed compositions, then deposited other minerals.

SNOW REMOVAL

STREETS, PARIS. Snow Removal from the Tracks of the Paris Regional Transport System (Le déblaiement des neiges sur les voies du reseau des transports en commun de la région Parisienne), A. Roubaud. Industrie des Voies Ferrées et des Transports Automobiles (Paris), vol. 22, no. 258, June 1928, pp. 161-169, 10 figs. Treats of electric sweepers; construction and operation; automobile and towed sweepers; organization for snow removal and execution of work.

STREET RAILROADS. Cars Revamped Into Snow Fighting Equipment. Elec. Ry. Jl., vol. 72, no. 2, July 14, 1928, pp. 49-50, 4 figs. Gary Railways, Gary, Ind., remodeled six of its retired passenger cars for snow fighting at total expenditure of approximately $22,000; shear plows put on two cars are operated by air from inside car; comparison of costs fighting storm of Feb. 17.

STREETS, TORONTO. Snow Removal at Toronto, G. W. Dies. Mun. News, vol. 74, no. 5, May 1928, p. 136. Toronto covers area of 32.32 sq. mi. with 562 mi. of streets, 147 mi. of lanes; organization principal factor; clearing car line streets; disposal of snow. Paper presented before Inst. Assn. of Street Sanitation Officials.

SPECIFICATIONS

EMPLOYMENT OF. Employment of Specifications, E. Grossman. Can. Engr. (Toronto), vol. 55, no. 2, July 10, 1928, p. 126. Necessary features of specifications described; purpose of specifications; methods of writing specifications; specifications should be terse, clear, and complete. From Boston Soc. Civil Engrs.—Jl.

SPRINGS, HELICAL

DESIGN. Springs From the Designer's Point of View, H. Barnes. Wire, vol. 3, no. 7, July 1928, pp. 227-228 and 244-246, 2 figs. Prejudice and lack of reliable data on performance records hinder wider application of coal springs; reliability of properly designed and heat-treated springs is established in variety of materials; new data for designers; springs properly classified as to duty with reference to "long-life factor."

STAINLESS STEEL

Chromium. Chromium Steels and Stainless Iron. Machy. (Lond.), vol. 32, no. 820, June 28, 1928, pp. 418-419. Properties conveyed by various amounts of chromium in steel and uses of such steels; chromium in steel is hardening agent but does not confer marked hardness in absence of carbon; as chromium content is raised steel becomes progressively stronger and harder and loses ductility to some extent, and corrosion-resisting properties increase; properties of special class of stainless steel known as stainless iron made with carbon content not exceeding 0.1 per cent.

Welding. The Welding of Stainless Steel. Metal Industry (Lond.), vol. 32, no. 26, June 29, 1928, p. 640.

STEAM ENGINES

Extraction. Why Bled Steam for Processing and Heating Saves Fuel, C. H. S. Tupholme. Power, vol. 68, no. 2, July 10, 1928, pp. 52-55, 4 figs. This article shows in simple way the advantage of installing back pressure or extraction engines in plants requiring both power and steam for manufacturing and heating processes; economy of back-pressure engine.

Lubrication. Internal Lubrication of Stationary Steam Engines. Mech. World (Manchester), vol. 83, no. 2163, June 15, 1928, pp. 438-439, 5 figs. Object of internal lubrication in steam engine; considerations in selecting cylinder oil; methods of lubricant application; prevention of carbon deposits.

Testing. The Practical Value of the Report of the Heat Engine and Boiler Trials Committee, G. J. Wells. Inst. Marine Engrs.—Trans. (Lond.), vol. 40, June 1928, pp. 247-261, 11 figs. This report marks another important step in standardizing methods of conducting tests for determination of efficiency of heat engines; Heat Engines Committee have ascertained standards of comparison and framed codes by means of which all necessary measurements may be made; few remarks upon standards of comparison.

STEAM HEATING

One-Pipe Systems. How to Overcome Troubles Found in One-Pipe Heating Systems, C. P. Benneche. Power, vol. 67, no. 25, June 19, 1928, pp. 1098-1099, 4 figs. System in which condensation flows back from radiator through same pipe that carries steam to radiator, is subject to various troubles; author enumerates more common of these troubles and offers simple remedies that have proved successful in practice.

STEAM PIPE LINES

Underground. Underground Steam Line at California, Ohio, W. S. McLeish. Power Plant Eng., vol. 32, no. 12, June 15, 1928, pp. 688-690, 3 figs. From river pumping station, at California, Ohio, near Cincinnati, 2,570-ft. line takes steam to filtration plant and eliminates boiler room in latter.

STEAM TURBINES

Blades, Calculation. Detailed Numerical Calculation of Multiple-Action Blading Calcul numérique détaillé d'un ailettage multiple a action), C. Colombi. Technique Moderne (Paris), vol. 20, no. 14, July 15, 1928, pp. 473-483, 10 figs. This article treats of some examples of application of method of calculation given in preceding article; it establishes for different forms of construction all elements of multiple-action blading and shows how to make exact calculations rapidly.

Design. The General Trend of Modern Development in Steam-Turbine Practice, H. L. Guy. Iron and Coal Trades Rev. (Lond.), vol. 116, no. 3146, June 15, 1928, pp. 904-905; and Engineer (Lond.), vol. 145, no. 3780, June 22, 1928, pp. 678-679. Tendency towards higher steam pressures; thermal advantages; steps in thermal efficiency; little tendency towards standardization in capacity; cost of developing particular size unit is considerable; multiplication of such charges represents serious loss. Paper read before Instn. Civil Engrs.

STEEL

Corrosion Testing. Service Is Best Test of Steel, H. M. Boylston. Iron Age, vol. 121, no. 24, June 14, 1928, pp. 1665-1668, 5 figs. Accelerated and salt-spray tests not conclusive; many acid tests for corrosion are misleading; temperature time, strength of solution, agitation and other variables which discredit tests; views of testing engineers; service only authoritative guide.

Temperature Effects. Some Effects of Heat on the Physical Properties of Steel, J. L. Cox. Am. Soc. Steel Treating—Trans., vol. 14, no. 2, Aug. 1928, pp. 225-238, 4 figs. Author describes phenomena occurring in tensile tests of steel with rising temperature, together with appearance and effects of creep; shows impossibility of making short-time creep tests and necessity for accurate knowledge of proportional limit if long-time tests cannot be made; application to design of experimental results; manufacturing methods for producing weldless pressure vessels for high-temperature work.

STEEL CASTINGS

Heat Treatment. Heat Treatment of Forgings and Castings for Selective Directional Adjustment of Residual Stresses, W. J. Merten. Am. Soc. Steel Treating—Trans., vol. 14, no. 2, Aug. 1928, pp. 193-198, 3 figs. Methods of selective abstraction of heat or selective cooling by directed quenching for producing favourable directional internal or residual stresses in forged disks or cast parts of rotating bodies; directing of coolant upon middle of rotating hollow bored or forged disk by properly placed spraying nozzles or by enclosing red-hot disk in container, immersing same into coolant and simultaneously opening ports and rotating disks.

STEEL PLATES

Shipbuilding. Low-Manganese Plates for Shipbuilding Save 10 Per Cent, W. J. Berry. Iron Age, vol. 121, no. 26, June 28, 1928, pp. 1813-1814. Lloyd's register approves D-quality high-tensile steel used by British Navy for all important hull members; 1.25 per cent manganese steel used for high strength; rapid method of determining proportional limit; D-quality steel fabricated by ordinary methods and equipment.

STREET LIGHTING

Financing. Financing Street Lighting, L. A. S. Wood. Elec. World, vol. 91, no. 24, June 16, 1928, p. 1302. Author claims that it is desirable for central station to provide two plans for financing street-lighting installations; one for lighting units with overhead construction and other for lighting units with underground construction. Abstract of paper read at Missouri Assn. Pub. Utilities.

STREET RAILROADS

Construction, British Columbia. Immense Construction Programme of the B.C. Electric Railway Co. Contract Rec. (Toronto), vol. 42, no. 25, June 20, 1928, pp. 663-666, 5 figs. This year's building activities of Company include power developments, erection of transmission lines and substations, additions to gas plant; construction of townsite and laying of street-car tracks; Bridge River development; townsite at Bridge River; several substations; activities of gas department; track rehabilitation.

Management. Are We Merely Running Cars? E. J. McIllraith. Elec. Ry. Jl., vol. 71, no. 25, June 23, 1928, pp. 1031-1033. Determination of ultimate or best development for public transportation; regulation of traffic requires co-operation; fast operation appreciated; comfortable and attractive cars are needed; importance of scheduling; training of operating force; railway management's obligation in city planning.

STREET TRAFFIC CONTROL

More Efficient Use. Making More Efficient Use of Existing Streets, J. A. Miller, Jr. Elec. Ry. Jl., vol. 71, no. 25, June 23, 1928, pp. 1038-1039. Existing roadways are ample to take care of present traffic if operation is properly regulated; entire roadway needed for moving traffic; no-parking restriction in loop district of Chicago; parking is largest single factor in obstructing free movement of vehicles in streets; traffic should move faster; co-ordinated system is most efficient and synchronous system is least satisfactory. Abstract of paper presented at N. Y. State Elec. Ry. Assn.

Traffic Regulation, G. Kelsey. Sci. Am., vol. 139, no. 1, July 1928, pp. 46-48, 10 figs. Analysis of accident causes, and suggestions for correction; traffic beacons and safety zones can be made of great value when properly placed.

STREETS

Maintenance and Repair. Patching Streets in West Palm Beach, O. F. Reynaud. Crushed Stone Jl., vol. 4, no. 5, June 1928, pp. 4-5. Unique method of patching used at West Palm Beach, Fla., presents very economical programme; materials and mixing; storage of finished mixture; laying and care of patch; labour and costs.

STRUCTURAL STEEL

Shipbuilding. Steel for Shipbuilding, W. J. Berry. Engineering (Lond.), vol. 125, no. 3256, June 8, 1928, pp. 720-721, and (discussion) 700-701. Excepting high-tensile steels referred to, mild steel has held almost undisputed sway for last 40 years for shipbuilding purposes; standard tests adopted by Admiralty and Lloyd's for mild steel have remained unaltered for that period; in case of commercial structural steels, proportional range of elasticity is extremely variable; method stipulated for recording proportional limit of elasticity. Abstract of paper read before Instn. Civil Engrs. See also Engineer (Lond.), vol. 145, no. 3778, June 8, 1928, pp. 626-627.

Welding. A List of Welded Structures, F. P. McKibben. Gen. Elec. Rev., vol. 31, no. 7, July 1928, pp. 382-384. List of steel structures in which parts are connected by welds shows that this process is no longer in experimental stage, but is means of fabrication so extensively used as to warrant attention of all structural engineers and architects; bridges, buildings, cars, etc.; cranes, frames and towers, ships, tanks, etc.

Welding, Testing. Canadians Test Welded Structural Steel Members, O. Gillespie. Can. Machy. (Toronto), vol. 39, no. 12, June 14, 1928, pp. 37-38 and 40. Progress of welding art in its relation to fabrication and erection of structural steel described; investigation of structural welding in which laboratories of University of Toronto co-operated extensively; predominating idea is to establish unit working stresses for use of designing engineer that will be safe and not wasteful as to material or labour.

SUGAR, BEET

Effluent Treatment. Beet Sugar Effluent Treatment. Can. Engr. (Toronto), vol. 55, no. 4, July 24, 1928, p. 162. Commission of Enquiry reports favorably regarding desiccation process; efficient screening and filtration; information regarding manufacture of beet sugar and treatment of effluent from such plants is contained in report issued by British Ministry of Agriculture; process effluent of diffusion waste and pulp-press water from diffusion factory of 1,000 tons day is about 450,000 gal. day.

SUPERHEATERS

Steam Dissociation. Dissociation of Steam in Superheaters. Power Plant Eng., vol. 32, no. 13, July 1, 1928, pp. 737-738, 1 fig. Because of lack of definite information and existence of conflicting theories, N.E.L.A. recently canvassed their entire membership for information; reports of tests to determine moisture content of steam show that determination of proper size and location of orifice offers most serious difficulty in this connection; although results vary considerably, attention is called to fact that moisture is indicated in every case and in considerable quantity.

SURGE TANKS

Differential. Johnson Differential Surge Tank at Allens Falls, N.Y. Water Tower, vol. 14, no. 2, July 1928, p. 7, 2 figs. Description of 22-ft. diam. by 96-ft. high surge tank; located at lower end of pipe line and on top of hill some 900 ft. upstream from and 150 ft. above power house.

SURVEYING

Levelling. A New Type of Levelling and Stadia Staff. Engineer (Lond.), vol. 145, no. 3779, June 15, 1928, p. 657, 2 figs. New type has been put on market by Cooke, Troughton and Simms, and is made in accordance with patent of A. E. Gayer; it differs from Sopwith staff in two main features; it is folding instead of being telescopic and is graduated on entirely different system.

T

TELEPHONE EQUIPMENT

Characteristics. Sensitivity Characteristics of a Low-Frequency Bridge Network For Locating Opens in Telephone Circuits, P. G. Edwards and H. W. Herrington. Bell Telephone Laboratories—Reprint, no. B-321, June 1928, 19 pp., 20 figs. Problem of locating opens in telephone cable conductors involves determination of impedances; study has been made of degree of accuracy and sensitivity obtainable in impedance measurements with different frequencies of supply voltage; mathematical and experimental analysis of sensitivity of impedance measurements in cable fault location by means of de Sauty bridge.

Humidity Tests. How the Weather Conditions Are Reproduced Accurately in Bell Telephone Laboratories, R. W. King. Telegraph and Telephone Age, vol. 46, no. 13, July 1, 1928, pp. 304 and 306, 2 figs. Bell Telephone Laboratories in New York City have specially constructed humidity rooms and chambers in which weather conditions ranging from sultriest of summer days to rigors of winter can be produced and maintained over long periods of time; rooms are large enough to permit testing of large assemblies of apparatus under actual operating conditions.

Poles, Setting. Erection of Poles with Dynamite, A. P. Vangelder. Telephony, vol. 94, no. 23, June 9, 1928, pp. 24-25, 7 figs. Use of dynamite in erecting poles in quicksand and swamps; method adopted by Florida Co. of placing pole; overcharge; blast clears hole and pole settles in; procedure was evolved by foreman of Southern Bell Telephone and Telegraph Co. in Florida.

TELEPHONE SWITCHBOARDS

Non-Multiple. A New Non-Multiple P.B.X., V. I. Cruser. Bell Laboratories Rec., vol. 6, no. 5, July 1928, pp. 363-365, 4 figs. 551-type P.B.X. was designed to improve maintenance conditions as well as to reduce cost of manufacture; in new board, stripmounted jacks and lamps are used for station lines; framework for new switchboard is made up of minimum number of parts.

TELEPHONE SYSTEMS

CARRIER. A Short-Haul Carrier System, H. S. Black. Bell Laboratories Rec., vol. 6, no. 5, July 1928, pp. 353-358, 4 figs. Requirements for proposed system as formulated by engineers of American Telephone and Telegraph Co.; system which met these requirements was developed and tested in laboratories; outstanding feature of Type D-1 system.

TELEVISION

ELABORATE APPARATUS. Television, R. W. King. Can. Ry. Club (Montreal)—Proc., vol. 27, no. 4, Apr. 1928, pp. 20-27. Elaborate apparatus is necessary to give convincing and complete demonstration; apparatus illustrative of electrical features of television demonstrated; few works on subject of synchronism.

What Can We See By Radio? R. P. Clarkson. Radio Broadcast, vol. 13, no. 4, August 1928, pp. 185-187, 5 figs. Heart of all present television devices is Nipkow disk which dates back to 1884; technical details are all that distinguish one apparatus from another; so far as reception is concerned, any receiver with sufficient amplication and power output can be used; for present, however, there is legal limit of plus and minus 5,000 cycles for width of sidebands and this limit will not be exceeded; consideration of what is to be sent and what can be seen through these whirling disks.

TIN PLATE

THIN AS PAPER. Tin Plate Thin as Paper. Iron and Steel of Canada (Gardenvale, Que.), vol. 11, no. 7, July 1928, pp. 213-214. Thin, almost like tinfoil or heavy grade of paper, 35-lb. or 48-gauge tinplate is being produced at Farrell and Pennsylvania works of American Sheet and Tin Plate Co.; marked degree of success attained in keeping material practically free from blemishes; field of application thus far limited; production and handling costs high.

TOOL STEEL

ALLOYING ELEMENTS. Tool Steels. Black and White, vol. 1, no. 3, Mar. 1928, pp. 22, 27-31. General effect of alloying elements; nickel; nickel steels with nickel contents under 1 per cent; chromium; action of chromium in steel; vanadium; tungsten; molybdenum; manganese; silicon used in practically all commercial steels as deoxidizer.

Tool Steels, Their Characteristics and Application, A. H. Kingsbury. Can. Machy. (Toronto), vol. 39, no. 13, June 28, 1928, pp. 114-118. Comparison of methods employed in tool-steel industry of years ago with those of present day; essentials to quality; metallurgical laboratory; no inspection positive; normalcy of tool steels; classifications; constituent cementite.

TOOLS

BENDING AND FORMING. Bending and Forming Tools, W. Richards. Mech. World (Manchester), vol. 83, no. 2164, June 22, 1928, pp. 450-451, 2 figs. Shearing and forming operation upon blanked component described in connection with manufacture of typewriter key lever.

GRINDING. Grinding Roll Turning Tools, R. H. Cannon. Iron Trades Rev., vol. 83, no. 2, July 19, 1928, pp. 135 and 137, 3 figs. Grinding of roll-turning tools for steel mills explained with details of wheels and special machine developed for purpose.

TRANSFORMER OIL

SLUDGE PREVENTION. Transformer Oils. World Power (Lond.), vol. 10, no. 55, July 1928, pp. 28-29. Sludge prevention by use of anti-oxidants; investigations by British Electrical and Allied Industries Research Assn. show that certain products, called anti-oxidants, which possess property of retarding oxidation, can be used to prevent formation of sludge; water and acid in insulating oils; they can also be used for retarding oxidation of cable compounds and rubber.

TUBES, STEEL, SEAMLESS

MANUFACTURE. Piercing Billets for Making Tubes, R. C. Stiefel and G. A. Pugh. Iron and Steel of Canada (Gardenvale, Que.), vol. 11, no. 7, July 1928, pp. 199-203, 5 figs. Pilger and plug processes are compared; typical modern plug-mill unit; power in piercing should be reduced to minimum and more power spent in bar mill to produce billets of smaller diameter; expanding mill for larger tubes; wide range in sizes from few sizes of billets advocated; better steel needed; ingots cast for piercing. From paper presented at Am. Soc. Mech. Engrs. See also Metal Industry (Lond.), vol. 33, nos. 2 and 3, July 23 and 30, 1928, pp. 33-38 and 59-61, 6 figs.

TUNNELING

CROSS-SECTION MEASURING. Checking Tunnel Size by Measurement From Wire Base Lines, L. T. Sogard. Eng. News-Rec., vol. 101, no. 2, July 12, 1928, p. 69, 2 figs. Construction of Salt Creek intercepting sewer, Contract No. 2, of Sanitary District of Chicago, involved driving 6,600-ft. through solid limestone for 7 x 7 ft. gothic-arch type section; shows how rods and wires were set up for checking cross-section of tunnel.

TUNNELS

CONSTRUCTION. Cascade Tunnel Construction Sets New Engineering Records, J. C. Baxter. Eng. World, vol. 33, no. 1, July 1928, pp. 6-8, 8 figs. Railroad tunnel in State of Washington is planned and operated from three different bases through temporary tunnel driven parallel to axis of main tunnel at distance of about 60 ft.; most modern up-to-minute equipment used throughout; some world's records which have been established during construction of this tunnel.

TURBO-ALTERNATORS

INSULATION. Improvements in Insulation for High-Voltage A-C. Generators, C. F. Hill. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 7, July 1928, pp. 492-496, 10 figs. Discussion is given of insulation problem in relation to increased size, rating, and voltages of turbo-alternators, and results of experimental studies showing possibilities of improving insulation to take care of such increases; mention is made of effects of high-voltage testing and use of hydrogen on insulation problem; explanation of device for elimination of corona formed around armature coils.

V

VACUUM TUBES

CATHODE, INDIRECT HEATING. The Use of Alternating Current for Heating Valve Filaments, C. W. Oatley. Experimental Wireless, vol. 5, no. 58, July 1928, pp. 380-384, 1 fig. Variation of filament temperature; numerical data; refer to thoriated tungsten filament; variation of effective grid a potential; superiority of indirectly heated cathode valves over ordinary valves in matter of mutual conductance is chiefly due to much greater filament power consumption of former.

FOUR-ELECTRODE. Detection With the Four-Electrode Tube, J. R. Nelson. Inst. Radio Engrs.—Proc., vol. 16, no. 6, June 1928, pp. 822-839, 9 figs. Mathematical analysis of plate rectification; investigation of various applications of four-element tube of screen-grid type in field of broadcast reception.

SCREENED-GRID. The Screen-Grid Tube, N. H. Williams. Inst. Radio Engrs.—Proc., vol. 16, no. 6, June 1928, pp. 840-843. In shielded grid tube feed-back is reduced to negligible amount and current through tube is very nearly independent of plate voltage over working range.

THERMIONIC. Continuous Reading of Varying Potentials by Means of Thermionic Values, D. T. Harris. Sci. Instruments—Jl., vol. 5, no. 5, May 1928, pp. 161-166, 9 figs. Assembly of apparatus, with steady zero reading, primarily designed for following changes in bio-electric potential differences, is described and illustrated.

THYRATION. The Direct-Current Transformer Utilizing Thyration Tubes, D. C. Prince. Gen. Elec. Rev., vol. 31, no. 7, July 1928, pp. 347-350, 9 figs. Research by several workers has been undertaken in order to produce and utilize tubes without incurring excessive losses; one of the most interesting of these tubes is "Thyraton," one form consists of mercury-arc rectifier with grid added to each anode arm; thyration has characteristic that current can be prevented from starting by small negative grid voltage but cannot be stopped under usual conditions of operation by applying large negative grid voltage.

VEHICULAR TUNNELS

DETROIT. Work Begun on Vehicular Tube from Detroit to Windsor. Eng. News-Rec., vol. 100, no. 25, June 21, 1928, p. 978. Tunnel under Detroit river is to be partly shield driven and partly of performed sections; single tube slightly larger in cross-section than Holland tunnel at New York; interior similar to Holland tunnel; roadway will be 22 ft. wide; traffic; private undertaking; estimated construction cost of $10,000,000.

VIADUCTS

CONCRETE, REINFORCED. Concrete Bridge Construction on Curve. Eng. News-Rec., vol. 101, no. 1, July 5, 1928, pp. 4-7, 7 figs. Design and Construction of Lindbergh Viaduct at Reading, Pa., consisting of 13 open-spandrel, three-rib arches of 41-ft. 7½-in. to 83¼-ft. clear span; details of bridge deck and arch sections, abutment pier at junction of short- and long-span arches; construction plant layout for curved plan; cableway adapted to handling materials for spans on sharp curve; careful centring aided in balancing arch thrusts; nice formwork demanded by curved cornice; total construction cost $443,937.

VOLTAGE REGULATORS

AUTOMATIC. Automatic Voltage Regulators' Application to Power Transmission Systems, C. A. Nickle and R. M. Carothers. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 7, July 1928, pp. 525-528, 6 figs. Considers means seriously for increasing maximum power and for insuring continuity of service during transient disturbances, such as load swings and short circuits; presents results of extended investigation along these lines; new regulator is described which will accomplish above; short circuits.

Computing Compensator Settings for Automatic Voltage Regulators, V. W. Palen. Elec. World, vol. 91, no. 26, June 30, 1909, p. 1382, 1 fig. Procedure to be employed with triple-loop circuits. (Continuation of serial.)

VOLTMETERS

HIGH-SPEED. A High-Speed Graphic Voltmeter for Recording Magnitude and Duration of System Disturbances, A. F. Hamdi and H. D. Braley. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 7, July 1928, pp. 512-515, 10 figs. Paper deals with graphic voltmeter for recording magnitude and duration of system disturbances; operating experiences with this device; points out importance of data obtained.

W

WALLS

HEAT TRANSMISSION, RESEARCH. Heat Transmission Research, F. B. Rowey, F. M. Morris, and A. B. Algren. Am. Soc. Heat. and Vent. Engrs.—Jl., vol. 34, no. 7, July 1928, pp. 517-541, 23 figs. Results of co-operative research between University of Minn. and Am. Soc. of Heating and Ventilating Engrs.; flow of heat through building and insulating materials; experiments have been directed to development of apparatus and testing of built-up wall sections and insulating materials; description of test apparatus; hot-plate apparatus and tests; calibrations of apparatus.

WAREHOUSES

TORONTO. Loblaw Warehouse in Toronto Is One of This Year's Notable Structures. Contract Rec. (Toronto), vol. 42, no. 26, June 27, 1928, pp. 679-684, 10 figs. Building covering area of 469 by 300 ft.; model of efficiency in layout; unique loading platform is one feature; four storeys high with full basement, and is of flat-slabbed reinforced concrete with exception of top floor, which is of steel frame construction and has monitor sash; all goods are handled by system of skids and mechanical mules and are assembled for distribution by over 2,000 ft. of electric tram rail.

WASTE HEAT RECOVERY

MAIN ASPECTS. Waste-Heat Recovery, W. Gregson. Iron and Steel of Canada (Gardenvale, Que.), vol. 11, no. 7, July 1928, p. 207. Main aspects of recovery of waste heat by steam raising in steel and carbonization industries are discussed; subject one of important factors that make for economic production based on post-war requirements. Paper read before Instn. Mech. Engrs.

WATER CHLORINATION

TORONTO, ONTARIO. Superchlorination of Toronto Water, N. J. Howard. Can. Engr. (Toronto), vol. 54, no. 26, June 26, 1928, pp. 645-646; and Contract Rec. (Toronto), vol. 54, no. 26, June 27, pp. 645-646. Discussion of paper by L. H. Enslow; superchlorination is laboratory controlled and not continuous; during 334-day period treatment used on whole or part of 167 days; raw-water turbidity less than 5 on 200 days in year; plans for new 100,000,000-gal. mechanical plant for Toronto make full provision for treatment. Paper presented at Am. Water Works Assn.

WATER DISTRIBUTION

DATA SUMMARIZED. A.W.W.A. Questionnaire Data Summarized. Can. Engr. (Toronto), vol. 54, no. 24, June 12, 1928, pp. 610-612. Summary of replies to questionnaire tabulated for discussion at Superintendents' Round Table Meetings at annual convention of Am. Water Works Assn., San Francisco; large percentage of cities submit data.

WATER FILTRATION

ELEMENTS. Elements of Successful Water Filtration, H. N. Jenks. Can. Engr. (Toronto), vol. 54, no. 25, June 19, 1928, pp. 630-632. Coagulation and filtration are chief factors in successful water purification; design factors and operating methods; chemical feed apparatus; coagulant dosing lines; design of mixing devices; mechanical mixing; design of underdrain system; size and depth of sand; filter-control equipment; application of coagulant; preservation of flow; washing of filter. Abstract of paper read before Iowa Water Works Conference.

Successful Water Filter Operation, H. N. Jenks. Contract Rec. (Toronto), vol. 42, no. 24, June 13, 1928, pp. 639-642. Satisfactory filtration is dependent on adequate coagulation; how suitable pretreatment of water can be obtained; influence of plant design and operating methods; design features as related to coagulation; design of mixing devices; compromise between gravity mixing and mechanical mixing; influence of plant design on filtration; underdrain system; size and depth of sand; filter-control equipment; preservation of flow; filtration as affected by operating methods.

WATER FILTRATION PLANTS

CALIFORNIA. Unusual Filtration and Aeration Plant Completed by City of Beverly Hills, R. L. Derby. Hydraulic Eng., vol. 4, no. 6, June 1928, pp. 354, 378 and 380, 3 figs. Difficult problem of water purification involving hydrogen-sulphide water solved after several years' intensive experimentation; first municipal rapid-sand filtration plant in state of California in which water softening as well as filtration is undertaken; process finally worked out; description of equipment; air blowers; head house; chlorination.

WATER METERS

LIFE OF. Life of Water Meters Largely Dependent Upon Construction Materials, T. C. Brownell. Hydraulic Eng., vol. 4, no. 6, June 1928, p. 388, 1 fig. Galvanic action of stray electric currents often destroys meters made of inferior materials; electrochemical action.

WATER PIPE

COPPER. Copper Water Service Pipe Connections, R. B. Morse. Can. Engr. (Toronto), vol. 54, no. 26, June 26, 1928, pp. 639-640. Practice of Washington Suburban Sanitary District in use of copper tubing for service pipes of smaller diameters and reasons for adoption; district water supply; all services are metered; installing service pipe; flexibility of tubing; comparative cost of services.

WATER PIPE LINES

ARC WELDING. Long Welded Pipe Line, V. R. Young. Can. Engr. (Toronto), vol. 55, no. 2, July 10, 1928, p. 32, 3 figs. Carries water distance of seven miles to city, passing under Connecticut River; 54-in. and 48-in. diam. pipe; plates are bent into half cylinders and automatically arc welded together in shop.

CLEANING. Periodical Cleaning of Water Mains Greatly Decreases City Distribution Expense, W. H. Grotz. Hydraulic Eng., vol. 4, no. 6, June 1928, pp. 356, 370, 372 and 373. Experience has shown that low-pressure mains often become so badly silted as to reduce capacity by nearly half; mains which had been in ground 25 years and longer were badly silted; cleans approximately six mi. of mains; improvement after cleaning; 100 per cent increase; description of process; time required.

CLEANING, BUFFALO. Experiences at Buffalo, N.Y., in Cleaning Water Mains, W. H. Grotz. Mun. News, vol. 74, no. 5, May 1928, pp. 125-126. Distribution system; mains in ground 24 years and longer were badly silted; work done under first contract gave excellent results; procedure in cleaning water main; cleaning device; cost; benefits. Abstract of paper presented before Can. Section, Am. Water Works Assn.

CONCRETE. New Concrete Pipe Line Carries Water Supply to Birmingham, W. R. Brend. Concrete Products, vol. 34, no. 6, June 1928, pp. 51-53, 4 figs. Concrete pipe lines more than 9 miles in total length; composed of 42-in. and 36-in. pipe; all pipe are of lock-joint type, with steel cylinder imbedded in concrete and bar reinforcement so designed to carry up to 300-ft. head of water.

New Soft Water Supply for Santa Maria, California, H. L. Neel, Jr. West. Constr. News, vol. 3, no. 11, June 10, 1928, pp. 354-355. Installation of 18-in. concrete pipe line from Orcutt to Santa Maria; pipe having 2½-in. wall stands hydrostatic pressure test of 120 lb.; pipe lengths 3 ft.; total cost of 5½-mi. pipe line was $65,000.

CROSS CONNECTIONS. Report of Committee on Cross-Connections. New England Water Works Assn.—Jl., vol. 42, no. 2, June 1928, pp. 191-219. Definitions; demand for cross-connection; fire protection; cross-connection and public health; position of public-health authorities; importance of inspection; examples of common cross-connections to potable water supplies; partial list of epidemics caused by polluted water entering drinking-water systems through cross-connections.

DEAD ENDS. Dead End in Water Works Systems, S. B. Morris. Can. Engr. (Toronto), vol. 55, no. 1, July 3, 1928, pp. 107-108. Disadvantages in employment of dead ends in water mains discussed; their effect on hydraulic capacity of main and quality of water; briefly analyzes and weighs several problems pertaining to dead ends in water mains and sealed services; effect upon corrosion; effect of electrolysis. Paper presented at Am. Water Works Assn.

WATER PURIFICATION

PROTECTION. Protection and Purification of Supplies and Methods of Analysis. Eng. News-Rec., vol. 100, no. 26, June 28, 1928, pp. 1012-1015. Abstracts of papers read before annual convention of Am. Water Works Assn. on pollution diversion, protection of water supply of Wichita Falls, Tex., from salt water; recreational use of reservoirs; prechlorination; super- and de-chlorination; algae and crenothrix control; plankton in reservoirs; hydrogen-sulphide removal; tastes from creosoted wood-stave pipe; filter-plant operation; chemical and bacteriolocal practice.

WATER SOFTENING

ZEOLITE PROCESS. Softening Water by Use of Zeolite, J. T. Campbell and D. E. Davis. Can. Engr. (Toronto), vol. 55, no. 5, July 31, 1928, pp. 178-182. Experience with zeolite process on treatment of municipal water supplies in two towns on Ohio River; comparative annual cost estimate for lime-soda vs. zeolite softening; size of softening units; experiences at Sewickley. Paper presented at Am. Water Works Assn.

WATER TREATMENT

DOMESTIC PURPOSES. The Filtration and Treatment of Water for Domestic Purposes, A. C. Houston and H. E. Stilgoe. Engineering (Lond.), vol. 125, no. 3258, June 22, 1928, pp. 787-788, and (discussion) 760, 2 figs. Metropolitan water supply of London is given as example of what can be done to purify waters which in their origin are not free from contamination; examples of nearly every known method of purification are to be seen at works of Board. Abstract of paper read before Instn. Civil Engrs. See also Engineer (Lond.), vol. 145, no. 3780, June 22, 1928, p. 681; and Surveyor (Lond.), vol. 73, no. 1899, June 15, pp. 625-626, 1 fig.

NEW YORK CITY. Taking Corrosion Out of Catskill Water, W. W. Brush. Water Works Eng., vol. 81, no. 13, June 20, 1928, pp. 913-914, 2 figs. Experiments of New York Water Department to effect result; water now especially corrosive to cast-iron hot-water pipes; most desirable treatment; cost of treatment; experiments to determine material.

WATER WORKS

PUMPAGE METERING. Does It Pay to Meter Waterworks Pumpage? C. W. Parsons. Contract Rec. (Toronto), vol. 42, no. 28, July 11, 1928, pp. 732-734. Cases of two cities, one small and one large with different problems, cited as indication of value of installing flow meters; reasons for metering; effect of metering large mains; metering at filtration plants; improvement of operating conditions; why metering pumpage pays.

WELDING

BIBLIOGRAPHY. Current Welding Literature. Am. Welding Soc.—Jl., vol. 7, no. 6, June 1928, pp. 61-63. Bibliography covering American and foreign periodicals.

WELDING PRACTICE

GENERAL THOUGHTS. Some General Thoughts on Fusion Welding, S. W. Miller. Am. Soc. Steel Treating—Trans., vol. 14, no. 1, July 1928, pp. 61-65 and (discussion) 65-66. Comparison is made between different methods of welding, showing need in all of them for protection of metal from oxidation; explanation of action of fluxes and of advantages of making rods for fusion welding of proper chemical composition so that resultant welds will be free from oxides.

WIND TUNNELS

AIR FLOW. On Improvement of Air Flow in Wind Tunnels, C. Wieselsberger. Nat. Advisory Committee for Aeronautics—Tech. Memo., no. 470, July 1928, 9 pp., 7 figs. Analysis of Gottingen type of wind tunnel; application of Gottingen principle to other wind tunnels, such as Nat. Physics Laboratory or Eiffel type, by replacing customary exit cone with different one; requirements of air stream employed in aerodynamic investigations of aircraft models or of individual parts. From Jl. of Soc. Mech. Engrs. of Japan, vol. 28, no. 98, June 1925.

WINDOWS, METAL

AIR INFILTRATION. Air Leakage Through a Pivoted Metal Window, F. C. Houghten and M. E. O'Connell. Am. Soc. Heat. and Vent. Engrs.—Jl., vol. 34, no. 7, July 1928, pp. 549-553, 5 figs. Study of air leakage through pivoted window in Grand Central Palace Bldg., New York City, during Power Show; description of building; test procedure and results.

WIRE

STEEL, HEAT TREATMENT. The Heat Treatment of Drawn Wire for Bridges, A. V. de Forest. Wire, vol. 3, no. 7, July 1928, pp. 236-237, 1 fig. Better knowledge of better strength steels points to prospect of longer and lighter bridges; paper was written as part of symposium on subject of bridge steels; use of heat treated steel; instead of wire hardened by cold working, fully heat-treated steel was used in quenched and tempered state; future of bridge wire; reprinted from Am. Soc. Steel Treating—Trans.

TESTING MACHINES. The Mechanical Testing of Wire, J. D. Brunton. Wire, vol. 3, no. 7, July 1928, pp. 224-226 and 241-244, 6 figs. Variety of machines makes it possible to maintain high-quality production by frequent, rapid and accurate tests; gives outline of these tests and their meaning and describes apparatus that is most commonly used to perform them; 10,000-lb. capacity; 60,000-lb. capacity; 200-lb. machines; testing grips important.

WOOD PULP

TESTING. Chemical Wood Pulp Quality Evaluation, J. L. A. Macdonald and G. A. Cramond. Paper Trade Jl., vol. 87, no. 5, Aug. 2, 1928, pp. 51-53. More than little doubt as to whether tear of sheet pulp is truly indicative of strength characteristic of pulp when converted into sheet of paper; numerical data; deals with problem of testing of chemical wood pulps for strength; test results.

Testing Wood Pulp for Strength. Paper Mill, vol. 51, no. 28, July 14, 1928, pp. 20, 22, 24 and 36. Abstract of contribution to discussion on Evaluation of Chemical Wood Pulps by J. L. A. MacDonald and G. A. Cramond at meeting of South of Scotland Technical Section of British Paper Makers' Assn.; dealing with problem of testing of chemical wood pulps for strength; meaning of strength; only practical method of testing pulps for strength is in form of sheets; evaluation of chemical wood-pulp strength testing; direct mill application.

Z

ZINC PLATING

GALVANIC. Electroplating Zinc. Metal Industry (Lond.), vol. 32, no. 25, June 22, 1928, p. 620. Paweck and Seihoer, of Vienna Electrochemical Institute, have devised galvanic zinc-plating process, which greatly reduces time factors in that operation.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostatic copies of the articles listed in this section, or others on engineering subjects, may be obtained from the Engineering Societies Library.

Price of each print (up to 11 by 14 in. size) 25 cents, plus postage. Where possible, two pages, up to 7 by 9 in. size, will be photographed on one print Larger magazines require a print per page. Bills will be mailed with the prints.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made, sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street. New York, N.Y.

A

AERIAL PHOTOGRAPHY

Canada. The Airplane in Canadian Exploration, A. M. Narraway. Soc. Automotive Engrs.—Jl., vol. 23, no. 3, Sept. 1928, pp. 229-234, 4 figs. Use of aerial surveying in investigation and development of Canada's vast undeveloped areas; descriptions are given of method of taking photographs, which differs from other photographic mapping methods, of plotting data on map, and of preparing type maps showing condition of lumber resources of region; application of photography to investigation of water-power resources; problem of indexing photographs.

Geological Survey. Application of Commercial Aviation to a Geological Survey, C. M. Wagner. Oil. Bul., vol. 14, no. 8, Aug. 1928, pp. 807-808. Airplane facilitates field work, but its use cannot replace detailed ground work; in unexplored and unmapped area, aerial observation preceding general reconnassance or detailed work is of great value; cites two-hour flight over territory that would require weeks or months in mere reconnaissance.

Mapping, Canada. Aerial Photography Solves Canadian Surveying Problem. Eng. and Min. Jl., vol. 126, no. 8, Aug. 25, 1928, p. 311, 1 fig. Map and brief description show how proposed route for transmission line of Hudson Bay Mining and Smelting Co. was determined by means of aerial photography; time and expense saved; power plant at Island Falls on Churchill river, near Wasawakasik lake, 80 mi. north of Flin Flon mine.

AERIAL TRANSPORTATION

Mining Exploration, Canada. A Trip Through Northern Manitoba, R. C. Rowe. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 33, Aug. 17, 1928, pp. 652-657, 8 figs. Mandy mine on Schist lake; Flin Flon mine, on north shore of bay of Flin Flon lake; description of mine and mill; return to The Pas, finishing round trip in four days; in north-land, big mines are in wireless communication with The Pas and Winnipeg; call plane, just like calling taxi. (Concluded.)

AIRPLANE ENGINES

Lubrication. Development of Aircraft Engine Design and Lubrication. Lubrication, vol. 14, no. 7, July 1928, pp. 73-84, 17 figs.

AIRPLANES

Tail Surfaces, Design. Study of Horizontal Tail Surfaces of Consolidated XPT-3 (NY-1). Air Corps Information Circular, vol. 7, no. 615, Aug. 15, 1928, 8 pp., 7 figs. Study to improve landing characteristics of XPT-3 airplane by re-designing horizontal tail surfaces; desired larger stalling moments obtained by proposed tail are effective only at low speed and do not alter balance with elevators free at 85 mi. per hr.; decreased slope of pitching coefficient improves control throughout entire range of flying; somewhat increased stick forces can be offset by use of balanced elevators.

Wings. Pressure Distribution Over a Rectangular Monoplane Wing Model Up to 90 Deg. Angle of Attack, M. Knight and O. Loeser, Jr. Nat. Advisory Committee for Aeronautics, Report No. 288, 1928, 19 pp., 34 figs. Description of pressure-distribution tests made on wing model in atmospheric wind tunnel of Langley Memorial Aeronautical Laboratory.

16th Wilbur Wright Memorial Lecture, F. H. Handley Page. Roy. Aeronautical Soc.—Jl. (Lond.), vol. 32, no. 212, Aug. 1928, pp. 649-704 and (discussion) 704-705, 62 figs. Wind-tunnel experiments showing how aerodynamic characteristics of wing section are altered by slot, are described, and best application of Handley-Page slotted wing for control purposes is explained; with correctly designed and positioned auxiliary airfoil, opening and closing automatically, very good control at beyond stall can be obtained without added complication of control by forward airfoil.

Slotted Wings and the Automatic Slot, F. H. Page. Engineering (Lond.), vol. 126, no. 3265, Aug. 10, 1928, pp. 180-182, 11 figs.

Tests with New Type of Airplanes (Versuche mit neuartigen Flugzeugtypen), A. Lippisch. Zeit. fuer Flugtechnik u. Motorluft-schiffahrt (Munich), vol. 19, no. 12, June 28, 1928, pp. 274-281, 19 figs.

The Surface Resistance of Airplane Wings (Ueber den Oberflaechenwiderstand bei Flugzeugen), M. Schrenk. Zeit. fuer Flugtechnik u. Motorluftschiffahrt (Munich), vol. 19, no. 9, May 14, 1928, pp. 208-209.

Wing Spread as the Basic Factor in Design (Die Spannweite als grundlegendes Bestimmungsstueck des Flugzeugentwurfs), G. Lachmann. Zeit. fuer Flugtechnik u. Motorluftschiffahrt (Munich), vol. 19, no. 9, May 14, 1928, pp. 198-208, 21 figs.

AIRPORTS

Planning. Airport Planning, G. Hadden. Eng. News-Rec., vol. 101, no. 10, Sept. 6, 1928, pp. 344-345, 2 figs. Brief general discussion of considerations influencing airport design; suggests policy of planning for future developments as nearly as they can be predicted and to build for immediate needs.

Chicago, Ill. Chicago's Municipal Airport An Institution. Airports, vol. 1, no. 3, July 1928, pp. 27 and 38, 1 fig.

ALLOYS

Aluminum. *See Aluminum Alloys.*

Bronze. *See Bronze.*

Chrome-Nickel. *See Chromium-Nickel Alloys.*

Equilibrium Diagrams. Equilibrium Diagrams in Studying Alloys, W. Rosenhain. Heat Treating and Forging, vol. 14, no. 7, July 1928, pp. 734-739, 3 figs. Abstract from presidential address to Institute of Metals.

Heat-Resisting. Heat-Resisting Alloys, T. H. Turner. Am. Metal Market, vol. 35, no. 155, Aug. 14, 1928, pp. 17-20, and 22-23.

Zinc. *See Die Casting.*

ALLOY STEELS

Manufacture. The Manufacture of Alloy Steel, E. C. Smith. Iron and Steel of Can. (Gardenvale, Que.), vol. 11, no. 8, Aug. 1928, pp. 242-244. Inquiry into alloy-practice conditions; control of charge necessary; furnaces and fuels used; many intangibles included in customer's demands; methods of adding alloys; ingot practice must be good; slow rolling in smooth rolls; alloy steels like old branded products; fine alloy steels from basic open hearth. Paper presented to Am. Iron and Steel Inst.

ALUMINUM ALLOYS

Chlorine Treatment. Note on the Treatment of Aluminum and Aluminum Alloys With Chlorine, D. R. Tullis. Inst. of Metals—Advance Paper (Lond.), no. 480, for mtg. Sept. 4-7. 1928, 8 pp.

Fits. How Temperature Affects Fits in Aluminum Alloys. Am. Mach., vol. 69, no. 8, Aug. 23, 1928, p. 311. Builders of automobile engines have experienced difficulty with fit of rods on crankpins in extremes of temperature; customary to allow little more rod clearance in winter than in summer; additional clearance of 0.0004 in. is allowed for new engines that go into service in winter months; experiments with steel reinforced and alloy caps; Franklin and Hupp practice.

Welding. Spot Welding of Aluminum and Its Alloys, W. M. Dunlap. Aviation, vol. 25, no. 9, Aug. 25, 1928, pp. 590-591 and 618-626, 10 figs.

ALUMINUM ALLOY CASTINGS

High Temperature Effects. Mechanical Properties of Aluminum Casting Alloys at Elevated Temperatures, R. L. Templin, C. Graglio and K. Marsh. Iron and Steel A.S.M.E. Trans., vol. 50, no. 16, May-Aug. 1928, pp. 25-36 and (discussion) 36-37, 28 figs. Tensile results obtained from "short-time" high-temperature tests of ten different aluminum casting alloys and very pure cast aluminum, and for various heat treatments; all specimens tested were sand cast; tensile strength, yield point, elongation in 2 in., reduction in area, and Young's modulus values are given for various temperatures throughout range 75-800 deg. fahr.; describes method of measuring specimen temperatures during tensile tests.

ALUMINUM CASTINGS

X-Ray Analysis. Results of X-ray Examinations of Aluminum Pistons and Other Light-Metal Castings (Untersuchungsergebnisse der Roentgendurchleuchtung von Aluminiumkolben und anderen Leichtmetall-Gusstuecken), M. v. Schwarz. Zeit. fuer Flugtechnik u. Motorluftschiffahrt (Munich), vol. 19, no. 14, July 28, 1928, pp. 323-325, 13 figs.

AMMONIA COMPRESSORS

Temperature-Pressure Relations. Temperatures and Pressures in Ammonia Systems, A. G. Solomon. Power Plant Eng., vol. 32, no. 17, Sept. 1, 1928, pp. 941-942, 1 fig.

APARTMENT HOUSES

Reinforced Concrete. Tall Reinforced-Concrete Building Involves Special Design, B. B. Shapiro. Eng. News-Rec., vol. 101, no. 9, Aug. 30, 1928, pp. 315-317, 3 figs. Reinforced-concrete apartment house recently built in Chicago; designed originally for steel framing; 21 storeys high; founded on 60-ft. wood piles; because of unusual irregularity in plan column spacings varied; unusual windbracing; rapid construction; quality control of concrete; economy in concrete framing.

ARCHES

Hinges, Design. Reinforced-Concrete Hinges With Convex and Concave Contact Surfaces (Eisenbeton-Waelzgelenke mit konkaver und konvexer Beruehrungsflaeche), G. Hartschen. Bauingenieur (Berlin), vol. 9, no. 32, Aug. 10, 1928, p. 580, 2 figs. Theoretical, mathematical discussion of principles of design; numerical example.

ASBESTOS INDUSTRY

Canada. Canadian Asbestos, 1927. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 35, Aug. 31, 1928, p. 699. Production slightly greater than 1926; higher prices give 5.1 per cent increase in value; tabulated statistics on output, shipments, imports, exports, etc.

ASBESTOS

South Africa. The Nature and Origin of the Amphibole-Asbestos of South Africa, M. A. Peacock. Am. Mineralogist, vol. 13, no. 7, July 1928, pp. 241-286 and 6 figs. on supp. plates.

AUTOMOBILE ENGINES

Connecting Rods, Manufacture. How Citroen Makes Connecting Rods. Am. Mach., vol. 69, no. 9, Aug. 30, 1928, pp. 348-349, 7 figs.

Cylinders, Manufacture. Unique Locating Method Employed in Finishing Cylinder Blocks, K. W. Stillman. Automotive Industries, vol. 59, no. 9, Sept. 1, 1928, pp. 296-298, 6 figs.

Detonation. Influence of Engine Design on Detonation (L'influence du dessin du moteur sur al détonation Ricardo. Technique Automobile et Aérienne (Paris), vol. 19, no. 142, 1928, pp. 75-79. Discussion of detonation, causes, prevention, form of combustion chamber, merits of various forms; influence of cylinder dimensions of detonation.

AUTOMOBILE PLANTS

Heat Treating in. Dodge Electrifies Heat Treatment. Iron Age, vol. 122, no. 7, Aug. 16, 1928, pp. 389-392, 5 figs.

AUTOMOBILES

Bodies, Steel. Sheet Steel for Automobile Bodies. Heat Treating and Forging, vol. 14, no. 8, Aug. 1928, pp. 856-862, 7 figs.

Brakes. A New Vacuum Servo. Automobile Engr. (Lond.), vol. 18, no. 244, Aug. 1928, pp. 289-290, 5 figs.

Frames, Manufacture. Making Automobile Frames Automatically. Iron Trade Rev., vol. 83, no. 8, Aug. 23, 1928, pp. 441-443 and 483, 5 figs. Article deals with automatic production of automobile frames by A. O. Smith Corp., Milwaukee; rates of speed maintained in automatic plant is between 300 and 360 frames per hour; description of equipment and operation.

Front Axles, Manufacture. How Ford Makes Front Axles, F. L. Faurote. Iron Age, vol. 122, no. 8, Aug. 23, 1928, pp. 457-460, 7 figs.

Springs, Standardization. Leaf-Spring Standards. Soc. Automotive Engrs.—Jl., vol. 23, no. 3, Sept. 1928, pp. 321-322, 3 figs. Present spring and spring parts specifications, as revised and consolidated by Subdivision of Passenger Car Division, are given and include leaf springs, leaf-spring steel, leaf-spring tests, and tests for parallelism of spring eyes.

Transmissions. The Lescarts Variable-Speed Transmission Gear (Appareil de transmission à vitesse variable système Lescarts), A. Dumont. Genie Civil (Paris), vol. 93, no. 4, July 28, 1928, pp. 93-95, 4 figs.

AUTOMOTIVE FUELS

Anti-Knock Compounds. Iron Carbonyl: The German Anti-Knock Compound. Petroleum Times (Lond.), vol. 20, no. 497, July 21, 1928, p. 108. Researches have proved that crude benzol can be refined into high-grade motor fuel when used alone; supplies are too limited for general use; Benzol-Verband has found blends of benzol or alcohol with petroleum fuel satisfactory; most important anti-knock fuel in Germany is "Motalin," which is doped petroleum motor fuel in which added chemical is iron carbonyl Fe (CO) 5; said to be non-poisonous; 0.1 per cent sufficient.

Detonation. Spectroscopic Study of Fuels and Analysis of Detonation Theories, G. L. Clark. Soc. Automotive Engrs.—Jl., vol. 23, no. 2, Aug. 1928, pp. 167-173, 1 fig

B

BEAMS, REINFORCED CONCRETE

Stresses. Web Stresses in Reinforced Concrete Beams. Contract Rec. (Toronto), vol. 42, no. 33, Aug. 15, 1928, pp. 845-847. Action of web reinforcement in overhanging or restrained beams in which there are both positive and negative bending moments; purposes of tests; how tests were made; conclusions as result of tests. From University of Illinois Engineering Experiment Station—Bul.

BLOWERS

Forced-Draft. Westinghouse Forced-Draft Blower of the Schmidt Propeller Type, J. B. Lincoln and B. F. Treat. Am. Soc. Naval Engrs.—Jl., vol. 40, no. 3, Aug. 1928, pp. 424-437, 9 figs. Article describes and gives results of tests made at U. S. Naval Eng. Experiment Station on Schmidt vertical blower manufactured by Westinghouse Electric & Mfg. Co.; tests cover performance of fan at various speeds and capacities and performance of combined unit; description of blower.

BLOWING ENGINES

Gas, Testing. Industrial Tests Made on Gas Blowing Engine, Cockerill No. 2, at Central Gas Blowing Plant of Belval Works of Societé Métallurgique des Terres Rouges (Essais industriels effectués sur le groupe soufflet-moteur à gaz Cockerill No. 2, etc.), Stefffes and A. Graff. Chaleur et Industrie (Paris), vol. 9, no. 99, July 1928, pp. 391-410, 21 figs.

BOILER FEEDWATER

Treatment. A Non-Chemical Method for the Prevention of Scale Accumulation in Boilers, Diesel-Jackets, and Water-Circulating Systems in General, A. T. Ridout. Inst. Mar. Engrs.—Trans. (Lond.). vol. 40, July 1928, pp. 333-340 and (discussion) 340-350.

BOILER FURNACES

Design. Some Fundamental Considerations in the Design of Boiler Furnaces, W. J. Wohlenberg and F. W. Brooks. Fuels and Steam Power (A.S.M.E. Trans.), vol. 50, no. 15, May-Aug. 1928, pp. 141-155 and (discussion) 155-158, 22 figs.

Pulverized Coal. Some Operating Data of Large Steam Generating Units, H. Kreisinger and T. E. Purcell. Fuels and Steam Power (A.S.M.E. Trans.), vol. 50, no. 15, May-Aug. 1928, pp. 83-94 and (discussion) 94-101, 23 figs.

Pulverized Coal and Gas Firing. Combination Firing of Blast-Furnace Gas and Pulverized Coal, F. G. Cutler. Fuels and Steam Power (A.S.M.E. Trans.), vol. 50, no. 15, May-Aug. 1928, pp. 102-105 and (discussion) 105-106, 8 figs. Ensley blast-furnace plant of Tennessee Coal, Iron and Railroad Co., consisting of six blast furnaces, has been operating for about five years; boiler plant using pulverized coal to supplement blast-furnace-gas firing, and some results obtained from this installation are given.

Pulverized Coal. Experiences in Changing to Pulverized Coal, M. J. Gearing. Power Plant Eng., vol. 32, no. 17, Sept. 1, 1928, pp. 914-918, 3 figs. Changing from stokers to pulverized-coal equipment necessitated some experimenting at Diamond Crystal Salt Co. plant.

Regulation. Automatic Regulation of Boiler Furnaces (Selbsttaetige Reglung von Feuerungen fuer Dampfkessel), H. Treitel. Archiv fuer Waermewirtschaft (Berlin), vol. 9, no. 8, Aug. 1928, pp. 249-255, 11 figs.

BOILER SCALE

Formation of. Theoretical and Experimental Study of the Formation of Scale in Boilers (Etudes théoriques et expérimentales sur la formation des incrustations de chaudières), R. Stumper. Chimie et Industrie (Paris), vol. 20, no. 1, July 1928, pp. 10-20, 5 figs.

BOILERS

Corrosion Prevention. Corrosion of Boilers Checked by Electrochemical System, O. W. Garrick. Eng. News-Rec., vol. 101, no. 6, Aug. 9, 1928, p. 209.

High Pressure. High-Pressure Steam Boilers, G. A. Orrok. Fuels and Steam Power (A.S.M.E. Trans.), vol. 50, no. 15, May-Aug. 1928, pp. 47-57 and (discussion) 57-67, 17 figs. Paper previously indexed from Mech. Eng., June 1928.

High-Pressure, Manufacture. Construction of High-Pressure Boiler Drums (La construction des corps de chaudières à haute pression). Génie Civil (Paris), vol. 92, no. 16, Apr. 21, 1928, pp. 392-393, 2 figs. Method employed by firm of Thyssen (Mulheim) is described; rolling mill capable of dealing with 30-ton ingots is used to produce plates of 16 to 18 tons; after trimming plates and beveling two edges in preparation for lap welding, drum about 4 ft. in diameter can be formed with single longitudinal seam; welded drum is heated to 900 deg. cent. in order to remove all internal stresses.

Pulverized-Fuel Firing. Latest Developments in Pulverized Fuel Firing. Iron and Coal Trades Rev. (Lond.), vol. 117, no. 3153, Aug. 3, 1928, p. 157, 2 figs.

Waste-Heat. Steel Plant Waste Heat Boilers, R. H. Stevens. Blast Furnace and Steel Plant, vol. 16, nos. 7 and 8, July and Aug. 1928, pp. 931-935 and 1050-1053, 5 figs. Paper delivered before Am. Iron and Steel Inst.

BRAKES

Internal Expanding. Differential Internal Expanding Band Coupling or Brake with Linked Bands (Differential-Innenband-Kuppling Oder Bremse mit Verketteten Baendern), P. Kaeppler. Werkstattstechnik (Berlin), vol. 22, no. 15, Aug. 1, 1928, pp. 435-436, 5 figs. Details of patented Kaeppler coupling, its application in construction of internal bands expanding by centrifugal force; results of tests.

BRIDGES

Arch, Concrete. Arch Bridge Unusual in Design and Construction, W. L. Scott. Eng. News-Rec., vol. 101, no. 9, Aug. 30, 1928, pp. 325-327, 3 figs. Pont de la Caille on road between Annecy and Geneva in France is 450-ft. single-arch bridge of reinforced concrete spanning gorge 480 ft. deep.

Cantilever, Highway, Carquinez Strait. The Design of the Carquinez Strait Bridge, D. B. Steinman. West. Soc. Engrs.—Jl., vol. 33, no. 8, Aug. 1928, pp. 389-400, 7 figs.

Highway, Approach Slabs. Reinforced Approach Slabs for Highway Bridges, W. H. Rabe. Eng. News-Rec., vol. 101, no. 10, Sept. 6, 1928, pp. 352-354, 2 figs.

Highway, England. The Valley Bridge, Scarborough. Engineer (Lond.), vol. 146, no. 3786, Aug. 3, 1928, p. 109, 2 figs. Notes on reconstruction of bridge originally completed in 1865; new bridge consists of 4 spans of 150 ft. each and provides roadway 40 ft. wide with two footwalks each 12 ft. 3 in. wide; details of construction work.

Highway, Foundations. Investigation of Foundations in Highway Bridge Surveys, C. B. McCullough. Roads and Streets, vol. 68, no. 8, Aug. 1928, pp. 385-391, 4 figs. Extracted from Tech. Bul. by author in coöperation with U. S. Bur. Pub. Roads, issued by U. S. Dept. of Agriculture.

Highway, Surveys. Highway Bridge Surveys, C. B. McCollough. Contract Rec. (Toronto), vol. 42, nos. 34 and 35, Aug. 22 and 29, 1928, pp. 860-865 and 921-926, 8 figs. Value of obtaining comprehensive and accurate preliminary information; method of reporting data; scope of survey; waterway, foundation and traffic factors; maps and profiles; factors that affect run-off; determination of channel movement and of current velocity. (To be continued.)

Masonry, Arch. The English Bridge and Its Predecessors Over the Severn at Shrewsbury, A. W. Ward. Instn. Mun. and County Engrs.—Jl. (Lond.), vol. 55, no. 3, Aug. 7, 1928, pp. 241-246, 2 figs.

Masonry, Widening, Italy. Widening the Railroad Bridge Over Quadronna Creek (L' allargamento del viadotto sul torrente Quadronna), D. L. de Veali. Rivista Tecnica delle Ferrovie Italiane (Rome), vol. 34, no. 1, July 15, 1928, pp. 13-28, 11 figs. and 1 supp. sheet. Design and construction of duplicate masonry bridge adjoining one built in 1893, on Milan-Laveno line between Saronno and Varese, to make room for extra tracks; both bridges are carried on six semi-circular arches, 12 m. span, and are tied together at tops of piers by arch work giving 11.61 m. total width instead of original width of 4.12 m.; details of loading tests of new construction.

Piers, Construction. Piers in Deep Water for Highway Bridges, P. R. Johnson. Constr. Methods, vol. 10, no. 9, Sept. 1928, pp. 6-9, 7 figs.

Selection. What is the Best Kind of Bridge to Build? J. A. L. Waddell. Contract Rec. (Toronto), vol. 42, no. 34, Aug. 22, 1928, pp. 866-869. Author discusses suitability of various types of bridges for different conditions encountered at crossings; enumerates many factors that must be considered in selecting design of bridge; reinforced-concrete versus steel bridges; methods of pier sinking; concrete versus timber piles; plate-girder bridges; cantilever bridges. (To be continued.)

Steel, Construction. Floating a 300-ft. Bridge Span Into Position, J. F. Jackson. Eng. News-Rec., vol. 101, no. 9, Aug. 30, 1928, pp. 310-311, 2 figs. Flood conditions in Atchafalya river in spring of 1928 necessitated special methods in placing last span of combined bridge built for Louisiana Railway and Navigation Co. at Simmesport, La.

Steel, Highway. Rolled Structural Sections Used in Rio Grande Highway Bridge, P. B. Tartt. Eng. News-Rec., vol. 101, no. 8, Aug. 23, 1928, p. 274, 1 fig. New Rio Grande toll bridge to be built between Del Rio, Tex., and Villa Acunya, Coah., Mexico, will consist of four 150-ft. Pratt truss spans; all main members of bridge, with exception of interior verticals, are rolled H-sections with web horizontal in every case; slight excess metal is more than compensated for in saving in inert material of lacing that would have been required in built-up sections; saving in shop work and number of rivets eliminated is enormous.

Suspension, Steubenville, Ohio. Ohio River Suspension Bridge at Steubenville, Ohio, G. F. Wolfe. Eng. News-Rec., vol. 101, no. 9, Aug. 30, 1928, pp. 304-309, 8 figs. Fort Steuben structure with 689-ft. centre span presents new practices in suspension-bridge engineering, namely: in use of rolled steel sections for main towers and web members of stiffening trusses; cable spinning on land; method of strand transfer; use of 150-ft. tower boat for erecting main towers and use of standard derrick boat equipped with special 130-ft. boom for erecting stiffening trusses and floor system of main span and West Virginia side span.

Trestle, Construction. Building a Pile Trestle Bridge Across a Swamp, F. M. Garnett. Contractors and Engrs. Monthly, vol. 17, no. 1, July 1928, pp. 23-25, 5 figs. Millen-Statesboro highway crosses Ogeechee river in Georgia; and swamp over newly constructed causeway and bridge; grading work by dragline; construction of bridge; piling driven from ground by special rig; handling and placing timbers; placing Kyrock bridge mat; force and equipment used.

BRONZE

Hardness Testing. The Hardness Value for Standard Tin Bronzes, Red Brass Alloys, and Lead-Tin Bronzes in Cast State (Zur Kenntnis der Haertwerte der genormten Zinn-Bronzen, Rotguss-Legierungen und Blei-Zinn-Bronzen in gegossenem Zustande), W. Claus, H. Goeke and F. Goederitz. Giesserei (Duesseldorf), vol. 15, no. 31, Aug. 3. 1928, pp. 763-772, 19 figs. Results of Brinell hardness testing; regulations for different alloys.

High-Strength. Notes on High-Strength Bronzes (Notes sur les bronzes à hautes résistances), Duranton. Fonderie Moderne (Paris), vol. 22, Aug. 10, 1928, pp. 301-302. Composition of bronzes used in France; 10 kinds of ordinary and 4 kinds of high-strength bronzes; aluminum bronzes of high strength.

BUILDINGS

CONCRETE CONSTRUCTION. Concrete Building Construction, T. Crane and T. Nolan. Engineering (Lond.), vol. 126, no. 3265, Aug. 10, 1928, pp. 155-156.

SPHERICAL, GERMANY. World's First Spherical Building. Eng. News-Rec., vol. 101, no. 9, Aug. 30, 1928, p. 331, 1 fig. Building erected for Dresden Exposition "Die Technische Stadt," diameter 82 ft., five storeys (98½ ft.) high, contains about 268,000 cu. ft. and is completely equipped as office building with cafe on top floor.

C

CABLEWAYS

LUMBER TRANSPORTER. Mammoth Tramway to Span Western Canyon. Gen. Elec. Rev., vol. 31, no. 9, Sept. 1928, p. 475. Recently erected by Michigan-California Lumber Co. at Camino, Calif.; single tram carrier carries rail car loaded with maximum of 24,000 lb. of sawed lumber; distance between terminals is approximately 2,700 ft.; maximum speed of operation will be 1,800 ft. per min.; four steel cables, each 2 in. in diam., support tram carrier which runs on 32 wheels; traction rope endless and one inch in diameter.

CANALS

HEAD WORKS. The Head-Works of the Imperial Canal, C. E. Grunsky. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 7, Sept. 1928, pp. 2102-2105. Discussion by E. S. Lindley of paper published in Nov. 1927, issue of Proceedings indexed in Eng. Index 1927, p. 139.

CARS

STREET RAILROAD, BEARINGS. Use of Ball and Roller Bearings on Street Cars (Kugle og rullelejers anvendclighed i sporvogne), J. V. Balslev. Teknisk Tidskrift (Stockholm), vol. 58, no. 33, Aug. 18, 1928 (Mekanik), pp. 106-112, 5 figs.

CAR RETARDERS

RECENT DEVELOPMENT. Car Retarders, a Recent Development in Railway-Yard Operation, L. Richardson. Am. Soc. Mech. Engrs.—Advance Paper for mtg. Oct. 1 to 3, 1928, 8 pp., 11 figs.

CASE HARDENING

CARBURIZING COMPOUNDS. Carburizing and Case Hardening. Heat Treating and Forging, vol. 14, no. 7, July 1928, pp. 757-761, 1 fig. Carburizing compounds used and containers employed with proper directions given for packing parts; cyanide and gas carburizing; lead and furnace treatments. From Driver-Harris Co. booklet on Nichrome Castings.

CAST IRON

"GUNITE." "Gunite"—Its Properties and Applications. Machy. (N.Y.), vol. 35, no. 1, Sept. 1928, pp. 61-62, 3 figs. New metal known as Gunite recently announced by Gunite Corp. of Rockford, Ill., is discussed.

PEARLITIC. High-Grade Cast Iron (Hochwertiges Gusseisen), H. Jungbluth. Maschinenbau (Berlin), vol. 7, no. 16, Aug. 16, 1928, pp. 766-770, 3 figs. Compilation based on recent papers in German and in English, by Piwowarsky, Kerpely, Young, and others; improvement of cast iron by addition of other metals, production of pearlitic mass, reduction in graphite content, etc.

CEMENT

ALUMINA. High-Alumina Slags for Alumina Cement. Iron and Steel of Can. (Gardenvale, Que.), vol. 11, no. 8, Aug. 1928, pp. 251-252. Production in blast furnace of high alumina slags for manufacture of alumina cement, investigated by U. S. Bureau of Mines, at North Central Experimental Station, Minneapolis, Minn.

DISINTEGRATION IN SALT WATER. Sea Water-Resistant Cements, G. J. Fertig. Concrete, vol. 33, no. 3, Sept. 1928 (Mill Sec.), pp. 105-110, 6 figs.

CEMENT KILNS, ROTARY

HEAT BALANCE. Heat Balance in Rotary Cement Kilns, H. Pooley. Engineering (Lond.), vol. 126, no. 3267, Aug. 24, 1928, pp. 219-220. Table is presented which serves as example of type of heat balance wheel which might be expected in connection with average wet-process, uninsulated cement kiln; author indicates methods which can be used to obtain better fuel consumption and stresses importance of accurate and continuous records, which items are frequently neglected.

CEMENT MORTAR

STEAM TREATMENT. Effect of Steam Treatment of Portland Cement Mortars on Their Resistance to Sulphate Action, T. Thorvaldson and V. A. Vigfusson. Eng. Jl. (Montreal), vol. 11, no. 9, Sept. 1928, pp. 493-499, 2 figs. Discussion of paper previously indexed from Mar. 1928 issue of same journal.

CHROMIUM-NICKEL ALLOYS

HIGH TEMPERATURE. Laboratory Experiments on High-Temperature Resistance Alloys, C. J. Smithells, S. V. Williams and J. W. Avery. Inst. of Metals—Advance Paper (Lond.), no. 466, for mtg. Sept. 4-7, 1928, 22 pp., 17 figs.

CITIES AND TOWNS

PLANNING. Imagination in City Planning, S. Child. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 7, Sept. 1928, pp. 2147-2149. Discussion by W. W. Crosby and A. A. Shurtleff of paper published in Apr. 1928 issue of Proceedings.

PLANNING, BUILDING DESIGN. Development of City Property for Industrial Purposes, W. W. Hay. Contract Rec. (Toronto), vol. 42, nos. 35 and 36, Aug. 29 and Sept. 5, 1928, pp. 928-929 and 946-948, 5 figs.

COAL

CARBONIZATION, LOW-TEMPERATURE. The "Plassmann" Process of Low Temperature Carbonization, D. Brownlie. Gas Age-Rec., vol. 62, no. 7, Aug. 18, 1928, pp. 196-198, 3 figs.

The K.S.G. Process of Low-Temperature Carbonization, W. Runge. Fuels and Steam Power (A.S.M.E. Trans.), vol. 50, no. 15, May-Aug. 1928, pp. 17-23 and (discussion) 24-27, 2 figs. Paper deals with development of Kohlenscheidungs Gesellschaft process; principle of operation and field of application; constructional details of retorts are described, as are also method of heating, fuel handling, gas and tar recovery, and types of coals suitable for process; yields of products per ton of coal of given analysis are tabulated; by-products; economic phases of process.

COMBUSTION PROPERTIES. Burning Characteristics of Different Coals, H. Kreisinger and B. J. Cross. Am. Soc. Mech. Engrs.—Advance Paper for mtg. Sept. 17-20, 1928, 10 pp., 10 figs.

SPONTANEOUS COMBUSTION, TESTING. Spontaneous Heating of Coal in Storage. Iron and Steel of Can. (Gardenvale, Que.), vol. 11, no. 8, Aug. 1928, pp. 254-255. General review of results of chemical and physical research relative to causes and prevention of spontaneous heating of coal in storage, published by U.S. Bur. of Mines, as Tech. Paper no. 409. See also Power Plant Eng., vol. 32, no. 17, Sept. 1, 1928, p. 946.

COAL HANDLING

BELT CONVEYORS. Caterpillar Coal Face Conveyor, G. F. Zimmer. Indus. Mgmt. (Lond.), vol. 15, no. 8, Aug. 1928, pp. 264-265, 4 figs.

GRAB BUCKETS. New Type of Segmental Grabs (Ein neuer Segmentgreifer), C. Huetter. Gas und Wasserfach (Munich), vol. 71, no. 30, July 28, 1928, pp. 734-735, 2 figs.

EQUIPMENT. Modern Mechanical Coal Handling Plant. Colliery Guardian (Lond.), vol. 137, no. 3530, Aug. 24, 1928, pp. 729-731, 5 figs. Describes items of coal-handling equipment manufactured and sold by Underfeed Stoker Co.; known as Beaumont specialties and include automatic skip hoist, cable drag scraper conveyors, bucket elevators and conveyors, steel bunkers, and rubber belt conveyors; applicable also to handling of coke, ash, sand, cement, limestone, ores, etc.

COAL MINES AND MINING

BLASTING. Increasing Lump Coal by Shooting Explosives in Self-Tamping Recoverable Steel Barrels, S. S. Lanier Jr. Explosives Engr., vol. 6, no. 8, Aug. 1928, pp. 294-295, 2 figs.

CONVEYOR. Standard Equipment Slightly Modified Interlocks 4½ Mile Conveyor, F. R. Grant. Coal Age, vol. 33, no. 8, Aug. 1928, pp. 477-478 and 481, 4 figs.

EXPLOSIVES. Approved List of Permissible Explosives. Coal Age, vol. 33, no. 8, Aug. 1928, pp. 490-491. Abstract of U.S. Bur. of Mines—Reports of Investigations, serial no. 2879, 1928, previously indexed.

Necessity for the Use of Short-Flame Explosives, T. E. Jenkins. Min. Congress Jl., vol. 14, no. 8, Aug. 1928, p. 611, 1 fig.

LOADERS. Rock Work With Mechanical Loaders, T. F. McCarthy. Coal Mine Mgmt., vol. 7, no. 7, Aug. 1928, pp. 28-31 and 40. Paper previously indexed from Min. Congress Jl., June 1928.

Mechanical Loading with A.C. Power Meets Test at Francisco, J. Mosbey. Coal Age, vol. 33, no. 8, Aug. 1928, pp. 470-472, 6 figs. Describes tests with a.c. power at Francisco Mining Co.'s No. 2 mine, 7 mi. east of Princeton, Ind.; time studies; cost of coal delivered to parting is 25 per cent less than with hand loading.

OPEN PIT, INDIANA. All Equipment New and Completely Standardized at Indiana Strip Mine, C. C. Balzer. Coal Age, vol. 33, no. 8, Aug. 1928, pp. 482-484, 7 figs. Describes equipment and operations at strip mine of Electric Shovel Coal Corp. near Clinton, Ind.; about 1,200 acres with maximum cover 52 ft., average 40 ft.; seam is 52 in. of low-ash coal and 20 in. top coal with 20 per cent ash; average production 40,000 tons per month with 102 men; total electric power cost is 13 to 15 cents per ton of coal.

SCRAPERS. Scrapers in Entries and Long Faces, W. H. Smitherman. Coal Mine Mgmt., vol. 7, no. 7, Aug. 1928, pp. 32-35, 4 figs. Paper previously indexed from Min. Congress Jl., June 1928.

SIGNAL SYSTEMS. Automatic Block Signals for Mine Haulage Systems, C. E. Watts. Min. Congress Jl., vol. 14, no. 8, Aug. 1928, pp. 608-610, 5 figs.

SIGNAL SYSTEMS, GREAT BRITAIN. Signaling in British Coal Mines, L. Fokes. Coal Age, vol. 33, no. 8, Aug. 1928, pp. 485-486 and 488, 4 figs. Coal Mines Act of 1911 specified maximum of 25 volts for signaling; later order required bells modified to render them incapable of igniting gaseous mixture; practice of designing underground signaling gear in flameproof enclosures; describes types of signaling equipment, with particular reference to lowering and hoisting of men in coal-mine shafts.

STEEL SUPPORTS. The Use of Steel in Coal Mining, L. Frost. Iron and Steel of Can. (Gardenvale, Que.), vol. 11, no. 8, Aug. 1928, pp. 238-239. Use of steel arches in supporting underground roadways on coal mines.

STEEP SEAMS. An Experience of Machine-Mining in a Highly-Inclined Seam, J. M. Williamson and J. Bilsland. Instn. Min. Engrs.—Trans. (Lond.), vol. 75, part 4, July 1928, pp. 327-334, 5 figs. Paper previously read before Min. Inst. of Scotland, Dunfermline, and indexed from Colliery Guardian, June 29, 1928.

COAL WASHING PLANTS

WEST VIRGINIA. Ashland Coal and Coke Company Tipple and Washer, H. D. Smith. Min. Congress Jl., vol. 14, no. 8, Aug. 1928, pp. 602-607, 15 figs. Ashland plant in Pocahontas coal field, about 20 mi. from Bluefield, W. Va.; five sizes of coal made and cleaned at this plant; complete description of plant and equipment; results entirely satisfactory and product meets exacting demands of present market.

COKE PLANTS

CANADA. The Plant of the Montreal Coke and Manufacturing Company, D. G. Munroe. Gas Age-Rec., vol. 62, no. 8, Aug. 25, 1928, pp. 225-226, 233-234, 5 figs.

ENGLAND. A Modern Coke Oven Plant. Engineer (Lond.), vol. 146, nos. 3788 and 3789, Aug. 17 and 24, 1928, pp. 168-172 and 190-195, 22 figs. Details of plant of South Yorkshire Chemical Works of Parkgate; comprises battery of 60 Semet Solvay ovens, capable of carbonizing 6,000 tons of coal a week, with elaborate coal and coke-handling machinery, complete by-products recovery plant and power house.

MONTREAL. New Plant of Montreal Coke and Manufacturing Company, D. G. Munroe. Iron and Steel of Can. (Gardenvale, Que.), vol. 11, no. 8, Aug. 1928, pp. 228-230.

COLUMNS

DESIGN. Moments of Inertia of Uniform Octagonal Cross-Sections (Traegheitsmomente von bewehrten, regelmaessigen Achteckquerschnitten), W. Fiedler. Beton u. Eisen (Berlin), vol. 27, no. 15, Aug. 5, 1928, p. 291, 1 fig. Fundamental formulas and table of values of moments of inertia, for use in design of columns in mushroom systems of roof construction.

CONCRETE

ELASTICITY. Extensibility of High Quality Concrete. Pit and Quarry, vol. 16, no. 11, Aug. 29, 1928, pp. 85-86, 3 figs. Experiments were made with standard test pieces of concrete such as are usually made in testing tensile and compressive strengths; extensibility was determined, or really elasticity. Brief abstract translated from Zement, July 26, 1928.

PERMEABILITY. The Permeability of Concrete, I. L. Collier. Contract Rec. (Toronto), vol. 42, no. 34, Aug. 22, 1928, pp. 870 and 911-912, 4 figs. Paper presented before Am. Soc. for Testing Matls., previously indexed from Concrete, Aug. 1928.

PROPORTIONING. An Exact Basis of Proportioning, J. A. Kitts. Concrete, vol. 33, no. 3, Sept. 1928, pp. 13-14.

PROPORTIONING PLANTS. Proportioning Plant and Transit Mixers, W. A. Scott. Eng. World, vol. 33, no. 2, Aug. 1928, pp. 65-67, 2 figs. Central proportioning plant and transit mixing units recently put in operation at Portland, Ore., for concrete paving and other forms of concrete work; results in undeviating uniformity of mixture for all batches of concrete delivered at same job.

STRENGTH. Equation for Predicting Strength of Concrete, F. N. Wray. Eng. News-Rec., vol. 101, no. 8, Aug. 23, 1928, pp. 291-292. Equation developed from data published by Portland Cement Assn. and based on compression tests of 6 by 12-in. cylinders, makes it possible to predict strength of concrete at any age between seven days and five years, when strength at any other age between those same limits is given.

CONCRETE AGGREGATES

SAWDUST. Sawdust as a Concrete Aggregate. Contract Rec. (Toronto), vol. 42, no. 33, Aug. 15, 1928, pp. 850-851 and 855. It is possible to make light-weight partition or backing-up block with sawdust, sand and portland cement; mineralized sawdust is used to counteract shrinkage and render material incombustible; Columbia University tests.

CONCRETE CONSTRUCTION

DEVELOPMENTS. Development in Use of Concrete, F. E. Wentworth-Sheilds. Can. Engr. (Toronto), vol. 55, no. 7, Aug. 14, 1928, pp. 230-231. Paper presented before Instn. of Civil Engrs.

WINTER. Unusual Inclosure for Winter Building Construction. Eng. News-Rec., vol. 101, no. 8, Aug. 23, 1928, p. 292, 1 fig. In constructing Belmont Hotel at Madison, Wis., in winter of 1927-28, all floors were concreted in canvas inclosures moved up as work progressed; canvas inclosure was heated by coke salamanders; after lower stories were concreted wooden housing was constructed to protect stone cutting and interior finishing operations.

WINTER, COST. Unit Costs of Winter Concreting on Two St. Louis Buildings. Eng. News-Rec., vol. 101, no. 8, Aug. 23, 1928, p. 290, 1 fig.

CONCRETE

REINFORCED, CALCULATION CHARTS. Calculation of the Bending and Compression Parts of Reinforced Concrete (Le Calcul des pieces flechies et comprimées en beton arme), H. Ravize. Génie Civil (Paris), vol. 93, no. 6, Aug. 11, 1928, pp. 135-138, 3 figs.

RETEMPERING. Retempering Concrete. Good Roads, vol. 71, no. 8, Aug. 1928, p. 452, 1 fig. Results of recent group of tests made in Research Laboratory of Portland Cement Association to determine effect of retempering and delayed placing on strength and workability of concrete.

CONCRETE STONE

SPECIFICATIONS. Specifications for Concrete Stone, C. Van de Bogart. Can. Engr. (Toronto), vol. 55, no. 8, Aug. 21, 1928, pp. 249-250. Paper presented before Am. Concrete Inst., previously indexed from advance paper for mtg. Feb. 28, 1928.

COOLING TOWERS

CONCRETE, HYPERBOLIC. The Hyperbolic Reinforced-Concrete Cooling Tower, J. H. D. Blanke. Nat. Engr., vol. 32, no. 5, May 1928, pp. 209-213, 5 figs.

COPPER EXTRACTION

IODINE PROCESS. Amenabar's Wet, Iodine Process of Copper Extraction (Die Aussichten des Amenabar-Verfahrens zur Gewinnung von Kupfer mittels Jod auf nassem Wege), E. Hentze. Metall und Erz (Halle, Germany), vol. 25, no. 15, Aug. 1, 1928, pp. 370-372. Critical review and appraisal of commercial future of iodine method of copper extraction patented by A. Amenabar Ossa, of Chile; comparison with Claudet's iodine process of extracting gold and silver from Henderson lyes.

COPPER-MAGNESIUM ALLOYS

TESTS. The Copper-Magnesium Alloys, W. R. D. Jones. Inst. of Metals—Advance Paper (Lond.), no. 469, for mtg. Sept. 4-7, 1928, 11 pp., 5 figs.

COPPER MINES AND MINING

AFRICAN COPPER DEPOSITS. C. B. Lakenan Favorably Impressed With African Copper Deposits, A. B. Parsons. Eng. and Min. Jl., vol. 126, no. 7, Aug. 18, 1928, pp. 244-245 and 260. Interview with engineer; world demand for copper will bring price near 20 cents; copper-mining regions of Chile, Belgian Congo, and Rhodesia; present problem in Congo is lack of sulphide ore to facilitate leaching and smelting; in Rhodesia, first producer will be Roan Antelope, then N'Kana and N'Changa; immense tonnages of 3 per cent ores; Africa should be investigated by American copper interests.

ACCIDENT PREVENTION. Promotion of Safety at the Ray Plant Nevada Consolidated Copper Co., M. Brown. Min. Congress Jl., vol. 14, no. 9, Sept. 1928, pp. 659-660, 1 fig.

ARIZONA. The Mining Operations of the Cornelia Copper Company, G. R. Ingham. Min. Congress Jl., vol. 14, no. 8, Aug. 1928, pp. 623-627, 10 figs.

QUEBEC. The Noranda Enterprise, A. H. Hubbell. Eng. and Min. Jl., vol. 126, no. 9, Sept. 1, 1928, pp. 330-334, 8 figs. Mine and smelter of Horne Copper Corp. near Rouyn, Quebec; 1,198,375 tons above 300 level, average 6.73 per cent copper and $5.44 gold per ton; irregular lenses of pyrrhotite, chalcopyrite, and pyrite among rhyolite lavas, agglomerates and andesites; geology and development; lenses mined by inclined branch raises, slashed to full width after reaching level above; intervening benches removed by combined underhand and overhand stoping. (To be continued.)

COPPER-NICKEL CASTINGS

SPECIFICATIONS. Proposed Master Specifications for Copper-Nickel Alloy Castings. Foundry, vol. 56, nos. 15 and 16, Aug. 1 and 15, 1928, supp. sheets nos. 727, 728, and 729, 1 fig. Aug.: United States Government general specification for metals, Federal Specifications Board Specification No. 339, in effect on date of invitation for bids, forms part of this specification; general and detail requirements of material and method of inspection and tests given. Aug. 15: Inspection; packing and marking of shipment.

COPPER ORE TREATMENT

ARIZONA. The Old Dominion Company, E. H. Robie. Eng. and Min. Jl., vol. 126, no. 7, Aug. 18, 1928, p. 259. Brief account of visit to plant at Globe that treats ore from Old Dominion and Arizona Commercial mines.

FLOTATION, ARIZONA. The Morenci Concentrator of the Phelps Dodge Corporation, E. H. Robie. Eng. and Min. Jl., vol. 126, no. 8, Aug. 25, 1928, pp. 290-294, 3 figs.

CRANES

RUNWAYS. Reinforcing Craneways in a Big Shop. Am. Mach., vol. 69, no. 10, Sept. 6, 1928, pp. 398-400, 6 figs. Describes work in Schenectady plant of General Electric Co.

CULVERTS

DESIGN. The Design of Box Culverts, A. C. Hughes and C. S. Gray. Surveyor (Lond.), vol. 74, no. 1909, Aug. 24, 1928, pp. 165-167, 4 figs.

CYLINDERS

METAL, STRESSES IN. Internal Stresses in Metallic Cylinders (Sur la détermination des efforts internes dans les cylindres métalliques), Portevin. Académie des Sciences—Comptes Rendus (Paris), vol. 186, no. 14, Apr. 2, 1928, pp. 939-941, 1 fig.

D

DAMS

UNUSUAL DESIGN. Arch Dam of Unusual Design. Eng. News-Rec., vol. 101, no. 9, Aug. 30, 1928, p. 311, 1 fig. Novel types of dam consisting of series of light arch walls decreasing in height, in downstream order; light construction made possible by intermediate pools, which provide balanced load on lower downstream section of each wall and lower effective water pressure; this reduces amount of material in structure and prevents scour below dam at times of overflow; tests were made on plaster models of contemplated dam on Upper Dordogne using mercury in place of water, showed factor of safety between four and five.

DESIGN. Recent Progress in Construction of Dams (Les derniers progrès dans la construction des digues et barrages). Revue Générale de l'Electricité (Paris), vol. 24, no. 6, Aug. 11, 1928, pp. 204-210. Report by A. Forti on dams of masonry, gravity and arch types, and construction methods for masonry dams; other types of dams; reservoir-dam studies in France; calculation and construction of large dams; state of dam construction in Italy. Paper presented before Congrès le Paris de l'Union Internationale des Producteurs et Distributeurs d'Energie Electrique.

ARCH, CANEADEA, N.Y. Caneadea Dam One of Uncommon Form, A. S. Taylor. Compressed Air Mag., vol. 33, no. 9, Sept. 1928, pp. 2513-2516, 12 figs. Structure in Northwestern New York is first constant-angle arch type of dam to be built in eastern part of United States; crest of dam has total length of 600 ft.; 45 ft. through at base; arch section is made up of eleven 40-ft. segments.

ARCH, DESIGN. Local Distribution in High Arch Dams, R. A. Sutherland. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 7, Sept. 1928, pp. 2151-2156. Discussion by W. Cain and B. F. Jakobsen of paper published in Apr. 1928 issue of Proceedings.

EARTH. Lafayette Rolled Earth-Fill Dam, P. Schuyler. West. Constr. News, vol. 3, no. 16, Aug. 25, 1928, pp. 529-531, 7 figs. Earth-fill dam for Mokelumne water-supply project of East Bay municipal utility district, will be 160 ft. high (maximum centre height), 1,850 ft. long on crest, and will contain 1,800,000 cu. yd. of earth; construction progress; centre portion varies in clay content from 60 to 90 per cent; upstream facing consists of 6-in. reinforced-concrete pavement laid on 9 in. of gravel.

EARTH, CONSTRUCTION. South Carolina's Big Dam, F. J. Messick. Du Pont Mag., vol. 22, no. 8, Aug. 1928, pp. 11-14, 7 figs. Brief description of construction work on largest earth dam in world on Saluda river, S.C., to back up 750 billion gallons of water for hydro-electric power development.

FAILURES. Extremely Thin Dam Fails. Eng. News-Rec., vol. 101, no. 9, Aug. 30, 1928, p. 318, 3 figs. Unreported failure of dam on Prosser Creek about 5 mi. below Truckee, Nevada; built of unreinforced concrete, thickness at top only 18 in. and at bottom not more than 36 in.; height 35 ft. and top length 100 ft.; portion 60 ft. long at top, 30 ft. long at bottom and 20 ft. high was carried away, bottom of break being at construction joint at which apparently no attempt had been made to bond concrete.

GRAVITY, CONCRETE, IDAHO. The Black Canyon Diversion Dam, Boise Project, Idaho, I. E. Houk. New Reclamation Era, vol. 19, no. 8, Aug. 1928, pp. 125-127, 1 fig.

MULTIPLE DOME, COOLIDGE, ARIZ. Coolidge Dam—A New Type of Construction, E. Sickler. Excavating Engr., vol. 22, no. 8, Aug. 1928, pp. 291-293 and 307, 8 figs. Multiple-dome dam being built by U.S. Indian Irrigation Service on Gila river at San Carlos, Ariz.; consists of three egg-shaped domes supported by canyon walls, and by intermediate buttresses, with smaller end of dome resting on foundation and larger end forming part of crest and serving as support for bridge for trans-continental highway.

SLAB (AMBURSEN). Stony Gorge Dam, J. L. Savage and H. J. Gault. West. Constr. News, vol. 3, no. 15, Aug. 10, 1928, pp. 490-501, 11 figs. For supplemental storage, Orland project, California, U.S. Bureau of Reclamation; details of design and construction; fault line is determining factor in selection of Ambursen type of dam; selection, location and dimensions of Ambursen type; design data and details; special features; foundations; concrete aggregates; detail cost analysis.

DESUPERHEATERS

SATURATORS AND. Desuperheaters and Steam Saturators (Desurchauffeurs et saturateurs de vapeur), P. Coulon. Société Alsacienne de Constructions Mécaniques—Bul. (Belfort, France), vol. 6, no. 23, July 1928, pp. 80-84, 4 figs.

DIE CASTING

ALUMINUM ALLOYS. Properties and Production of Aluminum Alloy Die-Castings, S. L. Archblutt, J. D. Grogan and J. W. Jenkin. Inst. of Metals—Advance Paper (Lond.), no. 477, for mtg. Sept. 4-7, 1928, 19 pp., 19 figs.

COPPER ALLOYS. Die-Casting of Copper-Rich Alloys, R. Genders, R. C. Reader and V. T. S. Foster. Inst. of Metals—Advance Paper (Lond.), no. 475, for mtg. Sept. 4-7, 1928, 32 pp.

ZINC ALLOYS FOR. Die-Casting Alloys of Low Melting Point, T. F. Russell, W. E. Goodrich, W. Cross, and N. P. Allen. Inst. of Metals—Advance Paper (Lond.), no. 473, for mtg. Sept. 4-7, 1928, 15 pp., 4 figs.

DIESEL ENGINES

COMPRESSORLESS, FUEL PUMPS FOR. Fuel Pumps of Compressorless Diesel Engine (Brennstoffpumpen kompressorloser Dieselmotoren), O. Holm. Archiv fuer Waermewirtschaft (Berlin), vol. 9, no. 8, Aug. 1928, pp. 258-261, 24 figs. Author points out difficulties which have existed so far in production of efficient fuel pumps for compressorless engines; discusses causes of trouble and means for their elimination; advantages and disadvantages of usual types and arrangement of valves, pump chambers, and packing.

MARINE (SULZER-SCHELDE). The Sulzer-Schelde Marine Engines (Sulzer-Schelde Scheepsdieselmotoren), F. C. Martzinger. Schip (Hague), vol. 10, no. 15, July 20, 1928, pp. 195-204, 22 figs. Characteristics and special merits of Dutch adaptation of Sulzer two-cycle and four-cycle marine Diesel engines, for use on Dutch four-screw motor liners.

DIESEL LOCOMOTIVES

SPEED CHANGERS FOR. Universal Transmission for Electric Locomotives, and Speed Changer Operated by Oil Under Pressure for Diesel Locomotives Constructed by the Société de Locomotives de Winterthur (Transmission universelle pour locomotives électriques et changement de vitesse actionné par huile sous pression pour locomotives Diesel, construits par la Société de Locomotives de Winterthur). Revue Générale des Chemins de Fer (Paris), vol. 47, no. 2, Aug. 1928, pp. 258-262, 6 figs. Description of transmission used on electric locomotive and geared speed reducer used on Diesel locomotives.

DRILLS, TWIST

STANDARDIZATION OF. Twist Drills. Automobile Engr. (Lond.), vol. 18, no. 244, Aug. 1928, p. 286, 1 fig. Discussion of new British Engineering Standards Association report dealing with penetration of twist drills; graph shows performance test for twist drills.

E

ECONOMIZERS

DESIGN AND OPERATION. What the Boiler Plant Engineer Should Know of Material, Design and Operation of Exhaust-Gas Feedwater Preheaters (Was der Dampfkessel-Ingenieur von dem Material, dem Bau und dem Betrebe der Abgas-Speisewasser-Verwaermer wissen muss). G. Frantz. Waerme (Berlin), vol. 51, no. 30, July 28, 1928, pp. 527-545, 18 figs.

ELECTRIC CIRCUIT BREAKERS

HIGH-SPEED. High-Speed Circuit Breakers, with Special Reference to A-C Type, J. W. McNairy. Gen. Elec. Rev., vol. 31, no. 9, Sept. 1928, pp. 468-475, 14 figs.

ELECTRIC CONVERTERS

Rotary. The Care of Manually Controlled Rotaries and Auxiliary Equipment, II. W. Smith. Elec. News (Toronto), vol. 37, no. 16, Aug. 15, 1928, pp. 37-38 and 46, 3 figs.

ELECTRIC EQUIPMENT

Grounding. The Earthing of Electrical Equipment. Engineering (Lond.), vol. 126, no. 3267, Aug. 24, 1928, pp. 235-236. Editorial comments in which it is claimed that if plebiscite of electrical industry were taken on this subject, majority in favor of earthing would result; earth wire must be sufficiently large to carry any fault current that may be produced, and care must be taken to protect it against mechanical damage and corrosion.

ELECTRIC FURNACES

Hydrogen-Nitrogen Mixtures. The Application of Oxygen and Hydrogen to Industrial Operation, F. P. Wilson. Gen. Elec. Rev., vol. 31, no. 9, Sept. 1928, pp. 493-495, 1 fig.

Steel-Making. Electric Furnaces, Brown-Boveri System with Hydraulic Regulation of Electrodes (Fours électriques système Brown-Boveri à réglage électro-hydraulique des électrodes), E. de Mulinen. Génie Civil (Paris), vol. 93, no. 6, Aug. 11, 1928, pp. 143-145, 5 figs. Describes electric furnace of 20 tons capacity installed at Aosta; has 3 electrodes of 600 mm. diam. for 15,000-amp. current; how electrodes are regulated.

ELECTRIC LAMPS

Mercury Quartz. New Type of Mercury Quartz Lamp, A. I. Tkhorzhevsky. Electritchestvo (Leningrad), no. 13-14, July 1928, pp. 286-289. 8 figs.

Neon. High-Speed Vision. Power, vol. 68, no. 7, Aug. 14, 1928, p. 290. Neon lamp is capable of being illuminated to its full brilliancy and extinguished almost completely in time interval that is measured in millionths of a second; machines, including Stroborama and other types, are successfully used in mechanical industries, hydraulics, aerodynamics, etc., wherever fast periodic method occurs.

ELECTRIC LINES

Grounding. Protective Grounds, V. E. Johnson. Elec. Jl., vol. 25, no. 9, Sept. 1928, pp. 447-450, 6 figs.

High Tension, Colorado. Transmission Experience of the Public Service Company of Colorado, M. S. Coover and W. D. Hardaway. Am. Inst. of Elec. Engrs.—Jl., vol. 47, no. 9, Sept. 1928, pp. 633-636, 6 figs. 100,000-volt transmission lines completed in 1909 extended from Shoshone hydro plant on Colorado river across Continental Divide to Denver and represented pioneering in high-voltage transmission at high altitudes; paper describes system in general way and outlines some of more salient operating difficulties that have arisen from time to time as well as their remedies; method of load dispatching.

Insulation. Rationalization of Transmission System Insulation Strength, P. Sporm. Am. Inst. of Elec. Engrs.—Jl., vol. 47, no. 9, Sept. 1928, pp. 641-644, 5 figs. It is shown that at present time transmission systems in general are designed without proper consideration of surge voltages which may be imposed upon them; grading scheme proposed is possible although requiring additional operating data; grading should result in less costly designs and installations; net effect will be better performance of transmission system in service.

Relation Between Transmission Line Insulation and Transformer Insulation, W. W. Lewis. Am. Inst. of Elec. Engrs.—Jl., vol. 47, no. 9, Sept. 1928, pp. 637-640, 3 figs. Principles to be followed in transmission-line construction to reduce damage from lightning are recommended; recommendations are as follows: keep transmission conductors low and arrange horizontally; use ground wires; use sufficient insulation but of sufficiently low value near stations to protect apparatus; install lightning arresters at transformers; arguments leading to these recommendations are outlined.

Transmission Line Insulation and Overhead Ground Wires, S. W. Lewis. Iron and Steel Engr., vol. 5, no. 8, Aug. 1928, pp. 354-358, 2 figs.

Loss Calculation. Load Factor-Equivalent Hour Values Compared. H. M. Sayers. Elec. World, vol. 92, no. 8, Aug. 25, 1928, p. 369. Writer refers to article of F. H. Buller and C. A. Woodrow published in July 14th issue of this journal, and presents table of load characteristics for different load diagrams, all giving 25 per cent load factor.

Overhead, Design. Design of Overhead Power-Transmission Lines (Beitrag zur Berechnung von Freileitungen), K. Langhard. Elektrotechnische Zeit. (Berlin), vol. 49, no. 32, Aug. 9, 1928, pp. 1181-1183, 2 figs.

Power Arcs. Study of Transmission Line Power-Arcs, P. Ackerman. Eng. Jl. (Montreal), vol. 11, no. 9, Sept. 1928, p. 504. Discussion of paper previously indexed from May 1928 issue of same journal.

ELECTRIC LOCOMOTIVES

Germany. The Bergmann 2-C-2 Locomotive With a Single Motor (La locomotora Bergmann 2-C-2 de un solo motor). Ingenieria y Construction (Madrid), vol. 6, no. 67, July 1928, pp. 369-370, 3 figs. Brief description and principal specification data on electric locomotive with one 3,200-h.p. motor using alternating current at 15,000 volts.

ELECTRIC MACHINERY

Vibration. Vibration of Frames of Electrical Machines, J. P. Den Hartog. Applied Mechanics (A.S.M.E. Trans.), vol. 50, no. 17, May-Aug. 1928, pp. 1-5 and (discussion) 5-6, 9 figs.

Windings. Induced Voltages in Field Windings, W. F. Sutherland. Power Plant Eng., vol. 32, no. 16, Aug. 15, 1928, pp. 878-879, 2 figs.

ELECTRIC METERS

High Tension. Inexpensive Approximate Metering of a 66-Kv. Line, R. S. Daniels. Elec. World, vol. 92, no. 8, Aug. 25, 1928, pp. 357-358, 1 fig. Account of scheme which has worked successfully during past year for several installations on system of California-Oregon Power Co. at locations where high-tension was required for load-dispatching purposes only.

ELECTRIC MOTOR-GENERATORS

High Frequency. High-Frequency Alternators for Induction Furnaces. English Elec. Jl. (Lond.), vol. 4, no. 4, July 1928, pp. 111-113, 5 figs. Special motor-generator sets have been made in sizes from 150 to 650 kw., operating at frequencies from 500 up to several thousands of cycles per sec.; attention drawn to construction of stator frames of alternator and induction motor of set, which is of welded-steel plate type.

ELECTRIC MOTORS

Starters. Fundamental Principles and Operation of Direct-Current Motor Starters, C. G. Green. Nat. Engr., vol. 32, no. 6, June 1928, pp. 255-259, 12 figs. Effect of resistance in motor field; acceleration period; hand-operated starters; description of manual starter; principal of operation of automatic starter; protection against overload.

Supersynchronous, Brakes. Automatic Brake for Supersynchronous Motors, M. P. Bailey. Elec. World, vol. 92, no. 10, Sept. 8, 1928, p. 455, 2 figs. One of first installations of supersynchronous motors fitted with automatic motor-operated brakes has been put in service at Volunteer Portland Cement Co.'s plant at Knoxville, Tenn.; supersynchronous motor is built in such way that stator frame can revolve; brake is put into operation by push button.

Synchronous. Where Synchronous Motors Are Applied, F. W. Hotchkiss. Power, vol. 68, no. 10, Sept. 4, 1928, pp. 406-409, 4 figs. Author reviews recent improvements made in synchronous motors and their controllers that have made them applicable to practically every constant-speed drive; typical examples of difficult drives are cited and chart given that shows 32 different applications in 50 different industries.

Three-Phase Standards, Germany. Standard Types of Three-Phase Motors (Die Entwicklung der neuen Drehstrommotoren von 5,5 kW bis 100 kW, etc.), O. Zaehringer. Siemens—Zeit. (Berlin), vol. 8, no. 7, July 1928, pp. 367-375 and supp. plate, 31 figs. Recently established German motor standards made it desirable to abandon old designs and develop modern line covering range up to 100 kw.; designers found it possible to reduce frames and bearings to ten sizes; large variety of motors can be assembled from relatively few stock parts to answer practically all demands within this range; chart is included showing by colors how same parts can be utilized in different types of motors.

ELECTRIC NETWORKS

Low-Voltage. Low-Voltage A-C Networks, D. K. Blake. Gen. Elec. Rev., vol. 31, no. 9, Sept. 1928, pp. 470-482, 6 figs.

ELECTRIC TRANSFORMERS

Costs. Relative Costs of Transformers. Elec. World, vol. 92, no. 8, Aug. 25, 1928, pp. 363-364.

Large. Design of Large Transformers (Bau von Grosstransformatoren), G. Stern. Elektrotechnik und Maschinenbau (Vienna), vol. 46, no. 26, June 24, 1928, pp. 685-691, 13 figs. Latest developments in design of large power transformers by German concern; in spite of disastrous failures of others with butt-joint iron cores, author's concern clings to this core construction on account of advantages which it offers when compared with interleaved core; unit, claimed to be largest existing transformer, can be reconnected to give 100,000 kva. single-phase output. See brief translated abstract in Elec. World, vol. 92, no. 8, Aug. 25, 1928, p. 370.

Protection. Network Transformer Protection. Elec. World, vol. 92, no. 9, Sept. 1, 1928, p. 408, 2 figs. In distribution network of Dallas, Tex., Power and Light Co. it was desired that good regulation characteristics of low secondary reactance transformers be had without consequent increased liability to transformer failure or burnt-out underground, short-circuit or other overload conditions; in series with each transformer secondary and grounded neutral is parallel circuit consisting of fuse and reactor.

Testing. Distribution Transformer Tests, D. M. Thomas. Elec. World, vol. 92, no. 8, Aug. 25, 1928, p. 358, 2 figs.

Methods of Testing Electrical Apparatus. Elec. Jl., vol. 25, no. 9, Sept. 1928, pp. 457-461, 8 figs.

Thermal Rating. The Thermal Rating of Transformers, E. T. Norris. Instn. Elec. Engrs. (Lond.), vol. 66, no. 380, Aug. 1928, pp 841-854, 6 figs.

Three-Winding. Three-Winding Transformers with Tap Changing Under Load, K. A. Oplinger. Elec. World, vol. 92, no. 9, Sept. 1, 1928, pp. 410-412, 5 figs.

ELECTRIC TRANSMISSION AND DISTRIBUTION

Annual Report. Annual Report of the Committee on Power Transmission and Distribution, P. Torchio. Am. Inst. Elec. Engrs.—Jl., vol. 47, nó. 9, Sept. 1928, pp. 676-678.

ELECTRIC WELDING

Arc-Welding Steel Structures. Arc-Welding Steel Structures and Machine Parts, A. M. Candy. Machy. (N.Y.), vol. 35, no. 1, Sept. 1928, pp. 51-52, 7 figs.

Resistance Welders. Resistance Welders as Manufacturing Tools. Engineering (Lond.), vol. 126, no. 3265, Aug. 10, 1928, pp. 158-161, 16 figs.

ELECTRICITY SUPPLY

Ontario. "Hydro" Service in Ontario Municipalities. Elec. News (Toronto), vol. 37, no. 16, Aug. 15, 1928, pp. 39-40, 1 fig. It is claimed that more than 80 per cent of domestic energy is sold where average charge is less than 2 cents per kw-hr., and more than 70 per cent of commercial power sold where rate is less than $25 per horsepower year.

ELECTROMAGNETS

Most Powerful. The Most Powerful Electromagnet in the World, the Electromagnet of the Academy of Science (L'électro-aimant le plus puissant du monde l'électro-aimant de L'Académie des Sciences). Nature (Paris), no. 2790, Aug. 1, 1928, pp. 119-123, 6 figs. Description of electromagnet installed at National Research Laboratory at Bellevue near Paris; history of electromagnet; weight 120 tons; electric power 100 kw., diam. of coils, 75 cm.

EMBANKMENTS

Reinforced Concrete. Marine Embankments in Reinforced Concrete, R. N. Stroyer. Concrete and Constr. Eng. (Lond.), vol. 23, no. 8, Aug. 1928, pp. 527-540, 16 figs.

EVAPORATORS

Multiple-Effect. Evaporators for Boiler-Feed Make-Up Water, W. L. Badger. Fuels and Steam Power (A.S.M.E. Trans.), vol. 50, no. 15, May-Aug. 1928, pp. 207-212, 6 figs.

F

FELDSPAR DEPOSITS

Canada. Feldspar in Canada. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 31, Aug. 3, 1928, p. 626, 1 fig.

FILTERS

Sludge. Recent Types of Continuous Filters for Sludge-like Masses (Neuere unterbrochen arbeitende filter fuer schlammige massen), K. W. Geisler. V.D.I. Zeit. (Berlin), vol. 72, no. 31, Aug. 4, 1928, pp. 1089-1092, 11 figs. Construction details of suction and other types of filters by Groeppel, Wolf, Polysius and others, also special filter for dehydration of cellulose.

FLOW METERS

Steam. Correction of the Steam-Flow Meter for Change in Size of Orifice, H. Weber. Power, vol. 68, no. 9, Aug. 28, 1928, p. 362, 4 figs. Author shows method by which meter can easily be corrected.

FLOW OF WATER

Concrete Pipe. Determination of Coefficients for Concrete Pipe from Actual Field Measurements, F. C. Scobey. Hydraulic Eng., vol. 4, no. 8, Aug. 1928, pp. 491-493 and 502-503 and 514, 5 figs. Summary of mass of experimental data upon various types of concrete pipe lines, coefficients mentioned for but three formulas, Scobey, Williams-Hazen, and Kutter-Ganguillet. Paper presented before Am. Water Works.

Orifices. Acceleration of Water Flow Through an Orifice, M. F. Sayre. Mech. Eng., vol. 50, no. 9, Sept. 1928, pp. 722-723.

Pipes. Formulæ for Estimating Flow of Water in Various Types of Closed Conduits. Hydraulic Eng., vol. 4, no. 8, Aug. 1928, p. 514.

FORESTRY

British Columbia. Forest Conservation in British Columbia, P. Z. Caverhill. Eng. Jl. (Montreal), vol. 11, no. 9, Sept. 1928, p. 505. Discussion of paper previously indexed from June 1928 issue of same journal.

FORGINGS

BRASS, HEAT TREATMENT OF. The Heat Treatment of Drop Forged Brass, R. Hinzmann. Fuels and Furnaces, vol. 6, no. 8, Aug. 1928, pp. 1047-1050, and 1069-1070, 16 figs.

STEEL, HEAT TREATMENT OF. Determination of the Heating Time for Forgings. Fuels and Furnaces, vol. 6, no. 8, Aug. 1928, pp. 1081-1082, 2 figs.

FOUNDATIONS

COLUMN FOOTINGS, DESIGN. Proposed Method of Design for Continuous Column Footings, N. B. Green. Eng. News-Rec., vol. 101, no. 7, Aug. 16, 1928, pp. 237-238, 3 figs.

SUBAQUEOUS, TESTING. Wash Borings in Tidal Waters with Portable Pump, J. R. Noyes. Eng. News-Rec., vol. 101, no. 8, Aug. 23, 1928, pp. 290-291, 2 figs. Eighty-pound pump, direct-connected to four-cylinder, two-cycle, high-speed gasoline motor, capable of delivering about 40 g.p.m. at pressure of 120 lb. per sq. in., was connected through hose to 1-in. iron jetting pipe; more than 100 borings were taken in 6½ hr.; in 7½ working days 2 mi. of channel was examined to depth of 2 ft. below mean lower low water permitting accurate determination of subsurface conditions across entire bar, in Gastineau Channel, near Juneau, Alaska.

FOUNDRY PRACTICE

OXYACETYLENE WELDING. Oxy-Acetylene Welding in the Foundry, G. F. Wieser. Acetylene Jl., vol. 30, no. 2, Aug. 1928, pp. 59-62. Paper read before Welding Conference.

FURNACES, ANNEALING

NORMALIZING IN. Furnaces and Methods in Normalizing. Heat Treating and Forging, vol. 14, no. 8, Aug. 1928, pp. 915 and 917.

FURNACES, HEAT-TREATING

TYPES. Furnaces for Various Heat Treatments, P. C. Osterman and E. C. Cook. Heat Treating and Forging, vol. 14, nos. 7 and 8, July and Aug. 1928, pp. 781-784 and 903-907, 14 figs. July: Oven semi-muffle furnace is described in connection with treatment of high-speed steel tools; vertical cylindrical type furnaces and salt baths adaptable for certain purposes; electric and gas-fired furnaces compared. Aug.: Case-hardening problems are reviewed and number of installations are described.

G

GARAGES

MECHANICAL HANDLING IN. Garage Has Mechanical Handling for Cars. Eng. News-Rec., vol. 101, no. 10, Sept. 6, 1928, pp. 359-361, 3 figs. Twenty-two storey 66 by 88-ft. garage in 41-storey Pure Oil Building downtown business district of Chicago, which has storage capacity for 572 cars, and in which cars are moved vertically by elevators and horizontally by transfer tables, without use of their own power, is new development toward solving parking problems in congested districts; also providing parking accommodation for tenants in office buildings.

GARBAGE INCINERATORS

INCINERATORS. Incinerators. Domestic Eng. (Chicago), vol. 124, no. 8, Aug. 25, 1928, pp. 23-25 and 47-48 and 51-52, 18 figs.

GAS ENGINES

HEAT LOSSES IN. Losses in Exhaust of Large Gas Engines (Verluste im Auspuff von Grossgas motoren), J. R. Solt. Stahl and Eisen (Duesseldorf), vol. 48, no. 33, Aug. 16, 1928, pp. 1132-1133, 2 figs.

GAS PRODUCERS

MECHANICAL. Gas Producer Arranged for Full Mechanical Operation. Iron Age, vol. 122, no. 8, Aug. 23, 1928, p. 467, 3 figs.

GAS RETORTS

CONTINUOUS VERTICAL. Carbonization in Vertical Retorts, J. L. Hyslop. Gas World, vol. 89, no. 2298, Aug. 18, 1928, pp. 142-146.

GAS TANKS

WATERLESS. The Waterless Holder at Toronto, W. R. Gardner. Gas Engr. (Lond.), vol. 44, no. 628, Aug. 1928, pp. 206 and 209. Digest of paper before Can. Gas Assn., previously indexed from Gas World, July 14, 1928.

GASES

HIGH-PRESSURE RESEARCH. High Pressure Gas Research at the University of Illinois, N. W. Krase. Chem. and Met. Eng., vol. 35, no. 8, Aug. 1928, pp. 463-465, 4 figs.

GAUGES

KRUPP MIKROTAST. Krupp Mikrotast Gauge. Machy. (Lond.), vol. 32, no. 823, July 19, 1928, pp. 510-513, 11 figs. Description of gauge developed by F. Krupp, A.-G., Essen, which consists of two parts, Mikrotast proper which may be used alone, and adapters to suit work to be gauged; Mikrotast can be supplied and with wide range of scale graduations reading in both millimeters and inches, and measurements can be taken to 0.001 mm. or 0.00004 in.; pointer actuating mechanism; gauging cylindrical surfaces; special applications of saddle gauge; internal gauging; thread gauging.

GEARS

DESIGN. The Arc Gear Tooth System, A. Fisher. Machy. (Lond.), vol. 32, no. 826, Aug. 9, 1928, pp. 595-598, 6 figs.

NON-METALLIC, HORSEPOWER OF. Horsepower of Non-Metallic Spur Gears. Machy. (N.Y.), vol. 35, no. 1, Sept. 1928, suppl. sheet no. 137. Method of computing horsepower of spur gears composed of laminated phenolic materials or rawhide, as recommended practice of Am. Gear Mfrs.' Assn.; table of safe working stresses for different speeds.

TOOTH MODIFICATION. Hob Corrections for Gear Tooth Modifications, J. A. Hall. Am. Mach., vol. 69, no. 10, Sept. 6, 1928, pp. 379-382, 4 figs. Paper presented before Am. Gear Mfrs. Assn.

GEOPHYSICAL EXPLORATION

METHOD OF MAPPING. The Seismic Method of Mapping Geologic Structure, D. C. Barton. Min. and Met., vol. 9, no. 261, Sept. 1928, pp. 401-403.

Wireless in Mineral Prospecting, F. J. North. Discovery (Lond.), vol. 9, no. 104, Aug. 1928, pp. 239-243, 6 figs. Considerable success is being obtained with use of wireless for detecting minerals, mainly as result of research in United States; many details have still to be worked out before this new process can be generally employed by surveyors; special study of geophysical methods will be undertaken in Australia.

GOLD MINES AND MINING

NOVA SCOTIA. Gold Mining in Nova Scotia, J. P. Messervy. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 31, Aug. 3, 1928, pp. 623-624 and (discussion) 624-626. Interview, reported by S. Mifflen; historical note of first discovery in 1858; causes of decline in activity; recent interest awakened as to rehabilitation; outline map of known gold districts, covering about half of province along Atlantic coast; brief summary as to how developments should be carried out.

GOLD ORE TREATMENT

CYANIDATION. Problem of Cyaniding South Dakota "Blue Ores" Solved, E. S. Leaver and J. A. Woolf. Eng. and Min. Jl., vol. 126, no. 7, Aug. 18, 1928, p. 260. Abstract of Bur. of Mines—Tech. Paper no. 423, "Cyanide Extraction of Gold and Silver Associated with Arsenic and Antimony in Ores, with Especial Reference to Those in Nevada and South Dakota."

GRAIN ELEVATORS

ELECTRIC OPERATION. The Electrical Installation of a Modern Terminal Grain Elevator, A. E. Macdonald. Elec. News (Toronto), vol. 37, no. 16, Aug. 15, 1928, pp. 47-51, 7 figs. New 5,500,000-bushel, reinforced-concrete terminal grain elevator of United Grain Growers, Ltd., Port Arthur, Ont.

GRINDING

PRECISION. Precision Grinding of Small Parts, F. W. Curtis. Am. Mach., vol. 69, no. 9, Aug. 30, 1928, pp. 359-361, 8 figs.

H

HARBOUR IMPROVEMENTS

NEW BRUNSWICK. Important Work in St. John Harbour. Contract Rec. (Toronto), vol. 42, no. 34, Aug. 22, 1928, pp. 857-858, 1 fig. Pier, 800 ft., and 1,500,000-bushel elevator are among projects to be carried out with $5,000,000 loaned by Dominion Government.

HARBOURS

APPROACHES. Harbour and Dock Approaches, C. R. S. Kirkpatrick. Can. Engr. (Toronto), vol. 55, no. 8, Aug. 21, 1928, p. 240. Abstract of paper presented before Instn. Civil Engrs., previously indexed from Engineering (Lond.), June 15, 1928.

HARDNESS

TESTING. Hardness Testing, H. M. German. Am. Soc. Steel Treating—Trans., vol. 14, no. 3, Sept. 1928, pp. 343-354, 13 figs. Paper presents some newer ideas pertaining to Brinell, Rockwell, and scleroscope hardness testing; charts showing comparative hardness values of Brinell with Rockwell C, Rockwell B and scleroscope; brief description of Vickers and monotron hardness testing machines.

HEAT TRANSMISSION

PIPES. Heat Transfer Between Flowing Liquid and Enclosing Pipe Shell (Waermeuebergang stroemender Fluessigkeit in Rohren), L. Schiller and T. Burbach. V.D.I. Zeit. (Berlin), vol. 72, no. 34, Aug. 25, 1928, pp. 1195-1196, 2 figs.

Note on Heat Transmission in Pipes (Bermerkung ueber den Waermeuebergang im Rohr), L. Prandtl. Physikalische Zeit. (Leipzig), vol. 29, no. 14, July 15, 1928, pp. 487-489. Theoretical, mathematical elaboration of older formulas; takes account of phenomena of turbulent flow of liquid in pipes.

WALLS. Thermal Phenomena in Walls of any Form (Waerme und Temperaturverlauf in Waenden von beliebiger Form), K. Laehmann. V.D.I. Zeit. (Berlin), vol. 72, no. 32, Aug. 11, 1928, pp. 1127-1128, 6 figs.

HYDRAULIC DREDGES

DIESEL DRIVEN. Diesel Hydraulic Dredge. Mar. Rev., vol. 58, no. 9, Sept. 1928, pp. 40-41, 2 figs. Hull is 106 ft. long, by 28 ft. beam, by 8 ft. depth; Diesel pump engine is Bessemer 6-cylinder, 4-stroke-cycle, developing 500 hp. at 275 r.p.m., direct-connected through Francke floating-ring type of flexible coupling to 15-in. Morris centrifugal pump; delivering 200 cu. yd. solids per hour against 40-ft. head.

HYDRAULIC TURBINES

OPERATION. Operation of Waterwheels at Small Gate Openings, J. Talla. Power, vol. 68, no. 9, Aug. 28, 1928, p. 360, 1 fig.

HYDRAULICS

STANDING WAVES. The Standing Wave, J. H. Jones. Engineering (Lond.), vol. 126, nos. 3265 and 3266, Aug. 10 and 17, 1928, pp. 172-173 and 193-194, 10 figs. Standing wave may either make or destroy success of otherwise carefully planned water-regulating works, and its analysis throws great light upon other apparently unconnected obscure phenomena; results of author's investigations covering period of eight years; method of analysis adopted is based on law of conservation of momentum; weir discharge. (To be continued.)

HYDRO-ELECTRIC DEVELOPMENTS

BRITISH COLUMBIA. Water-Power Resources of British Columbia. Elec. World, vol. 92, no. 9, Sept. 1, 1928, p. 409, 1 fig. Water-power resources are estimated at 1,930,000 hp. minimum and 5,100,000 hp. for six months, of which 460,562 hp. has already been developed; principal central-station systems in province are those supplying Vancouver, Victoria, and Nelson districts.

CONOWINGO, MD. The Conowingo Hydroelectric Development on the Susquehanna River, A. Wilson. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 9, Sept. 1928, pp. 655-657. Unusual features of design and construction of dam, power station, and hydraulic equipment, together with general description of entire project are described.

HYDRO-ELECTRIC POWER DEVELOPMENTS

BRITISH COLUMBIA. The Alouette Lakes Development, British Columbia. Engineering (Lond.), vol. 126, no. 3266, Aug. 17, 1928, pp. 185-191, 23 figs.

CANADA. Hydro-Electric Development in Canada. Can. Engr. (Toronto), vol. 55, no. 8, Aug. 21, 1928, pp. 235-237, 6 figs. Review of present and prospective hydro-electric power-plant construction in Canada; estimated that about 550,000 hp. will be installed this year; numerous undertakings also in initial stages of construction; developments in various provinces.

ONTARIO. Ontario Hydro's New 54,000 hp. Nipigon River Development. Elec. News (Toronto), vol. 37, no. 18, Sept. 15, 1928, pp. 33-34, 3 figs.

QUEBEC. Montreal Island Power Development Is in Full Swing. Elec. News (Toronto), vol. 37, no. 18, Sept. 15, 1928, pp. 34-35, 2 figs. Description of power development on Riviere des Prairies at Black river; ultimate installation will consist of ten units of 12,000 hp. maximum capacity, with total of 90,000 hp. under normal conditions; location of plant is shown by map accompanying article; 800 men are at present employed on job and work is progressing very satisfactorily.

HYDROGRAPHIC SURVEYING

POSITION FINDING. Radio Acoustic Position Finding in Hydrography, J. H. Service. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 9, Sept. 1928, pp. 670-674, 4 figs. Temporary shore stations are set up, equipped with microphone placed in water and connected with amplifier ashore through cable; amplifier is connected through relay to automatic key driven by clockwork, which causes radio transmitter to send out characteristic signal whenever microphones is disturbed; ship obtains time of travel of sound in water from her position to shore-station microphones; speed of sound in seawater being known, ship's position is thus fixed; method has been used in U.S. Coast and Geodetic Survey. Bibliography.

I

ICE PLANTS

PHILADELPHIA. Tacony Plant of Kensington Hygeia Ice Co., Philadelphia, Pa. Ice and Refrig., vol. 75, no. 2, Aug. 1928, pp. 93-95, 6 figs.

INDUSTRIAL LIGHTING

VIBRATIONS EFFECT. Vibration As Related to Industrial Lighting, A. J. Thompson. Iron and Steel Engr., vol. 5, no. 8, Aug. 1928, pp. 390-391.

INSULATING MATERIALS (ELECTRIC)

TESTING. A Modern Industrial High-Pressure Laboratory, A. Imhof. Elec. Rev. (Lond.), vol. 103, no. 2647, Aug. 17, 1928, pp. 267-269, 6 figs. Account of equipment used for testing insulating materials; high-tension works laboratory must serve two purposes: insulators must be expeditiously and yet thoroughly examined for quality and size; accurate research is absolutely necessary in connection with improvement of quality and study of convenient dimensions and construction details; test room must be spacious; good ventilation and illumination by adjustable reflectors must be provided; description of one of latest and largest industrial test laboratories in German porcelain factory.

INSULATORS

ELECTRIC. Hardware and Insulators, D. C. Hopper. Iron and Steel Engr., vol. 5, no. 8, Aug. 1928, pp. 350-352.

[*See also Airplane Engines; Automobile Engines; Diesel Engines; Oil Engines.*]

IRON AND STEEL PLANTS

NOVA SCOTIA. Plant of Dominion Iron & Steel Company at Sydney, N.S. Iron and Steel of Can. (Gardenvale, Que.), vol. 11, no. 8, Aug. 1928, pp. 231-232. Description of small improvements made to plant which have effected important economies; all production records in all departments have been broken in past year.

IRON CASTINGS

GRAY. Way to Improve Gray-Iron Castings, R. Moldenke. Iron and Steel of Can. (Gardenvale, Que.), vol. 11, no. 8, Aug. 1928, pp. 240-242. Abstracts of paper presented at European Foundrymen's Congress, Barcelona, Spain.

IRON FOUNDRIES

CASTING PRACTICE. Casting Technique (Die Giesstechnik fuer Gusseisen), J. Petin. Giesserei (Duesseldorf), vol. 15, no. 31, Aug. 3, 1928, pp. 749-757, 15 figs.

GRAY-IRON. Completes New Foundry for Compressor and Engine Gray-Iron Castings. Iron Age, vol. 122, no. 8, Aug. 23, 1928, pp. 461-462, 2 figs. Chicago Pneumatic Tool Co. has completed new foundry at Franklin, Pa.; building is 130 ft. wide and 220 ft. long; buildings and foundry equipment represents investment of more than $400,000; 225 men will be employed; equipment includes two cupolas, one of 16 and one of 8 tons per hour capacity.

IRON MINES AND MINING

PUMPS, ELECTRIC. Two Deep-Level Pumping Plants in the Lake Superior Iron Country, W. M. Hoen. Eng. and Min. Jl., vol. 126, no. 10, Sept. 8, 1928, pp. 364-369, 6 figs. Castile Mining Co. and Montreal Mining Co. on Gogebic range; water is accumulated at about 2,000 ft.; new pumps replace older and less efficient units; Castile has 3 geared 5¼ by 18-in. Prescott horizontal duplex; 200-hp. squirrel-cage motors, 2,200 volts; Montreal has 2 geared 6¾ by 24-in. Worthington horizontal duplex 450-hp. synchronous motors, 2,200 volts; at both plants, motors connected to pinion shaft through Falk-Bibby coupling.

IRRIGATED LANDS

DRAINAGE. Report of the Committee of the Irrigation Division on Drainage of Irrigated Lands. Am. Soc. Civil Engrs.—Proc., vol. 54, Mar. 3, 1928, pp. 131-152. See discussion in no. 7, Sept. 1928, pp. 2203-2205, 1 fig.

IRRIGATION

WATER RECOVERY. Return Water and Drainage Recovery From Irrigation. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 7, Sept. 1928, pp. 2178-2194, 3 figs. Discussion by R. I. Meeker and F. H. Tibbetts on symposium, presented at meeting of Irrigation Division, Denver, Colo., July 14, 1927, and published in Apr. 1928 issue of Proceedings.

LEAD-ZINC MINES AND MINING

AUSTRALIA. Mining Ore at the Broken Hill Proprietary, E. J. Horwood. Eng. and Min. Jl., vol. 126, no. 8, Aug. 25, 1928, pp. 295-297, 3 figs.

LOCOMOTIVE REPAIR SHOPS

WABASH RY. CO. Wabash Shops Are Enlarged to Meet Repair Demands, F. W. Curtis. Am. Mach., vol. 69, no. 8, Aug. 23, 1928, pp. 315-317, 4 figs.

LOCOMOTIVES

DESIGN. British Influence on American Locomotive Design. Modern Transport (Lond.), vol. 9, no. 491, Aug. 11, 1928, pp. 3-4, 7 figs. New Pacific-type locomotive built at Mt. Clare shops of Baltimore and Ohio Railroad, design of which is said to be strongly influenced by British design.

DIESEL. *See Diesel Locomotives.*

ELECTRIC. *See Electric Locomotives.*

FRAMES. Graphical Analysis of Rigid Beams on Elastic Supports (Zeichnerische Untersuchungen fuer den starren Traeger auf Elastischen Stuetzen), E. Pawelka. Organ fuer die Fortschritte des Eisenbahnwesens (Berlin), vol. 83, no. 15, Aug. 1, 1928, pp. 289-292, 8 figs. Author develops graphical method of analysis of stresses in beam members of locomotive frames resting on springs.

HIGH-PRESSURE, SWITZERLAND. High-Pressure Locomotives of the Swiss Locomotive Works of Winterthur (Hochdrucklokomotive 60 Atm. der Schweizerischen Lokomotiv-und Maschinenfabrik Winterthur), H. Brown. Zeit. des Oesterr. Ingenieur u. Architekten-Vereines (Vienna), vol. 80, no. 31/32, Aug. 3, 1928, pp. 279-285, 15 figs.

OIL-ELECTRIC. A 660-Hp., 87-Ton Oil-Electric Switcher for the Long Island Railroad, J. H. Harvey. Ry. and Locomotive Eng., vol. 41, no. 6, June 1928, pp. 162-165, 5 figs.

PULVERIZED-COAL. The AEG Pulverized Fuel Locomotive, W. Kleinow. Fuel (Lond.), vol. 7, no. 8, Aug. 1928, pp. 345-363, 23 figs. Development of use of pulverized fuel; development of A.E.G. system of pulverized-fuel combustion for locomotives; A.E.G. pulverized-fuel tender; trial of locomotive on road.

STEAM-TURBINE. The Super-High-Pressure Turbine Locomotive of the J. A. Maffei A. G. Eng. Progress (Berlin), vol. 9, no. 8, Aug. 1928, pp. 218-219. German State Railways Co. have placed order with Locomotive Works of J. A. Maffei, of Munich, for locomotive with super-high-pressure boiler and turbine drive; locomotive will be express train engine of 4-6-2 type, of 2,500 hp. maximum capacity, and will have maximum speed of 110 km., 68 m. per hour; boiler as Benson type.

THREE-CYLINDER. Some Experimental Results from a Three-Cylinder Compound Locomotive, L. H. Fry. Instn. Mech. Engrs.—Proc. (Lond.), no. 4, 1927, pp. 923-954 and (discussion) 955-1024, 30 figs.

WHEEL LOADING. Dynamic Loading on Locomotive Wheels, G. Lomonossoff. Engineer (Lond.), vol. 146, nos. 3784 and 3785, July 20 and 27, 1928, pp. 58-59 and 83-85, 4 figs.

LOOMS, COTTON

POWER REQUIREMENTS. Theoretical Expressions for the Power Required to Drive Plain Cotton Looms, R. H. Wilmot. Metropolitan Vickers Gaz. (Manchester, Eng.), vol. 11, no. 184, July 1928, pp. 18-20.

LUMBER HANDLING

PRINCIPAL CLASSIFICATIONS. Mechanical Handling of Lumber, C. M. Bigelow and T. D. Perry. Am. Soc. Mech. Engrs.—Advance Paper for mctg. Oct. 1 to 3, 1928, 7 pp., 18 figs. Problem may be divided into three principal classifications: handling of lumber for kiln drying; handling of relatively moderate sizes of dimension lumber for erection and equipment of houses and small industrial structures; handling of large-size structures, ships, etc.

M

MACHINE TOOLS

BALL BEARINGS. Ball Bearings for Main Spindles, H. W. Holdsworth. Machy. (N.Y.), vol. 35, no. 1, Sept. 1928, pp. 11-16, 8 figs.

ELECTRIC DRIVE. Electric Drivers for Machine Tools, A. Fox and A. J. Whitcomb. Machy. (N.Y.), vol. 35, no. 1, Sept. 1928, pp. 33-36, 5 figs.

MACHINERY

POWER REQUIREMENTS. Power Required to Drive Machinery, J. W. Brassington. Nat. Engr., vol. 32, no. 4, Apr. 1928, pp. 155-158, 3 figs.

TORSION RESISTANCE. Resisting Torsional Strains in Machinery Bases. Am. Mach., vol. 69, no. 9, Aug. 30, 1928, p. 342, 4 figs. Illustrations of use of butt-welded tubes for resisting effects of torsion; examples of tests carried out by Lincoln Electric Co. on tubular cross-members for base on gasoline-driven hoist.

MANGANESE STEEL

MANUFACTURE BY ELECTRIC PROCESS. Making Electric Manganese Steel, J. H. Hruska. Iron Age, vol. 122, no. 8, Aug. 23, 1928, pp. 455-456, 2 figs.

MATERIALS HANDLING

GRAB BUCKETS. Grabs, E. G. Fiegehen. Engineering (Lond.), vol. 126, no. 3267, Aug. 24, 1928, pp. 224-225, 4 figs. Grabs for transporters and telphers; automatic coiling drums.

IRON AND STEEL PLANTS. Clamshell Buckets in the Steel Industry, E. L. Harrington. Blast Furnace and Steel Plant, vol. 16, no. 8, Aug. 1928, pp. 1076 and 1075, 1 fig.

METAL CUTTING

TEMPERATURE EFFECTS. Cutting Tools Research Committee Report on Cutting Temperatures: Their Effect on Tools and on Materials Subjected to Work, E. G. Herbert. Instn. Mech. Engrs.—Proc. (Lond.), no. 4, 1927, pp. 863-892 and (discussion) 893-908, 21 figs.

METAL MINES AND MINING

BRITISH COLUMBIA. The Central British Columbia Mining District, R. C. Rowe. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 35, Aug. 31, 1928, pp. 692-695, 6 figs. Outline of geology and description of some individual mines in area about 250 mi. in length, from Terrace to Endago on Edmonton-Prince Rupert line of Canadian Northern Ry.; deposits mainly of silver-lead or silver-lead zinc type and some occurrences of gold-copper ore.

EXPLOSIVES. Reducing Metal Mining Costs by Using Stemming, O. N. Wampler. Explosives Engr., vol. 6, no. 8, Aug. 1928, pp. 303-305, 4 figs. Tests conducted on lead blocks showed 90 per cent gain in explosive energy from use of stemming; various percentages of saving in quantity of explosives required to produce given results in certain mines; reduces number of boulders in stope shots; further advantages to be expected as men become adept with its use and become convinced of its advantages.

FIRE PREVENTION. How to Prevent Mine Fires, E. D. Gardner and D. J. Parker. Eng. and Min. Jl., vol. 126, no. 8, Aug. 25, 1928, p. 300. Abstract of U.S. Bureau of Mines—Reports of Investigations; no. 2882, previously indexed.

STOPING. Stope Control, Dilution, and Recovery with the Caving Methods, C. A. Mitke. Eng. and Min. Jl., vol. 126, no. 7, Aug. 18, 1928, pp. 246-252, 14 figs. Purpose of boundary shrinkage stopes is to isolate, from main mass, block of ore being undercut and drawn; mechanics of ground movement; piping caused by uneven drawings; cross currents proved by tests with wooden cubes placed in ore blocks about to be caved; high recovery dependent on close spacing of draw holes, as well as on "stope control"; examples of tonnages and grades at Miami, Morenci, and other mines. (Concluded.)

METALS

FATIGUE. What is Fatigue (Was ist Ermuedung)? K. Laute and G. Sachs. V.D.I. Zeit. (Berlin), vol. 72, no. 34, Aug. 25, 1928, pp. 1188-1189, 2 figs. Report from government testing laboratory and Kaiser Wilhelm Institute for metal research at Berlin-Dahlem; review of fatigue of metals studies by Gough, Ludwik, Moore and Kommers, and others; new experiments by authors showing weakening effect of heat treatment on nickel bars subjected to vibrations repeated millions of times.

HEAT CONDUCTIVITY. Heat Conductivity of Metals as Factor in Heat Transfer, R. Worthington. Chem. and Met. Eng., vol. 35, no. 8, Aug. 1928, pp. 481-482.

NOTCHED-BAR TESTS. The Fracture of Notched Tensile Test Pieces (Der Bruch gekerbter Zugproben), W. Kuntze. Archiv. fuer das Eisenhuettenwesen (Duesseldorf), vol. 2, no. 2, Aug. 1928, pp. 109-117, 11 figs.

WEAR TESTING. The Wear of Metals and Its Determination. Engineering (Lond.), vol. 126, no. 3267, Aug. 24, 1928, p. 237.

MINERAL DEPOSITS

CANADA. Apatite, Graphite, and Mica in Canada. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 34, Aug. 24, 1928, pp. 675-676. Much apatite produced as by-product of mica mining; these minerals and graphite occur in and near Grenville-Hastings group of sedimentary rocks, in parts of Ontario and Quebec, south and north of Ottawa; general outline of characteristics of deposits, with some production data.

MINES AND MINING

CANADA. Canadian Mining Industries. Engineer (Lond.), vol. 146, no. 3788, Aug. 17, 1928, pp. 177-178, 7 figs. partly on p. 174. Vast coal fields of Nova Scotia, Alberta, and British Columbia, gold ores of Porcupine and Kirkland lake in Ontario, nickel-copper deposits of Sudbury, silver-cobalt ores of Cobalt, all have been important factors in opening up new sections of country and in establishing permanent civilization; mining activities in Canada furnish employment for appreciable percentage of population; development facilitated by plentiful supply of cheap hydro-electric power; transportation; aviation.

CAVING. Comparison of Branch Raise and Combined Shrinkage and Caving Methods, C. A. Mitke. Min. and Met., vol. 9, no. 261, Sept. 1928, p. 411. (Abstract.)

LIQUID FIRE. Mining By Fire. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 35, Aug. 31, 1928, pp. 700-701. Article previously indexed from Min. and Indus. Mag. of S. Africa, Mar. 21, 1928.

PUMPS, HYDRAULIC. P. Mengin Pump, Hydraulically Operated, for Deep-Water Pumping (Pompe P. Mengin à Commande hydraulique, pour le puisage des eaux profondes). Génie Civil (Paris), vol. 93, no. 6, Aug. 11, 1928, p. 146.

Rock Pressure. Nature of Rock Pressure and Its Utilization in Working of Mansfeld Mines (Das Wesen des Gebirgsdruckes und dessen Ausnutzung beim Abbaubetriebe des Mansfelder Bergbaus), G. Gillitzer. Glueckauf (Berlin), vol. 64, nos. 29 and 30, July 21 and 28, 1928, pp. 977-987 and 1009-1016, 15 figs.

O

OIL ENGINES

Airless Injection, Testing. Experiments on Solid-Injection Engine, G. F. Mucklow. Automobile Engr. (Lond.), vol. 18, no. 244, Aug. 1928, pp. 306-310, 13 figs. Experiments carried out in engineering laboratories of University of Manchester on Crossley single-cylinder solid-injection heavy-oil engine Type 0123 which was so arranged that timing of fuel injection could be varied; normal injection timing of 348.5 deg. gives best results in case of particular engine under test.

Power Measurement. Exhaust Temperature as Load Index for Oil Engines, E. C. Magdeburger. Am. Soc. Naval Engrs.—Jl., vol. 40, no. 3, Aug. 1928, pp. 496-500. 1 fig. See article by Heidelberg in V.D.I. Beit. (Berlin), Dec. 24, 1927.

Power-Plants. An 11,700 B.H.P. Oil Engine for Power Station Work. Engineer (Lond.), vol. 146, no. 3786, Aug. 3, 1928, p. 128, 1 fig.

OIL SHALE

Canada. Oil Shale Developments in Canada, A. A. Swinnerton. Petroleum World (Lond.), vol. 9, no. 335, Aug. 1928, pp. 309-314. Paper presented at Dominion Chemical Convention, previously indexed from Petroleum Times (Lond.), July 28, 1928.

OPEN-HEARTH FURNACES

Design. Improvements in Open Hearth Furnaces with Moll-Type Head (Neuerungen an Siemens-Martin-Oefen mit Moll-Kopf), K. H. Moll. Stahl u. Eisen (Duesseldorf), vol. 48, no. 34, Aug. 23, 1928, pp. 1160-1165, 6 figs. Report no. 146 of Steel Works Committee of Verein deutscher Eisenhuettenleute.

ORE DEPOSITS

Theory. Diffusion in Ore Genesis, A. R. Whitman. Economic Geology, vol. 23, no. 5, Aug. 1928, pp. 473-488, 5 figs. Describes quantitative experiment to establish rate of diffusion of metallic solutions in rock; author argues that diffusion process functions as principal agent of mobility in facilitating metasomatism.

ORE DRESSING

Experimental Plant. The Experimental Plant, H. F. Lunt. Colo. School of Mines Mag., vol. 18, no. 1, May 1928, pp. 15-17, 6 figs. Accurate results from pilot mill made possible by special equipment, devised principally by A. J. Weinig; rock saw; reagent feeder; table for determining quantities of reagents required. (Continuation of serial.)

ORE TREATMENT

Flotation. Preparation and Modification of Ore Pulps for Flotation Grinding, H. S. Martin. Min. Congress Jl., vol. 14, no. 9, Sept. 1928, pp. 716-718, 1 fig.

ORE TREATMENT, FLOTATION PLANTS

Payments. Analyzing Complex-Ore Settlements Graphically, H. L. Johnson. Eng. and Min. Jl., vol. 126, no. 7, Aug. 18, 1928, pp. 256-258.

P

PAVEMENTS

Brick, Wear. Wear of Brick Pavement Under Heavy City Traffic, P. L. Brockway. Eng. News-Rec., vol. 101, no. 8, Aug. 23, 1928, pp. 286-287. At Wichita, Kan., traffic of 3,000,000 tons per foot of width reduces thickness one inch; Arlington test by Bureau of Public Roads misleading; traffic wears out pavement in direct ratio to volume and in increasing ratio with density.

Concrete, Felt Base. Sealed Felt Base for Concrete Pavement. Roads and Streets, vol. 68, no. 8, Aug. 1928, p. 415.

Concrete, Specifications. The Effect of the Length of the Mixing Period on the Quality of the Concrete Mixed in Standard Pavers, J. L. Harrison. Pub. Roads, vol. 9, no. 5, July 1928, pp. 93-111, 9 figs. Results of study of specifications governing mixing of concrete for highway pavements made by U.S. Bur. of Public Roads; with coöperation of state highway departments; reports of records of some 1,500 broken cylinders are given.

Testing, Germany. Dynamic Testing of Street Pavements and Its Results (Dynamische Strassenwertung und Ihre Ergebnisse), P. Langer and W. Thome. Beton-Strasse (Berlin), vol. 3, no. 8, Aug. 1, 1928, pp. 199-208, 17 figs. Authors describe instruments and methods used in testing street and highway pavements by acceleration and impact effects; results of tests on Brunswick experimental highway; effect of vehicle springs; graphs of pavement conditions.

PETROLEUM PRODUCTION

Canada. Progress in Western Canada Fields, V. Lauriston. Oil and Gas Jl., vol. 27, no. 10, July 26, 1928, pp. 145, 156, 159-160.

PHOTOELASTICITY

Theory and Practice. Use of Oblique Double Refraction in Study of Strain Distribution in Stressed Bodies (Ueber die Anwendung der akzidentellen Doppelbrechung zum Studium der Spannungsverteilung in beanspruchten Koerpern), M. Waechtler. Physikalische Zeit. (Leipzig), vol. 29, no. 15, Aug. 1, 1928, pp. 497-534, 39 figs. Extensive review of theory and practice of photoelasticity; theoretical and practical studies by Coker, Filon, Mesnager, Koenig, Asch, author, and others; international bibliographic list of 102 references.

PIPE LINES

Welding. Welding as Applied to Steam and Water Piping, J. H. Zink. Heat. and Vent. Mag., vol. 25, no. 8, Aug. 1928, pp. 80-82, 5 figs.

PIPING (POWER PLANTS)

Welding. The Welding of Power-Plant Piping, A. W. Moulder. Fuels and Steam Power (A.S.M.E. Trans.), vol. 50, no. 15, May-Aug. 1928, pp. 235-240, 17 figs.

POWER PLANTS

Electric, Substations. Safe, Underground Transmission of Electrical Energy, H. Milliken. Elec. News (Toronto), vol. 37, no. 17, Sept. 1, 1928, pp. 31-37, 15 figs. Montreal Light, Heat and Power Consolidated has completed 4,000-volt distribution substation where density of load is such as to require ultimate station capacity of approximately 90,000 kva. two-hour rating; station is known as Vallee Street Substation; description of 66-kv. cable installation connecting substation to overload system, 4,000 ft. away.

Electrical Features of the Conowingo Generating Station and the Receiving Stations in Philadelphia, R. A. Hentz. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 9, Sept. 1928, pp. 649-654, 13 figs. Paper outlines principal electrical features of Conowingo development; including main units and their connections, station auxiliary supply, and 220,000-volt substation built on roof of power plant; 220,000-volt substation at Plymouth meeting Philadelphia terminus of Conowingo lines at lines of Pennsylvania-New Jersey interconnection; Westmoreland substation where 66-kv. lines from Plymouth meeting tie in with 66-kv. backbone of Philadelphia Electric System.

What Size Substations? L. G. Smith. Elec. World, vol. 92, no. 10, Sept. 8, 1928, pp. 459-461, 4 figs. Factors to be considered in determining economic size; practices of utilities; method of analysis developed upon basis of interrelation of system elements. Based on material compiled by substation subcommittee of electrical apparatus committee, N.E.L.A.

Electric, Substations, Remote Control. The Economics of Supervisory Control, R. J. Wensley. Elec. News (Toronto), vol. 37, no. 16, Aug. 15, 1928, pp. 34-36.

Electric, Transformer Stations. Extra-high Pressure Step-down Transformer Station. Engineer (Lond.), vol. 146, no. 3789, Aug. 24, 1928, p. 198. First 220,000-volt step-down transformer station to be built in Canada is being erected by Ontario Hydro-Electric Power Commission in Leaside, Ont.; 220,000-volt lines terminate on bush and may be disconnected from it by means of large oil circuit breakers and disconnecting switches; each circuit breaker is 22 ft. high to top of bushing, and occupies area of 25 ft. by 10 ft.; 110,000-volt windings of transformers provide means of inter-connection whereby Gatineau power may be taken directly and absorbed into 110,000-volt Niagara system.

POWER PLANTS, HYDRO-ELECTRIC

Automatic. Largest Automatically Controlled Generating Station, C. W. Colvin. Contract Rec. (Toronto), vol. 42, no. 32, Aug. 8, 1928, pp. 815-818, 4 figs. Description of 10,000-kva. unit in British Columbia Electric Railway Co.'s Alouette plant controlled from Stave Falls, 10 miles distant; spare turbine-driven exciter installed; station building is of reinforced-concrete construction; hydraulic, electric, and auxiliary apparatus; governing system.

British Columbia. Largest Automatically Controlled Generating Station, C. W. Colvin. Elec. News (Toronto), vol. 37, no. 16, Aug. 15, 1928, pp. 29-30 and 51, 3 figs. Control equipment of Alouette station is designed to perform automatically and in proper sequence all of operations of starting, running, and shutting down ordinarily performed by operations and floor men in manually operated stations; protective features. (Concluded.)

Automatic, Switzerland. Automatic Generating Plants Installed in Switzerland (Les usines génératrices à fonctionnement automatique installées en Suisse), J. Kloninger. Revue Générale de l'Electricité (Paris), vol. 24, no. 5, Aug. 4, 1928, pp. 189-195, 6 figs.

Gates. Roller and Sector Gates on Hydro Plants, O. Reed. Eng. News-Rec., vol. 101, no. 10, Sept. 6, 1928, pp. 346-349, 7 figs. General review of hydro-electric development in Norway; special problems; regulation of forebay ponds by sector and roller gates at Raanaasfos, Solbergfos, and Vamma; Raanaasfos dam spillway has capacity of 141,000 sec.-ft. and is regulated by two sector gates and one roller weir, 164 ft. long with regulating height of 12.3 ft.; reliability of these gates proved by thorough operating experience; electric heating of roller gates; objection to use of sector gates is wide masonry base which is required.

Ice Control. Electric Heating Protects Sluice Gates and Intakes Against Ice, J. H. D. Blanke. Nat. Engr., vol. 32, no. 7, July 1928, pp. 315-316. How number of hydro-electric plants are warding off ice troubles quite effectively by means of electric heating systems installed by Siemens-Schuckert-Werke; at Gratwein paper mill transformer of 95-kva. capacity and output voltage of 110 is employed for screenheating system.

Water Flow. Water-Flow Prediction for Hydraulic Power Stations (Wassermengenvorhersage im Kraftwerksbetrieb), A. Kvetensky. Elektrotechnik u. Maschinenbau (Vienna), vol. 46, no. 17, Apr. 22, 1928, pp. 375-377, 2 figs.

POWER PLANTS, STEAM

Design. Some Economic Factors in Power-Station Design, H. B. Brydon. Fuels and Steam Power (A.S.M.E. Trans.), vol. 50, no. 15, May-Aug. 1928, pp. 159-168 and (discussion) 168-181, 17 figs. Paper previously indexed from Mech. Eng., May 1928.

High Pressure. High Pressure Steam at Edgar Station, I. E. Moultrop and E. W. Norris. Fuels and Steam Power (A.S.M.E. Trans.), vol. 50, no. 15, May-Aug. 1928, pp. 32-36 and (discussion) 36-40. Authors describe design of generating plant for Edison Electric Illuminating Co. using steam at 1,200 lb.; this plant was first in country to use pressures of this magnitude; equipment of original plant is described and operating difficulties and results are discussed; comparison of space requirements of high- and low-pressure equipment.

Economies of Higher Pressures Substantiated. Power Plant Eng., vol. 32, no. 17, Sept. 1, 1928, pp. 918-919, 1 fig.

POWER PLANTS, STEAM-ELECTRIC

Detroit. What is in Detroit's Morrell Street Plan—And What It Cost. Power, vol. 68, no. 10, Sept. 4. 1928, pp. 402-404, 2 figs.

One-Man Operation. One-Man Operation for Avon Park Station, R. D. Stauffer and J. P. Garvin. Elec. World, vol. 92, no. 8, Aug. 25, 1928, pp. 349-357, 8 figs.

PRESSURE VESSELS

Fusion Welding. Fusion Welds on Heavy Plate, R. W. Miller. Iron Age, vol. 122, no. 10, Sept. 6, 1928, pp. 567-570, 6 figs.

Welded Joints. Maximum Allowable Unit Working Stresses for Fusion-Welded Joints. Acetylene Jl., vol. 30, no. 2, Aug. 1928, pp. 70-71.

PUMPING STATIONS

Equipment, Economics. The Merits of Seven Kinds of Pumping Equipment Compared, P. Hansen. Eng. News-Rec., vol. 101, no. 11, Sept. 13, 1928, pp. 386-388, 2 figs. In connection with new pumping station at Highland Park, Ill., seven types or combinations were considered, which are enumerated; study of local governing conditions indicates preference for electrically driven centrifugal pumps using purchased energy. See also editorial comment on p. 377.

England. The Prestwood Pumping Station of the South Staffordshire Waterworks Company. Engineering (Lond.), vol. 126, nos. 3263 and 3266, July 27 and Aug. 17, 1928, pp. 102-104 and 211-212, 13 figs., 4 on p. 202.

PUMPS, CENTRIFUGAL

Design. Some Unusual Pumping Services. W. A. T. Gilmour. Can. Engr. (Ontario), vol. 55, no. 7, Aug. 14, 1928, pp. 225-226, 5 figs. Design of centrifugal pumps for sewerage, drainage, dredging, abattoir, quarry, dairy, salt manufacture, and other special purposes.

Fluids Other Than Water. Characteristic Laws for a Centrifugal Pump With Fluids Other Than Water, H. Mawson. Instn. Mech. Engrs.—Proc. (Lond.), no. 4, 1927, pp. 1037-1045, 5 figs.

Petroleum Pipe Lines. Big Development in Centrifugal Pumps, A. H. Borchardt. Oil and Gas Jl., vol. 27, no. 15, Aug. 30, 1928, p. T-176, 2 figs. Research work has resulted in widespread use of this type of machinery in pumping of crude oil.

Piping. Centrifugal Pumps, E. W. Sargeant. Mech. World (Lond.), vol. 84, nos. 2167 and 2171, July 13 and Aug. 10, 1928, pp. 28-29 and 124-126, 9 figs.

PUMPS, SELECTION

To Fit Service Conditions. Selection of Pumps to Fit Service Conditions, F. G. Cunningham. Am. Water Works Assn.—Jl., vol. 20, no. 2, Aug. 1928, pp. 171-182. See also Water Works Eng., vol. 81, no. 17, Aug. 15, 1928, pp. 1183-1184 and 1187.

PUMPS, RECIPROCATING

Petroleum Pipe Lines. Air Chambers for Reciprocating Pumps, W. D. Pomeroy. Oil and Gas Jl., vol. 27, no. 15, Aug. 30, 1928, pp. T-112-113, T-116, T-118, T-119, T-122 and T-124, 27 figs.

PUMPS, ROTARY

Multi-Disk. The Hollko Multi-disk Rotary Pump (Die Hollko Waelzkolbenpumpe) Jentsch. V.D.I. Zeit. (Berlin), vol. 72, no. 33, Aug. 18, 1928, pp. 1158-1160, 13 figs. Construction details of new type of rotary pump (Mocigemba design) consisting of two shafts carrying six rotary disks each, manufactured by Hollunder and Co. of Essen for heads of 50 to 200 m. and up to 1,900 r.p.m.; tests by author at Duisburg School of Mechanical and Mining Engineering indicate efficiency of 35 per cent.

PYRITE DEPOSITS

Canada. A General Summary of Observations on the Sulphide Deposits of Northern Quebec, H. C. Cooke and W. F. James. Can. Min. Jl. (Gardenvale, Que.), vol. 49, nos. 34 and 35, Aug. 24 and 31, 1928, pp. 670-674 and 696-698, 7 figs.

PYROMETERS

Surface-Temperature. Pyrometers for Surface Temperature Measurements. Foundry Trade Jl. (Lond.), vol. 39, no. 624, Aug. 2, 1928, pp. 79-80, 4 figs. Description of new form of pyrometer, produced by Cambridge Instrument Co., which enables temperatures of hot metal surfaces to be measured with ease and rapidity hitherto impossible; overcoming contact difficulties; modifications for industrial utility; nonferrous applications.

R

RADIO BEACONS

Rotating. A Rotating Radio Beacon, R. L. Smith-Rose and S. R. Chapman. Engineering (Lond.), vol. 126, no. 3264, Aug. 3, 1928, pp. 130-131. Ordinary open aerial of wireless installation is replaced in beacon by vertical rotating frame aerial consisting essentially of vertical oblong flat coil; coil in beacon rotates at uniform rate round vertical axis and listener at each receiving station therefore gets zero, or minimum, signal twice in each revolution; accuracy of observations made in this way depends essentially on uniformity with which beacon revolves and is synchronized with stopwatch. Abstract of report by Committee on Directional Wireless.

RADIO RECTIFIERS

Metal. Metal Rectifiers. Wireless World (Lond.), vol. 23, no. 8, Aug. 22, 1928, pp. 223-226, 6 figs.

RAILROADS

Coal Storage. The Storage of Railway Coal, E. McAuliffe. Ry. Age, vol. 85, no. 8, Aug. 25, 1928, pp. 361-363, 1 fig. Union Pacific has successfully stored Rock Springs lump, without loss of fuel value after four years in pile; Union Pacific System rules governing storage of coal are set forth.

Grading, Costs. Cost Data on a Railroad Grading Job. Contractors and Engrs. Monthly, vol. 17, no. 1, July 1928, pp. 10-11, 2 figs.

Los Angeles Harbour. Belt-Line Railroad Agreement for Los Angeles Harbour. Eng. News-Rec., vol. 101, no. 8, Aug. 23, 1928, p. 282. After three years of preliminary work, agreement turning all port rail trackage over to harbour belt-line railway to be operated as separate corporation signed by Los Angeles Board of Harbour Commissioners and by four railroads that reach harbour; track mileage 122.7, valuation $57,927,732; after five years any party to agreement may withdraw upon two years' written notice.

Signals and Signaling. Speed Signal Aspects, C. W. Prescott. Int. Ry. Congress Assn.—Bul. (Lond.), vol. 10, no. 7, July 1928, pp. 594-597.

Signals and Signaling, Interlocking. Electric Interlocking System, R. J. Cullen. Am. Soc. Mech. Engrs.—Advance Paper for metg. Oct. 1 to 3, 1928, 5 pp., 9 figs. Installation by Boston and Albany Railroad at its new station in Springfield, Mass., centralizes control of all switches and signals; details of interlocking machine, switches, signal, track circuits, track and signal indicator, telephone service, and power supply.

Signals and Signaling, Power Supply. Power Supply for Railway Signals and Automatic Train Control, C. F. King Jr. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 9, Sept. 1928, pp. 658-661, 1 fig. Paper deals with several systems of automatic block signaling, particularly a.c. system, and apparatus commonly used to insure continuity of power supply; within past three years number of frequency-converting automatic substations has been installed by railway companies; class of apparatus used in these stations is discussed, including details of installations on Pennsylvania and Long Island Railroads.

Tracks, Curve Reduction. Ironing Out a Mountain Railway. Ry. Age, vol. 85, no. 9, Sept. 1, 1928, pp. 403-410, 13 figs. Denver and Rio Grande Western eliminates more than ten complete circles of curvature and reduces maximum curves from 12 degrees to 6; expenditures for improvements amount to $26,863,147; roadbed was widened; treated ties and heavier rails are used; data on heavy locomotives on D. & R.G.W.

Tracks, Widening. Novel Methods Used in Widening Narrow Gauge Line. Ry. Age, vol. 85, no. 10, Sept. 8, 1928, pp. 453-454, 4 figs. Southern Pacific departs from usual prrctices in modernizing Nevada-California-Oregon; new rails were laid on each side of old track; description of track work carried out.

RAILS

Bonds, Arc Welding. Arc-Weld Rail Bonds. Gen. Elec. Rev., vol. 31, no. 9, Sept. 1928, pp. 510-511, 8 figs.

Curve Resistance. Freight Train Curve Resistance. Elec. Traction, vol. 24, no. 8, Aug. 1928, p. 402, 2 figs. Tests made by University of Illinois to determine resistance of cars and rails at different speeds and curvature; results obtained from 101 tests made with five freight trains.

RAILWAY ELECTRIFICATION

Cleveland. Cleveland Terminal To Be Electrified. Ry. Age, vol. 85, no. 8, Aug. 25, 1928, p. 345.

RAILWAY MOTOR CARS

Gasoline-Electric. A Solution of the Branch Line Problem, L. C. Paul. Ry. and Locomotive Eng., vol. 41, no. 6, June 1928, pp. 155-158, 2 figs.

REFRIGERATION

Research Laboratories. The New Refrigeration of the German Institute of Engineering Physics (Das neue Kaeltelaboratorium der Physikalisch. Technischen Reichsanstalt), W. Meissner. V.D.I. Zeit. (Berlin), vol. 72, no. 31, Aug. 4, 1928, pp. 1069-1076, 9 figs. Financing of new laboratory of government institute; general plan of buildings and general equipment; details of special apparatus for liquefaction of nitrogen (20 liters per hour), oxygen (7 1/hr.), hydrogen (10 1/hr.) and helium (2.5 1/hr.); apparatus for separation of neon from helium and for purification of helium.

REFUSE INCINERATORS

Chicago. Chicago Builds $600,000 Garbage-Incinerating Plant. Eng. News-Rec., vol. 101, no. 8, Aug. 23, 1928, pp. 287-288, 2 figs. Six furnaces of Goose Island incinerator give capacity of 600 tons of refuse daily; cranes carry materials from pit to charging hoppers.

RESERVOIRS

Gate Valves, Setting. Placing Gate Valves Under Water in Reservoir, C. B. Burdick. Eng. News-Rec., vol. 101, no. 11, Sept. 13, 1928, pp. 389-391, 3 figs. Divers set frames for valves over openings in cross-walls and suction pipes at Louisville, Ky.

Reinforced Concrete, Covered. Covered Reservoir Combines Precast and Poured Concrete, G. D. Reichert. Eng. News-Rec., vol. 101, no. 11, Sept. 13, 1928, pp. 380-385, 11 figs. Appreciable saving made in constructing Stacy Park covered reservoir for St. Louis water works by combining precast concrete with concrete poured in place; reservoir, 806 ft. long and 603 ft. wide, has reinforced-concrete roof, supported by 1,724 precast concrete columns spaced 16½ ft. on centres and tied together in groups of fours by precast struts at about mid-height; column casting yard at central mixing plant; construction plant for wall footings; belt conveyor backfilling walls; roof forms carried by precast columns. See also editorial comment on p. 379.

Reinforced-Concrete, England. Reinforced-Concrete Service Reservoir at Stafford. Concrete and Constr. Eng. (Lond.), vol. 23, no. 8, Aug. 1928, pp. 559-563, 4 figs. Town has total consumption of 850,000 gal. per day; form and main dimensions of new reservoir are shown; inside dimensions are 107 by 90 ft., with 17 ft. of water at stated capacity; side walls are 15 in. thick, and division wall 17 in., main reinforcement being ¾-in. diam., bars at 4½-in. centres; roof slab of reservoir is 4½ in. thick, reinforced.

RESINS

Synthetic, Properties of. Elasticity and Mechanical Properties of Resinoids as a Function on Their Preparation, O. Manfred and J. Obrist. Plastics, vol. 4, no. 7, July 1928, pp. 371-372 and 374, 1 fig.

ROADS

Concrete. Portland Cement Concrete Roads for May 1928 Surpass All Previous High Marks. Good Roads, vol. 71, no. 7, July 1928, p. 420, 1 fig. Trend of concrete road construction; presents table of yardage awards of portland-cement concrete for May 1928.

Concrete, England. A Few Descriptive Notes on Concrete Roads in Survey, W. P. Robinson. Instn. Mun. and County Engrs.—Jl. (Lond.), vol. 55, no. 3, Aug. 7, 1928, pp. 229-235, 4 figs. Kingston by-pass road and Merton connections; by-pass road is 8½ mi. in length; width of road is 100 ft.; carriage-way 30 ft. in width; Reigate to Dorking main road, 4.88 mi. in length, minimum width of 60 ft.; concrete-surfaced carriage-way 30 ft. in width; Sutton by-pass road 4¾ mi. in length, 80 ft. in width, carriage-way 30 ft. in width.

Concrete, Ontario. Concrete Pavement at Cornwall, J. M. Breen. Can. Engr. (Toronto), vol. 55, no. 8, Aug. 21, 1928, p. 245, 3 figs. Cornwall, Ont., last year embarked on five-year programme of permanent road improvement; plan consists of paving about 1½ mi. of streets each year; township also laying concrete pavements; method of carrying out work. From Mun. Improvements.

Construction, Canada. Reconstruction of the Old Cariboo Road in Canada, P. Philip. Roads and Streets, vol. 68, no. 8, Aug. 1928, pp. 406-410, 7 figs. Unit prices on contract work; tunnel work on Section 2; difficult rock work; bridge work; Boothroyd-Lytton 24-mi. section; Lytton-Spences bridge; 100 mi. of Cariboo road, when completed in fall of 1928, will cost approximately $2,500,000.

Construction, Scotland. Road Maintenance and Construction, Past and Present, with Notes on Road Works in Galashiels, J. Watson. Instn. Mun. and County Engrs.—Jl. (Lond.), vol. 55, no. 1, July 10, 1928, pp. 80-88, 4 figs.

Design. Roads 1888-1928, A. W. Cross. Instn. Mun. and County Engrs.—Jl. (Lond.), vol. 55, no. 26, June 26, 1928, pp. 1559-1569 and (discussion) 1570-1573. Foundations; curbing, channeling and draining; surfacing; pros and cons of various surfacings mentioned; tarred macadam; asphalts; wood blocks; granite and other stone set pavements; concrete surfaces; blue-brick paving. Paper prepared for meeting of West Midland District of Instn. of Min. and County Engrs.

Gravel, Construction. Utah Now Using California Type Oiled Gravel Road. Eng. News-Rec., vol. 101, no. 8, Aug. 23, 1928, p. 291, 1 fig. On relocation of main highway east from Salt Lake City, by way of Parleys Canyon, California type of mulched oiled gravel is being tried; grader mixes asphaltic oil with gravel, throws material in ridges, then spreads it.

Reconstruction, Oregon. Reconstruction of Canyon Road, Oregon, W. A. Scott. Highway Engr. and Contractor, vol. 19, no. 3, Sept. 1928, pp. 24-27, 7 figs.

Surface Treatment. "Arcite," the New French Aqueous Pitch Emulsion for Road Finishing, W. Maclaren. Colliery Guardian (Lond.), vol. 137, no. 3530, Aug. 24, 1928, pp. 733-735, 5 figs.

Surface Treatment, Europe. Methods of Resurfacing With Emulsified Asphalt Penetration Macadam in European Countries, C. L. McKesson. Roads and Streets, vol. 68, no. 8, Aug. 1928, pp. 393-395, 9 figs. Notes on practice in England, France, and Germany; construction methods similar to American; penetration resurface over old macadam; German resurface job; penetration macadam on German race course, in military road, and over old stone-block pavement.

Surface Treatment, Testing. Results of Tests of Road Surface Treatment (Ergebnisse von Fahrbahnoberflaechenbehandlungen), Nack. Bautechnik (Berlin), vol. 6, no. 34, Aug. 10, 1928, pp. 485-489. Author tabulates observations on condition of 37 experimental sections in streets of Essen, treated with various patented commercial compounds; details of construction and state of weather during and about period of construction in fall of 1927; general condition in Apr. 1928.

ROCKETS

Laws of Flight. Mechanics of Interplanetary Rockets (Zur Mechanik der Weltraumraketen), H. A. Senftleben. Zeit. fuer Flugtechnik u. Motorluftschiffahrt (Munich), vol. 19, no. 14, July 1928, pp. 319-323, 4 figs.

Rocket Engines. The Problem of Rocket Vehicles (Zur Frage der Raketenfahrzeuge), R. Conrad. Motorwagen (Berlin), vol. 31, no. 19, July 10, 1928, pp. 440-441.

S

SAND AND GRAVEL PLANTS

Complete Unit. A Complete Sand and Gravel Unit. Pit and Quarry, vol. 16, no. 11, Aug. 29, 1928, pp. 43-48, 10 figs. Description of plant of Kenosha Sand and Gravel Co., Kenosha, Wis.

SAND, BITUMINOUS

Canada. Alberta Tar Sands to Be Used. Oil and Gas Jl., vol. 27, no. 16, Sept. 6, 1928, p. 140. Brief news item from Chatham, Ont., states that extensive use of Fort McMurray tar sands of northern Alberta, for paving purposes throughout West, will be undertaken in 1929; large plant will probably be constructed at Edmonton or Calgary for necessary refining operation; government appropriation to enable S. C. Ells to work out new processes.

SEWAGE CHLORINATION

DEMONSTRATION. A Demonstration of Color-Reaction in the Test for Free Chlorine as Applied to Sewage, C. M. Nicholas. New Jersey Sewage Works Assn.—Proc., Mar. 23, 1928, pp. 12-13 and (discussion) 13-14. Paper covers general range of application of chlorine to settled sewage of 5, 10, 15 and 20 p.p.m.; free chlorine test on sewage leaving chlorine contact tank (generally point of discharge in steam) instead of immediately after chlorine is added; delayed color reaction; proper length of contact period; starch iodine vs. orthotolidin.

SEWAGE DISPOSAL

FILTERS. Filtering Materials for Sewage Works, N. T. Veach, Jr. Mun. News, vol. 75, no. 2, Aug. 1928, pp. 91-92, 1 fig. Paper presented at Texas Water Works Short School.

SEPARATE SLUDGE DIGESTION. Separate Sludge Digestion in Primary and Secondary Tanks, F. P. Sissons. Eng. News-Rec., vol. 101, no. 11, Sept. 13, 1928, p. 402. Abstract of previously indexed paper by F. P. Sissons, read before Association of Managers of Sewage Works and printed in Surveyor (Lond.), July 13, 1928; separate sludge digestion reduced; weight of sludge sent to drying beds by 46 per cent.

TUCSON, ARIZ. "Sewer Farm" at Tucson, Arizona, To Be Irrigated With Settled Sewage, F. M. Veatch. West. Constr. News, vol. 3, no. 16, Aug. 25, 1928, pp. 525-528, 2 figs. Sewer farm consists of 750 acres; comparative costs of sewage-disposal plants at Tucson, Ariz.; sewage-flow and land required for broad irrigation at Tucson; treatment plant.

SEWAGE DISPOSAL PLANTS

FILTERING MATERIALS. Progress Report of the Committee of the Sanitary Engineering Division of Filtering Materials for Water and Sewage Works. Am. Soc. Civil Engrs.—Proc., vol. 54, no. 4, Apr. 1928, pp. 243-280, 3 figs. See also discussion in no. 7, Sept. 1928, pp. 2213-2218.

SEWAGE PUMPING STATION

AUTOMATIC. Automatic Control of Pumping Equipment, as Installed at Springfield, Mass., J. F. Kovalsky. Hydraulic Eng., vol. 4, no. 8, Aug. 1928, pp. 512 and 530, 3 figs.

SEWAGE TREATMENT

FAILURES. Why Sewage Treatment Plants Fail to Function Properly, C. A. Smith. West. Constr. News, vol. 3, no. 15, Aug. 10, 1928, pp. 503-506, 4 figs.

SEWAGE TREATMENT PLANTS

DEWATERING. Dewatering the Site of North Toronto Sewage Treatment Plant Without Sheet Piling. Contract Rec. (Toronto). vol. 42, no. 33, Aug. 15, 1928, pp. 837-838, 4 figs. Moretrench Wellpoint system used at North Toronto sewage-treatment plant with marked success; automatic method that kept excavation dry; area to be dewatered is 45,050 sq. ft., and is largest in Canada to be dewatered by this system; description of operation of system.

FLINT, MICH. Sewage-Works Designed to Meet Needs of Automobile Town, W. R. Drury. Eng. News-Rec., vol. 101, no. 10, Sept. 6, 1928, pp. 357-358, 1 fig. In Flint, Mich., strong domestic sewage plus trade wastes will have complete treatment in which unique Imhoff tank plays part; general layout of sewage works; four radial-flow Imhoff tanks; each tank consists of 18 hexagonal cells with outside ring of cells acting as structural frame; sludge beds, 24 x 125 ft. in plan, 40 in number are built with tile underdrains covered with gravel and sand, with division walls of cypress planks held by means of precast slotted concrete posts.

HOLLAND, MICH. The Holland, Mich., Sewage Treatment Plant, P. Hansen and K. V. Hill. Contractors and Engrs. Monthly, vol. 17, no. 1, July 1928, pp. 1-5, 13 figs.

SHAFT SINKING

EUREKA, UTAH. The North Lily Shaft at Eureka, Utah, J. S. Finlay. Min. Congress Jl., vol. 14, no. 9, Sept. 1928, pp. 698 and 708, 1 fig.

SILK, ARTIFICIAL

PLANTS, ELECTRIC EQUIPMENT. Electrical Practice in a Large New Quebec Artificial Silk Plant, C. E. Olive. Elec. News (Toronto), vol. 37, no. 17, Sept. 1, 1928, pp. 43-45, 4 figs.

SILOS

DESIGN. Load Stresses on Oblique Walls and Bottoms of Bunkers (Die Belastung schraeger Bunkerwaende und Boeden), W. Kunze. Bauingenieur (Berlin), vol. 9, no. 35, Aug. 31, 1928, pp. 632-635, 10 figs. Author points out inconsistencies in usual methods of analysis of stresses in oblique walls and bottoms of large bunkers and compartment silos.

SLABS, REINFORCED CONCRETE

DESIGN. Design Tables for Reinforced-Concrete Slabs Carrying Concentrated Loads (Eisenbetonplatten mit Einzellasten, Hilfswere zu ihrer Berechnung), R. Roll. Bauingenieur (Berlin), vol. 9, no. 34, Aug. 24, 1928. pp. 615-618, 3 figs.

SLIDE RULES

VECTORS. Slide Rule Calculation of Vectors, E. G. Allen. Elec. World, vol. 92, no. 8, Aug. 25, 1928, p. 362. Reference is made to new form of slide rule which, among other uses, facilitates conversion of one form to other; ordinary polyphase duplex slide rule can be similarly used for this purpose in manner described.

SLUDGE TANKS

CAPACITY. Capacity of Sludge Digestion Tanks, K. Imhoff. Can. Engr. (Toronto), vol. 55, no. 8, Aug. 21, 1928, pp. 239-240, 1 fig. Description of types of digestion in different tanks and temperature of sewage in some large disposal plants. Article previously indexed from Am. City, May 1928, from paper presented at Tenth Annual Texas Short School.

SMOKE ABATEMENT

DAMAGE. Damage Due to Smoke, H. B. Meller. Am. Soc. Mech. Engrs.—Advance Paper for mtg. Sept. 17-20, 1928, 6 pp. Paper is based mainly upon publications of smoke investigation conducted by Mellon Inst. of Industrial Research of Pittsburgh, introducing such additional observations and data as have seemed necessary or desirable for correlation, or to indicate results of studies made since 1913; composition of soot; meteorological aspects; products of combustion injurious to stone; effects on metals; effects on outside painting and interior of buildings; effects on vegetation and influence on health.

SNOW REMOVAL

ROADS, NEW YORK. Snow Handling in Onondaga County, R. B. Traver. Pub. Works, vol. 59, no. 8, Aug. 1928, pp. 295-296, 1 fig.

STREET, ALBANY. Fighting Snow in Albany, L. W. Herzog. Pub. Works, vol. 59, no. 8, Aug. 1928, pp. 296-299, 3 figs.

STREETS, TORONTO. Snow Removal in Toronto, G. W. Dies. Pub. Works, vol. 59, no. 8, Aug. 1928, pp. 294-295. Abstract of 192 report of street commissioner of Toronto, Ont.

SOLDERS

PROPERTIES. The Strength of a Cadmium-Zinc and of a Tin-Lead Alloy Solder, C. H. M. Jenkins. Inst. Metals—Advance Paper (Lond.), no. 479, for mtg. Sept. 4-7, 1928, 19 pp., 11 figs.

SPRINGS

TESTING. Tests on Belleville Springs by the Ordnance Department U.S. Army, D. A. Gurney. Am. Soc. Mech. Engrs.—Advance Paper for mtg. Oct. 1-3, 1928, 5 pp., 11 figs. Belleville springs are dish-shaped and used where relatively large load capacity, small deflection, and limited closed height are necessitated by other controlling features of design; recent demands for larger Belleville springs disclose absence of reliable data; investigation at Rock Island Arsenal was undertaken to supply this lack of information; material used was chrome-vanadium sheet steel SAE 6145, containing carbon, 0.43; manganese, 0.62; chromium, 1.10, and vanadium, 0.18.

STEAM

HIGH PRESSURE. Higher Steam Pressures, N. E. Funk. Fuels and Steam Power (A.S.M.E. Trans.), vol. 50, no. 15, May-Aug. 1928, pp. 28-31, 8 figs.

HIGH-PRESSURE, UTILIZATION OF. High-Pressure Steam; Opportunity for Its Use in Industry (La vapeur à haute pression), V. Kammerer. Société Industrielle de Mulhouse—Bul. (Mulhouse), vol. 94, no. 6, June-Aug. 1928, pp. 385-432, 15 figs.

High-Pressure Steam Usage, C. S. Darling. Mech. World (Lond.), vol. 84, no. 2168, July 20, 1928, pp. 52-53, 2 figs.

STEAM CONDENSERS

TUBES, CORROSION OF. The Corrosion of Condenser Tubes. "Impingement Attack"; Its Causes, and Some Methods of Prevention, R. May. Inst. of Metals—Advance Paper (Lond.), no. 471, for mtg. Sept. 4-7, 1928, 35 pp., 8 figs.

STEAM ENGINES

VIBRATION PREVENTION IN. Stopping Building Vibrations Due to Unbalanced Engines, C. H. Bigelow. Power, vol. 68, no. 11, Sept. 11, 1928, pp. 450-451, 2 figs.

STEAM PIPE

BENDS, STRESSES. Stresses and Reactions in Expansion Pipe Bends, A. M. Wahl. Fuels and Steam Power (A.S.M.E. Trans.), vol. 50, no. 15, May-Aug. 1928, pp. 241-255 and (discussion) 255-262, 43 figs.

STEAM TURBINES

BLADES. Detailed Numerical Calculation of Multiple-Action Blading (Calcul numerique détaillé d'un ailettage multiple à action), C. Colombi. Technique Moderne (Paris), vol. 20, no. 15, Aug. 1, 1928, pp. 519-525, 7 figs.

DESIGN. The General Trend of Modern Development in Steam-Turbine Practice, H. L. Guy. Power, vol. 68, no. 6, Aug. 7, 1928, pp. 250-251, 2 figs. Author presents results of important studies and sets forth British point of view. Paper presented before Instn. Civil Engrs., previously indexed.

TESTING. Steam-Combustion Tests of Three-Cylinder 16,000-Kw. Brown Boveri Steam Turbine in Rotterdam (Dampfverbrauchs-Messungen an einer dreigehaeusigen 16,000 kw. Brown Boveri Dampf-Turbine in Rotterdam), D. Dresden. Schweizerische Bauzeitung (Zurich), vol. 92, no. 5, Aug. 4, 1928, pp. 57-59, 2 figs. Descriptive and test data on 16,000-kw., 3,000-r.p.m., 12-atmos. pressure, Brown Boveri, two-stage turbine of Schiaven power plant of Rotterdam municipal electric system; steam consumption 4.50 to 4.88 kg. per kw-hr.

STEEL

COLD DRAWING. Study of Cold Drawing of Soft Steel (Contribution à l'étude de l'étirage à froid de l'acier doux), R. Giraud. Revue de Métallurgie (Paris), vol. 25, no. 6, June 1928, pp. 347-354, 4 figs. Measure of work absorbed by metal under form of potential energy; method of testing and table of tests with results of cold drawing.

HEAT TREATMENT OF. Facts and Principles Concerning Steel and Heat Treatment, H. B. Knowlton. Am. Soc. Steel Treating—Trans., vol. 14, no. 3, Sept. 1928, pp. 415-434.

Heating of Steel By the Controlled Temperature Method, G. W. Hegel. Am. Soc. Steel Treating—Trans., vol. 14, no. 3, Sept. 1928, pp. 377-384, 7 figs. Author demonstrates effect of rate of heating through critical range on temperature distribution in piece of steel; he shows how best results can be obtained by controlling maximum temperature.

MANGANESE. *See Manganese Steel.*

SPRING, TESTING. Researches on Springs—Torsional Fatigue Tests on Spring Steels, G. A. Hankins. Dept. of Sci. and Indus. Research—Eng. Research (Lond.), Special Report No. 9, 1928, 24 pp., 8 figs. partly on supp. plates. Investigation by National Physical Laboratory as part of systematic study undertaken by Springs Research Committee.

STRUCTURAL ARC WELDING. Arc Welding of Structural Steel (Lichtbogenschweissung von Eisenkonstruktionen), K. Bung. V.D.I. Zeit. (Berlin), vol. 72, no. 32, Aug. 11, 1928, pp. 1105-1111, 54 figs. Report from committee on Welding, of Verein Deutscher Ingenieure, on details of welded seams and joints and methods of making them; tensile tests of welded seams and joints; tests of comparative strength of welded and riveted joints; arc welding of pipes, tubes and structural shapes; practical examples of welded steel trusses, tanks, etc.; cost data.

TOOL. *See Tool Steel.*

STEEL CASTINGS

ALLOY-STEEL. Steel Castings Withstand Severe Operating Conditions, J. H. Hall. Foundry, vol. 56, nos. 16 and 17, Aug. 15 and Sept. 1, 1928, pp. 655-656 and 702-704. Abstract of paper presented in behalf of Am. Foundrymen's Assn. before Inst. of Brit. Foundrymen.

STREAM POLLUTION

PREVENTION. Engineering Methods Economically Combat Stream Pollution, W. L. Sullivan. Chem. and Met. Eng., vol. 35, no. 8, Aug. 1928, pp. 483-485, 3 figs. Account of work of Passaic Valley Sewerage Commission appointed with authority to take whatever action was necessary to bring about regeneration of lower Passaic river; Commission's interpretation of what constitutes polluting matter is given.

STREET CLEANING

ORGANIZATION. Street Cleaning and Waste Disposal, E. C. Goodwin. Can. Engr. (Toronto), vol. 55, no. 6, Aug. 7, 1928, pp. 200-202.

STREET LIGHTING

DESCRIPTION. Kansas City Brightway Has 963 Lumens per Foot, R. A. Graves. Elec. World, vol. 92, no. 10, Sept. 8, 1928, pp. 470-471, 4 figs. Equipment gives six times former intensity; first section involves eighty 1,500-cp. lamps within five-block area with rated outputs of 15,000 lumens per lamp; this is only beginning of extensive whiteway which will in time, it is hoped, extend across entire city.

Modern Street Lighting, C. E. Schwenger. Elec. News (Toronto), vol. 37, no. 16, Aug. 15, 1928, pp. 31-33. Comparison of systems and intensities in use with recommendations for good modern practice; flexibility of multiple system increases its popularity; Illuminating Engineering Society recommendations as presented by Committee on Street Lighting 1927, to which other engineering bodies have agreed.

STREET RAILROADS

TRACKS, DESIGN. Divergence of Special Trackwork Design Hinders Standardization, W. J. Nixon. Elec. Ry. Jl., vol. 72, no. 8, Aug. 25, 1928, pp. 292-294, 5 figs.

STRUCTURAL STEEL

CONCRETE ENCASEMENT. Gunite and Concrete Encasement to Increase the Strength of Structural Steel, C. T. Morris and J. R. Shank. Ohio State University Studies—Eng. Experiment Station, no. 37, 1928, 72 pp., 63 figs. Experiments made in England and Canada have indicated that within reasonable limits, concrete encasement will act as unit with member in supporting loads; tests at Engineering Experiment Station of Ohio State University have borne out these conclusions; at North High Street viaduct in Columbus, Ohio, restoration of reduced steel girders by reinforcing steel and gunite has received practical test and has been found satisfactory, results of which are given in full.

SWIMMING POOLS

WATER CHLORINATION. Chlorination of Swimming Pool Water, R. F. Heath. Can. Engr. (Toronto), vol. 55, no. 9, Aug. 28, 1928, pp. 257-262. Brief bibliography.

T

TANKS

DESIGN. Design of Cylindrical Vessels Having Walls of Variable Thickness (Beitrag zur Berechnung des zylindrischen Behaelters mit veraenderlicher Wandstaerke), E. Steuermann. Beton u. Eisen (Berlin), vol. 27, no. 15, Aug. 5, 1928, pp. 286-288, 1 fig.

TEMPERATURE MEASUREMENT

THERMOELECTRIC. Thermoelectric Measurement of Temperatures Above 1,500 Deg. Cent., H. L. Watson and H. Abrams. Am. Electrochem Soc.—Advance Paper for mtg. Sept. 20-22, 1928, pp. 29-41, 6 figs.

TORQUE RECORDERS

VIBRATIONS. Records Transient Vibrations, C. Schwager. Elec. World, vol. 92, no. 8, Aug. 25, 1928, pp. 361-362, 4 figs. Torque recorder described was designed for measuring rapidly varying torques and can be mounted on any shaft; it is application of electrical telemeter described in Technologic paper no. 247, Bur. of Standards.

TIDAL POWER

UTILIZATION. Tidal Power and Turbines Suitable for Its Utilization, A. H. Gibson. Water and Water Eng. (Lond.), vol. 30, no. 356, Aug. 20, 1928, pp. 374-375. Abstract of paper read before Instn. Mech. Engrs., previously indexed.

TOLERANCES

SELECTION. Selecting the Tolerances, J. F. Hardecker. Am. Mach., vol. 69, no. 9, Aug. 30, 1928, p. 341. Entire successful functioning of elaborate mechanism may rest upon successful choice of tolerances; in most instances, tolerances have to go through a period of development design similar to that which idea itself had to go through before it became proven idea.

TOOL STEEL

PROPERTIES. On the Nature and Applications of the Principal Types of Tool Steel, W. H. Wills. Am. Soc. Steel Treating—Trans., vol. 14, no. 3, Sept. 1928, pp. 363-376, 2 figs.

TRACTORS

AGRICULTURAL DRAWBAR PULL. Effect of Drawbar Pull Upon the Effective Weight on Front and Rear Wheels of Farm Tractors, E. G. McKibben. Agric. Eng., vol. 9, no. 8, Aug. 1928, pp. 243-245, 7 figs. Development of simplified formulas to show effect of drawbar pull.

TUBES

MANUFACTURE. Manufacture of Tubes (La fabrication des tubes), G. de Lattre. Technique Moderne (Paris), vol. 20, no. 16, Aug. 15, 1928, pp. 537-545, 17 figs. Evolution and critical study of processes of manufacture of rough materials; ingots and billets; Mannesmann process of rolling tubes and Mannesmann mill layout are described.

TURBO-GENERATORS

COOLING. Ventilating Methods and Equipment for Modern Turbo-Generators, C. L. Hubbard. Nat. Engr., vol. 32, no. 5, May 1928, pp. 203-208, 9 figs. Factors affecting amount of heat generated; limiting temperatures; removal of heat from generators; computing air requirements; cooling and purifying air; removing foreign matter; self-cleaning filter; relation between air temperature and load; humidity; direct or open system of ventilation; indirect or closed system; surface air cooler; fire control; use of inert gases.

TESTING, GERMANY. Acceptance Tests of an 80,000 Kw. Turbo-Generator for the Klingenberg Power Plant (Abnahmeversuche an einer 80,000 Kw-Turbodynamo des Grosskraftwerkes Klingenberg), W. E. Wellmann. V.D.I. Zeit. (Berlin), vol. 72, no. 31, Aug. 4, 1928, pp. 1077-1081, 5 figs. Details of apparatus and methods employed in testing efficiency of largest turbo-generator of continent of Europe, manufactured by A.E.G.; tests by staff of 30, most of them of faculty of Berlin Institute of Technology, showed guarantees exceeded by 2.45 per cent.

V

VENTURI METERS

COEFFICIENTS. Coefficients of Venturi Meters and Reynolds' Criterion, W. S. Pardoe. Eng. News-Rec., vol. 101, no. 8, Aug. 23, 1928, pp. 281-282, 2 figs. In writer's belief coefficients of Venturi meters cannot be plotted against Reynolds' criterion and give any satisfactory result above critical velocity; tested 3.981 by 1.631-in. Venturi meter up to throat velocity of 110 ft. per sec.; both theory and experiment indicate that Reynolds' criterion can be used advantageously below critical velocity or for streamline flow.

VOLTAGE REGULATORS

DEVELOPMENT. The Development of the Feeder Voltage Regulator, E. R. Wolfert. Elec. Jl., vol. 25, no. 9, Sept. 1928, pp. 441-446, 11 figs. Feeder-voltage regulator was developed for purpose of increasing or decreasing outgoing feeder voltage so as to compensate for variable line drop or variable bus voltage, maintaining constant voltage at centre of distribution or load centre; they are divided into two general classes: one in which voltage is varied in steps, and other in which voltage can be changed gradually, or in infinite number of steps, termed induction type; details of both types.

INDUCTION. Induction Voltage Regulators for Power Transmission. World Power (Lond.), vol. 10, no. 56, Aug. 1928, pp. 169-172, 6 figs. English Electric Co. has developed series of induction regulators which are usually oil-immersed and either self-cooled or water-cooled.

W

WATER CHLORINATION

DEVELOPMENTS. Recent Developments in Application of Chlorine in Water Purification, L. H. Enslow. Mun. News, vol. 75, no. 2, Aug. 1928, pp. 71-79, 6 figs.

Removing Tastes of Chlorine. Can. Engr. (Toronto), vol. 55, no. 8, Aug. 21, 1928, p. 242. Remedial measures adopted by New York State Department of Health; three methods are available: (1) "super-chlorination"; (2) destruction of phenolic wastes by use of potassium permanganate; (3) addition of ammonia in small quantities to water just previous to addition of chlorine dose. From Am. City.

WATER FILTRATION PLANTS

MENASHA, WIS. A Modern 4,000,000-Gallon Purification Plant, J. H. Kuester. Am. City, vol. 39, no. 3, Sept. 1928, pp. 87-89, 3 figs. Public water supply of Menasha became contaminated with heavy vegetable growths, making it undesirable for use between June and November; pumping plant was entirely renovated in 1924 and so arranged that water-purification plant could be conveniently connected with very few changes and comparatively small expense; in 1927, funds secured to build new 4,000,000-gal. plant; pumps and aerators; settling basins; pipe gallery; chemical feed and chlorination; filters.

OVERLOADING. Filter Operation at Variable Rates, H. N. Jenks. Am. Water Works Assn.—Jl., vol. 20, no. 2, Aug. 1928, pp. 214-219.

WATER PIPE LINES

CLEANING. Cleaning of Water Mains, W. H. Grotz. Am. Water Works Assn.—Jl., vol. 20, no. 2, Aug. 1928, pp. 199-204 and (discussion) 204-207. Buffalo's water distribution system; thick mud from mains; method of operating machine; amount and cost of water-main cleaning in Buffalo; benefits to community.

LAYING, COSTS. Man-Hour Costs of Water-Main Trenching and Pipelaying, A. E. Walden and A. F. Di Domenico. Eng. News-Rec., vol. 101, no. 11, Sept. 13, 1928, pp. 392-395. Summaries of seven years' work in Baltimore County, Md., given in pounds per man-hour as well as in linear feet; comparative costs of hauling to job, jointing (including leadite and lead) and laying sand-cast and sand-spun pipe; also editorial comment on p. 377.

RUST REMOVAL. Method Used to Remove Rust From Office Building Mains, F. N. Speller, E. L. Chappel and R. P. Russell. Water Works Eng., vol. 81, no. 18, Aug. 29, 1928, pp. 1247-1248. Not necessary to disturb piping by this plan; in one building more than $100,000 was saved; tuberculation removed by acid solution; method described for removing rust tuberculation used in 35-storey office building located in down-town section of New York; general plan of cleaning operation; treatments and difficulties encountered. Abstract of paper presented before Am. Inst. Chem. Engrs.

WATER SOFTENING

ZEOLITE PROCESS. Experiences in Softening With Zeolite, J. T. Campbell and D. E. Davis. Water Works Eng., vol. 81, no. 17, Aug. 15, 1928, pp. 1165-1166 and 1199, 3 figs. How system has served in two plants; good results accomplished; cost of construction and operation. See also Mun. News and Water Works, vol. 75, no. 2, Aug. 1928, pp. 111-116, 2 figs. Paper read before Am. Water Works Assn.

WATER TREATMENT

ALGAE CONTROL. Algae Control in Uncovered Distribution Reservoir By Chlorinating, L. B. Mangun. Mun. News, vol. 75, no. 2, Aug. 1928, pp. 103-104. Abstract of paper presented before Am. Water Works Assn.

WATERWAYS

ENGINEERING PROGRESS. Advances in Waterways Engineering During a Half Century, W. M. Black. Am. Soc. Civil Engrs.—Proc., part 1, vol. 54, no. 7, Sept. 1928, pp. 2101-2102. Discussion of paper, continued from Feb. 1928 issue of Proceedings.

WATER WORKS

DESIGN. Water-Supply Struggles of a Small City, P. P. Phillips. Eng. News-Rec., vol. 101, no. 10, Sept. 6, 1928, pp. 361-363, 4 figs. Mount Airy, N.C., water supply; divert water averted from natural flow of Lovill's Creek through gravity supply main to water treatment and pumping plant designed to supply 1.5 m.g.d. which would give 200 gal. per capita daily to present estimated population of 7,500; clear-water storage; wash-water tank; details of water filtration and pumping plants.

STUART, FLA. Stuart, Florida, Iron Removal and Pumping Station, P. P. De Moya. Am. Water Works Assn.—Jl., vol. 20, no. 2, Aug. 1928, pp. 244-252, 3 figs.

WEIRS, CIRCULAR

FLOW COEFFICIENTS. Summary of Experimental Data Obtained From Use of Circular Weirs, M. P. O'Brien. Hydraulic Eng., vol. 4, no. 8, Aug. 1928, pp. 494-495 and 531, 5 figs.

WELDED JOINTS

EFFECT OF SHAPE ON STRENGTH. Influence of the Shape of Ends of Parts of Certain Welded Joints on the Value of Breaking Load and Deformation (Influence de la forme des abouts des éléments de certains assemblages soudes sur la valeur de la charge de rupture et sur la déformation), D. Lagrange and D. Rosenthal. Académié des Sciences—Comptes Rendus (Paris), vol. 187, no. 5, July 30, 1928, pp. 277-279, 1 fig. Discussion of effect of butt-joint ends on strength of joint. See also Génie Civil, vol. 93, no. 7, Aug. 18, 1928, p. 171, 2 figs.

WELDING

ELECTRIC. *See Electric Welding.*

OXYACETYLENE. *See Foundry Practice.*

WOOD PRESERVATION

STATISTICS, UNITED STATES. Wood Preservation in 1927 Shows High Records. Eng. News-Rec., vol. 101, no. 9, Aug. 30, 1928, p. 314. In 1927, according to annual statistics prepared for U. S. Forest Service in coöperation with American Preservers' Assn., there were 187 treating plants in operation, as against 180 in 1926 and 127 in 1925; 10 new plants were constructed as against 14 in 1926; quantity of wood treated was 345,685,804 cu. ft., or 56,363,725 cu. ft. more than in 1926.

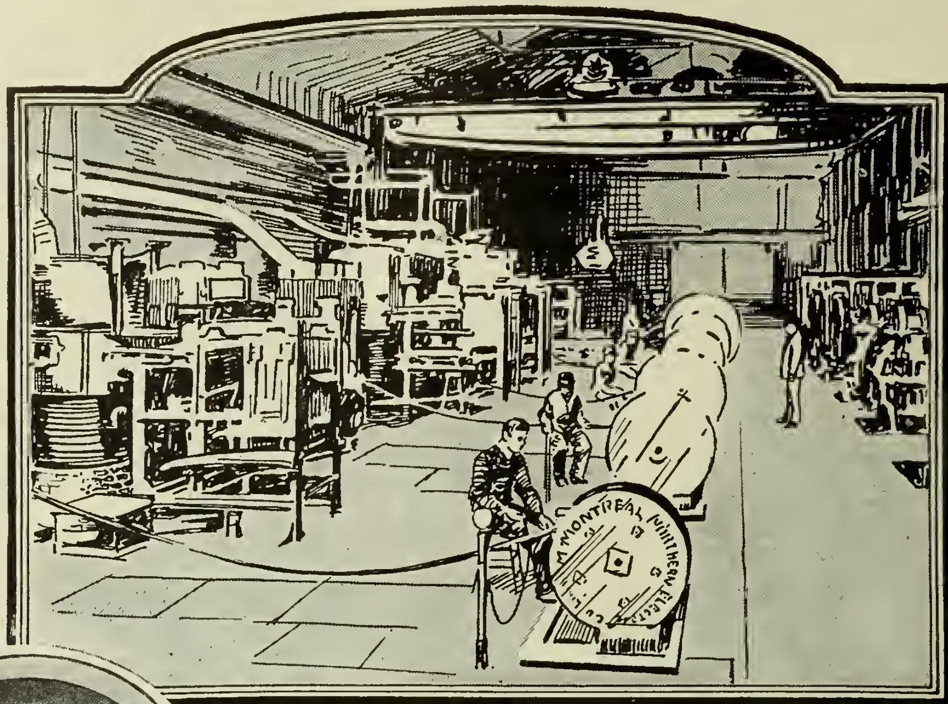
Z

ZINC MINES AND MINING

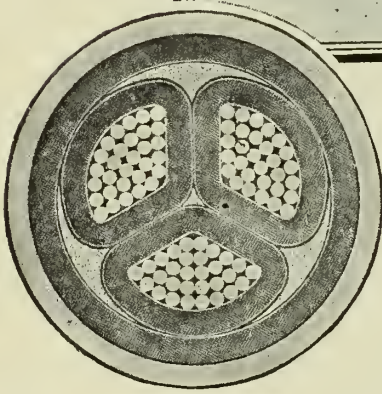
QUEBEC. Mining and Milling at the Tetreault Mine. Am. Zinc Inst.—Bul., vol. 11, nos. 7-8, July, Aug. 1928, pp. 30-39. Operations and production of mine operated by British Metal Corp. which in 1927 produced 13 per cent of zinc output of Canada in addition to valuable production of lead, silver, and gold.

ZINC ORE TREATMENT

FLOTATION. Flotation Practice at the Sullivan Mill, C. T. Oughtred. Am. Zinc Inst.—Bul., vol. 11, nos. 7-8, July, Aug. 1928, pp. 22-29. Purport of this paper is to review briefly flotation practice at Sullivan concentrator, laying particular stress upon such phases as appear to be departure from what is generally conceded to be standard practice.



Bank of Lead Presses used in the manufacture of Lead Sheathed Cables.



250,000 C.M.
Triple Conductor
13,200 Volts
Lead Covered

Principally used for the transmission of power underground. Cables of this type can be had in a wide range of sizes and for all voltages.

Power Cable that ensures Service

THE power cables used by the Electric and Power Companies for their feeder and distribution work are required to stand up under all conditions.

The general acceptance of the Northern Electric Paper Insulated Lead Covered Cables for this class of work proves that it meets with all the exacting requirements for which it is required. The quality of material and the rigid tests imposed insure this reliability in service.

Specialists at every Northern Electric branch will gladly co-operate with you on all your power distribution problems.

Engineering Index

This Index is prepared by the American Society of Mechanical Engineers.

In this department will be published from month to month the titles of current engineering papers with the authors and source and a brief extract of the more important. It is designed to give the members of The Institute a survey of all important articles relating to every branch of the engineering profession.

PHOTOSTATIC PRINTS

Photostat copies (white printing on a black background) of the articles listed in this section or others on engineering subjects can be obtained from the Engineering Societies Library at a cost of 25c. per page.

When ordering identify the article by giving: the author; the title of the article; the name of the periodical in which it appeared; and the volume and page numbers. A remittance of 25c. a page should accompany the order.

The print's size is limited to 11 by 14 inches, but where possible, two pages up to 7 by 9 inches in size will be photographed on one print, larger magazines require a print per page.

The Library is also prepared to translate articles, to compile lists of references on engineering subjects and render assistance in similar ways. Charges are made sufficient to cover the cost of this work. Correspondence is invited. Information concerning the charge for any specific service will be given those interested. In asking for information please be definite, so that the investigator may understand clearly what is desired.

The Engineering Societies Library is under the management of the United Engineering Society, which administers it as a public reference library of engineering. It is maintained jointly by the American Society of Civil Engineers; the American Institute of Mining and Metallurgical Engineers; the American Society of Mechanical Engineers and the American Institute of Electrical Engineers. It contains 150,000 volumes on engineering and allied subjects, and receives currently most of the important periodicals in its field.

Orders and correspondence should be addressed to

Harrison W. Craver, Director,
Engineering Societies Library,
29 West Thirty-ninth Street. New York, N.Y.

A

AERONAUTICS

ALBERTA, CANADA. Alberta Awakens to Possibilities of Civil and Commercial Aviation. Can. Aviation (Toronto), vol. 1, no. 3, Sept. 1928, pp. 14 and 46.

DEVELOPMENT, CANADA. Aeronautical Development in Canada, A. O. Adams. Can. Aviation (Toronto), vol 1, no. 3, Sept. 1928, pp. 28 and 30. Perils of early days of flying; technical developments after war; eight aircraft types already designed and built in Canada include four boat seaplanes and four convertible to twin-float seaplanes, landplanes or ski-equipped aircraft; two British and American types in production in Canada are Fairchild F.C.-2 and Avro; details of Vanessa, patrol aircraft Vista and photographic sesquiplane Velos; metal plays important part. (To be continued.)

AIR COMPRESSORS

ROTARY AND TURBO. Rotary and Turbo Compressors. Engineer (Lond.), vol. 146, nos. 3789 and 3790, Aug. 24 and 31, 1928, pp. 206-208 and 233-234, 15 figs.

AIR CONDITIONING

OVERCOMING OBSTACLES. How to Overcome Obstacles to Good Ventilation, C. L. Hubbard. Plumbers Trade Jl., vol. 85, no. 6, Sept. 15, 1928, pp. 546 and 548-549, 552 and 608, 12 figs.

DEHUMIDIFICATION. Dehumidification of Air, C. S. Keevil and W. K. Lewis. Indus. and Eng. Chem., vol. 20, no. 10, Oct. 1928, pp. 1058-1060, 3 figs.

DUST DETERMINATION. A Study of Dust Determinators, F. B. Rowley and J. Beal. Am. Soc. Heat. and Vent. Engrs.—Jl., vol. 34, no. 10, Oct. 1928, pp. 741-750 and (discussion) 750-754, 7 figs. Results of co-operative research between Am. Soc. Heat. and Vent. Engrs. and Univ. of Minn.

REFRIGERATION IN. Refrigeration as Applied to Industrial Air Conditioning, R. W. Waterfill. Heat. and Vent. Mag., vol. 25, no. 9, Sept. 1928, pp. 75-78, 5 figs.

AIRCRAFT ENGINES

AIR COOLING OF. Air Cooling of Aircraft Engines (Luftkuehlung bei Flugmotoren), F. Gosslau. V.D.I. Zeit. (Berlin), vol. 72, no. 38, Sept. 22, 1928, pp. 1335-1340, 26 figs. Paper read at 1928 annual meeting of Society of German Engineers (V.D.I.), reporting experiments made at Siemens and Halske laboratories; obtained quantitative relationship between wind velocity, cylinder-wall temperature and construction-type and dimensions of cylinders, aiding in design of air-cooling system for engines; critical review of various types of cylinder construction.

OIL. The Oil Engine and Aeronautics, E. E. Wilson. Aeronautics (A.S.M.E. Trans.), vol. 50, no. 20, May-Aug. 1928, pp. 65-67 and (discussion) 67-68.
Oil Engines for Aircraft and Railways, A. E. L. Chorlton. Engineering (Lond.), vol. 126, no. 3271, Sept. 21, 1928, pp. 375-378 and (discussion) 369, 10 figs. Paper read before Brit. Assn.

AIRCRAFT PROPELLERS

EFFICIENCY. Considerations on Propeller Efficiency, A. Betz. Nat. Advisory Committee for Aeronautics—Tech. Memorandum, no. 481, Sept. 1928, 20 pp., 12 figs. Translated from Zeit. fuer Flugtechnik u. Motorluftschiffahrt, Apr. 28, 1928.

LIFT CURVES. Preliminary Report on the Flat-Top Lift Curve as a Factor in Control at Low Speed, M. Knight and M. J. Bamber. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 297, Sept. 1928, 10 pp., 5 figs.

AIRPLANES

BIPLANES, LIFT CALCULATION. On the Lift of Biplanes, T. Moriya. Tokyo Imperial University—Jl. (Tokyo), vol. 17, no. 10, Aug. 1928, pp. 191-200, 12 figs.

MANEUVERABILITY. The Span as a Fundamental Factor in Airplane Design, G. Lachmann. Nat. Advisory Committee for Aeronautics—Tech. Memorandum, no. 479, Sept. 1928, 40 pp., 21 figs. Bibliography. Translated from Zeit. fuer Flugtechnik u. Motorluftschiffahrt, May 14, 1928.

METAL, MANUFACTURE OF. Problems of Metal Construction. Soc. Automotive Engrs.—Jl., vol. 23, no. 4, Oct. 1928, pp. 342-344. Review of Production Session of Los Angeles meeting, with brief abstracts of paper.

AIRPORTS

CANADA. List of Canadian Fields Is Issued. Aviation, vol. 25, no. 14, Sept. 29, 1928, p. 1032. List of 39 landing stations in Canada for airplanes, seaplanes and airships is given, with location, description and owners, in report issued by Assistant Trade Commissioner Thiemann at Ottawa.

ALLOYS

ELECTRIC RESISTANCE. The Electrical Resistance of Alloys Under Pressure, C. W. Ufford. Phys. Rev., vol. 32, no. 3, Sept. 1928, pp. 505-507.

HEAT-RESISTING. Heat-Resisting Alloys, T. H. Turner. Am. Metal Market, vol. 35, no. 179, Sept. 18, 1928, pp. 12-14, 4 figs.

See also Aluminum Alloys; Aluminum Brass; Bearing Metals; Copper Alloys.

ALUMINUM ALLOYS

CASTINGS, TESTING OF. Stability of Aluminum and Magnesium Casting Alloys, A. J. Lyon. Am. Inst. Min. and Met. Engrs.—Tech. Publication, no. 133, Sept. 1928, 15 pp., 5 figs.

ELASTIC LIMIT. The Elastic Limit and Figure of Merit of Light Alloys (Guetezahlen und Elastizitaetsgrenzen bei Leichtmetallen), A. Schroeder. Zeit. fuer Flugtechnik u. Motorluftschiffahrt (Munich), vol. 19, no. 5, Mar. 14, 1928, pp. 105-106. Custom of comparing performance of light alloys on basis of saving in weight for same tensile strength is fallacious, since no consideration for safety is given; what is required is not comparison of ultimate tensile but infinite life under reversal of stress; point is closely related with elastic limit of material; elastic limit has to be determined with great accuracy in order to render comparison of value.

PROPERTIES. Aluminum Alloys (Ueber Aluminium-Legierungen), A. Merz. Giesserei (Duesseldorf), vol. 15, no. 34, Aug. 24, 1928, pp. 836-840, 3 figs. Properties and improvement of best known aluminum alloys are discussed, including duralumin, aldur, skleron, aeron, konstruktal, montegal, lautal, silumin, alneon and neonalium.

CASTINGS. New Aluminum Alloys of High Elastic Limit Which Improve With Age (Neue selbstveredlnde Aluminium-Gusslegierungen mit hoher Elastizitaetsgrenze), M. v. Schwarz. Zeit. fuer Flugtechnik un Motorluftschiffahrt (Muenchen), vol. 19, no. 16, Aug. 28, 1928, pp. 361-364, 18 figs.

ALUMINUM BRASS

PROPERTIES. Aluminum Brasses, E. R. Thews. Can. Chem. and Met. (Toronto), vol. 12, no. 9, Sept. 1928, pp. 246-248. Discussion of metallurgical properties which have a bearing on difficulties met with frequently in manufacturing practice; aluminum and hot rolling of brass; metallurgical considerations; applications of aluminum brasses.

AMMONIA COMPRESSORS

LARGE. The Largest Refrigerating Compressor in the World (Der groesste Kaeltekompressor der Welt). Eis- u. Kaelte-Industrie (Berlin), vol. 21, no. 8, Aug. 1928, pp. 86-88, 2 figs. Descriptive note on 4,000,000-calories two-stage ammonia compressor manufactured by Gebrueder Sulzer A.-G. of Winterthur, Switzerland, for German chemical plant; compressor is direct-connected with 1,200 h.p. steam engine; vaporization temperature is minus 5 deg. Cent., liquefaction temperature is plus 30 deg. Cent.

APARTMENT HOUSES

GERMANY. The Apartment-House Group on the Hallgartenstrasse in Frankfurt a.M. (Der Wohnhausblock in der Hallgartenstrasse Frankfurt a.M.), M. Nowotny. Gesundheits-Ingenieur (Munich), vol. 51, no. 10, Mar. 10, 1928, pp. 145-150, 4 figs.

AQUEDUCTS

ITALY. The Apulian Aqueduct. Engineering (Lond.), vol. 126, no. 3267, Aug. 24, 1928, pp. 220-224 and 234, 30 figs. on supp. plates.

ASBESTOS

MILLING, CANADA. Milling and Dressing Asbestos, E. Larochelle. South African Min. and Eng. Jl. (Johannesburg), vol. 39, nos. 1924 and 1926, Aug. 11 and 25, 1928, pp. 671-673 and 741-743, 3 figs. Article previously indexed from Can. Min. and Met. Bul., June 1928.

SOUTH AFRICA. Asbestos in the Malipsdrift Area. S. Africa Min. and Eng. Jl. (Johannesburg), vol. 39, no. 1923, Aug. 4, 1928, pp. 639-641, 4 figs.

AUDITORIUMS

ERECTION, ATLANTIC CITY. Largest Proscenium Arch for Auditorium. Am. Contractor, vol. 49, no. 35, Aug. 25, 1928, pp. 18-19, 4 figs. Erect truss in sections; structure to be world's greatest convention hall; truss of proscenium arch across main hall of auditorium clear truss span of 350 ft.; truss was fabricated in sections; structure will seat 41,000 people in main auditorium.

AUTOMOBILE ENGINES

CRANKSHAFTS, MANUFACTURE OF. Continental Crankshaft Practice, C. O. Herb. Machy. (N.Y.), vol. 35, no. 2, Oct. 1928, pp. 103-109, 19 figs. Methods recently adopted by Continental Motors Corp. for making crankshaft of well-known 6-cylinder automobile.

DESIGN. How Motion of a Mechanism May Be Analyzed Geometrically, W. Samuels. Automotive Industries, vol. 59, nos. 11 and 12, Sept. 15 and 22, 1928, pp. 366-369 and 406-408 and 417, 3 figs. Sept. 15: Method by which motion of mechanism can be analyzed completely from its geometry, and automotive applications given; differential calculus involved is explained to make method accessible to every engineer; distances, angles, times and speeds dealt with; application to driven end of crank train. Sept. 22: Application to engine valve cams; cam with outline composed of circular arcs and contacting with flat plate on rocker arm; value of sliding reduction.

IGNITION, TESTING OF. The Effect of Hydrocarbon Vapour on the Contact-Points of Ignition Apparatus, E. A. Watson. Automobile Engr. (Lond.), vol. 18, no. 245, Sept. 1928, pp. 347-350.

AUTOMOBILES

Gears and Gearing, Manufacture of. Gear Blanks With Minimum Waste, C. A. McGroder. Iron Age, vol. 122, no. 14, Oct. 4, 1928, pp. 815-817, 5 figs. Uniformity of grain structure where it is most needed and minimized waste of material are outstanding improvements effected by new method of manufacturing bevel ring gear blanks, as developed and perfected by forge department of Dodge Brothers Corp., Detroit; using 4½-in. chrome-vanadium steel bar stock; this new process, through novel heading operation, turns outside surface of bar out and away from its centre, until it lies at right angles to original bar.

Parts, Heat-Treatment of. Willys-Overland Heat-Treating Methods, F. W. Manker. Machy. (N.Y.), vol. 35, no. 2, Oct. 1928, pp. 131-133, 5 figs. Normalizing, hardening and tempering operations performed by automatically carrying work through furnace arranged in tandem; hardening and tempering crankshafts; heat-treating miscellaneous parts; three furnaces used in heat-treating rear-axle shafts; annealing operations performed in pusher-type furnaces.

Transmissions, Design of. Gear Box Design. Motor Transport (Lond.), vol. 47, no. 1224, Aug. 27, 1928, p. 254, 1 fig. Design of gear box introduced by J. M. Hargreaves is discussed; three forward speeds and reverse; gears are in constant mesh; speed changes affected by four cone clutches.

Transmission, Heat Treatment of. Precision Heat Treatment for Gears. Iron Age, vol. 122, no. 13, Sept. 27, 1928, pp. 761-764, 4 figs. Heat-treating operations on automobile transmission and ring gears at plant of Dodge Bros.; six-zone annealing, controlled to 7 deg., necessary for maximum machinability; oil for quenching presses held to 3 deg., plus or minus.

AUTOMOTIVE FUELS

Combustion. Combustion in Automobile Engines (Die Verbrennung im Kraftwagenmotor, ihre Gefahren und ihre Unwirtschaftlichkeit), Sass. Automobil-Rundschau (Berlin-, vol. 30, nos. 12 and 14, June 15 and July 15, 1928, pp. 285-289 and 368-370, 16 figs.

Detonation. Anti-Detonants, C. Moureau and C. Dufraisse. Automobile Engr. (Lond.), vol. 18, no. 245, Sept. 1928, p. 320. From Chem. and Industry, vol. 47, no. 33, p. 848.

Anti-Knock Fuels, G. Edgar. Chem. and Industry (Lond.), vol. 47, no. 34, Aug. 24, 1928, pp. 230T-232T.

Flame Characteristics. Some Flame Characteristics of Motor Fuels, G. B. Maxwell and R. V. Wheeler. Indus. and Eng. Chem., vol. 20, no. 10, Oct. 1928, pp. 1041-1044, 6 figs. In order to obtain some information as to cause of "pink" or knock of motor fuels, photographic study has been made of movement of flames, simultaneously with measurements of development of pressure, during explosion of charge in engine cylinder; suggestions are made for suppression of pinking, and on basis of these studies differences between pinking and non-pinking explosions are pointed out.

Gas. Replacing Liquid Motor Fuels with Gas Fuel, F. Lommatsch. Petroleum Times (Lond.), vol. 20, no. 501, Aug. 18, 1928, p. 280. Discusses lighter-than-air flying craft; in United States military airships, loss of weight by consumption of fuel is compensated by passing gases through condenser; latest Zeppelin LZ 127 to be tested in Aug. 1928 with gas fuel; is of about same specific gravity as air; its consumption does not change weight of airship; said to increase action radius 30 per cent. Abstract translated from Allgem. Oesterr. Chem. u. Tech. Zeit.

Testing. The Influence of Fuel Characteristics on Engine Acceleration, D. B. Brooks. Soc. Automotive Engrs.—Jl., vol. 23, no. 3, Sept. 1928, pp. 235-248 and (discussion) 248, 38 figs. Method for approximately deriving effective air-fuel ratio delivered to cylinders during acceleration described; effect of fuel volatility on engine acceleration was studied using six fuels; it is shown that relative values of these fuels for acceleration depend upon amount of vaporization in manifold.

B

BALANCING

Methods of. Static and Dynamic Methods of Balancing (Statische und dynamische Auswuchtung), D. Hofmann. Maschinenbau (Berlin), vol. 17, no. 7, Sept. 6, 1928, pp. 814-817, 11 figs. Description of Hofmann-Kunze dynamic method of balancing, also of "Universal," "Punga" and other balancing machines; vibration-measuring instruments.

BEAMS, REINFORCED CONCRETE

Design. Nomogram for Determination of Moment of Inertia of Rectangular and T-beams (Nomogramm zur Bestimmung der Tragmomente von Rechteck und Plattenbalken). P. Deutsch. Beton u. Eisen (Berlin), vol. 27, no. 17, Sept. 5, 1928, pp. 317-321, 3 figs.

Stresses. Web Stresses in Reinforced Concrete Beams. Surveyor (Lond.), vol. 74, no. 1911, Sept. 7, 1928, pp. 217-218.

BEARING METALS

Tin-Base. A Study of Tin-Base Bearing Metals, O. W. Ellis and G. B. Karelitz. Machine-Shop Practice (A.S.M.E. Trans.), vol. 50, no. 18, May-Aug. 1928, pp. 13-27 and (discussion) 27-28, 64 figs.

BEARINGS

Lubrication. A Theory of the Lubrication of Cylindrical Bearings, F. E. Cardullo. Am. Soc. Mech. Engrs.—Advance Paper, for mtg. Sept. 24-27, 1928, 14 pp., 6 figs. on supp. sheet.

Grooving Bearings in Machines, G. B. Karelitz. Am. Soc. Mech. Engrs.—Advance Paper, for mtg. Sept. 24-27, 1928, 9 pp., 30 figs. on supp sheet. Essentials of correct lubrication and conditions which it is desirable to establish by means of grooving are discussed; series of examples of grooving in classified number of applications; mechanism of lubrication briefly discussed; author concludes that large number of machine-bearing troubles would be eliminated and wear would be decreased were more attention paid to fundamentals of lubrication during design of machines.

The Friction of Journal Bearings with Insufficient Lubrication (Die Reibungsverhaeltnisse des Gleitlagers bei unvolkommener Schmierung), W. Koehler. Archiv fuer dans Eisenhuettenwesen (Duesseldorf), vol. 2, no. 3, Sept. 1928, pp. 159-168, 25 figs. Author discusses friction conditions of bearings with and without adequate lubrication; calculation of heat balance; predetermination of corresponding values for experimental bearing of Dettmar oil-testing machine; method and equipment for determination of coefficient of friction of journal bearing; friction of white-metal bearing with adequate and inadequate lubrication.

BELT DRIVE

Problems. Solutions of Some Difficult Belt Drives, J. E. Rhoads. Power, vol. 68, no. 23, Sept. 25, 1928, pp. 527-528, 2 figs. Solutions of six typical cases of problems of belt drives; in case of valuable machine which may become jammed, serious breakage may be saved through presence of belt which can slip, fly off pulley and break in such emergency; case of mixing machine in chemical industry; group drive direct from compound engine to shaft driving 16 beaters in paper mill; 200-gal. per mi. portable pump in tannery; centrifugal oil-clarifying machine, etc.

BLAST FURNACES

Pig Iron. Producing Victoria Pig Iron on the Welland Canal Bank, D. M. Duncan. Can. Machy. (Toronto), vol. 39, no. 19, Sept. 20, 1928, pp. 39-42, 9 figs. Description of Victoria furnace built by Canadian Furnace Co. at Port Colborne for purpose of manufacturing exclusively merchant pig iron for foundry; handling coke and ore; both ore bridges unload 10,000 tons in 24 hrs.; method of charging furnace; blast-furnace gases used in preheating air blast; slag principally used in reclamation from lake Erie.

Process, Theory of. A New Theory of the Blast-Furnace Process (Eine neue Theorie des Hochofenverfahrens), F. Wuest. Stahl und Eisen (Duesseldorf), vol. 48, no. 37, Sept. 13, 1928, pp. 1273-1287, 12 figs. Review of earlier research on oxidation zone in front of tuyeres and formation of pig iron in furnace; impossibility of reduction of silicon and manganese from slag; reduction of auxiliary elements by carbon obtained from carbon monoxide in shaft and bosh; confirmation of this theory by laboratory tests; injurious effect of oxidation zone in front of tuyere on economy of blast-furnace process.

BOILER FEEDWATER

Treatment. A Non-Chemical Method for the Prevention of Scale Accumulation in Boilers, Diesel-Jackets and Water Circulating Systems in General, A. T. Ridout. Domestic Eng. (Lond.), vol. 48, no. 9, Sept. 1928, pp. 163-165. Paper read before Inst. Mar. Engrs., previously indexed.

Treatment of Feedwater. Nat. Elec. Light Assn.—Serial Report, no. 278-81, Aug. 1928, 57 pp., 48 figs. Operation of evaporators under varying ranging of conditions; summarizes more recent results of research; covers briefly results of past reports; cites new cases on caustic embrittlement and covers experiments on new inhibitives, such as sodium phosphate, tannate and sodium acetate; data in connection with electrolytic processes are presented; statements by International Filter Co. on electro-osmosis describes process of purifying water by electrolyzing. Bibliography.

BOILER FURNACES

Pulverized Coal. Burning Crushed Coal in Suspension, J. F. O. Stratton. Power, vol. 68, no. 12, Sept. 18, 1928, pp. 486-487, 2 figs.

Design and Calculation of Combustion Chambers of Pulverized Coal Furnaces (Bau und Berechnung der Verbrennungsraeume von Kohlenstaubjeuerungen), 11. Ketz. Waerme (Berlin), vol. 51, no. 34, Aug. 25, 1928, pp. 619-625, 10 figs. Notes on combustion-chamber loads; development of new theory of design; thermal efficiency of heating surface of chamber.

BOILER PLATES

Alloy Materials. The Use of Alloy Steels for Boilers, J. V. Romer and W. W. Eaton. Boiler Maker, vol. 28, no. 9, Sept. 1928, pp. 261-262.

Basic Open-Hearth. The Properties of Basic Open-Hearth Steel at Various Temperatures, E. Pohl. Metallurgist (Supp. to Engineer, Lon.), Aug. 31, 1928, pp. 119-120. Author discusses mechanical properties of certain type of basic open-hearth steel; with increase in working pressure of boilers, 20- to 25-ton steels formerly used for boiler plates have become inadequate, and basic open-hearth steel of greater strength has assumed importance. Review of article translated from Stahl u. Eisen, May 17, 1928.

Testing. Boiler Plate at High Temperatures (Kesselbleche bei erhoehten Temperaturen), A. Pomp. V.D.I. Zeit. (Berlin), vol. 72, no. 36, Sept. 8, 1928, pp. 1262-1265, 12 figs. Abstract of 60-page report, by author and F. Koerber, on study made at Kaiser Wilhelm Institute for Iron Research; 14 specimens of steel and nickel-steel boiler plate were tested for effect of temperature up to 500 deg. Cent., effect of cold working age, crystallization, etc.

BOILERS

Design. Investigation of Loading Capacity of Evaporating Surface and Steam Space of Boilers and Pressure Vessels (Untersuchung ueber die Belastungsfaehigkeit der Verdampfungsoberflaeche und des Dampfraumes der Dampfkessel und Verdampfapparate), Eberle. Archiv fuer Waermewirtschaft (Berlin), vol. 9, no. 9, Sept. 1928, pp. 282-283, 2 figs. Brief account and results of investigations, followed by discussion.

Tendencies in Boiler Design. Power Plant Engr., vol. 32, no. 19, Oct. 1, 1928, p. 1029. Report by Nat. Elec. Light Assn.

High-Pressure. The Design and Construction of High-Pressure Water-Tube Boilers, H. E. Yarrow. Engineering (Lond.), vol. 126, no. 3270, Sept. 14, 1928, pp. 341-342, 2 figs. Paper read before Brit. Assn.

Inspection. The Activity and Experiences of the Heat Engineering Bureau of Central German Steam Boiler Inspection Association of Magdeburg in the Fiscal Year 1927 (Taetigkeit und Erfahrungen der Waermestelle der Mitteldeutschen Dampfkesselueberwachungsvereine Magdeburg im Geschaeftsjahr 1927), Berner. Waerme (Berlin), vol. 51, no. 30, July 28, 1928, pp. 556-561. Brief account of results of work covering different fields, including grates for lignite and bituminous-coal firing; boiler and boiler-furnace efficiencies; lignite coke; pulverized-coal firing; superheaters, economizers, air preheaters, reciprocating engines, turbines, Diesel engines, feedwater treatment, etc.

Vertical, Tubular. A New Steam Boiler, N. Forssblad. Nat. Elec. Light Assn.—Serial Report, no. 278, July 1928, p. 12. Details of internally fired single-drum sectional boiler with vertical tubes, designed for use in auxiliary steam plant connected with Swedish hydro-electric station; low installation cost and small space requirement; advantages are short heating-up time and low heating-up losses; disadvantages are small water surface and low water storage.

Waste-Heat. Factors Which Influence the Choice of Waste-Heat Boilers, J. B. Crane. Iron and Steel Engr., vol. 5, no. 9, Sept. 1928, pp. 407-412, including discussion, 10 figs. Economical possibilities of waste-heat boilers require a study of all problems where there is heat in gases above 1,000 deg. Fahr. being discharged to atmosphere; if pressures, weight and character of gases are suitable, return-tubular boiler will give maximum results at least outlay; otherwise vertical boiler is best; single-pass horizontal boiler is suitable for special conditions and may be used in some cases in place of vertical boilers.

Water-Tube, Design. Calculation of Wall Thickness of Water-Tube Boiler Sections (Berechnung der Wanddicke von Teilkammern [Sektionen] fuer Wasserrohrkessel), G. Kerff. Archiv fuer Waermewirtschaft (Berlin), vol. 9, no. 9, Sept. 1928, pp. 292-294, 7 figs.

BRASS FOUNDRY PRACTICE

Production. Producing Non-Ferrous Castings of Quality in Modern Foundry, E. G. Brock. Can. Machy. (Toronto), vol. 39, no. 18, Sept. 6, 1928, pp. 25-29, 8 figs.

BRIDGES

Approaches, Construction. Heavy Cut in Rock Cleaves Palisades for Hudson River Bridge Approach. Constr. Methods, vol. 10, no. 10, Oct. 1928, pp. 14-17, 16 figs. Methods and equipment usually associated with quarrying and mining operations rather than with bridge construction; approach cut for west end of bridge is approximately 800 ft. long and 146 ft. wide with maximum depth of 85 ft.; anchorage tunnels; air-compressor plant serving tunnels comprises two 800-cu. ft. per min. stationary Ingersoll-Rand machines electrically driven by General Electric synchronous motor; scheme of handling inclined tunneling operations.

Arch, Calculation. Calculations of Parabolic Arches With Two-Pin Supports Prolonged by Non-Articulated Beams Resting on Movable Supports (Calcul de l'arc parabolique à deux rotules prolongé par des poutres non articulées, reposant sur appuis mobiles), L. Légens. Génie Civil (Paris), vol. 93, no. 9, Sept. 1, 1928, pp. 214-216, 9 figs.

Concrete Arch, Testing. Experiments on the Reinforced Concrete Bridge at Corbeil (Expériences effectuées sur le pont en béton armé de Corbeil), Aubert. Annales des Ponts et Chaussées (Paris), vol. 1, no. 3, May-June 1928, pp. 234-244, 4 figs. partly on supp. sheet.

Concrete, Construction. Arthur Kill Bridges Paved With Joggled and Vibrated Concrete. Eng. News-Rec., vol. 101, no. 12, Sept. 20, 1928, pp. 427-429, 5 figs. To secure pavement of dense and strong concrete for two highway bridges across Arthur Kill, between mainland of New Jersey and Staten Island, engineers required concrete to be compacted by vibrating deck forms with pneumatic hammer; also use of traprock aggregates and special finish.

Concrete, Highway. Port Robinson Highway Bridge. Can. Engr. (Toronto), vol. 55, no. 12, Sept. 18, 1928, p. 315, 1 fig.

Design. What Is the Best Kind of Bridge to Build? J. A. L. Waddell. Contract Rec. (Toronto), vol. 42, no. 37, Sept. 12, 1928, pp. 968-971.

Highway, Surveys. Highway Bridge Surveys, C. B. McCullough. Contract Rec. (Toronto), vol. 42, nos. 38 and 39, Sept. 19 and 26, 1928, pp. 993-996 and 1013-1015, 4 figs.

Highway Bridge Surveys, C. B. McCullough. Contract Rec. (Toronto), vol. 42, no. 36, Sept. 5, 1928, pp. 942-945, 4 figs. Stream gradients and erosion; general factors controlling erosion; local conditions effecting erosion; five most commonly used methods for exploring foundations are: (1) sounding rod; (2) soil auger or boring machine; (3) wash boring or churn drilling; (4) core drilling, and (5) test pits; method to be used in any particular investigation will depend upon conditions encountered. (Continuation of serial.)

Railroad, Design. The Present Position as Regards the Question of Dynamic Influences on Railway Bridges, A. Ronsse and R. Desprets. Int. Ry. Congress Assn.—Bul. (Brussels), vol. 10, no. 9, Sept. 1928, pp. 717-723. Brief examination of present position of question of dynamic effects in railway bridges, taking into account particular points of view of Streletzky and of ordinary opinions most widely accepted at present time in Europe and in America; examination into organic condition of bridge; calculation of dynamic effect; balancing of locomotives and speed.

Steel. Endurance and Beauty in Steel Bridges, C. E. Fowler. Am. Inst. of Steel Constr.—Reprint, 19 pp., 28 figs.

Steel, Arch—Colorado River. Bridging the Colorado Across the Marble Gorge, A. S. Taylor. Compressed Air Mag., vol. 33, no. 10, Oct. 1928, pp. 2547-2548, 4 figs.

Steel, Construction. The Erection of Steel Bridges, D. G. Mackintosh. Structural Eng., vol. 6, no. 9, Sept. 1928, pp. 279-286, 8 figs.

Steel, Railroad and Highway Combined. Design and Construction of Railroad and Highway Bridge in Maine. Eng. and Contracting, vol. 67, no. 9, Sept. 1928, pp. 451-453, 3 figs.

Suspension, Design. Design of Great International Suspension Bridge Over Detroit River, J. Jones. Eng. News-Rec., vol. 101, no. 13, Sept. 27, 1928, pp. 460-466, 8 figs.

Suspension, Detroit River. The Ambassador Bridge, G. M. Bolton. Mich. Engr., vol. 46, no. 3, Sept. 1928, pp. 4-7, 2 figs. Links cities of Detroit, Mich., and Sandwich, Ont.; total length of bridge, including main span, approaches and terminals, is approximately 9,000 ft.; roadway 47 ft. in width; 8-ft. sidewalk; main span 1,850 ft.; each of main cables is 19 in. in diam.

BUILDING MATERIALS

Sound-Absorbing. The Absorption of Sound by Materials Used in Structures, F. R. Watson. Eng. and Contracting, vol. 67, no. 9, Sept. 1928, pp. 473-475. Results of investigation made by Engineering Experiment Station of University of Illinois; definition of acoustic absorption; action of sound in room; method of measurement; sources of sound; Rayleigh disk and its use; coefficients listed may be used in calculating reverberation in rooms.

C

CABLEWAYS

Buckets. Tipping Apparatus for Aerial Ropeways. Indus. Mgmt. (Lond.), vol. 15, no. 9, Sept. 1928, pp. 302-303, 3 figs. Description of device by which buckets can be tipped at predetermined positions in order to effect greatest possible economy and to utilize tipping area to fullest capacity; employed for disposal of coal-mine waste.

Dam Construction. Cableways for the Nag Hammadi Barrage. Engineer (Lond.), vol. 146, no. 3792, Sept. 14, 1928, pp. 284-285, 5 figs. partly on p. 288. Details of cableways, constructed by Henderson and Co. of Aberdeen, for handling materials in construction of dam being built across Nile river; cableways are erected across Nile at right angles to stream and are disposed so as to command practically whole area of barrage structure, which is about 3,000 ft. long by 340 ft. wide; each cableway has clear span of 3,100 ft.; each is designed to handle a load of 5 tons on hook.

Passenger, Italy. Aerial Suspension Passenger Cableway from Cortina to Ampezzo (Le funiculaire aerien de Cortina d'Ampezzo), F. Crestin. Génie Civil (Paris), vol. 93, no. 9, Sept. 1, 1928, pp. 212-214, 5 figs. Various regulations for passenger cableways; description of double-line cableway 1,921 mi. long in 3 unequal spans; cars hold 18 passengers each; safety devices; cable calculations; supporting cable 45 mm. diam.; traction cable 22.5 mm. diam.

CARS

Tank, Germany. Large Tank Cars in Germany and in United States (Grosskesselwagen in Deutschland und in den U.S.A.), O. Bondy. Glasers Annalen (Berlin), vol. 52, no. 4, Aug. 15, 1928, pp. 45-49, 9 figs. Data and descriptive notes on German tank cars by Krupp, Linke-Hofmann (for Russia), Hannover Waggonfabrik (for India), also of several types of American tank cars; capacities of 45 cu. m. and more.

Articulated, Street Railroad. Combined Drum and Bellows Connection Features Montreal's Articulated Car. Elec. Ry. Jl., vol. 72, no. 11, Sept. 15, 1928, pp. 450-454, 9 figs. Experimental units combine two types to maintain wide opening between two bodies at all times; designed for rush-hour service; car embodies several departures from previous designs of this type; result is noiseless and practically air-tight articulation; unit is 80 ft. long, front and rear bodies being of equal length; articulation coupling between two sections is designed on universal-joint principle. See also Can. Ry. and Mar. World (Toronto), no. 367, Sept. 1928, pp. 544-545, 3 figs.

CASE HARDENING

Nitration. Recent Developments in the Application of Nitrogen to the Surface Hardening of Steel, V. O. Homerberg. Fuels and Furnaces, vol. 6, no. 9, Sept. 1928, pp. 1153-1157, 9 figs.

The Process of Surface Hardening of Steel by Nitriding, W. J. Merten. Fuels and Furnaces, vol. 6, no. 10, Oct. 1928, pp. 1371-1376, 4 figs.

CASTINGS

Cleaning, Hydraulic. Hydraulic Method of Cleaning Castings, J. Prendergast and H. A. Lincoln. Iron Age, vol. 122, no. 12, Sept. 20, 1928, p. 734. Cleaning castings by water under pressure directed from nozzles in plant of Sullivan Machinery Corp., Claremont, N.H., is described.

Welded Steel vs. Costs. Welded Steel Equivalent of Castings, R. W. Capper. Welding Engr., vol. 13, no. 9, Sept. 1928, p. 45. Cost reductions made possible by use of welded steel in machinery construction and designs of parts suitable for this method; manufacture of specific pieces illustrated can be accomplished in any well-equipped steel fabricating shop which is operated in connection with machine shop; costs are based on manufacture in multiple of five pieces at a time, but without use of jigs or fixtures.

Centrifugal. Improvements in Moulds for Making Hollow Cylindrical Castings Whose Diameter Is Small with Respect to the Length by Centrifugal Force (Perfectionnements apportés aux moules pour la fabrication, par la force centrifuge, de corps creux cylindriques dont le diamètre est petit par rapport à la longueur). Fonderie Moderne (Paris), vol. 22, Mar. 25, 1928, pp. 106-108, 6 figs.

CHIMNEYS

Vibrations. Vibration of Chimneys (Schwingungen von Schornsteinen), E. Lehr. Beton u. Eisen (Berlin), vol. 27, no. 16, Aug. 20, 1928, pp. 301-306, 4 figs.

CITIES AND TOWNS

Planning. Modern Attitude to Town Planning, J. D. Craig. Can. Engr. (Toronto), vol. 55, no. 13, Sept. 25, 1928, pp. 339-340. Paper presented before Town Planning Inst. of Canada.

Citizenship and Town Planning. Can. Engr. (Toronto), vol. 55, no. 13, Sept. 25, 1928, p. 333.

Town Planning Developments in Ontario, A. E. K. Bunnell. Contract Rec. (Toronto), vol. 42, no. 39, Sept. 26, 1928, pp. 1040 and 1035.

Noulan Cauchon's Plan for City of Ottawa, N. Cauchon. Contract Rec. (Toronto), vol. 42, no. 39, Sept. 26, 1928, p. 1041, 2 figs.

Regional Engineering, Its Problems, Status and Future Requirements, W. W. DeBerard. Eng. News-Rec., vol. 101, no. 14, Oct. 4, 1928, pp. 496-501, 9 figs.

COAL HANDLING

Loading and. Loading and Storing of Friable Bulk Materials (Das Verladen und Lagern umladeempfindlicher Schuettgueter), E. H. H. Aumund. V.D.I. Zeit. (Berlin), vol. 72, no. 35, Sept. 1, 1928, pp. 1221-1224, 7 figs. Paper read at session of management section of 1928 annual meeting of Society of German Engineers (V.D.I.).

COAL MINES AND MINING

Steel Supports. The Use of Steel Arches in Supporting Underground Roadways, L. Frost. Can. Min. and Met.—Bul. (Montreal), no. 196, Aug. 1928, pp. 954-972, 11 figs. Paper presented before Min. Soc. of Nova Scotia, previously indexed from Iron and Steel of Canada, Aug. 1928.

Ventilation. Better Airways vs. New Fans, W. J. Montgomery. Min. Congress Jl., vol. 14, no. 10, Oct. 1928, pp. 777-782, 4 figs.

Recent Tendencies in Coal Mine Ventilation, G. S. Rice. Min. Congress Jl., vol. 14, no. 9, Sept. 1928, pp. 719-721.

COAL WASHING

Flotation. The Sand Flotation Process as Applied to the Washing of Coal, T. M. Chance. Min. Congress Jl., vol. 14, no. 9, Sept. 1928, pp. 724-727 and 732, 4 figs.

COFFERDAMS

Wrecking. Old Cofferdam Removed by Power Scraper Bucket. Eng. News-Rec., vol. 101, no. 11, Sept. 3, 1928, pp. 409-410, 2 figs.

COLUMNS, REINFORCED CONCRETE

Design. Reinforced Concrete Columns, L. Turner. Concrete and Constr. Eng. (Lond.), vol. 23, no. 9, Sept. 1928, pp. 597-602, 2 figs.

CONCRETE AGGREGATES

Gradation. Grading Aggregate for Concrete. Can. Engr. (Toronto), vol. 55, no. 12, Sept. 18, 1928, p. 317, 2 figs.

Moisture Content. New Moisture Content for Aggregates. Cement, Mill and Quarry, vol. 32, no. 13, Sept. 1928, pp. 33-34, 1 fig.

CONCRETE BLOCKS

Specifications. Specifications for Concrete Stone, C. Van Bogart. Contract Rec. (Toronto), vol. 42, no. 36, Sept. 5, 1928, pp. 952-953.

CONCRETE CONSTRUCTION

Reinforced, Testing. Tests of the Effect of Brackets in Reinforced Concrete Rigid Frames, F. E. Richart. U.S. Bur. of Standards—Jl. of Research, vol. 1, no. 2, Aug. 1928, pp. 189-250, 40 figs. Results of analyses and tests of rigid frames of reinforced concrete with and without enlargements (termed "brackets") at intersection of horizontal top member with vertical legs; all frames were of inverted U-form hinged at lower end of vertical legs; it is shown that relations between moments and size of brackets, determined exactly only by long-drawn-out computations, may be expressed by simple empirical equation with accuracy sufficient for many cases met with in practice.

Reinforcing Bars, Welding. Welding of Reinforcing Bars Effects Large Saving. Elec. World, vol. 92, no. 13, Sept. 29, 1928, p. 638, 2 figs. Several thousand dollars are saved by Pacific Gas and Electric Co. in construction of large concrete cooling-water intake by electric welding of reinforcing bars; job was of special nature in that square concrete piling was used for side walls of structure and roof was poured separately in place and joined to these side walls.

CONCRETE

Cost Calculation. Chart for Calculating Material Cost Per Cubic Yard of Concrete, C. M. Bull. Eng. News-Rec., vol. 101, no. 11, Sept. 13, 1928, p. 411, 1 fig.

Design. The Design of Pavement Concrete by the Water-Cement Ratio Method, F. H. Jackson. Pub. Roads, vol. 9, no. 6, Aug. 1928, pp. 124-128, 1 fig.

Mixing, Cost. Relation Between Output and Cost in Mixing Concrete, W. C. McNaughton. Eng. News-Rec., vol. 101, no. 13, Sept. 27, 1928, p. 472, 2 figs. Graph for calculating effect of curtailment of output on yardage costs of concrete; unit costs for various yardage outputs of two concrete plants of New York subway contractors.

Moisture Condensation. Preventing "Sweating" of Concrete, J. E. Foster. Nat. Engr., vol. 32, no. 9, Sept. 1928, pp. 415-416.

Proportioning. The Practical Application of the Water Cement Ratio Theory, J. Singleton-Green. Structural Eng., vol. 6, no. 9, Sept. 1928, pp. 265-278, 2 figs. Designing mix; Abrams' theory: water ratio and strength; amount of water for given strength; various cement; maximum density; bulking of sands; inundation; variation in quantity of coarse aggregate. Bibliography.

STRENGTH. Effect of Mixing Time on Concrete Strength. Am. Contractor, vol. 49. no. 35. Aug. 25, 1928. pp. 20-21. Conclusion from data secured is that strength of concrete is not increased by longer mixing periods; over 2,000 cylinders were broken; cylinders were prepared as required by A.S.M.E. standards; general summary of data secured on cylinders.

TESTING. Compression Test for Concrete. Can. Engr. (Toronto), vol. 55. no. 13. Sept. 25, 1928. p. 332, 2 figs. Description of tests, carried out at Portland Cement Assn.'s laboratory, in which compressive strength and wear of concrete are plotted against water-cement ratio. From Concrete Highways.

WORKABILITY. Workability and Durability of Concrete, R. W. Atwater. Can. Engr. (Toronto), vol. 55. no. 10, Sept. 4, 1928, pp. 279-281. Paper presented before Am. Concrete Inst., previously indexed from Eng. and Contracting, Mar. 1928.

COPPER ALLOYS

COPPER-CADMIUM. Notes on the Manufacture and Properties of Some Copper-Cadmium Alloys, W. Bannard. Brass World, vol. 24. no. 9, Sept. 1928, pp. 273-276. 8 figs.

COPPER DEPOSITS

MANITOBA. Island Lake, Manitoba, N. B. Davis. Can. Min. Jl. (Gardenvale, Que.), vol. 49. no. 37, Sept. 14, 1928, pp. 734-735.

COPPER MINES AND MINING

RHODESIA. Development of the N'Changa Copper Mines. S. African Min. and Eng. Jl. (Johannesburg), vol. 39. no. 1923, Aug. 4, 1928, pp. 646-648. Abstract of first annual report of N'Changa Copper Mines, Ltd.; history and review of progress; area 1½ by 3 mi., at altitude of 4,300 ft.; rainfall about 50 in. annually; geology; River Lode; Dambo Lode; new discovery in southwest corner of area; organization employs average of 90 white men and 850 natives; churn drilling and diamond drilling in progress during 1928. See also Min. and Indus. Mag. of South Africa (Johannesburg), vol. 6, no. 12, Aug. 8, 1928, pp. 559-560.

Roan Antelope, in Rhodesia, May Deliver Eight-Cent Copper, G. L. Walker. Eng. and Min. Jl., vol. 126, no. 11, Sept. 15, 1928, pp. 404-406, 2 figs. British corporation, in which Americans are interested, owns three copper ore deposits in Northern Rhodesia, Africa; outline map and cross-sections of ore-body, which is bed of feldspathic shale containing disseminated chalcocite; official of American Metal Co. estimates 30,000,000 tons averaging 3.4 per cent copper and calculates total cost of 8.15 cents per pound of copper delivered in Europe; indications are that 100,000,000 lb. annual productive capacity can be created by total capital expenditure of $15,000,000.

COPPER ORE TREATMENT

LEACHING, NATURAL—UTAH. Utah Copper's New Precipitating Plant, H. D. Keiser. Eng. and Min. Jl., vol. 126, no. 14, Oct. 6, 1928, pp. 534-537, 7 figs. Precipitation of copper from natural surface waters has been practised at Bingham Canyon properties of Utah Copper Co. since 1917, on small scale and largely experimental; operation of new plant began March 26, 1928; to June 1, average flow treated was 1,000,000 gal. in 24 hr.; plant heads average 20 lb. copper per 1,000 gal.; extraction 97.5 per cent; details of system for collection of waters and of precipitation boxes; detinned iron scrap used to precipitate copper metal from sulphate solution.

PLANTS, NEW MEXICO. Revision of the Coarse Crushing and Fine Crushing Departments of the Hurley Plant of the Chino Mines, Nevada Consolidated Copper Company, F. Hudges. Min. Congress Jl., vol. 14, no. 9, Sept. 1928, pp. 699-701, 4 figs.

COPPER SMELTERS

ARIZONA. Copper Smelting at Douglas, E. H. Robie. Eng. and Min. Jl., vol. 126, no. 13. Sept. 29, 1928, pp. 493-496. Describes some features of Copper Queen smelter of Phelps Dodge Corp.; largest roasting furnaces in world, with 11 interior hearths; hot calcine drops directly into reverberatory feed gins; two reverberatories in use were making 11,000,000 lb. copper per month; Great Falls type of converters still used; brief description of lead smelter; Calumet and Arizona smelter, on adjoining site, also partly described.

QUEBEC. The Noranda Enterprise, A. H. Hubbell. Eng. and Min. Jl., vol. 126, no. 11, Sept. 15, 1928, pp. 412-416, 6 figs. Smelter was blown in Nov. 21, 1927, and first copper produced Dec. 16; reverberatory furnaces, roasters, converters, casting machines and accessories; operating results; detailed log of procedure, Nov. 21 to Dec. 26, 1927. (Continuation of serial.)

The Noranda Enterprise, A. H. Hubbell. Eng. and Min. Jl., vol. 126, no. 12. Sept. 22, 1928, pp. 451-456, 6 figs. Recounts difficulties of smelter operation and their solution; crushing plants; sampling mill; adjustment of roasting and smelting capacities; reverberatories; converters; coal pulverizing and precipitation plants; Cottrell dust-precipitation plant; instruments for furnace control; outline of plant organization.

CULVERTS

DESIGN. How Long Should a Culvert Be for Safety and Economy? Highway Mag., vol. 19, no. 8, Aug. 1928, pp. 215-217, 7 figs.

CUPOLAS

TEMPERATURE MEASUREMENT. Accurate Temperature Measurements in Cupola Practice (Genaue Temperateuressungen im Kupolofenbetrieb), P. Rheinlaeder. Giesserei (Duesseldorf), vol. 15, no. 37, Sept. 14, 1928, pp. 911-917, 9 figs.

CUTTING TOOLS

DIAMOND. Metal-Cutting With Diamonds. Soc. Automotive Engrs.—Jl., vol. 23, no. 4, Oct. 1928, pp. 419-420, 3 figs. Slight pressure and small wear of diamond tool result in fine and accurate finish; finishing of bearing metal and bronze bushings in crankcases and connecting rods; accurate finishing rather than removal of large quantities of stock is greatest use for diamond tools in machining; very high speed possible; new requirements on machines; distinctive requirements for diamond-cutting machine tool.

D

DAMS

ARCH, DESIGN. Some Adjustments of Stresses in Arch Rings of Arch Dams, F. W. Hanna and T. L. E. Haug. West. Constr. News, vol. 3, no. 17, Sept. 1928, pp. 574-577, 2 figs.

EARTH, FAILURES. Uncompleted Lafayette Rolled-Fill Earth Dam Damaged by Movement, N. A. Bowers. Eng. News-Rec., vol. 101, no. 13, Sept. 27, 1928, pp. 483-485, 7 figs. About half of yardage in dam of East Bay Municipal Utility District, Oakland, Calif., shifted position; embankment had been built to 120 ft.; cause to be sought through foundation studies; cross-section of Lafayette dam showing stage of completion and downstream profile after slip; some joints in upstream paving opened, others were buckled or crushed. See editorial comment "Unstable Earth," on p. 457.

MULTIPLE DOME, CONSTRUCTION. Construction Features, Coolidge Multiple-Dome Dam. Eng. News-Rec., vol. 101, no. 12, Sept. 20, 1928, pp. 438-442, 13 figs.

UPLIFT PRESSURE. Uplift Under Dams, C. E. Pearce. West. Constr. News, vol. 3, no. 17, Sept. 10, 1928, pp. 569-571, 2 figs.

DIATOMACEOUS EARTH

CANADA. Development of Diatomaceous Earth in Nova Scotia, R. W. Burroughs. Can. Min. and Met.—Bul. (Montreal), no. 196, Aug. 1928, pp. 973-988, 6 figs. Diatomaceous or infusorial earth consists of silicious remains of minute aquatic plants; California deposits are largest, most extensively worked and best known; largest Canadian deposits are in British Columbia and Nova Scotia; smaller, impure deposits in Ontario, Quebec and New Brunswick; describes deposits of Scotia Diatom Products at Little River, near Digby, N.S.; plant for mining and preparation for market is being constructed. Paper presented before Min. Soc. of Nova Scotia.

DIE CASTING

COPPER ALLOYS. Die-Casting of Copper-Rich Alloys, R. Genders, C. R. Reader and V. T. S. Foster. Foundry Trade Jl. (Lond.), vol. 39, no. 629, Sept. 6, 1928, pp. 167-170 and 172. Abstract of paper read before Inst. of Metals.

DIESEL ENGINES

ANTE-CHAMBER TYPE. Studies of Diesel Engines. The Ante-Chamber Engine (Entersuchungen an der Dieselmaschine die Vorkammermaschine), K. Neumann. V.D.I. Zeit. (Berlin), vol. 72, no. 36, Sept. 8, 1928, pp. 1241-1248, 10 figs. Report from Department of Internal Combustion Engines and Engineering Thermodynamics of Hanover Institute of Technology on experimental studies of performance and mode of operation of 18-h.p. one-cylinder four-cycle engine of ante-chamber type; mathematical analysis of combustion phenomena; special merits of ante-chamber type for high-speed Diesel engines.

COMPRESSORLESS. The Sixty-Seventh Annual Meeting of the Society of German Engineers (V.D.I.), Essen, 1928 (Die 67 Hauptversammlung des Vereins Deutscher Ingenieure in Essen 1928). L. Hausfelder. Motorwagen (Berlin), vol. 31, nos. 18 and 20, June 30 and July 20, 1928, pp. 414-415 and 456-461, 5 figs. Abstracts of principal papers read at sessions on internal-combustion engines, marketing, paints and painting; extensive abstracts of Reinsch's paper on progress in design of compressorless Diesel engines and of Gosslav's paper on heat control of cylinders of air-cooled airplane engines.

DEUTSCHE WERKE. Double-Acting Air Injection Engines. Gas and Oil Power (Lond.), vol. 23, no. 276, Sept. 6, 1928, p. 243. Details of new 6-cylinder Deutsche Werke design of engine; bore 650 mm.; stroke 1,050 mm.; rating of 4,200 h.p. at 120 r.p.m.; four sets of ports of approximately equal height extend around entire cylinder periphery, two serving upper side of piston and two lower side; accessibility studied; controls placed at camshaft level instead of on floor level.

DOUBLE-ACTING (M.A.N.). 11,700 B.H.P. Double-Acting Oil Engine. Power Engr. (Lond.), vol. 23, no. 270, Sept. 1928, pp. 341 and 363, 1 fig. Notes on large new German engines built by M.A.N. intended for peak-load service; coupled to generator of Siemens-Schuckert makes operating at pressure of 6,000 volts; each engine has 10 cylinders 600 mm. in diam. with piston stroke of 900 mm., 11,700 b.h.p. being developed at 215 r.p.m.; power produced with brake mean effective pressure of 69.5 lb. per sq. in. and piston speed of 1,268 ft. per min.; loop system of port scavenging.

PULVERIZED FUEL. Operating Diesel Motors with Coal Dust Fuel, F. E. Bielefeld. Oil Eng. and Technology (Lond.), vol. 9, no. 8, Aug. 1928, pp. 216-218, 5 figs. Original Diesel engine was designed with view to using solid fuel in powder form; MacCallum coal-dust-fired motor, British patent No. 816 of 1891; development not continued, as relatively coarse coal dust caused difficulties; brown coal-dust now used will pass sieve of 8,000 to 10,000 mesh per sq. cm.; fine powder offers large surface of attack to combustion oxygen; Diesel can be fired without auxiliary ignition fuel; brief discussion of German patents. Abstract translated from Technische Blaetter, June 9, 1928.

VALVES, DESIGN OF. Contribution to the Design and Calculation of Fuel Cams and Fuel Valves for Diesel Engines, J. N. Basu. Nat. Advisory Committee for Aeronautics—Tech. Memorandums, no. 477, Aug. 1928, 32 pp., 22 figs.

DUST PRECIPITATION

ELECTRIC. Precipitation in Europe, G. Berg. Elec. World, vol. 92, no. 11, Sept. 15, 1928, pp. 499-503, 8 figs. It is estimated that there are at present about 2,000 electrical precipitation plants in world, of which 800 are situated in United States and 1,000 in Germany; types of electrifiers; modern electro-filter plants; industrial applications.

Notes on Electrical Dust Precipitation, D. H. Lewis. West of Scotland Iron and Steel Inst.—Jl. (Glasgow), vol. 35, part 6, Mar. 1928, pp. 98-99 and discussion) 99-100, 6 figs. on supp. plates. Problem of dust recovery comes under three heads: (1) prevention of nuisance; (2) collection of values; (3) cleaning of gases; all plants described are of type now handled by Lodge-Cottrell Co.; Oski plant was installed at Wishaw to treat gases from rotary cement kiln; main difference between Lodge-Cottrell and Oski types of plant; arrangement of plant.

E

ELECTRIC ARCS

ALTERNATING CURRENT. Extinction of an A-C Arc, J. Slepian. Am. Inst. Elec. Engrs.—Jl., vol. 47, no. 10, Oct. 1928, pp. 706-710, 8 figs.

ELECTRIC BUSBARS

SPACING. Spacing Busbars for Safe Voltage Clearance, M. Kushlan. Elec. World, vol. 92, no. 14, Oct. 6, 1928, pp. 681-682, 1 fig.

ELECTRIC CABLES

FAILURES. Cable Operation. Nat. Elec. Light Assn.—Serial Report, Sept. 1928, 16 pp.

SHEATH LOSSES. Reduction of Sheath Losses in Single-Conductor Cable, H. R. Searing and W. B. Kirke. Elec. World, vol. 92, no. 14, Oct. 6, 1928, pp. 685-688, 8 figs.

ELECTRIC CONDUITS

CONSTRUCTION. Conduit and Manhole Construction. Nat. Elec. Light Assn.—Serial Report, Sept. 1928, 9 pp., 14 figs.

ELECTRIC FURNACES

ANNEALING. Alloy Steel Castings Annealed in Car Type Electric Furnaces, M. Rock. Fuels and Furnaces, vol. 6, no. 10, Oct. 1928, pp. 1405-1407, 3 figs.

ELECTRIC NORMALIZING AND ANNEALING. Iron Age, vol. 132, no. 14, Oct. 4, 1928, pp. 818-821, 8 figs. Description of electric annealing installed by Timken Roller Bearing Co. for use in production of alloy steels; eight furnaces for slow cooling handle alloy steels at various heating cycles; large pit furnaces a feature; air blast for cooling; special furnace for normalizing chrome steel; two-car type furnaces for bar stock.

HEAT-TREATING. Electrically-Heated Pusher Type Furnaces Used in Carburizing Automobile Parts, I. S. Wishoski. Fuels and Furnaces, vol. 6, no. 10, Oct. 1928, pp. 1395-1398, 2 figs. Describes pusher type furnace built by Holcroft and Co., of Detroit, Mich., used by automobile company for carburizing ring gears, side gears, king pins, etc., on 10-12 hr. cycle and quenched direct from boxes; net production, 700 lb. per furnace per hr.; operating economy, 10-12 lb. gross or 3.7 lb. net per kw.-hr.

RESISTANCE. The Use of Nickel-Chromium Alloys in Electric Furnaces, A. G. Lobley. Foundry Trade Jl. (Lond.), vol. 39, no. 631, Sept. 20, 1928, pp. 209-210, 2 figs.

ELECTRIC FUSES

CRITICAL STUDY OF. A Critical Study of the Current Rating of Low-Pressure Ordinary-Duty Fusible Cut-Outs, P. D. Morgan. Instn. Elec. Engrs.—Jl. (Lond.). vol. 66, no. 381, Sept. 1928, pp. 926-939 and (discussion) 939-948, 18 figs. Present report reviews British, Continental and American practice, deduces a method of rating suitable for existing British designs and provides experimental data required for revised specification.

ELECTRIC GENERATORS

HYDRAULIC TURBINE DRIVE. Alternators for Water Turbines. World Power (Lond.), vol. 10, no. 58, Oct. 1928, pp. 441-444, 6 figs.

ELECTRIC LAMPS

INCANDESCENT. Temperature and Brightness of the New Standard Type of Incandescent Lamp, W. E. Forsythe and E. M. Watson. Gen. Elec. Rev., vol. 31, no. 10, Oct. 1928, pp. 532-534.

ELECTRIC LINES

GROUNDING. Overhead Transmission, W. T. Taylor. Electricity (Lond.), vol. 42, no. 1972, Aug. 23, 1928, pp. 14-15.

Effect of Ground Wire on Travelling Waves, J. H. Cox and J. Slepian. Elec. World, vol. 92, no. 12, Sept. 22, 1928, pp. 551-554, 2 figs.

INTERCONNECTED. Operating Problems of Interconnected Power Systems, W. R. Hamilton. Elec. Jl., vol. 25, no. 10, Oct. 1928, pp. 494-500, 7 figs.

LOSS CALCULATION. Relation Between Loss and Load Factors, R. C. Powell. Elec. World, vol. 92, no. 12, Sept. 22, 1928, p. 558, 1 fig. Author refers to article by F. H. Buller and C. A. Woodrow, published in July 14 issue of same journal entitled Load Factor—Equivalent Hour Values Compared, and gives results of similar study made by him some 15 years ago.

POLES, WOODEN—ONTARIO. Development of Pole Line Construction, E. F. Hinch. Can. Engr. (Toronto), vol. 55, no. 10, Sept. 4, 1928, pp. 275-278, 6 figs. Principal construction methods employed by Ontario Hydro-Electric Power Commission; eastern cedar poles have been standard material for pole-line construction; insular pins; solderless connectors; grounding. Paper presented before Assn. Elec. Utilities.

POLES, WOODEN, RECONSTRUCTION. Rehabilitating Wood Pole Lines Without Interrupting Service. Elec. World, vol. 92, no. 13, Sept. 29, 1928, pp. 618-619, 6 figs. Important steps in pole line reconstruction job in Connecticut are illustrated; by use of pole mounts, pole section above ground is saved for further long continued service after decayed butt has been removed; rehabilitation is accomplished without interrupting service on line.

SPAN WIRE SUSPENSION. Span Wire Suspension Replaces Steel Tower, A. Kankeberg. Elec. World, vol. 92, no. 13, Sept. 29, 1928, p. 613, 1 fig. Where transmission lines traverse rugged and mountainous country; Public Service Co. of Colorado uses span wire suspension cable consisting of ⅝ in. plow-steel strand attached to canyon walls; no trouble has been experienced with installations of this type.

SURGES. Surge Voltage Investigation on Transmission Lines, W. W. Lewis. Am. Inst. Elec. Engrs.—Paper, for mtg., June 25-29, 1928, 11 pp., 16 figs.

TOWERS. Semi-Flexible Tower Line to Meet Severe Conditions, C. A. Booker. Elec. World, vol. 92, no. 11, Sept. 15, 1928, pp. 507-509, 3 figs. New England Power Co. follows policy of constructing all its important lines with all conductors in horizontal plane; conductors in horizontal plane with single circuit per tower; line built in structural units with anchor and intermediate towers.

TOWERS, DESIGN. Stresses in Transmission-Line Towers Produced by Breaking of Suspended Wire (Die Beanspruchung der Leitungsmaste bei Seilriss), Kammueller. Bautechnik (Berlin), vol. 6, no. 39, Sept. 7, 1928, pp. 133-136 (supp. Stahlbau), 14 figs.

HIGH-TENSION, CANADA. Gatineau to Toronto, 230 Miles, 260,000-H.P., 220,000-V. Elec. News (Toronto), vol. 37, no. 19, Oct. 1, 1928, pp. 38-45, 16 figs. Two single-circuit transmission lines operating at 220,000 volts; Paugan Falls development; large transformers; 220-kv. line; locating of route for line by means of aerial photography; standard towers are of "A" frame construction; Toronto terminal station; largest transformers in existence which are 32 ft. in height to top of high-voltage terminal and tank is over 13 ft. in diameter.

HIGH-TENSION, ONTARIO. Hydro Terminal Station at Leaside, Ont. Can. Engr. (Toronto), vol. 55, no. 14, Oct. 2, 1928, pp. 343-346, 7 figs. Ontario Hydro-Electric Power Commission completes construction of 230-mi., 200,000-volt transmission line from Gatineau river to Toronto and builds new terminal station at Leaside; locating route for transmission line solved by means of aerial photography; procedure adopted; first of lines erected; terminal transformer station; size of transformers; largest single-phase water-cooled units in physical size ever built; total estimated cost of whole work, $14,000,000.

ELECTRIC LOCOMOTIVES

MOTOR-GENERATOR. Performance of Motor-Generator Locomotives, P. A. McGee. Ry. Age, vol. 85, no. 10, Sept. 8, 1928, pp. 443-447, 3 figs.

MINE. Super-Powerful Locomotives for Main Haulage Service, G. H. F. Holy. Coal Mine Mgmt., vol. 7, no. 8, Sept. 1928, pp. 17-21, 3 figs. Article previously indexed from Coal Min., Sept. 1928.

ELECTRIC MOTOR-GENERATORS

CHARACTERISTICS. Selecting Motor-Generator Characteristics, W. H. Colburn. Elec. World, vol. 92, no. 12, Sept. 22, 1928, pp. 555-556, 2 figs.

ELECTRIC MOTORS

ALTERNATING CURRENT. Changing a Two-Phase Motor for Three-Phase Operation, M. E. Wagner. Power, vol. 68, no. 12, Sept. 18, 1928, pp. 479-480, 3 figs. Author tells how two-phase, 100-h.p., 2,200-volt, 60-cycle, 8-pole induction motor was changed to operate on 440 volts, three-phase.

DIRECT CURRENT, SPEED ADJUSTMENT. How Adjusted Speed Is Obtained with Direct Current Motors, F. A. Annett. Power, vol. 68, no. 14, Oct. 2, 1928, pp. 561-564, 7 figs.

SINGLE-PHASE, DESIGN. Improvement in Single-Phase Motor Design, N. Currie, Jr. Gen. Elec. Rev., vol. 31, no. 10, Oct. 1928, pp. 535-536, 6 figs.

SQUIRREL-CAGE. Applications for Squirrel-Cage Motors Extended. Power, vol. 68, no. 23, Sept. 25, 1928, p. 522.

SYNCHRONOUS, BRAKING. The Dynamic Braking of Synchronous Motors, K. B. Spear. Elec. News (Toronto), vol. 37, no. 18, Sept. 15, 1928, p. 49.

ELECTRIC NETWORKS

LOAD DISPATCHING. Load Dispatching Problems and Procedure, F. R. George. Elec. World, vol. 92, no. 11, Sept. 15, 1928, pp. 505-506, 2 figs. Pacific Gas and Electric Co. adopted centralized control idea in about 1900; there was established in 1906 separate department for this phase of system operation under title of Load Dispatcher; authority and responsibility are centered in one office, and from this point emanate all orders regarding load, frequency and voltage regulation; disposition of stored waters; energy purchased from other companies; switching on all high-voltage lines and all tie lines between stations regardless of voltage and kindred matters.

SHORT CIRCUIT CALCULATION. Time-Saving Charts Facilitate Use of Calculating Table, R. C. R. Schulze. Elec. World, vol. 92, no. 12, Sept. 22, 1928, pp. 556-557, 5 figs.

STABILITY REGULATION. System Stability with Quick-Response Excitation and Voltage Regulators, J. H. Ashbaugh. Elec. Jl., vol. 25, no. 10, Oct. 1928, pp. 504-509, 8 figs.

ELECTRIC RESEARCH

PROGRESS. Electrical Research and Progress, W. R. Whitney. Nat. Elec. Light Assn.—Bul., vol. 15, no. 9, Sept. 1928, pp. 521-526

ELECTRIC RHEOSTATS

LIQUID. Liquid Rheostats for Extra High Voltage, W. Wilson. World Power, vol. 10, no. 57, Sept. 1928, pp. 237-246, 9 figs. Article investigates cause of past irregularities in liquid rheostats; liquid resistors for high circuits; electrolysis cause of variability; calculation of concentric liquid resistances; electrical design of earthing resistors; thermal considerations; water resistivity; advantage of liquid high-voltage resistors.

ELECTRIC TRANSFORMERS

CONNECTION. Two-Phase and Three-Phase Power from the Same Transformers, J. B. Gibbs. Power, vol. 68, no. 11, Sept. 11, 1928, pp. 448-449, 5 figs. Connection is shown which has been suggested as means of supplying 2-phase and 3-phase power simultaneously from 4-wire line, and is compared with other means for accomplishing same result.

TEMPERATURE MEASUREMENT. Transformer Temperature Indicator Records Temperature Range. Elec. World, vol. 92, no. 14, Oct. 6, 1928, p. 688, 2 figs.

VOLTAGE REGULATORS. Tap-Changing Equipment Controls Transformer Voltage, A. Palem. Power, vol. 68, no. 23, Sept. 25, 1928, pp. 519-522, 6 figs.

LARGE, HANDLING. Five Steps in Handling 25,000-Kva. Transformer at Edgar Station. Elec. World, vol. 92, no. 13, Sept. 29, 1928, pp. 634-635, 5 figs.

ELECTRIC WELDING METHODS

INDUSTRIAL. Industrial Methods of Electric Welding and the Equipment Used. Elec. News (Toronto), vol. 37, no. 18, Sept. 15, 1928, pp. 47-49, 1 fig. Outlines three industrial methods of welding electrically; briefly discusses resistance welding, atomic hydrogen welding, arc-welding equipment and atomic-hydrogen welding equipment. Presented in serial report of Indus. Heating Committee of Nat. Elec. Light Assn.

ELECTRICITY SUPPLY

COST DISTRIBUTION, REDUCTION. Reducing Distribution Expense. Elec. World, vol. 92, no. 12, Sept. 22, 1928, p. 563, 1 fig.

EXCAVATING MACHINERY

DRAGLINE. Advantages of the Boom Type Dragline. Brick and Clay Rec., vol. 73, no. 6, Sept. 11, 1928, pp. 378-381, 7 figs.

EXCAVATION

METHODS. Unusual But Effective Methods of Excavating. Contract Rec. (Toronto), vol. 42, no. 38, Sept. 19, 1928, pp. 1003-1004, 5 figs. Hamilton's $1,000,000 Canadian National Railway station now under way; contract involves removal of over 200,000 yards of materials and four new bridges to be built; description of methods and equipment used in excavating.

F

FANS

INDUCED DRAUGHT. Eliminating Inlet Loss in Induced Draught Fans, G. C. Derby. Power Plant Eng., vol. 32, no. 19, Oct. 1, 1928, pp. 1047-1050, 7 figs.

FIREBRICK

SILICA (DINAS). Tridymitization of Dinas Silica Brick, V. N. Shvetzov. Jl. Russkovo Metallurgicheskovo Obshchestva (Leningrad), no. 3, 1928, pp. 61-71, 15 figs. Author reports experimental study of Dinas silica firebrick made by Tartar quartzite at Zlatoustov ceramic plant.

FLOOD CONTROL

MISSISSIPPI RIVER. Some Hydraulic Problems Affecting Flood Prevention Work on the Mississippi, E. H. Schulz. Eng. and Contracting, vol. 67, no. 9, Sept. 1928, pp. 447-450. Paper published in West. Soc. of Engrs.—Tech Papers.

FLOORS, CONCRETE

CRAZING. Crazing of Concrete Floors, R. Kaufman. Concrete, vol. 33, no. 4, Oct. 1928, pp. 44-47, 3 figs.

FLOW OF LIQUIDS

PIPES. Flow of Brine in Pipes, R. E. Gould and M. I. Levy. Univ. of Ill. Eng. Experiment Station—Bul., vol. 26, no. 2, Sept. 11, 1928, 24 pp., 6 figs. Object of this investigation was to determine relation between friction factor and Reynold's number when commercial calcium-chloride factor and Reynold's number when commercial calcium-chloride brine is circulated in standard wrought-iron pipe under conditions encountered in refrigeration practice; fluids in pipes; types of flow; description of apparatus; methods of conducting tests; comparison of results with brass, steel and iron pipe; viscosity of commercial calcium-chloride solutions.

FLOW OF OIL

PIPE, HEAT TRANSMISSION. Heat Tranfer in Oils Flowing Through Pipes, M. Garcia. Indus. and Eng. Chem., vol. 20, no. 9, Sept. 1928, pp. 889-891. Logarithmic mean-temperature difference equation is based on assumptions which are wholly unjustified when dealing with oils, and may give misleading results in heat-transfer calculations; graphical methods are given for calculation of mean liquid temperatures and mean-temperature differences, to be used in correlation of experimental data or design of exchanges for heavy viscous oils involving large temperature ranges.

FORGING MACHINES

HIGH-DUTY. Internal Displacement Principle Aids Forging Practice. Iron Trade Rev., vol. 83, no. 13, Sept. 27, 1928, pp. 778-779, 5 figs. See also Iron Age, vol. 122, no. 13, Sept. 29, 1928, pp. 768 and 769.

FURNACES

FOUNDRY. Notes on a New Furnace for Steel Works Intending to Produce Small Castings, M. G. Lely. Foundry Trade Jl. (Lond.), vol. 39, no. 627, Aug. 23, 1928, p. 132.

G

GALVANIZING

Hot. The Estimation of Zinc Pickup in Hot Galvanizing, E. D. Timmerman. Can. Chem. and Met. (Toronto), vol. 12, no. 9, Sept. 1928. pp. 249-250.

GASES

Calorific Value vs. Combustion Temperature. The Relation Between Calorific Value of Gases and Their Combustion Temperature (Ueber den Zusammenhang zwischen dem Heizwert der Gase und ihrer Verbrennungstemperatur, bzw. die Herleitung und selbsttaetige Aufzeichnung des Heizwertes aus der Temperatur der Abgase), H. Fahrenheim. Waerme (Berlin), vol. 51, no. 33, Aug. 18, 1928, pp. 611-612, 1 fig.

GEARS AND GEARING

Hobs. New Type Gear Hob, G. A. Moore. Machy. (Lond.), vol. 32, no. 827, Aug. 16, 1928, pp. 633-635, 7 figs. Method of grinding hob with disk- and pencil-type wheels; semi-ground form hob of French manufacture; in longitudinal rows of teeth every second recess between two adjacent teeth has its walls and root ground to exact dimensions required, while alternate recesses in same row are all made to greater depth; space roots ground at same operation as flanks; high-production hob with spiral cutting action.

Reduction Gears. Reduction Gears at the 1928 Leipzig Fair (Die Reduktions-Getriebe auf der Leipziger Technischen Messe 1928), C. Bluethe. Schweizerische Bauzeitung Zurish, vol. 92, nos. 11 and 12, Sept. 15 and 22, 1928, pp. 139-142 and 148-152, 17 figs. Descriptive notes on Escher Wyss, Krupp, Flender constant-ratio and variable-ratio, friction or chain, speed-reducing gears; also notes on Lauf-Thoma, Enor, Energator and other hydraulic gears.

Tooth Modification. Hob Corrections for Gear Tooth Modifications, J. A. Hall. Am. Mach., vol. 69, nos. 11, 12 and 13, Sept. 13, 20 and 27, 1928, pp. 431-435, 462-472 and 491-493, 20 figs. Sept. 13: Analysis of straight-line correction are concluded and method for determination of entrance angle is given and illustrated by use of charts and formulas. Sept. 20: Charts are given and explained to simplify calculation of number of modified teeth in contact under worst conditions so that continuity of action is assured. Sept. 27: Method of analysis for hobs with circular corrections now in use; number of gear teeth in contact is constant for all sizes of gears; comparison of five systems of hob correction now in use.

GEODETIC SURVEYING

Levelling Rods. The Geodetic Level Rod—Its Design and Methods of Construction. Instruments, vol. 1, no. 8, Aug. 1928, pp. 347-350, 2 figs.

GEOLOGY

Quebec. The East Coast of Hudson Bay, A. P. Low. Can. Min. Jl. (Gardenvale, Que.), vol. 49, nos. 36 and 37, Sept. 7 and 14, 1928. pp. 712-717 and 736-739, 6 figs.

GEOPHYSICAL EXPLORATION, ELECTRIC

Civil Engineering. Electrical Prospecting Applied to Foundation Problems, I. B. Crosby and E. G. Leonardson. Am. Inst. Min. and Met. Engrs.—Tech. Publication, no. 131, Sept. 1928, 12 pp., 13 figs.

GOLD MINES AND MINING

Nova Scotia. The Montague Gold Mine, Halifax, N.S., S. C. Mifflen. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 33, Aug. 17, 1928, pp. 660-661, 4 figs.

Placer, British Columbia. Hydraulic Mining, J. H. Robertson. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 32, Aug. 10, 1928, pp. 639-641, 3 figs.

GOLD ORE TREATMENT

Amalgamation. Recovery of Fine Gold by Amalgamation, E. S. Leaver. U.S. Bur. Mines—Information Cir., no. 6081, Aug. 1928, 4 pp. Circular written in response to many requests for information on recovery, or reasons for poor recovery, of fine gold by amalgamation process; checking gold content; nature of gold; float and rusty gold; effect of impurities; placer gold; cyanidition is usual method for recovery of gold lost in amalgamation process.

Tailings Retreatment. Retreatment of Comstock Tailings, E. S. Leaver and J. A. Woolf. Eng. and Min. Jl., vol. 126, no. 12, Sept. 22, 1928. pp. 448-450. Article previously indexed from U.S. Bur. Mines—Report of Investigations, no. 2883, July 1928.

GRAIN ELEVATORS

Construction. New Grain Elevator and Malt House. Contract Rec. (Toronto), vol. 42, no. 36, Sept. 5, 1928, pp. 956-957, 4 figs. Description of new grain elevator and malt house costing $600,000 being erected for Canadian Malting Co.; 15 round tanks 100 ft. high, 25 ft. 6 in. in diameter centre to centre of wall, 5 square tanks 14 ft. by 10 ft. and warehouse all of reinforced concrete resting on wood piles; description of construction operation.

GRAPHITE ORE TREATMENT

Flotation. The Concentration of Flake Graphite Ores, C. S. Parsons. Can. Min. Jl. (Gardenvale, Que.), vol. 49, no. 39, Sept. 28, 1928, pp. 778-781, 3 figs.

GYPSUM DEPOSITS

Description of. Gypsum and Anhydrite, F. A. Wilder. Am. Mineralogist, vol. 13, no. 9, Sept. 1928, pp. 476-480, 3 figs. Gypsum is important in building industry; output in 1926 was 5,635,411 tons, including 200,000 tons of anhydrite; many important gypsum deposits were originally anhydrite; general notes of occurrences in Nova Scotia, New Brunswick, Newfoundland and Prince Edward Island, in Canada; at least half of gypsum deposits in United States are associated with anhydrite; latter lacks water of crystallization and cannot be changed to semi-hydrate by calcination.

H

HAMMERS

Power. Foundations of Power Hammers (Hammerfundamente). E. Rausch. Beton u. Eisen (Berlin). vol. 27. no. 17, Sept. 5. 1928, pp. 321-327. 8 figs.

HARDNESS

Measurements of. Apparatus and Methods for Measurement of the Hertzian Hardness. R. Esnault-Pelterie. Engineer (Lond.), vol. 146. nos. 3788, 3789 and 3790. Aug. 17. 24 and 31. 1928. pp. 180-181, 196-197 and 220-222, 9 figs. Paper read before Brit. Section of Société des Ingénieurs Civils de France.

HELIUM

Canada. Petroleum and Natural Gas in Ontario. R. B. Harkness. Petroleum Times (Lond.). vol. 20. no. 504. Sept. 8, 1928. p. 412. Abstract of paper read before Min. and Met. Congress.

HIGH BUILDINGS

Wind Bracing, Design. Practical Design of Wind Bracing, C. T. Morris. Am. Inst. of Steel Constr.—Reprint of paper presented Oct. 1927, 12 pp., 7 figs. Author enumerates uncertainties involved in proper design of wind bracing; approximate methods; Smith's method; slope-deflection method; Ross method; wind velocities and resulting pressures.

HOUSING

Industrial, Canada. The Housing of Industrial Classes in Canada, A. G. Dalzell. Town Planning (Ottawa), vol. 7, no. 5, Oct. 1928, pp. 123-126.

HYDRAULIC TURBINES

Design. Alignment Charts As An Aid in the Design of Hydraulic Turbines (Fluchtentafeln und Wanderkurvenblatt als Hilfsmittel beim Entwerfen von Wasserturbinen), E. Thomas. Seimens-Zeit. (Berlin), vol. 8, no. 7, July 1928, pp. 403-414, 5 figs.

Draught Tubes. Improvements in Draught Tube Result in Large Savings, J. Jacob. Power, vol. 68, no. 11, Sept. 11, 1928, pp. 440-441, 2 figs.

Impulse, Speed Control of. The Speed Control of Impulse Turbines. Engineer (Lond.), vol. 146, no. 3790, Aug. 31, 1928, p. 238, 5 figs.

Testing. Measurements of Hydraulic Turbine Gate Leakage, E. B. Strowger. Power Plant Eng., vol. 32, no. 19, Oct. 1, 1928, pp. 1051-1052, 2 figs. Abstract of N.E.L.A. Hydraulic Power Committee report.

HYDRO-ELECTRIC POWER DEVELOPMENTS

Progress and Trend. Progress and Trend in Hydraulic Power Development, H. A. Hageman. Mech. Eng., vol. 50, no. 10, Oct. 1928, pp. 765-766. Paper presented at Mid-West Power Conference, Chicago, Ill., Feb. 14-17, 1928.

British Columbia. The Bridge River Power Plant, F. H. Fullerton. Elec. Rev. (Lond.), vol. 103, no. 2653, Sept. 28, 1928, pp. 507-510, 8 figs. Undertaking of British Columbia Electric Railway Co. will be largest hydro-electric power development scheme in Canada, excepting that of Niagara Falls; it is expected to yield 600,000 h.p.; power is distributed over wide area by means of 16 major substations; initial dam will be overflow type; station No. 1 will provide for 60,000 k.w.

Alouette Hydro-Electric Development. Can. Engr. (Toronto), vol. 55, no. 10, Sept. 4, 1928, pp. 271-274, 6 figs. Principal construction features of development at Alouette Lake undertaken by British Columbia Electric Railway Co.; embankment built of dense clay; concrete dam and spillway; tunnel 3,539 ft. long connects Alouette and Slave Lakes.

Canada. Water Power and Industry in Canada. Elec. Times (Lond.), vol. 74, no. 1925, Sept. 13, 1928, pp. 341-342, 2 figs. Author touches upon remarkable way in which water power has transformed and is transforming Canadian industry; official figures given by Minister of Interior state that Canada had hydro-electric installations with total capacity of 4,777,921 h.p. in operation at close of 1927.

Nova Scotia. Mersey River Hydro-Power Development, H. W. Mahon. Can. Engr. (Toronto), vol. 55, no. 13, Sept. 25, 1928, pp. 325-328, 3 figs. Nova Scotia Power Commission will construct three hydro-electric power developments on Mersey River which will have total turbine capacity of 30,900 h.p., all stations being automatically controlled from substation at Big Falls; newsprint mill at Brooklyn, N.S.

Quebec. Paugan Development Takes Its Place Among Largest Hydro Plants in America. Power, vol. 68, no. 15, Oct. 9, 1928, p. 614, 1 fig.

Montreal Island Power Development Is In Full Swing. Contract Rec. (Toronto), vol. 42, no. 39, Sept. 26, 1928, pp. 1011-1012, 2 figs.

Sweden. Swedish Hydro-Electric Power on Increase. Power, vol. 68, no. 14, Oct. 2, 1928, pp. 577-578.

Washington. Many Novel Features Involved in Chelan Project, E. H. Collins. Elec. West, vol. 61, no. 3, Sept. 1. 1928. pp. 129-133, 12 figs.

HYSTERESIS

Elastic. Determination of Elastic Hysteresis of Construction Materials by Means of the Porsional Deflection Apparatus (Bestimmung der Werkstoffdaempfung mittels der Verdrehungs-Ausschwingmaschine), O. Foeppl. V.D.I. Zeit. (Berlin), vol. 72, no. 37, Sept. 15, 1928. pp. 1293-1296, 4 figs.

I

IMPACT TESTING

Notched-Bar The Notched-Bar Impact Test (Ueber die Kerbschlagprobe [Schlagbiegeprobe]). E. Honegger and M. Ros. Schweiz. Verband fuer die Materialpruefungen der Technik, Bericht no. 5, March 1927, 63 pp., including discussion, 69 figs. Theory of impact testing, general review of research work; description of Charpy, Izod, Amsler and Guillery impact-testing apparatus; examples from practice, microstructure of tested specimens.

INDUSTRIAL PLANTS

Design. Modern Practice in Location, Layout and Design, C. P. Wood. Chem. and Met. Eng., vol. 35, no. 9, Sept. 1928, pp. 528-530, 2 figs.

Enlargement. Enlarging the Factory on an Assured Profit-Paying Basis. W. W. Hay. Mfg. Industries, vol. 16, no. 5, Sept. 1928, pp. 333-336, 5 figs.

INTERNAL-COMBUSTION ENGINES

Design. Internal-Combustion Engines (Verbrennungsmotoren), F. Schultz, M. Seiliger, F. Romberg and R. Pawlikowski. V.D.I. Zeit. (Berlin), vol. 72, no. 37, Sept. 15, 1928, pp. 1279-1285, 21 figs. Abstracts of papers read and discussed at sectional session of 1928 annual meeting of German Society of Engineers (V.D.I.) on design of automotive Diesel engines, increasing speed of automotive engines; experiments with Diesel engine injection nozzles and pulverized coal engines.

Heavy Oil. New Methods of Using Fuel of High Boiling Point in Internal-Combustion Engines (Neue Wege zur Verarbetiung hochsiedender Kraftstoffe in Verpuffsmotoren), H. Ellerbusch. Motorwagen (Berlin), vol. 31, no. 24, Aug. 31, 1928. pp. 551-558, 5 figs. Greater economy and safety of heavy oils as fuel: description of vaporizing cylinder, manufactured by Gesellschaft fuer Kohlentechnik, which makes possible use of heavy fuel oils in ordinary internal-combustion engine without unfavorable effect on lubricating oil and other customary disadvantages; results of tests carried out on 4-cylinder motor-truck engine.

Supercharging. Supercharging for Sea-Level Conditions, C. F. Taylor and L. M. Porter. Soc. Automotive Engrs.—Jl., vol. 23, no. 4. Oct. 1928. pp. 359-361.

IRON FOUNDRIES

Practice. Present and Future Problems of Iron Foundry Practice (Gegenwaertige und zukenftige Probleme im Eisengiessereiwesen), T. Geilenkirchen. Giesserei (Duesseldorf). vol. 15. nos. 35 and 36. Aug. 31 and Sept. 7, 1928, pp. 853-860 and 889-899, 16 figs.

L

LACQUERS

CELLULOSE TYPE. The Development of Duco Type Lacquers, M. J. Callahan. Chem. and Industry (Lond.), vol. 47, no. 34, Aug. 24, 1928, pp. 232T-239T, 3 figs.

LATHES

TESTING. Determination of the Efficiency of a Lathe (Wirkungsgradbestimmung an einer Drejbank), M. Coenen. Maschinenbau (Berlin), vol. 17, no. 7, Sept. 6, 1928, pp. 806-809, 6 figs. Author describes construction and method of testing efficiency of Reinecker constant-speed-drive lathe; tests made at testing laboratory of Chemnitz Gewerbeakademie.

LEATHER

TESTING. Some Comparative Data on Vegetable and Chrome-Retanned Sole Leather, R. W. Frey, I. D. Clarke and L. R. Leinbach. Am. Leather Chemists Assn.—Jl., vol. 23, no. 9, Sept. 1928, pp. 430-439 and (discussion) 440-441, 1 fig. on supp. plate.

LEVEES

CONSTRUCTION. Dredging As An Aid in Levee Construction, S. C. Godfrey. Military Engr., vol. 20, no. 113, part 1, Sept.-Oct. 1928, pp. 416-422, 9 figs. Notes refer to five different tasks of general character performed by Dredging District of the Mississippi River Commisson during past two years.

LOCOMOTIVES

ELECTRIC. *See Electric Locomotives.*

FUEL ECONOMY. Steam and Fuel Economy Devices on American Locomotives. Engineer (Lond.), vol. 146, no. 3789, Aug. 24, 1928, pp. 197-198.

INTERNAL-COMBUSTION. An Internal-Combustion Engined Locomotive. Gas and Oil Power (Lond.), vol. 23, no. 276, Sept. 6, 1928, pp. 237, 1 fig. Details of 6-cylinder vertical-type engine built by National Gas Engine Co. and locomotive built by Hudswell Clark and Co. for use on plantations in Australia where coal for fuel is not available; engine is designed to run on gasoline, paraffin or wood alcohol; easy starting attained by 3½-h.p. air-cooled engine; power unit is capable of developing 102 h.p. at 1,000 r.p.m.

PACKING RINGS, MACHINING OF. Device for Machining Locomotive Packing Rings, W. Salmon. Ry. Mech. Engr., vol. 102, no. 9, Sept. 1928, p. 520, 4 figs.

PULVERIZED COAL. The A.E.G. Pulverized Coal Locomotive (A locomotive A.E.G. de combustivel pulverisado), W. Kleinou. Revista Brasilieira de Engenharia (Rio de Janeiro), vol. 8, nos. 6 and 7, June and July 1928, pp. 210-220 and 249-259, 23 figs.

STEAM-TURBINE. Development of Boiler Design for Steam-Turbine Locomotives. Boiler Maker, vol. 28, no. 9, Sept. 1928, pp. 258-260, 6 figs. Boilers to carry 450 lb. pressure will be one-third of standard boiler weight; proposed design for 2,500-h.p. steam-turbine locomotive suitable for either heavy passenger or fast freight service; starting tractive force to be 100,000 lb. and maximum speed 65 mi. per hr.; boiler of water-tube type; pulverized coal burners; feedwater heater, pump and injector.

LOCOMOTIVE TENDERS

BRITISH. Tenders of British Locomotives Making Long Non-Stop Runs. Can. Ry. and Mar. World (Toronto), no. 367, Sept. 1928, p. 539, 1 fig.

LUBRICATING OILS

AUTOMOTIVE, VISCOSITY OF. Viscosity Most Important Property, H. C. Mougey. Oil and Gas Jl., vol. 27, no. 18, Sept. 20, 1928, pp. 149, 150 and 155.

LUMBER

DRYING BY SUPERHEATED STEAM. Drying by Means of Superheated Steam (Trocknung mittels ueberhitzten Dampfes), K. Heinrich. Waerme (Berlin), vol. 51, no. 35, Sept. 1, 1928, pp. 641-643, 1 fig.

M

MACHINERY

EXHIBITION, CANADA. Canadian National Exhibition Emphasizes the Latest in Engineering Practice, D. M. Duncan. Can. Machy. (Toronto), vol. 39, no. 19, Sept. 20, 1928, pp. 59-60 and 69, 5 figs.

MACHINE SHOPS

ENGLISH. The Edgwick Works of Alfred Herbert, Ltd. Engineer (Lond.), vol. 146, no. 3791, Sept. 7, 1928, pp. 248-251, 9 figs. Activities of Alfred Herbert, Ltd., machine-tool makers of Coventry, have been divided between two factories separated by distance of some three miles; two establishments have now been amalgamated and following notes give some idea as to how process of transference has been accomplished without any interference with programme of production, and indicate extent of firm's present equipment.

MACHINE DESIGN

FORKED ENDS. Standardized Forks and Motion Pins. Machy. (Lond.), vol. 32, no. 829, Aug. 30, 1928, pp. 686-687, 9 figs. Suggestion for standardized range of forked ends and motion pins, designed with view to facilitating cheap production; principal proportions of forks are based on diameter of motion pin and are easily remembered by draughtsmen.

MACHINE TOOLS

EXHIBITION, LONDON. Machine Tool Exhibition, Olympia. Engineer (Lond.), vol. 146, nos. 3791 and 3792, Sept. 7 and 14, 1928, pp. 251-256 and 274-280, 40 figs. Exhibition represents distinct advantage in general character of technical exhibitions in Great Britain; general impressions given; brief descriptions of exhibits according to makes. See also special 16-page supplement in issue of Sept. 7, 1928, giving descriptions of exhibits.

MALLEABLE IRON CASTINGS

PRODUCTION COSTS. Burden, Melting and Annealing Costs for High-Grade Malleable Castings (Gattierungs, Schmelz und Gluehkosten fuer hochwertigen Temperguss), R. Stotz. Giesseri (Duesseldorf), vol. 15, no. 37, Sept. 14, 1928, pp. 905-911, 5 figs.

MATERIALS HANDLING

CONSTRUCTION WORK. Materials Handling at Conowingo. Elec. World, vol. 92, no. 13, Sept. 29, 1928, p. 600, 3 figs. Illustrations are presented of unusual materials handling methods in construction of dam and power house at Conowingo, Md.; illustrations include specially constructed travelling derrick and construction bridge and gantry travellers for work on dam.

GRAB BUCKETS. Progress in the Design of Grab Winches. Demag News (Duisburg), vol. 2, no. 4, Oct. 1928, pp. 81-91, 24 figs.

MECHANISMS

MOTION ANALYSIS OF. How Motion of a Mechanism May Be Analyzed Geometrically, W. Samuels. Automotive Industries, vol. 59, nos. 11 and 12, Sept. 15 and 22, 1928, pp. 366-369 and 406-408 and 417, 3 figs.

MERCURY-VAPOR PROCESS

DEVELOPMENTS IN. Tendencies in Development of Vapor Engines Using One or More Working Fluids (Entwicklungsrichtung der Ein- und Mehrstoffdampfmaschinen), W. Gumz. Brennstoff und Waermewirtschaft (Halle), vol. 10, nos. 12 and 13, June 2 and July 1, 1928, pp. 223-227 and 241-247, 10 figs.

METALS

FATIGUE. Fatigue Phenomena, With Special Reference to Single Crystals, H. J. Gough. Roy. Soc. of Arts—Jl. (Lond.), vol. 76, nos. 3955 and 3956, Sept. 7 and 14, 1928, pp. 1025-1044 and 1045-1062, 9 figs. Sept. 7: Fatigue strength of metals related to external straining forces (stress effects); stress systems employed in laboratory and some typical testing machines; effect of frequency of applied cycle of stress upon endurance limit; influence of mean stress of cycle on limiting range of stress. Sept. 14: Influence of sudden changes of section and of surface defects upon fatigue strength of metals.

TESTING. On Thermal Brittleness in Metals, T. Inokuty. Tohoku Imperial Univ.—Sci. Reports (Sendai), vol. 17, no. 4, July 1928, pp. 817-842, 18 figs.

MILLING MACHINES

HIGH-SPEED STEEL. The Influence of Degree of Elongation and Upsetting on Efficiency of High-Speed Steel Milling Machines (Ueber den Einfluss des streckungs und Stauchungsgrades auf die Leisteungsfaehigkeit von Schnellstahlfraesern), R. Hohage and R. Rollett. Stahl und Eisen (Duesseldorf), vol. 48, no. 36, Sept. 6, 1928, pp. 1243-1247, 14 figs.

HYDRAULIC FEED. Hydraulic Drive for Milling Machines (Hydraulischer Fraesmaschinenantrieb), H. Narath. Maschinenbau (Berlin), vol. 17, no. 7, Sept. 6, 1928, pp. 818-821, 8 figs.

MINE TIMBER

PRESERVATION. Timber Treatment Plants, Where and How to Operate Them, L. D. Tracy. Coal Age, vol. 33, no. 9, Sept. 1928, pp. 537-539, 4 figs.

MINES AND MINING

BRITISH COLUMBIA. British Columbia Is Expanding Its Mining Activities, T. A. Rickard. Eng. and Min. Jl., vol. 126, no. 13, Sept. 29, 1928, pp. 486-490, 3 figs. Review of recent progress; 1927 mineral output was largest recorded; value lower, because of market conditions; Sullivan mine, of Consolidated Mining and Smelting Co. of Canada, important factor; smelter at Trail; Premier Gold Mining Co. in Portland canal district; Granby Consolidated; Duthie silver-lead-zinc mine in northeastern district; Britannia mine, biggest copper producer in British Empire; Coast Copper on Quatzino island; comment of lack of old-time prospector.

CAVING. Comparison of Branch Raise and Combined Shrinkage and Caving Methods, C. A. Mitke. Am. Inst. Min. and Met. Engrs.—Tech. Publication, no. 136, Sept. 1928, 11 pp. Full text of paper previously indexed from Min. and Met., Sept. 1928.

LAWS, CANADA. Notes on Mining Laws in Canada, W. B. McPherson. Can. Min. Jl. (Gardenvale, Que.), vol. 49, nos. 37 and 38, Sept. 14 and 21, 1928, pp. 740-744 and 761-763. Sept. 14: Notes to give general view of legislation applicable to mining in various parts of Canada; outline of Dominion regulations regarding coal, petroleum and natural gas, dredging; alkali, carbon-black production from natural gas and quarrying; details of procedure by separate provinces. Sept. 21: Mining laws of British Columbia, Manitoba, Alberta, Saskatchewan, Yukon and Northwest Territories.

NOVA SCOTIA. The Mining Industry of Nova Scotia, J. P. Messervey. Min. and Met., vol. 9, no. 262, Oct. 1928, pp. 433-439, 5 figs.

STRATIFIED DEPOSITS. The Working of Coal and Other Stratified Minerals, H. F. Bulman. Nature (Lond.), vol. 122, no. 3072, Sept. 15, 1928, pp. 394-396.

MINING GEOLOGY

NEWFOUNDLAND. The Geology of the Central Mineral Belt of Newfoundland, A. K. Snelgrove. Can. Min. and Met.—Bul. (Montreal), no. 197, Sept. 1928, pp. 1057-1127, 8 figs. Bibliography, with 77 items.

MOTOR CARS (RAILROAD)

STEAM. Articulated Steam Rail Cars. Modern Transport (Lond.), vol. 20, no. 498, Sept. 29, 1928, pp. 5 and 18, 7 figs. Clayton twin coaches for Egyptian state railways; two carriages with trailer truck at each end and driving trucks in middle; total seating accommodation for 115 passengers; articulation; engine is Clayton standard rail-car type carried horizontally between two axles, and is mounted in bearings on one axle; designed to maintain speed of 60 km. in service with full load.

MOTOR TRUCK REGULATIONS

ONTARIO. Ontario Motor Truck Operation Regulation Put Into Effect. Can. Ry. and Mar. World (Toronto), no. 367, Sept. 1928, pp. 553-555, 1 fig. Public Commercial Vehicle Act goes into force on Sept. 17, 1928; act is given in full; regulations for motor truck operation.

N

NATURAL RESOURCES

CANADA. The Natural Resources of the Hudson Bay Basin, R. B. Stewart. Can. Min. and Met.—Bul. (Montreal), no. 196, Aug. 1928, pp. 1002-1014.

O

OIL ENGINES

DOUBLE-ACTING MARINE. A 4,000-B.H.P. Double-Acting Two-Stroke Oil Engine. Engineer (Lond.), vol. 146, no. 3790, Aug. 31, 1928, pp. 234-236, 3 figs. Engine, constructed for submarine repair and depot ship Medway, differs in some respects from standard design of licensees, mainly with regard to auxiliaries and special provisions made in order to meet Admiralty practice; there are four working cylinders, with bore of 27 ft. 6 in. and stroke of 47.25 in., which are arranged in two pairs, with three-stage air-injection compressor between second and third cylinders.

OIL FIELDS

ALBERTA, CANADA. The Oil Industry of Alberta. Petroleum Times (Lond.), vol. 20, no. 505, Sept. 15, 1928, pp. 457-458 and 460, 2 figs. Drilling began in Medicine Hat (Redcliff) gas fields in 1888; renewed activity in 1908 and 1914; many wild-cat ventures during Calgary boom; remarkable development since 1925, when Alberta produced 143,134 bbl. of Canada's total of 332,001; Imperial Oil Co., Ltd., controls chief workings; proven areas in Turner Valley, Irma-Wainwright and Skiff oil fields; some details of Turner Valley wells.

CANADA. Petroleum and Natural Gas in Ontario, R. B. Harkness. Petroleum Times (Lond.), vol. 20, no. 504, Sept. 8, 1928, p. 412. Abstract of paper read at Min. and Met. Congress.

OIL SHALE MINES AND MINING

OPEN PIT. Can Oil Shale Be Mined by Stripping Methods? F. E. Cash and M. W. von Bernewitz. Min. Congress Jl., vol. 14, no. 9, Sept. 1928, pp. 665-668 and 733, 10 figs.

OPEN-HEARTH FURNACES

DESIGN. Information on Construction of Open-Hearth Furnaces in United States (Données sur la construction des four Martin aux Etats-Unis), F. Leperonne. Revue Universelle des Mines (Liège), vol. 19, no. 3, Aug. 1, 1928, pp. 109-123, 9 figs. Types and capacities of furnaces; description of stationary furnaces, their foundations and lining; doors; brick lining and lining of clay of magnesia; cooling of masonry; recuperators and dust chambers; mean life of different parts of furnaces.

ORE DEPOSITS

THEORY. Our General Metalogenic Theories (Nuestras teorias generales metalogenicas) J. Hereza y Ortunyo. Revista Minera Metalurgica y de Ingenieria (Madrid), vol. 79, nos. 3135, 3136 and 3137, Sept. 8, 16 and 24, 1928, pp. 421-422, 434-436 and 448-450, 3 figs.

ORE TREATMENT

FLOTATION. Flotation Separation Tests, B. W. Holman. Min. Mag. (Lond.), vol. 39, no. 3, Sept. 1928, pp. 150-161, 10 figs.

P

PAINT

TESTING. Wear of Protective Paints of Vehicles (Beanspruchung von Schutzanstrichen an Fahrzeugen). O. Koenig. V.D.I. Zeit. (Berlin), vol. 72, no. 35, Sept. 1, 1928, pp. 1213-1219 and (discussion) 1219-1220, 31 figs. Paper read at session of paint section of 1928 annual meeting of Society of German Engineers (V.D.I.).

PAVEMENT CONCRETE

BRITISH COLUMBIA. Concrete Pavements in B.C. Can. Engr. (Toronto), vol. 55, no. 9, Aug. 28, 1928, p. 263, 4 figs.

PETROLEUM GEOLOGY

ALBERTA, CANADA. Two Interesting Boulders in the Glacial Deposits of Alberta, R. L. Rutherford. Jl. of Geology, vol. 36, no. 6, Aug.-Sept. 1928, pp. 558-563, 1 fig.

PIPE LINES

WELDING. The Strength of Welds in Pipe Lines, J. B. Graham. Oil and Gas Jl., vol. 27, no. 15, Aug. 30, 1928, pp. T-148, T-151, T-153 and T-156, 17 figs.

PLATES

RECTANGULAR. Experiments with Simply Supported Rectangular Plates Carrying Single Concentrated Loads (Versuche mit frei aufliegenden rechteckigen Platten unter Einzelkraftbelastung), M. Bergstraesser. Forschungsarbeiten auf dem Gebiete des Ingenieurwesens (Berlin), vol. 302, 1928, 25 pp., 55 figs. Report from department of applied mechanics of University of Goettingen; fundamental equations of theory of plates; Nadai solution; details of experimental equipment and methods for testing square and rectangular glass plates; results of tests compared with computations based on Nadai theory.

POWER

COSTS. Costs of Effective Horse Power-Hour for Various Types of Prime Movers for Powers Less Than 200-H.P. (Prix de revient du cheval-heure effectif pour divers types de force motrice pour des puissances inférieures à 200 chevaux), Géronimi. Chaleur et Industrie (Paris), vol. 9, no. 100, Aug. 1928, pp. 459-462, 10 figs.

POWER PLANTS, DIESEL

WOODWORKING PLANTS. Why Diesel Engines Were Selected and the Results, W. G. Schaphorst. Indus. Woodworking, vol. 28, no. 12, Sept. 1928, pp. 56 and 58, 1 fig. Why New York City woodworking concern abandoned use of central station electric current and what it saved by installing Diesel engines to drive its own electric generators.

POWER PLANTS, ELECTRIC

SUBSTATIONS. Lightpipe 200-Kv. Substation, R. B. Pollock. Elec. World, vol. 92, no. 12, Sept. 22, 1928, pp. 559-563, 5 figs. Southern California Edison Co. establishes important steam and hydro power distribution point.

SUBSTATIONS, DESIGN. Layout of a Hypothetical Substation. Nat. Elec. Light Assn.—Bul., vol. 15, no. 9, Sept. 1928, pp. 544-554, 10 figs. Paper presents several solutions of problem in design of hypothetical substations, as submitted by certain members of Electrical Apparatus Committee, Engineering National section, N.E.L.A.; statement of problem; high-tension switching; 4,000-volt layout; oil circuit breakers; feed to large customers; transmission; substation transformer capacity.

POWER PLANTS, STEAM

ASH HANDLING. Ash Handing in Boiler Houses (Die neuzeitlichen Mittel zur Abfoerderung der Asche in Kesselhaeusern). Wintermeyer. Foerdertechnik u. Frachtverkehr (Wittenberg), vol. 21, no. 13, June 22, 1928, pp. 243-247, 8 figs. See brief translated abstract in Eng. and Boiler House Rev. (Lond.), vol. 42, no. 3, Sept. 1928, p. 145.

COMBINED HEATING AND POWER. Combined Power and Heat (Kupplung von Kraft und Waerme), A. G. Ernst. Archiv fuer Waermewirtschaft (Berlin), vol. 9, no. 9, Sept. 1928, pp. 299-300, 1 fig.

EUROPE. Summary of European Developments, A. G. Christie. Nat. Elec. Light Assn.—Serial Report, No. 278-77, uly 1928, pp. 1-2. Developments in high-pressure boilers; pulverized coal; air heaters; furnaces; prime movers; peak loads.

FLUE-GAS RECORDERS. Power House Measurements. World Power, vol. 10, no. 57, Sept. 1928, pp. 271-274, 6 figs.

HIGH-PRESSURE. The Economy of High-Pressure Power Plants (Die Wirtschaftlichkeit von Hochdruckdampfanlagen). W. Schultes. Waerme (Berlin), vol. 51, no. 30, July 28, 1928, pp. 546-555, 14 figs. Notes on heat and economy balance; calculation of overhead; permissible initial costs for high-pressure plants.

OPERATION SCHEDULES. Scheduling Units in the Power Plant, D. C. Zimmermann. Power, vol. 68, no. 23, Sept. 25, 1928, pp. 515-518, 12 figs.

TEXTILE MILLS. Power Practically a By-Product in New Steam Plant Development in Cone Mills, D. G. Woolf. Textile World, vol. 74, no. 10, Sept. 8, 1928, pp. 15-16, 2 figs. Unit based on quantity of steam required for process and heating purposes; two new Heine boilers are replacing 35 boilers; each boiler is 863 h.p.; pulverized coal is used as fuel; General Electric Co. double-extraction type turbine, 3,500-kw.; transportation of steam.

POWER PLANTS, STEAM-ELECTRIC

GERMANY. Three Continental Stations, W. H. Fulweiler. Nat. Elec. Light. Assn. Serial Report, No. 278-77, July 1928, pp. 2-6, 3 figs. Details of Langerbrugge and Rummelsburg central stations; Benson boiler installation at Cable Works of Siemens-Schuckert Co.; operation of this boiler.

LONG BEACH, CALIF. Provision Made for Three Fuels at Long Beach, G. A. Fleming. Elec. World, vol. 92, no. 14, Oct. 6, 1928, pp. 672-679, 13 figs. New building, plant No. 3, has been started adjacent to two older stations for ultimate of eight large units; turbine is General Electric tandem-compound unit with 18 high-pressure and 3 low-pressure double-flow stages; steam is bled at four points; 3 Babcock and Wilcox boilers are provided for 90,000-kw. unit; oil and natural gas are used as fuels, burned in combination Peabody burners. See also editorial comment on p. 671.

POWER TRANSMISSION

MECHANISMS. Development of Oscillating Power-Transmitting Mechanisms (Die Entwicklung schwingender Leistung ueber tragender Mechanismen), H. Schieferstein. Maschinenbau (Berlin), vol. 17, no. 7, Sept. 6, 1928, pp. 809-814, 17 figs.

PROTECTIVE COATINGS

LEAD. Homogeneous Lead Coating. Can. Chem. and Met. (Toronto), vol. 12, no. 9, Sept. 1928, pp. 256-258. Abstract translated from V.D.I. Zeit.

PUMPS

SCREW VISCOSITY. Screw Viscosity Pumps, H. S. Rowell and D. Finlayson. Engineering (Lond.), vol. 126, nos. 3268 and 3272, Aug. 31 and Sept. 28, 1928, pp. 249-250 and 385-387, 13 figs. Aug. 31: Pump, which was first demonstrated by J. Dewrance in 1922, consists of rotor on which are cut right- and left-hand screw threads; rotor turns within closely-fitting sleeve and is forced by viscous drag to delivery port. Sept. 28: Discussion of experimental results.

SELECTION. Selection of Waterworks Pumps to Fit Service Conditions, F. G. Cunningham. Contract Rec. (Toronto), vol. 42, no. 38, Sept. 19, 1928, pp. 997-999 and 1004. Paper presented before Am. Water Works Assn. and published in Aug. 1928 issue of Journal, previously indexed. (To be continued.)

PUMPS, CENTRIFUGAL

VELOCITY HEAD. Velocity Head on Centrifugal Pumps, G. H. Gibson. Can. Engr. (Toronto), vol. 55, no. 11, Sept. 11, 1928, pp. 297-298, 2 figs.

PUNCH PRESSES

TOOLS FOR. Double-Production Press Tools. Machy. (Lond.), vol. 32, no. 828, Aug. 23, 1928, pp. 661-663, 8 figs.

R

RAILROADS

SWITCHES, SPRING. South Shore Line Uses Spring Switches on Heavy Traffic Line, B. L. Smith. Ry. Age, vol. 85, no. 10, Sept. 8, 1928, pp. 455-456, 3 figs. See also Ry. Signalling, vol. 21, no. 8, Sept. 1928, pp. 331-332, 3 figs.

TRACKS, VIBRATION. Dynamics and Vibrations in Railroad Track (Dynamik und Schwingungen des Eisenbahnoberbaues), Saller. V.D.I. Zeit. (Berlin), vol. 72, no. 38, Sept. 22, 1928, pp. 1323-1329, 19 figs. Paper read at Darmstadt conference on vibrations of Society of German Engineers (V.D.I.) on effect of vibrations on railroad track and its bearing on selection of materials and type of construction for ties and rail joints; methods of measuring vibration stresses; description of Okhuizen and Geiger instruments; comparison of simultaneous vibration records, obtained by Geiger and Okhuizen instruments, for trains moving with velocities of from 22 to 90 km. per hr.

SWITCHES, REMOTE CONTROL. The Economic Value of Remote Power Switch Machines. Ry. Age, vol. 85, no. 11, Sept. 15, 1928, pp. 501-503. Abstract of report presented before Am. Ry. Assn.

TRACKS, MAINTENANCE AND REPAIR. Roadmasters View Problems as Cogs in Transportation Machine. Ry. Age, vol. 85, no. 13, Sept. 29, 1928, pp. 619-625. See also Ry. Eng. and Maintenance, vol. 24, no. 10, Oct. 1928, pp. 425-446.

TRACKS, RELOCATION. Grand'Mere-Shawinigan Track Diversion. Can. Engr. (Toronto), vol. 55, no. 9, Aug. 28, 1928, pp. 253-255, 5 figs. Principal features of construction of 8 miles of track for diversion near Shawinigan Falls, Que.; 40 concrete culverts provide outlet for numerous springs and drain roadbed; total cost over $2,000,000.

WELDING PRACTICE. Autogéneous Welding, S. Lewis. Ry. Jl., vol. 34, no. 9, Sept. 1928, pp. 27-30. Address before Int. Railroad Master Blacksmiths Assn.

RAILS

JOINTS, WELDING. Recent Developments in Arc Welding of Rail Joints, H. C. Heaton. Elec. Ry. Jl., vol. 72, no. 13, Sept. 29, 1928, pp. 577-578. Abstract of address before Am. Elec. Ry. Eng. Assn.

RECLAMATION OF LAND

HOLLAND. Engineering Features of the Zuyderzee Works, J. W. Thierry. Engineering (Lond.), vol. 126, no. 3269, Sept. 7, 1928, pp. 305-308, 9 figs. General scheme consists in enclosing Zuyderzee by large enmbankment along Waddenzee; of enclosed area (915,000 acres) four parts or polders of total area of 550,000 acres will be reclaimed separately; in centre will be left fresh-water lake of 270,000 acres, in which solid matter from Yssel will settle without any danger of silting it up; problems arising in connection with enclosing area; embankment and dam construction; pumping stations. Paper read before Brit. Assn.

RECTIFIERS

MERCURY-ARC. High-Power Mercury-Vapor Rectifiers (Redresseurs à vapeur de mercure de grande puissance). Industrie Electrique (Paris), vol. 37, no. 869, Sept. 10, 1928, pp. 394-403, 11 figs.

MERCURY-ARC, SUBSTATIONS, ONTARIO. Hamilton's New Automatic Mercury-Arc Rectifier Substation, C. E. Hutton. Elec. News (Toronto), vol. 37, no. 18, Sept. 15, 1928, pp. 29-32, 6 figs.

REFRIGERATION

EVAPORATING SYSTEMS. Modern Refrigeration Evaporating Systems, G. Hilger. Refrig. Eng., vol. 16, no. 4, Oct. 1928, pp. 99-106 and (discussion) 106-109, 14 figs.

The Evaporating System, F. P. MacNeill. Ice and Cold Storage (Lond.), vol. 31, no. 366, Sept. 1928, pp. 225-228, 1 fig.

RESERVOIRS

GATE TOWERS, ICE THRUST. Gate Towers, Tilted by Ice, Returns to Position, G. N. Carter. Eng. News-Rec., vol. 101, no. 14, Oct. 4, 1928, p. 502, 1 fig.

ROAD MATERIALS

TAR SANDS. Roads from Athabaska Tar Sands, H. O'Hagan. Am. City, vol. 39, no. 3, Sept. 1928, pp. 121-122, 3 figs. Bituminous sand deposits in western Canadian province have long been thought to possess interesting possibilities for road building; practical test, under supervision of Canadian National Parks, has recently been made in Jasper National Park with satisfactory results claimed; method of quarrying.

ASPHALT SURFACING, ENGLAND. Road Surfacing with Cold Asphalt. Surveyor (Lond.), vol. 74, no. 1912, Sept. 14, 1928, pp. 241-242, 3 figs.

Construction, Canada. Reconstruction of the Old Caribou Road in Canada, P. Philip. Eng. and Contracting, vol. 67, no. 9, Sept. 1928, pp. 463-467, 7 figs.

Curve Layouts. Transition Curves and Superelevation, F. G. Royal-Dawson. Roads and Road Constr. (Lond.), vol. 6, no. 68, Aug. 1, 1928, pp. 252-254, 3 figs.

Improvement, Great Britain. Road Improvement and Finance, W. J. Hadfield. Surveyor (Lond.), vol. 74, no. 1914, Sept. 28, 1928, pp. 277-279. Increased traffic causes increased cost of roads; expenditure per mile; new and widened roads and bridges; new methods of road construction; gradients; concrete roads; effect of new methods upon finance. Extracts from paper presented before World Motor Transport Congress.

Reconstruction, Toronto. Highway Improvements in Toronto District. Contract Rec. (Toronto), vol. 42, no. 38, Sept. 19, 1928, pp. 987-988, 6 figs. Negotiations recently concluded insure widening of Toronto-Hamilton Highway, Kingston Road and St. Clair Avenue; several new bridges called for.

Resurfacing. Two Methods of Resurfacing Old Roads, A. H. Hinkle. Can. Engr. (Toronto), vol. 55, no. 12, Sept. 18, 1928, pp. 311-314. Paper presented before Annual Purdue Road School, previously indexed.

Surface Treatment. The Oil Mix Treatment of Gravel Roads, C. H. Bowman. Good Roads, vol. 71, no. 9, Sept. 1928, pp. 496-499. Abstract of paper presented at 1928 Highway Conference.

Asphalt, Foundations. Recent Researches in Portland Cement Concrete and Their Application to the Design of Bases for Asphalt Pavements, R. M. Green. Asphalt Assn.—Circular, no. 52, 10 pp., 5 figs.

Concrete, Construction. Obtaining Efficiency in Concrete Road Construction. Roads and Streets, vol. 68, no. 9, Sept. 1928, pp. 457-459.

Concrete, Gravel Requirements. Requirements of Gravel for Concrete Roads, C. R. Waters. Cement, Mill and Quarry, vol. 32, no. 13, Sept. 1928, pp. 75-76. Address delivered at Empire State Sand and Gravel Producers Assn.

ROCKET PROPULSION

Engines for Automotive Vehicles. Economy of Rocket Engines for Vehicles (Zur Frage der Wirtschaftlichkeit des Raketenantriebes fuer irdische Fahrzeuge), H. S. Senftleben. Zeit. fuer Flugtechnik und Motorluftschiffahrt (Muenchen), vol. 19, no. 16, Aug. 28, 1928, p. 367, 1 fig. Short theoretical note on variation of efficiency of rocket drive with speed of gas expulsion from rocket cylinders.

Theory. Rocket Propulsion by Means of the Explosion Wave (Der Raketenantrieb durch die Explosionswelle), K. Baetz. Maschinen-Konstrukteur (Leipzig), vol. 61, no. 16-17, Aug. 15 and Sept. 1, 1928, pp. 370-373, 1 fig.

ROLLING MILLS

Equipment. Increasing the Output of a Small-Section Rolling Mill. Demag News (Duisburg), vol. 2, no. 4, Oct. 1928, pp. 92-94, 5 figs.

Metal Flow in Rolling. Experimental Investigations on Metal Flow in Rolling, N. Metz. Rolling Mill Jl. (formerly Iron and Steel World), vol. 2, nos. 8 and 9, Aug. and Sept. 1928, pp. 307-310 and 363-366, 19 figs. Aug.: Tensile stresses on side planes caused by lowering of elongation; determination of amount of spread. Sept.: Flow of metal in gripping angle and oval pass; spread diagrams of flats can be used to advantage in calculation of spread in oval.

Strip Mills, Germany. Design and Operation of Strip Mills, R. W. Deimel. Blast Furnace and Steel Plant, vol. 16, no. 9, Sept. 1928, pp. 1183-1186, 7 figs. Translated from Stahl und Eisen. (To be continued.)

Four-High. Calculation of Efficiency of Rolling Processes in Relation to Diameter of Roll and Its Application to Four-High Mills (Die Leistungsberechnung des Walzvorganges in Abhaengigkeit vom Walzendurchmesser, ihre Anwendung auf das Vierwalzengeruest), L. Weiss. Zeit. fuer Metallkunde (Berlin), vol. 20, no. 8, Aug. 1928, pp. 280-282, 2 figs.

S

SAND AND GRAVEL PITS

Excavators. Slackline Cableway Excavators and Power Drag Scrapers in the Sand and Gravel Industry, M. R. Elden and H. A. Roe. Nat. Sand and Gravel Bul., vol. 9, no. 9, Sept. 15, 1928, pp. 9-16, 8 figs.

SCREW THREADS

Measurements. Rational Measurement of Elements of a Screw Thread with Wires (Détermination rationelle des éléments d'un filetage à l'aide de "piges"), L. Fraichet. Génie Civil (Paris), vol. 93, no. 10, Sept. 8, 1928, pp. 238-240, 3 figs.

Gauges, Taper Gauges, Measurement of. The Measurement of Taper-Screw Thread Gauges, J. E. Baty. Machy. (Lond.), vol. 32, no. 827, Aug. 16, 1928, pp. 617-621, 13 figs.

SEWAGE ANALYSIS

Residual Chlorine Determination. Determination of Residual Chlorine, L. H. Enslow. Can. Engr. (Toronto), vol. 55, no. 11, Sept. 11, 1928, pp. 293-294. Comments on methods of estimating residual chlorine; practical methods are (1) starch-iodide method (colorimetric); (2) starch-iodide method (volumetric); (3) benzidine-hydrochloride method (colorimetric); (4) orthotolidin hydrochloride method (colorimetric); compensating for turbidity, colour, manganese, etc,; period of contact between chlorine and treated water.

SEWAGE DISPOSAL

Activated Sludge. A New Coagulant Discovered for Activated Sludge Prior to Filtration. Contract Rec. (Toronto), vol. 42, no. 37, Sept. 12, 1928, pp. 971-974, 4 figs. Chlorinated copperas is better than anything tried before, according to studies carried out by Sanitary District of Chicago; details of research work; discovery was made by J. R. Palmer that ferric salts, particularly ferric chloride, greatly facilitated filtrations; composition and cost of iron salts.

SEWAGE DISPOSAL PLANTS

Defects. Common Defects at Sewage Disposal Works, H. C. H. Shenton. Surveyor (Lond.), vol. 74, no. 1912, Sept. 14, 1928, pp. 223-224.

SEWAGE DISPOSAL, RURAL

Saskatchewan. Sewage Disposal for Rural Homes in Cold Climates, R. M. Starbuck, Jr. Domestic Eng. (Chicago), vol. 124, no. 9, Sept. 1, 1928, pp. 26-27, 71-72 and 75-76, 4 figs.

SEWAGE TANKS

Comparison. The Advantages of Different Types of Sewage Tanks, W. Clifford. Water and Water Eng. (Lond.), vol. 30, no. 357, Sept. 20, 1927, pp. 428-430 and (discussion) 430-432.

SEWAGE TREATMENT

Germany. Sewage Treatment Abroad, W. Rudolfs. Pub. Works, vol. 59, no. 9, Sept. 1928, pp. 266-369.

Research. Sewage Purification and Disposal Studies Outlined at Lawrence Experimental Station, H. W. Clark. Hydraulic Eng., vol. 4, no. 9, Sept. 1928, pp. 556-557, 566-567 and 580-582.

SPRINGS

Machine for Testing. The Elasticometer. Machy. (Lond.), vol. 32, no. 831, Sept. 13, 1928, p. 786, 2 figs. Details of spring-testing machine put on market by Coats Machine and Tool Co.; object of machine is to provide means whereby large range of springs can be rapidly tested by unskilled labour; machine is suitable for compression tests on springs of diameters from 1/8 to 2½ in. and lengths from ¼ to 6 in., and on springs from 6 to 8½ in. long of diameters from 1/8 to 7/8 in.

STEAM CONDENSERS

Arc Welding of. Building Surface Condensers by Arc Welding, B. H. Nichols. Power, vol. 68, no. 11, Sept. 11, 1928, pp. 436-437, 2 figs. Article submitted in Lincoln Arc Welding Prize Contest.

STEAM ENGINES

Thermal Analysis. Thermal Analysis of Internal Combustion or Steam, Piston Engines (Analyse thermique des moteurs à piston, à explosion ou à vapeur), M. Bouffart. Revue Universelle des Mines (Liége), vol. 19, no. 5, Sept. 1, 1928, pp. 197-229, 4 figs. Discusses 2- and 4-stroke engines and closed thermodynamic cycle; for internal combustion and steam; action of cylinder walls; comparison and steam engines.

STEAM GENERATORS

Electric. Electric Steam Generators Popular in Switzerland, C. J. Webb. Power Plant Eng., vol. 32, no. 19, Oct. 1, 1928, p. 1032, 1 fig.

STEAM HEATING

Central, Coke Firing in. Heat Utilization in Coke-Fired Boilers of Central Heating Plants (Die Waermeausnuetzung in koksgeheizten Sammelheizungskesseln). Gesundheits-Ingenieur (Munich), vol. 51, no. 33, Aug. 18, 1928, pp. 529-537, 18 figs. Report from department of heat engineering of Darmstadt Institute of Technology describing elaborate experimental study; also test of central heating plant of Geissen University clinics showing that efficiency of coke-fired plants with variable load may be in excess of 70 per cent.

STEAM METERS

Orifice. Measuring Steam Flow by Means of Diaphragm Orifices (Stauring-Mengenmessung von stroemendem Dampf), W. Pflaum. V.D.I. Zeit. (Berlin), vol. 72, no. 37, Sept. 15, 1928, pp. 1297-1301, 18 figs. Report from mechanical laboratory of Danzig Institute of Technology treating of correct construction of diaphragm orifice meters; condensing steam and other factors interfering with precision of effect of various factors; results compared with those of other investigators. See also Forschungsarbeiten auf dem Gebiete des Ingenieurwesens, no. 298, previously indexed.

STEAM PIPE LINES

Flexibility. The Flexibility of Plain Pipes, J. R. Finniecome. Engineer (Lond.), vol. 146, nos. 3790 and 3791, Aug. 31 and Sept. 7, 1928, pp. 218-219 and 246-248, 11 figs. Aug. 31: Analysis of tests on pipe bends on basis of Karman theory. Sept. 7: Deflection-stress correction factor; comparison of actual longitudinal stress obtained from tests with Karman longitudinal stress.

STEAM TURBINES

Design. The General Trend of Modern Development in Steam Turbine Practice, H. L. Guy. Metropolitan-Vickers Gaz. (Manchester), vol. 11, no. 185, Aug. 1928, pp. 46-48.

Operation. Shutting Down Steam Turbines with Sinking Boiler Pressure (Auslauf von Dampfturbinen mit sinkendem Kesseldruck), Schlicke. Waerme (Berlin), vol. 51, no. 37, Sept. 15, 1928, pp. 679-680, 1 fig.

STEEL

Cold Rolling. Influence of Cold Rolling and Annealing at Different Temperatures on the Strength and Structure of High-Grade Sheets (Der Einfluss des Kaltwalzens und Gluehens bei verschiedenen Temperaturen auf die Festigkeitseigenschaften und das Gefuege von Qualitaetsfeinblechen), E. Marke. Archiv fuer das Eisenhuettenwesen (Duesseldorf), vol. 2, no. 3, Sept. 1928, pp. 177-183 and (discussion) 183-184, 16 figs. Results of tests to determine mechanical properties and structure of cold-rolled sheet, and cold-rolled sheet subsequently annealed; practical application of results in sheet mills.

Heat Treatment. Effect of Quenching Temperature Change on the Properties of Quenched Steel, O. W. McMullan. Am. Soc. Steel Treating—Trans., vol. 14, no. 4, Oct. 1928, pp. 477-501, 24 figs.

Fundamentals in the Art of Heat Treatment, D. K. Bullens. Fuels and Furnaces, vol. 6, no. 10, Oct. 1928, pp. 1359-1369, 2 figs.

Notes on the Relation of Design to Heat Treatment, F. R. Palmer. Am. Soc. Steel Treating—Trans., vol. 14, no. 4, Oct. 1928, pp. 469-476, 11 figs.

Facts and Principles Concerning Steel and Heat Treatment, H. B. Knowlton. Am. Soc. Steel Treating—Trans., vol. 14, no. 4, Oct. 1928, pp. 580-608.

Manufacture, Purification. Purifying Steel with Sodium Compounds, J. R. Miller. Blast Furnace and Steel Plant, vol. 16, no. 9, Sept. 1928, pp. 1204-1205, 7 figs.

STOKERS

Travelling-Grate. Tests on Furnaces, with Special Reference to Furnace Grates (Versuche an Fuerungen, insvesondere an Rost Feuerungen), Koeniger. Archiv fuer Waermewirtschaft (Berlin), vol. 9, no. 9, Sept. 1928, pp. 274-277, 24 figs.

STORAGE BATTERIES

Utilization. Electric Storage Battery Aids in Hauling Heavy Cable, O. W. Cooley. Wire, vol. 3, no. 9, Sept. 1928, pp. 303 and 313-314, 2 figs.

T

TEMPERATURE CONTROL

Automatic. The Development of Automatic Temperature Control for Industrial Heating Apparatus, A. N. Otis. Fuels and Furnaces, vol. 6, no. 10, Oct. 1928, pp. 1387-1394 and 1398, 7 figs.

TOPOGRAPHIC MAPPING

Chicago. Mapping the City of Chicago and Vicinity, O. H. Nelson. West Soc. of Engrs.—Tech. Papers, vol. 33, no. 1, Jan. 1928, pp. 7-22, 13 figs. Account of field work for topographic map of Chicago and vicinity recently completed by co-operation of U.S. Geological Survey and Illinois State Geological Survey.

TUBES

Manufacture. Manufacture of Tubes (La fabrication des tubes), G. deLattre. Technique Moderne (Paris), vol. 20, no. 17, Sept. 1, 1928, pp. 581-585, 3 figs. Treats of different processes of machine work; compares them and shows relative advantages of processes for size and quality of products to be obtained; Mannesmann, Ehrhardt and Stiefel processes especially described.

TUNNELS

SURVEYING. Graphical Cross-Sections Recorded by Tunnel Pantograph. Eng. News-Rec., vol. 101, no. 13, Sept. 27, 1928, p. 481, 1 fig.

TURBO-BLOWERS

CONSTANT-VOLUME REGULATION. Constant-Volume Regulation for Turbo-Blowers, A. Baumann. Brown Boveri Rev. (Baden, Switz.), vol. 15, no. 9, Sept. 1928, 269-271, 6 figs. Description of Brown-Boveri system of regulation; shows diagrammatic arrangement of blower driven by d.c. motor and provided with volume regulation.

V

VIADUCTS

STEEL, RECONSTRUCTION. Revamping Steel Viaduct to Carry Street Over Railroad, T. Doll and J. Singleton. Eng. News-Rec., vol. 101, no. 13, Sept. 27, 1928, pp. 473-475, 3 figs. Remodelling structural steel railroad overcrossing by taking it down, refabricating two-thirds of old steel and then re-erecting it with this steel and 70 tons of new steel was required in modernizing Branner St. viaduct in Topeka, Kan.; viaduct consists of three 100-ft. trusses and 52-ft. girder span.

W

WATER ANALYSIS

CHLORINE DETERMINATION. A New Indicator for Chlorine, K. Alfthan. Am. Water Works Assn.—Jl., vol. 20, no. 3, Sept. 1928, pp. 407-411.

WATER CHLORINATION

NEW YORK STATE. The Chlorination of Auxiliary Water Supplies in New York State. Am. City, vol. 39, no. 3, Sept. 1928, p. 141. New York State Department of Health has completed series of tests on special fire-pump chlorinator which is capable of effectively chlorinating auxiliary fire supply under intermittent operation of fire pumps and rendering such auxiliary supply potable, providing it is not too grossly polluted; requirements that must be met; cross-connections illegal after Jan. 1, 1929.

WATER FILTRATION PLANTS

ZEOLITE. Zeolite Filter Plant of Ohio Valley Water Company, Bellevue, Pa., A. H. Kneen. Indus. and Eng. Chem., vol. 20, no. 9, Sept. 1928, pp. 951-953. Operation statistics of plant of Ohio Valley Water Co. at Bellevue, Pa., from Nov. 1925 to Dec. 1927.

WATER PIPE LINES

BLOWOFFS. Automatic Pipe-Break Valves on Mokelumne Aqueduct. Eng. News-Rec., vol. 101, no. 13, Sept. 27, 1928, pp. 478-479, 2 figs. To project 94-mi. long, 54- to 65-in. steel-pipe aqueduct of East Bay Municipal Utility District, Oakland, Calif.; four automatic shut-off valves and blowoffs have been installed; in case of break, increased flow will automatically operate motor-driven closing mechanism, shutting butterfly valve and preventing further flow into broken section; blowoff above shutoff is opened simultaneously to maintain rate of flow normal and thus keep head down to hydraulic grade line.

LEAKAGE. Careful Survey of Water Usage Reveals Information Regarding Leaks, V. E. Perry. Hydraulic Engr., vol. 4, no. 9, Sept. 1928 (West. Waterworks), pp. 564 and 583.

WELDED, STRESSES. Physical Study of Stresses That Result from the Welding of Large Diameter Pipe Lines, L. T. Jones and W. S. Weeks. Hydraulic Eng., vol. 4, no. 9, Sept. 1928 (West. Waterworks), pp. 561-563 and 579, 9 figs.

WATER SOFTENING

ZEOLITE PROCESS. Zeolite Softening of Lime-Treated Water at Columbus, Ohio, Water Softening and Purification Works, C. P. Hoover, V. L. Hansley and C. Q. Sheely. Indus. and Eng. Chem., vol. 20, no. 10, Oct. 1928, pp. 1102-1105, 4 figs.

WATER SUPPLY

ARTESIAN. Municipal Sanitation Problem. Can. Engr. (Toronto), vol. 55, no. 11, Sept. 11, 1928, p. 302, 3 figs.
MONTREAL. Montreal and Its Water Supply System, T. W. Lesage. Water Works Eng., vol. 81, no. 19, Sept. 12, 1928, pp. 1319-1320 and 1380.
SPRINGFIELD, MASS. Springfield's New Water Supply Development. Pub. Works, vol. 59, no. 9, Sept. 1928, pp. 333-339, 19 figs.

WATER TOWERS

DESIGN, GERMANY. The Water Tower of the Heye Tannery at Worms (Der Wasserturm der Heyl 'schen Lederwerke Liebenau in Worms), A. Kleinlogel. Beton u. Eisen (Berlin), vol. 27, no. 16, Aug. 20, 1928, pp. 297-301, 14 figs. Design and construction of cylindrical reinforced concrete tanks, 1,250 cu. m. total capacity, with convex bottoms, built on top of reinforced concrete factory building 17 m. by 17 m. by 26.4 m. high; columns and special footings; system of reinforcement, etc.

WATER TREATMENT

ST. LOUIS. Methods of Water Treatment at Chain of Rocks and Harvard Bend Plants, St. Louis, L. A. Day. Mun. News and Water Works, vol. 75, no. 3, Sept. 1928, pp. 158-160. Paper presented before Texas Water Works Short School.

WEIGHTS AND MEASURES

INCH, PRECISION VALUE OF. A Precision Value for the Inch, L. D. Burlingame. Ry. and Locomotive Eng., vol. 41, no. 6, June 1928, pp. 169-171. Reason for Bureau of Standards' standards; attempts to enforce metric system; how metric system has introduced controversy; standard of Great Britain and United States identical; inch, controlling unit, should be made precise; comparison with accepted meter value; summary of proposal for precise inch. Paper prepared for Am. Inst. Weights and Measures.
INTERNATIONAL METER. Determination of Length of International Meter in Terms of the Red Cadmium Line, N. Watanabe and M. Imaizumi. Imperial Acad.—Proc. (Tokyo), vol. 4, no. 7, July 1928, pp. 350-353. (In English.)

WELDING

PRACTICE, SWITZERLAND. Oxy-Acetylene and Electric Welding at the Zulzer Works. Welding Jl. (Lond.), vol. 25, no. 299, Aug. 1928, pp. 230-236, 14 figs.
See also Pipe Lines; Steam Condensers.

WIRE, STEEL

MANUFACTURE. The Operations Involved in the Manufacture of Steel Wire, G. A. Alder. Iron and Steel World, vol. 2, no. 6, June 1928, pp. 293-298. Abstract of paper read before Cleveland Instn. Engrs., previously indexed from Iron and Coal Trades Rev., Dec. 9 and 16, 1927.

WOOD PRESERVATION

TERMITE CONTROL. Prevention of Termite Damage. Eng. News-Rec., vol. 101, no. 12, Sept. 20, 1928, p. 433.
