Zwicker, B. H. C. Asst. Equipt. Engr., Maritime Telephone & Telegraph Co., Halifax, N.S. For mail: 4 Tower Terrace. (S.1928. M.1941)

GEOGRAPHICAL LIST OF MEMBERS

Corrected to September 15th, 1946

ZONE A

(The four Western Provinces)

Victoria Branch District

(Vancouver Island and the Gulf Islands Tributary to Vancouver Island.)

Beaver Cove (Br.NonRes.), STUDENT, W. E. Lloyd.
Duncan (Br.Res.), MEMBER, R. H. Vaughan.
Esquimalt (Br.Res.), MEMBERS, N. T Carson, A. G. M. Davy, R. H. Stevens.
Campbell River (Br.NonRes.), MEMBER, T. M. McIntyre; JUNIOR, R. A. Cunningham; STUDENT, F. F. Slaney.
Ladysmith (Br NonRes.), MEMBER, H. E. Stevens
Nanaimo (Br.NonRes.), MEMBER, H. F. Bourne, D. C. Stephenson; JUNIOR, A. P. Alexander; STUDENTS, H. M. Tapay, F. E. Turley.
Parksville (Br.Res.), MEMBER, F. Lee.
Port Alberni (Br NonRes.), JUNIOR, A. J. Narod.
Port Alice (Br.NonRes.), MEMBER, C. C. Ryan.
Port McNeill (Br.NonRes.), JUNIOR, I. A. Abramson.
Royal Oak (Br.Res.), MEMBERS, A. L. Ford, H. T. Hughes.
Royal Roads (Br Res.), JUNIOR, H. U. Ross.
Royston (Br.Res.), STUDENT, J. S. Edwards.
Salt Spring Island (Br.NonRes.), MEMBER, F. O. Mills.
Savary Island (Br.NonRes.), MEMBER, Chas. L. Bates.
Sidney (Br.NonRes.), MEMBER, C. W. Gamble; STUDENT, J. R. Moran.
Tod Inlet (Br.NonRes.), MEMBER, R. E. Haskins.
Victoria (Br.Res.),

HONORARY MEMBER

C. A. Magrath.

MEMBERS

H. C. Anderson, J N. Anderson, Jas. H. Blake, R. Bowering, A. L. Carruthers, A. S. Chapman, L. C. Charlesworth, Ernest Davis, R. F. Davy, R. C. Farrow, A. W. Ferguson, Wm. S. Fetherstonhaugh, S. H Frame, H. N. Gahan, A. G. Graham, F. W. Gray, F. C. Green, Garth Griffiths, T. Hogg, G. M. Irwin, E. W. Izard, E. A. Jamieson, E I. W. Jardine, J. C. MacDonald, Wm. J. MacKenzie, C. D. MacKintosh, Kenneth Moodie, A. S. G. Musgrave, H. J. Napier-Hemy, Kenneth Reid, E. D. Robertson, H. L. Sherwood, J. R. Simpson, Ernest Smith, Owen W. Smith, W. L. Stamford, E. Stansfield, F. M Steel, J. H. Trimingham, G. M. Tripp, G. A. Vandervoort, S. Warnock, S. R. Weston, T. B. Williams, Wm. F. Wilson, N. A. Yarrow.

JUNIORS

James E. Beamish, P. W. Bishop, D H. R. Blake, B. F. Guttormson, W. H. Longworthy, W. A. Ker, A. G. Macdonald.

STUDENTS

A. Wm. Bartlet, S. B. Howlett, J. A. W. Izard, Leonard C. Johnson, F. Yvon Pare, G. W. Stamford, S. O. Wigen.

Vancouver Branch District

(The balance of British Columbia, except that allocated to Kootenay Branch)

Atlin (Br.NonRes.), STUDENT, J. H. Eastman.
Burnaby (Br.Res.), MEMBER, G. N. Stowe; JUNIOR, D. A. Whelen.
Chilliwack (Br.NonRes.), MEMBER, H. M. B. Inglis; JUNIOR, R. E Wilkins; STUDENT, L. J. Bayly.
Cultus Lake (Br.NonRes.), JUNIOR, J. A. Merchant.
Eburne (Br.NonRes.), STUDENT, N. E. Greenaway.
Fort St. John (Br.NonRes.), Member, E. O Greening; AFFILIATE, A. Holland.
Grantham's Landing (Br.Res.), STUDENT, R. E. Fisher.
Granville Island (Br.Res.), MEMBER, W. E. Jenkins.
Greenwood (Br.NonRes.), MEMBER, S. H. Davis.
Haney (Br.NonRes.), MEMBER, A. E. Sharpe.
Hollyburn (Br.Res.), MEMBER, E. H. Jupp; STUDENT, E. Parnum.
Hope (Br.NonRes.), STUDENT, J. A. Dennison
Kaleden (Br.NonRes.) , MEMBER, A. K. Robertson.
Kamloops (Br.NonRes.), MEMBERS, H. L. Cairns, J. E. Hanlon, H. L. Hayne, W. Ramsay, J. H. A. Steven, M. L. Wade; JUNIOR, A. R. Colby.
Kelowna (Br.NonRes.), HON. MEMBER, G. Stirling; MEMBERS, A. J. Gayfer, F. W. Groves, D. K. Penfold.
Ladner (Br Res.), MEMBER, C. E. Cooper; STUDENT, J. D. Robertson.
Lynn Valley (Br.Res.), MEMBER, W. Anderson.
New Westminster (Br.Res.), MEMBERS, G. B. Dixon, L. B. Elliot, E. S. Jones, W. E. Keyt, J. B Lambert, G. Macleod, K. W. Morton, J. D. Nicol, R. E. Potter, C. Raley, F. J. Simpson, P. M. Smith, C. C. Worsfold; JUNIORS, C. H. Clay, A. C. Cooper, G. R. Davidson, J S. Slater; STUDENTS, K. L. Hall, F. A. MacLean, E. S. Rhodes, M. C. Robinson, H. A. C. Stokes.
Ocean Falls (Br.NonRes.), MEMBERS, P. A. Frattinger, C. W. E. Locke; JUNIOR, R. R Snyder.
Oliver (Br.NonRes.), MEMBER, A. Cox.
Parksville (Br.NonRes.), MEMBER, W. S. E. Morrison.
Penticton (Br.NonRes.), MEMBERS, R. A. Barton, F. H. Latimer; STUDENTS, R. G. Harris, N H. Latimer.
Port Coquitlam (Br.Res.), JUNIOR, S. M. Schofield.
Port Mellon (Br. NonRes.), MEMBER, J. G. D'Aoust.
Powell River (Br.NonRes.), MEMBERS, D. A. Evans, W. Jamieson, J. S. Motherwell; JUNIOR, A. E. Chard; STUDENT, T. C. York.
Prince Rupert (Br. NonRes.), MEMBERS, K. Dixon, E. A. Phillips; STUDENTS, L. G. G. Holtby, D. Mackay.
Princeton (Br. NonRes.), STUDENT, A. C. Dimock.
Shalalth (Br.NonRes.), MEMBER, C. R. Lindsay; JUNIOR, R. Chambers.
Sherman (Br.Res.), STUDENT, J. E. Smith.
Smithers (Br.NonRes.), JUNIOR, W. R. Workman; STUDENT, R. M. Cook.
Squamish (Br. NonRes.), STUDENT, J. C. Confortin.
Vancouver (Br.Res.),

MEMBERS

G. W. Allan, J. Alton, H. P. Archibald, J. S. Ball, F. H. Ballou, H. Balmforth, G. H. Bancroft, P. W. Barchard, J. B. Barclay, I. C. Barltrop, F. R. Barnsley, R. Bell-Irving, M. D. Berry, T. V. Berry, W. A. Bickell, E. E. Bissett, R. T. Blair, P. N. Bland, W. R. Bonnycastle, C. Brakenridge, H. R. Brownell, E. E. Brydone-Jack, P. H. Buchan, J. E. Buerk, L. H. Burpee, E. F. Carter, J. Chalmers, G. T. Chillcott, A. W. G. Clark, C. E. Cleveland, E. A. Cleveland, C. J. Cock, C. A. Colpitts, G. S. Conway, P. E. Cooper, F. P. V. Cowley, W. R. Craig, A. D. Creer, C. R. Crysdale, J. Cunningham, C. W. Deans, S. H. deJong, A. Dickson, V. Dolmage, J. M. Duncan, A. C. Eddy, L. J. Ehly, R. A. Emerson, M. J. Evans, W. P. Ferguson, J. N. Finlayson, H. C. Fitz-James, E. Floyd, J. P. Fraser, W. T. Fraser, H. W. Frith, M. L. Gale, A. S. Gentles, G. McD. Gilbert, A. I. E. Gordon, A. Granger, J. R. Grant, J. Green, E. E. Gregg, W. B. Greig, C. T. Hamilton, J. B. Hamilton, W. G. Heslop, H. B. Hicks, S. Hogg, J. B. Holdcroft, A. Holsten, H. M. Howard, W. L. Inglis, J. A. Jones, J. A. D. Keay, W. N. Kelly, W. L. Kent, A. T. Kerr, N. D. Lambert, T. Lees, D. O. Lewis, H. M. Lewis, D. A. Livingston, K. Y. Lochhead, J. R. Lyall, A. S. Mansbridge, W. O. Marble, C. G. Mills, H. H. Minshall, H. St. J. Montizambert, T. M. Moran, W. G. Murrin, J. B. Macdonald, H. MacKenzie, H. J. MacLeod, H. N. Macpherson, A. C. McEachern, C. J. McGavin, J. McHugh, R. A. McLachlan, D. McRoberts, F. Noakes, J. C. Oliver, J. B. Parham, E. L. Paterson, K. E. Patrick, A. Pearson, A. Peebles, A. H. Perry, F. R. Phillips, G. L. Phillips, A. A. Plummer, W. H. Powell, R. C. Pybus, W. Rae, R. Rennie, H. Rindal, E. N. Ridley, J. Robertson, R. Rome, A. M. Ross, S. Ross, P. R. Sandwell, W. Scales, C. D. Schultz, C. A. Scott, R. G. Scott, W. O. Scott, N. C. Sherman, W. Smaill, D. S. Smith, L. B. Stacey, E. J. Stephen, F. C. Stewart, G. P. Stirrett, W. M. Stobbart, P. B. Stroyan, W. G. Swan, J. A. Tames, F. B. Taylor, G. F. Taylor, E. C. Thrupp, G. L. Tooker, D. P. Urry, G. A. Walkem, R. Walkem, J. A. Walker, C. E. Webb, E. B. Webster, R. W. Wellwood, J. S. Wilson, B. P. Wisnicki, A. S. Wootton, A. E. Wright, W. B. Young, A. C. R. Yuill.

JUNIORS

J. L. Adams, R. G. Bentall, B. N. Brockhouse, M. S. Brown, J. A. Burton, J. Carrothers, W. R. Cheriton, H. V. Casson, D. G. Crook, J. A. Deptford, J. H. Ferguson, R. H. Garrett, S. S. Gilmour, J. B. Glenn, W. G. Grimble, G. J. Henrickson, R. W. Hole, R. J. Kenst, F. R. Killam, F. Langenek, S. C. Laughlan, F. C. Leroux, L. W. MacDougall, C. D. Marlatt, J. L. Miller, V. L. Mosher, L. F. Morrison, L. G. McDiarmaid, W. G. McIntosh, D. J. Rattenbury, R. C. Robson, R. G. Scarisbrick, A. C. Smith, H. L. Smith, W. D. Stewart, J. H. Swerdfeger, C. H. Vatcher, J. M. Wallace, H. B. Young.

STUDENTS

J. D. Anderson, F. J. Andrew, F. B. Baker, D. R. Bakewell, W. A. Bateman, R. F. Binnie, J. M. Bird, J. Brandlmayr, Jr., F. R. Bunnell, A. Burnham, J. A. Burton, R. Bushfield, P. W. Chutter, R. H. Currie, E. G. Davis, C. M. Douglas, O. C. Edwards, D. R. Elliott, G. M. Ellis, A. M. Eyre, R. M. Ferguson, A. G. Fletcher, E. E. Gallagher, A. V. Gallon, G. M. Genge, R. Goleman, H. B. R. Graves, W. M. Gray, W. G. Grimble, J. L. Harbell, D. G. Heal, P. S. Herring, C. G. Hewlett, J. B. Hicks, R. F. Hooley, F. R. Hole, N. Hudak, G. M. Josephson, W. E. Kenny, J. C. Kent, R. G. Kerr, H. Kolbeins, S. S. Lefeaux, A. Ludwick, R. G. Lye, W. E. Lyle, D. J. Manning, L. R. Munroe, W. A. McDill, J. H. McNaughton, S. J. Nelson, A. S. Nemetz, J. N. Olsen, R. L. Payne, G. R. Phare, R. A. Pillman, E. T. Quirk, D. L. Pitman, R. W. Racine, W. G. Robinson, E. A. Robertson, W. B. Scott, C. C. Taylor, L. H. Taylor, J. T. Teevan, E. R. Tinney, J. K. Wong.

AFFILIATES

C. B. Huyck, R. L. Bartlett, G. E. Herrman, G. N. Lancaster.

Vernon (Br.NonRes.), MEMBER, B. H. Schroter.
Westbank (Br.NonRes.), JUNIOR, J. Barber-Starkey.
White Rock (Br.Res.), MEMBER, M. C. Nesbitt.
Woodfibre (Br. NonRes.), MEMBERS, W. A. Bain, G. D. Trethewey.
Yale (Br.NonRes.),MEMBER, W. K. Gwyer.

Kootenay Branch District

(The territory in British Columbia included between the 119° parallel on the west, the United States boundary on the south, and the boundaries of the province on the north and the east.)

Cranbrook (Br.NonRes.), MEMBER, C. E. MacKinnon.
Fernie (Br.NonRes.), MEMBER, G. E. Elkington.
Holborn (Br.NonRes.), MEMBER, J. A. Webster.
Kimberley (Br.NonRes), MEMBER, P. S. Barratt; JUNIORS, M. Cantwell, J. W. Reynolds; STUDENT, W. H. Poole.
Nakusp (Br.NonRes.), STUDENT, L. E. Parent.
Nelson (Br.NonRes.), MEMBER, R. Pollard; JUNIORS, J. G. Matthews, M. L Zirul.
Rossland (Br.Res.), MEMBERS, D. J. S. Irvine, W. N. Papove, A. C. Ridgers.
South Slocan (Br.NonRes.), MEMBERS, A. A. Lambert, W. J Tindale.
Trail (Br.Res.), MEMBERS, E. B. Broadhurst, A. H. W. Busby, L. A. Campbell, J. P. Coates, E. A. G. Colls, R. W. Diamond, A L. Garvin, H. P. Hamilton, W. G. Jewitt, T. W. Lazenby, C. E. Marlatt, E. Mason, S. C. Montgomery, J. V. Rogers, E. M. Stiles, J. P. Svarich; JUNIORS, G. R. McMeekin, J. R. Wellington; STUDENTS, G. W Downie, R. J. Gray, W. V. Nicholson, A. Swystun.

Calgary Branch District

(The territory in Alberta included between the north boundary of township thirteen from Saskatchewan to the British Columbia boundary, northerly on the interprovincial boundary to the north boundary of township forty-two; east to the east boundary of range twelve (west of the fourth meridian); south to the north boundary of township thirty-seven; east on the north boundary of township thirty-seven to the Saskatchewan boundary; and south on the interprovincial boundary to township thirteen.)

Banff (Br.NonRes.), MEMBERS, C. R. Cornish, F. G. Haven, P. J. Jennings, R. McC. Martin, N. E. Willett; JUNIOR, W. H. Ball; STUDENT, J. H. Peatfield.
Black Diamond (Br.NonRes.), JUNIOR, R. H. Teskey.
Bowness (Br.Res.), MEMBER, W. F. Elford; JUNIOR, G. H. Galbraith.
Brooks (Br.NonRes.), MEMBER, W. Crook.
Calgary (Br.Res.),

MEMBERS

W. Anderson, E. Avery, R. Barnecut, A. Baxter, F. K. Beach, R. L. Black, G. P. F. Boese, E. W. Bowness, R. W. Brews, F A. Brownie, J. E. Brown, R. A. Brown, W. P. Cheney, J. W. Clarke, F. B. Connors, S. G. Coultis, B. H. Corey, M. Cranston,

J. C. Dale, P. Davidson, S. J. Davies, E. H. Davis, J. B. deHart, F. C. Dempsey, H. E. Denton, C. V. Dunne, F. S. Dyke, D. C. Fleming, J. N. Ford, W. L. Foss, W. S. Fraser, F. T. Gale, A. B. Geddes, W. J. Gold, D. P. Goodall, W. J. Gray, L. Green, J. A. Haberman, J. Haddin, D. F. Hamelin, J. J. Hanna, D. A. Hansen, H. E. Hansen, S. H. Hawkins, H. R. Hayes, A. Higgins, R. C. Hind, R. T. Hollies, O. H. Hoover, W. C. Howells, E. H. Hunt, J. S. Irwin, M. W. Jennings, G. D. Kellam, F. A. Killer, J. F. Langston, H. B. LeBourveau, J. G. MacGregor, R. MacKay, M. H. Marshall, P. D. Mellon, W. St. J. Miller, K. W. Mitchell, H. H. Moore, H. J. McEwen, J. McMillan, A. S. Neil, J. S. Neil, V. A. Newhall, K. K. Paget, J. H. Palmason, J. R. Paget, J. H. Parks, T. M. Parry, A. A. Peebles, P. F. Peele, S. G. Porter, H. Randle, F. N. Rhodes, W. E. Robinson, H. H. Ross, J. H. Ross, T. Schulte, W. G. Sharp, H. B. Sherman, W. A. Smith, B. W. Snyder, H. C. Spence, T. D. Stanley, H. J. Stephens, H. LeM. Stevens, Guille, J. I. Strong, W. D. Suitor, D. G. Tapley, F. C. Tempest, H. W. Tooker, W. B. Trotter, R. S. Trowsdale, G. W. Webster, C. V. F. Weir, C. H. White, J. H. Wilson, E. W. Wood, J. R. Wood, F. B. Young, H. R. Younger.

JUNIORS

A. G. Ballantyne, F. E. Balshaw, J. E. Beach, A. I. Clark, D. Cramer, T. C. Elliott, C. W. Elliott, D. H. Evers, S. D. Foote, F. W. Fraser, J. W. Gregg, N. R. Hannah, C. M. Harding, H. H. Heisler, W. A. Hiller, C. R. Hoar, D. C. Jones, E. L. Jones, O. M. Julson, W. A. King, D. F. Kobylnyk, J. A. Lamb, D. D. Livingstone, R. O. Lockwood, H. N. Lukes, G. MacLeod, J. R. Milne, S. G. Moseson, W. R. McRae, G. G. D. Robertson, P. L. Rule, N. Safran, W. A. B. Saunders, T. M. Schulte, G. C. Scowcroft, A. E. Sick, J. L. Sloan, I. Smith, R. B. Snyder, W. D. Stothert, W. H. Tate, J. A. Webb, R. H. Wray.

STUDENTS

F. Black, L. E. N. Carr, J. A. Clow, G. A. Hutton, S. L. W. Mann, W. A. McLaggan, S. R. Nelson, P. J. Robinson, W. R. Sadler, S. E. Rutledge, A. J. Spence, J. G. Spencer.

AFFILIATE

G. Key-Jones.

Canmore (Br.NonRes.), MEMBER, C. S. Dewis.

Exshaw (Br.NonRes.), MEMBER, J. B. Hanly.

Olds (Br.NonRes.), MEMBER, G. N. Houston.

Seebe (Br.NonRes.), JUNIORS, G. V. Eckenfelder, B. A. Monkman; STUDENT, O. E. Enarson.

Stettler (Br.NonRes.), MEMBER, W. D. Gray.

Strathmore (Br.NonRes.), MEMBERS, G. H. Patrick, P. M. Sauder.

Turner Valley (Br.NonRes.), MEMBERS, R. G. Laird, G. D. Phelps, J. W. Young; JUNIOR, G. A. Connell.

Edmonton Branch District

(All the Provinces of Alberta north of the northern boundary of the Calgary Branch, plus Yukon and the Northwest Territories)

Bruderheim (Br.NonRes.), STUDENT, R. S. Kittlitz.

Cadomin (Br.NonRes.), MEMBER, H. McLeod.

Chinook (Br.NonRes.), STUDENT, R. G. Proudfoot.

Delia (Br.NonRes.), STUDENT, G. W. Herzog.

Dawson (Br.NonRes.), MEMBERS, A. G. Barrett.

Edmonton (Br.Res).

MEMBERS

J. A. Allan, A. M. Allen, F. M. Barchard, T. E. Bate, H. A. Bowden, N. A. Bradley, F. R. Burfield, J. B. Burke, W. F. Byers, J. Callaghan, W. A. Capell, C. W. Carry, J. W. S. Chappelle, D. B. Collier, J. E. B. Cranswick, J. F. Cunningham, J. G. Dale, T. W. Dalkin, W. J. S. Dawson, P. L. Debney, W. J. Dick, R. M. Dingwall, W. A. Donaldson, A. C. Dunn, N. W. DuBois, G. P. Duncan, J. M. Forbes, A. Frame, C. E. Garnett, J. Garrett, R. J. Gibb, A. W. Haddow, R. M. Hardy, P. Hargrove, D. Hutchison, O. Inkster, W. J. Johnston, J. W. Judge, J. E. Kellett, H. P. Keith, W. W. Kelland, O. G. Kelly, W. D. Kirkland, T. N. Louden, J. D. A. Macdonald, N. W. Macpherson, N. H. G. McClary, J. F. McDougall, W. I. McFarland, R. N. McManus, F. McPherson, R. C. McPherson, C. Z. Monaghan, G. H. N. Monkman, I. F. Morrison, W. R. Mount, E. Nelson, C. E. Nix, A. M. Paull, V. Pearson, G. R. Pinchbeck, B. W. Pitfield, J. W. Porteous, M. M. Price, D. B. Rees, A. M. Reid, H. A. Ripley, D. W. Ritchie, D. Ross, B. Russell, C. J. Sanderson, R. Scott, E. Skarin, E. L. Smith, D. R. Stanley, R. J. Stephenson, W. F. Stevenson, L. A. Thorssen, H. W. Tye, R. G. Watson, J. R. Whigham-Teasdale, T. W. White, H. J. Williamson, R. S. L. Wilson, E. H. Wright.

JUNIORS

D. K. Campbell, J. M. Casault, E. K. Cumming, R. L. Davies, S. G. Davis, C. Farstad, J. W. Forster, L. E. Gads, L. G. Grimble, R. A. Hemstock, R. H. Hislop, H. Hole, N. A. Lawrence, R. H. Linke, D. L. MacDonald, R. B. A. MacKenzie, F. A. Madill, D. M. Marshall, G. F. McAulay, R. B. McDiarmaid, L. H. McManus, R. E. Phillips, C. F. Phripp, G. E. Poole, J. E. Poole, J. W. Preboy, W. W. Preston, P. J. Prokopy, A. B. Samuel, S. R. Sinclair, C. A. Stollery, J. G. Wall, B. F. Willson.

STUDENTS

R. J. Allman, S. H. Asselstine, W. D. Baines, G. W. Bernard, A. L. Berry, R. A. Brown, H. A. Carswell, W. H. Cowley, J. W. N. Fead, J. Gregory, S. J. Hampton, E. Hochhausen, R. J. Hollingshead, W. S. Jones, H. L. Kasten, K. R. Lobb, I. F. B. McBride, R. E. McClary, L. W. Nelson, M. Nicolson, R. H. Nicolson, C. Nyberg, C. H. Olson, W. B. Ozust, E. J. Sanden, H. C. Shannon, E. M. Smith, M. E. Stewart, P. Yachimec.

AFFILIATE

G. H. Milligan.

Egremont (Br.NonRes.), JUNIOR, J. G. Weeks.

Erskine (Br.NonRes.), JUNIORS, W. M. Huddleston, D. A. Kennett.

Fort Resolution (Br.NonRes.), MEMBER, H. A. Ingraham.

Fort Simpson (Br.NonRes.), MEMBER, G. Knutson.

Grande Prairie (Br.NonRes.), JUNIOR, W. J. Blackstock.

Jasper (Br.NonRes.), MEMBER, J. B. Snape, STUDENT, W. L. Hayhurst.

Lougheed (Br.NonRes.), STUDENT, V. E. McCune.

Norman Wells (Br.NonRes.), JUNIOR, J. D. Harvie.

Peace River (Br.NonRes.), MEMBER, J. H. Johnston.

Port Radium (Br.NonRes.), MEMBER, E. J. Bolger.

Vermillion (Br.NonRes.), MEMBER, B. E. Bury.

Wetaskiwin (Br.NonRes.), MEMBER, P. J. Maggs.

Whitecourt (Br.NonRes.), JUNIOR, L. E. Smith.

Whitehorse (Br.NonRes.), MEMBERS, W. B. Akerley, L. S. Keith, G. Walsh, JUNIOR, G. E. McDougall.

Yellowknife (Br.NonRes.), MEMBERS, D. A. G. Smith, W. G. Stuart, JUNIORS, H. Lepp, G. M. Webster, STUDENT, J. K. C. Mulherin.

Lethbridge Branch District

(Territory in Alberta included between the United States boundary and the northern boundary of township thirteen.)

Bellevue (Br.NonRes.), STUDENT, J. Longworth.

Blairmore (Br.NonRes.), MEMBER, J. A. Brusset.

Cardston (Br.NonRes.), STUDENT, R. D. Low.

Coaldale (Br.Res.), MEMBER, H. W. Rowley.

Coleman (Br.NonRes.), MEMBER, F. J. Hastie; JUNIORS, H. E. Hewitt, R. L. Sanders.

Diamond City (Br.Res.), MEMBER, A. J. Branch.

Hartel (Br.NonRes.), MEMBER, F. J. Werth; STUDENT, R. E. Martyn.

Lethbridge (Br.Res.),

MEMBERS

R. C. Bell, N. H. Bradley, G. S. Brown, J. M. Campbell, C. S. Clendening, J. M. Davidson, A. G. Donaldson, C. S. Donaldson, J. Haimes, P. E. Kirkpatrick, R. S. Lawrence, T. Miard, M. S. Mitchell, R. B. McKenzie, A. L. H. Somerville, J. T. Watson.

JUNIORS

R. E. Grant, J. H. Harding, E. B. Wilkins.

STUDENTS

E. A. Lawrence, I. M. Scott.

Macleod (Br.NonRes.), MEMBER, H. C. Ritchie.

Magrath (Br.Res.), MEMBER, M. F. R. Lloyd.

Maycroft (Br.NonRes.), JUNIOR, G. E. P. Eastwood.

Medicine Hat (Br.NonRes.), MEMBERS, J. M. Anderson, A. C. Gardner, D. W. Hays, C. M. Moore, K. A. Truman; JUNIORS, A. N. Gunter, W. F. Hall.

Pincher Creek (Br.NonRes.), MEMBER, T. O. Neumann.

Suffield (Br.NonRes.), MEMBER, T. Pascoe; JUNIOR, I. C. Scarlett.

Walsh (Br.NonRes.), JUNIOR, H. T. Hargrave.

Saskatchewan Branch District

(The Province of Saskatchewan)

Alsask (Br.NonRes.), STUDENTS, W. F. Reeder, W. W. Robertson.

Ardill (Br.NonRes.), STUDENT, A. Mowchenko.

Aylsham (Br.NonRes.), STUDENT, L. C. Ward.

Bienfait (Br NonRes.), STUDENT, J. Birbrager.

Bishopric (Br.NonRes.), MEMBER, M. F. Frombach.

Brancepeth (Br.NonRes.), STUDENT, R. E. Shore.

Bulyea (Br.NonRes.), STUDENT, G. R. Mather.

Cabri (Br.NonRes.), STUDENT, J. A. L. Robinson.

Canwood (Br.NonRes.), JUNIOR, D. E. Haldane.

Cheviot (Br.NonRes.), STUDENT, E. E. Brooks.

Claybank (Br.NonRes.), MEMBER, S. Matthews.

Climax (Br.NonRes.), STUDENT, J. A. Francis.

Cupar (Br.NonRes.), JUNIOR, D. B. Hall.

Davidson (Br.NonRes.), MEMBER, R. L. Bigg.

Eatonia (Br.NonRes.), STUDENT, E. L. Smith.

Elfros (Br.NonRes.), STUDENTS, W. J. Babey, J. C. Hughes.

Estevan (Br.NonRes.), STUDENTS, A. D. Moore, G. A. Peterson.

Gravelbourg (Br.NonRes.), JUNIOR, L. J. L'Heureux.

Indian Head ,Br.NonRes.), STUDENT, D. H. McCorkindale.

Invermay (Br.NonRes.), JUNIOR, G. I. Loucks.

Island Falls (Br.NonRes.), AFFILIATE, H. T. Olson.

Kennedy (Br.NonRes.), MEMBER, I. F. Hilts.

Kincaid (Br.NonRes.), JUNIOR, T. A. J. Leach.

Langham (Br.NonRes.), STUDENT, D. A. Buhr.

Limerick (Br.NonRes.), JUNIOR, M. Hawkeye.

Markinch (Br.NonRes.), JUNIOR, D. A. Stann.

Meadow Lake (Br.NonRes.), STUDENT, E. R. Carpenter.

Melville (Br.NonRes.), JUNIOR, E. H. Gavlas.

Moose Jaw (Br.NonRes.), MEMBERS, G. B. Alexander, C. K. Buchbach, A. W. E. Fawkes, K. C. Graham, R. M. Henderson, A. A. Holland, C. J. Somers, C. M. Thompson; JUNIORS, I. Shicnfield, W. Smith; STUDENTS, M. P. Durrant, E. E. Nixon.

Naicam (Br.NonRes.), STUDENT, O. Swenson.

North Battleford (Br.NonRes.), MEMBERS, H. P. Fuller, R. R. Keith, D. D. Low, M. H. Stevenson; STUDENTS, H. W. Klassen, A. H. G. Snow.

Ormiston (Br.NonRes.), MEMBER, A. W. Watson.

Pense (Br.NonRes), JUNIOR, W. E. Boyle.

Perdue (Br.NonRes.), STUDENT, R. J. Brehler.

Prince Albert (Br.NonRes.), MEMBERS, W. Christie, G. H. L. Dempster, D. M. Dunlop, J. B. Hamilton, H. J. Hermanson, J. Jonsson, W. Waters; JUNIOR, S. A. Weinstein; STUDENT, M. D. Robb.

Regina (Br.Res.),

MEMBERS

R. W. Allen, W. H. Bentley, A. I. Bereskin, R. Bing-Wo, H. K. Black, C. A. Boulton, W. L. Bunting, W. L. Campkin, H. R. Carscallen, E. S. C. Carpenter, H. S. Carpenter, F. C. Christie, W. E. Crossley, D. C. M. Davies, W. E. Denley, H. J. deSavigny, J. N. DeStein, S. G. Dethridge, C. W. Doody, A. H. Douglas, E. J. Durnin, F. E. Estlin, J. W. D. Farrell, R. J. Fyfe, A. C. Garner, S. Harding, K. T. Hawley, C. C. Hay, D. W. Houston, R. W. Jickling, G. E. Kent, S. T. Lewis, A. P. Linton, W. O. Longworthy, E. E. Lord, P. G. McAra, D. A. R. McCannel, D. S. MacDonald, T. McGuinness, G. L. MacKenzie, H. R. MacKenzie, O. W. Martyn, G. G. Milne, W. Mock, B. Montbriand, S. R. Muirhead, G. N. Munro, H. I. Nicholl, J. M. Patton, W. W. Perrie, W. B. Ramsay, H. G. Randlesome, H. G. Riesen, H. L. Roblin, J. G. Schaeffer, A. W. Shattuck, F. J. Slominski, F. H. Smail, C. W. Sparrow, M. J. Spratt, E. Stewart, W. M. Stewart, J. J. A. Street, B. J. O. Strong, L. A. Thornton, T. G. Tyrer, F. R. Vance, R. G. D. Ward, H. F. Wickware, H. J. Woodman, J. R. Young, S. Young.

JUNIORS

W. T. Bothwell, L. A. Dokken, L. F. Eull, J. C. Fyfe, M. G. Jacoby, H. L. M. King, D. A. Larmour, H. L. Lexier, C. A. Loden, J. G. S. McMorine, F. D. Sturdy, A. G. Teskey, L. J. Treleaven, W. B. Thomson, H. D. Watson, G. Wesa.

STUDENTS

A. R. Boall, D. A. Fraser, C. A. Loden, D. R. Low, D. H. Marshall, R. V. Mills,

R. L. Moyer, D. McIntyre, R. W. Ottem, G. Petuk, S. A. Weinstein, J. F. Wilson.
Richlea (Br.NonRes.), STUDENT, S. T. Ostevik.
Saskatoon (Br.NonRes.),

MEMBERS

G. D. Archibald, A. L. C. Atkinson, A. L. Cole, H. R. Davis, F. H. Edmunds, C. R. Forsberg, J. S. Fowler, I. M. Fraser, W. A. Friebel, A. R. Greig, J. Guthrie, N. B. Hutcheon, T. B. Jackson, W. E. Lovell, A Michalenko, A. A. Murphy, F. McCallum, W. G. McKay, R. A. McLellan, A. B. Olson, G. W. Parkinson, P. C. Perry, R. Peterson, E. H. Phillips, E. K. Phillips, R. A. Spencer, J. M. Taylor, J. E. Underwood, H. McI. Weir, W. G. Worcester, F. Young.

JUNIORS

L. G. Chan, G. W. Clarke, R. M. Coons, J. B. Edwards, G. C. Hamilton, K. F. Humphrey, N. L. Iverson, T. V. Kennedy, J. B. Mantle, G. C. McLeod, L. R. McLeod, E. L. Miners, R. F. Pearson, C. F. Ripley, E. S. Smith, W. R. Staples, J. C. Traynor, W. N. White.

STUDENTS

B. N. Burwell, W. R. Campbell, G. E. Carss, J. L. Cook, R. Dabinsky, F. J. Dusel, W. J. English, A. B. Farnam, D. A. Ferguson, J. A. Funk, H. M. Graham, G. H. Green, W. H. Harper, C. P. Lentz, R. E. Ludwig, J. G. Matthews, D. A. Powell, M. B. Pierce, W. A. Reed, C. F. Ripley, J. H. Saldat, D. Thierman, L. W. Ward, H. A. Westberg, A. P. Wiles, G. H. Wilks, A. G. Wilson, R. A. Zurowski.

Shaunavon (Br.NonRes.), MEMBER, J. A. McCoubrey.
Swift Current (Br.NonRes.), MEMBERS, H. W. Carss, J. E. Mollard, V. E. Thierman; JUNIOR, J. S. G. Middleton.
Stoney Creek (Br.NonRes.), JUNIOR, D. M. McLeod.
Tantallon (Br.NonRes.), STUDENT, R. W. Ormiston.
Togo (Br.NonRes.), STUDENT, H. L. Topham.
Val Marie (Br.NonRes.), STUDENT, G. A. Duey.
Verwood (Br.NonRes.), JUNIOR, L. T. Holmes.
Watrous (Br.NonRes.), STUDENT, J. D. Mollard.
Watson (Br.NonRes.), STUDENT, A. M. Hill.
Weyburn (Br.NonRes.), MEMBERS, J. E. Bennett, A. J. Cameron; STUDENT, H. N. Gawley.
Wilkie (Br.NonRes.), JUNIOR, C. Garrett.
Yorkton (Br.NonRes.), MEMBER, H. M. Bailey; STUDENTS, R. P. L. Daniels, M. N. Spector, T. J. Uruski.

Winnipeg Branch District

(The Province of Manitoba)

Birtle (Br.NonRes.), JUNIOR, V. L. Dutton.
Boisevain (Br.NonRes.), JUNIOR, W. J. Milhausen.
Brandon (Br.NonRes.), MEMBERS, R. F. P. Bowman, W. W. Fotheringham, C. G. Peters, W. H. Shillinglaw; JUNIOR, G. W. Lawson.
Charleswood (Br.NonRes.), MEMBER, G. R. Fanset
Churchill (Br.NonRes.), MEMBER, C. G. J. Luck; JUNIOR, F. J. Sergi.
Dauphin (Br.NonRes.), MEMBER, R. C. Robinson; AFFILIATE, E. Ashton.
Flin Flon (Br.NonRes.), MEMBER, M. K. Reikie; STUDENT, N. C. Croome.
Fort Whyte (Br.Res.), MEMBER, C. W. Edmonds.
Glenboro (Br.NonRes.), STUDENT, K. G. Anderson.
Grandview (Br.NonRes.), JUNIOR, R. H. Walker.
Lydiatt (Br.NonRes.), MEMBER, W. A. James.
McCreary (Br.NonRes.), STUDENT, R. S. Everall.
Morden (Br.NonRes.), STUDENT, P. A. Livingston.
Pine Falls (Br.NonRes.), MEMBER, M. W. Turner; STUDENTS, N. Bachynski, D. D. Munro, J. P. V. Palmer, C. Rempel.
Poplar Point (Br.NonRes.), STUDENT, F. T. Kuzyk.
Pointe du Bois (Br.NonRes.), JUNIOR, R. H. Ansley.
Rivers (Br.NonRes.), STUDENTS, D. Danylkiw, E. D. Manchul.
Selkirk (Br.Res.), STUDENT, L. H. Howard.
Seven Sisters Falls (Br.NonRes.), MEMBERS, A. L. Oddleifson, A. S. Williams.
Snow Lake (Br.NonRes.), JUNIOR, J. A. Caverly.
Swan River (Br.NonRes.), MEMBER, H. F. Peters.
St. Alphonse (Br.NonRes.), STUDENT, G. De Pauw.
St. Boniface (Br.Res.), JUNIORS, J. W. Boux, J. F. Boux.
The Pas (Br.NonRes.), MEMBER, J. G. MacLachlan; JUNIOR, J. G. Horsburgh.
Transcona (Br.Res.), STUDENTS, W. R. Brownlee, H. J. Harding, A. McCaw.
Winnipeg (Br.Res.),

MEMBERS

G. Affleck, F. W. Alexander, C. V. Antenbring, E. Arnason, C. H. Attwood, C. T. Barnes, H. S. Beetham, I. W. Beverly, H. J. A. Bird, W. H. S. Bird, C. H. Blanchard, R. W. Borrowman, H. B. Brehaut, H. STUDENTS

C. N. Lund, R. A. Quance, W. M. Young.
Wallaceburg (Br.NonRes.), MEMBERS, D. McGorman, H. B. R. Craig; JUNIOR, J. D. Cram.

London Branch District

(The counties of Elgin, Middlesex, Oxford, Perth, Huron, Bruce.)

Aylmer (Br.Res.), JUNIOR, D. S. Caverly; STUDENTS, E. J. Thompson, R. G. Wilson.
Beachville (Br.Res.), MEMBER, J. D. Campbell.
Clinton (Br.NonRes.), STUDENT, D. M. Venton.
Goderich (Br.NonRes.), MEMBER, S. C. Anderson.
Ingersoll (Br.Res.), STUDENT, J. C. Bodwell.
Komoka (Br.Res.), STUDENT, B. W. Spicer.
Lakeview (Br.NonRes.), JUNIOR, F. A. Hunt.
London (Br.Res.),

MEMBERS

W. R. Alder, S. W. Archibald, J. R. Bach, F. C. Ball, R. Barbour, A. C. Blue, E. V. Buchanan, S. G. Chipman, R. S. Charles, D. N. Cooke, M. M. Dillon, J. Ferguson, A. L. Furanna, R. W. Garrett, J. Gilchrist, H. L. Hayman, T. L. Hughson, G. E. Humphries, E. R. Jarmain, S. G. Johre, J. W. Jolly, J. C. Keppy, I. Leonard, T. A. S. Munford, H. A. McKay, G. H. W. McKee, V. A. McKillop, T. L. McManamna, G. N. Scroggie, H. J. Simmons, N. J. W. Smith, W. R. Smith, R. H. Spriggs, H. G. Stead, C. Talbot, W. M. Veitch.

JUNIORS

W. K. Clawson, S. M. Dunn, E. H. Fisher, F. S. Hutton, J. W. Kirk, A. Madryga, R. H. Payton, R. E. Stone, F. S. Stopps, J. A. Tod.

STUDENTS

R. S. Allison, J. B. Cronyn, D. A. Eisenhauer, R. E. Evans, A. A. Greenlees, T. C. Greenlees, R. L. Hope, J. S. Kyles, D. M. Lyall, A. F. Mosher.

AFFILIATES

E. F. Carson, W. P. R. Willis, A. Wilson.
Stratford (Br.NonRes.), MEMBERS, H. C. Bates, H. W. Bloxham, A. G. Garner, A. B. Manson, W. H. Riehl; JUNIORS, C. Fraser, C. W. Hawkins, F. H. Upton.
St. Marys (Br.Res.), STUDENT, E. L. Fulcher.
St. Thomas (Br.Res.), MEMBERS, F. A. Bell, W. C. Miller, J. W. Peart; JUNIORS, P. Koropatnick, D. D. Oldreive, P. A. Weber; STUDENT, L. W. Stock.
Tillsonburg (Br.NonRes.), MEMBERS, C. V. Corless, J. H. Johnson; JUNIOR, J. F. Weston.
Walkerton (Br.NonRes.), MEMBER, G. E. Stephenson.
Woodstock (Br.Res.), MEMBERS, J. Carnwath, F. T. Julian, W. G. Ure, J. A. Vance; JUNIOR, R. R. Smith.

Hamilton Branch District

(The counties of Wentworth, Norfolk, Brant, Waterloo, Halton West (Townships of Nelson and Nassagaweya), Wellington, Haldimand.)

Ancaster (Br.Res.), MEMBER, P. Ford-Smith.
Bartonville (Br.NonRes.), MEMBER, G. L. T. Vollmer.
Brantford (Br.Res.), MEMBERS, C. C. Cariss, H. E. Mott, G. H. Richards, C. A. Waterous; JUNIORS, G. A. Potts, G. O. Sanders; STUDENT, F. E. Sterne.
Burlington (Br.Res.), MEMBERS, W. B. Nicol, D. B. Simpkin, N. E. Wideman; STUDENT, W. J. Oliphant.
Caledonia (Br.Res.), STUDENT, L. A. S. Dean.
Dundas (Br.Res.), MEMBER, H. G. Bertram; STUDENT, R. T. Bailey; AFFILIATE, J. F. Crowley.
Elmira (Br.NonRes.), MEMBER, W. M. Easton; JUNIOR, J. F. McKay; STUDENT, K. S. Sargent.
Freeman (Br.Res.), MEMBER, E. L. Zealand.
Fruitland (Br.Res.), JUNIOR, N. W. Balkely.
Galt (Br.Res.), JUNIORS, J. E. Gordon, E. B. Pearce, W. L. Thomlinson; STUDENTS, C. E. Bell, W. J. Horner, R. N. Payton.
Guelph (Br.NonRes.), MEMBERS, E. P. Bowman, G. H. Chalmers, C. G. E. Downing, L. E. Jones, W. H. Keith, G. H. Kohl, D. R. McQueen, H. S. Nicklin; JUNIORS, J. L. Fair, G. W. Hudson, D. M. Curzon, H. L. Saunders; STUDENTS, W. R. Denford, J. F. Bunge.
Hagersville (Br.Res.), MEMBER, J. S. Green; STUDENT, R. J. Blezard.
Hamilton (Br.Res.),

MEMBERS

E. A. Agnew, E. T. W. Bailey, E. F. Barratt, G. M. Bayne, E. R. Bishop, J. A. Brown, W. E. Brown, A. M. Buchanan, R. E. Butt, J. C. Callaghan, D. W. Callander, W. W. Chadwick, C. E. Church, E. M. Coles, W. H. Collins, L. S. Collison, H. A. Cooch, E. D. W. Courtice, N. L. Crosby, B. A. Culpeper, E. H. Darling, W. A. Dawson, J. R. Dunbar, N. A. Eager, E. R. Eaton, W. G. Enouy, C. A. Ernst, W. B. Ford, W. A. T. Gilmour, J. P. Gordon, A. R. Hannaford, W. G. Hewson, W. Hollingworth, F. W. Hubbard, W. L. Hutchison, C. H. Hutton, J. R. Hutton, E. P. Innes, J. W. Jankowski, S. R. Job, J. J. Kelly, F. I. Ker, A. Love, W. L. McFaul, E. G. MacKay, J. J. Mackay, W. S. Macnamara, N. Metcalf, W. L. Miller, F. E. Milne, W. G. Milne, G. Moes, A. A. Moline, J. C. Nash, E. E. Orlando, P. L. O'Shaughnessy, F. W. Paulin, C. C. Parker, H. O. Peeling, M. A. Phelan, H. S. Philips, C. J. Porter, A. Pottinger, W. J. W. Reid, H. A. Ricker, A. G. Riddell, A. A. Scarlett, L. C. Sentance, A. W. Sinnamon, C. C. Smith, P. D. Smith, J. Stephenson, H. E. Steventon, J. Stodart, J. Taylor, H. Thomasson, J. T. Thwaites, A. E. Tuck, F. J. Veale, N. Wagner, W. M. Warnick, T. O. Watts, E. M. Whitby, A. F. White, J. B. Wilkinson, A. H. Wingfield, E. G. Wyckoff.

JUNIORS

J. D. Abell, T. F. S. Aman, A. Ainlay, D. E. Bridge, J. C. Buchanan, W. R. Chilman, H. L. Cormick, M. C. Edwards, J. M. Elliott, D. H. Gibson, W. Hindle, J. D. Houlding, S. M. Kennedy, J. W. Kerr, J. W. Lucyk, R. D. MacAulay, I. M. Macdonald, D. P. MacVannel, W. R. McColl, S. W. McKnight, J. H. Mitchell, N. J. Paithouski, G. L. Phoenix, G. Ross, W. R. Rowbotham, J. A. Savory, H. M. Scott, R. C. Sentance, H. C. Tilbury, H. Tovee, J. A. Tyerman, R. B. Warren, N. O. Weston, C. C. Wight, R. G. Wilson.

STUDENTS

C. G. Anderson, D. A. Campbell, L. A. Cook, F. F. Dixon, R. N. E. Haughton, W. A. Freeman, L. C. Galloway, M. D. Gronlund, E. H. W. Hartwig, A. J. Healey, G. I. Hector, W. G. Jones, C. D. MacDougall, S. P. Patzalek, T. McD. Riley, L. Shakotko, J. W. Soden, M. A. Stein, W. A. S. Tite, E. M. Tuff.
Hespeler (Br.NonRes.), MEMBER, A. C. Macnab.
Kitchener (Br.NonRes.), MEMBERS, F. G. F. Barr, D. J. Emrey, R. E. Hammond, B. F. Matthews, M. Pequegnat, S. Shupe; JUNIORS, S. Dembicki, O. J. Gaffney, V. O. Griffin, D. P. Herring, J. G. Kerfoot, W. A. Runge, J. D. Spencer; STUDENTS, J. M. Bennett, L. A. Borth, J. M. Conway, E. F. Johannson, W. R. Roberts, J. D. Wray.
Lynden (Br.Res.), JUNIOR, J. I. Thompson.
Port Nelson (Br.Res.), MEMBERS, T. S. Glover, H. A. Lumsden; JUNIOR, H. F. McLachlin; AFFILIATE, S. F. Kelly.

Preston (Br.NonRes.), MEMBER, F. H. Midgley.
Simcoe (Br.NonRes.), MEMBERS, J. F. LaPlant, G. R. Marston; STUDENT, C. E. Vandecan.
Stoney Creek (Br.Res.), STUDENT, J. Mowbray.
Waterdown (Br.Res.), MEMBERS, W. D. Black, F. R. Leadlay.
Waterloo (Br.NonRes.), MEMBER, A. M. Snider; JUNIORS, W. J. Farago, W. L Bradley, W. G. Snyder; STUDENT, J. B Bingeman.

Niagara Peninsula Branch District

(The counties of Lincoln, Welland, and the area in the United States within a radius of twenty-five miles of Niagara Falls, Ont.)

Buffalo, N.Y. (Br.Res.), MEMBERS, J. D. Burbank, W. E. S. Dyer, H. D. Fyfe, N. R. Gibson, J. R. Guildford; JUNIORS, S. D. Levine, C. D. Pengelley.
Chippawa (Br.Res.), JUNIORS, R. C. Cline, A. J. Ring.
Fenwick (Br.Res.), STUDENT, R. A. Van Berkum.
Fonthill (Br.Res.), MEMBERS, A. W. Lash, H. V. Wildwood.
Fort Erie (Br. Res.), MEMBERS, A. G. Asplin, C. S. Boyd, W. R. Manock, R. L. Morrison, L. C. McMurtry, G. E. Otter, M. Yong; JUNIORS, J. C. Fox, L. J. Russell; STUDENT, C. McDonald.
Grimsby (Br.NonRes.), MEMBERS, R. M. Scrivener, C. W. Webster.
Humberstone (Br.Res.), MEMBER, E. C. Little.
Merritton (Br.Res.), JUNIORS, N. F. Hoch, W. Schofield.

Niagara Falls, Ont. (Br.Res.),

MEMBERS

S. W. Andrews, H. E. Barnett, T. A. Barnett, W. D. Bracken, C. Climo, C. G. Cline, C. A. O. Dell, L. L. Gisborne, R. A. H. Hayes, J. H. Ings, W. Jackson, M. F. Ker, W. P. London, H. S. Lundy, J. L. Miller, W. B. Musgrave, A. W. F. McQueen, W. T. Porter, F. C. Simpson, E. N. Walton.

JUNIORS

K. L. Bellamy, A. D. Bloomberg, E. R. Brannen, G. L. T. Ellis, J. W. Lee, W. H. Mable, W. M. Newby, T. E. Ott, P. A. Pasquet, W. I. Phemister, H. T. Rose, F. B. Schafheitlin, C. N. Simpson.

STUDENTS

V. A. Betts, D. A. Bowden, G. M. Catchpole, W. H. Innis, J. D. B. Ogilvie, R. R. Urquhart.

Niagara-on-the-Lake (Br.Res.), MEMBER, H. L. Bucke.
Port Colborne (Br.Res.), MEMBERS, C. N. Geale, A. C. Harvie, J. H. Tuck.
St. Catharines (Br.Res.), MEMBERS, M. B. Atkinson, A. J. Bennett, W. W. Brumby, W. Campion, G. A. Cunningham, J. B. Eldridge, E. Grummitt, A. G. Herr, M. H. Jones, W. C. Lorimer, A. L. Malcolm, C. L. Mason, J. J. Miller, J. M. Millman, C. G. Moon, G. Morrison, A. L. McPhail, E. M. Nason, J. E. Neilson, J. B. Nelson, L. P. Rundle, J. F. Shelton, D. B. Sommerville, G. F. Vollmer, C. W. West; JUNIORS, F. S. Bestwick, W. K. Campion, E. A. Dillon, P. J. Farmer, W. L. Hetherington, W. G. McLaughlin, R. A. Moore, M. F. Rodman R. T. Sawle, A. D. Smith; STUDENTS, C. A. N. Baker, S. C. Cooper, E. P. Miller, W. S. Watson, P. Zaharuk.
Thorold (Br.Res.), MEMBERS, W. Bohraus, P. E. Buss, G. E. Griffiths, C. R. McCort, J. L. McDougall, W. B. Scoular; JUNIORS, A. D. Hamilton, S. J. Simons; STUDENT, A. P. Sentance; AFFILIATE, J. G. Halliday.
Welland (Br.Res.), MEMBERS, W. D. Brownlee, N. K. Cameron, J. C. Critchley, H. D. Davison, J. C. Street, R. H. Timms, H. L. Weaver, E. R. Zacharias; JUNIORS, H. W. S. LeBel, D. B. Leightner; STUDENTS, G. A. Bennett, D. Bitondo, H. B. Hilton, J. A. Northcote, J. D. Palmer, F. B. B. Scott.

Toronto Branch District

(The counties of Ontario, York, Peel, Halton East (Townships of Trafalgar and Esquesing), Dufferin, Grey, Simcoe, Muskoka, Parry Sound, Nipissing (south of Mattawa River.)

Ajax (Br.Res.), MEMBERS, C. E. Olive, H. L. Shepherd; JUNIORS, H. P. Boone, H. O. Coish, S R. Kent, G. M. Nixon, L. A. Walker; STUDENTS, D. A. Brooks, P. A. Charest, J. Colotelo, J. F. Little, L. Malkin, W. B. Young.
Alcona (Br.NonRes.), MEMBER, H. Wellwood.
Barrie (Br.NonRes.), JUNIORS, J. B. Dewhurst, H. J. Murphy; STUDENT, W. D. Beckett.
Brampton (Br.Res.), MEMBER, W. P. Dale.
Cherrywood (Br.NonRes.), STUDENT, R. R. Morrish.
Clarkson (Br.Res.), MEMBERS, R. E. Jones, W. E. Lundie.
Collingwood (Br.NonRes.), MEMBER, A. M. Parsons.
Downsview (Br.Res.), MEMBER, J. T. Turner.
Highland Creek (Br.NonRes.), JUNIORS, D. E. Hibbard, W. A. Nelson.
Islington (Br.Res.), MEMBERS, L. M. Jones, F. McArthur, T. J Pounder, F. T. Taylor; JUNIORS, R. A. Davis, A. G. Moffatt.
Lambton (Br.NonRes.), JUNIOR, H. W. Ashton.
Lansing (Br.Res.), MEMBER, W. J. Bruce.
Malton (Br.Res), STUDENT, E. J. Crowther.
Mildmay (Br.NonRes.), STUDENT, W. R. Macke.
Mount Albert (Br.NonRes.), MEMBERS, H. J. Kurtz, D. V. McIntyre.
Newmarket (Br.Res.), JUNIOR, A. Pollock; STUDENT, L. B. Rose
Newtonbrook (Br.Res.), JUNIOR, H. P. Smith.
Nobel (Br.NonRes.), JUNIOR, E. L. Rhodes.
Oakville (Br.Res.), MEMBERS, J. N. Langman, L. H. Robinson; JUNIOR, A. H. Meldrum.
Orillia (Br.NonRes.), MEMBER, L. G. McNeice; JUNIOR, R. E. Scott.
Oshawa (Br.NonRes.), MEMBERS, F. Chappell, H. A. Davis, W. E. Phillips; JUNIORS, H. R Frizzle, T. A. A. Sharpe; AFFILIATE, G. E. Leigh-Mallory.
Owen Sound (Br.NonRes.), MEMBERS, N. Bowman, T. D. Kennedy, D. D. C. McGeachy; JUNIORS, R. K. Mackenzie, J van Damme; STUDENTS, C. Roles, W. Shears.
Pickering (Br Res.), MEMBERS, W. A. McLean, K. H. J. Clarke.
Port Credit (Br.Res.), MEMBER, W. A. Hesse; STUDENT, E. E. Sutton.
Port Perry (Br.NonRes.), MEMBER, J. S. Parker.
Stayner (Br.NonRes.), MEMBER, J. B. Saunders.
Swansea (Br.Res.), JUNIOR, L. W. Sommerville.
Toronto (Br.Res.),

HONORARY MEMBER

R. W. Angus.

MEMBERS

JUNIORS

J. A. Archibald, B. Baker, D. T. Bath, R. T. Bogle, A. J. Bonney, W. B. Brown, R. K. Buhr, D. L. Cole, G. H. Cook, G. T. Davis, A. De Maio, D. A. Drynan, W. R. Elsey, N. W. Finnie, O. J. Frisken, A. R. T. Hailey, G. H. Hall, R. S. Hull, R. R. Jackson, J. M. King, H. Marksfield, R. D. MacKimmie, K. A. McCaffrey, D. C. McCrady, D. R. McGregor, A. M. McQuarrie, J. F. Osborn, R. A. Phillips, E. P. Stephenson, M. M. Uloth, J. R. Wood.

STUDENTS

L. M. Angus, R. H. Bigham, J. S. Black, K. L. Broe, M. Chizen, E. A. Creelman, H. M. Ellis, W. B. Hall, J. R. Harris, J. A. Harrison, D. A. Lamont, G. G. Lantz, A. A. Lewis, D. M. Murray, M. J. O'Brien, J. E. Pickering, A. E. Roos, J. O. Shaughnessy, T. A. Sissons, C. M. Skinner, A. L. Stevinson.

AFFILIATE

E. Bonenfant.

Port Hope (Br.NonRes.), MEMBERS, J. G. G. Kerry, E. M. Wynn; JUNIORS, T. G. Edgeworth, H. A. Lancefield, R. W. McNally; STUDENTS, S. H. M. Elliott, F. R. Thompson.

Trenton (Br.NonRes.), MEMBERS, E. C. Luke, H. A. Moore, J. J. Macnab.

Kingston Branch District

(The counties of Prince Edward, Lennox, Addington, Frontenac, Leeds.)

Barriefield (Br.Res.), MEMBER, K. H. McKibbin; JUNIOR, V. W. Bethel.

Brockville (Br.NonRes.), MEMBERS, T. W. Brackinreid, D. A. S. Laing, E. H. McCann; STUDENT, W. M. Campbell.

Elgin (Br.NonRes.), MEMBER, E. W. Oliver.

Gananoque (Br.Res.), MEMBERS, J. M. Campbell, H. D. Rogers; JUNIOR, R. B. Wotherspoon.

Kingston (Br.Res.),

HONORARY MEMBERS

A. L. Clark, R. C. Wallace.

MEMBERS

G. T. L. Andrews, R. D. Bennett, W. H. Blake, T. L. Brock, J. D. Calvin, J. R. Carter, W. Casey, R. E. Clarke, H. G. Conn, V. R. Davies, C. H. Ellacott, D. S. Ellis, C. C. Folger, L. F. Grant, F. X. Granville, H. W. Harkness, M. N. Hay, W. S. Hunt, A. Jackson, D. M. Jemmett, S. D. Lash, H. H. Lawson, J. D. Lee, R. A. Low, W. E. Lumb, O. T. Macklem, A. Macphail, D. C. Macpherson, A. D. McGinnis, T. A. McGinnis, A. O. Monk, W. F. Noonan, R. F. Ogilvy, R. H. Rimmer, P. Roy, M. G. Saunders, S. Slater, G. J. Smith, J. E. Thom, F. M. Wood, W. B. Wilson.

JUNIORS

H. G. Burbidge, C. H. R. Campling, W. D. Colby, C. E. Craig, B. B. Denyes, C. R. Engler, V. F. Harrison, A. H. Holden, A. F. Holloway, F. W. Hubbard, R. J. Kennedy, J. V. McKenna, R. J. Merrill, J. C. Orr, G. Padley, W. J. Piercy, A. C. Pue-Gilchrist, J. L. Richards, D. L. Rigsby, E. Ryan, G. H. Spencer, G. H. Schuett, W. G. Stinson, L. J. Vergin.

STUDENTS

V. E. Aksim, S. J. Alexander, W. R. Anderson, W. R. Birks, W. S. Bradbeer, B. R. Bradley, R. J. Brison, J. M. Cameron, D. R. Campbell, W. Dick, W. E. Blake, S. W. C. Fenton, W. H. Finch, W. E. Francis, R. W. Fuller, F. L. Goodwin, E. Gosh, F. Hager, E. F. Kean, G. M. Keyser, E. Langston, T. G. Lemmon, I. B. Miller, J. F. Mills, W. R. MacGregor, D. C. MacVicar, J. L. McKelvie, R. M. McKnight, P. T. Nash, W. D. Nobes, R. Noonan, R. A. Patterson, W. H. Potts, J. T. Provan, R. B. Purser, O. J. F. Rankin, R. W. Stewart, R. S. Throop, M. Turner, J. R. Wright.

AFFILIATE

R. Hinton.

Napanee (Br.Res.), MEMBERS, W. M. Lewis, H. L. Schermerhorn.

Picton (Br.NonRes.), STUDENT, J. H. Ward.

Tamworth (Br.NonRes.), STUDENT, R. H. Carroll.

Yarker (Br.Res.), STUDENT, R. G. Freeman.

Cornwall Branch District

(The counties of Dundas, Glengarry, Grenville, and Stormont.)

Aultsville (Br.Res.), STUDENT, J. G. Jarvis.

Cardinal (Br.NonRes.), MEMBERS, A. S. Fraser, R. H. Wallace; JUNIOR, C. G. Wallman; STUDENT, F. E. Trewartha.

Cornwall (Br.Res.)

MEMBERS

E. J. Bartley, B. de Hueck, A. L. Farnsworth, D. Giles, J. M. Hawkes, W. H. Magwood, W. H. Malone, H. E. Meadd, W. P. Nesbitt, D. Ross-Ross, W. L. Todd.

JUNIORS

A. G. Follows, T. F. Holmes, J. Oliver, J. N. Swartz.

STUDENTS

D. R. S. Browning, D. Feldman, Y. Kato, G. D. Mader, P. Ross-Ross, L. H. Snelgrove.

AFFILIATE

F. Winterburn.

Crysler (Br.Res.), STUDENT, J. C. Smith.

Kemptville (Br.NonRes.), JUNIOR, H. D. Ralph.

Maitland (Br.NonRes.), MEMBER, R. C. P. Webster.

Merrickville (Br.NonRes.), JUNIOR, C. S. Dinsmore.

Williamstown (Br.Res.), MEMBER, D. D. MacCrimmon.

Ottawa Branch District

(The counties of Prescott, Russell, Carleton, Lanark, Renfrew, Ottawa, Ont., Pontiac, Que., Temiskaming, Que.)

Almonte (Br.NonRes.), MEMBER, C. J. Chaplin.

Arnprior (Br.NonRes.), MEMBER, N. Malloch; JUNIORS, C. G. Taylor, W. C. E. Wood.

Arntfield (Br.NonRes.), MEMBER, J. A. Ogilvy.

Aylmer (East) (Br.Res.), MEMBER, A. N. Budden.

Bourget (Br.NonRes.), STUDENT, R. E. Major.

Britannia Bay (Br.Res.), MEMBER, H. D. Acres.

Bryson (Br.NonRes.), JUNIOR, L. J. Lichty.

Buckingham (Br.Res.), MEMBERS, W. A. Baldwin, H. A. Barends, G. J. Crane, O. R. Woermke; JUNIOR, W. M. Karn; STUDENT, D. A. Bauman.

Carleton Place (Br.NonRes.), STUDENT, M. E. Oattes.

Chalk River (Br.NonRes.), MEMBER, I. N. MacKay; JUNIORS, H. E. Gove, E. A. Russell, J. L. Strachan; STUDENT, D. S. Craig.

Deep River (Br.NonRes.), MEMBER, D. McK. Loomis; JUNIOR, E. Armbruster; STUDENTS, J. A. Harvey, J. C. Reynaud.

Dobie (Br.NonRes.), JUNIOR, E. W. Cheeseman.
Gatineau (Br.Res.), MEMBERS, C. Brain, O. S. Craik, G. D. Davidson, A. L. Swanson.
Hawkesbury (Br.NonRes.), MEMBERS, R. Boismenu, S. Sheinberg, S. Wang, H. J. Whiting, W. R. Young; JUNIOR, F. W. B. Shaw; STUDENT, E. R. Heuser.
Hull (Br.Res.), MEMBERS, A. N. Ball, J. P. Carrière, J. D. Chéné, F. L. Davis, A. V. Gale, W. F. Hadley, R. G. Johnstone, T. Lanctot, D. O. McLennan, J. W. Paterson, G. Stephenson, L. Sterns; JUNIOR, J. A. Hopps; STUDENTS, B. W. Burgess, A. A. Grignon.
Manotick (Br.Res.), MEMBER, L. R. Thompson.
Montebello (Br.NonRes.), STUDENT, P. E. Laliberte.
Noranda (Br.NonRes.), MEMBERS, D. M. Giachino, J. Handley, C. M. Hare, C. W. Justice, G. Lacasse, H. C. Seely; JUNIORS, M. LeBel, M. L. Papineau, B. Taylor; STUDENT, R. S. Haflidson.
Ottawa (Br.Res),

HON. MEMBER

C. D. Howe.

MEMBERS

J. Adam, R. C. F. Alexander, F. Alport, F. Anderson, H. V. Anderson, T. V. Anderson, H. E. Armstrong, F. C. Askwith, F. Astels, N. F. Ballantyne, B. G. Ballard, C. E. Baltzer, R. G. Bangs, J. C. H. B. Abells, M. Bellefeuille, G. Bird, W. J. Bradley, R. F. Brooks, J. C. Burroughs, J. M. Carbert, D. G. Carty, E. F. Charlesworth, L. Chwedchuk, J. F. Cottee, F. C. Creed, L. H. W. deLaunay, A. E. Fee, W. D. Flemming, F. H. Frappier, J. K. Gordon, A. H. Graves, P. G. Gregory, W. H. D. Hanchet, J. C. Hebert, P. A. Herisch, K. E. Lachance, G. J. Leaver, E. R. Lea, D. A. MacKay, J. A. D. Marion, B. I. McCaffrey, J. A. McLean, H. L. Meuser, J. W. Mills, B. M. Monaghan, N. Randall, G. Rosenthal, D. B. Smith, G. Y. Slader, H. M. Sullivan, G. W. Thompson, L. R. Wagener, L. J. Walker, R. H. Whiteman, G. N. Whyte, H. W. Wilson.

AFFILIATES

A. J. Ames, J. D. Henderson, R. A. V. Nicholson, J. A. O'Brien.

Pembroke (Br.NonRes.), JUNIOR, F. R. Remus; STUDENT, R. Horricks.
Perth (Br.NonRes.), MEMBERS, W. L. Dickson, G. C. Dunn.
Renfrew (Br.NonRes.), MEMBER, J. R. Stewart.
Russell (Br.NonRes.), STUDENT, J. C. McArthur.
Smiths Falls (Br.NonRes.), MEMBERS, F. R. V. Billie, P. L. Climo, R. E. Farmer; JUNIORS, M. W. M. Conklin, G. L. Hughes; STUDENT, J. S. Johnston.
Temiskaming, Que. (Br.NonRes.), MEMBERS, H. Anvik, J. A. Freeland, J. Frisch, B. Grav, A. K. Grimmer, C. A. Hellstrom, J. G. MacLaurin; JUNIOR, J. R. Blanchard.
Thurso (Br.NonRes.), MEMBER, A. Clairmont.
Uplands (Br.Res.), MEMBER, W. M. Diggle.
Ville-Marie (Br.NonRes.), MEMBER, C. Poirier.
Wakefield (Br.Res.), MEMBER, H. Jomini.
Westboro (Br.Res.), MEMBER, E. H. Manley; JUNIORS, R. C. Scott, J. S. Wrong.

ZONE C

(The Province of Quebec)

Montreal Branch District

(The Counties of Compton, Stanstead, Sherbrooke, Richmond, Wolfe, Arthabaska, Megantic, Chambly, Drummond, Yamaska, Richelieu, St. Hyacinthe, Bagot, Shefford, Rouville, Brome, Missisquoi, Iberville, St. Johns, Napierville, La Prairie, Verchères, Chateauguay, Huntingdon, Beauharnois, Jacques Cartier, Laval, Two Mountains, Terrebonne, L'Assomption, Montcalm, Joliette, Berthier, Maskinongé, Argenteuil, Vaudreuil, Soulanges, Abitibi, Labelle, and also all other territory in Canada not allocated.)

Acton Vale (Br.NonRes.), JUNIOR, P. E. Douville.
Amos (Br.NonRes.), MEMBERS, J. Dumont, J. Limoges; JUNIOR, J. L. Pare; STUDENT, F. Grenier.
Asbestos (Br.NonRes.), MEMBERS, L. P. Bonneau, L. O. Cooper, N. Farrar, W. F. Simpson; STUDENT, G. Piche.
Beaconsfield (Br.Res.), MEMBER, T. Eardley-Wilmot; STUDENT, R. J. S. Hope.
Beauharnois (Br.Res.), MEMBERS, H. F. Abbott, C. G. Kingsmill, R. Lord, C. Miller, C. H. Pigot, L. A. Prud'homme, J. M. Scott, F. Willows; JUNIOR, G. E. Ransom.
Beaurepaire (Br.Res.), MEMBER, O. Kemp.
Bedford (Br.NonRes.), MEMBER, J. W. H. Ford; JUNIOR, W. R. Ford.
Beebe (Br.NonRes.), MEMBER, W. B. Haselton.
Beloeil (Br.Res.), MEMBER, L. L. Allaire; STUDENT, R. V. Row.
Bishoptown (Br.NonRes.), STUDENT, R. S. Smith.
Boucherville (Br.Res.), MEMBER, E. S. Mattice.
Bourlamaque (Br.NonRes.), MEMBERS, W. G. Cosser, H. Mugaas; STUDENTS, F. W. Brown, P. Matte.
Brownsburg (Br.NonRes.), MEMBERS, F. H. Barnes, J. B. Francis, P. Guenette, J. F. Lynch; JUNIORS, R. B. Elliott, H. M. Sherwood; STUDENT, A. Waller.
Cadillac (Br.NonRes.), MEMBER, J. P. Marion.
Chambly Canton (Br.Res.), MEMBER, R. W. Phillips; JUNIOR, R. M. MacFarlane.
Chateauguay Heights (Br.Res.), MEMBER, J. M. Crawford; JUNIOR, U. F. McCulloch.
Coaticook (Br.NonRes.), MEMBER, J. J. Samson.
Como (Br.NonRes.), MEMBER, F. R. Henshaw.
Contrecoeur (Br.Non.Res.), JUNIOR, J. A. Berthiaume.
Cookshire (Br.NonRes.), JUNIOR, G. Malo.
Cowansville (Br.NonRes.), MEMBER, A. G. Scott.
Dorion-Vaudreuil (Br.Res.), MEMBER, T. F. R. Dumont.
Dorval (Br.Res.), JUNIORS, W. B. Boggs, K. H. Fritsch, A. A. Hink, D. D. Hunter, E. N. Parker.
Drummondville (Br.NonRes.), MEMBERS, O. Bessette, F. A. Chisholm, R. N. Ferguson, J. W. Gathercole, E. Goulet, B. Kelimbet, J. L. Killoran, J. T. Lakin, C. R. Matthews, JUNIORS, J. W. Marsolais, J. G. Thibault, P. D. Normandeau; STUDENTS, B. Chevrette, D. W. Ellis.
Duparquet (Br.NonRes.), STUDENT, D. F. Lillie.
East Angus (Br.NonRes.), MEMBERS, K. A. Brebner, J. A. Dickinson; JUNIOR, W. G. Baker.
Farnham (Br.NonRes.), MEMBER, K. B. Wallace.
Georgeville (Br.Non.Res.), MEMBER, W. A. Murray.
Granby (Br.NonRes.), MEMBER, L. Desrochers; STUDENT, R. Tetreault; AFFILIATE, H. O. Beaudoin.
Henryville (Br.NonRes.), STUDENT, G. F. Phénix.
Hudson (Br.NonRes.), MEMBERS, J. H. C. Maclure, J. A. Shaw; JUNIOR, J. H. Wilson.
Huntingdon (Br.NonRes.), STUDENT, D. E. MacNair.
Iberville (Br.Res.), MEMBER, H. L. Trotter; JUNIOR, R. Menard.
Joliette (Br.NonRes.), MEMBERS, J. L. Lacombe, L. E. H. Lippe, J. P. Poirier.
Kilmer (Br.NonRes.), JUNIOR, J. G. MacLeod.
Knowlton (Br.NonRes.), MEMBER, E. C. Thorne.
L'Abord à Plouffe (Br.Res.), JUNIOR, Z. Valiquette; STUDENT, C. E. Gravel.
Lachute (Br.NonRes.), STUDENT, J. Bedard.
Laprairie (Br.Res.), AFFILIATE, A. Loranger.
La Sarre (Br.NonRes.), MEMBER, A. A. Lorrain; STUDENT, J. M. Martel; AFFILIATE, J. Bonenfant.
L'Assomption (Br.Res.), MEMBERS, J. A. A. P. Bourgeois, O. Mathieu.
Lennoxville (Br.NonRes.), MEMBER, G. M. Sutherland; JUNIOR, B. P. Clarke.
L'Epiphanie (Br.NonRes.), STUDENT, R. Livernoche.
Longueuil (Br.Res.), MEMBERS, M. Beaudoin, R. C. C. Brown, J. Charnley, N. I. Edwards, J. G. Lefrançois, A. Pepin, M. Pepin, B. H. Russell, W. J. Tanner; JUNIORS, P. Brais, G. Lefebvre; STUDENTS, J. Bourbeau, F. H. Edwards, J. P. Lalande, J. P. Larose.
Magog (Br.NonRes.), MEMBER, G. B. Mitchell; JUNIOR, M. Luscombe.
Malartic (Br.NonRes.), MEMBER, J. P. Millenbach; STUDENT, L. Thauvette.
Marieville (Br.Res.), STUDENT, F. Bessette.
Macdonald College (Br.Res.), JUNIOR, R. L. Scarth.
McMasterville (Br.Res.), MEMBER, W. R. Topham.
Mont Laurier (Br.NonRes.), STUDENT, P. L. Lamarche.
Montreal (Br.Res.), HON. MEMBER, S. J. Hungerford.

AFFILIATES

C. H. Allen, F. Atkinson, R. W. Breese, P. M. Chaussée, A. R. C. Clibbon, L. C. Farand, G. W. Hand, F. Hankin, S. S. Hawkins, J. O. Houde, J. D. Johnson, S. Johnson, D. Jones, E. J. Keane, H. Little, P. W. MacFarlane, W. H. C. Mussen, D. H. Parker, N. S. Pickard, T. Reynolds, J. D. Roberts, G. P. Ste-Marie, C. A. Thomson, L. Weightman, J. Winder.

Mont Rolland (Br.NonRes.), MEMBER, L. G. Rolland.

Napierville (Br.NonRes.), MEMBER, C. Larose; JUNIOR, G. Lecavalier.

North Hatley (Br.NonRes.), MEMBER, C. L. Cate.

Notre Dame du Bon Conseil (Br.NonRes.), MEMBER, A. E. Lafleur.

Parent (Br.NonRes.), STUDENT, J. Illaszewicz

Pierreville (Br.NonRes.), MEMBER, J. Shooner.

Pike River (Br.NonRes.), JUNIOR, R. E Howie.
Plage Laval (Br.Res.), JUNIOR, S. Marceau.
Plessisville (Br.Res.), MEMBERS, R. G. Archambault, A. Chartier, R. Daoust; AFFILIATE, A. J. G. Hebert.
Pointe Claire (Br.Res.), MEMBERS, M. V. Cheshire, P. L. Mathewson, R. Thorn, E. E. Wells, L. A. Wright; JUNIOR, A. H. Coote; STUDENT, L. P. Clermont.
Prevost (Br.NonRes.), STUDENT, R. Morin.
Rawdon (Br.NonRes.), MEMBERS, H. W. R. Shepherd.
Rigaud (Br.NonRes.), MEMBER, O. Fogarty.
Rosemere (Br.Res.), MEMBERS, J. R. C. Macredie, J. G. Welsh.
Ste. Adele (Br.NonRes.), MEMBER, E. Busso.
Ste. Agathe (Br.NonRes.), JUNIOR, A. Mendelsohn.
Ste. Anne de Bellevue (Br.Res.), MEMBERS, H. G. Cochrane, F. S. Keith, R. Strickland, A. Trudeau; JUNIOR, D. C. Dobbin; AFFILIATE, E. H. Parmelee.
St. Cesaire (Br.NonRes.), JUNIOR, J. G. R. Gagne.
Ste. Dorothée (Br.Res.), STUDENT, W. B. Jackson.
St. Eustache sur le Lac (Br.Res.), MEMBER, J. A. Reynolds.
St. Gabriel de Brandon (Br.NonRes.), MEMBER, R. M. Charlton.
St. Hilaire (Br.Res.), JUNIOR, A. A. B. McMath; STUDENT, R. G. Baril.
St. Hyacinthe (Br.NonRes.), MEMBERS, A. A. Belanger, L. Crepeau; STUDENTS, G. Darveau, R. H. Gingras.
St. Jerome (Br.NonRes.), MEMBERS, G. Brosseau, G. H. Kirby, F. Valiquette; JUNIORS, R. P. Bales, F. Brien, G. Fournier.
St. Jean (Br.Res.), MEMBERS, C. Craig, E. Gaudette; STUDENT, G. P. Dawson.
St. Joseph de Sorel (Br.NonRes.), MEMBER, G. C. Gauthier.
St. Lambert (Br.Res.), MEMBERS, O. A. Barwick, J. G. G. Belle-Isle, H. Cogdell, W. E. Davison, R. A. Lombard, C. D. Norton, F. J. A. Old, M. J. Rutledge, J. L. M. Tait, F. W. Tanton, H. H. Vroom, R. M. Walker; JUNIORS, A. H. Berry, R. J. Graham, M. P. Gunning, M. N. Joubert, D. M. Lappi; STUDENTS, P. Corio, L. A. Dion, J. Dumka.
Saint Roch (Br.NonRes.), MEMBER, F. Racicot.
Ste. Rose (Br.Res.), MEMBER, S. G. MacDermot.
Ste. Therese (Br.Res.), MEMBERS, E. W. Farmer, E. S. Holloway, E. Monette; JUNIOR, H. G. Roy.
Senneville (Br.Res.), MEMBER, F. W. Angus.
Sherbrooke (Br.NonRes.), MEMBERS, D. Cameron, G. J. Cote, A. C. Crepeau, G. M. Dick, H. V. Haight, E. T. Harbert, F. H. Hibbard, R. H. Hodgson, G. Masse, R. I. McCabe, F. S. MacDonald, R. B. McRae; JUNIORS, J. R. Lemieux, M. Michaud; STUDENT, D. A. Burris.
Sorel (Br.NonRes.), MEMBERS, A. D'Amours, J. L. Laroche, Y. Marchand, J. Tetreault; JUNIORS, R. Leduc, L. Normandeau, A. Rochon; STUDENTS, G. Bourgault, J. Gariepy, D. Noiseux, E. Pontbriand.
Strathmore (Br.Res.), MEMBER, C. A. Allen.
Sullivan Mines (Br.NonRes.), MEMBERS, J. A. R. Faucher, L. Pineau, L. C. Belliveau.
Terrebonne (Br.Res.), MEMBER, J. P. Piche; STUDENT, G. Gascon.
Thetford Mines (Br.NonRes.), MEMBERS, W. J. Johnson, J. M. Michaud; STUDENT, E. Gilbert.
Valcourt (Br.NonRes.), MEMBER, R. Saint-Pierre.
Val D'Or (Br.NonRes.), MEMBERS, L. Brossard, L. P. Cousineau, L. Dumont, T. Koulomzine; STUDENT, S. Godbout.
Valleyfield (Br.NonRes.), MEMBERS, R. Belanger, A. W. Sullivan; JUNIORS, C. Forest, J. E. Wells; STUDENTS, M. DeGrandmont, L. P. Derome.
Valois (Br.Res.), MEMBER, W. Jackson; STUDENT, V. Zabek.
Victoriaville (Br.NonRes.), MEMBERS, R. Boisclair, L. Hediger, S. C. Hill, J. P. Lalonde.
Waterloo (Br.NonRes.), MEMBERS, L. DeLisle, W. D. Schofield.
Windsor Mills (Br.NonRes.), MEMBER, T. W. Houghton.
Woodlands (Br.Res.), MEMBER, H. M. Dibblee.

Saint Maurice Valley Branch District

(The counties of Champlain, Nicolet and St. Maurice)

Almaville (Br.Res.), MEMBER, J. R. Eastwood; AFFILIATE, G. Auger.
Cap de la Madeleine (Br.Res.), MEMBERS, P. E. Cadrin, P. Descoteaux, R. Morrissette, E. R. McMullen, W. Plante, H. G. Timmis; JUNIOR, R. A. Parsons.
Grand'Mère (Br.Res.), MEMBERS, J. C. Bèique, F. W. Bradshaw, G. R. Goring, V. Jepson, J. Joyal, J. A. Michaud, R. Saintonge; JUNIORS, G. E. Backer, M. C. Caron, A. Courchesne, E. K. Dokken, R. E. Kirkpatrick, R. MacPherson, J. B. Sweeney, J. P. Villemure, J. P. Woods; STUDENT, J. W. Powers.
La Tuque (Br.NonRes.), MEMBERS, R. Baril, J. M. Jopp, R. D. Packard; JUNIORS, A. T. Girard, E. M. Macleod, L. R. Ravary, J. E. B. Sawyer; AFFILIATE, P. G. Wolstenholme.
Nicolet (Br.NonRes.), STUDENT, A. Bourbeau.
Rapide Blanc (Br.NonRes.), JUNIOR, E. A. Gareau.
Shawinigan Falls (Br.Res.),

MEMBERS

A. B. Balcom, E. T. Buchanan, G. Cadenhead, C. C. Cuthbertson, H. C. DeBlois, E. A. Delisle, R. Dorion, M. Eaton, A. C. Fleischmann, W. M. Harvey, A. H. Heatley, A. S. Holder, E. D. Lavergne, J. H. Legg, C. R. Morris, W. A. E. McLeish, F. C. Richardson, L. A. Robillard, C. T. M. Robinson, H. Sorgius, L. B. Stirling, P. G. Telmosse, A. Trudel, H. J. Ward, A. H. Watier, J. S. Whyte, A. Winnikow, H. K. Wyman.

JUNIORS

J. A. Brooks, P. Codd, E. E. Copping, C. G. deTonnancour, J. J. Dupuis, J. G. Garceau, H. Haakonsen, J. R. Hamel, J. C. Hamilton, W. K. W. Hastey, L. F. Horne, J. L. Jomini, G. B. MacCoy, H. A. Norton, A. B. Rossetti.

STUDENTS

M. Beaudry, G. R. Dargis, J. H. Douglas, P. Lavallee, P. R. Martin, W. G. Seline, C. G. Swift, L. Turcotte.
St-Elie de Caxton (Br.Res.), MEMBER, S. Troop.
St-Tite (Br.NonRes.), MEMBER, A. Morin.
Trois-Rivières (Br.Res.)

MEMBERS

G. B. Baxter, F. X. T. Berlinguet, H. W. Burri, E. Butler, J. Dessaulles, P. E. Dufresne, J. H. Fregeau, N. Gray, H. O. Keay, M. Langlois, P. E. McIlhargey, R. E. McMillan, C. H. Neil, A. W. Peters, C. F. Walker, H. Walker, J. F. Wickenden, S. E. Williams.

JUNIORS

G. H. deWitt, W. R. Mackay, C. W. McLeod, T. W. Ross, L. G. Symons.

STUDENTS

A. T. Farmer, A. Glassman, J. P. Milette, C. G. Mills, J. J. Normand, Y. Trudel.

Quebec Branch District

(The counties of Gaspé, Bonaventure, Matane, Rimouski, Témiscouata, Kamouraska, L'Islet, Montmagny, Bellechasse, Dorchester, Beauce, Frontenac, Anticosti, Lotbinière, Lévis, Charlevoix, Montmorency, Québec, Portneuf.)

Sydney (Br.Res.).

MEMBERS

C. M. Anson, Y. C. Barrington, M. W. Booth, I. W. Buckley, W. E. Clarke, M. F. Gossitt, F. A. Crawley, J. H. Fraser, L. Frost, E. L. Ganter, W. P. Graham, C. L. Kenney, J. A. Macdonald, W. A. MacDonald, S. C. Mifflen, J. R. Morrison, J. A. MacLeod, T. L. McCall, H. J. McCann, S. G. Naish, J. A. Russell, C. M. Smyth, W. L. Stuewe, V. T. B. Williams, W. S. Wilson.

JUNIORS

R. E. MacDonald, N. D. Parlee, G. W. Ross, G. A. White.

STUDENTS

S. Glickman, A. E. A. Love, D. McKerron, R. L. Mullins.

AFFILIATE

M. R. Chappell.

Sydney River (Br.Res.), JUNIOR, A. M. Miller.

Wabana, Nfld. (Br.NonRes.), MEMBERS, C. B. Archibald, J. B. Petrie; JUNIOR, F. Rees.

Whycocomagh (Br.NonRes.), JUNIOR, H. G. Gillis.

OTHER COUNTRIES

Argentina

Basavilbasco, MEMBER, G. W. Coward.

Australia

Melbourne, MEMBER, T. P. Strickland.
Nedlands, JUNIOR, W. C. Wilkinson.
Sydney, MEMBER, M. E. Tregarthen.

Bermuda

Devonshire, MEMBER, S. H. Kemsley.

Bolivia

La Paz, JUNIOR, S. E. Halme.

Brazil

Sao Paulo, MEMBERS, P. M. deChazal, C. M. Steeves, J. W. Suthren; JUNIOR, H. I. Hamilton; STUDENT, W. C. Robertson.

Rio de Janeiro, MEMBERS, L. R. Armstrong, A. W. K. Billings, F. Chadillon, H. Gendron, C. J. Oliver.

British Guiana

Georgetown, MEMBERS, J. C. Batzold, T. H. Henry.

Ituni, MEMBER, T. M. MacNab.

Mackenzie, MEMBER, R. W. Johnson; JUNIOR, W. J. Staples.

British West Africa

Freetown, MEMBER, A. O. Barrie.

British West Indies

Antigua, MEMBERS, R. E. Smythies, T. R. Theobalds.

Ewarton, MEMBER, O. M. Clarke.
Grenada, STUDENT, C. Knight.
Kingston, MEMBER, A. D. Scott.
Pointe-a-Pierre, JUNIOR, K. K. Balderson.
Port-of-Spain, MEMBERS, J. H. Reid, F. R. G. Wrigley; STUDENT, R. D. Archibald.
San Fernando, STUDENT, K. A. Lawrence.
St. Joseph, MEMBER, L. R. Gransaull.
Tunapuna, MEMBER, P. R. Gransaull.

Ceylon

Colombo, MEMBER, P. M. Smith
Minneriya, MEMBER, W. A. Wheten.

China

Shanghai, MEMBER, W. N. Bostock.

Colombia

Barranca-Bermeja, MEMBERS, G. L. Colpitts, K. R. Shipley; JUNIORS, J. F. Baxter, R. L. Blackett.

Bogota, MEMBERS, J. H. Addison, J. Lefebvre; JUNIOR, G. F. Coote; STUDENT, P. Troalen.

Cali, MEMBER, H. A. Fuller.
El Centro, JUNIOR, D. C. Wetterberg.

Ecuador

Guayaquil, JUNIORS, E. J. Connor, F. W. Uruski; STUDENT, J. H. Nicholls.

England

Bath, MEMBER, E. H. Harrison.
Beckenham, MEMBER, D. Kennedy.
Bedford, MEMBER, C. O. Thomas.
Bickley, MEMBER, H. B. Fergusson.
Birmingham, MEMBER, C. E. Bell.
Bristol, MEMBER, A. G. Ashford.
Chippenham, MEMBER, M. A. Ravenor.
Crowborough, MEMBER, G. D. Rhodes.
Etham, MEMBER, P. B. Roberts.
Finchley, MEMBER, J. W. Houghton.
Greentithe, MEMBER, J. H. McIntosh.
High Wycombe, MEMBER, J. R. Cosgrove.
Horrabridge, MEMBER, N. P. Dalziel.
Hyde, JUNIOR, W. E. Adlington.
Kidderminster, MEMBER, H. J. Whittaker.

Weybridge, MEMBER, W. S. Hollyhock.
Wolverhampton, MEMBER, J. F. Lester.

France

Paris, HON. MEMBER, M. J. Rabut; MEMBER, D. C. Unwin-Simson.

Iceland

Reykjavik, JUNIOR, J. Bjarnason.

India

Bombay, MEMBER, R. K. Nariman.
Chota Muri, MEMBER, J. E. Pepall.
Howrah, MEMBER, F. S. Gumley.
Simla, MEMBER, R. J. Mattson.

Mexico

Mexico City (D.F.) MEMBERS, G. R. G. Conway, F. S. Easton.

Norway

Oslo, MEMBER, O. J. Rorvik.
Skien, MEMBER, O. H. Tjonnaas.

Peru

Lima, MEMBERS, M. A. Matheson, M. S. Saunders.
Negritos, JUNIOR, J. D. Rice.
Oroya, JUNIOR, J. Poliskin.
Talara, MEMBERS, C. J. Bullick, O. F. Bush.

Rhodesia

Kitwe, MEMBER, A. M. Morton.

Scotland

Aberdeen, MEMBER, H. Johnson.
Fairmount Annan, MEMBER, J. B. Newton.
Glasgow, MEMBERS, N. M. Brydon, T. Fife, J. McGregor, J. Shannon; JUNIOR, G. F. G. Hughes.
Milngavie, MEMBER, G. Sproule.
Portree, MEMBER, W. H. Hunt.
Prestwick, MEMBER, J. M. Begg.

South Africa

Maseru, MEMBER, S. C. Carver.
Pietermaritzburg, JUNIOR, E. L. Miller.

Strait Settlements

Singapore, JUNIOR, G. Savard.

Sweden

Stockholm, MEMBER, F. H. Palmer.

Turkey

Ankara, MEMBER, F. E. M. Thrupp.

Venezuela

Maracaibo, MEMBERS, C. B. Macdonald, G. C. Semmens, M. G. Taylor; JUNIORS, F. S. Idenden, H. S. Wright; STUDENT, W. F. Dawson.

Wales

Bridgend, JUNIOR, P. D. Verschoyle.
Cardiff, MEMBER, C. H. Oakes.
Llanrynach, MEMBER, D. H. James.

United States of America

Albany, N.Y., MEMBER, A. W. Harrington.
Allendale, N.J., JUNIOR, N. W. Kershaw.
Ann Arbor, Mich., MEMBER, J. A. Van den Broek.
Arcadia, Cal., MEMBER, B. E. Barnhill.
Arlington, Va., MEMBER, J. B. Carswell.
Atlanta, Ga., STUDENT, F. Dixon.
Arnold, Mo., JUNIOR, J. W. Ames.
Babylon, N.Y., JUNIOR, C. G. Banting.
Baltimore, Md., MEMBERS, A. G. Christie, J. A. Walls; JUNIORS, E. J. Bobyn, T. E. Martin.
Bangor, Me., MEMBER, L. S. Dixon.
Bay City, Mich., STUDENT, S. G. Spivak.
Belleville, Mich., MEMBER, C. W. Bickers.
Berwick, Pa., MEMBER, W. Yost.
Bloomfield, N.J., MEMBER, M. H. Teaze.
Bloomington, Ind., MEMBER, T. Goby.
Bridgeport, Conn., MEMBER, A. T. E. Wanek.
Bronxville, N.Y., MEMBER, E. R. Jacobsen.
Brownville Jct., Me., MEMBER, E. M. Jelly.
Boston, Mass., MEMBERS, F. A. Barbour, M. Jacobs; JUNIOR, H. P. Eddy; STUDENT, R. J. Joy.
Cambridge, Mass., MEMBERS, C. B. Breed, W. L. Campbell, W. M. Fife, G. A. Jenkins, W. M. Murray; JUNIORS, H. M. Coverdale, A. B. Extence, R. Scott; STUDENTS, R. W. Brandley, V. P. Rossiter.
Canton, O., JUNIOR, R. S. Cuthbertson.
Charleston, S.C., MEMBER, L. de B. McCrady.
Charlotte, N.C., MEMBERS, F. H. Cothran, W. S. Lee, D. F. Noyes.
Cheshire, Conn., MEMBER, E. J. Beugler.
Chicago, Ill., MEMBERS, C. E. De Leuw, L. F. Harza; JUNIOR, L. A. McKeown.
Chillicothe, O., MEMBER, G. H. Pringle.
Cleveland, O., MEMBER, C. L. Breithaupt; JUNIOR, J. B. Moore.
Collinsville, Conn., MEMBER, H. E. Smith.
Columbus O., MEMBER, G. C. Turner, JUNIOR, G. Sinclair.
Crosset, Ark., MEMBER, K. O. Elderkin.
Dade City, Fla., MEMBER, C. H. S. Venart.
Dayton, O., STUDENT, P. Schurman.
Denver, Col., MEMBER, W. J. Pearce.
Denville, N.J., MEMBER, P. W. Greene.
Doraville, Ga., JUNIOR, S. L. Coulter.
East Orange, N.J., MEMBERS, F. F. Longley, F. A. Snyder.
Elizabeth, N.J., JUNIOR, C. R. Jacobs.
Ellsworth, Me., MEMBER, H. N. Skolfield.
Escanaba, Mich., MEMBER, O. B. Mason.
Evanston, Ill., MEMBER, H. E. Riggs.
Fort Worth, Tex., MEMBER, R. E. Lembcke.
Garden City, Kan., STUDENT, J. S. Hubley.
Greenwich, Conn., MEMBER, R. D. Mershon.
Halethorpe, Md., MEMBER, G. A. Lindsay.
Hoboken, N.J., MEMBER, A. R. MacGowan.
Holyoke, Mass., MEMBER, J. L. Tighe.
Houston, Tex., MEMBER, R. H. Riva.
Inglewood, Cal., JUNIOR, F. R. Dwyer.
Ithaca, N.Y., MEMBER, W. L. Malcolm; JUNIOR, L. Page; STUDENT, D. H. MacDonald.
Jackson Heights, N.Y., MEMBER, C. M. Barnes.
Kansas City, Mo., MEMBERS, W. W. Crouch, E. E. Howard.
Katonah, N.Y., MEMBER, A. A. McLaren.
Lafayette, Ind., STUDENT, A. Cahn.
La Jolla, Cal., MEMBER, C. C. Whittier.
Lincoln, Neb., MEMBER, G. M. Williams.
Logan, Utah, JUNIOR, E. A. Olafson.
Los Angeles, Cal., MEMBERS, M. Gibbs, L. G. Jost, E. Laidrich, E. B. Rider.
Lynn, Mass., STUDENT, R. E. Ayers.
Madison, Wis., HON. MEMBER, D. W. Mead.
Marlboro, Mass., JUNIOR, P. Bousquet.
Marion, Ind., JUNIOR, F. W. Molland.
Martinez, Cal., MEMBER, C. M. Dean.
Meridan, Conn., MEMBER, E. B. Wardle.
Milford, Conn., MEMBER, J. E. A. Warner.
Milwaukee, Wis., MEMBER, J. F. Roberts.
Minneapolis, Minn., JUNIOR, G. J. Dodd.
Morrisville, Pa., JUNIOR, M. J. Olafson.
Mt. Vernon, N.Y., MEMBER, J. A. DeCew.
Mountain Lakes, N.J., MEMBER, G. D. Sauer.
New Castle, Pa., MEMBER, C. E. Legris.
New Haven, Conn., JUNIOR, M. Zides.
New York, N.Y., MEMBERS, B. A. Bakhmeteff, P. R. Boese, G. H. Burgess, G. W. Burpee, G. C. Clarke, F. G. Coburn, W. W. Colpitts, C. E. Davies, T. H. Doherty, J. W. Doty, E. G. Eggertson, H. S. Ferguson, J. Forgie, C. E. Fraser, G. L. Freeman, L. Greenberg, J. F. Greene, J. M. M. Greig, J. R. Groundwater, G. F. Hardy, G. R. Heckle, F. J. Hoar, W. J. Johnston, N. T. McKee, S. Nathanson, G. W. E. Nicholson, H. D. Nickle, H. B. Oatley, M. Pirnie, J. Pringle, J. P. Rubush, B. L. Silver, D. B. Steinman, R. W. Tassie, F. H. Taylor, K. H. Themain, E. Vinet, W. L. Waters, E. I. Wigdor, S. H. Woodard; STUDENT, P. Grenier; AFFILIATE, F. A. Annett.
North Hollywood, Cal., MEMBER, J. Hammersley-Heenan.
Nutley, N.J., MEMBER, J. W. Hunter.
Oakland, Cal., MEMBER, H. A. Calkins.
Ogden, Utah, MEMBER, O. Weeks.
Okanogan, Wash., JUNIOR, W. J. Breslin.
Orlando, Fla., MEMBER, T. T. Irving.
Palo Alto, Cal., JUNIOR, G. Ford.
Pasadena, Cal., MEMBER, J. D. Mackerras; JUNIOR, J. V. Charyk; STUDENT, A. Roshko.
Pass-a-Grille Beach, Fla., MEMBER, B. Ripley.
Pass Christian, Miss., MEMBER, R. R. Hepinstall.

COMMONWEALTH CONFERENCE

This conference was referred to in general terms in the October issue of the *Journal*. Now that the resolutions and conclusions have been presented to Council, it becomes possible to report in greater detail. In view of the uniqueness of the conference, the wide representation and the possibility of expansion in activities and cooperation that it proposed, it is believed the membership in general will be interested to know more about it.

In the first place it should be recorded that the arrangements for every detail of the programme were perfect. Not a single item was overlooked and the precise timing kept the conference going at the fast pitch necessary to complete the agenda within the prescribed period. The officers of the three "host" institutions who were responsible for the programme deserve great credit for the perfection of all arrangements, and for the warmth of their hospitality.

The participating organizations and the delegates were as follows:

The Institution of Civil Engineers:

Sir Thomas Peirson Frank, president
Sir William Thomson Halcrow, president-elect
Sir Reginald Edward Stradling, vice-president
Sir Roger Gaskell Hetherington, member of council
Sir Frederick Charles Cook, vice-president
Mr. E. Graham Clark, secretary

The Institution of Mechanical Engineers:

Mr. Oliver Vaughan Bulleid, president
Professor F. C. Lea, past-president
Dr. H. J. Gough, vice-president
Mr. Alfred Roebuck, councillor
Mr. D. R. Pye, councillor
Dr. H. L. Guy, secretary

The Institution of Electrical Engineers:

Dr. Percy Dunsheath, president
Mr. V. Z. deFerranti, president-elect
Sir Arthur Fleming, past-president
Mr. T. G. N. Haldane, vice-president
Mr. Percy Good, vice-president
Mr. W. K. Brasher, secretary

The Institution of Engineers, Australia:

T. E. Upton, president
W. R. Hebblewhite, councillor

The Institution of Engineers, India:

Rai Bahadur P. R. Agarwal, councillor
John Chambers, councillor

The New Zealand Institution of Engineers:

C. W. Hamann, councillor
D. B. Mansergh, past councillor

South Africa: Representing (a) The Society of Civil Engineers, (b) The Institution of Engineers, and (c) The Institute of Electrical Engineers: Professor W. G. Sutton, past president (a) and (b).

A. J. Adams, Secretary of Associated Scientific and Technical Societies.

The Engineering Institute of Canada:

J. B. Hayes, president
L. Austin Wright, general secretary

As this was the first conference it was not possible to reach final conclusions on all items. Many were left to be discussed further between organizations after additional consideration had been given them by the individual organizations. The advisability of holding additional conferences at regular intervals was discussed but it was agreed that no decision be made at the present time. It was evident, however, that the present conference had attained its objectives, and would go towards advancing the interests of the profession within the Commonwealth.

It was a matter of satisfaction to all that there were no differences of opinion on any subject, and there was a very ready and complete accord on all proposals to exchange privileges between organizations. The spirit of full cooperation between all parts of the Commonwealth was very apparent and very inspiring.

The conference opened with a luncheon at Claridges on Monday, September 16th, at which Mr. O. V. Bulleid, president of the Institution of Mechanical Engineers, presided. A business session in the council room of the Institution of Civil Engineers followed the luncheon where under the chairmanship of Sir Peirson Frank, president of the Institution of Civil Engineers, consideration was given to the possibility of establishing procedures for the joint publication and discussion of technical papers; and to a comparison of practices with regard to abstracting services, library classification systems and public relations. The agenda provided also an opportunity to discuss the exchange of membership privileges and other courtesies to members of any one organization visiting in the country of another, with the object of agreeing on a reasonably uniform procedure.

Consideration was given to broadening throughout all the organizations the presently partially established principle of providing the publications of one society to the

Front row, left to right: T. E. Upton, O. V. Bulleid, Sir T. Peirson Frank, Dr. P. Dunsheath, J. B. Hayes. Second row: Sir Wm. T. Halcrow, Prof. W. G. Sutton, W. R. Hebblewhite, Rai Bahadur P.R. Agarwal, Dr. H. L. Guy, D. B. Mansergh, V. Z. deFerranti, Dr. H. J. Gough, W. K. Brasher, C. W. Hamann. Last row: Graham Clark, Dr. L. Austin Wright, A. J. Adams, John Chambers.

members of another at a privilege rate, and to the activities of the three senior organizations in the various parts of the Commonwealth in relationship to the activities of the societies already established there and represented at the conference.

The second day provided an all day programme of events outside the council room. It began with a visit to the great Battersea Power Station, and included an inspection of the extensive buildings of the London County Council where in the engineers office the plans of the new Waterloo Bridge were examined. Immediately after, the bridge itself was visited.

A rare privilege was afforded at noon when the delegates were the guests of the Worshipful Company of Goldsmiths for luncheon in Goldsmiths' Hall. A much appreciated feature was an exhibition of some of the Company's oldest plate compared with examples of the designs of modern artists and artisans. Mr. G. R. Hughes, clerk to the company, received the guests on behalf of the Master and Wardens.

In the afternoon a tour was made of the devastated areas of the City of London. The delegates were fortunate to have as their guide Mr. F. J. Forty, City Engineer, whose intimate knowledge of the old city before the blitz and his affection for it provided a stirring story of stirring events. It is not likely that any person in London was better suited to this assignment. His thrilling short talk about the Guildhall, while the group stood in the badly damaged Great Hall, the only remaining part of that famous institution whose history goes back 2000 years, will remain forever in the minds of the listeners.

The afternoon was concluded with a reception to the delegates at the Institution of Civil Engineers, where an opportunity was afforded of meeting the officers of the three senior institutions and other distinguished representatives of British engineering and science, including Sir Alexander Gibb, Sir Robert Watson-Watt, Air Commodore Frank Whittle, Sir Ben Lockspeiser.

Wednesday's sessions were held at the headquarters of the Institution of Mechanical Engineers. It is interesting to note that the original plan to meet in the council room had to be abandoned because of the noise of pneumatic drills and chippers across the way which were removing the heavy brick window enclosures that had protected the room where the British Cabinet had met after their premises had been bombed at Westminster. Under these circumstances, a room on the other side of the Institution building made a better meeting place.

The session was presided over by Mr. O. V. Bulleid, president of the Institution of Mechanical Engineers, and Chief Mechanical Engineer, Southern Railway. The entire session was devoted to a discussion of standards of education and training as a basis for membership in the societies, to see if there were some possibility of agreeing on requirements that would be uniform for all organizations. Luncheon was provided at the Cafe Royal by the president and council of the Institution of Mechanical Engineers.

All day Thursday was spent at the National Physical Laboratory at Teddington where, under the leadership of Sir Charles Darwin, director, many interesting departments were visited and much was learned about the vast amount and variety of war work done in this institution.

Luncheon was held in the nearby Mitre Hotel at Hampden Court, during which Sir Charles Darwin made an informal but informative short address, after which the party returned to the National Physical Laboratory.

Friday's sessions were held in the council room of the Institution of Electrical Engineers at Savoy Place immediately adjacent to the new Waterloo Bridge. The chairman was Dr. Percy Dunsheath, president of the Institution, and W. K. Brasher acted as secretary, both of whom are well known to Institute members who met them at the 1946 annual meeting in Montreal. The luncheon was given by the president and council of the Institution of Electrical Engineers at the Savoy Hotel.

The agenda dealt with the requirements other than educational for admission and transfer in the various organizations, and compared the different membership classifications, to see if any changes could be agreed upon that would promote closer uniformity in such classifications.

The agenda provided also for a discussion of the desirability and practicability of evolving some form of joint membership between organizations. The discussion disclosed many constitutional difficulties in the way of this objective, but further study is to be given to it.

At five o'clock, J. B. Hayes, the president of the Institute received the delegates and overseas members of the Institute at the Dorchester Hotel, as noted elsewhere in this *Journal*.

There were no fixed engagements over the week-end but the conference was resumed on Monday, Sept. 23rd in the council room of the Institution of Civil Engineers with Sir Peirson Frank in the chair.

The agenda dealt generally with the status of the engineer in the public esteem, and in detail provided a multitude of interesting divisions of the subject. It brought to light great differences in the situation in Canada as compared to other parts of the Commonwealth. In no other country is the responsibility for protection of the public divorced from the work of the professional society as it is in Canada. Membership in the technical society is the qualification looked upon by the public as a guarantee of competence. All organizations were greatly interested in the advances made in Canada, and it was shown that somewhat similar steps have been taken in New Zealand and considered in Australia, India and Africa.

Considerable time was taken to discuss the relationship of the senior societies to specialized societies that catered solely to a single phase of the larger field of engineering, with the object of discovering additional means by which the groups could further develop cooperation. As a subdivision of this subject there was a discussion on the relationship between the professional society and subprofessional groups that operate in the same field.

Employment services were also dealt with at length, as were also the possibilities of developing a service to give information on emigration conditions, and arrangements for interchange of teaching staff and apprentices.

Another item of interest to the Canadians dealt with the move to establish in some parts of the Commonwealth associations or guilds of engineers having protectionist motives as the basis of their policy.

Tuesday's programme gave the delegates some of the highlights of the whole conference. First, a tour was made of the London docks and the Royal Dock Group under the guidance of Mr. Shepherd-Barron, chief engineer of the Port of London Authority. These areas constitute a city in themselves with their miles of dock frontage and acres of warehouses and dock space. No one who has not seen the docks can have any conception of their extent and their facilities. They are mute testimony to the leading position that London occupies in world trade. It was surprising to learn of the relatively small amount of damage suffered from bombs and fire during the war in spite of the special attention paid to the area by the Huns.

The party was embarked in an Admiralty launch and after an exceedingly interesting trip on the River Thames, was greeted at Greenwich by Engr. Vice-Admiral Sir John Kingcombe, Engineer in Chief of the Fleet. As his guests they had luncheon in the famous Painted Hall of the Royal Navy College, a rare and much appreciated privilege. The Hall was only slightly damaged by bombs, mostly restricted to the destruction of several of the large windows. The paintings which completely cover the walls and ceilings of this Hall are remarkable, and in conjunction with the splendid architectural design and the severe furnishings produce a most unusual and striking effect. The paintings took nineteen years to complete.

In the afternoon a visit was made to the Royal Observatory during which many of the earliest pieces of astronomical apparatus were inspected. Later the group visited the National Maritime Museum which contains many of the most important and interesting objects in England. In the library are many very old and rare volumes, and the delegates were permitted to see and handle some of the most interesting, such as an original Ptolomey Geographia dated 1462, a volume of Pepys, Capt. Cook's Narrative of his Second Voyage, and a Volume of Lady Hamilton's letters. In the museum one of the most interesting exhibits was that of timekeepers, and included Harrison's model which was the first really successful timekeeper in the world. With it he won the £20,000 prize in 1713, after a trip in a sailing ship to Jamaica during which it was out only five seconds. That evening the delegates were received at the Savoy Hotel by Nowab Zain Tar Jung, president of the Institution of Engineers (India).

On Wednesday the 25th the conference continued in the council room of the Institution of Electrical Engineers with Dr. Percy Dunsheath in the chair, and was devoted principally to a consideration of the part played and to be played by the institutions in the encouragement of and provision of facilities for research. In several parts of the Commonwealth, but principally in England the societies have funds for research work. The object of the meeting was to see if a measure of cooperation could be developed between organizations to expand and to amplify this work.

In the afternoon the party was taken to the General Post Office Research Establishment at Dollis Hill where they were met by the Controller Dr. W. G. Radley. Many interesting departments were visited and particular interest was shown in television developments.

At six o'clock all delegates attended the British Commonwealth and Empire Lecture of the Royal Aeronautical Society held in the auditorium of the Institution of Civil Engineers, at which Sir Henry Self was the speaker, after which they adjourned to the headquarters of the Society in Hamilton Place where they were dinner guests of the council of the Society. The president, Sir F. Handley-Page, presided. The company included many persons whose names are closely associated with the advance of aeronautics and industry in England, such as Lord Teddar, Marshal of the R.A.F., Lord Winster, Minister of Civil Aviation, Lord Knollys (B.A.O.C). Lord Amherst (B.E.A.C.), Air Vice-Marshal D. C. T. Bennett (B.S.A.A.), Sir John S. Buchanan, Sir Alan Cobham, Air Marshal Sir Ralph Cochrane, O.C. Transport Command, Sir Roy Fedden.

Thursday was set aside as a day of divertissement. In the morning the party was driven to the country club of the Royal Automobile Club at Epsom where they were welcomed by Col. C. W. Myddleton, vice-president of the Club. Late in the afternoon the party returned to the Institution of Civil Engineers to hear the Parson Memorial Lecture delivered by Sir Hugh Chance on "Recent Developments in Optical Glass Manufacture." After the lecture the delegates dined with the council of the Institution under the chairmanship of Sir William Halcrow, president-elect. During the function they were privileged to meet representatives of the Royal Society (Sir Rob. Robinson, President) the Physical Society (Prof. D. Brunt, President), the North East Coast Institution of Engineers and Shipbuilders, the Institution of Marine Engineers, and the Institution of Naval Architects.

Friday the 27th was the last day of the formal programme. The session was carried on in the council room of the Institution of Mechanical Engineers with Mr. O. V. Bulleid in the chair. The time was devoted principally to the preparation of resolutions which summarized the work and conclusions of the conference, and to a discussion of details related to publicity and future policy. Several items of new business were also introduced and discussed as fully as time permitted. Arrangements were made for additional conferences in special subjects for the following week. An invitation was submitted by Prof. Sutton (South Africa) on behalf of the three societies he represented to hold a similar conference in South Africa.

That evening the conference was formally concluded by a banquet given at Grosvenor House by the councils of the three host institutions.

Lord Dudley Gordon (vice-president Institution of Mechanical Engineers) proposed the toast to "Engineering and the Commonwealth", which was replied to by Professor W. G. Sutton of South Africa and J. B. Hayes of Canada.

LONDON MEETING

An event unique in Institute history took place in London, England, on Friday, September 20th. Taking advantage of the presence of the president and general secretary a meeting was held for all members resident in that country.

The meeting was held at the Dorchester Hotel and took the form of a reception. As a feature the president presented to Prof. Fred Webster the certificate of Honorary Membership which was awarded him by Council on December 19th, 1942. In acknowledgment Professor Webster spoke of the pleasure it had given him to be in Canada during the war, and by his lectures on the effects of bombing on structures, to make contribution to Canada's war effort.

Members and non-members in many parts of Canada

Prof. Fred Webster, Hon.M.E.I.C., Sir Peirson Frank, Mr. A. J. Adams, Prof. W. G. Sutton, Mr. C. W. Hamann.

Prof. Fred Webster receives from President J. B. Hayes his certificate of Honorary Membership in the Institute.

will well remember the series of lectures given by Prof. Webster in Hart House at the University of Toronto under the auspices of the Institute and the several lectures delivered to branches. It was a rare privilege to have instruction on this then important topic from the Allies outstanding expert.

Many suggestions were made by members as to future activities of the Old Country group. It was felt that as one-time residents of Canada it would be pleasant and advantageous to meet once or twice throughout the year,

Col. G. M. Carrie, Col. L. Eon and Mrs. Eon, Col. van Steenburgh, Dr. H. L. Guy.

and it was agreed that further consideration would be given to the proposals.

Special guests of the Institute were the officers of the British Institutions, and the delegates to the Commonwealth conference. The complete list of those present follows:

Frank, Sir Thomas Peirson, President; Halcrow, Sir Wm. T., President-elect; Clark E. Graham Secretary; Institution of Civil Engineers.

Dunsheath, Dr. Percy, President; de Ferranti, V. Z., President-elect; Brasher, W. K., Secretary; The Institution of Electrical Engineers.

Bulleid, Oliver Vaughan, President; Railing, Sir Harry, President-elect; Guy H. L., Secretary; Institution of Mechanical Engineers.

Col. Wm. Van Steenburgh, and the delegates to the Commonwealth Conference.

Members: Abbott, C. A., Gravesend; Collier, Col. E. V., London; Carrie, Col. G. M., London; Eon Col. L. Guy, London; Gibb, Sir Alexander, London; Hollyhock, W. S., Surrey; Houghton, J. W., Finchley; Hubble, C. W., Surrey; Hughes, G. F. G., Glasgow; Johnson, Howard, Aberdeen; Fergusson, H. B., London; Kennedy, Duncan, Kent; Lester, J. F., Wolverhampton; Pinto, E. A., London; Rhodes, Brig.-Gen. Sir Godfrey, Sussex; Simpson, P. London; Thomas, C. O., Bedford; Webster, Prof. Fred., London; Verschoyle P. D., Glamorgan, South Wales.

BRITISH COMMONWEALTH STANDARDS CONFERENCE

The British Commonwealth Standards Conference, which has been sitting in London for the past fortnight, was attended by representatives from the national standards organizations of Australia, Canada, Eire, India, New Zealand, Palestine, South Africa and the United Kingdom.

The Conference agreed on methods to be employed for continuous co-operation between the Commonwealth countries with a view to the development of unified standards for materials, articles, appliances, etc.

It has also been decided to co-ordinate scientific, technical, trade and commodity terms and definitions in association with any country using the English language and prepared to participate.

The Conference has made some very important recommendations in connection with the use and control of marks to indicate conformity to a national standard.

Opportunity was taken to discuss in detail a number of technical subjects including Commonwealth dairying standards for methods of testing dairy products, plant and machinery, and the materials used in the processes employed.

CO-OPERATION WITHIN THE COMMONWEALTH

Elsewhere in this number of the *Journal* appears a factual account of a conference held in London during the month of September. There are some points that might be of interest to the members beyond the mere statement of facts. For instance, this is the first time that representatives of engineering organizations within the British Commonwealth of Nations have met together to discuss common problems and to seek out new collective means and methods for improving their usefulness to their members and to the profession.

The conference was prompted at least partially by events which took place during the war. The impromptu methods adopted to exchange membership privileges brought about such a wide use of these privileges that it seemed apparent that some organized arrangement should be discussed in order to make available even greater benefits. The close cooperation between individual engineers in various parts of the Empire indicated that some organized means to continue these contacts would be helpful to the individual, to his professional associates and to the common cause. These matters, and others made up the agenda for two weeks of meetings in London, England.

It was interesting and significant to note that there were absolutely no fundamental differences of opinion on any subject. Occasionally, established customs, which were working satisfactorily in one country, and which were beyond the control of engineering groups, made it impossible to agree to changes which were proposed in order to bring about uniformity of practice, but such instances were few and were not of great importance. It was surprising to find out how closely the problems of the profession in one country were duplicated in another.

The outstanding feature of the conference was the unanimous and eager desire to cooperate. It was encouraging to discover this immediately the conference met. It was not felt that at the moment any formal organization need be established to produce these results, but that through the secretariat of the institutions in London adequate contact could be maintained until all objectives were attained or further meetings became desirable.

The initiative of the three "host" institutions in arranging the conference and their generosity in the handling of it was greatly appreciated. Their skill in the arranging and carrying out of the programme made the conference an outstanding success and a tribute to their organizing ability.

There is no doubt but that the business concluded, and the contacts established between organizations and between individuals, will result in permanent improvements of great importance, and will establish channels through which further negotiations may be carried out successfully as occasion offers. This conference will go down in history as a first post war step towards full cooperation between engineering organizations.

Coming from various parts of the United States and Canada, a group of men who have achieved eminence in the engineering profession assembled in New York, October 18 and 19, for the annual meeting of the Engineers' Council for Professional Development. The Institute, as one of E.C.P.D.'s eight constituent bodies, had ten representatives out of a total of about fifty attending the business sessions. Dean C. R. Young and Dr. de Gaspé Beaubien, two of the three Institute representatives on the Council were present as well as the following representatives on E.C.P.D.'s committees: Student Selection and Guidance, L. F. Grant of Kingston, Ont.; Committee on Professional Training, R. deL. French of Montreal; Junior Committee on Professional Training, J. W. Brooks of Kapuskasing, Ont.; Committee on Professional Recognition, J. A. Vance of Woodstock, Ont., and his successor E. V. Buchanan of London, Ont.; Committee on Employment Conditions, R. E. Heartz of Montreal; Committee on Information, the assistant general secretary substituting for Dr. Wright. In addition, R. C. Flitton of Montreal, a councillor of the Institute, was present.

The committee reports on the year's activities were discussed at length and the work was planned for the coming year.

Professional Recognition

Dean N. W. Dougherty of the University of Tennessee, reporting for the Committee on Professional Recognition, suggested means of bringing the work of engineers before the public, and made a plea " to all engineers for greater participation in civil and political fields." He stated that in addition to activity in community gatherings, the power of the press must not be overlooked. " Excellent books have been written during the last few years on the work of the engineer. Unfortunately, the book-reading public is relatively small in number as compared with those who buy magazines. This field has been neglected by us in late years." To encourage the preparation of articles with popular appeal for such magazines as the *Saturday Evening Post* and *Readers' Digest*, Dean Dougherty suggested " an annual competition sponsored by E.C.P.D., for the ten best papers popularizing the specific work of the author, of a type acceptable to the editors of the national magazines with large circulations."

" Another medium of popularizing is of course the screen ", he continued. "Too often the lay public thinks only of the professional engineer as the builder of bridges and skyscrapers. Could we not write specifications for a series of ten-minute films illustrating phases of the making of everyday necessities, each concluding ' March of Time '-wise with ' The luxuries of yesterday have become the necessities of today and are provided by that service-rendering group, the engineers '? "

Recommendations of this committee were:

" More rapid action toward developing a uniform code of ethics;

" Uniform membership requirements and uniform nomenclature for grades of membership in the technical engineering societies;

" Producing a permanent and popular record of engineering achievements during the war;

" That technical societies through their publications emphasize the professional phases of engineering and

" That constituent bodies should use their influence to prevent further multiplication of engineering specialties."

Student Selection and Guidance

Reporting for the Committee on Student Selection and Guidance, Carl J. Eckhardt, Jr., University of Texas, Austin, pointed out the widespread use of a screening test for pre-engineering students. Called the " Pre-engineering Inventory ", its purpose is to " select engineering students with the expectation which accompanies the selection of materials with which engineers deal." During the 1945-1946 academic year, thirty-two institutions used the inventory for 12,300 students.

A second screening is proposed with the preparation of " Sophomore Achievement Examinations." These will " serve to reassure those students who should continue their engineering studies." Their usefulness to the colleges in sampling the needs of their students is evident. Proposed, but not yet prepared, are " Senior Examinations " to provide information for graduating students, their educators and prospective employers. Money for these tests has been made available by the Carnegie Corporation of New York and by the Carnegie Foundation for the Advancement of Teaching, the American Society for Engineering Education, and E.C.P.D.

Over 70,000 copies of the booklet " Engineering as a Career " have been distributed through colleges, high schools, professional societies, book stores and commercial agencies. In Canada, over 25,000 copies of the booklet " The Profession of Engineering in Canada ", prepared by the Engineering Institute, have been distributed and a third printing is now in process.

Accrediting Engineering Curricula

At an early date, re-examination of the curricula of all those engineering schools which had already had curricula accredited, was recommended by the Committee on Engineering Schools. A questionnaire was sent to all such institutions to determine their readiness for re-examination. Most institutions have replied that, because of difficulties encountered in returning to " normal " after the unusual experience of the war years, they would prefer that such inspection be postponed until 1947-1948.

The accrediting of technical institutes is well under way by a committee headed by Dean H. P. Hammond of The Pennsylvania State College.

The committee also recommended that a program of accrediting graduate curricula should be inaugurated.

D. B. Prentice, president of Rose Polytechnic Institute, chairman of the committee, reported that out of 167 degree-granting institutions in the United States, 133 now have one or more curricula accredited by E.C.P.D., with a total of 580 curricula accredited in major and specialized fields.

Professional Training Aids Provided

To assist the engineer in his professional development after graduation, the Committee on Professional Training has prepared and circulated a number of aids. In his report, Dr. C. A. Pohl, New York consulting engineer, listed the following: reading lists and bibliographies, personal appraisal blanks, lists of college extension programs, lists of appropriate articles, and reprints of certain pertinent articles. Dr. Pohl's committee urged closer co-operation between practicing engineers and younger members of the profession, to the end that encouragement and direction be given to the professional development of those entering the engineering profession.

Remuneration of Engineers

The Committee on Employment Conditions for Engineers reported that during the year its chairman, V. T. Boughton, associate editor, *Engineering News-Record*, had studied the activities of the Engineers' Joint Council, Committee on the Economic Status of the Engineer, which is actively surveying the compensation of the whole engineering profession. In view of the progress being made by EJC and the doubtful value of duplicating the effort, Mr. Boughton's committee recommended that this group be discharged and that E.C.P.D. request permission to continue to have an observer sit in at meetings of the EJC committee.

Code of Ethics

The Committee on Principles of Engineering Ethics, under the chairmanship of D. C. Jackson, professor emeritus of electrical engineering at Massachusetts Institute of Technology, reported the development of a universal "Canon of Ethics" for all engineers. The code has been prepared after extensive study of the respective codes of the participating societies and the draft has been approved by a number of constituent organizations. The final code is expected to be issued soon.

Engineering Societies Directory

The preparation of a list of all engineering societies in the United States and Canada was an accomplishment reported by the Committee on Information. Sydney Wilmot, chairman of the committee, reported that 237 organizations had been listed with classification according to "grade of membership subject to admission requirements." This committee also reported the pending publication of the Fifteenth Anniversary Booklet of E.C.P.D.

Fifteenth Anniversary Booklet

This booklet has been prepared for dual purposes—information on the activities of E.C.P.D. and the stimulation of contributions to a professional development research fund to be administered by the Ways and Means Committee. This program will be under the direction of a special subcommittee headed by R. L. Goetzenberger, vice president of Minneapolis-Honeywell Regulator Company. This subcommittee reported that "fund-raising is our primary objective . . . to defray the expense of" a professional development fund supervised by Engineers' Council for Professional Development. To give meaning to the fund-raising campaign, the committee called for "a listing of projects which require investigations within its scope to perform, and for the accomplishment of which funds are necessary."

The annual dinner was held Friday night at the Pennsylvania Hotel with an attendance of about eighty. The main feature was a presentation on the screen of the proposed layout of the material for the booklet referred to above.

E.I.C. Reports

At the business session on Saturday morning, representatives from the eight constituent bodies reported on the activities of their respective groups in furthering the aims of E.C.P.D. during the previous year.

Dean C. R. Young reported as follows on behalf of the Engineering Institute:

"In an effort to advance the common objectives of ECPD and The Engineering Institute of Canada, the latter arranged a unique gathering on the occasion of its annual meeting in Montreal last February. The Institute invited to a three-day conference the president of the undergraduate engineering society from each of the eleven universities or colleges in Canada granting degrees in applied science or engineering. It bore the entire cost of bringing these delegates to Montreal. Six separate sessions were held during which valuable discussions and interchanges of views took place. Nine resolutions on matters affecting engineering students and new graduates were adopted. These were later submitted to a conference of deans and teachers of engineering which was also held during the annual meeting.

"Most important of the purposes of this student conference was the desire of the Institute to discuss with student representatives themselves the means by which the graduate engineer can help the undergraduate. It was thought that by bringing the students together on the important occasion of the annual meeting of the Institute, which was attended by large numbers of senior engineers, valuable specific information might be obtained and many useful contacts afforded the juniors. Discussions were left entirely to the students, the Institute officers serving merely as guides and consultants. This method produced excellent results and promoted free and open debate of all subjects. No delegate had any reason to feel himself under restraint.

"Exchange of views by engineering educationists on matters of vital concern to the myriads now thronging the engineering schools was furthered by the action of the Institute in arranging for a conference of deans and teachers of engineering on the occasion of the annual meeting at Montreal. It had been suggested that the professional engineering organizations might have some proposals of value to those whose full time duty it is to serve young men in the educational institutions. Material contained in the nine resolutions adopted by the students' conference was placed before the conference of deans, with results that were thought-provoking and stimulating.

"Growing out of the preliminary gathering of deans at Montreal came a more representative conference of engineering educationists on the occasion of the annual meeting of the National Conference of Canadian Universities at Toronto in June. As a result, a Committee on Applied Science and Engineering Education was set up within the Conference to concern itself with educational problems in Canada as does the American Society for Engineering Education in a larger field.

"During the year, the EIC Committee on the Training and Welfare of the Young Engineer has directed its efforts to the guidance of high school students interested in entering the engineering profession and to advice and assistance to young men who have graduated or have but lately become employed as engineers. The secondary school aspect of the work has been carried out jointly with the Canadian Institute of Mining and Metallurgy and the Chemical Institute of Canada. Counsellors have been appointed at many important centers in Canada for the purpose of visiting schools and addressing students whenever called upon by the principal of the school or the provincial Department of Education. These counsellors are drawn from various branches of the engineering profession and are in a position to give comprehensive and dependable information to enquiring students.

"Assistance to the younger members of the profession is afforded through the agency of the 27 branches of the Institute throughout Canada. Each branch is asked to take steps to welcome the young engineer and his family, if he is married, when he first arrives in a new environment and has also been asked to assure him of opportunities for discussion and advice from older engineers concerning his own professional life. Each branch is asked to appoint a young engineer to correspond with the chairman of the Committee on the Training and Welfare of the Young Engineer concerning the problems and wishes of himself and his contemporaries.

"In support of the work of this committee, so ably guided by the late Harry F. Bennett, there has now been established what is known as 'The Harry F. Bennett Educational Fund of The Engineering Institute of Canada.' Its objectives are to promote and advance the study of engineering sciences, more particularly the establishment of scholarships and fellowships to deserving persons; to encourage the establishment of departments in schools and colleges for the study of engineering and science; to make loans to deserving students under regulations primarily for the purposes of enabling them to pursue advanced study in engineering sciences, and generally do any matter which will advance and assist in the growth and development of such engineering sciences. This represents a practical form of assistance that will do much to convince young men entering the profession of the sincere desire of the older men to help them.

"The EIC continues in its efforts to further the adoption of a uniform code of professional ethics. A new Committee on Professional Ethics has been appointed to review the situation from the viewpoint of the EIC, and it is hoped that proposals will be advanced that will make the work of the ECPD committee so much the easier.

"During the year the Institute has continued to press for a more favorable attitude of the Civil Service Commission to the engineer in the matter of salary. A strong committee presented a brief to the Royal Commission on Administrative Classification in the Public Service advocating extensive revision of the existing system. While the response was not satisfactory, at least it may be said that the Institute has been pressing the matter in the true spirit of the ECPD charter.

"Work of very great value to engineers emerging from the armed forces has been carried out by the Committee on Rehabilitation of the Institute. Incidental to its activities was the preparation of a booklet entitled 'The Engineer's Return to Civil Life' which was remarkably well done. Communication was established with members of the Institute while still in the forces, employment information was supplied to them, and a careful scrutiny was given to all government rehabilitation measures that might affect the engineer. High commendation of the Institute's activity in this regard has been publicly voiced, notably in a CBC radio broadcast on December 4, 1945."

New Officers

The following officers and committee chairmen were elected for 1946-1947:

Chairman: James W. Parker, president, Detroit Edison Company.

Vice-Chairman: T. T. Read, professor of mining, Columbia University.

Secretary: H. H. Henline, national secretary, American Institute of Electrical Engineers.

Assistant Secretary: A. B. Parsons, secretary, American Institute of Mining and Metallurgical Engineers.

Chairman, Committee on Student Selection and Guidance: Carl J. Eckhardt, Superintendent of utilities, University of Texas.

Chairman, Committee on Engineering Schools: D. B. Prentice, president, Rose Polytechnic Institute.

Chairman, Committee on Professional Training: Chas. A. Pohl, consulting engineer, New York.

Chairman, Committee on Professional Recognition: N. W. Dougherty, dean of engineering, University of Tennessee.

Chairman, Committee on Information: G. Ross Henninger, editor, American Institute of Electrical Engineers.

CORRESPONDENCE

Who Is It?

215 Melrose Avenue
Ottawa, Ont.
September 25, 1946

The Editor
The Engineering Journal
Montreal, P.Q.

Dear Sir:

The attached print is taken from an original autographed photograph which was acquired by the writer in England during the recent war. Although the signature will give a clue, it is not sufficiently clear to tell the full story and I wonder how many of your readers will recognise this outstanding member of our profession.

You will observe that he is dressed "for the job" and, except for the hat, is as suitably turned out as many a present day construction man, complete with "seegar".

I should assume that the background is composed of anchor chains from "The Great Eastern". I was informed that the picture was taken in the late fifties.

Yours sincerely,

V. S. Thompson, M.E.I.C.

(*See Answer Page 701*)

MEETING OF COUNCIL

A meeting of the Council of the Institute was held at Headquarters, on Saturday, October 26th, 1946, convening at nine-thirty a.m.

Present: Vice-President J. E. Armstrong (Montreal) in the chair; Vice-Presidents G. F. Layne (Quebec) and W. R. Manock (Fort Erie); Councillors P. E. Buss (Thorold), A. Cunningham (Kenogami), G. J. Currie (Halifax), R. S. Eadie (Montreal), R. C. Flitton (Montreal), A. R. Jones (Peterborough), E. Lavigne (Quebec), C. A. Peachey (Montreal), P. E. Poitras (Montreal), J. B. Stirling (Montreal); Treasurer J. A. Lalonde (Montreal); R. E. Heartz, chairman of the Committee on Employment Conditions, and Assistant General Secretary Louis Trudel.

Death of Past-President G. H. Duggan: Council noted with sincere regret the accidental death of Past-President G. H. Duggan, which had occurred on October 8th, 1946. The following resolution was passed unanimously:

"The President and Council of The Engineering Institute of Canada desire to record their deep regret on learning of the death of Past-President George Herrick Duggan.

During his long and active membership he rendered many valuable services to the Institute; his interest in the Institute's work was untiring, his benefactions were notable and his wise counsel was constantly available. He was the recipient of many well-deserved honours.

The passing of a man of such outstanding achievements leaves a vacancy which will indeed be hard to fill. His loss will be specially felt by those of his friends and associates who are charged with the direction of the affairs of the Institute. The President and Council beg to express their most sincere condolence with the members of Mr. Duggan's family on the occasion of this sad bereavement."

Death of Dean R. L. Sackett: Mr. Trudel announced the death, on October 6th, 1946, of Dr. R. L. Sackett, of New York, who had been dean of engineering at Pennsylvania State College for over twenty years, having retired in 1937. In the last ten years he had been connected with the American Society of Mechanical Engineers and with the Engineers' Council for Professional Development, and in his work with these societies had been closely associated with officers and members of the Institute. Dean Sackett was particularly interested in the welfare of the young engineer, and has been of great assistance to the Institute's committee. A letter expressing the sympathy of the Institute had been sent to Dean Sackett's family. Council recorded its sincere regret in the passing of this good friend of the Institute.

Councillor Currie presented President Hayes' greetings and his regrets that he was unable to be in Montreal for this meeting. Within the last two weeks he had returned from his trip to London, England, and had to attend to many duties. The president had asked Mr. Currie to inform the members in this area that he was eagerly looking forward to his official visit to the various branches in November.

Community Planning: Mr. Trudel reminded Council that at the September meeting authorization had been given for the Institute to participate in the newly established Community Planning Association of Canada and Messrs. R. L. Dobbin, N. B. MacRostie and L. Austin Wright had been appointed as the Institute's representatives on the provisional board. A meeting of the provisional board had been held in Ottawa last week, at which Mr. MacRostie had been present. Although no official report had been received, it had been noticed in the newspapers that provisional officers had been elected as follows: Acting-president, R. E. G. Davis, of Ottawa; Vice-President, John M. Kitchen; Executive Councillor, Norman B. MacRostie; Secretary-Treasurer, Alan H. Armstrong. A report from the Association and from the Institute's representatives will no doubt be received in due course. In the meantime this progress report was accepted.

Engineers' Council for Professional Development: Immediately following the last meeting of Council a request had been received from the Engineers' Council for a nominee to replace Dean C. R. Young as the Institute's representative on the Committee on Professional Training. Following consultation with Dean Young, the General Secretary had been in touch with Professor R. DeL. French, at McGill University, who had tentatively accepted the appointment, subject to confirmation by Council. Professor French had attended the recent annual meeting of E.C.P.D. in New York. It was unanimously agreed that this appointment be confirmed.

Budget—Tariff item 180e: The assistant secretary reviewed the developments that had taken place since the Digby meeting when Council's attention had been called to the fact that the duty had been removed from engineers' plans entering Canada. He had been in touch with Dr. Surveyer who had undertaken to discuss with Mr. R. D. Harkness, M.E.I.C., vice-president of the Canadian Chamber of Commerce, whether it would be appropriate for that body to join with the Institute in making representations to the government. Mr. Harkness had been away at the annual meeting of the Chamber and it had not been possible for Dr. Surveyer to contact him. In the meantime Dr. Surveyer had written the Minister of Finance in his own name and had protested the action taken by the government.

Additional representations had been made to the Institute by members since the last Council meeting, and instances cited where the removal of duty might work to the disadvantage of Canadian engineers. One case in point was the $8,000,000.00 plant which Lever Brothers were planning to erect in Toronto and for which they had retained the services of a firm of engineers from Boston.

A communication had been received from the Canadian Construction Association inviting the Institute to express an opinion on a draft resolution that had been prepared by the Association for submission to the government.

Mr. Stirling, as a member of the management committee of the C.C.A., pointed out that the Association was much concerned over this development and was prepared to join with other groups in making emphatic representations for the repeal of the legislation. The Association felt, however, that the action should be initiated by the engineering organizations and it would like to see them take a strong stand in this respect.

A long discussion followed which was entered into by Messrs. Lalonde, Peachey, Flitton, Jones, Eadie and Poitras. It was pointed out that the Minister had promised in the House that the legislation would be reviewed in six months if it proved detrimental to Canadian engineers. It was therefore important that strong evidence be accumulated in the course of the next month or so and that other interested groups be invited to join with the Institute in protesting the government's action. The opinion was expressed that it might be advisable to ask these other groups to send resolutions of their own along the lines of the Institute's resolution but couched in different words.

On the motion of Mr. Poitras, seconded by Mr. Lalonde, it was accordingly resolved that the Committee on Professional interests of the Institute be empowered to set up a sub-committee for the purpose of thoroughly investigating the situation and drafting an appropriate resolution to be approved by Council at its November meeting and subsequently sent to the government, the resolution to be sent to all branches of the Institute, to the provincial associations of professional engineers and other interested groups for their consideration and support.

Canadian Scientific Film Association: At the September meeting of Council, authorization had been given for the Institute to become a charter member of the Canadian Scientific Film Association. In accordance with Council's directions, Mr. Trudel had attended the inaugural meeting in Ottawa on September 18th, at which the draft constitution had been discussed and finally approved. The Institute has direct representation on the Council of the Association. The first meeting of the new Council had been held in Ottawa recently but Mr. Trudel had been unable to attend.

In response to Mr. Layne's inquiry, Mr. Trudel stated that the Association proposed to prepare catalogues with appraisals of films available, and planned eventually to offer a service to groups such as the Institute for the routing and scheduling of films throughout the branches.

Shore Erosion on the Great Lakes: At the last meeting of the Council the question of shore erosion on the Great Lakes had been discussed, with the suggestion that it might be possible for the Institute to undertake a scientific study of the problem. By direction of Council the matter had been referred to the Toronto branch executive with the recommendation that they examine the situation in relationship to the Toronto area and make recommendations to Council as to action which might be taken by the Institute to bring this problem to the attention of the proper authorities. The following reply had been received from the Toronto Branch secretary:

> "After considerable discussion, I was directed to report that while the Toronto branch executive regards the problem sympathetically, we feel that the time and attention required for such a review, on top of the

full daily programme of the members, and in addition to the preparations for the Diamond Jubilee National Meeting, could not be properly spared, and would request that the matter be referred to the Hamilton and Niagara Peninsula branches, whose areas are at least as directly affected."

Mr. Armstrong suggested that perhaps this was not so much a Toronto problem as an Ontario district problem as most of the Ontario branches were in affected areas. Considerable discussion followed, during which Mr. Buss and Mr. Armstrong described conditions in certain localities. Finally, on the motion of Mr. Jones, seconded by Mr. Buss, it was unanimously resolved that the project of investigating shore erosion on the Great Lakes be referred to the Ontario branches with the suggestion that the subject be discussed at branch meetings to develop interest and consciousness, preliminary to possible later action by the Ontario provincial division, if established.

Diamond Jubilee Meeting 1947: Mr. Trudel reported that Mr. E. A. Cross chairman of the Toronto Branch, had been appointed chairman of the Diamond Jubilee Committee. In accordance with a suggestion received from the committee, on the motion of Mr. Lalonde, seconded by Mr. Layne, it was unanimously resolved that an invitation be extended by Council to His Excellency the Governor General to be the Institute's guest at the banquet to be held at the Diamond Jubilee Meeting in Toronto in May 1947.

Honours for Dean Adrien Pouliot, M.E.I.C.: During the past summer, Dean Adrien Pouliot, of the Faculty of Applied Science at Laval University, Quebec, has been visiting various universities in France, and was invited to deliver a lecture at the Sorbonne on October 10th, under the auspices of the Association des Ingénieurs-Docteurs de France, which had taken this opportunity to confer upon Dean Pouliot its Medal of Honour. Mr. Trudel read a telegram of congratulations which had been sent on behalf of Council through the Canadian Ambassador, together with a reply which had been received. Council noted with appreciation the great honour which had been conferred upon Dean Pouliot as a distinguished Canadian engineer and educator.

Harry Bennett Memorial Fund: On behalf of Mr. Vance, chairman of the Committee on the Bennett Memorial Fund, Mr. R. E. Heartz, a member of the committee, presented a detailed report on the returns to date from the various branches. Seven of the branches had passed their objective, but some had not yet started their campaign. The figures indicated that the subscriptions were very good from those who had given but the percentage of those canvassed was relatively low. The committee hopes that the campaign will be cleared up by Christmas. A meeting of the committee was held recently and up to date information has been sent to the division chairmen who will all be contacted by telephone within the next week. The committee urges all councillors to do everything they can to further this campaign by contacting the members in the various branches. The committee is confident that it will reach its objective but it will take considerably longer than at first anticipated. This progress report was noted.

Committee on Employment Conditions: Mr. Heartz reported that his committee was still gathering information on the proposed economic survey of the engineering profession in Canada, similar to that already under way by the Engineers' Joint Council in the United States. He hoped to be able to present a complete report to the December meeting of Council.

Mr. Heartz reminded Council that one of the resolutions passed at the Students' Conference in February of this year had recommended that the Institute establish an employment bureau in each of its local branches whose purpose it would be to prepare lists of positions available for student engineers. This resolution had been referred by Council to the Committee on Employment Conditions which now recommends to Council that employment committees be set up at the various branches of the Institute to report to and to be under the direction of Headquarters.

The committee is of the opinion that in the case of the larger branches the need for such committees is relatively small as existing facilities already give excellent service to student and junior engineers. In the case of the smaller branches the situation is quite different, and with a close tie-in with Headquarters these branches can be of service to young men seeking employment.

On the motion of Mr. Eadie, seconded by Mr. Jones, it was unanimously resolved that this report be accepted.

The meeting adjourned for lunch at twelve thirty and reconvened at two thirty p.m. with Vice-President Armstrong in the chair.

Student Section at Laval University: A letter was presented from the secretary of the Quebec Branch advising that approval had been given by the branch to the establishment of a Student Section at Laval University. It was hoped that the section could be inaugurated during the forthcoming visit of President Hayes to the branch. Council was gratified to note this activity among the students in Quebec.

It was noted that the next meeting of Council would be held at the Hotel Cornwallis, Cornwall, Ontario, at ten o'clock a.m., on Saturday, November 23rd, 1946. The Council rose at four o'clock p.m.

ELECTIONS AND TRANSFERS

A number of applications were considered and the following elections and transfers were effected:

Members

Best, Gordon Livingstone, Graduate, R.M.C.; W/C., R.A.F., Chief Engr. Officer, Aero. Engr., H.Q. No. 45 (Transport) Group, Dorval, Que.

Bishop, Joseph William, Colonel, R.C.E.M.E., Director of Mechanical Engrg., Dept. National Defence, Ottawa, Ont.

Brooking, Donald Charles, B.Sc. (Elect.), Manitoba, distribution engr., Canadian General Electric Co., Ltd., Winnipeg, Man.

Coombes, Robert Arthur, B.Sc. (Elect. Engrg.), New Brunswick, switchgear engr., English Electric Co., Ltd., St. Catharines, Ont.

Covey, Douglas Elliot, B.Sc. (Chem. Engrg.), Sask., asst. mech. engr., Wayagamack Divn., Consolidated Paper Corp., Ltd., Three Rivers, Que.

Davis, John Caswell, B.Sc. (Mech. Engrg.), McGill, president and mgr., J. C. Davis Limited, Winnipeg, Man.

Drummond, George D., B.Sc. (Mining), McGill, president, Drummond & Co., Ltd., Montreal, Que.

Grant, James Andrew, B.A.Sc. (Mining), Toronto, 342 Linsmore Crescent, Toronto, Ont.

Harrop, Alan Cameron, B.A.Sc., Toronto, genl. supt., Montreal East refinery, Imperial Oil Limited, Montreal, Que.

Lake, George William Charles, Graduate, R.M.C., 30 Brant St., Orillia, Ont.

Lyons, Manson Ainslie, S.B. (Civil Engr.), M.I.T., Deputy Minister of Public Works, St. James, Man.

MacMillan, Donald C., B.Sc. (Civil), Queen's, Major, Camp Engineer, Barriefield Military Camp, Ont.

Magill, Edward Stairs, B.Sc. (Civil), Manitoba, Asst. Professor, Civil Engrg., Univ. of Manitoba, Winnipeg, Man.

Mayberry, Frederic Coates, asst. mgr., dept. of works, Canadian National Exhibition, Toronto, Ont.

Nickerson, Harold Waite, B.Sc. (Civil), B.Sc. (Elect.), New Brunswick, plant engr., Canadian Cottons Limited, Cornwall, Ont.

Paquette, Norman Onesime, S.B. (Arch.), M.I.T., chief engr., Pacific Coast, Stevenson & Kellogg Ltd., Vancouver, B.C.

Ross, John William, B.A.Sc., Toronto, development engr., Dominion Oxygen Co., Toronto, Ont.

Stephanson, Barney Thorvardur, B.Sc. (Agric.), Sask., sessional instructor, Dept. of Agricultural Engrg., Univ. of Alberta, Edmonton, Alta.

Waldock, Donald Albert George, Major, B.Sc., London Univ., R.C.A., N.D.H.Q., Ottawa, Ont.

Yates, Bert T., B.Sc. (Civil), Queen's, president, H. Yates & Co. Ltd., Cornwall, Ont.

Juniors

Clarke, James Murdoch, B.Eng. (Mech.), McGill, Building Products Limited, Ville La Salle, Que.

Davies, Clifford Lorne, B.Sc. (Civil), Manitoba, tech. officer, reconstrn., Department of Public Works, Selkirk, Man.

Murphy, Bernard Ross, B.A.Sc. (Mech.), Toronto, design engr., H.E.P.C. of Ontario, Toronto, Ont.
Scrimes, Walter Robert, B.Sc. (Elect.), Manitoba, asst. engr., Winnipeg Electric Co., Winnipeg, Man.

Affiliate

Szwarc, Aleksander, Ph.D. (Chemistry), Univ. of Posnan, Poland, consultg. chemist, Howard Smith Paper Mills, Montreal, Que.

Transferred from the class of Junior to that of Member

Biesenthal, Clarence Gordon, B.Sc. (Mech.), Queen's, chief engr., Alex. Fleck Limited, Ottawa, Ont.
Kennedy, Dorwin Elmore, B.A.Sc. (Civil), Toronto, forest products engr., Forest Products Laboratories, Dept. of Mines & Resources, Ottawa, Ont.
Sadler, Robert F., B.Sc. (Civil), New Brunswick, asst. engr., mtce. of way, St. Lawrence Divn., Canadian National Railways, Montreal. Que.
Shaw, Frederick W. B., B.Eng., McGill, elect. engr., Canadian International Paper Co., Hawkesbury, Ont.
Wallis, W. Herbert C., B.Sc. (Civil), New Brunswick, project engr., Canadair, Cartierville, Que.

Transferred from the class of Student to that of Member

Estabrook, Howard Albert, B.Sc. (Met. Engrg.), supt., time study and efficiency dept., Aluminum Co. of Canada, Ltd., Arvida, Que.
Goodfellow, Hodgson, Major, R.C.E.M.E., B.Sc. (Mech.), Saskatchewan, District Elect. and Mechanical Engr., Military District No. 10, N.D.H.Q., Ottawa, Ont.
Thompson, George Wilbert, B.Sc. (Chem.), Queen's, Major, R.C.E.M.E., D.M.E., N.D.H.Q., Ottawa, Ont.

Admitted as Students

Baldwin, Willard Harold Cody, B.Sc. (Elect.), New Brunswick, engrg. asst., Bell Telephone Co. of Canada, Quebec, Que.
Campbell, Gunner Alvin Edgar, B.Sc. (Elect.), Alberta, 42 Government Insurance Bldg., Regina, Sask.
Gray, Robert Vernon (British Columbia), 447 West 19th Avenue, Vancouver, B.C.
Gummer, Ernest M., B.Eng. (Elect.), N.S.T.C., transmission, Maritime Telegraph & Telephone Co., Ltd. Halifax, N.S.
Lee, Thomas Bing-Kven, B.Sc. (Mech.), Queen's, 1162 St. Urbain St., Montreal, Que.
Narduzzi, Enzo D. (Queen's), 340 Albert St., Kingston, Ont.
Smythe, J. F. S. (Queen's), Kingston, Ont.

Students at McGill University

G. H. Balcome	L. A. Issen	D. M. McKim
R. R. Bernard	J. R. F. Keely	C. N. McPherson
A. Blauer	S. Levine	T. M. Medzwiecki

Students at University of New Brunswick

L. F. Fiander	C. F. Mallory	P. C. Toft
H. K. Larsen	R. Otsuki	

By virtue of the co-operative agreements betweeen the Institute and the associations of professional engineers, the following elections and transfers have become effective.

ALBERTA

Members

Gould, Edward Christopher Seymour, B.Sc., Queen's, geologist, with N. W. Byrne, consultg. engr., Yellowknife, N.W.T.
Livingstone, Robert Donald, B.Sc. (Mining), Alberta, mining engr., Lethbridge Collieries Ltd. Lethbridge, Alta.
Richardson, Allyn St. Clair, B.A.Sc., British Columbia, sr. sanitary engr., Dept. National Health & Welfare, Edmonton, Alta.
Russell, Bernard Elliot, inspecting engr., Snare River Hydro, Yellowknife, N.W.T.
Watson, John Gordon, B.Sc. (Civil), Saskatchewan, asst. hydraulic engr., P.F.R.A., Cardston, Alta.

Junior to Member

Lawrence, Norman Alexander, B.Sc. (Civil), Alberta, dftsman., City of Edmonton Power House, Edmonton, Alta.
Willson, Bruce Franklin, B.Sc. (Civil), Alberta, jr. engr., Northwestern Utilities Ltd., Edmonton, Alta.

NEW BRUNSWICK

Member

Dickson, Henry Ewen, B.Eng. (Mining), N.S.T.C., sales engr. and branch mgr., Wm. Stairs, Son & Morrow Ltd. Saint John, N.B.

Junior to Member

Marshall, Herbert Ansley, B.Eng. (Mech.), N.S.T.C., industrial lubrication engr., Maritime Division, Imperial Oil Limited, Saint John, N.B.

Student to Member

MacArthur, Jack Llewellyn, B.A.Sc. (Civil), Toronto, engrg. dept., N.B. International Paper Co., Dalhousie, N.B.

QUEBEC

Members

Brisset des Nos, Andre, B.A.Sc., C.E., Poly., asst. division engr., aqueduct section, City of Montreal, Que.
Leslie, Clarence Arthur, B.Sc. (Elect.), Tri-State College; B.Sc. (Civil), Michigan State College, elect. and mech. supt., Malartic Gold Fields, Halet, Que.
Szczeniowski, Boleslaw, Ms. Mech. Engrg. and Dr. Tech. Sciences, Warsaw Institute of Technology, Warsaw, Poland, Agrégé Professor, Ecole Polytechnique, Montreal, Que.
Zbinden, Ernest, Mech. Engr., Univ. of Lausanne, Switzerland, engr., aqueduct section, engrg. divn., Public Works Dept., Montreal, Que.

Juniors

Brennan, John Thomas, B.A.Sc. (Elect.), Toronto, equipt. engr., Bell Telephone Co. of Canada, Montreal, Que.
Hill, David Humphrey, B.Sc. (Met.), Queen's, sales engr., Williams & Wilson, Ltd., Montreal, Que.

Junior to Member

de Witt, George Harding, B.Eng. (Elect.), McGill, asst. to supt., repair dept., Shawinigan Water & Power Co., Three Rivers, Que.

Personals

News of the Personal Activities of members of the Institute

Baron Boris de Hueck, M.E.I.C., has been appointed to complete the current term as councillor of the new Cornwall Branch of the Institute. He was born at St. Petersburg, Russia, and studied at the Polytechnic Institute of Riga, receiving a B.Sc. degree in 1913. While serving at the University as assistant professor of mathematics for two further years, he was active in a consulting practice at St. Petersburg. He saw military service from 1915 to 1919, first as a major with the Imperial Engineering Corps of the 1st and 5th Russian army, and later as a major with the British Expeditionary Forces at Murmansk. From 1919 to 1921 he was a technical advisor with the Russian Embassy in London, England.

He then came to Canada and was employed first as an engineer with the Toronto Carpet Company and the Barrymore Cloth Company. Two years later he established a consulting practice with various industrial contacts in Ontario, Quebec, and the U.S.A., and in 1926 entered Stuart, James and Cook Inc., New York, in an engineering capacity, becoming Montreal manager for that company in 1928. He then entered the Canadian National Railways in Montreal as an engineer, remaining three years, and joined Canadian Cottons Limited, Montreal as chief engineer in 1934. In that position he is now located at Cornwall, Ont.

F. T. Boutilier, M.E.I.C., is the newly elected chairman of the Saguenay Branch of the Institute. Born in Sydney, N.S., he graduated from the Nova Scotia Technical College, Halifax, in 1928 with a B.Sc. in mechanical engineering. He immediately entered the employ of the Dominion Steel and Coal Corporation, Sydney, as assistant to the steam engineer, remaining until 1929 when he joined the Aluminum Company of Canada. Located at Arvida, Que., he was at first technical assistant in the mechanical department and later transferred to the aluminum plant in the same capacity. He was made general foreman of the remelting and alloy department in 1932, and was appointed to his present position as assistant to the aluminum plant superintendent in 1935.

J. E. Dyck, M.E.I.C., has recently been appointed secretary-treasurer of the Saguenay Branch of the Institute. He graduated from the University of Saskatchewan with a B.Sc. in mechanical engineering in 1930. He remained at the university as an instructor for the next two years, going in 1934 to Harris, Sask., where he was principal of the high school and teacher of mathematics and sciences. He then became associated with the International Nickel Company, located at Copper Cliff, Ont., and in 1941 he came to Montreal as senior draughtsman and designer on reinforced concrete, heating, ventilation and plumbing for the Aluminum Company of Canada Limited. He was transferred in 1944 to Arvida, Que., where he is statistician for the industrial engineering department of the company.

Hector Cimon, M.E.I.C., secretary of Price Brothers and Company Ltd., Quebec, has received the additional appointment of vice-president of the company. He joined his company on graduation from Ecole Polytechnique, Montreal, in 1916, being employed successively on special survey work, on design and supervision of construction, and on engineering. He became secretary of the company in 1939.

Ernest Davis, M.E.I.C., has retired as comptroller of water rights British Columbia Department of Lands and Forests, Victoria. He had been in that post since 1939 when he was promoted from the position of assistant comptroller of water rights and chief engineer. His service with the department dates from 1910 when he entered it as an engineer on hydrographic work.

R. C. Farrow, M.E.I.C., is the newly appointed comptroller of water rights for the Department of Lands and Forests of British Columbia. He was with the water rights branch as district engineer prior to his service from 1940 to 1946 with the R.C.E. and the R.C.A. Returning to the department this year he was appointed chief hydraulic engineer.

Colonel E. C. Thorne, M.E.I.C., R.C.E., director of engineer development at National Defence Headquarters, Ottawa, was awarded the Legion of Merit, degree of officer, by the United States Government with a citation for exceptionally meritorious service from October 1943 to January 1946 in connection with the work of the Engineer Board. "As director of equipment, Canadian Army, he fostered the closest relationships of mutual helpfulness between research and development agencies of the Canadian and United States Armies. Through his expert technical knowledge and loyal cooperation, Colonel Thorne greatly furthered the combined war effort of Canada and the United States".

John Stephen Keenan, M.E.I.C., manager of the supply department of Canadian General Electric Company, Toronto, Ont., was elected president of the Canadian Electrical Manufacturers Association at its recent annual meeting.

John Morse, M.E.I.C., vice-president in charge of operation of the Shawinigan Water and Power Company, has been appointed the Canadian member of the International Executive Committee of the C.I.G.R.E. (the International Conference on Large Electric High-Tension Systems), Paris, France. This Committee originally had five members, one each from France, England, Switzerland, the United States and Russia, and its membership has been increased to seven by the addition of one member each from Canada and Sweden. Mr. Morse, is also president of the Canadian National Committee of the C.I.G.R.E.

M. D. Young, M.E.I.C., has received the appointment of general superintendent in charge of distribution for the City of Winnipeg Hydro Electric System. He is a graduate in electrical engineering of the University of Manitoba. He joined the staff of Winnipeg Hydro the year following his graduation, 1926, and in 1930 was made distribution engineer. He became assistant superintendent of distribution in 1938.

J. H. Fox, M.E.I.C., has recently been appointed by the Minneapolis-Honeywell Regulator Company Limited, Toronto, as sales manager of the commercial controls division. He has been with the company since 1934 and obtained wide experience as sales engineer in the Modutrol Division. He joined the Army in September 1939, took the 2nd Base Workshop to the continent shortly after D-Day and retired with the rank of lieutenant-colonel in February of this year.

Valmore Denis, M.E.I.C., who is as the Ottawa Headquarters of the Department of Public Works of Canada will retire from the service in April, 1947. He began his career with the Department in 1901.

M. D. Bleaken, M.E.I.C., is now associated with the time study and standards department of the Canadian General Rubber Company, Galt, Ont. He had been employed previously by Canadian Car and Foundry in the aircraft division at Fort William, Ont., as mechanical engineer for hydraulic equipment in aircraft.

S. A. Craig, M.E.I.C., is with the Dominion Bridge Company Ltd., Lachine, Que. He was formerly in charge of the production department of Wartime Shipbuilding Limited, Montreal.

H. L. Eberts, M.E.I.C., who was with Stevenson and Kellogg Limited, Montreal, is now factory manager with the Federal Electric Manufacturing Co. Ltd., Montreal.

Henry Howard, M.E.I.C., has recently been appointed professor of mineral dressing in the department of mining and metallurgy of the University of British Columbia. He had been employed since 1942 by Eldorado Mining and Refining, first at Port Hope, Ont., on special research, and later at Great Bear Lake, N.W.T., as mill superintendent. After three years research he and Mrs. Howard succeeded in developing a method for the quantitative assaying of pitchblende ores by means of the Geiger counter. This was an original development at Great Bear Lake, although the counter had previously been in use for qualitative assaying. Mr. Howard intends to carry on at the university with his investigations concerning the treatment and assaying of radioactive ores.

D. D. Reeve, M.E.I.C., has accepted the position of resident engineer with the Abitibi Power and Paper Company Limited at Fort William, Ont. He was previously employed by the Aluminum Company of Canada Ltd., Montreal, as a mechanical engineer in the general engineering department.

F. Valiquette, M.E.I.C., is the new city manager of St. Jerome, Que., He was previously located at Bourlamaque, Que., as town manager.

J. Edouard Prevost, M.E.I.C., formerly with the Montreal Laboratory of the National Research Council is now employed by the Hydro-Electric Commission of Quebec as designing and development engineer at the Beauharnois power plant. Mr. Prevost graduated with honours from the Ecole Polytechnique in the class of 1921 and has since had extensive experience in the construction field.

Wm. B. White, M.E.I.C., is an assistant engineer with the Canadian National Railways, western region, with headquarters at Winnipeg. He joined the company after receiving his discharge from the R.C.E. with the rank of captain in July this year.

A. R. Crookshank, M.E.I.C., who was assistant engineer in the Saint John district of the Department of Public Works of Canada, has been promoted to the position of senior assistant engineer.

S. C. Anderson, M.E.I.C., was recently appointed chief engineer for the Dominion Road Machinery Company of Goderich, Ont. He was formerly sales engineer for Sawyer Massey Limited, Hamilton, Ont.

J. W. Tarbox, M.E.I.C., is in Ottawa, Ont., with the National Research Council as a junior research engineer in the department of electrical engineering and radio. He was previously with the Hydro Electric Power Commission of Ontario, Toronto.

A. M. Toye, M.E.I.C., who has been attached to the Inspection Board of the United Kingdom and Canada since 1942, on leave of absence from the Department of Highways of Ontario, has returned to the Department. He will be in the office of the bridge engineer at Toronto, Ont.

Charles Farstad, JR.E.I.C., has recently been appointed mechanical superintendent for Burns and Company Limited at Edmonton, Alta. He was in Grand'Mère, Que., since 1941, as assistant engineer with the Consolidated Paper Corporation Limited, returning to Calgary, Alta., early this year.

H. I. Hamilton, JR.E.I.C., is in Brazil, South America, in the employ of the Sao Paulo Light Heat and Power Company. He was previously with the Demerara Bauxite Company, Mackenzie, British Guiana, S.A.

Murray Zides, JR.E.I.C., is studying traffic engineering at the graduate school of Yale University, New Haven, Conn. He had been with the highway division of the Department of Public Works of New Brunswick at Fredericton, N.B., since his graduation from the University of New Brunswick in 1944.

R. F. Shapcotte, JR.E.I.C., is now employed by L. Y. McIntosh, architect, Fort William, Ont., on supervising, estimating, and mechanical design. On his release from the R.C.E. in 1945 he was employed as an engineer by the Department of Public Works, Ottawa.

J. A. Tod, JR.E.I.C., who was discharged from the R.C.E. in May with the rank of lieutenant, is now with the Bell Telephone Company at London, Ont.

W. D. Harkness, JR.E.I.C., has returned to Canada from Mexico, where he was with the Cia. Industrial de Atenquique, in Jalisco. He is now at Port Arthur, Ont., with the Marathon Paper Mills of Canada Limited.

J. A. K. Leger, JR.E.I.C., is at present resident in England and is teaching mathematics at the Hampton Grammar School, Hampton Court. Until his recent demobilization he was actively engaged in the development and planning of the telecommunication network in France, Belgium, Holland, and Germany as a staff officer for the chief signal officer of HQ. 21 Army Gp.

G. E. McDougall, JR.E.I.C., has gone to Whitehorse, Yukon, as a bridge engineer for the Department of National Defence on the Northwest Highway System. He was previously with the Public Roads Administration in Edmonton, Alta.

L. M. Nadeau, JR.E.I.C., is the new assistant registrar at Montreal for the Corporation of Professional Engineers of Quebec. He was formerly engineer inspector for the Canadian Underwriters' Association at Montreal.

W. J. Ives, JR.E.I.C., of Winnipeg, Man., received the degree of master of engineering (electrical), at the fall convocation of McGill University.

J. L. deStein, Jr.E.I.C., received his master of engineering degree (civil), from McGill University at the fall convocation. He obtained a B.Sc. degree at the University of Saskatchewan in 1939, and has been with the Aluminum Company of Canada in Montreal since 1940.

William Tkacz, Jr.E.I.C., is at the University of Michigan, where he is following a graduate mechanical engineering course leading to the degree of Master of Science. He expects to be at the university until September 1947.

G. V. Bourbonnais, Jr.E.I.C., who was overseas with the R.C.E., for over three years is now employed by Zachée Langlais, consulting engineer, Quebec. Following his discharge he accepted the position of assistant superintendent, St. Malo Shops, Dominion Arsenal, Que.

Geo. S. Baldry, Jr.E.I.C., is in Rutland, Mass., where he is a pathologist at the Rutland State Sanatorium. He had been practising privately as an industrial hygienist before entering the R.C.A.M.C. in 1944. He became director of the division of industrial hygiene for the city of Winnipeg, Man., in 1942 after studying at the School of Public Health, at Harvard University.

Pierre Duchostel, Jr.E.I.C., was appointed on August 1st as electrical engineer with the Quebec Power Company, Quebec. He joined the company in April of this year, when he severed connections with the Ferranti Electric, Montreal. He entered the latter company in 1943. going on loan to the National Research Council, Ottawa, that year, as a junior research engineer, and returning in 1945.

F. W. Davidson, S.E.I.C., is in Boston, Mass., where he is studying at the Harvard Graduate School of Business Administration. He had been with the Bell Telephone Company of Canada, Montreal, while studying at McGill University toward a master of engineering degree.

P. J. Robinson, S.E.I.C., of Calgary, Alta., received the degree of bachelor of engineering (mechanical), at the fall convocation of McGill University, Montreal.

Norman Epstein, S.E.I.C., of Outremont, Que., received the degree of master of engineering (chemical), at the fall convocation of McGill University, Montreal.

J. M. Carrol, S.E.I.C., is employed by Aluminium Laboratories Ltd., at Arvida. Que., on research in the development of spectroscopy and spectrographic analysis, in compliance with his course in engineering physics at Queens University, Kingston, Ont. He will return to the university in April or September 1947.

Eric Bergenstein, S.E.I.C., was the victim of a serious accident a few weeks ago. He was severely burned and has been hospitalized. An active student member, he was the University of Manitoba representative at the Students' Conference held in connection with the annual meeting this year.

R. J. Blezard, S.E.I.C., is with the Canadian Gypsum Company as plant engineer at Hagersville, Ont. He had been a junior engineer with Link Belt Limited at Toronto, Ont., since his graduation in mechanical engineering from the University of Saskatchewan in 1944.

E. R. Heuser, S.E.I.C., is at Hawkesbury, Ont., where he is employed as a chemist for the Canadian International Paper Company. He graduated in 1945 from McGill University, Montreal, as a bachelor of engineering.

A. C. Noel, S.E.I.C., who graduated from the Nova Scotia Technical College in 1946 as a B. Eng., is with the Bell Telephone Company of Canada at Quebec. He is a junior engineer in the plant engineering department, eastern district.

Charles Metherell, S.E.I.C., who graduated this year from the University of Toronto, is employed by Price Brothers as a junior chemical engineer and is located at Kenogami, Que.

Edmond M. Tuff, S.E.I.C., who served with the R.C.N.V.R. since his graduation in 1945 from the Nova Scotia Technical College, is now located at Hamilton, Ont. He is employed by the Otis-Fensom Elevator Company and is taking the student training course.

Louis Malkin, S.E.I.C., who graduated last May as a B.Sc. from Mount Allison University, Sackville, N.B., is now demonstrating in chemistry at the Ajax division of the University of Toronto.

R. A. Zurowski, S.E.I.C., is instructing in the engineering department of the University of Saskatchewan. He graduated as a B.Sc. in electrical engineering from the University of Manitoba in 1945.

John Stonehewer, S.E.I.C., is with Proctor, Redfern and Laughlin, consulting engineers, Toronto, Ont. He graduated in civil engineering from McGill University, Montreal, this year.

Donald M. Venton, S.E.I.C., is employed by Armstrong, Anderson and Company, consulting engineers of Toronto, Ont. He had previously been connected with the Pigott Construction Company at Aylmer, Ont.

Obituaries

The sympathy of the Institute is extended to the relatives of those whose passing is recorded here:

Augustus Griffin, M.E.I.C., manager of the department of natural resources of the Canadian Pacific Railway in Calgary, Alta., died suddenly at his home on October 13th, 1946.

He was born in Visalia, California, in 1883, and attended the University of California, graduating in 1906 with a B.Sc. in civil engineering, specializing in irrigation. He then spent six years, as engineer of the Modesto irrigation district in Modesto, Calif., and in 1913 he was superintendent of irrigation for the Truckee Carson (now Newland) project of the United States Bureau of Reclamation. Two years later he became chief engineer for the South San Joaquin irrigation district, Manteca, Calif., and he came to Canada in 1918 as superintendent of operation and maintenance for the Canadian Pacific Railway's eastern section irrigation project at Brooks, Alta. He was appointed chief engineer of the company's Department of Natural Resources in 1932, and moved in 1935 to Strathmore, Alta., where he supervised the operation of the western section irrigation project of the C.P.R. Accepting the position of assistant manager of the Department in 1941, with headquarters in Calgary, Alta., he became manager in 1942.

He is credited with important contributions to the promotion of fruit growth in Alberta and was tendered a resolution of appreciation in 1940 by the Great Plains Section of the American Horticultural Association. He was a member of the Association of Professional Engineers of Alberta and of the American Society of Civil Engineers, serving for two years as chairman of the irrigation division of the latter society. He joined the Institute as a Member in 1925, and has been a valuable member of the Committee on Prairie Water Problems for the last few years.

Lieutenant-Colonel H. B. Stuart, M.E.I.C., of Hamilton, Ont., died on October 14th, 1946, at the R.C.A.F. Hospital at Rockcliffe, Ont.

He was born at Mitchell, Ont., in 1889, and attended the University of Toronto, graduating in 1909 with a B.A.Sc. degree. He immediately entered the Hamilton Bridge Co. As field engineer for the company since 1921 he was noted as an expert on the construction of bascule bridges and helped design the one over the Burlington Beach Ship Canal..

His civil engineering career was interrupted by service in the R.C.E. in World War I. He was connected with the Hamilton Garrison at the outbreak of World War II, and in 1940 he was appointed officer commanding the 1st Field Squadron, R.C.E. His overseas service merited him the M.B.E. in 1943, and he returned to Canada in 1944 with the rank of major. The next year he was promoted to the rank of lieutenant-colonel and was made head of the bridging section of the directorate of engineer development in Ottawa. At the time of his death he was serving on the directorate of works and construction there.

Lieut.-Col. Stuart joined the Institute in 1920 as an Associate Member, becoming a Member in 1935.

News of the Branches

Activities of the Twenty-eight Branches of the Institute and abstracts of papers presented

CALGARY BRANCH

J. F. Langston, M.E.I.C. - *Secretary-Treasurer*
D. C. Jones, Jr.E.I.C. - - *Branch News Editor*

At a general meeting held on October 17th, the Calgary Branch was addressed by V. A. Newhall, M.E.I.C., city commissioner of Calgary, on the subject of **Urban Transportation.**

Mr. Newhall reviewed the reports and recommendations of W. K. Furlong and Norman D. Wilson who had been consulted regarding the modernization of the Calgary Transit System. He then went on to give the relative advantages and disadvantages of modern transportation vehicles, including the P.C.C. streetcar, gasoline buses, diesel buses, and trolley coaches.

By means of a graph it was shown that each vehicle would operate more cheaply than the others under certain peak loads. For the load conditions encountered on most routes in this city the trolley coach appears to have the advantage of low operating cost. In comparing the initial costs of various types of vehicles, they must first be reduced to a "per seat" basis. To this comparative initial cost is added the amount required for amortisation. Mr. Newhall demonstrated that this capital cost of the trolley coach is lower than other types of vehicles, even when the cost of overhead wiring is included. A comparison of maintenance costs and out-of-service times showed that due to the long period between overhauls on a trolley coach, it is relatively cheaper to maintain.

Mr. Newhall pointed out that either gas buses or diesel buses were needed to operate on newly established lines and on lines which had low peak loads. These vehicles also have the advantage of flexibility.

At the conclusion of his talk the speaker answered numerous questions and R. A. Brown thanked him for his very interesting and timely address.

LETHBRIDGE BRANCH

H. T. Miard, M.E.I.C. - *Secretary-Treasurer*
E. A. Lawrence, S.E.I.C. - *Branch News Editor*

The Farmer in a Program of Reconstruction, was the subject of an address given by E. E. Eisenhauer, M.E.I.C., deputy minister of reconstruction of Saskatchewan, at a dinner meeting of the Lethbridge Branch at the Marquis Hotel on Saturday evening, October 19th.

Mr. Eisenhauer related the efforts of the federal and provincial governments to bring rehabilitation to the farmers of Saskatchewan and to the war veterans settling on the land. He gave an interesting account of the work of the Saskatchewan Department of Reconstruction.

The history of the plains has been one of good crops interspersed with lean years. There have been three great droughts in Saskatchewan since 1838; the last, from 1929 to 1937 was firmly impressed on the minds of all the residents. The program of reconstruction must encourage and assist the farmers to protect themselves against such calamities by carrying supplies of feed and seed from good years into periods of drought.

Agriculture is the main industry of Saskatchewan and the production of agriculture is based on a wheat economy, because in the period from 1920 to 1945, 70% of the gross income from Saskatchewan agriculture was from wheat. In that period, yields varied from 2.6 to 23.3 bushels per acre. These extreme fluctuations must be given careful consideration in a programme of reconstruction. Export markets with reasonable prices are also necessary to give security to the farmer.

Saskatchewan has 33½ million acres of arable land. There are 1,135,000 acres of vacant and abandoned land and seven million other acres of ranch land where development of water supplies would greatly increase the production of livestock. Twenty-seven million acres of submarginal land and three million acres of grey soil are arable if economic units are set up and the necessary development undertaken.

Some of the ways in which the above aims can be realized are by conservation of water resources, irrigation, proper land utilization, such benefits as the Prairie Farm Assistance Act, the P.F.R.A., and assurance of markets with reasonable prices, increased research in agriculture and in the industrial use of agricultural products.

Irrigation is a very important method of guaranteeing crops. There are two types—large systems necessitating construction of dams and reservoirs to store spring freshets, and canals; and small individual systems, such as construction of small inexpensive dams on individual farms to serve a small area of the farm. If a farmer has enough water to irrigate a few acres for food and seed, he is prepared for drought. Large irrigation schemes are, of course, of more value to industry and towns.

The Department of Reconstruction is also interested in establishing returning war veterans. Since 1939, all good crown land was reserved for veterans and can be obtained in economic farm units. Already 764 units are settled. The speaker gave details of the efforts and ingenuity of many of these settlers.

Forty sections of twice burned over land are being prepared for agriculture by the Department with equipment built in its machine shop. In all this development, the Province obtains federal co-operation.

Rural housing is another concern of Mr. Eisenhauer's Department. A farm home is both the office and residence of the farmer, and a committee has studied the problem and presented a report on the design of a home for a farm. These homes should have the amenities of the city—electricity, water and sewerage and should be painted.

A. G. Donaldson expressed the meeting's appreciation to the speaker. This meeting was a "Ladies' Night" with an attendance of sixty-four. The head table guests were Mr. Eisenhauer, Branch Chairman and Mrs. R. S. Lawrence, Mr. and Mrs. P. M. Sauder, Councillor and Mrs. C. S. Clendening, Mr. and Mrs. G. S. Brown and Mr. and Mrs. C. S. Donaldson.

MONTREAL BRANCH

E. M. Van Koughnet, M.E.I.C. - *Secretary-Treasurer*
Hyman Schwartz, S.E.I.C. }
Eli L. Ilovitch, S.E.I.C. } *Branch News Editors*

"The first factor in industry is top management," Mr. Frank L. Sweetser told the members of this branch when speaking on **Industrial Engineering and Profit Control** at a regular meeting held on Thursday evening, October 24th. The speaker then went on to explain that if the management is good, that is to say if the men in the leading positions are in good physical health, have the executive ability and the proper authority for the responsibilities they hold, then the company will run smoothly.

In controlling profits and preventing losses it is necessary to plan the production and establish a budget before work actually begins on any project. The budget should show what the given item *should cost,* the number of articles that can be sold, and whether the project pays. The budget is prepared with the aid of charts and graphs, the most important of which is the Profit vs. Volume diagram. Ordinary accounting, on the other hand, records the past and consequently often fails to indicate trends in time for corrective action. Nevertheless accounting should be a check on production. The speaker then suggested that someone in authority be made responsible for the differences in the planned and the actual production. The talk was illustrated with lantern slides. R. S. Eadie was chairman of the meeting.

❖ ❖ ❖

In an auditorium so overcrowded that many listened from the corridors, Mr. John I. Yellot delivered a paper on the development of **Coal Burning Gas Turbines for Locomotive Use.** This was on Thursday evening October 31st.

Mr. Yellot, who is chairman of the Power Test Code Committee on Gas Turbine Power Plants of the American Society of Mechanical Engineers, explained that the new Diesel-electric locomotives have been continually replacing the familiar steam locomotives for both short and long distance runs. In fact there are now 3000 Diesel-electrics on order in the United States and only 35 steam engines.

The coal operators whose income depends largely on the sale of coal to the railroads, realizing the danger to their business have backed research on prime movers which would use coal instead of oil as a fuel. The speaker then went on to explain why it is theoretically and actually impossible to greatly improve the efficiency of modern reciprocating steam locomotives which is about 10%. He then showed that gas turbines, because they can operate at high temperatures due to recent metallurgical developments in heat resisting alloys, result in great economies which outdo the diesels.

At present there is under construction in the U.S. a coal burning gas turbine locomotive, which is essentially similar to the oil burning gas turbines manufactured by the Swiss. (See "The Application of the Gas Turbine to Railway Locomotives" by A. K. Leuthold, *The Engineering Journal,* August, 1946)

The machinery of the new locomotive consists of an axial flow multi stage compressor, a preheater using exhaust gases, a single cylindrical burner, a multi stage turbine and conventional electrical drives. The additional equipment required to handle the solid fuel consists of a helical screw conveyor, a crusher to reduce the coal to pieces ¼ in. diameter, a dryer, a venturi type coal pulverizer for reducing the coal to a powder so fine that nearly 90% passes through a 300 mesh screen, i.e. finer than a silk handkerchief, and an "Aerotech" fly ash separator. The last item is a special type high temperature cyclone and is located between the burner and the turbine.

The new locomotive, because it burns coal which costs less than a third for corresponding fuel oil, because of its high overall efficiency—between 25 and 30%—and relatively few moving parts will make this type of prime mover the leader in the locomotive field. In addition it will consume practically no lubricating oil, will be noiseless, smokeless, easy to operate and simple to maintain.

At the conclusion of the discussion period H. F. Finnemore thanked the speaker. W. A. Newman was in the chair.

OTTAWA BRANCH

C. G. Biesenthal, jr.e.i.c. - *Secretary-Treasurer*
R. C. Purser, m.e.i.c. - - - *Branch News Editor*

The first evening meeting of the fall season was held on Wednesday evening, October 16, at the auditorium of the National Museum. Sir Donald Bailey, O.B.E., superintendent of the Bridging Wing of the British Military Engineering Establishment, spoke on the **Development of the Bailey Bridge,** after which two films were shown which displayed the various uses to which the Bailey Bridge could be adapted. Sir Donald agreed to answer any questions and a number of the engineers present availed themselves of this opportunity of securing desired information.

Chairman J. H. Irvine in introducing the speaker, pointed out that Sir Donald has been associated with the design of every British Military Bridge produced in the last eighteen years. His outstanding achievement was the design in 1940 of the Bailey Bridge, which played such a notable part in World War II.

Sir Donald compared the problems involved in designing a military bridge with the building of an ordinary bridge for peacetime purposes. He pointed out that military bridges must be adaptable to heavy loads, they must function in any kind of territory, and be erected in much shorter time than is the case with ordinary bridges. A feature of the Bailey Bridge is that it has only eight basic units, the heaviest of which can be carried by six men.

After describing the method of constructing and launching the bridge at the site, he revealed some of the problems which hampered the British engineers and manufacturers. He told how a new steel alloy had to be devised when the increasing proportion of scrap in the first one chosen led to its abandonment. Stating that 696,000 panels, the basic units of the Bailey Bridge, were made in the United Kingdom, he recalled the steps taken to test every one.

The speaker stated that 500,000 tons of building material were produced by 300 British firms, this amount being sufficient for 240 miles of double-trussed, double-tiered bridging.

* * *

At an evening meeting held at the National Museum Lecture Hall, Nov. 1st, John I. Yellott, of Baltimore, Md., gave a talk on the use of **Cool Burning Gas Turbines in Locomotives.** Mr. Yellott is director of research for the Bituminous Coal Research Locomotive Development Committee. He has had a distinguished career on the engineering staffs of the University of Rochester, the Stevens Institute, and the Illinois Institute of Technology.

The speaker pointed out that one-third of the coal requirements in Canada are used by the railroad systems of the Dominion. In the United States, the corresponding fraction is one-fifth. Research operations have been underway for some time in the development of an internal combustion engine which could be fed cheaply by abundant coal instead of gasoline or oil.

His talk was illustrated by lantern slides and included an explanation of jet propulsion elements and other features, as well as the processing of "atomized" coal, needed for the latest turbine.

J. H. Irvine, chairman of the branch, presided at the meeting.

ST. MAURICE VALLEY BRANCH

W. M. Mackay, m.e.i.c. - *Secretary-Treasurer*

The inaugural meeting of the fall season of the St. Maurice Valley Branch was held in the Cascade Inn, Shawinigan Falls, on Tuesday, October 22nd. A. W. Peters, branch chairman, introduced the speaker of the evening, G. M. McHenry of the Canadian General Electric Company.

The title of Mr. McHenry's paper was **Industrial Power Distribution.** He compared the economics of power distribution at 575 volts, from a single substation, and distribution at a higher voltage by making use of unit substations at load centers throughout the plant. He showed typical feeder layouts for the various degrees of flexibility and dependability which may be required, and the protective equipment which may be necessary in each case. The talk was illustrated by slides.

Following the address, there was a short discussion period, after which J. Dupuis thanked the speaker for his very well-presented paper. Fifty members of the branch attended the meeting.

SASKATCHEWAN BRANCH

D. W. Houston, m.e.i.c. - *Secretary-Treasurer*
L. A. Dokken, m.e.i.c. - - *Branch News Editor*

The regular monthly meeting of the Saskatchewan Branch was held in the Kitchener Hotel, Regina, Saskatchewan, on Friday, October 25th, 1946. The attendance was forty-eight, including a few members from Saskatoon and Moose Jaw, who were introduced by Chairman F. E. Estlin.

Guest speaker of the evening was Mr. W. H. Prevey, application engineer of the supply department, Canadian General Electric Co., Toronto. Mr. Prevey spoke on **Fault Selective Protection on Distribution Systems,** which dealt with the automatic features used in protecting an average electrical transmission system. Such features as instantaneous and time delay fuses, cutout relays, and indicating fuse box types were dealt with in detail, as well as common methods used in calculating the magnitude of probable short-circuit currents at all locations in a given system. The time-short circuit current, characteristic fuse graphs were explained to the members and in conjunction with these charts, it was shown how the characteristics of the "high-surge" type fuse was developed. This fuse was developed by combining two high amperage fuses, in order to retain the high amperage feature for resisting high surges of short duration with a suitable heat storing solder to give normal line protection.

The working of the various protective elements in a distribution system was then explained diagrammatically, with an assumption a fault in a certain location, and a careful follow-up by the speaker of the "teamwork" features of the various protective devices. A practical demonstration was then given showing the blowing of the instantaneous and time delay fuses, as well as the indicating fuse box types, featuring both the drop-down and drop-out doors easily spotted by "trouble men".

A discussion period followed in which considerable interest was shown, particularly in the field of adapting such automatic equipment to our climatic conditions.

R. W. Jickling, of the Saskatchewan Power Commission, in thanking the speaker, gave examples of how such equipment has led to higher service maintenance records and fewer minute "outages" and gave high praise to those men who have developed the features described.

TORONTO BRANCH

E. G. Tallman, m.e.i.c. - *Secretary-Treasurer*
E. R. Graydon, m.e.i.c. - *Branch News Editor*

A joint meeting of the Toronto Branch of the Institute and the Toronto Chapter of the Ontario Association of Architects was held on October 24th in University College. About 150 architects and engineers heard and participated in a lively discussion on **Community Planning.**

In the panel discussion, architects were represented by Messrs. Anthony Adamson, P. Alan Deacon and John Layng; engineers by Messrs. Ross Dobbin, J. F. MacLaren and Hew Scott. A general discussion followed in which many of those present joined. Many points of interest arose during the evening. Organization of a Toronto Branch of the Community Planning Association, the need for student courses in the subject, and the Ontario Town Planning Act were all discussed. Many national and provincial examples of successful municipal planning, which have contributed greatly to better living, were cited.

The meeting served to clear up many misconceptions about the subject, and offered concrete evidence of the co-operation of architects and engineers in this field of general concern.

VANCOUVER BRANCH

A. M. Eyre, s.e.i.c. - - *Secretary-Treasurer*
P. B. Stroyan, m.e.i.c. - *Branch News Editor*

Some one hundred and twenty members of the Vancouver Branch of the Institute and the Professional Engineers' Association attended a joint meeting in the Hotel Vancouver on October 25th to hear Professor Frank Forward, Head of the Department of Mining and Metallurgy at the University of British Columbia. The speaker had just returned from a trip to the Far East as consultant to the National Resources Commission of the Chinese Government and took as his subject **Some Engineering and Industrial Aspects of Present Day China and Formosa.** The twenty thousand mile trip taken by Professor Forward included Guam, Iwo Jima, Tokyo, Yokohama, Hiroshima, Iwo Cuni, Shanghai, Pekin and Formosa. Impressions of a visit to a war-crime trial in Tokyo and some observations on the effects of the atom bomb on Hiroshima proved extremely interesting, and examples of the prices of commodities in Shanghai gave an idea of the terribly inflated conditions in that city.

A most depressing account of the general chaos existing in those parts of China visited by the speaker, the poor health and extreme indifference of the people, indicated that the economic and industrial prospects of the country would not have a chance of showing much improvement unless the outlook of the Chinese could be drastically changed. Any help which can be given by other nations could not be expected to improve conditions materially without a complete change in the national attitude.

The picture of Formosa was a little brighter and the natural resources, including coal, oil and natural gas, limestone, fishing and forest products, hold a reasonable possibility of a return to a sound economy for the two and a half million inhabitants. Formosa has been for the past fifty years under Jap control and the natives speak Japanese and Amoy with little inclination to switch their sympathies to the Chinese. The Japs had installed power stations with a combined output of some 350,000 K.V.A., furnishing cheap power throughout the island by a comprehensive network of transmission lines. The power plants were demolished by American bombers but about 100,000 K.V.A. has been restored.

Professor Forward was thanked for a most interesting and instructive address by R. C. Pybus, branch chairman, and by W. O. Scott, president of the Association of Professional Engineers of British Columbia.

W. H. Powell reported briefly on the Maritime Professional Meeting held in September at Digby, Nova Scotia.

THE ANSWER

To Quiz on page 693

Isambard Kingdom Brunel, 1806-1859, English engineer, was born in Portsmouth, studied in Paris at Collège Henri Quatre, and in 1823 entered his father's office as assistant engineer. Early assignments included the post of resident engineer of the Thames Tunnel project, and the design and engineering of the suspension bridge over the Avon at Clifton. At 27 he was engineer of the new Great Western Railway, contributed famous projects to the line, and introduced to it the broad (7-ft.) gauge. He resigned that office in 1846, and the Royal Albert Bridge on the Tamar at Saltash was his last and greatest railway project.

The *Great Western,* of Brunel's design and construction, was the first steamship built to make regular voyages across the Atlantic. The larger ships *Great Britain* and *Great Eastern* were also his design, the latter launched in 1858. Other interests included the construction of docks and piers, the improvement of large guns, the design of hospital buildings, the promotion of the Great Exhibition in 1851.

Elected a Fellow of the Royal Society in 1830, he declined the presidency of the Institution of Civil Engineers through ill health. He received a D.C.L. degree from Oxford in 1857. He died at his home in Westminster in 1859.

BOOK REVIEW

THEORY OF STRUCTURES

S. Timoshenko and D. H. Young. New York, McGraw-Hill; Toronto, Embassy, 1945. 488 pp., illus., 9 x 6¼ in., cloth, $6.00 (in Canada).
Reviewed by I. F. Morrison, M.E.I.C.*

It would seem that new text books in a field already so over-crowded as The Theory of Structures, now coming to be called Structural Analysis, could not help being superfluous. However, in spite of the large number already available, new ones appear from time to time and among the new arrivals occasionally one stands out as a distinctly better book than any of its contemporaries. The Theory of Structures by Timoshenko and Young is just such a book and for that reason a brief review may perhaps be of some value to those interested in the subject.

For the purposes of this review, the book might be considered as made up of four parts, which may be designated briefly as dealing with 1. plane statics, and three-dimensional statics, which deals with space frames, 2. influence lines, 3. statically indeterminate systems.

Of the first part, little need be said. It is concerned with the usual, elementary, well-known theorems of plane statics, including a brief treatment of the principle of virtual work. This part is obviously intended as a review of first principles. The authors are to be commended on the careful treatment given to "critical forms" and complex trusses; a topic usually overlooked in texts on structural analysis but which, none-the-less, is of fundamental importance in a thorough treatment of the subject.

Chapter IV, on statically determinate space structures, which belongs to the first part, fulfills a long standing requirement in elementary texts on the Theory of Structures and is, in itself, of sufficient importance to place this book ahead of similar texts. A number of cases of three dimensional trusses are worked out. The chapter includes an excellent section on the General Theory of Statically Determinate Space Trusses and also a section on Henneberg's method of analysis which is not to be found in most texts on the Theory of Structures.

Although it makes but little difference as regards the use of the text for teaching purposes, Chapter III, which deals with influence lines and moving loads, might well have followed the Chapter IV on space structures, in the general arrangement of the book, as a second part. This subject is adequately treated for statically determinate girders and trusses both with and without floor systems, and lays a foundation for further treatment of indeterminate cases.

These first four chapters occupy about one half of the entire book and would be found suitable for a senior course of one term. The 180 problems, inserted in groups, following each main topic throughout these chapters, offer a wide choice of assignment by the instructor.

The second half of the book, which constitutes the third part referred to above, concerns itself with indeterminate structures and Chapter V deals with general theorems relating to elastic systems. The principle of superposition, Castigliano's two theorems, the reciprocal theorem of Maxwell and the Williot diagram form the bulk of it. More space should perhaps have been given to the subject of virtual work, the basis for which is established in the First chapter under the heading of virtual displacements. The general form of "The Work Equation" is not given. Structural analysis is tending more towards this method than towards an application of Castigliano's Theorems. Perhaps the authors feel that a greater interest in these valuable theorems should be revived but it is still obvious that the Theory of Virtual Work is the broader fundamental principle and, therefore, perhaps the more important from a teaching standpoint. To be sure, the method of fictitious loading is mentioned but it is not given sufficient attention to attract the student.

The deflection of pin-jointed trusses is dealt with at some length in Chapter VI. As is customary, this work is given as an example of the application of the theorems of the preceeding chapter and also serves as an introduction to the analysis of indeterminate structures. More detail might well have been devoted to the change of slope of beams and rotation of truss joints, which topics are now generally included in the term "deflection". This deficiency, however, is partly overcome in a subsequent chapter on the Slope-deflection method.

Statically indeterminate structures are treated by the customary methods. This work is given in Chapters VII and VIII, which deal with trusses and frames, including continuous beams, respectively. These chapters include influence-lines for trusses with redundant members and reactions, and also a brief treatment of the method of successive approximations, often called The Hardy Cross method. More emphasis should perhaps have been placed on the subject of side-sway, without a consideration of which, analysis by this method is generally inadequate.

The final chapter considers the analysis of arches and includes the subject of frames and rings as additional illustrative material on the application of the method of elastic centers.

These last chapters are well illustrated by numerical examples but there are fewer problems than in the first half of the book. The problems are naturally more difficult. It is always easy for an instructor to secure satisfactory problems in these topics but for those who wish to make a close study of indeterminate structures without instructional assistance more problems would perhaps be desirable.

The reader will realize from the preceeding comments that this book does not pretend to be a complete treatise on The Theory of Structures. A number of topics have been either very briefly treated or omitted altogether. On account of the reputation of the authors, who have produced several excellent texts, one hardly need add that as an elementary text, the book is fundamentally sound and will make an excellent first course in the subject for senior students.

Professor of Applied Mechanics, University of Alberta, Edmonton, Alta.

ERRATUM

Lincoln's Incentive System, by J. F. Lincoln, was reviewed by E. D. Graham, Vice-President, Stevenson & Kellogg Ltd., Montreal, and not by E. D. Kellogg, as stated in the October 1946 issue of The Engineering Journal, Page 593.

ADDITIONS TO THE LIBRARY

TECHNICAL BOOKS, ETC.

Applied Photogrammetry; 4th ed:
Ralph O. Anderson. Chattanooga, Tennessee, Anderson, 1946. 518 pp., illus., cloth.

Atmospheric Pollution in Leicester; a Scientific Survey:
Gr. Britain. Dept. of Scientific and Industrial Research. Atmospheric. Pollution Research. London, H.M.S.O., 1945. 161 pp., illus. (Technical Paper No. 1).

Atomic Theory for Students of Metallurgy:

PRELIMINARY NOTICE

of Applications for Admission and for Transfer

Nov. 13th, 1946.

The By-laws provide that the Council of the Institute shall approve, classify and elect candidates to membership and transfer from one grade of membership to a higher.

It is also provided that there shall be issued to all corporate members a list of the new applicants for admission and for transfer, containing a concise statement of the record of each applicant and the names of his references.

In order that the Council may determine justly the eligibility of each candidate, every member is aksed to read carefully the list submitted herewith and to report promptly to the Secretary any facts which may affect the classification and selection of any of the candidates. In cases where the professional career of an applicant is known to any member, such member is specially invited to make a definite recommendation as to the proper classification of the candidate.*

If to your knowledge facts exist which are derogatory to the personal reputation of any applicant, they should be promptly communicated.

Communications relating to applicants are considered by the Council as strictly confidential.

The Council will consider the applications herein described at the December meeting.

L. Austin Wright, General Secretary

*The professional requirements are as follows:—

A **Member** shall have been engaged in some branch of engineering for at least six years, which period may include apprenticeship or pupilage in a qualified engineer's office or a term of instruction in a school of engineering recognized by the council. In every case a candidate for election shall have held a position of professional responsibility for at least two years. The occupancy of a chair as professor, assistant professor, associate professor or lecturer in a faculty of applied science or engineering, shall be considered as professional responsibility.

Every candidate who has not graduated from a school of engineering recognized by the council shall be required to pass an examination as prescribed by council, on the theory and practice of engineering, with special reference to the branch of engineering in which he has been engaged.

A **Junior** shall have been engaged in some branch of engineering for at least four years. This period may be reduced to one year, if the candidate for election has graduated from a school of engineering recognized by the council, in which case he shall not remain in the class of Junior beyond the end of the eighth year after graduation.

Every candidate who has not passed the examinations of the third year in a school of engineering recognized by council shall be required to pass an examination in engineering science as prescribed by council. He shall not remain in the class of Junior beyond age thirty.

A Junior may be transferred to Member without payment of transfer fee providing he makes application before the end of the seventh year after graduation or, if a non-graduate, before attaining age twenty-nine, and his application is approved by council.

Council may extend the above limits if in its opinion special circumstance warrant such extension.

A **Student** shall be at least seventeen years of age, and shall present a certificate of having passed an examination equivalent ot the final examination of a high school, or the matriculation of an arts or science course in a school of engineering recognized by the council or shall be required to write examinations as prescribed by the council.

He shall be:

a. pursuing a course of instruction in a school of engineering recognized by the council, in which case he shall be transferred to Junior automatically without payment of transfer fee in the second January after graduation, or

b. receiving a practical training in the profession in which case he shall be transferred to Junior without payment of transfer fee providing he makes application before attaining age twenty-five and his application is approved by council.

He shall not remain in the class of Student after he has attained the age of twenty-five, unless in the opinion of council special circumstances warrant the extension of this age limit.

An **Affiliate** shall be one who is not an engineer by profession but whose pursuits, scientific attainments or practical experience qualify him to co-operate with engineers in the advancement of professional knowledge.

The fact that candidates give the names of certain members as reference does not necessarily mean that their applications are endorsed by such members.

FOR ADMISSION

AMBROSE—HOWARD GEORGE, of London, Ont. Born at Toronto, April 21, 1918. Educ.: B.A.Sc. (Mining), Toronto, 1942; R.P.E., Ontario; 1937-38-40-41 (summers), with gold mining companies in Quebec and Northern Ontario; 1942-46, Lieut., R.C.E.M.E., O/C 31 & 36 Light Aid Detachments; and at present, instru'man., Canadian National Railways, London, Ont.

LIBRARY NOTES *(Continued from page 703)*

London, 1946. 325 pp., diagrs., charts, tables, 12 x 9¼ in., fabrikoid, $6.75.

Under the following headings this volume presents typical specifications to serve as a guide for the practising engineer; structural specifications, airports, roads, railroads, bridges, docks, dams, drainage, sewers, sewage treatment, and water. Section VIII on costs provides the engineer with a framework of relative costs of materials, equipment and labor, and by relating these costs to the Engineer News-Record cost indexes, as indicated, effective working figures may be realized. A seventy-page, classified glossary concludes the book. Vol. I of this series presented a comprehensive collection of design data. Vol. III will cover field practice.

DESIGN and CONSTRUCTION of CONCRETE ROADS:

R. A. B. Smith and T. R. Grigson. 2 ed. Concrete Publications, Ltd., 14 Dartmouth Street, London, S.W.1, England, 1946. 208 pp., illus., diagrs., charts, tables 9¼ x 6½ in., cloth, 5s.6d.

Beginning with the siting and planning of highways, this book proceeds to a full discussion of the materials and methods employed in modern highway construction. The treatment is practical throughout, including the brief design chapter. Maintenance and repair are considered, and technical data on concrete testing procedures and soil classification methods are appended.

(Continued on page 710)

Rehabilitation and Employment Service

THE ENGINEERING INSTITUTE OF CANADA
2050 MANSFIELD STREET, MONTREAL 2, QUE.

The service is operated for the benefit of members of The Engineering Institute of Canada, and for industrial and other organizations employing technically trained men—without charge to either party. It would therefore be particularly appreciated if employers would make the fullest possible use of these facilities to make known their existing or estimated requirements. Notices appearing in the Situations Wanted column will be discontinued after three insertions, and will be re-inserted upon request after a lapse of one month.

Situations Vacant

CHEMICAL

CHEMICAL ENGINEER recent graduate up, to be assistant to the department superintendent of a tar distillery in the Toronto area. Salary $225. Apply to File No. 3674-V.

CHEMICAL ENGINEERS OR METALLURGISTS, with knowledge of French or German, required by a government department for literature researches on industrial problems. Salary about $300. Apply to File No. 3682-V.

CIVIL

CIVIL ENGINEER with experience in the mechanical trades required as designer by a building contractor in Quebec, age 30-35, salary open. Apply to File No. 3444-V.

CIVIL ENGINEER, preferably with railroad experience, required by a company engaged in large scale asbestos production in Quebec to supervise construction of local railroad. Salary open. Apply to File No. 3683-V.

ELECTRICAL

ELECTRICAL ENGINEER with experience in teaching or practical electrical work required as full-time technical instructor in the Montreal area. Salary open with overtime. Apply to File No. 3600-V. (B)

ELECTRICAL ENGINEER with construction experience wanted as assistant to sales manager in a Montreal electrical supply service company. Salary according to experience. Apply to File No. 3611-V.

ELECTRICAL ENGINEER with considerable industrial experience required as a safety engineer by a public utility in the Montreal area. Bilingual preferred Salary open. Apply to File No. 3654-V.

ELECTRICAL ENGINEER to be chief engineer, responsible for electrical and mechanical design and testing, required by a firm in Ontario manufacturing electric motors. Salary open. Apply to File No. 3656-V.

ELECTRICAL ENGINEER with at least three years experience in the design of generating plants and high tension transformer stations required by an engineering firm in Toronto. Salary open. Apply to File No. 3661-V.

ELECTRICAL ENGINEER with several years experience required as a designer by an industrial organization in Montreal. Salary open. Apply to File No. 3677-V.

MECHANICAL

JUNIOR MECHANICAL ENGINEER to be trained as plant engineer and assistant to plant manager in an industrial plant in central Quebec. Must be bilingual. Salary from $225. Apply to File No. 3658-V.

MECHANICAL ENGINEER with experience in the fabrication of Farm Implements, required by a Quebec firm. Bilingual man preferred. Salary according to experience. Apply to File No. 3666-V.

MECHANICAL ENGINEER with experience in the design of industrial machinery required by a Montreal firm manufacturing custom built machines. Salary $200-$250. Apply to File No. 3669-V.

MECHANICAL ENGINEER with industrial experience required as plant engineer for a plant in central Quebec manufacturing assorted building products. Salary from $250. Bilingual an advantage. Apply to File No. 3671-V.

MECHANICAL ENGINEER with design experience in the pulp and paper industry required by a firm with headquarters in Montreal. Salary $350. Apply to File No. 3673-V.

JUNIOR MECHANICAL ENGINEER with knowledge of precision machine shop practice and aptitude for research work in metals and plastics required for an organization in Toronto for the production of artificial limbs. Must be veteran. Salary from $225. Apply to File No. 3675-V.

MINING

MINING ENGINEER with several years experience required by a company engaged in large scale asbestos production in Quebec. Salary open. Apply to File No. 3683-V.

MISCELLANEOUS

MECHANICAL OR AERONAUTICAL ENGINEER with at least five years experience, mostly in design of aircraft power plants or of installations in passenger craft, required by an industrial organization in the Montreal area. Salary from $275. Apply to File No. 3650-V.

CIVIL, MECHANICAL OR AERONAUTICAL ENGINEERS, with some experience in aircraft design or construction, required by an industrial organization in the Montreal area. Salary from $225. Apply to File No. 3650-V.

JUNIOR ENGINEERS, recent graduates up, required by an organization in Montreal for the inspection of buildings for fire hazards, etc. Bilingual preferred. Salary about $200. Apply to File No. 3651-V.

MECHANICAL AND STRUCTURAL DESIGNERS AND DRAUGHTSMEN required by a pulp and paper company in the Port Arthur district. Salary open. Apply to File No. 3653-V.

ASSISTANT ENGINEER with experience in estimates and specifications for industrial work required by a pulp and paper company in the Port Arthur district. Salary open. Apply to File No. 3653-V.

CHIEF DRAUGHTSMAN with at least five years draughting room and related engineering office experience, preferably in pulp and paper or process industries, required by a pulp and paper mill in the Port Arthur district. Salary open. Apply to File No. 3653-V.

JUNIOR ELECTRICAL OR MECHANICAL ENGINEER required by an industrial firm in Montreal for training as an industrial engineer, including plant layout and maintenance. Salary open. Apply to File No. 3660-V.

INDUSTRIAL ENGINEER with at least ten years experience required by a manufacturer in Montreal. Salary open. Apply to File No. 3662-V.

JUNIOR MECHANICAL OR ELECTRICAL ENGINEERS for training as production engineers with an industrial firm in Montreal. Salary from $175. Apply to File No. 3662-V.

CONSTRUCTION ENGINEER with ten years' experience in the design and erection of steel and concrete buildings required for the staff of an oil company in Montreal. Travelling involved. Salary open. Apply to File No. 3663-V.

JUNIOR ENGINEERS preferably with pulp and paper or other industrial experience required for training for the sales staff of a Montreal manufacturer of machines and equipment. Salary from $175. Apply to File No. 3664-V.

MECHANICAL OR AERONAUTICAL ENGINEER with about five years' aeronautical experience required as service engineer at an airport in Western Canada. Salary from $200. Apply to File No. 3665-V.

STRUCTURAL DESIGNERS AND DRAUGHTSMEN required by a firm of consulting engineers in Montreal. Salary open. Apply to File No. 3668-V.

JUNIOR ENGINEERS, recent graduates up, as designing draughtsmen for a brewing company with headquarters in Montreal. Salary from $200. Apply to File No. 3670-V.

SAFETY ENGINEER, preferably with considerable industrial experience, required by a brewing company with headquarters in Montreal. Salary from $375. Apply to File No. 3670-V.

CIVIL OR MECHANICAL ENGINEERS with some industrial experience required as plant engineers by a brewing company with headquarters in Montreal. Salary from $350. Apply to File No. 3670-V.

JUNIOR ENGINEERS, under 30, preferably with shop or industrial experience, required by an Ontario paper company for training as designers. Salary $200 plus board and lodging while under training. Preference to veterans. Apply to File No. 3676-V.

SALES ENGINEER with knowledge of sawmill and woodworking equipment, preferably bilingual, required for the sale of specialized equipment. Salary $200 plus commission. Apply to File No. 3678-V.

CHEMICAL OR MECHANICAL ENGINEER, recent graduate required for the service dept. of a chemical industry in Central Ontario. Salary open. Apply to File No. 3680-V.

CIVIL OR MECHANICAL ENGINEER, age 28-35, with at least five years industrial or construction experience, required by a Montreal firm for training as branch manager for the Toronto area. Salary open. Apply to File No. 3681-V.

INDUSTRIAL ENGINEER as field representative in the Toronto-Niagara area for a government department, five to ten years experience. Salary about $300 Apply to File No. 3682-V.

JUNIOR ENGINEER, recent graduate up, required as surveyor by a company engaged in large scale asbestos production in Quebec. Salary open. Apply to File No. 3683-V.

The following advertisements are reprinted from last month's Journal, having not yet been filled.

CHEMICAL

CHEMICAL ENGINEER, recent graduate up, required by a petroleum refining company in Montreal for process and design work. Salary about $200. Apply to File No. 3575-V.

CHEMICAL ENGINEERS, age 22-35, recent graduates up, are required by a Montreal firm for development work, maintenance, design and construction in explosives field. Sales and technical service representation to paper and textile industries. Salaries according to qualifications. Apply to File No. 3588-V.

CHEMICAL ENGINEER, Ph.D. or M.Sc. Specialized in physical chemistry, required by industrial organization in Montreal area as member of organic research team. Salary open. Apply to File No. 3596-V.

CHEMICAL ENGINEER, under 30, required for the patent department of a large industrial organization in Montreal. Salary from $200. Apply to File No. 3609-V.

CHEMICAL ENGINEERS OR CHEMISTS for analytical work in the laboratory of an industrial firm in Central Ontario. Salary from $175. Veteran preferred. Apply to Fil.e No. 3642-V.

CHEMICAL ENGINEER, preferably with sales experience, for sales and service with an industrial firm in Central Ontario. Salary open. Apply to File No. 3642-V.

CHEMICAL ENGINEERS AND RESEARCH CHEMISTS with considerable experience required by an industrial organization in the St. Maurice Valley. Salary open. Apply to File No. 3644-V.

CIVIL

TWO CIVIL ENGINEERS are required to act as senior and junior structural designers respectively with a steel company in Southern Ontario. Apply to File No. 3389-V.

TWO CIVIL ENGINEERS, one experienced man to be in charge, the other to act as assistant, mostly for office work, are required for a building programme in Ontario, in connection with roads, trails, lookout towers, telephone line, buildings, etc. Preference to veterans. Salary up to $3,000 per year for senior and $2,000 per year for junior position. Apply to File No. 3394-V.

CIVIL ENGINEER to take charge of work in a drainage district in Quebec. Must be bilingual. May be recent graduate. Salary from $200. Apply to File No. 3479-V.

CIVIL ENGINEER for design work in an industrial plant in the Montreal area with experience in building construction, probably permanent position, salary from $200 up according to experience. Apply File No. 3504-V.

CIVIL ENGINEER, recent graduate, required by a firm of consulting engineers in Montreal, to assist Engineer in charge of field work in Ont. Salary $175 up. Apply File No. 3518-V.

CIVIL ENGINEERS with experience in detailing and designing structural steel and reinforced concrete for manufacturers are required for a steel fabricating company in Manitoba. Salary open. Apply File No. 3519-V.

CIVIL ENGINEER to be superintendent of construction with a contractor in Montreal. Salary according to qualifications. Apply to File No. 3558-V.

CIVIL ENGINEER, recent graduate up, to be assistant to town engineer of a town in the Montreal area. Permanent position. Salary from $175 up. Apply to File No. 3569-V.

CIVIL ENGINEER, age 35-40, with extensive experience in detailing and checking structural steel in buildings and bridges, required by a steel fabricating company in Southern Ontario. Salary open. Apply to File No. 3570-V.

CIVIL ENGINEER with 3 or more years' experience on design of industrial buildings, equipment, supports and foundation work, is required by a Montreal firm for structural design work in steel, timber and reinforced concrete. Salary $200 up. Apply to File No. 3588-V.

CIVIL ENGINEER with construction experience required as plant engineer by a textile firm with headquarters in Montreal. Salary open. Apply to File No. 3615-V.

ELECTRICAL

ELECTRICAL ENGINEER, age 32-36, with electrical experience around mines or smelters. English speaking with working knowledge of French, is required by a company in Shawinigan Falls, Quebec. Salary open. Apply to File No. 3415-V.

ELECTRICAL ENGINEERS, age 30 to 40. 5 to 10 years experience, for estimating design and general engineering for large public utility in Toronto area. Apply to File No. 3429-V

ELECTRICAL ENGINEERS, from recent graduates up, required by a company in Montreal engaged in the production of telephone, etc., equipment. Veterans preferred. Salary open. Apply to File No. 3551-V.

ELECTRICAL ENGINEER for a junior position in the design department of an industrial concern in the Montreal area. Salary open. Apply to File No. 3574-V.

ELECTRICAL ENGINEER DRAUGHTSMEN, preferably with pulp and paper experience, required by a paper company in Montreal. Salary open. Apply to File No. 3610-V.

ELECTRICAL ENGINEER for sales engineering, with previous experience, age 25-40, required by a Montreal firm handling pumps, valves, automatic controls, etc. Salary according to experience. Apply to File No. 3614-V.

ELECTRICAL ENGINEER with experience in the design of electrical circuits required by an industrial organization with headquarters in Montreal. Salary open. Apply to File No. 3644-V.

ELECTRICAL ENGINEER with knowledge of power apparatus, preferably bilingual, required for sales work with a manufacturer in the Montreal area. Salary open. Apply to File No. 3646-V.

ELECTRICAL ENGINEERS with at least five years experience, mostly in aircraft design, required for the design staff of an industrial organization in Montreal. Salary from $275. Apply to File No. 3650-V.

MECHANICAL

MECHANICAL ENGINEER, is required for draughting and detail work with a company in central Ontario. Good prospects for advancement. Single man preferred. Salary open. Apply to File No. 3393-V.

STEAM PLANT SUPERVISOR—Manufacturer with several plants in Ontario and Quebec requires an active man with technical training and field experience in efficient steam plant operation. Apply to File No. 3406-V.

MECHANICAL ENGINEER, with mine mechanical draughting experience, for producing gold mine in Quebec. Apply to File No. 3436-V, stating experience, references and salary expected.

MECHANICAL ENGINEER with experience in pulp and paper work is required as draughtsman for a company in New Brunswick. Salary is open according to qualifications. Apply to File No. 3471-V.

MECHANICAL ENGINEER, recent graduate, for technical service and plant operation with a manufacturer in the Montreal area. Successful candidates will have two-year training course in U.S. Apply to File No. 3476-V.

MECHANICAL ENGINEERS from recent graduates up required by a structural steel company in the Montreal area. Salary according to qualifications. Apply to File No. 3485-V.

MECHANICAL ENGINEER with at least five years' industrial experience, knowledge of plant layout, equipment design and cost estimating and preferably experience in chemical industry. Salary $275-$325. Apply to File No. 3553-V.

MECHANICAL ENGINEER with considerable experience in heating and ventilation, etc., required by a firm of consulting engineers in Montreal. Salary open Apply to File No. 3565-V.

MECHANICAL ENGINEERS with experience in heating and ventilating or the pulp and paper industry or with general mechanical layout and design work are required by a firm of consulting engineers in Montreal. Salary from $250-$350 according to experience. Apply to File No. 3568-V.

MECHANICAL ENGINEER, recent graduate, for junior position in the design department of a firm in Central Ontario making special heavy duty mobile equipment. Apply to File No. 3572-V.

MECHANICAL ENGINEER from recent graduates up, preferably with paper and pulp experience, required by a firm in the St. Maurice Valley. Salary according to experience. Apply to File No. 3573-V.

MECHANICAL ENGINEER with some electrical experience for the design department of an industrial concern in the Montreal area. Salary open. Apply to File No. 3574-V.

MECHANICAL ENGINEER with paper mill or mining experience required as assistant mechanical superintendent and understudy to mechanical superintendent in a paper mill in the St. Maurice Valley. Salary from $300 according to experience. Apply to File No. 3581-V.

MECHANICAL ENGINEER, preferably with mining experience, age 25-35, required by a manufacturer in Montreal to do estimating or design work on mining equipment and assist in sales. Salary according to experience. Apply to File No. 3589-V.

MECHANICAL ENGINEER with extensive knowledge of machine shop practice and general industrial experience is required by a specialized industrial plant in the Montreal area. Veteran preferred. Salary according to experience. Apply to File No. 3595-V.

MECHANICAL ENGINEER with five to ten years industrial experience and familiar with the layout and construction of chemical plants, required by a manufacturer in the Montreal area for plant design and construction. Salary from $300. Apply to File No. 3605-V.

MECHANICAL ENGINEER with experience in the automotive business and the maintenance of all types of internal combustion engines required by an oil company in the Montreal area. Salary open. Apply to File No. 3608-V.

MECHANICAL ENGINEER with at least five years industrial experience required by a textile firm with headquarters in Montreal. Salary open. Apply to File No. 3615-V.

COMBUSTION ENGINEER, MECHANICAL, preferably with five years industrial experience, required by a textile firm with headquarters in Montreal. Salary from $300. Apply to File No. 3615-V.

MECHANICAL ENGINEER with at least five years' experience of aluminum processing, plant design and operation, etc., required for Aluminum production organization in Australia. Limited contract. Salary open. Apply to File No. 3620-V

YOUNG MECHANICAL ENGINEER, recent graduate up, single, to be assistant maintenance engineer in a cement plant in South America. Salary about $250 with keep. Apply to File No. 3621-V.

MECHANICAL ENGINEERS to be design squad leaders on heavy machinery design required by a company in Central Ontario. Salary open. Apply to File No. 3623-V.

MECHANICAL ENGINEER recent graduate, required by an industrial firm in south western Quebec, for the design and erection of complex textile machinery. Salary open. Permanent position. Apply to File No. 3625-V.

MECHANICAL DRAUGHTSMAN with experience in power house layouts required by an engineering firm in Toronto. Salary open. Apply to File No. 3630-V

MECHANICAL ENGINEER, bilingual, with shop or automotive experience, required for equipment maintenance by a manufacturer in the Montreal area. Salary open. Apply to File No. 3631-V.

JUNIOR MECHANICAL ENGINEER with construction or machine shop experience, required by a Montreal firm handling heavy construction equipment. Salary open. Apply to File No. 3635-V.

MECHANICAL ENGINEER with experience in machine design required by a firm in the Maritimes engaged in ship repair and conversion and the manufacture of marine and heating equipment. Salary open. Apply to File No. 3638-V.

MECHANICAL DRAUGHTSMEN, graduates preferred, with experience in shop and field erection, required for design of coal and oil fired heating and steam systems by an industrial firm in Montreal. Salary open. Apply to File No. 3647-V.

MECHANICAL ENGINEER with knowledge of machine tools, age about 35, required in Montreal for work in connection with purchase, design, re-conversion and sale of machinery. Salary $300-$400. Apply to File No. 3648-V.

METALLURGICAL

METALLURGIST, age 25-30, veteran, experience in Metallurgical Laboratory or Mine Assay office and Mining Mill practice decided advantage, required by a Montreal firm to be trained for Sales Representative. Salary depending on experience. Apply to File No. 3588-V.

MISCELLANEOUS

TWO INDUSTRIAL ENGINEERS, preferably with engineering background in mechanical, electrical or chemical engineering, age 35 up, bilingual, with some practical experience, is required by a company in Montreal engaged in industrial engineering, consulting work, plant layout, controls, inventories, production and admin. controls. Apply to File No. 3307-V.

CHIEF DRAUGHTSMAN to take charge of engineering department, draughting room and estimating for machinery manufacture in Sherbrooke. Apply to File No. 3430-V.

ENGINEERING DRAUGHTSMAN required by an industrial concern in Three Rivers for all round employment in a permanent position. Apply to File No. 3443-V

CIVIL OR MECHANICAL ENGINEER with experience in pulp and paper mills, to be assistant to plant engineer in a paper mill in Central Quebec. Salary open. Apply to File No. 3445-V.

TWO STRUCTURAL STEEL DRAUGHTSMEN with five or more years experience in designing and detailing steel structures. State experience and salary required. Location Toronto. Apply to File No. 3451-V.

ELECTRICAL OR MECHANICAL ENGINEERS interested in transportation, with experience in the transportation field or machine shop practice or automotive services, maintenance and operation. Salary according to qualifications. Apply to File No. 3456-V.

MECHANICAL OR ELECTRICAL ENGINEER under 35, with at least 5 years practical experience, is required for a responsible position in the engineering department of an industrial firm in Toronto. Apply to File No. 3472-V.

STRUCTURAL STEEL DESIGNERS AND DETAILERS required by a construction company in Montreal. Salary open. Apply to File No. 3482-V.

CIVIL OR MECHANICAL ENGINEER with experience in construction required by a Montreal firm to estimate value of work done and to inspect during construction concrete and steel bldgs. Salary open. Apply to File No. 3486-V.

RESIDENT ENGINEER with considerable construction experience and bilingual is required by a public utility for employment on the upper Ottawa River. Salary from $350. Apply to File No. 3505-V.

PLANT ENGINEER with pulp and paper experience for development, construction and maintenance work with a paper mill in the Lake St. John area. Salary open. House available. Apply to File No. 3507-V.

STRUCTURAL STEEL DRAUGHTSMEN AND CHECKERS, preferably graduate engineers but any experienced men acceptable, are required for a steel fabricating company in Manitoba. Salary open. Apply to File No. 3519-V.

MECHANICAL OR MINING ENGINEER, age 30-40 with experience in industrial engineering, required by a large mining and processing firm for methods studies of equipment, labour and costs. Salary according to qualificatons. Apply to File No. 3524-V.

INDUSTRIAL ENGINEER, under 40, with not less than 5 years' experience in industrial methods engineering, required by a paper company in British Columbia. Salary open. Apply to File No. 3550-V.

CIVIL OR MECHANICAL ENGINEERS, preferably with pulp and paper experience, required for engineering and operating staff of a large Ontario corporation. Salary according to qualifications. Apply to File No. 3554-V.

CHEMICAL OR MECHANICAL ENGINEERS, age about 30, with at least five years' experience in the paper industry, required by an Ontario Company to train for executive positions. Salary open. Apply to File No. 3554-V.

GRADUATE ENGINEERS with experience in air-conditioning, heating, refrigeration and allied problems, required by a manufacturer in the Montreal area. Salary open. Apply to File No. 3566-V.

CIVIL OR MECHANICAL ENGINEER with construction experience required by an Ontario firm manufacturing and installing building specialties for industrial plants. Salary open. Apply to File No. 3567-V.

DESIGN ENGINEER with considerable experience required by a pulp and paper firm in the St. Maurice Valley. Salary open. Apply to File No. 3573-V.

CIVIL AND MECHANICAL ENGINEERS AND DRAUGHTSMEN, preferably experienced in building design and plant layout, required for a pulp and paper mill in Southern Ontario. Salary open. Apply to File No. 3578-V.

MECHANICAL AND ELECTRICAL DRAUGHTSMEN required by a Montreal firm. Must have working knowledge of equipment layout, architectural, piping and design. Salary from $200 up. Apply to File No. 3588-V.

MECHANICAL AND ELECTRICAL ENGINEERS, from recent graduates up, are required for mechanical and electrical maintenance, also design phases of project engineering work, by a Montreal firm. Salaries according to qualifications. Apply to File No. 3588-V.

GRADUATE ENGINEERS required as Development Engineer and Assistant to Sales Manager by a Montreal firm. Industrial, also sales and administrative experience necessary. Salary $200 up according to experience. Apply to File No. 3588-V.

INDUSTRIAL ENGINEER, 5 years' experience industrial manufacturing or process work, required by a Montreal firm for study and co-ordination of plant work. Salary $295 up according to qualifications. Apply to File No. 3588-V.

CHIEF DRAUGHTSMAN, under 35, 5-12 years' experience in drawing office, Including year or more as squad boss, required by a Montreal firm. Salary $225 up. Apply to File No. 3588-V.

ASSISTANT PROFESSORS AND INSTRUCTORS required for the staff of a technical college in New York State. Salary open. Apply to File No. 3600-V. (A)

DESIGN ENGINEER, capable of assuming responsibilities of designing structures and equipment layouts of steam plants, hydro-electric developments, etc., required by an industrial corporation in Montreal. Salary from $350 according to experience. Apply to File No. 3603-V.

HYDRAULIC ENGINEER, familiar with hydraulic machinery design, installation, stream functions and runoff computations, etc., required by an industrial corporation in Montreal. Salary from $300 according to experience. Apply to File No. 3603-V.

MECHANICAL OR ELECTRICAL ENGINEER with considerable construction experience required as executive assistant to chief engineer of general contracting firm with headquarters in Montreal. Salary from $300 according to experience. Apply to File No. 3604-V.

DESIGN ENGINEERS with experience in reinforced concrete and hydraulic structures for hydro-electric developments for an engineering firm with headquarters in Toronto. Salary open. Apply to File No. 3612-V.

CHIEF DRAUGHTSMAN with experience in design and controlling a design staff required for both structural and equipment work by a steel fabricating plant in Western Canada. Salary open. Apply to File No. 3616-V.

CHIEF ENGINEER with industrial experience required for a steel fabricating plant in Western Canada. Salary open. Apply to File No. 3616-V.

STRUCTURAL OR MECHANICAL DRAUGHTSMAN required for detail drawings by a steel fabricating plant in Western Canada. Salary open. Apply to File No. 3616-V.

GRADUATE ENGINEER, bilingual, required for senior position on the Montreal sales staff of a firm manufacturing and installing mechanical equipment in buildings of all types. Veteran preferred. Salary open. Apply to File No. 3622-V.

SALES AND SERVICE ENGINEER with considerable experience in sales and heavy mechanical equipment required by a sales organization on the West Coast. Salary open. Apply to File No. 3626-V.

DESIGN DRAUGHTSMAN for the design of cranes and hoists of all types, capable of making and checking complete manufacturing detail drawing, required by a manufacturer in Southern Ontario. Apply to File No. 3628-V by letter with full details. Salary open.

MECHANICAL OR CHEMICAL ENGINEER for sales and sales engineering of industrial oils and greases, preferably bilingual and with experience in the paper or textile industries, required by an oil company in Montreal. Considerable travelling. Salary from $250. Apply to File No. 3632-V.

QUALIFIED ENGINEER required to represent for sales purposes in Northern Ontario a company engaged in the supply of coal. Knowledge of territory essential Salary open. Apply to File No. 3634-V.

SALES ENGINEER to call on Industrial and Municipal engineers and executives across Canada. Returned man, under 40 with knowledge of mill pipe layout practice preferred. Position with future in nationally known firm, headquarters Toronto. Salary and expenses. Apply to File No. 3636-V.

AERONAUTICAL OR MECHANICAL ENGINEER, recent graduate up, required as owner's representative on aircraft design and manufacture. in the Toronto area. Salary open. Apply to File No. 3637-V.

SALES ENGINEER with wide engineering experience wanted by a company in Toronto for the sale of textile machinery and construction equipment. Salary open. Apply to File No. 3639-V.

JUNIOR ENGINEERS, CIVIL, ELECTRICAL OR MECHANICAL, recent graduates up, required for the design staff of a large industrial organization in Montreal. Salary from $175 according to experience. Apply to File No. 3644-V.

ENGINEERING DRAUGHTSMEN with survey experience for the lands department of a public utility with headquarters in Montreal. Salary open. Apply to File No. 3644-V.

EXPERIENCED INSTRUMENT MAN for field work required by an engineering company with headquarters in Montreal. Salary open. Apply to File No. 3644-V

JUNIOR ENGINEERS, recent graduates up, required by an organization in Montreal, for the inspection of buildings for fire hazards, etc. Bilingual preferred. Salary about $200. Apply to File No. 3651-V.

Situations Wanted

MECHANICAL ENGINEER, S.E.I.C., married, age 35, wants more suitable work. Experienced in Mechanical, Aeronautical, Civil and Forestry engineering, with over 7 years in responsible positions involving organization, getting along with people and fast control of new problems. Speaks several languages; has experience as Draughtsman, Foreman, Inspector, Plant Engineer, Assistant to Plant Superintendent and Designer; also in hydraulics, thermodynamics and stress analysis. Will accept responsible position anywhere with assured family accomodation near work. Prefers Airlines, Paper Industry, Mining or any expanding enterprise where technical ability in organising would be welcome. Desired salary $300 a month. Apply to File No. 140-W.

CHEMICAL ENGINEER, graduate in 1939, Jr.E.I.C., veteran, considerable experience in development and process control and quality control as well as some experience in production work, desires change. Employment since graduation, except for time in the services, has been with a large chemical manufacturing company. Montreal or Toronto areas preferred. Apply to File No. 798-W.

ELECTRICAL ENGINEER, Jr.E.I.C., age 26, B.Sc. (Man.) '42, E.M.E. Canadian Army for 4 years, in charge of workshop units engaged in the maintenance and repair of precision optical and mechanical instruments. Position of responsibility desired in research, power, traction or mechanical line. Ontario or western area preferred. Apply to File No. 1537-W.

MECHANICAL ENGINEER, M.E.I.C., P. Eng., age 28. Five years experience including plant layout and design; plant engineering and works and building maintenance; maintenance of trucks, tractors, cranes and small ships. Aircraft project and service engineer, design of modifications and failure investigation, power plant, engine, propeller, etc. Good organizer and ability to handle men. Engineering Officer, Royal Canadian Navy. Desires sales or plant engineering position in Montreal area. Available two weeks notice. Apply to File No. 1658-W.

SALES ENGINEER, Jr. E.I.C., P. Eng., Que., age 32, B. Eng. McGill in Mechanical, experience in sales, design and plant engineering. Married. Bilingual Location immaterial. Veteran. Available on short notice. Apply to File No. 1692-W.

DESIGN-DRAUGHTSMAN, M.E.I.C., With experience in all classes of Structural Steel detailing and design, Plant layout. Equipment drawings, piping. Paper Mill construction. Wishes change of position to suit experience. Capable of assuming duties of Assistant Chief Draughtsman. Location preferably Montreal, Que. Apply to File No. 2439-W.

GRADUATE ENGINEER, B.Sc. (Civil), M.E.I.C., services available. Thorough knowledge of building construction and fifteen years' experience in sales engineering and promotional work in connection with building products; also considerable practical experience in construction work as estimator and in field work. Recently resident engineer on large industrial project. Good connections with architectural and contracting firms, particularly in Toronto area. Apply to File No 2440-W.

GRADUATE ENGINEER, Jr. E.I.C., having proven executive and administrative ability, a liking for and experience in Sales Engineering work, and ten years production and maintenance experience in industry, wishes to locate in the Winnipeg area. Apply to File No. 2500-W.

ELECTRICAL ENGINEER, Jr.E.I.C., graduate McGill University 1944, age 25, single. Experience in industrial, radio communications and as Radar officer in R.C.E.M.E. Interested in a position leading to sales engineering or industrial management. Services available on one month notice or less. Apply to File No. 2649-W.

GRADUATE CHEMICAL ENGINEER, S.E.I.C., B.A.Sc., Toronto, 1946, available immediately. Interested in position with Consultant or in Production. Location preference: Hamilton, Ont. Apply to File No. 2721-W.

GRADUATE ELECTRICAL, TORONTO, 1932. M.E.I.C., P. Eng. Seeks responsible Administrative or Industrial Engineering position with Manufacturer, Supplier or User of Electrical Equipment and or Electrical or General Management, Engineering Services, preferably outside the Province of Quebec. Fourteen years' experience in Radio and Aviation Industries, including: four years radio development and manufacture, one year supervision of instruction radio trade school, six years supervision of installation, operation and maintenance of radio aids to air navigation, one year supervision of airline communications, two years equipment and sales engineering, aeronautical and railroad radio equipment. This included executive and administrative responsibility. Apply to File No. 2725-W.

GRADUATE FOREST ENGINEER, Jr. E.I.C., single, age 28, with six years' bush experience, in timber, improvement and operational surveys, operational planning and layout, construction and supervision, requires position as assistant logging superintendent or assistant logging engineer. Available immediately for service anywhere in Canada or British possessions. Details of experience and references furnished on request. Apply to File No. 2726-W.

PLANT ENGINEER, B.Eng., M.E.I.C., R.P.E. (Ont.), age 35, married, with 11 years' experience in design, construction and maintenance of electrical and mechanical installations and buildings. Aggressive, resourceful and co-operative Successful record in responsible supervisory position. Apply to File No. 2728-W.

COMMUNICATIONS ENGINEER. Engineering Physics (Hons.), Jr.E.I.C., Assoc. I.R.E., R.P.E. Ont., F.B.I.S., age 26. Summer employment with telephone manufacturer, Ontario Hydro, and as radio instructor. Three years with the Royal Navy as Radar Officer in complete charge of maintenance, installation and operation of radar equipment on board. One year field engineering with commercial FM radio equipment. Seeks position with opportunity for origina work in electronic and allied fields. Available beginning 1947. Apply to File No. 2779-W.

CIVIL ENGINEER, age 39, M.E.I.C., R.P.E., etc., used to responsibility and control in Consultative, Public Authority and Governmental fields, seeks worthwhile professional or commercial opportunity in Southern Ontario. Apply to File No. 2790-W.

MECHANICAL ENGINEER, Sask., '46, with summer experience in highway surveying, time checking, a steel rolling mill, ship wiring, job planning and cost estimating, desires work, preferably in Vancouver area. Would prefer work including time and motion studies, cost control and estimating, and job evaluation. Available on short notice. Apply to File No. 2795-W.

Business Opportunity

MECHANICAL ENGINEER with shop and capital desires partner with experience and capital to set up a Heating, Plumbing and Air-Conditioning Contracting and Engineering Firm in Montreal. Write to File No. 2262-W.

DICTIONARY OF AERONAUTICS with Glossaries of Aerological and Navigational Terms:

By E. B. French, Mentzer, Bush & Co., Chicago, 1945. 129 pp., illus., diagrs., charts, tables, 8½ x 5½ in., cloth, $1.00.

Words and phrases in the field of aviation and aeronautical engineering are defined in a concise manner. The illustrations are designed to identify and relate a number of terms as a group. Separate glossaries are provided for aerological and navigational terms.

ELECTRON MICROSCOPE, an Introduction to its Fundamental Principles and Applications:

By E. F. Burton and W. H. Kohl. 2 ed. Reinhold Publishing Corp., New York, 1946. 325 pp., illus., diagrs., charts, tables, 9¼ x 6 in., cloth, $4.00.

The opening chapters cover the principles of the optical microscope, including a discussion of wave motion as a means of propagation of energy. The author proceeds to a description of electromagnetics and the electron, and then presents the physical principles upon which the operation of the electron microscope is based. Both the electrostatic and magnetic types are covered. Important practical applications of the electron microscope are considered in the last chapter. The book is well illustrated with sketches and micro-photographs, and there is a twenty-page bibliography.

ENGLISH-FRENCH and FRENCH-ENGLISH TECHNICAL DICTIONARY:

F. Cusset. Chemical Publishing Co., Brooklyn, N.Y., General Publishing Co., Toronto, 1946. 590 pp., 6¾ x 5 in., cloth, $7.00 (in Canada).

Giving both English to French and French to English translations, this dictionary, as shown on the title-page, covers metallurgy, mining, electricity, chemistry, mechanics and science. Phrases as well as words are given and in many cases appear directly under each of the important words. A few basic conversion tables appear at the end of the book.

HANDBOOK of MATERIAL TRADE NAMES (Industrial Research Services):

O. T. Zimmerman and I. Lavine. Industrial Research Service, Dover, New Hampshire, 1946. 503 pp., tables, 9¼ x 6 in., fabrikoid, $7.50.

This alphabetical list of some 5000 trade names of commercial materials gives brief information concerning compositions, properties and uses as well as the name of the manufacturer or distributor. A wide range of materials is covered, including metals, plastics, chemicals, pharmaceuticals, etc. A separate list of the manufacturers and distributors provides addresses.

MECHANICAL WORLD YEAR BOOK 1946:

Emmott & Company, Ltd., London. 360 pp., diagrs., charts, tables, 6¾ x 4 in., fabrikoid, 2s.6d.

This year book provides a pocket-size manual of information on machine-shop practices, light alloys, plastics, bearings, steam boilers, turbines, internal-combustion engines, welding, and other topics of interest to manufacturers and mechanical engineers. There is a large amount of tabular matter presenting useful mathematical and engineering data.

NEW CAREERS in INDUSTRY:

By J. M. Amiss and E. Sherman. McGraw-Hill Book Co., Whittlesey House Division, New York and London, 1946. 227 pp., illus., 8¼ x 5½ in., cloth. $2.50.

The main types of jobs available in industry are discussed from, several viewpoints. Necessarily, information is given about duties working conditions, wages and qualifications. Additionally, the authors emphasize the importance of the individual job, its place in the total pattern of industry, and opportunities for advancement. The field is covered from the machine operator to the salesman, from the supervisor of mechanical operations to the supervisor of personnel and labour relations. Suggestions are also given for planning for the necessary educational training and for the evaluation of one's own qualifications.

PERSONALITY and ENGLISH in TECHNICAL PERSONNEL.

P. B. McDonald. D. Van Nostrand Co., New York, 1946. 424 pp., 8¾ x 5½ in., cloth, $3.75.

This book emphasizes the importance of developing a definite personality, an accurate command of English, and effective methods for presenting ideas, both written and verbal, with specific suggestions for improvement in these particulars, The value of a reasonably broad cultural as well as technical background is brought out, and several chapters offer material for increasing one's general knowledge.

PRINCIPLES of Business ORGANIZATION:

W. R. Spriegel and E. C. Davies. Prentice-Hall, Inc., New York, 1946, 564 pp., illus., diagrs., charts, tables, 9¼ x 6 in., cloth, $6.35.

The material presented in this book is divided into the following major sections: ownership and structural forms of a business enterprise; promotion and operation of an enterprise; financial considerations; accounts and records; the manufacturing function; the marketing function; personnel maintenance. Miscellaneous considerations such as business research, governmental controls, etc., are covered in a final section. Although an operating business is the central theme, much of the material would meet the requirements of other types of organizations.

RADAR, What It Is:

F. J. Rider and G. C. B. Rowe. John F. Rider, Publisher, Inc., New York 16, 1946. 72 pp., illus., diagrs., 11 x 8½ in., paper, $1.00.

The underlying principles of radar are explained in simple language with a description of the basic radar set. The use of radar during the war by land, sea and air forces is described, including countermeasures. A brief survey of the future of radar is added in conclusion.

REFRIGERATING DATA BOOK, Refrigeration Applications Volume, 2 ed:

American Society of Refrigerating Engineers, 40 West 40th St., New York, 1946. 683 pp., Refrigeration Classified, 190 pp, illus., diagrs., charts, tables, 9½ x 6½ in., cloth, $5.00.

Each of the seventy-six chapters of this revised manual is devoted to a specific application or closely allied subject, beginning with the fundamental principles involved and continuing with a description of the processes employed. Covering practically the entire field, these chapters are grouped under the major section headings of frozen foods, cold storage, refrigeration in food manufacture and distribution, special low temperature applications, industrial uses, and air conditioning.

REYNOLDS' NUMBER.

J. Jennings. Emmott & Co., Ltd., Manchester, England, 1946. 20 pp., charts, tables, 7¼ x 4½ in., paper, 1s.

The object of this small pamphlet is to demonstrate clearly the meaning of the Reynold's Number, to examine its structure, explain its significance, and show how it can be calculated and utilized. The pamphlet should be useful to any one concerned with any of the varied applications of the science of fluid dynamics.

Society for EXPERIMENTAL STRESS ANALYSIS, Proceedings, Vol. 3, No. 2:

Edited by C. Lipson and W. M. Murray. Published and distributed by Addison-Wesley Press, Inc., Kendell Square, Cambridge 42, Mass., 1946. 166 pp., illus., diagrs., charts, tables, 11¼ x 8½ in., cloth, $5.00.

Eleven papers on various aspects of the subject are contained in this volume, together with seven papers covering the proceedings of a panel discussion of fatigue failure of manufactured parts. The topics of the first eleven papers include the construction and use of strain gages, methods of stress analysis, and a study of the mechanical behavior of the skull and its contents under injuring blows. A list of members and the contents pages of the preceding volumes are included.

SOHO FOUNDRY:

W. K. V. Gale. W. & T. Avery, Ltd., Soho Foundry, Birmingham 40, England, 1946. 49 pp., illus., maps, diagrs., 8½ x 5½ in., paper, 5s.

This is a brief historical survey of an English manufacturing concern with which are connected three of the great industrial pioneers: Matthew Boulton, James Watt and William Murdock. Biographical sketches of the three men are interwoven with the account of the development of the works.

STEEL CASTINGS:

E. N. Simons. Paul Elek Publishers, Ltd., London, E.C.1, England, 1946. 208 pp., illus., diagrs., charts, 7½ x 5 in., cloth, 13s.

Raw materials, melting processes, patterns, foundry sands, molds and cores are dealt with in the first few chapters. Post-casting processes, heat-treatment and machining practice are subsequently covered. The steels used for castings are discussed in detail, including the types and uses of castings from these steels. Separate chapters are devoted to inspection and testing, centrifugal casting, and buying procedures on the part of the customer. A number of special castings are described at the end.

WHAT ARE COSMIC RAYS

P. Auger, translated from the French by M. M. Shapiro. University of Chicago Press, Chicago, W. J. Gage, Toronto, 1945. 128 pp., Plates 1-12, 7¾ x 5¼ in., cloth, $2.75 (in Canada).

This book presents a simple, straight-forward account of all the major cosmic-ray phenomena for the reader who lacks a technical knowledge of physics. A translation from the original French, the new edition has been revised in the light of recent new discoveries and important changes in the field of cosmic rays. The history of the development of cosmic-ray research is reviewed in the early chapters, and a number of photographs of tracks of electrified particles are collected at the back.

THE ENGINEERING JOURNAL

THE JOURNAL OF THE ENGINEERING INSTITUTE OF CANADA

VOLUME 29 | MONTREAL, DECEMBER 1946 | NUMBER 12

"To facilitate the acquirement and interchange of professional knowledge among its members, to promote their professional interests, to encourage original research, to develop and maintain high standards in the engineering profession and to enhance the usefulness of the profession to the public."

CONTENTS

DEVELOPMENT OF THE CANADIAN MAGNESIUM ALLOY ASSAULT BRIDGE

COLONEL E. C. THORNE, M.E.I.C.
Director of Engineer Development, Department of National Defence, Ottawa

Early in 1944, the possibilities of jungle warfare loomed up for the Allies, and the transport of supplies through the jungle in narrow tracks and across precipitous ravines and mountain streams presented one of the major problems. Equipment could only be brought in by men on foot, or by pack animals, and trails thus formed would have to be improved after the initial advance to take jeeps and their loads.

After a series of discussions between Canadian Military Headquarters, the Ministry of Supply and the War Office in London, it was agreed that Canada, with her development facilities and knowledge of magnesium alloys, should undertake the design and construction, from magnesium, of a light infantry assault bridge to be used as a fixed span bridge over precipitous ravines or mountain streams, and also as a pontoon bridge on sluggish streams. All parts of the bridge must be suitable for transportation in one-man loads over long distances in the jungle, and it should be possible for twelve men to carry one hundred feet of completed bridge one hundred yards from the building site. The bridge should be initially capable of supporting infantry in file, and pack animals over a minimum clear fixed span of one hundred feet, and when in use as a pontoon bridge, should withstand currents of five miles an hour. Both types of bridge should be capable of being converted or strengthened to take jeep traffic.

On June 1st, 1944, the directorate of engineer development at National Defence Headquarters was assigned the task of working out the details of this problem on the recommendation of Major-General Howard Kennedy, M.E.I.C., who was then Quartermaster-General, and under whom the directorate functioned. Major-General Kennedy had long advocated the possibility of the use of magnesium alloys in military engineering, and the opportunity of experimenting in the military bridging field was especially welcome at this time.

History of the Development

In spite of the fact that enormous quantities of magnesium were being produced, magnesium was still a highly strategic material needed for aircraft construction, incendiary bombs, tracer and incendiary ammunition and flares, and as an alloying ingredient for high strength aluminum.

The immediate problem was where to obtain as quickly as possible the magnesium alloy for the prototype development. In Canada, one government-owned plant was producing magnesium metal, and a small number of privately-owned plants were converting magnesium metal into sand castings and die castings. It was apparent that no material to meet our requirements was immediately available in Canada, as the preliminary design studies indicated that the bulk of our requirements would be in the form of sheet and extrusions. Furthermore, there was the question of technical advice in solving production and design problems.

It was therefore decided to approach the best known authority in the magnesium field on the American continent, the Dow Chemical Co., of Midland, Mich. An agreement was immediately reached whereby the company undertook to fabricate three standard bays of bridge to drawings and specifications supplied by the directorate of engineer development, with the understanding that changes in design suggested by the company to suit standard shapes and extrusions and to meet particular characteristics of magnesium would be acceptable.

Fig. 1—Launching of bridge by cantilever method.

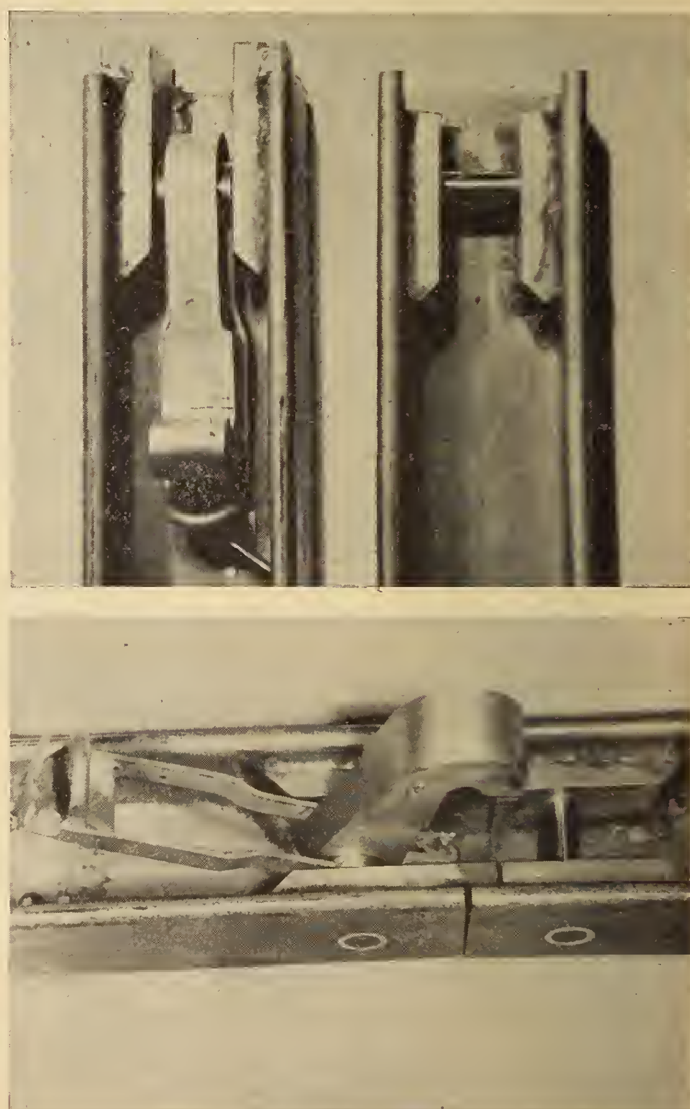

Fig. 2 A—Male and female chord connector showing pin and hook ends. B—Hook handle released from locked position and hook moving forward onto pin.

On December 8, 1944, the prototype panels of bridge were demonstrated to General A. G. L. McNaughton, Minister of National Defence, and to representatives of the General Staff at National Defence Headquarters. The Minister agreed to the furtherance of the project on the understanding that all the development work be done in Canada and all sheet and extruded sections be processed in Canada. Authority was granted to fabricate 250 ft. of bridge for test and demonstrative purposes.

Through the co-operation of the Department of Munitions and Supply, the Dominion Magnesium Company agreed to supply, in ingot form, a magnesium alloy to meet directorate of engineer development specifications and to submit samples which would be tested by the Bureau of Mines, Department of Mines and Resources. The Aluminum Company of Canada welcomed the opportunity of extruding and rolling magnesium in its Kingston plant.

Lt. Col H. B. Stuart, M.E.I.C., and Lt. Paul O. Freeman, JR.E.I.C., both officers employed in directorate of engineer development were assigned the task of preparing the structural details and drawings required for the sections to be used in the bridge. An improved chord connector was also designed by Lt. Col. H. B. Stuart which was ultimately included in the final design.

By January 1945, the problem of production of magnesium extrusions and sheets had been ironed out and dies were being made by the Aluminum Company. There remained, however, the problem of fabrication of the bridge, and owing to the nature of the development, it was considered that the fabrication should be undertaken by a firm who was familiar with light alloy construction, and it was proposed that aircraft factory facilities be utilized. Fairchild Aircraft Limited, of Longueuil, Que., undertook the fabrication of the magnesium alloy bridge. By January 8, 1945, drawings for tools and jigs were under way for the fabrication of the bridge, and it should be noted that the credit for the design of the tools and jigs as well as the making goes entirely to the engineering staff of the Fairchild Aircraft Company, whose splendid cooperation was greatly appreciated.

Specifications

The main purpose, insofar as the preliminary design was concerned, was to determine by simple tests whether a magnesium light alloy bridge would have a reasonable expectation of success. In order to find this out, it was considered essential to fabricate a full scale section of the bridge, and apply static tests. After considering the problem from all angles the following design specifications were formulated.

The bridge was to be 100 ft. long by 2½ ft. wide by 4 ft. deep, consisting of twenty-five sections. The sections were to consist of standard bays and hornbeam sections, each to be made so that it could be disassembled without loose parts, and folded up into units small enough and light enough that approximately fifty men could pack the entire bridge on their backs. It will be recalled that the original specification called for an assembled 100-ft. section to be handled by twelve men. The bridge weighed 2000 lb. when completed, and it was not beyond the possibilities for twelve men to handle this load over the distance specified. A working load of 100 lb. per lineal foot had been specified, and it was considered that this would be the maximum static and dynamic load which the bridge would have to support in service. A margin of safety of about 50 per cent was considered satisfactory in the final design. Another important load condition had to be considered in cases where the bridge was to be launched by the cantilever method, i.e., by attaching two spans together end to end and rolling or sliding the bridge into position (see Fig. 1). Under these conditions it is necessary that the bridge be able to support its own weight when cantilevered 100 ft. The provision of a special end section capable of supporting the bridge under load was also included in the design, and this would also provide end support to prevent overturning of the bridge under a wind load of 10 lb. per sq. ft., acting on the side of the bridge. Sufficient reinforcing was included under the decking for the use of spans side by side for jeep traffic, as under these conditions the decking is the critical item, and has to be capable of supporting the wheel load of a jeep, which amounts to 850 lb. spread over an area of 15.4 sq. in.

Fig. 3—A standard bay.

It was the intention to use welded construction throughout, and helium welding equipment was installed, and helium gas obtained, but because of difficulties in obtaining sufficient quantities of helium, argon was later substituted. Because of the thin sections of the components, welding of the bulb stem to the underside of the decking caused considerable warping, and it was necessary to resort to rivetted design. No difficulty, however, was experienced in welding the extruded sections, and tests on the welds in the top and bottom chord channels withstood pulls in excess of design requirements without any signs of weakness. It is interesting to note that all the welding was done without any of the magnesium alloy burning.

Design Features

The design follows that of the common deck plate girder bridge. The structure is sub-divided into bays 4 ft. long

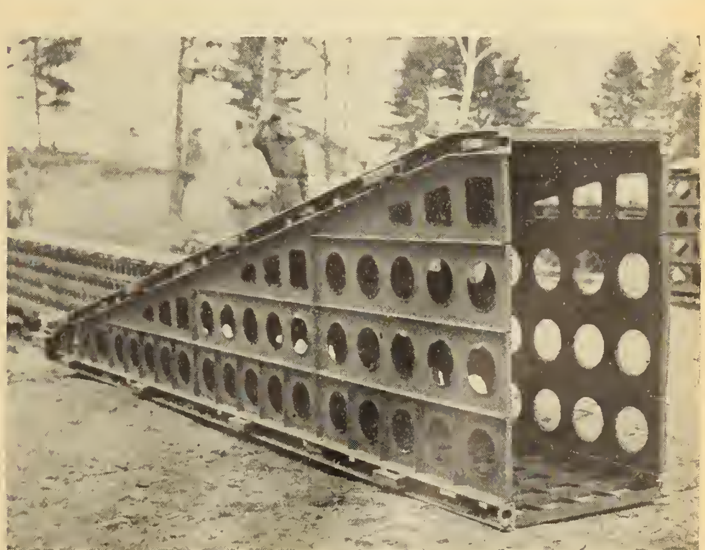

Fig. 4—16 ft. Hornbeam section (4 bays) assembled, ready for attaching to standard bay.

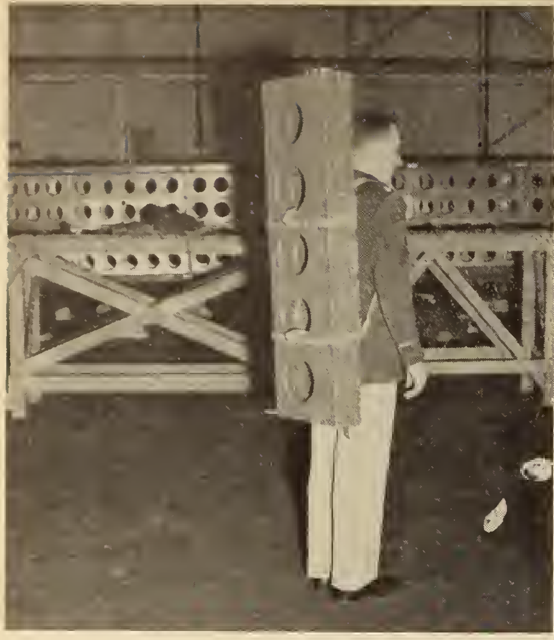

Fig. 5—The component parts may be folded up for carrying in a pack on a man's back.

and 27 in. wide, which dimensions were determined to facilitate man carriage. A span of 100 ft. is capable of supporting a live load of 100 lb. per lineal foot, which is approximately one infantry man after another, each wearing full battle equipment, and well closed up. When two bridges are used abreast, a live load consisting of a jeep towing a 6 pounder gun is capable of crossing the 100-ft. span.

The dead load for design purposes is 20-lb per lineal foot. It is observed that magnesium weighs .065 lb. per cu. in., whereas aluminum alloy weighs .1 and steel .283 lb. per cu. in. Impact was not considered in the calculations, it having been felt that, for design purposes, the combined dead and live load of 120 lb. per lineal foot uniformly distributed, kept in view the basic loading, and could more readily be compared with the yield points of the materials tried in the initial computations.

The deck panels are 27 in. wide by 4 ft. long, and are combined with the transverse vertical brace frames, and

Fig. 6—The side panels comprise four hinged panelettes.

fold into a load slightly in excess of 27 lb. This load is folded into four, the deck being doubled, likewise the brace frame, and the two meet in a common hinge. The deck is of a hard rolled plate, while the side panels and bracing frames are made of a soft alloy to permit forming. The sides or webs are 4 ft. long and 4 ft. deep, and fold, likewise four times into a pack about 1 ft. wide and 4 ft. long, each side weighing 27 lb.

Each 4-ft. section is fastened together by a chord connector which consists of a hook, eccentric and pin, thus eliminating the use of bolts and nuts (Fig. 2a and b). Although this hook is simple in conception, it should be noted that it must withstand a stress of some 20,000 lb. In the original tests carried out on the prototype panels, it was found that when the bridge is loaded to 150 lb. per lin. ft., the maximum load that must be carried through the fitting is 25,000 lb., and it was believed that some eccentricity was introduced at the joint due to the fact that the chord channel was not sufficiently deep to permit the tie bolt to lie along the centre line of the chords. This defect has been overcome in the new design.

Fig. 7—Final stage in assembly of a standard bay. Dzus fasteners are locked in position throughout.

General Description and Tests

One hundred feet of bridge comprises seventeen standard bays, such as the one shown in Fig. 3, equal to 68 ft., and two hornbeam sections, (Fig. 4) each 16 ft. made up in increments of four feet. The hornbeam section is decked top and bottom to permit its use as a ramp if necessary. Standard bays are decked only on top, the bottom of the bay being braced by a frame. A standard bay is made from four component parts all of which are standard and interchangeable. No component part weighs more than 27 lb., and it may be folded up so that it can be carried quite comfortably in a pack on a man's back (Fig. 5).

The top deck and vertical brace frame are combined in a hinged assembly; when in the open position the deck is 4 ft. long and 27 in. wide, and the vertical brace frame the same. For pack carrying, the deck folds into two, the vertical brace frame likewise. Finally the folded top deck and folded vertical brace frame fold one under the other by means of a hinged assembly, forming a component, 2 ft. by 27 in., by 4 in. thick; this is one component of a standard bay and weighs 27 lb. The side panels (Fig. 6) (two for each bay) comprise four hinged panelettes, the top and bottom panelette terminating on the chord channels. When open, the side panel extends 4 ft. in length and depth; when folded it is reduced to 4 ft. in length by one foot in depth, and 4 in. thick. The bottom brace is similar to the vertical brace and consists of two hinged sections.

To assemble a standard bay, the two sides are laid on end, and the top deck and vertical brace are fitted. This is done by aligning and inserting shear lugs, found on the underside of the decking, into holes in the chord channel, and locking down with Dzus fasteners (Fig.7). The bottom brace is fitted in the same manner, and the bay is now assembled and may be turned up into its correct position for joining onto another bay. Hornbeam sections are built in a similar manner, the only difference being that a bottom deck replaces the bottom brace frame. Assembled bays are hooked together by means of the hook and pin built into the chord channel. Each end of a chord channel has an alternate male and female coupling, and corresponding alternate hook and pin assembly. The hook itself is actuated by an eccentric, and is in its fully extended position when the handle and hook are both forward. When two chord channel assemblies are fitted together the hook is put forward and just clears the pin, the handle is then swung back, at the same time the hook takes up on the pin, and the handle is locked back into the chord channel to insure that the hook remains closed. Chord channels are joined in this manner top and bottom. It should be noted that the entire assembly operation has been effected with only the use of a screwdriver

Fig. 9—Timber decking being placed on four fifty-foot bridge assemblies.

Fig. 8—View along the decks of the 100 ft. span showing double bridge brace frames in position.

to cinch the Dzus fasteners. No other tools are required to build this bridge, and even the screwdriver may be dispensed with in an emergency as a knife or a dime will cinch the Dzus fasteners equally as well. The normal time required to assemble a standard bay is 59 seconds.

Launching the bridge over a dry gap of 100 ft. or less is performed by the cantilever method. Rollers are placed on the near shore bank seat and the bridge rolled forward. Counterweight on the back end is provided by additional bridge structure which is held in position by a " C " clamp which fits into the top and bottom chord channels. Figure 1 shows one hundred feet of bridge being launched by the cantilever method.

A single girder structure across the gap is capable of carrying 100 lb. per lin. ft., equal to infantry men with equipment spaced at two feet intervals. Hand rails are provided to guide troops across during darkness. This in effect fulfilled the first requirement for the bridge.

The next stage of the development was to consider the problem of the jeep load. A jeep weighs approximately 3600 lb. and it would be required to tow equipment weighing approximately 2800 lb. An additional problem presented itself at this stage due to the fact that the wheel gauges for the various towed vehicles varied considerably from that of the jeep. This would not have been a very serious difficulty had the bridge been decked down. It should be remembered, however, that the specifications precluded any consideration of decking due to the additional bulk and man power carrying requirement that would have resulted.

The roadway, therefore, would have to be provided by the top deck of a single bridge, and all that was necessary to determine was the optimum spacing between two single bridges to allow for a safety margin both inside and outside for the various wheel gauges. A double bridge brace frame was then made which acted as a spacer between the two bridges. It fits onto the hand rail brackets, which are on the inside of the two structures when they are placed side by side, by shear lugs, and is held by Dzus fasteners. The bridge assembled in this manner provided means for jeep and jeep-towed loads to cross a maximum span of 100 ft. (Fig. 8).

So far the only addition to the bridge over and above the standard component parts has been the double bridge brace frame. They only weigh 7 lb., and could still be included in the man pack loads within the specified limits.

Demonstration

At this stage of the development, the bridge met the original design specifications, and it was decided to demonstrate the bridge to United Kingdom, United States of America and Canadian observers. This was done on

Fig. 10—Fully loaded three-ton truck weighing 16,000 lb. towing a 3,100 lb. gun. Total live load of 19,000 lb.

Fig. 11—Long spans supported on pontoons.

May 7, 1945. While preparing for the demonstration we were asked to consider additional applications for the bridge and its adaption to shorter spans for higher load classifications, and long wet gap crossings employing intermediate pontoon supports. The latter had already been considered to the extent that the bridge could be easily supported at its extremities on pontoons equally as well as on fixed bank seats. The introduction of considerably longer wet gap spans, however, would mean a change in the build up of the bridge, in that considerably more standard bays would be required than hornbeam sections, therefore articulation would have to be provided within the standard bay section for every hundred feet of bridge in the cases where the maximum spans were being floated, and at suitable locations where intermediate supports were inside the maximum span.

To increase the load capacity by shortening the span, immediately introduced the problem of decking down, not only to provide for the varying widths of vehicles to be catered for, but also to take care of the distribution of load over the supporting members.

Owing to the improvised nature of these additional requirements, and the short time for preparation before the demonstration date, field expedients had to be resorted to, to meet the deadline. Four 50-ft. bridge assemblies were placed side by side, and decked down with timber decking made up of 2 by 5 in. British Columbia fir cut into eleven foot lengths, and spaced with two inch blocking. In order to simplify the decking down during the demonstration, decking units were prepared ahead of time. One deck section comprised approximately 5 lengths of 2 in. by 5 in. by 11 ft. lumber with 2-in. spacing blocks approximately 12 in. long at each end and in the centre, the whole bolted together to form a rigid assembly (Fig. 9).

Over this bridge was passed a jeep, followed by a universal carrier weighing 9500 lb., and a fully loaded three-ton truck weighing 16,000 lb. towing a gun weighing 3,100 lb., making a total load of 19,100 lb. (Fig. 10).

The resulting deflections on the bridge assemblies were roughly checked and found to be very small, and it was felt that a bigger load could have been handled. However, without a strain gauge check it was not considered wise to do so, and the additional capabilities of the bridge and its versatility had been demonstrated far beyond what was expected. If heavier loads were to be handled, a number of changes in design would be necessary.

The last phase of the demonstration dealt with a long floating span supported on pontoons (Fig. 11). No articulating connector had been designed or made ready for the demonstration, with the result that field improvisation was necessary. Sacrificing one of the spare bays to provide the chord channels and hook assemblies, and utilizing angle iron and scrap steel plate, a rough and ready articulating connector was made up in the field workshop. This articulating connector was ultimately used as a basis for design for additional light alloy articulating connectors which were made up at a later date.

As a result of the demonstration, a request was received from United States War Department for additional bridges to carry out further trials. At this time, minor changes in design details were effected to simplify production, and all welding was eliminated. On this occasion the bridge was fabricated by the Ottawa Car and Aircraft, Limited, Ottawa, Ont.

Conclusion

The development of the Canadian magnesium alloy assault bridge has proved conclusively that there are probably many interesting characteristics of magnesium which will make themselves known only as wider experience in fabrication and more varied applications uncover them. Full and true information about magnesium has not been easy to acquire because magnesium is in a period of rapid growth, and misinformation about magnesium is almost as prevalent as correct information. The future use of magnesium and magnesium alloy, therefore, will depend entirely on progress made by fundamental research into the nature and properties of magnesium and the technological problems of producing its various forms.

WELDED-BOILER LOCOMOTIVES ON C.P.R. LINES

Since early this year, two locomotives with welded boilers have been in operation on the Canadian Pacific Railway lines between Montreal and Toronto, and Winnipeg and Regina. This development is part of the company's programme for adoption of the latest devices in the field of transportation.

The operating performance of the engines is being carefully followed, and the following advantages are expected to result from the use of welded as compared to rivetted boilers. It will:

1. Eliminate cracks due to intergranular corrosion and high stress concentration in rivet holes.
2. Increase joint efficiency as compared to rivetting.
3. Reduce weight by the elimination of lap joints, inside and outside welts and rivets.
4. Eliminate the possibilities of age-hardening of cold worked plates by final thermal stress-relief heat-treatment.
5. Eliminate high stresses around rivet holes due to rivetting operations.
6. Eliminate stress risers due to abrupt change in section, such as the excess thickness at girth and longitudinal seams of the rivetted boiler.
7. With the more uniform contour of the interior and exterior of the welded boiler, permit ease of application of brackets and facilitate cleaning the interior, due to the absence of welts and rivet heads.
8. Eliminate damage due to caulking of rivets and joints in the rivetted construction.
9. Result in a more economical method of fabricating.

Work carried out by the mechanical engineering department of the C.P.R. resulted in the fitting by the Montreal Locomotive Company of two new "1200" class engines (4-6-2 wheel arrangement) with the new boilers, built by the American Locomotive Company of Schenectady, N.Y. They are the first locomotives of this type to operate on Canadian lines, and are being run in regular service under varying operating conditions.

Decision to try them was prompted by the good service obtained from fusion welding in other instances, including a welded-boiler locomotive now in service on the Delaware and Hudson. Permission of the Board of Transport Commissioners of Canada was necessary for installation of the boilers.

General Description

The boilers were built to operate at a working pressure of 250 lb. per sq. in. with a factor of safety of five and an allowable joint efficiency of 90 per cent. They differ from the Delaware and Hudson Railroad Company's boiler in that the barrel portion consists of three barrel courses butt-welded together, and that a man-hole opening is provided in the third course to facilitate internal inspection in place of the conventional steam dome. The foundation rings are cast steel with single rivet construction, with the caulking edges of the inside and outside firebox sheets seal welded.

Fig. 2—Preparation of longitudinal seam, showing draw bolts and tack welds.

The smoke box is fastened to the first course by rivetting to facilitate renewing the smoke box which is done three to four times during the life of a locomotive boiler.

The wrapper sheet consists of a three plate construction which permits using a heavier sheet over the crown, thus eliminating the need for the liner generally used to stiffen the crown of one-piece wrapper sheets.

The man-hole is flanged from 1 in. plate and has a 17 in. dia. opening, with an overall diameter of 34½ in. fitted into the third course and attached with double-welded butt-weld. The boiler shell opening at the man hole is reinforced with a liner 1⅛ in. thick 25 in. inside dia. by 40 in. outside dia. which is attached to the manhole flange and boiler shell by fillet welds at the inside and outside edges of the liner.

Pads for top check, washout opening, bracket attachments for dry pipes and other internal and external fittings are fillet welded to the boiler shells prior to the stress relieving heat treatment.

All washout plug bushings and flexible staybolt sleeves are seal welded to the backhead, wrapper sheet and throat sheet after the boiler has been stress relieved.

The firebox door opening is formed in the usual manner, by flanging the outside back head inward and the inside back head outward. The two edges are joined together by a single welded butt-weld.

The front tube sheet is of the same design as that used in the Delaware & Hudson all-welded boiler. It consists of a circular ring 1¼ in. thick by 4⅜ in. wide, with a recess at the water side in which the tube sheet is fitted and fillet welded both sides. The complete tube sheet assembly is then fitted and fillet welded to the first course. The ring is provided with slots at the top and bottom centres in order that the tube sheet may be renewed

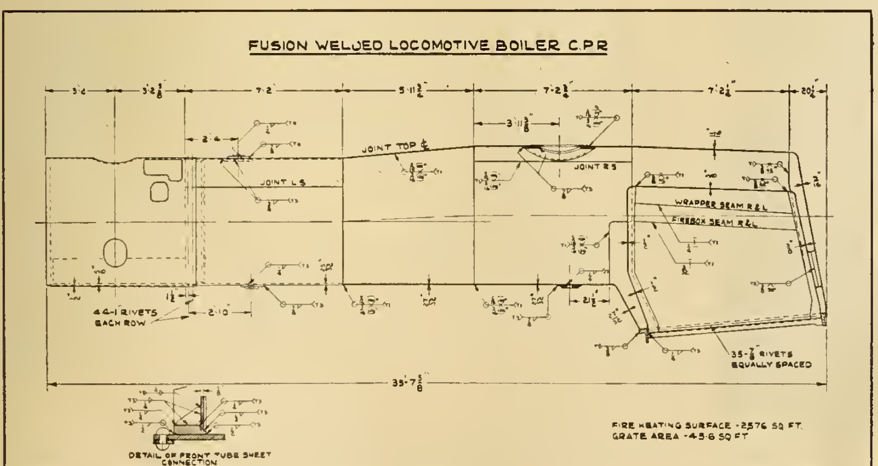

Fig. 1—Showing general dimensions of boiler and location of welded seams.

Fig. 3—Welded longitudinal seam showing starting tab and test plate.

without cutting any of the welds except those directly attaching the tube sheet to the circular ring.

Material

Plates used in the boiler shells were carbon steel to A.S.T.M. specification A-201, Grade A, killed for automatic submerged melt welding. The inside firebox sheets were carbon steel firebox quality to the railway company's specification No. 5.

Joint Preparation

The girth and longitudinal seams of the barrel courses were prepared for automatic submerged melt welding on a plate planer, prior to rolling and forming. The inside and outside back head, throat sheet, back tube sheet and fire door hole were prepared for manual welding by chipping and grinding. A tolerance of .015 in. was permitted in the gap between the plate edges which were automatic submerged melt welded and a ⅛ in. gap between joints that were welded manually. To obtain the tolerance required for automatic welding it was found necessary to grind the butting faces prior to pulling them together. Large nuts were tack-welded to each side of the seams inside the boiler through which draw bolts were applied to hold the seams in line and for pulling the butting edges together. After each seam was properly lined up the plates were tack welded on the inside to maintain a good fit during welding on the outside. Clean-up grinding of the plate edges was also done in order to remove all dirt and scale which might have otherwise caused defects in the weld metal.

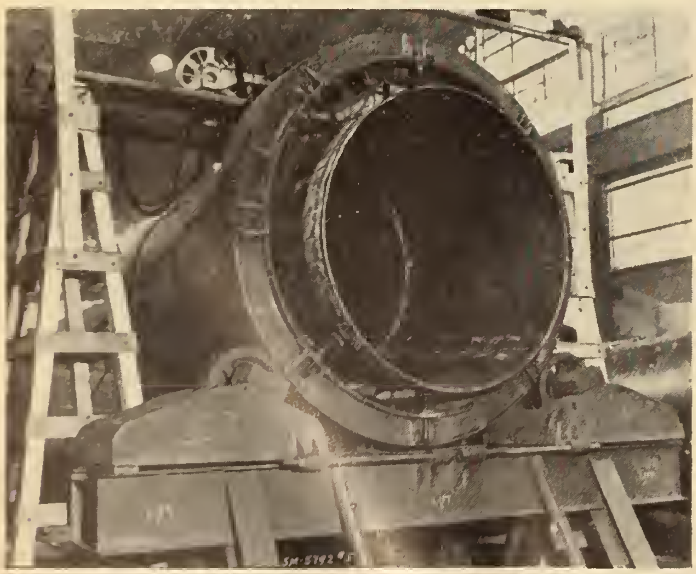

Fig. 4—Welding outside of girth seam between first and second courses and large auxiliary ring used to compensate for eccentric course.

After the outside welds were completed, the draw bolts, nuts and tack welds were removed and the inside of the seam made ready for welding.

Welding Procedure

All welding was in accordance with the A.S.M.E. Locomotive Boiler Code. Procedure qualification and operator's qualification tests were made to determine the suitability of the welding technique employed, welding apparatus, electrodes, plate material and welding operator's ability to produce sound welds, under conditions similar to those used during erection of the boilers.

The procedure qualification tests consisted of welding joints similar to those required for erection of the boilers, using the welding and rotating equipment employed during construction. A record of all qualification tests was kept for future reference.

Fig. 5—Welding third course to wrapper sheet and throat sheet.

The automatic submerged melt welding process was used to weld all longitudinal and girth seams where practical. Test plates were attached to the longitudinal seams of each barrel course and welded continuously with the seam.

Marks were placed on each test plate so that they could be identified in relation to the course from which they were taken. Test plates were stress relieved with the boilers and then given the physical test required. The test showed the joint to be superior to the parent metal in all cases.

The total length of fillet and butt-welds required was:

Fillet Welds	Butt Welds
¼ in.: 658 in.	⅜ in.: 586 in.
⅜ in.: 713 in.	½ in.: 206 in.
½ in.: 730 in.	9/16 in.: 113 in.
⅞ in.: 318 in.	25/32 in.: 299 in.
	27/32 in.: 775 in.

All fillet welds and a small percentage of the irregular butt welds were made with the manual arc, using A.W.S. E-6011 electrodes.

X-Ray Inspection

X-ray inspection was carried out in accordance with the A.S.M.E. Locomotive Boiler Code requirements.

MODERN PRACTICE IN ACTIVATED CARBON SOLVENT RECOVERY PLANTS

GUY F. DOWDING AND STANLEY G. WARD
The Nicholson-Dowding Co., London, Eng.

Introduction

Industries using solvents in large quantities in their processes and those producing solvents as a by-product are faced with the problem of recovering that portion of the solvent carried as a vapour through the medium of air or other gas. Typical industries are:

Municipal gas	Coke oven
Rubber spreading	Artificial silk
Leather cloth	Photogravure
Asbestos	Edible oil
Film casting	Dry cleaning

Solvents in the form of vapour at normal temperatures cannot be recovered by means of condensers, and the use of equipment incorporating oil or water traps is not satisfactory. Modern practice utilizes the properties of activated carbon. Whereas the properties of activated carbon were known in 1790, little use was made of this material in bulk until the introduction of poison gas warfare. Activated carbon is now produced on a large commercial scale by a special process with an adsorbing power seven to eight times that of the charcoal previously used. After some months of use the adsorbing power is reduced to such an extent that it is necessary to re-actify it. This process is cheaply carried out, the spent carbon being normally bought back for re-activating.

The method employed to extract the solvent is to pass the vapour-laden gas through activated carbon. Afterwards the solvent is driven from the carbon by passing steam through the carbon and then into a condenser, thereby recovering the solvent as an aqueous mixture. In the case of non-miscible solvents, such as benzol, the distillate is automatically decanted. In the case of miscible solvents the aqueous condensate is fractionally distilled.

After the steaming process, the activated carbon is dried by passing through it re-heated gases from which the solvent has already been removed. In the case of solvents of very low boiling point, the carbon is also further cooled as well as dried. The cycle of adsorbing, steaming and drying of the carbon is now repeated until such a time as it is necessary to re-activate the carbon. Modern plant operating on this principle is completely automatic and recovery is practically one hundred per cent.

Typical Recovery Plant

A typical recovery plant consists of two adsorbers, a condenser, a gas cooler, recirculating fan, gas heater, separator or condensate receiver and automatic valve control mechanism. In the case of non-miscible solvents the separator delivers the recovered solvent ready for use. Miscible solvents are passed from the receiver to a fractionating condenser.

The solvent laden gases are taken from the ducts leading either from drying chambers, extractor hoods, or, in the case of the gas industry, from the gas main immediately before it enters the container. It is almost always necessary to cool the gas and a gas cooler of tubular design is incorporated. Two adsorber units are supplied to each plant, one adsorber receives the vapour laden gas from the ducts while the other is being steamed and dried. After the carbon in the receiving adsorber is fully saturated, automatic pneumatically operated mushroom valves effect the change over from the one adsorber to the other. The adsorbers vary in size according to the amount of gas treated. They are cylindrical units and are approximately two and a half feet in height and diameter for treating a quarter of a million cubic feet a day, while for treating three million cubic feet a day the size is some five feet in diameter by seven and a half feet in height. The carbon is contained in an annular zone about the centre line of the cylinder, the gas passing from the outside through the carbon layer to the inside. The steam passes in the reverse direction. The loose carbon charge is easily changed by means of removable plates at the top and bottom of the cylinder.

The automatic valve control mechanism is essentially an electrical timing device with appropriate pumps and switches which may be easily adjusted according to the age of the carbon in use. A typical cycle will be twenty minutes while one unit is adsorbing, during which time steam has been passing through the second solvent-laden unit for ten minutes, and ten minutes will have been allowed for drying and cooling. Valves are now automatically operated and the two units are interchanged.

The condenser is of tubular design. The arrangement is novel in that no valves intervene between the condenser and the adsorbers.

The recirculating fan passes a portion of the solvent-free gas through the carbon after the steaming period for purposes of drying and cooling. This gas is re-heated by a small gilled-type heater. In some cases, air is used instead of the treated gas.

The complete plant is compact and, whereas some arrangement of units is permissible to meet special cases, a unit treating a quarter of a million cubic feet a day is some ten feet high by about eight feet by ten feet. One with a capacity of three million cubic feet a day is some twenty feet high by twenty-four feet by seventeen feet. There is no obvious limit to the quantity of gas a day that can be treated. The equipment is clean, automatic and extremely economical in running costs. The solvent recovered is of the highest grade of purity and there are no waste products since the spent carbon may be re-purchased for treatment. The pressure drop across the plant is as low as three inches.

Application to Specific Industries

The principal industries in Great Britain in which plant of the type described is in use are municipal gas, dry cleaning, artificial silk, rubber spreading, leather cloth, asbestos, film casting, photogravure and edible oil. Hydrogen sulphide should not pass through the adsorbers and so the equipment has not yet been employed in conjunction with coke ovens, but active research and development has been carried out. Suitable equipment is in the final stage of development and there is no doubt whatsoever that the general principle can be adapted to this industry. The method is not limited to these fields alone, but a short description of the technique as applied to these industries will indicate the scope.

Municipal Gas Industry

A special plant has been designed for use in the gas industry for the extraction of crude benzol. It differs from the usual type of active carbon recovery system in that the whole unit forms an enclosed system, the gas main being connected directly to one end of the plant and the gas holder to the other. The plant is very similar to that used in other industries. Drying of the carbon is effected by returning a portion of the treated gas through the adsorber after steaming.

Many benzol plants of this type have been erected in Great Britain and supplied to municipal authorities such as Manchester and Swansea. All these are entirely automatically operated and require very little attention. The plants are manufactured in standard sizes, the smallest at the moment treating a quarter of a million cubic feet of gas per day. There is no limit to the quantity of gas that can be treated, but the largest plant which has been installed treats up to eight million cubic feet of gas per day.

The benzol, with a content of some fifty to sixty per cent benzene, is delivered from the equipment water white and ready for use. Recoveries of one hundred per cent have been recorded. In addition, the process completely removes naphthalene and reduces the content of organic sulphur compounds in the gas.

This method has definitely displaced the older oil absorption system and, since this plant has been put on the market, at least ninety per cent of the orders which have been placed in Great Britain have been for activated carbon plants. It is believed that eventually they will displace existing oil wash plants.

It is difficult in general to give actual figures of costs of benzol production, but the following data is summarized from a recently compiled authoritative statement, purposely intended to include on a very comprehensive scale every possible contingency of expenditure. The data is based upon 1944 costs in Great Britain and may be taken as an indication of the financial aspect.

	Pence per gal. of crude Benzol
Net thermal replacement costs (coal, less coke and tar)	5.0
Operating costs (including steam, water, replacement of adsorbent, labour, etc.	3.0
Capital costs—benzol plant (and maintenance)	1.5
Capital charge for extra carbonising plant required	1.8
Repairs and maintenance of extra carbonising plant	0.7
Total costs debited to benzol recovery	12.0
Selling price of crude benzol	17.0
Profit per gallon of benzol	5.0

Coke Oven Industry

As has been mentioned above, sulphuretted hydrogen must be removed from gases before they are passed into the adsorbers. On this account no equipment has been previously offered to the coke oven industry. However, suitable equipment is now in a finalized form, as a result of considerable research and development to the end of simplifying the coal gas purification.

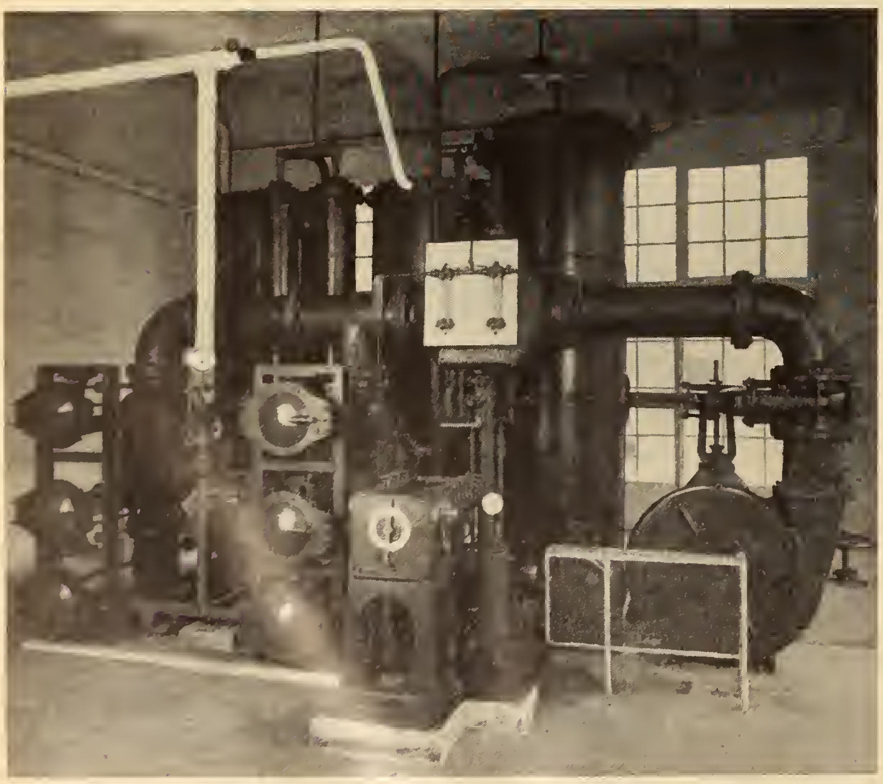
There is no doubt that the general principle of the activated carbon recovery system can be applied to this industry and it is hoped that such equipment will be offered at an early date. In this case it is strongly believed that the activated carbon plant will definitely displace the oil wash method. These plants will be of very considerable capacity and are likely to influence the lay-out of new coke oven installations.

Dry Cleaning Industry

Various solvents are used in this industry of which the principal ones are petroleum white spirit, trichlorethylene and perchlorethylene.

The clothes are washed in the spirit, then centrifuged and transferred to the dryers, where most of the spirit is evaporated and recovery is effected. The air from these machines is connected to the recovery plant. It is cooled and filtered from fluff and dust before being passed to the adsorbers.

Plants using chlorinated solvents must be of a different design to those using white spirit, since, although there is no danger from fire or explosion, the toxicity of the solvents necessitates the machines being fully enclosed. The total enclosing of the machines enables a higher efficiency of recovery to be effected in the case of chlorinated solvents, where some ninety per cent is recovered. In the case of white spirit the efficiency of recovery is between fifty and sixty per cent.



A typical small capacity benzole recovery plant. Capacity of gas works—½ million cu. ft. per day. Output of benzole—100-120 gallons per day.

With a view to obtaining the highest efficiency in recovery of the solvent and to simplify the dry cleaning process, a completely new dry-cleaning machine has been designed which is coupled to a solvent recovery plant. It has been found possible to wash, centrifuge and dry the clothes in one machine. Naturally this makes an extremely compact and efficient unit which, being directly connected with the recovery plant operates with practically no solvent loss. There is considerable time-saving by eliminating the transference of clothes from one machine to the other. Clearly such a machine has a wider application than the dry cleaning of clothes and is of interest to all industries applying a cleaning process to yarns, fabrics and similar materials.

Artificial Silk Industry

This industry was developed very rapidly in Great Britain as in most countries, but before the general development of the activated carbon recovery system. Consequently, the industry adopted the then only known system of recovery; that is, by solution of the vapours in water at low temperature and then fractionating the solvent from the water. The water, however, will only absorb to a concentration of one or two per cent, beyond which the efficiency of recovery is impaired. The operation, therefore, of this type of plant is expensive and somewhat delicate.

The activated carbon system is undoubtedly replacing the water wash system in Great Britain. In the application of this system, the silk is spun in enclosed cabinets, sufficient air being drawn through the cabinets to bring away the whole of the solvent, usually acetone. The air has a temperature of some 50 or 60 deg. C. and contains up to one per cent of acetone. The acetone-laden air must be cooled to approximately atmospheric temperature and filtered. Rather greater care is taken in the recovery than is necessary for higher boiling solvents.

It is advisable in the case of acetone to cool as well as dry the carbon after steaming it before again passing the solvent-laden air. This is effected by passing clean, unheated air through the carbon after drying.

The recovered acetone is mixed with the aqueous condensate, but the concentration is about 30 per cent and the treatment of this condensate is much less costly than of the one per cent concentration obtained by the water wash system. Steam is, of course, consumed in driving the solvent out of the carbon, but in actual practice the overall steam consumption is somewhat similar for the two systems. In the case of the water wash system there is also the extra cost of refrigeration.

It appears that the activated carbon system will eventually replace the water wash system in Great Britain and it is believed that no more water wash systems will be installed there.

Rubber Spreading Industry

In this industry, fabric is coated with a thin layer of rubber for the purposes of making its impervious to water and air. This application of activated carbon for solvent recovery is most popular in Great Britain.

The raw plantation rubber is usually fairly clean. It is broken down and worked into a dough with the admixture of fillers. This process is carried out in the dry mixing machine by two rollers revolving at different speeds. The rubber is then passed through the wet mixer which again is a roller machine incorporating naphtha with the rubber on the rolls. The colours are usually added at this stage and the material is reduced to such a consistency that it will spread on to the fabric.

The wet mixers should be hooded as closely as possible, so that the naphtha which is evaporated may be collected by passing air through the hood to the recovery unit. The main source of recovery is from the spreading machine where the rubber dough is spread over the cloth which is then passed over steam-heated chests some 18 ft. long in order to evaporate the spirit. The spreading machine should be carefully and thoroughly hooded. Sufficient air is passed through the hood efficiently to collect the whole of the spirit and to keep the concentration of naphtha vapour well below the explosive limit. A series of spreading machines may be connected through ducts to a common main leading to the recovery plant. Approximately a thousand cubic feet of air per minute is sufficient for each machine which is actually spreading. The total air from the mixing and spreading machines is passed to the recovery plant which extracts the whole of the solvent and delivers it ready for re-use.

Leather Cloth Industry

The process in this industry is very similar to that of rubber spreading, except that cellulose, dissolved in acetone, benzene and alcohol, is used instead of rubber. The recovery technique for the two industries is therefore very similar.

The recovered solvent, however, is obtained partly in aqueous solution and partly mixed with the non-miscible benzene. It is usually unnecessary to separate the benzene mixture, but it is necessary to distil the acetone and alcohol from the aqueous solution by means of a copper fractionating column.

Film Casting Industry

The processes in this industry also bear some resemblance to those of the rubber spreading industry. There is, of course, no fabric medium onto which the film is spread. Cellulose acetate dissolved in acetone is run onto a heated dryer, the thickness and form of the film being defined by a spreading blade. The acetone is recovered by hooding the machines and passing the solvent-laden air to the recovery plant. The recovered acetone must be fractionated from the aqueous solution.

Photogravure Industry

Large quantities of solvent, principally petroleum, are used in this industry. The hooding of the Rota must be very carefully effected. In some cases the hood is provided by the manufacturers of the machines, in which case this ventilating system is utilized and connected to the recovery plant.

Asbestos Industry

In the manufacture of asbestos jointing, asbestos is the main constituent. This is bound together with rubber. The two constituents are normally mixed with naphtha which is dried off in a calender or a sheeting machine. The machine is thoroughly hooded and vapours are drawn through and delivered to the recovery plant.

Edible Oil Industry

There is normally a considerable loss of the solvent used for extraction in this industry. The extractor vessels are partially filled with the meal to be treated and the solvent, usually a low boiling petroleum hydro-carbon, is mixed in with heated stirrers. The air in the vessels is constantly being displaced by the solvent. When saturated it carries away considerable amounts of solvent through the condenser and vents.

Recovery is effected at the end of the condensers. Since the concentration of the solvent in the air is very high it is advisable to dilute it with more air before passing through the active carbon. This dilution is automatically effected in the plant.

Recapitulation

Activated carbon recovery plants have well proved their worth in British industry. These recovery plants are operating in every industry where solvents are used, as in the manufacture of rubber goods, leather cloth, rubber or balata belting, transparent paper, artificial silk, films, cables, edible oil, in dry cleaning and in other industries. In the dry cleaning industry, a consideration of the problems has led to the designing of a single machine for the processes involved. The benzol recovery plants in the gas industry are a most valuable source of benzol and result also in complete extraction of naphthalene and a considerable reduction of organic sulphur compounds in the treated gas. The use of these plants results in many millions of gallons of solvents being recovered and used over and over again instead of being lost by diffusion into the atmosphere and subsequent pollution.

DEVELOPING PROFESSIONAL ATTITUDES AMONGST UNDERGRADUATES

C. R. YOUNG, M.E.I.C.
Dean, Faculty of Applied Science and Engineering, University of Toronto

An address delivered at the Fifty-fourth Annual Meeting of the American Society for Engineering Education at St. Louis, Mo., June 20 to 23, 1946

A Present Need

Upon every engineering school that undertakes to give a scholastic preparation for professional life there rests the implied obligation of imparting to young men a high conception of their future calling. Educational institutions that confine their efforts solely to the communication of scientific principles, techniques, and procedures are under no such obligation. They belong to the vocational school or technical institute group; their product is the technician or the technologist. But a university or degree-granting college is bound by the traditions of higher education to fit men for life in its broad aspects and not merely for the more efficient discharge of certain scientific or technological duties.

Engineering colleges have much to learn in this respect from the medical schools. A student in the latter, from the time that he enters as a freshman until he graduates, is constantly subjected to indoctrination calculated to render him highly conscious of the dignity of the profession that he is about to enter and fully on his guard against any attitude or act that would bring that profession into disrepute. Teachers in the engineering schools have heretofore left such matters very much to the professional organizations and have led their classes deeper and deeper into technological intricacies—into the realm of matter and force rather than that of men.

In this course they have been abetted by the highly vocational and materialistic attitude of the average engineering freshman or sophomore. Only too often the young man enters college in the hope that he is done forever with liberal study and that now, at long last, he can get on with the mastery of techniques that will quickly give him superiority and the ability to make a comfortable livelihood, with little relation to the fortunes of the members of his own or any other calling.

Few engineering teachers have made it their business to point out with force and insistence that every graduate of an institution of higher learning should first of all be a citizen and after that a competent worker in some field that is not incompatible with the public welfare. There is no room in a democratic state for those who would pursue courses of action that are at variance with enlightened and constructive citizenship.

Curricular Devices

Something may be done to remedy the situation by curricular inclusions or adjustments. Long courses, devoted to professional attitudes and obligations, would in all probability defeat their own ends. The characteristic resistance of students to being intensively "preached at" would lessen receptiveness and absorption. Much better results may be expected from less obvious and less direct measures. In education, as in war, a flank attack is generally more effective and less costly than one directed obstinately against a guarded front.

For this reason, short inclusions or incidental references in courses ostensibly directed to another purpose than an exposition of the merits and obligations of the engineering profession, are often particularly stimulating. They afford a relieving aside from the main current of what may be a somewhat exacting technical subject and suggest spontaneity and consuming personal interest in professional matters on the part of the teacher. Who of us does not remember the illuminating and inspiring digressions of a great professor of mathematics, or mechanics, or geology?

A short course of lectures on the professional status, perhaps not more than six, may be found useful and practicable, but, the less formal scheduling there is, the better. Greater value is likely to be derived from incidental, but repeated, references to the topic in subjects that bear an unsuspected title. While these may be scientific or technological subjects, it is best to utilize the non-technical ones, either of the humanistic-social or of the tool variety, in that they offer more fluidity and opportunity for diversions. Attractive by-paths open out readily enough in English, Engineering and Society, Economics, Political Science, History, Philosophy, Psychology, Management, Engineering Law, Business, or Statistics. Digressions in the direction of the philosophy of the profession will, however, be profitable only if the teacher can speak with the authority that comes from personal experience and conviction. One who lacks the professional point-of-view himself can scarcely succeed in imparting it to others.

Of what nature should the incidental references to the professional life be? Engineering students being what they are, these should avoid the formal ethical or philosophic approach and should be associated with the personalities of those who have added lustre to the profession. They should be largely biographical or historical in character.

Young men of spirit can scarcely fail to derive benefit from reflecting, for example, on the classical attitude of John Smeaton, the first man to be generally designated as a "civil engineer." Limiting his professional employment in order to devote a portion of his time to scientific investigation and personal development, he adhered steadfastly to the maxim, "the abilities of the individual are a debt due to the common stock of public well-being."

Nor should characteristic examples of high integrity exhibited by the engineering masters in the course of their practice be overlooked. It would be useful to recall the historic declining by Thomas Telford of the post of chief engineer to the Liverpool and Manchester Railway on the ground that it might prejudicially affect the interests of his many canal company clients; or of George Stephenson refusing to use his own patented cast iron rail on the Stockton and Darlington Railway; of Sir John Aird, contractor for the Asyut barrage in Egypt, when unforeseen conditions made the cancellation of the contract necessary, leaving the whole question of profit to Sir Benjamin Baker, the consulting engineer; of Alfred Noble resolutely declining lucrative engagements for the sole reason that he could not give them the study and the attention which they demanded.

The moral, as well as the physical, courage that distinguished the great engineers and made of them illustrious leaders of the profession should in some incidental manner be brought to the attention of every young man in our engineering schools.

It required plenty of the stuff of which backbone is made for Alfred Noble to dissent from the majority report of the International Commission of Engineers appointed by President Theodore Roosevelt and frame the minority report which settled the difficult question as to whether a lock canal or one at sea level should be built at Panama.

Sir John Fowler, although an admirer and staunch friend of the younger Brunel and his successor as consulting engineer to the Great Western Railway, nevertheless resolutely urged the directors to face the loss of entirely abandoning the broad gauge.

The bridled tongue, the fixed resolve to assist worthy fellow practitioners rather than to hamper them through hint or significant silence is a trait that merits mention in any group of young engineers. The practice of the medical profession in this respect serves as a convenient illustration.

Instances of outstanding public or social leadership on the part of engineers may be cited with attendant vitalization of whatever is said in praise of the profession. The war years afforded plenty of them.

Extra-Curricular Aids

However much the engineering teacher may be able to do in inculcating professional ideals in the minds of undergraduates, he should be realistic enough to appreciate the advantage that is enjoyed by the outside practitioner in undertaking a similar task. The student is less disposed to view what is said by the outsider as propaganda than he is when it is said by a member of the teaching staff. There is, too, an added force to the views of men who are in the rough and tumble of professional practice. In consequence, the engineering teacher should do whatever may be possible in organizing meetings, conferences, or seminars at which practising engineers may express their opinions freely on professional questions. In all probability they will say no more than the teacher would have said on the subject, and perhaps say it not quite so well, but there is glamour attaching to the remarks of those who come into college halls from the busy outside world.

Not only is it possible to further the desired objectives by occasional lectures or discussions in which non-academic persons take part, but there is a pronounced value in the distribution of printed articles and papers by outside engineers amongst students, particularly of the upper years. Several notable reprints of this type have been circulated under the auspices of the Engineers' Council for Professional Development. The effect has been good and an extension of the plan is desirable. Busy as undergraduate students are during the academic year, they nevertheless should be urged to attend meetings of engineering organizations outside the university or college. Direct impressions of what prominent professional men say, do, or look like may there be obtained. A particular value attaches to personal contacts, for even the comparatively mature student is in some measure imitative. It is often true that more can be conveyed by example than by precept.

WELDED-BOILER LOCOMOTIVES ON C.P.R. LINES

(Continued from page 718)

To facilitate locating possible defects, lead numbers were attached to a cloth strip at 2 in. intervals. The cloth was then attached to the boiler, close enough to the weld so that the lead numbers would show on a 4½ by 17 in. X-ray negative. The numbers started at the front of each longitudinal seam and at the front longitudinal seam running counter-clockwise when x-raying the girth seams. Light centre punch marks were also made alongside each seam at 10 in. intervals, to which lead arrows pointed, serving as a permanent means of locating defects. When, for example, a defect was found on an x-ray negative, the negative itself was placed on the boiler and positioned exactly by placing the centre punch marks on the negative over those on the boiler, thereby eliminating any possible mistakes in locating defects.

Stress-Relieving Heat Treatment

The American Locomotive Company installed, in 1945, at its Schenectady plant, a wagon-bottom indirect heating stress-relieving furnace, which is fully automatic in its heating, soaking and cooling cycles.

Before placing a boiler in the stress relieving furnace, the foundation ring was bolted in place and the back head, wrapper sheet, throat sheet and boiler shell were thoroughly braced to prevent distortion. After the boiler was mounted on the furnace base, thermo-couples were attached at various locations of the boiler for control of heat input to the light and heavy sections during the stress-relieving operation. The stress-relieving temperature was raised 100 deg. per hour until a maximum temperature of 1175 deg. was reached, the furnace was held at this temperature for two and one half hours and cooled 100 deg. per hour until a furnace temperature of 200 deg. was reached before the boiler was removed from the furnace.

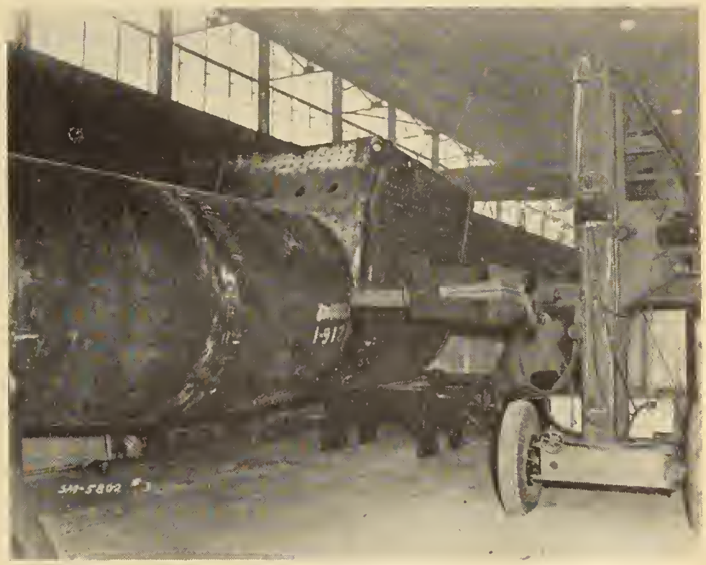


Fig. 6—Boiler seams under X-ray.

The stress-relieving heat treatment was accomplished without any change in contour.

After the stress-relieving heat treatment, the firebox, staybolts, flexible staybolts, tube, flues, stay rods and other internal fittings were applied.

Hydrostatic Test

The boilers were hydrostaticly tested to one and one-half times the maximum allowable working pressure, and while under this pressure all unstayed seams were hammer tested by striking each side of the seams at 6 in. intervals. The boilers were then given the usual final steam test for locomotive boilers.

CHANGES IN ANNUAL FEES

By the time this *Journal* reaches the membership it is likely the account for 1947 fees will have been received. For Members, Juniors and Affiliates the amount has been increased in accordance with the change in by-laws authorized by ballot last spring. The purpose of this article is to recall the circumstances that made these changes desirable, to the end that the increased account will be received in the same spirit which resulted in the overwhelming vote in favour of the change.

It was recognized that the Institute had grown in membership, responsibilities and capacity, to the point that the former income from fees was inadequate to meet its responsibilities and to give to the profession and public the service now demanded. The Institute has reached mature stature and the membership desires to keep it there, without special appeals such as were issued in 1945 and 1946 to establish and maintain the rehabilitation service. The Branches also require the additional funds which accrue to them from these increases.

Elsewhere in this *Journal* is an announcement of Council's proposal to meet the expressed wishes of the membership. Plans are being made to fill new posts for a Field Secretary and Technical Editor for the Journal. These appointments will mean better services to the members and branches, and will be made possible by the increased income from fees.

It should be remembered that eighty per cent of the membership approved the increases in fees. Prompt payment will expedite the inauguration of those things desired by the membership.

EMPLOYMENT OPPORTUNITIES AT HEADQUARTERS

Members will recall that one of the reasons for an increase in annual fees was the desirability of adding to the Institute staff a field secretary and a technical editor. At the November meeting of Council, authority was given to advertise these openings to the membership. Members who may be interested are asked to communicate with the general secretary either to make application or to secure additional information. All applications will be submitted to the Finance Committee for selection and recommendation to Council. It is hoped that decisions may be announced early in the new year.

Field Secretary

The field of work envisaged for this officer may be described briefly in commercial language as "contact man" between headquarters and branches. His time will be spent principally with the officers of the branches, studying their problems, aiding their plans, helping with papers programmes and meetings, establishing contacts between branches, keeping them informed of Headquarters and committee activities, and generally representing Headquarters in the field. His interest will be primarily the welfare of the branches, although it will be necessary for him to spend at Headquarters sufficient time to keep himself familiar with activities and policy of Council and committees.

This will require that he be able to meet people easily, both members and public, to speak in public, to work without regard to time or place, and be thoroughly self-reliant. It may not be necessary for him to reside in Montreal.

Technical Editor

His duties will be to take full charge and responsibility, under the Publication Committee, for all material in the *Journal,* with the exception of editorials and advertising. He will be required to appraise and edit manuscripts, to prepare articles from detail material submitted, and to seek out suitable papers that might not otherwise be obtained. It is expected that a certain amount of travel will be necessary in order to secure the most up to date material.

It is possible that consideration would be given to a part time appointment if a suitable person is not available on a full time basis.

General

Because of the wide variation in qualifications that the committee is prepared to consider, no scale of salaries is being advertised at present, but it is planned to pay enough to attract to the openings persons who are well qualified for the work. In applying, please give in detail all experience that would indicate a familiarity with or an aptitude for the work.

In each instance, preference will be given to a member of the Institute, particularly in appointing the field secretary. All inquiries and applications will be treated as confidential.

TARIFF CHANGE

In the October *Journal* mention was made of the protest offered by the Institute to the Minister of Finance relative to the change in customs tariff whereby certain engineering plans made in the United States would enter Canada duty free. Since then, further action has been taken by many organizations and individuals. As no satisfactory reply was received by the Institute, a formal resolution was passed at the November meeting of Council, which is reproduced herewith along with the covering letter.

December 12th, 1946.

Hon. D. C. Abbott, K.C.,
Minister of Finance,
Ottawa, Ont.

Dear Mr. Abbott:

Commencing with a letter dated July 25, addressed to Mr. Ilsley, the Engineering Institute of Canada has sent to Ottawa several communications dealing with the change made in the tariff regulations whereby plans for engineering work would enter Canada duty free (section 180e). Up to the present no adequate reply has been received.

You wrote to us on August 9, but did not give the information which we were seeking. In reply we wrote you on August 12th, repeating our question, but there has been no reply of any kind to that communication.

We believe the subject is of such importance and the Institute's interest in it sufficiently justified that the communications should not be ignored. Failure to receive a satisfactory reply has forced us to again bring the whole subject to the attention of the Council. At a largely attended meeting, on November 23rd, the following resolution was passed unanimously and I was instructed to forward it to you and to send copies to all our twenty-eight branches across Canada, as well as to the public press. It will also appear in our own *Engineering Journal* which reaches all our 8,000 members.

We are still desirous of discovering why this change was made and why the engineers were not consulted about it. To us it seems a strange policy that such a change would be made without studying the effect on the parties most concerned. There is no evidence that engineers or engineering organizations were even consulted. We would like to know also the likelihood of the change being reconsidered at an early date as suggested in your letter.

Herewith is the resolution:

RE: TARIFF ON ENGINEERS' PLANS ENTERING CANADA

WHEREAS the Council of the Engineering Institute of Canada meeting in Cornwall on Saturday, November 23rd, 1946, has been informed of the change in the customs tariff (item 180e), whereby certain important types of engineers' plans now enter Canada duty free, and

WHEREAS it is the opinion of this Council that such changes are detrimental to the country and to the profession for the following reasons:

(1) Plans made in the United States by American engineers are likely to specify American made machinery, materials and equipment, thereby depriving Canadian industry of what should be its legitimate business;

(2) Work of this kind done in the United States will provide employment for American engineers, draughtsmen and technicians instead of Canadian;

(3) The tendency for American engineers to engage American contractors (in many instances they are the same or interlocking companies) will deprive Canadian contractors of work which is essential to them.

(4) The profession of engineering in Canada cannot develop as it should in these specialized industrial fields unless such work is done in Canada. It will become necessary in many instances for the engineer to move to the United States if he desires such work. Canada cannot afford to lose any more of its engineering talents to the United States. The government should be bent on assisting them to stay here, rather than encouraging them to go elsewhere.

(5) As the United States does not give similar exemption to engineering plans made in Canada, the action of our government places the profession in Canada in an inferior and humiliating position.

THEREFORE BE IT RESOLVED that this Council urges strongly that the government reconsider and repeal item 180e of the Customs Tariff and restore the duty on engineers' plans, drawings or blueprints of machines, etc., to that rate which was in effect immediately prior to June 28th, 1946.

Yours sincerely,

(*Signed*) L. AUSTIN WRIGHT,
General Secretary.

THE SIXTY-FIRST ANNUAL GENERAL MEETING

Notice is hereby given, in accordance with the by-laws, that the Annual General Meeting of The Engineering Institute of Canada for 1947 will be convened at Headquarters at eight o'clock p.m. on Thursday, January 30th, 1947, for the transaction of the necessary formal business, including the appointment of scrutineers for the officers' ballot, and will then be adjourned to reconvene at the Royal York Hotel, Toronto, Ontario, at nine thirty a.m. on Thursday, May 8th, 1947.

MORE ABOUT SALARIES

The pattern of change in professional life in the United States frequently is an indication of developments to come in Canada. Therefore the recently issued scale of salaries for civil engineers in the Federal services and the new scale recommended in an interim report by the Committee on Salaries of the American Society of Civil Engineers are interesting to Canadians. In the November issue of *Civil Engineering* the two proposals are placed side by side for purposes of comparison. With the permission of the Society, the *Journal* reproduces herewith an abridgment of the report.

First the various grades are described. It is impossible to set up classifications that will fit into all businesses, but it is the hope of all salary committees that the grades described will be sufficiently appropriate that they can be accepted as a standard from which to start. These grade descriptions are much more general and therefore will be more useful than many that have been used in the past.

Engineers employed with federal or provincial governments in Canada will perceive with envy the salaries now being paid by the Government of the United States. It will be noticed too that the interim scale recommended by the A.S.C.E. committee is still higher than the Government schedule.

Following is the abridgment.

GRADE I

Grade I includes all positions which involve, under immediate supervision, the performance of simple and elementary civil engineering duties requiring professional training, but little or no experience.

GRADE II

Grade II includes all positions which involve, under immediate or general supervision, individually or with a small number of subordinates, the performance of civil engineering duties requiring professional training, previous experience, and to a limited extent the exercise of independent judgment.

GRADE III

Grade III includes all positions which involve, under general supervision, individually or with a number of subordinates, the performance of civil engineering duties of substantial difficulty and responsibility, requiring professional training, previous experience, and independent judgment.

GRADE IV

Grade IV includes all positions which involve, under general supervision, individually or with a number of subordinates, the performance of difficult civil engineering duties or the supervision of a subdivision of an engineering organization, requiring professional training, previous experience, recognized leadership, and independent judgment.

GRADE V

Grade V includes all positions which involve, under general supervision, individually or with a number of subordinates, the performance of difficult civil engineering duties or the supervision of a division of an engineering organization, or the direction of a staff on investigative studies, research and testing, design, or construction, requiring professional training, previous experience, recognized leadership, and independent judgment.

GRADE VI

Grade VI includes all positions which involve, under general direction, individually or with a number of subordinates, the performance of difficult civil engineering duties or the supervision of a division of an engineering organization, or acting as the principal assistant to the head of a division of a large engineering organization or the direction of a staff on investigative studies, design or construction requiring professional training, successful experience in engineering work.

Grade VII

Grade VII includes all positions which involve, under general direction, individually or with a number of subordinates, the performance of important civil engineering duties or the supervision of a division of a large engineering organization, or the direction of a staff on investigative studies, design or construction, requiring professional training, extensive successful experience in engineering work with demonstrated aptitude and capacity for increased responsibilities in managerial and executive functions.

Grade VIII

Grade VIII includes all positions, such as:

(a) the assistant to the technical and administrative head of an important engineering organization; or

(b) the technical and administrative head of a lesser engineering organization; or

(c) positions involving the development, analysis, and evaluation, for final executive action of difficult and complex engineering projects with respect to their feasibility, cost, economic justification, and public necessity or convenience.

Grade IX

Grade IX includes all positions:

(a) such as, the administrative and professional head of an important engineering organization with full authority and responsibility for conceiving and executing all the plans and functions of the organization, directing an administrative and professional engineering staff engaged in varied important projects; or

(b) positions requiring highly specialized professional engineering or scientific ability.

Comparison Of A.S.C.E. Proposal With Recently Established Scale for United States Federal Employees

In the last two years, two increases have brought the Federal employees' schedule up to the following:

Here are the salaries ASCE now recommends as an interim measure, pending further study, to bring salaries more nearly in line with existing conditions:

Federal Prof. Grades	Federal Rates, Eff. July 1, 1946	ASCE Grades Oct. 1946	ASCE Rates Oct. 1946
P-1	$ 2,645- 3,400	I	$ 2,700- 3,400
P-2	3,400- 4,150	II	3,400- 4,200
P-3	4,150- 4,902	III	4,200- 5,100
P-4	4,902- 5,905	IV	5,100- 6,100
P-5	5,905- 7,102	V	6,100- 7,250
P-6	7,102- 8,180	VI	7,250- 8,600
P-7	8,180- 9,975	VII	8,600-10,350
P-8	9,975-10,000	VIII	10,350-12,600
P-9	10,000 and up	IX	12,600 and up

STARTLING PROPOSALS IN SASKATCHEWAN

It has taken the western province of Saskatchewan to give professional groups the shock of the year. The government there is investigating the advisability of taking away from the professions and from other privileged groups the right to register, control and discipline their own members. The move came as a result of a resolution passed at the last session of the legislature, which recommended that the Law Amendments Committee review the professional acts and suggest such amendments as may seem " expedient and advisable ".

In one newspaper clipping that has reached the *Journal* it says " Nineteen different professions and practices ranging from medical men to engineers would be affected."

Presumably, the review of the professions is to discover whether or not they are exercising their government granted privileges " in the public interest ". Such a motive is a worthy one. Every government should be certain that these privileges are being used solely for that purpose, and no profession or other licensed group should object to such a study, providing the motivating spirit of the investigators is also solely in the public interest. The possibility of it being political is not too remote.

The action of the Saskatchewan government is of wide interest. The whole basis of licensing is being challenged. It is to be hoped that all the facts are written into the record of the reviewers in Saskatchewan, because if such is the case it will be found that at least as far as the profession of engineering is concerned the present system has been operated " in the public interest ", and doubtless the same will be true of the other professions.

The following paragraphs are taken from the *Leader Post* of November 30th:

" Transfer of disciplinary powers now held by professional societies in Saskatchewan to special administration boards to be set up by the government is proposed under legislation now being considered by the continuing committee of the law amendments committee of the legislature.

" Among specific recommendations contained in the resolution was that the committee study the professional acts for the purpose of ascertaining the powers and duties given to the various professions or practices under the acts; determining whether the exercise of such powers and the discharge of such duties by professional societies is in the public interest; the securing of such uniformity in the provisions and administrations of the acts as may be found possible, and recommending such amendments as might seem expedient and advisable.

" Nineteen different professions and practices, ranging from medical men to engineers, would be affected.

" These are: Legal, medical, surveyors, chartered accountants, agrologists, architects, veterinarians, engineers, chiropodists, dentists, physical therapists, pharmacists, music teachers, osteopaths, registered nurses, chiropractors, druggists, embalmers, and optometrists.

" Should the proposed legislation be approved by the legislature, it would mean the appointment of 19 government boards—one for each of the professions and practices—to deal with disciplinary measures, the setting of maximum fees to be charged for services, the licencing of the various professional people, examinations, and other regulations now held by the professions or practices under special acts.

Improper Conduct

" With regard to the disciplinary measures, it is understood that persons who might be charged with improper conduct or a breach of any of the regulations or of the code of ethics prescribed would have the right of appeal. If the appeal were lost, the person's name would be struck from the register. Provision would also be made for reinstatement at a later date.

"Under these acts, the professions now have sweeping powers by which they can deal with the disciplining of their own members, licencing, fees, qualifications for practicing in Saskatchewan, examinations and other matters pertaining to the various professions or practices.

"The professional people would be prohibited from practicing in the province after Dec. 31, 1947, unless licenced by the special administration boards to be set up by the government.

"It was learned that these administration boards would each be comprised of three members. Two of them would be appointed by the cabinet, the other by the profession affected.

"According to unofficial sources, the continuing committee has held several meetings since the last session of the legislature to deal with the proposed legislation. After a final draft is approved, it would be reported to the entire law amendments committee of 40 members.

"It is understood that the proposals stipulate that where professional people fail to register with their respective administration board and hold a license to practice issued by the board, a fine of not more than $500 could be levied following prosecution.

"All professional and other people covered by the 19 acts would be required to apply to the administration board for a licence authorizing them to practice after Jan. 1, 1948. This would be mandatory."

PRAIRIE WATER PROBLEMS

Institute's Recommendations Implemented

Considerable time was allotted a few years ago at annual professional meetings of the Institute to the study of prairie water problems. As a more or less direct result of these discussions, the Prairie Farm Rehabilitation Act was passed. Under this act, the federal government provides funds and staff to study, construct and operate many small water projects that have made habitable many localities that had been deserted, or never had been occupied, because of the lack of water. This organization has been very helpful in the rehabilitation of many areas in the three prairie provinces and it has gradually expanded until it is now undertaking quite large projects.

The interest and activities of the Engineering Institute have been maintained by the Prairie Water Problems Committee, appointed some years ago to study the various problems and make recommendations. This committee while scattered and difficult to convene, in fact has never held a meeting with all members present, is composed of members of the Institute scattered from Montreal, Que., to Victoria, B.C. Nevertheless, the proposed St. Mary and Milk Rivers development was, after a very careful study, endorsed by the committee. A report dealing fully with the project was prepared and forwarded to the federal and provincial governments with a strong recommendation that the project be undertaken by the two governments.*

The federal government appointed a committee with a member of the Institute, Mr. V. Meek, as chairman, to investigate and report. This committee also recommended that the project should be developed by the Dominion and Alberta governments. It was also pointed out that if this project were not proceeded with, Canada was in danger of forfeiting part of its share of the St. Mary and Milk rivers, both of which head in United States and supply the water for the project. While the Institute committee did not hold regular meetings, the members of the committee individually seized every opportunity to advocate the construction of the project. However, care was taken not to make a political issue of the matter.

Early this year, the Canadian Pacific Railway Company transferred the Alberta Railway and Irrigation Company's irrigation undertaking and works to the Alberta Government. This is the key to the St. Mary and Milk Rivers development and the transfer is a step recommended by the Meek Committee. The Alberta government created a crown corporation called the St. Mary and Milk Rivers Development with a manager to maintain and operate the project and as additional works are constructed, the crown corporation will take them over and operate them. The manager will also organize the owners of the additional irrigable lands into irrigation districts to give service to the farmers. The crown corporation will maintain and operate the reservoirs and main canals and wholesale water to the irrigation districts. In this way the government will be responsible for the larger and more costly works and the irrigation districts which are managed by a board of trustees elected by the water users will look after the distribution system and be responsible for the service to the farmers.

The Prairie Farm Rehabilitation organization has started the construction of the Pothole reservoir with funds provided by the Alberta government and the construction of the large dam on the St. Mary river near Spring Coulee with funds provided by the federal government. These two jobs have been started without a formal agreement but it is believed that a formal agreement covering the construction and operation of the whole project will be executed at an early date.

Recently the Lethbridge Board of Trade organized and held a Jubilee to celebrate the twenty-fifth anniversary of the starting of the construction of the Lethbridge Northern Irrigation District works and the recent starting of the construction of the works for the St. Mary and Milk Rivers development. Interested persons from as far east as Montreal and as far west as Vancouver attended. The Right Honourable C. D. Howe represented the Dominion government and Premier E. C. Manning represented the government of the Province of Alberta and gave public addresses. Both are much in favour of the construction of this and other similar projects.

Mr. Howe, in an address packed with informative factual data on irrigation and the St. Mary and Milk Rivers development in particular said in part:

"It is because of the value of irrigation to the state that governments are prepared to contribute largely to the cost of irrigation development. The federal government is in partnership with the provincial government in the building of the most ambitious irrigation undertaking that has been projected thus far. I look forward to the bringing into production of many more green acres in these prairie provinces."

Premier Manning was applauded when in reply he said:

"I was particularly impressed with the reference of Mr. Howe to the 'partnership' in this irrigation enterprise. We are happy to be an active partner with the Dominion in this development."

In expressing the thanks of the gathering to the guest speakers, Senator W A. Buchanan followed up this highlight by saying:

"We have here an example that might well be followed by other leaders in Canada, an example showing that it is possible for provinces to cooperate with the Dominion government."

The ultimate development includes the use of the available waters in the Belly and Waterton rivers as well as the St. Mary and Milk rivers.

It is understood that plans for the Bow River development, which is really an expansion of the Canada Land

* See *Engineering Journal*, May 1941, p. 222.

and Irrigation Company project, are developing and an agreement between the Federal and Alberta governments is likely to be consummated before long.

The Institute Committee is very pleased that its recommendations are being carried out. Seven members of the Committee attended the celebration at Lethbridge.

PITY THE EDITOR

Recently, many comments from members have come to the editor, regarding the "make-up" of the *Journal*. Each issue is getting thinner than the preceding and the amount of reading matter seems to be continually decreasing to the benefit of advertising. No criticisms could have better pleased the editor, because he hopes he may interpret them as expressions of appreciation for the Journal's former composition.

The conditions of which our members complain have been quite patent to the editorial staff, but there seems to be little than can be done about it. The facts are these. There is no shortage of papers to print, but there is a serious shortage of paper on which to print. The situation is worse than it has ever been at any time during the war, and each month it seems to further deteriorate. The fact that the Institute membership keeps increasing further complicates the problem.

It will be recalled that the list of members, which was part of the November issue, appeared on newsprint. It has thus been possible to effect some saving on the regular stock and meet the circulation requirements until the end of the year. The same expedient may have to be resorted to in the next few months unless the supply situation improves.

The principal reason why it is not possible to reduce the amount of advertising in the *Journal* is that the Institute is bound by contracts which usually run on a six months or a yearly basis. However, the pinch of paper has also adversely affected the volume of advertising which constitutes the principal source of revenue for the *Journal*. Incidentally, the printing costs have increased materially in the past year.

Another condition which has aroused criticism is the delay in publication. Here again, the situation is beyond the control of the editors. As in any other business today, delivery on schedule is a thing of the past. Although it may not be an excuse, the editor derives a certain comfort from the fact that this condition is not peculiar to the *Journal*. In fact, it was observed that *Electrical Engineering*, the publication of the American Institute of Electrical Engineers, recently dropped an entire issue in order to adjust its publication date. One of Philadelphia's principal papers recently discontinued for a while the publication of advertisements.

With the readers, the editor looks forward to the time when these conditions will not apply, but in the meantime he hopes the membership will not be too critical.

G. H. DUGGAN'S YACHTING ACTIVITIES

A Correction

In the obituary notice of Dr. G. H. Duggan published in the October number of *The Engineering Journal*, the following revision should be recorded in the description of his yachting activities.

The yacht which he sailed and with which he won the Seawanhaka International Cup against the best professional and amateur designers in the U.S.A. was called *Glencairn*. His success in this competition was an engineering achievement as much as a sporting event, because the yachts which raced were of the lightest weight and called for thorough structural knowledge and an ingenuity which Mr. Duggan possessed to a remarkable degree. The winning and subsequent defence of this trophy for so many years by yachts of his design was the more notable because, at that time, the United States of America yachtsmen were considered unbeatable, and the triumphant results of the races created an unprecedented interest and excitement throughout the country, both in the United States and in Canada.

CORNWALL BECOMES A BRANCH

The 28th branch of the Institute became a reality on November 22nd when at Cornwall, Ontario, the president presented the charter to Donald Ross-Ross, the first chairman. It was an inspiring occasion. One hundred and thirty-eight members were present, fifty-five of them being from cities other than Cornwall, and four of them being vice-presidents. Greetings were presented by representatives from sixteen branches, Regina being the most westerly and Sydney the farthest east. This wide representation was impressive and gave proof of the national character of the Institute's interests and activities.

The meeting was conducted by Chairman Ross-Ross, ably assisted by Drummond Giles, who introduced the president. The president commented on the unique experience he had had in being able to present charters to two branches in one year, the first one being at Trail, B.C., for the Kootenay Branch.

The general secretary spoke of his recent visit to England, and of the work done by the conference of representatives of the Commonwealth Engineering Societies, also of the first meeting held in London for the members of the Institute in the Old Country.

The large attendance of engineers resident in the locality was a definite indication of the need of a branch in that area. Previously, members in Cornwall and surrounding area belonged to the Ottawa Branch, but because of the distance from the branch centre they were not able to participate in the activities. Therefore, Ottawa had a special interest in the new branch, and Councillor Walter Saunders for Ottawa advised the youngest member of the Institute family that the members in Ottawa were delighted with the recent development and sent their heartiest good wishes.

President Hayes presents charter to Chairman Ross-Ross.

A regional meeting of Council was held the following day. There were councillors from eight branches. The president presided, but, following his established custom, handed over the reins in succession to each of the four vice-presidents: C. E. Sisson of Toronto, W. R. Manock of Fort Erie, G. F. Layne of Quebec and J. E. Armstrong of Montreal.

The executive of the new branch are to be congratulated on the excellent arrangements made for the meeting. Their hospitality and their organizing ability were outstanding, and were commented upon, particularly by the out of town members.

PRESIDENT HAYES VISITS QUEBEC AND EASTERN ONTARIO

In a tour which lasted less than two weeks, President Hayes completed last month his visits to the branches outside the Maritimes, inaugurated a branch at Cornwall and a Student Section at Quebec, presided over a regional meeting of Council and met with the largest group of engineering students ever assembled in one faculty, the Ajax Division of the University of Toronto. Throughout the journey, the president was accompanied by Mrs. Hayes, Councillor G. J. Currie of Halifax and Mrs. Currie, and the assistant general secretary. Other officers and past officers of the Institute joined the group for part of the trip to do honour to the president.

The tour started on November 17th at Quebec, where a full programme occupied three days. A detailed account of the proceedings appears in the Branch News Section. G. A. Gaherty, chairman of the Committee on Prairie Water Problems, and R. E. Heartz, chairman of the Committee on Employment Conditions and trustee of the Harry Bennett Educational Fund, both from Montreal, were present at the dinner meeting.

At Trois-Rivières, on November 20th, a dinner meeting was held at the Château de Blois and was well attended by members from all centers in the St. Maurice Valley. Wm. Chester Smith, from the Toronto Branch, and R. E. Heartz from Montreal were among the visitors.

The meeting with the Montreal Branch was held at Headquarters on November 21st and was addressed by the president and Dr. L. Austin Wright, general secretary, who told the audience of his recent visit to England and continental Europe. Before the meeting, the branch executive entertained the president and his party at dinner at the Mount Stephen Club.

A separate account of the Cornwall Branch inauguration appears elsewhere in this issue. On Sunday afternoon, the presidential party proceeded to Kingston where Past Vice-President E. P. Muntz of Hamilton and Montreal, and Councillor J. R. Dunbar of Hamilton, joined the group.

Monday, November 25th, was ladies day for the party. After a morning visit through the Aluminum Company's plant, Mrs. Hayes and Mrs. Currie were each presented with a pressure cooker. This gesture put into the minds of the ladies insidious expectations as they accompanied the group to the Nylon plant of the C.I.L., in the afternoon. The Kingston reputation for hospitality was fully maintained when the ladies were presented with samples of the precious hosiery after the visit. At five o'clock, the president and his entourage were guests at a meeting of the Undergraduate Engineering Society at Queen's. The president presented the Institute prize certificate to R. B. Glass and addressed the students. Councillor Currie and the assistant general secretary also addressed the meeting. The party were then guests of Dean Ellis for a reception at his home, where the branch executive were also present.

The dinner meeting with the branch was held at 6.30 in the Aluminum plant cafeteria. Principal and Vice-Chancellor R. C. Wallace, Hon. M.E.I.C., of Queen's, was present as well as Councillor Dunbar of Hamilton.

On Tuesday, November 26th, the presidential party proceeded to Ottawa where a branch dinner meeting was held at the Chateau Laurier at 7.15. The headtable guests included four past presidents of the Institute: A. J. Grant, Chas. Camsell, C. J. Mackenzie, K. M. Cameron. Among the out-of-town members present were Councillors J. B. Stirling of Montreal and J. R. Dunbar of Hamilton. The meeting was addressed by President Hayes and by Air Vice Marshal E. W. Stedman. A resume of Air Marshal Stedman's address on the Bikini tests appears in the Branch News Section

From Ottawa, the group were driven by Councillor W. L. Saunders to Peterborough, where a successful dinner meeting with the branch was held at the Empress Hotel. E. P. Muntz had joined the party again at this point. Among the guests present at the dinner was Mr. Lucas, assistant chief engineer of the British Thomson Houston Company. After dinner, Past Councillor H. R. Sills entertained for the visitors at his home.

The next morning, the presidential party were shown through the Canadian General Electric plant and entertained at lunch at the Kawartha Country Club.

Visit to Ajax

From there, Past Vice-President R. L. Dobbin drove the party to Ajax where they were greeted by Dean C. R. Young and Professor W. J. T. Wright, director of studies. An inspection indicated that the same standards of mass production to rigid specifications which existed in this former shell-filling plant have been maintained on the make-shift campus where now 3,200 students (first and second years) are undergoing engineering training for the pursuits of peace.

Dean Young was host to the party at dinner in the Faculty quarters, after which a huge meeting was held in the Students' Hall. Over 800 students, mostly returned men, filled the room to capacity. The meeting had been arranged by the Junior Section of the Toronto Branch of the Institute and was conducted by the president of the Undergraduate Engineering Society. Addresses were given by Dean Young, Professor Wright, President Hayes, I. S. Widdifield, chairman of the Junior Section, Councillor W. H. M. Laughlin of Toronto, President M. J. Auliffe of the Undergraduate Society, and the assistant general secretary. The visitors were then driven to Toronto where they entrained for Montreal.

On Friday evening, November 29th, the president accompanied by Councillor and Mrs. J. B. Stirling and Councillor and Mrs. G. J. Currie attended the Annual Dance of the Junior Section of the Montreal Branch at the Ritz-Carlton Hotel.

Thus was completed another presidential tour in the best traditions established by previous presidents.

JOINT ACTION BETWEEN A.S.M.E. AND E.I.C.

On December 5th, at New York City, the joint committee which is established under the cooperative agreement between The American Society of Mechanical Engineers and the Engineering Institute of Canada, met to consider joint activities for 1947. The A.S.M.E. representatives were A. G. Christie, past-president and professor of mechanical engineering at Johns Hopkins University, A. E. White, professor of metallurgical engineering, University of Michigan, and George Stetson, editor of *Mechanical Engineering*. For the Institute, John G. Hall of Combustion Engineering Ltd., Toronto, W. A. Newman of the Department of Research, Canadian Pacific Railway, Montreal and the general secretary, were the representatives. The other representatives of the joint committee who, unfortunately, could not be present were J. W. Parker, president, Detroit Edison Company, Detroit, and Dr. O. W. Ellis, director, Department of Engineering and Metallurgy, Ontario Research Foundation.

Preliminary arrangements were made for joint participation in the work of research and code committees. Also for joint publication of technical papers and joint participation in professional meetings. Prompted by the success of the 1943 meeting, a proposal to hold another joint professional meeting in 1948 is to be submitted to the governing bodies of both organizations.

The next meeting of the joint committee was set tentatively for Toronto in May, 1947, during the course of the annual meeting of the Institute.

REGISTRATION IN ENGINEERING AT CANADIAN UNIVERSITIES

University	Year	General Course	Aeronautical Engineering	Agricultural Engineering	Ceramic and Non-metallic Minerals	Chemical Engineering and Chemistry	Civil Engineering	Electrical Engineering	Engineering and Business Administration	Electro-Mechanics	Forest Engineering	Geology and Mineralogy Engineering	Mechanical Engineering	Metallurgical Engineering	Mining Engineering	Engineering Physics	Total

*Indicates those graduating in 1947—Total 1,175.

NOTE—The figures shown in brackets indicate, in each case, the number of veterans comprised in the figure immediately preceding.

The accompanying table, showing the enrolment in the various branches of engineering at Canadian colleges for the present session, is the most impressive display of these statistics that the *Journal* has ever published. The figures constitute records in all departments. They convey a better appreciation of the tremendous task undertaken by the teaching staffs at universities, and indicate the responsibility which lies ahead for the profession in seeing that these young men, most of them veterans, get properly established in their calling.

A total registration of 14,135 compares with a figure of 7,061 for last year and 4,197 for 1941-42. It is interesting to note that more than 9,000 of them are veterans. This confirms the forecast made a few years ago based on the survey carried out among the men in the armed services. Although they were not altogether unprepared for it, such an influx has taxed to capacity the resources of our universities and is being met only because of the ingenuity and efforts of the heads and the staffs of the faculties. A striking example of this is the registration figure of over 4,000 at the University of Toronto, 3,200 of whom (first and second year) are located at Ajax. The bold measures taken at the University of British Columbia are another example of the courage and ingenuity of the teaching staff.

The number of students expected to graduate in the spring is 1,175. Considering only the main branches, the graduating class is divided as follows: civil 261; electrical 256; mechanical 240; chemical 176; mining and metallurgical 89. For the first time in several years, the number of graduates in civil engineering exceeds the number of those graduating in each of the other branches.

The tabulation this year includes the registration at the five engineering colleges in the Maritimes where a three-year pre-engineering course is given, starting at the junior matriculation level. The institutions are: Dalhousie University and Saint Mary's College, Halifax; Acadia University, Wolfville, N.S.; St. Francis Xavier University, Antigonish, N.S.; and Mount Allison University, Sackville, N.B. The students graduating from those colleges are admitted in third year engineering at other Canadian universities, so that it is quite proper that their numbers be included in these statistics.

The University of British Columbia, which comes immediately after Toronto in volume of enrolment, has introduced two new courses this year: in agricultural engineering and in engineering physics. It is also interesting to note that a Department of Architecture has been opened, although this has no bearing on the accompanying statistics.

1947 Annual Meeting of the Institute

DIAMOND JUBILEE

TORONTO, MAY 8-9th — ROYAL YORK HOTEL

E.C.P.D. TO MEET IN CANADA

At the November meeting of the executive of the Engineers' Council for Professional Development, at New York, the invitation of the Engineering Institute of Canada to hold the 1947 annual meeting of the Council in Canada was accepted. The 24th and 25th of October were selected for the dates and the meetings will be held in Montreal at the Mount Royal Hotel.

This will be the first time that this international body has met outside of the United States. It will be an important event in the history of engineering development in Canada. It is expected that delegates from the educational field and the industrial world from many parts of both countries will participate. James W. Parker, president of the Detroit Edison Company is chairman.

HIGH SCHOOL STUDENTS ATTEND SYMPOSIUM

"Engineering as a Career" was the topic of discussion at a symposium for high school students, held on the afternoon of Friday, November 22nd, at Institute headquarters, in Montreal.

The meeting was sponsored by the Student Guidance Committee of the Montreal Branch. It was attended by some 150 students, all of whom had expressed an interest in the career of a professional engineer: they were drawn from the upper grades of seven local high schools (Montreal West, Westhill, Westmount, Montreal, Baron Byng, Lachine and Sir George Williams, Claremont Division). Because of the limited capacity of the auditorium it was not possible to accommodate all who wished to attend.

The students were first addressed by two guest speakers. Mr. F. L. Lawton, M.E.I.C., Assistant Chief Engineer, Aluminum Company of Canada, Ltd., spoke on Electrical Engineering as a Career; and Mr. S. R. Banks, M.E.I.C., Aluminium Laboratories Limited, spoke from the civil engineer's point of view. The meeting was then taken over by Professor R. DeL. French, a member of the Committee, who ably dealt with a prolonged question period.

It was evident that the audience were extremely interested in the Symposium—the first of its kind to be held by the E.I.C.—and favourable comments were made by the Student Counsellors, Messrs. H. R. W. Goodwin, L. D. Hamilton, and K. H. Murray, who were present. It is therefore likely that a further meeting on similar lines will take place shortly.

The Student Guidance Committee of the Montreal Branch is to be congratulated on the enthusiastic and realistic manner in which they are tackling their job. Six members of the Committee, including the Joint Chairmen, (L. A. Duchastel, French Section; and G. B. Moxon, English Section) took part in the meeting, which was presided over by Mr. Moxon.

A.S.M.E. STUDENTS VISIT MONTREAL

About twenty-five students from Clarkson College of Technology at Potsdam, N.Y., visited industrial plants in Montreal on December 6th. They are members of the Student Branch of the American Society of Mechanical Engineers at Clarkson.

At the request of the students, the plant visits had been arranged by Headquarters. Accompanied by one of their professors, Mr. Gordon Babcock, the group first inspected the Dominion Engineering Works at Lachine, and, in the afternoon, they were guests of the Steel Company of Canada, at its rolling mill in Montreal.

T. A. Monti and R. J. Griesbach, respectively chairman and vice-chairman of the Junior Section of the Montreal Branch of the Institute, escorted the group throughout the visits.

A STUDENT SECTION AT LAVAL

A Student Section of the Quebec Branch was officially inaugurated at Laval University by President J. B. Hayes in the afternoon of November 19th, on the occasion of his visit to the branch. It was only a few years ago that courses in engineering were established at Laval, and the present enrollment stands at 150. Out of this number, about 80 students belong to the new section of the Institute. Jérôme Lépine, a fourth year electrical engineering student, has been elected president.

Professor René Dupuis, head of the Department of Electrical Engineering, who has been instrumental in the establishment of the Student Section, welcomed the president and expressed the regrets of Dean Adrien Pouliot who could not be present. The annual visit of the president of the Institute at Laval was a great stimulus to both the students and the teaching staff.

On behalf of the students, Mr. Lépine expressed their pleasure at being permitted to become more closely associated with the Institute and thanked both the University authorities and the Quebec Branch for their assistance. He then invited the president to address the students.

President Hayes declared the new Student Section at Laval University officially opened. He then presented to Adrien Morin, a fourth year student, the certificate of the Institute prize "in recognition of his standing in the engineering courses of his year and of his activities in connection with engineering society affairs". In his remarks, the president insisted on the necessity of the engineer's imparting to his work some of his personality, beyond furnishing an honest day's work.

The chairman of the Quebec Branch, Charles Boisvert, thanked the president for his remarks and expressed the satisfaction of the branch at the establishment of a Student Section. He pledged the full support of the senior members of the profession.

The assistant general secretary then supplied the students with information concerning the Institute and the activities which were of particular interest to them.

Several members of the Quebec Branch were present and joined the teaching staff and the visitors for a reception offered by the Faculty.

A.I.E.E. TO MEET IN CANADA

The 1947 Summer Meeting of the American Institute of Electrical Engineers will be held in Montreal on June 9th to 13th, at the Mount Royal Hotel. It is a matter of importance to Canadians that this outstanding engineering society should meet on this side of the boundary. It will afford Canadian engineers unusual opportunities to participate in professional sessions and to cooperate with fellow engineers from another country. The senior officer of the Institute in Canada is Fred L. Lawton, Assistant Chief Engineer, Aluminum Company of Canada, Ltd., Montreal, who is Vice-president.

The Board of the A.I.E.E. has generously invited the members of the Engineering Institute to associate themselves with the Montreal Section A.I.E.E. in extending Canadian hospitality to visiting fellow engineers and to participate in technical and social phases of the programme—an invitation that has been formally accepted by the Council of the Institute. All committees have been made up on a joint basis, and the Institute members are happy to have a part in the arrangements as well as the meeting

As the information becomes available, the E.I.C. members will be advised of the papers and events both through the columns of the *Engineering Journal* and by direct mail.

CORRESPONDENCE

Engineering Costs—Overhead?

Port Arthur, Ont., November 15, 1946.

Editor,
Engineering Journal,
Montreal, P.Q.

Dear Sir:

Under the title, "Can Engineering Survive Being Classed as Overhead" an article by Mr. F. N. Hveem appeared in the July issue of *Civil Engineering*. Mr. Hveem's point is so well taken that I think it should be placed before the members of the Institute.

Briefly, his thesis is this, that our profession suffers as much from attempts to keep down the costs of en-engineering services, as it does from any lack of articulateness in engineers as a group. In addition to our efforts to improve our status in the community by the public speaking classes which are often advocated, we should lay more stress on producing economical designs.

We all can cite instances from our experience where substantial savings of cost could have been achieved through more thorough design. Many of us, however, do not realize quite how large those savings can be. I have sometimes seen a saving of several thousand dollars made possible by a week of extra work, amounting in cost to not more than a couple of hundred dollars, due to refinements in design.

Words often carry implications reaching much farther than their direct meanings. Some words, such as "dark" or "rough", have a bad sound, others, such as "light" or "smooth", have a good sound, and this quite independent of their immediate use and meaning. One of the words that has a bad sound is "overhead". It implies something extra and troublesome, a necessary evil, to be kept within its smallest dimensions. Another such word is "non-productive", often applied to the costs of all office work in a plant.

Now, engineering work, unless it is badly done, is not "non-productive" at all but "productive" in the truest sense, for it is the basis on which the whole business structure rests. It is cruelly false economy to slight our work, or to allow others to do so. But, so long as the cost of our work is considered an evil thing, many of us are forced to do that very thing, to make snap judgments do in place of careful analysis, to make high factors of safety cover up our lack of time for analysis.

The old saying runs that an engineer is one who can do with one dollar what any bungler can do with two after a fashion. What we tend to ignore is that, while it costs maybe twenty-five cents to look after the two dollar job, we must spend fifty cents to turn it into a one dollar job. When engineers come to taking a pride in the height, rather than the lowness, of their office costs, when accountants are trained to consider that height as a good rather than a bad sign, then engineers will fill their proper niche in the world.

A bridge was recently opened, over the Riviere des Milles Isles, near Montreal, that exemplifies this very clearly. In that bridge the girders were welded for full continuity, and integral action between the steel framing and the floor slab was assumed, made use of in design, and accomplished by thorough detailing and construction practices. I venture to suggest that the engineering costs on that bridge, expressed as a percentage of the total costs, were far higher than for any bridge that has been built for many years. That increase in costs was good rational economy, for it resulted in far greater savings in money, improved clearances, better appearance, and, even more important, an advance in the art of bridge design. We owe a debt of gratitude to the engineers in charge.

I have deviated somewhat from Mr. Hveem's paper, which I have before me as I write. He puts the matter more wittily than I can, and I commend his paper to all who can obtain access to it. To summarize the matter, until we make our public realize that we can only serve its real advantage when we are paid enough to do so, so long will poor engineering flourish and needlessly expensive structures be built. With low percentage costs to meet we can only live by consciously or unconsciously padding the jobs.

Yours truly,
Douglas S. Laidlaw, M.E.I.C.

Engineers' Salaries

New York, Dec. 4th, 1946.

To the Editor.

It has been correctly said that if all the past work of engineers and scientists were wiped out today, the world would be back in barbarism tomorrow. It is interesting to ask why in view of this many of these men, who are the brains without which our civilization could not function, receive only financial compensation comparable with the wages of unskilled labor.

One who has studied the subject said that when he found a badly paid engineer invariably it was another engineer higher up who was holding down the subordinate's salary. An executive of a concern employing many engineers, with whom the writer talked on the subject, said that he never interfered in engineers' salaries as they were decided by the manager of engineering who was an engineer with much experience in such matters. And some years ago the directors of the research organizations of two of the most important engineering concerns in the United States stated in addresses before one of the national engineering societies that it was inadvisable to pay high salaries to research engineers as the money tended to distract their attention from their work.

The standard of ethics of the legal and medical professions have been frequently criticized. But we rarely hear of a member of either of these two professions assisting in beating down the fee of another member when such fee is to be paid by a third party. In the recent American Society of Civil Engineers discussion, wherein some of the older members of the Society endeavored to formulate a code of ethics which the junior members should follow, the writer suggested that as he had never known a junior engineer to act except in accord with a high standard of ethics while he had only too often seen older engineers sacrifice their standards, it was perhaps presumptuous for the older engineers to attempt to lecture the juniors on ethics.

If the salaries of engineers and scientists were increased to ten times their present amounts it would be more in accord with the importance of their work; and if this were done the resultant added burden on the national economy would be less than one quarter of that resulting from the increase in the wages of labor since 1939. One of the important obstacles to be overcome before this can be accomplished is the attitude of the older members of the profession.

W. L. Waters, M.E.I.C.,
Consulting Engineer.

Military Engineers Association

Ottawa, 26 Nov., 1946

The Secretary,
The Engineering Institute of Canada,
Montreal, P.Q.

Dear Sir:

The Military Engineers Association of Canada was organized in 1912 for the purpose of furthering the interests of the Non-Permanent, (now Reserve Force) Engineers and of military engineering generally in Canada.

With the outbreak of the second world war in 1939, our Branches, with a few exceptions, ceased to operate as such, as their members engaged in the more serious business at hand. However, we have now reorganized and are putting forth our best efforts to ensure that military engineers receive adequate training and that the qualifications for officers of the Royal Canadian Engineers are maintained at a high professional standard.

In this connection, you may be interested to know that we have already submitted to the Department of National Defence (Army) our recommendations, which are in effect similar to the requirements for corporate membership in the Engineering Institute. One exception has been made and that is in the case of purely administrative officers who will be designated by the letter "A" as follows: R.C.E. (A).

Realizing that many of your members served in the wars of 1914 and 1939, and the great interest taken by the Institute regarding the professional qualifications of officers when the R.C.E.M.E was formed, we are forwarding you this information with the hope that we may receive your co-operation and assistance in furthering the interests of the Corps.

Yours very truly,

E. M. MEDLEN, M.E.I.C., Lt.-Col.
Hon. Secy.
Military Engineers Association of Canada.

MEETING OF COUNCIL

A regional meeting of the Council of the Institute was held at the Cornwallis Hotel, Cornwall, Ont., on Saturday, November 23rd, 1946, convening at ten o'clock a.m.

Present: President J. B. Hayes (Halifax) in the chair; Past-Presidents K. M. Cameron (Ottawa) and A. J. Grant (St. Catharines); Vice-Presidents J. E. Armstrong (Montreal), G. F. Layne (Quebec), W. R. Manock (Fort Erie), and C. E. Sisson (Toronto); Councillors G. J. Currie (Halifax), Boris de Hueck (Cornwall), J. R. Dunbar (Hamilton), R. S. Eadie (Montreal), R. C. Flitton (Montreal), S. R. Frost (Toronto), C. A. Peachey (Montreal), W. L. Saunders (Ottawa), J. B. Stirling (Montreal), J. A. Vance (Woodstock), Paul Vincent (Quebec), Treasurer J. A. Lalonde (Montreal), General Secretary L. Austin Wright and Assistant General Secretary Louis Trudel.

There were also present by invitation—Past Vice-President E. P. Muntz (Hamilton); Past Councillor J. G. Hall (Toronto); E. A. Cross, chairman of Toronto Branch; C. H. Boisvert, chairman, Roger Desjardins, secretary-treasurer, and René Dupuis, past-chairman, Quebec Branch; C. A. Robb (Montreal), past-chairman Edmonton Branch; Donald Ross-Ross, chairman, and A. L. Farnsworth, vice-chairman, Cornwall Branch.

In opening the meeting, the president expressed his pleasure at again presiding at a Council meeting in a new branch. He asked everyone present to feel free to express himself on all matters under deliberation.

Conference of Commonwealth Engineering Societies: The president reported very generally on the recently held Conference of Comonwealth Engineering Societies in London, England, and then asked the secretary to report the conference in detail.

The general secretary gave a description of the attendance and the business of the conference and concluded by presenting the resolutions which had been passed unanimously. (A detailed account of the conference appeared in the November *Journal*).

International Technical Congress, Paris (World Engineering Conference): The general secretary reminded Council that the proposal to establish a world federation of engineering societies had been before it many times in the last two years. He reviewed the history of the movement and of the Institute's reaction to it, and then reported that a conference was held in Paris in September at the same time as the Commonwealth Conference was being held in London.

The general secretary gave a very long and detailed account of the conference in Paris and of opinions of officers of several engineering societies both in Europe and in England.

It was agreed that in view of the possible complications this matter should be referred to the Committee on Professional Interests with a request that after further study they should submit a report to Council that would permit prompt action.

General Secretary's Report on Overseas Visit: The general secretary reported that at the conclusion of the Commonwealth Conference he had called on the presidents and secretaries of several other engineering societies such as the Institution of Structural Engineers, the Royal Aeronautical Society, the British Institute of Radio Engineers, the Société des Ingénieurs Civils de France, the Swiss Society of Engineers at Zurich, the Royal Belgian Society of Engineers and Industrialists in Brussels, and the Royal Society of Engineers of Holland at the Hague. In some instances he had been able to meet with the councils of the other organizations and in several instances had gathered information that would be useful to the Institute.

He reported further that he had interviewed several young English engineers who had been in correspondence with the Institute relative to moving to Canada. Through the Professional Engineers' Appointment Bureau, operated by the British institutions, he had been able to arrange for the supply of proper information to all residents in the Old Country who were interested in finding out about engineering conditions in Canada. In this way it was expected a much quicker response could be given to the inquirers than was the case when they had writen direct to the Institute.

He reported further that, through the offices of the three British institutions, the president and he had been able to meet many of the outstanding engineers in the Old Country and that through these contacts he expected the Institute would be able to bring to Canada, from time to time, distinguished speakers who would contribute to the annual meeting programme or to branch meeting programmes. Already, through arrangements made in London with Sir Robert Watson-Watt, that distinguished radar discoverer had spoken to a large group at a Montreal Branch meeting.

At the conclusion of the report of the president and the general secretary, Mr. Cameron moved that Council extend to the president and the general secretary its congratulations, coupled with its thanks, for the splendid work that they had done. This was seconded by Mr. Sisson and carried unanimously.

Community Planning: The general secretary reported that he had had an interview with officers of the Institution of Civil Engineers in London in order to discuss developments in England in the community planning field so that information could be passed on to the Institute's committee.

He was informed that in 1945 the Institution had carried out a series of four lectures which had as their basic purpose the idea of informing the general public of the engineers fundamental interest in the subject. These four lectures were largely attended and were given considerable newspaper publicity. Eventually, they were printed in very neat pamphlet form under the heading "The Position of the Engineer in Relation to Town and Regional Planning". This series was part of the Institution's programme to keep the engineer in the public eye as a town and regional planner.

A further enterprise in this field was an exhibition held in the society's headquarters which was widely advertised to the public and well received by thousands of visitors.

The general secretary also discussed with the officers the possibility of securing as a speaker at the annual meeting one of the leading planning engineers in England. Several names were suggested which would be submitted to the Papers Committee of the Toronto Branch.

Mr. Wright also reported on a meeting of the International Federation of Town Planning which had been held in Hastings while he was in England. He had not attended the conference as advice from the president of the Institution of Civil Engineers indicated that the agenda for the meeting did not offer much valuable material. The papers were given largely by architects and dealt mainly with developments in housing for the last two hundred years in some of the older European cities. Mr. Wright reported, however, that the proceedings of the conference, which had lasted for a whole week, were being forwarded to the Institute. It was thought they might be of interest to the Institute's committee.

Shore Erosion on the Great Lakes: The general secretary reported that while in England he discussed this type of work with the secretary and assistant secretary of the Institution of Civil Engineers. They outlined to him the long time interest that the members of that society had shown in this subject. They also gave the general secretary copies of several papers which had been delivered by their members, all of which it was expected would be helpful to the Institute's committee when formed.

Annual General Meeting 1947: Mr. Cross, chairman of the Toronto Branch, outlined the proposed programme of papers for the anunal professional meeting. These were of a tentative nature but indicated a very interesting programme. They were submitted to Council for discussion, and certain revisions were suggested which Mr. Cross thought would fall in very well with the plans of the Papers Committee.

Mr. Cross also brought to the attention of Council the matter of finances for the meeting. The general secretary explained the usual procedures with regard to these matters and Mr. Cross expressed the satisfaction of the branch at such proposals.

Committee on Medals and Awards: Mr. Muntz reported that he was not yet in a position to present a report with recommendations on all the medals and awards of the Institute. He suggested that a member of each of the previous medal committees be appointed to constitute a general committee, and that each member of the committee be asked to form a sub-committee to report on one specific medal for the 1946 award. The central committee will continue to study the Institute's whole system afterwards.

On the motion of Mr. Stirling, seconded by Mr. Dunbar, it was unanimously agreed that a general committee with sub-committees as suggested by Mr. Muntz be appointed to make recommendations to Council on the medal awards for the year 1946.

Institution of Mechanical Engineers—100th Anniversary: An invitation had been received from the Institution of Mechanical Engineers asking the Institute to appoint two official delegates to represent the Institute at the One Hundredth Anniversary of the Institution which will be celebrated in London in June, 1947. On the motion of Mr. Dunbar, seconded by Mr. Lalonde, it was unanimously agreed that the invitation be accepted and that it be left with the president and the Montreal vice-president to select the two delegates.

On the motion of Mr. Cameron, seconded by Mr. Currie, it was unanimously resolved that a hearty vote of thanks and congratulations be extended to the officers and members of the Cornwall branch for the very capable arrangements which had been made for the inaugural meeting of this new branch, and for the regional meeting of Council.

Mr. Ross-Ross expressed the gratification of the branch at the large number of out of town members who had come to the meeting, which had far exceeded their expectations.

The Council rose at four forty-five p.m.

ELECTIONS AND TRANSFERS

A number of applications were considered and the following elections and transfers were effected:

Members

Bentall, Charles, general mgr., Dominion Construction Co., Ltd., Vancouver, B.C.

Eastwood, George Garnet McDonald, B.A.Sc., Toronto, elect. engr., Courtaulds (Canada) Limited, Cornwall, Ont.

Hurd, Edwin Cecil, B.Sc., (Chem. Engrg.), Sask., Toronto refinery mgr., British American Oil Co., Ltd., Toronto, Ont.

MacKay, William Nelson, B.Aero.Engrg., Univ. of Minnesota, engrg. dept., Trans Canada Airlines, Dorval, Que.

MacLeod, Robert Gordon, B.Sc., (Elect.), Manitoba, 80 St. Clair Ave., W., Toronto, Ont.

Miller, Herbert Beverley, B.Sc., (Chem. Engrg.), Alberta, process engr., production control dept., Polymer Corporation Limited, Sarnia, Ont.

Shupe, Charles Ahrens, B.A.Sc., Toronto, Electric Tamper & Equipment Co. of Canada, Ltd., Toronto, Ont.

Smith, Gerald Edward, B.A.Sc., Toronto, field engr., Canadian Sirocco Co., Ltd., Windsor, Ont.

Wiley, Walter Kenneth, B.Sc., (Elect.), New Brunswick, industrial heating mgr., Northern Electric Co. ,Ltd., Montreal, Que.

Williams, Donald Drysdale, B.Eng., (Mech.), McGill, design engr., steam services, Robt. Rankin & Co., Montreal, Que.

Juniors

Burgess, John Alexander, B.A.Sc., (Mech.), British Columbia, jr. mech. engr., Consolidated Mining & Smelting Co. of Canada, Ltd., Trail, B.C.

Kendall, Evan Wildridge Jackson, The Bell Telephone Co. of Canada, Montreal, Que.

Read, Wallace Foster, B.Sc., (Chem. Engrg.), Queen's, 289 Wychwood Ave., Toronto, Ont.

Webster, Thomas Benjamin, B.Sc., (Mech.), Queen's, engrg. dept., Howard Smith Paper Mills, Cornwall, Ont.

Transferred from the class of Junior to that of Member

Anderson, James Douglas, B.Eng., (Mech.), McGill, service and erection engr., Combustion Engineering Corporation Ltd., Montreal, Que.

Fraser, Frederick Walter, B.Sc., (Civil), Saskatchewan, constrn. foreman, McColl Frontenac Oil Co., Ltd., Calgary, Alta.

Jordan, Jack McLean, B.A.Sc., Toronto, counties engr. and road supt., United Counties of Northumberland & Durham, Cobourg, Ont.

Powell, Robert Montague, Graduate, R.M.C.; B.A.Sc., (Chem.), Toronto, tech. asst., Canadian Industries Limited, Montreal, Que.

Seybold, Hugh G., B.Eng., (Elect.), McGill, mgr., aluminum dept., Drummond McCall & Co., Ltd., Montreal, Que.

Ward, Kenneth Roy, graduate, Royal Military College, 1939, Major, R.C.E.M.E., Staff Officer, Directorate of Mechanical Engrg., N.D.H.Q., Ottawa.

Transferred from the class of Student to that of Member

Meuser, Henry Lloyd, B.Sc., (Civil), Queen's, Colonel, R.C.E., Director of Engineers, N.D.H.Q., Ottawa.

Admitted as Students

Franz, Karl Kurt, B.Sc., (Mech.), Queen's, 45 Michael St., Kitchener, Ont.

Lewis, Robert Arthur, British Columbia, dftsman, Bloedel, Stewart & Welch, Vancouver, B.C.

Morriss, Harry Fayne, B.A.Sc., British Columbia, Northern Electric Co., Ltd., Montreal, Que.

Rochon, Paul-Emile, B.A.Sc., (Metall.), Laval, 122 Pere Marquette St., Quebec, Que.

Students at University of Toronto

Anderson, G. J.	Hill, E. H.	Monteith, H. D.
Beattie, D.	Hill, K. E.	Paulin, A.
Bernick, H.	Kissick, R. F.	Pawling, J. D.
Bourne, K. B.	Langlois, J. W.	Pepper, G. K. F.
Burn, B. D.	LeSueur, R. E.	Pinkus, D.
Chisholm, W. O.	Lusk, C. H.	Quan, B.
Crome, F. E. J.	Mabson, H. J.	Reynolds, D. K.
Cupp, C. R.	MacIsaac, G. E.	Ross, D. G.
Dale, W. E. H.	MacNairn, J. S.	Smith, R. J.
Dudgeon, E. H.	McEachern, D. L.	Temple, W. J.
Ewing, T. A.	McNabb, A. D.	Thomas, G. D.
Field, A. E.	Mann, A. D.	Tucker, G. H.
Harris, D. M.	Mansbacher, P.	Watson, H. A.
Hastings, B. A.	Marcotte, W. C.	Westwood, R. E.
Heaslip, W. T.	Meschino, J. L.	Zarnett, B. H.

Students at McGill University

Bickerdike, C. G.	King, C. G.	Morris, D. R. C.
Earle, A. P.	Lemco, I.	Routledge, B. F.
Elliott, E. W.	Lesperance, P.	Somerville, T. A.
Flaherty, R. N.	McCutcheon, J. O.	Taylor, J. S.
Geller, B.	McLandress, D. H.	Weekes, R. D.
Haley, P. G.	Maclean, W. G.	

Students at Ecole Polytechnique

Bellavance, A.	Couture, L. P.	Fradette, M.
Bilodeau, P. M.	Desbiens, W. F.	Mainguy, R.
Carrier, R. R.	Dorais, M.	Matte, J. P.
Cordeau, J. P.		

Students at University of New Brunswick

Alexander, G. T.	Donald, W. S.	MacDiarmid, R. A.
Busby, J. S.	Fulton, K. R.	Magnusson, E. R.
Donahoe, W. E.	Howard, R. G.	Watson, H. M.

Students at Nova Scotia Technical College

Bell, G. D.	Johnston, C. W.	Payzant, L. J.
Buckingham, R. F.		

Students at University of British Columbia

Butterfield, L. A.	Sissons, W. J.

Student at University of Manitoba

Williams, N. C.

By virtue of the cooperative agreements between the Institute and the associations of professional engineers, the following elections and transfers have become effective.

NOVA SCOTIA

Members

Connolly, Cornelius Joseph, B.Sc., St. Francis Xavier Coll., camp engr., Canadian Veterans Training, Windsor, N.S.

Cooke, William Greig, B.Sc., (Mech.), N.S.T.C., chief engr., National Gypsum (Canada) Ltd., Dingwall, N.S.

Henderson, Edgar Hastings, B.Sc., (Mining), N.S.T.C., plant engr., Halifax Shipyards Ltd., Halifax, N.S.

O'Connor, Victor Frederick, B.Sc., (Mech.), N.S.T.C., Lieut. in Engrg. Branch, R.C.N., Dept. of National Defence, (Naval Services), Halifax, N.S.

Renner, George Lyall, B.Sc., N.S.T.C., mech. supt., i/c of pumping and chlorination plants, Public Service Commission, Halifax, N.S.

Young, Angus Francis, B.Eng., (Mech.), N.S.T.C., operating own sales and service organization, Halifax, N.S.

Junior to Member

Mitchell, Kenneth Roscoe, B.Eng., (Civil), N.S.T.C., intermediate engr., Engineering Service Co., Halifax, N.S.

QUEBEC

Member

Finlayson, Donald William, B.A.Sc., Toronto, structl. engr., Foundation Co. of Canada, Montreal, Que.

Weldon, Harold Stanley, B.A.Sc., Toronto, chief electrical engr., Dominion Textile Co., Ltd., Montreal, Que.

Junior

Wilding, Malcolm Frank, B.A.Sc., (Elect.), British Columbia, power appartus sales engr., Northern Electric Co., Ltd., Montreal, Que.

Junior to Member

Alexander, John Andrew, B.Eng., (Chem.), McGill, asst. supt., McColl Frontenac Oil Co., Ltd., Montreal, Que.

Charland, Roger, B.A.Sc., (Civil), Ecole Poly, engr., tech. division, Public Works Dept., City of Montreal, Que.

Murphy, Daniel Francis, B.Eng., (Civil), McGill, structl. engr., Foundation Co. of Canada, Montreal, Que.

SASKATCHEWAN

Junior to Member

Eull, Leander Frank, B.Sc., (Elect.), Saskatchewan, asst. hydraulic engr., P.F.R.A., Regina, Sask.

Personals

News of the Personal Activities of members of the Institute

Dr. C. J. Mackenzie, M.E.I.C., president of the National Research Council, Ottawa, has been elected a fellow of the Royal Society. For five years of the war, Dr. Mackenzie was a member of the joint technical staff that carried out research in the field of atomic fission which resulted in the development of the atomic bomb. A past-president of the Engineering Institute, and a member of its Prairie Water Problems Committee, he is the former dean of engineering of the University of Saskatchewan.

L. K. Sillcox, M.E.I.C., first vice-president of the New York Air Brake Company, Watertown, N.Y., was presented with a certificate of Honorary Membership in The American Society of Mechanical Engineers at the Annual Banquet on December 4th, in New York City.

Colonel J. A. Macdonald, M.E.I.C., has been re-elected as chairman of the Cape Breton Branch of the Institute for the coming season. He is electrical superintendent of the Dominion Iron and Steel Corporation, Sydney, N.S.

Leo G. Denis, M.E.I.C., district chief engineer for the Province of Quebec, Dominion Water and Power Bureau, Surveys and Engineering Branch of the Department of Mines and Resources, retired on November 25th last following thirty-six years' continuous service with the Dominion Government. He joined the Water and Power Bureau, then part of the Department of the Interior, several years before his appointment in 1922 to the Quebec district, with headquarters in Montreal.

Albert Deschamps, M.E.I.C., Montreal general contractor and engineer, was recently elected by acclamation as alderman of the City of Outremont. He is president of the Canadian Construction Association.

L. L. Bolton, M.E.I.C., has retired from the Mines and Geology Branch of the Department of Mines and Resources, following a period of thirty-one years continuous service with the Dominion Government, during the last ten years of which he was general executive assistant for the Branch. He is a Life Member of both the Canadian Institute of Mining and Metallurgy and the Professional Institute of the Civil Service of Canada, having served the former as councillor, vice-president, and chairman of the Ottawa Branch.

F. C. C. Lynch, M.E.I.C., chief of the Bureau of Geology and Topography of the Department of Mines and Resources, Ottawa, retired in September last, after completing more than forty years of continuous service with the Dominion Government. In 1936, on the formation of the present Department of Mines and Resources, he received his appointment as chief of the Bureau and officer in charge of the National Museum of Canada. He is an honorary member of the Canadian Institute of Mining and Metallurgy and a founder and director of the Canadian Geographical Society. He serves the Society also as chairman of its editorial committee. He was for sixteen years secretary-treasurer of the Ottawa Branch of the Engineering Institute.

Lieutenant-Colonel J. H. Edgar, M.E.I.C., retired from the service of the Canadian National Railways in November last. He has been with the company for many years, located at the Winnipeg Office as inspector of materials. He served overseas in World War I, returning as a major. He has been in command of the 10th District Engineers, R.C.E. Reserve, for several years.

C. E. Garnett, M.E.I.C., has been elected to the presidency of the Edmonton Chamber of Commerce, and to the chairmanship of the Edmonton Industrial Development Board. He has been associated with Gorman's Limited in that city for many years, and is president and manager of the company.

William LeClair, M.E.I.C., of Ottawa, Ont., is the new president of the Canadian Federation of Property Owners' Associations, which includes some 8,000 property owning corporations and individuals. He is the president of the Ottawa Property Owners' Association, and secretary-manager of the Canadian Lumberman's Association and affiliated bureaux.

Donald C. Beam, M.E.I.C., has been appointed chief engineer of the Carter Construction Company Limited, Toronto, Ont. After serving for ten years with the Toronto Department of Buildings, latterly as technical secretary to the joint committee on revision of the Toronto building by-law, Mr. Beam joined Waritme Housing Limited in 1941 as general superintendent of construction. He was appointed manager of the maintenance and construction department three years later. He has been with the Carter Construction Company since 1945.

J. P. Fraser, M.E.I.C., has been appointed assistant chief engineer of the electrical operating division of the B.C. Electric Railway Company. He joined the company in 1940, coming from the Manitoba Power Commission.

G. W. F. Johnston, M.E.I.C., recently became assistant manager of the pricing and distribution divisions of War Assets Corporation, Montreal. A veteran of both world wars, he has been associated with engineering work on the Welland Ship Canal, the Canadian National Railways Montreal Terminal, the Beauharnois power development and other projects. He went overseas in 1939 in command of the First Anti-Tank Regiment, R.C.A., and at the time of his transfer to the reserve in October, 1944, he was colonel in command of artillery training at Petawawa, Ont. He joined War Assets in 1944.

F. J. Hoar, M.E.I.C., vice-president and general manager of the G. D. Jenssen Company, Inc., Watertown, N.Y., has been associated with the pulp and paper industry for many years. He was formerly connected with Stebbins Engineering and Manufacturing Company, Watertown, as middle west representative, and as manager of Canadian Stebbins Engineering and Manufacturing Co. Ltd., Montreal. He returned to Watertown in 1942, joining G. D. Jenssen in 1944.

R. H. Rimmer, M.E.I.C., has been named director of research for Aluminium Laboratories Limited, Kingston, Ont. He was with the Aluminum Company of Canada Ltd., at Montreal, as manager of the technical department, having been transferred there in 1943 from Arvida, Que., where he was in charge of research and development work.

Albert D'Amours, M.E.I.C., has left his position as assistant superintendent at Marine Industries, Sorel, Que., to take care of the administration of D'Amours Limited, building contractors, Montreal, of which firm he is president.

R. W. Emery, M.E.I.C., is resident engineer for the Brompton Pulp and Paper Company Limited, at Red Rock, Ont. He was formerly with the Marathon Paper Mills of Canada Limited, located at Toronto and at Marathon, Ont.

J. S. Green, M.E.I.C., is sales manager of the Ford-Smith Machine Co. Ltd., Hamilton, Ont. He had been associated with the British Air Commission for several years, and was located as resident inspector at the Beech Aircraft Corporation, Wichita, Kansas, and at the Douglas Aircraft Co. Inc., Tulsa, Okla.

M. S. Saunders, M.E.I.C., is in Lima, Peru, employed by the International Petroleum Company. He has been with the Tropical Oil Company at Bogota, Colombia, since 1943.

B. O. Baker, JR.E.I.C., is now in Quebec, with the Canadian Armament Research and Development Establishment of the Department of National Defence. He was previously at Peterborough, Ont., with the Canadian General Electric Co. Ltd.

G. D. Russel, JR.E.I.C., received the degree of master of science from McGill University at the fall convocation, 1946. He is connected with the Dewey and Almy Chemical Company of Canada, Montreal.

H. E. Archibald, JR.E.I.C., presently serving with Proctor, Redfern and Laughlin, consulting engineers, Toronto, Ont., has been appointed engineer of Teck Township, Ont. He was with the R.C.E. from the time of his graduation from the University of Toronto in 1943 until his discharge in 1945 with the rank of captain. He left the Ottawa staff of the Community Planning Branch of the Ontario Department of Planning and Development to assume his new duties on January 1st.

G. H. Galbraith, JR.E.I.C., is enrolled at the University of Toronto where he is taking a course in business administration leading to the degree of Master of Commerce. He is on leave of absence from his position as a mechanical engineer with the Shell Oil Company of Canada Limited, Calgary, Alta.

H. Haakonsen, JR.E.I.C., has established a private consulting practice in Shawinigan Falls, Que. He has been teaching mathematics and electricity at the Shawinigan Technical Institute since his graduation from Queen's University in 1944.

H. W. McFarlane, JR.E.I.C., is assistant professor of civil engineering at the University of New Brunswick, Fredericton. He served with the R.C.E. after his graduation from the same university in 1943 until March 1946, and had been with D. O. Turnbull, M.E.I.C., consulting engineer, Saint John, N.B., until his recent appointment.

R. A. MacKinlay, JR.E.I.C., is with Price Brothers Limited, Jonquiere, Que. He had been with the Navy since 1944 when he graduated with the degree of bachelor of engineering from the Nova Scotia Technical College, Halifax.

W. H. Longworthy, JR.E.I.C., is in Negritos, Peru, with the International Petroleum Company. He has been with the R.C.N.V.R. and was stationed at Esquimalt, B.C., and latterly at Victoria, B.C., with the rank of lieutenant.

Fernand Mailhiot, JR.E.I.C., who has been with the Ministry of Health, Province of Quebec, since his graduation in 1944 from l'Ecole Polytechnique, Montreal, has recently returned from the Graduate School of Engineering, Harvard University, where he received a master degree in sanitary engineering. He was granted a fellowship by the Rockefeller Foundation, New York.

Obituaries

The sympathy of the Institute is extended to the relatives of those whose passing is recorded here:

F. J. Hancox, M.E.I.C., passed away on September 10th, 1946, at his home in Toronto after a brief illness. He was born in Gloucester, England, in 1885, and studied at the Technical School there, qualifying under the City and Guilds Technical Institute, London, England, as a teacher of milling engineering and technology in technical schools. He spent ten years with J. Reynolds and Company Limited in Gloucester, as plant superintendent and as superintendent of the mill plant and repair shop. Coming to Canada in 1912, he entered the employ of the City of Toronto as a designer of sewage schemes and remained an employee of the city administration for thirty-four years. He served overseas with the Fifth Canadian Division in the first World War.

Mr. Hancox joined the Institute as an Associate Member in 1920, becoming a Member in 1940.

Henry Cron Kennedy, M.E.I.C., Montreal engineer, died suddenly on November 10th, 1946. He was born in Owen Sound, Ont., and was educated at McGill University, Montreal. He was associated with hydro-electric engineering projects in Ontario, B.C. and Alberta, prior to service as a lieutenant from 1915 to 1919 with the 24th Bn. V.R. and with the 3rd Bn. C.E. in France and England. On his return to Canada he spent two years with the Bathurst Lumber Company, as resident engineer on hydro construction and in 1921 he joined William Kennedy & Sons Limited of Owen Sound, Ont., and has been Montreal representative for the company for many years. In 1941 he was appointed inspecting engineer for the controller of steel for the Dominion Government. He was a director of his company and of F. H. Hopkins and Company.

Mr. Kennedy, a nephew of the late Sir John Kennedy and of the late William Kennedy, joined the Institute as a Student in 1904, transferred to Associate Member in 1910, and to Member in 1940.

G. G. Routledge, M.E.I.C., died at his home in Aurora, Ont., on October 23rd, 1946. He was born in Hardhurst, Cumberland, England, in 1870 and attended the Paisley Technical College. He began his engineering career with the British Government, employed on an ordnance survey of Great Britain from 1889 to 1899. In Paisley, Scotland, he was then engaged for some thirteen years on the design and construction of water supply mains. Arriving in Toronto in 1912, he was placed in charge of the survey of water mains and became superintendent of the city water distribution system. He remained with the works department as engineer in charge of the system until his retirement in 1945.

Mr. Routledge held the Hunt Memorial Award of the Canadian Section of the American Water Works Association. He joined the Engineering Institute as an Associate Member in 1921, becoming a member in 1940.

L. T. Rutledge, M.E.I.C., a member of the faculty of Queen's University, died in Kingston, Ont., on September 27th, 1946. He was born in January 1883, at Terra Cotta, Ont. He taught public school in the Brampton area of Ontario for a period of three years prior to entering the University of Toronto in 1906. He graduated with honours in mechanical and electrical engineering in 1910, and became employed by the Vancouver Street Railway as an engineer. Returning to the University of Toronto, he taught drawing in the department of architecture, and lectured at night classes in the Central Technical School of Toronto. From 1916 to 1920 he owned and operated a machine shop in Toronto, after which he joined the staff of the department of mechanical engineering at Queen's University, where he remained for some twenty-six years.

Mr. Rutledge was associate editor of one of McLean's engineering journals for many years, he lectured in mechanical engineering at Royal Military College, Kingston; he practised as a consulting engineer and managed a war plant in Orillia, Ont. Toronto University issued to him the degree of master of engineering in 1939.

He was a member of the Professional Engineers of Ontario, serving as a member of council and on the examining board. He joined the Engineering Institute as a Junior in 1912, transferring to Associate Member in 1914 and to Member in 1921. He was secretary treasurer of the Kingston Branch in 1922 and 1923, vice-chairman in 1926 and chairman in 1927. He was on the council of the Institute in 1928.

Donald Blair, M.E.I.C., of Ottawa, Ont., died on November 23rd, 1946. He was born in Fredericton, N.B., in 1887, studied in Ottawa and Montreal, and worked first in western Canada, for the city engineering department of Moose Jaw, Sask., and later on the Peace River District land survey in British Columbia. In 1917 and 1918 he was field engineer for the Powder Plant at Trenton, Ont., for Fraser Brace and Company, and the following year joined the Department of Public Works at Ottawa. He was office engineer and clerk for the construction department of the Temiskaming and Northern Ontario Railway from 1923 to 1925, and resident engineer for the Rouyn Branch Lines Company of the Canadian National Railways in 1926. Joining the Federal District Commission as an engineer the next year, he transferred in 1933 to the Department of National Defence in Ottawa as a structural design engineer. At the time of his death he was supervising engineer of the chief architects branch of the Public Works Department.

Mr. Blair joined the Institute as an Associate Member in 1934 and became a Member in 1940. He was a member also of the Association of Professional Engineers of Ontario and of the American Concrete Institute.

Ilja Leebosh, M.E.I.C., died in Montreal on November 8th, 1946. He was born in Latvia in 1898, and studied mechanical engineering at Friedrichs Polytechnical Institute, Goethen Anhalt, graduating in 1924. From 1926 to 1932 he was employed by the late Frederick B. Brown, consulting engineer, Montreal, working chiefly in connection with the Beauharnois Power Development. The next year he joined the Beauharnois Light, Heat and Power Co., to do transmission line and right-of-way work. In 1938 he went to the Canadian Bridge Company, Windsor, Ont., and in 1940 returned to the Beauharnois Light, Heat and Power Co., where he was employed on design of control dams, bridges, etc. He transferred in 1945, with the merging of the company, to the Quebec Hydro-Electric Commission, Montreal.

Mr. Leebosh joined the Institute as an Associate Member in 1938, becoming a Member in 1940.

Norman E. Willett, M.E.I.C., of Banff, Alta., passed away on August 23rd, 1946. He was born at Treherne, Man., in 1898, and studied at the University of Manitoba, receiving a B.Sc. in civil engineering in 1927. He immediately joined the Department of Highways of Manitoba as a resident engineer, and in 1937 he transferred to the engineering staff of the P.F.R.A., Department of Natural Resources, located at Regina, Sask. At the beginning of the war he was with the Department of Transport, building airports, and he went later to Revelstoke, B.C., for the Department of Mines and Resources engineering and construction service, transferring to the Banff head office in 1945.

Mr. Willett joined the Institute as an Associate Member in 1939, transferring to Member in 1940.

D. C. Tennant, M.E.I.C., former chief structural engineer of the Dominion Bridge Company, at Toronto, died on November 24th, 1946, in Toronto, Ont., the city in which he was born in 1880. He graduated in 1900 from the University of Toronto with a B.A.Sc. degree and came that year to Montreal to Dominion Bridge. He was first employed in the drawing office and he remained with the company as a designing engineer, with charge of such buildings as the Union Bank, Winnipeg, Macdonald College, St. Annes, Que., and many bridges built by his company. During these thirty-eight years he made his residence in Lachine, and Montreal West, Que. He was transferred in 1938 to Toronto as chief structural engineer for the Ontario Division of the company, and he retired in 1945.

Mr. Tennant joined the Institute in 1906 as an Associate Member, becoming a Member in 1911. He was Councillor representing the Montreal Branch from 1931 to 1933, and at the time of his death he was the Institute's representative on the National Construction Council of Canada.

News of the Branches

Because of the paper supply situation it has been necessary to reduce considerably the amount of space usually devoted to News of the Branches. We beg the indulgence of the branch news editors if they find that we have made liberal use of the blue pencil on their reports.—Editor.

Activities of the Twenty-eight Branches of the Institute and abstracts of papers presented

CALGARY BRANCH

J. F. Langston, M.E.I.C. - *Secretary-Treasurer*
D. C. Jones, Jr.E.I.C. - - *Branch News Editor*

A general meeting of the Calgary Branch was held in the Palliser Hotel on November 15th. T. D. Stanley introduced the speaker of the evening, Mr. B. A. Monkman, whose subject was **The Water Power Resources of the Yellowknife Area.**

Mr. Monkman reported that the rapid progress being made in the north has made it necessary to develop additional power to meet the rising demand. The Dominion Government had chosen the Snare River as the logical location for a power development following rough reconnaissance surveys of the northern rivers and a study of the limited water records available.

The speaker outlined the history of the development which at this time is being carried out by the Dominion Government on the Snare River. The Montreal Engineering Co. Ltd., consultants on the project, have suggested a five stage development of the river commencing with the construction of a dam on the Snare River at the outlet of Bigspruce Lake, with a power house at the foot of the dam capable of generating 8,000 H.P. but only required to generate 4,500 H.P. in the initial stage. This would entail the construction of an earth fill dam some 65 feet in height and 900 feet long. By diversion of the Emile River and construction of plants at "I" Lake the development would ultimately make 25,000 H.P. available.

A number of questions were asked at the conclusion of the paper and a vote of thanks to the speaker was moved.

F. K. Beach, M.E.I.C., announced that members of the Institute were invited to view a color film presented by the Alberta Petroleum Association showing the search for oil in Alberta.

The annual joint dinner of the Calgary Section, C.I.C., the Calgary district A.P.E.A. and the Calgary Branch of the Institute was held in the Palliser Hotel on November 23rd under the chairmanship of L. C. Stevens.

R. S. Trowsdale introduced the guest speaker, Acting Dean R. M. Hardy of the University of Alberta who spoke on **Engineering Education.**

Professor Hardy gave figures to show the greatly increased number of students now studying engineering and the number of graduates expected in 1949 and 1950. The standard of education of students entering engineering courses is very high due to the large number of applications from which to select, and particularly due to the serious attitude taken by ex-service personnel to the course. The function of a University is not to reduce the numbers in a class by failing, but rather to instruct the students to such an extent that they can graduate. Consequently the proportion of students graduating from the large classes will be about the same as in previous years.

The problem of employment for the large number of graduates is expected to be acute, but it will be offset to some extent by the increasing employment of engineers in positions which are not essentially technical.

Mention was also made of increasing agitation for the expansion of the engineering syllabus. Due to the fact that the subjects now included in the syllabus are fundamental, and cannot be eliminated, consideration must be given to lengthening the course.

H. R. Younger, chairman of the Branch, moved a vote of thanks to the speaker.

❖ ❖ ❖

A general meeting of the Calgary Branch was held in the Palliser Hotel on November 28th. Chairman H. R. Younger introduced the guest speaker, Mr. Buchanan, Superintendent of Schools in Calgary.

Mr. Buchanan introduced his subject, **The Need of University Facilities in Calgary,** by outlining the growth of the University of Alberta. He stated that no appropriations had been made for expansion since 1922 at which time the enrolment was around 2,000. At the present time about 4,000 students are attending the University and all buildings are overcrowded.

The speaker remarked that the attendance at the University should not drop below its present level, and, if anything, it should increase in view of the increasing demands for technical knowledge and improvement in social conditions. At the present time the proportion of students by population attending University in Alberta is among the lowest in Canada.

A University branch in Calgary would make it possible for more students in Southern Alberta to take University degrees. Mr. Buchanan said that provision of the necessary money was the greatest obstacle to establishment of the branch. If people generally appreciated the great value of university training in the technical and social development of the Province, the money would be made available.

At the close of the address Mr. Buchanan was assured of the support of the Calgary Branch in the movement to establish a branch of the University in Calgary.

Members were asked to discuss amendments to By-laws 5, 8, and 9 of the Calgary Branch as recommended by the Revision Committee. After minor changes the amendments were adopted on a motion by J. B. De Hart.

CAPE BRETON BRANCH

S. G. Naish, m.e.i.c. - *Secretary-Treasurer*

The first meeting of the season was held on September 23 when Mr. A. G. Dilks, sales engineer of the Canadian National Carbon Company, showed a technicolour film entitled "Manufacture and Use of Carbon and Graphite Electrodes". An interesting discussion followed, as guests included everyone in the district using such material.

❖ ❖ ❖

On November 20, D. J. MacNeil, consulting geologist, Antigonish, N.S., gave an address covering his experiences in connection with prospecting for petroleum in the Maritimes. Of particular interest was Professor MacNeil's assertion that geologically Nova Scotia has all the necessary qualifications for oil bearing territory. Although a number of holes have been drilled, so far without success, he pointed out that the average producing well is only obtained after a large number of failures.

Should oil be found in Nova Scotia, it was agreed that it would revolutionize the economy of the province, and bring a number of industries which are very much sought after, to relieve unemployment.

EDMONTON BRANCH

W. W. Preston, jr.e.i.c. - *Secretary-Treasurer*

At a special joint meeting with the Science Association of the University of Alberta, the Edmonton Branch of the Institute heard Squadron Leader R. Kronfeld, A.F.C. of the National Research Council of Canada, give an illustrated lecture on **Gliding and Soaring,** the Art and Science of Motorless Flight. S/Ldr. Kronfeld who had just completed a study of tailless aircraft in Edmonton, claimed that Canada has ideal climatic conditions for tests that may break the present gliding record held by Russia.

The speaker credited the Wright brothers with starting gliding in 1900. The greatest advance, however, was made in Germany after the first World War, when gliding became a substitute for aviation, which had been prohibited by the peace treaty.

Gliders may be catapulted into the air, or released from a hillside, or towed by a cable attached to a moving automobile, or the car may be held stationary, and the cable wound around a winch which pulls in the cable.

Soaring differs from gliding, in that one loses height while gliding, but not while soaring. To soar, the pilot must get into rising air currents, produced by topography of the ground, growth on the earth, positions of clouds and thermal effects. He must be very observant, to pick suitable conditions, and can learn much from the behaviour of birds.

S/Ldr. Kronfeld then discussed the activities of glider clubs in Britain, France and United States, and hoped Canadians would become more active in forming clubs, particularly at University centres. He reminded his listeners that Germany's fastest fighting plane developed from a glider, and that the use of gliders as freight carriers offers attractive fields of study.

The meeting was held in the University of Alberta Medical Building on May 23rd, and Dr. Winnifred Hughes, president of the University of Alberta Science Association, was in the chair. Acting Dean R. M. Hardy introduced S/Ldr. Kronfeld. A discussion period was in charge of J. E. Cranswick, vice-chairman of the Edmonton Branch who expressed the thanks of the joint organizations to the speaker for his most interesting paper. The attendance was 135.

The prospect that Canada's first tantalum refinery will be built in Edmonton in the near future was revealed by Dr. Daniel Gardner, of the Tantalum Refining and Mining Corporation of America, New York, N.Y., when he addressed a joint meeting of the local organizations of The Canadian Institute of Mining and Metallurgy, and The Chemical Institute of Canada, and the Edmonton Branch of the Institute. Dr. Gardner presented his paper, entitled **Canada's Role in the Tantalum and Columbium Industries,** to an audience of 116, in the MacDonald Hotel, on October 28th.

The speaker reviewed the early research on the little known elements, tantalum and columbium, and told of their occurrence in three belts; one including Siberia, Finland, Norway, Greenland and the North West Territories; the second, including, Colombia, British Guiana, Nigeria, Belgian Congo and Rhodesia; and the third with West Australia, South Africa and Argentina. In 1936, deposits in the North West Territories were discovered east of Yellowknife in the Ross Lake district. Dr. Gardner said, it is estimated that 100 tons of material will be mined daily, concentrated to 2,000 pounds at the mine and sent by plane to the refinery at Edmonton, where about 975 pounds of tantalum, 365 pounds of columbium, 14 pounds of tin and lesser quantities of iron and manganese will be recovered. Dr. Gardner considered there would be enough resources to last several decades. He was also hopeful, judging by experiences in other fields, that beryl and possibly even emeralds might be found.

The unusual properties of tantalum and columbium account for the present interest in them: Tantalum possesses a high melting point and is free from chemical attack. The metals absorb gasses readily and resist corrosion to a high degree. They are non-toxic.

Dr. Gardner concluded his paper with a general description of his refining process.

Among those at the head table were the Chairman, J. W. Porteous; Dr. Gardner and his daughter, Gina Nirova; Mayor Ainley, J. Oberholtzer, chairman of the Edmonton section of the Chemical Institute of Canada, who introduced Dr. Gardner; and E. D. Lilge, vice-chairman of the Canadian Institute of Mining and Metallurgy, who proposed a vote of thanks to Dr. Gardner, a motion which was heartily applauded by the joint membership.

HALIFAX BRANCH

J. D. Kline - - - - - *Secretary-Treasurer*
S. W. Gray - - - - - - *Branch News Editor*

On October 31st, 1946, the first fall monthly meeting of the Halifax Branch was held in the Nova Scotian Hotel. The attendance was 85, including some of the members of the Nova Scotia Technical College, who were guests of the branch.

The guest speaker of the evening was William E. Ross, Canadian manager of the apparatus department of the Canadian General Electric Company. His address covered future power prospects, electric, steam, etc. of Canada, and it was entitled **More Power for Canada.** Mr. Ross's address was accompanied by slides.

At its conclusion a hearty vote of thanks was proposed by Charles H. Wright, seconded by P. A. Lovett, and heartily endorsed by the assembly.

HAMILTON BRANCH

L. C. Sentance, m.e.i.c. - - *Secretary-Treasurer*
I. M. Macdonald, jr.e.i.c. - *Branch News Editor*

The regular monthly meeting of the Hamilton Branch of the Institute was held on Thursday, October 24th, 1946, with over 80 members and guests in attendance. Chairman A. R. Hannaford presided, and called on J. R. Dunbar to introduce the speaker of the evening.

Dr. John T. Wilson, Professor of Geophysics at the University of Toronto, served as deputy director of **Exercise Musk-Ox** while acting as director of operational research for the Canadian Army. This 3,100 mile trip through far Northern Canada, successfully completed last winter, was described by Dr. Wilson.

The expedition was not an isolated venture but the logical growth of secret experiments made during the war. The Canadian snowmobile was designed for possible invasion of Norway or military operations in the Alps, and was used, with the addition of a cab for protection against weather, in the Canadian exercise. The object of the trip was to find out how to live and move in the Arctic, and personnel were chosen for their experience in the far north, or for their technical knowledge.

The speaker outlined some of the conditions investigated by the expedition, including meteorology on the ground and in the air, navigation, signals and magnetic conditions, both on the ground and in the air, aircraft maintenance, air operations, housing, clothing, medical, snow and ice data, photography, flora and fauna, pyrotechnics and the use of small arms. There was no illness during the trip; in fact, the health of the members of the expedition was improved generally at the end of the trip. The trip was completed on schedule with the same vehicles being used continuously. Supplies of gasoline, food and repair parts were flown in by the

R.C.A.F. in twin-engine Dakota planes operated from four bases. These supplies were usually dropped by parachute, although planes landed on the ice at times, and experiments were conducted with gliders. In the speaker's opinion, keeping in touch with the expedition was a wonderful feat of navigation, and he commended the R.C.A.F. for their work. Part of the route covered by the "Exercise" lay over ice out of sight of land, and 1,500 miles had never before been covered by tractors. Parts of the north investigated by the party have never been mapped, and navigation in these regions was very difficult.

The world is too small, concluded Dr. Wilson, for blanks in the Canadian Arctic. Flying, radio, and the weather are all affected by what happens in the North, and Canadians should do more thinking about this little known third of their country. In addition, Canadians should do more for the Eskimos, who are a very fine and intelligent people.

Two films, one in technicolor, were shown during the talk. These films were taken by members of the expedition, and illustrated clearly the conditions and problems encountered in the far North.

After a discussion period, L. C. Sentance tendered a vote of thanks to Dr. Wilson, and expressed the appreciation of the members of the Branch.

❖ ❖ ❖

The annual ladies night of the Hamilton Branch of the Institute was held on Thursday, November 14th, 1946, with 110 members and guests in attendance at McMaster University Refectory. At the conclusion of dinner, Chairman A. R. Hannaford called on E. G. Wyckoff to introduce Mr. Frank Alexander, the speaker of the evening.

Mr. Alexander was supervising engineer during the construction of the Iraq pipe line. He spoke of his experiences and of the customs and outlook of the people of Iraq, of the influences at work in that country and their possible effects on the international political situation.

The speaker remarked on the general interest in Palestine and in the immigration difficulties prevailing. He then touched on Russian interest in Arabian oil deposits.

Some of the problems encountered during the laying of the 1,400 mile pipe lines in Iraq were outlined. The line was built through a clay desert with underlying rock that had to be blasted to get the line below the surface. The country between the Tigris and Euphrates Rivers was of limestone, unsuitable for wheeled vehicles, so caterpillar trains had to be used on the job, and it is interesting to note that tires on these vehicles had to be changed every few days because of excessive wear from rocks and lava.

Work on the project started in 1931, and by the time the job was finished in 1934, some 63,000 men were employed, these largely natives.

At the conclusion of the address, the speaker answered questions from the audience, and received a vote of thanks from J. R. Dunbar..

OTTAWA BRANCH

C. G. Biesenthal, Jr.E.I.C. - *Secretary-Treasurer*
R. C. Purser, M.E.I.C. - - - *Branch News Editor*

The president of the Institute, Mr. J. B. Hayes, of Halifax, was present at an informal evening dinner held by the Ottawa Branch at the Chateau Laurier, November 26. Chairman of the Branch, J. H. Irvine, presided and guests at the head table included four past presidents, Mr. A. J. Grant, Dr. Charles Camsell, Dr. C. J. Mackenzie, and Dr. K. M. Cameron, together with Mr. G. J. Currie, councillor from the Halifax Branch, Mr. Louis Trudel, Montreal, assistant general secretary of the Institute, Mr. W. L. Saunders, Ottawa, and the main speaker of the evening, Air Vice Marshal E. W. Stedman, M.E.I.C., of Ottawa.

The president, who was introduced by Dr. Camsell, extended greetings to the Ottawa Branch as part of his tour across the Dominion. He told of the recent engineers' conference in London, England, which he had attended along with the general secretary as representatives of Canada. Four Dominions and India were represented and he had felt it was part of a program to bring the Empire closer together and to encourage a high standard of engineering throughout.

Air Vice Marshal Stedman, who was one of the two official observers for Canada at the scene of the recent atomic bomb tests at Bikini, gave an absorbing account of his experiences and personal observations at these tests. He traced the sequences of the historic experiment pointing out at the outset that there was no secrecy in what he had seen. All he had viewed was seen by a hundred others and there were no restrictions on the dissemination of this information. Eleven countries of the United Nations had been invited to send two observers each. There were also a number of "non-participating" observers from the United States who were present at the Government's expense.

The Air Vice Marshal described the preparations for the first test on July 1st, the precautions taken, and the organization set up for the study of its effects.

The first impression after the flash was of a huge ball, or rather hemisphere, which spread out very quickly, followed by dissipation at the top and bottom leaving a circular cloud which appeared to be moisture. Inside it, the atomic cloud of a sort of salmon colour, with what appeared to be purple shadows, rose up quickly to about 40,000 feet and slowly drifted away.

A view of the target at closer range that afternoon disclosed a black smoke screen over the ships and during the night fires started in the target area. Ships anywhere near the bomb had been singed. They were not blistered, the paint was still solid, but they were black probably as a result of a very high temperature for a very short duration.

Damage to the ships was mostly to the superstructure. The "shadow" effect was very noticeable, as on the Prince Eugen where the front turret was outlined on the bulkhead behind. However, one could not assume from this that he would be safe behind the turret as the heat waves might rebound from neighbouring surfaces.

The second bomb, which was set off by radio signal on July 24, was suspended underwater under a boat between the *Arkansas* and the *Saratoga*. This test was "really a sight". It started with a splash which almost immediately was completely covered by a white hemisphere which soon disappeared. Then a column of water, estimated to be a half mile in diameter rose for about 30 seconds to a height of 5,000 feet and took the same length of time to go down again. However, on its descent, it had increased to about a mile in diameter of radio active water.

The effects of an air shock wave could be seen which very quickly died down and wore itself out when it reached the shore. A water wave about 70 feet high spread toward the beach but was "killed" at the reef. There was also quite a number of other features.

The Air Vice Marshal noted that the Arkansas appeared to be sinking. When the cloud disappeared it was gone. The Saratoga which obviously was in difficulties disappeared 7½ hours later. As the observer ship cruised amongst the target ships, radio activity counts were constantly made and "we went as far as we were allowed". The count would go up when anything floated nearby such as seaweed or an oil slick. The target ships appeared to have everything "pushed out".

On a later flight over the target area from Kwajalein, base point about 200 miles away, a much better view was afforded. The speaker arrived back in San Francisco just two months after he left it.

A motion picture film in colour was shown at the conclusion of the address. This vividly showed the effects of the shock waves on the surface water, the growth and dissipation of the atomic bomb clouds, the nature of damage to the target vessels, and other phenomena.

"History has repeatedly shown that the invention of any one weapon has never been sufficient to prevent war," said Air Vice Marshal Stedman in conclusion, "even although man may know beforehand what to expect. But now we have simply got to remove the causes of war. We have got to work upon the better side of human nature, to tackle man's better qualities if we are to stop war with all its terrifying implications."

BRANCHE DE QUEBEC

Roger Desjardins, M.E.I.C. - - - *Secrétaire-trésorier*
Charles Boisvert, M.E.I.C. - - - *Editeur des nouvelles*

Le 4 novembre, la branche de Québec avait le privilège de recevoir comme conférenciers le Dr P.-E. Gagnon, directeur de l'Ecole de Chimie et doyen de l'Ecole des Gradués de l'Université Laval, et le Dr Roger Potvin, professeur en électrométallurgie et métallographie à l'Université Laval.

Ces deux éminents professeurs présentèrent une étude de l'après-guerre en Allemagne en nous faisant part, dans la mesure permise par la censure, de leurs constatations sur les développements de l'industrie allemande, avant et durant la guerre. Le Dr Gagnon traita des recherches et progrès obtenus par les industries allemandes en produits pharmaceutiques et menus produits chimiques. Le Dr Potvin traita des progrès de l'industrie métallurgique. Un film illustra les constatations du Dr Potvin et nous donna un aperçu émouvant de l'état de démolition dans les centres industriels allemands.

A la demande du ministère de la Reconstruction, un groupe d'experts canadiens recrutés dans l'industrie et le gouvernement, ont passé quelques mois en Allemagne et dans les pays libérés, pendant l'été et l'automne de 1945. Lors de cette tournée d'enquêtes, ils visitèrent des usines, des institutions de recherches, des chantiers maritimes, des régions dévastées et d'autres endroits intéressants en Allemagne, les Pays-Bas, le Luxembourg, la Belgique et la France.

Des experts partirent avant le jour V-J et suivirent de près les troupes d'invasion afin d'obtenir des renseignements qui seraient utiles dans la poursuite de la guerre contre le Japon. Cependant, après le jour V-J, leur voyage prit du soir au lendemain, une tournure plutôt industrielle que militaire.

Les experts reçurent leurs instructions à Ottawa avant de partir pour l'Europe. A leur arrivée en Angleterre, on leur donnait de nouvelles instructions, et le groupe se joignait à d'autres équipes semblables du Royaume-Uni et des Etats-Unis. Tous travaillèrent sans relâche avec leurs collègues des autres pays, chaque expert étudiant avec les experts anglais et américains dans le même domaine. Par exemple, les experts canadiens en textiles se joignirent aux experts du Royaume-Uni et des Etats-Unis pour étudier tout particulièrement l'industrie textile en Allemagne.

C'est pourquoi nos investigateurs se sont trouvés séparés durant leur tournée. Néanmoins, il est intéressant de remarquer qu'il y a quasi unanimité dans leur opinion sur le statut social et économique de l'Allemagne.

En général, ils découvrirent que la technologie et l'industrie canadiennes surpassent celles des Allemands. Seulement en quelques cas exceptionnels, l'outillage en production présentait un développement nouveau inconnu au Canada. Selon leur opinion, la machine industrielle allemande semble s'être élevée à la production en série vers 1935. Apparemment, ceci coincide avec l'établissement du plan économique de quatre ans qui, à ce stage particulier, appuie plus forcement sur la quantité. Il semble que c'est à partir de ce moment-là que l'industrie allemande a pu se prévaloir du maximum d'outillage déjà existant ainsi que de toute la main-d'œuvre disponible. Vers 1939, l'industrie allemande fonctionnait sur un plan qui consacrait au développement industriel le total de la main-d'œuvre, y compris les "ouvriers-esclaves". Cette ligne de conduite ne convenait pas à l'industrie même, mais elle était autorisée par le parti nazi et le parti militaire, puisqu'elle a permis au moins la fabrication des armes et de l'équipement d'une catégorie. Cette situation s'est prolongée durant les premières années et ce n'est pas avant 1942, lors des défaites de Stalingrad et d'El Alamein que les nazis se rendirent compte des défauts apparents d'un tel système économique, et entreprirent des changements radicaux. Dès ce moment, sur les ordres d'Hitler même, on accordait la priorité absolue aux recherches et aux développements scientifiques. On se procura en fait d'outillage de laboratoire tout ce que l'argent pouvait acheter. Heureusement, à notre point de vue, l'Allemagne avait épuisé au delà de toute récupération une force que la richesse ne peut remplacer les cerveaux qui dirigeraient les travaux des laboratoires. La conduite qu'elle avait adoptée pendant les trois années précédentes avait englobé dans les armées plusieurs de ces hommes. Ceci explique pourquoi les Alliés ont découvert de superbes laboratoires de recherches dénués de personnel ou qui ne possédaient qu'une poignée de savants.

Nos deux conférenciers ajoutèrent de nombreux détails intéressants sur la fabrication synthétique de plusieurs produits pharmaceutiques et sur les méthodes particulières utilisées en métallurgie.

❖ ❖ ❖

Visite du president J.-B. Hayes

Dans l'après-midi du 17 novembre une douzaine de personnes, épouses et membres du conseil de la branche de Québec de l'Institut se rendaient à Lévis pour rencontrer M. et Mme J.-B. Hayes et M. et Mme G. J. Currie qui arrivaient de Halifax. L'assistant-secrétaire général, Louis Trudel, s'était joint aux membres.

De 5 à 7 heures, le président de la branche de Québec, Charles Boisvert et Mme Boisvert recevaient à un coquetel, à leur résidence, en l'honneur des distingués visiteurs.

A 11 heures 30, le matin du 18 novembre, le président Hayes visitait le maire de Québec et signait le livre d'or en présence des ingénieurs de la cité et des membres du conseil de la branche de Québec de l'Institut et de leurs épouses. Après la cérémonie il y eut réception et déjeuner au Manoir St-Castin, au Lac Beauport.

A 7 heures le soir, M. Hayes était l'hôte d'honneur à un coquetel suivi d'un banquet au Club de la Garnison. Parmi les 75 convives qui assistaient, on remarquait à la table d'honneur, le président de la branche, Charles Boisvert, le président de l'Institut J.-B. Hayes, l'ex-président de l'Institut Dr A.-R. Décary, le vice-président de l'Institut G.-F. Layne, le fiduciaire du fonds Harry Bennett, R.-E. Heartz, l'ex-conseiller Dr P.-E. Gagnon, l'ex-président de la branche René Dupuis, l'ex-vice-président de l'Institut Hector Cimon, le président du "Committee on Prairie Water Problems" G.-A. Gaherty, le représentant de la Corporation des Ingénieurs Professionnels de Québec Ernest Lavigne, le vice-président de la branche de Québec P.-A. Dupuis, l'ex-président de la branche Alex. Larivière, le conseiller de l'Institut G.-J. Currie, l'ex-président de la branche J.-O. Martineau, le conseiller de la branche J. O'Halloran, le conseiller de l'Institut Paul Vincent, le président de la section des Etudiants Jérôme Lépine, l'ex-président de la branche E.-D. Gray-Donald, l'assistant-secrétaire général Louis Trudel et le secrétaire de la branche Roger Desjardins. Le président de la branche, Charles Boisvert, présenta le président général, J.-B. Hayes, et invita le Dr A.-R. Décary à lui offrir un souvenir de son passage à Québec. Dans des termes appropriés, le Dr Décary présenta à M. Hayes une pipe et un paquet de tabac "Alouette".

M. Hayes remercia chaleureusement les membres de la branche de Québec et se dit touché de la délicate pensée qu'ils avaient eue en installant devant lui le drapeau distinctif de la Nouvelle-Ecosse. Il fit mention particulière du doyen Adrien Pouliot, du Dr A.-R. Décary et de Hector Cimon. Dans son discours aux membres M. Hayes référa aux conditions ouvrières actuelles et mentionna que

The head table at the dinner.

les ingénieurs avaient la responsabilité de ré-apprendre au monde à travailler et que leur travail devait être empreint de leur personnalité. Parlant de son voyage en Angleterre, où il représenta l'Institut à la conférence des ingénieurs du Commonwealth, le président s'est dit émerveillé de l'énergie déployée par les Anglais pour sortir de leurs ruines. M. Hayes s'est avéré l'apôtre de l'unité nationale en montrant comment nos deux grandes races doivent coopérer pour le progrès du Canada. Le président général Hayes a adressé quelques mots bien sentis en français à son auditoire. M. J. O'Halloran s'est fait l'interprète des membres de la branche de Québec et a présenté en français et en anglais les remerciements d'usage. Ont également adressé la parole: M. Gaherty, M. Heartz sur le fonds Bennett, M. G.-J. Currie pour apporter le message de la branche de Halifax, M. Louis Trudel sur les initiatives du bureau central.

Pendant ce temps, les épouses des membres du conseil de la branche de Québec recevaient à dîner, au Cercle Universitaire, en l'honneur de Mme J.-B. Hayes et Mme G.-J. Currie. Le 19 novembre, de 4 à 6 heures au Cercle Universitaire, un thé réunissait une soixantaine d'épouses des membres de la branche de Québec de l'Institut. Les invitées d'honneur étaient mesdames Hayes et Currie.

Le 19 novembre à 3 heures de l'après-midi, le président Hayes, accompagné de René Dupuis, directeur de l'école de Génie Electrique de l'Université Laval, Charles Boisvert, président de la branche de Québec, G.-J. Currie, Louis Trudel, Roger Desjardins et René Rioux se rendaient à l'Université Laval rencontrer le recteur Mgr F. Vandry. Après une entrevue très intéressante, le président Hayes visita l'université. De là, le groupe se transporta à la Faculté des Sciences, Boulevard de l'Entente, pour l'inauguration d'une section des étudiants. Le directeur René Dupuis souhaita la bienvenue au Président Hayes, au nom de l'Université, le présenta à l'assistance et demanda à M. Jérôme Lépine, en sa qualité de président de la section des étudiants, de prendre charge de la réunion. M. Lépine se dit heureux d'accueillir le président et lui demanda d'ouvrir officiellement la section des étudiants qui comprend près de 80 adhérents.

M. Hayes adressa quelques mots de remerciements et inaugura officiellement la section des étudiants. Il présenta à M. Adrien Morin un diplôme attestant que ce dernier a gagné le prix de $25 accordé par l'Engineering Institute à l'élève le plus méritant de Laval en 3ème année de Sciences. Le président prononça ensuite une courte allocution en français et en anglais et invita les étudiants à mettre dans leur travail le meilleur d'eux-mêmes et de développer leur personnalité. Le président de la branche de Québec, Charles Boisvert, se fit le porte-parole de M. Hayes et remercia les autorités de l'Université Laval, le directeur René Dupuis et les étudiants de leur magnifique accueil: Il fit appel à ces derniers pour les inciter à s'enrôler de suite dans les sociétés professionnelles afin de se préparer au rôle qu'ils seront plus tard appelés à y jouer. Il signala les avantages qu'offrent ces sociétés et invita l'assistant-secrétaire général, Louis Trudel, à dire quelques mots de l'Institut. Ce dernier exposa aux étudiants ce qu'est l'Institut et ce qu'il est en mesure de faire pour eux. Après le cérémonie, il y a eu réception au salon des professeurs de la faculté des sciences où un grand nombre d'entre eux s'étaient réunis.

Le 20 novembre, un bon groupe de membres de la branche de Québec, accompagnés de leurs épouses, se rendaient à la gare du Palais pour souhaiter bon voyage aux distingués visiteurs qui s'embarquaient pour Trois-Rivières.

SAGUENAY BRANCH

J. E. Dyck, M.E.I.C. - *Secretary-Treasurer*

Yacht Racing was the topic of an interesting address given by Professor D. M. Jemmett to the Saguenay Branch of the Institute on November 5th.

Professor Jemmett is professor of electrical engineering at Queen's University, and since 1922 has been connected with the

Kingston Yacht Club. In that year he was instrumental in obtaining for the club, 15 cat-rigged dinghies, each carrying 140 square feet of sail. The purpose of having many identical boats was to make a specialty of racing competition. Professor Jemmett stressed the point that sailing need not be a rich man's sport since small boats could provide a great deal of pleasure.

Professor Jemmett then discussed the rules of yacht racing as well as the finer points of handling a boat. In team racing, where several boats are entered for each competitor, it would often prove to be better strategy to "block an opponent's wind" and let a team-mate forge ahead rather than try to outdistance the competitor. Worrying an opponent is considered good sailing providing all tactics come within those prescribed by the racing rules.

Professor Jemmett then went into the technical aspects of sail construction. It was during the last world war that the slotted airplane wing was developed. Later it was realized that this was the principle involved in using a mainsail and jib. It had been known for a long time that a mainsail and jib gave better efficiency than a single mainsail of the same area but the reason behind it was not fully understood.

In connection with future construction of boats, Professor Jemmett believes that plywood will come to the fore, especially in the case of small craft. This type of boat will become fairly cheap when built on a mass production basis. The durability and seaworthy properties of the plywood boat had already been demonstrated. The present quality of lumber available is not suited to building boats since well seasoned wood is unavailable. Professor Jemmett advised using mahogany in place of any home grown type of lumber if boat building is contemplated at the present time.

T. A. Carter thanked the speaker on behalf of the Branch.

SAINT JOHN BRANCH

K. W. Salmon, jr.e.i.c. - *Secretary-Treasurer*
A. R. Bonnell, m.e.i.c. - *Branch News Editor*

The regular general meeting of the Saint John Branch of the Engineering Institute of Canada was held Thursday evening, Nov. 21 in the Admiral Beatty Hotel with the Chairman L. O. Cass presiding. There was a record number of engineers present. The guest speaker for the evening was Mr. R. M. Doull, General Manager of the Canada Gunite Co., Montreal.

Mr. Doull spoke on the reconstruction of the Halifax water reservoir, a concrete structure of four million gallons capacity. He described in detail the prestressed gunite roof, which roof is at present the largest dome in the world, being 164 feet in diameter. He told also of the condition of the reservoir before reconstruction, and of the methods of removing the old concrete from the roof and walls and of the condition of the walls and reforcing steel after removal of the old concrete.

The lecture was illustrated by a color film, showing details of all stages of construction, and at its conclusion Mr. Doull answered questions on various aspects of the work.

A vote of thanks was extended to Mr. Doull by L. G. Lilley and seconded by R. M. Richardson.

SARNIA BRANCH

F. F. Dyer, m.e.i.c. - - - - *Secretary-Treasurer*
S. V. Antenbring, jr.e.i.c. - *Branch News Editor*

The Sarnia Branch held a dinner meeting at the Polymer Cafeteria on Thursday, Nov. 21st, 1946. Dr. M. K. Inman, professor of economics at the University of Western Ontario, was the guest speaker, and discussed the **Gold Standard and the International Monetary Fund.**

Dr. Inman went into the history of the gold standard and described how it was established internationally about 1880 as a means of fixing rates of exchange between nations so as to promote trade and as an international guarantee against inflation.

The proper working of the gold standard required that nations with unfavorable trade balances would make up the difference by shipping gold. By so reducing the quantity of gold in the country, the banks would have to lower their credit and the resulting deflation would bring about a drop in price levels in the country, which would tend to restore favorable trade balances in the competitive world market.

The system, however, required dropping of wages and costs at home until such time as trade balances were restored, and often unemployment resulted during these periods.

During the 1920's the gold standard broke down because various countries concerned did not have this flexibility. Tariff walls tended to offset the balancing effect of the standard, and labor unions prevented wage cuts and decreased costs of goods. Unbalanced budgets and gold flowing for political rather than for economic reasons were further factors.

Dr. Inman feels that we should not return to the gold standard as the break down would be repeated, and he went on to describe the International Monetary Fund now being set up which, it is hoped, will be a means of tiding nations over short periods of unfavorable exchange without the bad features of the old gold standard.

A hearty vote of thanks was proposed by Bill Harrison.

LETHBRIDGE BRANCH

H. T. Miard, m.e.i.c. - - *Secretary-Treasurer*
E. A. Lawrence, s.e.i.c. - *Branch News Editor*

A well attended Ladies Night was held by the Lethbridge Branch of the Institute on Saturday, November 16th in the Marquis Hotel, commencing with a dinner at 6:30 p.m.

Dinner music by George Brown's Instrumental Trio was enjoyed.

Following an address of welcome to the ladies by the Chairman, R. S. Lawrence, community singing was led by Mr. Morton Brown and excellent vocal solos were rendered by Mrs. Chas. Lloyd and Mr. Edgar Rannard. Accompanists were Mrs. R. S. Lawrence and Mrs. George Brown.

A hearty vote of thanks was tendered the orchestra and artists for their contributions, following which a Northern Electric Sound film entitled "Wings of Wire" was viewed with interest. It depicted the contribution that wire has made to man's comfort and safety by bringing under his control, at the flick of a switch, the immense power of electricity. The various processes of drawing wire and preparing it for its multiple uses were demonstrated.

At the conclusion of the film shown by Mr. Smith of the Lethbridge J.C.'s, P. E. Kirkpatrick introduced the speaker of the evening, Mr. J. D. Sutcliffe of London, England.

Mr. Sutcliffe, taking for his subject the **Wavy Navy Ashore and Afloat,** wove a very interesting and humorous address around his experiences while training with the Royal Navy in the British Isles and during subsequent operational duty with the Fleet Air Arm as a radar radio officer.

A hearty vote of thanks was tendered the speaker by J. Davidson and heartily endorsed by all present.

SASKATCHEWAN BRANCH

D. W. Houston, m.e.i.c. - *Secretary-Treasurer*
L. A. Dokken, m.e.i.c. - *Branch News Editor*

The regular monthly meeting of the Saskatchewan Branch was held in the Kitchener Hotel, Regina, on Friday, November 15th, 1946. Since our Council held their business meeting during the afternoon, Vice-President E. K. Phillips ,presiding, took pleasure in welcoming out of town councillors to our dinner meeting.

Mr. G. E. Kent, assistant sup't. of Imperial Oils Regina Refinery, gave a very interesting talk on the search for oil in Western Canada. Maps, prepared by the speaker, were distributed so that the members could actually note the areas in which oil was discovered or in which some promise of a producing field was shown by preliminary tests. During his review of the areas in Western Canada the speaker made mention of the tremendous cost of exploration and drilling operations, as well as the risk involved even when very favourable geological conditions were noted. He stressed the point that despite the difficulties encountered, our crude oil situation is such that the search must go on in order to locate producing fields that can replace existing areas, which are experiencing rapidly diminishing reserves.

An Imperial Oil technicolor film entitled "Search Unending", was shown, which reviewed the entire field of oil production from the theory of sedimentary deposits up to and including the actual drilling operations. Emphasis in the film was placed upon the scientific methods employed in the actual search such as gravimetric and geological surveys, seismograph recordings, core analysis, and aerial photography, all of which interlock to minimize the margin of error in determining the location of a "test" well.

During the discussion period, Mr. Kent obliged with a brief on actual drilling operations, in the course of which he gave figures on the amount of material used in the drilling of a well, the life and cost of the "bits", the mud circulation system, and obliged with actual accounts of some of the difficulties encountered by production engineers. The informal discussion period was especially interesting, since it connected up so well with the address and films to give a complete overall picture of this phase of the Oil Industry from the preliminary survey to bringing in a producer. This feature was brought to the attention of the members by H. S. Carpenter, who, in thanking the speaker, made reference to the fact that the field of oil production is new to most of our members, and such a complete account was both informative and interesting.

Before closing Stewart Young paid tribute to Councillor H. L. Roblin, who will shortly be transferred by his firm. Mr. Roblin has served the branch well and has always been keenly interested in the development. Mr. Roblin, in replying, recalled many incidents of the past, and expressed his regret at leaving the branch, which is associated with many pleasant memories.

TORONTO BRANCH

E. G. Tallman, m.e.i.c. - - - - *Secretary-Treasurer*
E. R. Graydon, m.e.i.c. - - - - *Branch News Editor*

The November technical meeting of the Toronto Branch of the Institute was held on November 28th, at the University of Toronto.

Members and their guests, members of the Ontario Section of the American Society of Mechanical Engineers and of the Institute of Power Engineers filled the Botany Lecture Room to overflowing. Wide interest in the paper presented was evident by the presence of representatives of interested bodies, among whom was Toronto's mayor, Mr. Saunders.

Professor A. E. Allcut of the University of Toronto, was the speaker and his paper was entitled **Toronto's Smoke Problem.** E. A. Cross, branch chairman, presided at the meeting and recalled several humorous anecdotes of the days when Professor Allcut and he were students at the University of Manchester. Slides showing smoke pouring out of chimneys of two buildings in the Queen's Park area, one a government building, the other a University of Toronto building, set the stage for Professor Allcut's presentation.

Space limitations here prevent proper reporting of a technical paper that deserves complete publication. Professor Allcut discussed the problem in general terms as he considers that Toronto's smoke problem is typical of any large city. The divisions of the paper were headed by the questions—what, whence, how, why, what results, how much, and remedy? Smoke was described as dirt forming, harmful, and issuing from a chimney. Carbon particles combined with tar and ash in varying proportions and of great variation in size are present in smoke, and hence analysis of smoke helps to identify the source. Dilution is a great factor in the problem as air under 2,300 feet has been known to travel 1,000 miles per day, thus making it important to stop smoke at the source.

The cause of smoke is generally improper combustion which can be attributed to improper firing or improper fuel. The effect of smoke in the air we breathe can be judged by the fact that an average human being takes in about four to seven times as much air as food per day.

The cost of smoke has been estimated at five to twenty dollars per person per year. Various gauges and charts are available to measure smoke, and Professor Allcut illustrated these and other parts of his paper with slides. Various remedies were discussed. It was pointed out that filtering removes only the coarse particles. Central heating, cyclones, wet baffles and electrostatic precipitation were also discussed. An ineresting point mentioned by Professor Allcut was that smoke forecasts are now possible. In conclusion Professor Allcut stated that in his opinion the remedy for the problem lay in "education supplemented by legislation applied with discrimination."

TORONTO BRANCH

Junior Section

B. R. Murphy, Jr.E.I.C. - - - - *Secretary-Treasurer*

The 1946-47 season opened in a flourish with an overflowing crowd of 225 in the Debates room of Hart House on October 8th. Mr. Winnett Boyd, chief engineer, Gas Turbine Division, A. V. Roe, Aircraft Co., gave a splendid talk on **Jet Propulsion Engines.** Members learned such interesting facts as the point that jet planes for speeds below 500 m.p.h. develop greater efficiencies with the energy being transferred to a propeller shaft; for speeds above 500 m.p.h. the hot gases are blown out the back in a stream.

Two sound films, "The Bell Telephone Hour" and "The Dawn of Better Living" were well received.

❖ ❖ ❖

A successful dinner meeting was held at the Winchester Hotel on Nov. 12 with 110 in attendance. Mr. H. R. Hilliard, speaking on **Frequency Modulotion,** in the light of his supervision of the construction of the new C.B.C. station VE9EV, outlined the improvements in reception with F-M broadcasts but stated that sets for domesic use are expensive at present. Mr. K. R. Stehling, chemical engineering student, gave an absorbing talk on **Development in Atomic Energy,** and members were loathe to let him go. He stated the engineering problem of harnessing the heat released in an atomic pile. If water is used to carry away the heat, it becomes dangerously radio-active. In time, this water loses its radioactivity. Due to the difficulty of separating U-235 from U-238, plutonium was used, by preference, in the bombs. Mr. R. H. Self, a construction engineer with the H.E.P.C., unfolded the gigantic task of planning a job such as the H.E.P.C. Stewartville Development, which will supply 54,000 K.W. Mr. Gordon Keith gave the results of the Jr. Section annual salary survey, which indicated progress for the last place electrical branch and showed that civil servants or government employees were the lowest paid of all engineers; many salaries are still too low for the well-being of the profession. Two interesting films, "Rail Roading" and "Communications, News and Views", were shown.

❖ ❖ ❖

A plant visit on Nov. 21 to Consumers' Gas Co., the largest public utility of its kind in Canada, producing 27,000,000 cubic ft. per day, using 200 tons of coke, 900 tons of coal and 1,000,000 gals. of water, drew an enthusiastic gathering of 80. We are very much indebted to the Consumers' Gas Co. Limited for their gracious reception.

BOOK REVIEW

THE ENGINEER IN SOCIETY

J. Mills. New York, Van Nostrand, 1946
196 pp., 8½ x 5¼ in., cloth, $2.50

Reviewed by E. P. MUNTZ, M.E.I.C.*

This very readable book should be studied by every engineer and scientist, as well as by many others.

The author, "recently retired Director of Publications at the Bell Telephone Laboratories, is a Fellow of the American Physical Society, the American Institute Electrical Engineers and the Institute of Radio Engineers. The inventor of several methods for wire and radio telephony, he conceived and supervised the design of the Bell Telephone Exhibits at the World's Fairs in Chicago, 1933; San Diego, 1935; Dallas, 1936; San Francisco, 1939-40, and New York, 1939-40. For three decades a top-line expositor of electrical science, Mr. Mills is the author of over a dozen volumes including the pioneering text on radio, written during World War I and widely used in the Signal Corps. He is also the author of *Within the Atom, Signals and Speech,* and *A Fugue in Cycles and Bels.*"

Mr. Mills was a scout for research workers and subsequently Personnel Director for Bell Laboratories, and is peculiarly well qualified to write about the Engineer in Society.

The preface to the book begins, "It should not have required the development of an atomic bomb to direct attention to the political importance of science and engineering. Nor to emphasize for scientists and engineers their relationship to the world society of which they are a part. Those recognitions are by-products which may prove to be more influential than the bomb itself."

The introduction begins, "Engineers as a class are too modest," and ends, "All that totals to an appalling task for the engineer and scientist. They must apply the objective method of science to the things that directly affect their lives and material surroundings, and do so without regard to inbred or subjective attitudes. They must do that also without regard to well established vested interests and pressure groups. Unshrinking they must seek the truth. And as they learn, they must persuasively present it to their fellowmen. More than they can do? Perhaps, but I hope not, because I believe the application of the method of science is the last hope of our civilization. And I know no class that can apply it better than the scientists and engineers, who have already learned how in studying the physical relationships of our universe."

In vivid colloquial style the engineer and scientist and their jobs are analysed. This takes the first three general divisions of the five in the book.

"A Course for Action" is the title of the fourth division, the chapter headings of which are "Scientific Men of Good Will," "The Lady or the Tiger," and "Organizing for Evolution."

"Exposition for Engineers" is the title of the fifth general division of the book. It contains chapters on "The Art of Thought," "The Curve of Growth," "Persuasive Exposition," "Forms of Anonymity," "Euclid and King James," "Reader Consciousness."

The first three divisions lay the groundwork leading to "A Course for Action" in the fourth; the six chapters of the fifth division are included evidently to make more effective the engineer's thinking, writing and speaking—a necessary corollary to any action.

The climax comes in Chapter 12, "Organizing for Evolution." "The immediate problem before engineers and scientists in industry is an engineering study of their class relationship to society. The first aspect of that problem is the scheme under which they receive their rewards, in other words, their pay. That is the subject which I propose for their scientific investigation. Like most research projects, as the investigation progresses, it will disclose new problems. I shall miss my guess, on the basis of other projects observed, if it does not very soon indicate a broad series of studies which will bring the engineer and scientist into fruitful contact with the major problems of our time. If the project is attacked in the objective manner of the scientific method it should lead to socially important results." The

*Consulting Engineer, Montreal, Que., and Hamilton, Ont.

chapter ends with "Like all problems of research and development that of organizing must be answered by evolution. Neither the successful method of attack nor the final conclusions can be predicted. The solution is in the lap of the gods, as one might say, but the gods are those of the scientific method and are co-operative with the forces of evolution. The time has come when all scientific men of good will must join in an intelligent attack upon the social and economic and even political problems of the day. And that attack must be an evolutionary application of the methods of science."

Mr. Mills finds the chief voluntary and licensing bodies too conservative and therefore unsuitable. He demands an organization which "must not produce any John L. Lewis or lesser imitation thereof." "They (the Engineers and Scientists) must even avoid letting any organization which they form present another opportunity for the executive-minded or the exploiter." He even suggests excluding those in minor executive positions.

In a convincing manner, Mr. Mills leads the reader to the necessity for a new form of organization. This he surrounds with many limitations in chapter 12, and then leaves the whole matter to evolution without giving a definite suggestion for the final structure. He laments the loss of research workers to executive positions and almost in the same breath states that "the end result of licensing, except as it protects those who direct construction and installation, would seem to be to tax all technical school graduates initially twenty-five dollars and annually a dollar."

Anyone with an open mind will acknowledge the contribution Mr. Mills has made in this book and can derive benefit from and agree wholeheartedly with most of it. However, any successful organization must have competent leaders with executive ability, who are executive minded. If even those in minor executive positions are excluded, the leaders will have little experience, and the evolution will be painfully slow. Mr. Mills' objective seems to be an executive composed of research workers for research workers. Presuming individuals with executive ability offer themselves, they must carefully eschew any other form of executive work. This is idealistic surely. The only way it could work out would be in another form of totalitarian cell within our so called democracy.

A man of Mr. Mills' wisdom and experience undoubtedly has a preferred starting point and it would be interesting to have some further indication from him regarding probable initial form and early steps of the type of organization he envisages.

The text is made vivid by pertinent illustrations from the author's 45 years of experience, by some anecdotes and by the happy phraseology. These coupled with a subject of so great current interest induce a non-stop first reading. A second reading then follows as a matter of course to digest all the valuable information and the fine points of the philosophy so ably presented.

ADDITIONS TO THE LIBRARY

TECHNICAL BOOKS, ETC.

Airports; Design, Construction and Management:
H. K. Glidden, H. F. Law, and J. E. Cowles. N.Y., McGraw-Hill, 1946. 583 pp., illus., cloth.

Currents in Aerials and High Frequency Networks:
F. B. Pidduck. Oxford, Clarendon Pr., 1946. 97 pp., illus., cloth.

Elastomeric Engineering:
Describing the Scientific Process of Manufacturing Rubber Units for the Requirements of the Engineering and Shipbuilding Industries. Andre Rubber Co. Ltd., Tolworth, Surrey, Andre Rubber Co. Ltd., 1945. 165 pp., illus., cloth.

Engineering and Society with Special Reference to Canada:
Part 1 by C. R. Young; Part II by H. A. Innis and J. H. Dales. Toronto, University of Toronto Press, 1946. 429 pp., paper.

Factual Analysis of the Tennessee Valley Authority:

The following notes on new books appear here through the courtesy of the Engineering Societies Library of New York, and may be consulted at the Institute Library.

AIRCRAFT PRODUCTION DESIGN:

J. L. Thompson, Aviation Press, 1590 El Camino Real, San Carlos, California, 1945. 238 pp., plus index, illus., diagrs., charts, tables, 9¼ x 7½ in., stiff paper, ring binder, $5.00.

Design procedure is considered with respect to production methods, the serviceability and accessibility of parts, machineability, and the factors of repair and lubrication. The various operations which enter into the manufacture of airplane parts are described with discussion of their adaptations and limitations. Separate chapters are devoted to materials for airplane construction and to standardized parts.

BEAMS ON ELASTIC FOUNDATION:

M. Hetényi. The University of Michigan Press, Ann Arbor, Mich.; Geoffrey Cumberlege, Oxford University Press, London, 1946. 255 pp., diagrs., charts, tables, 10¼ x 6¾ in., cloth, $4.50.

This book deals with the analysis of elastically supported beams. Chiefly theoretical in nature, the book discusses as well the applications to a variety of technical problems. Beginning with the general solution of the elastic line, the several chapters treat of beams of finite and unlimited length, beams of variable rigidity and modules of foundation, bars under various loadings, the torsion and elastic stability of bars, circular arches, and continuity in the foundation. Although mainly in the field of statics, the solutions developed may also be employed in such fields as vibration and acoustics.

CURRENTS IN AERIALS AND HIGH-FREQUENCY NETWORKS:

F. B. Pidduck. Clarendon Press, Oxford, Eng; Oxford University Press, Toronto, New York, 1946. 97 pp., diagrs., charts, tables, 9 x 5½ in., cloth, $2.50.

This book is an account of previously unpublished investigations on currents in aerials, based on a little-known paper of Pocklington. Fundamental formulae are deduced and extended to soldered networks. The theory of transmission lines is established as that of a system of two aerials, the untuned Y-feeder is considered in detail, and a theory of aerials parallel to the earth is worked out. The necessary tables or calculations are included.

ELASTOMERIC ENGINEERING, describing the scientific process of manufacturing rubber units for the requirements of the Engineering and Shipbuilding Industries:

Andre Rubber Company Limited, Hook Rise, Tolworth, Surrey, England. 2 ed., 1945. 168 pp., illus., diagrs., charts, tables, 10 x 7½ in., cloth (one guinea).

The first four chapters are devoted to the properties, preparation, compounding, manufacture and processing of natural and synthetic rubbers. The succeeding chapters describe the production of rubber-metal bonded units for various engineering applications. The properties of the rubber-metal bond are discussed, manufacturing processes and testing methods are described, and design procedure and calculations are given.

LES ESSAIS DES TRANSFORMATEURS INDUSTRIELS:

M. Lapine. Dunod, Paris, 1946. 139 pp., diagrs., charts, tables, 10 x 6½ in., paper, 330 frs.

This practical book describes a variety of tests for industrial transformers. Among the topics covered are windings, losses in vacuo, short circuits, insulation, overheating, coils, connections, and defects resulting from accidents. The final chapter discusses the operation of transformers in parallel. Instrument transformers are not considered.

GAS TURBINE GAS CHARTS (Research Memorandum No. 6-44):

Research and Standards Branch, Bureau of Ships, Navy Department, Washington, D.C., 1945. 48 pp., diagrs., charts, tables, 8¼ x 10¾ in., paper, apply.

This report was prepared to provide a means for rapidly and accurately calculating gas turbine performance. Along with the charts is a brief description of their use, and an appendix explains the method of calculation with actual examples of gas turbines plant performance. A bibliography lists the original sources of the data from which the charts were prepared and the method of preservation was derived.

PLASTICS FOR ELECTRICAL AND RADIO ENGINEERS:

W. J. Tucker and R. S. Roberts. Technical Press Ltd., Gloucester Road, Kingston Hill, Surrey, England, 1946. 148 pp., illus., diagrs., charts, tables, 9 x 5¼ in., cloth, 12s.

This handbook provides the electronic engineer with essential data relating to the application of plastics in the electrical and radio industry. Molding and manufacturing procedure and the advantages and limitations of plastic materials are discussed in a full and practical manner. Insulation and testing problems are dealt with in detail, and tables giving physical properties are presented in a manner useful to the electronic industry.

POST-WAR DEVELOPMENT OF ROAD MOTOR TRANSPORT:

H. E. Aldington, E. G. Beaumont and J. S. Nicholl. Institution of Automobile Engineers, 12 Hobart Place, London, S.W.1. 1945. pp. 179-210. illus., tables, 8½ x 5½ in., paper, 2/6.

This small pamphlet presents three papers read at a joint meeting of eight British Technical Societies and covers the following topics: roads (highway design and traffic development); progress of motor vehicle design and construction; traffic (analysis and planning).

RECENT AERONAUTICAL LITERATURE, a Selective Subject Index for 1945:

Compiled and edited by W. K. Dennis. Beech Aircraft Corp., Wichita 1, Kansas. 1946. 387 pp., 11 x 8½ in., paper, $5.00.

Over 12,000 title entries from some sixty aeronautical periodicals (American, Canadian and English) are included in this volume. They are arranged alphabetically by title under a large number of selected subject headings. Many of the periodicals indexed (including a large number of company publications) are not covered by the commercial indexing services. A supplementary monthly publication is also available.

SOILS, CONCRETE & BITUMINOUS MATERIALS, a record of a course dealing with Airfield Construction:

Given at the Road Research Laboratory, Dept. of Scientific and Industrial Research, July-August, 1943, London, His Majesty's Stationery Office, 1946. 288 pp., illus., diagrs., charts, tables, 9½ x 7¼ in., paper, 10s. net (obtainable from British Information Services, 30 Rockefeller Plaza, New York, $2.75).

In this volume are collected a series of lectures by some 35 specialists for the training of engineers in the construction of airfields from certain materials. Part I, on soils, covers geology and soil formations, the properties of soils, stabilization, construction methods, airfield design, and the theory of soil testing. Parts II and III deal with the properties, manufacture and use of cement, concrete, and bituminous surfacings. Recommended testing procedures for various phases of the work with these materials are given in Part IV. A comprehensive and detailed index increases its use for reference purposes.

STEAM POWER PLANT AUXILIARIES AND ACCESSORIES:

T. Croft, editor, revised by D. J. Duffin, 2 ed. McGraw-Hill Book Company, New York and London; Embassy, Toronto, 1946. 583 pp., illus., diagrs., charts, tables, 8¼ x 5½ in., cloth, $5.00.

A practical manual for the operating engineer, this book has been revised to conform with the changes that have taken place in the 24 years since it was originally published. Topics on which considerable new material has been added include reciprocating and centrifugal pumps, methods of boiler feeding, foodwater heaters, economizers and air preheaters, condensers, steam piping of power plants, and steam traps. As before, there are review questions and problems, and a technical data section has been added.

THERMODYNAMICS:

G. A. Hawkins. John Wiley & Sons, New York; Chapman & Hall, London, 1946. 436 pp., diagrs., charts, tables, 8¾ x 5½ in., cloth, $4.50.

This book is intended as a text for a two-semester undergraduate course. Fundamental concepts, the basic laws, and the theoretical considerations of ideal gases, energy, and entropy are discussed in the first half of the book. Succeeding chapters deal with the practical aspects of nozzles and orifices, internal combustion engines, air compressors, gas turbines and jet propulsion, vapor cycles and refrigeration. There is also a final chapter dealing with the fundamentals of heat transfer.

Although not available in the Institute Library, inquiries concerning the following new books will be welcomed there or may be sent direct to the publishers.

ELECTRICAL PROTECTIVE EQUIPMENT AND POWER-FACTOR CORRECTION, Fire Protection and Fire Fighting Equipment:

By E. S. Lincoln. Essential Books, 270 Madison Ave., New York. 1945. 242 pp., illus., diagrs., charts, tables, 8¼ x 5¼ in., cloth, $3.00,

This book presents the fundamentals of electric circuit protection by means of fuses and circuit breakers against overloads, reverse currents, under and over voltage. The equipment is described in detail, including fire protection and fire fighting equipment. The material is based on the provisions of the National Electric Code and the NEMA definitions applying to protection and protective relays. A special chapter is devoted to power factor correction.

ELECTRONIC EQUIPMENT AND ACCESSORIES:

By R. C. Walker. Chemical Publishing Co., Brooklyn, N.Y., 1945. 393 pp., illus., diagrs., charts, tables, 8¾ x 5¼ in., cloth, $6.00.

Specific information is given on the various applications of electronic devices, with many illustrative examples outside the field of telecommunication. The book constitutes a simple introduction of the main sections of the subject of electronics to practical engineers, mechanics, etc. Since electronic devices so often act as a control link in connection with small mechanisms, a large part of the book is devoted to such apparatus with its accessory equipment.

ELEMENTARY APPLIED AERODYNAMICS:

By P. E. Hemke. Prentice-Hall, New York, 1946. 231 pp., illus., diagrs., charts, tables, 9¼ x 6 in., cloth, $3.25.

The opening chapters discuss the physical properties of air and the flow of an ideal fluid. Following directly from these come the chapters on airfoil theory, including the compressibility effect. Propellers receive separate treatment, and the performance of a conventional airplane is discussed. A brief chapter on rotors and helicopters is included. The presentation has been kept as simple as possible, but some preliminary training in mathematics, physics and mechanics is expected.

ELEMENTARY WAVE MECHANICS.

W. Heitler. The Clarendon Press, Oxford, England; Oxford University Press, New York, 1945. 136 pp., diagrs., tables, 7½ x 5 in., cloth, $2.25.

Beginning with chapters on the experimental basis of quantum mechanics and the derivation of the wave equation, the author proceeds to discuss the hydrogen atom, angular momentum and spin, the problem of two electrons, pertubation theory, and the periodic system of elements. The past two chapters provide an introduction to the theory of chemical bond.

METALLURGY of STEEL CASTINGS.

C. W. Briggs. McGraw-Hill Book Co., New York and London, 1946. 633 pp., illus., diagrs., charts, tables, 9 x 5½ in., cloth, $6.50.

The object of this book is to provide a reference work for the technical control of manufacturing operations for the production of steel castings. It correlates the problem of the casting of steel with the methods of steel manufacture, and considers in addition the following related topics: gases, deoxidation, and inclusions; tapping and pouring; gates and risers; properties of liquid cast steel; solidification; hot-tear formation; molding sands and cores; and the welding of steel castings.

THEORY and PRACTICE of FILTRATION. (Modern Library of Chemical Engineering).

G. D. Dickey and C. L. Bryden. Reinhold Publishing Corp., New York, 1946. 346 pp., illus., diagrs., charts, tables, 9¼ x 6 in., cloth, $6.00.

The general concept of filtration as considered in this book is limited to the separation of solids from liquids and gases by the use of porous media, with by far the most space devoted to liquid filtration. History, theory, and filtration principles are first discussed, followed by description of the types and uses of filters and their auxiliary apparatus. Three special applications are dealt with separately: oil filters, extractors and expellers; water filtration; sewage clarification and sludge dewatering. Surface and interfacial separation of immiscible fluids are discussed in an appendix.

WATER BACTERIOLOGY, with special reference to Sanitary Water Analysis.

S. C. Prescott, C.E.A. Winslow and M. H. McCrady. 6th ed. John Wiley & Sons, New York; Chapman & Hall, London, 1946. 368 pp., charts, tables, 8½ x 5½ in., cloth, $4.50.

Intended both as a textbook for the student and as a reference manual for the laboratory worker, this book covers the public health phases of the subject. It discusses the distribution, behavior and sanitary significance of bacteria introduced into water from extraneous sources. It describes the development of methods currectly employed in sanitary water bacteriology, with official standards, paying special attention to the details of recognized tests and reactions. Separate chapters are devoted to sewage bacteriology and shellfish examination.

WORKSHOP TECHNOLOGY, 2 Parts:

W. A. J. Chapman. Edward Arnold & Co., London; Longmans, Green & Co., New York, Toronto, 1945. Illus., diagrs., charts, tables, 8¾ x 5½ in., cloth. Part 1, 303 pp., $1.50; Part 2, 328 pp., $2.50

The full range of workshop operations is covered in these two volumes. The majority of the text deals with machine-tool work on the standard machines: lathes, shapers, milling machines, etc., covering the tools, speeds and feeds, indexing, and numerous detailed descriptions of actual jobs. The materials, ferrous and non-ferrous, are described with their properties and heat treatment. The hot working of metals is considered, bench jobs are described, power devices and safety are discussed, and the elements of measurement and gauging are given full coverage.

PRELIMINARY NOTICE

of Applications for Admission and for Transfer

December 9th, 1946,

The By-laws provide that the Council of the Institute shall approve, classify and elect candidates to membership and transfer from one grade of membership to a higher.

It is also provided that there shall be issued to all corporate members a list of the new applicants for admission and for transfer, containing a concise statement of the record of each applicant and the names of his references.

In order that the Council may determine justly the eligibility of each candidate, every member is asked to read carefully the list submitted herewith and to report promptly to the Secretary any facts which may affect the classification and selection of any of the candidates. In cases where the professional career of an applicant is known to any member, such member is specially invited to make a definite recommendation as to the proper classification of the candidate.*

If to your knowledge facts exist which are derogatory to the personal reputation of any applicant, they should be promptly communicated.

Communications relating to applicants are considered by the Council as strictly confidential.

The Council will consider the applications herein described at the January meeting.

L. Austin Wright, General Secretary

*The professional requirements are as follows:—

A **Member** shall have been engaged in some branch of engineering for at least six years, which period may include apprenticeship or pupilage in a qualified engineer's office or a term of instruction in a school of engineering recognized by the council. In every case a candidate for election shall have held a position of professional responsibility for at least two years. The occupancy of a chair as professor, assistant professor, associate professor or lecturer in a faculty of applied science or engineering, shall be considered as professional responsibility.

Every candidate who has not graduated from a school of engineering recognized by the council shall be required to pass an examination as prescribed by council, on the theory and practice of engineering, with special reference to the branch of engineering in which he has been engaged.

A **Junior** shall have been engaged in some branch of engineering for at least four years. This period may be reduced to one year, if the candidate for election has graduated from a school of engineering recognized by the council, in which case he shall not remain in the class of Junior beyond the end of the eighth year after graduation.

Every candidate who has not passed the examinations of the third year in a school of engineering recognized by council shall be required to pass an examination in engineering science as prescribed by council. He shall not remain in the class of Junior beyond age thirty.

A Junior may be transferred to Member without payment of transfer fee providing he makes application before the end of the seventh year after graduation or, if a non-graduate, before attaining age twenty-nine, and his application is approved by council.

Council may extend the above limits if in its opinion special circumstance warrant such extension.

A **Student** shall be at least seventeen years of age, and shall present a certificate of having passed an examination equivalent to the final examination of a high school, or the matriculation of an arts or science course in a school of engineering recognized by the council or shall be required to write examinations as prescribed by the council.

He shall be:

a. pursuing a course of instruction in a school of engineering recognized by the council, in which case he shall be transferred to Junior automatically without payment of transfer fee in the second January after graduation, or

b. receiving a practical training in the profession in which case he shall be transferred to Junior without payment of transfer fee providing he makes application before attaining age twenty-five and his application is approved by council.

He shall not remain in the class of Student after he has attained the age of twenty-five, unless in the opinion of council special circumstances warrant the extension of this age limit.

An **Affiliate** shall be one who is not an engineer by profession but whose pursuits, scientific attainments or practical experience qualify him to co-operate with engineers in the advancement of professional knowledge.

The fact that candidates give the names of certain members as reference does not necessarily mean that their applications are endorsed by such members.

FOR ADMISSION

ANDERSON—BURNETT LYMAN, of Chippenham, Bucks,. Eng. Born at Toronto, Ont., May 21st, 1912. Educ.: B.A.Sc. (Mech.), Toronto, 1934; Small arms tech. course, Military Coll. of Science, England; 1934-35, shopwork, Bradbury Steel Co., Toronto; 1935-36, time and motion study, Ward St. Works, Canadian General Electric, Toronto; 1936-37, time study, cost analysis, distribution of overhead expense dept., Dominion Rubber Co., Montreal; 1937-38, asst. to plant supt., development of prod. control methods, Cockshutt Plow Co., Brantford, Ont.; 1938-39, prod. engr. with Govt. staff at John Inglis plant (Bren Guns), Dept. National Defence; 1940-46, R.C.O.C. and R.C.E.M.E., Canada and England, at the end of war on Tech. Staff at Canadian Military H.Q., i/c Small Arms, etc., England; at present, managing-dir., Keith Tool & Production Co., Ltd., mfrs. press tools, jigs, fixtures, gauges, etc., Chippenham, Bucks., England.

Rehabilitation and Employment Service

THE ENGINEERING INSTITUTE OF CANADA
2050 MANSFIELD STREET, MONTREAL 2, QUE.

The service is operated for the benefit of members of The Engineering Institute of Canada, and for industrial and other organizations employing technically trained men—without charge to either party. It would therefore be particularly appreciated if employers would make the fullest possible use of these facilities to make known their existing or estimated requirements. Notices appearing in the Situations Wanted column will be discontinued after three insertions, and will be re-inserted upon request after a lapse of one month.

Situations Vacant

CHEMICAL

CHEMICAL ENGINEER OR CHEMIST, preferably with Ph.D., required by a pulp and paper company with plants in Eastern Canada, for research work Salary open. Apply to File No. 3549-V.

CHEMICAL ENGINEER required by a pulp and paper company with plants in Eastern Canada, for mill control and pilot plant work. Salary open. Apply to File No. 3549-V.

CHEMICAL ENGINEER OR CHEMIST, from recent graduate up, is required by an industrial concern in Montreal for chemical control of products. Salary open. Bilingual preferred. Apply to File No. 3564-V.

CHEMICAL ENGINEER required as assistant professor of chemical engineering in a Canadian university to start autumn 1947. Salary open. Apply to File No. 3600-V (D).

CHEMICAL ENGINEERS, both with experience and recent graduates, required by an industrial organization in the St. Maurice Valley. Salary open. Apply to File No. 3644-V.

JUNIOR CHEMICAL ENGINEER, recent graduate up, required for a paper mill in the Lake St. John area. Salary about $225. Apply to File No. 3684-V.

CHEMICAL ENGINEER with considerable experience in the pulp and paper industry required as chief chemist in a paper mill in Northern Quebec. Salary from $350. Apply to File No. 3684-V.

CHEMICAL OR METALLURGICAL ENGINEERS, from recent graduates up, required by a Quebec firm engaged in metal production for employment as production and development engineers. Salaries open. Apply to File No. 3693-V.

CHEMICAL ENGINEERS with about five years' industrial experience required by a manufacturer in Central Ontario. Salary open. Apply to File No. 3702-V.

CHEMICAL ENGINEER, recent graduate, required as process engineer in production control by a manufacturer in Central Ontario. Salary open. Apply to File No. 3708-V.

JUNIOR CHEMICAL ENGINEER required for control work by a paper company in Western Ontario. Salary open. Apply to File No. 3717-V.

CIVIL

CIVIL ENGINEERS, recent graduate up, required by a pulp and paper company with plants in Eastern Canada. Salary open. Apply to File No. 3549-V.

CIVIL ENGINEERS with master's degree, teaching and consulting experience, age 28-40, required for the staff of a university in N.Y. State. Salary open. Apply to File No. 3600-V (C).

JUNIOR CIVIL ENGINEER for general construction work with a manufacturer in the province of Quebec. Salary open. Apply to File No. 3672-V.

CIVIL ENGINEER required by a contractor in Montreal as field engineer and layout man on a construction job. Salary open. Apply to File No. 3694-V.

ELECTRICAL

ELECTRICAL ENGINEER age 30-45 with sales training with large manufacturer of electrical equipment instruments and 5-10 years experience as sales service and sales engineer required as sales engineer in Canada for U.S. firm making special equipment for transport and industry. Salary open. Apply to File No. 3447-V.

ELECTRICAL ENGINEER, with general knowledge of a.c. and d.c. motors, switchgear, mercury rectifiers, transformers and other electrical apparatus, for sales work in Eastern Canada, age 30 to 35, salary open. Apply to File No. 3695-V.

ELECTRICAL ENGINEER, recent graduate, preferably bilingual, required by a public utility in the Ottawa area to learn the distribution business from the management end. Salary open. Apply to File No. 3699-V.

ELECTRICAL DRAUGHTSMAN with several years' experience in industrial layouts for large concern in Eastern Townships. Permanent position and attractive salary available for experienced men. Apply to File No. 3701-V.

ELECTRICAL ENGINEER with construction experience, required by an electrical contractor in Montreal for estimating, etc. Salary $250 up. Apply to File No. 3720-V.

MECHANICAL

MECHANICAL ENGINEER with paper mill experience for design and layout in connection with the re-conversion of a paper mill in Eastern Quebec. Salary from $200-$350 according to experience. Apply to File No. 3497-V.

MECHANICAL ENGINEER with experience in pulp and paper or mining work required by a pulp and paper company with plants in Eastern Canada. Salary open. Apply to File No. 3549-V.

MECHANICAL ENGINEER with industrial or construction experience, required by a firm of consulting engineers to inspect machinery deliveries in the Cornwall area. Salary open. Apply to File No. 3691-V.

MECHANICAL ENGINEER, recent graduate up, required for maintenance and production engineering by an industrial firm in Montreal. Salary open. Apply to File No. 3692-V.

MECHANICAL ENGINEER with considerable experience in chemical plant design and equipment required by a manufacturer in Central Ontario. Salary open. Apply to File No. 3702-V.

MECHANICAL ENGINEERS, age 25-35, required by a manufacturer in Montreal, for training as sales engineers and for executive positions. Salary from $200. Apply to File No. 3710-V.

JUNIOR MECHANICAL ENGINEER, under 30 and preferably bilingual, required by a Montreal firm to train as sales engineer for pumps, engines and allied electrical equipment. Salary open. Apply to File No. 3714-V.

MECHANICAL ENGINEER with experience in tools, dies and shopwork required as assistant to the plant manager of a factory in the Montreal area. Duties include obtaining materials. Salary $250-$350. Apply to File No. 3719-V.

MISCELLANEOUS

ASSISTANT PLANT ENGINEER with paper mill experience required by a pulp and paper company with plants in Eastern Canada. Salary open. Apply to File No. 3549-V

MECHANICAL OR ELECTRICAL ENGINEER with experience in paper mill or steam plant operation, bilingual if possible, is required by an industrial firm near Montreal. Salary from $300. according to experience. Apply to File No. 3498-V.

STRUCTURAL STEEL CHECKER OR DRAUGHTSMAN required immediately for a steel fabricating company in Niagara Peninsula. Salary open. Apply to File No. 3687-V.

MECHANICAL OR ELECTRICAL ENGINEER with general industrial experience, preferably with knowledge of time study, required by a wire and cable manufacturing company in Ontario. Salary approximately $225. depending on qualifications. Apply to File No. 3690-V.

SALES ENGINEER, electrical graduate, preferably bilingual, required in Quebec for the sales staff of a firm manufacturing power specialties. Salary open, plus expenses. Apply to File No. 3697-V.

CONSTRUCTION ENGINEER with field experience, age about 30, required as office engineer and assistant to general manager for a firm of contractors in Montreal. Salary open. Apply to File No. 3703-V.

CIVIL OR MECHANICAL ENGINEER with considerable experience in the design and layout of industrial plants required for the design staff of an industrial organization in Montreal. Salary from $250. Apply to File No. 3704-V.

SPECTROSCOPIST with experience in chemical analytical work and the use of the emmission spectograph required by an industrial organization with headquarters in Montreal. Salary open. Apply to File No. 3706-V.

FORESTRY ENGINEER, recent graduate up, required by a paper company for woods operations on the Lower St. Lawrence. Salary from $175. Apply to File No. 3707-V.

CHEMICAL, MECHANICAL OR METALLURGICAL ENGINEER, recent graduate up, required by a manufacturer in Central Ontario for construction project work from inception to completion as required. Salary from $200. Apply to File No. 3708-V.

JUNIOR SALES ENGINEER, mechanical background, age 25-30, required by a Montreal firm manufacturing steel tanks, oil drums and other equipment for the oil industry. Salary about $200. Bilingual an advantage. Apply to File No. 3709-V.

MECHANICAL OR ELECTRICAL ENGINEER with about five years' experience required by a Montreal firm for material control and sales engineering. Salary open. Apply to File No. 3711-V.

JUNIOR ENGINEER DRAUGHTSMAN required by a Montreal firm designing and manufacturing aeroplane equipment. Salary open. Apply to File No. 3712-V.

JUNIOR ENGINEERS, recent graduate up, required for the engineering staff of a communications company with headquarters in Montreal. Veterans preferred. Salary from $175. Apply to File No. 3713-V.

JUNIOR STRUCTURAL DESIGN ENGINEER required by a steel fabricating firm in Central Ontario. Salary open. Apply to File No. 3715-V.

The following advertisements are reprinted from last month's Journal, having not yet been filled.

CHEMICAL

CHEMICAL ENGINEER required by a petroleum refining company in Montreal for process and design work. Salary about $225. Apply to File No. 3575-V.

CHEMICAL ENGINEERS, age 22-35, recent graduates up, are required by a Montreal firm for development work, maintenance, design and construction in explosives field. Sales and technical service representation to paper and textile industries. Salaries according to qualifications. Apply to File No. 3588-V.

CHEMICAL ENGINEERS OR CHEMISTS for analytical work in the laboratory of an industrial firm in Central Ontario. Salary from $175. Veteran preferred. Apply to File No. 3642-V.

CHEMICAL ENGINEER, preferably with sales experience, for sales and service with an industrial firm in Central Ontario. Salary open. Apply to File No. 3642-V.

CHEMICAL ENGINEER recent graduate up, to be assistant to the department superintendent of a tar distillery in the Toronto area. Salary $225. Apply to File No. 3674-V.

CHEMICAL ENGINEERS OR METALLURGISTS, with knowledge of French or German, required by a government department for literature researches on industrial problems. Salary about $300. Apply to File No. 3682-V.

CIVIL

TWO CIVIL ENGINEERS, one experienced man to be in charge, the other to act as assistant, mostly for office work, are required for a building programme in Ontario, in connection with roads, trails, lookout towers, telephone line, buildings, etc. Preference to veterans. Salary up to $3,000 per year for senior and $2,000 per year for junior position. Apply to File No. 3394-V.

CIVIL ENGINEER with experience in the mechanical trades required as designer by a building contractor in Quebec, age 30-35, salary open. Apply to File No. 3444-V.

CIVIL ENGINEER to take charge of work in a drainage district in Quebec. Must be bilingual. May be recent graduate. Salary from $200. Apply to File No. 3479-V.

CIVIL ENGINEER for design work in an industrial plant in the Montreal area with experience in building construction, probably permanent position, salary from $200 up according to experience. Apply File No. 3504-V.

CIVIL ENGINEERS with experience in detailing and designing structural steel and reinforced concrete for manufacturers are required for a steel fabricating company in Manitoba. Salary open. Apply File No. 3519-V.

CIVIL ENGINEER, age 35-40, with extensive experience in detailing and checking structural steel in buildings and bridges, required by a steel fabricating company in Southern Ontario. Salary open. Apply to File No. 3570-V.

CIVIL ENGINEER with 3 or more years' experience on design of industrial buildings, equipment, supports and foundation work, is required by a Montreal firm for structural design work in steel, timber and reinforced concrete. Salary $200 up. Apply to File No. 3588-V.

CIVIL ENGINEER with construction experience required as plant engineer by a textile firm with headquarters in Montreal. Salary open. Apply to File No. 3615-V.

CIVIL ENGINEER, preferably with railroad experience, required by a company engaged in large scale asbestos production in Quebec to supervise construction of local railroad. Salary open. Apply to File No. 3683-V

ELECTRICAL

ELECTRICAL ENGINEER, age 32-36, with electrical experience around mines or smelters. English speaking with working knowledge of French, is required by a company in Shawinigan Falls, Quebec. Salary open. Apply to File No. 3415-V.

ELECTRICAL ENGINEERS, from recent graduates up, required by a company in Montreal engaged in the production of telephone, etc., equipment. Veterans preferred. Salary open. Apply to File No. 3551-V.

ELECTRICAL ENGINEER with experience in teaching or practica electrical work required as full-time technical instructor in the Montreal area. Salary open with overtime. Apply to File No. 3600-V. (B)

ELECTRICAL ENGINEER DRAUGHTSMEN, preferably with pulp and paper experience, required by a paper company in Montreal. Salary open. Apply to File No. 3610-V.

ELECTRICAL ENGINEER for sales engineering, with previous experience, age 25-40, required by a Montreal firm handling pumps, valves, automatic controls, etc. Salary according to experience. Apply to File No. 3614-V.

ELECTRICAL ENGINEER with knowledge of power apparatus, preferably bilingual, required for sales work with a manufacturer in the Montreal area. Salary open. Apply to File No. 3646-V.

ELECTRICAL ENGINEERS with at least five years experience, mostly in aircraft design, required for the design staff of an industrial organization in Montreal. Salary from $275. Apply to File No. 3650-V.

ELECTRICAL ENGINEER with considerable industrial experience required as a safety engineer by a public utility in the Montreal area. Bilingual preferred Salary open. Apply to File No. 3654-V.

ELECTRICAL ENGINEER to be chief engineer, responsible for electrical and mechanical design and testing, required by a firm in Ontario manufacturing electric motors. Salary open. Apply to File No. 3656-V.

ELECTRICAL ENGINEER with at east three years experience in the design of generating plants and high tension transformer stations required by an engineering firm in Toronto. Salary open. Apply to File No. 3661-V.

ELECTRICAL ENGINEER with several years experience required as a designer by an industrial organization in Montreal. Salary open. Apply to File No. 3677-V.

MECHANICAL

MECHANICAL ENGINEER, is required for draughting and detail work with a company in central Ontario. Good prospects for advancement. Single man preferred. Salary open. Apply to File No. 3393-V.

MECHANICAL ENGINEER, with mine mechanical draughting experience, for producing gold mine in Quebec. Apply to File No. 3436-V, stating experience, references and salary expected.

MECHANICAL ENGINEER with experience in pulp and paper work is required as draughtsman for a company in New Brunswick. Salary is open according to qualifications. Apply to File No. 3471-V.

MECHANICAL ENGINEERS from recent graduates up required by a structural steel company in the Montreal area. Salary according to qualifications. Apply to File No. 3485-V.

MECHANICAL ENGINEER, recent graduate, for junior position in the design department of a firm in Central Ontario making special heavy duty mobile equipment. Apply to File No. 3572-V.

MECHANICAL ENGINEER from recent graduates up, preferably with paper and pulp experience, required by a firm in the St. Maurice Valley. Salary according to experience. Apply to File No. 3573-V.

MECHANICAL ENGINEER with paper mill or mining experience required as assistant mechanical superintendent and understudy to mechanical superintendent in a paper mill in the St. Maurice Valley. Salary from $300 according to experience. Apply to File No. 3581-V.

MECHANICAL ENGINEER with extensive knowledge of machine shop practice and general industrial experience is required by a specialized industrial plant in the Montreal area. Veteran preferred. Salary according to experience. Apply to File No. 3595-V.

MECHANICAL ENGINEER with five to ten years industrial experience and familiar with the layout and construction of chemical plants, required by a manufacturer in the Montreal area for plant design and construction. Salary from $300. Apply to File No. 3605-V.

MECHANICAL ENGINEER with at least five years' experience of aluminum processing, plant design and operation, etc., required for Aluminum production organization in Australia. Limited contract. Salary open. Apply to File No. 3620-V.

YOUNG MECHANICAL ENGINEER, recent graduate up, single, to be assistant maintenance engineer in a cement plant in South America. Salary about $250 with keep. Apply to File No. 3621-V.

MECHANICAL ENGINEERS to be design squad leaders on heavy machinery design required by a company in Central Ontario. Salary open. Apply to File No. 3623-V.

MECHANICAL ENGINEER recent graduate, required by an industrial firm in south western Quebec, for the design and erection of complex textile machinery. Salary open. Permanent position. Apply to File No. 3625-V.

MECHANICAL DRAUGHTSMAN with experience in power house layouts required by an engineering firm in Toronto. Salary open. Apply to File No. 3630-V.

MECHANICAL ENGINEER, bilingual, with shop or automotive experience, required for equipment maintenance by a manufacturer in the Montreal area. Salary open. Apply to File No. 3631-V.

JUNIOR MECHANICAL ENGINEER with construction or machine shop experience, required by a Montreal firm handling heavy construction equipment. Salary open. Apply to File No. 3635-V

MECHANICAL ENGINEER with experience in machine design required by a firm in the Maritimes engaged in ship repair and conversion and the manufacture of marine and heating equipment. Salary open. Apply to File No. 3638-V.

MECHANICAL DRAUGHTSMEN, graduates preferred, with experience in shop and field erection, required for design of coal and oil fired heating and steam systems by an industrial firm in Montreal. Salary open. Apply to File No. 3647-V.

MECHANICAL ENGINEER with knowledge of machine tools, age about 35, required in Montreal for work in connection with purchase, design, re-conversion and sale of machinery. Salary $300-$400. Apply to File No. 3648-V.

JUNIOR MECHANICAL ENGINEER to be trained as plant engineer and assistant to plant manager in an industrial plant in central Quebec. Must be bilingual. Salary from $225. Apply to File No. 3658-V.

MECHANICAL ENGINEER with experience in the fabrication of Farm Implements, required by a Quebec firm. Bilingual man preferred. Salary according to experience. Apply to File No. 3666-V.

MECHANICAL ENGINEER with experience in the design of industrial machinery required by a Montreal firm manufacturing custom built machines. Salary $200-$250. Apply to File No. 3669-V.

MECHANICAL ENGINEER with industrial experience required as plant engineer for a plant in central Quebec manufacturing assorted building products. Salary from $250. Bilingual an advantage. Apply to File No. 3671-V.

MECHANICAL ENGINEER with design experience in the pulp and paper industry required by a firm with headquarters in Montreal. Salary $350. Apply to File No. 3673-V.

JUNIOR MECHANICAL ENGINEER with knowledge of precision machine shop practice and aptitude for research work in metals and plastics required for an organization in Toronto for the production of artificial limbs. Must be veteran. Salary from $225. Apply to File No. 3675-V.

METALLURGICAL

METALLURGIST, age 25-30, veteran, experience in Metallurgical Laboratory or Mine Assay office and Mining Mill practice decided advantage, required by a Montreal firm to be trained for Sales Representative. Salary depending on experience. Apply to File No. 3588-V.

MINING

MINING ENGINEER with several years experience required by a company engaged in large scale asbestos production in Quebec. Salary open. Apply to File No. 3683-V.

MISCELLANEOUS

TWO INDUSTRIAL ENGINEERS, preferably with engineering background in mechanical, electrical or chemical engineering, age 35 up, bilingual, with some practical experience, is required by a company in Montreal engaged in industrial engineering, consulting work, plant layout, controls, inventories, production and admin. controls. Apply to File No. 3307-V.

CIVIL OR MECHANICAL ENGINEER with experience in pulp and paper mills, to be assistant to plant engineer in a paper mill in Central Quebec. Salary open. Apply to File No. 3445-V.

TWO STRUCTURAL STEEL DRAUGHTSMEN with five or more years experience in designing and detailing steel structures. State experience and salary required. Location Toronto. Apply to File No. 3451-V.

MECHANICAL OR ELECTRICAL ENGINEER under 35, with at least 5 years practical experience, is required for a responsible position in the engineering department of an industrial firm in Toronto. Apply to File No. 3472-V.

STRUCTURAL STEEL DESIGNERS AND DETAILERS required by a construction company in Montreal. Salary open. Apply to File No. 3482-V.

RESIDENT ENGINEER with considerable construction experience and bilingual is required by a public utility for employment on the upper Ottawa River. Salary from $350. Apply to File No. 3505-V.

PLANT ENGINEER with pulp and paper experience for development, construction and maintenance work with a paper mill in the Lake St. John area. Salary open. House available. Apply to File No. 3507-V.

STRUCTURAL STEEL DRAUGHTSMEN AND CHECKERS, preferably graduate engineers but any experienced men acceptable, are required for a steel fabricating company in Manitoba. Salary open. Apply to File No. 3519-V.

MECHANICAL OR MINING ENGINEER, age 30-40 with experience in industrial engineering, required by a large mining and processing firm for methods studies of equipment, lahour and costs. Salary according to qualificatons. Apply to File No. 3524-V.

INDUSTRIAL ENGINEER, under 40, with not less than 5 years' experience in industrial methods engineering, required by a paper company in British Columbia. Salary open. Apply to File No. 3550-V.

GRADUATE ENGINEERS with experience in air-conditioning, heating, refrigeration and allied problems, required by a manufacturer in the Montreal area. Salary open. Apply to File No. 3566-V.

DESIGN ENGINEER with considerable experience required by a pulp and paper firm in the St. Maurice Valley. Salary open. Apply to File No. 3573-V.

CIVIL AND MECHANICAL ENGINEERS AND DRAUGHTSMEN, preferably experienced in building design and plant layout, required for a pulp and paper mill in Southern Ontario. Salary open. Apply to File No. 3578-V.

MECHANICAL AND ELECTRICAL DRAUGHTSMEN required by a Montreal firm. Must have working knowledge of equipment layout, architectural, piping and design. Salary from $200 up. Apply to File No. 3588-V.

MECHANICAL AND ELECTRICAL ENGINEERS, from recent graduates up, are required for mechanical and electrical maintenance, also design phases of project engineering work, by a Montreal firm. Salaries according to qualifications. Apply to File No. 3588-V.

GRADUATE ENGINEERS required as Development Engineer and Assistant to Sales Manager by a Montreal firm. Industrial, also sales and administrative experience necessary. Salary $200 up according to experience. Apply to File No. 3588-V.

INDUSTRIAL ENGINEER, 5 years' experience industrial manufacturing or process work, required by a Montreal firm for study and co-ordination of plant work. Salary $295 up according to qualifications. Apply to File No. 3588-V.

CHIEF DRAUGHTSMAN, under 35, 5-12 years' experience in drawing office, Including year or more as squad boss, required by a Montreal firm. Salary $225 up. Apply to File No. 3588-V.

ASSISTANT PROFESSORS AND INSTRUCTORS required for the staff of a technical college in New York State. Salary open. Apply to File No. 3600-V. (A)

MECHANICAL OR ELECTRICAL ENGINEER with considerable construction experience required as executive assistant to chief engineer of general contracting firm with headquarters in Montreal. Salary from $300 according to experience. Apply to File No. 3604-V.

DESIGN ENGINEERS with experience in reinforced concrete and hydraulic structures for hydro-electric developments for an engineering firm with headquarters in Toronto. Salary open. Apply to File No. 3612-V.

CHIEF DRAUGHTSMAN with experience in design and controlling a design staff required for both structural and equipment work by a steel fabricating plant in Western Canada. Salary open. Apply to File No. 3616-V.

CHIEF ENGINEER with industrial experience required for a steel fabricating plant in Western Canada. Salary open. Apply to File No. 3616-V.

STRUCTURAL OR MECHANICAL DRAUGHTSMAN required for detail drawings by a steel fabricating plant in Western Canada. Salary open. Apply to File No. 3616-V.

GRADUATE ENGINEER, bilingual, required for senior position on the Montreal sales staff of a firm manufacturing and installing mechanical equipment in buildings of all types. Veteran preferred. Salary open. Apply to File No. 3622-V.

SALES AND SERVICE ENGINEER with considerable experience in sales and heavy mechanical equipment required by a sales organization on the West Coast. Salary open. Apply to File No. 3626-V.

DESIGN DRAUGHTSMAN for the design of cranes and hoists of all types, capable of making and checking complete manufacturing detail drawing, required by a manufacturer in Southern Ontario. Apply to File No. 3628-V by letter with full details. Salary open.

MECHANICAL OR CHEMICAL ENGINEER for sales and sales engineering of industrial oils and greases, preferably bilingual and with experience in the paper or textile industries, required by an oil company in Montreal. Considerable travelling. Salary from $250. Apply to File No. 3632-V.

QUALIFIED ENGINEER required to represent for sales purposes in Northern Ontario a company engaged in the supply of coal. Knowledge of territory essential. Salary open. Apply to File No. 3634-V.

AERONAUTICAL OR MECHANICAL ENGINEER, recent graduate up, required as owner's representative on aircraft design and manufacture in the Toronto area. Salary open. Apply to File No. 3637-V.

SALES ENGINEER with wide engineering experience wanted by a company in Toronto for the sale of textile machinery and construction equipment. Salary open. Apply to File No. 3639-V.

JUNIOR ENGINEERS, CIVIL OR MECHANICAL, recent graduates up, required for the design staff of a large industrial organization in Montreal. Salary from $175 according to experience. Apply to File No. 3644-V.

MECHANICAL OR AERONAUTICAL ENGINEER with at least five years experience, mostly in design of aircraft power plants or of installations in passenger craft, required by an industrial organization in the Montreal area. Salary from $275. Apply to File No. 3650-V.

CIVIL, MECHANICAL OR AERONAUTICAL ENGINEERS, with some experience in aircraft design or construction, required by an industrial organization in the Montreal area. Salary from $225. Apply to File No. 3650-V.

MECHANICAL AND STRUCTURAL DESIGNERS AND DRAUGHTSMEN required by a pulp and paper company in the Port Arthur district. Salary open. Apply to File No. 3653-V.

ASSISTANT ENGINEER with experience in estimates and specifications for industrial work required by a pulp and paper company in the Port Arthur district. Salary open. Apply to File No. 3653-V.

CHIEF DRAUGHTSMAN with at least five years draughting room and related engineering office experience, preferably in pulp and paper or process industries, required by a pulp and paper mill in the Port Arthur district. Salary open. Apply to File No. 3653-V.

JUNIOR ELECTRICAL OR MECHANICAL ENGINEER required by an industrial firm in Montreal for training as an industrial engineer, including plant layout and maintenance. Salary open. Apply to File No. 3660-V.

INDUSTRIAL ENGINEER with at least ten years experience required by a manufacturer in Montreal. Salary open. Apply to File No. 3662-V.

JUNIOR MECHANICAL OR ELECTRICAL ENGINEERS for training as production engineers with an industrial firm in Montreal. Salary from $175. Apply to File No. 3662-V.

CONSTRUCTION ENGINEER with ten years' experience in the design and erection of steel and concrete buildings required for the staff of an oil company in Montreal. Travelling involved. Salary open. Apply to File No. 3663-V.

JUNIOR ENGINEERS preferably with pulp and paper or other industrial experience required for training for the sales staff of a Montreal manufacturer of machines and equipment. Salary from $175. Apply to File No. 3664-V.

WANTED

Graduate Mechanical or Civil Engineer

Required for permanent employment in Newfoundland for development and general engineering work for woods operations, involving an annual cut of 600,000 cords of pulpwood. Good salary and opportunity for qualified engineer. Applications should be sent to Bowater's Newfoundland Pulp and Paper Mills, Limited, Corner Brook, Newfoundland.

ASSISTANT PLANT ENGINEER

Graduate Engineer with pulp and paper mill experience preferred but not essential. Structural design experience necessary. Immediate Employment. Position permanent. Mill manufactures newsprint and sulphite pulp and is located in city on north shore of Lake Superior. Salary from $250—$325. Apply to File No. 3657-V.

Mechanical Engineers

Are required on armament research and development at the Canadian Armament Research and Development Establishment, Valcartier, Quebec. Experienced in design or recent graduates. Salary at various grades from $2,280. per year up, depending on training and experience. Applications should be forwarded to Director General of Defence Research, New Army Building, Ottawa, Ontario.

RESEARCH CHEMIST
OR
CHEMICAL ENGINEER

To conduct fundamental research on combustion and fuels in gas turbines, jet engines and propulsive ducts. Qualifications, graduation from a recognized University, majoring in physical chemistry, post-graduate research or research experience. Thorough grounding in chemical thermodynamics essential. Salary $3,000 to $4,000 per annum, depending upon qualifications and experience. Address reply to Director, Mechanical Engineering Division, National Research Council, Ottawa, Ontario.

RESEARCH CHEMIST
OR
CHEMICAL ENGINEER

To conduct research on lubricating oils and lubricating greases. Qualifications, graduation from a recognized University, post-graduate research or acceptable research experience. Thorough general grounding in physical chemistry essential. Salary $2,880-$3,600, depending upon qualifications and experience. Address reply to Director, Mechanical Engineering Division, National Research Council, Ottawa, Ontario.

CIVIL OR MECHANICAL ENGINEERS

EXPERIENCED in design and field supervision of construction of industrial buildings, piping, pumping and mechanical equipment, for products distribution. Ten years experience required.

•

RECENT GRADUATES for work in engineering department on design of buildings and miscellaneous equipment for handling petroleum product.

Required by major oil company. Salaries open. Please reply to File No. 3685-V.

SALES ENGINEER

Wanted by an old established Company operating a completely equipped machine shop for Contract Engineering. The Engineer we want will assume executive directive of all engineering activities and will be the main point of contact with large clientele. An opportunity exists here for a resourceful individual to establish himself with a going concern and develop his own ideas.

Reply stating age, experience and present occupation. Interview will be arranged.

Please reply to File No. 3698-V

WANTED
Utility Rate and Appraisal Engineer

Large public utility on West coast requires an experienced engineer to make rate studies on gas and electricity, prepare reports and to make property appraisal and evaluation.

Reply fully stating experience, education, age, marital status, etc.

Please reply to File No. 3718-V.

GRADUATE ENGINEERS for mechanical design, experimental, test and development departments of a Canadian firm producing aircraft gas turbines. Salary open. Apply to File No. 3667-V.

STRUCTURAL DESIGNERS AND DRAUGHTSMEN required by a firm of consulting engineers in Montreal. Salary open. Apply to File No. 3668-V.

JUNIOR ENGINEERS, recent graduates up, as designing draughtsmen for a brewing company with headquarters in Montreal. Salary from $200. Apply to File No. 3670-V.

SAFETY ENGINEER, preferably with considerable industrial experience, required by a brewing company with headquarters in Montreal. Salary from $375. Apply to File No. 3670-V.

CIVIL OR MECHANICAL ENGINEERS with some industrial experience required as plant engineers by a brewing company with headquarters in Montreal. Salary from $350. Apply to File No. 3670-V.

JUNIOR ENGINEERS, under 30, preferably with shop or industrial experience, required by an Ontario paper company for training as designers. Salary $200 plus board and lodging while under training. Preference to veterans. Apply to File No. 3676-V.

SALES ENGINEER with knowledge of sawmill and woodworking equipment, preferably bilingual, required for the sale of specialized equipment. Salary $200 plus commission. Apply to File No. 3678-V.

CHEMICAL OR MECHANICAL ENGINEER, recent graduate required for the service dept. of a chemical industry in Central Ontario. Salary open. Apply to File No. 3680-V.

CIVIL OR MECHANICAL ENGINEER, age 28-35, with at least five years industrial or construction experience, required by a Montreal firm for training as branch manager for the Toronto area. Salary open. Apply to File No. 3681-V.

INDUSTRIAL ENGINEER as field representative in the Toronto-Niagara area for a government department, five to ten years experience. Salary about $300 Apply to File No. 3682-V.

JUNIOR ENGINEER, recent graduate up, required as surveyor by a company engaged in large scale asbestos production in Quebec. Salary open. Apply to File No. 3683-V.

Situations Wanted

MECHANICAL ENGINEER, S.E.I.C., married, age 35, wants more suitable work. Experienced in Mechanical, Aeronautical, Civil and Forestry engineering, with over 7 years in responsible positions involving organization, getting along with people and fast control of new problems. Speaks several languages; has experience as Draughtsman, Foreman, Inspector, Plant Engineer, Assistant to Plant Superintendent and Designer; also in hydraulics, thermodynamics and stress analysis. Will accept responsible position anywhere with assured family accomodation near work. Prefers Airlines, Paper Industry, Mining or any expanding enterprise where technical ability in organising would be welcome. Desired salary $300 a month. Apply to File No. 140-W.

CHEMICAL ENGINEER, graduate in 1939, Jr.E.I.C., veteran, considerable experience in development and process control and quality control as well as some experience in production work, desires change. Employment since graduation, except for time in the services, has been with a large chemical manufacturing company. Montreal or Toronto areas preferred. Apply to File No. 798-W.

INDUSTRIAL ENGINEER—C.E., B.A.Sc., M.E.I.C., age 38, married, bilingual, process development, methods, time study, production control, job evaluation, plant layout, sales. Services available at short notice. Apply to File No. 2157-W.

DESIGN-DRAUGHTSMAN, M.E.I.C., With experience in all classes of Structural Steel detailing and design; Plant layout. Equipment drawings, piping. Paper Mill construction. Wishes change of position to suit experience. Capable of assuming duties of Assistant Chief Draughtsman. Location preferably Montreal, Que. Apply to File No. 2439-W.

GRADUATE ENGINEER, Jr. E.I.C., having proven executive and administrative ability, a liking for and experience in Sales Engineering work, and ten years production and maintenance experience in industry, wishes to locate in the Winnipeg area. Apply to File No. 2500-W.

COMMUNICATIONS ENGINEER. Engineering Physics (Hons.), Jr.E.I.C., Assoc. I.R.E., R.P.E. Ont., F.B.I.S., age 26. Summer employment with telephone manufacturer, Ontario Hydro, and as radio instructor. Three years with the Royal Navy as Radar Officer in complete charge of maintenance, installation and operation of radar equipment on board. One year field engineering with commercial FM radio equipment. Seeks position with opportunity for original work in electronic and allied fields. Available beginning 1947. Apply to File No 2779-W.

CIVIL ENGINEER, age 39, M.E.I.C., R.P.E., etc., used to responsibility and control in Consultative, Public Authority and Governmental fields, seeks worthwhile professional or commercial opportunity in Southern Ontario. Apply to File No. 2790-W.

MECHANICAL ENGINEER, Sask., '46, with summer experience in highway surveying, time checking, a steel rolling mill, ship wiring, job planning and cost estimating, desires work, preferably in Vancouver area. Would prefer work including time and motion studies, cost control and estimating, and job evaluation. Available on short notice. Apply to File No. 2795-W.

Business Opportunity

MECHANICAL ENGINEER with shop and capital desires partner with experience and capital to set up a Heating, Plumbing and Air-Conditioning Contracting and Engineering Firm in Montreal. Write to File No. 2262-W
