# A COMPARISON

PERHAPS you do not know that *The Canadian Magazine* during 1906 carried almost as much advertising matter as some of the principal magazines of the United States. In fact, if the American magazines did not count in the pages reserved for their own announcements, *The Canadian Magazine* would equal them in actual agate measurement.

Remember: The population of the United States is about thirteen times that of Canada. Does not the comparison reflect credit on *The Canadian Magazine*?

There is more credit when you consider that every advertisement in *The Canadian Magazine* is strictly high-class.

## RECORD FOR 1906

			AGATE LINES
OUTLOOK	-	-	422,929
McCLURE'S	-	-	417,001
REVIEW OF REVIEWS	-	-	380,422
EVERYBODY'S	-	-	348,995
MUNSEY'S	-	-	341,639
SCRIBNER'S	-	-	308,196
HARPER'S	-	-	295,802
COSMOPOLITAN	-	-	289,114
<i>The Canadian Magazine</i>	-	-	247,296

English and American advertisers as well as our own people have been quick to acknowledge the worth of *The Canadian Magazine* using it more than any one journal of similar character in Canada.

# WINCHESTER

## RIFLES SHOOT STRAIGHT AND STRONG

The name "Winchester" on a rifle barrel is the hall-mark of accurate and strong shooting. This is due to the excellence of Winchester barrels, the knowledge and experience embodied in their manufacture and the care taken in targeting them. Only good guns ever leave our factory. For results always use Winchester guns for all your shooting and Winchester make of ammunition for all your guns.

If you wish an up-to-date Vegetable or Flower Garden the coming season, you must have

**SIMMERS'**  
**SEED CATALOGUE**  
**For 1906**

Because it contains the most complete list of Vegetables and Flowers, together with many striking novelties

Simmers' Field, Vegetables and Flower Seeds have for over fifty years been staple with the best farmers, market gardeners and critical private planters. When you buy Seeds, you naturally expect them to germinate. This is an absolute necessity, but the most important point is the quality of the vegetable or flower produced.

Simmers' quality Seeds cover this, because we buy from acknowledged specialists, and we spare no expense in procuring the best Seeds for germination and productiveness. It tells you about it in our Seed Catalogue for 1905, which is mailed FREE for the asking. Write at once.

**T**HE distinctive feature about my Willow Furniture is not the price, but the quality—lots of Art Furniture is sold at less, but you would not want it at any price when placed alongside of YOUNGER'S WILLOW FURNITURE. I grow my own Willow. I supervise personally the workmanship. I guarantee strength and durability of every article. As to BEAUTY of this Furniture, it speaks for itself. The handsome set, illustrated above, sells for \$12.50. It comprises three comfortable arm chairs, made of Willow. That means coolness and comfort. There is no reason in the world why you should sit in an unventilated and unhealthy upholstered chair when you can buy these artistic chairs at prices from \$3.50 to \$10.

We also manufacture a variety of other Rush and Willow Furniture, including Settees, Arm Chairs, Fancy Chairs, Invalid's Chairs, Tables, Picnic Baskets, Automobilists Baskets, and numerous other articles. Special baskets of any style made to order. No extra packing charges for shipping to outside points.

**W. YOUNGER, 666 YONGE STREET, TORONTO**

## *Cigar*

Sells on its merits, it needs no praise from us, but we want smokers of good cigars to recognize this—that's why we advertise.

**HARRIS, HARKNESS & CO.**  
MAKERS

**MONTREAL**

**"Bristol"** TRADE MARK

## **Steel Fishing Rods**

for many years have maintained their supremacy for all-around fishing, giving perfect satisfaction under all conditions.

Their merit is known and acknowledged all over the world. No other rod combines strength, sensitiveness and backbone as does the "BRISTOL." But be sure you get a "BRISTOL." Don't let the dealer work off on you some inferior imitation. Look for our trade-mark, "BRISTOL," on reel seat.

Send for our illustrated color catalogue, "A Lucky Strike." You'll like it. Look on page 28 and read description of our combination Reel and Handle—An advance in reel making.

**The Horton Manufacturing Co.**  
32 Horton Street, Bristol, Conn.

# THE SIX CYLINDER FORD

## \$3200

"Model K" is a luxurious touring car with a world of RESERVE POWER with speed to meet every requirement, with an engine so simple, so smooth in its operation, that the presence of a motor on the car could almost be questioned.

Its six cylinders solve the problem of "more power"—power for emergencies. The majority of cars will make a good showing on a smooth road or even a slight grade, but put them where a little extra exertion is necessary and see where they are. They lack RESERVE POWER, they have only sufficient power for ordinary occasions.

The bank that only has enough cash for its daily requirements falls down in an emergency. The car with only enough power for smooth city streets falls down completely when it strikes a hill, sandy or muddy roads.

*The Ford 6 cylinder car has sufficient RESERVE POWER to meet any emergency*

Two of its cylinders alone will give power enough to run along the smooth streets of a city, yet in the country no sand, no hill, no mud, can put the whole six out of business. It is RESERVE POWER that counts. Write us for full particulars.

We also make two other cars, Model "C," a practical family car, will seat 4 people, \$1100, and Model "N," the 4 cylinder two passenger runabout, \$650.

## ***T. W. Boyd & Son***

Established 1845.

***27 Notre Dame St., West, MONTREAL***

**Summer Residences on Islands Off  
the North Shore of Lake Huron,  
Near Desbarats, Ont.**

**TO LET**

Desbarats is on the Canadian Pacific Railway and has a good Railroad and steamer connection from all the large cities of the United States and Canada. It is also the northernmost station of the Chicago Yacht Club and an important Station of the Keewaydin Canoe Club and of the Wild-wood Lodge Co.

Every Steamboat Line calling at Mackinaw or Sault Ste. Marie can be taken for Desbarats, as there are boats running to Desbarats or connecting with boats for that place from each of these ports.

**LONGFELLOW ISLAND NO. 56**

The black spot on the extreme left is the little boat dock. The island is very irregular in shape.

Longfellow Island has a small four roomed camp of very solid construction, with a fine stone fire-place. It is a picturesque island in a commanding position, Miss Longfellow lived there for a part of one summer with many members of her family, and there the Indian Play of Hiawatha was first given for her entertainment. She said of this place: "The spot selected for the drama could not have been more beautiful." Rent \$150.00 for the season, partly furnished.

**McNAB ISLAND NO. 58, DESBARATS, ONT.**

When writing advertisers kindly mention **ROD AND GUN IN CANADA.**

## ROD AND GUN IN CANADA.

McNab Island has been the favorite island ever since the first summer resident came. It was in fact the first island built upon. The camp containing five rooms, stone fire place, kitchen and ice-house will be rented for \$150.00 for the season. The only furniture necessary to bring would be linen and cutlery. The rest will be furnished in sufficient quantities for a small family. Boats can be

The Desbarats River, up which the largest yachts can motor to the Railway Station

rented for the season. The railway station is two miles distant, and the Hiawatha Camp and steamer dock only half a mile away.

There are other camps to rent, some of them more expensive than these.

There is bass and trout fishing and moose, bear, deer, duck and partridge hunting. The fishing in the inland lakes, which have good wagon roads leading to them, or canoe routes, is unsurpassed in America. Just about the Hotel and Camp is to be had the kind of fishing that Isaac Walton loved, pike, bass, perch and carp, and mullet in great abundance. Residents or visitors can drive to phenomenally good bass and trout fishing in the nearer inland lakes.

One of the pleasures of life in Desbarats is to be enjoyed by owning or renting a motor boat. There are one hundred islands within a four mile circle of which the Camp is the centre. Every day for a month a different destination may be selected, either as a fishing or picnic grounds. One may walk, drive, paddle, sail or motor to the post office, railway station and store. There is telephone connection. There is a resident village doctor. Fruit, fresh meat, cream and vegetables can be brought to the island home daily, and yet one feels as if one were a thousand miles from civilization.

ROD AND GUN IN CANADA.

Niverville, Man.,

Feb. 7, 1906.

Wolverine Motor Works,  
Grand Rapids, Mich.

Gentlemen:—It gives me great pleasure to tell you that the 6 H. P., 2 cylinder, 2 cycle engine, I bought from you last June has given the best of satisfaction, on the River and also on the Lake. It drives my 22½ ft. boat close to 11 miles an hour, and does it easily.

The best part, however, is the ease of handling it. It is seldom that I have to use the crank more than once a day as it would hold the compression in the hottest sunshine for four or five hours, and has repeatedly started by the lever alone after not being used for 1½ to 2 days.

We lived through the worst storm on Lake Winnipeg of the season '05 and would surely have been drowned had the engine stopped on us.

Respectfully yours,

WM. B. MEY.

New Orleans, La., Feb. 1, 1906

Wolverine Motor Works, Grand Rapids, Mich.

Gentlemen:—Your 75 H. P. Engine, which we have been using for the past 12 months, has been satisfactory in every respect.

We take great pleasure in mentioning to you some of the work it has been doing. We make two trips weekly a run of 260 miles round trip up and down the Mississippi River, without counting landings, 9 miles per hour against the current, at an average speed exceeding all expectations.

The motor is installed in an 80 ft. by 17½ ft. beam freight carrier, and will state that we had no trouble whatever.

We wish to compliment you and your southern representative, Mr. Bruguere, on having the best gasoline boat in this part of the country. We have been using this engine for 12 months, and find her to run smoother every day. We take pleasure in recommending this engine. Yours truly,

SPICUZZA BROS.

# WOLVERINE MARINE ENGINES

One Grade Only—The Highest

Have stood as the standard of excellence for 20 years—the highest art in marine gasoline engine construction, 5 to 100 h. p., 2 and 4 cycle, self-starting and reversing.

## CONVINCING REASONS

Why the WITCH-ELK  
Hunting Boots are best

For  
**Sportsmen  
Engineers  
& Miners**

They are the  
lightest boot on  
the market, qual-  
ity and material  
considered.

They are made to fit, and wear. They are practically  
waterproof—if properly taken care of. There are no  
nails or anything to gall the feet. They will not harden.

**THEY WILL PLEASE YOU**

Ask your dealer to order you a pair or write for cat-  
alogue O.

**WITCHELL SONS & CO., LIMITED  
DETROIT, MICH.**

Manufacturers of Sporting and Athletic Footwear.

**A** FRIEND of mine once told me that he preferred to be bitten by mos-  
quitos and black flies to using the beastly mixtures he had tried. He  
added "You are lucky, the flies seem to let you alone, you come out of  
the woods without a fly-bite on you, I wish I could do the same thing." I  
gave him a

**25c. box of  
FLY PIZEN**

He tried it, found it satisfactory, uses it still, and advises his friends to  
use it. Twenty springs or more passed in the society of the black fly and  
mosquito, have rendered me fairly cognisant of the likes and dislikes of those  
pests. I find they simply loathe FLY PIZEN, or anyone who uses it. If you  
wish to try it, send me twenty-five cents, and I will mail you a box. It can  
be purchased wholesale from The National Drug and Chemical Company of  
Canada Ltd

# Rambler

**Model 14,  
Price, \$1,750.**

## June Time Is Rambler Time

With the passing of alternate sunshine and storm, when the fair weather promise of today is fulfilled tomorrow, the call of nature becomes insistent and the paths of man lead to rural surroundings.

There is no better way of reaching the heart of nature than in an automobile, and no better automobile than the Rambler.

The pleasure of an afternoon trip or an extended tour is entirely dependent upon the reliability of the car, and there is no more positive way of insuring against marring incidents than the use of a Rambler.

The 1906 line comprises two types, in two and four-cylinder construction, designed to meet the requirements of the non-professional operator and the enthusiastic expert. We offer several models in each type and invite your early inspection. Catalogue free.

VOL. VIII

JUNE 1906

NO. 1

### Our Birthday.

**B**IRTHDAYS have been described as milestones along the path of the world, marking stages of progress towards a higher life. These anniversaries are of something more than sentimental interest, and to a Magazine, as to an individual, give pause for reflection, retrospection, often for congratulation, and always for good wishes.

In entering upon our eighth year of existence "Rod and Gun in Canada" is fortunate in being able to declare, without fear of contradiction, that this birthday closes a year of progress unprecedented in the history of any periodical published in Canada. Each month has witnessed improvement and growth in various directions, and so largely increased the number of our readers, admirers, and friends that the difficulty has been to keep pace with our rapid forward strides. A few of our friends can realise something of the amount of work this has involved, and make allowances for us; while those who do not know the multifarious requirements of a growing Magazine may accept this explanation for any shortcomings they may have perceived on our part. From all sides we have received encouragements, and these have stimulated and heartened us to such an extent that we have found it possible to sustain the responsibilities this rapid growth has thrown upon us.

The conductors of this Magazine have aimed high and to our constant efforts to attain and maintain the high standard we have set before ourselves our successes may be largely attributed. The public admire high ideals, and are ever ready to give a generous response to real and earnest efforts to live up to such ideals. The high

aim may not be secured, but one goes nearer to it for the trying. Our programme includes nothing less than the efficient protection and perpetuation of the vast and valuable forests; the splendid fisheries; and the finest herds of game left in the world today—a marvellous inheritance for the people of Canada; a heritage so gigantic that some excuses may be found for those who in the past believed that these great national assets were inexhaustible, and were careless in the management and control thereof. "Rod and Gun in Canada" has had marked successes in awakening the public to a sense of the present condition of things. These wonderful assets have been seriously threatened, and their continued existence endangered; but the opportunity is still with the people, and there are uneasy stirrings from one end of Canada to the other, every one of which bears testimony to the fact that "Rod and Gun in Canada" has not preached in vain, and that the work so ardently pursued is bearing good fruit.

The campaign of education, now in full flood, was inaugurated, advocated, and defended at a time when the subject failed to arouse interest or sympathy in any quarter. Now, from ocean to ocean, and from the great lakes to Hudson's Bay, forestry, exploration, fish and game protection, and all that they involve, are live topics, and "Rod and Gun in Canada" has made them so.

So vast is the field that even in the midst of success we are conscious of the little done, and of the great amount that still remains to be accomplished. Our work is not much more than begun. The need for vigilance, for urging on measures

for further protection, and for seeing that those already carried are not allowed to remain a mere dead letter, is as great as ever.

"Rod and Gun in Canada" has proved its capacity for rendering the highest service to the Dominion, and as an inevitable result its own material advancement, has followed. We have not merely aimed high, but we have also run straight. The interests of the great public of this wonderful Dominion has been to us as a guiding star, and nothing of lesser moment has been allowed to interfere with our course. In consequence of this, even those who have differed from us have watched our career with respect and not grudging us the influence, the position, and the successes which have followed.

From the Atlantic to the Pacific, from Prince Edward Island to the far off Yukon, we have pursued the same course irrespective of political or other considerations. No portion of the Dominion is too far away not to receive some notice from us, and none too small or unimportant not to ensure our consideration.

Whenever the Dominion or Provincial Governments have taken a course which appeared to us to be in the public interest, the support of "Rod and Gun in Canada" has been given promptly, freely and forcibly. We did something to make the Dominion Forestry Convention the magnificent success it undoubtedly was; from his accession to office we have supported and upheld the Hon. Jean Prevost in his campaign to make the most of the magnificent and largely undeveloped fish and game resources of the beautiful Province of Quebec; gratifying recognition has been accorded to our efforts on behalf of New Brunswick; in Ontario the enlightened policy of the Government in creating vast forest, fish and game preserves has been supported from its inauguration; and throughout the great Northwest, in far away British Columbia and the Yukon, our policy has been ever the same.

Something must be said of the great services rendered to the Dominion by the manner in which the Magazine has made the many wonders of Canada known first to Canadians, secondly to our cousins across the southern border, and also to the world at large. As a resort for sports-

men and tourists Canada is no longer unknown, thanks largely to our work, and the peoples of the whole world are rapidly revising their ideas of our country as a result of the numerous visits paid by tourists and sportsmen who, having seen for themselves something of this wonderful and beautiful land, have returned home full of enthusiasm for the north with its invigorating climate, and its numerous other attractions.

The great and widespread reaction in favor of a rational outdoor life, the impetus given to sport in its highest forms, the effect upon the national physique, and the public health; all these movements have been helped, and in some instances started by "Rod and Gun in Canada."

Amongst the latest tributes paid to our work is the adoption of the Magazine as the official organ of the Alpine Club of Canada. This organization has a great future before it. The mountain ranges of Canada are so vast, and present such a wide field for exploration that the Club is bound to grow in numbers, influence, and position, and is calculated to do most excellent service for Canada. No doubt it will become a great power in shaping the future of the Government's policy with respect to those vast ranges which form a national playground unequalled anywhere on the earth's surface.

During the year we have broadened the scope of the Magazine, recognizing the growing and widespread interest taken in boating and automobiling as methods of recreation and healthful outdoor exercises. Exploration and sport throughout Canada in all their various branches will continue to be the strength of the Magazine, and with our continually increasing army of friends we trust to be able more efficiently than ever to continue our career of usefulness during the year upon which we are now entering.

It remains for us to thank our contributors who have given of their best and provided such rich treats out of the stores of their most interesting experiences; our vast and constantly growing army of readers, who by their friendly commendations are daily swelling the numbers of our friends; the great number of public men from those holding high and responsible

offices to those of humble station who have cheered, encouraged, stimulated, and aided us by kind words and cheery greetings in carrying on our work; and by no means least those who having seen our growth, and tested the value of the Magazine, as a publication of high aims, standing, and position, have so generously used our advertising pages to our mutual advantage; and whose patronage, coming from men of shrewd business ability, testifies in no uncertain way to the standing and value of the Magazine.

All these things render our task for the coming year one of heavy responsibilities and most difficult work. With so much to encourage however, and with so much help assured, we face the next twelve months with hope and courage. If our friends con-

tinue to rally round us as in the past the future of the Magazine, the protection of Canada's national assets, the development of our wonderful resources, the thorough exploration of the Dominion, the making known to the world of our advantages for sportsmen and tourists—all this is assured in a fuller and larger measure than even during the year now closed.

As we believe our friends will do their parts, so likewise will we perform ours. What we have done during the past year is the best guarantee for our conduct for the future; and with redoubled energy and renewed spirits, as a result of this retrospect, we enter upon the work of giving a better, brighter, more informing and more valuable Magazine—improving with each number—during the present year.

## A Veteran Explorer on a New Expedition.

**R**EADERS of "Rod and Gun in Canada" are well acquainted with the wanderings of Mr. C. G. Cowan, who, though his home is in Londonderry, Ireland, never seems so happy as when he is on one of his many exploring trips in British Columbia and Alaska. This preference means much in the case of Mr. Cowan who has hunted in South Africa, Australia, Siberia, and various parts of Europe, and thinks that nowhere in the world can such good sport be obtained as in Canada. Mr. Cowan went through the South African campaign commanding a company raised by himself and rendered good service to the British cause. He has made no less than sixty-six trips across the Atlantic Ocean, and the same number of journeys across the continent to Vancouver. British Columbia and Alaska are his favorite hunting grounds and his knowledge of their territories is probably unequalled. With the exception of the Skeena River he has traversed every important stream in the well watered Province of British Columbia, and he now means to try and complete his exploring trips by proceeding to the head waters of the Skeena River.

With this object in view Mr. Cowan, after finishing his arrangements, which as

an old campaigner were made with extreme care and completeness, left Kamloops by steamer for Hazelton. He had previously sent forward his head guide, and a number of men with ten pack horses loaded with his provisions and outfit, arranging to meet them at the point named. It is his intention to add several more horses to his band at Hazelton, and from there start his cross country journey through the mountains. At the time he left Kamloops he had not decided whether he would proceed by the Yellowhead or Pine Pass, but he calculates upon taking four months to complete the journey, his objective point being Edmonton. In addition to his exploring work, Mr. Cowan hopes to gather specimens of big game to be mounted and set up in the Museum of Natural History at South Kensington, London, England.

He proposes to call at a number of Hudson Bay Posts, including Fort George at the head of the Fraser River, and will do some exploring work through the Peace River country north of Edmonton. Readers of "Rod and Gun" who have had the privilege of following the course of Mr. Cowan's previous wanderings will join in the hope that he will in due course tell them of his experiences on this trip.

ARTHUR O. WHEELER, F. R. G. S., FIRST PRESIDENT OF THE ALPINE CLUB OF CANADA.

## The Alpine Club of Canada at Work.

BY A. O. WHEELER.

**M**OUNT Rundle in July and Mount Rundle in April are two different propositions. At the later date it presents a series of bare jagged lime-stone peaks rising one after the other along a ridge some eight miles in length. At the earlier date there are a number of snow-fields, the peaks rise white against the blue sky and the western side is seamed by couloirs filled with snow.

Ignoring the fact that it was Friday and the thirteenth day of the month, a party of the Alpine Club gathered the night before at Grand View Villa—Dr. R. G. Brett's pretty little mountain hotel—perched high on the side of Sulphur Mountain, beside the Banff Hot Springs.

The Grand View Villa, which is rapid-

ly becoming the mountaineer's rendezvous at Banff and which, by the way, bids fair to be the Banff Headquarters of the Alpine Club, was astir early that morning. The genial manager in person called the cook. Muffled sounds of hob-nailed climbing boots on carpeted passages, a sharp knock and in subdued tones "five o'clock and a fine morning" could be heard by the half awake. A hurried breakfast and the party of six were on the way, each carrying an ice-axe or alpen-stock and the leaders with rucksacks full of provisions and climbing ropes on their backs.

It was a most representative party. There were present the President of the Club, two stalwarts of the Canadian organization, who were also members of the

American Alpine Club, the Principal of the Western Canada College, one of the ladies from the educational staff of St. Hilda's Ladies' College and last, but by no means least in reputation or prowess, the well-known engineer of early C.P.R. construction days — Mr. George H. Middleton, of Edinburgh, Scotland.

The party drop quickly a thousand feet down the bridge trail to the Banff Springs hotel, cross the Spray river by the "Green Bridge", follow up the Spray for perhaps three-quarters of a mile by a faint path and then start straight upward. The climb

the great dyke of Sulphur Mountain over-looked, there arose in the south-west an isolated sharp spire, hanging in mid-air, a huge pinnacle of seemingly intangible proportions in the shifting violet haze of the twenty odd miles of distance.

There is no other peak like the Matterhorn of the Rockies and with one voice arose the exclamation "Mt. Assiniboine." This peak, with its 11,800 feet of altitude, presents a truly enticing vision from Mount Rundle.

The snow was hard and bore well, so it did not take long to reach our peak,

ROCKIES OF CANADA, LOWER KICKING HORSE FALLS, NEAR LANSBOIE, B. C. FALLS 80 FT

of Mt. Rundle is not of very great interest to the true Alpine climber. It lacks variety, and consists chiefly of a hard steady pull of 5000 feet. As, however, the party cleared the pines and occupied vantage point after vantage point, its members could not but respond with bursts of enthusiastic applause at the glorious panorama of sunny golden valleys threaded by silver streams and dotted with glassy lakes that stretched north, south and west.

As still higher ground was attained and

and shortly after twelve p.m. the party stood upon its summit.

The most striking features are the comprehensive views both up and down the Bow Valley, embracing a considerable part of Lake Minnewanka; but most of all the tremendous precipices of smooth rock falling with one awful drop, sheer 3000 feet to the ridges below.

It was bitterly cold and short time was spent at the summit. One sweeping gaze at the magnificent cirque of peaks, valleys, forests, lakes and rivers, that will always

render Mount Rundle unique as a view point, and the descent was begun.

Recrossing the snow-field and descending to timber line a blazing fire and lunch restored natural warmth and the keenest appreciation of the climb and its wonders.

Not the least attraction of the day consisted in the descent of an adjacent snow-filled couloir by a series of glissades. One after another, the party came hurtling down the frozen slopes with a speed of twenty miles an hour, some sitting, some standing, with ice-axe or alpen-stock acting as rudder, and a greater or less amount of skill, resulting in the latter case in a confused jumble of arms, legs, hats, caps, and other paraphernalia at the bottom of the slope.

Throughout the day the excitement at the Grand View Villa had been intense and business was practically suspended to see the Alpine Club make its first climb.

Guests and employees filled the balconies and even climbed on the roof to view the ascent and descent with field-glasses, and it is doubtful who derived the most enjoyment therefrom, the actors or the spectators. Cries of "there they are," "Now they come," "now they are having their lunch," and suspended animation while the quick shoots of the individual members of the climbing party down the snow couloir were being made.

It was but a small achievement, and yet the time of the year at which it was done shows that the Alpine Club means business; and more, the personnel of the party points to the fact that those entrusted with the education of the young men and women of Canada are fully alive to the beneficial moral, intellectual and physical effect of mountaineering upon the mind and body.

### Canada's Mountain Outfitters.

By A. O. Wheeler.

**T**HERE are in the mountain regions of Western Canada a number of picturesque men who dress in buckskin shirts and cowboy hats, men who ride like centaurs, know the mysteries of the diamond hitch, can guide a swimming pack-horse across a rushing torrent with easy skill, can make a camp bed of fragrant balsam boughs and cook a supper of bannock,

bacon and beans, with perhaps a few fresh trout or a juicy venison steak thrown in, to the highest degree of perfection.

These men know the valleys and passes like a book and it is to their knowledge of the region and its woodcraft, to their happy knack of making you comfortable under all circumstances of weather, in selecting a breezy shaded spot on a sultry day or providing a glowing camp fire on a chilly night, that the charm of visiting these glories of mountain scenery chiefly consists; for, as a well known humorist remarks, "How can a man write poetry with a pain in his toe?"

A number of these outfitters have thrown themselves, heart and soul, into the spirit of the newly formed Alpine Club of Canada; not from any desire of gain but from a pure love of the wonderful surroundings where they live—some of them since their childhood. Although comparatively poor men, they came to Winnipeg at considerable expense, and loss of time, to attend the recent organization meetings of the Club. These are men the Alpine Club of Canada will always honor and assist to the best of its ability.

Let us hope that no effort will be made to introduce into this home of nature in its pristine wildness the modern monopoly methods of sordid commercial machinery, and so, to force out of the business these sons of the mountains who have borne the brunt and labor of opening up and making known to the world their beauties.

A note of warning is now sounded by the Alpine Club. We do not want these stalwarts, who are part and parcel of the scenery, to go. We do not want to climb our mountains by elevated railroads, to have fences and turn-stile gates around the ice tongues of our glaciers, or ferry boats and screw steamers on our magic mirror lakes of blue and green; methods that are now making all true lovers of nature avoid Switzerland as the plague. What we do want, is more of these men, whom modern commercial schemes are trying to oust, and more of their primitive methods of transport, such as saddle ponies, pack-ponies, birch bark and log canoes. We can then, for a short time, withdraw from the daily grind of life in our cities and obtain a perfect rest for mind and body in the midst of nature, aided by befitting accom-

## ROD AND GUN IN CANADA

paniments, and not find that when we reach these beauty spots of Canada the jarring toot of the steam engine, the rumble of the vehicle and the everlasting cry of "fares please" is still with us!

Here in the wilds of mountain, lake and forest we should endeavor to preserve the methods, habits and customs that belong to nature in its primeval state, and retain at least one spot in the forests of our great Dominion to which tired out workers can go and derive impressions that bring us closely in touch with the Creator of all

of a probably poorly paid underling, who has no interest in making you comfortable, and, in all likelihood, does not know how.

There is still another beauty spot of consideration: These mountain regions of the Dominion, with their many valleys, water-ways and lakes, affording abundant opportunities for hunting, fishing and camping expeditions and the enjoyment of unsurpassed scenic splendors, are the property of the people of Canada. It is therefore, befitting that they should be a source of livelihood to as many of Canada's citi-

ROCKIES OF CANADA—HEAD OF ICE RIVER VALLEY.

things, without encountering the defiling grasp of the money grabber.

Let us for a moment consider the effect of a monopoly of the Outfitting and Guide business in our mountain regions. It will be all in the hands of one man or one group of men; the familiar faces and enjoyable personalities will vanish; there will be no redress for bad service; you may take it or leave it; there is but one method, and one choice. You simply do the show as you are told and no longer arrange your trip to suit yourself. Instead, you are turned over to the tender mercies

of men, who live within their bounds, as possible, and should not be turned into a mere machine for grinding out wealth to members of a monopoly.

The Canadian Pacific Railway Company has, owing to its magnificent summer hotels in these beauty spots of the mountains and the large numbers visiting them from all parts of the world, a very considerable patronage to distribute to the outfitters and guides. It is strongly hoped that the Company will not lend itself to any monopoly of the business, and that, while insisting that outfitters and guides

be of irreproachable character, it will distribute the patronage fairly and freely with a view of allowing its big profits in the mountain regions to be shared by as many of Canada's mountain citizens as possible.

## A Notable Centre for Climbs in the Selkirks.

By Rev. J. C. Herdman.

**N**OW that the Alpine Club of Canada has been formed, one may well ask, What and where are the chief tourist and climbing centres among our mountain ranges? For the Selkirks, Glacier House is the best base of operations. It is worth considering, what climbs can be undertaken around this resort, what can be done in a few hours, what can you do within the limits of a day?

Several trails have been cut through the forests and stamped into the mountain slopes, and a fine telescope is placed in the observatory tower, which can be swung round to almost any angle and brings the great glacier and many peaks and cascades into vivid nearness of eyesight. It was Mr. H. E. M. Stutfield, a mountain-climber and author, who first thought of the telescope, and it has turned out to be an excellent suggestion. Then there is a large record-book in the office in which you will find interesting reading regarding the different climbs. No doubt there is a quantity of gush in some of the accounts, but many pages are well worth reading. Again, under a large glass case in the billiard-room there is a brilliant miniature panorama of the Selkirk range, with its valleys, snow fields, peaks, glaciers and railway line, all built up artistically and accurately named as to the different summits and features by Mr. Bell-Smith, an artist of note, who has spent many summers and painted splendid scenes through these passes.

There is a climb from Glacier House to Marion Lake, sixteen hundred feet high, running round to Observation Point on the slopes of Mt. Abbott. This distance can be climbed in an hour and a half. The trail pushes up further to the shoulder of Mt. Abbott, and though it soon loses itself on the higher slopes, there is no diffi-

culty in getting to the crest of the mountain, eight thousand feet above the sea level. There is a good trail to the great blue-green glacier where you can see the rocks that have been painted by the Rev. W. S. Green and Mr. Vaux to mark the terminals of the ice slope, and which show how the glacier has receded year by year, these great rocks being the end points of the glacier in different years. In the space now cleared through the shrinking of the ice, herbage and flowers are growing.

Another trail takes you into the Asulkan Valley, presenting charming views. At one point several cascades face you and you can continue the walk until you reach the terminal moraines of the Asulkan glacier. A further trail, rather dim and steep, takes you up the "Glacier Crest," through thick timber, and giving you at last a magnificent view, with the great Illecillewaet Glacier on one side and the Asulkan on the other. The name Asulkan is an Indian word meaning "wild goat." There is a walk down the Illecillewaet Valley from Glacier House, past the base of Mt. Cheops down to Ross Peak, quite separate from the route the Canadian Pacific Railway takes in working its way through the famous loops.

Then there is a trail from Ross Creek water tank up the Cougar Valley. Let us hope this will be extended up to Cougar and Cheops caves, and as an appropriation has been passed by the Government at Ottawa for this purpose, we may expect results. It would be a splendid thing to have another trail cut through Cheops Valley, to connect with Bear Creek, which runs down to Rogers Pass. There is also a trail from Glacier House to Cascade Pavilion, on the side of Mt. Avalanche, and onwards virtually to the summit of the peak, and another trail from Rogers Pass up to the little shelter built two and a half years ago in the Rogers Amphitheatre, not far from the slope of the Hermit Glacier. Besides these trails there are pleasant walks up and down the Canadian Pacific Railway lines.

As for mountains some can be climbed in a day, such as Abbott, Lookout, and Afton, which any active climber can manage in a day without the help of a guide, but it is better to have the assistance of a Swiss guide for the other peaks, many

of which can be climbed in a day also, such as Mounts Eagle, Sir Donald, Cheops, Cougar, the Domes, Castor and Pollux, Fox, Gow and Macoun.

The further mountains require two days work such as Rogers, the Swiss Peaks, Truda, Grant, Hermit, Macdonald, Dawson, Donkin, Purity and Bonney. It costs \$5 a day for a Swiss guide, and one needs strong clothing and hobnailed boots. The start is usually made about 4 o'clock in the morning. The guide takes up the provisions and the rope which is needed to help the party through dangerous climbs,

laws of perspective get in their subtle and confusing work. On the summit you are supposed to build up a cairn or "stone man."

Much climbing can also be effected in winter, with help of snowshoes or skis. The climbing is cooler, but you are liable to find your lunch frozen and have to use a Swiss lantern sometimes for light before and after daylight. But if the day be bright, no finer view is possible of the play of the sunlight upon chiselled marble-peaks and white lines of ramparts and unexpected far-off summits of purity.

ROCKIES OF CANADA—MACARTHUR LAKE. A BEAUTIFUL CERULEAN BLUE, DOTTED BY BABY ICEBERGS

and will give you excellent teaching as to the use of an Alpine ice-axe. You have to be specially careful as to rotten stones, ice slopes, and snow-cornices (whether walking below or above them). Carpets of flowers of brilliant hues, gaily decorated butterflies, streaks of red snow and crevices on the glaciers will meet you as you climb the slopes. And often you come within sudden sight of bears, mountain goats, whistling marmots, ptarmigan and grouse. The vision from a high peak presents a startling and glorious but very complicated panorama—it is here that

### The Summer Camp Arrangements.

With that energy which characterizes youthful organisations the Committee of the Alpine Club of Canada have already laid down the lines of their arrangements for their first Summer Camp. They have good reasons for believing that members will attend from all parts of the Dominion, from the States, and from Europe, and that such a gathering of veterans and amateurs will then assemble as have never before met in Canada's mountain regions.

The choice of the location of the first

camp has been a matter of careful consideration, and the Yoho Pass easily carried the day. It is impossible to conceive of a more excellent selection. The Pass, not so long opened to the tourists of the world, baffles any word picture to describe its wonders and its beauties, and all the members—those inured to mountain wonders, and those to whom much will be new will all enjoy the entrancing views seen on all sides during their residence in the Camp. To render the whole complete the Camp will be pitched on the borders of Summit Lake, two miles north of Emerald Lake, one of those wonderful "lakes in the clouds" which it is well worth travelling across the continent to see, and which are unique. The visitors will also see the great Takakkaw Falls, the highest cataract in Canada, and other equally wonderful sights.

A good choice has also been made of the task set the graduating members. It is anticipated that these will number not less than fifty, and that all of them will endeavor to qualify for full membership. Mount Vice President, which rises from the shores of Summit Lake, gives more than the required height the graduates are required to ascend. The ascent is also a good one as presenting a varied experience in the different phases of mountain climbing, grassy slopes, timber, rocks, and ice fields all having to be negotiated before the peak is reached. It is estimated that the climb will take six hours from camp and four hours return, making a long ten hour day, the biggest half of which at least will mean strenuous work for the amateur mountaineers. To accomplish this task will be a pretty severe test, and the assistance of Swiss guides will be given. In order that no more may essay this task at once than those whose safety can be looked after, the parties will be limited in number, and the trip repeated as often as may be necessary.

There will be other trips arranged, one to the Falls occupying two days, the night being spent in a permanent camp at the head of the Yoho Valley, and the return being made by a different route from the one taken on the outward journey.

While enjoyment and health will be amongst the prominent features of the

Camp, the serious side of the movement will not be neglected. A science section will be established, and a commencement made with the work of accurately measuring the movement of the glaciers. For a beginning the present positions will be determined, and boulders marked in order to be compared with observations taken in succeeding seasons.

Provision is being made for one hundred members and the camp will be divided into four sections known respectively as being devoted to the ladies, officials, members, and guides. There will be a number of the well-known hardy mountain ponies in camp in charge of experienced packers, and some of the best mountain guides will accompany all touring parties.

Given fine weather, the careful arrangements of the authorities, which seem to lack nothing in their completeness, should ensure for members the time of their lives, and prove a solid foundation for the up-building and progress of the Club.

From this Camp will radiate influences which will be world wide in their extent and force. Once imbue those present with mountain enthusiasm, and they will carry with them into every corner of the world the knowledge of the wonderful playground the Canadian Alps afford to all. This Camp will form an introduction to that larger life which all who come under the influence of the mountains feel, and which never fails of some effect upon those who have passed their lives amidst these wonders. The graduates are going to have some grand experience and doubtless after their efforts they will (whether successful or not) have an added respect for those who pioneered the way into these mountain fastnesses.

The following is a copy of the official circular describing the arrangements of the Camp:—

The camp is for the purpose of enabling members of the Club to meet in the mountain regions of Canada, and graduating members to qualify for active membership by climbing a mountain at least 10,000 feet above sea level.

The camp will open on Monday, July 9th and close Monday July 16th.

A start for the camp will be made from Field station on the Canadian Pacific Railway early on Monday morning. Members

attending are requested to arrive, if possible, by the evening train of July 8th, but the morning trains throughout the week will be met.

The number of persons who can attend the camp is limited to one hundred.

Active members will be charged one dollar (\$1.00) per day while at the camp, to cover board and equipment. This does not include hotel expenses.

All graduating members who attempt to

their wives or husbands, who will be charged at the rate of \$2.00 per day. Otherwise, except in the case of the press, it is necessary to be a member of the Club to attend the camp.

All nominations for membership must be proposed by three members and be in the hands of the Secretary of the Club before the 1st of June.

Members to be eligible for the privileges of the Camp must be in good standing

H. G. Wheeler.

G. W. Wheeler.

Dr. McRae

M. P. Bridgland

ON SUMMIT OF MT. RUNDIE, BANFF.

qualify for active membership and reach 9,000 feet above sea level will be charged at the above rate.

All graduating members who fail to reach 9000 feet above sea level and all persons other than members will be charged at the rate of two dollars (\$2.00) per day.

The altitude of the camp is 6,000 feet above sea level.

Active members are privileged to bring

that is, have paid their dues for the current year.

The above charges include transport of baggage, and, as far as possible, of visitors to and from the railway and to and from the various points of interest in the Yoho valley for which excursions will be arranged daily.

No person attending can bring more than forty pounds of baggage. If in excess

of this amount, they will be refused transport until the weight has been reduced to the required limit. Baggage should be as light as possible and should consist of two pair of blankets, weighing about fifteen pounds, a small feather pillow, a change of clothes and boots, toilet articles, etc. No trunks or boxes can be handled.

Those climbing require heavily soled leather boots well set with Hungarian nails.

Knickerbockers, puttees, sweater and knock-about hat furnish the most serviceable costume.

No lady climbing, who wears skirts, will be allowed to take a place on a rope, as they are a distinct source of danger to the entire party. Knickerbockers or bloomers with puttees or gaiters and sweater will be found serviceable and safe.

Each member who intends to climb should bring a pair of coloured glasses. Coloured mica glasses are suggested. These can be bought from any druggist at about 50c per pair.

As the number of persons who can attend the camp, is limited to one hundred, you are requested to notify the secretary of the committee (Mr. H. C. Wheeler, Banff, Alberta,) as soon as possible. The applications to attend will be accepted in the order in which they are received; due allowance being made for distance.

Please state on what date you will arrive at Field and for how many days you will remain at the camp.

On arriving at Field, all, whose applications have been accepted, will be supplied with Club badges. Persons unable to produce their badges will not be afforded transportation to the camp.

An endeavor will be made to obtain reduced rates from the Canadian Pacific Railway and if successful, those booked to attend, will be duly notified.

Please take notice that under the constitution the first Annual Meeting of the Club will be held at the Yoho camp.

In order to become effective at the meeting, all nominations for membership and proposed amendments to the Constitution should be in the hands of the Secretary of the Club not later than 1st of June next.

Nomination slips may be had from the Secretary of the Club on application.

Amendments to the Constitution require to be proposed by five active members.

By Order, H. G. Wheeler, Secretary, Yoho Camp Committee, Banff, Alberta.

Elizabeth Parker, Secretary Alpine Club of Canada, 160 Furby street, Winnipeg.

There are bright prospects for the Summer Camp. The President and the outfitters are sparing no pains to ensure success. The Department of the Interior has taken much interest in the preparations, besides contributing valuable assistance in men, horses and mountain equipment. The Legislature of Alberta voted the sum of \$250 towards the Camp's maintenance and in this did a wise action as the attractions of Alberta will receive wide publicity from the holding of this Camp. Private subscriptions have also been received and the preparations for the Camp are now in a forward state.

The Librarian (Miss Jean Parker) has received three works, viz: Mr. Wheeler's "Selkirk Range," bound in morocco, from the author; Dent's "Mountaineering", a very valuable work, the gift of Mr. S. H. Mitchell, of Winnipeg; and "Among the Selkirk Glaciers," by the Rev. Spotswood Green, Dublin, Ireland, one of the Club's honorary members, presented by Mr. Frederick Meineicke, of Milwaukee, a gentleman who takes a deep interest in the Canadian Alps. These form a valuable nucleus for the Club's Library, and it is hoped other contributions will come in. While Alpine literature has grown enormously of late years much of it is embedded in Alpine journals, and it is hoped that by the time the Club possesses rooms of its own they will also possess files of official periodicals from both sides of the water.

The Alpine Club of Canada will always be glad to give information to parties desirous of visiting the Canadian Rockies for the purpose of camping, hunting, fishing exploring or viewing the scenic splendors of the region. It will also place such parties in communication with reliable outfitters and guides, many of whom are connected with the Club. In so far as possible, maps of any particular region will be supplied on application.

All requests for the above information should be addressed to the Secretary, Mrs. H. J. Parker, 160 Furby St., Winnipeg.

# Canadian Boating Prospects.

A Dominion Review.

BY LOU E. MARSH.

**T**HE precise influence of the automobile fever upon yachting, canoeing and kindred aquatic sport is, as yet, problematical. Automobiling is comparatively in its infancy in Canada yet, though to be sure it has, this spring, given abundant signs of a lustiness that warms the cockles of the heart of the car manufacturer and his army of mechanics and agents. At present however it is hard to determine with exactitude the effect it will have upon the sport of kings. That it will have an appreciable effect is certain, but the simultaneous advent of a motor boat epidemic is a circumstance which must be taken into the total reckoning.

The motor car fever is unlike the bicycle epidemic of eight or ten years ago. It does not reach the same class of people. Everybody had a bicycle in the old days and aquatic sport of all descriptions suffered. Its effect was chiefly felt in canoeing, rowing and the small boat classes, because the acquirement of a bicycle did not loom up as a large expense to the man who owned craft of the classes which make up the fleets of the larger yacht clubs. To the man of smaller means—the mechanic, the lesser professional man, the small business man, and the clerical chap—who compose the membership of the smaller clubs a \$100 for a bicycle and another hundred for incidentals, represented about all they could stand each year in the way of sporting expense, and in addition occupied all their spare hours.

The situation today is on a different footing.

Today the larger clubs are the losers by the advent in the popular field of automobiling, but even at that they are not feeling any pinch. In fact every big club in the country is going ahead this year. It seems paradoxical, but it is sober truth. The situation is easily explained. The whole country is prosperous. Money is flowing freely and everything is booming.

The Bluenoses are chortling with glee because things are fairly booming down by

the sea. In Ontario and Quebec the great industries are buzzing with activity, and our goods were never rated higher up. In the Great West—but why dilate upon the unprecedented sweep of progress in the Golden West? On the Pacific Coast the joy of a land that has come into its own is rippling from the foothills of the Rockies to Vancouver's rock girt western coast.

There is lots of money, and the automobile men are gobbling up a goodly share. But most of the men who can afford motor cars are men who can afford yachts too, and they are keeping up both. The one is a useful adjunct of the other. If a yachtsman wants to take a jaunt down the lake for a day or two he sends his chauffeur over to keep pace with him down the shore. If he wants to return to town in a hurry he drops into the nearest port, gets into touch with his Darracq, or his Thomas, by phone, or telegraph, and is whisked back to town, leaving the craft to follow at leisure. He is not dependent upon railway trains, nor is he a slave to anything else but his own inclinations. Many of those who can buy and keep a good car and who do not own a yacht join a good yacht club for its privileges. They substitute a yacht club for a motor club for social and entertainment purposes.

How then does the motor car game affect the aquatic clubs?

Well! it deprives the yacht clubs of men who would have purchased and maintained yachts of goodly size. It divides the allegiance of men who have been yachtsmen for years.

The motor boat is responsible. A motor boat is much cheaper than an automobile, and it has become the substitute for both sailing and automobiling with many men. It costs but little, too, to keep up a motor boat, and the result has been an unprecedented boom in motor boating, and something akin to overcrowding in the young men's yachting clubs. The rowing and canoeing clubs are booming this year

too, but they are not going ahead like the clubs which provide accommodation for those who like to get afloat in something one can move around in without emulating the midnight stealth of a "gum shoe" man toiling in a seminary.

Down in the Atlantic provinces yachting is a trifle stagnant mainly because of the lack of active inter-club competition, but the "put puts" are having a great boom, so much so, that motor boat clubs are being formed in Halifax, St. John and Fredericton. Canoeing, too, has taken a new lease of life.

At Montreal, the headquarters for Quebec aquatics, there isn't a branch of the game without growing pains. The Lake St. Louis sailors are building up a couple of new knockabout classes and the Grand Trunk, Lachines, and St. Lamberts are hugging all their canoeing trophies to their breasts and preparing to reach out for some more. The war canoe championship is held in Montreal and the club which has it is laying plans to withstand the assaults of the oncoming racing season. The Island Aquatic Association crew of Toronto, which cleaned up down Ontario way last season, are on the war path for that championship and the Montrealers are not underrating them. Montreal, too, has acquired the motor speed boat game and will have three craft good for over 20 miles an hour. A try for the American Power Boat Association championships is even contemplated.

At Ottawa—well, don't say a word derogatory to the capital city's aquatic sports. They are nothing if not ambitious at Ottawa, and their canoeists are after the Canadian Canoe Association regatta this summer and the chances are that they will get it. Ottawa usually garners in about everything she goes after. It is her taking way, acquired from long association with the master politicians upon parliament hill. Every canoe club is loaded to the roof with new members and fizzes with enthusiasm like a soda siphon.

Ottawa too wants a rowing championship. Last year four husky Ottawans brought home from the Canadian Henley the junior fours championship and now the same quartette are gunning for intermediate and senior honors. That's Ottawa nerve—of the brand that gets things. They've

got a new coach—Stevenson of Harvard—and are busy curling water every day.

Smiths Falls, Brockville, Perth, but why enumerate them? They are all busy as nailers and so we come to Gananoque and Kingston. At Gananoque the new yacht club is an assured success, and the place is going to be alive with motor boats. Kingston is building a \$15,000 addition to the clubhouse and on May 24th held a big motor boat regatta. Belleville after being dormant for five or six years has awakened and the yacht club there looks as if it would survive its second infancy.

At Toronto the centre of all aquatic sports on the Canadian Great Lakes there never was such a boom. Motor boats take the lead and everything aquatic makes the busy bee of the poem look like a sleeper. The Argos Henley crew is the piece de resistance in the rowing line. The rosy chances of this year's crew is admitted on all sides, and this acts as a stimulant upon rowing generally. The Dons have new quarters, and so much fresh blood that the officers are puzzled to know how to keep the new ones busy. The Torontos are after a fours championship and have Jimmy Rice to coach them. It looks as if the Torontos are again going to come into their own. Argos are crowded for space and are talking of a clubhouse across at Toronto Island beside the Royal Canadian Yacht Club. The Toronto Canoe Club looks as if it is going to win back some lost A.C.A. championships.

The yacht clubs!

The "Busy" sign is hung out on 'em all, from the smallest to the largest. The event of the Royal Canadian year is, of course, the Fisher Cup race at Charlotte in August. It looks as if this is going to be a repetition of the Canada's Cup event of last year as far as real interest is concerned. Everybody is going over for the big event. The Queen City Yacht Club and the National Yacht and Skiff Club are busy attending to the motor boat men, while the smaller fry report superb progress in every direction.

At Hamilton the boom is chiefly in motor boats though Captain J. H. Fearnside's Lipton Cup challenger is arousing great interest and the resurrection of the Hamilton Rowing Club is creating a stir.

In London the rowing game is very much alive, but it has not been galvanized into anything like the activity in Toronto and the east.

In the West the blade game is, however taking great strides, so much so that a revival of the Northwestern Rowing Association is on the tapis. The Kenora crews will not be as strong this year as last, but the Winnipeg club already has a couple of dangerous looking fours busy on

the Red River. Both Kenora and Winnipeg will be represented at the Canadian Henley.

On the Pacific Coast the starting of the Canadian Ketch Maple Leaf, in the San Francisco to Honolulu international yacht race promised a revival of interest, but the San Francisco disaster has knocked the project on the head.

Next season should see Canadian sports afloat at the zenith of their popularity.

## A Backwood's Incident.

BY H. JERVIS.

**A** bright sun was shining on the frozen surface of the snow covered lake, making it glisten with countless brilliants, and dazzling and trying to the eyes to look upon. There was one bay in the shadow and this had been used as the dumping ground for the logs which had been hauled from the surrounding forest. In the woods there was silence of that intensity so often perceived in the cold mornings of the month of March. At intervals this silence was broken by the report of a contracting tie, or the "rap, rap" of a woodpecker boring his way into a dead tree in search of a grub whose condition when found would be but a cold treat to the hungry bird.

Enjoying the beauties of the walk I was wending my way to a lumber camp near by. I had travelled some few miles on snow shoes from the scene of operations of a neighboring firm, and knew the camp for which I was making to be three or four hundred yards back on the banks of a small creek which fed the lake.

Just as I came within sight of the buildings my pleasant reverie was broken by a cry of "jam! jam!" Looking up I saw it was the chore boy of the camp who was trying to make himself hoarse by his excited yells. My return to the practical interests of life enabled me to note at once that owing to some obstruction the stream of the creek was dammed, and as the water was rising rapidly there would soon be a danger of a flooded cookery.

The cook, an elderly man, was apparently a log driver of some experience and quickly took in the situation. He realized that the threatened catastrophe must be

averted, and that it lay upon him to take measures with that end in view. Grasping a peevy he reached the banks of the overflowing stream in a few bounds, and with a supple spring he alighted on an empty pork barrel, which being only partially steadied by the snow and ice which had jammed against it, immediately commenced revolving. By means of great agility the cook managed to retain his position on the barrel. This however could not go on for long and the cook jumped on to a pile of tea leaves and potato peelings. This proved a false move and the unfortunate chef sank to his waist and then did not reach solid ground. The chore boy had remained on the bank from which vantage point he had silently admired the agility of his superior. He now seemed to come to life again and yelled "Punch your peevy through the pile of frozen pea soup below you, and you will let the water off!" Instantly the cook, who was ready to grasp at a straw, followed out this suggestion, and the water finding an outlet, the flood disappeared with a mighty roar. Then the cook calmly walked ashore and shook a part of the camp refuse from his clothes, though an abundant supply still remained upon them and him!

Entering the camp he wiped his hands on the dish cloth, jerked the cat by the tail out of the tea chest, and having kicked the dog from a quarter of beef, proceeded to pound dough!

Shortly after this occurrence the clerk was informed that the stock of beans, tea, lard, etc., was running short, and the cook did not think the supplies would be nearly enough to last until the drive was out!

WINNIPEG BEACH, A FAVORITE SUMMER RESORT FOR THE PEOPLE OF WINNIPEG.

## Canadian Summer Resorts.

**T**HE field is so rich, and so extensive that the difficulty is to know where to begin, what to include, and how much to endeavour to cover. Probably, however, the bulk of readers will desire information regarding the newer of these resorts, while mention must be made of some whose popularity is not likely to fade, and which are today established favorites as at any time in the past.

One distinctive feature of Canadian summer resorts as compared with those of the United States is that it is not necessary in Canada to go to expensive places in order to meet with nice people whose companionship does much to enhance the

opment. A good hotel was built, reasonable rates charged and hundreds at once made their summer headquarters at St. Andrews, N.B. Among others who made their summer homes at St. Andrews are Sir Wm Van Horne, Chairman of the Canadian Pacific Ry., Sir Thos. Shaughnessy, its present President, and many other leading citizens of Quebec and Ontario.

The historic interests and monuments about St. Andrews are many. Much artistic ability has been displayed in the construction of the Algonquin Hotel, and the golf links and tennis courts are among the best in the world. There are now in addition to the larger hotel Kennedy's and

ALGONQUIN HOTEL, ST. ANDREWS BY THE SEA.

pleasures of a holiday. For years the people of Montreal went in large numbers to the Maine coast, where good accommodation and congenial society could be had in places where the rates were from \$10 to \$20 per week. Owing to the great increase of wealth in the United States these prices have been forced up so high that Canadian summer resorts, equally as desirable, have been developed, and provided with accommodation that can satisfy the most exacting.

By the construction of a railway from Montreal through Maine to the New Brunswick shores, a terminal point on the sea, the old village of St. Andrews, by reason of its climatic and scenic advantages, was selected as a suitable place for such devel-

other comfortable hotels, where board and rooms can be had for from \$5.00 to \$12.00 per week.

Speaking of the delights of St. Andrew's one has said: "The old place has been a sort of Sleeping Beauty of the seaside for generations." The roads are excellent, forest-lined and shaded. This is more than a hint to the motorist. The fishermen are civil, capable and have good craft to take one out in.

It was soon found that Fredericton, St. Stephens, St. John, Richibucto, Dalhousie and other places in N. B. offered equally good advantages for summer resorts and hotels and boarding houses were opened in these places and managed with success.

There has been a tendency to leave the sea-side for the woods, and their fishing, shooting and camping, which is by many considered more enjoyable today than the bathing and dancing of the average summer hotel. All sorts and conditions can gratify their tastes in either direction in Canada today.

Moosehead Lake in Maine and the surrounding northern sections of that State are annually drawing an increasing number of devotees with a very large per-

centage in the descendants of the military families who once garrisoned the town. There is good fishing and shooting in the surrounding country, with a long season, which is patronized by those who, in addition to the pleasant summer resort, wish to have good sport as well.

Many writers of note have told in guide books and elsewhere of the City of Quebec and the Chateau Frontenac, the view from which cannot be duplicated anywhere in America unless it be from the mountain

CHAMCOOK LAKE, ST. AN DREWS, N. B.

centage of ladies and children. It used to be that the northern camps were patronized by men only. It is a new departure that has been freighted with much blessing, not only in the development of muscle and generally more robust health among the people, but in the protection of fish and game, and natural beauty, which came as a natural result.

Fredericton is a river town and is the capital of New Brunswick. It has good so-

top at Montreal or Look Out Mountain, Chattanooga.

After crossing the State of Maine eastward we come into a very beautiful section of Canada, called the Eastern Townships of Quebec. It is really a part of the Appalachian Range. The hills are covered with soil to a greater extent than in New England and the primitive forest has been preserved to a larger extent, the result being a combination of mountain, hill and

lake scenery of a very great attractive power.

Thousands are to be found who will tell you with enthusiasm of these Eastern Townships of Quebec and of Lakes Memphremagog and Massawippi and the surrounding glens and valleys with their countless smaller lakes and streams, which

which lies like a gem directly at the foot of the Mountain.

North of Montreal, in the Laurentian Range, are many small hotels and trout lakes and streams. The hotels are very reasonable, charging from \$1.00 to \$2.00 per day and giving very fair value therefore. The habitue of the luxurious Ameri-

CHATEAU FRONTENAC, QUEBEC.

bring to this section a large patronage from the southern States and from the larger cities of Canada. Massawippi has a colony of summer people from Baltimore and the south, and Memphremagog is delightfully marked for scores of miles with the beautiful residences of the capitalists from both sides of the line. This deep and clear international lake has been stocked with the best kind of fish and good roads all around the lake enable residents to enjoy its matchless beauty with comfort from their carriages and automobiles.

Among the delightful spots not yet developed, but which must in the near future attain to a great residential value, is Mt. Orford and the thirty-three lakes which cluster all around its base. Here we have an elevation of three thousand feet with a splendid supply of the purest spring water coming from the summit and falling down the mountain sides and good railway and good wagon road connections. One of the attractions of this section is Orford Lake (not to be confounded with Orford Pond)

can hotels must go elsewhere to obtain what he thinks he needs; though possibly it were better for him to content himself with the plainer fare.

The Place Viger Hotel in Montreal is one of the new departures, being a station

PLACE VIGER HOTEL, MONTREAL, QUEBEC.

LAC DES SABLES, ST. AGATHE, QUE.

hotel and yet has for the use of its guests along its whole front and extending hundreds of yards on each side the beautiful Place Viger Square.

All around Montreal are summer re-

Lake of the Two Mountains and the various branches of the St. Lawrence River and the tributaries of that mighty stream.

Westward from Montreal, reached by a carriage drive from Kaladar Station, on

THE MINTO HOUSE, LAC ST. JOSEPH, NEAR ST. AGATHE, QUE.

sorts which are patronized by the young men and others who have to stay in the city for business reasons while their families go to the forest or the sea-side. Much enjoyment is to be had by the residents of Montreal on the shores of Lake St. Louis,

the Canadian Pacific Railway line to Toronto, is Bon Echo Inn. This is a unique place of rest with running water, fine bathing and modern conveniences.

In the Kawartha Lakes, Muskoka Lakes and French River Districts small and large

hotels are being built, and a larger number of camps for the new class of future sportsman and summer-resorter which is being evolved out of a society to which the love of the wild is an irresistible lure. This class is a growing one, every one being a sort of recruiting sergeant for his regiment and his particular location.

On the height of land between Ontario

tion, as one that has not yet failed in supplying good accommodation to those who have asked for it.

There are a number of hotels on Lake Temagami, which were very much overcrowded last year. They are good of their kind, but this year the tremendous excitement there, together with the large amount of advertising that has been done

CANAL, BOBCAYGEON KAWARTHA LAKES, ONT.

and Quebec, Lakes Kipawa, Timiskaming, Temagami and the myriad of unnamed lakes, many of them of large dimensions, are gradually becoming known to a steadily and quickly increasing class of patrons. The hotel accommodation is not keeping pace with the demand, but we can recommend Hotel Bellevue, at Timiskaming Sta-

tion of this Lake will make it a necessary precaution to write ahead to these hotels in order to be assured of accommodation. Not to have accommodation in a new country of that kind, unless one is provided with tent and complete camping outfit and provisions, is a very serious matter.

The Lake Nipissing and French River

VIEW FROM KENSINGTON POINT, DESBARATS.

country is one where the traveller must be accompanied by his tent and provision bag. The canoe trip is delightful through this country when one is well outfitted, and there is no better fishing in the world than that of the French River for bass and maskinonge. It is not a trout country, or at least, it would be safe to say that the trout lakes and streams are not yet made known to the public if they are there. Further west, southwest and east of the French River there is good trout fishing.

There is a good hotel at Sudbury (from a western standpoint) and good stores. From there towards Sault Ste Marie there is good fishing and shooting at many points, but the only summer hotels be-

good hotels, and following along the shore of Lake Superior to Batchawana Bay and to the mouth of any of the rivers that empty into Lake Superior as far as Fort William good fishing is to be had, but one must bring one's tent, canoes and provisions after leaving Sault Ste. Marie.

Coming back to Sudbury and following the main line, which crosses many of these good fishing rivers and skirts the shores of many a lake, we come to the paragon of trout rivers, the Nepigon, to visit which make for Nepigon station.

Very good fishing and shooting can be had near Port Arthur and in the thousand miles of wilderness many thousands of good camping sites can be selected.

Fort William, at the eastern end of

HIAWATHA CAMP HOTEL, DESBARATS, ONT.

tween Sudbury and Sault Ste Marie are at Desbarats and at points on St. Joseph Island. Desbarats has a good camp hotel at \$2.00 per day and the St. Joseph Island hotels give good value at \$1.00 per day. The situation at Desbarats is particularly attractive. There are one hundred islands in a cluster and the spot is ideal for sailing, boating, canoeing and motor boats. A drive of a few miles inland brings one to virgin lakes with excellent bass fishing, and a little further back the same roads bring one to a higher level where brook trout is to be found. The return trip from these lakes can be done by canoe.

At Sault Ste Marie are a number of

Lake Superior, has a good hotel and good fishing and shooting within easy reach.

Three hundred miles west of Fort William, after passing many good hunting and fishing districts, we come to Kenora, formerly Rat Portage. We are sorry that name was changed. Its thousands of islands afford ideal building spots and many of them are built upon, and the society people from Winnipeg there disport themselves for two months and more. The elevation is right for the ideal climate and, as there are no unfavorable conditions, the summer colony is flourishing.

Those of the population of Winnipeg, who can afford to leave there in summer; (not because of its unhealthfulness, but be-

cause the Red River of the North is not as attractive as others) go to Winnipeg Beach on Lake Winnipeg, lying fifty-one miles to the north of Winnipeg. Winnipeg Beach is a popular summer resort, with miles of sand beach and the great fishing and shooting, which is carefully preserved, give it an assured future.

There is good shooting and not good fishing around many of the lakes of the thousand miles of prairie country separating Winnipeg from the Canadian Rocky Mountains. There are growing towns and cities which have their local resorts, but the Canadian Rockies and the Pacific Coast draw all those who can afford it from the prairies.

if his stay is a short one, so overpowered is he by the stupendous scenery that is around him. The writer is fond indeed, both of fishing and shooting, and yet he has spent hours and days simply watching the mountains—the play of light and shadow across their tops: the formation of storms; the temporary disappearance from view of the mountain peaks in the snow-storm; the merging of the single peak from the storm and its transformation into myriads of diamonds and pearls, blood stones and opals by the rays of the “light of the world.”

Every one of the matchless hotels, from Banff to Glacier and from Field to Vancouver, are delightfully situated, and the

C. P. R. HOTEL, CANADIAN NATIONAL PARK, BANFF, ALBERTA

The trip to the north from Calgary and Edmonton via the Mackenzie River to the Arctic Ocean is destined to be popular. It is unusual in the extreme in all its conditions, and the unusual draws in our day with a magic power and counts its devotees in ever increasing numbers.

Now we come to the Canadian Rocky Mountains and to summer resorts on their higher plains. Here we have awe inspiring scenery, almost oppressive in its grandeur. Ice-capped mountains there are, and seen from their base, all their magnificent proportions are enjoyed to the full. Here the fishing and shooting is as good as anywhere in the world, but many a fisherman or sportsman will neither fish nor shoot

people one meets take nothing from the enjoyableness of one's surroundings. Last year, it is true, the World's Fair at Portland, Oregon, occasionally crowded these hotels, perhaps making them a little uncomfortable, and the very cheap rates given by the Railways may have occasionally given some one a neighbor, whose acquaintance he felt he might have dispensed with; but that was temporary and is now past.

To illustrate the kind of society one may meet in the Mountains the writer will give an instance: On a trip from Golden, B. C., on one of the light draft steamers running from there to Lake Windermere and other mother lakes of the Columbia

River, among the thoroughly friendly and sociable party of twenty-four, who previously had for the most part been strangers to one another, were several titled people from Great Britain, a United States Consul and his daughter and half a dozen globe trotters who had seen almost every corner of the world. One can imagine how delightful it was to do this trip in such company, surrounded by the two great ranges of the Rockies and the Selkirks, crested with snow clad peaks. Among the deck hands were the scions of three noble families, who preferred to "serve in heaven" than to reign elsewhere. In our Rocky Mountain trip we never left a steamboat, a sleeping car or a hotel without regret.

forgot to mention the Sicamous Hotel on Sicamous Lake, equal to anything anywhere—good enough for anybody.

The accident that led Major Rogers to follow the flight of an eagle down the Eagle Pass and the building of the Railway that followed at the foot of the mountains rather than over some of the higher passes near the summits (as is the case with other lines) has made of the scenery along the line of the Canadian Pacific Railway through the mountains infinitely the most impressive railroad journey in the world, and until some similar accident leads some other railway to do likewise this scenery will remain incomparable.

In all the districts covered in this

VIEW FROM BALCONY, LAKE LOUISE CHALET, LAGGAN, R. C.

ting having to leave behind some charming friends we had made during our short stay.

We met two ladies in the busy year, of which we have spoken, who had made two entire trips across the Rockies and back by train while waiting for rooms to be emptied for them at Banff. The large hotels have been enlarged again and the process will continue as need occurs.

The Chalet on Lake Louise is repeatedly said by world-wide travellers to have the most beautiful location and the finest, grandest and most delightfully unforgettable outlook from its verandahs of any hotel in the world. It baffles description. And then one would be inexcusable if he

sketch there is no "hay fever," "rose fever," "autumnal catarrh," "hay asthma," or the evil thing under whichever name it is known. Dr. P. H. Bryce, Chief of the Medical Department of the Canadian Government, says:—

"Hundreds of lakes, buried in the forest recesses, form highways in every direction for the tourist, sightseer or sportsman who, traversing river, lake and portage, lies down at night by the camp fire marvelling that he is only tired, never exhausted. Muscles, appetite, eye, ear—indeed his whole physical nature,—are aroused, and in an atmosphere never sultry and always bracing he inhales an air as intoxicating as wine."

# Our Holiday in British Columbia.

## The Best of Sport and Scenery.

BY DR. A. C. FALES.

**H**AVING decided to go to Canada for our holiday, and also fixed upon the West as the scene of our annual vacation, it still remained to be a little more definite as to locality. From information received we fixed upon Cassiar.

What is Cassiar and where is it located? This term applies to a district situated in the Northwestern part of Canada, south of the sixtieth parallel of North latitude and is bounded on the North by the Yukon Territory, on the West by that strip of Alaska which extends South to the Portland Canal, on the East it is separated by the Districts of Caribou and Atlin from the Rocky Mountains and on the South is continuous with the province of British Columbia of which it forms no small part.

My attention was first directed to this country through communications with the Hudson Bay Company, who on former occasions had helped to arrange my hunting trips; but chiefly through a letter written by Mr. F. Matheson, their manager at Telegraph Creek, B. C.

This region is a comparatively new one for sportsmen, as previous to this year, I could find by inquiry that only about seven hunting parties had been there in the history of the district. Much prospecting has been going on there for years and the Hudson Bay Company has been trading with the Indian tribes for perhaps three quarters of a century, but today one finds it in as primeval a condition as when America was first discovered.

Those who have been there will bear witness that it stands today pre-eminently the greatest game preserve on the North American continent, not only in the variety but in the quantity of its game which includes many of the noblest animals of the chase. This must long continue to be the case for reasons that will appear in this narrative. Not only is the game steadily increasing, but it will necessarily do so, for the few hunters who go there, make little or no impression on its numbers. The great rush of white men to the Yukon dis-

trict farther North must certainly have resulted in a great migration of game to this more southerly district and this is completely substantiated by the Indians and traders alike. Twenty-five years ago moose were unknown there, and some old Indians told me that they as young men had never seen or heard of such an animal. But now they are constantly on the increase, and in size are larger than those of the Eastern

TELEGRAPH CREEK, B. C.

Provinces of Canada or elsewhere unless we except some portions of Alaska. Why moose in general are larger here and in Alaska than elsewhere I am unable to say but I do not doubt its truth.

The caribou of Cassiar are noted for the great size of their antlers. Bear, both the grizzly and black are abundant. There are four distinct varieties of mountain sheep. The ordinary big-horn (*Ovis Montana*), the *Ovis Stonei*, the *Ovis Fanini* and the *Ovis Dalli*, the latter being pure white. The mountain goat (*Oreamnus Montana*) were so numerous in the section in which we hunted that I might say they were always in sight. Grouse of which there are four or five kinds were very plentiful and ptarmigan equally so.

Leaving Boston on the evening of July 27th, 1905, in company with Mr. B. T. Loudon of Allston, Mass., to whom I shall

refer hereafter briefly as Tom, and Mr. W. A. Jones of Chicago, we journeyed together to what seemed to us "the promised land."

From Vancouver we left by steamer, "Princess Victoria" for Victoria, the capital of British Columbia, situated on Vancouver Island. Here we stayed two days making final preparations with the Hudson Bay Company and awaiting the Canadian Pacific Railway steamer bound North on August 5th. We were disappointed in this, as we could not induce them to land us at Fort Wrangell, our destination, and accordingly we were compelled to return to Vancouver and take passage on the steamship "City of Seattle" of the Pacific Coast Steamship Company which left Seattle on the 4th of August and Vancouver on the afternoon of the 6th. On account of a crowd of excursionists we were unable to secure staterooms and were given cots instead. Rather than be left behind however, we would have slept on deck.

It is no part of my purpose to dwell on the details of this journey north, which could be made the subject of an interesting article. We kept the inside route, running nearly the whole way between the islands and the main-land, through water as calm for the most part as that of a lake, with beautiful mountain scenery on either side, with a party of pleasure seekers bound for the land of snow, ice and the totem-pole.

Our first stop was at Ketchikan, Alaska, on the afternoon of the 7th at 3.15, where we went ashore. This town consists of several saloons and log residences, a saw-mill and a canning factory. A long plank walk led us to a small rapid stream flowing on the outskirts of the town into the sea. From the bridge we watched the salmon ascending the stream. Their numbers were legion. Indeed, the pools below the bridge were so packed that they could only move by pushing aside their fellows. Small boys were wading in and catching them in their hands. Many were dead and dying in the pools, some of them no doubt from injury sustained on the rocks in ascending the rapids immediately above the bridge. It seems to be well substantiated however, that all these Western salmon die after depositing their spawn.

Several totem poles were seen at this

place and an occasional "Siwash". Ketchikan is overlooked by snow clad mountains. Several mining prospects are in the vicinity. Leaving here we passed the towns of Metlah-Katlah and Kasaan, which are merely old Indian villages, with a few white inhabitants. The steamer usually calls at these places, but this time she omitted them and finally landed us at Wrangell, at one o'clock on the morning of the 8th. We were conveyed through the darkness and rain to the Pioneer Hotel and assigned to a room right over the bar, where the sounds of mirth and hilarity ceased only with the rising of the sun.

The next morning we spent in looking over the town. Judging from its appearance it has seen better days. Many of the buildings, constructed chiefly of logs, are falling into decay and untenanted. There are two hotels, the one at which we stopped and across the street, Hotel Wrangell. Neither are very fine specimens of architecture. There are many stores, nearly all of which carry a line of Indian curios, which are much sought after by tourists. The buildings are arranged about the water's edge in a crescentic manner, there being only one street worthy of the name, and this is planked all over to keep pedestrians out of the water. Owing to the fact that it rains about all the time, these planks are more or less slippery, principally more, and very often festooned with a greenish moss. Fortunately I wore hob-nailed boots which served a useful purpose as poor Jones, who was not so well provided had a bad fall that almost incapacitated him for the trip.

The hotel at which we stopped contained besides bedrooms, one general service room used indiscriminately for bar, smoking parlor and waiting room. The proprietor, Mr. Lynch, is an old timer in that country, his early days having been spent in prospecting and placer mining. From him I gathered a lot of ancient history of the place.

Perhaps the most conspicuous figure of the town is Old Bob Reid, formerly a prospector and miner, who settled down here, built a creditable looking store and carried on with his partner a general mercantile business. Having sold out to the latter he built a wharf and bonded warehouse,

which occupies most of his attention. Ever ready with a joke he replied to my interrogation "if there were any horses in Wrangell?" "No! but there are plenty of jackasses."

There are many totem poles in Wrangell curiously carved, with images of the crow and frog predominating. These carvings relate to some tribal or family history as do the hieroglyphics of Egyptian and Babylonian history. They are often the depositories of the remains of celebrated men among the tribe.

We had expected on arrival here, that men and canoes would be immediately available for the trip up the Stikine River, which represents the only available access into the Cassiar country from this place. In this, however, we were badly informed, as the Indians were all away fishing and white men capable of navigating the river were scarce. We were therefore obliged to wait till someone showed up. A canoe that had gone up the river with a hunting party a few days before our arrival carried word to Chief Shakes to hurry down as soon as possible.

Not content with doing nothing we resolved on a deer hunt on one of the numerous islands adjacent to this place, and for this purpose secured the services of Charlie Oleson, a young Swede, who on his way to the Klondyke stopping en route, lost his heart to one of Wrangell's fairest daughters, otherwise he might never have figured in this narrative. He proposed that we row around to the west side of Zarembo Island, stop at an old cabin of which he knew and hunt on a mountain slope nearby.

On Friday, Aug. 11th, we started in a row-boat, in tow of a small tug, which was bound for a salmon cannery on Prince of Wales Island. Before we cut loose from the tug a storm came on and the captain kindly went several miles out of his course in order to put us under a lee shore where we could effect a landing. Owing to his sprained leg Jones did not go along. We made the nearest point on shore that we could reach, and in the rain put up a tent and otherwise prepared for the night as best we could.

On the following morning we coasted along the shore in search of the old cabin. Passing the mouth of a small stream Char-

lie suggested that we go up a short distance and look for salmon. This we did, and while peering through the shallow water I discovered a large fish, which Charlie said was a halibut. It was a surprise to me to find halibut in such a place. The thing now uppermost in our minds was to get him, but how? This we soon decided could be accomplished by tying a heavy sheath knife to the end of a pole which we had with us, and use it as a spear. Charlie acted as executioner while we watched him with the keenest interest. Stealthily he pushed the knife to within a few inches of the halibut's back and then with all his strength he buried it therein. After sev-

CANON OF THE STIKINE, ABOVE TELEGRAPH CREEK.

eral plunges, during which the pole broke, the fish got away with a long gash in its back. We followed it up, having in the meantime repaired our weapon, and soon came, not to the same fish, but another, who received like treatment, it also escaping. A third and a fourth was similarly dealt with. Then we decided to change our tactics and aim for the brain. The fourth fish did not go far when we discovered it again, and this time Charlie with a well-directed plunge speared him forward of the gills, inflicting a terrible wound. A stream of blood followed the fish as it made down stream, where running into very shallow water we captured it. This halibut was more than I could lift, and on opening its stomach I found therein eight large crabs and a partially digested salmon. Needing no more fish we continued our journey. About noon we came in sight of the cabin and at the same time espied two deer on

the shore. Pulling as closely to them as prudence would allow we opened fire. Owing to the heavy swell the boat rocked considerably and we shot wildly. Finally the deer took in the situation and started for the woods when a chance shot struck one breaking his hind leg. The wounded deer managed to get into the timber, but Charlie landed and soon despatched him.

Pulling up to the front of the cabin we soon started a fire and had dinner of fried venison and halibut steaks, after which we amused ourselves shooting at seals which were abundant along this coast. At a nearby trout stream we tried with flies, but without success, Charlie observing that we should have salmon eggs for bait.

The following morning we started for the top of the mountain where we expected to find some old stags with good sized antlers. Passing through heavy timber, among which I noticed cedars of enormous size used by the Indians for making canoes, we reached the foot of the mountain and began the ascent. The slope was very gradual and we had no difficulty in making our way, with only slight exertion. Soon two small deer were seen by Charlie and myself and in trying to show them to Tom that he might have first shot, they ran a-

ZAREMBO ISLAND — 2 DEER  
KILLED BY ONE BULLET.

way. Thereafter we separated in order to more thoroughly cover the country, and in about half an hour I heard the boys firing. Stopping to listen two deer came bounding my way which I promptly dispatched. Attracted by my shooting the boys soon came up, and concluded the deer that I had kill-

ed were the ones they were after. Leaving our game at this place, we climbed to the summit, but saw no more deer that day, much to Charlie's disappointment as he said he had always good luck at this place on former occasions. Returning to the boat we passed the night at the old

THE CANOE IN WHICH WE EMBARKED WAS FORTY-TWO FEET LONG.

cabin, and next morning started to row to Wrangell, against wind and tide. The day was fine however and we did not mind it much though our progress was slow.

We stopped at two places along the shore to shoot deer, in one of which I was fortunate enough to bring down two with one bullet. The deer on these islands are the true black tail (*Odocoileus Columbianus*) and must not be confounded with the mule deer of the mainland (*Odocoileus Hemionis*) which also has a black tail. We arrived at Wrangell at eleven o'clock that night, very hungry, having eaten only hard tack and raw onions. Jones had been very anxious about our safety and was on the point of chartering a tug to go and hunt for us. Chief Shakes had arrived in the meantime and all was in readiness for our departure which was to take place early the following day.

Leaving Wrangell at 10.30 on the 15th of August we began our journey up the Stikine River. The canoe in which we embarked was forty two feet long, made from a single cedar tree and like the Indian canoes in general use on that coast was very much higher at bow and stern than in the middle. The advantages of this arrangement are obvious, as the captain of the

boat, who stands in the stern, and uses a very long heavy steering oar, needs this oar considerably elevated above the water, so that while using it he can at the same time observe the water ahead and avoid rocks and dangerous rapids and shoals. The bow is high to correspond in appearance and to keep out water when running rapids. Our canoe was an exceptionally fine one, being nicely finished, both outside and in extremely light weight considering her dimensions and capable of carrying about five tons burden.

All our baggage and provisions were packed in convenient parts, so as to interfere as little as possible with the rowers and from end to end a long broad strip of canvas was spread which effectually covered everything and afforded protection from rain and sun. Under the gunwale on each side ran a long rope held in place by loops which could be used to attach there to the canvas so that in case we desired we could make a tent like covering. There was also a place for a mast which we carried, on which two roughly square sprit sails could be set when the wind was sufficiently strong to be utilized.

In addition to our captain, Chief Shakes of the Thlinklit tribe, we had also as oarsmen, his two sons, George and Moses, and Charlie Wilson, a Skeena River Indian whom Shakes had requisitioned for the trip. The latter could not talk the language of the others, but could speak Chinook, an invented dialect introduced by traders for convenience in communicating with the various tribes. As they all spoke fairly good English we had no difficulty in coming to an understanding all around.

Such a canoe as we had is worth four or five hundred dollars and Shakes owns a much larger and better one still, which he sent to the World's Fair at St. Louis.

The sky was clouded when we started, but as this is the usual thing at this place we paid no attention to it, expecting that it would rain most of the time anyway. Nor were we to be disappointed, for within half an hour it began and was the rule through most of the journey. However we were all provided with oil clothes and hats and did not care whether it rained or not. Passing out of the harbor we rowed around a rocky point of Wrangell

Island and skirted its shore for a short distance, then striking across the channel, between the Island and the mainland we came to the mouth of the Stikine River, about seven miles distant from Wrangell. The water in this channel and in fact all about for several miles is extremely muddy, which is sufficiently explained by the debris brought down by the swift current of the river.

Just before entering the mouth we passed a small creek named Garnet Creek, in allusion to a garnet mine in the vicinity. On the left stretching almost wholly across the river's mouth is an extensive bar, covered with drift wood. This bar is being formed by gravel and sand brought down by the swift stream. Soon we entered the river proper and our speed in consequence was very much diminished. Being determined to return home with as full a knowledge of this river as possible, I kept my eyes busy and also questioned the Indians.

The Coast Mountains through which the Stikine has broken its way to the sea, consist of several roughly parallel ranges, with many cross ranges between, all of which are capped with snow and ice; and glaciers, of which I shall speak later, are common.

The navigation of the river is accomplished by rowing with long oars. The Indians at each stroke rise from their seats to a standing position, leaning forward and throwing all their weight into the stroke. This kept up all day is extremely hard work and one would think at the end of the day they would want rest. This is not so; as soon as they land for the night they would chase each other about, race through the bushes, laugh and joke or would seize a salmon gaff and wade in after salmon. They were always in good spirits no matter how hard the labor or how wet and cold the weather. Besides rowing they pole the canoe in shallow water and prefer it to rowing whenever possible, and better still they prefer lining or tracking; that is running on the shore with a long rope fastened to the bow. They use the sails when possible and often combine sailing and rowing or lining and poleing as the occasion demands.

The first range bordering the sea is two or three thousand feet in height and extremely well wooded part way up. This is

reasonably accounted for by the immense rainfall on this coast, where sea breezes laden with moisture from the warm Jap-an current come in contact with the snow capped mountain tops.

As the Indians were doing all the work I had nothing else to occupy my time but gaze about me and one of the first things to attract my attention was the immense numbers of salmon making their way up stream. Though the water was too muddy to see them their presence could be easily made out by the small rips made in their progress. Occasionally the Indians would strike at them with a pole which accelerated their speed considerably, often they would jump completely out of the water. As salmon were in constant attendance on us all through this trip I have thought it not unwise to digress somewhat and give some account of them.

From time immemorial they have furnished the Indians of the coast with a never-failing supply of food, and in accordance with their habit of going up the streams as far as it is possible for them to reach, the interior tribes have also depended on them for their existence. Not only the human race profit by their presence, but the numerous birds of prey in this region, the eagle, crow, raven and hawk look to them for their means of subsistence. The bears also know as well when they are due and in accordance therewith, seek the smaller sloughs and creeks at the right time and regale themselves with a bountiful diet; and it is here that the Indians are accustomed to find them while they are seeking their prey.

As near as I could find out there are at least six varieties of salmon on this coast. The King or Queen or Spring salmon make the first run. They are the largest, often weighing as high as sixty or seventy pounds. The Sock eye or Silver salmon is the most highly colored and preferred for canning purposes. They range in weight from four to eight or nine pounds. The Cohoe or Tyee salmon are the next most valuable, and weigh from 6 to 7, or twelve or fourteen pounds. They are also largely canned. Besides these there are the dog salmon, which only recently are acquiring a commercial value and are sent largely to the Orient; the Humpback, and the Steelhead; the latter are the last to

ascend the rivers and are found as late as December. From what I heard they are not so much a salmon as a large variety of trout.

Several eagles were seen the first day, and Jones fired at them several times, using small shot, but without result. There are two varieties, the bald or white-headed and the golden eagle.

On this day's journey we overtook Charlie Rose, a hunter and trapper, who was going up the river with a load of supplies which he intended to cache for use during the winter's hunt. Aside from him we saw no human being, on the river during the trip until we were near our destination at Glenora and Telegraph Creek.

We made about sixteen miles the first day, not troubled much by flies and mosquitoes and pitched our tent for the night on a wet sandbar, which is the only available place along the river for the purpose. As it was raining at the time, we put the tent up inside out in our hurry and not having proper poles we did not get her up tightly enough, and as a consequence she leaked more or less. Towering above us was a lofty snow capped mountain peak largely wrapped in clouds. Here in the rain we made a fire of wet drift-wood and fried some venison steaks cut from a deer I had brought along from our hunt on Zarembo Island.

The following morning shortly after starting we came in sight of a Glacier known as the first or Little Glacier, sometimes called Popoff Glacier, which fills a high valley on the North side of the river about ten miles from its mouth. Owing to cloudy, rainy weather we were unable to secure any photographs.

A particularly difficult rapid was encountered today and with all the combined efforts of the Indians poling vigorously they could not stem the current at the first attempt; but Shakes very skilfully steered across to the other side where by hugging the shore closely they succeeded in forcing a passage. I was much struck by the ability of Charlie Rose, who in a smaller canoe poled up this rapid unaided. For minutes at a time he made no progress whatever but grimly stuck to his work and got through. The last we saw of him was at this place, as we soon left him behind. Many eagles were seen and the banks of

the river were covered with bushes loaded down with red and blue colored berries, none of which were familiar to me. The river was half a mile wide in places and bordered by sloughs on either side. In general, Shakes kept to the latter, wherever navigable, as we thus avoided the more difficult current of the main river. A knowledge of these sloughs is indispensable in making good progress up stream. Saw a few ducks but no geese. George Shakes gave us a good exhibition of the Indian method of taking salmon with hook and pole. An ordinary gaff has the point of the hook set backward towards the handle, but in this case the hook is set with the point towards the fish and is held in position by a slot in the pole, the hook having a bit of cord attached about a foot long. When a salmon is struck he liberates the hook from the slot and in some way manages to pull it clear through his body, and with all his struggles he cannot get away as the bit of cord holds him fast. Farther up in the country I did not find the Indians using this method, preferring an ordinary long handled gaff instead.

On account of so much fog and mist we could not see the beauties of the country thereabouts. We camped for the night about one mile from the International Boundary, thirty four miles from the mouth of the river following its windings or about twenty-five miles in an air line. Our tents were again pitched on a sand and gravel bar, with main river in front and a large slough behind. We could not drive stakes and had to use logs and stones to keep down the bottom of the tent. Not bothered much by flies and mosquitoes, but if the weather was fine I judge from what the Indians said we should have been devoured.

We resumed our journey next day at 8:30 a.m. and soon came to the International Boundary indicated by a swathe through the woods and by monuments placed on the mountain tops. A little farther up the river were some old log buildings, the former seat of the Custom House, since moved to Glenora. It rained more or less all day and at 3.30 p.m. we reached the mouth of the Iskoot or Skoot River, the principal tributary of the Stikine. It

comes in from the South and is a very swift turbulent stream. Having heard a good deal about the Iskoot as a bear country, we resolved to spend a couple of days on our way up, and accordingly we poled up this stream to a point about a quarter of a mile from its junction with the Stikine and landed the contents of the canoe on the ever present sand bar. Here we scared up a flock of wild geese, which had been resting on the bar. It being only about 4 p.m. Shakes decided to take the canoe and pole up one of the numerous still-water salmon creeks which empty into the Iskoot looking for grizzly bear. Not long after entering the creek we began, to see signs of bear, their tracks showing plainly in the soft mud along the banks. Keeping a sharp watch we followed along until we came to the head of the creek, where a small rill trickled down the mountain side. At this place the water was literally alive with salmon and being very shallow near the shore their backs showed above water. They were spawning and dying here; we could see plenty of dead fish in the bottom, and on the shore among the grass and bushes were remnants of many half eaten by the bears, while a unsavory odor of decaying flesh pervaded the atmosphere. Monstrous tracks all about and paths led through the dense jungle in various directions, where the bears come down to fish. We sat for some time in the canoe with our rifles ready hoping to hear their approach, but Shakes said we were too late as the bears having been there before us had gone to the mountains and would not be back till the next day. I asked him what time they usually came down and he said when the sun has gone down just enough so that it shines on the middle of the water; that is when one of the banks of the creek is in shadow. This he thought would be two or three o'clock in the afternoon. We went ashore and followed some of the paths a short distance, then returned to the canoe resolved to come back on the morrow and lie in ambush for them. Never was I in a more likely place for grizzly bear and I felt sure of getting one the following day. Questioning Shakes he said the bears came down to the water, waded in and stood or sat motionless until a salmon came within reach, when with a sweep of his paw he

threw the fish ashore. They catch more than they need and this explains the fragments that we saw strewn all about.

Returning to our sand-bar we had to pitch our tent and eat our supper in the dark, and rain coming on we passed a disagreeable night; but we had great hopes of glorious sport on the morrow and we regarded bad weather merely as a preliminary penance.

In the morning when we awoke, the rain was pouring down in torrents and the wind blowing a gale. The river had risen appreciably. We did not get up till 10.30 thinking it better to kill time in bed than stirring about in the rain. The weather show-

GREAT CANON OF THE STIKINE.

ing no signs of improvement we decided to abandon our hunt for grizzly in this vicinity and push on up the river in the morning and if conditions were favorable we would try at the Hudson Bay Flats farther along. We passed a miserable day, everything covered with mud and wet sand. However we kept up our courage.

Arising early in the morning we embarked at 8.30. The rain had ceased temporarily, but the sky was cloudy. This morning we caught our first glimpse of the Great Glacier. This Glacier enters the valley of the Stikine nearly at right angles, through a break in the mountains two or three miles distant from the river bank. Before entering the Stikine valley the glacier has a width of from one-half to three quarters of a mile, but upon emerging from the bordering mountains it immediately expands in a fan like manner,

its actual front upon the river being from three to three and one-half miles in width. The front of the glacier appears to be quite close to the edge of the river, but is actually one-third of a mile distant at the nearest point. The interval is occupied by moraines and marshy pools, the outer tier of moraines nearest the river forming wooded hills about one hundred and fifty feet high. Large streams issue from beneath the ice. The miners who have observed this glacier for a number of years say that it is constantly receding and Shakes told me the same thing. He also volunteered the information, that the Indians have a tradition in which they state that the glacier formerly extended across the Stikine Valley, the river running through a tunnel like opening. A hot spring is situated immediately opposite the glacier on the other side of the river.

The first Hudson Bay Company post was located here but later it was moved half way up the river and subsequently abandoned. About opposite the middle of the glacier two wild geese arose, one of which I fired at, bringing him down with a rifle bullet. It proved to be a male bird and was as large as any domestic goose. We cooked him but the flesh was tough and not very palatable.

Today we had the first sunshine since leaving Wrangell and at 2 p.m. we hoisted sail and made good progress. Looking behind we could see that it was raining in the Iskoot Country. Beautiful cascades could now be seen coming down the mountain side, one or two of which we photographed. In one place from the foot of a miniature glacier a number of small rills came trickling down, resembling in the distance silver threads, eventually converging into one, which empties into the Stikine on our left the water of a greenish color due to glacial silt. The mountains here are about six or seven thousand feet high and were swathed in white clouds.

The wind increasing as the day wore on, we were swept by a most imposing spectacle of ice, snow and green foliage. Tonight we were fortunate in finding a decent place in which to camp—a grassy spot which had been used before with plenty of old tent poles and firewood.

There was not much of special interest to chronicle on the following day. It rain-

ed all night clearing in the morning. Most of today's journey was particularly hard on the men poling and lining in heavy water. We passed the Porcupine Glacier on our right and made an early stop for camp intending to go after bear in the morning, in an adjacent salmon creek.

Awakened by the Indians at 3.30 a. m. we had a hurried breakfast of coffee and stewed beans and then poled up the creek. All along we found fragments of salmon which the bears had left and lots of fresh tracks of grizzly. At the head of the creek we expected to find them but long before this was reached our further progress was prevented by a fallen tree, which effectually closed the creek for the canoe and as we had already wasted so much time Shakes thought it not wise to go after the bear on foot through the thickets. Somewhat disheartened we took his advice and turned back when game seemed almost within our grasp. This incident and the one on the Iskoot convinced me that a successful bear hunt on the Stikine requires a special trip for the purpose, when one can wait for suitable weather, and further I made up my mind that a Peterboro' canoe taken along to paddle up the salmon creeks would be much superior to the larger and longer canoe which we had. A week at each of the creeks I mention would certainly reward the hunter with all the sport he could wish.

Coming down the creek, we started on our way up the river at 7 a.m. Soon we came on a flock of geese resting on a sand bar ahead. I got out, crept as closely as I could and fired at them, but the ball fell short and they flew away. Stopping for dinner at 10 a.m. we had quite a wait while the Indians made a new oar to replace one broken during the morning. Here we took some photographs. Starting out again a stiff breeze came up, when hoisting sail we sped along rapidly. Passing the Hudson Bay Flats, a noted place for bear, Shakes demurred at stopping on account of wasted time and we let him have his way. Mud Glacier or Dirt Glacier now appeared on our left. This is so called by the miners on account of the great quantity of debris with which its surface is covered. This glacier is much smaller than the last, having a width of from one quar-

ter to one-third of a mile. Like the Great Glacier it comes down on the river flats. The mountains now appear to have less trees and smaller, we are getting further inland where there is less rain. Have seen no bear or goat yet, not even a porcupine. I began to think that luck was against us. The sun was shining bright and clear today and black flies and mosquitoes were quite annoying. We were now six days out

We were swept by a most imposing spectacle of snow, ice and green foliage.

and still little more than half way. Tonight we camped near a small salmon creek and with George Shakes we went to look for bear, but aside from old tracks we saw nothing.

(To be Continued.)

From time to time newspaper paragraphs appear of seizures of game at Ottawa showing the activity of Game Warden Loveday in upholding the protection laws. These items collected make a formidable showing in the tables attached to the annual report of the Ontario Game Commission. During the year no less than 3,400 partridges in addition to several boxes of these birds, 116 beaver skins, 8 otter skins, and 771 muskrat skins were seized. The trophies also included a boat, spears, etc. Of course Ottawa is an important centre from which attempts are made to illegally ship out game, but this only emphasises the necessity for having a vigilant officer at such a point, and serves to show that Mr. Loveday is the right man in the right place.

# In Temagami's Tangled Wild.

BY AN EYE WITNESS.

"**I** SN'T this a wonderfully beautiful lake?" asked the summer-resorter of the son of a President, and Theodore Roosevelt, jr., answered unhesitatingly and almost reverently. "Yes it is indeed marvellously beautiful!"

"Don't you count it about the most bewildering bit of wild that you have ever seen?" insisted the doughty inquisitor, and Theodore Roosevelt, jr., answered in the affirmative, casting an inquiring glance at his questioner.

"Well, would you mind signing a declaration to that effect?" urged the anxious inquirer, for he owned the hotels at Temagami.

Now the son of a President closed up like a clam, but not until he had explained that he would have to ask the Doctor, in whose care he travelled.

But he had said it and he meant it, too.

If you spill a cup of cream on a smooth floor the spangle spot will give you a good idea of a map of Temegami, the lakes having a shore line of something like 3000 miles.

The waters of Temagami are cold and deep, the shores of the lakes are usually clear cut, but sometimes there are shelving shores, sand strewn and pleasant to play upon. At other places the walls are rugged, but nearly always wooded, high, dry, and healthful.

The whole territory of many hundred square miles is a Government Reserve, the wild things are protected by game wardens and fire rangers, the aim being the preservation upon this continent of a bit of God's wilderness. For those who like the canoe there is here a full summer's route with new scenes at each turn of the shore line. It is a peerless region affording pleasures unobtainable in any other part of America. With a power launch one may travel for weeks and ride strange new waters almost every day.

But of course one of the objects of an outing is physical exercise so the canoe's the thing.

Leaving Temagami station we paddle up the northeast arm of Lake Temagami,

threading a labyrinth of islands, feasting on the grandeur of the shifting scenes, and drinking health in the bracing air. This arm of the lake is from a quarter of a mile to two miles wide for fourteen miles where it opens into a wide lake. Rounding Mategama Point we pass Temagami Island by the ruins of an old Hudson Bay fort wrecked two centuries ago. Here, on a high point overlooking the lake, stands the beautiful "Temagami Inn", one of the most charmingly picturesque spots in the lake country.

Not far from the Inn, when emerging into another miniature open sea, we behold Bear Island, one of the principal landmarks in the territory, where the Hudson Bay Co., now have their head quarters. Bear Island is seventeen miles from our starting point, Temagami station, and we land here for a tarry of a few hours and to look around at the novel scenes that greet us. The Chief Fire Ranger of the district has his headquarters here, and his comfortable log house is situated at the steamer landing where all visitors are requested to register their names before proceeding further. There is also an Indian village here composed mostly of the guides and their families, who live in tepees, and a number of log houses. The village also boasts of a church. One of the features of the place is Mrs. Turner's, where the wants of the inner man can be substantially satisfied with dishes fit for a king, the menu very often including moose, venison or bear, and always the tasty bass or lake trout. The Indians in this part of the country are descendants of the Algonquins and a remnant of the Ojibways. They are a frugal people, humble and honest, and make the best pathfinders, as they are thoroughly conversant with the entire district and can land you at the portage in the dark.

From Bear Island there are many good fishing grounds that are easy of access, among which are Gull Lake, about four miles, reached by two short portages, and where excellent black bass fishing is assured. Northeast of the island about four

to eight miles, in Spawning Bay, Loon Lake, Kokoko Bay and many other of the inlets are also capital spots for the gamiest of the finny tribe. During July and August the bass are easily hooked, but the salmon trout are more wary, and resort to the deep, cool waters, and can be caught only with a wire line of great length.

If a visitor desires he can outfit at Temagami Station and take steamer to any point on Temagami Lake, thence proceeding by canoe into the more remote parts of the reserve. The outfitting store at Temagami Station is well supplied with all the camper needs. Here arrangements

highways and small lakes and streams in the endless forest and water-sheds of Temagami to employ the most enthusiastic tourist during an all summer holiday. About five miles from Bear Island, down the South Arm, is situated Camp Temagami, an organized summer camp, where parents may entrust their boys under the care of responsible men, feeling their safe return after an ideal and profitable vacation, refreshed and strengthened with an abundance of stored energy, a greater love and knowledge of nature, and with new accomplishments likely to prove of lifelong interest and benefit. This camp is conducted under the personal management of Mr.

TYPICAL SCENE IN TEMAGAMI.

can be made for a trip through this new wonderland.

A hotel has been constructed here for the accommodation of tourists and sportsmen, and where campers and canoeists can sojourn while arranging for their canoes and outfits.

There are many beautiful journeys that can be made on this particular lake, which include a steamer or canoe trip to Muddy-water Bay, Cross Bay, the South Arm, Austin Bay, Island Bay, the South - West Arm, the Northwest Arm and Sandy Inlet. As seen by the map the contour of this lake is most irregular.

Many days can be spent on Lake Temagami exploring the adjacent streams and lakes. In fact there are enough liquid

Arthur L. Cochrane of the staff of the Upper Canada College, Toronto, Ont. An interesting prospectus, giving full information regarding this camp, rates, etc., can be had by communication with Mr. Cochrane, Deer Park, Ont. Mr. Cochrane is the Canadian honorary representative of the National Life-Saving Society, and a well-known authority on swimming. He aims at having each boy under his care not only an accomplished swimmer but also a thoroughly experienced camper and voyager.

From Bear Island we proceed north to the North Arm through an archipelago of beautiful scenery passing many romantic islands including "Granny Island" where dwells Mrs. Kokomis an old woman

in stone around which circles an Indian legend of long ago.

Entering Devil's Bay, we glide rapidly over the pellucid waters and see looming up on our right a high promontory rising sheer out of the water for a distance of at least 300 ft. This is known as the Devil's Mountain, and at its base lies Devil's Island, a beautifully wooded gem separated from the main land by a narrow strip of water known as Devil's Gut. From Bear Island to this point we were the only voyagers that disturbed the heroic and interminable solitude of Temagami, but here we found a number of tents occupied by a colony of young college students from the Southern States. They numbered about forty and were under the direction of pro-

point was fraught with many disadvantages and hard work which has all been eradicated by the building of the Temiskaming & Northern Ontario Railway from North Bay to Temagami. The fishing in the neighborhood is excellent; fine catches of bass, wall-eyed pike are of daily occurrence. In the deep waters the great grey lake trout is caught, a twenty pounder being common, and specimens up to fifty pounds have been taken.

A handsomely illustrated booklet, giving a concise description of this camp together with the rates charged for an outing of any duration can be secured by applying to Mr. A. S. Gregg Clarke, Room 1821 Park Row, Building, New York City, N. Y.

ON HAWK ISLAND, LADY EVELYN LAKE.

fessors from some of the leading American Colleges. Each year this aggregation of young blood make their home in Temagami for the summer months and not only enjoy every minute of their stay but store up in health sufficient energy to enable them to carry through their studies during their college year. The Colony is known as Kewadin Camp and has for the past twelve years made this region their headquarters at different points throughout the district and now permanently located on Devil's Island. From these headquarters the boys start out on exploring and fishing excursions, using the Indians to guide them into the right paths. In previous years the means of getting to their objective

From Devil's Island we push our way forward, and passing through narrow channels, entered Sharp Rock Inlet, proceeding to the Northwest extremity and taking a quarter mile portage into Diamond Lake, a lovely sheet of water. The trail between Sharp Rock Inlet and Diamond Lake is through the dense forest over an easy route. Continuing our journey for about four miles, we reached Lady Evelyn Falls, a drop of about 8 feet, between Diamond Lake and Lady Evelyn Lake necessitating a lift of our outfit of about a hundred yards. The scenery at this spot is most entrancing and the fish bite with very little coaxing. Leaving the Falls, the route lies through narrows for about a mile,

emerging into the most beautiful of Temagami's treasures—Lady Evelyn Lake. Words fail when a description of this lovely sheet of water is essayed, and to appreciate the wonderful beauty of its surroundings a personal visit must be recommended. This Lake is named after Lady Evelyn Cavendish, daughter of the Marquis of Lansdowne, an ex-Governor-General of the Dominion of Canada.

The bosom of the lake is thickly set with heavily wooded islands and the main shores, high and rocky are covered with virgin forests of pine. The water is as clear as crystal, and cold and pure. Paddling across the noble expanse the remoteness and strangeness of the scene were particularly attractive qualities to us and there was something infinitely restful and

pounds and common pike weighing up to eight and ten pounds.

Next morning our canoes were again commissioned for our journey North. After placing a few miles behind us, we landed at a Fire Ranger's place and were cordially received and after spending a pleasant hour or two with our newly made friend who knew every niche and corner of the territory, and who gave us valuable information regarding the likely haunts of the speckled beauties, we turned our canoes towards the west and put in two and a half hours of solid paddling before pitching our tent for the night. The part of our trip was a most enjoyable one and took us through what is considered one of the best hunting confines of the district. During our progress we had the

ON MONTREAL RIVER, NORTH OF BAY LAKE

pleasing in the air we breathe and the grandeur of the scene that lay before us.

Pitching our camp on the Hawk Island, an ideal camping site we got out our fishing tackle to test the waters of this lake, and our expectations were more than gratified with the result. Circumnavigating the island we caught ten small mouthed black bass in half an hour, the fish being of the gamiest and ranging from two and a half to four pound. Good fishing is assured in any part of this lake and our experience demonstrated that different fish would take different bait. The catches during our stay at this lake in addition to a large number of black bass, constituted wall-eyed pike weighing from six to eight

good fortune of seeing the lordly moose among the lily pads near the shore and myriads of ducks of several species were feeding among the rushes and marshes. As we proceed the Lake gradually narrows until it becomes not more than one hundred feet wide, with cliffs rising from the shore line hundreds of feet in height, with a stream winding in the circuitous channel, bringing to view a change of scene at every turn.

One remarkable feature of this beautiful country is the long continued twilight which lasts until nine o'clock in the evening as also the wonderful clearness of the sky at night, offering ideal conditions for the observation of the

moon and stars and providing one of the signal advantages to see the moon with such a silver sheen or the stars with such brilliancy. By day the skies are as blue as the skies of Italy, and at night as black as those of the tropics, the celestial objects standing out clear cut with marvelous beauty.

The camping grounds at the mouth of Lady Evelyn River where we halted for the night lies in the valley beside a beautiful water fall at the foot of which black bass abounds and where we caught sufficient for our evening meal in a few minutes. At this point the portage is not more than one hundred feet around the Falls which takes us into Willow Lake, a stretch of water about five miles long

joyed. In this haunt of the brook trout in the most favorable of surroundings where the waters simply teem with speckled beauties, the unexpected will often happen. The most delicately manipulated fly does not always manage to secure a strike, and other bait, such as the flesh of fish, minnows, etc., attract these fellows as no other bait will do. During the months of July and August excellent fishing is assured in this locality.

Returning to Willow Lake the canoeist can follow the water-way south to the end of the lake, portage into Diamond Lake, thence follow the route that leads into Obabika Lake, choosing for himself a dozen different ways of returning, either to Lake Temagami, his starting point, or

ON THE PORTAGE, MONTREAL RIVER.

leading to the trout streams that empty into this lake. These streams run through the virgin forest and contain fish that are worth landing. It is where the angler can realize his fondest dreams, rich in possibilities and where but few have cast a line.

To reach the speckled trout grounds is somewhat of a arduous task, and though the portages are numerous, they are short (not more than one hundred feet to one hundred yards), and when the objective point is reached and fifty five speckled trout ranging a pound and a half to three pound, can be landed, the sportsman readily endures the seeming hardships that are encountered and looks back with pleasure on the magnificent sport that he has en-

joyed continuing south as far as Lake Nipissing.

Matawabika Falls is the outlet of Lady Evelyn lake into the Montreal River, a mighty stream reaching from the far North to Lake Temiskaming. Leaving the Falls we notice on the left a clearance on which stands the cabin of Mr. Jas. Mowat, a former Hudson Bay Co. trader, who now has a small farm, the only one that has been seen on the length of our route.

From Matawabika Falls our route lies down the Montreal River, the first impressions of which are favorable to the hunter. The current of the river is hardly perceptible for a considerable distance and the stream lies between shores of marshy land, where ducks are plentiful. This is a

junction point for three routes. In times gone by an Indian battle occurred here. The river then flows through the forest on either side.

About eight miles below Matawabika Falls we enjoy the exciting experience of running the Pork Rapids, an obstruction in the river with a drop of a few feet, where the waters are turbulent and rush over the rocky bottom in mad career. The Indian guides steer the canoes safely through and, with the exception of a ducking now and then from a splash of the waves, the journey is made with safety.

The big game found in the Temagami region comprises the moose, caribou and red deer. The moose are plentiful in this district, but are wary animals, and not a little skill is necessary to get one. During the month of June and the early part of

clusive, for the hunting of red deer, reindeer or caribou. Only one moose, reindeer or caribou and two deer may be taken in any one season by any one person, and a cow moose or young moose or caribou under one year of age can be killed. A fee of \$25.00 is charged for license to non-residents to hunt any game, bird, or animal, while a license for any one domiciled in the province is \$2.00 to hunt deer, and \$5 to hunt moose, reindeer or caribou. This license must be carried by the person holding the same while hunting, and to be shown on request. A non-resident may export in any one season one bull moose, one reindeer, one caribou, and two deer, this being the legal number allowed each hunter to kill.

Caribou is an inhabitant of this territory. Signs of them are seen everywhere

ON THE MONTREAL RIVER

July, hundreds of these "Monarchs of the Forest" are seen by the canoeist as they are forced to the water by the flies, which infest the woods until about the middle of July. After July 15th the flies and mosquitoes disappear and the moose go back to the woods and fatten up. They are, therefore, not seen so frequently during the month of August, excepting in the early morning or late evening when they come for their drink at the water's edges. During September, which is known as the rutting season, moose are seen in large numbers throughout the district. The open season for hunting moose commences on October 16th and continues until November 15th, both days inclusive; and from November 1st to November 15th, both days in-

They are a much more wary and timid animal than the moose, and are consequently harder to see, and prove much more difficult to capture. When seen, they are usually in bands or droves of various numbers. The country lying south and east of Smoothwater Lake and northwest of Wakenika Lake and River seems to be the best suited to these cautious animals, as it is a rough and hilly country in which the caribou dwell in great numbers and in other localities in the region.

As to its deer, it may be said that they are not found in great numbers in the immediate vicinity of Lake Temagami, but in the territory south of the lake, between North Bay and Temagami Station as also south of Lake Nipissing and the French

River, deer abound, and full information can be had from the publication "Haunts of Fish and Game," issued for gratuitous distribution by the Grand Trunk Railway System.

Government regulation for the preservation for fish and game are very strict and are rigidly enforced during the close season.

The game birds found in this locality are the ruffed grouse, commonly called willowed partridge, and the pine grouse, besides geese, duck and other water fowl. In the northern portion of the territory, towards the head of Lady Evelyn Lake, Lady Evelyn River, Willow Lake and the East branch of the Montreal river, are found duck in abundance. The varieties embrace the following species:—mallard, wood duck, merganser, blue bill, shell drake, widgeon, etc. Partridge are found almost anywhere in the forest, and are abundant. The open season for shooting ducks is from September first to December first, both

days inclusive, and for partridge from September 15 to December 15th, both days inclusive.

The most numerous of fur bearing animals are the bear, marten, mink, otter, fox, beaver and muskrat. The otter and beaver, however, are protected, and are not allowed to be killed till November, 1906.

The Indian guides who reside in the district know every nook and corner and are the best judges as to where the haunts of game are, and are reasonable and can be depended upon.

The principal fish are small mouthed black bass, speckled trout, lake trout, and wall-eyed pike. During the mid-summer season the lake trout go in the deep water and it is necessary to use a wire line of a couple of hundred feet. The black bass, on the contrary, bite well during July and August, and the waters of the lakes in close contiguity to Lake Temagami simply teem with them.

Ottawa's Crack Four.

This is the crew which won the championship at the Canadian Henley last August. They are after Intermediate and Senior honors this year, and are being coached by Jim Stephenson.

# The Canadian Henley.

The Canadian Canoe Association has just about given the quietus to the most ambitious scheme ever hatched to give Canada an aquatic meet which would rival in interest, that blue ribbon of all water meetings, the English Henley.

True the proposal was born of a canoe man and had for its object the establishment of Canadian canoeing championships in fact as well as in title. But its ultimate result—if it had gone through—would have been the creation of an aquatic meet which would have put anything in that line on the continent in the shade.

But alas ! The might have been !

The Canadian Canoe Association handed the brilliant scheme a solar plexus punch when it fixed upon Saturday, Aug. 1, as the date for its annual regatta.

The scheme originated with Robert Moody, a prominent Toronto canoeing man. He proposed to the Canadian Henley Regatta committee to add canoeing championships to the programme of that premier rowing event, and to put up shields and individual prizes for war canoes, fours, tandems and singles, and to make the races open to Canada. The laudable idea was to bring together the best paddlers in Canada and to settle the much disputed question of racing supremacy.

For years unavailing efforts have been made to bring this about but the results have been decidedly unsatisfactory. Here and there a Canadian championship title became so in fact, but only because of the efforts of the holder of the championship of one section of Canadian paddlers, who challenged the reputed champions of the other Association. It remained for Mr. Moody to offer the most feasible suggestion for real championships. He outlined his proposal to the Canadian Henley Committee and the idea had so many attractive features that it was instantly adopted by the Canadian Canoe Association, the Eastern organization, just about knocked it sky high.

Practically, Mr. Moody's proposition took the Canadian Henley out of the ranks of the purely rowing meet and made it a joint canoeing and rowing event. The two sports are so closely identified that a dual

meet such as outlined must have redounded to the benefit of both sports. The Canadian Henley, as a rowing meeting, already had its position in the annals of Canadian aquatic sport. The grafting on of real championship canoeing would add to the public interest in the meet and would have, it was fondly hoped, return true Canadian canoeing champions. The caste of the great rowing meet assured every canoe club in the Dominion that the effort to promote the canoeing championships was a bona-fide one, but the Eastern men, at their annual meeting in Ottawa on May 12th, gave the scheme the cold shoulder, and the title of Canadian champions awarded at the St. Kitts meet will have a hollow sound, for the Canadian Canoe Association regatta clashes with the canoeists day at the Canadian Henley, and the result will be that there will be eastern and western Canadian canoe champions.

The Henley committee had decided to hold the canoe races upon Saturday, Aug. 1, interspersing them with the finals in the rowing events. That the canoe races are not regarded as of secondary importance and run off as a curtain raiser or an "after the show" attraction, was a source of much satisfaction to Western canoeists. Placing these races on a par with the rowing championships was a trite recognition of the value placed upon the suggestion by the regatta committee.

In fact it was "up to" the Easterners, in every way, shape and form, but they chose to "gang their own gait" and play in their own yard. The Henley programme will not be abandoned, but the only result will be to give the winners a standing, and add weight to any challenge the visitors at St. Kitts may hurl at the eastern champions.

For years the winners of the Canadian Canoe Association championships have been titled Canadian champions but their title has been as empty as will be that of those who come home in front at St. Kitts will acquire. Last year the Island Aquatic Association war canoe crew of Toronto, after trimming up the best of the western war canoe crews, tried to get a race with the Eastern "Canadian" cham-

pions, but the holders wanted a small gold mine to give the Toronto lads a chance at their title, and the contest never took place. This failure to decide the war canoe championship was the origin of Mr. Moody's idea. For a while he was sanguine of securing the attendance of the war canoe crews and other swift paddlers from the Montreal, Ottawa, Brockville and

other eastern clubs to meet the best Orillia, Toronto and St. Kitts could produce and the club went as far as to join the Canadian Canoe Association in order that the proposal might be presented fully to the Easterners in annual meeting. Mr. H. G. Wade of Toronto came down to urge the proposition, but the Easterners would have nothing of it.

ISLAND AQUATIC CLUBHOUSE.

## Islanders' Year in War Canoe Racing.

**J**UST take a tip from me—watch the Island Aquatics of Toronto in war canoe racing this year. If they don't climb into the championship class I will drop the prophet's mantle, and hustle for cover.

The Islanders were strong last year but they will be stronger than ever this year. They are already hard at work and will go to the races with practically the same crew as made such a fine showing last season.

The only two absentees from the competition for the crew this year will be William Temple, who paddled No. 14 and Walter Robinson who paddled amidships. Temple has quit paddling and Robinson has been removed by his bank to Trenton. Brad Jamieson, the Island champion, will take one place. He would have been in the boat last year but for an attack of appendicitis. Jamieson has held Island paddling and swimming championships ever since he was fifteen years old. For the other place there are available the Goad Brothers, Jim Cosgrave and Arthur Meredith, all of whom are paddlers of strength and racing experience. Indeed they will give a couple of those who were in the crew last year a run for their position. Last year's crew

consisted of Harold Huckvale, stroke; Douglas Cooper, No. 2; Philip Huckvale, No. 3; Cuthbert Huckvale, No. 4; George Lamont, No. 5; Len. Morrison, No. 6; Tom Wade, No. 7; John Greey, No. 8; Walter Robinson, No. 9; Trevor Temple, No. 10; Bob Huckvale, No. 11; Garnet Bell, No. 12; Frank Huckvale, No. 13; Wm. Temple, No. 14; R. E. Moody, captain.

This is the Islanders' second year in war canoe racing. They started last year early in May in a Dean war canoe under the tuition of "Bob" Moody and on Dominion Day were beaten by the Toronto Canoe Club crew over a poor course. On this course the Islanders drew the shallow water and attributed their defeat to slowness of shallow water. That their contention was right was proven when later they trimmed the Torontos by three lengths on the Toronto Bay course and lowering the record by 19 seconds. At Orillia they won not only the war canoe race but the fours as well, beating Reg Blomfield's great Toronto four by a hundred yards in half a mile.

The same fours will bear watching too. They look like champions. The Islanders are building a new clubhouse that will be ready by Aug. 1st.

# The Canvas Covered Canoe and Its Repairs.

**A**LL canoeists will be interested in the following contribution on this subject from the pen of Mr. C. F. Paul, of the staff of the "Star", Montreal. In our May number we drew attention to this matter as one of deep concern to canoeists and gave such information as we were able to obtain from manufacturers in the Dominion as to the possibility of repairing canvas covered canoes. Mr. Paul's personal experiences are valuable, and will be read with interest by his fellow canoeists. We quote Mr. Paul's letter in full:—

"Can a canoe be canvassed by an amateur? It certainly can. Some four years ago I took a try at it, my only tools being a tack hammer, a paper of tacks, a pair of pliers and two strips of canvas, each sixteen feet and a few inches long. Today I am still using that canoe. It is as good as ever, has never leaked a drop, and I expect that it will stand the racket for years to come.

"I may state to begin with that the canoe when I undertook the work was utterly unfit for use. No amount of ordinary repairing would have made the craft water tight. I went to a man who should have known something of the work, and he pronounced that I could not do it. However, I bought the canvas, two strips a trifle longer than the actual measure of the craft, and fairly heavy, though by no means clumsy. I began by tacking this canvas along the keel, beginning at the centre of the boat and working both ways. I found that by soaking the canvas with water that I was able to stretch it better with the pliers than when dry, so kept it wet throughout the operation. After tacking the full length of the keel,—that is up to where the bend begins toward the bow and stern, — I stretched it tightly toward the gunwale, tacking it to the side of the boat close to the gunwale and on to the gunwale itself. I made no attempt to take the gunwale off, as the boat was old, and the experiment not likely to prove profitable.

"Of course, I had previously removed the metal guard or cutwater from the bow and stern and tacked the canvas just where these would come when replaced. There-

fore, all the tack holes I had to look out for were along the keel and under the metal cutwater. For the keel, serving the double purpose of strengthening the canoe and covering the tacks, I had an oak piece turned out. This was about a quarter inch thick, and three inches wide in the centre, tapering toward each end. In all this keel piece was some eight feet long. I then coated the keel with white lead and screwed on the oak. The bow and stern, under the cutwater, I treated in the same manner.

The canoe was then given two heavy coats of paint, inside and out. Of course, the canoe has not the fine finish that the latest canvas boats have as regards surface, but speed is of no particularly value in the Laurentians where I have her.

As regards the mending of a canvas covered canoe I have had no experience. It would be possible to tear a rent in a boat covered as mine is, but it is most unlikely. I am of the opinion, however, that if I was going to make a long journey through rapid water, in a country where expert assistance was at a premium that I would stick to the birch bark, easily mended and lighter than anything else of its inches, barring of course, the aluminum craft which costs a small fortune in comparison.

"For the country where I have my camp the canvas covered canoe is the ideal boat for most purposes. Such things as sticks and stumps and stones may jar the paint a bit but never hurts the canvas, and a coat of paint each autumn keeps them in perfect order.

"For the information of those who have a hankering for the birch bark,—and I must own to having one myself,—but at the same time believing that the canvas boat has more superior qualities, I may state that the Indians at Lorette are now making a canoe on the same general design as the birch bark, but are covering it with canvas. Though not fast boats these canoes are staunch, roomy and comparatively light. I am under the impression that the Grand Trunk Pacific survey parties have utilized a great many in their recent work."

Montreal, May 10th, 1906.

ONE OF THE COLUMBIA CHANNELS

## The Ptarmigan.

BY CAROLINE D'A LANG.

**M**AKING its habitation in high places, sharing with the Eagle the lonely mountain peaks and craggy precipices, we find the Ptarmigan, a bird gracefully formed and beautiful at all seasons of the year, but much more so when Winter has enveloped the mountains in its mantle of white. Then the Ptarmigan discards its mottled plumage which made it almost indistinguishable against the mossy lichen covered rocks and stones and dons a robe of soft pure white in keeping with the prevailing color.

Ducks, geese and other wild birds come and go with the seasons but the Ptarmigan remains in the same district where it was raised, making its nest in the scant grass on the high mountain slopes and rearing its young where it too was brought up. This bird breeds early in the season so that by the time the prospector goes up the mountain in his ever hopeful search after the riches hidden in the hard heart

of the mountain the eggs have been hatched out and few specimens are brought down into the valley.

One day early in spring I stumbled on a nest with two eggs in it. I duly appropriated one, cutting a piece of cloth from my jacket to wrap around it and, placing it tenderly in a cocoa tin. Its diameters are one and one eighth, and one and seven eighths inches. In color it is light brown shading down to creamy white, and it is dotted and blotched with dark reddish brown.

Mountaineers consider the flesh of the Ptarmigan more delicate in flavor than that of the grouse which is of the same species. The prospector with his limited supply of condensed foods (for he who climbs high must go light) is only too glad of such an addition to his bill of fare, but the difficulty is in finding them. The Ptarmigan trusts almost entirely for safety to the harmony of its plumage with the general aspect of the ground. In winter it

will crouch down in the snow and the hunter would pass close beside without noticing it were it not for its bright black eye showing plainly against the white background.

However it is not about a bird but its namesake I intend to write today—one of the boats belonging to the Upper Columbia Transportation Co., which plies between the town of Golden situated at the confluence of the Kicking Horse and Columbia Rivers, and the Village of Windermere on the banks of a beautiful lake of the same name, the distance between the two places being one hundred miles.

Captain F. P. Armstrong, the pioneer pilot of the Upper Columbia River has overcome difficulties such as would daunt many navigators. He originates methods of surmounting obstacles which the more prosy denounce as impossible. For example the moving of a large stern wheeler under her own steam from the Kootenay to the Columbia River. A glance at the map will show a neck of land about a mile in width between these rivers at one point, and an incompleted and disused canal the lock of which is seventy seven feet long with a lift of eleven feet, while the boat's length is one hundred and fifty-three feet. Yet the work was managed successfully. Last year running the boat rather late in

GOLDEN, B. C.

the season, taking the risk of being caught away from Port either by ice or low water, he found he could not get out of Lake Windermere the water being so low at the entrance. Everybody declared he

was bottled up as tight as the Russians at Port Arthur harbor, so when the cheery whistle of the boat was heard in the town he was asked in surprise how he got out. "Oh I just stopped the Columbia River for a few days till I got enough water," he replied. As a matter of fact he had dammed the river at the outlet of the lake until that body of water which is ten miles

THE UPPER CABINS WERE TRANSFERRED TO THE NEW HULL WHICH WAS SUNK INTO POSITION THROUGH A HOLE IN THE ICE.

long had been raised some fourteen inches.

When he decided that "The Duchess", which had been doing service on the river for several years, must be replaced by one of lighter draught, everyone said his idea of building a hull in the winter on the ice beside the old boat, moving over the cabins and machinery, and getting her ready for the opening of navigation was impracticable. Yet that is what he did and that is how the Ptarmigan was built to replace the old boat.

This is a stern-wheel steamer and the lightest draught boat in Canada, necessarily so on account of the shallowness of the River at certain periods of the year.

The rivers and lakes in this district being fed by the melting of the snow and ice on the mountains, are high in hot weather and low in cold, the reverse of what is found in Ontario.

According to this novel plan of the Captain's the new hull was built on the ice, and when completed the ice was sawn all around it. In order to provide against the ice breaking under her and allowing her to settle unequally, holes were cut along either side at distances of about six

feet. These were afterwards joined by saw cuts beginning from each end. These precautions however proved unnecessary, for when the sawing was completed the body of ice remained perfectly rigid and upheld the boat. Very gradual was its submergence and almost imperceptibly it sank, the deck remaining as even as a billiard table. The work of carpenters and painters was not interrupted for a moment. A month later on her trial trip the rudders were found jammed and examination proved it was owing to some of the old ice under her.

Once the hull was afloat there was no

"That she does," enthusiastically answered the man.

"'Ptarmigan,' is her name," said the Captain.

The first boat, The Duchess, was built in 1886. At that time the only mill in the country was at Donald seventeen miles from Golden. As the mill had no plaher, the original Duchess was built of rough planks. Some indians who saw the boat during construction were very sceptical as to the feasibility of such an immense canoe ascending the river, and on going back to their Reserve told the rest of the tribe that even one hundred men would not be

CAPT. F. P. ARMSTRONG, THE PIONEER STEAMBOAT MAN OF THE UPPER COLUMBIA

difficulty in removing the engines and boiler. Timbers were put across and the cabins moved bodily over in half a day.

Standing fresh in her new coat of white paint, surrounded with snow covered ice she stood a form of beauty.

"I say, Captain," said one of the workmen, "she looks mighty nice. Now what do you intend naming her?"

"She reminds me of a Ptarmigan," said the Captain.

able to paddle her against the stream.

Consequently when news arrived that the boat was afloat, almost the whole population of aborigines assembled on the banks of the river at a place known as The Salmon Beds (the spawning ground of salmon coming up from the Pacific) and where the town of Athalmer now stands, and here in holiday attire they waited till the big canoe came in view. At this point the water is very clear and although in

depth about two feet it looked much less and they would not believe the boat could make its way any farther. The children were sporting in mid stream in fancied security and the engineer fearing for their lives stopped the engine without orders and the boat losing steerage ran aground and was stuck for a short time.

The Indians were very much astonished

drew over another old Indian of the name of Kuoy to show him the phenomenon. The engineer perceiving what he was going to do changed the order of things so that when Kimbasket had explained the difference to his friend and started to exemplify by touching lightly the injector and grasping firmly the suction pipe, a look of surprise overspread his face. Naturally

"SHE LOOKS LIKE A PTARMIGAN." "PTARMIGAN" IS HER NAME

at the machinery. Steam as a propeller was unknown to them, but the points which astounded them most however, were not those which one would have expected. The greatest conundrum of all was how some pipes should be hot and others cold. The engineer could not resist playing a trick on one old Indian of the name of Kimbasket. He felt the steam pipe of the injector and found it hot, then he touched the suction pipe and found it cold. He

he could not let go his hold at once and Kuoy looked at him with an amused look on his face as much as to say "what else could you expect?" He has never been able to give satisfactory explanations to this day.

The Duchess on this first trip took a large quantity of trading supplies. The Indians were in comfortable circumstances in those days, earning good pay from hunters and travellers from the South, but

more particularly from the Chinamen who were working placer ground, so when they boarded the boat in numbers a brisk trade was done with them. Gold dust was the only currency, so to facilitate matters each one's bag of yellow dust was weighed and he was given red, white and blue poker chips in exchange.

It was almost impossible when all the goods were disposed of to get the Indians to leave the boat and after repeated warnings the Captain blew a shrill whistle.

On the banks were about two hundred cayuses, a few tethered to bits of brush but the most of them standing with their bridle reins hanging on the ground. It was a gay scene—blankets of the brightest dye

ARMSTRONG CHANNEL, ONE OF THE MANY CHanneled COLUMBIA.

adorned many of the ponies especially those to which the papooses were strapped, their little brown faces and black eyes peeping out from bright yellow, green or crimson silk handkerchief.

At the unusual sound of the whistle the horses stampeded. Wild with fright they scampered across the level and scrambled up the foot hills over brush and fallen timber regardless of their precious burdens. Added to this noise and confusion were the shrieks of the squaws and papooses and the headlong rush of the Indians, after their fast disappearing property. Such a din was never before heard in the mountains. It was weeks before some of the horses were recovered.

An incident happened during the stoppage of the boat, showing that even the stolid Indian has a sense of the ridiculous. When the boat was stuck, several Indians

helped to push it off. One old Indian of the name of Klahowyah who had got on board after working very hard, drew a bucket of water and raised it to his lips to get a drink. The captain who was standing on the deck above leaned over, took the bucket by the rim and tilted it so that the old man's head got the full benefit of the bath. Klahowyah looked angrily around, saw an Indian boy standing near him on the guard, and supposing he was the offender hit him a clout on the head and knocked him into the river. The Indians on the bank who had seen the performance simply rolled over and over on the ground in convulsions of laughter.

On the down trip The Duchess met with a mishap. In the early days the huge cottonwood trees which lined the banks in many narrow places met those on the other side forming a canopy. The river is so tortuous in some places it was almost impossible, when steering to keep clear of one bunch not to run into another. When making a sharp turn the boat ran under one of these and her whole upperworks and smokestack were brushed overboard.

The captain fell on top of the boiler. The furnace door was open at the time, and the wreckage took fire, but this was easily put out. The current swung the boat over to the other side, the crew tied it to a tree, and then went fishing for the smoke stack which was eventually located in a hole about twenty feet in depth. After some difficulty it was put in place, and forty eight hours after the accident, The Duchess was under weigh again.

A few miles farther down they picked up the Honorable F. W. Aylmer. He had been hunting and his canoe was loaded with game. The cook was given a free hand and soon a meal such as hunters love was placed on the rough boards covered with oil cloth that did duty as a table. His attire calls to mind a story that is told of him in the early days, shortly after the C.P.R. hotel at Field had been opened. Tangled brush, swamps and rain had left their marks on his clothes, a three weeks growth of beard, a bronzed face and a cowboy hat, while bearing the Hall mark of the hunter, was scarcely civilized attire. The Captain brought up a letter for him on one of his trips, but did not see him until the down trip when he came

across him in similar hunting attire. On reading the letter he saw it was necessary to be in Calgary the next day. As there was plenty of time between the landing of the boat at Golden and the departure of the eastbound train to go to a hotel and get into shape there seemed to be no need to delay the boat so he got on as he was. However an accident prevented the boat from getting into port at its usual time and he was only able to catch the train as it was pulling out. After paying for his dinner at Field he asked the lady manager for cigars. She pushed a box towards him saying they were fifteen cents each or two for a quarter.

On asking if she had a better quality some at twenty five cents each were produced.

I don't care for home manufacture, he said, have you no imported ones.

Yes, she said, we have, but they are half a dollar each.

May I see them, he asked.

Certainly, she said, producing a box, they are half a dollar each — fifty-cents each, she added impressively.

Thanks, they will do, I'll take the box.

On his return from Calgary a week later, she chatted amiably with him not recognizing him in his changed attire.

Do you remember a tough who bought a box of cigars from you a week ago at fifty cents each, he enquired.

She stared intently at him for some

moments, and then said slowly, why I do believe you are the same man.

A penny for your thoughts when I bought the box, he said.

I thought at the time, she said smiling, that you might much better have bought a box of soap.

This same gentleman when driving up country one cold winter's day was discuss-

ON THE COLUMBIA NEAR SPILLAMACHEEN.

ing with another passenger the best means of keeping the feet warm. The stage driver, a lad of about eighteen, who was listening intently broke into the conversation innocently in his slow drawl:—

They say, if a fellow don't wash his feet the whole winter, they'll never be cold, have you tried it Mr. Aylmer?

Not yet, but if you recommend it I shall, was the caustic reply.

## Six Months in New Brunswick Woods.

BY HOWARD P. RENSHAW.

**A**S I was growing beyond my strength, being only eighteen years old and rather slim, a dose of Nature's medicine was recommended to me, and it was decided I should spend half a year in the woods of New Brunswick.

Arrangements having been made with Mr. W. H. Allen, of Penniac, N. B., to enable me to carry out this programme, I left my home in Connecticut towards the end of last October, and on the following day found myself in Fredericton, the finely situated and picturesque capital of the Province. Here my guide met me, and by his advice I visited the Crown Land office, where I wandered round and admired the

fine exhibits of mounted big game and birds, all of them the products of the Province; and completed my outfit at some of the stores in the City, finding their prices surprisingly low. I also inspected the parliament buildings, and was altogether pleased with the appearance and facilities for business in the City.

In the evening we drove to Penniac, ten miles out, and spent the night at my guide's house. The next morning found us early astir, and myself full of anticipations of new and pleasant experiences. The outfit was loaded on a heavy truck wagon and we faced a twenty-mile journey, our destination being Suitor Brow Camp.

My experiences began early for on this journey I shot several partridges, and saw one medium sized moose. There were innumerable tracks leading in all directions, and to judge by them one would have thought we should have seen several big ones. Perhaps however we made too much noise.

Before dark we reached the camp and it was not long before a good meal was prepared and eaten, and excellent arrangements made for spending the night. The Sutor Brow Camp is located on a high bank on the south side of Little River in Sunbury County, the Sutor Plains, where caribou are to be found, being about two miles off. This camp is one of a line of five camps owned by Mr. Allen, covering a radius of ten by twenty-five miles. Although out all day and every day, the first few days were passed without seeing any large bulls.

The morning of the seventh day broke beautifully fine, and as it had rained all the previous night my guide told me it was a splendid time for still hunting, and we should see lots of game. In this instance he was a true prophet, for we had only left the camp a short time when we saw six moose, two of which were bulls of a large size. I picked out my moose, and with one shot from my 35 Winchester rifle dropped the game almost in his tracks. Of course I was more than delighted with my good fortune, and the only drawback to complete happiness was the fact that I had left my camera in camp. After a few necessary operations we went back to dinner, and my success did not interfere with my appetite. In the afternoon I made sure of my camera on the outward journey, and made a number of pictures of what I was told was the record moose of Little River.

This considerable success led to a change of procedure, and on succeeding days time was spent on the plains looking for a large caribou with horns to match. While we saw caribou every day we spent several days without discovering any with horns large enough to satisfy me, but one beautiful November morning I secured my second prize—a large bull with a fine set of antlers.

By the end of November, when the season closed, I had killed one each of moose,

caribou, deer and fox, besides many partridges, rabbits, etc.

It was a big work to get all my specimens out to the taxidermist for the purpose of mounting, but it was finally accomplished, and hunting gave place to trapping.

I assisted generally at this work, and we soon had a line of traps set up, and had distributed the moose, caribou and deer meat amongst the different camps for use during the winter months, the meat being used both for the table and as bait for the traps which numbered fifty, and made a line about forty miles long.

By this time I had gained about twenty pounds in weight, felt like a new man, and was able to put in a good day's work. I could even tramp for twenty miles on snow shoes without feeling unduly tired.

At present beaver, sable, and mink are protected in New Brunswick, and our traps were set for lynx, fox, and ermine. We secured several lynx alive and kept them in a cage, but as they were captured in steel traps and had their feet frozen, they did not live long, and we only saved one. It is surprising how quickly a lynx will devour a freshly killed rabbit, keeping up a continuous growling. Our winter's occupation was pleasantly varied by several visits to Fredericton.

During the last week in February my guide, as President of the New Brunswick Guides' Association, represented that body at the Sportsmen's Show in New York, and I attended to the traps in his absence. On my first solitary trip over the traps I took five lynx and several ermine.

So far the winter had been mild, but with March came cold and snow and the line of traps could hardly be cleaned out between the storms. This meant continuous hard work, and every trip over the traps gave us either lynx or ermine. One would think that after catching a score of lynx they would seem to be scarce, but such was not the case. Every journey round the traps all through the winter we came in close contact with either moose or caribou, both being very numerous.

In good weather we spent our time in the open air picking spruce gum which sells very readily in the New England States for medicinal purposes.

# VISCOUNT JOHN

## CHAPTER VIII

### The Second Attack.

By

DR. J. M. HARPER

**N**EXT morning, just as dawn was at the breaking, I looked out with drowsy eye from under my blanket. With the full fresh air of the morning in my nostrils, and the hum of Tom the Mariner's manner of narration hardly yet out of my ears, I took in the surroundings at first as if they all belonged to some strange dream. The physical exhilaration was something to remember, though the full wakening point was no sooner reached than a counteraction was experienced in the burning sensations that seemed to issue from nearly every terminal nerve of my body. The sandflies and every other bite'em-no-see'em's had been getting in their work during the hour or two I had been giving to sleep, and as I thought my companions had been doing also; and, though sorely agonized from back to heel, I hesitated to disturb them by getting up for more freedom to engineer a counter-irritation of my inflamed cuticle.

But as I raised myself silently on my elbow, I saw that some one of us had seized time by the forelock to seize something else by the body, if he could only find it. For, through the dull grey glimmer, the first thing that attracted my waking sensations was a disconsolate-looking figure standing by the eastern pole of the tent, holding on to it for support with one hand, while the other hand was busy making manifold grabbings and slappings and rubbings akin to a dog's, when he is on the hunt for hidden foes within his fleece.

"Who is there?" I cried, at last forgetting the aural comfort of those of us

who were still stretched on the spruce boughs like so many mummies rolled up in dark grey shrouds.

The uncertain light would have puzzled any one.

"It's me," answered the figure with the deepest melancholy in its tones, "at least all that is left of me. These infernal pests have made every inch of my flesh raw."

Some one was undergoing the agonies of the Skedellic.

"And who are you?" I again exclaimed.

But the figure answered never a word to me, his conversational powers for the moment being directed as if towards the different parts of his body.

"Talk of the exquisite cruelties of the Inquisition! This out-Inquisitions any inquisition that ever imperilled the life and liberties of mankind. Jehosaphat, how the beggars sting! Get out and away ye humming infidels or I'll be the death of a million of you in one fell swoop! By St. George and the Dragon, this is awful," and the speaker, making no pause in his string of expletives, rubbed his back and shoulders against the tent-pole, as if he would bring it down.

"What's the racket now?" questioned Tom the Mariner, as he raised his body head-upward's, to make an observation with sleepy eyes.

"Ay, what's the matter noo?" repeated Viscount John doing the same, "It's about time we were a' asleep, I'm thinkin'. Are ye no done wi thae yaumerin' stories o' yours yet, Tom?"

I told them both to take their time to

see what was the matter for themselves.

"Oh, its only Dan or Doctor Jim," said Tom, lying down again. "Is that all?"

Then I looked across the improvised bed and became conscious of the vacancy to my right.

The victim thus first awake was really Doctor Jim.

"Where is my rifle?" growled Tom.

"Where is my rod?" I cried trying to make fun of the situation.

"Ay, where is my watch?" shouted the Viscount, now fully awake, and thus arousing the whole camp.

There was no more sleeping for any of us now.

And Doctor Jim was glad of it, oh, how glad, as he afterwards told me. The anguish became bearable as soon as we were all astir, with the fellowship of misery to bring greeting until the fire was fanned into flame again, and preparations were well under way for breakfast.

During the meal there was but one prominent thought in all our minds,—but one policy to pursue.

The Big Pool was to be attacked again.

"You won't have the fishing you would have had last night," said Tom, "with the water as high as it is."

"But we'll hae a chance o' witnessin' your skill in throwin' a fly to lure the patriarchs o' the pool," exclaimed Viscount John.

There was still a lowering sky, but Tom assured us that it was going to be fair weather, with that partial shifting of cloud which is the angler's delight.

When we came to the river, Tom suggested that we all keep together. The rush of water was too strong he said, to carry out the arrangement of the previous afternoon with safety. The Viscount would be sure to be getting into trouble again.

"The Viscount is aye under orders," said that gentleman. "When he comes doon the Tavistock he soon gets the habit on him o' havin' nae mind o' his ain."

So it was agreed that Tom should take us across the rather wrothy current in an oblique line, and eventually land us all on the strand I had occupied the day before.

"You will have to fish in relays," said Tom.

"With the Viscount in the first relay,

as usual of course?" I rejoined laughingly.

"No, sir, there's nae first for me this mornin'; I'm cured o' that for a' time. A man, to be a man, should practise what he preaches. The Mariner and I here 'ill look on until it is time for him to come in wi' the Amen o' the best castin' ye ever saw in your life. Sae the three o' ye get at it. I'll handle the landing net for all o' ye, and when I'm tired wi' drawin' them in, Tom can hae his turn; or rather, Dan, you hae the first o' the landing net. I'm no willin', wi' Tom's eye on me and the moralities behind it, to tak' even the first place o' a guid second. The philosophy o' an upright practice has nae give to it. It would mak' but a puir fishin' rod, if we would seek for its counterpart in sic gear; and yet what maun be maun he is a fine common-place law as auld as eternity itsel'. Sae gang at it, my gallant fellows, and leave me oot for the present. Tom and I will mak' the maist appreciative audience you could hae, as the newspapers would say."

And we three novices did go at it, as Viscount John thus advised, while Tom and he sat in the canoe watching us, to issue words of warning, encomium, and remonstrance from time to time.

At the end of five minutes strenuous casting, Doctor Jim got the first bite, but I hooked the first fish and a fine lusty fellow he was, making a run the length of the whole pool, before he wheeled about on the return trip. There was evidently going to be no keenness in the biting, but the rising of the waters had given stubbornness to the fighting qualities of my victim, for it took me fully ten minutes to get him within reach of Dan.

Tom and the Viscount vied with one another in the comments they made during the run, and when Dan reached out the net to take the floating three pounder and lifted him on high, flopping in his string-cage, with all manner of lights issuing from his speckled, silver-sheened body, applause came from the canoe and a clapping of hands.

By this time Doctor Jim had hooked his fish, but had lost him before the clapping of hands was over.

How the mischance enhanced the heroism of my achievement!

Doctor Jim found that the cause of his mishap was a broken hook, severed at the fluke.

"What fly did you take that fellow of yours with?" he cried out to me, as I was preparing for another engagement. "Don't you think the Viscount is making too much noise over there, does he think that trout are void of all sense of hearing?"

Doctor Jim was certainly in training for more than the catching of fish, for he quite suddenly asked my pardon for disturbing me.

I told him I was using a Robin-red breast for the tail and a Pharmachene-belle for a bob.

"I can lend you one of either or both," I said, handing him my book, and feeling ashamed to have to make my self-denial so apparent; while Doctor Jim blushed almost as deep a scarlet as any Robin-red-breast or Crimson-beauty in my collection.

By and by, after a good deal of casting which came in for intermittent encouragement from the canoe, Doctor Jim and I had each our fish on in full run. Our rods were showing their build in fine style. The screaming of the reels made the very waters dance with joy. For the moment the sun came out to see the fun, and the sloping shores of the pool seemed to me, intent, as I had to be, on the urgency of the event, like some great amphitheatre encircling the contestants as in a gladiatorial show. The interest of the imagined cloud of witnesses, focussed in the outcries and running comments from the canoe, came to me for the moment for a reality. A crow perched upon a ragged spruce at the head of the pool uttered his strange cry of exultation once and again, while several scamps of squirrels kept up a nearer recurrence of mocking revelry, as the reel gave out or brought in the silken line with its slender stay of terminal gut.

What a moment of full-tensioned living that was!

The whole world, permanent or evanescent, stretched out along that little bit of almost invisible translucency.

Climax and crisis were running in each other's wake like some runaway tandem.

How is it all to end?

There is Dan, I see him from the eastern corner of my eye. How can he attend

to both emergencies? Why did Viscount John not bring his spare landing-net? He might then have been of some service to me beyond that mere vapid running comment of his, should Doctor Jim call for Dan's assistance first. The competition would then have been a fair and square competition, with no handicap in the first or last heat.

No, there is no chance for our overlapping — no chance for anxiety on that score at least. But there was anxiety enough and to spare for all that, with my rod bending through a variation of curves. Nor, as all experienced anglers will tell you, do years of practice ever drive out this anxiety. The same story has to be repeated of tensioned activity, whenever the sportsman is thus engaged with a heavy fish, during the process of his landing it.

My turn to utilize Dan's alertness came first.

There was no hitch in the landing process.

Doctor Jim's turn was also successful.

And the two beauties we had caught were eventually laid out side by side on the cross bar of the canoe as we gave way to the Viscount and Dan, with Tom taking charge of the landing-net.

My fish weighed three pounds and a little over, while Doctor Jim's was the smallest fraction under the three pounds. Before the fish were weighed, however, both Dan and Viscount John had their rods in hand.

Dan had about the same luck that we had, though the fish he caught was a shade smaller than ours. The Viscount had taken his stand at the upper end of the pebble-strewn bank, well within the shade of some overhanging birches. How he managed to throw a line in a spot so full of threatening entanglements, I could hardly understand, until I noticed that he had shortened his line to within a yard or so of the caster, and was making a kind of a side sweep from under the bush. Wading up as far as he could, he soon bagged two or three large fellows, while Dan was still struggling with his first; and then returning by the way he had gone, took up several with his line let out to its fullest.

After further exchanging of places from

time to time, the Doctor and I, with Tom happened to be the spectators in turn.

What a pleasure it was to watch the deftness with which the Viscount could bring that caster of his down on the rippling wavelets of the pool, with only a thin streak to indicate where the flies had fallen; and when Dan's lures began to fail in their function, with no chance even of a bite, he soon joined in watching the skill of the Viscount.

"If you don't mind letting me handle your rod," said Tom to Dan, "I may as well try a bout with the Viscount."

And we were all delighted to hear him say so of his own accord.

I had heard of Tom's skill as a fly-fisher more than once expatiated upon in Bervie Lodge. The Viscount had been dropping hints all the way down about his finesse in throwing a Jock Scott or Davie Brown just where he had a mind to. And now that the right kind of competition had come to us with the disinclination of the trout of the Big Pool to allow us to repeat the havoc of the night before among their relatives—when the thought of gain by a counting of the fish caught had gone out of us,—what could be more interesting than to watch a contest of fly-casting between the master of the Tavistock himself and his brother-in-law the Viscount.

For fifteen minutes there had been a rise of no kind, and the Viscount was showing impatience.

"This thing's played out and we may as weel gang hame. The disappearance o' sae mony o' the saints below, by sudden ascension to a higher sphere, has raised a suspicion in the community that a Fotheringay is but a deil in disguise. They hae gi'en up lang syne the folly o' even lookin' at a bit scarlet wi' a hackle or yellow-body, I've gaen owre my book wi' some care up yonder, but, only wi' fair success; and now I think the game o' changin' my flies is not worth the candle. Hae Tom! there's my book! see what ye can dae wi' it to get anither rise."

But Tom, rod in hand, refused to take the proffered book.

"You say the place is played out, or fished out, and that all lures have become alike to the trout lying along the bottom of the pool. This is the moment to try one's skill."

"Ye're spoilin' for a competition, Mr. Tom the Mariner," said the Viscount. "That I see brawly."

"And what pleasanter way could there be of spending the time we have on hand before leaving for home. There are plenty of fish in there to catch, if one only has the skill and the tackle. But perhaps you would prefer to try the Skedellic?"

"No Skedellic for me," I exclaimed; "I've had enough of that dismal hole."

"Nor for me either," joined in the Viscount. "We might meet the alter ego o' Olivard, wi' twa rods in his hand, and be drooned forbye on our way back. Na, na, nae Skedellic for ony o' us, my gallant lad. If ye want to burn a candle wisely, dinna burn it at baith ends. Though a candle o' a competition even wi' you Tom at this favoured spot may no be worth the farthing, yet nane o' us are likely to get our fingers burned or a' is done. Out wi' your proposition my man."

Tom's proposition was simply one of keeping to the pool, and testing our own perseverance, not for fish, but to show our skill.

"If this be what ye ca' family pride, my fine fellow, I'm in for it, though ye hae the handicap o' us a', in being fresh. The five o' us can hardly tak' part in the struggle, since ye hae nae rod, Tom. Will we draw lots?"

I suggested that the contest be confined to the veterans, with the verdict left in the hands of a jury of three.

"And what's to be the prize?" asked the Viscount.

"The honour of the thing would be prize enough for me," I answered. "But if that doesn't satisfy you, perhaps Mr. Tom will hand over to you the keeping of King George all the way home, should ye win."

(To be Continued.)

At a recent competitive shoot between the Associated .22 Caliber Rifle Club of South Australia and a picked English team at Adelaide the bulk of the members on both sides shot with Stevens Ideal Rifles, and the best ten scores were obtained by those who used these rifles. In the end the South Australians won by nine points and the close scoring throughout the day was undoubtedly due to the use of these rifles.

## American Sportsmen in Canada.

**T**HIS subject continues to excite interest amongst many of our readers, who, we are glad to note from the tone of their communications, approve of the position we have taken up and agree that in true sport there is no international boundary line. The sportsman, who is a sportsman in every sense of the term, is welcome in Canada, come from what part of the world he may; and if he hails from south of the boundary line, and is willing to comply with the reasonable conditions laid down for his guidance in the Dominion he is none the less a welcome visitor. Mr. Frank L. Phalen writes from Fairhaven, Mass.:—

The Editor, "Rod and Gun in Canada":—

"Dear Sir.—A copy of your interesting Magazine for April has been sent me by the Canadian Pacific Railway Company.

"I have found very much in it to enjoy. It smells of the forests and streams, and splendid natural attractions of Canada. It invites the lover of Nature and sport to your wonderful land of lakes and mountains still unspoiled by the noise and disfigurement of civilization.

"I am an American, but not I hope one of those who are either "hogs" or "demi-gods" as described by your Montreal correspondent, Duncan McGregor. I am sure the heat and discourtesy of some of your correspondents do not represent the attitude or the feelings of the Canadian people. No doubt there are Americans, as there are Canadians, of whom we are all ashamed. I have travelled and mingled extensively with Canadians in Nova Scotia, Quebec, and Ontario, and I am sure that gentlemen and true sportsmen on both sides of the boundary line desire only fair play and good will.

"It is to the advantage of Canada, as it is to that of the States, that good feeling and brotherhood prevail in all their relationships; and you may rest assured that all true American sportsmen are quite as anxious as our Canadian friends that only "a square deal" should be had on both sides of the boundary line.

"Thousands of American citizens who find pleasure in Canada in summer will appreciate the judicious and candid spirit of

your editorial comments. May the sins and follies of neither a few foolish Americans, nor a few thoughtless Canadians, ever disturb our happy fellowship."

"Guide", who writes from Sharbot Lake, Ont., addresses us as under:—

"Having read all the letters brought out by Mr. Russell's communication in the October number of "Rod and Gun in Canada" I would like to add my experience to the number. In the first place I think Mr. Russell treated the subject in a very fair manner. I am a Canadian and believe in Canada for the Canadians, but not to the extreme that Mr. Black advises.

"I have been a guide for the last eight years, and during that time have had to deal with all kinds of people. I find that when you are looking for sharks you may find any amount of them amongst Canadians. Why I have known men from Mr. Black's own town to catch thirty black bass to one rod in one day, and then not be satisfied. There are some Americans also who do not know when they get enough. In such cases Mr. Russell's advice should be taken, and they ought to be made to feel the law. One lesson will be all that most of them will require.

"What we most need are good fish and game wardens—men who will do their duty without fear or favor, and who cannot be bought for five dollars by one man, while going to the extent of the law with the next because he refuses to cough up. One reason why Americans get on so easy in Canada is that they are nearly always ready to cough up.

"Another writer thinks Americans should not be allowed to bring in guns. Well, here it is again—the only trouble I have ever had with people wanting to kill game out of season has been with Canadians. My advice is to bring in all the Americans you can, as they leave their good money in Canada, and there is plenty of game and fish for all who want to come.

"Rod and Gun in Canada has the ball rolling, and is doing a great work for the country. It is just what we needed in Canada—a live sporting Magazine, and I hope you may have all success your splendid Magazine deserves."

A LAKE ON THE LAURENTIANS

## Truth and Some Trout.

BY C. H. HOOPER.

**A**UGUST, it will be admitted, is not the best month for trout fishing — yet it happened in August.

It was not premeditated and therefore came to us undiscounted by anticipation. My twin and I had found that we wanted to go somewhere. We did not know why or where, but we yearned to get away from town. Our conversation for days had consisted of sentences beginning "Let's",— answered by sentences beginning "But"—

Finally we bundled into a C. P. R. train at the Place Viger, Montreal, with one fishing rod and hand bag containing principally what must be used in emergencies only, but without tickets.

We were at last going north. On that we were fairly resolved. We consulted the conductor. We asked him frankly where we would be at, say 10 p.m.—it was then five. He intimated that when we had given him one-seventy five per head his information would be more reliable. We complied. He said "Labelle." We decided to go to Labelle. We did not know the place. Possibly that fact influenced our decision. With one bit of information he supplied us. At Labelle lived a hotelkeeper, one "Nontelle." We repeated to ourselves "Labelle-

Nontelle, Nontelle, Labelle. We soon became letter perfect. We decided that after 10 p.m. we should be ruled by circumstances—plus Nontelle.

We arrived and were put off. The train receded into the hills and we perceived that it was very dark and very cold. In the distance could be heard a river. Presently we realized that our stock of French was small. We stopped men with lanterns and murmured our lesson: "Nontelle, Labelle, Monsieur Nontelle, Monsieur Labelle" — it sounded a little mixed, I thought, at the time. But they only backed away respectfully. Then I tried a bolder flight. "Monsieur Nontelle est-il dans ici?" They said a great deal which sounded very interesting. By a supreme effort I slowly articulated "L'hotel de Monsieur Nontelle, il est—ou ????" I have since been told that this could not be considered very good French. There was, however, something so appealingly pathetic in my inflection that the hearer's heart must have been pierced. He escorted us down a road, his lantern a star of hope, across a bridge over a roaring river to a hotel. We risked no more eloquence; we gave him a quarter. It

seemed to work as well. We reflected that it might have served at first. Then we went to bed. The morning ushered in a glorious day—and Nontelle. He asked us in good English what we wished to do. I looked at my twin. My twin looked at me. A bright idea occurred to me and I seized my rod. "We wish to go a-fishing," said I, or words to that effect. Nontelle did not seem pleased. He said it was too early or too late. We said that did not matter. He probably thought we were fools. Being French he did not say so. The details were left strictly to him, and while he hitched his horses we examined the town. We had time to spare.

Seated in the trap, I began to realize that a ten foot, split bamboo bass rod, a hundred yards of heavy line and no flies are not the proper equipment for trout fishing. I intimated as much to Nontelle. His reply was impressive. He had, he said, three dollars worth of trout tackle with him and had placed two "poles" in the rig against all contingencies. I said nothing—what did it matter? We were out for enjoyment and if trout came to us—even on the end of a bass line and "pole"—what cared we?

The drive through the hills was delightful, with Trembling Mountain always in sight. About three miles from the town we crossed a stream with the inevitable lumber chute, drew up and alighted.

Nontelle carried a mysterious pail full of things and his pole; my twin followed clutching something by the neck and a ditto pole, and I brought up the rear with my brave split bamboo, multiplying reel and cable. We two are both over six feet, while Nontelle is about a No. 1 sized man. The procession was imposing.

Our host produced his "tackle". The dealer must have "seen him coming." We secured a trout hook each at least and—let me whisper—a supply of the homely "wum." The stream was narrow enough to step across. If minnows lived in it, I reflected they would feel cramped. Selecting a pool over which I could have jumped I tossed in my bait with no great expectations. Instantly there came a tug and I—well I "struck." My rod, as I have remarked is ten feet long and remarkably stiff. A beautiful flashing half pound trout soared over my head and perched in a tree

behind me. I fell upon him, threaded him on a twig, laid down my rod, and went to tell my twin all about it. He smiled upon me and with a nonchalance which I knew was feigned indicated a slightly larger trout on the bank behind him. I hurried back to my rod.

The water was so low that few pools of any size could be found. We scrambled up the hills and over the rocks and through the briars, dropping in here and there—sometimes securing an eight inch trout—oftener securing nothing. It was hard work, rough work, but more particularly very hot work. At a ruined dam Nontelle climbed over a chaos of logs and deftly dropped his line by hand through a crevice into an impossible little pool. He drew up the best fish caught that day—weighing subsequently just a pound.

But ye gods, I meditated this is not trout fishing. Where is the dainty rod, the slender silk and the delicately tied deception? I asked Nontelle. He said we wanted to catch trout for dinner. The argument seemed to be conclusive.

By noon we had penetrated some few miles into the hills. We had worked hard and faithfully—a thing we seldom do—had scrambled and were scratched, sun burned and leg-weary, but above all we were villainously hungry. We again consulted our host. It appeared that he possessed the same symptoms. Moreover he knew how to treat them. Fishing was postponed, a fire lit and while Nontelle prepared some trout we reclined on a shelving rock by the murmur of a little fall and reflected.

Yesterday had been full of noises—the clang of the cars, the foot-falls of men, and of horses, the rumble of wheels, the shriek of whistles and all the abominable clamour incident to a high state of civilization. Today not a sound broke the silence, save the falling of the water and the crackling of the fire! Even the lumber men had left the woods and only that morning had we seen the fresh track of a deer. Primeval environments hemmed us in and Montreal lay a hundred miles to the south. We gloated over the fact together, but as my twin poetically said: "Gloating filleth not the belly." At this moment dinner was announced.

I have pic-niced with a white cloth and

napkins; I have camped respectably with a tin service; I have frequently eaten from a frying pan—each man's share sacredly inviolate by the imaginary meridian across the charmed circle of iron,—and I have occasionally gnawed a bird from the wooden spit upon which it had been roasted.

I now expected the pan. Here is where the Gaul overreached us. Nontelle had not fried our trout. He had produced a pail full of what he called "bouillon." It was not "bouillon", it was nectar and ambrosia—mixed!

The solids and semi-solids—trout, potatoes, tomatoes and onions we fished out with our clasp-knives, shovelled upon hunks of bread and snapped at before they fell off. Then we ate the bread. That nothing should be lost we drank the remainder from tin pint cups. I would not swear that we did not lick the pail.

Yesterday we had toyed with food, carped at the cooking and criticized the service. Today we were children of Nature—and we felt it.

We lanky six footers expanded. We beamed upon each other and we teamed upon Nontelle. Finally we opened that which was sealed and finished gloriously.

Then we lit our pipes and meditated. Our meditations were profound,—so much so in fact that Nontelle two hours later aroused us with shouts, and one of the "poles." We fished in a desultory manner for a little longer, but our hearts were not in the task. Trout we had killed;

trout we had cooked and trout we had assimilated—our work was done.

Presently it began to rain. This was unexpected and we hurried towards the road.

Nontelle suggested a short cut by way of the board walk along the lumber chute. Knowing no better we assented. It proved a nightmare. It consisted of a single unbarked, half-round plank, a bare six inches wide, wet and slippery with the rain, the long spans bucking under us like bronchos and it crossed the country at a single level regardless of the contour of the ground. Sometimes we tottered along a road that threaded 50 feet above a ravine upon a rickety tressel, again across a beaver dam several inches under the surface. A slip in the former case meant a broken neck, in the latter merely a bath.

Nontelle lead cat-like and debonnaire, the pail and contents in one hand, his pole in the other. My twin followed, clutching another pole and ever stretching blindly sideways—for his eyes were very busy—to the timber chute beside us. Last I tottered along fully engaged with rod and camera. With caulks in his boots the lumberman skips down this via dolorosa with sang-froid. We had no caulks and shuffled along with brows knit, muscles tense, patting (personally at least) our prayers. Nontelle was crooning "La Belle Fontaine"—the heartless villain.

We reached the rig at last, bundled in and gasped in relief. Our trout had been well earned.

## A Hunt in Northern Ontario.

BY W. H. ALLISON.

**W**ITH the exception of a three days' hunt in the vicinity of Dead Creek, Ont., two years ago, when I had the good fortune to shoot two deer in that short time, I had not been in the woods for ten years, and last fall I felt an unutterable longing for some of the old experience. Business engagements relaxed so far as to make it possible for me to in-

dulge in my desires, and I was making some hurried arrangements when I remembered that the Ontario open season would not fit in with them, and it seemed as if I was to be balked in the very hour of my triumph.

In the course of business I found myself a few days later in Montreal, and my esteemed friend, who is also an ardent

sportsman, Mr. Frank Murray, invited me to accompany him on his hunting trip to the wilds of Northern Quebec. It did not take me long to make up my mind. I accepted his invitation with alacrity, and as he spoke the visions of our northern camp, the freedom of the woods, and the glories of the chase, filled me with the most pleasant of anticipations. Already I was escaping from the monotony of hotel life, and felt like a boy released from a course of strong discipline at school.

To my mind the laws of Quebec are more liberal, in this respect at least, than those of Ontario. They allow greater freedom to those who cannot take their outing in one particular fortnight, and they also give hunters a larger amount of security, as the woods are not so crowded, and the chances of being shot in mistake are reduced to a minimum. I believe the almost entire freedom from gun accidents in Quebec as compared with Ontario and New Brunswick, is due to the extended season in Quebec.

We left Montreal on Nov. 22nd and proceeded along the Laurentian branch of the Canadian Pacific Railway to Labelle, about one hundred miles north from Montreal, and four hours run through a mountainous and picturesque country. At Labelle we procured a team and sleigh which conveyed us thirty miles to the west to Lake de Saube (Saud Lake.) Here we found a nice camp, which has been recently built near the narrows between Sand and Beaver Lakes, and we proceeded to make ourselves comfortable.

Deer signs were numerous but the whole surrounding country had been so thoroughly hunted during the previous fortnight (13 deer having been killed in that time by one party alone) that after one day's experience, in the course of which the guides fired several shots at long range at three deer which we saw, we decided to return.

On the way out when near Lake Desert, fourteen miles west of Labelle, we shot a fine buck which tipped the scales at 175 lbs. By the way Lake Desert is one of the finest lakes there is in that northern country for catching red and grey trout. During the fishing season numerous parties fish this lake and make fine hauls.

The red trout average from twelve to sixteen inches, and the grey trout from twenty to thirty inches in length. There is good accommodation at moderate rates at the west end of the lake.

We found the wolves numerous and destructive, and in addition to what we saw of these miserable brutes and their habits, we received much further testimony from the guides and settlers. The necessity for an increase in the bounty, so as to make it worth the while of both guides and settlers to spend time in hunting the wolves, was strongly impressed upon us.

One of our guides told us of an adventure he had last fall when a big timber wolf trailed him right to the vicinity of our camp. Whenever Joe stopped the wolf would sit on its haunches and snarl at him. As he had only three cartridges in his rifle, Joe was afraid to shoot. At length however he mustered up his courage and fired twice, and then, without waiting to see the result, he turned and ran for camp which he reached in safety.

The night when we were in camp the wolves came within one hundred feet of the buildings at midnight and howled so fiercely as to awaken us from sleep. Joe was frightened and springing for the door, placed a block of wood against it.

As we were awake and wolf stories were in order, the other guide told us that a fortnight before, when still hunting, he shot a doe when it was on the full run for the water. It was being chased by two wolves, and on going towards it the wolves wheeled and ran back.

If our time had not been so limited, and the calls of business so imperative, we would have had a wolf hunt, and made an attempt to rid the Province of a few of these pests. However we are hoping to again visit the locality ere long, and then, if circumstances will allow, we will have our revenge upon the wolves for disturbing our night's repose. Seriously however I believe there is more destruction of deer by wolves during the winter months than by all the hunters in the Province. It would be a wise action on the part of the Quebec Government to increase the bounty on wolves, and it would be one great means of assisting in the preservation of the game of the Province.

THE HON. DR. REAUME.

Minister of Public Works for Ontario, who has charge of the Fish and Game Interests of Ontario. [

Contrary to general expectation, the Legislature of Ontario adjourned without effecting any amendments of the Game Laws of the Province as recommended by the Ontario Game Commission. It was fairly well understood that the Government had several changes in view, and that Dr. Reaume had a measure in an advanced state of preparation. The pressure of Government work however in other directions was so great that time could not be found for this purpose. The work and the efforts of Dr. Reaume are not likely however to be wasted. As indicated in the last number of "Rod and Gun in Canada" the Executive of the Ontario Fish and Game Protection Association will supply all their branches with queries on the controversial points of fish and game protection now awaiting further legislative action. These branches will be asked to send a represen-

cative or representatives to a Provincial Conference to be held at Toronto in the fall at which all these points will be voted upon, these united expressions of the views of practical men being afterwards presented to the members of the Game Commission, and the Hon. Dr. Reaume, the Minister of Public Works for Ontario, who is in charge of the machinery for enforcing the provisions of the Act. In all probability an amending measure will be introduced into the Legislature next session by the Hon. Dr. Reaume, whose portrait we give above. The numerous sportsmen who visit Ontario every year to enjoy their vacation in one of its many sporting territories will be pleased to make the acquaintance in this way of the gentleman to whom is entrusted the working of the Act, upon the efficient carrying out of which so much of their sport and enjoyment depends.

## Carrying Firearms in Game Districts.

**T**HIS subject, like many others pertaining to game protection is one of continual interest, and it is one on which sportsmen are likely to differ widely for a long time to come. One of our valued correspondents (Mr. William Pratt, of Penetanguishene, whose letter we give below) appears to blame both "Rod and Gun in Canada" and the members of the Ontario Game Commission for not taking up a strong position on this subject. If we had had Mr. Pratt's unfortunate experience we might feel as keenly on the subject as he does.

As the Ontario Game Commissioners well put it, the first consideration for any new proposal is that it should be capable of being effectively enforced. We doubt whether, if even Mr. Pratt's suggestion is wise, it could be enforced.

We would also commend to our readers the following remarks by the Commissioners on "sportsmanlike" conduct:—

"Whether an action is sportsmanlike or not there is no certain test. The term "unsportsmanlike" is frequently used to express the dislike of an individual sportsman to practices which in other places and under other conditions are generally approved. What is regarded as "sportsmanlike" in one place is often strongly reprobated in another country, or even in another part of the same country."

Sportsmen can discuss all these matters good humoredly and without name calling. One man's experience differs widely from another's, and conditions in one part of the Province are totally at variance with those prevailing in another portion. What the Game Commissioners have to recommend, and what the Government has to consider before initiating legislation, is the good of the whole Province, and not any particular part; and for the Province we doubt if Mr. Pratt's proposal is practicable, even if advisable; and under the conditions of life in the northern portions of the Province we do not believe it to be advisable there. With these preliminary observations we give Mr. Pratt's letter, and shall be willing to find room for any other moderate expressions of opinion on the part of our readers:—

"A few numbers back you touched lightly, and with a good deal of uncertainty, the question of the prohibition of carrying fire arms in game haunts in the close seasons. The Game Commissioners also in their annual report, just to hand, take up the question in a manner that indicated uncertain knowledge, so that evidently a better understanding of the effects of indiscriminate and uncontrolled carrying of fire arms is to be desired. The Commissioners along with all others who desire effective laws for game preservation, cast about for various measures toward that end, but there is a vast difference in proposed regulations, and as might be expected, the less the practical experience of those proposing new laws, the less practical are their amendments.

The Game Act as it now stands makes provision for restricting hounds running at large in deer country, and wisely so, but the wonder is that fire arms were not placed in the same category. Did any one ever hear of a deer being run down and killed by dogs? It is not impossible but highly improbable and certainly rare. On the other hand, and I wish to make this as strong as the English language is capable of presenting it, there are more deer shot in close season in this Province, than are killed in the legal way in open season, and all this awful destruction from allowing all and sundry to carry fire arms absolutely uncontrolled. It is not deer alone that suffer, but not a four footed animal, not a game bird, no not even our songsters, escape. What good purpose is served by allowing tourists, shantymen, holiday makers out of our cities, towns and villages, and others, to carry firearms at their sweet will and pleasure? What good end is reached? What ill effects would their prohibition bring about? Is it possible to say one word in argument of the present state of affairs.

If, Sir, "Rod and Gun in Canada" has a mission, surely it is in line with game preservation."

I remain, Yours truly,  
WM. PRATT,

Penetanguishene, April, 1906.

TORONTO CANOE CLUB OLD BOYS.

# The Toronto Canoe Club.

## Early History.

BY LOU E. MARSH.

**T**HE Toronto Canoe Club, like everything else worth while, had parents. It was born humbly and has achieved great heights in the world of acuquatics — the largest canoe club on earth — yet those who nursed and coddled it and organized canoeing on Toronto Bay in the early days, are men whom the paddlers of today are proud to acknowledge.

Mr. J. W. Bridgeman !

Mr. Robert Tyson !

Mr. Hugh Neilson !

Mr. F. M. Nicholson !

There are four names indelibly emblazoned on Toronto canoeing history. As long as blademen turn eddies on Toronto bay, so long will those four be remembered and revered. The other day I had a talk with several veteran members of the Toronto Canoe Club—W. H. Sparrow, John Muirhead, J. G. Ramsay and Geo. Howell.

I wanted an insight into the club's ancient history.

"Go and ask Mr. Neilson ; he is the father of the club" they replied with singular unanimity.

I did as I was advised, but I found Mr. Neilson too modest to accept the entire honor of founding the present superb organization. I, too found a man, who, though his hair and beard are silvered by time, is still full of activity. The recital of old time T. C. C. struggles on many waters stirred his blood, and his eyes snapped with the lust of keen competition. He drew word pictures of starts, in old-time championships, when the farthest man on the line was a quarter mile away from the chap on the pole, and once, even, he dropped upon one knee, and seizing a cane, or an umbrella—I dont know which, for his vivid description transformed it into a racing blade—he illustrated a new stroke that, backed by good Canuck muscle, sent a Peterboro' to the front, and brought a championship to the land of the Maple Leaf.

Hi ! Yah ! But those were the days when Canadian canoeing blood ran hot and Toronto's sturdy paddlers brought home lots of good Yankee silverware.

The Toronto Canoe Club was founded in Decemeber, 1880. There were just six present at the organization meeting, which was held at the Rossin House. Those six were Messrs. Neilson, Bridgeman, Tyson, Nicholson and two young men whose enthusiasm was not of so sufficiently sturdy a character as to mark itself upon the memory of Mr. Neilson.

Mr. Bridgeman was elected the Canoe Club's first Commodore, and his proud flotilla consisted of six canoes.

Canoe Club members now own over 300 canoes !

The first question of importance upon the horizon was a proposition to call the puny infant the Toronto Boating and Canoe Club, but Mr. Neilson protested and won the day, and the new club was labelled the Toronto Cance Club.

The Canoe Club's first quarters were in John Clendenning's boathouse at the foot of Lorne street. In those days the foot of Lorne street was the edge of the Bay. The first year the entire club space would just hold six canoes, but the club "grew like scandal," and the next year or so Clendenning built the organization its first club house. This tiny little structure could be tucked away in the present club's gymnasium. There were racks for 18 canoes, a locker room and a meeting room. No showers, gym, reading room, ladies' parlor, ball room, dinghy shelter, and no steward—just a bald little boat house, — but still she grew.

"We held official races from the first year of our existence," said Mr. Neilson.

"Who won ?" I enquired.

"Well around 1882 I used to win the handicap races" he laughed. "I used to arrange the handicaps" and Mr. Neilson went off into silent laughter as he recol-

lected the days when he used to "frame up" "soft spots" for himself.'

In those days combined sailing and paddling races were popular and Mr. Neilson used to fix 'em up so that there would be lots of difficult sailing in each event. Sailing was his stronghold and Mr. W. G. McKendrick, the asphalt contractor, relates with unction how Mr. Neilson would fix it so his paddling abilities would be over-matched by Mr. Neilson's sailing skill, and how the club's grandpa managed to get away with the majority of the prizes.

Mr. Colin Fraser, Mr. Nicholson and Mr. Tyson too took part in the racing, but Mr. Tyson was never enamoured with the paddling game. He liked sailing and his old friends in the game are never done relating tales of his inventiveness. He had new ideas for everything that related to sailing, from patent reefing gears, and telescoping masts, to sails of weird design. Those who are associated with Mr. Tyson even now remark his wonderful preference for nautical novelties—proas, catamarans, folding canvas boats—and are full of admiration for his nautical skill, knowledge and general handiness. He is now a member of the Queen City Yacht Club, and has attained much popularity among the young men by reason of the readiness with which he places his fund of knowledge and his manual skill at their service. To watch Mr. Tyson nurse his odd sailing craft out to windward is a treat to those who admire sailorly skill. He never loses an inch, as many a fresh tyro in a faster boat has discovered when he thrust a race upon this quiet veteran.

But to get back to matters more strictly canoeing:—

In 1882 the Torontos took a whirl at the American Canoe Association game. The championship meet was at Lake George and Messrs. Nicholson, Tyson, Neilson and Fiske Johnston went down. The first three were sailors and they were trimmed to the King's taste. Johnston did collect a couple of small prizes but what was more valuable he garnered much useful racing knowledge.

The next year the A.C.A. meet was held at Stoney Lake near Peterboro. Mr. Johnston's Lake George experience did him good and he proved himself to be the

speediest man on the lake. Mr. Neilson's opportunity came too in the sailing race. It blew half a gale, and the Toronto man with 100 pounds of shot in a big husky centreboard canoe, lugged through the race and won handily.

It was in 1884, however, that Johnston really came to the front. At the A.C.A. meet on Grindstone Island in the St. Lawrence he beat the best America had at any and every style of paddling. In these championship races Edwin Gould, the millionaire New Yorker, was a competitor. Any sort of paddling was allowed and double blades and single blades were mixed up promiscuously in a long line of starters. Gould used a double blade, and so did Johnston, but Johnston sat upon a box in his canoe, and getting full power behind each stroke, soon left his field astern. Johnston's magnificent performance woke paddlers up to the fact that Toronto was on the canoeing map, and hard on Johnston's heels came Rupert Muntz, Harry MacKendrick, D. B. Jacques, W. A. Leys, and they brought cup after cup and championship after championship to the "Red Ring" clubs. Jacques and Leys were the tandem champions of the continent, and the other pair held just about all the other championships.

In those days styles in paddling were as divergent as the types of canoes. Johnston was a powerful fellow and used his body on his blade. Harry MacKendrick was noted for his gracefulness. He originated paddling with only one knee down. In races he used to lash his upright knee to a thwart. He used his blade with a little rocking side motion that was a pleasure to look upon.

After these champions came a dozen good paddlers, whose names are still bright in the club's racing history — the McNichol Bros., Sylvester, and half a dozen others who bring us down to today and "Reg" Bloomfield, Bruce Ridpath, Gallow, Moody, Brent, Brown and the scores of good blade wielders who combine the spirit of competition with that of good fellowship, and help cement the club into what it is today—one of the most compact and popular aquatic organizations in the entire world.

# A Great Modern Boating Organization.

BY LOU E. MARSH

MR. WILLIAM McQUILLAN'S DINGHY

HOLDER OF THE BAILEY CUP AND TORONTO CANOE CLUB DINGHY CHAMPION

**T**HAT the Toronto Canoe Club is the premier canoeing organization in the world is an undisputed fact. The club has 600 members and those 600 members own 300 canoes, forty sailing dinghies, and a respectable little fleet of motor boats.

The Club's prestige at large was

made, and is being maintained, by the prowess and skill of its racing men, but its popularity in Toronto is due to the social position it occupies.

The Club, speaking socially, occupies a unique position in Toronto, by reason of the originality and variety of its entertainments. The "something doing" sig-

is practically nailed over the front door of the club. It is not like the majority of other aquatic clubs, which put up the shutters on Nov. 1 and hibernate until the May flowers are abloom. The club is just as much alive on New Year's day as it is in mid-July.

The Toronto Canoe Club's winter programme is a development of late years. Ten years ago a dance or two with a smoker and a dinner, the usual programme of any aquatic organization, served to keep the

MR. WILLIAM McQUILLAN.

members from falling away altogether in the winter months. Now the committee in charge in the winter and of the social side during the summer is of equal importance with that which handles the racing. In the summer time these twain toil hand in hand and things fairly sizzle with life around the clubhouse.

The winter programme of the club practically commences with the Hallowe'en frolic and the land marks are the Christmas tree, the watch night service New Year's eve, and the annual banquet, while interspersed at regular intervals are dances and smokers. Added to this are

Saturday night "snacks", a card or indoor sporting contest, which runs practically all season and skating and ice boating parties. During the past couple of seasons club members have developed a mania for skate sailing and any fine Saturday afternoon when the ice was clear and the wind good the Bay was freckled with skate sailors, the majority of whom were members of the Toronto Canoe Club and their friends.

In addition numerous hockey matches between scratch teams are pulled off and the boys have even introduced indoor baseball out of doors on the ice. Some of the players wear skates and some flounder around in leather foot gear. One afternoon the game was played on the snow covered ice and the outfielders wore skis, snow shoes or hip rubber boots.

In the summer time the club holds at homes on regatta and other race days, picnics in the war canoes up the Humber or across to the Island, club cruises for supper at some of the near by summer resorts with a baseball game after the meal. In the fall the athletic event par excellence is the annual battle between two Rugby teams. The players wear everything from suits of oilskin to swimming costumes plus a pair of knickers and the trick plays they have evolved under the Burnside rules have put kinks in the locks of the Thrift Burnside and made Rev. A. F. Barr, Thrifts collaborator, sigh for a missionary berth in Mongolia.

In racing circles the Toronto Canoe Club has had its ups and down. The strongest club in the northern division numerically and in sporting spirit the "Red Totem" insignia was always athwart the chest of a doughty antagonist, be the contest one for fours at a mile or a hurry-scurry. The club was always strong at the American Canoe Association meets, and, that the T. C. C. boys were there with the goods is evidenced by the array of A. C. A. shields around the clubhouse. Every championship in the A.C.A. has at one time or another been held by the "Red Totem" club. Eight years ago the T.C.C. was in its racing prime. Those were the days in which the McNichol Bros. came to the front and started in to clean up the silverware. They were sturdily backed up by half a dozen good men and

when war canoe racing became the thing the T.C.C. crew trimmed up the best of them. During the past three or four years the club has been dropping back a bit, and wins were not so frequent, but last year Reg. Blomfield, the "wizard of the canoe" brought back some of the club's lost laurels and the club too had a fours that passed the flag in front often enough to be considered the best in the north.

This year the old time racing fever has broken forth and with the prospect of red hot competition from the Island Aquatics and the Parkdales the Toronto Canoe Club men are working as they have not worked for years. The men have been taking their medicine and acquiring useful knowledge in the hard school of experience and are about due to climb out into the calcium which ever envelops champions.

The Club is sending Blomfield's four south to meet the great Tacoma fours in July for the International championship and the club will be found well represented at the Canadian Henley canoe events.

Though a canoeing organization the Toronto Canoe Club has the finest fleet of sailing dinghies on the Lakes and numbers among its members four or five of the best dinghy sailors in Toronto. The club has about 40 dinghies and 26 or 28 of them try the racing game. The club runs two series of sailing races and these events excite as much interest as do the paddling races.

The best sailing man the canoe club has is Wm. McQuillan, who has twice won the championship. He is not only the best man the T.C.C. has but he is right up among the top notchers on the Lake. The only man who consistently trims McQuillan is Frank Howard the Queen City yacht club crack. McQuillan and Norman R. Gooderham of the R.C.Y.C. put up a great race when they couple up.

In W. H. Sparrow the canoe club has another grand small boat sailor and right on his heels are such good ones as Ernie Tyrrell, R. Bertram, Avern Pardoe, Geo. Beswick and a couple of others who make McQuillan do his prettiest to beat them out.

The Toronto Canoe Club is just about ready for a new club house. They have added and remodelled in order to provide

for their heavy membership, but still it grows and though the Club has a fair amount of accommodation now it will not be long before they will have to open negotiations with an architect. The character of the club membership is responsible for this. Fully 90 per cent. of the members are truly active members and utilize the club summer and winter

MR. J. HUGH WEIR OF HAMILTON

A veteran Lake Ontario sailor, is known from Snake Island to Burlington Piers, as one of the trickiest stick handlers in the business. He is as good in a sixteen foot skiff as he is in a Canada cup boat, and has both built and sailed Canada Cup candidates. He comes of a sailing family, and has a reputation for hard driving when slugging through is necessary to win. He is a good disciplinarian and has taught many Hamilton youngsters when and how to reel the canoes with which to woo the Goddess of Victory.

# AUTOMOBILES AND AUTOMOBILING

## The Montreal Show

The Montreal Arena, which has resounded to the trills of the greatest contraltos, the "bow-wow" of canine aristocracy, and the neighing of blue blooded horses, to say nothing of the shouts of the wildly enthusiastic hockey crowds, added the "honk-honk" of the benzine buggy to its list of characteristic noises on April 21. On that date Montreal inaugurated its first automobile and motor boat show. It continued for a week, and was from the point of view of the Montreal automobile man a hit of the most pronounced character. Despite the fact that the Montreal Arena lends itself more readily to a show of this character than does the Granite Rink, Toronto, and that 26,000 people visited the Show, the exhibition was not as good a one as that in Toronto, if one judges from business results.

The buying was not nearly so brisk as it was at the Toronto Show, and sales are what make a permanent impression.

To those Toronto enthusiasts who visited the Montreal Show it was patent that the auto epidemic has not reached the same virulence as it has in Toronto. Toronto had autos before Montreal, and in addition Toronto has natural advantages which count heavily in the advancement of the business. Toronto's streets present no obstacle to any car, while in Montreal the hills are too steep, and the grades too heavy to permit of the satisfactory use of a light single cylinder car. It is the small cars that build up the business. They attract the man of moderate means who cannot afford to take a plunge on a \$400 or \$500 car at the outset, and the successful operation of a small car puts him in line for a heavier and more costly one.

In Montreal a car under 12-16 horse power is hardly a satisfactory investment. One powered at the 20-21 mark is about right for use in Montreal, and will take

almost any of the hills there without undue labor.

To get back to the show however Manager R. M. Jaffray had almost half a hundred good cars on exhibition but he fell down on auto boats, though by the same token the Toronto Show had nothing to boast about in the same Department as far as numbers were concerned. Toronto had four boats, but Montreal had only one and that did not arrive until late. The exhibit included nineteen English cars.

The autos on display included the Canadian cars Russell, Ford and Packard; the United States Winton, Peerless, Pope-Tolledo, Waverley Electric, Oldsmobile, Cadillac; the French Clermont-Bayard, Panhard, De Dion - Buton, Darracq; the Italian F. I. A. T.; while the English manufacturers were represented by Daimler, Argyle, and several other cars.

The accessories were about on a par with those at the Toronto Show, but this portion of the show was strengthened by an English exhibit. A feature of the Show was the exhibition of half a dozen freak idea motor bicycles.

Motor boat engines formed a fairly strong exhibit. The Defiance Engine Co., of Chatham, made a hit, and the Buffalo engine attracted much attention. A couple of local firms also showed up with engines that were well worthy of attention.

The Show was not particularly well patronized on the opening day, but on Monday the people attended with a rush, and the interest continued all the week. On April 23rd the Automobile Club of Canada visited the Arena in a body. They were headed by Mr. A. J. Davis, the President and all were enthusiastic over the Exhibition. They predicted that in future years Canadian autoists will be content with their own shows and not bother about those of New York and Boston.

The sales of Russell cars were particu-

larly gratifying in view of the fact that these cars are "made in Canada" and had to compete against some of the best cars in the world. Twelve Russells were sold before the Show was over, and many more "good prospects" came to a head very shortly afterwards. Fords too had an excellent run, and the little car found favor because of its general utility and its reputation for reliability.

### Two Good Stories

Ottawa motorists are telling a couple of good stories on one of her known "devil wagon" devotees—a Mr. S——d. This gentleman's hearing is not of the best, and one day his fellow motorists stole the reed out of his horn. For six weeks he religiously squeezed the bulb every time he drove his car, and anything obstructed him or anyone was apparently endangered. The comedy was played to the intense joy of his comrades of the choo-choo until Mr. S——d narrowly escaped running down a woman. He stopped at once, and went gallantly back to the affrighted female who angrily accused him of failing to give her warning. "I sounded my horn half a dozen times like this ——", said Mr. S——d, squeezing the bulb.

No sound came therefrom, and Mr. S——d could do no more than offer the most ample apologies and forthwith purchase a new alarm.

One day last fall while out on a jaunt one of the boys came back to the party with a hatful of eggs he had purloined. His companions considered his feat a great jest but balked on eating them. They were in a quandary until Mr. S——d turned chef. He set his little single cylinder racing until the water in the cooler was boiling. Then he took the top off and dropped the hen fruit in——

Good stories—if they are true.

### The Responsibility of a Motorist

To a somewhat less degree than the locomotive engineer, the user of the public highways has a right to assume that the road is clear, or that if obstructions exist due warning shall be given of them. But it is well known that even on the best-conducted railways obstructions are sometimes found to exist, with the result that

accidents frequently occur and lives are lost. Therefore, the engineer is constantly on the lookout, ready to throttle, reverse and whistle "down brakes" in the effort to escape the consequences of negligence, carelessness or worse on the part of others. Much more should the traveller upon the public road take heed of the obstacles that may rise in his path.

Railway crossings, draw-bridges and roads with sharp turns and steep hills should be watched carefully and the car kept under perfect control. Taking things for granted—"guessing" that everything is all right—is risky business. It is far better to lose a few seconds to render assurance doubly sure than to court disaster.

### An English Authority on Auto Questions

In England, as in Canada, they are discussing automobile legislation, and a contribution to the subject by Mr. Henry Norman, a noted traveller, automobilist, and writer, and one of the members representing the large and industrial city of Wolverhampton in the British House of Commons, may be recommended to the consideration of all concerned. Mr. Norman starts with the undoubted statement of fact, already reiterated in these pages, that automobiles have come to stay. It seems necessary to repeat what is almost a truism, as many people, even including some legislators, appear to fancy that they can kill the movement. No greater delusion was ever cherished on the part of anyone. Mr. Norman briefly reviews the progress made in locomotion in the past and has no difficulty in showing how every step was vainly opposed, only to be approved later on, in sheer wonderment that anyone could have been found so foolish as to imagine the course of the world could be stayed for their prejudices. Particularly is this the case with railways, while long ago public opinion has swung round to the other extreme, and we all know how much Canadian progress would have been hindered but for improvements in travel. One need lay no claim to prophetic vision to predict a similar revolution in public opinion with regard to automobiles before many years have passed over our heads.

On the speed question, Mr. Norman

### JOHN FORMAN

708-10 Craig Street

MONTREAL

goes to the root of the matter. He would fix no limit, holding that "the motorist has exactly the same duty towards his fellow men as have all other members of society. There is no need whatever to devise an artificial and fanciful code for him." The law he would lay down is brief but inclusive and really sums up the whole duty of those who use the public roads. "Whenever, wherever, and however you are driving, you must drive to the safety of all users of the roads." This is all that can be required of motorists or anyone else, but nothing less should be taken. To lay down a speed limit but too often means that the motorist will drive up to that limit, which said limit may be dangerous under certain circumstances, and unnecessarily and foolishly restrictive in others. This appears to be the true position to take up, and is no doubt the one at which we shall eventually arrive.

The other points upon which Mr. Norman lays stress are the necessity for passing an examination for all drivers before they are permitted to drive, and a graduated tax based upon horse power, for

all vehicles. Upon both of these points there should be pretty general agreement, particularly if, as Mr. Norman advocates, the whole proceeds of the tax were earmarked for expenditure on the roads.

#### Novel Contests

True to their reputation the Americans are promoting novel contests, no less than fourteen being scheduled to take place at Yonkers, N.Y., one being to start cars on low speed ten yards from a sand pit in which the depth increases gradually, the award being for distance. In an efficiency test cars will be supplied with one pint of gasoline, and will travel as far as power permits. Prizes will be given for cars covering two hundred yards from standing start on high gear carrying pails filled with water on any part of the car floor selected by the owner with the least water spilled. Although these and all the other contests are novel, there is method in them, and they are calculated to test and prove the usefulness and reliability, under most trying circumstances, of the cars.

While on this subject mention may be made of a contest arranged by the Chaffeurs League in Paris. In order to test the value of the different kinds of motor car springs, a vessel containing milk is to be carried by each car and the race is arranged to be run over rough roads in a given time. The chaffeur who arrives at the end of the course with the most milk will be given a silver medal — and he should deserve it too.

#### **Drastic Regulations**

The committee of the Ontario Legislature charged with the duty of preparing the new bill dealing with motor regulations in the Province showed themselves distinctly hostile to the new vehicles. So far as prohibiting racing on the public roads, providing heavy fines for offenders, and reasonable means for identification, the committee would have had no difficulty in carrying public opinion with them. They however spoiled what would have been good regulations by insisting upon unreasonable ones, and the only consolation is that time and experience will prove their utter futility.

#### **Boycotting Ontario**

Possibly owing to this unfriendly feeling on the part of the Ontario people, a fine auto tour of the Glidden Club of New York, through the Province has been partially if not wholly abandoned. This organisation, which numbers nearly five hundred autos, had intended to leave Buffalo on July 23rd, visiting Hamilton, Toronto, Kingston, Ottawa, Montreal, and Quebec, returning via Maine, making a splendid tour of some 1,500 miles. By the new route only Montreal, Three Rivers and Quebec will be visited in Canada. Many American automobilists were opposed to coming to Canada at all, and this decision to give Ontario the cold shoulder should open the eyes of some people to their folly. Such a party would have left much money in the Province, and done a great deal of good to many people. In the Province of Quebec apparently they are more liberal. By the new itinerary a couple of weeks will be occupied, and a trophy will be awarded to the car showing the greatest efficiency and freedom from car trouble.

## Racing Programme Q. C. Y. C.

May 24—Dinghy class, 16 foot Knockabout Class.

May 26—16 foot Class; First Class.

June 2—Special Class; Dinghy Class.

June 9—16 foot Class; Mackinaw Class.

June 16—16 foot Knockabout Class; Dinghy Class.

June 23—Special Class; First Class.

June 30—Cruising race, all classes.

July 2—L.S.S.A. Regatta, R. H. Y. C. Hamilton.

July 7—16 foot Class; Dinghy Class.

July 14—16 foot Knockabout Class; Mackinaw Class.

July 21—Special Class; First Class; Dinghy Class.

July 28—16 foot class.

Aug. 4—Dinghy Cruising Race.

Aug. 18—16 foot class.

Aug. 25—Mackinaw Class; Special class; First Class.

Sept. 1—Cruising Race, all classes.

Sept. 8—16 foot Knockabout Class; 16 foot class; Dinghy Class.

Sept. 15—Club Regatta.

Sept. 22—Mackinaw Class; Special Class; First Class.

## CUPS AND FLAGS.

Club Cups will be awarded the Yacht or Skiff making the best average in her class.

Frederic Nicholls Cup, First Class.

Tupper Cup—First Class.

Smith Cup—16 Foot Skiff Class.

Dodd Cup—Special Class.

World Cup—Mackinaw Class.

Commeford Cup—Dinghies

Prize Flags will be awarded the winners in each race

The Rear-Commodore will present 3 silk flags to be competed for by all classes, ex-

cept Dinghies and Motor Boats, for the highest average during season.

## A Motor Boat Programme

Here is the first regular season's racing programme for motor boats ever issued by a club in Canada—that of the Queen City Yacht Club of Toronto:—

June 2—18 ft.; June 9, 25 ft.; June 16, 30 ft.; June 23, 22 ft.; June 30, Cruise to Hamilton for L.S.S.A. Regatta, July 2, 1906; July 7, 18 ft.; July 14, 22 ft.; July 21, 25 ft.; July 28, 30 ft.; Aug. 4, Cruising Race; Aug. 11, 25 ft.; Aug. 18, 22 ft.; Aug. 25, 30 ft.; Sept. 1, Cruising Race; Sept. 8, 18 ft.

The classification and rules under which the races are held follow:—

18 ft. class, L.O.A. 18 ft., Min. Beam at L.W.L. 4 ft 8 in., H. P. 3.

22 ft class, L.O.A. 22 ft, Min. beam at L.W.L. 4 ft 8 in., H. P. 3.

25 ft. class, L.O.A., 25 ft, Min. beam at L.W.L. 5 ft. 9 in. H. P. 10.

30 ft. class, L.O.A. 30 ft., Min. beam at L.W.L. 6 ft. 2 in., H.P. 15.

40 ft. class, L.O.A. 40 ft.

Shall any boat built or being constructed prior to April 1st, 1906, exceed the overall length of her class by not more than 6 inches, the same will not bar her from competing in that class.

The beam of a boat shall be completed at a point 6-10 of the overall length, measured from the bow.

All boats will be given a number by the measurer which must be at least 12 inches in length and be displayed on both sides of the boat while racing.

Steam boat regulations to govern.

J. W. Commeford, the honorary measurer of the club, has donated championship flags for all the classes.

### Treating at the R. C. Y. C.

The anti-treating resolution offered by J. E. Robertson of the Royal Canadian Yacht Club of Toronto, which was considered to have crystallized in the mind of Mr. J. K. McNaught, M.P.P., of Toronto the idea of his anti-treating bill introduced in the Ontario Legislature, was snowed under when it was put to a vote at the annual meeting of the club. The officers for the ensuing year are as follows:—

Commodore—Dr. A. A. Macdonald (acclamation.)

Vice-Commodore—Frederic Nicholls (acclamation.)

Rear-Commodore—J. J. Kenney (acclamation.)

Hon. Treasurer—L. S. McMurray (acclamation.)

Executive Committee — Messrs. Brush, Pearson, McMurray, Staunton, Johnston, Polson, C. A. R. Brown, Dr. Riordan, ex-Commodore Haas, and ex-Commodore Jarvis.

### Stevens on Coaching Ottawa

Charlie Stevenson, the veteran oarsman, coach and trainer, will have charge of the Ottawa oarsmen this year. Stephenson's record both as a sculler and a coach are well known among English speaking oarsmen. Stephenson came from Harvard University to Ottawa. He has been coaching the Harvard eight all spring. As a sculler he went up against the best men in America, England, Australia and New Zealand and since he has been in the tutoring game he has trained several top-notch crews in England. In America the Argonauts of Toronto, the Detroit Rowing Club and the Vancouver Rowing Club crews have all been under Stevenson's watchful eye. Jimmy Rice who was with Ottawa last year and who is now training the Torontos recommended Stephenson. Stephenson took charge of the Ottawa crews on June 1st.

### The Victoria Yacht Club. Ottawa

The popular Toronto sailing dinghy has gained a strong foothold in the Victoria Yacht Club of Ottawa, and the club's course at Lake Deschenes will be the scene of some hot contests this year for the H.

Burks & Sons Cup for the class. Nearly all the boats in all classes destroyed in the club house fire last fall have been replaced and many new ones have been added to the fleet. The new club house has been practically completed. It contains 20 rooms for members who desire to live out at the clubhouse during the summer. The 1906 officers are:—

Hon. Commodore—G. H. Millen.

Hon. Vice-commodore—Geo. Burn.

Commodore—G. H. Rogers.

Rear-Commodore—W. R. Baker.

Auditors—Geo. Ross, L. Jarvis.

Directors—Messrs. E. T. B. Gillmore, D.E. Johnson, Dr. McElhinney, E. A. Oliver, D. F. Blyth, S. McClenaghan, C. C. Smith, Blyth Beattie.

### Ottawa Gets C. C. A. Meet

The Rideau Canoe Club of Ottawa, the baby aquatic organization of the Capital City, will control the Canadian Canoe Association Regatta this year. They won the meet from the Massawippis of Sherbrooke, the Carlton Place Club, and the Britannias of Ottawa. Ottawa was entitled to the meet. The two outside clubs were easily disposed of, though the Britannias were pretty strong, but when they found the sentiment of the meeting was in favor of the Rideaus they gracefully dropped out and made the choice unanimous. The race will be held at the Aylmer Yacht Club course. The Island Aquatic Association of Toronto, Smith's Falls, Carleton Place, Massawippi of Sherbrooke and Victorias of Aylmer were admitted to membership. The Association is gaining strength rapidly. A proposition for a permanent course was turned down by the meeting. The election of officers resulted:—

Commodore—W. R. Kennedy.

Rear-Commodore—Dr. O. K. Gibson.

Secretary-Treasurer—W. E. Gowling.

Executive—Jos. Johnston, St. Stephens; C. R. Johnston, New Edinburgh; E. R. McNeill, Brits; W. J. Whight, St. John's; H. C. Gourne, St. Lambert; M. W. Mitchell, Sherbrooke; Douglas, Smith's Falls; H. C. Wade, Toronto Island; G. R. Gray, Longueuil; E. A. Oliver, Victoria Y. C.; W. J. McDermott, Carleton Place.

### Parkdale to the Front

This new Parkdale Canoe Club of Toronto is going to make a splash in canoeing circles. A year ago the organization was unknown, now it has over a hundred members, club quarters at Meyer's pavilion on Humber Bay, has purchased a Dean war canoe and two racing fours, and even contemplates application for membership in the American Canoe Association and the Lake Sailing Skiff Association. The club too is a power in municipal politics. They rose to the emergency in grand style when the city proposed to empty a sewer into the club's parade ground, the Humber Bay. They are conducting a red hot opposition. The club is going in strong for the racing game and is looking forward to a clubhouse of its own.

### The Fours Championship

One of the most important races in the Toronto Canoe Club programme this year is a race for the international four championship. The race will be paddled at Pittsburg on July 4. The challenging club is the Tacoma Canoe Club which has the strongest four in the United States. Reg Blomfield's four will be sent down to represent the "Red Ring" and they should just about lead the Tacomas home.

### Hamilton Oarsmen Have Revived

The awakening of the rowing interest in Hamilton foreshadowed in last month's "Rod and Gun in Canada" looks like a permanency. A membership of one hundred has already been reached and over a thousand dollars raised by subscription. The committee of reorganization is hustling to make it \$1500 and with such a bundle of the sinews of war they expect to make a real splurge this summer. Quarters have been secured and three working fours purchased.

These are the men who are officially responsible this summer:—

Hon.-President—J. W. Lamoreaux.

Hon. Vice President—Robt. Hobson.

President—R. T. Steele.

Vice-President and Captain—D. M. Cam-

Secretary—Alex. McKenzie.

Treasurer—S. S. DuMoulin.

Assistant Treasurer—Jack Ramsay.

House Committee—N. J. Boyd, B. O. Hooper, J. W. McAllister.

Advisory Board—S. C. Mewburn, W. W. Osborne and R. H. Labatt.

### Versatility at Montreal

The Cartierville Boating Club of Montreal is neglecting no department of the aquatic game this year. They will have illuminated boat parades, motor, paddling and rowing races to say nothing of weekly dances and picnics. The club's 1906 officers are:—

President, T. Sonne, re-elected; vice-president, Harvey Roy; Secretary, F. B. Brown; treasurer, E. Drolet.

Executive committee, J. A. Bremner, G. E. Radford, F. W. Hamilton, E. W. Barlow and W. P. McKeddie.

The board of directors is composed of the following: T. Sonne, E. Drolet, E. W. Barlow, J. A. Bremner, J. Harvey Roy, Ls. Madore, Rod Madore, I. Meunier, Vict. Pelletier and Louis Boyer.

### Argos Grand Henley Eight

If beef and brawn will win the Grand Challenge Shield at the English Henley the Argos of Toronto should be considered as having the shield nailed to the wall. They are this year taking over the huskiest crew which ever competed in that historic race. Argos will average 183 pounds this year. The best previous average of any crew was 177 pounds. That was the figure reached by the Cornell crew. The English crews seldom average above 172 pounds. Don Mackenzie who stands 6 feet 3½ inches in his socks is the baby of the crew. He weighs 170 pounds in Adam's costume. Austin Fellowes, the giant of the crew, 6 feet 5 inches in height and weighs 260 even. The crew is remarkable for its height. Only two men fail to beat the six foot mark while there are ten in at 6 feet 4 inches to say nothing of Fellowes 6 feet 5 inches of bone and sinew.

The weights and heights of the crew follow:—

## Winnipeg Senior Eight

They leave on June 9. Thompson, the substitute, has been rowing in the boat all spring, while Joe Wright was coaching from outside the boat. Wright after licking team work and style into the crew stepped into the boat early in May and has kept them going hard all month.

"Pud" Kent, who has been in Winnipeg for two years, returned at the same time and took the place of Cochrane, who was "subbing" for him in the preliminary work. Kent was only six pounds over weight when he arrived. Jack Walsh, who was in New York all winter was an unexpected acquisition. He too landed with the May flowers and is in grand shape.

The crew has made some record breaking trials already and the Club is bubbling over with enthusiasm at the outlook. Advices from England say that the English crews are having an off year and that the Canuck eight has a grand chance.

Ishaw! This "off year" canard has been passed out every year Argos looked dangerous. The chappies over 'ome are seeking a soft place to fall on. At least that is the construction placed on the yarn.

Winnipeg rowing men consider that a \$15,000 club house deserves a suitable athletic complement, and they have in training a senior eight for the Canadian Henley and the American regattas. As a nucleus for this eight they have last year's great senior four and an additional inducement is the fact that the James Bay crew of New Westminster and Vancouver has expressed its intention of competing at the Canadian Henley. An attempt which seems likely to meet with ultimate success is being made to revive the old Northwestern Rowing Association. The 'Peg Club is taking the initiative and has communicated with the Duluth and St. Paul's clubs. They would like to see a revival of the old rivalry.

## A Fine Motor

While the demand for motors has grown in a most wonderful manner, it appears likely that the calls for them will be even greater in the future. No one who considers the subject for a few moments can wonder at this position of affairs. The motor is so compact, so easy to work, saves so much labor, and gives such thorough enjoyment, that a boat without a motor will soon become obsolete. Any owner can speedily learn how to work his motor, and the possibilities of pleasure from his boat when so fitted up are increased to an infinite extent. No one who has once had a motor boat would ever be without one again if he could help

it. The knowledge of power it gives him, the increased speed, the perfect control, and the ease of working are all factors that add to the pleasures of his outings, and increase the delight he takes in his boat.

For these pleasures to be tasted in perfection a reliable motor is essential. There are many motors and many good ones, and one of the best in every sense of that much abused word, is that manufactured by the Buffalo Gasolene Motor Co., of Buffalo, N. Y. Although only eight years old the Company has met with so much success that three enlargements of their works have proved necessary, and a fourth and much larger one is now under consideration. Although this will double their capacity, there are already indications that these extensions will be none too large.

These facts are in themselves pretty strong evidences of the excellence of the motors made by the Company. They have adopted a principle and worked at it until they have come as near perfection as it is possible to achieve on this mundane sphere. All their motors are of the four cycle type, two cylinder, up to and including seven and a half horse power, and four cylinder ten horse power and over. The Buffalo is a medium weight motor specially designed to secure strength without undue weight, and embodying every feature common to the best engines of the day, while also including several peculiar to itself. The very best of materials are used, and all parts being interchangeable a worn or broken part can be easily replaced. The Company indeed set themselves to manufacture instead of to build motors with the result that their motors are compact, and the strongest medium weight gasoline engine that the most modern mechanics have developed up to the present time. Simplicity and ease of access to every part have been kept in view throughout construction with the result that the motor is easy to operate, and any part can be removed without disturbing the other parts. All parts such as propeller, etc., are furnished complete with the motors, while economy in fuel from its use is also a great consideration. The motors are equipped with either the make and break, or jump spark ignition at the option of the

purchaser. The speed can be changed instantly at the will of the operator.

As might be expected, in Canada, where motor boat developments have gone forward with extraordinary rapidity, the Buffalo motor is well and favorably known, and as its users are its strongest advocates and its warmest friends, there is little doubt it will make as rapid strides proportionately in the Dominion as in the States. Efficiency is bound to succeed anywhere, but if such may be said to be the fact in one instance over all others, it is certainly the case with motors upon which

THE BUFFALO MARINE MOTOR.

at times so much may depend. The value of a boat is multiplied indefinitely when it has a good motor, and with the Buffalo motor any boat owner may rely upon one that is not going to fail him. Every motor sent out by the Company is guaranteed for one year—a big undertaking when it is carried out in the large number of cases in which they are interested and showing strong confidence in their own manufactured article. Their many satisfied customers say that this confidence is not misplaced, and that any boat owner may be sure of the best motor if he installs a Buffalo in his boat.

There are it is stated many Buffalos in use in Canada, and exhibitions at both the Montreal and Toronto shows attracted much attention to them, and increased their reputation and the knowledge of the Buffalo throughout Canada.

The same firm make a centrifugal pump which they claim will do more work in a given time and at a less cost than any other outfit of its kind on the market today.

A PORTION OF ROBERTSON BROS.' SHIPBUILDING YARD.

## Canadian Motor Boats.

### A Fine Hamilton Industry.

**R**OBERTSON BROS.' ship yard, a portion of which is shown in our illustration, has been in operation at the foot of Bay street, Hamilton, since 1860.

The present proprietors, Robertson Bros., have each year on the stocks, one or more vessels of considerable proportions, but since the building of large wooden vessels went out of fashion, fifteen years ago, they have devoted their time to the building of yachts and steamers of the smaller class from 50 to 100 feet in length. In their yard are wintered annually twenty to thirty craft of various sizes and descriptions, among which may be seen several gasoline launches and steamers.

Since the advent of the motor boat the plant, which is admirably adapted for this line, has been operated almost exclusively in turning out launches. The firm issues annually a handsome catalogue illustrating the various styles and sizes of launches which they carry in stock.

The first consideration, when designing a boat of any description, is the service for which she is intended; from this knowledge the proportional dimensions of the boat to be built are determined. It will be seen by examining the various drawings in their catalogue, illustrating details of construction, that more of ship con-

struction has been worked into the hull than is generally found in launch building. The arrangement of kelsons, stringers, clamps, etc., and the frames—running in one length from gunwale to gunwale all combine to make a strong and light hull. The distribution of butts in planking is also well looked after and in the smaller sizes the planking has no butts, each streak being in one length.

In designing their stock launches this firm has succeeded in turning out a form of hull which partakes in varying degrees of the qualities of both the older or ship model and the popular torpedo boat form of stern.

The compromise form illustrated in their catalogue has been declared by users of Robertson's boats to be unequalled for carrying capacity and when equipped with suitable power to compare favorably in speed with semi-racers of the same dimensions and power which do not carry half the load. This form of stern does not squat or draw down by the action of the propeller as does the counter or ship-formed stern, nor is the boat constructed with this form of stern uneasy in a seaway. On the other hand the large amount of nearly flat horizontal surface in the popular torpedo boat form renders a boat of this

A SHIP ON THE WAY READY FOR PLANKING

description very uneasy in a seaway and often results in severe pounding.

The demand for gasoline launches of from sixteen to forty feet in length has for the past three years taxed the capacity of the plant for six or seven months of each year, but the firm finds time to

attend to a large amount of repair work besides building one or more craft of larger dimensions. Their marine railway is constantly in use during the boating season.

Anyone interested in Motor Boats would do well to send for Robertson Bros.' catalogues

ONE OF THE FIRM'S MOTOR LAUNCHES

# OUR MEDICINE BAG

We are delighted that our judgment in selecting and making a leading feature in the April issue of "Rod and Gun in Canada" of the poem "The Best Old Dog in the Land," has been so widely and generally appreciated by our readers. It is a long time since such a wide, and indeed unanimous endorsement of any contribution to our pages has found such enthusiastic expression. The poem has been read, quoted, cried over, and (with our permission) reproduced, and it is reasonably certain that it will find its way to every corner of the world where the English language is spoken or any English readers are to be found. The reason for all this is obvious. The Rev. C. F. Yates possesses the true poetic faculty, which enables him to give expression to what we all feel, and we are all indebted to him for giving utterance in such noble words and high sentiments to some of the best of our thoughts and feelings. This is the mission of the poet, and in proportion as he does this he achieves success in his high calling. Every fine piece of poetry touches us in some of our better feelings, and it is in this way we distinguish true poetry from the mere jingles which only play upon words. Everything from the pen of the Rev. C. F. Yates moves a chord of our finer sentiments, and we are fortunate in numbering amongst our contributors a poet whose work appeals to those higher feelings to which true sportsmen, spending much of their time amidst Nature's wonders, are ever ready to respond.

His Royal Highness, Prince Arthur of Connaught, before leaving Vancouver Island had some excellent sport at Cowichan Lake and rapids, particularly in the headwaters of the river. The Prince gave a college yell as he got his first strike and afterwards had two trout rise to his flies; he hooked them, but in the exciting fight that followed they were too much for him. Upon winding up his line he found that

one had disappeared. He captured two more after that and had very many strikes. The other members of the party were successful and returned with full baskets. The Prince agreed that the fishing was ideal. It is needless to say that the party was well treated and found that, even without their fishermen's appetites, the spread that had been made ready for them on their return at the end of twenty miles of rough travel would have tempted anybody. On the second day the Prince's party was again successful. In all the Prince caught twelve of as fine trout as anybody could wish to carry home. The "Cowichan" fly, which is a good local fly and little known outside of the Island of Vancouver, proved to be the favorite. The Cowichan Lake, River and summer resort made many friends through this trip. The weather was not good, but nobody thought of that. Expert Indian paddlers gave the party a magnificent canoe trip, full of excitement from start to finish, through the most beautiful scenery. Vancouver Island both for fishing and shooting, offers very many attractions.

Any Fish or Hunt Club requiring a guardian or warden can hear of a man who has had Canadian, English, American, and Australian experience by addressing John Hope, 124 Lyon St., Ottawa. Mr. Hope is a good shot, a good fisherman, with an excellent knowledge of boats; and as his wife is a good cook, and both have the best of testimonials, they would make ideal caretakers for any organisation having such a vacancy.

In connection with the work attempted by the Ontario Fish and Game Protective Association in interesting children through their school books in bird life, a correspondent defends the country boy as a greater friend to the birds, and far less likely to do them injury than the city-bred lad. Instances are given where boys

with no pretensions to be other than the careless beings boys usually are have protected the birds building near school houses or dwellings, and enjoyed the daily observations of the taking ways and family lives of the birds. Of course this ideal picture is not always in accord with facts, but it is undoubtedly true that children can be interested in the subject, and many amongst them will heartily respond to any teaching thus given to them.

Progress and improvement are the key-notes thoroughly well maintained in the works of the J. Stevens Arms and Tool Co., of Chicopee Falls, Mass. They have just added materially to the value of their No. 17 Favorite rifle by placing a sporting rear sight and a Rocky Mountain front sight upon them without advancing the price. A new extension rib will hereafter be used on the No. 250 series of their hammer guns, and the No 350 series of their hammerless guns. A new check hook which will be used on all their double barrel guns takes away all strain from the forearm. These two improvements make all the guns in the series noted specially strong, and prevent their shooting loose even with the heaviest charge of dense powders. Changes that are really improvements are what all sportsmen like to see.

Mr. Charles Noble, of Collingwood, Ontario, writes a sensible letter dealing with fishery problems on the great lakes. He would like to see the Government do something to destroy unmerchable soft fish like suckers, which prey upon the spawn of whitefish and trout, and suggests a bounty of half a cent per pound when he believes they could then be profitably caught, salted and exported to the States. Further he would like a Government hatchery established on the Georgian Bay, and believes if these two courses were followed they would go a long way in restoring these fisheries to their old time productiveness.

For successful duck shooting decoys are necessary, and in the past the sportsman has had much trouble with his decoys. Now he is promised relief if he secures the Illinois River Folding Duck Decoys

which are made light and strong in various duck varieties and are used in groups of three. In addition they are attractively got up, and their durability, portability, and perfect construction enables them to be handled with both ease and satisfaction. Birds are lured a longer distance with these decoys, and as there is nothing to get out of order they can be used effectively for a long time. The patentee and sole manufacturer is J. W. Reynolds, 68 South Morgan St., Chicago, whose own experience, the best of all teachers, has led him to adopt several of the improvements here noted, and which have commended themselves to many sportsmen. Mr. Reynolds has also a double duck call which he describes as durable and moisture proof.

They are working well in New Brunswick in the way of fish cultivation. This spring, Fishery Commissioner D. G. Smith of Chatham, N.B., "planted" forty - five thousand trout fry in the Johnston and Kane brooks, and if plans are carried out, one million land locked salmon will also be turned out. As an experiment Mr. Smith has tried the planting of ova in the advanced eyed stage, instead of waiting for the fry to hatch out and have their sacco absorbed before distribution in the lakes and rivers of the Province. For the trial the forty-five thousand trout fry mentioned above were taken from the hatchery and conveyed to the Lomond Lake practically without loss. To carry the test still further fifteen thousand of the ova were planted in a spring brook within one hundred yards of Fishery Guardian Johnston's house so that the completion of the hatching, and the advancing process of the fry stage may be under his daily observations. Upon the results will depend the extension or abandonment of the scheme. So far success seems assured.

A further experiment is being tried by Mr. Smith. He is having the Johnston brook excavated so as to form a hatching and rearing pond. Salmon ova will be placed on a prepared gravelly bottom, and with the running stream no further care will be required. The whole expense of the operation will be for the conveyance of the ova from the place where the parent fish

# Happy Sick People

Thousands of People have used the Ensign Remedies for every form of ailment under the sun, and out of all such patients NOT ONE has charged that we have misrepresented our Remedies in any way, or that we have claimed more for them than their merits justified. Isn't that a record for you? Think of it! The only people who do not believe in the Ensign Remedies are those who have never tried them. Numbers have refused to try them, because they do not believe in them, and do not see how anything so simple can help them. The processes of Nature are all simple, and if we limited our practical application to what we understand there would be little doing. We live—who knows why? When you figure out the confines of the universe, tell us what is beyond. It is practical nonsense to resist or blind ourselves to facts. If the Ensign Remedies cure, they do it whether you know why or how. If you wish relief from suffering and disease, seek the natural way. Drug action is plainly unnatural. There is no argument about that or room for it. Follow the ways of the Creator and you will be successful and happy.

We want to talk to you through our booklets and leaflets. We have booklets on General Diseases, Private Diseases, Women's Diseases and Varicocoele, Varicose Veins. They are free to you. Send for any or all of them. We list 51 Remedies. We make about 500, covering all forms of disease. We have a complete system, and we say there are no incurable diseases. We mean CURE, or alteration of the disease state. We do not mean a suppression of symptoms.

We have no free remedies, no cut-rate bargain counter goods. Our remedies are worth much more than we ask for them. You pay for what you get and you get what you pay for. Write us to-day.

## J. P. Clabrough & Johnstone

PRICE STREET, BIRMINGHAM ENG

When writing advertisers kindly mention ROD AND GUN IN CANADA.

are stripped at the St. John hatchery to the hatchery pond at Loch Lomond. In this way the fish will be reared as nearly as possible under natural conditions and should gain in vigor and strength thereby, besides allowing a larger number to come to maturity. It is by these experiments much of the science of fish culture is learned, and an indefinite extension of the work throughout Canada should soon make our fishing waters unexcelled anywhere in the world.

Once again the subject of fly protection becomes of immediate and pressing importance to those intent upon going into the Canadian backwoods. Mosquitoes and flies are a drawback which only those acquainted with the tortures these insects can inflict upon suffering humanity can realise. No wonder the attempts to make man immune to the bites of these numerous enemies are almost as plentiful as the hordes which seek to destroy his peace and deprive him of the pleasures he would otherwise enjoy. While many rely upon the efficacy of their own preparations, and others have favorite ones compounded for them, the well known "Bite-no-more", a preparation manufactured by Messrs. Franklin, Hawley & Co., of Austin Station, Chicago, may be recommended to those who are in search of something of the kind. It will enable them to go into the woods with confidence that their well earned holiday will not be turned into a time of misery, and also put them into a position of being able to defy the myriad hosts whose territories they invade. A preparation economic and effective, not disagreeable, with a quickly evaporating odor, whose protecting qualities remain long after drying, appears to meet the wants of sportsmen who would gladly spend more time in the woods but for these little pests, whose numbers and bites make life unbearable to those exposed to their ravages. The attractions of the woods are so great that men will risk much to enjoy them and as they can now, by the aid of this preparation, neutralise one of the worst of the drawbacks they may be expected to go more often, to stay longer, to enjoy themselves better and to love Nature and Nature's ways with a keener delight in all her works.

For all of which they will have occasion to bless "Bite-no-more."

There is no end to new Societies, but one having a wide field of usefulness, and whose success would call down upon it many blessings should such attend its efforts, is the American Mosquito Extermination Society. Those who have suffered from this pest when in the backwoods will certainly wish all success to the Society's work for if it should lead to the extermination of mosquitoes it would mean an extension of the Canadian holiday season in the woods by a couple of months. The Society describes mosquitoes as "a needless and dangerous pest." They also say that their propagation can be prevented. All who have had actual experience with them would view their extinction without regret.

By a typographical error the word "canoeist" appeared in the advertisement of the Toronto Central Business College in our May number in place of the word "camerist". The whole sense of the advertisement however would lead readers to know what word was meant, and we are so used to the word "canoeist" that it escaped notice. Of course in a photographic contest the word "camerist" was the one intended to be used, and we again draw the attention of our readers to this contest arranged by the College in question in connection with their photographic course, which appears pretty sure to prove highly successful.

Every fisherman who has had much experience knows the value of taking care of his line, but only few do so effectively. Many have been the attempts to ensure the drying of the line evenly and efficiently so as to prevent the drying and rotting such as cause breakages at critical moments. Practical success was in no case achieved until a couple of years ago, when in a modest way the "Anglers' Friend" made its appearance. This device can be neatly folded and carried in the angler's kit as its weight is small. When in use four arms are unfolded, held firmly in position both by interlocking and a spring, and a substantial base is securely fastened upright by means of a thumbscrew. The fishing

# ITHACA GUNS

---

**T**HIS illustration shows the double thick nitro breech and narrow skeleton rib of an ITHACA No. 7 \$300.00 list gun.

¶ This feature together with the reinforced frame, reinforced stock and double bolt makes the ITHACA the strongest and safest gun for Nitro Powder.

¶ We build everything from a feather-weight  $5\frac{3}{4}$  lb. 20 gauge gun to a  $10\frac{1}{2}$  lb. 10 gauge Duck, Fox and Goose gun.

¶ For twenty-three years we have enjoyed the reputation of making the hardest and closest shooting guns on the market—the same man is still boring them and is to-day the oldest and most experienced barrel borer in America.

¶ Send for Art Catalog describing 17 grades, 10, 12, 16 and 20 gauge guns ranging in price from \$17.75 to \$300.00.

Lock Box No. 13

Pacific Coast Branch: 114 Second St., San Francisco, Cal.

reel is attached to the base by a simple and effective folder in the same manner as the reel seat of a rod. The inventor is Mr. Laughton, of Litchfield, Minn., who first made one for his own use, and was forced into the manufacture of others by the clamour of his friends to be supplied with such an effective means of drying their lines. The demand has grown until the device is now patented in four countries, and the Anglers' Friend promises to grow in favor until it is as widely known as the fashion of fishing is followed.

Changes and improvements in firearms are subjects sufficient to set every sportsman talking and comparing notes on the subject to an endless extent. They will one and all like to know that the Savage Arms Company, of Utica, N. Y., have been able, after considerable and careful experimenting, to convert their regular 1889 Model rifle into a take down without sacrificing strength or durability in any way. It is claimed that the new take down feature is the simplest that has ever been devised for a high power rifle. The distinctive feature of the Savage Take Down is that, when the rifle is assembled and the fore end in proper place, the barrel and receiver are locked securely together. As all sportsmen well know a rifle that can be easily taken apart offers many advantages to the user, both for convenience in carrying and ease in cleaning. The take down arrangement will be the new feature of the Savage 1899 Model 26 inch round barrel with rifle or shot gun butt; weight 7½ lbs.; and the Savage 1899 Model, 22-inch round barrel, shot gun butt only, weight about 7½ lbs. Both can be supplied in various calibers. The Company expects to have the new rifles ready for delivery on July 1st.

Last month a couple of tramps, of by no means the ordinary kind, spent a night at Toronto. They were young men who were on the return journey of a walking tour which commenced at Sydney, Cape Breton, and included a visit to San Francisco, the whole being an eight thousand mile tramp. The men started out to earn a wager of \$1200, the conditions being that they had to leave home without a cent, to walk the whole way, to earn their living

on the road, and to return before Sept. 1st. each with \$200. They left Cape Breton in July of 1905, walked to San Francisco as certificates of reputable citizens of all the towns through which they passed testified, and were on their return journey when they reached Toronto. They had earned their living by doing odd jobs and selling pencils, and had a goodly proportion of the \$400 secured—so much so that they felt justified in making purchases of new clothes at Toronto, at which place they had still 1235 miles to travel before their journey reached its final termination.

Messrs. Hardy Brothers, the well known English manufacturers of fishing tackle, of Alnwick, writes to "Rod and Gun in Canada" to the effect that the spring in the old country, while rather too dry for fishing, has been more than beautiful. On all the Northern streams salmon and trout were, at the time of writing, being taken daily.

The Seventh Volume of "Rod and Gun in Canada" concluded with our May number. For this Volume a Title Page and Index have been prepared and all our readers who wish to bind this Volume for future enjoyment and reference can have a copy of the same upon forwarding their requests to this office and enclosing a two cent stamp.

Every sportsman knows how much may depend upon a reliable cartridge, and the established reputation of English makers are deservedly guiding influences in selecting cartridges for sport in Canada. A man who goes to the backwoods may have the best of guns, but if he has poor cartridges his sport is not likely to be anything else, and his trip is robbed of the best portion of its enjoyment. It is therefore absolutely essential, if the best is to be obtained out of a man's vacation, that he should be well outfitted, and good cartridges are a very important part of that outfit. If the sportsman selects the cartridge manufactured by Messrs. Cogswell & Harrison, of London, England, he may go on his trip with the certainty that his cartridges will not fail him when the testing time arrives. This firm are actual manufactur-

ROD AND GUN IN CANADA

ers of cartridges, and possess several of their own inventions which enable them to scientifically test all their materials before use. As a result these selected and tested materials make up cartridges upon which absolute reliance can be placed. The English "Field", one of the highest authorities in the world on shooting, says: — "The Victor and Victoroid cartridges rightly bear a great reputation for accuracy of loading and reliability." The Canadian Agents for these cartridges, which ought to have as great a vogue in Canada as in the old country, are Messrs. Thomas Moore & Son, 43 St. Sacramento Street, Montreal.

Around Latchford, Ont., on the Main Line of the Canadian Pacific Railway west of Sudbury is a fine big game country. It would be well to correspond with Mr. E. L. Miles of that place for anybody wishing to learn about this new country.

"We won't go there because of the flies and mosquitoes," is often heard just now with reference to certain sections of the country. There are many good articles offered to the public for the prevention and cure of bites from these pests, and amongst the best of them is Calvert's Twenty Per Cent Carbolic Soap. Those who have not tried this remedy should not fail to do so, and they will find the comfort of their vacation much enhanced thereby. Carbolic acid (Phenol) is freely used in water or oil solution by medical men for various skin ailments, and its utility (when combined with pure soap) must be evident to every one. The manufacturers, Messrs. F. C. Calvert & Co., of Manchester, England, have achieved a great reputation with this soap, and their Canadian depot is at 349 Dorchester street west, Montreal. The price is thirty cents per tablet each in a tin box, and while it can usually be procured at all druggists, if there is any difficulty, a cake will be sent from Montreal on receipt of price. The following testimonial from Central Africa, where flies are a torment, speaks for itself:—"From London Mission, Lake Tanganyika, Central Africa, July 4.—Here as well as in Jamaica, the people (with sores, yaws, and such like) come to me for that twenty per cent. medical soap. Its unparalleled value

is well known amongst the natives." The same firm also make a disinfecting powder which is most useful as a preventative against disease, and if more freely used there would be less discomfort at summer resorts. If "Rod and Gun and Motor Sports in Canada" is mentioned, a sample tin will be sent free of cost.

Holiday makers and campers, who are now making their preparations for their vacations in the woods, are thinking and even dreaming of tents, camp bags, camp beds, waterproof clothing, canvas covered and other canoes, and all the various paraphernalia required if they are to obtain the best from their holiday. All these things and others needed to outfit sportsmen are to be found in the catalogue of the Sonne Tent and Awning Company, 329 Craig St., Montreal, and good quality at a reasonable price is the distinguishing characteristic of the Company. Mr. Sonne, the head of the concern, is himself a sportsman, and can offer valuable hints and advice to those who outfit with the Company. If you wish for a catalogue mention "Rod and Gun and Motor Sports in Canada" and one will be promptly forwarded.

Those who have tried the Coaxer bass baits—and their name is legion — will hail with pleasure the appearance of a miniature "Coaxer" for trout. This is being put on the market this year for the first time and has already met with a large demand. The bait is prepared in assorted colors, and is the smoothest little article that has been seen for some time. It is really more of a fly than anything else, but the cork body makes it float at all times, and therefore it is a surface fly. It is as light as a bass fly, and only about the size of the ordinary trout fly, thus producing a very killing combination. Those who have tried it declare it to be a mighty good thing, and are loud in its praises. Even if a fisherman has his outfit complete, he should make room for this small addition, which will add greatly to the effectiveness of his fishing powers. Those who have never tried the "Coaxer" should make investigation of its coaxing abilities, and they will not be disappointed. If your dealer has not got them write direct to the maker, W. J. Jamieson, 1388

# When You Go West, Outfit At Winnipeg---at EATON'S

Going West this summer to hunt, to fish, to climb the Mountains or to look over this glorious Western country? The above advice can be made the means of saving you expense and trouble. Don't burden your journey with supplies. It's not necessary. Wait till you reach Winnipeg. You can outfit at this great store just as satisfactorily as at your own home—may be more so. Everything here from the proverbial needle to an anchor, and our prices will compare favorably with any that can be secured in New York or Chicago.

We have made the matter of outfitting tourists and hunters as convenient it is possible to be made. Supplies can be packed and delivered to station hotel or if necessary shipped to the point nearest your destination.

## A Few Facts About Our Store

The largest store in Western Canada occupying over six acres of floor space. Gives employment to 1,400 people. Four boilers generate about 1000 horse power. Has a Mail Order Service that reaches every town and hamlet in the North West, British Columbia and the Yukon, where ever the mails go.

**THE T. EATON CO. LIMITED**  
Portage Ave., Winnipeg.

Lexington street, Chicago, Ill., and if you will mention "Rod and Gun and Motor Sports in Canada" he will forward you a catalogue describing these miniature Coaxers in full. Every fly fisherman will find this little trouble well repaid.

Bait casting is fine sport but to do the best of work a thoroughly good casting rod is essential. One that has proved its superiority at several tournaments is the Kalamazoo short casting rod manufactured by Messrs. Locher & Robb, Kalamazoo, Mich. So excellent are its merits that the champion long distance bait-caster, Mr. E. B. Bartholomew, of Chicago, has declared that he always uses it both in fishing trips and for exhibition work. At Chicago tournament last year the first six prizes were gained by fishermen using these rods.

For the game shot the perusal of the fine catalogue of Messrs. Joseph Lang & Son, 102 New Bond St., London W., England, is nothing less than a delight. The prices might certainly be described as stiff, but then the weapons included are of the best, and for those who can afford them the best are none too good. Sportsmen, and more particularly those who hunt for big game, know that there are times when full reliance has to be placed upon their guns, and a failure at such a crisis would be serious. The firm have good guns of all kinds, and for all purposes, including special ones for ladies and youths; and their special low pressure high velocity cordite rifles for big game ought to meet with favor on this continent. Their "new century" single or double trigger ejector possesses all the modern improvements, and is priced at 25 guineas, or practically \$130. The firm has light sporting rifles at lower prices. Their list of revolvers is one to study, and their range of ammunition one affording plenty of choice, and all of the best. Gun cases, cartridge carriers, and bags in bewildering varieties but all excellent, show what the sportsman's outfit may be when complete. Canadian and American sportsmen should be interested in the West London Shooting School, which is conducted under the auspices of the firm at Ealing near London. The lessons given are valuable though they

cannot compare with the practical ones gained in the Canadian woods. An index is included in this catalogue, which for completeness and interest may be commended to every sportsman.

That the present is an exceptionally busy season in nautical circles is evident from the experience of the Fraser Hollow Spar and Boat Company, of Greenport, N. Y. Every week for the past three months they have been shipping hollow spars on the Atlantic liners to their British agents, Messrs William Fife & Son, of Fairlie, Scotland. They have recently built a set of hollow spars for the new sloop yacht Effort, one for Messrs. Havens, Luckenbach, & O'Donohue's class P sloop; several topsail yards for the German schooner yacht Hamburg; a number of spars, etc., for the sloop Navahoe; and the British yacht White Heather. A good sized schooner was recently chartered by the Company and loaded with twelve large crates of hollow spars for delivery at various shipbuilding yards. The Company are building and fitting up several launches, boats, etc., to cover orders secured, and since last season have built about seven hundred canvas covered canoes, and one hundred of their famous St. Lawrence river skiffs.

The fisherman's reputation for exaggeration—to put it mildly—is not always deserved, though it has met with such general indulgence as to become a proverb. Allowance is now made for many of these stories, and one naturally thinks of a big discount when he hears of them. At the same time this reputation is not always deserved, and as usual in this world the great body of fishermen have to suffer for the sins of a few. A friend of "Rod and Gun's", whose character is good and who abhors exaggeration, tells the following incident:—

"I know that on one occasion when away fishing I was telling some friends on the train on the return journey just exactly to the strict letter what had occurred, pointing out that I had caught all my speckled trout on the fly, and I had brought home with me about seventy-five fish, the smallest of which was about eleven inches in length, and an American

sitting in the smoking department of the Pullman car hearing my story spoke to the negro porter next morning in the hearing of my friend to whom I had been telling my experience. On leaving the train at Toronto my friend said to me: "I have a good joke on you Mac." My reply was "What is it?" He said "Do you remember the American gentleman who sat behind us when you were telling me your experience in trout fishing on Lake St. German?" I remarked "Certainly so." He stated then he had heard the conversation between this American gentleman and the porter in the morning to the following effect:—

American—Porter do many people go trout fishing up to Lake St. German?

Porter—Yes, sir, I believe they do.

American—Do they catch many fish up there?

Porter—Well I reckon they do or they would not go there.

American—Well I heard that man talking last night in the car, and of all the damn liars in telling fish stories he beats them all.

Mrs. Dan O'Connor, of the well-known Temagami Inn, has distinguished herself as an angler, and increased the fame of Temagami as the ideal resort for fishermen, by catching a fish weighing  $27\frac{1}{2}$  lbs. The fish was thought to be a lake trout, but doubts were expressed as to a lake trout attaining such a size. Mr. Dan O'Connor took the fish to Toronto where it was placed in the refrigerator at the King Edward Hotel prior to being mounted for exhibition purposes. Mrs. O'Connor will be congratulated on her success by many tourists and fishermen this season

There was considerable activity on the part of the fishery officials at Niagara Falls, Ont., during the early part of May. There had been rumors for some time that illegal shipments of fish were crossing the border at this point. Fishery Inspector Shelley, who had been closely watching the trains, seized four tons of such fish on May 3rd, as they were on their journey to New York city. The whole were disposed of by public sale. On the following Saturday the entire day was spent in examin-

ing the express cars of the various trains going into the States with the result that big hauls were made. From a Michigan Central train seven boxes were taken and confiscated, from a Grand Trunk train sixteen, and from a Michigan Central on Sunday morning thirty-three. It was stated by a correspondent that Niagara Falls assumed the proportion of a large fish market, and local dealers were temporarily put out of business. In addition the local poorhouse was well supplied. A good deal was put in cold storage, to be sold at intervals as convenient. There is no doubt if a few more confiscations followed, and the illegal traffic were thus made unprofitable, it would speedily cease to the great advantage of the fisheries of Canada and all those who fish in a legal manner.

The manufacturers of "3 in One" gun oil will likely be next applying their famous lubricant to the axes of the earth to make the universe revolve more smoothly. Mr. Slee, President of the G. W. Cole Company, manufacturers of "3 in One" ad-

vises that they have just made arrangements with three different concerns to establish agencies in foreign countries. As the sale of "3 in One" is already international, it is evident that it must soon be universal. At home, they are not missing any opportunities of educating gun owners, sportsmen and others about the efficacy of "3 in One" for oiling, cleaning, polishing and preventing rust. Nearly all the principal gun and fire-arm manufacturers in the United States use and recommend "3 in One" and send out a sample bottle with every fire-arm they sell. Three of these firms alone are putting out nearly 7,000 samples a week, or a total of 350,000 samples per year. If there is anyone anywhere who doesn't know something about "3 in One" what is his excuse?

A wider circle than is usually included in the term sportsmen have rejoiced at the special prominence given to Canada by the victory of the Hamilton man over all competitors in the foot racing on the classic ground of Marathon. Sherring appears to be a sportsman in the best sense of the word, and his victory was doubly gratifying on that account. He is said to be strictly an amateur, and to have gone out to Greece at his own expense. In such a case he deserves all the credit, and the still more substantial rewards he will receive. The meeting of the old and the

new, as in this instance, appeals to the imagination of all, and the comparison between the virile Canadian and the decadent Greeks touches also our national pride. Canadians do well to rejoice at the victory of one of themselves on such historic ground, which means that the whole world will hear of it, and to honor the victor.

A neat folder of considerable interest to sportsmen and tourists has been gotten up and issued by Mr. F. S. Stocking, Quebec City Agent for the Quebec Central, Quebec and Lake St. John, and other railways. Quebec city is a fine center for sportsmen and tourists, the Quebec Central, giving a through service from New York, Boston, and Portland, with Pullman car, and the Quebec and Lake St. John taking them to a region where Nature is at her best, and which appears never likely to be spoiled—the far famed Saguenay. The trips north from Quebec are ideal, and whatever other part of the world one may have visited, new experiences in the north of Quebec Province are certain. A resume of the fishing and hunting laws of the

Province, as recently amended, are given on the folder, and Mr. Stocking is authorized to issue such fishing and hunting licenses as may be required. With this little folder one need not fear any misunderstanding with the authorities, as the hints given therein are quite sufficient to keep one straight, and enable one to remain well within the law, while at the same time having one's fill of enjoyment. Mr. E. O. Grundy, of Sherbrooke, P. Q., is the General Passenger Agent of the Quebec Central, and Mr. Alex. Hardy, General Passenger Agent of the Quebec and Lake St. John, at Quebec. Either of these gentlemen, as well as Mr. Stocking, will give all information required, and answer any queries that may be addressed to them by sportsmen or tourists.

The *Marlin* Baby Featherweight Repeater. A new high-grade .22 caliber repeating rifle which weighs only 3 pounds 10 ounces!

But this gun is no toy. It is a new and business-like rifle. It combines all the good old *Marlin* features—solid top, side ejection and simple mechanism—with the newer sliding forearm action which is so easy to work without spoiling the aim.

The reduction of cost and weight is positively not at the expense of *Marlin* quality. The high standard *Marlin* drop forgings are used in the breech block, frame and inside working parts. The rifle has the pleasant *Marlin* balance. Both .22 short and .22 long-rifle cartridges can, by means of an extra carrier, be used in the same

gun—a *Marlin* feature which all rifle shooters greatly enjoy.

The *Marlin* standard of accuracy is maintained in the highest degree by the most careful boring and the deepest grooving, which last care gives the barrel about double the life of the product of other rifle makers.

Take a *Marlin* Featherweight on your fishing trip or to the summer camp. Take one home to the farm or wherever your vacation finds you, and see what pleasure a good, light .22 caliber repeater can add to your outing.

It is an ideal squirrel rifle and can be relied upon to get all the killing power there is out of any .22 cartridge in hunting any sort of small game.

If your dealer cannot supply you write us direct. A complete description of this wonderful little rifle is given in our 1906 Catalogue. Sent FREE for six cents postage.

## Canadian Indians' Tournament

Shooting extraordinary characterized the first annual tournament of the Canadian Indians at Montreal, May 24th and 25th. Over fifty shot through the entire programme.

First amateur average, first day, was won by Mr. W. H. Ewing (Chief Long Buffalo Horn) Montreal, with 189 out of 200, and second average by Mr. D. McMackon (Chief Level Head) Highgate, Ont., with 186.

First amateur average second day was won by Mr. Westover (Chief Black Hawk) with 193 out of 200, and second average by Mr. Throop, Ottawa, with 191.

Amateur average for both days was won by Mr. Ewing with the splendid total of 378 or 94½ per cent, and second average by Mr. Westover with 395 or 94 per cent.

Mr. E. G. White, Ottawa, won the Ewing Cup with 49 out of 50.

J. Mowell Hawkins was high professional with 339; Elliott, second, with 368; Durston, third, with 378.

The full scores not being at hand as we go to press, the same are unavoidably held over until July, in which issue, however, a complete report, properly illustrated, of this meeting and of the Canadian Indians' annual meeting will be published.

## Stray Pellets

The following extract from a report of a Pennsylvania tournament is apropos of the recent discussion regarding two cent targets:—

"Many gun clubs holding shoots collect as much money as possible from gun, powder and ammunition firms for advertisements in their programmes, then add a few dollars to the events, as sort of bait to draw the shooters in order that they may come and pay two cents each for targets which cost the club about half a cent. The money thus made is placed in the club treasury to be used for an annual blow-out, or dear knows what. The Western Pennsylvania Trap Shooters League desires to discourage this kind of business, and instead give profits of tournaments to the contestants, where it rightly belongs. All the money from advertisements in the programme, dues from the different clubs in the league, one cent on each target trapped, and forty cents additional entrance charged all contestants is

divided among those who shoot through the entire day's programme at each shoot and fail to win their entrance. The promoters of the league feel highly elated, as matters worked out even better than anticipated. This plan was used at Ruffsdales and gave entire satisfaction to all. Of the thirty men who faced the traps twenty five shot through the entire programme of 180 targets, and every one who failed to win his entrance was paid back in full less cost of targets, and the forty cents extra charged each entry. Some of the contestants who had won but two or three dollars were pleased beyond measure when handed \$12 each by the cashier instead of the small amount they had expected to receive. One shooter had been in the money but twice out of the twelve events, and when he received \$12 instead of the \$1.10 due him, could hardly realize that such a thing was possible. L. B. Fleming, who won high average, received \$24.10. The entrance being \$16, he stated he was well pleased with the amount received, and that it was enough for any shooter to win in a day's shoot. When the small number of entries is considered, of the twenty-five who shot through the programme over one-half of them won over their entrance."

Stratford boys have decided not to hold a tournament on July 2nd and 3rd as announced. The Old Boys Re-union there on those dates is the reason given.

J. A. Gignac, secretary of the new gun club at Cutler, Ont., writes that he has succeeded better than he expected in organizing a club. They now have 46 members and all are enthusiastic. The club will hold a tournament on July 2nd.

Dr. Cook, Elmwood, Ont., writes that owing to the number of tournaments in June he has changed the date of his shoot to Friday July 6th.

The following scores at 20 targets were made at the weekly shoot of the Hyde Park (London) Gun Club: S. Lewis 7, J. Harrison 13, W. Oliver 12, F. Harrison 16, A. Steinhoff 12, D. Ross 8, K. Routledge 12, G. Roberts 3\*, W. Hodgins 7, J. Fowler 12. \*At ten targets.

At the annual meeting of the Grand Forks, Man., Gun Club, the following officers were elected: President, W. B. Wood; vice-president, L. B. Gibbs; secretary-treasurer, John Nuss; assistant, M. Wells; field captain, George E. Duis; executive committee, C. A. Hale and W. M. Ferguson.

The annual dinner of the Stanley Gun Club Toronto was held at the Merchants' hotel and restaurant April 27th. Guests were present from Hamilton as well as from the various city clubs. Thomas A. Duff was presented with a handsome quarter cut oak secretary in recognition of his services in connection with the various successful tournaments held under the club's auspices, and George M. Dunk was the

recipient of a gold watch. Mr. Dunk superintended the construction of the new club house and the laying out of the grounds. The Stanley Gun Club has now the most complete shooting park in Canada, and visitors will always receive a cordial welcome. The president, J. H. Thompson, presided at the dinner while George W. McGill made a most efficient toastmaster. The prizes won at the annual target shoots were presented by Mr. Duff, the winners being George L. Vivian, J. H. Thompson, H. Townson, George M. Dunk, W. H. Joselin, F. Hooley, A. S. Edkins, Ald. R. Fleming, George H. Cashmore, P. Wakefield and James Williams.

#### London Tournament

The fourth annual tournament of the Springwood Gun Club, London, was held on May 17th and 18th on the Club grounds. Prepara-

HARRY SCANE, WINNER HIGH AVERAGE.

tions had been made to handle a crowd of any size, three sets of Bowron traps having been installed. All the arrangements for the smooth running of the shoot and the convenience and comfort of the shooters, were perfect. Although there was a good attendance, it was not as large as might reasonably have been expected. Other tournaments before and after this one, no doubt, was largely responsible for this. A heavy downpour of rain on the morning of the first day, also contributed to lessen the attendance.

The shooting throughout the tournament was phenomenal, no such high averages having ever before been made over any traps in Canada, and this notwithstanding the fact that all the shooters were subject to a more or less severe handicap. Perfect weather, the easy work of the traps and the pleasant conditions surrounding the shoot all contributed to this result. As to the grounds all were enthusiastic, and we know of none better situated or better adapted in every way for holding a large shoot.

The feature event of the first day was the contest for the handsome trophy presented by the Hon. C. S. Hyman, Harry Scane, Ridgetown, and W. A. Smith, Kingsville, tied for this with 23 straight. In the shoot-off both again went straight. It was then agreed to save time and let the score in event No. 6 decide the result. In this Scane again went straight, while Smith missed his 1st and 14th birds.

On the second day two trophies were offered for competition in Events Nos. 4 and 8. The first of these, the London Handicap, was won by F. Galbraith, Ridgetown. Five tied in the first round with straight scores, viz., McMackon, Royal, Galbraith, McNeil and Johns. In the shoot-off the scores were: Galbraith 20, McMackon 18, Royal 17, McNeil 19 and Johns 15.

The handsome silver cup presented by the Hon. Adam Beck, was won by Roland Day of London, after shooting off the tie with Dr

Wilson and D. McMackon. Day scored 19 and Wilson and McMackon 18 each.

High average for the tournament resolved itself into a neck and neck race between R. E. Day, London, and Harry Scane, Ridgetown. At the end of the first day they were a tie with but six misses out of 200. Mr. Scane finally won out, scoring a total of 384 out of 400 or 96 per cent, received first prize, a fine Ithaca hammerless gun. Mr. Day got second prize, a \$24.00 Stevens rifle with 380 or 95 per cent.

The trade representatives present were John S. Boa, Winchester expert, Chicago, Ill.; E. G.

ROLAND E. DAY, WINNER SECOND HIGH AVERAGE.

Winner of Championship of Western Ontario at the Springwood (London) Gun Club.

White, Ottawa, and F. H. Conover, Leamington, Dupont representatives; John S. Cole, jr., Detroit, Mich., of the U. M. C. Co. and F. L. Hallford, Montreal, of the Dominion Cartridge Co. Of the professionals E. G. White, headed the list the first day, with the remarkably good score of 195 or 97½ per cent. J. S. Boa was but one behind while F. H. Conover was well up with 185. The latter did very well considering the fact that he is just recovering from a severe illness. On the second day Mr. Boa forged to the front and finished with 388 out of 400, or 97 per cent. Mr. White was but two behind, finishing with 386 or 96½ per cent. Mr. Boa, of course, used Winchester gun and ammunition and demonstrated the well-known excellence of these goods. Mr. White used Dupont powder in Dominion Sovereign and his good work showed not only the superior qualities of Dupont but, also, the excellence of the Canadian shell. Further it demonstrated Mr. White's ability to hold his own in the warmest company.

During the shoot Mr. Boa gave an exhibition of rifle shooting with the Winchester 22 automatic and did several clever stunts with this excellent little weapon.

The merchandise event, each day, inaugurated last year, proved attractive and many who did not take part in the regular events, amused themselves with this. Each contestant was allowed as many ten-bird rounds as he desired, the best two scores to count for the prize.

The scores, all events being at 20 targets each, are as follows

\*Professional

The following scores were made in the Merchandise event: MacMackon 20 Galbraith 18. Hartleib 17, Fortner 16. Avery 19. White, Boa, Amger 16. McNeil 14. Kribbs 20. Kelly 18. Thompson 20. Day 19. Scane 19. Tillman 17. Sreaton 14. Unton 19. Wilson 19. Smith 19. Royal 19. Beattie 19. W. G. Brown 19. Hay 19. Turnbull 20. Kennedy 17. Gillies 19. Webb 14. Coffey 15. Nicholson 14. Parker. Aikens 16; Dewar 18, Buck 17.

#### REFLECTIONS.

Chief Jam Jam officially denies that he called "Pass" instead of "Pull."

John S. Cole was hobbling around with rheumatism in both feet. We have a suspicion that John is cultivating that rheumatism to get out of walking the floor at nights.

Bert Glover performed the difficult feat of shooting through the programme and managing the office work as well. He scored well in both places and his handling of the cash could not have been more satisfactory.

Every one was sorry to see the ever popular "Ham" still under the weather from his recent illness.

Springwood Gun Club has grounds that would be ideal for a Dominion or Indian shoot. The street cars run within 50 feet of the club house.

Doc Tillman was one of the busiest of the club. He had rapid business both days. Nevertheless, he managed to black out some very good scores.

The shooting of Day and Scane was the most amateur performance yet seen at a Canadian tournament. Mr. Day takes his place in the front rank of Canadian shooters. "Sure shot" has been there for many moons.

The round face of "Brother Charles" was much missed. Reports from Ridgetown indicate that he has been "round" some.

#### SPRINGWOOD CLUB HOLIDAY SHOOT.

The holiday shoot May 31st of the Springwood Gun Club was well attended and men were made of all the events; in fact, the scores and through was exceptionally good. Three events were on the programme: two prize traps in each, and the others were one piece of hand painted china and cut glass. The winners were:

Event No. 1—Avey and Breckon.

Event No. 2—Tillmann and F. Brown.

Event No. 3—Glover and Day.

The averages for the day were as follows:

	S. A.	Hit	Average
Glover .....	76	73	97
Day .....	100	96	96
J. Brown .....	45	39	86
Tillmann .....	120	110	92
Breckon .....	107	95	90
F. Brown .....	90	76	84
Nicholson .....	45	25	55
Simcox .....	45	29	69
Webb .....	45	31	69
Avey .....	160	94	89
Stone .....	45	30	66
Rissett .....	30	27	90
Bryce .....	66	47	78
Mercer .....	45	32	71
Fortner .....	50	78	79

#### Owen Sound Sound Tournament

The second annual tournament of the Owen Sound Gun Club was held at Royston Park on May 10th and 11th. The weather both days was fine and favorable for good shooting although a little cooler than was altogether comfortable. The Owen Sound boys had presented a programme of the most attractive kind, in fact the most favorable from the shooters standpoint of any so far this year—\$50 in high average prizes being offered each day, beside valuable merchandise prizes and the handsome Dupont cup. Nevertheless, the attendance was a distinct disappointment. No doubt this was owing to the fact that a two day shoot at London and the big Indian shoot at Montreal were scheduled for the following weeks in May and the shooters found it impossible to attend all. Those who did attend were richly repaid for their trouble. They were given a chance to win something worth while and in this respect the example of the Owen Sound Club might well be followed by some others who are not quite so generous in the matter of average prizes.

The shooting was over the new Bowron trap. Unfortunately the trap commenced to "buck" from the first and created no end of trouble until the middle of the second day when it went out of business altogether. In fact, had it not been for "Big Buck's" mechanical skill it would not have run as well as it did. This was a regrettable feature of the shoot as this trap has many qualities that make it superior to any on the market.

F. H. Conover, Dupont representative and F.

## HAMMER THE HAMMER

and convince yourself that it is *not* one of the rank and file of the "went-off-by-accident" kind. "The proof of the pudding is in the eating"; the proof in this case is *in the trying*.

# IVER JOHNSON

SAFETY  
AUTOMATIC REVOLVER

cannot be discharged unless you pull the trigger. It is so constructed that the hammer cannot possibly come in contact with the firing-pin unless the trigger is *pulled all the way back*—true of no other revolver.

Hammer. \$6.50

Hammerless. \$7.50

Look for our name on the barrel and the owl's head on the grip.

**IVER JOHNSON'S ARMS AND CYCLE WORKS**

157 River Street, Fitchburg, Mass.

New York Office: 99 Chambers Street

Makers of Iver Johnson Bicycles and Single barrel Shotguns

L. Hallford of the Dominion Cartridge Company were the hired men present. Mr. Conover was just recovering from a serious illness and was without his old reliable shooting iron and so did not shoot much. Mr. Hallford did good work as referee.

High average prizes the first day were as follows: First, G. B. Smith, Ayton, \$15; 2nd, G. M. Dunk, Toronto, \$12; third, W. A. Smith, Kingsville, \$10; fourth, C. E. Harris, Owen Sound, \$8; fifth, W. M. Morrison, Owen Sound,

\$5.00.

Second Day—First and second, G. M. Dunk and Thos. Upton, Hamilton, tie, \$14.50 each; third, C. E. Harris, \$10; fourth and fifth, G. B. Smith and W. M. Morrison, tie, \$6.50 each.

All the events were at 21 targets except No 8 each day, which was at 25.

The 2-yard limit handicap 16-22 yards, was used, the average men the first day being 17, an extra yard the second. The scores follow:—

### FIRST DAY.

G. B. Smith, Ayton (17-20 yds.)	17	17	16	18	17	19	20	22	19	20
G. M. Dunk, Toronto (18-21 yds.)	18	20	17	16	14	18	20	24	18	19
W. A. Smith, Kingsville (18-21 yds.)	16	18	19	19	18	17	16	20	20	15
C. E. Harris, Owen Sound (16-19 yds.)	18	19	19	12	12	18	18	20	19	20
M. W. Morrison, Owen Sound (16-19 yds.)	18	16	16	18	11	19	19	20	19	18
W. Lewis, Owen Sound (16-19 yds.)	18	17	16	14	14	19	17	20	18	18
J. E. Harrison, Owen Sound (16-19 yds.)	15	17	17	18	16	17	15	20	18	18
T. Upton, Hamilton, (18-21 yds.)	15	17	17	18	13	18	18	21	19	16
J. E. Cantelon, Clinton (17-20 yds.)	16	16	14	19	12	13	16	17	18	16
H. A. (17-20 yds.)	17	17	18	15	15	17	17	20	18	18
R. Luck, Point Edward (16-19 yds.)	16	18	19	15	12	17	17	24	17	17
S. M. G. (16-19 yds.)	11	11			17	10	17	14	18	14
Ben. McLaren, Owen Sound (16-19 yds.)							16	16	16	14
Jas. Oatt, Owen Sound (16-19 yds.)								16	19	17
Dr. Cook, Elmwood (16-19 yds.)									24	16

Eighth event was a merchandise event. 25 birds. First prize, 500 loaded sovereigns, won by W. Lewis; 2, cut glass bowl, Dr. Cook; 3, 100 pounds shot, G. M. Dunk; 4, oak arm chair R. Luck; 5, five pounds mulleite, H. A.; 6, one dozen handkerchiefs, W. A. Smith; 7, 100 re-

peater loads, C. E. Harris; 8, Forest and Stream, one year, W. M. Morrison; 9, 100 Elley loads, G. B. Smith; 10, umbrella, T. Upton; 11, J. E. Harrison, brass wiper; 12, box chocolates, Jas. Oatt; 13, box cigars, S. M. G.; 14, tobacco jar, J. E. Cantelon; 15, Rod and Gun one year, Ben McLaren.

When writing advertisers kindly mention ROD AND GUN IN CANADA.

## SECOND DAY.

	Total														
G. M. Dunk (19-22 yards)	20	18	18	19	19	17	19	19	—	149

P. Doersam (16-19 yds.)							17	14	16	16	—				
S. M. G. (16-19 yds.)							16	16	17		—				

The eighth and last event was for the cham-Upton, Dr. Cook and W. M. Morrison. In the pionship of northern Ontario and a silver cupshoot off the veteran at the traps. Mr. Upton, presented by the Du Pont Powder Company atput it all over the younger shooters. Score:— 25 targets. There were three ties at 22, Thos. Upton 22, Dr. Cook 18, Morrison 15.

## Toronto Traps

The deciding match in the inter-club series between the Stanley Gun Club of Toronto and the Hamilton Gun Club of Hamilton was shot on the grounds of the Stanley Gun Club on Saturday, May 12th. The day was fine, light good, with a strong westerly wind, but owing to the location of the grounds the shooter was well protected from the breeze. The friends of both clubs were out in full force to cheer their respective clubs to victory. The match was shot 40 men a side, 25 targets per man, and was a case of see saw all thro the match, the Stanleys finally pulling away and winning by 33 targets. The inter-club matches between the Stanley and Hamilton Gun Clubs are always looked forward to with interest, more so this year than usual, and are usually shot best two out of three. The first match this year was shot on the grounds of the Stanley Gun Club, 27 men a side, and was won by the Stanleys by 9 targets. The second match taking place on the grounds of the Hamilton Gun Club 29 men a side, and resulted in a tie. The third match was again shot on the grounds of the Hamilton Gun Club 37 men a side, and was won by Hamilton by 10 targets. The deciding match took place in Toronto 40 men a side and was won by the Stanleys by 33 targets. Never in the history of shooting have two clubs been so evenly matched. At the end of the third match only one target separated the scores of the two clubs. The Stanleys previous to this year have always been the losers by a small margin, but this year have successfully turned the tables on their opponents. It is mainly due to the active interest taken by the members of these two clubs that trap shooting enjoys the healthy condition it holds in Canada today. The

STANLEYS—P. Wakefield 25, T. Duff 25, Joslyn 21, Mason 24, Turp 24, Dunk 24, Pearsall 23, Ely, Jennings 23, C. Logan, Dey, Thompson, Vivian, 22, Ross, Hovey, Sawden, jr., Edkins, Bredannaz, Wolf, Sawden, sr., 21, McGill, Fleming, Matthews 20, Gillman, Hiron, Williamson 19, Fritz, W. Wakefield, J. Townson, Martin, Harrison, Bate, Buck, Sheppard 18, Cashmore 17, Farmer 16, Ingham 16, Williams 16, Dorf 15, Hegarth 11, Total 802.

HAMILTON—Beatty 25, W. P. Thompson 24, D. Fletcher, King 23, Doc Green, Rasberry Thompson, 22, A. Lee, H. Graham, G. S. Karr, Konkle, Doc Wilson, M. E. Fletcher, 21, Smith, Royal, Wark, Oliver, J. Cline, Ben H. Rich, 20, J. Crooks, Maxwell, Hunter, Geo. Cline, Friend, Horning, Upton 19, Waterbury, D. M. Scott, Culp, 13, Bowron, Merriman, Court Thompson, 17, Bates, H. Dynes, Dr. Hunt, Burgess, 16, Barnhard 14, G. Dean 11, C. Smith 10, Total 764.

The Central Gun and Rod Club held a team shoot over the traps on their grounds at the

Ontario House, Kingston Road, on Saturday, April 21st, 1906. The teams were picked by the President and Vice President. The Vice President's side won by a majority of eleven. After the shoot the party adjourned to Mr. Richard Crew's dining room, where they enjoyed a splendid supper with a good programme. A spoon given each Saturday was won by J. Crew. The following scores were made at 25 targets: J. Crew 22, Beatty 21, D. Crew 20, Bate 19, Goddard 19, Beare 18, Taylor 18, G. Knox 17, W. Knox 16, Webb 16, Rogers 16, McDermott 15, Bunker 15, Annis 15, Usher 13, Broughton 12, McGinnis 9, Earls 9, Tansley 8, handicap by yards.

In the weekly spoon shoot of the Riverdale Gun Club on Saturday, May 19th, Jennings and Bond tied at 22 birds each, the shoot-off being won by Jennings. Scores:— Event 1, 10 targets—T. Logan 10, J. Jennings 9, Bredannaz 8, J. Logan 8, Joselin 7, Lowe 7, Bond 6, G. Logan 6, Mollon 5, Powell 5, Hiron 5, Davidson 4.

Event 2, 10 targets—Joselin 10, Bond 9, Jennings 9, Bredannaz 8, Hiron 8, T. Logan 8, J. Logan 7, Powell 7.

Event 3, 25 targets, spoon handicap—Jennings 22, Bond 22, Mollon 19, Hiron 18, T. Logan 18, J. Logan 18, Davidson 17, Joselin 16, G. Logan 14, Bredannaz 12, Lowe 11.

Event 4, 10 targets—Joselin 9, Jennings 9, Lowe 8, Bond 7, Bredannaz 7, G. Logan 7, J. Logan 7, Mollon 6.

The Riverdale Gun Club held their regular weekly shoot on Saturday, May 12th, but owing to the high wind the scores were not up to the average. The "spoon shoot" a 25-bird handicap event, was won by T. Logan with a score of 21 from the 19-yard mark. Mr. Jennings on 20 yards being second with a score of 20. The following are the scores in the different events:—

Event 1, 10 targets—Jennings 10, Bate 8, Bredannaz 8, Davidson 7, Bennett 6, Joselin 5, Wooley 4.

Event 2, 10 targets—Bate 8, G. Logan 7, Jennings 7, Wooley 6, T. Logan 5, F. Bredannaz 5, J. Logan 4, Joselin 3.

Event 3, spoon, 25 targets—T. Logan 21, J. Jennings 20, G. S. Bate 19, F. Bredannaz 18, J. Logan 18, C. Davidson 16, W. Joselin 14, G. Logan 12, A. Wooley 12.

Event 4, 10 targets—G. Logan 9, C. Davidson 8, J. Logan 8, A. Wooley 12.

Event 4, 10 targets—G. Logan 9, C. Davidson 8, J. Logan 8, A. Wooley 7, D. Walton 6, T. Logan 3.

The final match of the season in the City Blue Rock League was shot Saturday afternoon the Stanley Gun Club and the Riverdale Gun Club, the home club winning by a good margin. There was a good turnout of mem-

bers of both teams, the Stanleys having out 18 men, while the Riverdales had 20, and some fine shooting resulted. The following are the scores of the fifteen high guns on both teams:

Stanleys—Dunk 24, Fleming 24, Duff 23, McGill 23, Williamson 22, Sawdon, sr., 22, Dey 22, Cashmore 22, Martin 21, Thompson 21, Ely 21, Ingham 20, Sawdon, jr., 19, Wilson 17, Kerr 17. Total 318.

Riverdales—T. Logan 24, Jennings 24, G. Logan 23, Hiron 23, Logan 22, Taylor 22, C. Logan 22, Bate 22, Bond 22, Edkins 22, W. Best 21, Joselin 21, Powell 21, Mollon 21, Hooley 20. Total 330.

The Balmy Beach Gun Club's grounds April 28th was the scene of a particularly close shoot for a handsome shield presented by Jas. D. Bailey, whose name has been so long associated with sports of all kinds in Toronto. The contest was at 50 targets and the sliding handicap was used for the first time by the club, the shooters moving back or forward after each ten targets, according to their scores. The result was as follows:— J. G. Shaw 43, Fred Lyonde 42, J. H. Shaw 42, P. J. Boothe 41, J. H. Smith 40, Chas. Davies 40, W. R. Draper 39, J. H. Casci 33, J. Wilson 29, J. Geroux 28.

### Hamilton Happenings

The Hamilton Gun Club grounds presented a busy scene on Saturday, April 28th, when the biggest list of events the club has ever held during one afternoon took place. The Stanley Gun Club of Toronto came up to shoot against the local marksmen, and the match, along with four sweepstake events and a practice shoot, made up a lengthy programme. The last time the Stanleys visited the local club the match ended in a tie, and Saturday's match was for the purpose of shooting off the tie. In Saturday's contest the clubs made a record for North America in amateur inter-club trap-shooting.

The Stanleys had 40 men ready to uphold the honor of the club, while Hamilton had 37 men. The match was a 25 targets event, 37 men a side, and Hamilton won by ten birds. In getting 37 men to shoot, Hamilton had to call on Charles Brigger, who injured his knee eight months ago and is going around on crutches. Mr. Brigger was allowed to shoot sitting on a chair, and was cheered to the echo by all when he finished, breaking 19 out of 25. The Stanleys had a special train on the C.P.R., arriving here at 2.20 p.m., and leaving at 10 p.m. They were royally entertained at the grounds and afterwards at the uptown quarters of the Hamilton club, where a few short and happy speeches referring to the great success of the wonderful match and the good fellowship prevailing among trap-shooters in Canada, were made by J. H. Thompson, George McGill and T. A. Duff of Toronto, and Dr. J. E. Overholt, Ralph Ripley and W. P. Thomson of Hamilton.

The scores of the various events follow:

Blue Rock match, 25 targets, 37 men.

STANLEYS—Dev. Hulme 26; Vivian, Dunk, Ingham, Lawson, 24; Townsend, Bate, McGill, Jennings, Matthews, 23; Turn, Cashmore, Duff, Pearsall, Edkins 22; Ely, Thompson, Murray, 21; Fleming, Harrison, Jordan, Hiron, Bredannaz 20; Williams, Martin, W. Wakefield, Ross, P. Wakefield, Mason, 19; Buchanan 18, Snanner 17, C. Wilson 17, Sheppard 16, Williamson 16, Hogarth 14, Farmer 14. Total 759. Per centage .820.

HAMILTON—B. Smyth 24, Dr. Hunt 24, D. Fletcher, Upton, W. P. Thomson, Horning, G. Cline, Oliver, Maxwell, Dr. Johnston 23; A. J. Hunt, Ben It, Hunsberger, Dr. Wilson, Dean, King, Reardon, 22; Bates, M. E. Fletcher, H. Graham, 21; Wark, Cline, Rich, Hunter, Lee, Beattie 20; Brigger, Gould, Dr. Green, Crooks 19, Bowron, Raspberry, Royal, Marshall, Friend, A. Smyth 18; Waterbury 16. Total 769. Percentage .831.

Total percentage, 74 men, .825.

### SWEEP EVENTS.

First sweep, 15 targets—Dr. Wilson 15, Dunk 15, Turp 15, Upton, King, Beattie, W. P. Thomson, Duff, Jennings McGill 14 : Dr. Green Hunsberger, B. Smyth, J. H. Thompson, P. Wakefield, Popp, Waterbury, Bredannaz, Pearsall, Eddins, Jordan, Friend, Oliver 13; Rasberry, Horning, M. E. Fletcher, Ingham, Williamson, G. Cline, 12; Gould, Dean, Hunter, Dr. Hunt, Hogan, 11; W. Wakefield, C. Thomson, Williams, Fleming, Ben It, Barnard, Royal, Lawson, 10; Curno 9, Dr. Johnston 8, Spanner 8.

Second sweep, 15 targets—Dunk 15, Hunter 15, G. Cline, Bates, Horning, Harrison, W. P. Thomson, Bredannaz, Duff 14; Curno, B. Smyth Upton, Scott, Wark, 13; Pearsall, M. E. Fletcher, Rasberry, King, Dey, J. H. Thomson, Rich, Jennings, Tomkins, Hunt, 12; McGill, Beattie, Jordan, Dean, Friend, 11; Fleming 10, P. Wakefield 10, Barnard, J. Cline, Dr. Green, Eddins, Alder 9.

Third sweep, 15 targets—Rasberry 15, Popp, 15, G. Cline 15, Duff 15, Pearsall, W. P. Thomson, Dr. Wilson, Upton, B. Smyth, Dr. Green, 14; W. Wakefield 13, Dunk 13, P. Wakefield 12, Harrison, G. McGill, P. Friend, 11; King 10, Jennings 11, Bredannaz 10, Magill 8.

Fourth sweep, 15 targets—Turp 15, W. P. Thomson 15, G. Cline 14, Upton 13, B. Smyth 13, Dr. Groves 13, Rasberry 12, Dr. Jordan 11, Dr. Wilson 11, Scott 7.

### PRACTICE SHOOT.

Event 1—10 targets—J. Hunter 9, Oliver 9, Friend 6, Rasberry 5, B. Smyth 9, Dr. Green 7, Ben It 5, Marshall 7, Dean 8, Horning 9, Crooks 10, G. Cline 9, A. J. Hunt 7, Maxwell 8, Reardon 9, Lee 8, Lawrence 8, King 9, Bates 5, Dr. Hunt 5, Dr. Johnston 8, W. P. Thomson 10, Farmer 4, Beattie 9, Tomkins 7, Alder 9, Curno 3, D. Fletcher 8, Wark 9, J. Cline 7, Hunsberger 6, Gould 7, Bowron 7, Graham 5, C. Thomson 3, Rich 3, Howard 5, Hawkins 8, Dunham 8.

Event No. 2—10 birds—J. Hunter 9, Oliver 6, Friend 6, Rasberry 8, B. Smyth 8, Dr. Green 8, Ben It 8, Marshall 9, Dean 10, Horning 7.

Event 3—10 birds—J. Hunter 10, Oliver 6, Friend 6, Rasberry 8, B. Smyth 10, Dr. Green 8.

Event No. 4—25 targets—J. Hunter 19, Horning 20, W. P. Thomson 23, Upton 23, Dr. Wilson 25.

There was to have been a 25-target match between A and B. classes at the Hamilton club grounds on Saturday, May 5th, but as only a few of the A class men put in an appearance a match was held between teams chosen by Messrs. Upton and Dean, the latter's team being victorious. The losing side dined the winners at George Truman's. The scores:

25 birds.

Upton's team—Hunter 20, D. Fletcher 14, Wark 20, Barnard 18, Friend 14, W. P. Thomson 23, George Cline 22, Dr. Hunt 23, King 22, C. Thomson 16, Lee 18, F. Dunham 8, Dr. Green 23. Total 231.

Dean's Team—Beattie 25, Hunter 20, Karr 19, Dean 18, Court Thomson 18, Rich 19, A. J. Hunt 20, Dr. Johnston 21, Maxwell 10, Ben It 20, Stroud 10, Scott 15, Hawkins 10, Ben It 20. Total 256.

### New Gun Club

Enthusiastic sportsmen turned out for the meeting called at Marcon's hotel, Sandwich, Ont., to organize a gun club. Thos. Reid, of Walkerville, acted as chairman and nominations were received for the offices. Thos. J. Wear was elected president, David LaFond as vice-president and John Chapman as secretary-treasurer. W. C. Donaldson was elected captain and Jack Marcon will act as manager. The new organization will be known as the Lagoon Park Gun Club. The executive board will con-

## The Malone Gun Club

MALONE, N. Y.

will hold their opening shoot

### Wednesday, June 6

Canadian Shooters are cordially invited to attend and the committee in charge assure them that every effort will be made to make the day an enjoyable one. Splendid facilities for shooting are offered as the new club house and grounds are well equipped and nicely located. Ten events with added money will be shot off, and merchandise event will be open during day. Programs mailed on application.

Be sure to attend this shoot, you will never regret it.

## Doctoring

THINK OF

## ALEX. JOHNSTON

494 Eastern Ave., TORONTO, ONT.

Who has every facility for choke boring, re-stocking, Browning and repairing guns. You can make no mistake in bringing or sending your gun to him

sist of the officers of the club. A letter was received from F. H. Conover, of Leamington, who represents the DuPont Powder Co. in which an offer of a valuable loving cup to the new club was made. This was unanimously accepted and a vote of thanks was tendered the donors. It was decided to shoot for the trophy during the next four months, the event to be at 25 targets with a sliding handicap from 16 to 20 yards, members to be allowed to total their ten best scores during the competition. The trophy will become the winner's property at the end of the competition series.

Besides the officers already named the following members were enrolled: C. J. Wall, Thos. Reid, Andrew Braid, Goldie English, V. Bradshaw, John Merritt, W. Cousland, W. Rochford, J. L. Heureux, T. Brooke, J. Purser, J. Marcon, F. Stewart, L. Horton, F. Myles, Harry McIntosh, David Janisse, F. Marcon, W. Smith, L. Youngblood and Geo. McIntosh.

### Woodstock Beat Ingersoll

A high wind swept across the Ingersoll Gun Club grounds May 10th when Woodstock and Ingersoll Clubs met in a twenty bird shoot but despite this fact there were some very creditable scores made. Woodstock won the shoot by seven birds, the score standing 119 to 112. The score:—

Woodstock—Dawson 15, Hartley 11, Walker 9, Dawes 11, Vance 7, Booth 17, Miller 14, Maynard 18, Welford 9, Dutton 8. Total 119.

Ingersoll—Staples 15, Kirbyson 15, McMulkin 15, Nichols 16, Ruckle 3, McMulkin 7, Winder 14, Williamson 10, Morrison 7, Harris 11. Total 112.

In the 15 bird sweepstakes the following scores were made: Pyne 14, Miller 13, Nichols 23, Kirbyson 12, Thompson 12, McMulkin 12, Booth 12, Staples 11, Dawson 11, Welford 7, Harris 11, Hartley 11.

### Quebec Gun Club

The second shoot for the Fov Cup took place at the Kent House on Saturday May 19. The principal scores on Saturday were:—

At 25 birds—H. des Rivières 23, E. R. Pepin 21, R. Ruel 20, P. Bishop 19, Felix Turcotte 19, E. I. Waagen 18, Capt. Panet 17, R. Wright 17, J. K. Boswell 16, L. P. J. Turcotte 15.

### Dartmouth Doings

The Dartmouth, N.S., Rod and Gun Club held their monthly shoot at their grounds May 2nd and as usual were favoured with beautiful weather. The shooting commenced at 2.30 and there were seven events which resulted as follows:—

First event—10 targets and preliminary—1st, A. Edwards and Lieut. DuDomain, tie, 9 each; 2nd G. E. Vanbuskirk, L. F. Hill, Capt. Uniacke and Lieut. Willis, tie; 8 each. 3rd—A.M. Stewart 7.

Second event—Garrison Gun Club vs Dartmouth Rod and Gun Club, three man team, 25 targets, unknown angles:—

Garrison Gun Club—Lieut. Willis 14, Lieut. DuDomain 16, Capt. Uniacke 14. Total 46.

Dartmouth Rod and Gun Club—G. Edwards 16, J. A. McLaughlin 8, L. F. Hill 16. Total 40.

Majority for garrison team six targets. Third event—Lafin and Rand Cup—25 targets. Handicap—A. Edwards 23, L. F. Hill 22, H. D. Romans 21. This cup was won in April by Jas. Egan.

Fourth event—10 bird sweepstake—L. F. Hill 10, E. Walsh 8, Lt. DuDomain, A. Edwards, Capt. Uniacke, tie, 7.

Fifth Event—10 bird sweepstake—L. F. Hill 10, Lt. DuDomain 8, Capt. Uniacke 7.

Sixth event—10 bird sweepstake—Lt. DuDomain and A. Edwards tie, 10; Capt. Uniacke 9, L. F. Hill 8.

Seventh event—doubles—Won by E. Walsh. The Austen-Hill gold badge was won by L.

## Western Canada

Is a paradise for Sportsmen, no matter what branch of sport they prefer. Both large and small game is plentiful and the innumerable lakes and rivers abound with fish. You probably know this already but you may not know that we have been supplying the needs of sportsmen in Western Canada for nearly thirty years and know our business from A to Z. Our Catalogues, copies of which we will be pleased to mail you, show what goods we sell.

The Hingston Smith Arms Co., Ltd.,

Winnipeg, Manitoba

is the best score ever made on the grounds. The badge was won on Good Friday by R. A. Johnston with a run of 19.

At the Dartmouth Rod and Gun Club's range on Saturday afternoon, April 21st, there was a three man team match between Dartmouth Club and Garrison Gun Club. The result of the scoring of fifty targets was as follows:

Garrison Club—Captain Uniacke 20, Lieut. DuDomain 35, Lieut. Willia 29, Total 84.

Dartmouth Club—L. F. Hill 36, R. A. Johnston 42, A. Edwards 42, Total 120.

During the afternoon the Austen Hill gold medal which has been held by J. A. McLaughlin since Good Friday, was won twice, first by

F. Hill with a straight run of 34 targets. This A. Edwards with a run of 17, and later by R. A. Johnston with a straight run of 19.

The newly founded Gun Club, of Malone, N. Y., who have erected a fine clubhouse within an easy distance of the town, installed a Tribune Automatic Trap, and several sets of expert traps, will hold their opening shoot on June 6th, and they promise any Canadian friends who may visit them on that occasion a warm welcome, and a chance to meet members from half a dozen clubs in New York State and along the border.

78 Bay St., Toronto, and Redditch, England.

**IF LIVE BAIT** will ever catch more fish than a "Dowagiac" artificial minnow, it is the exception. 19 times out of 20, game fish 'strike' only to attack the lure.

## "DOWAGIAC" Artificial Minnow

**MORE "DOWAGIAC" BAITs** are sold every year than all other Artificial Casting Bait combinations.

*The "Dowagiac" Bait Products for 1906 are just a little handsomer and more perfect in construction than ever before.*

A piece of painted wood with a fish-hook attached is not a criterion for artificial bait. "Dowagiac" baits are the result of many years' experience of practical bait casters. Every detail has been carefully worked out and *that is why* the "Dowagiac" minnow will land your fish at a time when he would slip off the other fellow's bait. "Drop a line" to us and catch one of our booklets showing our minnows printed up in their natural colors.

**JAS. HEDDON & SON, Dept. 10 E., Dowagiac, Mich.**

Distributed in Canada by Wood, Valance & Co., Hamilton, Ont. Rice Lewis & Son, Toronto, Ont.

## PHYSICAL DEGENERACY.

Mrs. Ruth Jackson declares in the "Nineteenth Century" that "the Englishwoman of today is the worst housekeeper in the world, while two hundred years ago she was the best." Mrs. Jackson attributes the present notorious decay of the domestic virtues in England to the degeneracy of the race. If Mrs. Jackson knew America as well as we do she would admit that we dispute the first position in degeneracy with the British. All this can be cured however and it must be. Fresh air, exercise, sulphur, sand, sun and clay baths, canoeing, camping, fishing and shooting, snow shoeing, skiing, and winter camping, whichever is the most convenient to take. I am ready to furnish to thousands of persons.

In the meantime I quote (abbreviating) from Elbert Hubbard a standing prescription to be observed daily as a help to dear old Mother Nature, in the arrest of physical degeneracy.

If you have no appetite, do not eat. If you have appetite do not eat too much. Be moderate in the use of everything except fresh air and sunshine. Ecclesiastes advises MODERATION, Buddha EQUANIMITY, William Morris, WORK, St. Paul, LOVE.

Hippocrates the father of medicine said what has been repeated in better phrase by Epicurus, the slave, to his pupil, the Roman Emperor, Marcus Aurelius, observe MODERATION, EQUANIMITY, WORK, and LOVE.

Times have changed since these ancients spake. Nowadays many work too much; to such I would say have one season in the year, if not two, of exercise and amusement. I would like to have a chance to prescribe free.

Address: L. O. ARMSTRONG,

An Ideal Light for  
Summer Homes

### THE ANGLE LAMP

#### Comfort in Summer Lighting

As the days grow longer it is more and more important that you use the right illumination. If you have a system that requires endless attention, that smokes and smells and makes a room unbearably hot, you will find it more disagreeable every day that brings you nearer warm weather. This lamp is, therefore, the one kind of illumination that will bring you absolute satisfaction. While more brilliant than gas or electricity, it never smokes, smells or gets out of order, is lighted and extinguished as easily as gas, gives almost no heat and is economical beyond comparison with anything else. **Eighteen Cents** worth of oil will burn for one month and will show you that it is possible to use oil with comfort and saving. It presents a perfect substitute for gas, electricity and other new systems and being absolutely non-explosive, it can be placed in any hands with absolute safety. The unique feature, **No Under Shadow**, insures all the light falling directly downward and outward, which makes every occupation of the evening a genuine pleasure. They are handsome, well made, and a distinct decoration wherever used. Thousands are employed in homes, stores, churches, halls, libraries, etc., and give unbounded satisfaction. Our catalogue 21 shows all styles from \$2 up. We will gladly send it to you upon request.

## FOR A COMPLETE MAIL ORDER ADVERTISING COURSE

**Biggest Offer Ever Made. Nearly 900 pages of interesting, solid and instructive matter relating to every subject of ADVERTISING in the MAIL ORDER BUSINESS.**

**I**f you are a business man, advertising student, mail order man, ad writer or connected in any way with advertising or the mail order business, send \$1. and take advantage of this offer today. Our handsomely cloth bound book,

### Principles of the Mail Order Business

is the most complete, practical and comprehensive book on this branch of advertising ever published; written by an expert. This important subject has never before been fully treated in a special work of this kind. A complete synopsis of contents is impossible in the space allotted in this ad, but it covers every branch of the mail order business in **20 complete chapters, fully illustrated**, such as, The Standpoint of the Small Dealer, How to Keep Records, Following up Inquiries, The Catalogue Business, Selling Goods through Agents, The Mail Order Medicine Business, Legitimate Schemes, The Trust or Consignment Scheme, Advertising Mediums, Typographical Details, Postal Pointers, Financial Mail Order Advertising, Real Estate Mail Order Advertising, Etc., Etc. This book is just the thing for the manufacturer or merchant who wants to add a mail order department, and a valuable guide to those who intend to start a mail order business.

### Advertising (MONTHLY)

has for its contributors the most brilliant and experienced advertising men in the world and every conceivable subject pertaining to Advertisment Writing, Space Buying, System, Methods, etc., is discussed in a masterly manner at once interesting to the tyro and convincing to the most experienced advertisers—such as: The Chance for the Small Business, Mailing Cards, The Value of Price in Advertising, Why Booklets Bring Business, Doctors and Advertising, Saving Bank Business by Mail, Retail Advertising in the Country, How Country Merchants can draw Trade, Continuous Advertising, Inactive Advertising Matter, Etc., Etc., and a mass of other interesting matter too numerous to mention. The man who is studying advertising by correspondence will be interested in "The Letters of an Advertising Man to His Younger Brother," which discusses in a series of heart to heart talks the trials, difficulties and temptations that beset the young advertising writer in learning and following his profession. 64 pages, issued monthly, and for \$1, you will receive 12 numbers and a copy of Principles of the Mail Order Business, making over 900 pages in all. This is the biggest bargain ever offered. Send your order to

**Chicago College of Advertising**  
Book Dept. 10 Royal Insurance Bldg., CHICAGO.

**FREE**—We will also send you a copy of our 64 page booklet, "How to Become an Advertising Man," which describes in detail the most complete and comprehensive advertising course taught by any advertising college in America.

# *The Province of Quebec*

*From the Sportsman's View Point.*

No country in the world possesses a greater variety or more attractions in the line of sport than historic Quebec. When a little better known it will surely become the "Mecca" of devotees of sport; the angler is very much in evidence now even, from 1st May to 30th September, putting forth his best efforts to secure the silvery salmon, the beautiful speckled or sea trout, or yet again the pugnacious bass.

Autumn sees the sportsman again around with rifle or shot-gun, tracking the fleet Caribou or Red Deer or snugly ensconced on the shores of a lake, waiting for an opportunity to lay low the king of the forest, the mighty Moose. Others are content to frequent the hardwood ridges or beaches, in quest of the ruffed grouse, or wild fowl. Few, if any, return unrewarded for their efforts.

A large area of territory is now under lease to clubs, but there is ample room for more; as for the transient sportsman, there is a wealth of territory at his disposal, e. g. in the Upper Ottawa, St. Maurice, Lake St. John and on both sides of the St. Lawrence below Quebec City. Access to all these points is easy, either by rail or water way.

Fishing licenses for the season for non-residents, cost \$10.00 for hunting \$25.00.

Fishing and hunting territories are obtainable at very reasonable rentals, in any part of the Province where crown lands exist. There are still some very desirable salmon rivers available in the Lower Gulf district.

The Government will in all probability, allot territory to Fish and Game Clubs in the recently created Reserve, in the Peninsula of Gaspé, reserving of course the interior for propagation and a limited amount of shooting and fishing.

## *"Laurentides National Park."*

This renowned hunting and fishing territory takes on increased popularity yearly. Dates for hunting and fishing may be applied for at any time. Increased accommodation will be provided for sportsmen by 1st September, 1905, in the great Caribou Barrens.

For information of any kind re Sport, address

The Hon. Minister of Lands, Mines and Fisheries,  
Quebec, P. Q., Canada.

## LYMAN'S Bow-Facing Rowing Gear

Rowing Gear with handle part detached from the Boat to show the Ball and Socket Joint

Several advantages, viz.: the front view, the increased ease and speed in rowing, the raising of the bow instead of depressing it, the closing up of the oar out of the way while on the boat, the increased facility in avoiding obstacles, the diminished effort of hand and eyes in steering, rowing without noise, the better balance and swing of the oars, have commended this gear to all who have tried it.

The gear can be attached to almost any boat, and is especially adapted to hunting (indispensable in duck shooting), fishing and all kinds of pleasure boating.

Send for 1906 catalogue of Rowing Gear, and Rifle Sights.

**The Lyman Gun Sight Corporation**  
MIDDLEFIELD, CONN., U. S. A.

# Marble's Rifle Cleaner

This Cleaner can be attached to any standard rod, and may be freely used in the finest rifle without the possibility of injuring it. Each of its sections is composed of six washers of the softest brass gauze that can be made, and are a trifle less in diameter than the bore for which they are designed. By this arrangement the spring of its tempered steel-backbone presses but one side of each section against the bore and the twist in the wire causes the cleaner to follow the lines of the rifling with the result that every atom of the bore is treated, and that all leading, copper, rust or caked powder is quickly removed. This Cleaner does its work quickly and thoroughly and is exceedingly durable. Ask your dealer first. Price prepaid, 5 cents. Field Cleaner 75 cents. Mention caliber. Send for 56 page, 1906, free catalogue U

# ***Our Proposition To You***

Owing to the San Francisco earthquake and fire, we shall be deluged with orders for our **SUSPENDED TENTS**, and it will be a serious question whether we shall be able to fill the orders that come from Canada, consequently we have concluded to organize a Canadian Company, and manufacture our **TENTS** in some one of the cities of the Canadian Provinces.

The Canadian Company will be capitalized for **ONE HUNDRED THOUSAND DOLLARS**. Shares will be **TEN DOLLARS** each, and will be offered at par. We shall retain fifty per cent of the stock, and the other fifty per cent will be held by the several subscribers. A factory will be erected for the purpose of not only making our **SUSPENDED TENTS**, but will also include all varieties of **Sporting Goods**.

The management of the Canadian Company will be placed in the hands of competent men (preferably stockholders) and the sales will be within the **British Possessions**.

**OUR SUSPENDED TENT** is fully protected, and the patents that have been allowed are pronounced valid by Patent experts. Its uses cover a very wide field, and includes: **Camping**, **Red Cross Society work**, **Tuberculosis**, and **Consumptives**. The **Hospital Corps** in the **Army**, the **Permanent camps** of the **Army**, **Emergency cases**, **The lawns of Hospitals**, and the lawns of the private citizen.

Your deposits should be made with your local bank, and a statement from them that you have made such a deposit, will entitle you to a pro rata of stock, provided the amount of fifty thousand dollars is over subscribed, and to the full amount of your subscription if the full amount is not over subscribed.

The deposit you make with your local bank, must be in the form of an order on your bank to pay to the **SUSPENDED TENT CO. of CANADA**, as soon as incorporated, the amount of the deposit as soon as the stock shall be delivered to said bank.

This is an offer that you should take advantage of at once. The season is now at hand, and if there is no delay by you, we will be able to begin operations within a very short time; as we shall rush our patterns, and templates into Canada, and begin manufacturing as soon as we can. The goods and machinery can be secured on a day's notice, consequently there would be no occasion for delay beyond the organization of the company.

Send your certified subscriptions,  
and your name and address to

## TO FILL The ORIGINAL and ONLY GENUINE CONKLIN'S SELF-FILLING PEN

Simply dip in the ink, press with the thumb, and the **CONKLIN PEN** is filled and ready for instant use. It is simple, convenient, efficient, with no complex mechanism and nothing to get out of order.

The elastic ink reservoir is compressed by the presser bar under the thumb, and, when released, instantly draws in the ink through the feed channels at the point. The quickly adjusted lock-ring prevents ink from being forced out again. Feeds regularly until the last drop of ink in reservoir is used. Always responds without kick or balk. Cleans itself as easily as it is filled. Fully guaranteed.

If your dealer does not handle the **CONKLIN PEN**, let us make you our Special Offer to Fountain Pen Users. Full information, with illustrated catalogue, sent upon request. Sold by dealers everywhere.

**THE CONKLIN PEN CO.,**  
514, 516, 518 Jefferson Ave.,  
Toledo, Ohio.

"Lest We Forget" take

## A "Harrimac" Landing Net

On the next fishing trip. With it you will have greater success. How many fish have you lost for want of one? It combines these essential features: Strength, easy adjustment, ease and reliability of operation, lightness and durability. It's collapsing net ring (with no screws or separate parts to get lost) made of finely tempered steel and beautifully finished in nickel or black rubber enamel, with its fine wood handle, and other superior features, make it a necessary part of the fisherman's outfit. It *springs* into shape; and wherever known it springs into use. Made in different sizes for different kinds of fishing. Price \$1.50 to \$3.00; other good nets, 75c. to \$1.25. All dealers. Send for booklet telling all about it. Also about "Takapart", "Expert" and "Feather-light" Reels. Free on request.

### BUILD YOUR OWN BOAT BY THE BROOKS SYSTEM.

10,086 NOVICES most of them with no tool experience whatever—many of them professional men—seeking recreation and exercise—built boats by the Brooks System last year. Over fifty per cent of these have built their second boat. Many have established themselves in the boat building business.

If you can drive a nail and cut out a piece of material from a full-sized pattern—you can build a **Canoe Rowboat, Sailboat, Launch, or Yacht** in your leisure time at home, and the building will be a source of profit and pleasure.

The **BROOKS SYSTEM** consists of **exact sized printed paper patterns** of every part of the boat with **detailed instructions** and **working illustrations** showing each step of the work, an **itemized bill of material** required and how to secure it.

All you need is the patterns costing from \$2.50 up and materials from \$5.00 up. Only common household tools required.

Our big free catalogue tells how you can build all styles of boats all sizes. We also furnish complete boats in the knockdown form ready to put together. Satisfaction guaranteed or money refunded. Complete Catalog free. LOOKS WE PUBLISH Useful Information for the Amateur Yachtsman and Boat Builder. Price 25c. The principle and operation of Marine Gasoline Motors. Price 25c.

## For Sale, Want, and Exchange Depts.

Advertisements will be inserted in this Department at 2c. a word. Send Stamps with order. Copy should not be later than the 15th of the month.

ANYONE wishing to purchase one of the best Salmon Fishing Pools in America can learn particulars by writing to Mr. W. J. Taylor, Publisher of Rod and Gun in Canada, Woodstock, Ont.

FOR SALE—Irish Setter Bitch, 2 years old, with a fine pedigree, good hunting dog. Sell cheap. Also a number of Irish Setter pups. Jack Hayden, Cobourg, Ont.

FOR SALE—A 11 foot Folding Canvas Boat. Never been used. Good reason for selling. Address Francis W. Kahle, 229 Washington street, Buffalo, N. Y.

FOR SALE—An "Evening Star" electric search light lamp, size 8½x1½, weight 11 ozs. Regular price \$2.50, will sell for \$2.00 cash. Address D. B. Taylor, Tweed, Ont.

SHOOTING DOGS—We have some thoroughly broken Pointers and Setters that are as handsome and as well bred as any dogs in America. They are trained on quail, grouse, wood cock, etc., and as Shooting Dogs there are none more reliable or satisfactory to bag game over. We also have some highly bred and pedigreed puppies, both pointers and setters. High class gun dogs is our specialty. — The C. S. Freel Kennels, R., Loogootee, Indiana.

WANTED—Second hand Gasoline launch from four to ten horsepower, two cylinder engine, length of hull from twenty-two to thirty feet.—W. J. Taylor, Woodstock, Ont.

WANTED—Names and addresses of anyone desirous of securing a fifty dollar Ithaca Gun free. Address, Premium Dept., Rod and Gun in Canada, Woodstock, Ontario.

WANTED—A representative in every city and town in Canada and the United States, to solicit subscriptions for "Rod and Gun in Canada." We will pay a liberal commission to those whom we feel warranted placing the agency with. This is an opportunity that should be taken advantage of by any person desiring to make good money. For further particulars please address W. J. Taylor, Publisher Rod and Gun in Canada, Woodstock, Ont.

WANTED—The name and address of anyone desirous of securing absolutely free a Twelve Foot Patent Steel Duck Shooting Boat manufactured by the Michigan Steel Boat Co., Detroit, whose boats are unsurpassed in every particular. Address, Premium Department, Rod and Gun in Canada, Woodstock, Ontario.

FOR SALE—A complete fyle of Rod and Gun in Canada, beginning with first issue June, 1899, six volumes, all in good condition, \$5.00 will buy the lot. Address Box C, "Rod and Gun in Canada", Woodstock, Ont.

FOR SALE—Three months old Speckled Trout Fry, \$10 per thousand, at Hatchery, Inglewood, Ont. Apply J. Widdup, Sec., Caledon Mountain Trout Club, Brantford, Ont.

FOR SALE—Petite Century No. 2 Camera, absolutely new, excellent lens, size 3½x4½. Regular price \$12.50. Will sell cheap for cash. Apply H. V. Kahle, Balmy Beach, P. O., Toronto, Ont.

FREE—My Sportsman's Guide contains instructions for saving all trophies of the Rod and Gun for mounting to the best possible advantage. It also contains a complete list of my prices for all the different branches of Taxidermy work. I claim that my work is not beaten by any taxidermist in Canada. I will gladly forward references to prove my statement. My prices will show you how to save money by shipping to me.—Edwin Dixon, Taxidermist, Unionville, Ontario.

INVESTMENT — HERALD FREE — Leading mining and financial paper. News from all mining districts. Most reliable information regarding mining, oil industries, principal companies, etc. No investor should be without it. Will send six months free. Branch A. L. Wisner & Co., 61 and 62 Confederation Life Building, Owen J. B. Yearsley, Toronto, Ont., manager, Main 3290.

EVERY man, woman and child, who fishes should know the good points about our Braided Metal Trolling Lines. They are made of the finest and most flexible metal, sixteen strands being braided into a beautiful, smooth, strong and non-kinking line. Write today to the Metal Line Mfg. Co., 1099 Dawson street, New York City, for descriptive leaflet and free sample of line. This line has more weight than any other line and therefore will bring your minnow or spoon near big fish no matter how deep down in the water they may be. If the fish are down 25, 50 or 100 feet deep it makes no difference, the line will reach them. Big sinkers scare 90 per cent. of the fish. Our lines catch the big ones that are most easily scared. See the Metal Line Mfg. Co.'s name is on every line and do not accept any cheap imitations that are sold on the good reputation of our goods. Do not wait until you want to go fishing before getting a line. Have one ready. Discount to the trade.—Metal Line Manufacturing Company, 1099 Dawson Street, N. Y. City.

FOR SALE OR EXCHANGE—One of the grandest and most beautiful cases of Mounted Duck and Game Birds ever set up in the world. Over 25 different kinds in case and every bird a monster of his species, some very rare, case 3 feet long, 5 feet wide, 2½ ft. high, with bevelled plate glass and an elegant painted Marsh and Wood scenery for back ground. This case has cost the owner over six hundred dollars to procure. Will sell for \$350, or exchange for a 2½ carat perfectly first water color diamond or 3 carat slightly yellow cut diamond, must be perfect and flawless. Address "Rod and Gun in Canada." Woodstock, Ont.

## Build It Yourself

That launch, canoe, sail or rowboat you would like so much to own. You can do it at home if you buy our exact size printed paper patterns, and enjoy every minute of the work. Our paper patterns come to you in the exact size of every piece that goes into a boat, and we give you illustrated working instructions showing just how to build a boat. Also an itemized bill of all material required, omitting nothing, not even a nail. We show you and tell you exactly how to do everything necessary. You acquire no extra tools or help. You can do it yourself, do it quick, and do it good. Every pattern we sell is from a boat we have made and tested. We guarantee them perfect or return the money.

**BOAT FRAMES**—We sell the complete frames for all boats,

with a full sized set of plank patterns and illustrated working instructions for finishing. Each frame is set up for the planking in our own factory before shipment. Every piece is numbered, then taken apart and shipped to you in knock-down form. Frames cost \$10 and up, according to size and style of boat.

W. L. Dolson, Bath, N. Y., writes: It's a picnic to construct a launch from your patterns and frames.

Prices of complete boats on application. Send for free catalog.

Dept. 12.  
16 JOHN ST., NEW YORK CITY, N. Y.

## TACKLE THE TACKLE QUESTION

It is hard to find two fishermen who fish with the same tackle and use it exactly the same way. Every fisherman has his own way of doing things.

In selling tackle it counts a great deal to be a fisherman—it gives a clear understanding of other fishermen. You would have to search diligently outside of our tackle department to find three men whose range of fishing experience could do more to intelligently supply you with what you want—no matter where you choose to fish.

Touradif Rods are a product of our own experience and few men who ever got one in their hand are willing to fish with any other. However, our catalogue tells of many rods, of the finest English lines, and of leaders, reels and novelties. We will be glad to have you ask for it.

## THE "Featherlight" Reel

Is always right. It runs as slick as oil. The **cheapest, lightest and strongest** reel made.

Only low-priced reel made with **hardened steel** bearing sand click. No bearings to get out of order. Click double-pointed, reversible. Perforated sides

dry line, prevent rotting and loss of fish. No danger of denting it on log or stone. No screws in frame to jar loose and get lost at critical moment. Spool instantly released when necessary. Guaranteed not to get out of order like other reels, with brass click and bearings that soon wear out, making reel useless. Gears are hardened steel.

We repair our reels free, which no other maker will do. Made in nickel and bronze. Handsomely finished. Sixty yards Trout or Bass, eighty yards Bass (bait casting), \$2.00 each. Stop at nearest dealers and see them. Look for stamp "Featherlight." Send postal for our booklet all about reels and landing nets.

# SAVAGE

## SAVAGE TARGET MODEL

is built strictly on Savage Quality lines, which means the best value and superior quality in every individual part.

Savage Target Model shoots .22 caliber ammunition, and appeals to the target shooter, who requires a masterpiece in workmanship, and accuracy. These requirements are met by our Target Model, as they are in no other low priced gun. No gun "just as good as a Savage" except a Savage.

The Savage Target Model is a nicely balanced gun for off-hand shooting, weighs 4¼ pounds. Sold by all dealers or if they do not carry them, we will send this gun direct for \$8.50.

**SAVAGE ARMS CO., 546 Turner St., Utica, N.Y., U.S.A.**  
All shipments prepaid.

# JAEGER

PURE WOOL

JAEGER

Style AAN

Sleeping Bag.

"Fleece" Rug.

## "The Right Idea"

To make your vacation with Rod and Gun as pleasurable and healthful as possible, is to see that your camping outfit contains articles and garments which defy rough usage and in which you feel thoroughly and perfectly at home.

A good supply of "JAEGER" Pure Wool Clothing Sweaters, Shirts, Underwear, Stockings Socks Caps, Camping Rugs, etc., will enable you to defy changes of weather. The purity of the high grade wool used protects against the vicissitudes of climate, and at the same time gives you a durable and highly workmanlike outfit. From leading dealers in all principal cities. Our illustrated catalogue No. 1 should be in the hands of all who are planning an out-door vacation. Write for it to-day.

## “BRUSH” SHELLS FOR BIRD SHOOTING.

Winchester “Brush” Shells help wonderfully to make big bags. They are so loaded as to give an open and even pattern at ranges from 25 to 30 yards when used in choke bore guns, without loss of velocity, penetration or uniformity. With these shells you can use your duck or trap gun for field shooting and make many kills which otherwise would be misses. They are loaded in “Leader” and “Repeater” grades and sold by reputable dealers everywhere. Ask for Winchester “Brush” Shells and accept no substitute.

*Winchester Shells, Cartridges, and Guns Are Sold Everywhere.*

**T**HE distinctive feature about my Willow Furniture is not the price, but the quality—lots of Art Furniture is sold at less, but you would not want it at any price when placed alongside of YOUNGER'S WILLOW FURNITURE. I grow my own Willow. I supervise personally the workmanship. I guarantee strength and durability of every article. As to BEAUTY of this Furniture, it speaks for itself. The handsome set, illustrated above, sells for \$12.50. It comprises three comfortable arm chairs, made of Willow. That means coolness and comfort. There is no reason in the world why you should sit in an unventilated and unhealthy upholstered chair when you can buy these artistic chairs at prices from \$3.50 to \$10.

We also manufacture a variety of other Rush and Willow Furniture, including Settees, Arm Chairs, Fancy Chairs, Invalid's Chairs, Tables, Picnic Baskets, Automobilists Baskets, and numerous other articles. Special baskets of any style made to order.

No extra packing charges for shipping to outside points.

WHEN YOU SEE

# Rushton

on a boat, canoe, sail, paddle, oar, lee-boards—do you stop to think what it means?

That name is on only the very best of goods. Every experienced canoeist knows it, and it is one of the first things that novices learn.

RUSHTON superintends personally every bit of work that goes on in his factory. He is always there. He has been at this work for the last 31 years. Each year shows a larger business. There you have both cause and effect. We do not plan to rest on what we have done. Our product was never better than today. We lie awake nights thinking of ways by which we can give you better service. We would rather answer your enquiries than eat. Just give us the chance. Tell us where you are going, and let us recommend a model of canoe. We offer to you, among other articles all-wood boats and canoes, open and decked canoes, the INDIAN GIRL model canvass covered canoe, oars, paddles, sails, lee-boards, brass boat and canoe trimmings.

A CATALOGUE FOR THE ASKING

## Steel Fishing Rods

With the approach of the bass season your mind naturally turns to fishing tackle, and for the bass, which you know is a plucky little fighter, you naturally want a plucky little rod. There is no better bass rod made than the "Bristol" Steel Fishing rod. It gives just enough, has strength to withstand the severe strains, and is light. Different Bristols for different uses—all equally efficient. The "Bristol" is the best all around rod made.

Your dealer sells "Bristol" rods, but for your protection see that you get the genuine. It has the name "Bristol" stamped on the reel-seat.

FREE—Our beautiful color catalog. This describes the "Bristol" Steel Fishing rod, etc., as well as the combination reel and handle.

**The Adams Launch and Engine Mfg. Co. PENETANG  
ONT.**

***Summer Residences on Islands Off  
the North Shore of Lake Huron,  
Near Desbarats, Ont.***

**TO LET**

Desbarats is on the Canadian Pacific Railway and has a good Railroad and steamer connection from all the large cities of the United States and Canada. It is also the northernmost station of the Chicago Yacht Club and an important Station of the Keewaydin Canoe Club and of the Wild-wood Lodge Co.

Every Steamboat Line calling at Mackinaw or Sault Ste. Marie can be taken for Desbarats, as there are boats running to Desbarats or connecting with boats for that place from each of these ports.

**LONGFELLOW ISLAND NO. 56**

The black spot on the extreme left is the little boat dock. The island is very irregular in shape.

Longfellow Island has a small four roomed camp of very solid construction, with a fine stone fire-place. It is a picturesque island in a commanding position, Miss Longfellow lived there for a part of one summer with many members of her family, and there the Indian Play of Hiawatha was first given for her entertainment. She said of this place: "The spot selected for the drama could not have been more beautiful." Rent \$150.00 for the season, partly furnished.

**MCNAB ISLAND NO. 58, DESBARATS, ONT.**

McNab Island has been the favorite island ever since the first summer resident came. It was in fact the first island built upon. The camp containing five rooms, stone fire place, kitchen and ice-house will be rented for \$150.00 for the season. The only furniture necessary to bring would be linen and cutlery. The rest will be furnished in sufficient quantities for a small family. Boats can be

The Desbarats River, up which the largest yachts can motor to the Railway Station

rented for the season. The railway station is two miles distant, and the Hiawatha Camp and steamer dock only half a mile away.

There are other camps to rent, some of them more expensive than these.

There is bass and trout fishing and moose, bear, deer, duck and partridge hunting. The fishing in the inland lakes, which have good wagon roads leading to them, or canoe routes, is unsurpassed in America. Just about the Hotel and Camp is to be had the kind of fishing that Isaac Walton loved, —pike, bass, perch and carp, and mullet in great abundance. Residents or visitors can drive to phenomenally good bass and trout fishing in the nearer inland lakes.

One of the pleasures of life in Desbarats is to be enjoyed by owning or renting a motor boat. There are one hundred islands within a four mile circle, of which the Camp is the centre. Every day for a month a different destination may be selected, either as a fishing or picnic grounds. One may walk, drive, paddle, sail or motor to the post office, railway station and store. There is telephone connection. There is a resident village doctor. Fruit, fresh meat, cream and vegetables can be brought to the island home daily, and yet one feels as if one were a thousand miles from civilization.

## **T. W. Boyd & Son**

Established 1845

**27 Notre Dame St., West, MONTREAL**

Why is the *Marlin* Repeating Shotgun, Model No. 17, the best low-priced repeating shotgun in the world?

By making this gun with a solid frame and a straight grip stock a number of parts have been eliminated. The result is a stronger, simpler, cleaner gun than any other repeating model, and a very much less costly one.

The exclusively *Marlin* solid top and side ejection are features of Model 17, and to these famous *Marlin* ideas are added the new double extractor and a two-piece safety recoil block—devices which repeating shotgun users will welcome.

The *Marlin* breech block and working parts are cut from solid drop forgings. The barrel of

special rolled steel is bored for both smokeless powder and black. The guaranteed *Marlin* pattern of over 325 pellets with  $1\frac{1}{4}$  oz. No. 8 shot in a 30-in. circle at 40 yards is maintained in Model 17.

When the ducks come rushing in among the decoys or the grouse roar off through the dead leaves, you cannot be armed with a better, quicker, harder-hitting gun than the *Marlin* Model 17.

It is a first-class quail gun. For woodcock, snipe, prairie chickens, sharp tail grouse or any other bird shooting it is unsurpassed.

Its records at the traps are wonderful.

If your dealer cannot supply you write us direct. A complete description of Model No. 17 is given in our 1906 Catalog. Sent FREE for six cents postage.

## ONE DOLLAR

### FOR A COMPLETE MAIL ORDER ADVERTISING COURSE

**Biggest Offer Ever Made. Nearly 900 pages of interesting, solid and instructive matter relating to every subject of ADVERTISING in the MAIL ORDER BUSINESS.**

**I**F you are a business man, advertising student, mail order man, ad writer or connected in any way with advertising or the mail order business, send \$1. and take advantage of this offer today. Our handsomely cloth bound book,

#### Principles of the Mail Order Business

is the most complete, practical and comprehensive book on this branch of advertising ever published; written by an expert. This important subject has never before been fully treated in a special work of this kind. A complete synopsis of contents is impossible in the space allotted in this ad, but it covers every branch of the mail order business in **20 complete chapters, fully illustrated**, such as, The Standpoint of the Small Dealer, How to Keep Records, Following up Inquiries, The Catalogue Business, Selling Goods through Agents, The Mail Order Medicine Business, Legitimate Schemes, The Trust or Consignment Scheme, Advertising Mediums, Typographical Details, Postal Pointers, Financial Mail Order Advertising, Real Estate Mail Order Advertising, Etc., Etc. This book is just the thing for the manufacturer or merchant who wants to add a mail order department, and a valuable guide to those who intend to start a mail order business.

#### Advertising (MONTHLY)

has for its contributors the most brilliant and experienced advertising men in the world and every conceivable subject pertaining to Advertisement Writing, Space Buying, System, Methods, etc., is discussed in a masterly manner at once interesting to the tyro and convincing to the most experienced advertisers—such as: The Chance for the Small Business, Mailing Cards, The Value of Price in Advertising, Why Booklets Bring Business, Doctors and Advertising, Saving Bank Business by Mail, Retail Advertising in the Country, How Country Merchants can draw Trade, Continuous Advertising, Inactive Advertising Matter, Etc., Etc., and a mass of other interesting matter too numerous to mention. The man who is studying advertising by correspondence will be interested in "The Letters of an Advertising Man to His Younger Brother," which discusses in a series of heart to heart talks the trials, difficulties and temptations that beset the young advertising writer in learning and following his profession. 64 pages, issued monthly, and for \$1. you will receive 12 numbers and a copy of Principles of the Mail Order Business, making over 900 pages in all. This is the biggest bargain ever offered. Send your order to

# *The Province of Quebec*

## *From the Sportsman's View Point.*

No country in the world possesses a greater variety or more attractions in the line of sport than historic Quebec. When a little better known it will surely become the "Mecca" of devotees of sport; the angler is very much in evidence now even, from 1st May to 30th September, putting forth his best efforts to secure the silvery salmon, the beautiful speckled or sea trout, or yet again the pugnacious bass.

Autumn sees the sportsman again around with rifle or shot-gun, tracking the fleet Caribou or Red Deer or snugly ensconced on the shores of a lake, waiting for an opportunity to lay low the king of the forest, the mighty Moose. Others are content to frequent the hardwood ridges or beaches, in quest of the ruffed grouse, or wild fowl. Few, if any, return unrewarded for their efforts.

A large area of territory is now under lease to clubs, but there is ample room for more; as for the transient sportsman, there is a wealth of territory at his disposal, e. g. in the Upper Ottawa, St. Maurice, Lake St. John and on both sides of the St. Lawrence below Quebec City. Access to all these points is easy, either by rail or water way.

Fishing licenses for the season for non-residents, cost \$10.00 for hunting \$25.00.

Fishing and hunting territories are obtainable at very reasonable rentals, in any part of the Province where crown lands exist. There are still some very desirable salmon rivers available in the Lower Gulf district.

The Government will in all probability, allot territory to Fish and Game Clubs in the recently created Reserve, in the Peninsula of Gaspé, reserving of course the interior for propagation and a limited amount of shooting and fishing.

## *"Laurentides National Park."*

This renowned hunting and fishing territory takes on increased popularity yearly. Dates for hunting and fishing may be applied for at any time. Increased accommodation will be provided for sportsmen by 1st September, 1905, in the great Caribou Barrens.

For information of any kind re Sport, address

The Hon. Minister of Lands, Mines and Fisheries,  
Quebec, P. Q., Canada.

Niverville, Man.,  
Feb. 7, 1906.  
Wolverine Motor Works,  
Grand Rapids, Mich.  
Gentlemen: — It gives me great pleasure to tell you that the 6 H. P., 2 cylinder, 2 cycle engine, I bought from you last June has given the best of satisfaction, on the River and also on the Lake. It drives my 22½ ft. boat close to 11 miles an hour, and does it easily.

The best part, however, is the ease of handling it. It is seldom that I have to use the crank more than once a day as it would hold the compression in the hottest sunshine for four or five hours, and has repeatedly started by the lever alone after not being used for 1½ to 2 days.

We lived through the worst storm on Lake Winnipeg of the season '05 and would surely have been drowned had the engine stopped on us.

Respectfully yours,  
WM. B. MEY.

New Orleans, La., Feb. 1, 1906.

Wolverine Motor Works, Grand Rapids, Mich.

Gentlemen:—Your 75 H. P. Engine, which we have been using for the past 12 months, has been satisfactory in every respect.

We take great pleasure in mentioning to you some of the work it has been doing. We make two trips weekly, a run of 260 miles round trip up and down the Mississippi River, without counting landings, 9 miles per hour against the current, at an average speed exceeding all expectations.

The motor is installed in an 80 ft. by 17 ½ ft. beam freight carrier, and will state that we had no trouble whatever.

We wish to compliment you and your southern representative, Mr. Bruguere, on having the best gasoline boat in this part of the country. We have been using this engine for 12 months, and find her to run smoother every day. We take pleasure in recommending this engine. Yours truly,

SPICUZZA BROS.

# WOLVERINE MARINE ENGINES

## One Grade Only—The Highest

Have stood as the standard of excellence for 20 years—the highest art in marine gasoline engine construction, 5 to 100 h. p., 2 and 4 cycle, self-starting and reversing.

**SPECIAL OFFER** How to get boat plans worth \$50.00 to \$200.00 for pleasure or working boats without cost to you. Write us at once for complete information and Catalog No. 26.

**WOLVERINE MOTOR WORKS, Grand Rapids, Mich., U.S.A.**

**WE** are probably the largest exclusive marine gasoline engine manufacturers in the world.

**TWENTY** years of scientific study and careful experimentation **MUST** have resulted in something.

**OUR** special method of construction insures long life and freedom from annoying breakages.

**EVERY** engine is thoroughly tested and inspected before it leaves the factory.

# New Ocean House

*Swampscott, Massachusetts*

*The most magnificent modern summer hotel on the North Shore.*

*The New Ocean House is but thirty minutes from Boston by rail. Has accommodations for four hundred. Its situation is delightful.*

*Among other attractions it has to offer are safe surf-bathing, sailing, fishing, and the finest roads for driving, riding, and automobiling in America. Boarding stable and garage on premises.*

*Concerts by a superb orchestra every afternoon and evening during the season.*

*Facilities for all out-of-door sports.*

*Select patronage.*

*Write for booklet and other information.*

*Ainslie & Grabow*

*Proprietors*

*Address until June 1st, 270 Commonwealth Ave., Boston, Mass. After that date, New Ocean House, Swampscott, Mass.*

# FISHING AND SHOOTING

Like most of the other districts in Northern Ontario the Huntsville and Lake of Bays region is particularly favored in its fishing and hunting confines. The principal lakes of this chain are bountifully stocked with speckled salmon trout and bass, while in the more distant stretches of water, ling is found in plenty. The amateur fisherman may leave the steamer at some calling place on any of the lakes on the route, and drop a quiet fly until the return trip of the boat, in the evening.

Brook Trout are also numerous in the smaller streams which flow into the different lakes, and for the zealous angler, capital sport may be had. Sometimes the trout will rise to fly, and again at times they are so sly that nothing but a minnow will tempt their dainty appetites, or perchance a grasshopper or a piece of pork.

For the hunter, partridges are plentiful (open season, Sept. 15 to Dec. 15), but a dog is a necessity to success. Guides may be procured who have hunting dogs. Ducks are fairly numerous (open season Sept. 1 to Dec. 15). Beaver and Otter can be found in goodly numbers, but are protected by the Government until November 1, 1906. The season for deer runs from November 1 to November 15, and the exacting laws of the Provincial Government, enacted to protect these animals, are enforced with such vigor by the game wardens, that during the open season the deer are most numerous. During the last season more than 10,000 hunters went up into this and contiguous districts, and the success that the different parties had was all that could be desired, one of the express companies alone transporting 2,379 carcasses from this northern section during the open season. Bear and wild geese are also found. Campers can get supplies at Huntsville, and the guides will supply boats, etc., at moderate rates. If the ideal of the pleasure seeker is a camping life, fairylike spots in scheduled nooks among the woodland shores are waiting to be taken possession of; for others whose tastes tend to the comforts obtained in hotel life, there are modern and well appointed hostleries at several of the principal points at which the steamers of the Huntsville and Lake of Bays Navigation Route touch.

*"Now Blessings Light on him that first invented sleep."*

## Publisher's Notice

The increase in circulation and size of this magazine during the past two years has made it absolutely compulsory to instal new up-to-date machinery. While this is being done it has been found advisable to date the present issue July-August, and thus make it possible for the magazine to conform with the dating of American publications, which as a rule are published about the 20th of the month previous to the date of issue. The September number will therefore be in the hands of subscribers and on the news stands about the 20th of August, which system of dating and publishing will be maintained in future.

The next issue (September) will show a decided typographical improvement in the magazine, which together with the change in dating, will no doubt be appreciated by the great army of Canadian and American sportsmen and tourists who have come to look upon

VOL. VIII

JULY 1906

NO. 2

ICEBERG NEAR BLANC SABLON, LABRADOR

### Jottings From Labrador.

BY G. PARRY JENKINS, F. R. A. S.

(Member of the Canadian Government Eclipse Expedition to Labrador 1905.)

**T**HE ceaseless throbbings of the engines suddenly ceased and I awoke in my bunk to find the "S. S. King Edward" had arrived at the harbor of Blanc Sablon which is the boundary between Canada and Labrador. It was 5 a. m. August 9th, 1905, and on reaching the deck it was difficult to realize the combination of summer and winter which presented itself to my sight. The sun was shining gloriously over the wide expanse of the magnificent St. Lawrence, and turning to the mainland snow was distinctly visible within the rocky folds of the valleys which opened into the north shore.

Right by our side was an immense iceberg, dazzling with many emerald hues in the morning light, and its very presence sent a cold shudder over our surroundings. It was the first outpost of the great army

which we were to encounter in our journey further north and that its process of disintegration had been delayed so long was entirely due to its vast size. When we realized that only one-ninth of the bulk of an iceberg is visible above water the real dimensions of this one became more apparent. In fact we found from actual observation that it remained visible for a distance of fifteen miles after we passed it.

We had anchored at Blanc Sablon in twenty five feet of water and I could see the bottom distinctly. The water was as clear as crystal. Sea shells abounded and many star fishes were plainly discernable on the sands below. Floating at different depths were thousands of marine organisms which moved to and fro by the gentle currents that prevailed. These jelly-fishes ranged from little specks just visi-

ble to masses over a foot in diameter and there absolutely seemed no end to them. Flocks of ducks and gulls flew over our heads and the big loons popped up and

A FINE COUPLE FROM LAKE MELVILLE,  
LABRADOR

down around our vessel adding animation to the scene.

As we were now in the land of King Cod it was only to be expected that we should meet many of his subjects and there they were right under us, quite unconscious of the presence of our ship or of the many eyes that watched their movements. A number of our party improvised fishing line which were baited—well in fact it did not matter whether the hooks were baited or not—with a delicious morsel from the side of one of their own tribe, or a glittering piece of an old tin can, and up came cod after cod.

Nearly all the inhabitants along this dreary coast are rod and line fishermen, and they are extremely poor. It is only a few who possess nets or "traps", as they are called. A good cod outfit costs \$400, and it is seldom that one fisherman can boast of such a luxury. As a rule a number club together and each owns a certain share of the "trap".

The Rev. A. J. Vibert of the St. Clement's Mission, who came aboard our ship two days previously at the little fishing village of Mingan told us their parish extended from Pentecost to Blanc Sablon and was 500 miles in length. I asked him what kind of shooting there was on these

shores and he said it was great. Two gentlemen he knew went out shooting last winter and killed 73 partridges between them in one day. Of course these were the white partridge, or Ptarmigan. This sportsman's paradise has however its drawbacks. They only get their mail nine times a year, and no doctor is located there. Mr. Vibert without any medical training, had to amputate three fingers of one of the poor fishermen last winter.

We only remained at anchor here long enough to land the mails and in another twenty-four hours we were well into the Atlantic Ocean, our ship having safely rounded the dangerous Straits of Belle Isle in the early hours, although we had to slow down on several occasions during the night owing to treacherous fogs and to avoid running into the icebergs which are so prevalent in these parts. At 9 a.m. the next day the sky was exceedingly clear down to the very horizon. We now found we were in the thick of the icebergs. Father Kavanagh of Montreal, and I counted between us 101 icebergs right round our ship, and it required very careful steering and ever watchful eyes to navigate through them.

A jet of water splurged out on our starboard many yards into the air and we

SKINNING SEALS, LABRADOR

could just see the back of one of the large denizens of the deep. We were in a school of whales. All binoculars were turned on the spot and every minute each fountain

LORD STRATHCONA'S OLD HOME, RIGOLET, LABRADOR

seemed to play their sprays of water in succession. A dozen whales at least were counted by us on one occasion, and the sight became quite a familiar one. On these occasions every gun from the .22 Hopkins and Allen to the Army Regulation Rifles carried by different members of the expedition were discharged at these moving targets, but we might as well have tried to stop their gambols with a pea-shooter as any visible effect which our combined efforts had on them.

In entering into Hamilton Inlet, Labrador, we had the good fortune to see a mirage, the sight of which I shall never forget. On the water line a vessel was distinctly observed upside down and several icebergs had the same effect and appeared hanging down in the sky. The illusion was very real with the naked eye and actually became intensified through our telescopes.

Our course now lay inland and after travelling 40 miles up the inlet we arrived at Rigolet, at 2.40 p.m. on August 11th. It was here that Lord Strathcona started his connection with the Hudson Bay Company. We anchored there over night and one of the illustrations shews myself knocking at his Lordship's door in the old home in Labrador. The natives entertain a very warm affection for plain

Donald Smith as he was known to them. I met one couple, Joe Goudie and his Esquimaux wife, who had been married by Lord Strathcona at Rigolet 46 years ago. Joe is now 70 years of age and there are fourteen children of the marriage. As there are no clergymen stationed in these parts of Labrador the Factors of the Hudson Bay Company usually perform all the ecclesiastical duties such as marriage, baptism and burial services.

When standing on the little wharf at Rigolet we recognized the spot where the ill-fated explorer Hubbard with his companion, Wallace, were photographed on their arrival there two years previously as depicted in that fascinating book "The Lure of the Labrador Wild."

We were still 110 miles from our destination and having successfully passed the "Narrows"—a channel full of rocks, most of them uncharted—we steamed right across the broad waters of Lake Melville and arrived at North West River which has been a Hudson Bay Post for nearly a century.

Snow was visible on all the hills around and during night the temperature was only a few degrees above freezing point. Last year snow fell on the spot on which we were now located on the 15th of July.

We remained seventeen days on shore

ESQUIMAUX DOG TEAM OF THE HUDSON BAY CO., NORTH WEST RIVER POST, LABRADOR

taking all our provisions and sleeping tents with us. Our whole baggage, inclusive of the scientific instruments of the expedition, weighed 50 tons, and it was no mean task to carry, by manual labour alone, all of our belongings to our camp, half a mile from where we landed.

While there we met many full blooded Esquimaux, Indians and half-breeds, some of whom had come 600 miles from the interior to trade fur. The Indians were all

of the Montagnais or Mountaineer tribe. Up to a few years ago the great Hudson Bay Company had a monopoly in these parts, but now the French firm of Revillon Freres has opened an opposition establishment here. We went over the French post and saw some fine furs—the total value of which M. Duclos the factor estimated at \$10,500. The most prized was a silver grey fox, considered very rare, and for which he had paid \$200 to an Indian. The principal furs were bear, wolf, wolverine, lynx, fox, marten, mink and ermine.

A NATIVE INDUSTRY. SALTING SALMON, LABRADOR

The natives live entirely by fishing in summer and furring in winter. One half-breed told me he possessed 300 steel traps all of which he set during the winter and his "run" extended 70 or 80 miles from his little log cabin, which he called home, and in which we were hospitably entertained. It took him over a week to go the round of his traps in winter.

We found abundance of trout in Lake Melville, and Dr. Marsh, of Hamilton, and I indulged daily in the "gentle art". Lake trout, two and three pounds in weight, were quite common and they rose voraciously to the artificial fly. I found the "coch-a-bonddu" as good a killer in Labrador as it is in the streams of my na-

tive land, Wales. Salmon is also plentiful in this Lake and the employees of the Hudson Bay Company as well as those of Revillon Freres net them by the hundreds. After being salted they are exported to England.

The spot we were located at is also a great sealing station. The ranger seal is invaluable to the natives of Labrador, as they eat the flesh and make their clothes, moccasins and even sleeping bags out of the skin. This skin is absolutely waterproof. Several of us waded in the water all day without getting our feet wet in

ing one day near our camp, unconscious that I was being watched by three large Esquimaux dogs, and having landed a fine trout one of the dogs rushed forward and grabbed the fish off the line before I realized what had happened.

The Factor of the Hudson Bay Company at North West River, H.M.S. Cotter informed us he had ten dogs as a rule in his team. The leader was named Captain, and some of the other dogs were called Boatswain, Hudson, Tinker, Celtic and Koomalic. The dogs go an average of five miles an hour and when fifty miles or

HUNTING THE RANGER SEAL ON LAKE MELVILLE, LABRADOR

boots made by the natives from this material.

The dog is the only domestic animal found in Labrador and life would be intolerable there without the services of this faithful friend of man. The Esquimaux dog has still a good deal of the wolfish nature in him though, and when hungry has been known, we were informed on reliable testimony, to devour even some of the children. The dogs find their own living entirely during the summer, and are only fed in winter and that once a day. They are particularly fond of fish. I was fish-

more from home they return as straight as an arrow. Mr. Cotter has, however, travelled with his dogs from North West River Post to Rigolet, a distance of over 100 miles in one day. Travelling over the ice generally commences in December and goes on until the middle of May. In driving a team of dogs the words used are those adopted from the Esquimaux language and are:—

Ouk—Right

Rara—Left.

Wit—Go ahead

Ah—Stop.

## Interlocked Deer Horns.

### An Interesting Natural Curiosity.

The above cut represents a great curiosity of extreme interest to all sportsmen. The two deer, whose interlocked antlers are here, were found near the town of Woodstock, N. B., by Harry Palmer. They had evidently been engaged in a fierce encounter, and when discovered one had its neck broken, while the other was still alive. So completely are the horns interlocked that all efforts to separate the

heads proved futile, and the owner decided to have them mounted as they were. The work was entrusted to Mr. Avery Moorehouse, Zealand Station, N. B., and the owner now prizes highly, and exhibits very proudly this natural curiosity. By a remarkable coincidence we are enabled to present our readers with this view, and a story concerning a similar scene in the west, the latter witnessed by several people, in the same number.

# Interlocked Deer.

Interesting Sight by G. T. P. Surveyors.

BY C. B. SCHREIBER.

**W**E were making an exploration survey for the Grand Trunk Pacific Railway of Canada and had been out under canvas for over three months, at the time the following incident occurred. During this time we had rushed across seventy miles of prairie and cut our way through sixty miles of solid bush. From the business end of an axe the bush had proved slow, hard work, quite devoid of interest. The prairie had been quick brisk walking, also devoid of interest — only more so—as the prairie always is.

On this particular day the usual routine had been followed. Up at six, breakfast at half past and then for eleven hours of good hard work on the "Line"—four of us.

The previous night we had finished work about four miles from camp and this day had the unusual luxury of a wagon to ride on—or rather the reach between the two wheels was the "wagon." There was something in the air that day and we knew it—that foretold unusual incidents: for to begin with, as soon as we arrived at where the transit had been left we found it had been blown over.

To be hung up with a useless transit, when the nearest one was 520 miles away was a serious possibility and every one's interest was aroused. We clustered round the instrument talking, wondering, suggesting, though to no effect for the transit man finally said: "I'm afraid its no use boys, she's clean out of plumb; however we'll try a sight or two just to make certain."

At this time we were about 500 feet from the edge of a huge coulee—a scoop in the ground—probably the moraine of an old glacier and undoubted evidence of an ice age. It was 80 to 100 feet deep and perhaps 1500 feet across.

Its general direction was N. W. and, as usual, the side facing northwards, where there was shelter from the winds of the prairie, a dense growth of willows and small stunted poplars had sprung up—the

only wood for sixty miles. Numbers of small deep draws ran into the coulee, coming from the west side. These were filled with rose bushes, willow tips, etc., affording a certain amount of browsing for all the deer for miles round. They were evidently about in large numbers too for a light fall of fresh snow shewed numbers of tracks. Not one of us had a firearm of any sort; as it afterwards turned out we did not want any!

The transit man began to set up his instrument whilst the other three of us started ahead "on line." About two hundred yards away there was one of the deep side "draws" to be crossed, but no sooner had I reached the edge of it than I froze stiff, for there, not ten yards away, and not five feet below me were five does, heads well up and ears looking yards long, listening, listening. One of them saw the movement of my fur cap, but perhaps imagining it to be some animal, made no other move than to slowly look back in an inquiring manner at the other four who were still listening—all ears; ears as large as a donkey's. I held out my hand to the other two men, signalling them to make no noise, and they knowing what to expect crept up as quietly as thugs stealing on a victim. We remained there a couple of minutes watching, with never a move on either side.

Just then the transit man in great trouble, swore as only a westerner can swear. The voice came clear and vibrant in the crisp frosty air:—

"You jumped-up, peel-heeled, gol-darned ewe-necked product of an apprentice, journey man blacksmith. Holy blue Jemima! If I had an axe I'd ....."

The nearest doe began to get restless; she changed from foot to foot, whilst one of the others snorted. Presently down the wind came a torrent of verdant vapourings—one could almost smell sulphur! Unable to stand it any longer the does turned and started to move off.

The man behind me who held the pick-

et—a straight ten foot pole shod with a heavy iron point—poised it horizontally for a moment, and then flung it with all the force, but half the precision of a Roman javelin man. It described a beautiful parabola in the air but went just a little too far and landed flat on the withers of the nearest deer.

I've seen a cat drunk, I've seen a coyote hit in the vermiform appendix with a .22 bullet, and I've seen an hysterical woman suddenly confronted with a grass snake, but they none of them jumped quite so high or so far as that deer! The species are aptly named, "Black tailed or jumping deer." We measured some of the jumps afterwards and the best were about 21 feet between hoof marks.

Away went the whole five of them like the "Imperial Limited"—Faster, like a school ma'am to a dance!! Inside of a minute they were specks on the horizon. Did you ever see a jumping deer really travelling? It must have been after seeing some of them that the expression "hitting the ground in high places" was coined. They are first cousins to an air ship for they seem to be actually sailing most of the time.

Head held high, with a bound four feet in the air soars 250 pounds of grey sinew; legs straight, and extended to their utmost limit, to land twenty feet farther on with all four hoofs in a bunch that would fit on the brim of a cow boy hat. And yet the feet seem hardly to touch the ground ere they have left it once more.

I think that it is only when alarmed that they adopt this method as I have seen them trotting like a moose when at a reasonable distance from any chance of pursuit.

After this we went ahead, talking and wondering what had become of the bucks, as it was the breeding season and they should have been somewhere about. We shortly came upon another big draw running down to the main coulee, the farther bank being very much higher than that upon which we were. As soon as ever the first man put his nose over the edge of the far hill I knew there was something in sight. I ran up alongside him and cautiously peered over. At first I saw what I took to be two bucks playing. One was lying

down and the other seemed to be walking round prodding him with his horns. Then it struck me as being peculiar that the beast on the ground was turning round at the same pace as the standing up one, and always keeping head on to him. They were about two hundred yards away. For thirty seconds or so I pondered over how it was done, till a vision of Landseer's two pictures "Night" and "Morning" flashed across my mind and then I grasped the meaning of it all.

Two bucks had evidently been fighting, and their antlers had become locked. Then followed a scene of the wildest excitement. I ran towards them shouting to the man carrying the stakes to give me the small bit of rope he had for carrying them. But the stake "artist" was a Russian and knew not the meaning of "rope." Anyhow when I ran he followed and on arriving on the spot at once grasped the situation, and also the deers horns! He was sent flying ten feet for his trouble. Another man then coming up made a dart for one of the buck's hind legs and managed to get two grips, but he got a violent kick in the stomach and perforce let go. I, all this time, with more discretion than valour, was bellowing like the bull of Bashan for the rope, being very much afraid that if the horns should become unlocked some one would get gored.

I had had time to observe conditions whilst matters were progressing thus far. The fight had evidently been going on for some hours over an area of about an acre; the slight snow fall was trampled in all directions and strewn with blood and hair. The beast on the ground was dead, its neck having been broken. He'd been dead some time too for he was getting cool.

After a few minutes we managed to pass the rope under the buck's belly and to take a couple of half hitches round its fetlocks. Having done that it was no great job to throw him on his side like a steer for the brand.

Then followed the worst part of the whole episode. We had no gun of any description with us—not even an axe, and we had slowly to saw through the poor brute's jugular with a small pen knife!

The whole party supped off venison steak that evening and suffered all the penalties usual to eating "heated" meat.

We tried hard to keep the heads intact as we found them for the purpose of being mounted, but it was impossible to get the two beasts on to the wagon reach for transporting to camp in that condition and we were compelled to separate them. It took the united efforts of four men to stretch them apart and one man got a finger crushed in the rebound.

A year afterwards I was passing through Ottawa and deemed the incident worthy of report to the Geological Survey Department, who are always only too

glad to hear of any peculiar facts connected with rocks, fish or beasts.

They informed me that whilst it was not unusual for them to hear hunters' stories of locked antlers in the dried, bleached condition, they had never till then come across any one who had seen any of the deer tribe in that unfortunate predicament.

Hence I thought the particulars of the occurrence might be worthy of record in "Rod and Gun and Motor Sports in Canada."

## How I Got My Moose Head.

BY JOHN H. CONOVER ("WALSRODE.")

**L**IVING in Leamington, which is located in about the centre of the county of Essex, in the most southern part of the Province of Ontario, one and a half miles from Lake Erie, in the midst of the fruit and tobacco belt, and known all over Canada, as the town of peaches and cream, pretty girls, fast horses, and pointer dogs, there was no chance for me within a reasonable distance of getting a shot at big game, and becoming the proud possessor of trophies of the chase.

Our county is known to every shooter in Ontario as the home of upland birds such as the quail and the partridge, and the squirrel and duck shooting is generally good. Owing however to various causes amongst which I will enumerate improved guns, better ammunition, cold winters, wet springs, skunks, pot hunters, etc., our game is fast going and will soon be no more than a memory.

Now I have always been a lover of the dog and the gun, and many a day have I spent after quail and ducks. Even when thus engaged I have felt a longing to obtain experience with big game. With all such desires however the opportunity never came until last fall. Then being caught in the Cobalt silver excitement which swept through the country, it appeared to me that I might be able to accomplish two things at once—take a hunting and exploring trip at the same time to that northern country, or in other words try and dis-

cover a silver mine and shoot a moose on the same journey. As the sequel will show I did not fare so badly in either endeavor, succeeding in both objects as well as I could have expected.

Some of your readers may be interested in my impressions of the much talked of and written of Cobalt. The silver mining camp is located on the Cobalt Lake, about the centre of Coleman township, on the Temagami and Northern Ontario Railway, 103 miles north of North Bay. The country is very rough and rocky, and covered with small timber and underbrush, making it look like a thorough home for big game. There are many lakes round Cobalt, and all of them are well stocked with fish. The silver mines have been pronounced as the richest in the world.

On Tuesday, Oct. 10th last I packed my grip and gun, and with my belongings boarded the train north, headed for Cobalt and moose. Early next morning we were at North Bay, and in little over an hour were travelling over the new line to Cobalt, which however was not reached till between three and four in the afternoon. All along by the line the country was still rough and rocky, and thickly covered with timber. I was accompanied by two friends, Ed. Winter and Jacon Wigle, and together we first set out on an exploration trip for accommodation.

At that time such a building as a hotel or a boarding house was unknown in Cobalt, and therefore we made our way to Haileybury, where we put up at the Mati-

I. H. CONOVER, "WALSRODE," AND HIS BULL MOOSE.

banic Hotel, and received the best of receptions and care. Haileybury has a population of about 500 souls and is increasing rapidly. The town is delightfully situated on the western shores of the beautiful Lake Temiskaming, and is the headquarters for mine owners and prospectors. The first few days we devoted to mining matters, and made the acquaintance of many prospectors, as well as of a goodly portion of the country.

The second day of the open season we promptly forgot all about mines and mining, and complete arrangements having been made beforehand, we set out, accompanied by our guide (Telesfore Ranger) in a boat down the lake. We had birch bark canoes, blankets, grub, and all necessities for a trip of this kind, not even forgetting a little Cobalt bloom, which we were assured would keep up our spirits even under the most depressing conditions.

We had only made a mile or so when Ed. showed signs of distress and nervousness, and Wigle appeared quite pale and serious. Upon inquiries as to the causes

of these unwonted symptoms on their parts it appears that the sole reason was the apprehension that the Cobalt bloom had been left behind. A thorough investigation resulted in the discovery that it had been carefully packed away by yours truly, and was securely resting at the bottom of one of the canoes—a discovery that at once cleared the whole atmosphere, and made everything serene. We continued down the lake for more than fifty miles, and upon landing at McLaren's Bay had a twelve mile walk inland when we reached the K. V. lumber camp.

Our reception here can only be described as royal. The foreman and general manager of the camp, Patrick Foley by name, is a genial Irish sportsman whose heart appears to be as big as himself, and who not only gave us the warmest of welcomes and the heartiest hospitality, but also instructed us from the stores of his valuable experiences in the art of moose hunting—his hints being indeed the key to our success. That evening we had the cream of his forty years' experiences in the

forests of the Canadian northland, and were entertained with many stories of his encounters with bears, wolves, moose, etc. Despite these stories we slept soundly and rose early. A splendid breakfast was ready for us early as we got up, and after partaking of the same we left our generous entertainers with many expressions of goodwill, shouldered our packs, and started on the trail.

Our destination was the head of Long Lake, at which place we arrived well in advance of our outfit and provisions. (There was nothing else to do under these circumstances but to make ourselves as comfortable as possible. We collected a pile of dry wood to last us through the night, soon had a roaring fire, and ate our frugal supper, which consisted of a partridge boiled in a small pail, which we supposed to have been left there by E. King Dodds, of Toronto, whose name we discovered written on an axe blaze on a log near where we found the pail. We blessed our unknown benefactor for leaving such a useful article in that place, and made good use of it in lieu of a kettle. We found the partridge very plentiful and tame, and our supper under the circumstances was by no means a bad one. Throughout the night we each sat on a log with a blanket thrown around us, and dozed off only to be awakened by the dismal hoot of an owl or the howl of a near by and hungry wolf.

The morning broke bright and fine and we anxiously made a survey of our surroundings. To our joy we discovered signs of moose and after a hasty breakfast of partridge we started out. Ed. was the captain and chose to go to Trout Lake, about four miles south; Wigle and I making off in the opposite direction to Round Lake, about two miles off. We carefully examined the ground, located the runways, and on our return to camp had a dance round the old fire stump. The reason for our excess of spirits was that our guide had arrived and had a hot dinner awaiting us. Having lived for two days on stewed partridge, we did enjoy that meal which in its abundance and variety seemed to us to far surpass anything of the kind we had ever partaken of before.

In the afternoon Wigle and I went back to Round Lake, Ed. not having returned to

camp. However while on our way we heard a distant shot from him, and it subsequently proved that he had killed a fine buck deer. At Round Lake we selected what appeared to be the best runway, and taking up a position about one hundred and fifty yards away, so that the moose might not scent us, waited and watched with all the patience at our command for the appearance of His Majesty. At first our hearts' throbbled fast, and our pulses beat high, but they had regained the normal, when as dusk began to dim the light something appeared through the pines. As we looked we saw a monstrous spread of horns, and they appeared to us as though two men with white shirts and mounted on horses, riding side by side were coming towards us. It took us sometime to realise that it was a bull moose that was making in our direction. No artist could paint such a picture as that now presented to our view. This magnificent appearance threw us into a state of excitement and anxiety such as only sportsmen who have been similarly placed can appreciate and understand. We remained perfectly still, and with difficulty confined our admiration to our eyes. He came on slowly and when he reached the runway he turned at a right angle to the lake, and showed us that in every particular he was a prize well worthy of the ambition of the best of sportsmen.

Feeling that he would come no nearer, and that to delay matters would mean a worse chance for me, I raised my Winchester, a 40-60, and took careful aim. At that supreme moment I was less excited than before, and got in a fine shot. This caused him to make quite a lunge forward, and a second shot, which also reached him, turned him back on the runway. My third one was a miss, as Wigle saw the bark fly from a near by tree. The animal was now on the run directly away from me when I tried a fourth shot. This seemed to stagger him, and he stood erect for probably thirty seconds, and then fell over on his side partly in the water on the edge of the lake.

No pen can describe our excitement at that moment. We knew we had a valuable prize, and a head for which even old and experienced sportsmen might well envy us. We shook hands, hugged, jumped, and

performed other capers until our superfluous energies were somewhat exhausted. A careful examination of our prize followed. We found that the first two shots had both taken effect in the heart, and the fourth between the ear and the horn.

In the meantime Ed. had returned to camp, and hearing the shots, and thinking possibly we were in a mix up with bears or wolves and might require assistance, at once took up our trail, and came after us on the dead run.

As we were on the same trail, and making all possible speed for the camp to tell our good news, it was not long before we met. Ed. had heard our excited voices for sometime before he saw us, and recognised at once that we were victors in a conflict. We all returned to camp together, christened the head in what was left of the bloom, and spent the balance of the evening in recounting our adventures, and living over again the events of that memorable afternoon.

We felt that Patrick Foley must hear us twelve miles away and this impression turned to conviction when a day or two later he paid us a much appreciated visit. It was no light work getting out the head, hide, and some of the meat to Lake Temiskaming, and his assistance in this work was most valuable. When this was done we again took leave of our good friend, whom we trust we shall be able to meet again next fall.

At Haileybury, where we arrived on Oct. 24th we were congratulated on all sides for having made such a capture. We expressed the head to a taxidermist at Sudbury and took train for home, feeling covered with glory, and quite prepared to act the part of heroes to our many friends. These have been by no means backward in adding their congratulations to those we had received before, and our satisfaction with our success was largely increased through the appreciation shown by both friends and acquaintances.

## The Main Thing in Life, Now, is Fishing.

BY CAROLYN B. LYMAN.

At gray break o'day,  
We're stealing away !  
Here's the season for which we've been  
wishing !

Care wearies the mind  
We'll leave it behind !  
The main thing in life, now, is fishing !

Business—'twill wait !  
With tackle and bait  
And with heart that is light as a feather,  
We're off with the breeze  
That ruffles the seas !  
A truce to the luck and the weather !

Where Dawn wakes from sleep  
The fish in the deep  
With a smile that is silvery and witching,  
We'll tarry a spell  
And rock with the swell !  
The main thing in life, now, is fishing !

# Our Holiday in British Columbia.

## The Best of Sport and Scenery.

BY DR. A. C. FALES.

### Part II.

**N**EXT morning we were up at six o'clock and left our camp at seven. Jones, who up to this time had occupied the bow of the canoe now took his seat in the stern and I was put in the former place. The river where we camped last night at the foot of the Mud Glacier, has a sharp turn and spreads out over a lot of ground, being very shallow. George said that we were very likely to see mountain goat from now on to Glenora. Flies and mosquitoes bothered us a good deal today.

At 9.30 a.m. Shakes saw a grizzly bear on the left shore a long way ahead and called his boys' attention to it. As he spoke to them in Thlinklit language our attention was not called to the matter, and as the boys said it was only a stump, we were entirely unaware of anything unusual. This was a great mistake on Shakes' part, because we had three pairs of powerful field glasses in the canoe and could easily have settled the question. Later on from my position in the bow I noticed something floating down the river ahead of me, about two-thirds of the way across, which looked suspicious, but as a great deal of driftwood kept constantly coming down, including the stumps of trees, I was not sure but that it might be one of these. However, when I called George's attention to it, he instantly shouted, "grizzly bear!" Tom and Jones were in the midst of a game of cribbage, but they soon dispensed with that and hurriedly grasped their rifles. Excitement now became general, we were just poling up a bad rapid, the canoe was dancing, and the water so rough that we could only see the top of the bear's head, about three or four hundred yards distant. A general fusilade followed; about fifteen shots were fired, and the bear escaped unhurt, much to our dismay. We felt that under the circumstances it was almost impossible to hit him and we consoled ourselves accordingly. We had seen our first bear!

Wild geese were plentiful today and George fired at several without success. It began to rain at 11 a.m. and stopped at two. We passed the wreck of the steamer "Beaver" which ran into rocks in descending the river several years ago. This accident was caused, so the Indians informed me, by the breaking of the bell cord, on account of which the captain was unable to signal the engineer to stop the engines. Along the river bank I noticed piles of cord wood which is used as fuel by the steamer "Mount Royal", the Hudson Bay Co.'s boat which makes two or three trips a year, to carry up freight required at Glenora and Telegraph Creek. Late in the afternoon we passed the mouth of the Scud River, a tributary of the Stikine, which enters from the south. Just above the mouth of the Scud are very high peaks which Shakes said was the home of the mountain goat. We had not seen any of these animals up to this time, probably because the peaks were wrapped in clouds.

Tonight we camped near the foot of these mountains overlooking the confluence of the Scud, and while pitching the tents we discovered goat feeding on the summits. Through the glasses I counted twenty-three in one place, while others were scattered about. After some deliberation it was resolved to spend the following day in going after them.

Next morning we broke camp at 8.30 and moved to the foot of the mountain, on which we could still see the goats feeding, though by this time they had scattered in all directions. By the looks of things from a distance the climb did not seem to be anything like as difficult as it subsequently proved. We had imagined that we could climb to where the goats were in two or three hours at the most, but as it turned out we did not get there until about 2.30, or after a toilsome journey of about six hours.

At the start there were in the expedition Jones, Tom, myself and George Shakes but as the former fell and hurt himself in climbing the river bank, we left him be-

hind. From the bank we crossed a level tract of country, heavily wooded and densely overgrown with devil's club and alders; through these we tore our way to the first uplift and made that without much difficulty, reaching the first bench. After a short pause for breath we crossed this bench, which was covered with dense bush, encountering a porcupine on the way. As we had our minds on bigger game we paid no attention to him, and pushed on to the second rise, where our powers of endurance were to be taxed to the utmost. Long and steadily we ascended, panting and perspiring, with frequent stops to catch our breath, feeding here and there on the luxuriant crop of berries, and now zigzagging and crawling, holding on to bushes to pull ourselves up till we finally made the upper limit of timber, and stopped for a rest before the final attempt. Here where the trees and bushes give way to bare rocks, Tom gave up the ascent, being as he characterized it, "all in." Accordingly we left him and pushed on. Soon afterwards we were in close proximity to the goats, and as we crept up George discovered a couple moving on the rocks above us, going from our left to the right. Stopping to watch them and keeping out of their sight I espied another still farther up, standing still and watching us intently. I felt then that our trip was a failure, and we made it more so by going to windward instead of leeward. This was our fatal mistake, as the goats winding us took up the mountain side at a pace faster than we could keep up, but George nothing daunted left me and dashed away to my left to head them off, while I stood still and watched him. It was George's hope that they would go into some place where their escape would be cut off by inaccessible bluffs, but in this he was mistaken for they seemed able to go about anywhere they pleased. They would run a short distance, then stop a while and watch him, and then go on. In this way he gained on them and finally opened fire at long range. After several shots he finally crippled one, the wounded goat stopping on a narrow ledge while the rest bounded away. Unable to get the goat, we had to leave him where he lay and return to the boat before dark, and to add to our difficulties it began to rain.

While waiting for George to come down to me I had occasion to survey the country about from my lofty position, and never have I seen anything to equal its awful grandeur. An endless succession of lofty peaks and intervening ravines and plateaus extending northward covered by snow and ice, with no sign of vegetation, not

VALLEY WITH STREAM AT BOTTOM FLOWING FROM GLACIER HEAD. THE SCENE OF OUR HUNT

even a barren spot in all this wild waste. It reminded me of what I have read about the "Roof of the World" in Central Asia. Oh! for a camera to have taken such a picture.

Down the mountain we sped to where we had left Tom and found him a few rods farther up the mountain side, he having made that extra effort to shoot at some goats that appeared above him in our absence, but the presence of game within easy striking distance could not stir his enthusiasm enough to make the climb in his exhausted condition. We rolled, tumbled and slid down the mountain side through wet bushes, getting our hands filled with prickles from devil's club, and wet and famished reached the river bank long after dark in a condition not to be envied. A couple of shots fired by way of signal brought Shakes and the canoe to our side, and we were soon at the camp-fire, where after changing to dry clothes, and eating a hearty supper, we retired to our tent and described to Jones the result of the day's endeavor. There was a general dampening of ardor from that day on for Jones and Tom, but I did my best to con-

vince them that the worst was yet to come.

Next morning at 9 o'clock we were off, feeling somewhat lame from the vigorous exercise of the day before. We soon passed on our left a creek, which the Indians called Togagoheen and shortly thereafter, saw a black bear on the right shore. I fired the first shot, missing him, then Jones fired twice and at his second shot

A STAKE IS ERECTED ON THE BANK TO INDICATE IN FEET THE DEPTH OF WATER. THE BEAR WAS HERE PHOTOGRAPHED

the bear which had been standing on the shore up to this time, made a break for the woods. Jumping the bank he was just disappearing when I fired again, striking him on the side of the head. The ball passed through his brain and emerged below his left ear. The skull was completely knocked to pieces, the brains exuding. He proved to be a small bear not much more than a year old. We landed for dinner at a place where the Hudson Bay Company have a supply of wood piled up for fuel for their steamers. Here a stake is erected on the bank to indicate in feet the depth of water. The highest number marked on the stake was fifteen. The bear was here photographed. A little above this spot was an old cabin erected as a residence for the watchman, who was kept here to signal steamers ascending and descending the Great Canon of the Stikine. It should be mentioned in this connection that during the Klondyke rush a considerable number of steamers were plying on this river and collisions were inevitable, unless a guard was kept. At 2.50 p.m. we were through the canon. Never

did I see men work harder. We see-sawed back and forth across, taking advantage of eddies and clinging to the walls, which furnished support during the operation of poling. After passing the canon we hoisted sail, a good breeze generally blowing up the river from this point during the afternoon. A small tributary comes in here from the south called by the Indians "Ochsakaen", which interpreted means "the creek above the canon."

The weather has been improving each day and we have now experienced a full twenty-four hours without rain. Tonight we regaled ourselves on boiled bear meat and found it tender and quite palatable, far better, at any rate than the flesh of the wild goose that we ate a few days before.

The morning broke bright and clear, no rain last night. The wind being good both sails were set, and we passed through Klootchman's Canon at 10.30 a.m. Water here very rough. The river is now getting narrower and of smaller volume, but still very swift. We no longer follow sloughs. After passing Klootchman's Canon we came to extensive flats, across which the wind was sending the sand in clouds, but we do not mind this if only the wind holds strong. Glenora mountain now comes into view, a terrific current was running here, but the wind increasing to a gale the gallant canoe ploughs boldly through all opposition. This wind was a great relief to the Indians and to us as well, enabling us to make up for lost time. At 2.20 p.m. we passed the Grand Rapids, the water here in a short distance having a fall of twelve feet. I was amazed to see the canoe sailing steadily right up hill against this fierce current. Soon after this we noticed another small tributary coming in from the south called Dochdaon.

The mountains are steadily diminishing in height, many of them now showing no snow on their summits. Country is getting flatter. At 3.30 we came in sight of the confluence of the Clearwater, which is a stream of considerable size coming in from the north, a river much frequented by salmon. I noticed that the trees were getting smaller and while poplar has been prevailing below, I now found an occasional birch. Passing the mouth of the Clearwater we reached a camping place

nine miles below Glenora, having gone to-day a distance of thirty-six miles. Just before camping we passed a black bear on our left, but as we did not see him until we were well by him we made no effort to shoot. On the opposite bank of the river from our camp a man was shot and killed by his companion. They were on their way to the Klondyke. George told me that the murderer was subsequently apprehended and brought to justice.

Arising next day at four o'clock we had breakfast and were off at six. This morning we ascended a very bad rapid called "Charles' Riffle" which has a drop of twelve or fifteen feet in a short distance. Here we saw a white man going down in a Peterborough canoe. He belongs to the Clearwater Mining Outfit, where four men are working a placer claim taking out about \$25 per day per man. At 8.10 we passed Five Mile Creek, five miles from Glenora. Here Shakes has a cabin, and at this place, he and his boys were fishing when we arrived at Wrangell. They caught two hundred and eighty king salmon which when salted and dried weighed above four tons. Shortly thereafter we passed three old log cabins where the Hudson Bay Co. used to have their stores. Reached Glenora at 9.35 and met the customs officer, Mr. Chris Tervo. We handed him the mail bag which we had brought with us from Wrangell, and after a few words with him regarding our outfit, he decided we had nothing dutiable and passed us without trouble. Here we took on a lady passenger for Telegraph Creek. Glenora is only a small collection of rough cabins arranged in a single row along the river bank, a few of which are occupied by Indians, the balance falling into decay. During the Klondyke rush of '98 and '99, it was a place of considerable importance and many steamers were constantly plying between here and the coast. There was scarcely enough suitable land on which to pitch the tents of the hosts of Mammon. Some considerable grading was done here by the Dominion Government for a railway to run to Teslin Lake, but it was subsequently given up.

I saw a few dogs here with packs on their backs, belonging to Indians who were starting out on a hunting expedition. Some potatoes were growing here and they look-

ed well. As we move along I find the mountains are getting to be more and more destitute of trees, and what few there are of small size. At 4 p.m. Telegraph Creek came in sight. First we saw the Indian grave yard on the hill above the town. On the right the Lower South Fork of the Stikine empties into the main river, the water being muddy and few or no salmon ascend it. The wind gradually died out as we approached Telegraph, and the boys were compelled to resort to poling and lining. We saw a pack train moving out of the town bound for Dease Lake. Now a group of people appear congregating on the platform of the Hudson Bay Company's store and as we draw up to the wharf they all come down to greet us. Foremost among them Mr. Matheson, the manager, also Mr. Craik, his clerk, Mr. Drummond, the Provincial Constable and Nanook, the Chief of the Indian tribe here, called the Tahltan. We soon after met Mr. John Hyland and Mr. Charleson, who has charge of the telegraph line. Mr. Craik assigned us to a cabin where we were to reside during our stay here, and informed us that they had been awaiting our arrival for a week or more, that our guides were all ready and that owing to the limited time now remaining at our disposal we would not be able to go to the Nahlin country, but to the Sheslay River. In honor of our arrival the Union Jack went up and that night all the Indians were celebrating, which is the usual custom when a canoe arrives from down the river.

Telegraph Creek is a small stream which falls into the Stikine through a rocky gorge in the bordering hills on the North bank of the river. The little town occupies the narrow delta of this stream, the lower terraces bordering it on either side. It is the point of distribution for all the surrounding country. From here a trail suitable for pack animals leads to Dease Lake, about sixty-two and one-half miles distant. This trail was constructed and opened by the Government of British Columbia in 1874 to facilitate mining operations. In 1866 explorations for the line of the Western Union Telegraph Company were extended to this place under Major Pope. The object of this enterprise, the connecting of America with Asia across.

the Behring Strait, fell through owing to the successful laying of the Atlantic cable.

The Teslin Trail built by McKenzie and Mann for the Dominion Government in 1899 extends from Glenora through this place to Teslin Lake, a distance of one hundred and fifty-two and one half miles at an expense of \$80,000. An impetus was given this work by the great discoveries of gold in the Klondyke. The Dominion Telegraph Line extending from Ashcroft, on the Canadian Pacific Railway to Dawson City runs through Telegraph Creek and follows the Teslin Trail throughout the greater part of its length.

Telegraph Creek has an elevation above sea level of about five hundred and forty feet. The river here is about four hundred and eighty feet wide and very deep, having a velocity of six or eight miles an hour. This is the head of navigation, and is about one hundred and forty miles from the mouth of the Stikine. Navigation begins anywhere from April 10th to May 1st, depending on the breaking up of the ice. The river generally freezes before the end of November. From what has been said, it can be inferred that the Stikine River is a rapid and dangerous stream. Particularly is this so from Telegraph Creek to Glenora. Our party had almost completed arrangements with the Peterborough Canoe Co. for the construction of three canoes, in which to ascend the river, but they would have been of little use and might have endangered our lives.

During the day we strolled up to the Indian burying ground, situated on a high hill overlooking the town and observed the strange customs of these people. The receptacles for the dead form a curious collection, including old trunks, various shaped boxes and little dog-kennel shaped houses. The effects of the deceased are often deposited therein. I would infer that an attempt at cremation was first made and the ashes and bones subsequently collected for burial.

The white inhabitants are about fifteen in number, the Indians a variable quantity depending on the time of year, while dogs occur in great numbers, from the little black bear dog to the big husky, for sledge purposes.

There are three stores, the Hudson

Bay Company having two, while the third is owned by Mr. John Hyland. Every thing that a sportsman needs can be obtained here, of good quality, and at a price consistent with the difficulties of transportation. Horses are in sufficient supply for all demands and can be furnished either by the Hudson Bay Co. or by Mr. Frank Calbreath. A great many are required for the pack trains, which ply between here and Dease Lake. The price of two dollars per day charged may seem excessive to an outsider, but when one considers that it costs about seventy-five or one hundred dollars freight to get them there, and as there are only two or three places where there is any pasturage, scanty at that, one can understand the reason for exacting this price. Moreover the most of the year they have to be fed with hay and oats which cost extremely high. Besides many of them die before they become acclimatised. From what has been said regarding the pack trains to Dease Lake, one can be sure that the Indians here know all the arts of packing animals for the trail. They are unsurpassed at this work.

Owing to the immensity of this country, guides are necessary and as the Indians here know the country better than any one else, they are in demand. Saddle horses may be obtained for sportsmen, but some prefer to walk. A pack train will not make more than fifteen or twenty miles a day and one can easily keep up with it; moreover by walking to the hunting grounds, one gets in something like proper condition for climbing mountains in pursuit of game.

Board here costs fifty cents a meal at the Hudson Bay Co.'s restaurant, where food is prepared by a Chinese cook.

One can never find a more hospitable lot of people than reside here, and sportsmen can be sure of good treatment if they are deserving of it. If they go up there and violate the game laws they will surely find cause for regret. The law allows a very liberal quota of game to each man and if he kills four sheep instead of three he should be severely punished.

Licenses may be obtained from Mr. Drummond, the Provincial Constable or from Judge Porter. As it is a matter of some pride to these gentlemen to sell as many licenses as possible I would advise

sportsmen to defer buying their licenses until they arrive there.

The information regarding the rush of miners to this place at different periods and the incidents connected therewith, would fill a volume, but however interesting they may be do not find an appropriate place in this article.

On Monday forenoon, the 28th of August, we packed our outfits. The horses were brought in from the range and we got away at 2 p.m. Tom and Jones rode saddle horses while I walked with the Indians. We followed the Teslin Trail, which led up to the summit of Telegraph Mountain and camped here about ten miles from the town. Considerable snow had fallen the day before and was now melting. Larry Martin acted as chief guide, while Little Jackson had charge of the pack train and Mat Richards took care of the cooking. These men belong to the Tahltan tribe, which is divided into two castes, the Bears and the Birds. It is against their tribal laws for members of the same caste to intermarry. Thus a Bear may marry a Bird, but not another Bear. Larry did neither, but went to Wrangell and married a woman of the Thlinklit tribe, a sister of Chief Shakes. For this reason and on account of his aggressiveness in hunting and trapping, he is persona non grata among his tribe. I saw evidence of this all the time I was with them.

The following morning Larry and I started off ahead of the pack train and by one o'clock had walked twelve miles. Here we stopped to await its arrival. On the way I saw seven ducks in a small lake, plenty of red squirrels, a few mohawks, but no other game. The boys came up at 1.30 p.m., and we had dinner. Here were five old shacks, built by Klondykers during the rush of '98 and '99. The trail here and all along was littered with evidence of their discomfiture, such as old wheels with tires coming off and spokes rotting out, old whip-saws, pack saddles, etc.; we made a collection of some of this stuff and took some photographs. Near this place the Indians told me that three grizzly bears were killed the preceding summer. At 2.45 we were under way again and saw a flock of grouse of which we bagged several. Today we crossed a

stream called the First Tahltan and camped for the night at another known as the Second Tahltan. Both are tributaries of the Stikine and flow through deep valleys. The headwaters of the Taku River arise about one and one half miles from here.

Next morning Mat was up at 4.30 and we breakfasted on fried porcupine, which the guides had secured after we pitched camp the night before. Last night was cold and water froze in the kettles. The morning however was beautiful and clear.

INDIAN BOY JOHNIE CATCHING SALMON

I felt stiff and lame when I awoke, but concluded it would wear off. We moved on at 7.45 and soon came to New York Lake, so named because a New York outfit wintered here in '98 on their way to the Yukon Country. On the way we shot one duck, and one grouse with rifle. Larry killed a porcupine. About 5 o'clock we walked into the old Hudson Bay Post about forty-five miles from Telegraph. I was very tired and lame, so much so that I passed a very restless night. Here we met Mr. William Ball, telegraph operator, and George Adsit, lineman for the Dominion Telegraph Co. They welcomed us to their cabin, where we spent the evening. A number of Indians were camped at this place fishing salmon for their winter supply. The Salmon Creek here is a branch of the Sheslay River which in turn is a tributary of the Taku, and at this place we left the Teslin Trail and took to the mountains. It was decided to wait here one day and shoe the horses, cache some provisions for the return journey and rest up a little. Next morning George Adsit took

us down to the Salmon Creek and showed us how they catch them. We each took a successful turn at it. There is no great sport about the performance, which consists merely in using a long handled gaff and pulling the salmon out. As they are very plentiful and the water shallow one who is at all expert can catch a hundred or more in an hour.

During the day the old Indian doctor visited us. Their method of healing consists of incantations and wild gesticula-

WHAT JOHNIE CAUGHT IN A FEW MINUTES

tions over their patient, such as go with superstitious races. There is a belief propagated by their medicine men or witches that the otter gets inside their women and remains there until their death. This they believe accounts for many of their ailments. The old man was such a singular individual that we had to get his picture.

Next day we left the Hudson Bay Post for the mountains, Larry taking us across the Sheslay River in an old canoe, while Jackson and Mat forded the river with the horses. The sky was cloudy and it soon began to rain. I went ahead with Larry while he cut away any obstructions in the old trail. The climb up the mountain side was somewhat tiresome, but nothing to compare with the experience we had while after goat on the Stikine. At 12.45 we had reached a favorable location on the top of the mountain for camping, which the Indians thought it was expedient to do, on account of the fog which interfered with their following the right course. There being no trees here we camped in the open, having to use dead

scrub bushes for firewood. We only made ten miles today and expected on the morrow to reach the sheep mountains, about seventeen miles farther along. Mountain squirrels or gophers and ground hogs were plentiful. In places I saw where large holes had been dug out by grizzly bear in pursuit of these animals.

Owing to rain and fog we did not leave camp next day until almost noon. On the way we ran into a flock of ptarmigan of which Larry shot nine with a .22 calibre Winchester Automatic rifle, which we had with us for small game.

The long walk today was made exceedingly difficult by the very stony character of the ground, almost resembling the sea shore. With a thick sole under the foot it would not have been so bad, but having on only thin moose-skin moccasins my feet got very lame and sore. The latter part of the journey took us close to the edge of a gigantic valley or ravine in the bottom of which flowed a stream of considerable size. When almost to the site of our camping place Larry, always on the alert, spied a bear on the side of the valley towards us almost down to the bottom. Waiting for the pack train to come up we decided to go after him. The Indians thought from its size, that it must be a grizzly. Tired as I was and foot sore from my long walk over stones I was eager to go and Jones decided to accompany us. We started at a rapid pace down the precipitous mountain side, and after a little, looking back, I saw Jones returning to the pack train. Larry and I kept on at breakneck speed, now running, slipping and sliding, holding on to the bushes for support we finally reached a position about two hundred yards above Bruin and crept stealthily on him, taking advantage of every bit of cover. My heart was pulsating violently from the exertion. At a range of about one hundred yards I fired at him making a clean miss, the ball throwing up the dirt immediately under the bear. Quickly going through the motions of throwing another cartridge into the breech I snapped at him again, but the rifle missed, due I soon discovered to the magazine being empty. I was using a 9 m m Mannlicher rifle, the magazine of which can be opened under the breech to remove the cartridges, closing by a spring.

It seems that the force of the explosion had thrown open the magazine here, and allowed all the cartridges to escape. It was the first time that this had ever happened with my rifle and was no doubt due to a weakening of the spring. The arduous run of over two miles had totally unfitted me for any kind of straight shooting. It proved to be a big black bear, and after firing he disappeared as suddenly as though the ground had opened for him.

After about an hour of hard walking we arrived at the camping place, where the boys had put up the tents and made supper ready. Tired and lame I soon went to bed and slept badly. This camping place was used two years previously by Messrs. Hamilton and Mullins of San Francisco, who had a very successful hunt here.

In the morning we found that the weather had turned colder and the sky cloudy. Our tent was pitched on the side of the valley previously referred to, though we had descended fully a thousand feet from the top. A glacier of considerable size occupied the head of this valley about six miles distant, from which the stream at its bottom originated. A more beautiful and picturesque place could hardly be found. Away to the west was a long chain of snow-capped peaks running North and South. From this main range numerous spurs made off at right angles in an easterly direction, on one of which our camp was located. Between these parallel spurs were deep valleys all of which contained streams flowing from glaciers at their heads. These Eastern spurs were not covered with snow except in sheltered spots out of reach of the sun's rays. Here was the home of the mountain sheep and goat. The side of the valley opposite our camp was very precipitous and rocky and I may say that we could see goats thereon any time we had a mind to look for them.

Jones decided to remain in camp today with Mat, while Jackson and Larry, Tom and I went out to reconnoitre. We took the saddle horses which Tom and I rode. Keeping to the mountain on our side, we rode to the head of the valley. Saw no sheep, but some fairly fresh signs of them. Saw two or three goats but made no attempt to go after them. A snow storm came on but did not last long. Returned

early to camp resolving to make a more careful search on the following day.

Next morning we decided to descend to the bottom of the valley and camp near the glacier about six miles farther along. This work occupied the greater part of the day as the descent of the mountains necessitated cutting a trail for the pack train and we did not finally pitch camp until about 3 o'clock, where leaving the horses to graze we walked up the mountain side,

OUR PARTY GOING INTO CAMP

above the glacier looking for sheep. I think the Indians were disappointed that we saw none though they did not say so. Returning to the camp after dark we had supper and Larry proposed hunting on the mountain, across the valley from our first camp. In case we found nothing he resolved to go ten or twelve miles farther north.

Next day we were off early and having climbed the steep mountain side, we reached the top about ten o'clock and walked slowly along the summit, overlooking the valley, in which our camp was located. From this elevation we could see into another valley parallel with the first and separated from it by the high mountain spur on which we were hunting. About 12 o'clock we sighted a single ram and a mountain goat, feeding near by each other, away below us. Larry thought it best to leave them alone and look farther, intending to kill them on our way back. His judgment was good, for we had not gone far before we came to four others, all rams, feeding quietly on the other side of the summit. Creeping down with the

wind in our favor we approached as near as fifty or sixty yards, the sheep being entirely unaware of our presence. Opening fire, two sheep fell at the first volley, while the others looked sharply around hesitating what was best to do. Instantly our rifles rang out again and a third sheep went down, the other bounding away up the mountain. He soon stopped however

SOME OF OUR GAME

and turning for an instant to survey his pursuers he received two bullets killing him on the spot.

We stopped at this place for lunch, which we had carried with us, and then skinned out the heads, leaving the carcasses where they fell, taking only such meat as we would require for our consumption. It seemed too bad to leave this meat to spoil, but it was out of the question for us to take care of it. Whatever may be the opinion of others I found the flesh of the mountain sheep superior to any other venison. Measuring the horns we found the following dimensions:—

	Length of Horn.	Circumfer'ce at base	Width tip to tip
1.....	34	16½	22¼
2.....	35	15	20
3.....	30	14½	21½
4.....	39	14¾	23¾
Record Head	50	18	35

Returning to camp and carrying the heads with us we stopped on our way and dispatched the sheep and goat first seen, making five sheep and one goat the sum of this day's work. The fifth sheep had the following dimensions: Length of horn, 35¾; circumference at base, 14; width, tip to tip 26¾.

The sheep killed today are called the *ovis Stonei*, after Mr. Andrew J. Stone, who hunted in this country a few years ago, and carried his trophies to Professor Hornaday of New York, who pronounced them a new species and named them after his friend. The skins were dark grey with almost white faces, but the Indians say that the scalps are much darker in winter. We all felt pretty well satisfied with the result of this day's work, and expected to get our full complement in another day or two at most.

In the morning we started off again in the same direction and went by where we had killed the first four sheep, in order to pick up a hunting knife left while skinning. Having found this we went farther along the summit and sat down about 12 o'clock to study the surrounding country with field glasses. It was a beautiful clear day, the sun was shining hot, and through our glasses we could see plenty of mountain goat, some feeding, others lying down, but we were not after them today, and so did not disturb them.

About 12.30 while we were eating lunch, Jackson suddenly exclaimed, "See the grizzly bear!" and pointed into the valley, at a large object on the sand bar, which bordered the stream. We looked and saw something which Larry thought was a log. Picking up a pair of field glasses he focussed on the object and said joyfully: "By Jove, grizzly bear!" Hastily finishing our meal, we started down the mountain side. It was fully three miles from where we sat to the bear, who was evidently watching for salmon in the creek. After an exciting run we gained the bottom of the valley and stopped a few minutes for breath. The bear was still slowly walking up and down the stream. Cautiously creeping towards him, taking cover behind the small bunches of cottonwood trees that grew there, we approached to within two hundred and fifty paces. It was impossible to get nearer without exposing ourselves, and we resolved to try him at that range. Taking careful aim we fired at him, when he suddenly jumped into the stream and made for the thicket on the opposite side about fifty yards away. The Indians said he was hit, but I could not tell whether he was or not. Crossing the stream a trail of blood was

found and the Indians taking a rifle apiece crept in after him. They soon came on to him lying dead, a single bullet having gone clear through his body behind the shoulders. He was a monster, weighing I should judge one thousand pounds. While the Indians skinned him we kept a sharp watch in case any other bear might be lurking around.

On returning to the creek with the pelt and skull what was our surprise to see a second grizzly coming up stream not over fifty yards away. Crouching in ambush we turned loose on her, for it proved to be a female and mate to the first one killed. She immediately started for cover, but suddenly changing her mind ran back again to the stream, all the while under a destructive fire. Finally she wilted and rolled over with seven bullets in her body, four of the holes so close together that they could be covered by the outstretched hand. Neither of these bears showed any fight whatever, for the good reason I suppose that they saw nothing to fight with, while the second was so overwhelmed with fire that she had no chance at all to do anything. Strange as it may seem, but nevertheless true, a third grizzly put in an appearance while we were skinning our second victim. It did not come up the stream to where we were, but sheared off and struck out towards the other side of the valley. We fired several shots at this bear at long range, but I do not think that any took effect, and it disappeared from our view in the woods without our giving chase.

Our second bear was about two thirds as large as the first. Hastily rolling up the skins we placed them in the creek and weighed them down with logs and stones resolving to come after them the following day with horses, then taking up our rifles, we hurried away for camp, arriving there long after dark pretty well tuckered out.

The next morning Larry, Jackson and myself with two saddle horses and a mule started out after the bear skins, leaving Jones, Tom and Mat in camp. Having to cut a trail a good part of the way we could not get to the skins until late in the day. When almost to our destination we saw a black bear on the mountain side

near the bottom of the valley, and the Indians said if I would hold the mule and keep the dog quiet they would go and get him. This I agreed to do and they set out on horse back. Soon the mule, finding himself left behind set up the most unearthly noise which only a mule knows how to make, that the bear was alarmed and took off, and the boys gave it up. They instructed me how to keep him quiet the next time!

Camping for the night near the scene of our encounter with the grizzly bears, we kept up a sharp watch for more of these animals, but saw none. Larry said that Jackson was timid and that he would start up in the night at the slightest sound. Being too sleepy to be afraid, I knew nothing of any danger. In the morning we hung the skins out to dry and hunted all the forenoon for bear but saw no more. In the afternoon we climbed the mountain and killed a couple more goats, but saw no sign of sheep. Staying another night in this place, we were up early and started for our main camp, when we came upon another black bear, feeding on berries on the mountain side. This time the mule had his mouth effectually sealed by a rope wound several times around his jaws, and I was instructed to yank him unmercifully if he tried to bawl! Larry and Jackson set out as before and when near as they dared approach tied the horses and began to creep on their victim. As they were in full view of me I could watch the whole proceedings with the keenest interest. The bear soon stopped feeding and laid down apparently going to sleep. Stealthily they approached him and when within easy rifle shot Larry fired. The bear jumped and started up the mountain, but not far for suddenly turning he bolted for the woods below. Then followed an exciting chase, the bear running his best and the Indians in fierce pursuit firing at every opportunity, until when pretty near the bottom of the valley the poor bear rolled over and expired. The boys soon returned with his pelt and we resumed our journey towards camp arriving there about one o'clock. In our absence Tom had gone out with Mat and shot another big black bear. On their return to camp they found the horses had strayed away and as it was too late to go after

them that day they got a good start for home.

The morning after we returned Jackson set out after them, taking one of the horses we had with us. He found them at the Hudson Bay Post twenty-seven miles away, where they had been caught by the men stationed there.

On the following day Jones and Larry

DRYING BEAR SKINS

shot the only moose we secured on this trip. He was a very large one with a spread of 55½ inches and twenty-six points. Taking a horse along Mat and Larry went out to bring in the antlers. They saw two more moose and a black bear. Jackson returned with the horses that night and the next day we packed up all our stuff and started for home. No doubt if we had stayed there longer we could have killed plenty more game, but our time was limited and we then had all the heads and skins we could conveniently carry.

We camped two nights on our return and reached the Hudson Bay Post on the 14th of September. Here we stayed one day to rest and then started back over the Teslin Trail for Telegraph. Made seventeen miles the first day, camping at Mr. John Hyland's ranch. Next morning Larry, Tom and I resolved to cover the remaining distance without a halt. I walked the whole twenty-eight miles without much discomfort. The following afternoon the pack train came in, Jones having secured another black bear on the way.

Chief Shakes had agreed to be at Telegraph to take us down the river on the 18th, but he did not come and we waited

until the 20th when we decided to have a scow built, in which to go down. We started on the 21st and met Shakes a little above Glenora. After some hot argument in which we told him we were going down in the scow he went on to Telegraph. The customs officer at Glenora being away we had to stay there over night in order to have our papers made out. Shakes came down in the morning and after a lot of talk we agreed to abandon the scow and go with him if he would reimburse us for the expense we were under in constructing her. This he agreed to do and that morning we started and favored by wind and current made the whole distance to Wrangell in two days, against twelve going up, almost a record time. Fortunately we had no rain and arrived at Wrangell on the evening of the 23rd just in time to miss the steamer which went south in the morning. Here we waited four days and caught the steamship "Humboldt" which went direct to Seattle. Arriving there Tom met his wife, who went with him to Portland to attend the Exposition. Jones stopped at Seattle on business while I took the steamship "Princess Victoria" for Vancouver, where I arrived the following day and boarded a train on the Canadian Pacific Railway en route for home, reaching Boston on the evening of the 6th of October, after an absence of seventy days.

Previous to making this trip I was anxious to secure just such information as I have here given and am writing this article for the benefit of others who may wish to go. One has to make such a trip once in order to find out what to do the next time, and I would recommend sportsmen going up to take the Hudson Bay steamer "Mount Royal" from Wrangell to Telegraph Creek, taking with them a man from Wrangell, competent to bring a scow down, which can be built by the Hudson Bay Co. during the absence on the hunt. Then when returning there will be no delay in coming down the river. Another important matter is this—don't hire any guide in Victoria or elsewhere to go up there. The best guides can be secured at Telegraph. So-called professionals are not needed and are a useless expense, because they have to rely on the Indians themselves to show them the coun-

try. Further it is better to patronize the people up there, for it is to them that one has to look for advice and assistance in case of trouble.

Sportsmen should not be limited in the matter of time for this trip, for all kinds of game cannot be found in one section. If sheep and goats are wanted, there are certain localities for them, after which a second trip can be made to the moose and caribou country. Bear are likely to be seen anywhere. No one going there need come away empty handed for game is plentiful.

The best time for bear is the Spring and early summer months. Sportsmen may write to Mr. F Matheson or Mr.

John Hyland at Telegraph Creek, who will be pleased to give them full information and assist them in arranging their trip.

In conclusion I repeat there is no place where sportsmen can be more certain of success than in the Cassiar country. But one must make up their minds that to get sheep and goat there must be a great deal of arduous work in climbing the mountains in a rarefied atmosphere and it requires courage, patience and indomitable will to surmount the numerous obstacles one is bound to encounter. Our bag of five sheep, three goats, two grizzly bear, four black bear and one moose, may seem considerable, but there will be others who will do better.

"PETE"

## A Piece of Moose-Fortune.

BY CHARLES K. FOX.

**A** TRAGEDY had occurred. Pete's mother had been mired in some deep, sticky bog where she had gone too far to bite the sweet pulp of the lily

stems (the nutritious gift of the new spring), or some old she-bear had killed her with the conscienceless instinct that it were better to feed her cubs though

Pete starved, for animals are selfish just like common every day men and women. Anyhow Pete did not figure in the theme of existence after his mother was taken away, and that this happened was as plain as the sign of Spring on every spot of earth, because no cow moose ever forgets the particular nook in the forest where she conceals her young, when she goes off to forage for food, and the calf does not move until it hears the low call of its mother, or is rolled over in its bed by her great nose.

This was in the early Spring of '05, and a sturdy built Indian with keen senses, (the chief of the Malacetes) was making his way through the great forest of the Miramichi observing everything that pertained to woodcraft. He had a small pack on his back containing a blanket, a few pounds of flour, a package of tea and a strip of bacon and frying pan, but this bothered him little. He had no gun for he was not after game to kill. He was looking for a good "moose leads" paths where the big ungainly creatures travelled from the deep forest to the open bogs or lakes for a swash in the water and to eat roots and lily pads at night, and when he found the hunting ground that just suited him he would build his camp and make it snug for the fall and winter hunting.

But finding a good camping place was not an easy matter. He must have a spring of water or a running brook that would not go dry in the late summer and early fall to supply the camp with water, hard wood for the fire and soft wood for logs to build the cabin. They must all be within easy walking distance of his hunting ground which would be the lake or some open barren in the forest, and far enough away so the game would not get the odor of the camp fire smoke or hear the sound of the axe chopping the camp wood. So it was that in all the vast wilderness good camp sites were not plentiful like town lots, and sometimes many days' travel and observation does not locate an ideal spot.

Jim Paul knew all these things and he was spending no time foolishly in the great woods of the Miramichi. Though he loved the forest he was there preparing to earn money for the next cold winter and his eye took in everything about him. He had no particular sentiment for things that

could not serve his purpose. Perhaps his eye caught now and then the bright red-veined blossoms of the painted trillium in the shady patches of the damp land and made him a trifle more sympathetic. As he swung his axe low while lopping boughs for his evening camp it sometimes caught the shy vines of arbutus almost hidden under the old leaves and whisked them about

CRONIES, PETE AND HIS MASTER

with a pink and white shower of beauty, but Jim scarcely noticed them. His night's camp made, sheltered from dew by the boughs of the low hemlock, and tea boiled, he threw his tired limbs in his blanket, facing the stars, and feet to the embers, and dreamed of "Clote Scarpe" till the first streak of dawn, and the next day he travelled again, blazing no trail, but taking his bearings by the peaks and tall pines. And the next day was much as the last. The song of "killolleet," the white throat twining her spring nest, brought in its way a pleasant thought, but the drum of a cock partridge on a nearby log had to him a more business sound and was real music in his ears, for when there were

many he would say, "Partridges be plenty this fall, sportsmen like partridges, lots of fat birds do 'em good."

But suddenly Jim stopped and listened. There was a strange weak sound, a low moan almost undistinguishable but he knew it meant something, it was so much like the sounds he was familiar with that he could not be mistaken. The woods down the slope were open and clear except a big fallen spruce in the foreground and his practiced ear told him whence the sound came. It was on a bed of leaves under the

when his soft pleading eyes looked into those of the old guide and hunter he pulled his rough finger for his mother's teat, his sense of sympathy and speculation began to rise at the same time. Without hesitation he threw Pete across both shoulders, clutching his fore and hind feet with either hand, and though he stumbled a little at first he soon got his stride and with his face to the sun, which was due south, he soon fast put miles between himself and the place where Pete was born. But the calf, almost gone, could not stand

READY FOR A SLEIGH RIDE

very end, where the needles and cones made the snugest and coziest shelter that Pete was lying. He thought Jim's footsteps were those of his mother—at any rate his little weak whine had saved his life—he was almost starved.

Jim was puzzled—for old and cunning an Indian as he was he had never been able to outwit a cow moose and pilfer her calf. And here was a famished baby moose that he must kill to be human, for no hunter will leave an animal in misery if he can end its life. But somehow the intuition of the helpless creature imparted to Jim that he did not want to be put out of existence before having a show in the world, and

without food the long journey to the first settlement. So at the running brook Jim laid him in a hollow of dry leaves, squeezed juices from the young plants on which moose are wont to feed, boiled it with a sprinkle of flour and made a gruel, which, though not like his mother's milk put strength into his sturdy young limbs. Thus through the long journey was Pete kept alive and though he could walk again when set down for a rest or a meal he would never run away, and when he got to having plenty of good cow's milk he was more than ever attached to his new home. Then there was more trouble ahead for him for the law holds there is no place in the do-

mestic economy for wild game. The game wardens of New Brunswick demanded he should be liberated as it was unlawful to keep captive moose, but Pete defied the law and refused to be left in the forest alone, but came back every time to his captor's yard, picking it out from all the others.

Then Jim offered to send me the moose (for a consideration) and remembering the journeys in the forest, the waiting and calling when October nights were making ice in the eddies, and we shivered in the cold, waiting for a shot, and the forenoon sun brought drowsiness after the exciting hardship of the night, the curling of the camp fire and broiling of the grouse and venison and moose steaks,—with these memories still fresh, Jim's offer could not be denied.

So here is Pete ushered into a new and

strange moose life—new environment too, for Ernest Thompson Seton says it is incidental when moose ever ranged in New England south of a line drawn from the White Mountains to the Adirondacks and so on. But he likes the browse we give him and the hay and turnips and cabbages. He expects to spend the rest of his days in Winnikenni Park in Haverhill, on the shores of Lake Kenoza, where there is a cold spring and maple and yew trees. If he has good luck and is vigorous as his ancestors in the north woods, when he is six years old he will weigh 1300 pounds and grow antlers that will spread fifty inches or more with wide blades and branching prongs. These he will drop in the fall with the first snows to feed mice and hedgehogs, if there are any, and grow them again the next season between May and August. Good luck to Pete!

## Destruction of Deer by Wolves.

**H**ARRY Phillips, of Bisco Lake, the well-known and popular guide, writes to his friend, Jack Miner, of Kingsville, Ont., on the subject of the destruction of deer by wolves and his remarks coming from a man of practical experience in the matter is worthy of consideration. He says:—

"I have had a big time this fall and winter with the wolves. Between shooting and trapping I got three before snow came but I have only got two since. With poison I have killed at least three or four others that I did not get on account of big snow storms coming on after the wolves took the bait, making it impossible to track them for any distance. I may find some when the snow goes off. They are getting thicker all the time and they have driven all the caribou out of this part of the country,—all except what they have eaten up, and now they are eating up the red deer by the wholesale. If they keep on the way they have been for the last two years there will be no deer left

this side of the railroad. There is only one way to ever thin those wolves out and that is to raise the bounty for a few years to a price that will induce every man that hunts to hunt wolves, winter and summer. If the bounty was, say \$25 I would never give up the chase and I know of others here that would do the same. Hunt them winter and summer, and it is my experience that for every one that is poisoned and the bounty got for it there are two more go off and die in the woods and are lost.

In '05 I poisoned two that I got and I am sure I poisoned six or eight more and lost them through snow storms. Still I am glad I got rid of them, if I never get a skin, for two or three wolves will destroy more deer in a year than a large family of Indians. More than that a wolf will watch his chance to pick up every beaver he can. They catch them when the beaver is out at work. I say, raise the bounty. If possible get rid of the wolf instead of the deer."

# The Quebec Fish and Game Leases.

## Mr. White's Position.

**T**HIS subject is one of such wide interest to sportsmen that, although we have given considerable space to it in recent numbers, we are glad to publish in this issue a full statement by Mr. W. R. White, K. C., of Pembroke, Ont., explaining the position he takes up. Mr. White is recognized as the leader of the opposition to the policy adopted (and we believe rightly adopted) by the Hon. Jean Prevoist, Minister of Colonization, Mines, and Fisheries for the Province of Quebec, and endorsed by the Quebec Government and Legislature.

As to Mr. White's personal position in this matter we have nothing further to say. We think he is mistaken in his views, but he is quite capable of defending them and himself, and we need add nothing except a few words to make our position clear. We have not refused Mr. White the use of our pages as recent numbers have shown. The conductors of any Magazine, with consideration for its standing and position, cannot insert columns of newspaper reprint, and that is what Mr. White seems to have expected from us. With a full consideration for Mr. White's position we gave a fair summary of his arguments as inserted in a newspaper, though they were substantially the same as were given both at Montreal and Ottawa.

On one other point we must correct Mr. White. "Rod and Gun and Motor Sports in Canada" is not an Ontario organ (though printed and published in the Province, and necessarily devoting much attention to its sporting interests) but a Canadian Sporting Magazine, giving attention to the whole of Canada, and covering the whole of the Dominion in a more effective manner every month.

Despite the fact that it is a difficult task to argue with a lawyer, and particularly one with the ability and acumen of Mr. White, whose high personal and professional position we fully recognize, we venture to point out to him that he rather inadequately deals with our strongest point in his argument to us. Had his lease been granted

by any other landlord than a Government he could not possibly have escaped the payment of the non-resident license fee; and because the Government is his landlord he has neither legal nor moral justification in expecting to be excused that fee. Mr. White tells us the privileged class will still exist in Quebec. True; but one of these privileges has been taken from them, and their continued existence is merely a question of time. Mr. White agrees that we are right in stating that all agreements are subject to the laws of the Province; he is too good a lawyer to find fault with that proposition. Those laws say that non-residents shall be subject to fish and game licenses, and to exempt lease holders from those licenses is neither fair nor just. The laws of Quebec have now been brought partly, but not wholly, in conformity with the laws of other Provinces and States, and doubtless ere long will be brought entirely in line with them. With these preliminary observations we give Mr. White's letter in full, and are glad to acknowledge the general fair tone of his arguments in response to those we have put forward:—  
Editor Rod and Gun:—

Mr. Alfred Pelland's letter, and your editorial remarks on this question in your May number, have just been brought to my notice, and I ask the privilege of replying to them.

From Mr. Pelland's opening remarks, I presume he wishes your readers to infer that I have been guilty of discourtesy to the Minister in, as he says, "attacking the Hon. Mr. Prevoist during his absence from the country." Those who know me best will acquit me, I think, of any wish to attack any one under a disadvantage. I was not aware of the Minister's absence, and I was not attacking him personally, but simply criticising a piece of Quebec Legislation for which, no doubt, he was primarily responsible, but for which the Quebec Government and Legislature are now equally responsible.

I discussed the question publicly with the Minister, both at Montreal and Ottawa, and I wrote him at least two letters

on the subject, to which he did not reply. but afterwards gave me permission to publish.

I have the highest respect for both the Hon. gentleman and his office, but where legislation, that adversely affects my private rights, is initiated and carried through by him, despite my protests, I know of no tribunal before which I can cite him to appear except before the Bar of Public Opinion, nor do I know of any Divinity that doth hedge the Minister, or prevent his actions from being publicly criticised by the meanest subject in the land. I therefore hope I may be adjudged "not guilty" of the high crime and misdemeanor of being discourteous to a Minister of the Crown. Having said this much in personal explanation, let me briefly reply to Mr. Pelland's letter, and the extracts given by him from the Minister's speech.

To the argument based upon the High Licenses charged in some of the States of the Union, and in the Provinces of the Dominion—I can only say, as I have said more than once before, that the cases are not at all analogous.

The Province of Quebec leases Rivers, Lakes, and Lands for Fishing and Hunting, and has done so for years—none of these States or Provinces do so. The Province of Quebec received as rental from these leases during 1905, \$66,030.27, according to the Minister's report, Appendix 17, Page 66. In addition, each lessee was compelled by the terms of the Lease to employ and pay a guardian to protect the Fish and Game, and when we consider that outside of individual leases, 187 Clubs are incorporated and hold leases, and that the guardian must be employed from 1st January to 31st December, each lessee cannot pay less than \$350.00 per annum for game and fish protection.

Thus, the lessees pay \$70,000 in addition to rent, which under other circumstances the Government would have to pay; and as to the Game, no sane man will say that birds and beasts protected on the 6,400,000 acres under lease, scattered over the whole Province, does not practically protect the game in the whole Province.

This is amply borne out by the fact that the salaries paid to all "Fishery",

and "Game and Fishery" overseers employed by the Government do not aggregate more than \$12,000 per annum—leaving the Government of Quebec in round figures \$54,000 of cash surplus besides \$12,000 worth of patronage.

You will easily realize therefore the great difference between the States and Provinces, quoted in Mr. Prevost's speech, and his own Province.

Briefly put, the only source of revenue for game and fish protection enjoyed by these States and Provinces is the license fees, whatever they may be, and against whoever chargeable.

In Quebec the Lessees pay \$66,030.27 for the right to hunt and fish within certain limits, and \$70,000 for protecting game and fish for the whole Province—or a total of \$136,030.27—and the Government pretends to protect the game and fish in the rest of the Province by spending \$12,000.

Surely these figures should make any honest citizen of Quebec wonder why an additional burden of \$15.00 per annum should be placed upon the non-resident lessee, a tax which should produce a revenue of from \$25,000 to \$30,000 per annum—making lessees pay annually a total of \$166,030.27. This does not take into consideration the cost of buildings, of constructing roads and bridges, (the latter of enormous value to both settlers and lumbermen) which would probably foot up to an annual outlay of \$30,000 more.

To the Minister's argument based on articles 1415, 1416 and 1417a, I have only to say that when he admits the passage of the Order-in-Council of June 1st, 1901, he admits my whole case. When my lease was obtained, that Order-in-Council was in force, and the law then was and my bargain, then made, was, that for a certain specific sum payable annually, my Club should enjoy the hunting and shooting rights pertaining to the lands leased. The facts and the law were well known to both the contracting parties, and I say that the contract was made under the law as it then existed, and I and my associates are entitled to hunt on that territory during the existence of the lease.

I never denied the power of Parliament to confiscate my property, take away my rights, or do any other arbitrary act Par-

liament may do under our constitution. But, I have surely the right to protest against Parliament doing so, and to insist that in strict justice, and with a due regard for the preservation of its own honor, the Crown should not invoke the powers of Parliament to deprive me of the rights the same Crown has granted me, so long as I faithfully observe my end of the contract.

As to the small amount received from non-resident licensees, (\$2,561.00); is it not apparent that the Government would have received much more for such licenses if it had not adopted the policy of leasing instead of licensing? And does not the Province receive actually from people who are almost wholly non-residents a total of \$138,584.00—out of which the Province expends about \$12,000? Does any other State or Province have such a revenue and give free hunting and fishing to its own citizens? The Minister admits that the Order - in - Council was based on the ground that Clubs paid a considerable revenue to the Province; does not that argument still hold good? The Minister goes on to say that owing to increased demands, better means of communication, etc., the value of the territories under lease has much increased, and therefore the payment of the license fee must be exacted, and that it is quite permissible for the Province to take advantage of the "letter of the law"; not the spirit or the principles of justice, but "the letter of the law."

Well, if the Minister is content to violate the leases made with me on the 11th August, 1905, and the 24th October, 1905, and plead such reasons as justification, all I am prepared to say is that his ideas of fair play and mine do not coincide.

The Minister cites the resolution passed by the Fish and Game Congress called by him at Montreal. I have heretofore refrained from saying much with reference to this "so-called Congress." I am now compelled to state the facts, so that your readers may judge of the value to be placed on any such resolution.

In response to an invitation generally sent out by the Minister to the lessees, at least fifty Presidents and other officers of Clubs residing in Ontario attended that Congress. Probably a dozen

were Americans, and the rest were residents of Quebec—many of whom were not Club Members or Lessees. The motion to appoint the Committee to strike the standing committee was moved by a resident of Montreal, and the name of an Ontario man did not appear on this Committee. In a few minutes this Committee brought in its report, and upon not one of the Committees did the name of one of the fifty Ontario men present appear.

I then presumed to ask the Hon. Minister, who was presiding, what our position and rights were at that Congress, and all who were present will bear me out in saying that I had to ask the question three times before I obtained any answer from the Minister.

The Committee on Big Game subsequently brought in a recommendation to charge non-residents \$25.00 License Fee for hunting deer on their leased territories, and as it became evident to all that the Congress was under control of residents of Quebec, and agents of the Transportation Companies, many of us—after protesting as strongly as we were allowed—left the meeting in disgust. Even then the resolution was only carried by a few votes, and indeed some who were present claimed that the Chairman's adding machine slipped a cog when the votes against the resolution were being counted.

It must have been apparent to everyone that the Lessees, as a body, were opposed to the resolution, and I can only wonder at the Minister quoting it in his justification under the circumstances.

As to his election to the Presidency of the North American Fish and Game Protection Association, which he quotes as evidence of the Americans' approval of the measure—the Hon. Minister must remember that this honor was conferred upon him while he was only meditating upon this breach of contract, and before he had actually committed it. May it not have been that this great honor was thrust upon him in the hope that it might dull the keen edge of his enthusiasm to destroy our rights? It is well known that people of a certain type adopt such methods. I regret that I can neither understand nor practice them.

The contention of the Minister, that, if Governments could not break their solemn

contracts, or alter them, all Government would be at an end, can only elicit the reply, "Perish all Governments that deliberately break their contracts." I never held that my lease was forever—it is only for a specific term of years; as soon as that term expires, my contract is at an end; all the duty the Government owes to me then is to allow me to renew on such terms as to price and other conditions as the Government may fairly impose. If I find the price too high, or the conditions too onerous, I would probably decline the renewal, and the Government could then lease to any other person who, under the law, and my arrangement with the Minister would pay for my permanent improvements, and take my place. There is no "forever" about it. I only ask that for the period my leases are in force, the bargains therein set out should be respected, both by the Crown and the Lessee.

The Minister says I have not read my Lease. That statement is not true. I have read it carefully, and with a view to find a justification for the Minister's position, and I am unable to find it.

He cites Clause 2 of the Lease, compelling the Lessee, in the exercise of his rights, to conform to the provisions of present and future Game Laws. Does that justify the Minister or Parliament in altering the Leases which allow my Club to hunt and fish on paying \$120.00 per year, changing the contract by Act of Parliament and making our Club pay \$225.00 additional per annum? If \$225.00, why not, when the Province needs the money, make it \$2250.00? It is only going a cipher more at the right end of the Bill. I cannot conceive that the Minister is serious when he sets up this pretension.

Is this law not a law for revenue only? Wherein is it a Game Law? unless he refers to one game in which I believe they sometimes raise the "Limit"—but even then it must be a matter of agreement between the high contracting parties.

Does not this clause mean only that I shall observe the laws and regulations made from time to time for the protection of fish and game—observe close seasons, limitations of catch of fish, or number of heads of game to be taken, or any other law or regulation passed for the reasonable pro-

tection of game and fish? I give the Minister credit for not being quite serious in setting up this argument.

As to the Clause permitting the Government to cancel the Lease on one month's notice—I beg to state most emphatically that the Hunting Lease to my Club contains no such clause, and I will give \$100.00 to any charity the Minister may name, if he will find such a clause in the Lease of Hunting rights to the Neka-bong Club, dated 24th Oct., 1905. Even if such a clause existed, no Government worthy of the name would exercise its right without good reasons and in the public interest.

I never pretended that even if there were no restrictions in the Lease, the Legislature had not the power to wholly cancel it by Act of Parliament.

What I have argued, and what neither the Minister nor his apologists have successfully combatted is that the Crown has for certain money payments and the performance of certain covenants and agreements by him granted the lessee certain rights, and I say that it is highly improper, unjust, and dishonorable on the part of the Crown to take away these rights, or prevent the lessee from exercising them, unless he pays twice or three times the original consideration agreed upon; for no better reasons than that the Crown wants money, and that the privileges granted have become (in the opinion of the Crown) more valuable.

And just here let me say that in my case, less than a year ago my Club agreed to pay \$120.00 per annum for Hunting and Fishing rights—today our fees payable to the Crown will be \$345.00, and our assessment to pay guardian, and for protection of game and fish is \$425.00—a considerable increase in less than a year.

Coming now to my own particular case. It is not true that I obtained a transfer of Hunting Lease from Mr. Poupore, "a former member for Pontiac," but from another Poupore, a nephew of that gentleman. I obtained it in 1904. The Minister accepted the transfer, and so notified me.

My Club expended about \$500.00 in cutting roads and building a Hunting Lodge and other improvements. When these were completed I was notified that a fishing

lease held by one Emerson (an American) for Calumet Lake in said hunting territory, was in arrear. I replied that I was not the Assignee of this Lease, that we did not want it, and did not feel disposed to pay \$40.00 annually for the right to fish in a Lake where I knew there were no fish, and never was any and proved the latter fact by several statutory declarations.

The Minister replied that the one lease went with the other and that he would withdraw the consent to the transfer of the Hunting Lease unless we paid arrears on the Fishing Lease.

I went personally to Quebec and settled the matter with the Department by ignoring the old Leases and taking out new Leases for Hunting and Fishing, covering all the new property as well as the property in which my Club had been interested for over fifteen years, and agreed to pay—and did pay—the rental demanded, \$120, and I say that I did so agree on the distinct understanding that our rights to the fishing were good for nine years, and to the hunting for ten years from the dates of the respective leases.

It never entered the minds of either party to the bargain that any change was contemplated, or would be made, and I submit that having for over fifteen years had certain rights over part of the property, I was entitled to expect and believe that the forms of leases being the same, I should have the same rights during the pendency of the new Leases.

I may say that the amount of the rental was fixed by the Minister and agreed to by me. We have since put several hundred bass fry into Calumet Lake, and no doubt when the Lease falls in there will be good bass fishing. The Government of that day will probably forget, however, that we have made a valuable asset of what was worthless when it came into our hands.

The Honorable Minister's threat that at the expiration of my Leases he will raise the rental sufficiently to afford me complete satisfaction, is, to say the least, unworthy both of the Minister personally, and of his position as representing the Crown. It would be most unfair if the Minister would, to personally punish me for daring to question his public invasion of my private rights, punish fifteen or twen-

ty other gentlemen members of the same Club, who may not all share my views, as certainly some of them think I am unwise in so openly expressing them. But I am a man, free-born, and of mature age, and have strong opinions, and believe I have the right in this free country to express them. Anyway, I shall express them, notwithstanding the Minister's threat. I can only assure him that I alone am responsible for my opinions, and for the language in which I voice them, and no man living—whether Minister of the Crown, or member of my Club, can dictate to me when I shall speak or be silent.

Perhaps by the time the Lease falls in, the Minister and myself may have settled our little differences of opinion, or he will have lost his memorandum, or for that matter both of us may be where there is neither hunting nor fishing. I trust he will then be able to see with clearer vision than is now vouchsafed to him.

I would like to add a few words in reply to your editorial remarks, which on the whole are fairer than I expected, considering your former article on the same subject, and the fact that you have denied me the use of your columns heretofore.

Your view as to the weak point in my argument strikes me as somewhat peculiar, and your illustration as not applicable. The Crown is the lessor in this case, and has no more right to increase the rental during the term than a private landlord would have.

The Courts have always held, in cases against the Crown, that, while the Crown might have sovereign rights of confiscation and repudiation, it is contrary to the dignity and honour of the Crown to exercise these rights against the subject, and where the Courts were asked to interpret agreements between the Crown and the subject, have invariably held the Crown strictly to a performance of the written contract.

Take your illustration as correct, and I agree with all you say, but your illustration is not to the point: the proper way to put the case is this: If I rent a farm from B. for five years, and at the end of two years B. says to me: "You cannot plough the land, or cut the grass or the

corn without paying an additional fee by way of license" — that would be exactly Hon. Mr. Prevost's position.

You are quite right in saying that agreements are subject to the laws of the Province, but wrong in saying that the law of Quebec compelled holders of fishing leases to pay a license.

Under article 1375 properly read, and as it was always read and acted upon — persons domiciled in Quebec did not require a license to angle in waters not under lease, but persons not domiciled in the Province did require such license to angle in waters not under lease, Art. 1376 confers power on the Minister to lease or license for a term not exceeding nine years. Art. 1380 allows leases to be made in the name of a person or incorporated Club. Art. 1382 reads as follows: "The lease confers upon the Lessee for the time therein determined the right to take and retain exclusive possession of the lands therein described, subject to the restrictions and regulations which may be established, and gives him the exclusive right to fish in the waters fronting on such lands, in conformity with Provincial and Federal regulations then in force, etc."

What does the Lessee get for his money?

1.—The right to exclusive possession of the lands, subject to the restrictions, regulations, etc.

2.—The exclusive right to fish in the waters (not only the right to fish, but the exclusive right) fronting on the lands in conformity with both Provincial and Federal regulations then in force.

The Commissioner (or Minister) under the authority above cited, and I pledge myself that he has no other statutory authority, Leases to my Club. He does not License. The Act says "Lease" or "License." Mr. Prevost interprets it Lease and License. Where does the right lie, with the Lessee or the Minister?

You seem to argue strongly against what you call a "privileged class" — but you must remember that Mr. Prevost nowhere proposes to destroy the privileged class—only to bleed them—leases are still issued, and to be issued — as far as we know.

You give considerable credit to Mr. O'Connell, of the Quebec Central Railway—and Mr. Cook, ex-Mayor of Ottawa, for the compromise now agreed upon and accepted by the Minister, reducing the fees from \$25.00 to \$10.00 — and from \$10.00 to \$5.00 respectively. Mr. O'Connell evidently worked for his Railway interests, as the higher fee would doubtless have kept many visitors out of the hunting and fishing preserves served by his Rail. He is to be congratulated upon his success. Mr. Cook had no brief—as far as I know from the Ottawa sportsmen. He made no suggestion of a flat rate at Ottawa, and I took occasion to say then what I now repeat: That, as far as I am concerned, I have no quarrel with the Minister as to the amount of the License fee. If it is conceded that the Minister has the right to impose this fee then, in my judgment, no sportsman can find fault with whatever fee the Minister may, in the interests of his Province, impose. There is no issue on this point between the Minister and myself.

In conclusion, I ask for the 4th or 5th time this question, in the hope that, as the Minister has selected you as his official Ontario organ, he may deign to reply to it.

If the law always was that non-resident lessees of Hunting and Fishing Territories were compelled to pay a License Fee before hunting or fishing, why did Mr. Prevost go to the Legislature to pass a law already in force, and why does he now in renewing old leases specifically and distinctly make them subject to the payment of these License Fees?

I must apologize for the length of this letter, but I find it impossible to keep these gentlemen to the narrow issue I submitted to them, and I must perforce follow them and meet the side issues they raise with such skill as to make many not familiar with the subject believe they were dealing with the real question under discussion.

Yours truly,

WM. R. WHITE.

Pembroke, Ont., May 30th, 1906.

## The Alpine Club of Canada's First Camp.

### Description of the Arrangements.

BY A. O. WHEELER.

**T**HE question of the hour in Alpine circles is: Are you going to the Yoho Camp?

According to a circular recently published by the Alpine Club of Canada, the Camp will be in operation from the 9th to the 16th of July; that is will last eight days, and accommodation will be provided for one hundred persons.

Let us consider for a moment what it means to place one hundred persons in camp at the summit of a mountain pass, situated in one of Canada's wildest and most beautiful spots, nine miles from the nearest railway station on the Canadian Pacific Railway. It means an accumulation of fifty mountain ponies, a number of waggons, forty roomy tents, a staff of twenty-five including outfitters, guide-packers, cooks and other assistants, four

large mess tents, provided with cook stoves, the construction of tables, benches and other necessities of camp headquarters; riding saddles, pack saddles, one hundred plates, knives, forks, spoons, etc., and all necessary cooking outfit; beds of balsam boughs and the collection of fuel ad libitum for bonfires. All this has to be got together beforehand and the most of it transported on the backs of ponies from the railway to the camp ground.

The Club's members and guests will assemble on the evening of the 8th July at Mount Stephen House, situated in the little village of Field at the base of the snow crowned monarchs that has given the name to the hotel. Early on the morning of the 9th a start will be made for the camp on the Pass.

The difficulties of transit are much re-

duced by the fact that the Railway Company has in operation a delightful little chalet, built upon a tiny peninsula at the south end of Emerald Lake. This lake, a sheet of glacial water, magnetic green in color, lies directly below the Yoho Pass. Between Mt. Stephen House and the Chalet, the Dominion Government has constructed a good driving road, cut from the forests clothing the steep slopes of Mt. Burgess. It winds between walls of tall pines and presents glimpses of snowy peaks,

Camp is a training school and does not encourage laziness. Ponies will be ready for the ladies and those of more mature years will be seated in carriages.

Arrived at Emerald Lake, lunch will be found ready in the woods along its shores, and will be served in the most approved camp style. On all sides rise snowy heights overhanging their rippling reflections in the green water of the lake.

The baggage having come up, a move will be made for the camp ground, a mile

MTS. DALY AND NILES

Photo M. P. Bridgland

hazy blue valleys and shining waterways through vistas of woodland green. The first stage of the journey will be over this road.

Having deposited the baggage in charge of that past master of mountain craft, the genial Tom Wilson, of Banff, oldest and best known of all the guides, to whom the mysteries of the diamond hitch are an A. B. C., the more enthusiastic of the neophytes and the tough old warriors will be started forward on foot, for the

and a half farther on. The path follows the western shore through the forest, then crosses the moranian delta at the north end. The scenery here is magnificent. On the right is the isolated mass of Mount Wapta, one of the pillars of the Gateway to the Yoho Pass. On the left the Emerald range sends numerous ice cascades tumbling in wildest of crystal confusion down deep cut gorges from the snow-clad heights of the President and Vice-President; while a little to the south the sharp

spire of Mt. McMullen rises a stately pinnacle in the thin air.

Following the pony trail, the first test of mountaineering is had in the climb from the lake to the summit of the Pass, about 1000 feet. A short tramp through the primeval forest clothing the Pass and Summit Lake opens to the view, giving promise of a well earned rest. Here is a pretty little tarn, beyond whose margin of emerald sward graceful spruce trees wave their hoary limbs, festooned with moss draperies, in stately welcome to the members of Canada's Alpine Club, and seem to ask in mute inquiry "why so long in coming?"

Beneath their shade are ranged, in symmetrical rows, lines of white tents, denoting the headquarters of the Camp. The square is gay with bunting and at the door of several of the larger tents stand white-clad cooks ready to sound the tocsin that calls to supper, a joyful sound for the now hungry and weary travellers.

Let us approach and investigate. On one side of the square are the ladies' quarters; on the other the gentlemen's. Each tent bears a number to enable the occupants to find their respective dwelling places. At one end are the official quarters, where neat placards show the offices of the President, the Secretary, the Treasurer, the Guides and the Mountaineering Bureau. Here, also, a bulletin board proclaims the orders of the day and sets forth the official programme. At the opposite end are the quarters of the packers and their assistants, where are kept the ponies, saddles and other paraphernalia for the exploration, climbing and sight-seeing that is to be done.

The visitors now register with the Secretary of the Camp and are promptly assigned quarters, to which, with their baggage, they are quickly shown by scouts appointed for the purpose. The tents are filled with fragrant balsam boughs providing beds of a softness and aroma unknown to civilization.

The gong sounds for supper and the visitors are quickly seated around rustic tables, with a meal before them that is camp fare from the word "go." After supper the crowd gathers round a huge bonfire and the members flit back and forth through the shadows while the sparks fly

upwards into the starlit night and it is gradually realised that the Alpine Club's first camp is a thing of fact.

While many wish to linger round the fire, it may not be, for there is work for the morrow, when the first official climb will be made of the Vice-President, and the first round trip of the most beautiful of all Alpine valleys in the world begun; moreover, lights out at ten p.m. is a rule of the Camp.

It would fill more space than is now available to enter into a description of all it is planned to do. This will appear in good time when it has been done, but it may be said that there will be found a programme sufficient to satiate the wildest dreams, and when the week of camping is over, there will be so much to tell and so many to tell it, that it is doubtful if it can all be told before the next year's camp is on.

There is no doubt but that the fame of this first camp of the Alpine Club will go forth the world over and that the people of Canada will quickly realise that right here in our own Dominion there are sights of scenic splendour to be seen and things to be learned concerning the wonders of Nature that cannot be equalled in any other quarter of the globe.

## The Mountain Ideal.

BY MRS. E. PARKER.

Six months ago the Alpine Club of Canada was a dream; today it is a very tangible reality with a membership, including members-elect, of one hundred and fifty odd. From the beginning of the vision, the ideal of its founders was a popular mountaineering club whose enthusiasm would, in the sequel, give to the lusty young Canadian nation the ethical uplift that comes from nature's "grand uplift of mountain line." Always, from the first, the feeling has been national and moral. No movement in Canada since Strathcona's Horse went to South Africa, has so appealed to the feeling of Empire. Shall we organize a national club or shall we form a section, in affiliation with the American Club? was the gist of the appeal that went out; and without one dissentient voice the answer came for a purely

Canadian Club. But ever was kept in mind the splendid services done for our mountains by our American friends.

The mountaineering influence cannot be overestimated. It is acknowledged to be the hardest and noblest of all the sports of a sporting age. It is the sport which calls out the best of a man, and annihilates the worst of him. It carries him to the mighty solitudes of Nature and gives him the most extended physical vision on earth; if he has within him as a

light to the spirit. These men, who have adopted the highland life of the Rockies and who live in the very heart of Nature, are more than picturesque mountaineers and outfitters. They are men who scorn the littleness of complex conventional life, and are lost and lonely and unhappy among the throngs that thread the busy streets of the metropolis. They can teach us, who must perforce live in cities, many things. All men who live in the wilderness absorb what is beyond the ken of the

ICE TONGUE OF VOHO GLACIER

Photo M. P. Bridgland.

grain of mustard seed, feeling for the unseen, it feeds that feeling, and sends him back to the commerce and the commonplace of the plains with a new hope in his heart, even for the best in life which is not temporal and is not seen. It is by ideals, by large spiritual vision, that men live.

Then again the strenuous exercise of climbing and the reversion to the simplicities of life in the camp by mountain tarn or torrent is health to the body and de-

man who lives to make money. No one with a head on his shoulders and a heart in his bosom will deny that the palpable peril of western Canada is that men will be well nigh choked with wheat and real estate, and that women will be enervated with the hot pursuit of afternoon tea. The preachers are making a brave protest against the materialism of commerce and the inanity of a large section of social life. The Alpine Club of Canada has it in its heart to turn men's faces to a strenuous-

ness that is of another sort and that leavens the life with the leaven of good.

Canadians ought to take a national pride in their mountains. A snow field 10,000 feet above sea level, whose area is 200 square miles, pushing down glaciers to every point of the compass, is an item in the Alpine catalogue. But of description, more in future numbers.

I have spoken only of popular mountaineering, and there is no reason why the Club should not grow like compound interest. The Appalachian Club of Boston has 2000 members.

Attention will be paid to the scientific and the art sections of the Alpine Club of Canada. Much is to be done. Some of our honorary and active members have made valuable contributions to a scientific knowledge of the Canadian Alps, and to their flora; and some have done highly artistic photographic work. These sections will be smaller than the other but they will keep pace with the Club. We are delighted with our American membership, notably the Messrs. and Miss Vaux, who have been such ardent climbers. We are pleased to receive, too, Miss Tuzo, a splendid English mountaineer, who has climbed five difficult Canadian peaks. We hope for a further infusion of British blood. The Canadian Alpine Club extends a highland welcome to British holiday makers to turn their steps westward with the star of Empire.

One word more. Our nucleus of a library grows slowly. Sir Sandford Fleming, our good and wise friend from the beginning, sent his valuable book, "From Old to New Westminster" which covers an important period in the history of the Canadian Rockies. We will be very grateful for Alpine literature of any sort—old journals or books about any mountain region or mountaineering in the world. If any good Canadian whose eye falls on these lines, has it in his heart to send a cheque, I know how to invest the same for the library of the Alpine Club of Canada.

### Club Notes and News.

Sir Sandford Fleming has donated to the Library a copy of his valuable work, "From Old to New Westminster." This makes the fourth book in the young Libra-

ry. Exchanges from other Clubs and Alpine books will be added as speedily as possible. The Librarian will be grateful for the literature itself, or for the cheques with which to procure it.

The Department of the Interior has placed in the hands of Mr. E. F. Stephenson, Dominion Lands Agent, Winnipeg, fifty copies of Mr. Wheeler's book on the Selkirk Range (two vols.) which may be had by members of the Alpine Club at \$1 per copy.

The Club is to be reinforced by such Alpinists as the Messrs. Wm. S. and George Vaux, and Miss M. M. Vaux, of Philadelphia, who have for the last eight years climbed and explored in the Rockies. These three are among the members-elect. The total membership will be about one hundred and fifty if all graduate in July.

Mr. Wheeler has spared no pains to make the Yoho Camp a success. He and Mr. Herdman propose to ascend Mt. Vice President on or about July 5th, and mark the upward route, and so make the climbing easier for the graduates. Too much cannot be said for the abundant labours of Mr. Wheeler for the success of the First Camp, and for the progress of the Club generally.

It is expected that there will be a full attendance at Yoho. There is much to be done in the way of mountaineering and visiting neighbouring districts in the interests of the Club, and there is the business of the annual meeting which will take place in the Pass by the side of the Lake.

The Club is to be greatly strengthened by the membership of Miss Hemiesta L. Tuzo, of Surrey, England. Miss Tuzo's qualifications bespeak the spirit of the old Vikings. She has conquered Mts. Victoria, Bonney, Rogers, Swiss Peaks and Sir Donald in the Canadian Alps, all over 10,000 feet, and some over 11,000 feet above sea level. This lady mountaineer has reached an altitude in the Swiss Alps of over 12,000 feet.

# The Ontario Fisheries.

**T**HE Seventh Annual Report of the Department of Fisheries of the Province of Ontario for 1905 has just been issued. The most important portions of this report will be found included in that of the Deputy Commissioner (Mr. S. T. Bastedo.)

While there were more storms, he says, on the great lakes and apparently fewer fish caught, prices were higher, and the outcome for the fishermen nearly as good as the previous year. The total product of the fisheries indeed amounted to 22,572,300 lbs. and the estimated value \$1,708,963.

There were decreases in the North Channel of Lake Huron, the Georgian Bay, Lake and River St. Clair, and Thames River, Lake Ontario and Nipissing district; while there were increases in the Lake of the Woods, Lake Superior, Lake Huron proper, and Lake Erie.

The overseers employed under the Department now number 185. Two boats in the Georgian Bay, and one on the Rideau Lakes have maintained their usual patrols. In addition there has been a gasoline launch on the St. Lawrence between Prescott and Kingston, and a steam yacht on Lake Temagami. A gasoline launch, fifty feet long and very fast, equipped with an eighteen horse power engine, is to be placed on the Detroit River and Lake Erie, and Lake and River St. Clair, where the need of such a boat is stated to have long been felt. A boat of shallow draught is recommended for the Georgian Bay where the conditions have entirely changed since the patrol work was entered upon, and owing to the many channels a boat of light draught is absolutely necessary if efficient work is to be done.

During the season ten pound nets, 45 trap nets, nine seines, 106 gill nets, three hoop-nets, one tug, one sail boat, one row boat, one skiff, seven boxes of carp, six boxes of pike, one box of perch, and 2,570 lbs. of other kinds of fish, illegally used or taken, were confiscated; 77 persons were prosecuted for offences against the fishery laws, and all save one convicted; and no less than \$1,453 were imposed in fines.

Mr. Bastedo expresses the opinion that

under the circumstances the fishery overseers are performing their duties as efficiently as can be reasonably expected—"in fact have been, with few exceptions, extremely faithful."

The growing public sentiment in favor of preserving our inland fisheries (with which this Magazine has had much to do) is noted with approval, and the enforcement of the law by the officials of the Department insisted upon.

Breeding ponds for bass are recommended, and while it is believed the outlay would not be great, there would be a bountiful return and overflowing benefits to many people.

In the opinion of Mr. Bastedo the time has arrived when the Province should charge non-residents a rod license for angling in Ontario waters. The vast increase of visitors, and the consequent drain on the game fish, render closer inspection imperative, and the Deputy Commissioner argues that those who contribute nothing to the cost of maintaining our institutions should make a contribution towards this expense, as they share in the benefits, and this can only be done by means of an angling fee.

Regret is expressed that no progress was made during the year in laying down a uniform policy, and insisting upon uniform rules and regulations governing the great lakes fisheries. Eight States are concerned in this matter and it seems hopeless to expect their several legislatures to come to an identical agreement. Under these circumstances the Federal Government, it is anticipated, will take the matter up, and carry it to a successful conclusion, by means of a joint conference with the Dominion Government. While urging prompt and vigorous action, Mr. Bastedo does not see the necessity for Ontario giving up powers to the Dominion, inasmuch as only one Province is concerned in Canada, and an agreement with Ontario would be kept as rigorously as one with the Dominion. "Every possible step for a speedy conference should be taken. The business interests of the great lakes may be valued at several millions of dollars, the fishermen are acquiring greater

skill in operating their nets, this valuable source of food supply is steadily and rapidly declining, improved fishing apparatus is being introduced, more powerful tugs are being employed, gas engines are being installed in sail boats which multiply their effectiveness, the fishermen are acquiring greater skill in setting their nets and better knowledge of the habits of fish—all with a view to increasing the returns to the fishermen. To meet this increased attack, radical measures must at once be adopted—artificial propagation must be increased, the taking of gravid and immature fish must be stopped, a size limit must be specified, and a close season during which no fishing of any kind is to be carried on, must be established, or the lakes will be depleted beyond restitution."

A good deal of attention is paid to the supply of Canadian fish to the home market. The Department is prepared to see that such a supply is made, and they might even ask the Dominion Government to consider whether the fishermen should not be required to find a home market for all their whitefish. This it is believed would very considerably relieve the situation. "The time will no doubt come when there will be a home market for the whole fish, but that time is not yet, so that total prohibition of export is for the present out of the question. And the same may be said of Government ownership which has also been suggested as a solution of the problem of home supply and cheaper fish." Mr. Bastedo recommends a Commission of inquiry into the ownership of fishing vessels, gear, etc. The licenses have been applied for and issued in the names of Canadians though the fishing industry is stated to be largely controlled by Americans. The facts can only be positively ascertained by a Commission taking evidence under oath. It might be found that Canadian license holders are only numerous enough to supply the home market, and in that case Canadians who are operating American plants could find remunerative occupation by themselves fishing to supply that market.

With the exception of one case of alleged pollution on the Grand River, into which personal inquiry was made and a remedy suggested, which was at once carried out, no complaint of a serious char-

acter reached the Department throughout the year.

Applications to net fish in inland lakes in New Ontario were received during the year, but Mr. Bastedo is opposed to such a policy for any lakes containing speckled trout or game fish. There may be lakes for which net fishing licenses might be issued and a revenue derived therefrom, but there should be a full inspection and report before anything of the kind is allowed.

Attention is drawn to the successful experiments in the State of Wisconsin for fertilizing the eggs of lake trout. By law the fishermen of that State during the spawning period "take the eggs from the female trout while alive, and the milt from the male trout while alive, and after mixing them together in a pail or pan immediately cast them into the water from whence such fish were taken." The expense of placing a few experienced men upon the tugs of fishermen operating in Lake Superior, where the trout spawn nearly a month before the season closes, would not be great, and this course is recommended to the Dominion Department, as they have the sole charge of the work of artificial propagation in Canada. With only three hatcheries in the Province everything possible to be done to supplement their good work should of course be done.

In six weeks no less than 7,632 pike, 2,282 suckers, 228 pickerel, and 145 white fish were destroyed, or disposed of in some other way, in the River Nepigon. Coarse fish are clearly becoming a menace to the trout of that famous river.

A good deal of attention is given to the "dominating carp." It has multiplied most rapidly in Lakes Erie and St. Clair, while it has also invaded Lake Huron, being found both in the Georgian Bay and the North Channel. From several experiments made it appears impossible to exterminate the carp from waters in which it has already become established, but it is not too late to protect the more or less isolated waters that have not yet been invaded. Mr. Bastedo advises the discouraging of fishways, and stocking isolated waters with bass, trout, and other game fish, trusting that in this way many waters will be kept free from carp. There seems to be a general concensus of opinion

that a mistake was made when the carp was introduced into American waters, but as the fish is here to stay, the best way to keep it down is to make it profitable to fish for it. There is an increasing demand for it in the States, and the Department should afford every facility that it is proper to afford, and authorize the use of every implement the use of which will not be a detriment to or assist in the destruction of better species.

The officers in charge of the biological station on the Georgian Bay strongly recommend the establishment of a fish hatchery in the southern section of the Georgian Bay, where bass and whitefish hatching could be profitably combined. "There could be no mistake in establishing bass hatching ponds in various parts of the Province."

The gross revenue for the year from all sources amounted to \$47,765, and the expenditure to \$31,137, leaving a surplus of \$16,617.

With two exceptions the reports of the fishery overseers are not notable. Those exceptions are the reports of Overseer Leitch, of Nepigon, and Captain Hill, of the cruiser *Gilphie*. In the former case

the overseer reports the reckless destruction by the Indians of many fish, and those of the best kinds, in Lake Nepigon. As there is no other Nepigon in the world, the Department cannot move too promptly or too forcibly in this matter. One of the Overseer's suggestions is to the effect that a bounty should be placed upon coarse fish, which would induce the Indians to catch them in preference to the better fish, is worthy of consideration as effecting a double purpose—giving the Indians profitable employment and thus keeping them out of mischief, and improving the fishing by the destruction of the coarse fish.

The statement of Captain Hill of the *Gilphie* contains the record of the long summer cruise, and of the various nets, etc., destroyed. One feels in reading this narrative that though clothed in matter of fact and dry official language there is much romance about it, and that excellent work was done by the patrol boat. The Department would also do well to give attention to the recommendation made for a new and shallow craft in order that more effective work can be accomplished among the islands of the Georgian Bay, where according to all accounts an efficient patrol is much needed.

## The Haunt of the Trout.

BY C. W. YOUNG.

**O**N both sides of the River Ottawa, westward to the prairies, and northward to Hudson Bay, is the Canadian region of the small lakes. When the big flood subsided, ever so many thousand years ago, and the St. Lawrence took a new course to the sea, innumerable depressions were left, filled no doubt, with sea water and sea fish. Gradually the water became fresh, and the fittest of the fish survived. The salmon changed their nature and their habits, being unable to get to salt water, and became salmon trout and speckled trout, with numerous sub-varieties, but all with a strong family resemblance. In a few places, notably Lake St. John and tributary waters, the salmon retained their

scales, grew smaller, and are now called ouananiche, but as a rule these parts of their anatomy disappeared, or became so small as to be invisible. *Salmo Salar* is a gentleman among fishes, and so are most of his relations, but none so dainty and well-bred as the speckled trout, *Salmo Fontinalis*, or as some latter-day naturalists, dub him, *Salvelinus*. This is not fish gospel, but a guess, and possibly a good one, at how things happened in the marine world in past ages. The descendants of the sea salmon are not the only fish in these lakes, but with them only this story is concerned; the rest may look for another historian, or wait for a more convenient season.

To preserve the forests and the fish in at least a portion of Ontario, to prevent the drying up of the head waters of the rivers, and to provide a snug harbor where game of all kinds could increase and multiply with no fear of man, the Government of the Province some years ago set aside Algonquin Park, comprising about two million acres of land and water, some 60 miles long and about the same in depth. The killing of game of all kinds is prohibited at all seasons within this reservation, and no one is allowed to carry fire-

The Ottawa Division of the Grand Trunk cuts across the southwestern corner of this lakeland, and is at present the only highway by which it can be reached. The Park is about 200 miles north of Toronto and 170 west of Ottawa.

If, as the poet says, the fancy of the young man is of love in the spring-time, surely the old fellows' thoughts turn to fishing, and he is a poor follower of the gentle craft who, when the days begin to lengthen sensibly, does not overhaul his tackle and get things ready generally for

SUPPER ON THE SHORE OF WHITE'S LAKE BEFORE THE EVENING FISHING.—ALGONQUIN NATIONAL PARK OF ONTARIO.

arms, except a revolver, into the Park, though there is no restriction upon fishing at the proper time. There is quite a force of park police or rangers, who see that the game is not molested, look to the prevention of fires, and in the winter poison the wolves, which are numerous. Shelter houses are built at many points, for the accommodation of the rangers, and also used by visitors. No timber except pine is cut, and it is intended that with this exception the whole region shall remain as nearly as possible in a state of nature forever.

the joys of sport to come. When the buds swell and the warm showers bring out the first touches of green, the fever gets higher until he simply has to go a-fishing; the disease he suffers from can be cured in no other way.

So it came about that the spinner of this yarn heard the woods a calling, the spring fret came over him about the middle of the May month, and in company with a railway man and an artist, no less ardent anglers than himself, left Ottawa for the promised land. It was a glorious day, the temperature summerlike, and after 50 or

60 miles of journeying westward, settlements were mostly left behind, and we reached the region of the blackened timber and the racing stream. The call of the red gods grew stronger, and our faces were glued to the windows as we saw the Madawaska, with its tawny water, its log jams, and its bars of sun-warmed shingle. We knew if there were not trout in those pools there ought to be, and fancied ourselves standing on one of those rocks and casting the flies over the rippling surface.

As evening approached we left the train at Cache Lake, in the heart of Algonquin

taking of photographs, with a little fishing on the side and though it was early in the season, we satisfied ourselves in both directions.

A tramp of a couple of miles through the woods in the early morning brought us to Cranberry Lake, a lovely little sheet of water. On the way thither we scared up several deer and not a few partridges, which seemed somewhat tamer than usual. Everywhere could be seen traces of beaver, in the shape of newly-peeled drift wood on the lake, fresh-cut trees and numerous dams. Evergreens clothed the shores to

A STRUGGLE WITH A TWO POUND SPECKLED BEAUTY.—ALGONQUIN NATIONAL PARK

Park, and found there a comfortable resting place in the building erected for the park rangers, but used for visitors during the summer season.

There is no settlement, with the exception of the home of the Superintendent, the range house and a few shacks, with a cottage or two across the lake. The station is called Algonquin Park, and it is a good point of departure, as visitors must come there to comply with a few formalities before starting out. A small fee is charged but it is not irksome, and no one was ever heard to complain of it.

We were concerned mostly with the

the water's edge, and rarely beautiful was the foliage of the deciduous trees on the mountain-sides, the delicate purple of the buds about to burgeon forth lightened with a touch of yellow-green here and there.

It is not every fisherman who will acknowledge poor luck, but truth compels the admission that our first day was not the brilliant success we anticipated. From the time we left Ottawa our artist had buoyed us up with hope, and pictured the loveliness of Cranberry Lake, which he assured us was chuck-full of fish, waiting to be caught. Possibly he was stronger

on art than fish lore, for while the loveliness was there all right, the trout declined the dainties we offered them in the shape of artificial flies, minnows, old-fashioned fish worms, and spoons and phantoms in infinite variety, and our string was disappointingly small as we gave it up for a bad job early in the afternoon. If we had only waited till dusk, who can tell what would have happened, but we had no fancy to stumble over a woods trail after dark.

The Madawaska (Hidden River) flows out of Cache Lake, and for a mile or more below the outlet the shores are marshy

coch-y-bondu tailing off, with Parmacheene for a dropper, brought a flash of black and gold to the surface and a struggle began, which will ever remain one of the most vivid recollections of a lifetime of angling. Not that he was such a big fellow, perhaps an ounce or two over a couple of pounds, but it was probably the first fly he had seen this season, and he gulped it down for keeps. There was room aplenty, and it took a preliminary rush of twenty-five or thirty yards to satisfy the captive that the brown bug he had jumped at had a string to it. Leaping across a

A GOOD FISHING STORY AFTER LUNCHEON, MADAWASKA RIVER.—ALGONQUIN NATIONAL PARK OF ONTARIO

and the water flat, and not where one would look for trout

Timber slides have been thrown across the stream in places, however, and below them are rapid stretches, where trout are plenty, and it took little time to satisfy the greediest of us. Just above an iron bridge there is quite a widening of the stream, and a lively pitch, with deep water below. A large spruce tree has fallen from the north bank, and rippling down to it is the black water. An ideal spot for trout it looked, and so it was.

A cast of the flies, the old reliable

narrow place to the shingle gave a better point for the play, but it was at the expense of a bath in the icy water, which, however, was forgotten in the excitement of the moment. Nearly lost him, too, but when I had shaken myself a couple of times I found the pull still there and as lively as ever. I was afraid of that spruce tree, and when the trout made for it was prepared for trouble and checked him as hard as was safe, turning his head in time. The strain was telling, I saw a white belly uppermost, and reeling him in a dip of the landing net settled the business, and left

the speckled beauty flopping in the tall grass.

A smoke and a hooker of Seagram was necessary to restore equilibrium, and a second or third cast brought a mate to the first. Others followed quickly, but we began to think of the miles we had to tramp homeward on the railway track and concluded we had all we wanted to carry.

Next to catching fish is the pleasure of eating them, and all of us can vouch that the cook at Cache Lake is an expert in the manipulation of a frying pan. At breakfast a huge platter of trout waited on our appetites, and nothing but heads and tails were left when the meal was over.

There were plenty of other things to do besides fish at the Park, and we were well content to loaf through the woods for nearly a whole day, seeing game in abundance and getting many beautiful pictures. Chatting in his cosy office with Mr. Bartlett, superintendent of the Park, he showed us among other things a pair of capercailzies, a mammoth representative of the grouse family, and told us that two or three years ago several pairs of these magnificent birds had been imported from Scotland and set at liberty in the Park. He believed they had been become perfectly acclimatized and increased considerably in numbers, as specimens had been seen 40 or 50 miles from where they had been put in. There seems no reason why these birds should not do well, as they feed on buds and such like, and are not going to starve when snow is on the ground, as did some pheasants placed in the Park before the capercailzie. The cock bird would weigh ten or twelve pounds, and his plumage is very brilliant, recalling that of an English cock pheasant. The female is somewhat smaller, and clad in quiet colors, in which

respect birds generally reverse the manner of mankind.

Your true fisherman always wants to show up some of his catch at home, or who will believe he got any, and in the late afternoon we decided to go to a sure spot, which we were told we would find at White's Lake. This is another of the innumerable assortment one has to choose from, and has the additional advantage of being connected by an open channel with Cache Lake, no portage being necessary. Here there are only salmon or grey trout, which, though red in flesh and delicate in flavor, are less active than their speckled cousins. They take the bait quietly after the manner of a wall-eyed pike, rarely make the reel sing, and the only fight they put up is to hang back. After a jolly supper around the camp fire, we pulled out into the lake, and found the grey fellows quite in the humor, and so enticing was the sport that we only desisted when it became too dark to see the line in the water. The size of these particular salmon trout was about two or three pounds each, but they are often caught larger, one being brought into the house which scaled over nine pounds. At White Lake the railway man had a peculiar experience. He was fishing with a live minnow of large size and hauled a good-sized grey trout to the surface. Just as he was about to swing it into the boat, the fish and the bait parted company. The line was dropped in again and taken by the same fish almost on the surface, and this happened several times when he made his escape for good and all.

We live in hopes of returning to Algonquin Park later, when trouble may be expected among the black bass.

## The Canvas Covered Canoe and Its Repairs.

**T**HIS subject continues to interest our readers, and in addition to the experiences of Mr. C. F. Paul, as related in our June number, we have received the following communications, which we are sure will be perused with more than

ordinary interest by all our readers who are canoeists.

Miss Helen M. Merrill writes from Toronto:—

"A few years ago a canvas canoe which the writer had used constantly for several

seasons, had become so ornamented ( ? ) with patches of all sizes, that nothing short of a new cover could make it look respectable again. But how to get it recovered—there was the difficulty, when the men to be had, who were used to building only wooden boats, would not venture to do it. It was then, only on account of that happy attachment which springs out of very many joyous hours afloat, that the owner decided to try her hand at the problem.

"First, canvas of the required size was procured, then the keel, or properly speaking, the false keel, and the gunwales were carefully removed. The canoe was a Rob Roy, with a short gunwale on either side. These, and particularly a false keel, or thin, narrow strip running the entire length and well up at stem and stern, are a great protection. A stripe, four or five inches wide, of white lead was then applied with a brush not too stiff, to the old canvas along the keel, as little oil as possible being used. The freshest white lead is required, and from a can newly opened. The canvas was then fastened in position by tacking it with flat-headed tacks to the keel. That accomplished, the stretching and laying down of the new cover in white lead was a very easy matter. Along the top edge of the canoe the canvas may be folded under or not, and tacked, still with flat-headed tacks which are eventually covered by the gunwale in the ordinary style of canoe. The two important things are to apply the lead with little or almost no oil, and after the canvas is laid, allow it to dry thoroughly before painting. Covers put on in this way will not wrinkle.

"Before re-covering, all leakages should be closed with pieces of canvas laid on in white lead and well dried. Patches at any time should be cut four-sided, and frayed at least half-an-inch. Beside looking neater, they in this way present thinner edges and are not so likely to rub off. The second cover adds not a little to the weight of the canoe, and for this reason a light weight canvas is advised. First covers give better satisfaction when soaked with oil after being put on the frame, before being painted, than when treated in other way:

"A very good emergency patch is bley-

cle tape or rubber applied with rubber cement. The writer has used this and put her canoe in the water ten minutes, and less, after patching. Only small patches, however, were called for."

Mr. S. S. Humphrey, counselor-at-law, North Tonawanda, N.Y., writes as follows as to his personal experiences:— "I have never had any serious accidents while on any of my trips, but always carry a bottle of shelac with me, and after the day is over I apply a coat of it to any place where I may have scraped the paint off. As a result of this precaution I used my canvas covered canoe for a month at Honey Harbor on the Georgian Bay last year, and the canoe is now in as good a condition as when I sent it up there from here. I shipped it both ways, and only had it sewed up in burlap. I have heard that for quick repairs while on a cruise a good thing to use is a piece of silk covered with shelac. All you have to do is simply to stick the silk over the hole and apply the shelac. For permanent repairs—in one instance I smashed the planking of the canoe — I simply put the canvas back in place, first giving it a coat of white lead. This accident happened two years ago, and since I made these repairs the canoe has never leaked a drop."

"J. F." writes from Portland, Que.:— "We covered an old canoe with canvas ten years ago, and it is still good today although the canvas is rather light. I had two canoes covered with heavier canvas about six years ago and they are in good shape today. One of these canoes is now about twenty years old. The age of the other is uncertain. I send you a sample of the canvas. It was put on by myself and an ordinary "wood butcher." We made no gores or folds in the canvas, and it fits better than a glove. We then painted them with a mixture of white lead, red lead, red ochre, linseed oil, and turpentine. We have had to put in ribs and slats now and then to stiffen them as they grew old and rotten so that they are considerably heavier than when new. As for patching. The canvas has not been torn yet, although the canoes have had many adventures. The canvas has been worn through at the bow. I just sewed a piece of new canvas on the place and painted it."

# A Right and Left on Snipe.

BY THOS. JOHNSON.

**I**N one of Rider Haggard's novels two young Englishmen are depicted discussing a very interesting subject. The one seeking the advice of his companion is one of the slow, methodical yet happy-go-lucky Britishers who evidently think it a crime to do anything hurriedly, or say anything until after a painful deliberation, and also one of those unfortunate individuals born in the lap of luxury, at a period when commissions could be purchased in the army and civil service, or have bestowed upon them, by a wealthy patron, an easy "living" in the national church.

One of a later generation of these young bloods, when visiting Winnipeg a few years ago, was bewailing his fate, and informed me that his father insisted on his touring the globe so that he would know the world and its ways better. His one great regret was that the purchasing power of English wealth and the patronage of English aristocracy had been eliminated from the English Statutes by the low fellows, who first earned their living by the sweat of their brow. "I would have joined the army," he said, "but it is so deuced inconvenient, don't you know, to first have to undergo that tiresome qualifying examination."

Our English friend, after his globe trot, knows less of how to earn his own living than ever, and lapses into a lethargic life of laziness; his tutor and daily companion now being the game keeper on the paternal estates, and who imparts to his pupil all the ethics of game shooting. Haggard's hero had acquired an insane desire to pay the board of another man's daughter for the balance of her life, and, telling his friend the quandry he is in, his companion puts this query. "If you propose and she accepts, tell me, my dear fellow, how you think you would feel?" After gazing at the fire in the grate for an indefinite time, he at last slowly replied, "Like a right and left on snipe and killing 'em both." "But suppose she refuses your proposal, what would that make you feel like?" After the usual dreamy pause, and evidently being lifted on his feet by a long

drawn sigh, he in a tremulous whisper said, "Like missing 'em both."

No one but an old snipe shooter can grasp the full meaning of this brief reply, it being the ambition of all lovers of snipe shooting to kill a right and left. It requires extreme quickness to pull down these corkscrew twisters, even in single shots, but to double up a brace at extreme angles creates a most pleasant feeling, and the one accomplishing the feat is apt to give himself credit for accuracy and skill, and never give a thought that perhaps there was an element of luck associated with the shooting. I can vouch for the thrill of pleasure a right and left on snipe creates. I have many times killed a brace, one going straightaway, and the other a left or right quarterer, but a few years ago, Mr. W. G-s-n, and Mr. T. K-l-y, and myself were snipe shooting at a point less than a dozen miles from Winnipeg, and which at certain seasons is in their line of flight when they are migrating south.

Mr. G. had a new gun which did not fit him. I will digress here by saying that to shoot well, and look well, both your gun and suit must fit well. After firing a number of shots, he concluded that something was the matter with, either the shooter, the gun, or the cartridges, and requested that I should try the weapon.

I consented, and had only walked a short distance when I heard the familiar "scaip," "scaip" on each side of me. The bird to the right, being a greater distance away, I shot at first, then wheeled quickly and fired at the left one; both were killed stone dead about forty yards away. My shooting partners each retrieved a bird, and heartily complimented me on doing something we had often talked of, but never seen.

My first snipe shooting was inside the limits of the City of Winnipeg upwards of a quarter of a century ago, and I have shot every season since, but this was the first time I had accomplished the ambition of all snipe shooters. It will always be a delightful reminiscence amongst the many enjoyable experiences I have had afield.

## Leaping Salmon in a New Brunswick River.

The above picture represents one of the most interesting natural photographs ever taken. It is the work of Mr. D. G. Smith, Fishery Commissioner for New Brunswick, who tells the story of how he obtained it in a manner that must convince every one of its genuineness, though some doubts have been thrown upon its accuracy.

One day in early August five years ago, Mr. Smith was visiting the Big Sevogle, a tributary of the Northwest Miramichi. He observed a large number of salmon attempting to leap over the nine feet perpendicular fall, a short distance above the Square Forks. He timed the leaps and counted thirty-three in forty-five minutes. The scene remained with him and suggested a unique photograph. The following week he attempted the task with a live by-eye camera and sixteen plates. He made a raft of three cedar sleeper logs, by battening them together with short boards

nailed to their upper sides; and by means of heavy lines two of his assistants drew the raft, with Mr. Smith seated on it, as near the fall as he dared approach and fastened it there. Of course the Fishery Commissioner had his camera on its tripod in front of him. The first afternoon he snapped nine plates, and the remaining seven on the following day. On developing them he found that he had only one perfect picture (the representation of which appears above) out of the sixteen plates. This was so good however that he felt the result was worth going forty miles to accomplish, and the added difficulties of making the raft and towing it to the falls.

The picture has obtained several prizes, and the Intercolonial Railway have had it enlarged, and included it in their famous bromide series. It has attracted much attention and doubtless every one of our readers will be interested in the fine view of the photograph we are here enabled to reproduce.

# Salmon Fishing on the Restigouche.

The Memories of Thirty Years Ago.

BY JAMES S. MACDONALD.

**P**REVIOUS to my visit to this renowned stream, I had had most varied experience in capturing salmon in Nova Scotia. On the Medway River I had been fortunate enough to take newly run fish as early as the fifteenth of February—the earliest run of well conditioned salmon in the world. At the head of St. Margaret's Bay, twenty miles from Halifax, I have often had good sport in May; in the Margaree, Cape Breton, good luck in June; at Cole Harbor, Tor Bay, Guysborough County, for many years I accounted for successful bags of the enormous Arctic salmon, which there strike in from the cold current, which provides Nova Scotia with her tardy spring weather; and on the St. Mary Stillwater. I have had excellent salmon fishing up to the first of August. At North River, Victoria County, in Aspey Bay, one of the most romantic and sylvan spots on this continent, under the shadow of the Sugar Loaf—that lofty peak of the Cape North range of hills, which first in 1497 attracted the gaze of the discoverer Cabot—I have on that river captured both salmon and sea trout (Arctic) remarkable for their weight and beauty.

As an enthusiastic angler I was satisfied in any locality, north or east, in Nova Scotia—anywhere rock, sky, sea and forest presented their varied charms. Moderate success was all that was hoped for. It was the exhilarating sea air, blended with the forest balm; the breezy banks of the wild river stands; the dangers of the stream wind jams; the break of day experiences; the glorious sunshine; the bush whacking, bringing muscles and lungs and sinews into partnership and play; all furnishing enchanting visions and sensations of enjoyment and beauty, unfading each recurring day in which they were indulged.

The opening of railway communications between Halifax and Metapedia enabled me to venture upon new rivers, and to compare experiences in angling, which as far as Nova Scotia was concerned, had not

been by any means unsatisfactory. On June 20th, 1877, I started from Halifax on the Intercolonial evening express, the cars being crowded. Many people were taking advantage of the holiday provided by the anniversary of the settlement of Halifax (June 21st) for a summer outing, and in consequence the cars were crowded. By the time we reached Truro, sixty-two miles away, many had dropped off at stations contiguous to good trout streams. As a rule Nova Scotians are born anglers. The numbers of rivers, lakes and streams stocked with trout and salmon brings the pleasures of angling constantly to mind. No other Province of the Dominion presents the same facilities for indulgence in the sport; hence the popularity of angling with our blue noses.

Moncton, one hundred and seventy miles from Halifax, proved to be the destination of the greater number of our passengers, and after that point but few of those who started with the train were left to finish the trip to Metapedia, one of the most famous stations on the Intercolonial as the best point for the salmon-haunted Restigouche.

After a sound sleep in the Pullman I awakened about four a.m., and not feeling disposed to dress at so early an hour drew up the blind of the berth to enjoy the ever shifting scene. The day was breaking magnificently, giving promise of alternate cloud and brightness. In a few minutes the sun burst over the waters, and almost at the same instant our train began rolling over the Miramichi. The beauty of the wide expanse of water, the glorious stillness and shadowed splendour of the shore, the grandeur of the great mirror presented by the river, altogether presented a picture of enchanting beauty.

So much for the outside. Inside the car there was one horrible chorus of snores from tired sleepers. One worthy clergyman returning from the Presbyterian General Assembly at Halifax, who had, poor

fellow, been terribly agitated over the Macdonnell heresy case, appeared to lead in this unpleasant noise. After all, however, it was but a small drawback. The river, beautiful as a vision, was soon left behind, and then came glimpses of the Bay Chaleur. The rapid travelling of the train over this section claimed our attention. The road is magnificently built, and the greatest speed on any railway line on the continent here attained with wonderfully little vibration. From Chatham junction north the character of the scenery rapidly changes. The hills are higher and bolder and the land looks fertile and capable of cultivation. The broad Bay Chaleur with its magnificent headlands and grand expanse is seldom lost sight of and every mile presents features at once novel, attractive and beautiful. By six a.m. the cars were alive with passengers admiring the scenery. At 8.40 Campbellton was reached and a grand breakfast enjoyed. The sea trout provided were superb in size, and the cooking was of the best.

After Campbellton is left every mile grows more interesting. The train runs in the midst of hills. By nine o'clock Metapedia viaduct was reached and we slowly rolled over the waters we had so often sighed to look upon—the famous Restigouche.

In about a quarter of an hour both we and our traps were inside Fraser's hotel, now the headquarters of the New York Salmon Club, on the Quebec side of the river. We began to realize that we had in the course of a single night passed through two Provinces, and had run over 386 miles of the finest railroad on this continent.

At Fraser's we found all that was required for the comfort of the visitor. We had heard of Metapedia as a lone station near Rimouski, and had no idea of finding a well equipped and luxurious hotel with all the appliances of modern civilisation.

Numbers of fishermen from Montreal, Quebec, St. John, New York, and as far south as Baltimore had already arrived, and appeared happy in the prospect of sport on a river which never failed them, and which most of them had come so far to enjoy. Without delay our host procured me two Indian (Malicites) guides, and as

my tackle was in order I was soon afloat in their large new canoe.

Joe Paul was at one end and Peter Joe at the other. Seated on an inverted tub in the centre I proceeded to adjust a fly. Here I may, for the information of future fishermen give a list of salmon flies which must be taken:—Silver Doctor, Durham Ranger, Jock Scott, Nigger and Fairy. These will do, but you cannot do without them, and no fly book can be considered complete without these essentials. They fill the bill for all kinds of weather.

As we moved noiselessly out from the little landing to a deep pool indicated by Joe we noticed no less than nine canoes on the river, between the junction of the Metapedia and the bridge, all at work, the occupants as solemn as mutes. The tremendous importance of silence at this particular sport was well recognized and strictly observed, and there was not a sound to indicate life.

A turn in the canoe and we shot out to the centre of the stream. A scene of mingled grandeur and beauty met the eye. Lofty hills, covered to their summits with dark pines, rose sheer and abrupt from the New Brunswick side of the river. Far up the stream above the junction of the Metapedia with the Restigouche, grandly rounded peaks stood clear out in the background. Below, the splendidly built bridge spanning the stream was before us, and further down a grand view of the river could be had, closed by the Sugar Loaf Mountain near Campbellton. It was altogether a scene of unparalleled natural beauty, and for a time enchanted me so much that I forgot the errand on which I had come.

An hour passed, and although I angled carefully and skillfully, success did not come my way. Below the bridge a friend was struggling with a glorious fish, and we went to see the end of the struggle. Then my turn came. I had a rise to a well played Durham Ranger. Here for the benefit of fishermen in this stream I would say that angling on the Restigouche and Metapedia differs materially from most styles of angling anywhere else known. The fish in this locality rise first, nine times out of ten, for observation only, and will not readily take the bait until

ten minutes have elapsed when they will rise again to the fly. If at the time the fish rises to inspect the fly the fisherman follows with a second cast the chances are all against his success in striking the salmon.

Knowing this, when the first fish rose to our fly we were in our cast, and contentedly smoked for fully fifteen minutes, and then casting well above the pool it proved all right, as the next instant a glorious leap of fully four feet out of the water, a flash of glittering silver told we had struck a splendid fish and would have to look after our laurels in landing him. The Indians were as exultant as we were. Like all the world they admire success, and consider it good luck to strike a good fish within the first hour's fishing. After three or four smart leaps our hooked friend settled down to business. A desperate effort to run down stream, in which over eighty yards of line rolled like lightning off the reel, was happily checked in time to save us running the rapids below the bridge. Here the dexterity of the Indians came into play. They turned and twisted up stream and down, with the salmon constantly making lightning like darts, and were ready for the happy instant when it was time to gaff.

At length, after half an hour's grand struggle, we were landed on a small spit of land, on which my friend Pierce had about tired out his prize. Though both fish were nearly exhausted they were still ready for some final jumps, and with all our care one of these jumps nearly proved fatal to our hopes of landing our fish. By some strange coincidence the two salmon made a final jump together, and only by the merest chance escaped crossing lines in plunging back into the pool.

A moment afterwards the fish Pierce had hooked was fortunately gaffed, but mine had lots of life in him and still appeared determined to make a good fight of it. Another spin out of the line and we were reluctantly compelled to again take to the canoe. By steadily checking and keeping his head up stream we slowly reeled up to the first stand, and again landing we had the satisfaction, in about five minutes, of winding up to striking distance. Like a flash the gaff was under

him, and a noble salmon of twenty - six pounds was in the bottom of the canoe.

A glance up stream told us we were not the only occupied ones. During the struggle with our fish, other fortunate ones had secured four salmon. One gentleman had a magnificent capture of a monster weighing forty-three pounds. That capture however was slow work. The gigantic fish appeared to know his power and sulked in the pool where he was first hooked. When he was dislodged by the plan of letting pebbles fall on him, he made a rush for another pool. Had he adopted any other tactics he could have carried all before him, as no tackle made could resist such weight as he could bring to bear. Fortunately he continued to sulk, and while making a rush through shallow water to another pool was gaffed.

During the day eighteen fish were secured and sixteen lost, one gentleman, through extreme nervousness, having the misfortune to lose three grand fish. A Birmingham (England) man who had come across the ocean solely to have some fishing at Restigouche, stated that for the previous fifteen years he had been fishing in the North of Scotland, in Norway and in Sweden, but had never seen anything like that morning's work. At one time no less than eight rods were all occupied within a space of a few hundred yards.

On landing, our fish were taken to the refrigerator, duly weighed, tagged, and shipped by train that evening to various points as far away as Montreal, Boston, New York and Halifax.

We captured four fish that day weighing respectively twenty-six, twenty-two, nineteen, and twenty-five pounds; and returned rich in the possession of memories dear to every sportsman's heart.

Before four o'clock next morning we were awakened by the Indians who had been instructed to give us an early call. A cloudy sky, betokening wind did not look encouraging, but when salmon are about, fishermen do not stick at trifles. The wind increased so much that in an hour canoe work became ticklish indeed. During a lull we struck a noble fish. This time we found a Jock Scott the favorite fly. The fish gave us hard, steady and close work. Good handling, too, was re-

quired and there was no doubt from his rapid and convulsive leaps that he was fresh run from the sea. Finally he settled down to a steady resistance, and to the last he showed unabated energy. It was all to no purpose however, and when we had this twenty-seven pound fish extended in the canoe he made a splendid picture that will always live in my memory.

Engaged in the close work of this struggle, we had not noticed in our intense excitement the desperate squall that had been gathering. There was an ominous lull while we were admiring our prize. Then one of the Indians spoke out sharply: "Big roar in the hill! Quick! Quick!" The other immediately grappled with the mooring, but it had a long line to it as we were in the very centre of the pool. As soon as we were clear the paddles of the Indians cleaved the water like lightning, but we had not quite reached the shore when the squall struck us. The first effect was to send us up on the beach like a shot. The water, which up to that moment had been but partially ruffled, was now churned into a whirlpool, the tops of the short, sharp, angry waves being carried in seething foam hundreds of yards before the blast. Reflecting the black clouds overhead, the river was like ink, and the roar of the wind was deafening.

As soon as we could we looked around to see the fate of our friends. All but one canoe had succeeded in reaching the land safely. Those in this unfortunate canoe were caught and overturned in the hurricane as they were drawing up their mooring. Fortunately the occupant, an enthusiastic disciple of Isaac Walton and a venerated wearer of the cloth, was an excellent swimmer, and floating and swimming for over a hundred yards, he was overtaken by his Indians, who had managed to right the canoe and paddled after him.

In about ten minutes the squall had passed over, leaving all Nature smiling again. Luckily its path was unmarked by disaster, though one had very nearly occurred before our eyes.

During the day Sheriff Harding, of St. John, N. B., heard of the great fire which destroyed the city on that day, and in which he lost his home and property. Finding he could not leave for several hours,

there being no train available, he continued fishing in one pool and in less than two hours landed five salmon weighing in all one hundred and forty-two pounds. Standing in the ice house we saw them scaled and took memos of their weights, which were these:—thirty-five, twenty-seven, twenty-two, twenty-six, and thirty-two pounds respectively.

Such was the Restigouche River in 1877. It was a magnificent River of Success, and helped to divert the Sheriff's thoughts from his dreadful loss at home. Fourteen fish, independent of the above, were taken that day. While the majority were more than satisfied with their delightful experiences, and the fish caught, there were those who growled deeply at their luck. Never was the proverb that "the battle is not always to the strong, nor the race to the swift," better exemplified than in the fortune which fell to the lot of some of these gentlemen.

Here was one from Toronto, a skilful fisherman and generally fortunate, returning with a solitary fish. There was an actor from New York who, up to the previous day had never angled in his life, going home with four grand fish. Another from Baltimore, only in his first season, had secured three. Then again an old sportsman, always so lucky that his experience became proverbial, this time only captured two. Their grumbling was only a temporary annoyance, as every fisherman knows that if it rains today it will shine tomorrow.

On Saturday morning five o'clock found us in our canoe. The day looked promising, the sunlight tinging the high hills whose broad shadows were cast upon the river, which reflected every shade like a polished mirror. On dropping the mooring from the canoe a magnificent salmon scooted away, being startled by the falling iron. Owing to the lay of the river and the height of the hills, the sun's rays in the early morning had a most singular effect. First the tops were touched, then slowly the moving glory crept down the sides, the river still like burnished steel, cold and bright. In about two hours the sun's rays struck the water and all was brilliant and smiling.

Several splendid salmon were taken

during the morning, though we had the bad fortune to lose a grand prize. Everything right up to the time of the loss appeared to be going well, when a sudden leap of more than usual energy, and a taut line did the work.

A number of tremendous jumps in the pool during the morning showed us that the salmon would be more likely to play than take through the day. This judgment proved correct, and though all Nature appeared favorable for fishing the fish themselves were in no humor for indulging us. Nine or ten were however taken through the day. At six o'clock the Warden appeared on the banks and closed the fishing to anglers until six o'clock on Monday morning—a wise arrangement vig-

orously carried out for the preservation of the streams in this locality.

The above describes the Restigouche of thirty years ago. At that time it was the Queen of salmon rivers, and old Donald Fraser was the controller of its destinies. Since then great changes have taken place. The pools I have described have become the property of the New York Salmon Club. The genial Host Fraser has gone over to the great majority. The River however flows on as usual, and good fishing can still be had in portions of the great stream. Some of the charms of a generation ago have gone. The changes at Metapedia are perhaps only what might naturally be expected in the great march of events and the rush of change around us.

---

The following information from a reliable man will probably be of interest to some of our readers. He writes of townships due north and northwest from Desbarats, Ont., 28 miles east of Sault Ste Marie, on the north shore of Lake Huron. He says, "I can land your party by two trails. The best is  $1\frac{1}{2}$  miles in length. This could be made into a good waggon road. Of Morin and McMahon townships, the Thessalon from Poplar Dale bridge to Carpenter Lake is good trout fishing, some three pounds, but from one-half to one pound average. Woods Creek from Sheldon Lake to Lot 11 (my place) is good fine camping ground. On lot 7, 1st concession, is good trout fishing, but the northeast corner of Warren is the spot for trout. There is a trail from Copper Queen, and not far from Sheldon Lake is a genuine trout lake, deep and clear, and fine camping place. Now look up Morin and McMahon townships and you will find a fine trout river, known to me as the Echo." We know the District that Mr. Ross mentions. It is easily reached from Desbarats; but says Mr. Ross (and we rather fancy that he would be a pretty good guide for this region.) "The canoe route from where you leave the waggon road to the Echo River is a very wild one. One needs to have a guide for the first part anyway, and a man not accustomed to pretty hard

work had better have a guide always. Good trout and bass fishing; also moose, caribou, and red deer, partridge and duck are plentiful, with a few bear."

---

Another reliable man is Thomas B. Dunn, of Dunn's Valley, northwest from Desbarats, who writes about Otter Township. He says, "I have been fire ranger in and for the Township of Otter and know a little about it. The Missaqua River flows through a corner of the Township of Otter near to the Mississaga. There is trout fishing in some of the creeks. There is a trout lake north and west from the river in the township of Otter, but it is not very large. The outlet flows to the river. On the north and west side of the Township there is a large lake, partly in the Township of Otter and partly in Morin, with good brook trout fishing. The name is Sheldon Lake. It drains south to the big Thessalon River. Moose and red deer are quite numerous, and some caribou. To drive from Desbarats to Dunn's Valley the road would be fairly good; to within about  $2\frac{1}{2}$  miles of the Township of Otter. I think you would like the Township if you were once in it, because of its stern natural grandeur. From the bluffs on the north side of the Township you can look right into Clear Lake. In Township 188 bears are somewhat plentiful."

# VISCOUNT JOHN

## CHAPTER IX The Competition in Casting.

By  
DR. J. M. HARPER

**C**OMPETITION is the keystone to progress. It has been represented as another phase of the law of compensation that is well or poorly illustrated in the childish game of "beggar your neighbour." Whatever it be, it rouses a man to a sense of the fullness of his own powers and the desire to give them their fullest exercise, while it excites in the spectator of that exercise the impulse to vie sides with the winner or loser as just and not merely friendship dictates.

And so it was agreed that there should be an angling contest between the two veterans of the Tavistock. There were hundreds of fine big fellows in the Big Pool and since the keen biting of the season had ceased, there was now to be a match, in such a match, nothing of the achievements of the battue so common in the game protected in the older countries of the world. Thousands of fish, big and little, lay in wait within the recesses of the lake, there are of a population of millions of mankind, that had been reared from the giddy enthusiasm upwards, only to be the victim of an incautious angler as been known to have been taken on his own gill, but by the loss of a small fish in the hands of the hundreds of stored gluttony of the fact that there was the Big Pool for the loss of appetite. The count had said, escape from

adding to the commissariat below with his own lusty person,— that the community had been put on the qui vive against the seductive dangers that had been bobbing for them on the boundary-line between air and water. The contest therefore had in it the right element of the true sportsmanship. There was in it no taking of an undue advantage of the game to be killed, —no massacre for the mere sake of killing. The community below had been awakened to the true state of affairs by seeing so many of their kindred disappear into the world beyond their own, simply because it had become a craze for the moment to seize what was not worth seizing, even if it had been the luscious morsel it pretended to be. The fool that is caught by his own folly has only himself to blame. What a community of trout the great world is!

"If there are only to be two of us," said Tom, "I would suggest that all the fly-books be placed at our disposal." And taking up my rod he began feeling along the whole length of it much as a fencer proves his weapon. "You three gents as umpires can keep track of the number of rises and the number of takes, each take to count for six rises, with a change of fly or bait not oftener than every five minutes."

"And what about the handicap?" asked Viscount John.

"Oh, you may select your own place, and, if you like give me mine."

"That's a' very weel, my gallant lad, but ye surely dinna forget that I hae been slip-sloshin' wi' this rod o' mine for some

time, while your biceps has been havin' a holiday. Na, na, I maun hae a handicap."

"But if you win, you'll have as many other kind of caps as you can wish," cried Dan. "King George will be in your own hands."

"Give me twenty bites ahead o' Tom and I'll promise ye a' a nightcap in time." And the handicap of course was agreed upon by a majority vote.

Meantime Tom was busy among the flybooks, selecting and rejecting specimens, and pinning the favourites to the ribbon of his hat.

The Viscount went one better and put all the fly books in his fish basket as soon as Tom was done with them.

"We'll surely get somethin' oot o' some o' them," he said.

"With little left for anybody else," retorted Tom. "You've seen the best of your books, gents."

The Viscount selected the other side of the stream, leaving Tom with us on the sloping beach of pebbles.

"There's the way of an honest man's handicap. He picks the best ground for himself and chooses the fished-out places for his poor relation."

"Ye had the wale o' the books, and surely I may hae the wale o' somethin'. Ye may beat me in the castin' but I would rather ye shouldna in the catch. Sae stop your blethers and get at it, before the sun gets the better o' baith o' us."

And both did get at it.

Tom was fishing with but one fly on the gut.

The Viscount did not dispense with his bob.

When the first five minutes were up, Tom had had three bites, the Viscount four.

Then while the Viscount was selecting new flies, Tom hooked a four pounder; and, while watching the magnificent run of the fish with a leap and an indignant flop at the end of it, we nearly forgot all about the Viscount.

"I've caught the fellow on the outside," cried Tom, "and he may carry everything away with him, before I get through with him."

The Viscount had therefore time to change his flies and move up stream away

from the nearer turmoil Tom's four-pounder was making.

"There's one for the Viscount!" we were all soon crying out. "Good, old man, you'll have him the next cast."

But he didn't; nor for the next five minutes did he move a thing, though he waded even higher up and changed his bob.

"Try a Ginger-ale with a green body," shouted Tom across the stream. "That is what did the business for this chap."

The Viscount accepted the advice, and had a bite the very first cast, but missed the strike.

And he missed the strike twice again, though thereby bringing up his score to eight against Tom's nine, that is if the latter should succeed in landing his fish, which was still problematic after a ten minutes' fight.

Then the Viscount again in imitation of Tom dispensed with his bob, and had the feather of a Ginger-ale alone touching the water, with a gentleness of cast that none of the three of us had ever seen before, and never expected to be gifted with.

"A trout that can resist temptations of that kind must be far up, among the far-seeing of his kind," I said to Dan and Doctor Jim sitting near the canoe with me and keeping tally of the score.

"That's so," said Dan, with his eyes, like my own, running from the one line to the other.

"Man isn't this fine?" said Doctor Jim. "Do you know, I believe I could sit here all day and watch the Viscount throwing that line of his, if my attention were not drawn off by the deftness of the Mariner in his way of managing that big fellow he has hooked between the fins."

"Hallo, there goes the Viscount at last!"

"By the ginger-ale of Belfast, the score is even now."

"The Viscount has got his bite."

"Hurrah!"

And after the next cast, which counted one, he had his fish running up stream like mad, with the score standing at sixteen for the Viscount and nine for Tom.

Tom was now showing the least little bit of uneasiness. Then, turning round, he begged one of us to go to his assistance with the landing-net.

"All right," he cried, "you may give the Viscount a lift too, by one of you, going over to him. I don't mind; but I don't like being made a fool of a whole morning by this chap, as if I had a fifty pound salmon on a seven ounce rod."

As soon as Tom was clear of his four pounder—what a splendid specimen that fish was, the biggest of the whole catch—he was, up and at it again. But for the minutes he had his labour for his pains. Not a rise could his Ginger-ale provoke.

Then he changed to a Jock Scott but it was evidently too well known to the community below, and led only to a waste of time. The Viscount had his Ginger-Ale again at work with a chance of changing during the time Tom was busy with his Jock Scott.

When the limit of time had been duly respected, the two rivals were again both busy at work, the one with a Thunder and Lightning, and the Viscount with the brightest Fairy in his collection.

But never a rise did either get.

And the score was still against Tom.

Then the Mariner sat down on the pebbles to consider every specimen on his hat.

"There's nae mair fish, I'm afraid, to be caught here, the day," cried the Viscount fixing a Change-in-color on the gut for a bob, and a brilliant Silver Doctor for the tail. "Here goes for yin more trial and then guid-bye to the luck."

In his next cast, Tom had three flies on his caster and had one bite, which gave him ten points against sixteen.

Then he stripped his line, leaving the favoured fly as the tail; and throwing a full line well out, with the chance of a good long sweep, he had a second bite.

"Faith, Tom is in luck again; that makes him eleven," said Dan.

"And that makes him seventeen," said I as the reel gave out its sweet startling music, with the Mariner hastening along the beach.

The Viscount had within the next few minutes two bites which placed him ahead with a point to spare. There was no heed now given to the time limit for changing flies.

"Try a Plymouth Rock," shouted Tom never taking his eye off his line. "This beggar must have a brother and there's

no use of leaving him to think too long over his loss. Try a Plym Viscount, by all means."

How Tom's behaviour warmed all our hearts!

"Isn't he a brick?" said Dan. "Not a bit jealous nor afraid of being beaten as I would be."

"I wonder if Viscount John would show the same open-mindedness under such circumstances?" chimed in Doctor Jim.

"Of course he would," I exclaimed with a spice of indignation at the innuendo. "There's no better comrade on a trip like this than the Master of Bervie Lodge. Why, look there, he's got another bite, and another; by Jove, and he's got his fish too: Hurrah there, old man, you're doing well, twenty-four to the Mariner's seventeen! Don't lose him, for the life of you!"

And he didn't lose him.

Nor did Tom lose his fish either.

But there were no more fish to be had.

Tom had tried every fly on his hat, and when after half an hour the Viscount came across with his two fish, weighing about three and a half pounds each, Tom set to work to rummage the books for a new fly.

"I wonder," said he, holding up a combination of feather and hackle of which no one knew the name, and which Dan, its owner, knew nothing of as to its origin.

"It looks like a home-made specimen," said Tom.

"And if ye mak' use o't in there, ye'll gi'e the whole community an attack o' night-mare, or a's done."

"Nevertheless I must try it, since there's nothing much else to try; and since I'm not going to let any brother-in-law of mine give me the night-mare, I'll lighten the thing up with a morsel of salmo flesh and blood. What's the score, gentlemen."

And we told him seventeen to twenty-four.

Then here goes for the seven odd points that's to make things even."

"What, and start me on your track again!" cried the Viscount stretching himself out on the pebbles as an inclined plane with his head and shoulders supported upwards by his arms.

"You don't look much like going after anybody for some time," said Tom with

a smile. "I'm thinking you've got to the end of your tether; so just lie still until I even things up, if only with a bite or two."

"But I say, gents, hadn't we better christen this thing with a thimblefu', as this brother-in-law of mine would say. It's not a beauty of a fly, but for all that it deserves to have a name."

And a name it did get, though there have never been many specimens of it exposed for sale.

By the casting vote of King George, it has remained known in the Tavistock region as the Viscount's Nightmare, though it has never been guilty of taking a trout but once.

And it was Tom the Mariner that prepared it specially for that ordeal.

With a little black wax and thread, a tender part of the upper breast of one of the smaller fish was fastened within the brown body of the thing, and its wings stiffened out into the shape of a water spider.

"What's the score did you say gents?"

"Seventeen to twenty-four."

"Then here goes for the do or die."

Tom's first cast was a trial one, well up the stream.

Then he worked his way down along the far-away side where the Viscount had been, and drew the Nightmare towards him with a nicety of skill that excited us all.

"There ne'er was castin' like that nor cunnin' either," said Viscount John, still lying back on his arms as props. "Try the peak o' that bit bush yonder, Tom."

And Tom obeyed to within half an inch of the mark.

"That's a bull's eye for sure," continued the Viscount, "though it disna add to the score."

"So much the better for you," murmured the Mariner, making another of the same towards the bush.

"I believe he's there, though."

Tom began his creeping finesse again, from up-stream towards the Viscount's "bit bush", every cast being as skilfully made as if success was to be the greeting to each.

"Did ye no see the line o' his body?" cried the Viscount sitting up on the beach with excitement in his face, "I saw the

streak o' his back as plain as a sunbeam."

"Then count me one, gents," said Tom.

"Na, na; it wasna a bite."

"What do you call it then?"

"Oh naethin' it was only a trail."

And we all had to laugh.

"What do you call that, then?"

"Ay, that's an honest bite, and nae mistak' count him yin mair, my gallant lads."

"And that?"

"Anither for Tom the Mariner, guidmen."

"An' that?"

"Guidness me, the man has got him."

And the scream of the reel told us that it was so.

"Oddsakes, this becomes kind o' painful."

"For the fish?" asked Dan.

"No, for me" answered the Viscount, "I'll ne'er hear the end o' it, as a family matter. I maun at it again. The score is even, isn't it? This beats a'. Whaur's my rod?"

"Where's my watch?" I cried.

"Where's my rifle?" shouted Tom as he fought with his fish, amid the burst of laughter that followed, in which the Viscount joined as loud as any.

"It's a guid thing I hae my handicap to fa' back upon, though a handicap is a mean kind o' thing to accept frae onybody. Still I may as weel wait events after he gets that chap in. Man, but he's a fine fish, bigger I believe than the biggest, and spunky in his resistance as a salmon!"

When Tom had landed his fish, which dragged the spring balance down to the four and a half pound mark, the score stood twenty-four to twenty-four.

And there the competition had, to rest, with the handicap in the Viscount's favor. For though Tom the Mariner whipped the stream for another half-hour, not the semblance of a fish came to the surface, though we continued to watch with the closest care and attention the manner of his teaching us through our own powers of observation—the kind of teaching that one never forgets.

(To be Continued.)

# BOOKS OF INTEREST TO SPORTSMEN

"Bob and the Guides," by Mary Raymond Shipman Andrews (New York: Chas. Scribner's Sons) is a collection of stories, some of which have previously appeared in magazines, relating to camping and exploration in Canada. Bob and his elder brother find, as many others do, that no vacation anywhere else can equal those spent in the Canadian woods. They are wedded to the beauties of eastern Canada, and find the company of their French-Canadian guides not the least attractive feature of their holidays. Bob is an irrepressible youngster, and whether the story is told by himself or his elder brother, Walter, he forms the central figure. The stories told by him and of him are all the more enjoyable because he is represented as simply a healthy boy, with overflowing animal spirits, and full of good impulses, with a fine sense of humor and no vices. In consequence his frolics are all of the harmless, good natured kind. Probably the story that will appeal most to readers is the *Lost Caravel*, which may be described as an exploration treasure hunt, while Bill the Trapper shows how romance and adventure can be encountered even in New York. The *Camp of the Good Fairy* is an interesting bit of backwoods study, while the *Big Bateese*, illustrates the simplicity of the backwoodsman, who knows more about Nature than the ways of the cities, and in this instance narrowly escaped missing the value of a cheque through this want of knowledge. The whole is redolent of backwoods life, and every sportsman can pass several pleasant half hours in company of the entertaining Bob, and his no less interesting guides.

The Department of Colonization, Mines, and Fisheries of the Province of Quebec has just published the speech delivered by the Hon. Jean Prevost in the Legislative Assembly on Feb. 22nd last in introducing his proposals for amending and improving

the fish and game laws of the Province, and which were unanimously agreed to by the Legislature. Included in the booklet is the speech given by the Minister at the Fish and Game Congress at Montreal, and a summary of the proceedings at that important Conference. Both the Conference and the speech in the Legislature have been so largely dealt with in our pages that no further reference to them is necessary here, with the exception of one or two points. M. Prevost expressed to the House his emphatic opinion, as the result of his personal experience and inquiries, that the Province of Quebec is still able to offer "the very best fishing and hunting of the continent, if not of the entire world." An energetic campaign to make this fact known is about to be entered upon, and every thing practical done to popularize the Province. Further emphasis is given to the statement that the fur trade of the Province furnishes incalculable wealth to foreign countries without contributing one cent of revenue to Quebec. The Hon. gentleman quoted an American authority as follows, and the spirit of the quotation will find an echo in the heart of every sportsman:—"Animal, bird, and fish life has a right to exist, and if man has any Divine right beyond that which accords to all living things, that of protecting himself and his belongings from undue molestation and destruction, he has not received from the Creator the authority to relentlessly pursue and destroy the lives of birds and dumb creatures regardless of their utter extinction. And though he be the King of Creation, he is not warranted in abusing the authority with which he has been invested by the Divinity." Sportsmen who would like a copy of this pamphlet should send a request to the Department at Quebec city.

A seventh and revised popular edition of the *Art of Shooting* by Charles Lan-

caster, and published by him at his new address, 11 Panton St., Haymarket, London, S.W., England, has been issued at a price equivalent to sixty cents. The mere fact that a seventh edition has been called for is a strong proof of the success which has attended the work, and the demand there has been for it in many quarters. It needs no more than a cursory examination to learn the secret of its success. Mr. Lancaster is an expert, with thorough technical knowledge, and a wide personal experience. In addition he possesses an interesting style of his own, and manages to turn what might easily prove a dry subject into one exciting the deep interest of his readers even if they belong to a wider circle than shooters. No sportsman, whatever may be his particular field, can take up this treatise without receiving both pleasure and profit in return; while shooters, however wide may be their experience, cannot fail to learn something from it. Although nothing can surpass personal experience this treatise enables every one to use that experience intelligently, to overcome many little preliminary difficulties, and to avoid mistakes which might result seriously. With the revisions that have taken place, and the experience thus gained in book production, as well as in shooting, this treatise makes a close approach to perfection, and may be warmly commended to the attention of every sportsman, with the confident prediction that none who consult its pages will be disappointed.

Just at the present time when motor boats are having such a run in Canada, and appearances betoken a still wider appreciation of their many merits, it is interesting to turn to "The Book of Boats," by Raymond Cavanagh, and learn much of the curious prototypes of the modern launch. The author dilates in an interesting style upon the many curiously fashioned boats in use in various parts of the world, showing a familiarity with their history and construction which must be the result of wide personal experience or extensive study. Rafts, dug-outs, bark boats, skin boats, built-up boats, and mod-

ern types are his classifications, and under each head the amount of information given, and the wide fields covered, are as surprising as the matter is interesting. Every North American sportsman will appreciate this extract: — "For beauty of lines, adaptability to its purpose, gracefulness of its construction, ease of handling, capacity for carrying, there is no type among the boats of the world which can in any degree approach the birch-bark canoe of the North American Indian at its best." The last chapter, dealing with modern types, is necessarily and rightly devoted to the motor boat, to whose wonderfully rapid progress in popular esteem, as shown by its almost universal adoption, full justice is done. While a century has intervened between the first steamer crossing the Atlantic, and the latest ocean greyhound, less than a score of years has been given up to the motor boat. In that short time marvellous progress has been made towards perfection, and the public are commended for generous support and early recognition of the possibilities of this form of power. The book, which can be conveniently carried in camp and on pleasure trips, can be obtained from the Truscott Boat Manufacturing Co., of St. Joseph, Mich., prepaid, for fifty cents.

Messrs. Kynoch, Limited, of Birmingham, England, who are large manufacturers of guns, powder and military stores publish a quarterly journal called after the name of the firm, and dealing with subjects referring to guns, ammunition, and sporting topics in general. The last number includes "The History of the Cartridge"; "Breech fastenings for Drop-down Arms"; "Guns, Loads, and Patterns for Game Shooting"; "The North American Bison"; "The Velocity of Shot Charges"; "Notes on the Ball and Shot Gun"; "Powder in 8-bore Wildfowl Guns," etc. As will be seen the papers are largely technical, but they are well and popularly written, and most sportsmen cannot fail to take an interest in them. There are many points that are applicable to subjects discussed in the Dominion and the States, and both the journal and the firm's

many manufacturers might with advantage to all be better known in Canada.

—

The New Brunswick Tourist Association of St. John, N. B., have recently issued a neatly gotten up folder, thoroughly well illustrated, dealing with the attractions of the Province to both sportsmen and tourists and drawing particular attention to the advantages afforded by St. John as a holiday center. In addition to its many pretty pictures, the folder contains an account of a run through New Brunswick, a short historical sketch of the Province, gives some particulars of chances for investment, describes possible hunting, fishing and canoeing trips, has a fine colored map of the Maritime provinces, with special prominence given to St. John, a summary of the game laws, where to go for different game and fish, addresses of guides, and hotel list. For a folder the amount of information conveyed by both pictures and letterpress is considerable, and a request to the Association will bring a copy to any sportsman or tourist. New Brunswick, although one of the oldest settled portions of Canada, still contains much of its primeval forests, while in addition to its scenic attractions and its marvellous waterways, has fish and big game in abundance. Its nearness to the great centers of population of the New England States make it the ideal resort of the rapidly growing army of American tourists, and great though the exodus is to New Brunswick every year, the traffic is but in its infancy and promises to reach mammoth proportions in the not far distant future.

—

We have received a copy of a fine catalogue of fishing rods, reels, lines, flies, etc., issued by Mr. P. D. Malloch, of Scott Street, Perth, Scotland. The excellent illustrations which abound throughout the book renders it of extreme interest to every fisherman. These illustrations, in addition to pages of beautiful flies, are largely given up to fishing scenes in Scotland, and views of fish caught by the author and publisher of the catalogue. Canadian and American fishermen will be interested in noting the pictures of the fine salmon and trout for which Scotland is

famous, and will pay a tribute of admiration to Mr. Malloch for his successful encounters with the finny tribe. It is scarcely a wonder to find his catalogue so full and complete of just what the fisherman requires when we learn that Mr. Malloch himself caught autumn salmon weighing 200 lbs. in the Tay in March, and salmon weighing 123 lbs. caught in the Tay by Mr. Malloch in April, show fishermen on this side of the ocean how much earlier the season is there than here. The view of a basket of trout caught at Scourie, Sutherland, will make fishermen think that regulations as to numbers taken need enforcement in Scotland as well as in Canada. The only view outside of Scotland is one from the States, and considering the importance of Canadian fishing, and its certain and indefinite development in the future. Mr. Malloch will be well advised to give some attention to this land of magnificent waterways in future issues. Mr. Malloch is also something more than a good fisherman. The illustrations of fish modelling, painting and casting, the mounting of deer heads, and the setting up of birds show some very fine work. It is however to the fisherman that this catalogue will appeal with irresistible force, and with good reason. It is a complete collection of all that the angler and fisherman can possibly require, and even the most experienced hand may well find profit and instruction from a perusal of it. Rods, reels, lines, and flies, together with all the etceteras so dear to a fisherman's heart, are here given all the prominence such important matters deserve; and their numbers and varieties, together with the many specialities for which Mr. Malloch is well known, render the catalogue itself nothing less than fascinating to fishermen. The fine fishing tackle dealt in by Mr. Malloch is suitable for use in all parts of the world, and the excellence of the designs, and the extent and variety offered must please every choice, and render the fisherman who is able to outfit with Mr. Malloch at least happy in the knowledge that nothing but his own skill is needed to make him a good fisherman. All that equipment can do, and it can effect a good deal, is certain to be on the side of the fisherman who studies this catalogue and selects his outfit therefrom.

## SPORTS AFLOAT!

Being a Section Devoted to Those Who Brave Wind and Wave, in White-winged Yacht or Dainty Canoe, in Fragile Shell or Swift Power Boat

Edited by

LOU. E.  
MARSH

The H. F. Darrell Shield, given to the Lake Sailing Skiff Association for a dinghy championship emblem. The competition is

limited to the two fastest dinghies from each Club in the Association and the race will be sailed at Toronto on civic holiday.

### The Crawl Stroke

All last summer I was bothered by people who thought that because I could paddle about long enough to keep myself afloat, with all my clothes on, every time I fell or was thrown over board, off Pa-

poose of Toronto, I was an expert swimmer and therefore should know all about trudgeon, crawl and other speed and fancy swimming strokes. I usually bluffed out of the predicament but this summer when these knowledge-hunters got after me again about the crawl stroke I went over

to the Toronto Swimming Club, donned a bathing suit, and had some of the boys show me how. This new crawl stroke is the speediest stroke in the modern swimmer's category and is utilized up to half a mile. Up to that distance all the record marks have gone by the board to crawl stroke swimmers. It is a new stroke and but little known.

"Come on Marsh" shouted one of my instructors when I had donned my bathing suit. He plunged in, and I followed.

"Now turn over on your stomach," he said, "Perfectly flat, and do not roll. Now bend your arms a little at the elbow, flatten out your palms and dig in just at the top of your head. Then pull the arm quickly back until it is stretched out alongside your body. Now then do it with your other—like this."

"I watched him closely. He was dipping his hands in alternately with a sort of a grab motion just at his head and pulling them back. At the end of each arm stroke he swung his hands forward with a swing over like in the trudgeon stroke, only instead of reaching away out he poked his hand in right close to his head. He did not swing his arm as high, either, in the recovery. He swam, 'too, with his head submerged, only turning every second or third stroke to get a whiff of air.

"Now for the legs" he said, when I had mastered the arm stroke. "Don't kick with them. Work them up and down like this."

He was holding his legs rigidly outstretched and beating them up and down on the water near the surface, the left leg keeping pace with the right arm.

"Now watch me," he said, and away he went with hands and legs going as fast as he could work them, and he surged along with a movement that absolutely lacked any side roll. The crawl stroke is a perfectly balanced stroke, and is easily acquired. It is a cross between the trudgeon and the beginners "dog-fashion." Give it a go

### The Fisher Cup Rivalry

The rivalry at the Royal Canadian Club, Toronto, for the honor of upholding the club's challenge for the Fisher Cup is even keener than the contest last year for

the credit of backing up the defiance for Canada's Cup. Never have races been so keenly contested and neither side is sparing either energy or money in the healthy struggle for supremacy. There are only two contestants on the Canadian side, Temeraire, the defeated Canada's Cup challenger, and Zoraya, her rival for that honor.

Zoraya's supporters all declare that had she been the challenger, and not the Temeraire, she would have brought the silverware back home, and the Rochestrians would not now be crowing that they were the only club that ever successfully defended that emblem of the Great Lakes supremacy. They point out that while Temeraire beat Iroquois hands down in a breeze and a seaway, she was never able to beat Zoraya by any such margin under similar conditions, though she was in such weather undoubtedly her superior. So much admitted, they proceed to say that in light weather, properly handled, Zoraya was even more superior to Temeraire, than the Yankee craft proved herself. Therefore Zoraya supporters are taking a keen interest in the series of races which will decide which craft will be sent after the Fisher Cup, for Iroquois will undoubtedly defend the silverware. On the other side Vice Commodore Nicholls, the owner of Temeraire, is determined to prove that, not only did the committee which selected her to go after the Canada's Cup make no mistake, but that she can, with a few alterations, even beat the slippery Iroquois.

The non-partisans want the Fisher Cup brought back across the water and there you have the nucleus of the hottest kind of a yachting controversy—if you can call anything which is going to be settled by real practical demonstration a controversy.

James Worts, the youthful owner of Zoraya, has had her put in the best of shape for the season's racing and chasing, and is hot on Temeraire's trail. Upon Temeraire, Vice Commodore Nicholls is leaving nothing undone that experience can suggest to improve her speed. That she can trim Zoraya he is sure, and if she were to beat her Yankee conqueror for the Fisher Cup, his cup of sporting joy would be filled to overflowing.

Temeraire this year has undergone some radical changes. Her mast has been step-

ped farther aft, her horn lengthened two feet, and she has been given double headsails, and a new Ratsey mainsail. Last year she wore a simple sloop rig like Zoraya. Skipper Eddie Wedd likes her under her new rig and though he was beaten in the opening race of the season he is still confident that victory will ultimately perch at Temeraire's mast head.

The initial race was sailed in Zoraya's weather, something just above a zephyr. Zoraya was in perfect trim, while Temeraire had a new unstretched suit of canvas, and her crew were unfamiliar with her new head rig. At that Zoraya only beat her fifty-seven seconds in ten miles.

Zoraya won all her advantage in a thresh to weather, in light airs, just where Temeraire's wrinkled and unstretched mainsail was the greatest disadvantage to her. Temeraire, however, had the best of a couple of stray slants of wind and in addition she was handled by Skipper Eddie Wedd who is one of the best in the business, while Zoraya had at her helm her owner. Worts has the ear marks of a good man but he is not quite in Wedd's class yet as a racing skipper. If he sticks to his place at Zoraya's helm all summer he should be able to handle his own craft with anybody around the club, except of course the king pin of them all, Amilius Jarvis.

Beaver, the Canada's Cup defender of 1899 is sailing in the class races, but she hasn't a chance unless it blows a living gale, and the other crews get cold feet. The class has outgrown her, and the new boats beat her every way they have a mind to send them. A year or two ago we used to think the 30-footer that could out-thresh Beaver in a breeze of wind would never materialize.

By the way, this new double headsail rig is becoming very popular around the lake since Iroquois with her jib and staysail trimmed up our clean looking cup challenger. Temeraire's change in head dress was made because Designer Fife, who watched the races off Charlotte last August, came to the conclusion that Iroquois' split head canvas had much to do with her good windward qualities in light and moderate airs. She seemed to climb right away from the Canuck craft. Over across the water where Rochester and Iroquois

are lighting it out for the honor of defending the Fisher Cup, Rochester has adopted split head canvas and is doing well under it. Kee Lox II., the other candidate for the Canada Cup defence of last year, has also adopted the split-up forward triangle, but it has not proven a success on her, and Pembroke Bros. are reverting to the big single jib of 1905. Kee Lox is, however, not in the running for the Fisher Cup defence. She is rigged out for cruising this year.

The Rochester men are predicting failure for Temeraire's new jib and staysail rig because of her small forward triangle last season. They are not yet, however, aware of the fact that Temeraire's horn has been lengthened and her mast stepped further aft. That gives her ample room forward for the staysail.

### Some Fancy Races

Why seamanship races have declined in Toronto is beyond me. To my mind they are well worthy of a place on any club's programme, yet, after a couple of seasons here, they were abandoned. The Royal Hamilton Yacht Club has taken them up, and, though the events were pulled off with 16 foot dinghies, reports from up Ambitious City way are to the effect that they were "bully" fun. The Royal Canadian Yacht Club used to hold them with the larger boats of the fleet, but for some inexplicable reason have abandoned them. Those they did hold were decidedly interesting, both for the spectators and the participants. For clubs of all sizes and descriptions they should provide excellent sport, while as an item on the programme of aquatic events at a summer resort regatta I cannot recall anything which should produce more excitement for everybody concerned, except perhaps it be a lively tilting match from canoes.

One day I was a contestant in a seamanship race, at the National Yacht and Skiff Club, Toronto. The conditions compelled us to start from the club float, land our crews on the yachts which lay at anchor in a line with canvas made down, raise canvas, pick up break anchor, sail to a short buoy, reef and return to the us-

nal starting buoy of the club races, go once around the course either with or without the reef, reefing again when we rounded the home buoy, cover the course a second time, reach the mooring we started from, make down canvas, and bring the entire crew ashore. Points were given for every bit of work from reefing to making down canvas and picking up the moorings.

Now for the race—

At the five minute gun we were all lined up on the club dock with our dinghies high and dry, their bows pointing lake wards. We had been practicing getting into that dinghy all the previous afternoon, and had it down to a science. At the starting gun there was a wild scramble. Five dinghies were shunted into the water and twenty young men threw themselves at the dinghies. Some of them made good throws. About one-third of the entire score got wet, but somehow or other all managed to clamber in, and then a wild race for the anchored yachts ensued. If the entire outfit had been rowing for the Diamond Sculls they couldn't have put more energy into it.

Style ? Lots of it. Lou Scholes couldn't have imitated any of those strokes if he had tried. Each crew had put its sturdiest man at the oars, and the way in which those dinghies loaded almost to the gunwales, were hustled along was an eyeopener. In nearly every boat every other stroke drove her bow down until she shipped water, but those in the bow only cheered on their oarsmen. Those who were not rowing were cheering, and the excited shouts of the balcony crowd as they urged on their favorites created something akin to pandemonium around the club front.

One boat dropped a bit astern in the short pull to the yachts. One of the lads in the stern leaned forward, seized hold of the oars, and by throwing his weight on aided the perspiring oarsmen, and the craft pulled up into the bunch again. This additional aid promised to carry that dinghy to the front but there's many a slip ! The oarsmen caught a crab, and both toppled over, upsetting the over-loaded craft. The cheers on the balcony broke into hysterical shrieks, as the feminine

contingent grasped the humor of the situation.

"Swim for it, boys !" spluttered the skipper of the overturned dinghy, and swim for it they did, leaving one man to tow the dinghy to the yacht. Once aboard we whisked off the sail covers, and the foresail and mainsail, of the little schooner-rigged mackinaw, shot aloft so fast that the skipper thought the gaffs were going clean over the masthead.

I grabbed the big jib, and shaking it free from the bag, did a tight wire act out over the ten foot horn, and only saved myself a bath by making a wild dive for the forestay. I grabbed it, but the man on the halliard sent the sail aloft so fast that the snaps running up the forestay broke my grip again, and I did some more gymnastics around the forestay and bobstay, much to the delight of the balcony, and the intense disgust of my skipper. However, we got away about as fast as the rest of the bunch, and made for the first buoy. There we tossed in our reef, in record time, mainly because the foxy skipper had attached snaps to the reef outhauls and downhauls, and rings to the booms at the exact points where the leach and luff of the reefed sails would come. As soon as the outhauls and downhauls were fast, we made sail again, and tied in the points as we ran up to the mark. At the flag a keen eyed official caught us with an outboard reef-point in the mainsail untied, and sent us back. Once we crossed the mark we shook out the reefs and set to work to catch a couple of boats ahead. Well ! any way we finished the course in fourth place, but pulled up to third when the craft ahead missed its moorings, and then there was a wild scramble to make down canvas and get ashore. We got ashore without a mishap, but we were hard chased all the way. In fact we were beaten ashore by the fourth crew's dinghy, but the skipper of that craft, in his haste to get ashore, left one of his crew aboard. That individual promptly leaped overboard, and swam ashore, but we had a full crew on the float before they did, and got third place. The fifth crew to the mooring all but beat the swimmer, handicapped as he was by his clothing, ashore, but the other fellows sent

# ITHACA GUNS

**T**HIS illustration shows the double thick nitro breech and narrow skeleton rib of an ITHACA No. 7 \$300.00 list gun.

¶ This feature together with the reinforced frame, reinforced stock and double bolt makes the ITHACA the strongest and safest gun for Nitro Powder.

¶ We build everything from a feather-weight 5¾ lb. 20 gauge gun to a 10½ lb. 10 gauge Duck, Fox and Goose gun.

¶ For twenty-three years we have enjoyed the reputation of making the hardest and closest shooting guns on the market—the same man is still boring them and is to-day the oldest and most experienced barrel borer in America.

¶ Send for Art Catalog describing 17 grades, 10, 12, 16 and 20 gauge guns ranging in price from \$17.75 to \$300.00.

## Ithaca Gun Co., Ithaca, N. Y.

Lock Box No. 13.

Pacific Coast Branch: 114 Second St., San Francisco, Cal.

out their dinghy and towed the swimmer ashore astern of the craft.

It certainly was, great sport!

To add variety to the event I would suggest that at a given signal during the sailing over the course a member of the crew should throw himself overboard, and the yacht be required to pick him up. He should be equipped with a life preserver to prevent accidents. Another signal gun, too, might require every boat to gybe over mainsails. The contest admits of many variations which will occur to alert minds. Speed alone should not obtain the award. Methods of handling, reefing, gybing, deftness in making a pickup and other qualities should be rated in the award. The only difficulty is in securing enough competent men to judge such an event.

Try it some one, and then write me and between us we will tell the "Rod and Gun" family of sportsmen all about it.

There is another style of contest which appeals to me, too. That is the seaman-ship contest between clubs, suggested by Harry Darrell, secretary of the Lake Sailing Skiff Association, a year ago. His idea was to have two clubs, like the Queen City Yacht Club of Toronto and the Victoria Yacht Club of Hamilton, send delegations of sailors to each others courses on alternate Saturdays and, after giving the visitors their choice of the boats in any certain classes pit them against the home sailors in the remaining boats, the club making the best average in the two days racing to take home a silver shield. Darrell's idea was to utilize the sixteen-foot skiff class and dinghies with which both clubs were familiar, but there is no reason why such a contest should not be successfully pulled off between clubs whose fleets were entirely dissimilar. The visitors would undoubtedly get the best of the deal as far as boats are concerned but the homesters would have it on them in being more familiar with the remaining craft and water. Do you think such an idea is worth working out?

#### Still Alive

Somehow or other, that speedy demise of the 16-foot skiff class of the Lake Sailing Skiff Association, I predicted so freely

last season has not taken place. The class is this season showing some signs of vigor. However those who are on the inside say that it is but the last dying kick. Only two clubs have new sixteen footers for the F. E. Walker Cup race on Dominion Day—the Sunnyside Yacht Club and the Royal Canadian Yacht Club of Toronto. Up at Sunnyside the enterprising amateurs have designed and built four new ones upon the usual lines, and some of them are showing excellent speed, so much so that the S.Y.C. burgee will be flown in the Cup race at Hamilton. The new R.C.Y.C. sixteens are professionally designed and built, and are radical departures. They are bilge board craft designed by Robertson of Montreal, a young Scotchman who has been designing half raters for the Seawanhaka Cup contests. He has evolved what is only one remove from the square bowed side-walk of the western lakes. They are very full forward with long straight sides and flat floors.

How these new craft compare with the speedy Ackroyd boats of two years ago is still unknown, but, from a casual examination, I should say that the old boats would beat them out, especially going to weather in choppy water. Reaching, the new boats should be wonders, but dead before it I would again wager my money on the old boats. The day on which they come together I shall be an interested spectator.

#### Some Brotherly Love

The Canadian Canoeing Association, the premier organization of the eastern Canadian blade wielders, is not such an obstinate organization, as some of the western men have considered them to be. To western eyes, it seemed as if the Canadian Canoeing Association was bound to be the dog in the manger, or at least determined to play a lone hand, when they decided to hold their championship regatta on Aug. 4 at Ottawa, the same date the Canadian Henley had set aside as Canoeists' Day at the St. Catharines rowing meet, and for which the Canadian Henley people had generously put up prizes hoping to draw Canadian racing canoe men together and decided the much disputed war canoe and other championships

R. E. Moody, the Toronto enthusiast, who proposed the championship meet at the Canadian Henley, was keenly disappointed, and so were the Henley people, but Sun-ny Robert from the Queen City didn't sit down and sulk over it. Not a bit, he just clambered around to see those who were vitally interested, and the result was that Mr. H. Gerald Wade, of Toronto, was sent toward the rising sun to see what he could do with the flinty-hearted Easterners. Wade thought he was up against a brick wall, but when he met the C.C.A. men in Montreal he was delighted to find that they were reasonable chaps. He made his little talk, and in just about half an hour the Easterners came around and said: "Well! We won't spoil your show! If we shift our meet on a week, and send down our champion war canoe crew, and some real good handy men with the maple, what'll you do for us?"

"Do!" I can just about hear Wade saying it. "Why we'll ship down the Island Aquatic War Canoe crew and guarantee a few chaps who will make some of your best men extend themselves to keep their championships east."

And there you have the story of how the two divisions of Canoeists shook hands with each other over the line fence, and why the Grand Trunks of Montreal, the best war canoe crew in the east, will be over at St. Kitts to give the Western Ontario men a run for their money on Aug. 4 and why the Island Aquatics are putting in a few extra licks in the training line, and whetting up their knives in the hope of lifting the scalps of the speedy Easterners right in their own neck of the woods on Aug. 11.

My! but there will be something doing around here in the war canoe line this summer. There are even indications that the Toronto Canoe Club will wake up long enough to send down a fifteen that will be worthy of the "Red Totem."

### Another Launch Club

Brockville has jumped into line with a Motor Boat Club. That is the second one organized this year in Ontario—the other being the Toronto Motor Boat Club. Brockville has 20 charter members and the officers are:—Commodore, G. G. Lafayette;

rear-commodore, C. T. Wilkinson; secretary treasurer, H. B. White; executive committee, Dr. Bowe, C. A. McNaughton, C. A. Donaldson and Dr. Robertson.

### Rights of Way

There are a few things that the man who sails any kind of a craft from a dinghy to a forty footer should keep on the handiest shelf of his brain locker. He must have the rules of the road down pat. In pleasure sailing, as often as in racing, exigencies arise which call for the strict observance of the rules of the road in order that accidents may not arise.

The ordinary rule of the road is that the man on the starboard tack has the right of way and that a boat sailing free must keep away from one sailing close hauled on the wind. If both boats are sailing free with the wind on the same side the boat to windward must keep clear. A yacht squared away dead before the wind with her boom off to starboard must give way to a boat sailing on the same course but with her boom off to port, for the latter is reckoned as having the starboard tack aboard and may claim the right of way under that clause.

If you overtake another yacht you must keep clear of him until no overlap exists, and an overlap exists as long as you, as the skipper of the boat overtaking the other, have no choice as to whether you will go to leeward or weather of the craft you are passing or as long as you are in danger of fouling the other fellow if you luff or bear away or if he does either. In other words it is up to you to keep clear of him until you are so far past him that both may alter their helms at once without fouling.

The only right an overtaking yacht has is the right of unobstructed passage to leeward. If you attempt to go to windward the vessel you are passing may luff you provided the manoeuvre is started before you establish an overlap. If an overlap exists before he commences to luff, you may keep steadily on your course and he is responsible for the foul and of course for any damage that may occur.

If you are on the port tack and come about on the other stretch you are not en-

TORONTO, ONT.

titled to the rights of the starboard tack until your canvas has filled away.

If both boats are closehauled on either tack but come together because the leeward boat holds the better wind the leeward craft must keep away to avoid a collision. Neither can claim the rights of a yacht being overtaken.

All the above rules apply to conduct on the racing course as well as to general sailing. In addition the racing rules add two more rules dealing explicitly with conditions which arise on a racing course.

These rules are:—

## PASSING AND ROUNDING MARKS

If an overlap exists between two yachts when both of them without tacking are about to pass a mark on the required side, then the outside yacht must give the inside yacht room to pass clear of the mark. A yacht shall not, however, be justified in attempting to establish an overlap, and thus force a passage between another yacht and the mark, after the latter has altered her helm for the purpose of rounding.

# AUTOMOBILES AND AUTOMOBILING

## The New Law

There is no more stringent automobile act in force on the continent than that passed by the last session of the Ontario Legislature. Other Provinces and States have speed regulations that are enough to drive a man crazy, but it remained for the Ontario Legislature to enact a law which embodies in its provisions fines of from \$10 and costs to \$50 and costs for such a trivial offence as a light out, or any one of the other score of minor regulations. It does not matter whether or not the infraction of the regulation involves anything serious, the magistrate must upon conviction fine the unfortunate motorist at least \$10 and costs. The new regulations of the Act are severe enough but the average motorist would not have put up a very strong kick against them because they aimed at the protection of life and limb, but the imposition of such a heavy series of fines for the trivial mistakes and neglects of the motorist is what makes him hot under the collar. The new act boiled down to hard pan compels every owner to have numbers on both the back and front of his machine, prohibits the use of moving searchlights, prohibits racing on the highways, and compels stopping upon signal from the driver of a horse drawn vehicle. In case of a frightened horse the motorist is supposed to lend his assistance. In case of an accident by reason of the presence of the motor car the motorist must turn back, and upon request give in writing, to any one who demands it, his name and address together with that of the owner of the car. The penalties are severe. The first offence brings with it a fine up to \$50 and costs, the second up to \$100 and costs, while for a third offence there is no alternative but imprisonment

not exceeding one month, in addition a third conviction for any one offence in one year entails the revoking of the motoring license and another cannot be obtained for two years. There is no objection among motorists to any of these regulations providing they are reasonably enforced. The clause which imposes a fine upon a motorist who does not return at once to the scene of an accident has loopholes for injustice. Accidents sometimes happen after a car has gone by. How unjust it would be to fine a man for not returning to the scene of an accident he knew nothing about. Then again it is rather unfair to give a police officer the power of summarily arresting a man for an infringement of any one of the three offences enumerated. The new act does that. To offset this what does the motorist get?—Nothing. He doesn't even get a speed concession. If the Legislature had raised the limit for clear country roads to 20 miles an hour your autoist would have been at least mollified. As it is now he is very much disgruntled, but at the same time the motorists are counselling one another to patience. When the novelty of the motor car wears off like that of the bicycle then they expect more rational treatment at the hands of the Provincial legislators.

## The Glidden Trip

The projected trip of the Glidden tourists through Canada is off. When the Toronto Automobile Club found how determined and extreme the opposition to motor cars was throughout Ontario it requested the Glidden party to circumvent Ontario in order that the two or three hundred jaunting cars might not further arouse opposition to motor cars. Therefore the Glidden party will give Ontario the go by this summer

## JOHN FORMAN

708-10 Craig Street

MONTREAL

Instead of crossing into Ontario at Niagara Falls the Glidden group will move from Buffalo to Albany, skirt Lake Champlain and Lake George and enter Canada at Rouse Point. They will be entertained at Montreal by the Montreal Automobile Club and after a tour through Quebec by way of Three Rivers, Quebec City, St. Levis, St. Henri, St. Joseph, the Chaudiere Valley, St. Clume, thence into Maine and back via Portland.

Many Toronto motorists are much disappointed at the elimination of Ontario from the Glidden programme. The Quebec portion of the trip, however, should enamour the Glidden people of Canada and the Toronto enthusiasts are building upon another trip when the sentiment against motor cars is not so strong in the rural district.

### A Sample of Heroism

The talk of the Toronto automobiling fraternity during the past month has been of the heroism of Dr. Perry Doolittle, one

of the pioneers of the game in Canada. He deliberately risked his life and those of three persons with him to save that of a cyclist. The incident occurred in Toronto Junction. The opening of a sewer on one side of Dundas street threw all the traffic on the other. While driving on the street a cyclist in endeavoring to turn out of the way of the motor car fell prostrate in the roadway within fifteen feet of the car. To avoid the fallen man Dr. Doolittle had only one alternative, and that was to turn upon the street car tracks. Though a car was right beside him and going at a good clip Dr. Doolittle took the odd chance. He threw in the high gear and leaped his auto in front of the street car. The street car collided with the motor car at almost right angles and pitched the occupants into the street. Fortunately they fell clear of the rails. Two of the motoring party were women. Though all were shaken up no one was seriously injured. Dr. Doolittle's Yale car was seriously damaged and the street car did not escape scathless. Those who witnessed the accident cannot praise too highly Dr.

Doolittle's heroism. Practically he deliberately ran in front of the street car. There wasn't more than one chance in a hundred that the motorman would see his action in time to reverse and throw on the brakes.

That the days of romance and adventure are not ended is proved by the experience of Messrs. Percy F. Megargel, and David F. Fassett, who reached New York on Saturday, June 9th, twice crossing the continent in an automobile. They left New York on the outward journey, on August 19th last, and on their return the car had traversed 11,742 miles. On the outward journey they went from New York to Buffalo, and through the States of Pennsylvania, Ohio, Indiana, Illinois, Iowa and Nebraska to Omaha, from whence they proceeded to Portland through Wyoming, Idaho, and Oregon. From Portland they went down the Pacific coast to San Francisco, and returned through California, Arizona, New Mexico, and Colorado to Omaha, from which place they came home by the same route as they took on the outward journey. Their adventures would fill a volume. Rain, snow, mountains, ravines, Indians, dense woods, and other obstructions stayed them not. With a windlass they hauled their car up the perpendicular sides of clay gulches; with axes they chopped a road through trees and fallen timber, built make shift bridges, crossed the great American desert, hitherto unconquered by the automobile, and overcame other obstacles which rendered their journey a notable one in the history of the new vehicle. Nothing indeed stopped them but the want of gasoline and

that commodity even at a dollar a gallon, and when long journeys had to be taken to procure it, was found somewhere and somehow, and the ten months hard trip ended with complete success. Once they were three days without food but held stoutly on, and their pluck and perseverance, which were more or less severely tried during the whole trip, were finally rewarded by the successful completion of the most trying journey any auto or autoist have accomplished up to date.

# OUR MEDICINE BAG

We understand from the Ontario Fisheries Department that it is the intention of the Department to charge fees this year to all non-residents angling in the waters of the Province—the scale of fees being \$2 for a single angler, and \$5 for a family not exceeding five persons. Notices of this change are to be scattered throughout the Province.

Fishing with a philosopher is enjoyable if the philosopher is really a fisherman,\*as every reader of our "Viscount John" will admit. A writer in a recent issue of a British Columbia journal recounts the story of a day's fishing experience at Cowichan Lake, in company with the local philosopher. He found the fishing and philosophy so pleasantly intermixed that his experience proved the time of his life, and in addition to his fine fishing he gained much from his companion's philosophical discourse. Happy and hungry they were able to return at the close of the day with ten fish weighing twenty-two pounds, and the writer concluded the account of his experiences with the following sentence:—"George Forbes, you are a great philosopher, you theorize a good deal, but you certainly can fish."—No bad compliment to the varied powers of a valued friend.

In the February number of "Rod and Gun in Canada" we described the departure of Master Fred Shaughnessy, son of President Sir Thomas Shaughnessy, and his tutor, on a round-the-world trip, during the whole of which time they used tickets issued by the Canadian Pacific Railway Company, and remained under the British and Canadian Pacific flags. So successful has been this trip that it is contemplated to repeat the tour every year, and an annual excursion, encircling the entire globe, likely to be inaugurated by this enterprising company. Without doubt there are

large numbers of people who would gladly avail themselves of the opportunity to see something of countries other than their own if they could do so with comfort, and remain under the well-known flag all the time. It is not given to every one to love adventure, and yet travel and sight seeing is what most of us long for at times. The discomforts and inconveniences of a foreign tour frighten many people who would benefit in many ways by such a trip, and with everything arranged for them in the most comfortable way, and the British flag flying over them the whole of the time everyone even if timid could extract enjoyment that would well repay the cost (estimated at about \$1000) many times over. The pioneers enjoyed themselves so greatly, saw so much that was of interest, traversed 30,000 miles without mishap of any kind, and were so successful in every way that if enthusiastic reports can lead to the inauguration of the new service it is as good as started.

To see thirteen bears in one short holiday is not given to every party of hunters, but such was the recent experience of Mr. L. McAdam, of Vancouver, who spent a few days hunting close to the south fork of the Bridge River, less than sixty miles from Lillooet, B.C. He started from Lytton, taking the stage from Lillooet, about fifty miles. Engaging Guide Schwartz they had four miles travel over difficult country, the chief obstacle to their progress consisting of fallen timber. On their way they saw plenty of goat and big horn. Four bears, including two cubs, were seen on the first evening in camp, but one was too far off, and in the other cases the light was not good enough to risk a shot. Next day five bears, including two cubs, were sighted, but no shot fired. On the following day Mr. McAdam had his first chance and fired five shots at a big bear, the rough dippy country making it very difficult to gauge distances. He was satis-

**THE T. EATON CO. LIMITED**  
**PORTAGE AVE. WINNIPEG**

fied however that he had hit, and followed the trail till dark, resuming it at day-break. The bear was sighted and took to the water—a sure sign of a bad hit. Finding it impossible to cross, the party returned to the first camp. That evening a she bear with cub was seen, but too late to be followed. A big brown bear was sighted, and Mr. McAdam getting a good shot broke the brute's back. Several more shots were sent after him and one hit. In the darkness the bear escaped, but was followed next day, and finished by one shot in the neck. A fine grizzly was also obtained. The bear was seen when they were looking for the horses, and it took nine shots to finish her, one ball breaking through her chest, and cutting away the top of her heart. The return journey was very difficult and unpleasant, but the success of the trip more than repaid the hunter for all his hard work and discomforts.

Guns, and the advantages of particular makes, form a subject of perpetual interest to sportsman, and they will be glad to have details of the latest production in this line of the J. Stevens Arms' and Tool Company, of Chicopee Falls, Mass. This is the new No. 325 double barrel hammerless shot gun, in which the action is of the Anson and Deeley type, with the Stevens checkhook, relieving the forearm of all strain—an invention which has proved highly popular. The barrels are made of specially prepared high pressure steel, and are choke bored for nitro powder. The new gun has the extension matted rib with reinforced breach, oiled American walnut stock, with pistol grip checked, and patent snap forearm checked. The regular length of the stock is fourteen inches with 2½ inch drop. The gun can be supplied in 12-gauge, with 28, 30, and 32 inch barrels; and in 16-gauge with 28 and 30 inch barrels only. The weight is 7½ to 8½ lbs., and the list price is \$20.

Efficient performance of duties has its penalties as well as inefficiency, and the recent activities of Inspector Shelley, of Niagara Falls, Ont., has resulted in a depopulation of Lake Erie fishermen carrying their grievances to the Department at To-

ronto. They stated that they were prepared to prove that the fish seized were of the proper size—a rather large order considering that the fish were not then in existence. Mr. Bastedo, the Deputy Commissioner of Fisheries, promised them an investigation into the circumstances. Surely the Department might back up the Inspector when he is performing his duty, and an inquiry of the kind mentioned seems to be unnecessary.

There is no comfort on a trip of any kind unless one's footgear is irreproachable, and for the hard testing which boots receive on an outing the best is none too good. That the sporting and special footwear turned out by the Witchell-Sheill Company of Detroit, Mich., the sole manufacturers of the "Witch-Elk" brand, is appreciated by sportsmen to an increasing extent is shown by the fact that the Company has been reorganised for the purpose of enlarging the factory's output, owing to the rapidly increasing demands for their goods. Sportsmen and tourists know a good thing when they use it, and use it hardly, and the fact that they are taking more of these boots every year testify to the satisfaction given. Boots for athletes and sportsmen, who pursue any branch of athletics or sport, are specially made to suit the hard requirements of those who follow such strenuous occupations, and for this reason, and the fact that the footgear is made on scientific principles and with the best of materials, the success of the firm and its goods are due. Under the new arrangements effected their success appears likely to be greater than ever, and their footgear to be used in larger numbers by more satisfied athletes and sportsmen.

"The best trout fishing in the Province of Ontario" is what we all want, and that is to be obtained in one day's hard journey from the pleasant town of Orillia, if we are to accept the experiences of Messrs. J. B. Tudhope, M. P. P., M. B. Tudhope, H. R. Tudhope, Thos. Haywood, and Dr. A. R. Harvie. These gentlemen found the fishing in some lakes in Longford township, which lakes owing to their inaccessibility are said never to have been fished in by sportsmen before. They succeeded in

# Abbey's Effer- vescent Salt

getting 120 trout in all, and another party Messrs. J. O. Perry, S. D. McPhee, and H. Lloyd obtained sixty in four days. The local branch of the Fish and Game Protective Association should see that these lakes are strictly kept for rod and line fishing in the season, and then they will not deteriorate.

There appears to be no end to the numerous but effective inventions made in the interests of sportsmen and all who go into the woods by Mr. Marble, of the Marble Patent Safety Axe Company, of Gladstone, Mich. Mr. Marble's latest inventions include a safety carver which it is claimed is safe, strong, sanitary, and sensible—strong recommendations, every one of which it is believed can be thoroughly substantiated. It is described as an "eight inch pocket knife," and when folded occupies a space of only 5-16 inches thick by eight inches long, weighing only four ounces. The blade is of razor steel. The U shaped handle sections are of German silver heavily reinforced at the end where the blade bears on them. When open the knife is as rigid as a one-piece knife. Boiling water cannot injure this handle. The knife may be quickly and easily closed by pushing back the clasp, grasping the sides of the blade with one hand, and with the other pulling the outer handle down and back. The blade is then folded and the clasp pushed over it. Many guides have seen this knife, and all hold that it fills to perfection a long felt want. The same firm also make a safety saw with 8-inch blade, on the same principle as the carver. It is invaluable to all who go into the woods, and more particularly so to students of forestry and botany. Another most useful article, especially to fishermen is Marble's Safety Fish Knife. The blade, when folded, is entirely protected by the unique but simply constructed and operated German silver handle, and when open is as safe and as rigid as a one-piece knife. The knife is made sharp at the back of the point for ripping, and the back is an excellent fish sealer. No fisherman's outfit can be considered complete without this, one of the latest, and best devices for his convenience. A catalogue describing all these inventions will be sent free

to sportsmen who mention "Rod and Gun and Motor Sports in Canada."

The Hastings County branch of the Ontario Fish and Game Protective Association is, like its parent, very much alive, and as an illustration of this fact crowded the City Hall at Belleville on the last evening in May for an educational meeting in favor of its well known and meritorious objects. Mr. A. Kelly, Evans and Mr. Oliver Adams, who are untiring in this good work, delivered addresses, which were well supplemented by local speakers including Mr. Thomas Ritchie, Judge Fraleck, and the Rev. A. M. Hubby. Particular attention was paid to the question of net fishing in the Bay of Quinte, and the necessity of having efficient wardens insisted upon. The enforcement of the laws formed the theme of several of the addresses, and the educational value of the meeting and its after results should be very great.

A correspondent, who writes from Peterboro, Ont., wishes to say a word about the automatic shot gun, the prohibition of which is strongly recommended by the Ontario Game Commission. He says:—"I cannot find any reason why this gun should be prohibited, especially when the Government draws the duties upon its importation. It is not the gun that is to blame but the man behind the gun, and any man with a double barrel gun can do as much butchering, if he so wills, as he can with the automatic. The latter are made for two shots, and they are not quicker than a double barrel with a single trigger. I myself use an automatic, and as I am a mechanic in gun making, I admire the ingenious working of this gun. I am however no butcher, and when in camp kill only what I need for my living."

We are informed that owing to the great increase in their business, the Sonne Awning, Tent, and Tarpaulin Co., of 320 West Craig street, Montreal, will open a new office and show rooms at 327 St. James' St., in that city, where they will have launches, canoes, and boats of every description, and tents, awnings, and camp outfits of all kinds. This is the sort of

progress we like to record on behalf of our clients, and believe that the Magazine has no small share in the credit due for such extensions.

Considerable improvements in the train service have been made by the Grand Trunk System since they took over the Canada Atlantic, and now the Toronto sportsman is able to take the night train and find himself on his fishing grounds early on the following morning, having had the advantage of a good night's rest, and feeling ready to make use of every minute of his hastily snatched and all too limited vacation. From almost every station on this line, and more particularly from those within and on the borders of the Algonquin National Park, the fisherman may be sure of good sport and a quiet restful holiday. If the vacation is to be of any length of course arrangements should be made beforehand in order to secure canoes, guides, etc., but for a day or two, and unaccompanied by ladies or children, the fisherman is sure to find a place for himself and to enjoy his experiences both with the fish, and amid the haunts of Nature. If the fishery regulations are obeyed there will be plenty of rod and line fishing for all, and the fishing will not soon be depleted. From Orrville, Edington, Sprucedale, Otter Lake Station, and others the same stories of good fishing grounds come and the Toronto fishermen find almost at their own doors a vast area where fishing is of the best, and should improve rather than deteriorate. Bass, trout, and pike are the fish to be obtained, and these give sport enough to satisfy the most exacting; and canoe trips of any length, and taking one through beautiful country, can be made from any of these points. The Algonquin National Park should prove a source of delight to fishermen for many generations yet to come.

Every lover of outdoor life must be interested in photography. Many of them add materially to their enjoyment of the places they visit, and the scenes they witness, by obtaining pictures which give them untold delight in pleasant remembrances and enable them to live those memorable experiences over again. The

pleasures of an outing are three fold:—anticipation, realization, and recollection. The first is often the best; the second sometimes fail to come up to expectation, but the third is always enjoyable. Discomforts are softened, and pleasures heightened by the lapse of time. When to these can be added pictures of the scenes, which one lives over again in remembrance, the delights are enhanced, and no one should willingly forego them. The amateur photographer has now every kind of assistance available to enable him to achieve success in this work. Messrs. Lee & Sargent, 675 St. Catherine St., West, Montreal, have recently opened a photographic supply depot, and make a specialty of developing and printing. All films sent to them will receive the best of care, and their charges are reasonable. They have a fine assortment both of kodaks and supplies, and through the mail outsiders can obtain the same terms and have their work attended to just as well as if they were in Montreal. They offer a particular invitation to tourists visiting Montreal to inspect their stock. Their store is just "round the corner" from the Corona Hotel, a house that is growing in reputation with travellers and tourists every month, owing to the excellence of its accommodation, and the attention paid to the comforts of guests.

We are in receipt of a folder containing excellent maps, of the Nipigon District, gotten out by the Revillon Bros., Nipigon, Ont., established in 1723. They can supply guides, supplies, camping outfits, and everything for a fishing or hunting trip. They have taken a wise way of advertising by furnishing a good map free.

The latest Stevens hanger is a gem, and will make a fine addition to the decorations of any sportsman's den. It is a ten color lithograph, 15 inches by 20 inches, designed by a well known artist and executed with pleasing effect. A young couple in shooting costumes, each having one of the well known and reliable double barrel rifles, are in the act of crossing a stream by stepping stones. The lady looks well in her slouch hat jauntily set on her gold-

# CLARK'S PORK AND BEANS

## WHEN FISH- ING

Angling is such a fascinating sport that while you are at it you don't want to quit. But—the excitement and exhilaration and exercise of handling a rod and line creates an appetite—strong and insistent.

Now, Clark's Pork and Beans—real Boston baked—tender and tasty, put up in *germ proof* tins, provides a tempting, delicious and substantial meal that satisfies for hours. In three appetising flavors—the delicate, rich, "beany" flavour, plain, or with genuine tomato and Chili sauce, which adds a touch of spiciness that is irresistible. 5c. and 10c. tins.

**WM. CLARK, Mfr.** - - - **Montreal**

en hair, and her red jersey, covert coat, stout boots, and serviceable frock all bespeak a knowledge of the woods, her whole appearance denoting the healthfulness of outdoor physical exercise. For all this however her ladyship is evidently not averse to the assistance her male companion, who is as sensibly dressed as herself, is pressing to offer, as he displays his brace of ducks, and is telling her how he obtained them. The red glow of the western sun lights up the scene, and the boat, which has brought them on this expedition, and will take them back, is also plain in the background, run ashore to await their convenience. Any sportsman, sending six cents in stamps, and mentioning "Rod and Gun and Motor Sports in Canada" can by addressing the Company at Chicopee Falls, Mass., receive a copy of this hanger, to which the Company desire to give the widest possible distribution.

an outing than an ability and the means to make the best of records of the same by a camera. Sportsmen and tourists are appreciating this fact in larger numbers every day, and this accounts for the increasing numbers of supply houses, and the completeness of the outfits they furnish. Amongst the very best of these is the well-known and old established house of Messrs. George Barrat & Son of Montreal. They have a fine store in Peel street, near the Windsor Hotel, where so many sportsmen and tourists make their headquarters; and having a large and complete stock throughout are able to supply every requirement with promptitude and satisfaction. They issue a good illustrated catalogue, and by means of the mails place those who live in any part of Canada on an equality with the residents of the commercial capital of the Dominion. Through this catalogue alone the amateur photographer (and the professional too) may learn much, and if he will secure his supplies with Messrs. Barrat he may be certain of no failures, and a wonderful addition to

Nothing adds more to the pleasures of

When writing advertisers kindly mention ROD AND GUN IN CANADA

his pleasures in his outings that will give him in future memories and going over again by sight and thoughts the value of his expenditure many times repeated. There is nothing like living past pleasures over again, and in no way can this be better or more thoroughly done than through photography.

To kill five deer with ten shots at a distance of four hundred yards is by no means a bad performance as every hunter will readily admit. This is the record recently made by three Mexican gentlemen armed with Savage rifles, and shooting in their own country. It is little wonder that in writing to the firm at Utica, N. Y., they describe themselves as Savage enthusiasts, and declare that their performance with these weapons has stirred all the deer hunters of the vicinity to attempt to emulate their feats. They don't think these can be equalled, far less surpassed, with any other than Savage rifles.

The Solid Comfort Fishing Club of Western Penna., has located a camp for

this year near the head of French River, Ontario, and expect to go into camp about the end of this month. This Club has had a camp at Beaumaris on Muskoka Lake since 1880. It has twenty four members and is composed of active business men. Since 1880 it has always made Toronto its base of supplies. The Club will go by way of the Grand Trunk R. R. to North Bay.

Certainly next to your own enjoyment is the joy of sharing your pleasure and your best experiences with others. Such a plan a good deal more than doubles your own pleasures and if once tried is never abandoned. By no better method can this be effected than by having lantern slides made from your own photographs or films taken on your outings or in any other way, and then by their means go over your experiences again in company with your friends and neighbours. These slides, either plain or colored, will give untold joy to many people, if skilfully prepared. Such an expert, willing to make the very best of your material, can be found by ad-

dressing G. R. G. Legge, Granby, Que., whose customers include the leading railways and well known lecturers, and who would not be trusted with such work if he could not also give you satisfaction.

It appears to be an undoubted fact that big game in the Algonquin National Park is now more numerous than at any period since its establishment. The animals appreciate the guarantee of protection afforded them, and are gathering and increasing in great numbers. The beavers in particular are multiplying and affording tourists and sportsmen opportunities of witnessing the skilled work of one of the most interesting of Canadian animals. The protection thus given is only rendered effective by constant vigilance on the part of the Superintendent and his staff. Early last month they heard of a trapper working at the west of the park, and as near the boundary as to take advantage of the

animals that had gathered within the protected area of the Park. One fine morning, without the slightest intimation that anything out of the ordinary was afoot, the Superintendent, accompanied by a ranger, left headquarters at the break of day. They walked eight miles across country and paddled thirty two miles, making forty in all, and caught their man within a mile of the boundary. The offender had a beaver recently trapped in his hand at the time, and also a goodly store of furs which were all seized. The whole party returned to headquarters the same night—a pretty long and hard day's work, but one which shows the illegitimate trapper how swift and sure the authorities can strike when occasion calls for it.

It seemed hardly necessary for Mr. Jos. Templeton, Secretary of the Hastings county branch of the Ontario Fish and Game Protective Association, to address a

local paper in order to deny that he and other members of the local branch had refused to sign a petition circulated in Belleville, asking for the privileges of net fishing in the Bay of Quinte. The members of the local association are too loyal for any statement of the kind to possess a shadow of truth. There are few net fishermen left on the Bay of Quinte. (Mr. Templeton estimates them at six only) and as he points out the result of their work is to benefit great fish companies in Buffalo and New York. Naturally Mr. Templeton is for prohibiting net fishing in the Bay, and then there will be rod and line fishing for every one and abundance for all. The water is a public domain, and the whole of the public, and not a mere handful of monopolists, have the rights to the fishing. Mr. Templeton gives one most significant hint which may not be without its effects at headquarters. As he says, a few fishermen's votes no longer control the situation; for on the question of fish protection hundreds are now awake and they mean to make their position

clearly understood, and their power and influence felt. He emphasizes the fact that he is for stopping net fishing and enforcing the law.

Inventive genius is one of the marks of the age, and thousands of dollars are spent in procuring patents for articles which at the time appear likely to the enthusiastic promoter to live as long as the world lasts and to prove of untold benefit to mankind. Many flourish for a brief period and then sink into oblivion. A different fate seems likely to be the fortune of the Matchless Cigar Lighter, manufactured by the Matchless Cigar Lighter Manufacturing Company, of 16 St. John St. (Dept. 12) New York City. This novel invention is a boon to the man who smokes. While it takes us back to our grandfather's time, being "flintlock" in principle, it is wonderfully effective and useful, and bids fair to be highly successful. In appearance it resembles a match box and can be conveniently and easily carried in the pocket. In construction it is strong and durable and

If you anticipate a Western Hunting & Fishing Trip

## Bear in Mind

that you can outfit to better advantage here than you can at home and also save yourself a deal of trouble and some money. We are known by every sportsman from the Lakes westward and sellevything the hunter needs.

**The Hingston Smith Arms Co., Ltd.,**

**WINNIPEG**

fitted with a series of wheels, which, upon lifting the lever forming the top of the case, revolve on a tiny tube of flint, which in turn throws a spark on a chemically prepared wick, thus igniting it to light. a cigar, cigarette or pipe. The strongest wind cannot blow it out, and carrying a guarantee of two years' effective use it is remarkable that such a useful article can be sold for fifty cents.

During the greater portion of last month the Ontario Fisheries Department had a busy time stocking public waters with black bass. The Muskoka Lakes, Kawartha Lakes, Lake Simcoe, Lake Couchiching, Lake of Bays, and Grand River, were included in the waters that received attention, and applications were received by the Department for many others. The adult fish were taken from Inner Bay, Lake Erie, off the county of Norfolk. They were placed in cars specially fitted with tanks, and taken to their destinations. The results of this work, and of the Dominion hatcheries, if accompanied by effective protection, should soon be apparent.

In nothing is the pursuit of economy more foolish than in the purchase of firearms. So much may depend at a critical

moment upon the trustworthiness of a weapon that it is indeed tempting Providence to purchase a cheap revolver. What is saved by cheapness must come out of the quality of the weapon. It is impossible to have absolute safety, accuracy, and the best of materials and workmanship at a bargain counter price; and unless a weapon is as nearly perfect as human skill can make it (which must mean paying a good price for the article) it may prove more destructive to the owner than to anyone else. What does a dollar saved on the price count as against the loss of a hand or an eye? If you want a revolver that can be depended upon in any emergency; one made of the best material, and constructed by the most skilled mechanics; is accurate to the thousandth of an inch, with no rattle or shake about it, and as flawless as the most rigid inspection can ensure; quick acting and yet cannot be fired when on safety half cock except by pulling the trigger—you will find all this and more in the "H. & R." Double Action Model, 1905, Revolver. If you will mention "Rod and Gun and Motor Sports in Canada" the H. & R. Co., of Worcester, Mass., will send you a catalogue containing full particulars of this famous weapon.

John Reid, guide, has left Desbarats, Ont., to take a position as a railway brakeman. All letters about guides for the Desbarats country should be sent to Mr. Y. D. Rose, manager of the Hiawatha Camp hotel, Desbarats. Fortunately several good new guides will take his place there.

An Ideal Light for  
Summer Homes

### THE ANGLE LAMP

#### Comfort in Summer Lighting

As the days grow longer it is more and more important that you use the right illumination. If you have a system that requires endless attention, that smokes and smells and makes a room unbearably hot, you will find it more disagreeable every day that brings you nearer warm weather. This lamp is, therefore, the one kind of illumination that will bring you absolute satisfaction. While more brilliant than gas or electricity, it never smokes, smells or gets out of order, is lighted and extinguished as easily as gas, gives almost no heat and is economical beyond comparison with anything else. **Eighteen Cents** worth of oil will burn for one month and will show you that it is possible to use oil with comfort and saving. It presents a perfect substitute for gas, electricity and other new systems and being absolutely non-explosive, it can be placed in any hands with absolute safety. The unique feature, **No Under Shadow**, insures all the light falling directly downward and outward, which makes every occupation of the evening a genuine pleasure. They are handsome, well made, and a distinct decoration wherever used. Thousands are employed in homes, stores, churches, halls, libraries, etc., and give unbounded satisfaction. Our catalogue 21 shows all styles from \$2 up. We will gladly send it to you upon request.

# THE TRAP

ROD AND GUN AND MOTOR SPORTS IN CANADA is the Official Organ of the Dominion of Canada Trap-shooting Association. All communications for this department should be addressed to W. A. Smith, Editor "The Trap," Kingsville, Ont.

## Tournament Dates

August 8, 9 and 10—Dominion Trap Shooting Association, Hamilton, W. P. Thomson, Hamilton, Ont., Sec.-Treas.  
July 20—Clifford, Ont. John A. Gray, Sec.

## Dominion Tournament Programme.

The Tournament of the Dominion Trapshooters Association begins already to loom up large on the trapshooting horizon. The tournament will be held at Hamilton, August 8th, 9th and 10th, on the new Club grounds of the Hamilton Gun Club. It promises to be the greatest summer shoot ever held in Canada. Over 200 marksmen from different parts of Canada and the United States are expected to take part. The events and prizes will be open to Canadians only, but many professionals as well as outside amateurs are expected to be present. The former to display the excellence of the goods of the companies they represent. There will be ten 20-target events each day besides the individual championship, Grand Canadian Handicap, two-man team, five-man team and eight man team championships. \$12,000 to \$15,000, with \$1500 added money and trophies will be distributed among the winners.

Thomas Upton is president of the Association and Walter P. Thomson is Secretary.

At the last meeting of the Hamilton Gun Club committees were appointed to make all local arrangements for the big events and August 8, 9 and 10 promise to be three big days for Hamilton.

Trap Shooting in Canada is becoming more popular each year, as is evidenced by the increase in membership every year, and many new faces and clubs will be seen at the forthcoming tournament.

The Hamilton Gun Club has been of great assistance to the Association in promoting the gentlemanly pastime in Ontario, and it has endeavored to make the 1906 programme an attractive one in every way, and hopes to have its efforts appreciated by the largest attendance in the history of the Association.

The new grounds of the Club are second to none, the backgrounds being perfect and the accommodation for four sets of traps, tents for the members and space for the spectators is all that could be desired.

It is the intention of the Association to offer a programme similar to the one introduced at Ottawa in 1905, which gave such universal satisfaction.

All of the events will be the usual sweepstakes, but instead of offering trophies for each individual event, the corresponding events of each day will be taken, and trophies and prizes will be given for the aggregate of sixty birds for three events, 20 birds each event each day.

The usual prizes will be given for high average each day and for the high average for the tournament. His Excellency, Earl Grey, has donated a beautiful silver cup.

The following have also donated prizes at time of publication of this issue:—Thomas Union Company, Hamilton, Royal Distillery, Hamilton; Hotel Royal, Hamilton; Hilda Cigar Co., Hamilton; Hamilton Brewing Association, of Hamilton; Wood Vengeance Co., Hamilton; Ky-

noch Limited, Birmingham, Eng.; Isaac Hollis Gun Co., Birmingham, Eng.; Claborough Johnson Gun Co., Birmingham, Eng.; Montreal Rolling Mills, Montreal; Dominion Cartridge Co., Montreal; Geo. W. McGill, Toronto; Thomas A. Duff, Toronto; Gurney-Tilden Co., Hamilton; A. Zimmerman & Co., Hamilton; Lefever Arms Co., Syracuse, N. Y.; Canadian Indians; W. H. Ewing, Montreal; Hamilton Gun Club, Hamilton; Mail and Empire, Toronto; Brewers and Maltsters, Toronto.

The Hamilton Gun Club promises that everything will be done to make the Sixth Annual Tournament of the Bir Association the "Banner Shoot" of its history. The programme will be sent to members about July 20th.

Further particulars may be had by addressing W. P. Thomson, Esq., Spectator Building, Hamilton, Secretary of the Association.

## Stray Pellets.

A 50-man team match between Buffalo and Toronto, is on the tapis.

John A. Gray, secretary Clifford Gun Club, writes that this club will give their annual tournament, July 20th. The system of handicapping will be something new at tournaments. All shooting will be from 16 yards. Shooters will be classified according to their records at the trap as published in Rod and Gun from July, 1905, to June, 1906. The handicap will be by added birds to shoot at. 65 per cent to 95 per cent men will receive no allowance. 75 per cent to 85 per cent shooters will be allowed one extra target and 65 per cent to 70 per cent shooters will be allowed two extra birds, to shoot at in every ten. The object of this system of handicapping is to put every shooter on an equal footing and encourage the poorer shot. \$30.00 will be given for average money. A committee of three will do the handicapping.

As we go to press we are in receipt of the scores of Sarnia tournament held June 20 and 21. High average each day was won by Mr. Houghton, Sarnia, and second average each day by Mr. Chamberlain, Columbus, Ohio. Third average first day was won by B. W. Glover, London, and third average, second day, by Roy Luck, Sarnia. The scores are as follows, the number of targets shot at being in brackets:—First day—Cox (200) 153, Houghton (200) 166, Renicke (200) 154, Chamberlain (200) 165, Luck (200) 155, Glover (200) 158, Barney (200) 153, Forest (200) 142, Red Head (200) 108, Blue Bill (180) 124, Mitchell (120) 92, Tippitt (120) 77. Second day—Houghton (180) 155, Chamberlain (180) 164, Luck (180) 147, Renicke (180) 146, Barney (180) 143, Forest (180) 139, Cox (180) 128, McNeil (180) 124, Redhead (180) 121, McDonald (140) 96, A. Brown (60) 32, F. Mitchell (40) 26, Tippitt (20) 14, Parker (20) 20. High winds accounted for the low scores.

June 18th Fort Garry Gun Club commenced shooting for the Hamilton Powder Co.'s medal. To qualify each member must shoot at least ten nights during the summer. The person

CHIEF BE-WAH-BA-QUING (IRON-FACE.)

CHIEF JAM-JAM.

making the highest average will win the medal and will be entitled to shoot for a silver plate valued at \$150. The shoot for the plate will take place next summer and each club in Manitoba will be entitled to one entry.

#### Heap Big Indian Shoot.

Fine weather and a large crowd greeted the first annual tournament at Montreal, May 21 and 25. Notwithstanding predictions freely offered to the contrary by many who thought that Montreal was too far from the centre of the trapshooting world to ensure a successful tournament there, the gathering proved an undoubted success. These pessimists, over-looked the fact that Montreal is the centre of a circle of as enthusiastic and thorough sportsmen as can be found anywhere on the continent of America. The generosity of Walter H. Ewing Esq., Montreal, and the splendid work of himself and other local shooters, ably seconded the work of the High Scribe, Thomas A. Duff, Esq., Toronto, who devoted months of his time and energy in preparing a most attractive programme and to whose fine executive abilities, the success of the tournament can be largely attributed. The result was one of the most successful tournaments ever held anywhere in Canada and not only assured the permanent success of the Canadian Indians as a trapshooting organization but will, no doubt, give a tremendous impetus to the sport in Eastern Canada.

The shooting took place on the grounds of the Montreal Gun Club, near the Waterworks at Point St. Charles, and was over three sets of Bowron traps, set Sergeant system. Bowron traps were also used. Mr. Bowron, himself, was also present to give his personal attention to the traps, which were worked so satisfactorily

that his services were seldom required.

The first day, being Victoria Day, brought out a large number of spectators, including as we were pleased to see many ladies, who seemed to view with great interest the work of the target smashers. About 1500 neat aluminum souvenirs of the shoot in the form of an Indian in full costume, were distributed freely as a memento of the occasion. In addition a handsome badge in the shape of an oxidized medallion embossed with Indian head and words commemorative of the occasion was provided for each competitor, official, guest and "squaw" and were much appreciated.

The trade was represented by Messrs. J. H. Cameron, J. A. R. Elliott, and J. M. Hawkins, representing the Winchester R. A. Co.; T. A. Marshall and J. S. Cole, Jr., of the U. M. C. Co.; A. H. Durston of the Lefever Arms Co. E. G. White and F. H. Conover, Canadian representatives of the Dupont Powder Co., and F. L. Halford, Montreal, representing the Dominion Cartridge Co. The presence of the "hired men" always add to the pleasure of a tournament and was much appreciated by all the shooters in this instance.

The office was in charge of Mr. J. Mowall Hawkins who performed the onerous work of handling the books and shooting through the programme as well. He did exceedingly well in both places and both Mr. Hawkins and his Company are entitled to the thanks of the Canadian Indians for his valuable services. Mr. Hawkins was ably assisted in his office work by the well known Canadian experts, Messrs. George Cashmore and Alex. Dey and it goes without saying that this important end of the tournament was handled with entire satisfaction to every one.

The handicap adopted was the fixed handicap by distance, 16 to 20 yards, and proved much more satisfactory in every way to the

1- Forest H. Conover, "Chief Dave Hawk"; 2. D. McMackon, "Chief Level Head"; 3. Thomas A. Duff, "Chief King Pin"; 4. George W. McGill, "Chief Holy Smoke"; 5. Thomas Up-ton, "Chief Jam Jam"; 6. F. A. Heney, "Chief Eagle Eye"; 7. J. B. Goodhue, "Chief Memphramagog"; 8. Edw. G. White, "Chief Sah-aw-ko-kin-ap-i"; 9. Walter H. Ewing, "Chief Long Buffalo Horn."

sliding handicap commonly used. The professionals were allowed to fix their own handicap and shot from 18 yards throughout the tournament.

Professional high average, the first day, was won by J. M. Hawkins, with 194 out of 200; J. A. R. Elliott was second with 192, A. H. Durston third with 190 and T. A. Marshall fourth with 188.

Amateur high average, first day, was won by Walter H. Ewing, Montreal, with the splend-

Jam Jam. Long Buffalo Horn. Level Head. Short Wing

id score of 189. He received the handsome Clarendon cup offered as first prize. Second amateur high average and the sterling silver Bailey Cup was won by D. McMackon, Highgate, Ont., with the good score of 186. Duff, Jennings, Wakefield and Paine were close behind with 185.

Professional average the second day was won by Elliott with 196 out of 200. Hawkins was second with 195 and Marshall and Durston third with 188.

Amateur average the second day was won by Mr. A. W. Westover, Sutton Junction, P.Q., with 193 out of 200. In doing so he broke 98 out of his last 100 which was certainly a fine performance. Second average was won by Mr. A. W. Throop, Ottawa, with 191, who thereby confirmed the high reputation this well known target smasher has been making for himself this season. Mr. Westover received the handsome Ithaca gun offered as high average prize and Mr. Throop the handsome silver cup donated by Dr. W. J. C. Tomalin, Deloraine, Man.. W. H. Ewing and E. G. White were third with 189.

Professional high average for the tournament was won by J. Mowall Hawkins with 39 out of 400. Elliott was second with 388 and Durston third with 378.

Amateur average for both days was won by Walter H. Ewing with 378 out of 400. Mr. Ewing thereby became the holder of the very handsome and valuable solid gold and silver cup donated by the Toronto Indians and their friends, an honor which Canadian amateurs may well aspire to. A. W. Westover was second with 378.

The contest for the Ewing Cup excited a great deal of keen competition among the Indians to whom it was limited, and considerable amusement to the spectators. Each contestant was required to shoot in full Indian costume. The cup itself was a very handsome one on a large base embellished with a facsimile of a black bird target, and was the generous gift of Mr. Walter H. Ewing, Montreal. The contest was at 25 birds each day or 50 in all from the 16 yard mark. E. G. White, the popular Dupont representative, won out with

49, breaking his last 25 straight. The scores were White (Sah-aw-ko-kin-ap-i), 49; G. C. Thompson (Tasu-kamend), 48; G. M. Howard (Link-we-kinuk), 48; A. W. Westover (Black Hawk), 48; Thos. Upton, (Jam-Jam) 48; Geo. McCall (Eye-opener), 48; Walter H. Ewing (Long Buffalo Horn), 47; P. Wakefield (Powder Monkey) 46; Thos. A. Duff (King Pin) 45; E. C. Eaton (Manitou) 45; W. P. Thompson (Iron Face) 45; D. McMackon (Level Head) 45; W. A. Smith (Long Bill) 45; R. Fleming (Big Duck) 44; G. L. Vivian (Short Wing) 44; T. M. Craig (Ah-meek), 44; G. W. McGill (Holy Smoke) 43; F. H. Conover (Dave Hawk) 42; G. L. Wolf (Poundmaker) 42; J. Dodds (Pop 'em) 41

#### ANNUAL MEETING.

The annual meeting of the tribe took place in the council hall at the Place Viger Hotel, on Victoria Day, at 8.45 p.m. Every member present at the shoot was on his log. High Chief Dave Hawk (Forest H. Conover) was on the big log. The pipe of peace was smoked by all the members, and then Dave rose to the occasion and opened the pow-wow with "heap plenty talk," in which he congratulated the members on the success of the first tournament, as well as upon the good attendance.

At the close of his "talk" a fleet footed runner from the camp, who had been out scouting announced that Chief Long Talk (Hon. Tom A. Marshall) and Chief Brook Trout (J. A. R. Elliott), two chiefs from a tribe of friendly Indians, were approaching the council hall bearing glad tidings from Our brothers to the south. Chief King Pin was at once sent out to find

Big Duck King Pin, Holy Smoke, Short Wing.

them and he located them in the camp holding conversation with our squaws. They were at once disturbed, taken to the council hall and formally presented to the tribe in due and ancient form. Loud were the grunts of approval. Noses were rubbed and the pipe smoked whereupon they were escorted to two logs of honor which had hastily been prepared for them.

High Chief Dave Hawk called upon Chief Level Head to present the address of welcome, which he did to the great satisfaction of all.

High Chief Long Talk was first to reply. On rising he was greeted with war whoops, grunts and other marks of approval. He made an eloquent, cordial and friendly reply and assured the Canadian tribe that his band was at all times ready to help us in peace or in war. He expressed his pleasure at being present, his surprise at the perfect arrangements for the shoot as well as at the magnificence of the cups and souvenirs and assured us that with one year over our heads we had made as much progress as his tribe had in five years.

Chief Brook Trout ("dear old Jim") he is affectionately called in Canada) next rose to speak and was boisterously received. Brook Trout said he was too full (lump in throat) to speak, but wished to say how pleased he at-

10. W. A. Smith, "Chief Long Bill," 11. Dr. J. E. Overholt, "Chief Kill-em-quick"; 12. Harry Marlatt, "Chief Long Point"; 13. T. M. Craig, "Chief Ah-meek"; 14. John Dodds, "Chief Pop 'em"; 15. J. H. Thompson, "Chief Bald Pate"; 16. Geo. T. Wolf, "Chief Poundmaker"; 17. W. P. Thompson, "Chief Iron Face"; 18. G. M. Howard, "Chief Link-we-kinuk."

ways was to come to Canada. The oftener he came the better he liked to come. He also congratulated the tribe upon the progress it had made.

These two noted chiefs were then returned to the squaws for safe keeping until the council should adjourn, when they would again be taken in hand by the braves.

Considerable business was disposed of. Sixteen new members were elected as follows:—

TOM A. MARSHALL

U. M. C., EXPERT HIGH CHIEF OF AMERICAN INDIANS

Messrs. J. H. Rainville and R. B. Hutchinson, Montreal; M. E. Fletcher, F. B. Vallance, and H. A. Horning, Hamilton; George M. Donk, A. Dev, Dr. George G. Jordan and C. D. Ten Eyck, Toronto; H. Scane, Ridgetown; H. des Riveries, Quebec; Roy Luck, Point Edward; Dr. H. P. Stockwell, Sherbrooke; W. G. Doherty, Dr. J. Gunn and Dr. C. E. Holmes, Clinton.

The Dominion of Canada Trap Shooting Association was presented with a silver cup for competition at its annual tournament in August next, the cup to be known as "The Canadian Indians Trophy."

No decision was arrived at as to the date or the place of holding the next annual tournament.

FIRST DAY, MAY 24TH.—

namement, but it will go to the city or town whose club offers the best inducements. The date and place will be decided at a meeting of all Indians present at the Dominion tournament on August 8, 9, and 10, in Hamilton.

The election of officers resulted as follows:— High Chief, D. McMackon, Highgate, Ont.; High vice-chief, T. M. Craig, Sherbrooke, P.Q.; high scribe and chief of wampum, Thos. A. Duff, Toronto; council chiefs, Thomas Upton, Hamilton; George W. McGill, Toronto; H. des Riveries, Quebec; F. A. Heney, Ottawa; C. G. Thompson, Sherbrooke, Walter H. Ewing, Montreal, and W. A. Smith, Kingsville.

Votes of thanks were passed to the donors of cups and money prizes as well as to the retiring officers.

PRESENTATION OF PRIZES.

On Friday evening the small supper room of the Place Viger was a blaze of glory. The braves and many of the competitors were in evening dress, while the squaws and papposes were handsomely gowned. Mr. Thomas A. Duff was requested to act as toastmaster and opened the proceedings with an address of welcome. The first cup was presented by him to Edward G. White, Ottawa. This was the Walter H. Ewing Cup, open to Canadian Indians only. It was immediately filled with stuff out of bottles that makes a noise when the cork is pulled like a three-dram load of DuPont. Mr. P. H. Conover presented the Clarendon Hotel cup to Walter H. Ewing. More popping. Then Hon. Tom A. Marshall, high chief of the American Indians, presented to Mr. D. McMackon, high chief Canadian Indians, the Bailey Cup. In the course of Mr. Marshall's remarks he referred in glowing terms to our success, and expressed the hope that in the very near future the American and Canadian tribes would hold a joint tournament and pow-wow. The Ithaca gun was presented to Mr. A. W. Westover by Mr. F. H. Conover, the Dr. Tomlin cup to Mr. A. W. Throop by Mr. J. A. R. Elliott and the Toronto Cup to Mr. Walter Ewing by Thos. Upton, president of the Dominion Trap Shooting Association. Mr. Upton invited all to the tournament in August and thanked the tribe for the cup donated to the association. The ladies and children retired and the entertainment proceeded with speeches, songs and stories from every one present. During the course of the evening Mr. Thomas A. Duff on behalf of the Canadian Indians, presented to Hon. Tom A. Marshall, for the American Indians, a silver cup to be competed for at their annual tournament in Virginia in August next. Chiefs Long Talk and Brook Trout technically and eloquently replied.

From social and sporting points of view this tournament was a magnificent success, and all are looking forward to the 1907 meet.

The scores:—

REFLECTIONS.

In the opinion of the Canadian Indians, Place Viger means uniform courtesy, polite attention, unexcelled cuisine and splendid accommodation. King Pin made no mistake when he selected this fine hotel as headquarters for the Tribe.

x x x

A squad composed of D. McMackon, Thos. Upton, H. Scane, A. W. Throop and F. A. Heney broke 99 out of 100. But then what would you expect from such a squad? It is not surprising to know that the lost target was badly dusted.

x x x

Twenty one Montreal shooters took part in the Tournament which is a bright example some other local shooters don't always follow.

x x x

The Sherbrooke sound composed of Messrs. Thompson, Craig, Howard, Westover and Stockwell was hot enough to make one's wig-wag.

x x x

Mr. H. W. Brainerd, treasurer of the Dominion

ST. LAMBERT GUN CLUB, MONTREAL.

ion Cartridge Co., was a welcome visitor to the grounds both days.

x x x

Dave Hawk was unfortunate in the Ewing cup contest, his gun taking a bucking fit that cost him several birds.

x x x

Several shooters took the opportunity to make a long run by shooting the Lachine Rapids.

x x x

Quebec backed up their generous contribution in money to the committee with a generous contribution of good shooters to the tournament.

x x x

Short Wing took the opportunity of his visit to improve his already excellent French.

x x x

Sunny Jim's ear protector got out of place in the last event, last day, otherwise he would have landed professional average. However, it was a fight between the Winchester colors all the way.

#### Quebec Tournament.

The second annual tournament of the Quebec Gun Club was held at the Kent House grounds on Saturday, June 16th, and was an unqualified success. The high average for the day was won by Mr. W. H. Ewing of Montreal, while Messrs. H. des Rivières of Quebec, and G. M. Howard of Sherbrooke tied for second place. The team race was an interesting event, Sherbrooke won it, defeating Quebec by two and Montreal by three birds. The Foy Cup, open to Quebec members only, was won by Mr. des Rivières with Mr. Boswell second.

The scores:—

gramme designed to give the medium as well as the expert shot a fair chance for the average prizes offered, which in cash and trophies, were valued at \$87.00. The shooting was over Bowron traps with Bowron targets and both gave entire satisfaction.

G. M. Dunk, Toronto, won the high average in the 85-95 per cent. class, first day, for which \$5 was offered and won the high average for both days and the \$25 silver trophy. H. A. Mallory, Drayton, won high average for the second day and the prize \$5, and second high average for both days and the \$10 prize. W. A. Smith, Kingsville, won third high average and the \$5 prize for both days.

In the 75-85 per cent. class, A. Mahler, Ailsa Craig, won the average and \$5 first day and he and C. Harris, Owen Sound, tied for the average second day and divided the \$5.

In the 65-75 per cent. class, Dr. Cook, Elmwood, landed the \$5 prize, each day. J. Storer got the silver sugar bowl for low average first day and P. G. Doersam the silver sugar bowl for low average the second day. Mr. Doersam, also landed the silver trophy for low average both days.

The prizes in the merchandise event were won by Dunk, Mallory, G. B. Smith, Mahler, Harris, Duff and Dr. Cook. The principal prize a case of Sovereign loads, was hotly contested for by the 18's, and developed into a battle royal between Dunk and Mallory who had to shoot off several ties before either got an advantage. Finally Dunk won out by one bird.

The scores:—

REFLECTIONS.

Mr. Dr. Smith did good service as referee both days.

The hotel kept by Mein Herr Pete Doersam was shooter's headquarters and for a good meal for a hungry shooter, we recommend Pete's.

Mr. Jacob Steinmiller was the oldest shooter on the ground, and, also, the most jovial. A shoot in that neighborhood is not complete without Jacob.

Dr. Perdue, Messrs. Willets and Beetsche

# THE COAXER

## The New Trout Bait

it's shape and don't wear out. Send for cat along of new specialties

W. J. JAMISON, Dept. R.  
1085 LEXINGTON ST., CHICAGO

is absolutely weedless

came over from Clifford, each day, and made some good scores. Clifford boys will hold a shoot next month with something new in the way of a handicap.

During both days of the shoot several meadow larks flew back and forth within easy range of the guns, carrying food to their young. It was a creditable thing that no attempt was made to disturb them and the only concern of the shooters was that some of them might be accidentally hit. I wonder how many men outside the ranks of the trap shooter would have stood around for two days with loaded guns within easy reach and not taken a shot at such a tempting mark? Trap shooting is intended to and does teach one better things than the useless sacrifice of bird life.

Ayton is beautifully situated on high land commanding an extensive view of as rich and picturesque a country as the writer has ever seen. It is on a branch of the Saugeen River which furnishes splendid trout fishing. It would well repay a visit from the tourist and angler.

It is worth noting that all the average prizes were won with Dominion shells. Last year there was not a Dominion shell used in this locality. This year, with one or two exceptions, all used either the Sovereign, Imperial or Regal.

#### Jordan Station Tournament.

The Winchester Gun Club of Jordan Station held the most successful shoot since its formation on their grounds Victoria Day. A large number of shooters were present from Hamilton, Beamsville and other points and all went home more than pleased with the way they were treated by the club. The weather was all that could be desired and some very fine scores were made. The ladies of the club are to be congratulated on the fine dinner which they served to everybody at the club house.

#### Dartmouth Doings.

The monthly shoot of the Dartmouth Rod and Gun Club took place June 6th. A large number of members were present and the scores made were high. The fourth event, for the Laffin and Rand Cup, 25 targets, handicap, resulted—1st, Jas. Egan, 25; 2nd H. D. Romans, 24; 3rd, A. Edwards and J. Henneberry, 23.

A special meeting of the Dartmouth Rod and Gun Club was held at the club house June 1st for the purpose of discussing the advisability of purchasing a lake for fishing purposes. A committee was appointed to look into the matter and it is proposed to buy or lease a lake not at present a resort of sportsmen, and stock it with fish. The lake will be for the use of members only.

As illustrating to what perfection Winchester factory loaded shells have been brought by modern and scientific methods of manufacture, the recent score of Mr. J. A. Flick, a simon-pure amateur of Ravenna, O., is pertinent. At the tournament of the Tuscarawas Gun Club held in Canal Dover, O., May 25-26, he made a straight run of 235 targets, his score for the second day being a perfect one of 200 out of 200. That this is very remarkable shooting is indicated by the fact that it is the world's record for an amateur. In making this score Mr. Flick used Winchester factory loaded "Lead er" shells, which hold all the world's championship trophies, won the last and biggest Grand American Handicap at live birds and the last two Grand American handicaps at targets. Besides this, they hold the world's record long run of 419 targets, which was made by W. R. Crosby, one of the greatest trap shots in the country. All of which suggests the reason for the popularity of Winchester factory loaded shells.

## THE "Featherlight" Reel

Is always right. It runs as slick as oil. The **cheapest, lightest and strongest** reel made. Only low-priced reel made with **hardened steel** bearings and click. No gearing to get out of order. Click double-pointed reversible. Perforated sides dry line, prevent rotting and loss of fish. No danger of denting

it on line or frame. No screws in frame to jar loose and get lost at critical moment. Spool instantly released when necessary. Guaranteed not to get out of order like other reels, with brass click and bearings which soon wear out, making reel useless. Ours are hardened steel.

We repair our reels free, which no other maker will do. Made in nickel and bronze. Hand somely finished. Sixty yards Trout or Bass, eighty yards Bass (bait casting); \$2.00 each. Stop at nearest dealers and see them. Look for stamp "Featherlight." Send postal for our booklet all about reels and landing nets.

## "THE COMMON WAY"

From "Camp Kits and Camp Life" copyright, 1906, by Charles Scribner's Sons

**By CHARLES STEDMAN HANKS "NIBLICK"**

*Author of "Hints to Golfers."*

A practical handbook for the woods, founded on many camping trips with a varied assortment of guides and after many kinds of game and fish. The veteran sportsman as well as the neophyte will read the book with pleasure and profit. It takes up camp cooking, outfit, illness in camp, shooting, fishing, trapping, and general woodcraft.

There are cross-headings for each topic, and in addition there are conspicuous running head-lines giving the subjects of each page. The index is also full and definite; moreover the chapters classify the information in exactly the way the sportsman is apt to need it. The book is the size and shape to slip conveniently into the pocket.

A valuable manual of every phase of out-door life. Offers a thousand and one suggestions.—*Boston Transcript.*

AN UNEXPECTED SHOT

"A complete encyclopaedia of the requisites for camping, practical and helpful, and should drive all who can get there to the woods"—*N. Y. Sun.*

GERHARD MENNEN CO., Newark, N. J.

# Marble's Rifle Cleaner

This cleaner can be attached to any standard rod, and may be freely used in the finest rifle without the possibility of injuring it.

Each of its sections or brushes is composed of six washers, of the softest brass gauze that can be made, and all are a trifle less in diameter than the bore for which they are designed. By this arrangement the spring of its spirally-bent steel backbone presses but one side of each brush against the bore and the twist in the wire causes the cleaner to follow the lines of the rifling, with the result that every atom of the bore is treated, and that all leading, copper, rust or caked powder is quickly removed.

This cleaner does its work thoroughly and is exceedingly durable. Ask your dealer first. Price prepaid, 50 cents. Field Cleaner 75 cents. Mention caliber. Send for 56 page, 1906, free catalog "U"

## TO FILL The ORIGINAL and ONLY GENUINE CONKLIN'S SELF-FILLING PEN

Simply dip in the ink, press with the thumb, and the CONKLIN PEN is filled and ready for instant use. It is simple, convenient, efficient, with no complex mechanism and nothing to get out of order.

The elastic ink reservoir is compressed by the presser bar under the thumb, and, when released, instantly draws in the ink through the feed channels at the point. The quickly adjusted lock-ring prevents ink from being forced out again. Feeds regularly until the last drop of ink in reservoir is used. Always responds without kick or balk. Cleans itself as easily as it is filled. Fully guaranteed.

If your dealer does not handle the CONKLIN PEN, let us make you our Special Offer to Fountain Pen Users. Full information, with illustrated catalogue, sent upon request. Sold by dealers everywhere.

# A Chatham Kitchen Cabinet Cuts Your Work in Half That's a Fact!

Just think of the steps you take in your kitchen every day in the preparation of *one single meal*—running to the pantry—running to the cellar—running back and forward across the kitchen getting cooking utensils and supplies together

A CHATHAM KITCHEN CABINET simplifies all this.

—A place for everything and everything in its place—handy, compact, convenient. It keeps household supplies clean and fresh.

You can sit at this Cabinet, and everything necessary for baking and cooking are within reach without rising.

No housewife will be without one after she has once used it.

THE CHATHAM KITCHEN CABINET is mouse-proof—rat-proof—dirt-proof.

It's the most convenient piece of furniture ever put into a house—and the price is within the reach of all.

CHATHAM KITCHEN CABINETS are

## Sold on Time

Our easy terms of payment make it possible to own one of these Cabinets without noticing the expenditure.

I want you to know about this—I want you to have our booklet, which tells you about our various styles and prices. This book is FREE.

Write to me for it and I will send it to you at once.

My Free Book will tell you all about my many styles and sizes of Chatham Kitchen Cabinets. It will tell you how I pay freight on any Cabinet you order, direct to your station, selling it to you at factory price. You should get this book at once. Write today while you think of it.

MANUFACTURERS OF

## Gasoline Engines AND Launches

If you want a first-class, reliable, up-to-date, simple in construction, easy to handle, marine engine, at a reasonable price, and one that will give you entire satisfaction, buy one from McKeough & Trotter, Limited, Chatham, Ont.

The following letter is a sample of the many we are constantly receiving:

"Chatham, Ont., Jan. 2, '06.  
McKeough & Trotter, Limited, Chatham, Ont.

Gentlemen: I take much pleasure in testifying to the superior qualities of the six horse power gaso marine engine furnished me by your firm. I cannot say too much in its praises as it is thoroughly reliable, easy to start, and I have never known it to miss fire. It is well balanced; the exhaust is nearly noiseless; the oiling arrangements are perfect; the engine is strongly and compactly built; the wearing surfaces are of generous dimensions, after being in commission for months and running hundreds of miles I find no perceptible wear, and no repairs or changes of any kind have been made during this time. To any one wanting an engine of this kind I would strongly recommend them to give your engine a trial.

Name given on application."

Send for  
Catalogue.

Our circular truthfully states particulars. Write for it.

ADDRESS **FRANKLIN HAWLEY & COMPANY** Austin Station CHICAGO

## Twenty-Nine Tissue Salts

The Ensign Remedies contain twenty-nine tissue salts in combination. These include the twelve salts ordinarily used and seventeen of our own. All physiological chemists support our claim that there are twenty-nine or more salts necessary to normal bodily functions. The secret of the seventeen different salts and the many combinations we have discovered, remains the exclusive property of this Company.

For many years multitudes of cures have been wrought

through the sole use of the original twelve salts known to all. These cures would not be possible through any other agency. But frequently, diseases arise that cannot be affected by any one of these twelve salts. Granting that the principle of the curative value of tissue salts is correct, the explanation for these failures to cure must be that there are more than the twelve salts discovered by Schuessler.

This position is confirmed by the fact that, with the twenty-nine tissue salts and their combinations, we now cure nearly every human disease. The few that are still unmoved by our treatments, but further prove the correctness of the principle upon which our system is based. We believe that ALL diseases are curable. We hope that our investigations, thus far so positively successful, will eventually enable us to offer hope to every last sufferer of a so-called incurable disease.

As an explanation of our system we will say in short that our remedies are foods known as tissue salts. These tissue salts are inorganic elements of the human body. The lack of these elements in the body in the proper proportions subjects the individual to disease. An unusual exposure or a heavy strain on some set of tissues or organ of the body is often the cause of this condition. Our remedies supply these tissue building elements when nature is unable to do so.

For more minute information send for our booklets on General Diseases; on Private Disease; on Women's Diseases; on Varicocoele, Varicose Veins, free to all. Send for the

ones you want. They explain and are worth reading. No

"Secret" literature, only good sense.

**THE WILLIAMS MF'G Co.**

MONTREAL.

When writing advertisers kindly mention ROD AND GUN IN CANADA.

IF LIVE BAIT will ever catch more fish than a "Dowagiac" artificial minnow, it is the exception. 19 times out of 20, game fish 'strike' only to attack the lure.

## "DOWAGIAC"

### Artificial Minnow

MORE "DOWAGIAC" BAITs are sold every year than all other Artificial Casting Bait combined.

*The "Dowagiac" Bait Products for 1906 are just a little handsomer and more perfect in construction than ever before.*

A piece of painted wood with a fish-hook attached is not a criterion for artificial bait. "Dowagiac" baits are the result of many years' experience of practical bait casters. Every detail has been carefully worked out and *that is why* the "Dowagiac" minnow will land your fish at a time when he would slip off the other fellow's bait.

"Drop a line" to us and catch one of our booklets showing our minnows printed up in their natural colors.

## "New Century"

### TELESCOPIC STEEL FISHING ROD

This is the Rod you have been looking for.

The "New Century" is made of *seamless steel tubing*; extends instantly to any desired length; automatically locks in any position; guides outside; all joints telescope into handle joint (17 1/2 to 30 inches).

The "New Century" is better made, better balanced, lighter in any length, stronger and more durable than any other steel rod.

It is not necessary to look for our "trade mark," the "New Century" is distinguished from "tip to butt," a beautiful piece of mechanism.

*No joints to shake loose—get lost, no wood in the handle to shrink, no unjointing, no line cutting. A practical fishing rod, combining all the best features of high-grade bamboo, with the strength and durability of high-grade steel, and which can be comfortably carried "up a sleeve."*

All "New Century" rods are equipped with our patented single grip, one-piece, reversible handle (the only handle of this description on the market and used only on our rods).

*Bait, fly, muskallonge and sea fishing rods in all lengths.*

*Telescopic gear and net handles. All rods guaranteed. Write for Catalogue E.*

## PHYSICAL DEGENERACY.

Mrs. Ruth Jackson declares in the "Nineteenth Century" that "the Englishwoman of today is the worst housekeeper in the world, while two hundred years ago she was the best." Mrs. Jackson attributes the present notorious decay of the domestic virtues in England to the degeneracy of the race. If Mrs. Jackson knew America as well as we do she would admit that we dispute the first position in degeneracy with the British. All this can be cured however and it must be. Fresh air, exercise, sulphur, sand, sun and clay baths, canoeing, fishing and shooting, snow shoeing, skiing, and winter camping, whichever is the most convenient to take. I am ready to furnish to thousands of persons.

In the meantime I quote (abbreviating) from Elbert Hubbard a standing prescription to be observed daily as a help to dear old Mother Nature, in the arrest of physical degeneracy.

If you have no appetite, do not eat. If you have appetite do not eat too much. Be moderate in the use of everything except fresh air and sunshine. Ecclesiastes advises MODERATION, Buddha EQUANIMITY, William Morris, WORK, St. Paul, LOVE.

Hippocrates the father of medicine said what has been repeated in better phrase by Epicurus, the slave to his pupil, the Roman Emperor, Marcus Aurelius, observe MODERATION, EQUANIMITY, WORK, and LOVE.

Times have changed since these ancients spake. Nowadays many work too much; to such I would say have one season in the year, if not two, of exercise and amusement. I would like to have a chance to prescribe free.

Address: L. O. ARMSTRONG,

Colonization and Tourist Agent, Canadian Pacific Railway, Montreal.

## High Power Big Game Rifles

You don't use a tack-hammer to drive a tenpenny nail; neither should you use a low power rifle when you hunt big game. What you need is a Winchester high power rifle—one that hits a smashing, knockdown blow. Such rifles are the Model 1886, .33 Caliber; Model 1894, .30 Winchester and .32 Special Calibers, and Model 1895, .30 Army, .35 and .405 Calibers, using high power smokeless powder cartridges with metal-patched, soft-pointed bullets. The accuracy, reliability and killing power of these rifles is established, and if you sight right the game is yours. Winchester guns and Winchester ammunition are made for one another. Ask for Winchester make.

## FOR A COMPLETE MAIL ORDER ADVERTISING COURSE

**Biggest Offer Ever Made. Nearly 900 pages of interesting, solid and instructive matter relating to every subject of ADVERTISING in the MAIL ORDER BUSINESS.**

**I**F you are a business man, advertising student, mail order man, ad writer or connected in any way with advertising or the mail order business, send \$1, and take advantage of this offer today. Our handsomely cloth bound book,

### Principles of the Mail Order Business

is the most complete, practical and comprehensive book on this branch of advertising ever published; written by an expert. This important subject has never before been fully treated in a special work of this kind. A complete synopsis of contents is impossible in the space allotted in this ad, but it covers every branch of the mail order business in **20 complete chapters, fully illustrated**, such as, The Standpoint of the Small Dealer, How to Keep Records, Following up Inquiries, The Catalogue Business, Selling Goods through Agents, The Mail Order Medicine Business, Legitimate Schemes, The Trust or Consignment Scheme, Advertising Mediums, Typographical Details, Postal Pointers, Financial Mail Order Advertising, Real Estate Mail Order Advertising, Etc., Etc. This book is just the thing for the manufacturer or merchant who wants to add a mail order department, and a valuable guide to those who intend to start a mail order business.

### Advertising (MONTHLY)

has for its contributors the most brilliant and experienced advertising men in the world and every conceivable subject pertaining to Advertisement Writing, Space Buying, System, Methods, etc., is discussed in a masterly manner at once interesting to the tyro and convincing to the most experienced advertisers—such as: The Chance for the Small Business, Mailing Cards, The Value of Price in Advertising, Why Booklets Bring Business, Doctors and Advertising, Saving Bank Business by Mail, Retail Advertising in the Country, How Country Merchants can draw Trade, Continuous Advertising, Inactive Advertising Matter, Etc., Etc., and a mass of other interesting matter too numerous to mention. The man who is studying advertising by correspondence will be interested in "The Letters of an Advertising Man to His Younger Brother," which discusses in a series of heart to heart talks the trials, difficulties and temptations that beset the young advertising writer in learning and following his profession. 64 pages, issued monthly, and for \$1, you will receive 12 numbers and a copy of Principles of the Mail Order Business, making over 900 pages in all. This is the biggest bargain ever offered. Send your order to

### Chicago College of Advertising

Book Dept. 10 Royal Insurance Bldg., CHICAGO.

**FREE**—We will also send you a copy of our 64 page booklet, "How to Become an Advertising Man," which describes in detail the most complete and comprehensive advertising course taught by any advertising college in America.

Postage  
12 CENTS

## "THE COMMON WAY"

From "Camp Kits and Camp Life" copyright, 1906, by Charles Scribner's Sons.

## By CHARLES STEDMAN HANKS "NIBLICK"

Author of "Hints to Golfers."

A practical handbook for the woods, founded on many camping trips with a varied assortment of guides and after many kinds of game and fish. The veteran sportsman as well as the neophyte will read the book with pleasure and profit. It takes up camp cooking, outfit, illness in camp, shooting, fishing, trapping, and general woodcraft.

There are cross-headings for each topic, and in addition there are conspicuous running head-lines giving the subjects of each page. The index is also full and definite; moreover the chapters classify the information in exactly the way the sportsman is apt to need it. The book is the size and shape to slip conveniently into the pocket.

A valuable manual of every phase of out-door life. Offers a thousand and one suggestions.—*Boston Transcript.*

## AN UNEXPECTED SHOT

IF LIVE BAIT will ever catch more fish than a "Dowagiac" artificial minnow, it is the exception. 19 times out of 20, game fish strike only to attack the lure.

## "DOWAGIAC" Artificial Minnow

MORE "DOWAGIAC"  
BAITS are sold every  
year than all other  
Artificial Casting  
Baits combined.

The "Dowagiac"  
Bait Products  
for 1906 are just  
a little hand-  
somer and more perfect in  
construction than ever  
before.

A piece of painted wood with a fish-hook attached is not a criterion for artificial bait. "Dowagiac" baits are the result of many years' experience of practical bait casters. Every detail has been carefully worked out and that is why the "Dowagiac" minnow will land your fish at a time when he would slip off the other fellow's bait. "Drop a line" to us and catch one of our minnows showing our minnows printed up in their natural colors.

**JAS. HEDDON & SON, Dept. 10E, Dowagiac, Mich.**

Distributed in the Dominion by Wood, Venance &amp; Co., Hamilton, Ont.

# Sporting Goods

*As Advertised  
in Rod and Gun*

We have just looked through the April issue, and in our opinion it is a fine magazine. We issue a 300 page catalogue containing 1000 illustrations of articles used by sportsmen. The goods of nearly every American advertiser in Rod and Gun are shown and priced in our Catalogue, as well as the product of a large number of factories and makers who do not advertise in it. We will send you a copy on receipt of Ten Cents.

CATALOGUE ON APPLICATION

**ROSS RIFLE COMPANY**  
**Quebec**

# *The Province of Quebec*

*From the Sportsman's View Point.*

No country in the world possesses a greater variety or more attractions in the line of sport than historic Quebec. When a little better known it will surely become the "Mecca" of devotees of sport; the angler is very much in evidence now even, from 1st May to 30th September, putting forth his best efforts to secure the silvery salmon, the beautiful speckled or sea trout, or yet again the pugnacious bass.

Autumn sees the sportsman again around with rifle or shot-gun, tracking the fleet Caribou or Red Deer or snugly ensconced on the shores of a lake, waiting for an opportunity to lay low the king of the forest, the mighty Moose. Others are content to frequent the hardwood ridges or beaches, in quest of the ruffed grouse, or wild fowl. Few, if any, return unrewarded for their efforts.

A large area of territory is now under lease to clubs, but there is ample room for more; as for the transient sportsman, there is a wealth of territory at his disposal, e. g. in the Upper Ottawa, St. Maurice, Lake St. John and on both sides of the St. Lawrence below Quebec City. Access to all these points is easy, either by rail or water way.

Fishing licenses for the season for non-residents, cost \$10.00 for hunting \$25.00.

Fishing and hunting territories are obtainable at very reasonable rentals, in any part of the Province where crown lands exist. There are still some very desirable salmon rivers available in the Lower Gulf district.

The Government will in all probability, allot territory to Fish and Game Clubs in the recently created Reserve, in the Peninsula of Gaspé, reserving of course the interior for propagation and a limited amount of shooting and fishing.

## *"Laurentides National Park."*

This renowned hunting and fishing territory takes on increased popularity yearly. Dates for hunting and fishing may be applied for at any time. Increased accommodation will be provided for sportsmen by 1st September, 1905, in the great Caribou Barrens.

For information of any kind re Sport, address

The Hon. Minister of Lands, Mines and Fisheries,  
Quebec, P. Q., Canada.

## CONVINCING REASONS

Why the WITCH-ELK  
Hunting Boots are best

For  
Sportsmen  
Engineers  
& Miners

They are the  
lightest boot on  
the market, qual-  
ity and material  
considered.

They are made to fit, and wear. They are practically  
waterproof—if properly taken care of. There are no  
nails or anything to gall the feet. They will not harden.

Niverville, Man.,

Feb. 7, 1906.

Wolverine Motor Works,  
Grand Rapids, Mich.

Gentlemen:— It gives me great pleasure to tell you that the 6 H. P., 2 cylinder, 2 cycle engine, I bought from you last June has given the best of satisfaction, on the River and also on the Lake. It drives my 22½ ft. boat close to 11 miles an hour, and does it easily.

The best part, however, is the ease of handling it. It is seldom that I have to use the crank more than once a day as it would hold the compression in the hottest sunshine for four or five hours, and has repeatedly started by the lever alone after not being used for 1½ to 2 days.

We lived through the worst storm on Lake Winnipeg of the season '05 and would surely have been drowned had the engine stopped on us.

Respectfully yours,  
WM. B. MEY.

New Orleans, La., Feb. 1, 1906.

Wolverine Motor Works, Grand Rapids, Mich.

Gentlemen:—Your 75 H. P. Engine, which we have been using for the past 12 months, has been satisfactory in every respect.

We take great pleasure in mentioning to you some of the work it has been doing. We make two trips weekly, a run of 260 miles round trip up and down the Mississippi River, without counting landings, 9 miles per hour against the current, at an average speed exceeding all expectations.

The motor is installed in an 80 ft. by 17 ¼ ft. beam freight carrier, and will state that we had no trouble whatever.

We wish to compliment you and your southern representative, Mr. Bruguiere, on having the best gasoline boat in this part of the country. We have been using this engine for 12 months, and find her to run smoother every day. We take pleasure in recommending this engine.

Yours truly,  
SPICUZZA BROS.

# WOLVERINE MARINE ENGINES

## One Grade Only—The Highest

Have stood as the standard of excellence for 20 years—the highest art in marine gasoline engine construction, 5 to 100 h. p., 2 and 4 cycle, self-starting and reversing.

**SPECIAL OFFER** How to get boat plans worth \$50.00 to \$200.00 for pleasure or working boats without cost to you. Write us at once for complete information and Catalog No. 26.

**WOLVERINE MOTOR WORKS, Grand Rapids, Mich., U.S.A.**

**WE** are probably the largest exclusive marine gasoline engine manufacturers in the world.

**TWENTY** years of scientific study and careful experimentation MUST have resulted in something.

**OUR** special method of construction insures long life and freedom from annoying breakages.

**EVERY** engine is thoroughly tested and inspected before it leaves the factory.

# "A Fisherman's Luck"

is good luck when he has **Shredded Wheat Biscuit or Triscuit**—the favorite food for the lover of outdoor sports and pastimes—containing all the strength-giving elements of the whole wheat berry in concentrated digestible form.

If the fisherman returns without fish there is shredded wheat for the camp—ready cooked, ready-to-serve, palatable and appetizing—good in any climate in any season.

Warmed over the camp-fire, **TRISCUIT** is a crisp, delicious "snack," with or without butter, supplying the maximum amount of nutriment in smallest bulk. It is the whole wheat, cleaned, steam-cooked, drawn into porous shreds, compressed into a wafer, and baked.

## "Made in Canada."

THE CANADIAN SHREDDED WHEAT CO. LTD.

NIAGARA FALLS, ONT.

## PHYSICAL DEGENERACY.

Mrs. Ruth Jackson declares in the "Nineteenth Century" that "the Englishwoman of today is the worst housekeeper in the world, while two hundred years ago she was the best." Mrs. Jackson attributes the present notorious decay of the domestic virtues in England to the degeneracy of the race. If Mrs. Jackson knew America as well as we do she would admit that we dispute the first position in degeneracy with the British. All this can be cured however and it must be. Fresh air, exercise, sulphur, sand, sun and clay baths, canoeing, fishing and shooting, snow shoeing, skiing, and winter camping, whichever is the most convenient to take. I am ready to furnish to thousands of persons.

In the meantime I quote (abbreviating) from Elbert Hubbard a standing prescription to be observed daily as a help to dear old Mother Nature, in the arrest of physical degeneracy.

If you have no appetite, do not eat. If you have appetite do not eat too much. Be moderate in the use of everything except fresh air and sunshine. Ecclesiastes advises MODERATION, Buddha EQUANIMITY, William Morris, WORK, St. Paul, LOVE.

Hippocrates the father of medicine said what has been repeated in better phrase by Epictetus, the slave, to his pupil, the Roman Emperor, Marcus Aurelius, observe MODERATION, EQUANIMITY, WORK, and LOVE.

Times have changed since these ancients spake. Nowadays many work too much; to such I would say have one season in the year, if not two, of exercise and amusement. I would like to have a chance to prescribe free

## TO FILL The ORIGINAL and ONLY GENUINE CONKLIN'S SELF-FILLING PEN

Simply dip in the ink, press with the thumb, and the **CONKLIN PEN** is filled and ready for instant use. It is simple, convenient, efficient, with no complex mechanism and nothing to get out of order.

The elastic ink reservoir is compressed by the presser bar under the thumb, and, when released, instantly draws in the ink through the feed channels at the point. The quickly adjusted lock-ring prevents ink from being forced out again. Feeds regularly until the last drop of ink in reservoir is used. Always responds without kick or balk. Cleans itself as easily as it is filled. Fully guaranteed.

If your dealer does not handle the **CONKLIN PEN**, let us make you our *Special Offer to Fountain Pen Users.* Full information, with illustrated catalogue, sent upon request. Sold by dealers everywhere.

## YOUNG MEN AND WOMEN WHO CAN DO THINGS !!

The world's greatest need to-day is MEN AND WOMEN WHO CAN DO THINGS—the cry is not for INCOMPETENTS—the world is full of them. Men and women who can do some special work that everybody cannot do, and who can do it unusually well, are held at a PREMIUM. The world needs such people, will HAVE them, and will PAY them well. But one thing is needful. It is PREPARATION. This is the great work of our school. We have prepared thousands of young people for better things in life, and many of the most successful business and professional men and women of the country to-day owe to US their ability to DO THINGS WELL.

Our coupon is below. If there is a course in it that interests you, mark it, cut the coupon out and return it to us TO-DAY

NAME

# Marble's AUTOMATIC FLEXIBLE JOINT Rear Sight

## Important Features and Advantages:

1st.—**AUTOMATIC JOINT.** Whenever the sight is struck on front or back the coiled spring in the hinge brings it instantly into position for shooting. It can be locked down at will by the sliding button at back of hinge.

2nd.—**CAN BE USED ON RIFLES WITH LONG FIRING BOLTS,** and to better advantage than receiver sights on account of being closer to the eye.

3rd.—**ELEVATION LOCK.** By simple construction the lower sleeve, when turned up against the elevating sleeve, prevents it from being turned and holds disc stem true and rigid at any elevation.

Disc No. 2 (attached to stem). Disc No. 1.  
Both discs furnished with each Marble Sight.

4th.—**INTERCHANGEABLE DISCS.** These fit any Marble sight as will also the Sidelight and Target discs.

5th.—**POINT BLANK ADJUSTMENT.** A screw in the bottom of disc stem permits a quick change of point blank range without tools.

This sight will suit all American rifles, but when ordering state whether or not rifle has pistol-grip stock and be careful to give model and calibre.

Ask your dealer first. Price only \$3.00.

New and up-to-date Front Sights are described in new free catalogue "U".

**MARBLE SAFETY AXE CO., Gladstone, Mich.**

**CHAS. H. PERDEW, sr.,**  
Lock Box 461, HENRY, Ill., U. S. A.

Here are some reasons why a *Marlin* Model 1897, .22 caliber repeating rifle is the most satisfactory small bore repeater you can possibly own. : : :

In finish, workmanship and balance this rifle is unsurpassed. The *Marlin* quality of steel drop-forgings constitutes all the working parts. Every single piece and screw and pin in this gun is made with care to a standard pattern so that all parts are positively interchangeable. The barrel of excellent steel is carefully bored and the deep rifling gives absolute accuracy and great wearing quality. This and other *Marlin* rifles are the only repeating rifles to which telescopes can be

attached because the top of the breech is solid and the empty shell is ejected from the side.

The fact that this rifle handles .22 short, .22 long, and .22 long-rifle cartridges appeals strongly to all lovers of the small bore rifle.

For all sorts of small game this rifle is recommended, and with the long-rifle cartridge it is very deadly to hawks, owls, eagles, geese, ducks and any other shy birds which are hard to approach and require a hard blow to kill.

As a target rifle at long or short ranges, with or without a telescope, the *Marlin* Model 1897, .22 caliber repeating rifle is the guaranteed equal of any in the world.

If your dealer cannot supply you, write us direct. A complete description of Model 1897 is given in our 1906 Catalog. Sent FREE for six cents postage.

SEPTEMBER 1906

NO. 4

### A Royal Fisherman in Canada.

**W**HEN it became known that Prince Arthur of Connaught had been selected by his Majesty, King Edward the VII, to convey to his distinguished ally, the Mikado of Japan, the highest mark of his Royal favor, the Knighthood of the Garter, hopes were freely expressed that the Prince might be induced to return home via Canada. It was felt very strongly that this young Prince—standing in such close relationship as he does to the Throne of Great Britain—should be afforded an opportunity of seeing for himself as much as possible of the great Dominion—the chief of that wonderful galaxy of young nations in the making which gives such a world reputation and weight to the British Empire.

The wishes so generally and heartily expressed were graciously acceded to, and after his successful visit to Japan, in the course of which his important errand was discharged with soldierly efficiency, the Prince crossed the Pacific and landed on Canadian soil.

It may be well to remind our readers that Prince Arthur of Connaught is the eldest of the King's two fraternal nephews—the son of his only surviving brother, and the lives of his cousins and his cousins' children alone stand between him and the Heirship to the Throne. In addition to his membership of the Royal House, and his position in the British army, Prince Arthur has another claim upon the consideration of all Empire loyalists.

When King Edward, through his father the late Prince Consort, became entitled to select between the Kingdom of Great Britain and the German princi-

pality of Saxe-Coburg-Gotha—and of course chose the former—his brother, the late Duke of Edinburgh, became the reigning Grand Duke. On his death and the death of his only son, the Grand Duchy devolved upon the Duke of Connaught, who preferred to retain his position as a member of the British House of Lords, and an officer in the British army rather than become a German reigning Grand Duke. Prince Arthur expressed the same preference and passed on the title to his young cousin, the Duke of Albany, the only son of the late Prince Leopold, Queen Victoria's youngest son. This incident has endeared the Prince to all who are Britons first, in whatever part of the Empire they may dwell, and commended the pleasant young Prince to the generous good will of the Canadian people.

For some time before the Prince was due at Victoria, the Canadian Pacific Railway, who always worthily represents the great Dominion on such occasions, had its preparations well in hand. The Royal train, which carried the present Prince of Wales across the continent, was overhauled, and was run to Vancouver to await the arrival of the Prince and his suite, having been made in every detail a fitting home for Royalty during what meant a triumphant progress across a continent.

Remembering that all the members of the Royal House of Great Britain are sportsmen, and more particularly anglers—the Duchess of Fife, the King's eldest daughter, is particularly notable for her skill with the rod—it was arranged to give the Prince some fishing trips.

The trout fishing in British Columbia could not be overlooked. Accordingly two days were spent in fishing in the Cowichan River. This stream empties into the Gulf of Georgia on the eastern side of Vancouver Island. It is very swift at its head but grows deeper and broader as the contributions from numerous tributaries flow in on its way to its mouth.

The Prince's party arrived at Duncan about noon on March twenty-ninth, and remote though the district is

with the Prince, who unmistakably, showed his inclination on this occasion. Accompanied by Mr. W. F. Burton, one of the best fly fishermen of the Province who knows the holes and eddies of the lake, the Prince had fine sport. He speedily demonstrated that in capturing trout he required no tutor, and wisely, Mr. Burton confined himself to pointing out the likely places. The Prince continued until darkness compelled him to desist by which time he had hooked about a dozen fine trout.

PRINCE ARTHUR'S FISHING PARTY AT COWICHAN LAKE, VANCOUVER ISLAND

there were ample evidences of loyalty in bunting galore, and the welcoming songs and shouts of school children.

After lunch half the party, including the Prince, drove to Cowichan Lake in autos, and through the big trees they had a continuous succession of fine vistas. The logging operations seen on their way proved of great interest to them. The journey of twenty-five miles was completed between four and five in the afternoon.

Fishing was the immediate business

By the time the sport gave out the fishermen realized that they were hungry, and even Royalty could not guard against such a human frailty. To the general dismay, when they returned to camp it was found that the wagons containing the provisions and cooking outfits had not arrived. Ten minutes later however they appeared upon the scene and within forty minutes a most appetizing repast was spread. The dinner which would have done honor to the Astor Hotel, tasted all the better by

H. R. H. PRINCE ARTHUR AND PARTY ON HAND CAR AT CASTLE MOUNTAIN

reason of the keen appetites gained by the drive, the fishing, and the waiting in camp. Of course the principal dish was the fish so skilfully caught by the Prince himself, and upon which the chef had bestowed his best efforts. This chef did credit to the dining car system of the Canadian Pacific Railway. Diners, and chef were alike satisfied and expressed themselves to that effect with a freedom that alone must have convinced the Prince that he was amidst new and less trammelled surroundings than is generally the lot of Princes.

Although it was raining the next morning the Prince was not to be denied a further indulgence in Canadian fishing and the casting went on until he had added several more fine trout to his score.

The return journey was made by some of the party by canoes with expert Indian guide and every one enjoyed the beautiful scenery through which they glided. They had the experience of swift water which made the journey exciting and a little dangerous—the said dangers being minimised by the excel-

lence of their guides. To taste the full height of enjoyment there must be a spice of danger.

There was neither loyalty or royalty in the weather for it rained the whole of the time, but despite this drawback all the members of the party had a pleasant trip and thoroughly enjoyed themselves. The flies used by the Royal Fisherman were the March Brown and a Cowichan Coachman. The latter is a local fly but little known outside of Vancouver Island. It has a scarlet back and dark feathering and is good for early fishing. On the occasion of the Royal visit it was the favorite.

The members of the party who remained at Duncans had also plenty of good sport, General Kenny-Kenny obtaining a magnificent steelhead.

After this fine outing the whole party returned to Victoria and next day made a special trip to Vancouver on the "Princess Victoria."

Quite a number of stops were made after the transcontinental was taken. At Sicamous the Prince left the train and

WAITING TO CROSS THE GATINEAU

had a row and some good fishing on the beautiful lake of the same name. He proved an expert oarsman, putting plenty of muscle into every stroke, and apparently enjoyed this quite as much as any other of his Canadian experiences—perhaps even a little more so. He was able to take some quiet enjoyment away from all the bustle and fuss of official life, and enjoyed it to the full.

At one stop at Castle Mountain, a photograph was taken of the Prince on a handcar.

Through the mountains to the prairies went the train, and the Capital of the West, the fine City of Winnipeg, was reached. Here there were official reception and functions after which the journey was resumed. Mountains, prairies, the bold rugged grandeur of the North Shore of Lake Superior, and the beauties of the Ottawa Valley, were all seen to great advantage, and the Royal motor and every member of his suite, were duly impressed with the vastness and the wonderful progress seen on every hand. The Prince expressed himself as unable to describe in adequate language his feelings of admiration for the won-

ders he had seen and the wealth and variety of the charms of the beautiful Canadian country.

As relief and a pleasant change from the round of official receptions which were crowded into the visit to Ottawa, it was felt that another fishing trip would give the Prince a chance of testing the sporting advantages of the beautiful Province of Quebec. Matters were soon arranged, and the Prince received an invitation from the Denholm Angling Club to visit their preserve on Lake St. Germain, some miles back from the Gatineau River. The visit necessitated a train ride, country drives in wagons, and all the sights and scenes of the backwoods under the most pleasant and enjoyable conditions. The Prince entered into the spirit of the whole proceedings with delightful enthusiasm and it was clearly evident that this part of the programme gave him complete satisfaction.

The party lived at the Clubhouse, and during intervals some shooting at a target was indulged in (in the course of which the Prince showed that he was a crack shot,) and fishing on the Lake followed. On this occasion, Mr. W. L. Marler accompanied the Prince in the boat, and pointed out the likely places. Mr. W. R. Baker and Mr. W. A. Allan, the President of the Club, were in another boat. They all had splendid fishing and

PRINCE ARTHUR AND MR POPE, DENHOLM CLUB HOUSE, LAKE ST. GERMAIN, GATINEAU RIVER, QUE.

PRINCE AKTHUR RIFLE PRACTISING, DENHOLM ANGLING CLUB, LAKE ST. GERMAIN

the Prince is not likely to forget his experiences in Quebec waters.

The stay was not long but the whole party caught upwards of 200 trout, and proved that the Gatineau country is a good trout region. The same may be said for several hundreds of miles along the Laurentian range, and all the members of the Royal party expressed themselves as delighted with the varied experience afforded them and the fine fishing to be obtained in Canada. They repeated that in a lifetime they were not

likely to forget the pleasant experiences the Dominion had provided for them.

The commercial capital of the Dominion, the fine City of Montreal, was next visited and more official receptions were undergone. Ontario could not be neglected, and Toronto saw the Prince and made much of him. It is to be regretted that time did not allow some of the sporting advantages of Ontario to be tested as well as seen. But others were waiting and the Maritime Provinces had likewise a big programme. This

READY TO START—LAKE ST. GERMAIN

GATINEAU RIVER, QUE.

included further fishing, and the Prince added to his successes, and was further impressed with the variety and extent of the Dominion's sporting resources.

While Prince Arthur had the advantages of official arrangements and choice of good territories it should not be forgotten that time did not allow him to see anything more than a few samples of country. It is certain however that both himself and every member of his suite were not merely delighted with all they saw in Canada but convinced of the wonderful advantages of the Dominion in the way of sport of the best and highest kind as well as its material progress.

All the railway arrangements for conducting the Royal train across the continent were in the able and experienced hands of Mr. Baker who directly represented the President of the Canadian

Pacific Railway Company, Sir Thomas Shaughnessy. The Prince himself and all the members of his suite expressed their personal gratitude for the never ceasing attentions paid to their comfort and pleasure, and their certainty that the future of the Dominion from all they had been able to see—and they saw a great deal,—was bright and contained all the elements of permanence.

The Prince has safely reached England and in public addresses since his return has shown both in matter and manner how deep and abiding are the favorable impressions made upon him during his visit to Canada, and how pleasant were his experiences of the Dominion—not the least of the crowd of pleasant recollections called up by memory whenever he thinks of Canada being those in which he played the part of the Royal Fisherman.

# In Camp at Rosedale.

Kawartha Lakes District of Ontario.

BY MISS LOTTIE MACNIVEN.

**T**HE morning sun shone brightly down as the "Manita" steamed up Fenelon River, and the jolly party of campers on board enjoyed, to the utmost, their first view of the lovely scenery. They had come up on the Grand Trunk Railway System and taken the steamer at Lindsay and all the way along Sturgeon Lake had kept up a fire of admiring ejaculations. They were a typical crowd. There was Smith from Toronto, the globe-trotter who had visited half the civilized world and could tell fish stories; Jones, the rising young lawyer, of Ham-

cigars. That the same receptacles now contained a hammock and a dozen of the latest magazines they never suspected. Had they known about the hammock he might have enjoyed an unexpected bath at Fenelon Falls, but the magazines were a reserve stock to be produced on the first wet day.

The man of the party however to whom all bowed in reverence, and who was unanimously acknowledged their uncrowned king, was Sterling, the physician who could cook. In comparison with this accomplishment all others dwindled to insignificance. He could dictate his

ON THE BURNT RIVER NEAR ROSEDALE, ONT.

ilton, who could catch fish; McIntyre, of Toronto, the naturalist who always knew where frogs and worms were to be found; Brown, the clever electrician, of Kingston, who knew how to build a fire; and Ross, the musician, also of Kingston, who thought even fishing an exertion and desired only to lie by the lake shore and smoke and dream. Each year the others threatened to leave him at home, but relented on each occasion when their thoughts wandered to the handsome suit-case with its many boxes of finest

own terms without fear of mutiny. No matter how many fish Jones caught, they could not be eaten unless they were cooked and Sterling reigned supreme. The six members of the party were college men of the same year, all claiming Queen's as their Alma Mater. They had camped together many times enjoying the beauties of Muskoka and the Thousand Islands, but this was their first trip to the Kawartha Lakes. Remembering Sterling's tyranny of former years, Ross suggested before starting that they take

G. W. BURNS OF CINCINNATI, OHIO, AND GUIDE MERRIMAN OF FENELON FALLS, WITH TWO HOURS CATCH ON FENELON RIVER

a cook along this time but Sterling scouted the idea. "I can do the cooking," he informed Ross. "Each of the other fellows is of some use. Smith is the best all-round worker we have, if he does like to yarn a little, and you," (with ineffable disdain), "can wash the dishes." Ross thought of the cigars and fine tobacco concealed in the precious suit case and inwardly chuckling, added some carefully packed, slender necked bottles to his hidden treasures. Perhaps someone else could dictate terms before the trip was over. The party landed at Fenelon Falls and were being piloted up the steps of the cliff to "Hotel Kawartha" for refreshments, when there was a shout from Jones. "Look at those fellows," and the six bore down bodily upon two men who were coming from their canoe with four splendid maskinonge. One man was unmistakably a guide, while the yachting cap and outing shirt of the other seemed to proclaim him a tourist. "How long were you out?" "Where did you get them? What bait

do you use for trolling? Are there any like that up at Rosedale?" were a few of the questions hurled at them. The guide smiled indulgently. "We were out an hour or two," he said. "It's quite a common thing to bring in half a dozen 'lunge' or a dozen fine bass in a couple of hours and they are thick all the way up to Coboconk." "Nearly as large as the ones I caught at Georgian Bay," began Smith when Ross saw his chance and started again for the hotel. Rather than listen to one of Smith's stories this early in the day, the crowd followed willingly. The "Manita's" whistle found Ross on the piazza of the "Kawartha," his heels higher than his head, and wrapped in a cloud of fragrant smoke. "Let's stay here. This is good enough for me and they caught those fish down in the river." "Come along," the others shouted. "We came out to camp. We will leave you home next year, for certain," and they hurried him unwillingly down to the boat. They reached Rosedale at half-past eleven, and almost as the steamer touched the wharf, Brown sprang ashore and disappeared. The steamer sailed on and the party were left standing amid their tents, canoes and bales when Ross began to enumerate their belongings. "Three tents, two canoes, four bales, a suit case, five grips, a guitar, and six passengers. One, two, three—twenty-one. One short. Count again. One, two, three—twenty-one. What is missing? The stuff is all here, but where is Brown? He is the missing link. You must have left him at Fenelon Falls when you were

NEAR FENELON FALLS—KAWARTHA LAKES DISTRICT

A PORTAGE IN KAWARTHA LAKES DISTRICT

kicking up such a dust about me. But lo! the lost returns," as a figure came hurrying down the road to the wharf. "The most lovely spot on earth just on the lake shore. Magnificent oak grove, splendid camping ground and bathing. It was not overrated. Tumble the stuff into the canoes and paddle round." They were soon at the camping ground where Jones busied himself with his fishing tackle while the others unpacked the cooking out-fit. If he only had some bait he would steal down to the canoe and surprise those fellows with some fish for dinner. His meditations were interrupted by a touch on the elbow. "Come on," whispered McIntyre in a sepulchral voice. "I have the worms and we can dodge behind the trees, down to the canoe." Just as the fire crackled brightly and the provender was being inspected, the noise of paddling was heard, and the two deserters were seen rapidly approaching with three fine black bass, plenty for their first dinner. The afternoon was spent in pitching tents and

getting settled, and in the early evening the fishing parties started out, Brown and Ross being, by mutual consent, left to guard the camp. The fishers returned in a couple of hours with eleven bass, guided home by the splendid camp fire which Brown had built. At one side of the fire Ross lay stretched in a gorgeous red hammock, just touching the strings of his guitar while Brown reclined on a brilliant rug at his feet. Other rugs were carelessly but picturesquely scattered on the grass and on a rustic table, which Brown had manufactured while Ross swung the hammock, stood a box of cigars and a slender necked bottle. As the canoes came in sight the music of the guitar strings increased in volume, while Ross' magnificent tenor and Brown's rich baritone mingled in the strains of "Lo, the conquering heroes come." "It takes those two fellows to make an effective picture," muttered Sterling as they glided swiftly and silently towards the shore. "And champagne, by Jove! No wonder that suit case was heavy"! They rose next morning at daybreak and went fish-

ing immediately after breakfast, returning with two maskinonge and ten bass. Almost similar success attended them on their various fishing expeditions, during the month they remained in camp. Only upon three days were they prevented by pouring rain from going fishing. Then Ross became the hero of the hour by producing the magazines in which Brown and he had been revelling while the remainder of the party fished. They attended service each Sunday in the quaint little village church, and heard some very clever speakers. Men who were, like themselves, exotics, enjoying the beauties of Rosedale. One day they paddled up to Coboconk and on another occasion down to Fenelon Falls, while some of their best fishing was done in Burnt River. They also visited most of the islands of Balsam Lake, always discovering some new beauty.

Returning from their sails they witnessed many of the beautiful sunsets for which the Kawartha Lakes are famous. The most beautiful was on the evening before

they broke up camp. They had been fishing all day in Burnt River and passed under Rosedale bridge just as the sun was setting. Coming quickly around the curving shore, the beauty of the scene burst upon them. The sun was sinking behind the trees of Grand Island and the colors of the sky, ranging from palest amber to deepest crimson, defied description. The reflected colors upon the still waters made the canoes appear to be floating through a lake of gold and fire. They rested silently upon their paddles. It seemed sacrilegious even to speak. The almost intense silence was broken by Brown. "I never saw it equalled in Switzerland," and the party felt that words could go no farther. "I am coming back here this fall," said Jones, as on the following day the "Manita" bore them down the lake. "That guide down at Fenelon Falls says the ducks are bagged every day, in dozens, in Goose Lake during the season and that some of the finest deer in the country are found along Gull River, north of Coboconk."

## Mr. Aubrey White.

Deputy Minister of Lands and Forests for Ontario.

**I**N all that concerns the higher interests of outdoor life in the premier Province of Canada, Mr. Aubrey White, Deputy Minister of Lands and Forests for Ontario, has been such a conspicuous figure for so long a time that readers of "Rod and Gun and Motor Sports in Canada," who are not personally acquainted with this estimable civil servant will be glad to be introduced to him through our pages, and learn some of the interesting particulars of a long and useful official career in the course of which Mr. White has left his mark upon both the public life and the history of Ontario.

Mr. White came to Canada in 1862 from Ireland where he had been educated at the Royal Schools of Raphoe and Dungannon, and at Dunbar's in Dublin.

Making his way to Muskoka, he first entered into business by fur trading with the Indians in the Lake of Bays district ;

passing from that to the lumber business, the details of which he mastered from the ground—and tree—up.

During his many years residence in the North country, which was then comparatively unpopulated, Mr. White passed through all the experiences of an explorer, timber estimator, and wood ranger, thus acquiring a practical knowledge of woodcraft that pre-eminently fitted him for his later official positions.

In 1878 he was appointed Crown Lands agent at Bracebridge ; in 1882 promotion came to a clerkship in the Woods and Forests Branch of the Crown Lands Department ; and in 1887 he was appointed Assistant Commissioner, his official title being changed in 1906 to Deputy Minister of Lands and Forests.

Thus for nearly twenty years Mr. White has occupied one of the most important positions in the civil service, and worked under a long list of Commis-

MR. AUBREY WHITE

sioners and Ministers viz. the Hon. T. B. Pardee, Hon. Arthur S. Hardy, Hon. J. M. Gibson, Hon. E. J. Davis, Hon. A. G. MacKay, Hon. J. J. Foy, and Hon. Frank Cochrane.

Mr. White has performed the duties of his post with singular ability and with a high sense of its importance. To Mr. White is due the inception of the excellent fire ranging system of Ontario under which over five hundred rangers are now employed in protecting our forests from their greatest enemy. This system has been so highly appreciated as to have been copied, in whole or in part, by many of the other Provinces, as well as by the Dominion, and its main features are being adopted by the United States Government.

During the nineteen years of his occupancy of the post of Assistant Commissioner and Deputy Minister no less a sum than thirty millions has been received from this great revenue producing Department. The receipts for 1905 alone totalled \$2,119,404. The expansion of the department's activities, and the opening up of New Ontario, have also been in keeping with the growth of the Province.

As a lover of the tree and forest, Mr.

White is naturally a valuable supporter of the Canadian Forestry Association, having been a member of its Executive, and filled the highest offices in its gift—those of President and Honorary President. He was also a delegate to the meeting of the American Forestry Association held in Washington in 1905.

Mr. White further had the honor of assisting in the setting aside of the Algonquin National Park as a great Game, Fish and Forest Reserve, being a member of the Royal Commission along with Alexander Kirkwood, Archibald Blue, and Thomas W. Gibson appointed to consider the original proposition and to work out its details. In this great natural reserve of a million acres, the people of Ontario have a possession in perpetuity the full benefits of which can never be overestimated.

It will be the universal wish of his many friends, in which the readers of the Magazine will heartily join, that Mr. Aubrey White may live many years yet to give the Province the benefits of his ripened experience, and matured judgment on the many problems constantly arising, and in which the Department in which he has rendered such signal service is so deeply concerned.

REV. MR. BALDINGER (PITTSBURG), C. L. STOKES (NEW YORK), GUS BALDINGER (PITTSBURG)  
MR. HARVES (PITTSBURG)

## Fishing in Lake Nipissing.

BY W. F. SHAW, M. D.

**L**AKE Nipissing is one of the grandest of the many matchless sporting resorts to be found in the richly endowed Province of Ontario. There are many portions of it easy of access from the Grand Trunk Railway System. From its very nearness to civilization it is comparatively overlooked by the lover of fish and game. They imagine it is too near settlements to give them all the solitude they wish. With its five hundred miles of coast line, its deep bays and projecting points, shallow and stony reefs, innumerable islands, and unsurpassed scenery, there is nowhere within the confines of the Dominion a better combination of unlimited scope for sport, with convenience of access for the business or professional man who must keep in touch with civilization even upon his vacation.

In the west arm alone of this beautiful lake a canoeist might spend a couple of pleasant weeks amid the maze of islands and bays, each day taking a fresh route, and enjoying new and unrivalled scenery, yet never going beyond a few hours'

sailing of a post or telegraph office though enjoying absolute solitude all the time.

There is the best of fishing in these bays, and last year Mrs. E. A. Jacques, of Auburn, N. Y. landed a 'lunge' weighing forty-six pounds. There is also good duck shooting to be had in season, and along the finely wooded shores partridge shooting can be obtained, and indulgence had in deer hunting.

The one drawback is in the existence of fishing licenses from which the Ontario Government derives a revenue of some six thousands of dollars per annum. If the policy of allowing these licenses is continued, this admirable sporting resort will be robbed of one of its greatest charms. Practically no other benefit than the money one is derived by the Province from the fishery, as most of the fish are exported to the United States.

No one who has spent a week on these waters can fail to cherish a store of pleasant memories of incidents and experiences which must have fallen to them if

they have had any good weather at all on Lake Nipissing.

The writer recalls a half day's visit to one of these bays with special pleasure. The host was a popular bachelor, of Callander, Ont., as noted for his largeness of heart as for his generous physical proportions ; and the guest an old and esteemed mutual friend, Mr. John Stephenson, of the Bremner Bros. lumber firm, Hamilton. Mr. Stephenson had often expressed a wish to experience for once in his life the sensation of catching a fish, and we resolved to try and indulge him.

We left Callander shortly after noon, and proceeded direct to a noted bass fishing ground, an ideal spot, about three or four miles distant, amongst a cluster of low banked, reef bound islands, where we disembarked and got to work as quickly as possible. In addition to a basket of refreshments, hastily provided, our host very thoughtfully took along his kit bag, which had doubtless done duty many times before, and which on investigation was found to contain, on a small scale, something like the outfit that Noah must have taken into the ark.

CAUGHT BY C. L. STOKES, NEW YORK, WEIGHT 32 LBS.

JUST COME IN AND HUNGRY FOR BREAKFAST

Our host's collection was not well kept but he assured us that rust was not unwholesome—in fact that it is a form of iron in a reduced state, and good for the system—and accepting this statement we duly appreciated his foresight. No explanation was vouchsafed for the presence of the sand with the salt and other cooking requisites, but we took it for granted that our good host, being a man who knew something about everything, and apparently everything about some things, had some good and useful purpose in view for this also. If that kit bag could only have spoken it might have told of occasions in its experience when a little sand was more necessary than some of those who formed the parties when it was carried would care to admit. Without casting any reflections on his religious propensities our host was one who did not believe in trusting too much to Providence, and

accordingly his supplies were ample for all occasions.

In less than half an hour from landing we were all settled down to business within a distance of thirty or forty yards of each other. A quarter of an hour had not gone by when there was a shout, a struggle, a scramble over the rocks, and finally dazed, bewildered, and with an indescribable expression of countenance our mutual friend, with a three pound bass dangling from his line, stood before us, only able to say "Tom! Tom! Tom!"

It was pretty clear to both of us that he had at last experienced the sensation of catching a fish, and that in ample measure.

We were each so pleased with our friend's good fortune that for some minutes we all lost our equilibrium, and it was quite a time before the thought occurred

to us to continue our fishing. Eventually however we resumed our occupation, and succeeded in capturing two more fish, when time was called, and also the kit bag and the camp fire.

Tom, for such is the unpretentious cognomen of our host, amongst other good qualities, is an admirable cook, and soon had an appetizing meal ready. Whether it was due to the skill of our cook, the invigorating atmosphere in which we found ourselves, the tonic iron in the salt, the fact that we were eating the fresh fish we ourselves had caught; or a combination of all these, we never enjoyed a meal better, and it was astonishing to see the suddenness with which those fish disappeared.

The return trip was made without mishap, and it would be impossible to conceive a more delightful and satisfactory half day's outing.

## How Our Fishing Trip Was Spoiled.

BY F. F. COATES.

In this narrative is given an account of a fishing experience at a series of lakes known as Three Mile, Red Trout and Fry-ing Pan, which are situated about ten miles east of Halifax, N. S. The method of catching fish herein referred to, and which is practiced to a large extent by the colored people of that vicinity, is against the laws of the Nova Scotia Game Society, and although it was at first confined to lakes in the immediate vicinity of their settlements, it has of late extended to other fishing grounds at greater distances from their homes. Some sympathy may be felt for the negroes, as they make this the bulk of their means of livelihood but on the other hand there is no doubt that if they expended as much energy and time in following up lawful pursuits as they do on this one that is unlawful, and fast destroying the fish-

ing sport in that section of the country, they would find them far more remunerative.

My friend and I had again started on another fishing trip. On this occasion it was considerably shortened on account of lack of time, and we therefore had to content ourselves with a short run out of town to a lumber camp some ten miles distant, situated near a number of lakes, which once could be depended upon to furnish excellent sport to the fisherman. We had turned off the main road on to a trail leading along the foot of Granite Mountain, and were walking beside the team, that carried among other things our provisions for the inner man,—the nature of which would have won the approbation of the most ardent member of the W.C.T.U.

It was a lovely evening in early May. The sun, which was now setting, had shone brightly the whole day as if bent upon removing all remaining traces of the departed winter, and appeared as if loth to leave the scene of its day's activity.

We had arrived about midway between the main road and the camp, when all at once the diminishing wind carried to our ears the distant confused sounds of voices, so confused, as seemingly to have no relation to each other. My friend and I immediately began to speculate as to the source of these sounds, but had hardly come to a conclusion when there appeared around a bend in the road about a dozen negroes, some tall, others short, but all of which were characteristically lean. As soon as they saw us they immediately became silent, but after a short pause again resumed their conversation in low tones as if concocting excuses as to why they were there, and were afraid of being overheard.

From appearances this band of colored gentry may have been going on an impromptu picnic, as nearly all of them carried a large basket, but nothing else by which to denote their errand. The circumstances, however, of our meeting conveyed to us without making inquiries the fact that we should have rivals in the angling field the next day. We did not question them as to their destination, as they no doubt expected judging from their actions, and they therefore passed us continuing on their way, with the sounds of their voices and laughter increasing as the distance between us lengthened. These sounds, however, soon died away, and the incident passed out of our minds as we neared the sought for goal.

We found the camp deserted, but by the time we had put the horse up for the night and got settled the lumbermen arrived, having worked until the last streak of daylight had disappeared. There were six of us all told in the camp. We retired about 9.30 p. m. all in the one bunk; 3 at each end with feet to feet. All of the men were soon asleep with the exception of our host and myself, and the former possessing all of the characteristics of a recently converted Baptist immediately took up with the writer in a vigorous style the relative meanings of "into and unto," which lasted until the wee hours of the morning. At times our conversation became very enthusiastic, and our bed mates being awakened by the sound of our voices, gave vent to their feelings by protesting kicks,

which for a short time always had the desired effect.

The next day we started out at day-break with high spirits and fully armed to the scene of action. The next evening we returned with three small fish, and our spirits somewhat strained, if not broken. We had fished on three different lakes, had but little sport, and saw nothing of our colored rivals. As to the latter, we had hardly got back to camp when we again heard the sound of their voices, and rushing out to the road-way met the same Sons of Ham returning, not empty handed as we did, but each had a large fare of trout and some with their capacious baskets taxed to their limit. We immediately tried to get information from them as to where they got their great haul. They named the three different lakes we had visited, but we plainly and promptly informed them in words well suited for the occasion, that they had not been to either of the places they mentioned that day. They soon saw that they had been "Caught in the act," and not wishing to commit themselves again, moved off without further argument.

On the return of the lumbermen we recited this little incident to them, and they were surprised as to the number of fish these darkies had caught. They informed us that they had seen them that day lying on the banks of Three Mile Lake nearly all day, but apparently not fishing. They noticed further, however, that several times during the day the darkies would paddle around the lake on a roughly constructed raft, and then return to the shore for another sleep. Our hosts invited us to go with them the next day and try our luck there, and we jumped at the chance with the hope of still getting some sport out of our trip.

The next morning we were again up at daybreak. The weather had changed decidedly for the worse from a fisherman's point of view. The bright sun which had been shining the last few days failed to put in its appearance, and we were now experiencing one of the late snow storms which sometimes visits that part of the country during May. It was very cold, and a strong wind blew from the north. At the foot of the lake we all got into a large boat, which the lumber-

men had for towing logs, they taking charge of the oars. My friend located himself at the stern of the boat, while I perched myself up at the bow. The wind was blowing dead against us and our progress was slow. We had got about half-way up the lake and near the centre, when all at once a large fish jumped out of the water just ahead of us, several times in succession. We were surprised and unable to account for the actions of this fish, as it was still cold and blowing very hard. We cautiously rowed near the spot, getting out tackle ready for operation in the meantime, but when we arrived within about thirty feet or so of the spot, saw it was a large speckled trout secured by hook and line, and at the same time noticed the end of a pole near by. This told the whole story of our rivals' success. We immediately secured the fish, which proved to be a fine trout weighing about three pounds, and then continued on our investigations.

Following up the pole, the end of which was at the surface of the water, we found it to be about thirty feet long, and to it was spliced another of about the same length. To one end was attached a heavy stone weight, sufficient to sink it and keep it stationary, while the other end was allowed to float around as the wind might take it. Attached to the poles were a sufficient number of short lines, hooked and baited, set about four feet apart, so as not to get entangled with each other. From this one set we got about ten fish, all of which were dead with the exception of the first, and had apparently been caught the previous evening, as the skins of the fish were

becoming bleached in color. After taking the fish off the hooks we detached the lines, cut the poles from their moorings and set them adrift. On searching further we found six such contrivances, which we destroyed the same as the first, after having taken in all about thirty fish from them. On landing accidentally at a small island near the shore we found a further supply of lines, hooks, etc., and in addition found a large quantity of rope of about a half an inch in diameter, a sufficient length we should judge to stretch across that portion of the lake,—about a half a mile. My friend and I were eager to destroy this also, but the lumbermen persuaded us not to do this, stating that if we interfered further with the gear the negroes would no doubt take revenge upon their camp and boat.

Situated about three miles from these lakes is a settlement of negroes who dispose of a considerable number of trout at the Halifax market during the spring. I have often wondered at the bleached appearance the fish would sometimes present, but in view of the fact that the darkies referred to would have left the fish caught on their lines on Friday night until at least Sunday or possibly Monday, that is not to be wondered at.

Thus ended our fishing trip on this occasion: A fair number of fish, little sport, but a greater knowledge than we had heretofore possessed of the strategy resorted to by our dusky brethren. These methods have been carried on for some time resulting disastrously to the fishing sport, and it is to be hoped that proper steps will be taken to prevent their continuance.

## The Indians and Big Game in the West.

**T**HE Government Indian Agent at Morley, Alta., in his annual report on the condition of the Stony Indians, states that they are generally in a prosperous way, and to some extent self-supporting. As evidence of this he says that last year three hundred sacks of flour and 55,000 lbs. of beef less than the previous year were distributed amongst them.

Messrs. Brewster Bros., the well known guides of Banff, write to "Rod and Gun and Motor Sports in Canada" throwing a very different light upon the real condition of affairs. They feel constrained to do this in the interests of the country which in that and other large sections are bound up in no small degree with those of the tourists. Cutting off the rations, which look so attractive in print,

simply means that the Indians left the Reservation on a hunt to the north. A number remained on the Reserve to finish their haymaking by Treaty Day, in order to enable them to draw their Treaty pay. Then all who could go joined in the rush, and three hundred odd hunters round the Saskatchewan made such a clearance that nothing was left for anyone who might come after them.

The Stoneys, we are told, are most magnificent hunters, and their methods are thorough ones. They surround a mountain and climbing slowly up will drive everything to the top, where, on the open stretches of shale, or amongst the rocks, they kill everything—mountain rams, ewes, and even lambs falling before their rifles. Instances are given of one Indian who killed 26 sheep in one hunt on the Saskatchewan, and of others who killed ten and eighteen each. It is the same story with goat, deer, or any four legged or winged creature that crosses their path. A low average they calculate would be thirty animals to each tepee per season.

Each year the Government attempts further restrictions, and have prohibited the sale of sheep and goat heads. The rule is a good one, but it does no good so long as the Indians are left uncontrolled. The animals are slaughtered just the same, but the heads instead of giving work to the taxidermist are left rotting on the mountain sides. A large proportion of the meat goes to waste as the Indians are the least provident of mankind.

The game laws seem to be all directed against the tourist as the chief destroying agent. Now few of the tourists are fitted by nature or training to climb and shoot. To tour in western Canada a man has to be blessed with sufficient of this world's goods to pay for travelling a few thousand of miles to the "hunter's paradise," as the people are so fond of calling it, (Query : How long will it remain a "hunter's paradise" if the slaughter is allowed to continue ?) The tourist must spend an average of \$500 for a three weeks' trip, and many of them a good deal more. The money thus spent gives employment to many guides, adds to the income of stores and hotels, to the revenue of the railroads, and to the

Government, as well as proving the best advertisement the country can have. To satisfy the tourists should therefore be the great aim, and to give this satisfaction it must be arranged that they shall at least see game. This is impossible after the Indians have been through a valley.

Imagine the result if you can, say our correspondents, upon the tourist traffic of western Canada, for two or three hunters to get up at a dinner of the Canadian Camp in New York and saying : "Don't go to the Canadian Rockies ; there is no game there ; on our visit we did not even see a fresh track." Five hundred hunters listen to this statement, damaging in the extreme, and the results upon the traffic, and those dependent upon it, are deplorable. The men who make such a statement may be good hunters, and speak the entire truth—but unfortunately they followed the Indians.

At present the Rockies are really and truly "The only big horn country in America." It all depends upon the people to say how long this shall remain the truth.

Sofar as the agricultural work done by the Indians is concerned the results are certainly not startling, and cattle raising which sounds attractive, and which is work in which the Indians could really engage with success, is not greatly followed by them. Rather are they living on the small stocks they now possess, and the saving of 55,000 lbs. of beef will soon disappear in the larger expenditure which will speedily be forced upon the Government in replenishing the Indians' stocks of cattle.

If agriculture is spreading amongst the Stoneys then the Reserve should be moved to a farming district and away from the mountains. The present location is merely a temptation to the Indians to fish and hunt whenever they feel inclined, and in defiance of the laws or the seasons.

In conclusion, Messrs. Brewster point out that we owe the Indians something, and if we take from them the freedom of the mountains, the least we can do is to give them rations. Move the Reserve onto the prairie, and supply them with rations which will keep them on

the Reserve. By this means the Rockies may be maintained indefinitely as a big game country, and the tourist traffic, now only in its infancy, developed to very large proportions. This would be the best and most effective method, and prove the kindest in the end. By ad-

opting such a plan the Indian would be given a chance of settling down to some useful occupation, and the game would be saved and perpetuated; and one of the greatest delights of a wonderful country preserved for future generations.

## What Our Neighbors are Doing in Game and Bird Protection.

**L**IVE issues in Canada are or have been in a similar condition in the States, and questions of deep interest on one side of the border have a tendency to defy the international line and become common to both peoples. In no particular perhaps is this seen more strongly than in matters of game and bird protection. Experience in the States may well teach us much in Canada, and we may learn considerably from the manner in which our neighbours deal with problems similar to those which confront our people.

Recklessness marks the early history of dealings with game in the States, and the early Canadians followed the bad example thus set them. Excuses may be found in the fact that while men were few, and game most abundant, it did appear to the early settlers as though the supply was quite inexhaustible. With the increase in population, and the immense strides made in arms of precision, nothing less than indiscriminate slaughter resulted, and men began to see their folly when it was almost too late to remedy the fruits of the excesses in which they had indulged.

Once aroused however, the Americans, with that characteristic energy which has ever distinguished them, have made wonderful efforts to offset the pernicious results of their past inaction, and a pamphlet, compiled by Mr. T. S. Palmer, assistant in charge of Game Preservation in the Biological Survey, contains facts and figures showing the progress made in game and bird preservation throughout that country which will astonish many of our readers.

It is only a five years' retrospect—

a review of the work done in the few years of the twentieth century, and yet it shows a remarkable amount of accomplishment, and is rich in promise of future and more wonderful results.

One feature in which our neighbours excel is in regulating the importation of foreign birds and mammals, and the boast that in this work the "United States has undertaken a task of greater magnitude than that attempted by any other nation" would appear to be fully justified. Many countries have suffered for lack of such restrictions, and now both in South Africa and Australasia efforts are being made in this direction; but in the States the answer to the problem appears to have been worked out almost to perfection. It is surprising to learn that one consignment of foreign birds arrives on an average every day in New York, that in busy seasons as many as 10,000 have come on one steamer; while in the course of a year the importations aggregate more than 200,000 canaries and 40,000 miscellaneous birds. During five years ending June 30th, 1905, 1,563 permits were issued covering the entry of 2,841 mammals, 819,970 canaries, and 185,765 miscellaneous birds, of which 30,837 were game birds. In addition 19 permits were issued for the entry of 7128 eggs of game birds imported for propagation.

In the same period entry was denied to seven specimens of the mongoose, fifty-four flying foxes, one kohlemeise, fifteen blaumeisen, and two European starlings. In the case of the mongoose three examples arrived at San Francisco, three at Philadelphia, and the

seventh at Los Angeles. The first six were promptly destroyed and the seventh died. Two of the flying foxes were killed, and the remainder shipped back to the port from whence they came. It is pointed out that if the mongoose once obtained a footing in the South it would probably become the worst pest that could be introduced into the country. In a strict enforcement of the law lies the protection of the States from a repetition of such a costly experiment as the introduction of the English sparrow.

The right of the State to prohibit the exportation of game having been established, the various States have taken action, and now all the States of the Union, except Mississippi, prohibit export, and several of them have stopped the sale of all or certain kinds of game. As a necessity for these laws it is pointed out that in 1900 the number of prairie chicken killed in Nebraska was estimated at five millions, of which one million were killed for local consumption, and four millions for shipment beyond the State.

No less than 36 States require non-residents to take out hunting licenses, and 16 States insist upon resident hunters doing the same. In nine States the fees pay all the cost of protection; in Missouri the game protection fund has a balance in its favor of \$40,000 while that of Illinois was nearly \$100,000.

The Wichita game refuge bill approved in January, 1905, was the first step on the part of the States to utilize their forest reserves as game refuges. The extent was left to the President, who showed his hearty concurrence by setting aside the whole reserve of 57,000 acres for this purpose.

Birds are the special care of the Audubon Societies, local societies being organized in 36 of the States, and the movement given a permanency by the incorporation of the National Association. In no less than 34 of the States non-game birds are protected by law. Six Federal reservations have been set aside for the protection of sea birds, and successes have attended each one of these efforts. One of the far reaching results of the movement is said to have been the elimination of the plumage of native species from the millinery trade. "This

has been accomplished partly by legislation prohibiting possession and sale of such plumage; and partly by co-operation between the Audubon Societies and the principal wholesale milliners of the country." The restriction of the traffic in native cage birds has also been a further result of the educational work thus accomplished. Formerly these were trapped almost to extinction, but these conditions are now altered. "No other country at present extends such complete protection to its non-game birds or has restricted the traffic in native birds more effectively than the United States."

Prior to 1890 the Federal Government had set aside only three reservations for the protection of its animals and birds, but eight additional ones have since been established. Some of these are small islands of little or no agricultural value, but occupied as breeding grounds by large colonies of birds, and of far greater value than the acreage would imply.

The effort to protect and increase the herd of elk in the Sequoia National Park, California, is described, twenty being caught and transferred to a place where it is hoped that, free from molestation, they will increase in numbers, and thus ensure the preservation of this interesting species.

In the Yellowstone National Park, where the animals are under the protection of the Federal law, and have the further safety guard of a military patrol, bison, deer, elk, black bear, etc., are described as abundant; while beaver are increasing, mountain sheep number about 100, and antelope 1,500. So numerous are the elk that it is difficult to tell their numbers even approximately. So tame has the big game, thus protected, become that they visit the buildings, and sometimes even appear upon the parade ground at Fort Yellowstone.

These experiences demonstrate, the writer holds, how readily the big game of the West may be saved from extinction by proper protection when Congress shall authorize the utilization of certain areas of the forest reserves as game refuges.

# A Caribou Hunt in Cape Breton.

BY A HUNTER'S SON.

**S**OME of the highest and most extensive mountains of eastern Canada are found in the counties of Inverness and Victoria in Cape Breton. These mountains are all connected by ridges, and form but one range. Even now they make a vast wilderness, and really form the watershed for the whole island. In the early days of immigration from Europe great herds of moose wandered over these hills, though at present not a solitary specimen is to be found. Another animal, however not so much inferior to the moose in many ways, still roams the hills and ridges in abundance and supplies sport and venison to the hunter and the lover of adventure.

A caribou hunt is indeed prime sport and a distinguishing feature of the island. Everyone who can enjoys such a hunt at least once in his life. A good time is the month of February, and on a bright morning of that month in the valley of the Pond River preparations were being made for such a hunt. An hour before sunrise on this particular morning a party of five men started for the "barrens."

They climbed the mountains which sloped from the south, in the usual track or blazed path which, since it had always been the one used, was considered the best to travel on all occasions. The moon was still shining from the west, and casting long fantastic shadows on the snow. The snow, which during the earlier part of the winter had been clinging to the branches of the softwood, had by late storm been blown off. This is considered an important fact in connection with caribou hunting, and the men noting the fact thought themselves fortunate in their selection of a day for their hunt.

They reached the mountain summit just as the sun was appearing over the eastern hills. Having now reached a better path they moved along at a smarter pace than the one with which they had ascended the slope. In another hour the sun was having quite a pleasing effect upon the landscape, and the spirits of the hunters rose accordingly. The sparkling hoar frost, the glittering

crystals, and withal the blinding whiteness of the snow, made a scene upon which only strong eyes could look, but which thrilled the hunters with an indescribable rapture, causing them to quicken their footsteps, and feeling a supreme satisfaction in the mere fact of being alive.

About ten miles from the summit of the mountain they reached their "camp." The building was but a small log cabin, with bunks and of course a stove, the latter renowned for its great heating qualities. In such a camp the hunters enjoy the long winter evenings to the utmost. On the way to the camp nothing of particular note had occurred. Two tracks had been seen, but evidently they had been imprinted a day before. It was noon when camp was reached and the men immediately set about the preparation of dinner. They had brought with them most healthy appetites, stimulated by their long and toilsome march.

Seated round the table the hunters all appeared to be as fine fellows as could be found anywhere. They were hale and hearty, and used to a life of toil and endurance. One man, Angus Burk, seemed to be their leader by natural selection rather than by any appointment as such. He was by all means worthy of that distinction. He had hunted the barrens for twenty years, and knew every "trick of the trail". A good shot, he scarcely ever aimed at a caribou with his favorite Marlin without success attending his aim. He was a "Deerslayer" in reality. The other men, whose names respectively were John McGrath, Archie McLean, Willie Mombroquette, and Isaac Fortune, were all hunters in the true sense of the word, but they instinctively looked to Angus for guidance on all occasions.

The afternoon was spent in hunting around the camp, but without success, and the men returned and spent a pleasant evening, retiring early so as to be afoot with the break of day meaning on the morrow to hunt the barrens beyond the McKenzie River.

Starting before daybreak, they were miles on their journey when the dawn appeared. The morning broke fine and suitable for hunting. Tramping on snowshoes, they were on the "Everlasting Barren" before noon. As they looked across they could see moving objects. Perhaps they were caribou! Angus speedily directed a movement by which they might be approached undisturbed. The hunters marched round the edge of the barren in the eye of the wind, and before long were regaling their sight by watching a herd of caribou some distance away. Evidently the creatures were enjoying themselves, basking in the sun which was now shining brightly. The distance was however too great to admit of a successful shot. So another manoeuvre had to be brought into play.

Near to where the hunters stood watching was a ravine or gulch in the bottom of which ran a brook. The caribou often filed down this way, and had indeed worn a path. By Angus' directions, Archie and Willie were sent round to the left with instructions to sneak out in a thicket, and send the caribou down to the rest of the hunters.

At that time this appeared the only practicable scheme, and it was acted upon immediately. Angus and his two companions waited anxiously to see the result of this manoeuvre, and prepared for the anticipated and hoped for rush. The report of a rifle rang out across the barren, and immediately afterwards there came the rushing and the snorting sound of caribou, and a dozen came tearing in their direction. A few more leaps and that big bull leading will be opposite Angus. Now he is almost opposite! With head and antlers elevated he bounds along all unconscious of the lurking foe. Bang! three rifles go off almost simultaneously, and almost in the next instant speak again. The herd break up and disappear in the woods, leaving two of their number on the ground.

As quickly as possible the hunters gather round and celebrate their success. They admire the graceful heads and antlers, and the long athletic legs of the animals killed, and congratulate themselves on the reward of their long tramp. Having dressed their game they bind it on

their toboggans and start on their return journey. It was nearly three o'clock in the afternoon when all was finished and one and all knew that the short amount of daylight left them to return to camp made it doubtful if they could reach it before darkness set in. Moreover now they had time to look at the sky, they saw it was hazy, and clouds were flying from the south-west. Winds and squalls come from that quarter, and it was easy for the hunters to prophesy a speedy and a strong "south-easter."

Hardened hunters, they resolved to leave nothing useful behind them, and exulting in their success they started their homeward march. They were sufficiently awake to their possible danger to make all speed in the direction of the camp, though they did not think any serious ill could befall them.

At four-thirty however it grew prematurely dark, the wind came in great squalls, causing drifts to fly over the barrens, and through the open parts of the woods. McKenzie River gulch had just been left behind when the storm broke in all its fury. Exhaustion was stealing over the men after the exertions of coming up the river bank with heavy loads. It had not been possible to drag the full loads up the steep bank at once and the repetition of the climbing had been of itself an exhausting piece of work.

On they plod, and with all their efforts to keep up their courage the jokes became less in number and more feeble in character. Perspiration was flowing freely, night was settling down, and exhaustion made every step a painful operation. Still there appeared nothing before them but the dreary wilderness, and the southeaster shrieking through the tree tops followed them. To crown all, snow began to fall thickly and the track was speedily covered.

Thanks for experience at such a moment! Angus revived their drooping spirits once again. He declared that though the snow should fall six feet deep he would find the track—if indeed the night was not altogether too dark. This added danger now confronted them. Night settled her wings over the tree tops, and it threatened to be very dark indeed. In fact it would not have been

a Cape Breton south-easter if such had not been the effect produced.

Still they travelled on with a dogged perseverance that deserved the reward of camp and supper and bed. None of them knew that little Archie McLean was counting his steps. Brave little Archie! He dared not confess that he is about to give up and lay down in the snow. He was counting until only two or three more steps seemed to be within his utmost power. He knew that to lie down was fatal, and yet he felt that he must do it. Just then a voice ahead cries out "All right boys!" It was Angus shouting through the storm to the others who had fallen back and were straggling.

"All right, boys! We're there!" "Thank God!" involuntarily returned little Archie. He was just giving up all hope—hope of what he dared not now enquire. A few more steps and they all drew up at the camp, each having strangely intermingled feelings, and thoughts of the dangers now safely passed and the testing experiences they had undergone.

The warmth of a good fire soon made new men of them, and a hearty meal,

and a long rest restored them completely. While the south-easter roared and played his pranks outside, the sleepers knew nothing whatever of his proceedings.

In the morning the men awoke to a fine sight. There was snow everywhere, trees were buried, and drifts formed ten feet high! The camp was standing in a sort of "dug out!" The air however was warm and the wind had almost died away. Even now drops of rain were falling. Through all that day the rain fell in torrents, and the wind again sprang up towards the southward, only to haul gradually round to the westward, and change the falling rain to snow flakes. Soon the snow flakes ceased, the wind went round to the north and the frost began its work before dusk.

Next morning the hunters were able to travel over the surface of the snow in any direction, the crust having formed to a sufficient hardness. They set out and soon reached Pond River Valley again, every man thankful that he could tell round his own fireside to wondering friends the marvellous. (and yet after all common) experience of the hunters of Cape Breton.

## Bear Hunting in the Canadian Rockies.

BY JOHN ARTHUR HOPE.

**A**T the time the discovery was made—some few years ago—that the Mountains encircling Kootenay and Slocan Lakes in British Columbia were rich in galena ore, there was—in my opinion—no better bear country to be found South of the C. P. R., and North of the international boundary line, which is saying a good deal—for I had already hunted the same stretch of country West to the Fraser River, including well known bear countries in the States of Idaho, Montana, the Big Horn Range in Wyoming, and the Blue Mountains in Oregon.

In none of the above countries did I see as many bears, or markings of bears, and of a large size, in such a short time or small extent of country, as I did in the West Kootenay.

There was also a fair amount of caribou and deer, and plenty of goat, and it was not necessary, either, to climb up over the snow line to discover this fact. Their deep cut and well worn trails down the mountain sides—generally to a salt-lick—over the creeks, and up the other, proved conclusively that they were there, and could be got by men sound enough of wind and limb to climb after them, or patience enough to lie in wait for them on a moonlight night at their salt-licks.

The caribou kept high up, while the deer kept low down, following the snow up as it melted away. But the greatest enemy of the big game in the West, were waiting in their thousands for spring to open up to rush in and change the face of these quiet, heavy timbered, rugged mountains into a beehive of wild life.

cited struggling prospectors, straining every nerve to be one of the lucky half dozen ONLY, out of the many thousands, who would get rich with a few strokes of the pick. Though all prospectors don't pack rifles, they do dynamite—that curse to all lakes and rivers, and a curse it proved to be here, while the crack of the rifle could be heard incessantly.

What caribou, deer and other game escaped the rifle, went further back. The active, surefooted little goats deserted their salt-licks, seeking out still higher peaks to watch the strange scenes below, knowing they were quite safe. Down below them, among the alder bushes under the snowline, were to be found all summer a couple of sturdy animals of a different caliber, who were also quite safe, not because they were too high up, but because they bore a very bad reputation—whether deserved or otherwise, is not for me to say. At any rate they refused to go because a lot of two-legged animals had invaded their country, and the majority of the said two legged animals were apparently in no hurry to molest these sturdy rascals—the Silver-tip and Cinnamon—better known as grizzlies. Not only did they refuse to go, but they didn't even change their old quarters or habits—at least these two didn't to my certain knowledge, retiring as usual at daybreak to the alder patches under the snowline, and coming down after dark to look for their supper. Sometimes it happened that one of them paid a visit on the way down to some prospector's tent. Being a sort of surprise visit, the occupant of the tent generally made himself scarce, leaving the intruder to root out and eat up all his bacon and sugar—Bruin's favorite tid-bits—tearing down the tent in the process. Sometimes a bear has the misfortune to interview the wrong tent, getting lead instead of sugar. I have had surprise visits from these gentry more than once, and I can assure the reader that I didn't stay round to entertain them. Neither would you on a dark night! Now when one remembers the amount of blasting, tree cutting, smoke from innumerable camp fires, to say nothing of the hundreds of men swarming all over the country, one would naturally suppose that a shy animal like the bear, would leave such noisy quart-

ers and seek for quieter ones; no doubt some did, but a good many certainly did not, as I received good proofs through the summer months.

One morning at daybreak, early in April, a man with a pack horse left Kasto on Kootenay Lake for Bear Lake on the divide (20 miles). Ten miles on the other side is New Denver, on Slocan Lake. The trail was a very rough one, winding round the mountain sides, amongst rocks and fallen timber. About a mile out the trail made a dip down for about 20 feet, turned sharply round under a gutting spur of rock, then up again. As the horse went down from one side, a silver-tip came down the other, both meeting under the rock. Now, there are always two surprises when you meet a bear you have one, and he has the other. Both barred each other's way. The driver—who was walking behind the horse, and therefore, couldn't see past him on the narrow trail—struck the horse on the quarters to make him go forward. The horse snorted, and tried to turn round, instantly the bear rose on his hind legs, and struck the horse a blow that tore his neck to ribbons from ear to shoulder, knocking him backwards into the surprised man behind. Before the horse had time to get up, the bear made a lunge at the pack saddle, breaking the cinch, and tearing the horse's side and flank in the process. The horse, freed from his pack, lost no time on the trail back to town, neither did the man!

I and my pardner (Jim Ballantyne) were camped beside the Divide trail, on the outskirts of Kasto, we had heard a horse go by our tent before daybreak. Falling asleep again we were wakened by a snorting horse going by at full gallop. A few minutes afterwards the driver came along and told the above story, adding that the pack consisted of one hundred pounds of bacon, and two fifty pound bags of flour. "That Ba'r 'ill stop to eat that bacon and if you fellers get a move on back to that rock you'll get that mangy cuss!" Here followed a string of oaths that would surprise old "cloven foot," had he heard them.

Now Jim and I had trapped through the Kootenay the previous Fall and

Winter, and knowing there was plenty of Bear, we had decided to have a try for some in the spring. Here was a chance for the first! We took the trail without loss of time. Arriving near the rock, we separated, Jim going above, and I below, the trail for two reasons. The first was to get him between us if still there and the second to keep him from winding us—for a slight breeze was blowing towards the rock. A bear's weak point is his eyes, but his nose and ears are very keen, and make up for this deficiency—a point no bear hunter ever wants to forget. Working my way very cautiously forward, I reached the edge of the green timber. Beyond this, towards the rock, the ground had been burnt over some years before, only burnt stumps being left standing. When nearly under the rock, I worked up towards it, Jim working down. Being under the rock I was able to see him first, and a curious sight I witnessed. Apparently he had wiped up the bacon, and had then turned his attention to the flour bags, these he had ripped open, scattering the contents all round, and over his head, neck and shoulders.

He was still rooting the bags about, raising his head up to blow the dry flour out of his nostrils. I hadn't been watching him more than half a minute when he suddenly sat up, his great flour covered head flying round to all points of the compass. He had winded one of us. Once a bear winds you there is no time to lose. Drawing a bead on his shoulder I sent a 370 grain patch bullet through it from my 40-90- single shot Winchester. Through the smoke I saw a cloud of dry flour fly from his coat. Down he fell, rolled over, scrambled up again, dashed up the trail a piece, turned and faced up the mountain—making the dirt and dry sticks fly—towards Jim. They met all right. Jim was using a repeater—40-82-260, and old bacon eater met with a warm reception, getting three bullets through him, which sent him rolling down to the trail again, where he died in a few seconds. Except that the cinch was broken the pack saddle was none the worse. His fur—it was a male—was in prime condition, netting \$25. The meat we left for those who cared to take it. Cub bear is good eating, I never

tried an old timer. The next day we struck camp and hiked it up to the Divide. Here we found a considerable body of men camped waiting for the snow to disappear from the higher ranges above the Divide. Indeed, some had already staked off rich claims—so they said—on top of the snow.

Now, it doesn't follow that because a man is born and raised among bear, that he is a bear slayer. On the contrary, it is astonishing the number of men one will run onto in the west, who will tell you "they haven't lost any bear," and live up to it. Neither does it follow that because a man is fond of slaughtering mountain game, he is going round looking for bear. I could cite many cases to prove the above assertions, as could others.

A great many of these prospectors were old timers in the mountains; yet they were the very men who left the grizzlies alone. According to them a grizzly was never of the warpath. The bear, like the dog, has got a bad name—and it sticks to him east and west. We were sitting in our tent one evening eating supper—a few days after we struck the Divide, when two men rushed in both in a terrible state of excitement. "We want to buy a rifle," shouted one, "the price don't matter!" Jim, a very quiet man—looked at them in surprise—"Why, what's the matter?" he asked. "Matter!" excitedly—"matter, why the mountains are full of bear, and here we are like two darned fools without rifles of any kind!" "Where did you see the bear?" we inquired. "Bear!" in a surprised tone to me—why, we saw three!" "come here"—he added, stepping outside the tent and pointing to a ravine some few hundred feet above where we stood.

"My pard and I allowed we'd prospect above that ravine, where its clear—to-day. So this morning early we packed our blankets and some grub in case we had to camp out. Well, when we got to that ravine you see up there, we commenced to work our way through it—and hard work it was—for it is full of fallen timber and underbrush. We were nearly through when a small brown bear rushed out in front, and to one side of us. He hadn't gone twenty feet before an-

other followed him. Scrambling and grunting they made up the mountain side, towards a patch of underbrush. Before they reached that patch another bear came out as big as a bullock, and snorting like a steam engine came straight for us—"Well: What then?"—as neither seemed inclined to finish the story. "Well! there's no well about it"—mournfully—"all our outfits lying somewhere between here and that ravine." But—said Jim laughing,—“you'll find your outfit all right to-morrow!” “and meet those three bear again with only our bare hands?” “Nonsense,” said my pardner quietly—"the old bear was merely coming to see what her cubs were making such a fuss about. It's more than likely she's on the other side of the mountain now looking for a safe place to stow them, for it is doubtful which of you got the biggest fright." Nevertheless, they refused to go without a rifle. A twenty dollar gold piece was offered for the repeater—and refused. Twenty more followed—ten at a time—also refused. Then Jim spoke his mind. "If you'll take my advice"—sharply—"You won't buy one, for if youse got as excited in front of a Cinnamon with two cubs—has youse must have done to throw your packs away, — you'd be a dam site safer without a rifle,"—which explains all there is to explain about bear. As I have said, bears are very shy animals, too shy, as those who have ever tried to still hunt them, know. When cornered and wounded, or taken by surprise—as in the case of the horse and silver-tip above—they will fight, especially a she bear with cubs. If you wound her or her cubs, you have the most dangerous animal on the American continent to deal with. No true sportsman would have it otherwise.

We kept a close watch—late and early—on both sides, and above the Divide, on the open spans, which look like furrows down the mountain sides—caused by snowslides. Here—as the snow melted away—sprouted up grass, skunk cabbage, and other herbage in rank luxuriance. On every slide around that we saw there were signs of bear. Being disturbed so much by prospectors, they were very shy, and hard to see in daylight. Several times we heard them

smashing through the alder bushes,—they are very fond of alder tags—without however, getting a glimpse of them. I was sitting one evening alone at the head of a slide, just under the snow. This slide was one of three, it being the center one. Jim was at the head of the one on my right, a high ridge separating us. Some 800 feet below me grew a large patch of alder, the only patch on the slide. Presently I thought I saw something black moving through the herbage to one side of it. Keeping my eyes on it a few minutes showed I was right. It was a black bear, crawling over the ridge on my left. I worked my way down until opposite the tree I had marked, taking off my boots and cap, and placing a couple of cartridges between the fingers of my left hand. I peeped over the ridge, what do you think that bear was doing? Why sitting bolt upright and looking in my direction! He had winded me, though he was fully 120 yards below, and on the far side of the slide. Close behind him was a big rotten log. Through the smoke I saw chips fly from this log, and I made sure I had missed him, especially as the bear ran across the slide to some more bushes on my side and that much faster than a man could go. Jim came over the ridge a few minutes afterwards. I explained matters to him and we went and examined the log. No blood anywhere around! Next we followed the trail, and found blood on the edge of the bushes. Moving cautiously in, we found him—stone dead. The bullet had entered the chest between the forelegs, through the heart—and out! My only reason for mentioning this is that though fatally hit, he had run fully a hundred yards, and that faster than a man. The vitality of the bear is enormous.

Being near the end of April, we decided to move down to Slocan Lake. Here we found bear markings in all likely places, but the animals very shy, from constant contact with prospectors. As all fur was now losing its prime we went back to the Divide, intending to stop shooting. But the fates were against us. We were in the act of pitching our tent, close to the trail, when a packer came by with a string of horses, (one of Bill's outfit), and stopped to inform us

that a few days before one of his horses had fallen on the trail at Three Fork's and died. "I have just come over the trail—" he added—"and I noticed that some animal is visiting the horse. Now, from the size of the tracks where the animal crossed the creek, I should say it is a bear, for the tracks are as big round as the bottom of a bucket." "Shouldn't wonder"—remarked Jim grimly, after the packer had passed on—"but them tracks 'll be as big as waggon wheels before night." As is well known, bear are "meat hungry" in the Spring, and can generally be relied on at that time to visit a dead animal. On going down—some 400 yards or so, to where the horse lay, we found that a bear of large size was certainly visiting the horse. The horse was lying in an open valley about two hundred feet across, at the edge of the timber, and near the aforesaid small creek. As the moon was nearly at the full, with an open valley to shoot across, why not try for him? Agreed! Saying nothing to any of the prospectors—we got to the position we had selected, about 8.30 p.m., lay down, and kept quiet. Nine o'clock came and went, then ten! still no sign! The night was calm and still, except when a hearty guffaw from some miner's throat above floated down to us, or the dismal hoot of a night owl. Eleven came and went! Still no sign. Overhead the moon was floating in a cloudless sky, making the only Peak visible to us, stand out in clear relief, its snow-covered top and sides looking very cold and silvery under the bright moon. Now and again the pine tops swished mournfully, as a slight breeze passed through them. Eleven thirty! musn't smoke! Musn't do anything! but lie still with eyes wide open! The valley is as bright as day! Suddenly Jim pinched my arm and pointed across and above the horse! Ah! Bruin at last!! He was standing partly in the shade of the timber, perfectly motionless. How long had the cautious rascal been there? Now he is moving slowly along towards the bait. What a size he looks in the moonlight! half as big again as he really is!—He is still moving slowly along. Now he is out of the shadow! I feel another pinch on my arm, and see Jim push his

rifle forward. My heart is going like a sledge hammer; I will wait till Jim shoots. Then I'll be steady again! The report of Jim's rifle sounded like a clap of thunder! The bear fell—gave a snort—which sounded like woo-HUFF long drawn out, got on his feet again in a second, and lumbered up, and across the open span. "I've only wounded him,"—shouted Jim, jumping to his feet,— "shoot quick or we'll loose him". I fired and heard the bullet thud plainly. All it did was to make him turn and come down towards us. Jim pumped in two shots head on—always an ugly position.—The first missed, the next took his foreleg above the knee, sending him forward on his head. Staggering up on his three legs—not twenty yards away—he turned half round, and away back diagonally to where we had first seen him. Then we both raked him from the right flank to left shoulder. He dropped like a log, got up again, staggered round in a circle, then fell for good, tearing up the earth around him with his great claws, and sobbing up blood and foam from his badly wounded lungs. He was a male Cinnamon, in not over good condition, weight—guessed roughly—between 800 and 900 pounds. From the camp above came a succession of whoops, our shots had woke the boys up; they were coming along to see what the D—l all the row was about! "Whoop," yelled the first comer, "a ba'r boy's, lots of fresh meat!" "Hunt blanket—town (bed) you fellers!" yelled another—"we'll pull the skin of this Ba'r for ye!" and they did with a vengeance, for except the skin—we never saw a pound of the bear again; Fresh meat was a luxury on the Divide. Now, it will occur to the least experienced reader, that the missive addressed to a grizzly must be emphatic. Of course a man will use the weapon he likes best, and a fool is beyond all guidance. Excitable men should take a Maxim Machine Gun along, or stay at home, for such men—with the help of the fool and his popgun—have given the grizzly a reputation he doesn't deserve, as I have tried to show in these pages. The grizzly of the Sierra Nevada Range, I have never met. Sensible men going into the mountains for the first time should not listen to campfire talk. Re'

member practical men are always QUIET and RESERVED. Take a rifle with plenty of smashing power, and hold it straight for bruin's neck or shoulder, if below you break its back in the region of the kidneys. Let other parts of its body alone—if possible. Engage only guides who have a reputation, and want to keep it. Treat them well and rely on their judgment, and when you stand over a grizz-

ly for the first time you will feel that thrill of satisfaction run through you from head to toe, that only a true sportsman can appreciate.

Good old grizzly! I would like to see you protected in the summer months, by a stringent law, that would insure your being found in your Rocky Mountain home for all time.

## The Upper Steel, Lake Superior.

BY C. J. REED.

**T**HERE are many fine fishing streams all along the north shore of Lake Superior, but the one I like best is the Steel River, which is without doubt one of the best trout streams in Ontario, if not in all Canada. The fisherman who would fish the Steel River must be one who loves the wilderness, and then if he is a good fisherman he can obtain some splendid trout fishing in that river.

The tourist who would fish the Steel should make for Jackfish, a station on the main line of the Canadian Pacific Railway going west. He can obtain an outfit and guide in that small settlement, though it is well to arrange these matters beforehand, and then he can confidently make for the wilderness. From Jackfish to Mountain Lake it is three and a half miles to Clearwater—a beautiful lake of about one mile in length. A portage of one mile from Clearwater to Mountain Lake follows, and a paddle of two and a half miles brings one to the outlet into the Lower Steel, where most of the fishing is done. In this water I have caught ten trout, averaging three pounds dressed, two of them weighing six pounds each when taken.

On my last trip, accompanied by my friend, Mr. H. B. White, I fished in these lower waters with varying success for three days, and then we decided to make a visit to the upper waters. We wanted to reach the upper falls, and as our guide (Tom Geddes) had never been so far up the river we endeavoured to obtain information as to the distance. Accounts

varied all the way from ten to twenty-five miles, and so we took two days' provisions and started.

A paddle of five miles up the lake brought us to the stream, and after a short rest, we commenced our upward journey. For five miles we had a quiet paddle, and then met our first log jam, which necessitated a carry of about ten rods.

Fifteen miles with an occasional stretch of swift water, which we got over with just a pleasant experience, brought us to the second jam, which was three quarters of a mile around, and we had to cut a trail to get the canoe through.

We found no evidence of anyone having travelled that way for years, and we were glad of it, for trout fishermen learn to beware of beaten paths. Here we did our first fishing on the upper waters, taking the most beautiful specimens I have ever seen. The fish are darker on the back than those in the lower river, and the spots and mottling much more brilliant. In size they were from four and a half to five pounds and very plentiful.

A few miles above this point we made our first camp and in the morning resumed our journey, paddling that day over a succession of pools with moderately swift water that furnishes the fishermen the finest kind of sport. Night found us still looking for the falls, although we were fully twenty-five miles above Mountain Lake.

We were now indeed in the wilderness!

CAMP AT STEEL RIVER, NORTH SHORE OF LAKE SUPERIOR.

HEAD OF MOUNTAIN LAKE, NORTH SHORE OF LAKE SUPERIOR.

On our right was a range of rocky hills from one hundred to seven hundred feet high ; on the left sand hills, some bare and some covered with a dense growth of birch and evergreens.

There were signs of big game everywhere—moose, caribou, deer, and bear tracks, covering every step of sandy beach; and signs of beaver, otter, and other fur bearers were in abundance. The red deer is a new comer to that part of Ontario, being driven in no doubt by the clearing of their old haunts. To us it appeared a grand place for hunting for there was an abundance of game, and their natural enemy, man, was absent.

Owing to lack of provisions and signs of bad weather, we finished our third day's journey at noon, though when we were at Jackfish, on our return, a Long Lake Indian told us that had we pressed on two miles further we should have

seen the Falls. Of course had we known we were so near we should certainly have covered those two miles.

As it was we made the return in half the time, and had one of the most pleasant trips I have ever taken. We stopped three days on the lower river and took out twelve trout, weighing from three and a half to five pounds each which we took home.

The only inconvenience we had on the whole trip was owing to damage done to our canoe by an Indian. We had to leave this canoe on Clearwater Lake, being obliged to wade round the shore, the forest at that point being too dense for carrying.

Trout fishermen who are willing to rough it can find no better stream for fishing than the Upper Steel, and they can enjoy backwoods' experience with some work, which will make their fish all the better eating.

## An Afternoon With The Grouse.

BY A. W. WESTOVER.

**I**T was a raw November day in our section of the Province of Quebec, and the wind blew half a gale. Wig was coaxing me to go hunting, and though she is only a dog the excuse was sufficient, and I drew on a heavy sweater, put my canvass coat over it, and with gun under my arm went down along the railway track, trying to take some credit for self sacrifice in venturing out on such a dirty day. By the time we arrived at our first cover I had thoroughly convinced myself that I deserved success. This cover was an alder patch with thorns in the centre, not much larger than a good sized house ; but I had in previous seasons sometimes found birds there. I clucked to Wig and she was off like a shot. She took a cast down the near edge, then back round the thorns, when two birds jumped, and came as left quarterers with the gale. It was crack ! crack ! and a blur of feathers disappearing in the woods to the left ! I marked them down, and as I drew near brought Wig to heel as I thought her a trifle too eager for careful

work. We had advanced in this way perhaps thirty yards when glancing back I found her pointing in my direction. As the cover was very dense I could not see the bird when he jumped. I then let the dog go, and a little further along found her pointing the other one in a bunch of cedars. I got a fleeting glimpse when he flushed, and as I pulled saw the air fill with feathers, but could find no other trace, though we spent considerable time in the search.

We then crossed the fence to an alder run where a bird flushed wild, and I marked it down and killed it on the rise ; Wig pointing and retrieving very nicely. We found no more in this cover, and went on over the track to the old copper mine hill, where I knew of a wily old cock, who had outwitted us all more than once.

After working the cover several times very carefully we found him at the lower end behind a big brush fence, Wig pointing from the opposite side. I gathered him in, and we went down a ravine, and around the hill to a further cover where

we flushed from the trees. I did not get a single shot, and so worked round the west end of the hill to a clump of hawes. There was still nothing doing.

I put my gun under my arm and walked along the outer edge of a fringe of fir trees at the base of the hill, and had passed a solitary hawthorn standing in the open to my right when I heard one jump from beneath this tree and start for the timber. He had about fifteen feet to go to reach the firs, but I got two barrels after him without any apparent discomfort. I marked him down, followed, and flushed him near the top of the hill. He went away strong without giving me a chance to shoot, and settled in the firs where he first went in. When I got near the bottom Wig met me with the bird in her mouth—stone dead but still warm.

We then crossed a field and went down an old brush fence where Wig pointed one which I missed, and as he flew to a wet nasty swamp, where it was hard to locate him, and harder still to shoot, I did not follow. It was now getting dusk, and we had a hawthorn cover yet to work. We therefore made for this place in the most direct way. As we neared the lower edge and climbed the fence, a bird flushed which I did not see. Wig then went in and pointed under a clump of balsams, the branches on which grew very near the ground, forming an umbrella-like canopy. In the half light I distinguished an object that looked something like a bird standing very straight and still, and also like a knot sticking up from the ground. Now there is no close season on hemlock knots

in this section, but there is a roasting coming to the wing shooter who kills a bird on the ground. If this was a bird there was no chance to shoot on the rise, so I called it a knot, cast loose, and Wig retrieved. As a pup Wig was taught to retrieve sticks, and never forgets a well earned lesson—so figure it out for yourself. She found and pointed again at the upper end of the cover, but before I could get to her the bird started, and I got glimpses of him passing the tree trunks low down to the right. I threw in ahead, pulled, and thought I saw him go down, but was not at all certain till Wig brought him up with a sort of twinkle in her eye that seemed to say:—

He flew where you shot that time, didn't he?"

This ended the hunt, and we had before us a three mile tramp in the gathering dusk. Bulging game pockets however made the distance seem short. The two following days I worked the cover where I feathered the bird so badly, and as I could find but one bird on each occasion, I concluded the other one must have been hit just sufficiently hard to enable him to get out of range of the dog before going down. I have often seen them go away apparently unharmed, and suddenly collapse at a distance of two hundred yards from where they were shot.

This was the first time I had ever tried grouse on a very windy day. I have however since found the wild ones lay better, and as they must always raise against the wind there is an instant when they offer comparatively easy shot.

## Exploring Hudson's Bay.

### An Alternative Route to Europe.

**T**HE great inland sea known as Hudson's Bay has long fascinated those connected with Canadian exploration, and its possibilities as an alternative route to Europe has loomed large in the imagination of those who believe in the development of our great North land. As the tide of immigra-

tion grows in strength, and as the stream of tourists become ever wider and wider, the exploration to the North becomes a matter of constantly increasing importance to the Dominion. Long ago the great Hudson Bay Company dotted its forts in the far interior even to the shores and around Hudson's Bay. Some of

their Factors have passed their lives at lonely Posts outside the confines of civilization, and have proved the possibility of making some use of the immense territory that stretches away to the Arctic circle. The numbers of furs annually collected by the Company has been an eloquent testimony of the hunting and sporting capabilities of the country, and reports received of the fishing have been uniformly good.

In the popular imagination however the region was one vast area of snow and ice, and until the last few years little has been done to dissipate that notion.

At length however lovers of sport and outdoor life have vied with trappers and settlers, and become pioneers in exploration to the North. Many of the trappers and settlers could not write, and knew not how to publish their stories if they could, and consequently kept their good things to themselves. It has been different with the hardy sportsmen who have pushed on ever further and further north, and who will never be satisfied until the whole country is known, and its resources tested. The stories of these hardy adventurers have entranced their readers, and caused many to follow where they have pointed the way. The old idea is still widely prevalent though much has been done to kill it, and in this work we are entitled to take some credit for "Rod and Gun in Canada." The Government and the great transportation Companies have likewise rendered excellent service, and it seems not unlikely that the race to the North may be accelerated by recent occurrences.

Two railways—those pioneers of civilization—are pushing their iron roads along the northern trail. The Temiskaming and Northern Ontario Railway is going ahead with great rapidity, and the discoveries at Cobalt have but whetted the appetites of those who believe that greater discoveries are awaiting those who penetrate still further north. Then the James' Bay Railway is making for the Bay whose name it bears, and which is a great part of that wonderful inland sea—Hudson's Bay, whose

area is estimated at 350,000 square miles

In carrying on the work of Northern exploration the Mounted Police and the Marine Departments sent out a joint expedition in the spring of 1904. Major Moodie was in command, and for practically two years the expedition was at work. They succeeded in reaching Cape Fullerton, on the Northwest coast of Hudson Bay, and there they spent the first winter. In spring the steamer Arctic began a cruise around the Bay which lasted well into the summer. In the fall her head was turned to Hudson's Straits, and late in September, on the Labrador coast, the relief steamer Neptune was met. A return was made in the Neptune, and renewed supplies carried to newly established police posts. The voyage out was an exceedingly stormy one. It was late in the season, and the boat struck one of the numerous uncharted rocks in the Bay sustaining serious damages.

In July Major Moodie found no ice in Hudson's Straits, and there was none in October. These facts, joined with his previous experience, leads Major Moodie to conclude that for one third of the year the Hudson's Bay route is open to ordinary navigation. Of course for commercial shipping coal depots, wharves, and light houses will have to be established. The idea of shipping wheat to Europe by this route is quite feasible, and this must mean much to the future of Western Canada. As the prairies fill up even three transcontinentals, with all the assistance of the great lakes, will fail to cope with the immense work of moving the wheat crop, and advantage will be taken of this alternative route. It would mean a comparatively short land haul, and a long water carriage, and if the route were made safe, would enable exporters to land wheat in Europe at less cost than at present. The precise effects any such developments may have, not merely upon Western Canada, but upon the Dominion as a whole, must be left for the future to determine.

# Game and Fur Preservation in Northwestern Canada.

**O**NE of the papers read before the eighth International Geographic Congress by Dr. Townsend W. Thorndike, of Boston, has been reprinted, and as it deals entirely with Canada and is of deep interest to sportsmen, some references to it in our columns is justifiable. Dr. Thorndike entitles his paper "A plea for the establishment of a commercial game and fur preserve in the North West." He first draws attention to that mighty region known as the land of the "muskeg", or in other words, swamp land. Much of this land is wooded, though the wood is small and it is nearly all outside the fertile belt. It extends from Rainy Lake and Lake of the Woods, in a north and north westerly direction to the Athabasca and Peace Rivers. Here is a great territory where such a preserve as Dr. Thorndike has in mind could be created by the Dominion Government, and made of commercial and economic advantage as well as of considerable national service. Dr. Thorndike points out the enormous value of the fur trade and argues that fur bearing animals are tending to decrease though the number of furs taken may not have fallen off. This latter he attributes to the increased demand for furs, and the fact that of recent years furs, which formerly were not considered of any value, have in consequence of this greater demand been taken for commercial purposes. The Doctor puts forward a strong plea for preservation while the species are yet numerous, and before the slaughter has been so great as to make the chances for recuperation less than they should be. He points out the further advantage of having a large area for the preservation of fur bearing animals. Even when left in a state of nature they tend to become weakly and decrease by reason of inbreeding if their grounds are at all circumscribed, but with such a area as the Dominion Government could put aside for this purpose, this possibility could not arise. There would be some vested interests to deal with but if attention were given to the matter at once these would be but slight in comparison with the vast future good accom-

plished. Dr. Thorndike has also a further proposal. He would find employment for Indians as caretakers and hunters for this immense district. The Indians would be taught scientific methods of thinning out the animals instead of indiscriminate slaughter, with the result that this land would constitute a vast game and fur preserve for all time. Instead of the aimless life of the Reservations, the Indians would be given work that they like, and for which they are best fitted, which would give them a new interest in life, and would preserve for the country the great fur trade of the world. The Doctor pays a tribute to Canadian methods of managing the Indians, which is far in advance of anything accomplished in the States, but points out that even here something is wanting, and that something he believes would be supplied by the adoption of the policy we have outlined. Canada is better suited than any other part of the world, with the possible exception of Siberia, for such a large animal preserve. It is the natural place for such work, for the higher the altitude the better is the quality of the fur. Doctor Thorndike believes that it is not colonization which hurts and destroys the game, but the indiscriminate slaughter that goes on while colonization is progressing. Few people have an idea of the vastness of this fur trade. The figures are enormous, and the values immense. It is one that specially lends itself to Government supervision, and the time is ripe for the Dominion Government to adopt a broad and far seeing policy on this subject. Under official guidance and control this great work could be accomplished with untold benefit to Canada, to all lovers of animals and outdoor life, and with particular benefit to sportsmen, whose unanimous approval is a foregone conclusion. They all know that even if such a reserve is strictly preserved, the overflow will be considerable, and provide hunting grounds for all time. In the concluding words of Dr. Thorndike:-"The Indian is worth saving, the animal is worth saving, the land is worth saving—let them be preserved."

## A Sail Through the Lake of Bays.

**T**HE attention of the great mass of the travelling public has never been properly drawn to this ideal spot for sportsmen and Summer tourists. A large number are under the impression that Muskoka consists of the Lakes Joseph, Rosseau and Muskoka only. These lakes are doubtless very beautiful but they have become so thickly populated that they have lost much of their natural charm to the person or persons desiring to get in closer touch with nature.

Lake of Bays—(the name is very descriptive of the Lake itself—) is at the head of a chain of Lakes, namely: Mary, Vernon, Fairy and Peninsular and is reached from the town of Huntsville, Ont., on the Grand Trunk Ry. System after a delightful sail through the Huntsville River and the lakes Fairy and Peninsular. A short portage of one mile on the small railway (one of the shortest railways in the world) and you are in the Lake of Bays, which has the highest altitude of all Muskoka Lakes, being some 1100 feet above sea level. Entering the Lake through what are called the "Narrows", you enter the first or main bay of the lake. Directly ahead of the steamer is Haystack Bay but we do not enter the same, though its attractiveness is a strong inducement to do so. We pass on up the main Bay to the famous Bigwin Island, named after an Indian Chieftain whose remains are buried there. Straight ahead is a bold promontory known as Black Point, wooded and practically inaccessible but most majestic in appearance—the Gibraltar of the Lake. To the right is the beautiful property of Mr. W. J. Green, Toronto, known as "Wahawin," to the left, the cottage village of Norway Point, the summer home of many Clergymen, Doctors, Lawyers and other professional men recuperating from brain fag, etc. The steamer has turned east after leaving Wahawin making a call at Norway Point where numerous cottagers meet the boat. She then passes up another Bay making many short calls until the pretty

little town of Dorset is reached. This is the end of the trip in this direction. Disembarking at this point small boats are taken up through the river to Hollow Lake, through this Lake into another river a few miles, and Algonquin Park is reached. This Park is the Government Game preserve and has an area of thirty square miles, fish being the only thing it is permissible to take. You are then in the heart of Nature. Animals of all descriptions abound with practically no fear of man, appearing to understand that no one can harm them. This affords the naturalist, etc., a rare opportunity to see game in its natural haunts.

Travelling back again to Dorset we again take the steamer, proceed through the same Bay westward again passing Wahawin down into another Bay and reach the Muskoka River; a most picturesque river it is too, with its green banks and winding stream. Traversing it for a distance of two miles, we reach the town of Baysville. This is the end of navigation though the river continues its course through to the town of Bracebridge and then empties into the lower lakes. It is not accessible for steamers but is used for conveying logs into that town, huge booms of which are to be seen on the Lake of Bays. We pass back to the sentinel "Black Point" and turn North into the main Bay, and from this point proceeding North we run into Haystack Bay, from there to the Ox-tongue River, thence back by Dwight to the portage. The shore line of this lake following all indentations is some 365 miles and affords great opportunity for many delightful trips to different points to campers and cottagers sojourning there.

Fish abound, black bass, speckled trout and salmon trout being most plentiful. The water is very clear and beautiful for bathing purposes. On the whole it is one of the most delightful trips and locations to be found in Northern Ontario.

# TERRY

MRS H. L. LEONARD

TERRY.

I am gazing now with tearful eye  
 On the little mound, where Terry lies  
 Under the trees, where the drifting snow  
 Eddying and whirling to an fro  
 Weaves a blanket white, 'bove the faithful  
 breast  
 Of my little dog, who did his best  
 The best he knew— Could you, or I  
 In the summing up make the same reply,  
 When we cross the stream of the great Divide  
 To the Summer Land, on the other side ?

Only a dog ! whose eyes of brown  
 Looked up with faith into my own ;  
 Although to a lower life assigned,  
 Yet still with a spark of the Master mind  
 That reasoned and loved, was fond and true,  
 And did what duty told him to.  
 Do you call him soulless, deem him dead,  
 And only dust, when the breath has fled ?  
 Ah no ! Of life divine no ray  
 Can ever die, but lives for aye.

A tale I will tell and prove it true,  
 How a dog would die for love of you.  
 My Father, Terry and I together  
 Were travelling through the South, wherever  
 Our fancy led. This fateful night  
 We entered Hotel Grand, whose light  
 With welcoming glow, shone out afar,  
 As in the East gleamed the evening star.  
 We'd reached the haven of our quest,  
 Where we could find sweet sleep and rest.

Ah me !—Our eyes in slumber closed  
 And midnight passed, and our repose  
 Was undisturbed—a bless-ed calm—  
 'Till a shrill bark of dire alarm  
 Came ringing to my startled ears,  
 Dispelling sleep and waking fears.  
 I brushed the dream mists from my eyes  
 And gazing 'round, saw with surprise  
 My little Terry on the bed  
 One tiny paw upon my head ;

His teeth were clutching my night dress,  
 His speaking eyes wild with distress.  
 I heard without a frenzied cry  
 A roar like fierce wind sweeping by ;  
 I rushed and opened wide the door,  
 As smoke and flames burst through the floor  
 And safely gained the open air,  
 But my dear Father was not there.  
 Your Master, Terry, where is he ?  
 I wildly cried—bring him to me !

He knew his master slept above  
 And risking life, and all for love  
 He upward rushed in a mad race  
 Over the burning-hot stair-case  
 Until he reached his master's room!;  
 Alas in vain!—The awful doom  
 Of death by fire, had been his fate  
 And Terry's call had come too late.  
 Then through the smoke and fiery rain  
 Came Terry crawling back again.

All scorched and burnt, his bright eyes dim,  
 Quivering with pain, I rushed to him  
 And caught him to my aching breast,  
 My little dog, that did his best!—  
 My stricken heart was faint with pain;  
 Such dauntless courage used in vain,  
 Yet life he saved, fearless—despite  
 The raging flames. No white plumed  
 knight  
 Could better prove his bravery  
 Than wee Fox Terrier, Terry—

Oh not for him, the cruel shot!  
 Too human to have such a lot—  
 No wooden box—no unmarked grave,  
 For friend so faithful and so brave.  
 For when old age came creeping on,  
 And lustre from his eyes was gone  
 His muzzle grey—weak—crippled—lame,  
 So deaf, he hardly heard his name—  
 We tended him with loving care  
 Of all good things he had his share.

On velvet cushions he reposed  
 As peacefully he dreamed and dozed  
 And when to him came Death's surprise  
 He raised his honest faithful eyes  
 Unto my own, as if to say  
 Mistress, good bye! I've had my day.  
 And just as parted life's last strand,  
 He feebly licked my outstretched hand,  
 Then o'er his true eyes darkness fell—  
 He'd given to me his last farewell.

Think you that death could be the end  
 Of this brave hero, I called friend?  
 The wind may blow—the rain may fall  
 And though he comes not at my call,  
 I know he's safe from stones and cold.  
 Somewhere, within Love's sheltering fold.  
 And when "Life's fitful dream is o'er"  
 And I have reached the other shore,  
 I know not vain will be my quest,  
 I'll find my dog, who did his best.!

MRS. H. L. LEONARD.

Readers who are interested in the foregoing poem will be glad to learn something of the authoress. Mrs. Leonard, who as she herself says, "has turned the corner of three score years and ten," writes to "Rod and Gun in Canada:" "I have studied dogs and dog nature all my life, noted their intelligence, reasoning powers and faithfulness unto death, and believe such qualities cannot die. The poem I enclose is a true incident in all but a few minor details. The little dog passed on during the past winter.

"I should feel honored to have my poem appear in 'Rod and Gun in Canada' which I consider the best publication of the kind in the country in every respect; and we take quite a number of Magazines dealing with outdoor life. I read with pleasure all the articles, and the illustrations are fine.

"For many years, commencing in 1859, when I was married, I have spent with my husband from two to four months in the woods, camping out in New Brunswick, Maine, and of late years in the Adirondacks. I have camped in the snow, travelled on snow shoes, killed big game, moose, bear, etc. and have had quite a long experience in that line. Now however that I am nearing the Border Land my heart has grown tender towards all living creatures—and the rifle is unused, and the rod only occasionally. My husband's poor health also has shut us out very largely from our old time sports."

# The Alpine Club of Canada.

## First Summer Camp.

**F**OR a lusty infant of four months old to organize a Summer Camp in the very heart of the Canadian mountains, to gather together from all parts of the Dominion no less than one hundred people, including visitors from the States, England, South Africa, etc., to transport all their baggage and supplies on ponies over rough mountain trails, to conduct official climbs to peaks 10,000 ft. above sea level, to take trips of two days' duration away from the base of supplies, to do exploration, scientific, and art work, to take people over glaciers, raging torrents, ice and snow fields, up and down through mountain, valley, pass and level stretches—to do all this for a week without a single accident, and without a single person missing a meal partakes of the miraculous, and is a record of which every one connected with the Alpine Club of Canada may well boast, for it is indeed the story in brief of the Yoho Camp.

The Yoho valley is in the very heart of the Selkirks. Only discovered a few years ago it is one of those beautiful places which cannot be adequately described. Even those privileged to spend a whole week amid its marvellous surroundings failed to realize—and every one was painfully conscious of the fact—one thousandth part of its wonders. At the very summit of the Pass, on the borders of a lake whose marvellous coloring of emerald was a constant source of wonder and delight to the visitors, five miles higher than Emerald Lake and Chalet, was the Camp. On all sides it was overshadowed by giant peaks and the dark trees of the forest enclosed it in completely. It was easy to imagine that once inside there was no way out. The delusion was complete and it was not far from being a reality. Only half a dozen trails led into the valley and by no other means could one pass in or out.

The visitors had a fine breaking in on Monday, July 9th, when the great body started from Mount Stephen House, the fine hotel built by the Canadian Pacific

Railway under the shadow of Mount Stephen, and opposite Mount Field, at the little wayside station of Field in British Columbia. For the first nine miles there is now a good wagon road up to Emerald Lake and Chalet. Conveyances met the trains, and so far everything seemed on a par with civilization itself. The road is wildly romantic and beautiful. It lies entirely through a portion of the Canadian National Park and one of the many wonders seen, even on this initial trip, was the natural bridge, a never failing source of interest to all visitors. The great bulk of the party started out in high spirits and it seemed as if the trip were indeed a picnic until the Chalet was reached. Here luncheon was served and the second portion of the journey commenced. The trail leads round the lake and then across what are known in the mountain regions as flats. Rushing along these places are numerous brawling streams fed by the glaciers above, and on occasions they are swelled beyond negotiating by any other means than on horseback. On this particular occasion all the streams were easily and successfully crossed by means of fallen logs—two placed side by side make a good foot bridge—until the main stream was reached. Here there was no alternative but to take the ice cold water, and the visitors were at once broken in to the truth that if you go mountaineering you must not expect to remain dry shod. As the ice melts more rapidly during the day time when the sun overhead swelters every one, the little stream of the morning becomes a raging torrent in the evening, and those who formed the second party had perforce to remain on the banks of this stream until rescued by the pack-horse train and forded across on one of the guide's horses. This little incident impressed the visitors on the first day with the fact that the Camp was meant for work and not merely for play. A number of the party proceeded to the Camp over the Burgess trail—a severe climb, and a good breaking in for

Photo M. P. Bridgland.

TAKAKKAW FALLS AND GLACIER

them also as no place is passed on the way, and though water is avoided a few more streams on a hot day would not be amiss.

On arrival at the Camp, however, all the little preliminary difficulties were forgotten. A good meal awaited everyone and fine appetites had been raised by the hard work of climbing the Passes. The Camp-fire was alight, and during the whole of the gathering was never allowed to go out. The President—whose duties must have commenced long before for matters to run as smoothly as they did—was on duty and welcomed everyone. He also undertook the difficult task of assigning visitors to their respective tents, and did this with so much tact and discrimination that not a single unpleasant incident occurred to mar the proceedings of the week. For so many strangers to dwell together in the close quarters of tents for a whole week, and to have harmony and brotherly feeling prevailing the whole time is little short of a miracle and this is one of the accomplishments of which the Club officials may well be proud. The baggage did not arrive until after dark but no one minded at all. There were many jokes round the Camp fire as to what would happen if it did not come at all—and even that would not have materially damped the high spirits of the visitors, intent as they were upon the enjoyment of new experiences amid such beautiful and awe-inspiring surroundings. It was ten o'clock before the pack train arrived, and baggage was then speedily found, beds made, and the first night passed peacefully and pleasantly.

On Tuesday morning the real work of the Camp started in earnest. Interest centred on the official climb up Mt. Vice President for which two ladies and ten gentlemen had entered. Others tried less difficult but scarcely less exciting feats. It was reported that the party ascending Mt. Burgess had a particularly exciting time. Both morning and afternoon the Rev. Dr. Herdman headed parties to the Emerald Glacier, and this combination of ascending over shale, boulders, rock, ice and snow gave most of those trying it quite enough occupation for the day. The weather was unpropitious in the morning but cleared

up later on, and in the afternoon some beautiful views were enjoyed. Amongst the numerous curious phenomenon observed were beautiful rainbows, which, seen from the clouds above and shining in all their marvellous colors below was indeed a sight never to be forgotten.

Each of the several trips was productive of something of special interest, but particular mention must be made of what was known as the Yoho round trip. This took two days, one to go and one to return. On the outward trip the famous Takkakaw Falls were seen in all their wondrous majesty. Every member of the party was willing to sit for hours admiring these falls. From every point of view they presented a sight calculated to awe and impress the observers. It seemed impossible to escape from them. Soon after striking the trail for the head of the valley the thunders of the Falls were heard and as one got above the timber line the main fall—900 feet long—was seen dashing down to the river below. The glacial water appears to have forced its way right through the solid rock and falls in great leaps to the rock below and into the boiling swirling waters of the river. The whole fall is said to be 1,200 ft., and the thundering descent of hundreds of tons of water every minute without any apparent effect upon the glacier above may enable readers who have not seen the mountains to have some faint conception of the immense masses of ice that form these glaciers. To add to our knowledge of the glaciers will be one of the most important portions of the future work of the Club.

The Look Out from which these Falls could be well seen was a favorite resort and only time and hunger—the outdoor mountain hunger—drove people away. It is impossible to describe in adequate language the fascinations of these Falls, and a journey across the continent to see them alone is well worth while. The distant camp was fixed on a small plateau near to Laughing Falls. This trip was so popular that tent accommodation could not be provided for all, and the novelty of sleeping out was added to the other camp experiences. At the time the writer took the trip there were so

many volunteers for this novelty that not half the tent accommodation was used and ladies and gentlemen alike volunteered for the sky parlour. We had penetrated right to the head of the Yoho Valley and sleeping on a bed of balsam, beneath a perfect sky, with the thunder of the Falls on one side and the noise of the rushing waters of the Yoho River on the other, we had a splendid night—it would have been perfection had the porcupines only let us alone. On retiring we found one of these strange creatures settled comfortably on the bed chewing at a bath towel that had been carelessly left outside the canvas cover. When disturbed in this appetising meal the way he scuttled up a tree was remarkable. No sooner however were we comfortably between the blankets—and between two ice fed waters it was cold and blankets were comfortable—than he came into Camp again and got far too familiar to allow us to rest. At intervals, during the night first one and then the other would awake the echoes of the night with a blood curdling yell as a porcupine would attempt to chew up our bed covering and seek to deprive us of the warmth which it was absolutely essential for us to retain. The writer's companion—a Rev Doctor, developed a remarkable strength of lung in yelling, and he showed his aim was true by hitting one porcupine with his boots. Notwithstanding our exertions in keeping our little camp alive—the noise of the Falls prevented a single yell from reaching our companions—the porcupines succeeded in badly chewing up the Doctor's boots and in eating the edges of our blankets. The morning was bitterly cold and to dress and wash under such conditions was trying. A short time however and the healthy glow was running through us. The Camp fire was welcome and we packed up our bedding to save the remainder from our marauders.

A hearty breakfast of hot coffee and camp fare enabled us to face with pleasure the further experience of crossing the head of this rushing stream on saddle horses. The gallant little animals breasted the stream nobly, but it was a curious sensation to feel that just for a moment—which appeared an hour—the

horse lost its foothold and the banks and the waters appeared to be going past with the speed of an express train. Then the noble little animal recovered its footing, breasted the water again, and soon landed the writer on the further bank. It was a little bit of personal experience that gave one an added respect for these mountain ponies whose intelligence in overcoming difficulties of a special character caused a never ceasing admiration for their cleverness.

The Yoho Glacier was the first objective and the President and several members engaged in scientific measurements. They cut steps with ice axes and to the onlookers appeared to be crawling over a mere fraction of the visible surface of this mighty glacier—mighty, though by no means the largest of the series which make British Columbia so remarkable. It was only the tongue of the glacier upon which they worked and at the extreme edge of this tongue is a cave so large that a man looks like an insect as he inspects this wonderful work of nature. The water of the Yoho River comes from underneath this ice and rushes down the valley being joined on the way by numerous ice fed tributaries until it becomes a mighty rushing stream and eventually joins the Kicking Horse and finds its way to the Pacific Ocean. A short distance below our Yoho Camp it rushes along with a speed of thirty miles per hour and finding itself enclosed in a rocky gorge with a steep descent foams and boils in such a way as to cause a deafening roar. The manner in which trees, rocks, and every obstruction is carried down testifies to the strength of the water and there would be no hope for the unfortunate individual who took a wrong step and found himself in it.

On the way back to the main camp another of these remarkable falls, known as the Twin Falls, was seen. One of the Twins we were told, had lately run in an attenuated fashion, but we were fortunate in seeing all these falls at their best. The great heat of the sun during the daytime swelled the immense bodies of waters feeding these falls, and though the Twins as we saw them, were unequal in force and power, they were near enough in volume and might to justify

their names. There were many lesser falls, and every minute was rich in ever changing views. The trail, like all these trails, led up and down round what are called shoulders of hills, across rocks, green stretches, through timber, boulders and shale and gave every variety of experience. We lunched at a camp placed in this wilderness by the Canadian Pacific, and the cups of hot coffee supplied were indeed grateful and will cause this oasis in the desert to be long remembered. The man in charge said he had been six days without seeing a human being and the invasion of camp visitors was as welcome to him as his thoughtful kindness was to those who were, through him, the recipients of the Company's bounty. A ten mile tramp over the trail rendered one very fit for the supper that followed arrival in camp. By the way one of the tid bits provided at the camp in question was cooked porcupine, and the writer had his revenge upon one of the relatives of the disturbers of his night's rest.

The following is the official list of those who succeeded in making the qualifying climb of Mt. Vice President, and it is a remarkable fact (and a wonderful testimonial to the efficiency and ability of the guides) that not one lady or gentleman who set out to perform this difficult task failed to achieve success :—

It must not be conceived from this that the task set the graduating members was at all an easy one. On the contrary it was sufficient to try the endurance of any man, and was particularly severe upon beginners. Unearned honors however are never worth much and it is gratifying to the new active members who can now call themselves mountain climbers to know that pluck, perseverance and endurance were shown by each and everyone of them before winning the position they now hold. It was a pleasure to hear from Mr. Patterson, himself an expert and a conqueror of a virgin peak, that although he looked upon it as a condescension when asked to take the end of the rope to do so, he found the climb one worthy of his powers, and needing all his experience to achieve success. If Mr. Patterson was tried, what about the tenderfeet? Well they found it hard enough. Most of them were exhausted by the exertions undergone, but the mountain air, good food, sound sleep, and the exhilarating surroundings caused a rapid recovery. Nearly every one joined in the proceedings round the Camp-fire the same evening as they climbed, and considering that they were called at four in the morning, had a strenuous day of twelve hours continual and trying exertion is a strong testimony

to the efficiency of the mountain air and to the recuperating qualities of camp fare accompanied by a short rest.

There of course remains many stories of individual climbs and the whole week was rich in personal experiences.

The Camp fire evenings were most enjoyable and by general consent the Sunday evening service was most appropriate, held amid surroundings that were calculated to impress and fit all to a reverent worship.

Everyone regretted the arrival of Monday morning when aces had to be set to business again and the cares of the world taken up once more. There was a pleasant gathering at Mt. Stephen House on Monday evening and Tuesday and with the evening train very few were left, nearly everyone departing their several ways filled with pleasant recollections of the past Camp and high anticipations for those to be held in the future.

### The Annual Meeting.

One of the features of the Camp was the annual meeting held round the Camp fire, the members sitting on logs, and hugely enjoying the novelty of such a gathering. Every now and then the flames would leap up and enable those assembled in the rapidly gathering darkness to watch the speakers or see the enclosing background of forest trees. While the reports were adopted with enthusiasm, there were, as is only right with individuals possessing the sturdy independence of mountaineers, differences of opinion upon details, although all were as one in the desire to advance the interests of the Club and by such means to do national work 'or Canada.

The President (Mr. A. O. Wheeler), expressed the feelings of all in declaring that week as a proud and happy one in their lives. Less than four months ago they had no existence beyond that of an experiment, the issue of which was quite uncertain. Now with a membership of one hundred and forty they were met from all parts of the Dominion on the summit of a mountain pass, the axial point of an Alpine district that for snow-covered grandeur and variety of the highest type of mountain scenery, has

not its peer throughout the entire Rocky Mountain region. Their Camps would be one of the most tangible, outward and visible signs of the Alpine Club of Canada. It was from these that the "Canadian School of Mountaineering" would send forth its graduates to make their mark in our mountain centres and in those of other parts of the world. Their first Camp was almost entirely due to the loyal patriotism and keen love of the mountains of a number of the most prominent outfitters. Both their personal services and their resources had been freely placed at the disposal of the members in order that those present might see the glories of the mountain world and spread the fame thereof through the length and breadth of Canada, and make known to their fellow citizens the superb birthright of which we are all in possession. In the science and art sections good work it was hoped would be done, and during the coming winter it was hoped to publish a Year Book.

Mrs. Parker submitted the first annual report as follows :—

"The first annual report of the Alpine Club of Canada, coming close upon its inception in March, is presented in gratitude for the Club's very promising and stable beginnings—gratitude enhanced with faith in achievements to come.

It is twenty-three years since Sir Sanford Fleming, his son (S. Hall Fleming), and the late Principal Grant of Queen's University, pushing their way through the Selkirks, halted on the summit of Roger's Pass and resolved themselves into a "Canadian Alpine Club", with Sir Sanford as President, his son as Treasurer; and the Rev. G. M. Grant as Secretary. Officers once elected the transactions were as follows :—A resolution of thanks to Major Rogers, discoverer of the Pass; a proposition to conquer, as speedily as possible, Mount Sir Donald (then "Syndicate Peak"); and a toast to the health of the Club, drunk from the stream sparkling at their feet. Though but the common sudden impulse of an hour of exaltation, this ceremony, long since passed into a picturesque bit of Rocky Mountain history, was touched with prophecy; and we of the Alpine Club of Canada, here met on

a similar beautiful Pass, are fulfilling that prophecy.

Since that day of enthusiasm on Roger's Pass the Alpine idea has been stirring in the Canadian mind, faintly and slowly at first but gradually increasing until finally it gathered enough momentum to be called by that potential word, a movement. Appeals were sent out

derland of Canada" by Mr. A. O. Wheeler, assisted by Dr. Herdman. On March 28th Mr. Wheeler addressed the Canadian Club on the Canadian Alps and Canadian Mountaineering. In the afternoon of the same day the Club formally organized with seventy-eight members. The inaugural dinner followed in the evening, when some stirring speeches,

A sea of mountain peaks covered with perpetual snow, as viewed from the summit of Mount Dawson, the highest peak yet climbed in the Canadian Rockies.

through the press, and privately to persons proper to the project—appeals which won a response justifying the calling of a Convention in March, when delegates to the number of twenty-eight from every Province but one in the Dominion, foregathered in Winnipeg with a view to organize mountaineering. On March 27th the Convention began with an illustrated lecture on the "Won-

derland of Canada" by Mr. A. O. Wheeler, assisted by Dr. Herdman. On March 28th Mr. Wheeler addressed the Canadian Club on the Canadian Alps and Canadian Mountaineering. In the afternoon of the same day the Club formally organized with seventy-eight members. The inaugural dinner followed in the evening, when some stirring speeches,

born of experiences in rare altitudes, were made, and the healths of the King, the Club and its officers drunk with the enthusiasm of the heights. Sir Sanford Fleming, K. C. M. G., was chosen patron, and Mr. A. O. Wheeler, F. R. G. S., President, both with acc'amation. The following were unanimously elected honorary members:—Mrs. H. J. Parker, Winnipeg; Profes-

sor Charles E. Fay, President of the American Alpine Club ; Dr. J. Norman Collie, F. R. G. S., London ; and the Rev. Wm. Spotswood Green, Dublin. The President telegraphed that he was "Proud to be associated with the new Alpine Club of Canada". Acknowledgements of warm appreciation were received from the last three named honorary members; and the first takes eager leave to record her unworthiness, gratitude and pride in the unexpected honour given her by making her the first honorary member of the Alpine Club of Canada.

The following gentlemen voluntarily joined the new organization as associate members by paying the annual fee of \$25 according to a clause of the Constitution : Sir Sanford Fleming, K. C. M. G.; William White, Esq., Second Vice-President of the Canadian Pacific Railway Company; J.D. Patterson, Esq.; the Rev. C.W. Gordon, D. D.; and E. L. Drewry, Esq. One of these gentlemen, Mr. Patterson, was qualified for active membership by the ascent of Mount Ball, a maiden summit, Mount Lefroy and others. Mr. Patterson's material contributions did not stop with the Associate fee, while his sober though quick enthusiasm has been and is a support of the moral sort.

Circulars containing a brief notice of the Club's inception with its aims and purposes were sent out immediately, and applications for additional membership to the number of sixty-one have been received, so that, when their election is declared, the Club will number 140.

The personnel deserves a word. We have enrolled a large number whose vocation is teaching, either from the pulpit, the University and College chair, or that most important of all, the desk of the public school. We have physicians, nurses, lawyers, and men of commerce ; altogether an important representative contingent of the people, those whose business in the world is to mould character or touch the national life on some important side.

The President, whose conception it was and whose generalship with a patient faculty for detail, has made the large venture so successful, established this school of mountaineering in the

heart of the ancient forest, 6,000 ft. above sea. And a point to be noted is : its absolute remoteness in Nature, and its nearness of communications with the busy world—eleven miles only from the railway and five from a telephone. Through Mr. Wheeler's sleepless energy the equipment has been secured and the first summer session inaugurated. Hearty thanks are due to all who came to Mr. Wheeler's help ; to the Department of the Interior, the Alberta Legislature, the Canadian Pacific Railway, the generous but modest private contributors; lastly and notably to the Outfitters, whose contributions in the name and for the love of mountaineering is munificent.

The nucleus of a library has been formed on the basis of four gifts: "The Selkirk Range" by our President, the author ; Dent's "Mountaineering" by Mr. S. H. Mitchell ; "From Old to New Westminster" by its author Sir Sanford Fleming ; and "Among the Selkirk Glaciers" by Wm. Spotswood Green, the gift of Mr. Meinecke of Milwaukee. The Hon. Secretary of the Alpine Club of London has written to say that their Librarian will exchange literature with ours. We hope to accumulate Alpine literature of value by exchange and by gifts, and ere long to find a roof tree for a library worthy of the club.

Correspondence has been directed to the Motherland, telling a true Alpine tale of Canada and bidding British holiday seekers come to climb in their own territory with promises of virgin peaks and valleys for a century yet, and rare mountain solitudes uninvaded by the ubiquitous tourist. The Alpine Club will forward, in every way possible, British mountaineering in Canada. We welcome two English members, Misses Tuzo and Benham, who have attained so many Canadian summits. We welcome too, our American friends, some of whom have done steady scientific service. A true mountaineer is "blood brother" to every other mountaineer under any flag.

Much of the Club's activities are to be devoted to glacier work, flora and fauna; but the popular mountaineering element is to be fostered in the interests of young Canada. Mountaineering is the most

ethical, aesthetical, and strenuous of all the nobler sports. Its influence is national. A mountaineering people is a patriotic, a valiant people. Now that the Alpine Club of Canada has achieved visibility it is destined to take no mean part in helping to mould the lusty young nation. Growing from within its membership will reach into the thousands, like the Appalachian Club of Boston; and ultimately will be ours to accomplish some wider service in helping to bind closer the great Empire, whose westward star shines clear over the wide rich land for which our hearts beat true. This will we do if, as we expect every member of this Camp and this Club is an Alpine missionary."

### Camp Notes and News.

One of the greatest successes of the Camp was the catering. It was no light task to satisfy so many appetites sharpened by the keen mountain air and the daily exercise, but it was performed and there was no shortage of a single article. The fare was plain but substantial and there was no stint. Every one had plenty both in quantity and variety, and there was enough and to spare in the way of provisions of all kinds. When it is borne in mind where the Camp was and how much this meant in pack train work, the regularity and abundance of the meals was remarkable, and is the best testimony that could be given to the organizing ability of the President under whose personal supervision the whole was carried out.

The Outfitters who gave their personal services and the whole of their resources to make the first Summer Camp of the Alpine Club of Canada the success it undoubtedly was, deserve a paragraph all to themselves. Mr. R. E. Campbell, of Laggan and Field, who has cut out many of these mountain trails and done much exploring work himself was on hand the whole week and did valuable service. Mr. Tom Martin and Mr. Jack Otto, of Field, and Leancoil were also present and proved themselves capable guides as did also Mr. S. H. Baker, of Glacier, and Mr. E. C. Barnes of Banff. They will have their reward in the future as

the Club grows in members, fame and influence and bring many from all parts of the world to view Canadian wonders which none of us can fully appreciate so vast and so numerous are they.

In allowing Mr. Wheeler to give his whole services to the Camp for a week, and by placing at the disposal of the members the whole of their men, horses and outfit, it is estimated that the Dominion Government contributed fully \$500.00 to the expenses of the Camp. The Alberta Legislature gave a grant of \$250. What with Dominion, Provincial, and local help the Camp was made a possibility on a large scale and the mountaineering wonders of Canada brought home to people who should spread abroad its name and fame in a wider manner than has hitherto been possible.

The Canadian Pacific Railway has done much to aid the Club. In addition to generous treatment in the matter of transportation at the time of organization, liberal rates were given from all parts of the Dominion to those attending the Camp. The C. P. R. Hotel Department likewise gave hearty co-operation and valuable assistance which was much appreciated by those upon whom fell the burden of the work of the Camp.

In one case as much as \$100.00 was given as a personal subscription to the expenses of the Camp, and several smaller subscriptions were likewise received and proved very acceptable.

The cost of the Camp was estimated at between \$1,500 and \$2,000—no light undertaking for a youthful organization and one it would not have been possible to undertake but for the patriotism and enthusiasm shown on all sides.

The tents and bunting which rendered the Camp so fine amid its picturesque surroundings were loaned by Mr. H. Douglas, Superintendent of the Rocky Mountain Park; Mr. A. W. Dufus, commanding the Royal North West Mounted Police at Calgary; Mr. A. O. Wheeler, the President of the Club; Mr. R. E. Campbell; Mr. S. H. Baker and the

Hotel Department of the Canadian Pacific Railway.

Amateur Photographers were in evidence throughout the Camp and one result should be a series of photographs illustrating the many beautiful and wonderful sights that rewarded those who gave time and trouble to attend the Camp.

Mr. S. H. Mitchell, of Winnipeg, has been appointed Recording Secretary. The work is so rapidly increasing that it was felt Mrs. Parker needed assistance, and although not provided for in the Constitution, the new office is a logical outcome of the growth of the Club.

The next Camp is to be held in Paradise Valley, Alberta. This is said in some respects to even surpass the Yoho Valley. The mountains are higher, closer, and there are more of them than in the Yoho. Altogether the Paradise Valley is worthy of its name and what more can be said? Surely the members of the Club who are able to attend the next Camp are in for a good time.

Mr. R. Stuart Solomon, of Capetown, has joined the Club as an Associate member. This recent recruit to the ranks causes the Club membership to be extended over four countries, viz.:—Canada, England, the United States, and South Africa.

It may be mentioned that Mr. Solomon, whose sense of humour was one of the enjoyable features of the Camp, and whose good nature extended to enjoying a laugh against himself—a rare virtue—distinguished himself during the late war by the manner in which he threw open his own house free to every wounded colonial whom he could possibly help. His assistance extended to many Canadians, and his interest in Canada, developed by several visits, assumed this most practical form. Everyone in Camp will be interested to know this excellent feature of Mr. Solomon's career, and no one who was brought in contact with him will be surprised to learn about it. Mr. Solomon proved himself a good fellow all round.

Miss Tuzo, a lady mountain climber who has achieved a number of good climbs on two continents was present in Camp, and much enjoyed her visit, as well as gave pleasure to those who had the honor of meeting her. Accompanied by her one guide, Miss Tuzo made a successful ascent of Mt. Collie on Thursday, July 12th, and succeeded in reaching the highest peak. The start was made from the Laughing Falls Camp and an hour's walk brought the party to the Wapta. A charming alp succeeded, followed by a great snowfield, crossing which brought the party to the pass at the summit of Mt. Collie. A few hidden crevasses were the only danger, and it was necessary to use the rope in crossing the snow. The ascent was long and trying rather than difficult, though there was some interesting and not easy rock work to be negotiated. While a hard test of endurance the view from the top amply repaid the exertions made and Miss Tuzo, with her practical experience, considers that no other views she has seen can come up to and far less surpass those to be obtained from Mt. Collie. In fact, in her own words, one has only to name the mountains to fill up the names of those to be seen from Collie. The views of the Freshfield Glacier, Mt. Forbes, and several peaks in the Selkirks were particularly fine. The descent presented several features of interest. Passing behind the Yoho Peak some rather difficult ice work was done and Miss Tuzo was glad to know that she was in such able and experienced hands as those of Christian Kaufman, who has twenty-six climbs of maiden peaks to his credit, all achieved in the Canadian Alps. After a glissade came the snowfield above the Twin Falls and several hours were occupied in crossing this. The party had the uncomfortable experience of walking for hours through slush above their ankles, but this is a part of mountaineering. They saw a perfectly formed middle moraine between Collie and Marpole. This steep pass under station 18 was crossed which brought them to the Little Yoho where the interesting sight of goat close upon them was witnessed. A few miles further walk took the party to camp on the Little Yoho, the day having proved a

hard one, not altogether devoid of interest, but meaning hard work and not giving the fame of a maiden peak, though the work was as arduous, and in some respects even harder than would otherwise have been the case.

Amongst the many other features of the Camp was an auction sale at which the ice axes imported from Switzerland were sold. Mr. Solomon made a witty auctioneer and good prices were realized. The alpenstock used by Miss K. McLennan and the ice axe used by Miss E. R. Hobbes were brought in by Mr. J. D. Patterson and by him presented, through the President to the two ladies who made the first official climb.

Mr. J. D. Patterson made an ascent of Mt. Collie on the same day as Miss Tuzo and met with very similar experiences.

The President remained on duty from long before the opening of the Camp till Saturday morning when he reluctantly drew himself away for his scientific work on the glacier and left affairs in the capable hands of Mr. Patterson.

Mr. Freeborn, another member of the Appalachian Club of Boston, and a member of the Alpine Club of Canada, was a quiet, unassuming but most earnest worker in the Camp, and proved a most interesting member.

Mr. George Vaux, accompanied by Miss Vaux, of Philadelphia, well known members of the American Alpine Club who have joined the ranks of the Canadian Alpine Club, visited the Camp on the Yoho Pass, and attended one of the evening Camp fires. They left on the following morning for a trip up the Yoho Valley under the guidance of Tom Martin.

Three enthusiastic members of the Club—the Rev. Dr. McRae, principal of the Western Canada College, Calgary; the Rev. Alexander Dunn of Calgary and Mr. Don McTavish, accompanied by the two Swiss guides, Edward and Godfrey Feuz, made an ascent of Mt. Marpole on Monday, July 16th. They

had a long and arduous day, but were successful in making the peak. Edward Feuz described the climb as "better" than Mt. Vice President, stating that at one point they had a sheer climb of thirty feet up the perpendicular face of the rock—as pretty a piece of rock work as he had seen, and the rope was in constant use. In addition they had plenty of snow and ice, and the glacier work necessitated the constant use of the ice axes. By this time, however, the men were in fair training and notwithstanding all the difficulties in their way accomplished the feat without excessive fatigue. The guides declared the climb to be one of the best in the series, and the views obtained were such as to repay the climbers for their exertions.

Captain F. P. Armstrong, of Golden, B. C., has made an excellent suggestion with regard to the naming of the mountain-peaks in both the Rockies and the Selkirks. He points out the haphazard and often incongruous way in which names are given and the unhappy and inappropriate selections that sometimes result. He would like the Dominion Government to make a standing offer to the mountaineers of the world to name peaks after those who first succeed in climbing them and to include such names in the next Government maps and official publications. This would be the best stimulus that could be given to mountaineering in Canada, would lead to much and valuable exploration work on the part of ambitious individuals, and would substitute a regular system for a makeshift one. The Captain's suggestion is well worth the consideration of the authorities at Ottawa, and there are strong reasons in favor of its adoption.

A poetic member who made the official climb on the opening day composed the following as the Club cry:—

Yoho ! Yoho ! Yoho !  
We are the people who climb you know,  
Up to the regions of ice and snow ;  
On our return from the land of cloud,  
We all unite to shout aloud  
Yoho ! Yoho ! Yoho !

## How to Smoke.

**M**R. Valatin Nalbasse a medical man of the Persian Embassy in France has just published in the *Levant Herald* an amusing study on tobacco.

Sportsmen the world over think they know how to smoke, but possibly they may have something to learn, or they may at least learn here, what others think and have thought of tobacco.

We all know that Christopher Columbus' sailors were the first of the Europeans to see people burn dry leaves, drawing the smoke into their mouths and blowing it out again. This was on what is now the Island of Tobago, hence the name, tobacco; and it was the Great Columbus who first brought tobacco to Europe. Twenty-five years later Cortez sent some to Charles V., but it took fifty years to establish the use of tobacco at the Court.

John Nicot, a French Ambassador at the Court of Portugal in Francis the Second's time brought into notice in his native country, (where it was considered a medical drug) the nico herb or nicotine. At that time it cured many maladies—as do all new medicines. Nevertheless the smoking habit had begun, and it was fast becoming not a past-time only, but a habit or mania, in spite of the interdictions placed upon it by several of the Sovereigns. Louis XIV had a horror of tobacco and a formal command against smoking in his apartments was issued. Only Jean-Bart the great sailor had permission to smoke a pipe before His Majesty. We quote from Dr. Valantin Nalbasse about this sailor:

"The illustrious French sailor had obtained an audience from the King; but he had arrived long before Louis XIV could receive him. Tired of waiting and of the monotony of looking at the guard before the Royal door, he takes his pipe from his pocket, fills it conscientiously, lights it, and begins to draw and blow out enormous puffs of smoke under the noses of the terrified courtiers. The odor of the tobacco reached the Royal cabinet; Louis XIV asks the name of the audacious one who dared to smoke in his apartment, and was told that it was a sailor who pretended to have been

granted an audience by His Majesty. 'There is only Jean - Bart,' said His Majesty, 'who is capable of this,' and he ordered him to enter. In England King James the First forbade the use of tobacco in 1604."

Pope Urbain the Eighth excommunicated those who took snuff in Church and interdicted several priests who in spite of this made use of tobacco. The Sovereigns of Japan were in accord with those of Europe, and tried to put down the use of tobacco, but were unsuccessful. The Japanese had brought the habit with them from America, from which country they had originally come. Very little smoking was done in the time of Louis XIV on account of his pronounced antipathy to the pipe, but on the contrary much snuff was taken. It was one of the fashionable gestures of the eighteenth century to allow snuff to fall on coats, corsets, and lace work, that it might be shaken off with a stylish little movement of the fingers. It is a mistake to think that Europeans did not smoke before they found tobacco in America. Humanity has always smoked.

The Romans owned iron pipes in which they burned aromatic herbs, inhaling the smoke, and to this day in Europe tobacco is not the only vegetable product which various populations chew, snuff or smoke. As well as tobacco the betel root, cocoa, menthol, marjolaine, sage, lavender, thyme, absinthe, opium and hasheesh are smoked.

Since the days of Walter Raleigh tobacco has been indispensable to multitudes. George Sand could not write a line, Napoleon the Third could hardly speak; both were plunged into a sort of somnolence as soon as they stopped smoking.

In a letter to a doctor asking his advice about tobacco Francois Coppee wrote as follows: "I am prejudiced. I have been a great smoker since I was eighteen years of age. I burn cigarettes daily and all day—only cigarettes. I throw away each one after two or three puffs. I am not very strong, it is true, but I have no reason to attribute my poor health to tobacco, which I shall consider,

until proved to the contrary, as an excitant stimulating one to work and to dream, and for the poet these two things are synonymous."

There are on the surface of the globe many smokers ; but the number of those who know how to smoke is very restricted. "What an abominable thing is your tobacco !" said an Oriental some time since ;" and then you European people, you do not know how to smoke." Everybody knows of the prodigious variety of Oriental tobaccos, from the most simple leaves to the most varied mixtures of different qualities, to which are sometimes added perfumes, or they are exposed to the steamings of pine gum, which produces a kind called "latakiah."

It is those tobaccos, mild and insinuating, which are mixed more or less with "tombekou" rank and strong, to be smoked in the "narghile." In this strange and complicated apparatus, (hygienic nevertheless) the tobacco is burned in a little metal furnace; the smoke conducted by a pipe traverses a vase full of ordinary water, or better still, rose water, and reaches the lips of the smoker by a second tube. Let us leave to Theophile Gauthier the description of his impressions on this subject : "Nothing is more favorable to poetic reveries than to inhale in small doses, seated on the cushions of a divan, this odorless smoke refreshed with water, which is circulated through tubes in red or green morocco wound around the arm ; you smoke through a pipe, which is a work of art, a tobacco metamorphosed into perfumes and dreams."

Dr. Nalbasse, who is evidently a worshipping at the shrine of Madame Nicotine, recognizes that tobacco is mischievous when its use is abused and enjoins above everything that children

should not be allowed to smoke at any cost ; but when one is full grown and experiences some pleasure in smoking there is much to say in favor of tobacco. From the hygienic point of view, he says : "Tobacco has undoubtedly a favorable action for many upon the intestinal tube." "The story is well known of that historical woman with whom all treatment had failed to stop the continual throwing up to which she was subjected. Dr. Dujardin-Beaumetz advised her to smoke a cigarette after each meal ; and in this way only could her stomach be strengthened to retain food, and the throwing up began again as soon as the cigarettes were stopped."

Let us then be just and admit that tobacco never made as many victims as alcohol or opium.

"To conclude we advise that no one should smoke fasting, never in a bedroom, nor to exceed three or four cigars, or their equivalent in pipes or cigarettes, per day ; never to smoke a pipe to the bottom nor to smoke a pipe impregnated with nicotine, as so many smokers do and always to throw away a cigar when three-quarters done ; this advice is founded on the consideration that the nicotine is drawn towards the bottom of the pipe or to the end of the cigar. All old smokers know how very much better the first part of a pipe or cigar is than the last when smoked too long."

If so much could be written about tobacco by men who never sat around a Canadian camp fire at the end of a good day's work, after the consumption of moose steaks or baked maskinonge and camp accessories, what extravagance of language would have been theirs, had they had this camping experience so familiar to many of our readers.

## Half a Century in the Wilds.

### A Return to Civilization.

**I**MAGINATION has often been hard at work fancying what must be a man's emotions if, after half a century of sleep or banishment, he

could make a return to civilization, and find all modern improvements, of which he had no previous conception, in full play. As usual truth has again outrun

fiction. The famous Arctic exploring vessel *Discovery*, now one of the Hudson Bay traders, recently made her appearance at the West India Docks, London, England, having made the voyage by way of Hudson Strait ; and while an object of great interest and curiosity to the people, one of her passengers, a returned Hudson Bay Factor, who has spent half a century in the Far North, proved of even greater and wider interest than the vessel itself.

William Miller was born at Stromness in the Orkney Islands, which stand out in the North Atlantic beyond Scotland, and are pretty nearly as much wind and storm swept as the Far North of Canada, where he spent the major portion of his life. When quite young he emigrated to the Dominion, and took service with the Hudson Bay Company. He was at once initiated into frontier life, and took to it so well, and proved his trustworthiness so thoroughly, that thirty years ago he was promoted to the position of Factor at Misstassinny, a remote station in the very North of the Province of Quebec, and far from all vestiges of civilization. A Scotch lassie was found willing to share his exile, which after all was not very greatly different from his own homeland.

Here he remained for thirty years, brought up a family of several daughters, and was practically a king in his settlement. Rarely was another white man seen at his Post, and no white ladies ever visited at his station. He received letters and papers twice a year—by water in summer, and by dog train in winter.

Annually he made a journey down the Rupert's River to Rupert's House, another Hudson Bay Post on Hudson Bay, taking with him the piles of furs secured during the winter and brought in by Indian hunters and trappers ; while on the return journey he filled up with supplies destined to last him and his Indian traders until the next year. On these journeys quite a number of canoes formed the flotilla, and the journeys were never without interest.

As may well be imagined Mr. Miller

had some thrilling experiences and adventures. On one journey he walked four hundred miles on snowshoes, hauling his food by sledge, and pitching his tent by night with a stove to keep him warm. He was never short of supplies, being a clever and practised hunter and fisherman himself, and was able, had he so wished, to keep his station supplied by his own skill. His was a healthy and vigorous life, and nothing but age—he has seen three score years and ten—and failing eyesight made him give up his charge. He was the Chief in a settlement of fifty souls, all Indians except his own family, and it was not without regret that he parted from them.

A longing to re-visit the scenes of his boyhood, and to show his family the old home, conquered his love of the backwoods, and finally the family moved to the only home some of them had ever known. They went in canoes by Rupert's River to Rupert's House, and then crossed to Charlton Island, where is situated another Hudson Bay Post. At this point they managed to board the *Discovery*, which had been fast in the ice for five weeks, and made the voyage to England.

With the exception of one visit to Montreal, Mr. Miller had seen nothing of the wonders that science has wrought in the streets of modern cities, and one of his daughters, until the voyage to England had commenced, had never left the backwoods. Their feelings of mingled wonder, astonishment, and incredulity at sights which are so familiar to the residents of modern cities as to any longer arouse curiosity, were beyond expression, and can only be left to those of quick and vivid imaginations to faintly realize.

In his retirement after half a century of service, Mr. Miller might well spend some of his time in recounting his experiences, much of which would be both interesting and instructive, for the benefit of those whose lives are cast amid the storm and stress of modern overcrowded cities, and who look upon such a career as one after all to be envied.

# Fishing on the Georgian Bay.

BY THOMAS A. DUFF.

**T**HE small mouth Black Bass is, in my judgment, the king of Ontario's game fish, and is enthusiastically angled for by all lovers of the rod. An ample share of the splendid sport afforded in the quest for his elusive majesty has certainly fallen to my lot.

My business takes me from the Atlantic to the Pacific, and in many different waters of our broad and fertile Dominion have I wet my line and dipped my rod in the health-giving and pleasant recreation of fishing.

For several years my mind has been bent on having a home where the heated days of summer, cooled by the breezes of the lake, the air laden only with the aroma of the pine, cedar, tamarac and birch, could be passed in contentment and idleness, save for the boating, bathing and fishing, and where one, like the phoenix rising from its ashes, could return renewed to the strenuous life which follows for the balance of the year.

After careful consideration and much examination, forty-one acres, situated at Honey Harbor in the Township of Baxter and District of Muskoka, were purchased, and in the spring of 1905 was built after my own notions, and from my own plans, a convenient cottage which has been named "Bide-a-wee." It is very prettily situated and nicely laid out, being built on a rocky peninsula which juts out into a narrow channel through which a current constantly flows, thus assuring pure and cool water.

My object in selecting the Georgian Bay instead of one of the small inland lakes which abound in the locality was two-fold; firstly, because the air is fresher and cooler and mosquitoes do not make life miserable; secondly, because the fishing in the open waters of the Bay is much better than in the lakes, and with the entire chain of Great Lakes to draw from, it should, with the fishery laws duly observed, prove excellent ground for years to come. In the smaller lakes of Muskoka, where thousands of tourists from all parts of the world have been going for years,

the fishing is poor. In days gone by fish without number have been caught merely for the sake of killing and left on the shores to decay. The net too has done its dirty work.

Honey Harbor is situated in the district known as "the 30,000 islands of the Georgian Bay," and is very easy of access, being about four hours ride from Toronto, via Grand Trunk Railway to Midland or Penetanguishene, from where steamers convey one to the different hotels or resorts, of which there are four, whose rates range from \$1.00 to \$2.00 per day. At present there are about fifty cottages, but as there has been a wonderful demand for building sites many new ones will be erected this spring. During July and August there is a mail twice daily.

My experience with bass is that they have different habits in different waters. From June 16th (the opening of our season) until about July 12th they are to be found close to shore in places where there is a gravel or rock bottom with water from four to eight feet deep, and apparently they are there for the purpose of protecting the fry, because should another fish come anywhere near, it is at once attacked and driven off. The bass then has apparently no fear of the boat and I have watched their antics, with much pleasure, for half an hour at a time. When they are found thus engaged no effort should be made to lure them from their duty, because it might mean the loss of a thousand young fish. The question has often come to my mind when watching their movements, should not our close season be extended to July 1st. In fishing at White Fish Lake, near Gracefield, P.Q., through the courtesy of the Abbitibi Fishing Club, early in July, 1905, the same state of affairs existed and the members or myself made no effort to take any bass.

From about July 12th to September 1st they will be found out in the open water on the deep sides of rocky shoals. From that on they seem to frequent the channels separating the Islands, especially

those through which there is a strong current.

On account of the extent of the Georgian Bay and the facts that nearly all of the best fishing places are about shoals which usually do not show above the water a guide for the first few days is an almost indispensable adjunct for a stranger,

Last year, up to July 12th, we met with very indifferent success, some days very good, others the reverse; but after this date I can only recall one day when we failed to catch the limit of beauties ranging from one and a quarter to four and three-quarter pounds.

The favorite method of enjoying the

AN HOUR'S CATCH AT HONEY HARBOR

and these can be secured for not more than \$2.00 per day, or, if engaged by the month, the rate is about \$35.00. For two years I have had a very good Indian boy who is known as the "Commodore" on account of his interest in my little fleet. He has always lived in the neighborhood and is familiar with the locality.

sport at Honey Harbor is to take a motor boat, tow the skiffs, and proceed as rapidly as possible to the fishing grounds, usually arriving there between 8 and 8.30 a. m. The motor is dismissed to return at 7 o'clock; all likely places had by then been carefully fished, and it was no uncommon thing to have the ladies of the party come

out victorious. At noon an adjournment would be made to the shade of some of the magnificent trees found on a pretty island where the "Commodore" would build a stove of stones and light the fire, then the fish would be cleaned and fried, tables laid and full justice done to the repast; and how the party would eat. I pity those who may read these rambling sentences that have never enjoyed a meal beneath the friendly shade of a mammoth tree, the beauties of nature on every side, and fresh-

to the friendly neighbors who would be at the docks watching for our home coming and to share with them the prizes of the day. They, too, could have as much success as falls to my lot if only they would study the habits of the fish, observe that they run in schools and travel from shoal to shoal, and follow them with the same interest and zeal which characterizes all disciples of Isaac Walton.

Returning one beautiful August evening, with eight beautiful bass averaging

HIDE-A-WEE, A SUMMER HOME—HONEY HARBOR

ly caught black bass and thin rashers of Canadian bacon as the chief article of diet. What glorious fun it is!

After "washing up" a rest until 3.30, then to the boats again to listen to the singing of the reel and to watch the magnificent fight which the inhabitants of these waters can put up when the fisherman is armed with nothing heavier than six or eight oz. rod. The motor boat would return only too soon, but it was almost as much pleasure to exhibit our creel of fish

over two pounds and a twenty pound maskinonge, daintily arranged, myself in the stern of the boat with a troll playing behind, my favorite pointer "Bang" in the bow, and the guide lazily rowing, we were met by three or four boatloads of guests from one of the resorts who gazed with wonder upon the result of the day's outing.

After the usual exclamations to which the fair sex are prone, one lively maiden remarked, "Oh, where do you get such

lovely fish? Why cannot we catch them? How do you get them?" Ignoring the first two questions I answered the last by saying, "You see that pointer dog in the bow." The reply, of course, was in the affirmative. "Well," I said, "he is a dog that points game of all kinds and when there is a game fish near where the boat is he just stands up, sniffs at the water and looks at me." The people in the other boats looked at one another, the guide was nearly in convulsions and I looked wise.

We had not proceeded one hundred yards

and in the truth of my little pleasantry. The ladies were presented with the fish as an evidence of the incident and all went on their way rejoicing.

Another somewhat amusing occurrence happened later on at Gloucester Pool. company with my friend Harry Matthews, of Toronto, and Messrs. Andrews and Moore of Buffalo, N. Y., who were my guests for the day, we anchored on a favorite shoal and soon the occupants of both boats were very actively engaged in ascertaining who was master—the fish or the man. Mr. Andrews

STEAMBOAT CHANNEL AT HONEY HARBOR

when "Bang" stood up in plain sight of all, looked into the water, sniffed the air and looked at me. All saw the movement but I took special pains to draw their attention to his actions, and by a strange coincidence in about the exact spot where he had gone through the aforesaid performance there was a strike, and after a few minutes battle a six pound pickerel was landed. No one was more surprised than myself and had it not been for the laughter of the guide I honestly believe that some of my lady visitors would have gone away believing in the dog's prowess

lost his, and Mr. Matthews was also defeated, his line parting just above the lead. Of course the usual banter was indulged in and I jocularly remarked, "Oh never mind, I'll catch them for you."

A moment later there was a strike and a "swish" as the line rapidly paid out to the music of the reel. In an instant the fish jumped from the water shaking his head and returned to his abode with a splash, coming straight for the boat with me shouting "I've got him for you, I've got him!" After a glorious ten minutes he lay conquered in the landing net,

and on the guide going to remove the hook lo and behold: there was the hook, lead and part of the line that had once done duty for Mr. Matthews. True enough I had caught his bass for him and with all the dignity at my command presented it to him amid the applause of my friends. This fish weighed exactly four and three-quarter pounds and was taken by Mr. Andrews to Buffalo. I had never met with or heard of a similar case, but have since been told it is not uncommon to land a fish with broken tackle in its mouth.

As soon as the raft is tied up and the current from the propellers stops, the maskinonge go out in the search for food and usually locate themselves well out in the lake but around shoals where there are weed beds below the surface of the water. The method we adopted was to let out about 80 feet of line and row around these beds, and on only one occasion on which we went after these giants of the lake did we fail to get a strike. Then the fun commenced; the first performance was a tug and then a leap out of the

AMONG THE 30,000 ISLANDS OF THE GEORGIAN BAY

About August 10th the maskinonge begin to come down from the North. Millions of feet of logs are towed down the Bay by powerful tugs to Midland, Penetanguishene and Victoria Harbor, and it is said that these fish, attracted by the current caused by the wheels of the tugs, will follow under the rafts from the head of the lakes and remain there until the logs reach their destination. It is no uncommon thing to see residents of the above named places come out to meet the rafts, troll around them while in motion and rarely go home without a fish.

water the full length of the fish, and how he would fight! First he would run with the line and when stopped rush from side to side, finally going to the bottom when he got the butt and the fight started again. Fortunately my fish were always well hooked, my tackle strong and my skill sufficient to bring him to the boat near enough for the gaff, always dexterously handled by the "Commodore." Once in the boat the safety valve would open and my pent up feelings escape with two or three terrific shouts and a hearty shake of my guide's hand. None but a thorough

sportsman can thoroughly appreciate the pleasure to be derived from the skillful handling of a large musky !

I also had a very pleasant outing in October after lake trout and landed several beauties.

Honey Harbor is in my judgment an ideal place to spend the summer. There are enough fish to satisfy the most exacting; and should one tire of the open lake, grand sport may be had in Gloucester Pool, Six Mile Lake, or the Musquosh Riv-

er. The two former are quite large bodies of water and to get to them a portage is necessary, but this only adds to the pleasure and novelty of the trip, while the crowning result is a few hours' splendid sport with the finny inhabitants of the beautiful deep waters of these lakes.

On the point of rock in front of the house there is a blue rock trap located and thus I am able to keep in practice for the shooting tournaments and make the boys "go some."

## Game Protection in Nova Scotia.

**T**HE Game and Inland Fishery Protection Society of Nova Scotia have issued their report for last year, and included in it are reports from Agents in every county of the Province. The general opinion seems to be that moose are decreasing, and the Provincial Legislature is urged to shorten the open season, to limit the number of moose allowed to each hunter to one instead of two as at present; to prohibit the killing of any moose without horns; and to prohibit the sale of moose meat. It is also recommended that native hunters should pay a license fee.

Mr. Pritchard, the Agent for Pictou County, even goes so far as to recommend a close season for three years for moose, and argues that the breed is deteriorating owing to the old bulls being killed off. "The fine old bull is a thing of the past in these woods."

It is worth noting that Mr. Jenner, of Digby, reports that in his district the Indians respect the law far more than some white men.

Mr. Tufts, Agent at Kentville, mentions a case where a guide kills a moose for every man he takes into the woods, giving the credit of course to the tourist. He would like a law making it an offence for a guide to carry a gun or receive any portion of the meat—rather hard on the guide, and not at all a reasonable proposal.

One Agent went so far as to work in a lumber camp for three weeks in order to be in a position to see exactly what did take place, but his efforts were not marked by success.

In several counties the Agents express

the opinion that the moose are increasing, and so far as regards the Island of Cape Breton there appears, from the reports, to be no doubt on the point, though from some districts Agents report to the effect that moose are extinct in their particular neighborhoods.

Caribou are reported as scarce throughout Nova Scotia, but they are plentiful in the Island of Cape Breton. Mr. John Dalley, Agent at Digby, thinks that caribou are not now seen because the hunters do not have to go to the barrens for moose, and that is where the caribou would be found. A small herd was seen near the head of Bear River, Digby County, the first for several years. In Annapolis county they are reported to be increasing. After reporting them as extinct the previous year, the Agent in St. Mary's district, Guysborough County, was surprised to learn that a herd was seen in his district, and as a fact a man was charged with shooting one of them. The Agents in Cape Breton report them as increasing every year. Mr. G. Brewer, Agent at South Bay, Ingonish, Victoria County, "wonders if it would be too much to ask for the season to be opened for one month for the sake of the poor fishermen to whom a few deer would be a great help in providing for their families."

Red deer is imported game in Nova Scotia, is at present protected all the year round, and are reported as fast increasing in quite a number of districts. One Agent advocates a penalty as high as \$500 for killing a deer, with a minimum fine of \$200—an extreme course which ought not to be necessary, and which is not likely to

be taken. None are reported in Cape Breton.

Fur bearing animals appear to abound and wildcats particularly are stated to be increasing. Mr. Selig of Prospect is strongly against protecting the otter, arguing that its destruction of fresh water fish far outweighs its fur bearing qualities. The same gentleman is in a quandry over traps. He destroyed seven which he thought were set for mink though the owners claimed that they were set for muskrats only. In Yarmouth County beaver are said to be practically extinct, though there are some in Digby County. Mink are not plentiful generally and strict watch have to be kept on the trappers as mink skins are growing in value and demand. From one district—Baddeck Bay, Victoria County,—mink and otter were reported as "exceedingly plentiful"; and the Agent at North River, Victoria County, says "mink are abundant." In Digby County raccoons were described as a pest. From Hants County it is reported that one man lost twelve sheep by bears. Foxes are increasing in the same locality, and one man caught sixteen last fall.

The Secretary of the Society states that never within his memory were partridges so scarce as at present. The only reason he could assign for it was the marvellous increase in the number of wild cats, though many country people told him that numbers were killed off owing to the crust last winter forming so rapidly that after burrowing in the snow for the night the birds were unable to extricate themselves in the morning. If ruffed grouse are not further protected by stopping their sale, or giving them another close season for several years, they will soon become extinct throughout the Province. They are however increasing on the island of Cape Breton. With five exceptions every Agent reported these birds as scarce; whereas throughout Cape Breton the reports were just the contrary. In the five instances county, they were said to be plentiful. "fairly plentiful," "scarce, but on the increase," while the last one was not definite in either direction.

Woodcock were generally reported as scarce though at Mahone Bay, Lunenburg county, they were said to be plentiful. Mr. Jenner, of Digby, says the broods

seemed numerous and hatched out well, but six weeks of drought in the fall baked the swamps as hard as the highway. The cutting down of favorite covers continues and cause the birds to go elsewhere. In King's County they were said to be more plentiful than for some years past. Two agents in Hants County reported them as numerous though two others in the same county described them as scarce. They were fairly plentiful in Colchester County.

Snipe were also scarce, only one Agent on Cape Breton Island reporting them as "very plentiful"; and this is generally attributed to the fact that the upland swamps were baked hard and dry by the drought.

Ducks were generally reported as scarce, but the explanation given was that owing to the low state of the inland lakes an ample food supply was afforded them, rendering it unnecessary for the ducks to go to the seaboard for food. Their non-appearance at their usual haunts is not held therefore to mean any decrease in their numbers. These conclusions are borne out by the reports of the Agents throughout the Province, one stating that the ducks are rapidly on the increase, even some of the best sportsmen finding it no easy matter to shoot them.

In most of the counties hares were reported as numerous. In some places where they became overcrowded disease carried off a good many. As their pelts are worth only one cent each there is no inducement for the people to shoot them.

With regard to the fisheries the Society has endeavored to arrange with the Dominion Government for local control. Up to the present their efforts have not been very successful, but they are hopeful their renewed application will be favorably regarded by the new Minister of Marine and Fisheries. They report that salmon and trout suffered severely last year; they were netted and dynamited, owing to the low water caused by the drought, worse than ever; and the Society holds, with others, that it is high time better protection was afforded to the fish.

The report throughout bears abundant evidence of the efforts made by the Society and its Agents to carry on, and make as effective as possible under the circumstances, their most important work.

# Alaskan Cave Dwellers and Their Lives.

BY CAPTAIN DICK CRAINE.

**T**HE Esquimaux of Alaska appear to be an entirely different race from their fellows of Labrador or Greenland, and they have many peculiar customs of their own. Most people imagine the cliff and cave dwellers to be extinct—dead and gone ages ago, but they exist today on the islands off the Alaskan coast. I have made several trips amongst these people who are to be found on the Kings and Diomed Islands in the Behrings Straits. When I was there I traded amongst these people, giving them ammunition, provisions, etc., for their ivories, curios, and dogs.

At various World's Fair villages, as well as at the late Sportsmen's Show at Boston, I have had some of these dogs on exhibition, which, horrible as it may seem to the ordinary reader, were raised on human flesh. It was in 1899 that I got the puppy shown at Boston from them, and in that year, in consequence of an epidemic, about one third of the population died, the bodies being simply thrown on the cliffs for the dogs to eat. There is room as will be seen, for some good missionary work there.

It was in August of that year I was on King's Island, and had ocular demonstration of what I state. At that time there were about thirty-five dogs in the Island, and all were fat on human flesh.

King's Island rises precipitously out of the water to a height of 600 feet. There is only one place where it is possible to make a landing, and from that place a very steep rocky path, probably at an angle of forty-five degrees, leads up to their cave dwellings. These are all over the side of the rock, of which the whole island consists, and are made by prying out the shaly rock. This work is done a little at a time until gradually a room about sixteen feet in diameter is excavated. A ledge is left all round the sides and this is the place on which they sleep. Sometimes there are two, or even three shelves, and when this is the case they eat on the lower and sleep on the higher ones. The sanitary condition of these places is nothing less than frightful.

Here you find the historic seal oil lamps kept burning. The lamps are made out of a large stone hollowed out and filled with seal oil, either moss or old rags being used as a wick. They have no ideas of ventilation, and the heat and stench are indescribable.

The tropical temperature of the living room perhaps accounts for the airy costume assumed by the women towards evening when they are often to be found with no further clothing on than strings of beads, which are wound round their bodies in various fantastic designs.

Physically the natives are a short stolid people. Some of the women are almost pretty, having a kind of Japanese face with coarse black hair hanging in two platts, with complexions so florid as to suggest rouge. They are somewhat undersized, and are clumsy little creatures, clad in deerskin, and wear pants tucked into the tops of their sealskin boots. They wear a parka or shirt made of birds breasts with the feathers next to their skin, and another loose parka, with a hood on, over the other one. Some have combination suits, similar to those worn by the natives of the Siberian coast. By this I mean that they wear coat and pants in one garment on the principle of a union suit of underwear; in such cases the trousers are made very full like bloomers, and they have thus a waddling appearance when they walk. Nearly all wear gaudy beads, and most of them have copper coins or trouser buttons fastened in their hair. It is the fashion to have large holes in their lips, with a button or stone inserted in them, and others tatoo their chins.

Their marriage customs are simple and peculiar. When a young man takes a fancy to a girl, he delegates one of his friends to take a pair of new fur trousers round to her. If she accepts him she puts on the trousers, and wears them before the whole village for a week. At the end of that time he goes to live with her family.

After visiting one of their cave dwellings no one can wonder that during the last few years these people have been dying off like sheep. Whenever they can they

make a change from their own food to that of the white men, and then when necessity compels them they go back again to their own diet of walrus, seal, fish and oil. If they kept to their own food it would be better for them, but they are perfectly crazy after tea, sugar, molasses, tobacco, and whiskey. They take equal parts of tea and sugar, boil it all together until it is a sickening mess, and then, with only ship's biscuits to eat, they will drink cupful after cupful of this tea until it opens all their pores. After this mild debauch they go to sleep in their damp, dirty, evil smelling caves, and naturally contract disease. These sudden and complete changes of diet are bad for them, and to add to these evils they have a strong taste for liquor, and have learnt to make a drink which they know, as hootchinoo.

To make this liquid they take equal parts of flour and molasses, with four times the amount of water, and mix together. It is allowed to stand until it becomes sour, when it is put into an old five gallon kerosene can, and placed over the fire. An old gun barrel or a piece of seaweed is inserted in the top of the can, and passed through a large wooden bowl, as the vapour from the can comes in contact with the cold tube, it condenses and forms into drops of liquid dropping into a little wooden bowl. I know from experience that it has not a very pleasant taste, but it has intoxicating qualities, and that is what the natives want. The making of this stuff has given the Government a lot of trouble, and the revenue cutters are constantly finding these rude distilleries and destroying them.

Another of their strange customs is death by consent. When an Esquimaux gets too old to be of any further use, they are either thrust out to die, or deliberately left behind when the tribe sets off on one of its periodical travels. If, as is sometimes the case, their uselessness becomes apparent while the individual is still in possession of some worldly goods, a meeting is called, and after a feast, the goods are divided by the owner, who in the end places a slip noose round his own neck. It is etiquette for all those who have partaken of the feast, or received anything in the way of goods, to take hold of the rope, and help pull round the un-

fortunate host until life is extinct. This is distinctly one of the customs that none of us would wish to see imported into civilization.

They possess two kinds of boats — a kyak and an omeade. The former is a small canoe made of sea-lions' skins stretched over a light frame work made from drift wood or bone, leaving only a small hole in the centre in which a man can just sit. The other style is much larger and is left open. It is often of a size sufficient to carry two or three tons, and sometimes has a sail made of seals' intestines. Large as it is this boat is also made of sea-lions' or walrus skins, with a wooden or bone frame work.

For winter travel they have the typical Esquimaux dogs which are used all over Alaska. These dogs have been bred by the natives for generations, and are practically half bred wolves. The harness is made of seal or reindeer skins; while the sleds are often unique, being half composed of bone or any piece of drift wood they can find. The sled shoes are porous being made of bone. When it is very cold they will stop and roll the sled over, and after taking a mouthful of water from a bladder suspended round their neck, they spit it along the runner. This glazes over the runner so that the sled draws much easier for the next hour.

When I visited these people for the first time I was quite a novelty to them, for among the few white men they had ever seen none of them had a poll of red hair. As I had the good or bad fortune to be born with red hair, and had a plentiful supply of the same, my appearance amongst them created something of a sensation. There were many comments upon it, and some holder than the others wanted to know how I did it. They were ambitious of coloring theirs in the same way and refused to believe me when I told them it was natural.

When everything is considered these people do not live enviable lives. Indeed they often have a hard time of it to get a living of any kind. The Government has been doing a great deal for the natives on the mainland, and on St. Lawrence Island. They have introduced the reindeer there, and in these efforts have been very successful.

# Canoeing Experiences in Canada.

BY A. S. GREGG CLARKE.

**T**EN of us, all members of the Keewaydin Camps, had just started on our trip down the Montreal River. We had left Latchford and many of us were having our first experience in taking a canoe through a rapid by going down the three or four dashes that the river takes just below that place. Old Paul, his Indian blood apparently the coolest in the swirl of a rapid, puffing calmly at his pipe, had led us safely in a zig-zag course over two bad rapids, so that when we came to Willow Rapid, we thought we were capable of anything. This rapid is a very bad one:—a steep pitch, big rocks, and whopping swells at the bottom. Some of us followed close enough behind Paul to get down without mishap, although we danced precariously on the swells and shipped much water.

Paul, however, was nervous and ran to the other end of the portage where Heine and Mike, in command of the last canoe, were just shoving off for their dash down the rapid. He hailed them with a wave of the arms and cried out "you can't shoot him! You can't shoot him!" They failed to hear him, however, and started down full of confidence. Half way down their canoe struck the corner of a submerged rock and capsized in an instant. The next thing we saw was Mike with saucer eyes striking down the rapid with his famous overhand racing stroke in a mad effort, as he afterwards explained, to catch up to his feet, which had got a good head start. He was more frightened than he needed to be, and let out a few ridiculous panting cries of "Help, help!" We below the rapid, full of laughter, paddled out, caught Mike as he came down, and towed him to shore. Heine, in the meantime, had caught hold of the overturned canoe and floated down to quiet water, as placidly as a man could in a rushing rapid.

We had lost two bags of provisions and banged up the canoe a little, but the clothes, in water-proof bags, had been rescued, so that around the roaring fire we built to dry Heine and Mike out, we soon forgot everything, but the funny side of the upset. Beginners are sure to upset once

or twice in a rapid, but if a man keeps his head enough to stick to his canoe, there is possible danger only to the provisions and to the canoe.

Our experience on the Montreal River in this and subsequent rapids, made us believe that the canvas canoe is superior to all other for quick water. They not only respond to a touch, but they stand all manner of hard usage. The same canoe that met disaster in Willow Rapid had two serious encounters with rocks further down the river. The frame-work of the canoe in places was broken to pieces, yet the canvas remained uncut, so that Heine and Mike were able to take the long trip down to Temiskaming and then all the rough carrying and hard poling up the Matabitchuan River in this battered canoe without making a single halt for repairs. A cedar or birch bark canoe would have had to be abandoned.

Travellers by canoe in Canada who haven't carried over the Clay Hill or Devil's Portage (every canoe route in Canada has two or three Devil's Portages on it) from the Matabitchuan River to Fourth Bass Lake, can safely be said to have missed much of the excitement of portaging. Before the railway was built from North Bay to the lower end of Lake Temagami, every one bound for the Keewaydin Camps on Lake Temagami had to get there via Lake Temiskaming and the Matabitchuan River. This Devil's portage, therefore, was the first carry that the tenderfoot struck;—one of the hardest in all Canada.

At the beginning of the portage he meets a very steep clay hill up the side of which he has to mount by 100 steps cut into the hillside. Each step is at least two feet high, so that when a man has a hundred pound canoe on his head, the mere effort of lifting his load so far up into the air is tremendous even when the footing is good. But the day that our crowd of Keewaydinites first struck the portage, a rain had made it a sea of slippery mud. Sometimes our feet sunk to the ankles in mud; sometimes they slipped and

we fell. More than once after we had got almost to the top of the steps, the canoes slipped from our shoulders, when we fell and slid back to the bottom of the steps. Even when we reached the top of the steps, our troubles were by no means over, for the unbroken surface of the slope beyond was as smooth as ice. Here two of the fellows after repeated falls, decided to apply ingenuity to their problem. They fastened ropes to the bow of their canvas and pulled them along like sleds over the

smooth surface of the mud, while old Paul grunted with silent and contemptuous laughter. Despite these difficulties everyone not only kept his temper, but most of the time roared with laughter at the mishaps of someone else, and when we reached the summit of the hill not only did the long walk through the woods to Fourth Bass Lake seem child's play, but every other portage on the way to Temagami, seemed neither worthy of our strength nor of our ingenuity.

## BOOKS OF INTEREST TO SPORTSMEN

"Camp Kits and Camp Life," by Charles Stedman Hanks (Niblick) author of "Hints to Golfers" (New York, Messrs. Charles Scribner's Sons) is a book which every man going in to the Canadian backwoods ought to possess and study. It is an elaborate treatise upon all that concerns life spent amid the Saints of Nature, and forms a complete guide for the requirements and conduct of those who seek sport or health in a more simple and natural life than it is possible to spend in the hurry and bustle of the cities. The author rightly dedicates his work to his guides—those who know the Book of Nature by heart and who do so much in a quiet way to make a vacation perfect. Without their efficient aid in opening up the Book and enabling the city man to learn something of its contents, many a holiday, fraught with blessings to those who can take them in this way, would be altogether spoiled; and at best only a tithe of the pleasures possible would be enjoyed. The author commences by giving his readers the most elaborate instructions as to effi-

cient preparations necessary if they are to enjoy their holidays away from civilization. He then describes the best preparations for camps and camp fires and gives many useful hints the results of live and varied experiences which are likely to prove of the highest practical value to those who pay attention to them. They are well and clearly expressed, and even the man who knows most of the subjects dealt with in the book may learn something from it that he did not know before. Fishing, shooting, hunting and trapping are all written about in an interesting style that will commend itself to all classes of readers, and the last chapters or suggestions about camping out and some remedies for sickness or accidents in camp (and such things will happen with all possible care in the world) are particularly valuable. The book itself would be profitably taken on any trip, and its practical lessons studied on the ground. Any sportsman can obtain a copy of this book by sending the price \$1.50 to "ROD AND GUN AND MOTOR SPORTS IN CANADA," Woodstock, Ont.

# VISCOUNT JOHN

## CHAPTER IX

### The Way Homeward.

By

DR. J. M. HARPER

**O**UR outing was not yet over when we had everything in the canoe ready for starting up the river. The after-piece had in it something for us all, though our readers may not find in it anything for them.

The sun was with us again, bringing the waters down to their normal summer level. Every turn the canoe made in the numerous windings, brought us into the presence of an old friend,—some tree standing as an exception-mark, old and gnarled and gaunt perhaps, stalwart or widespreading, dissociate from its neighbours through its eccentricities of form or bearing,—some bed of the wild gilly-flower or fire-weed with its pink-purple umbels, or of the gentle marguerites with their staring solemn eyes, that silently told us of a meadow near by.

Nature-study is not to be had from book or teacher, but from Nature herself. She has something for us all,—a botany of her own, a zoology, a mineralogy, a full cosmology, concerning which he who runs may read.

And now that the angling habit had been appeased in Viscount John, the more sedate side of his character,—the more intellectual perhaps, but none the less entertaining,—came into fuller view. There was a fulness of knowledge in his diagnoses of the winsomeness of the mother of us all. He knew something of the habits of beast, bird, and plant, and what he knew had a folk-lore of its own. As with his fly-book in hand, he had some anecdote of origin or adventure to tell of every old battered pool-stained specimen in it, not excepting tragic

pieces of gut line and articles of angling gear, from the horrible "spoon," to the imitation minnow and worm; to help out his wonderful pocket museum; so with his experiences of things seen and unseen by him in the course of his woodland peregrinations, his mind had eventually become a living current from which the disappointed sportsman, weary and disheartened, perhaps, could always find some mind interest and some refreshment as well. If his humour was broad and personal at times, while on an excursion such as I have been describing, there was no loss of native dignity,—nothing vulgar in his appreciations of how a man should act, or what he might say or should not say. If there were two sides to his manner, there was no element of make-believe in either.

On the way up, there was in his conversation very little of the fishing flavour after he was once done with the rearrangement of his fly-book, and his series of running comments on the same.

"What's in the name o' a thing like that, to kill a fish wi'," he said, as he held up a Fiery Brown for us to examine "if a man does not know the particulars of his make-up, in its co-relation to the times and seasons in which it is to be wisely used. You noticed how Tom there made his selection of the best that were to be found in a' oor books, though in doin' so I'll wager he had in his mind the weather, the sky and the water as much as the colours o' the buskit bits o' things he put in his hat. It's the knowledge o' sic relationships that lies at the bottom o' a' skill: and a man, wha

ne'er bothers with such, is no much better than a quack at his trade."

"Noo, there's Robbie Burns!"

"Ay, now we're in for it?" said Tom with a whiff from his pipe and a satirical movement of his whip towards the off horse.

"And what for no? Are we to sit here, and look on at the wonderfu' fascinations o' the banks and braes o' this Tavistock o' oors, and no think o' the master o' them a' wha wove the mind-threads that nature had bestowed on him into the fortunes or misfortunes o' human love. Listen to sic lines as thae, Mr. Brither-in-law, and then get rid o' some o' your prosaic notions about this bonnie stream on which you were reared."

And here the Viscount gave a full recitation of Burn's "Banks and Braes o' Bonnie Doon."

"Ay, Tom, my man," said he when he was done; "gin God had gi'en ye the option, which would ye hae ta'en,—the skill to tak' the dourst fish oot o' the Tavistock or to write lines with the pathos o' thae two bits o' stanzas,—which would you mak' the maist o'? Ye hae the skill to catch a trout, my man; we can a' bear testimony to that, and are no jealous o' ye for havin' that skill either. But there's nae choice atween a hundred fish like thae at your end o' the canoe,—and a bonnie catch it is that the folks at hame 'ill be prood of,—my what a welcome the mither 'll gie ye!—there's nae choice, I say, atween sic prize and the twa stanzas I hae just recited. Solomon had bestowed on him wordly-gear and wisdom; but the tane without the tither would no hae been o' much account. And sae let nane o' us think little o' either."

"And yet you have a prize of wordly-gear and wisdom at your end of the canoe," murmured Tom, "that is seldom despised on the homeward run, when the right kind of guardianship has it in hand. Didn't your handicap place you in charge of King George?"

"Count one for the handicap," cried Dan.

"And a half one for me," returned Doctor Jim.

"Not to mention" I said not wishing to be left out in the fun "the fine illustration it is to us all how even the wisest

of men sometimes handle wordly-gear sparingly when it gets into their hands."

"We are under a Conservative government on our way up that, was Liberal on the way down," said Tom.

"Ye maun just abide, then, wi' the ups and downs o' life philosophically, my gallant lads, not a drop 'ill yin o' ye get until we come to hae a rest at the Beaver Dam. There's enough o' spirit in the air for all o' us. Besides that fox o' yours, Tom made a dreadfu' drain on oor resources, last night, and I don't want to hae to explain to my mither-in-law whaur it has a' gane. She's a keen-witted woman is my mither-in-law, eh, Tom?"

"But as I was saying,—and ye needna interrupt me, Tom, unless ye hae something to say,—I hae sic a love and admiration for this bonnie bit ribbon o' watter that I believe, if my machinery had been properly fitted up for it, I micht hae been a bit o' a poet myself."

"Get up there old Sugar-Loaf," cried the Mariner to the near horse, "and be thankful we are not worse than we are."

"And ye would hae been yin tae, Tom under the circumstances o' a proper outfit."

"Just think of the misfortune, gents, two poets in one family,—what a team! Gee up there, Sugar-Loaf, or something may happen yet."

"Every man is a poet in his ain richt. What chiel is there that hasna a yaumer-in' for the vale that gied him birth. The burn that rins by our mither's door, or the nearest to it, is the first o' a' poems we listen to, and there has been nae rhymster livin' or dead that hasna found in its rhythm a lilt for his first sang. The rinnin' brook lies at the bottom o' mair things in our composition than are dreamed of in our philosophy. It is, next to the mother's knee, the altar o' oor sympathies' sacrifice. Gie me the land, whase sons and dochters never feel better than when they are reading or writin' or recitin' some bit o' literature that lichtens and brichtens up its hills and dales, and I'll gie ye a people that are sure o' the best o' everythin' here and hereafter. Just try another deep draught o' that caller air,—a pure blend o' the scent o' forest, stream and mea-

dow-land,—and tell me if ye don't feel a better man.

"We must put up with what we can get, in the shape of a draught, when somebody has hold of the resources, eh, Sugar-Loaf ? Get up there Dandy : plenty of time to droop your head for a drink at the Beaver Dam.

"Ay, ye may mak' folks laugh at your irony, Tom ; but its true what I'm tellin' ye Just fill your lungs wi' the blend, my gallant lads ; isn't it fine ? I believe there's a sneezin' o' the sea itsel' in it."

And there really was truth in the Viscount's rhapsody,—there was exhilaration in the air of the Tavistock,—stimulant enough for all of us. The mid-summer's sun was hot, but the hottest day inland is easily endured by the angler at the side of a running stream. All things had been freshened by the rain,—all things save the mosquitoes, perhaps, that had possibly not had time to dry their wings to be in evidence a million-fold as of yesterday.

"The mosquito is a marvel o' the insect tribe," was what the Viscount told us when he had the chance. "The name just means a little fly, though some o' the Tavistockers are big enough for a' ordinary and extraordinary purposes o' blood drainin'. The entomologic gentry, of course, hae classified them under big names, and tell us that its only the females that bite while gossipin' wi' their wings around our heads. But a mosquito is a mosquito to us, male or female, whether its richt name be *CULEX PIPIENS* or no ; and the painful swellin' it mak's on the cuticle is a source o' profanity whether the beast means it or no. They say that the larvae hae their cradle on the surface o' still water, and that a' kind o' fish bolt them wi' zest, cradle and a'. Some folk, that haena had a trial o' them, declare that there's nae *MALICE PREPENSE* about the beggars, seein' that they carry nae pushion aboot their hurdies ; yet the ocular demonstration on the back o' oor necks this mornin' hardly bears that oot."

And so it was that the remotest hint from any of us or from the surroundings was sufficient to open the knowledge-bag of the worthy Viscount, as the canoe went swinging from turning to turning.

For instance while Dan was amusing himself by weighing a dozen of the largest fish we had taken, and spreading them out on a heap made by the smaller ones, the Viscount, with Tom's assistance made us familiar with the right name, anatomy, habitat, and habits of the famous Tavistock trout.

"Its no for me or any sic relation o' mine as my gallant brither-in-law there to say that the Tavistock trout are the finest to be angled for and eaten in the world. But, comrades mine, ye hae ne'er, I'm sure, seen a' mair luscious sicht a' your born days, than that up in the prow yonder,—a precious sliddery hillock o' silver and gray, stoddin wi' spots o' vermillion and yellow and black. Its easier for the maist o' folk to say "salmo" than "salvelinus," yet ye have to keep them baith in mind when you distinguish the sea-trout frae the brook trout. The scientific name for theae victims o' yours gentlemen, is 'Salmo trutta,' thus distinguishing them from the 'Salvelinus fontinalis,' found in our lakes and ponds. These denizens o' the sea, were up on their honeymoon when ye fell foul o' them revellin' to the burstin' on worms and mosquito oil, wi' an odd smelt or twa for their dinner and a watermoth or spider for their desert. They're the deil's ain kimmers to eat, as Tom there 'ill tell ye, on their way up or doon, and hae been found a hundred miles frae the sea on their summer's retreat wi' their kindred the salmon."

And thus did Viscount John discourse, with a song or an anecdote thrown between, of the marvels of the stream ; and when we reached the Beaver Dam, the pause in his converse came to us like the regretful first breaking-up of a house party when the crack is good.

After baiting his horses, Tom said that he would try to reduce the handicap by making a cast or two, while we were at our lunch.

"Na, na, my man," exclaimed Viscount John, "that match is done wi'. Ye maun fecht against mischance and no against superior skill this time and that's gamblin'. I hae had my fill o' this hole for a while ; and I don't think ony o' oor frien's here want to mak' a rival o' ye, Tom. They seem to hae had their fill o' things tae."

JAEGER

Sleeping Bag.

## Experienced Campers

—Those who know how to camp in comfort, under all conditions of weather and climate are unanimous that Pure Wool is the only possible wear for health and comfort. Because "Jaeger Pure Wool" is absolutely pure—with superior qualities of hard wear, the service it gives makes it very economical—it should form a large part of your camping equipment.

We can fit you with everything from head to foot—Underwear, Sweaters, Rugs, Sleeping Bags of Camelhair Fleece, Stockings, Caps, Cardigans, Knitted Shooting Jackets, etc. Obtainable from leading dealers in all principal cities.

And so we had, though we were all willing enough to sit, and smoke and look on, while Tom was giving us a second lesson by sight in the act of throwing a fly.

"Ye needna gang oot as far as I did, unless your life is insured," cried the Viscount. "The monument o' my folly still stands yonder; wi' the fragment o' yin o' my coat-tails or somethin' lower down still on it, as a pennon o' danger."

But Tom did not need to go from low-wading distance before the handicap was wiped out, with a great balance standing in his favour; for he was able to take a fish at nearly every cast, as I helped him with the landing-net.

As fish after fish was brought out, neither Dan nor Doctor Jim could get a move on them. They had had their first surfeit. They were sick of angling, as the boy is made sick of his first cigarette or pipe, though with no prospect of any after check to the habit, as things proved in their after career.

"I never saw the Viscount in the mood of idleness before, when there were trout to catch," whispered Tom to me, as he stooped to help me to relieve his casting-line from the landing-net. "What has come over him?"

"He must be tired after that morning's bout with you," I answered.

"Or does not wish to be beat."

"Perhaps, that's it."

"And your friends?"

"Oh, its laziness with them."

"They have had enough of it."

"It looks like that."

"And you? Will you have a cast or two?"

"I think we have all done very well, with more fish than we can carry home."

"Then we stop right here, though the sport is still at its best. Do you see that bit of cloth on the Viscount's late judgment-seat, a remnant from his own seat?"

"Then here goes for my last cast; watch."

And I did watch.

"That's one," said Tom.

"Yes", said I.

"And that's two."

A pause.

"And that's three."

But Tom's fly did not strike the water this time.

The master of the Tavistock had deliberately fixed his hook in the morsel of cloth that hung and fluttered from the eminence of poor Viscount John's late judgment-seat, as it had been called and probably as it is called to the present day.

It was the supreme joke of superior skill.

"I did it on purpose," said Tom a little flushed at his success.

"I know you did."

"And I'm going to bring it ashore now."

"If you can," said I.

"There's no IF about it: watch!"

And he did bring the bit of cloth ashore, and taking it from the hook asked me to keep it as a souvenir of my first angling trip on his native stream.

"What's this ye've got?" asked Viscount John as I approached the group of three.

"A souvenir," I answered.

"Of what?" asked Dan.

"Of Tom, the mariner's prowess as an angler, and of our friend the Viscount's judgment-seat."

And such a souvenir I still possess; and when the Tavistock and its glories come up for conversation among my friends when I am entertaining them, the humble little bit of striped Scottish tweed has its share in the merriment.

\* \* \* \*

We had a right royal welcome when we arrived at Tavistock Camp. The whole family were out on the little jetty to see the canoe come in with its splendid load. The mother of the establishment was there to receive from the Viscount's own hands the far from depleted King George.

"Ye aye bring plenty of fish back with you, John, and the jumble of the jar shows that you have been eydent and sparing. Bring me the biggest and ye'll have it boiled just out of the water for your tea. There's nothing so sweet as a boiled Tavistock just out of the water."

And Dan and Doctor Jim and myself have never forgotten the flavour of that trout.

THE END.

Dauntless, the new 100 foot gasoline yacht of Vice Commodore Nicholls, of the Royal Canadian Yacht Club, Toronto.

### THE BIG SKIFF REGATTA.

For keenness of competition and good fellowship commend me to a Lake Sailing Skiff Ass'n. regatta, such as the organization pulled off at Hamilton, June 30, July 2, with the able assistance of the Royal Hamilton Yacht Club. It was practically an inter-city meet, and, while the rivalry between Toronto and Hamilton sporting men is not always of the most peaceful variety, the session of the skiff sailors passed off without a hitch. On the floats and in the clubhouses the rivals were blood brothers. No matter how hard fought the struggle outside on the racing course the strife was forgotten—or drowned when the competitors reached terra firma again. Out on the course it was, no

quarter given or asked—ashore it was share and share alike. When the Hamilton boys missed their last cars back from Burlington Beach to the city, they turned in and slept with the Toronto lads at the clubhouse or on the boats. If the Toronto boys grew weary in town the Hamilton lads piloted them to places of rest—or refreshment. Around the Royal Hamilton Yacht Club Rear Commodore George T. Tuckett, Guy Judd and Ex-President Birely of the L. S. S. A., looked after the boys royally. The Rear Commodore was a whole host in himself and, if the others slept, it was after all the visitors had retired. They tended to the boys from Friday midnight until daybreak on Tuesday morning.

They set such a pace for hospitality that the Toronto men are despairing of

being able to properly reciprocate when the meets go to the Queen City next year.

As I have already remarked, the racing was of the keenest. The interest centered in the fourteen foot dinghy and the sixteen foot skiff races. Hamilton only had one entry in the fourteen foot dinghy race, but in the skiff events the contestants were about evenly divided. Honors, too, were pretty well shared. Joe Humphrey, in Cygnet, of the Victoria Yacht Club, of Hamilton, won the much coveted Walker Cup, while Acushla, of the National Yacht Club, Toronto, with Bert Archer at the stick, won the Cakewalk Cup for the same class.

Acushla won the Cakewalk Cup handily and chased Cygnet hard in the Walker Cup. In the Cakewalk Cup race Acushla got away in the first flight and soon worked to the front. Triple of Hamilton was hard after her, with Cygnet of Hamilton and Ewing Bros. Trial of the Queen City Yacht Club well up. The first thresh up thinned out the fleet and these four were left to fight it out on the second round. Acushla, however, was superbly handled and held Triple safe under her lee all the way. Trial and Cygnet had a hot scrap for the show money, but the Toronto boat won out on the last leg. On the finish, too, Skirmisher, of the Nationals of Toronto, twice winner of the Walker Cup, came up strong and just about nipped Cygnet on the home mark. She showed unexpected speed in the quartering run and was first at the finish buoy in both cup races.

In the Walker Cup race, Cygnet got away in front while Acushla, Trial and Skirmisher were buried back in the bunch. Archer and his crew worked like beavers to get to the front but every boat they tried to pass luffed them up to the limit and they did not get out into the first flight until the second round. On the second trip around the Acushla did some surprising work on the weather leg and won into second place. Coming home Cygnet only had twenty yards on the Toronto boat, but try as they might, they could not catch the slippery Cygnet. It was a hard race for the Toronto contingent to lose, and the Hamiltonians were naturally jubilant.

It was a good thing for the sport too that the silverware was divided up. In the dinghy races there was only one Hamilton starter, and that boat was smothered in the speed of the Toronto dozen. The first race was sailed in half a gale of wind, and the way in which the little fellows went at the rough work was a revelation to Hamiltonians. The second race on the holiday was sailed in a moderate breeze. Both races resolved themselves into contests between Frank Howard and George P. Beswick of the Queen City Yacht Club, Toronto, and Turrell Bros. of the National Yacht Club, Toronto. Beswick got away with the lead in both races, but Howard beat him in the first and captured the Birely Cup with the Turrells in third place. In the Commford Cup race Turrell did great work on the windward leg and caught Beswick who was leading at halfway. Howard, too, out bucked Beswick. Turrell Bros. won first place from Howard handily and Beswick nursed along safely into the show money. W. H. Sparrow of the Toronto Canoe Club, and Roy Edwards of the Lakeside Cove Sailing Club, were up near the front in both events, but they were never in a position to give the leaders a fight for it on the finishing leg.

Only one eighteen foot dinghy showed up from Toronto for that class, and, so the trophy was put up for a race between Hamilton sixteen foot dinghies. Guy Judd won handily but at that the Toronto fourteen footers beat his time over the course. Though they started ten minutes astern of the Hamilton sixteen foot dinghies four or five of the Toronto fourteens beat the third boat to the finishing flag, and the distance was only four miles.

In the knockabout cabin class Little Nell, owned by George E. Gooderham of the R. C. Y. C., Toronto, won hands down. "Cully" Robertson's La Souris, of the same club, and Rev. Father Whitcombe's Go, of the Royal Hamilton Yacht Club, had a pretty struggle for second place. Hugh Weir, the veteran, sailed Go but La Souris worried him all the way. Twice the Toronto boat forced Weir to go about, and three times she was in the lead. Once she had a two hundred yard lead on Go but, on the

last thresh to weather, Weir nursed Go into the lead, and she won the place by a hundred yards.

The Toronto boats had an interesting time in getting up to Hamilton for the races. Twenty-two dinghies, sixteen ft. skiffs and knockabouts started up in tow of a tug Friday night but a wicked southwest storm broke up the tow three different times, and the tug put back to the harbor. Then the sixteen footers set out to sail up, while the dinghies were placed aboard the Hamilton steamers. Only one sixteen footer, Acushla, made the journey under canvas. She came romping in, rail under, in a heavy westerly squall Saturday afternoon, June 30th, and was given a rousing reception. The others were picked up en route by motor boats and steam launches proceeding to the races and were towed in, arriving at all hours.

The next L. S. S. A. regatta will be held in Toronto Bay.

#### SAYS ARGO'S STARTED TOO FAST.

The defeat of the Argonauts at Henley is a sad blow to Canadian rowing, if you would believe a lot of croakers, who are going around saying that the Canadian style of rowing is away behind the demands of such a competition.

Don't you believe what they say. Now that the race is over, and the crew is back, and the situation has been analyzed, the Argos are just as eager as ever to go back at it again. The club has confidence in the ability of the crew and the worth of the real Argo stroke.

What was wrong at Henley?

Well! I'll never tell you, because I am not a rowing expert but I will tell you what a veteran top notcher told me a week after the race.

"Hard luck about the Argos, isn't it?" I remarked.

"Yes. But say, that crew should have won, and won easily," said the veteran earnestly. "They beat themselves."

"How is that?" I queried.

"Well! who ever heard of a crew starting out a race at a 40 or 41 stroke clip as they did," he replied. "Joe Wright never did that in any of his races here. Why he always got away at 34

or 35, and then hit up the pace to 38 or so in a sprint to the finish. Why, it is folly to think of jumping out at a 40 stroke clip right at the outset, with such a big crew. Why those fellows wouldn't have a chance to get their arms straightened out, with such a fast stroke, and their slide—he looked volumes—why I'll bet they weren't sliding three inches. They simply chopped their oars up and down. The boat wouldn't move worth a continental. Do you know what that crew wanted? They wanted decent coaching. Instead of starting off like that, those big fellows should have got away at about 34 and after they got swinging well together and got the boat going, then hit up the pace. Why all last winter when they were on the rowing machines, all they used to do was to squat down and see how many strokes a minute they could pull. Joe Wright had 'em all skinned at it. No one tried to teach them how to pull properly or to give them any style. There was some talk this spring about Joe Wright being too old to stroke another crew. Well! for one race there is no better than the same Joe but I tell you that at 42, no man is in shape to stand three gruelling races three days in succession. I know. I've been there myself. Give the same crew good coaching and they will lift that Grand Challenge Cup yet. They've got the stuff in them."

#### TORONTOS BEAT GRAND TRUNKS.

This war canoe "controversy" is getting to be the warmest sort of a proposition. What with the Toronto Canoe Clubs "No. 1" crew cleaning up the redoubtable Island Aquatics at the Toronto Canoe Club Summer Regatta and then trimming both the Aquatics and the Canadian Canoe Assn. Champion Grand Trunks of Montreal, at the Dominion Day Regatta at Toronto, the "dope" sheets have gone all awry. On form, at the Regatta, it looked like a struggle between the Aquatics and the Grand Trunks. The Grand Trunks cleaned up everything in the east last season, and the Aquatics had 'em all astern in the west. The Islanders were young and husky and this year, with a couple of

Some racing members of the Toronto Swimming Club.

sturdy young fellows to fill up weak gaps, looked to have the Canadian championship at their mercy. But championships are not won on paper. The first time the T. C. C. and the Islanders came together the "Red Ring" crew under the handling of Reg Blomfield just about toyed with their rivals from over the bay. They met their sprint without flinching, and then, set up such a pace, two hundred yards from home, that the Islanders had to drop back beaten and exhausted. The Islanders trained faithfully during the intervening week and were in great shape for the big event. The race was however between the Montreal crew and the T. C. C. outfit. The Grand Trunks paddled a nice race. They got away in the lead, were half a length to the good halfway, but when Blomfield hit up the pace in the final quarter of a mile, of the three quarters, the Grand Trunks came back hastily. They came on again and drew even but could not stand the gruelling grind of the awful sprint, and the Torontos swept on to victory with a length to the good. The Island Acquatics were third, with the Toronto Canoe Club seconds fourth, and the new Parkdale Canoe Club representatives right on their heels and going

strong. The Parkdalian's pulled up a lot in the final sprint, and it looked as if another quarter of a mile would have made them contenders with the Acquatics.

The Grand Trunks paddle with a slow jerky stroke. They do not get their blade aft of their bodies at all. It is a choppy stroke, good on the get away but it looks a little short for a mile. However, the Grand Trunks won with it last year. The T. C. C. stroke is just a bit longer but when the man with the big paddle kicks the throttle wide open the stroke gets shorter and closely resembles the Grand Trunk's style.

The Toronto Canoe Club's racing revival is quite unexpected.

In the open singles at the Dominion Day regatta, Reg Blomfield just about met his Waterloo. W. Brownrigg and Boaz, the Montrealers, gave him a stiff argument and Brownrigg was lapping him at the finish. Blomfield had not trained faithfully for the race and his lack of condition almost beat him. Huckoale Bros., the Island Acquatics double blade tandem, beat Blomfield and Bruce Redpath in that event after a good race. The Grand Trunk's four withdrew from the double blade four where they

C. Morris diving in the competition at the big Dominion Day Regatta at Toronto.

would have met Blomfield's crack crew, in order to save themselves for the war canoe race and Blomfield & Co. had a walk over. In the fours single blade, the Toronto quartette did the same thing and put in a second four, consisting of the Nichols, Nasmith, Livingstone and Tripp, which gave the Easterners a surprising hustle.

The war canoe crews get together twice more this season. The Grand Trunks and Britannias, of Ottawa are scheduled to appear at the Canadian Henley canoe events on Saturday, Aug. 5th, where they will meet the Torontos, Acquatics and Parkdales and the Acquatics have promised to send their crew down to the Canadian Canoe Assn. regatta at Aylmer, Quebec, on the following Saturday. The Britannias of Ottawa have ordered a new Dean war canoe and are looked upon as promising contenders for the C. C. A. championship.

#### SOME RACING CANOE STYLES.

In these days of red hot competition in canoe races the question of model racing craft is of paramount importance. That Walter Dean of Toronto builds the fastest four model in America cannot be denied. His fours are in use by all the foremost crews of America and they hold all the championships. In war canoes too, unless the one Dey Bros. of Ottawa are building now turns out to be a wonder. Dean has the call—all the four war canoe crews paddle his boats—Grand Trunks and Lachines of Montreal, St. Johns, Island Acquatics, Parkdales, Torontos of Toronto—and what is better still are ordering new ones. Years ago they used to paddle war canoes built by other Canuck canoe building firms. They built them in the plank-on-edge style, deep narrow craft, and when Dean came along with a good beam boat with lots of flow he was laughed to scorn. He

## Complete Engines and Launches

2 CYCLE,

4 CYCLE,

## Hamilton Motor Works, Limited

HAMILTON, CANADA

could hardly persuade a Toronto crew to man it. When they did they trimmed the deep boat to a stand still. The Torontos took the Dean boat to the races and just everlastingly skinned the Eastern crews, and the Orientals commenced to buy occidental boats.

In singles the palm may not be awarded. Dean builds a nice racing single, but, he has nothing on Dey of Ottawa, when it comes down to speed. Dey turns out a little sliver of a craft that is fast but — — — — — crankey. Dean builds a boat a man can paddle, comfortably. A canoeist with his bumps of balance developed like a high-wire artist can just everlastingly make a Dey canoe hustle, but a mistake means a bother. The Dean is more steady and by reason of its steadiness wins races. In a bit of a chop it is ideal and sometimes it brings its paddler home when the other fellow is doing a swimming stunt. Both racing singles have their merits.

### ZORAYA FOR FISHER CUP.

Like Minota, the unsuccessful Canada's Cup Candidate for 1899, Zoraya, the defeated cup boat of 1905, will go to Rochester after the Fisher Cup. While the selection has not yet been made officially, and the trial races for the selection of the challenger are still in progress, Zoraya will undoubtedly back up the challenger. She won the first five races right off the reel, defeating Temeraire badly every time they came together. Of course the Temeraire adherents will tell you that Zoraya was favored with her own particular brand of weather, a light breeze—but granting that she was, there is every reason why Zoraya should go after the trophy. Temeraire had her chance at Iroquois in the Canadas Cup races, and failed to trim the Herreshoff boat in light airs. Zoraya should get a chance to show what she can do with the successful cup defender, for Iroquois will be the Rochester representative in the Fisher Cup race. She not only deserves a chance to show what she can do because of last season's results, but she is fairly earning it by her work this season. As she stands now she is far superior to Temeraire in light airs. Last season Temeraire only beat

her out by the narrowest of margins in zephyrs, and those who know say that Zoraya, even in last year's form, was the better boat, in soft winds, but that she was never sailed to get her true value out. That is undoubtedly true for last year, James Worts, her owner, let everybody sail her. She hardly ever had the same skipper twice. No man can jump right at the helm of a boat like Zoraya—or any other craft for that matter—and get her best pace. This year Worts himself has sailed her in every race, and he is doing remarkably well. How Zoraya will do with Temeraire in stronger breezes is still unknown. They have not met in anything above a six knot breeze, and Zoraya always had the heels of her rival in that sort of going.

But why this great difference this year? Has Zoraya improved, or is it her skipper?

Zoraya is practically in her last season's form. No changes have been made in her. She is in superb shape. On the other hand Temeraire is wearing a new rig—a big mainsail with staysail and jib instead of a simple sloop rig, with its single jib—and in addition her mast has been stepped farther aft, and her horn lengthened, giving her a much larger forward triangle. That this rig does not suit her in light airs, at least, and that she is slower does not admit of argument. Every time Temeraire and Zoraya got together on the wind in the first five races Zoraya simply made a show of her rival. She not only outpointed but outfooted her rival in an astounding way. It was just like stacking a racing power boat up against a canal boat. It was on the wind that Zoraya won all the races. In four races the wind was flukey, and, Temeraire's supporters hoped against hope that luck had beaten her, but when the pair got together in a true wind of six miles strength, and Zoraya simply smothered her and all but lost her, the Temeraire men admitted that Zoraya had it on the ex-cup challenger.

While Temeraire in her new rig is a disappointment, Rear Commodore Nicholls, her owner, is not at all downhearted. As a matter of fact, though he does not tell everybody, Temeraire is being used as a Fife experiment this year, and the knowledge which the Scotch designer

# ITHACA GUNS

THIS illustration shows the double thick nitro breech and narrow skeleton rib of an ITHACA No. 7 \$300.00 list gun.

¶ This feature together with the reinforced frame, reinforced stock and double bolt makes the ITHACA the strongest and safest gun for Nitro Powder.

¶ We build everything from a feather-weight 5¾ lb. 20 gauge gun to a 10½ lb. 10 gauge Duck, Fox and Goose gun.

¶ For twenty-three years we have enjoyed the reputation of making the hardest and closest shooting guns on the market—the same man is still boring them and is to-day the oldest and most experienced barrel borer in America.

¶ Send for Art Catalog describing 17 grades, 10, 12, 16 and 20 gauge guns ranging in price from \$17.75 to \$300.00.

Pacific Coast Branch: 114 Second St., San Francisco, Cal.

obtains from her performances this summer, under the new rig and other changes, will be brought to bear upon the Canadas Cup boat he designs for Vice-Commodore Nicholls next winter. Canadas Cup is the paramount interest of the Vice-Commodore, and the Fisher Cup race but an incident, therefore Temeraire's Fisher Cup chances are being willingly sacrificed for the purpose of obtaining valuable data for the great cup race of 1907. Fife wanted to know how Temeraire would act with double headsails and a larger forward triangle, therefore the craft was altered and given a new suit. He knows now that whereas last year she could outpoint Zoraya at all times, that this year the Mylne craft can just clean her up to the King's taste. After the two 30 footers get together in a strong breeze it will be up to Fife to rig out the new Candidate for the Canadas Cup challenger as he thinks best. He has absolutely carte blanche. As next year's racing craft must be built under the new universal rule we may expect to see a much different style of boat.

### RACES FOR WOMEN.

Another contest which helps keep up the interest around the smaller racing clubs is a race for lady skippers. In nearly every club in Canada there are young women who have been taught the fine points of small boat sailing by fathers, brothers and sweethearts. Arrange a race in boats of one class with the fair Corinthians at the helm. Let them have crews of men who can take charge if things go awry but make it a condition of the race that the ladies are to handle the tillers from preparatory gun to finishing signal. Such races will quicken the interest among the ladies. If the club and anything that will do that will put life into a sailing organization—there is no better influence in club life than that exerted by the "good fellows" in skirts. The first race or two is likely to produce some burlesque sailing but once you put a healthy, hearty young woman into a competition where she feels she has a fighting chance it is a revelation how quickly she will settle down to mastery of the intricacies of the game. A race will

teach them more about a boat and sailing than a season of knocking about. In aimless sailing the boys are too apt to put the girls at the helm when the wind is abeam or astern and they are seldom taught how to work a boat to weather. In these days of athletic womanhood it is surprising how many women can handle a small boat fairly well. In both Kingston and Belleville I have seen women sailing boats up to 30 feet, while around Toronto there are at least half a hundred women who can sail dinghies and skiffs well. The Hamilton women are not backward either in the game. On Dominion Day there I saw three Mackinaws with girls at the helm. They were brown as berries too from exposure to wind and sun and handled these unworldly crafts as if they had known them all their lives. Hang up a nice flag for a trophy and let the girls have a go at the sport.

### A GOOD PADDLER GONE WEST.

Toronto has lost, and Edmonton gained, Reg. Blomfield, Canada's greatest paddler. Blomfield left Toronto for the West early in July. He was one of the finest sporting men in the Queen City and his loss is a heavy one to the Toronto Canoe Club. Blomfield is a most versatile young man. He could do anything in a canoe any man ever did in Eastern Canada, was a first rank hockeyist and played a fair game of rugby.

Canoeing was Blomfield's forte. In a racing single he has only been beaten once. That was at Orillia last year where Anderson in a racing machine which was many pounds underweight—it was a section of a rowing shell—beat him after a desperate race. Boat and poor Anderson never were in Blomfield's class. Blomfield won all the singles he ever paddled in, in 1904 winning 31 prizes, and in fours and doubles both single and double blades in the war canoes his crew almost invariably won. He was captain of the Toronto Canoe Club and steered its No. 1 war canoe crew.

In canoe acrobatics he was a wonder. He holds the record for the upset stunt of two and two-fifths seconds and has

# Launch Fittings

Tents, Flags, Compasses  
Oiled Clothing, Sails

**JOHN LECKIE, Limited**

76 Wellington St. West

TORONTO, ONT.

been timed in practice as doing the busts in one and four-fifths seconds. The flip consists in upsetting a canoe and clambering back into it. Blomfield standing on one gunwale, grasps the other and by throwing himself backwards and kicking strongly with his feet turns his canoe completely over in the air while he himself disappears in the water to reappear a second later and fairly bounce right out of the water into his canoe.

Blomfield is the originator of the most unique canoe stunt in the world. It is performed on Toronto Bay in the wake of a side wheel ferryboat and consists of riding the crew over a wave from one side of the bay to the other. Blomfield was the first man to do the trick in Toronto, but now at least a score of expert paddlers emulate the stunt.

To ride the swells requires a light canoe, much paddling ability, steady nerves and the balance of a tight rope astern. Commencing, the canoist dashes at the swell just astern of the steamer with a tremendous spurt and places his canoe just on the forward side of the third or fourth swell. There he paddles like a demon for an instant until the pull of the wave grasps his canoe and ahead he shoots. Then he ceases paddling and devotes all his attention to steering for the canoe in the curve of the moving wall of water shows a vigorous desire to shoot off at a tangent. Once let the canoe start on a side rip and it is all over but the swimming, for he will turn over like a flash.

Blomfield has gone West for the Dominion Bank. He was presented with a Greener Gun by the T.C.C. boys

## HAMILTON SEAMANSHIP RACES.

Last month I devoted a paragraph to the worth of Seamanship races for developing interest in the races in sailing clubs of all kinds. The other day when I was up in Hamilton I discovered that the Royal Hamilton Yacht club have a series in sailing canoes. These canoes are left in the boat house. At the gun they must be taken down, put in, the spars and canoes shipped and hoisted, leeboards strapped on and then they sail to a quarter mile buoy and back, dismantle and stow in the boat house. The contests arouse much interest and are as popular with the contestants as they are with the spectators. They have seamanship races with the 16 foot dinghies too.

# AUTOMOBILES AND AUTOMOBILING

## The Glidden Tourists in Canada.

The Glidden tourists have visited Canada, done no harm and much good to the country and departed for their homes, charmed with the beauties of the Dominion, and deeply interested with its vast possibilities for development. In accordance with their programme as announced, they avoided Ontario entirely, and devoted almost their whole time to Quebec where the authorities, less prejudiced against the new form of locomotion, gave them hearty welcomes. The party was a large one with well equipped and handsome cars of the best makes, and to watch the procession as they went by with their skilled drivers, having the fine machines under perfect control was alone an education in automobile matters. With the exception of Montreal and Quebec there were difficulties in finding accommodation for so many people, but these were overcome by chartering steamers, etc., and pressing other means of accommodation into the service. Any little "roughing" was taken in the best of humor, and the whole trip was one enjoyable in the highest degree. The autos behaved well, though on such a tour they found difficult pieces of road to negotiate, and met with obstructions and irregularities that under other circumstances might have brought some to grief. With skilled assistance always at hand nothing stayed the triumphant progress, and the tourists professed themselves so charmed with their Canadian experiences that a return visit to the Dominion may be confidently anticipated next season. Perhaps by that time the Ontario authorities may see the unwisdom of attempting to stay the progress of a form of locomotion as certain to advance as the tides are to flow. If not, Canada is sufficiently wide to give the tourists plenty of choice, and the other Provinces are not likely to adopt the policy of On-

tario in this particular. The Ontario authorities may hinder but they cannot stay the progress of automobiling.

## A Cheaper Form of Energy.

Canada is bound to follow the example of the United States in permitting the sale of denatured alcohol, and thus place the industries of the Dominion on an equality with those of our great neighbor. This will mean much for automobiling, even if Mr. Edison's interesting experiments with cobalt do not turn out the success some enthusiasts predict. It appears to be quite certain that with denatured alcohol a cheaper and more efficient form of energy can be found, and this cannot fail to mean great things for the automobile industry. The time when every worker will have his automobile and live in the country, or at least in the suburbs, may not be quite at hand, but he would be a bold man, and would have to shut his eyes to many modern developments if he ventured to dispute the probabilities, and still more the possibilities, of this outcome of a movement which has made wonderful strides and is still going ahead in a fashion to astonish all who take note of modern industries. This new form of securing power may go very far. It will benefit the farmer who will find an immediate and profitable sale for products that were previously no good to him, and it will give a stimulus to many industries, including that of automobiles, some of which it is impossible to foresee.

## Autoists in Trouble.

The man who goes touring during the worst of the Southern California rains goes looking for trouble. E. R. Thomas, the Buffalo maker of the Thomas car, in his journey from San Diego to Los Angeles, found his trouble

# Abbey's Effer- vescent Salt

A tonic laxative, pleasant, mild and effective, invaluable for stomach, liver, kidney and bowel disorders.

It makes the stomach healthy, the liver active, the digestion good and the blood pure. That means health.

Nothing so bad for your health as a lazy liver—nothing so good for a lazy liver as ABBEY'S SALT.

*"After all a Happy Life is a Good Digestion."*

(OUIDA)

Take ABBEY'S SALT and be happy.

**25c. and 60c. per Bottle.**

At the time, it was no laughing matter for Mr. Thomas, but when he was once more comfortably housed at the California Club he only laughed and said it was all in the game. "I came west for winter amusements; I am surely getting plenty of it. This was my first season in the sunny clime, and we all have to learn certain things. I wired east yesterday for a motor boat for my tours next year."

Mr. Thomas, in company with Mr. H. J. Haas, superintendent of the Thomas factory, and the driver, started for Los Angeles. There were many wet places in the road but the "Flyer" made good progress until it arrived at the little creeks near the Pala Mission. These creeks had become swollen rivers and a rushing torrent came down through the mountain. When the automobile chugged by the little mission the word spread rapidly among the Indians at the reservation that it was going to swim the river, and there were soon several hundred wildly curious braves lined up along the bank. An Indian on horseback went across to locate the ford and came back with the information that the car could get through. With power on the machine plunged in, Mr. Thomas and Mr. Haas crouching low in the tonneau to avoid the splash of water. The car seemed to be going all right until just in mid-stream, where it ran into a bed of quicksand and held firm. There was water on all sides and to the alarm of the occupants the car began to sink slowly. First the wheels went down, and then the hood began to fade from view under the water. Water began rising along the sides of the car and the occupants perched themselves on the top of the rear of the tonneau. "Come on with that horse and take me out of here," yelled Haas to a red man on the bank. The Indian came and with more or less trouble the Buffalo man got aboard the pony. They started for the shore and suddenly without warning the Indian stuck his spurs into the pony's flank. The animal gave a lunge and Mr. Haas made a beautiful dive into the stream. He was rescued and Mr. Thomas was then brought to shore.

#### Stopping Runaways From An Automobile.

One of the most thrilling feats in which an automobile has ever figured was wit-

nessed in Buffalo a short time ago when Harry Tate, a tester in the employ of the E. R. Thomas Motor Company, stopped a team of runaway horses from an automobile. The horses, which were hitched to a huge mineral water delivery wagon had been left standing in the street several blocks from the Thomas factory, when they were frightened by a bit of flying paper. They bolted and tore down the street at a gallop. Tate had been testing his car out. As the team sped by him he jumped into his car and, throwing on all the power, started in chase. He drew alongside within two blocks and guiding the automobile alongside grasped the flying reins. The driver then put on his foot-brake, but more than a block had been covered before the frantic animals could be quieted down. Even then it was only by running the automobile up over a low curb and pulling the horses into a tree. Neither one had been hurt in the least. Tate made them secure to a tree and then coolly drove away. About a year ago Tate stopped another runaway, but with not such good luck. He saw the rig coming behind him while in a test car, ran it ahead of the horse, dismounted from his machine and grasped the runaway by the bridle as it came by. He was dragged almost one hundred yards before he brought it to a standstill and was painfully bruised. That was one of the reasons why he decided to stick to his car in stopping the next one.

#### A New Carburetor.

The carburetor used on this year's Columbia cars presents some unique features, which the makers claim are of great practical value. It is of the float feed aspirating type but has no springs to break nor needle to get out of adjustment or become inoperative through the introduction of dirt. The primary air supply is received through a round port opening directly between the cylinders, the temperature of the air admitted being equalized whatever the outside temperature. The auxiliary air supply is taken in through a series of ports in the bottom of the carburetor, opened and closed by the barrel, having corresponding ports which moves up or down as the engine demands more or less gas. The barrel is made of just the size and weight to

effect the proper resistance to the suction of the engine and rises slowly and drops back of its own weight against the air cushion formed in the bottom of the containing chamber. The throttle is set horizontally in the mixing chamber at the point where the gas intake pipe leaves the carburetor. The throttle is not connected with the governor but is actuated by a foot-pedal in the tow-board, the governor speed being determined by a hand lever mounted in the steering wheel. The governor controls a by-pass valve which is mechanically operated as the governor balls throw in or out. It is claimed that use of this carburetor effects a larger saving in fuel consumption than any device previously used, that there is absolutely no place nor need of adjustments of any kind and that beyond occasional cleaning it requires practically no attention.

#### **An Auto on Railway Tracks.**

A new field of activity has been opened for the automobile in connection with interurban trolley systems as is shown by the purchase of an automobile by Mr. Adams D. Claflin, of Newton, Mass. Mr. Claflin is the head of several electric railway systems in Massachusetts, and recently he closed a contract with C. S. Henshaw of Boston for a Thomas "Flyer" which he will use for inspecting the various lines in which he is interested. The advantages of the automobile over the private car are, that the former can be stopped at any point on the line without interfering with traffic, and, that its course is not confined to the rails on the line, a fact which enables the inspectors to make side excursions for the purpose of examining "feeding" territory.

#### **Sensible Method for Speed Regulation.**

The neatest and most effective auto-trap yet devised is that in use in the park district of New York. Three sentry-boxes are stationed a quarter of a mile apart on Broadway and a policeman is located in each. When an auto passes the One Hundred and Ninety-seventh street post the sentry telephones its number and time of passing to post No. 2, and the latter times it for the quarter-mile between the two stations. If the chauffeur has been

driving faster than the law allows, the fact is telephoned to sentry box No. 3 and the policeman is out in the road to stop the auto by the time it arrives. The occupants are made to answer detailed questions and their replies are filed away as a formal notice of a first warning. The system aims at prevention rather than punishment. The drivers and owners do not view the system as a device for trapping them unawares. They are so friendly disposed toward it that many use the contrivance as a means of testing the speed of their machines so that many use the contrivance as a means of testing the speed of their machines so that they may know how to gauge their rate of progress on any road.

#### **Undergoing Severe Tests.**

The new Pope-Tribune Model V. has recently been put to several severe tests, fully meeting the expectations of the builders. It was recently driven for six miles on the low gear, over mud roads without overheating the engine. Rather drastic treatment, but essential to the successful perfection of the car.

#### **Indeed a Veteran.**

The following interesting account from "The Automobile" concerning a veteran mechanic is worthy of notice:

At four-score years "Daddy" Barnes, employed at the Pope Motor Car Company's factory in Indianapolis, asserts that he is the oldest mechanic employed in the automobile business and declares that he is not nearly ready to quit active work. Although his life has been one of hard toil time has dealt kindly with him, and his form is still robust, his hand steady and blue eyes keen.

Among all of the 600 employees of the company, because of his bright, philosophic mind and ever-ready kind words to those about him, he is affectionately known as "Daddy," and whatever else his name may be, it has been lost in the more familiar cognomen.

The tools he uses daily at his bench were made by himself, some of them as much as half a century ago. The brace was made fifty-five years ago and the breast drill forty-nine years and the hack saw an even half century. He has been

## McKEOUGH & TROTTER, Limited, Chatham

We are large manufacturers of **GASOLINE ENGINES** and **LAUNCHES**. Our engines are made from the latest designs by experienced workmen, with first-class material, are simple, reliable, safe, have no valves, few working parts, easily handled by the inexperienced and fully guaranteed. The graceful appearance of our boats combined with their handsome finish and general constructional superiority, appeals to all careful and critical buyers.

associated with the manufacture of bicycles and automobiles since their inception and sixteen years ago made the patterns for the first bicycle built by the Indiana Bicycle Company. He has been a close observer of the development of the automobile since the first Waverley electric was built.

### Automobiles 75 Years Ago.

"Automobilists who have been fired for fast running, stoned by irate farmers, pestered by officious constables and lampooned by newspapers, may take comfort in the knowledge that their original, some seventy-five years ago, passed through the same experiences—only more of them," says Malcolm McDowell in an interesting and timely article, "Anti-Auto-Riots in 1830" in the Technical World Magazine.

"The first quarter of the last century developed an automobile craze fully as vir-

C. C. SHOEMAKER, Box 602, FREEPORT, ILL.

ulent as the fad of today. In the 1820's and 1830's steam wagons to run on common roads, turnpikes and toll roads, became so popular with the higher classes in England that the directors of stage coach companies and breeders of horses took alarm. They used their influence to slip a number of little bills through parliament, permitting toll roads to levy tolls designed to be prohibitive on steam carriages and wagons. The steamers were compelled to pay five and ten times as much toll as was charged for the largest six-horse stage coach."

When writing advertisers kindly mention Rod and Gun and Motor Sports in Canada.

# OUR MEDICINE BAG

Two Orders-in-council have just been issued by the British Columbia Government which have given rise to much misunderstanding on the part of guides and sportsmen in the Province. The first provides a close season for mountain sheep for three years "in that part of the Province situated to the south of the Canadian Pacific Railway between the coast and the Columbia River on the east and the international boundary line on the south." The second proclaims a close season for moose in the county of Kootenay for three years.

Complaints of the slaughter of black bass at Long Point on Lake Erie by American visitors was one of the regrettable incidents of the month. The men who are guilty of this foolish conduct are responsible for the prejudices often heard and sometimes expressed (as was recently the case in our pages) against American sportsmen in Canada. No one wishes to confound them with American sportsmen in general, but general approval will follow any severe example that is made of men who coming to a neighboring and friendly country break our laws with apparent impunity, and destroy our fishing without any material gain to themselves and to the great loss of the public. Our protection is becoming more efficient and our protective associations now cover the ground so well that those who witness any misconduct of this kind have only to report the matter for proceedings to be promptly taken. Our fisheries are well worth preserving and it is the duty of all to assist in the work by at once notifying the proper official when any offence against our game and fishery laws is seen by them.

Mr. G. D. Smith, the Fishery Commissioner for New Brunswick, has kindly supplemented the account we gave in the June number of his experience in fish cultivation by further particulars which we are sure

will be of particular interest to the great body of our readers. He says:—"There is no question as to the advantages of planting wall eyed ova either salmon or trout instead of keeping them in the hatchery to develop to the fry stage before distributing. In May I placed nearly 200,000 trout ova in natural waters where I would have, later, placed the resultant fry, 15,000 of them being put where Mr. Alex. Johnston, the well known Loch Lomond Fishery Guardian, could daily note their development. These eggs were packed at the New Brunswick Government's hatchery, Barti bog, in boxes designed and made by myself, the whole lot, including their envelope of moss and snow, weighing only 160 lbs. I transported them 200 miles—twenty-six by highway in a buckboard wagon, and 174 by railway. The loss in transit was less than one-tenth of one per cent. and between the time of planting and hatching the mortality was even less than that. Mr. Johnston's weekly reports to me until the fry had absorbed their sacs, and scattered in the spring brook where hatched, showed that the experiment was an unqualified success. If this quantity of ova, which was not half a load for a single horse buckboard wagon, had been kept in the troughs until hatched out, the resulting fry would have required at least forty cans for their transportation to the planting places, and these cans, with the necessary water, ice, etc., would be carried in at least five double express wagons. The experiment has therefore demonstrated that the loss by this method of planting is very much less than when the work is done in the fry stage, while the expense is, comparatively, only nominal."

The present season promises to be the record one for salmon in Northern New Brunswick for both anglers and netters. A number of the latter have taken more in a single night than during the whole of last season. All the rivers—the Restigouche,

## When You Visit the Golden West Drop in at EATON'S

You'll find us right at the gateway of the West—at Winnipeg. Think you were back in New York, Philadelphia or Toronto once inside this great Store. The same immense stocks and unsurpassed varieties that you have been used to seeing in the large cities of the east. The same store service too, and the same conveniences in shopping, and money has equal shopping value here that it has in any of the large Eastern centres.

If you are a tourist, hunter or homesteader you can save yourself a lot of bother in not bringing supplies across the continent. You can outfit at this great store just as satisfactorily as you can at home—and may be more so. We make the outfitting of tourists, &c., as convenient as it can be made—greatest care given to packing supplies which will be delivered to hotel, station, or shipped direct to destination. If you are interested, write us about it.

# THE T. EATON CO. LIMITED

PORTAGE AVE. WINNIPEG

Upsalquitch, Jacquet, Nepisquit, Miramichi and smaller ones share in the great catches being made and which will no doubt exceed those of 1896, which has heretofore held the angling record.

The run of sea trout in New Brunswick has on the other hand been a failure. It is stated that for some years the wholesale fish dealers have been carrying on an illicit traffic in the young of this valuable game fish. The shipments have been quite heavy to Canadian as well as to United States centres. The principal guilty parties—those who induce the poor hand-to-mouth fishermen of out-of-the-way places to scoop the fingerlings with bag nets—are persons of influence, some of them in Parliament, and these men obtain transportation certificates to the effect that the contraband fish have been legally taken. A crusade was made against this traffic last winter, and it is hoped it will have a repressive effect. Prominent citizens ought to be ashamed to be detected in promoting and profiting from illegal traffic in baby fish, but those in the wholesale fish business are said to entertain no such sentiments.

The importance of the Miramichi, N.B., as a fresh fish shipping centre is strikingly illustrated by the railway returns of two stations in the parish of Chatham alone for three months of last winter. There was in the shipments about one car load of frozen salmon. With that exception the fish were the catch of the winter months named and consisted of smelts, tomcods (frost fish), flounders and eels. In December 619½ tons were sent from Loggieville, and 252½ tons from Chatham; in January 476½ tons from Loggieville, and 267½ from Chatham; in February 436½ tons from Loggieville, and 205½ from Chatham, making a total of 1532½ tons from Loggieville, and 725½ from Chatham, a grand total of 2257½ from both stations.

What sportsman has not experienced the difficulty of lighting his pipe or cigar in the open wind? This trouble can now be avoided by taking into the woods a "Matchless Cigar Lighter", which has recently become very popular among sportsmen, and by means of which a light is produced

by quickly lifting a ratchet, which rapidly revolves a steel wheel against a small piece of flint, the sparks lighting the charred end of the wick; therefore "the harder it blows the brighter it glows." The makers claim there is nothing to wear out in this device except the wick and flint cube will last for years. Dealers supply the "Matchless Cigar Lighter" at fifty cents and they are guaranteed for two years by the manufacturers, The Matchless Cigar Lighter Manufacturing Co., 16 John street, New York City.

Despite the many excellencies of our Fishing Number, we omitted the championship story which comes from New Brunswick, and threatens to put every other fisherman out of business. This story which easily takes the championship is a combination of a fish and game narrative. A man armed with a gun, but having only one bullet for the same, was out hunting and reached the edge of a lake where he encountered a bear and a moose. He was only disconcerted for a moment, and then with the quick tuition which comes from life in the backwoods he aimed at a sharp point of rock between the animals, split the bullet in two, killed the bear with one half and the moose with the other. The recoil of the gun knocked him into the lake, but when he came to the surface he had a mink in one hand and a muskrat in the other, while his rubber boots were full of trout. It need only be added that the hero of the story is known to the narrator—at least he says so. It is well if a man must exaggerate that the exaggeration should be such that no possible mistake can be made, and that not even with the veriest greenhorn can it pass muster as the semblance of truth.

Marble Safety Axe Co., of Gladstone, Mich., is out with another new invention for the sportsmen. This time it is a Safety Lolding Saw. This tool is folded and constructed the same as Marble Safety Carver, which was described in these columns last month. On account of being so safe, light and easy to carry, this saw is invaluable to all people going to the woods, and especially so to the student of forestry. It has an eight inch blade, and weighs only four ounces.

# CLARK'S

## Canned Meats

In camp you cannot pay too much attention to your food supply. Clark's Canned Meats—noted for their high quality and absolute purity as well as their appetizing tasty flavor, provide ideal foods for camp.

Cannot become spoiled by the heat or damp—always ready-to-serve in many delightful ways.

Clark's Veal Loaf is a splendid sandwich maker. More tasty and wholesome than ordinary veal. Clark's Corned Beef, Sliced Smoked Beef, Clark's Pork & Beans are a necessity to all campers, etc. Ask your dealer for Clark's Meats.

**WM. CLARK, Mfr.**  
**MONTREAL.**

The north shore of Lake Superior is probably one of the wildest and at the same time most attractive to those in search of beauty as Nature made it. There are fishing streams all along the 200 miles to Port Arthur, Nepigon being the most famous. This is a very fine river, containing an abundance of large fish, and affording the best of sport in capturing them. The country round Thunder Bay is particularly rich in game of all kinds especially moose and caribou. Port Arthur is favored by a good many fishing parties, it being centrally and conveniently located, and the fisherman or hunter can easily go from there to any point he may favor. The indications for a fine summer season are most favorable.

Long canoe trips are proving immensely popular in Canada of late years, says Mr. L. O. Armstrong, Tourist Agent of the C. P. R., and they would be immensely more popular now but for the great scarcity of guides. The Mississauga River is a great centre of attraction, on the whole route

from the Height of Land to its mouth in Lake Huron. During the whole of this distance the river runs through one of the most romantically beautiful countries in Canada. Two large parties are now on their way to explore this region. Dr. Howard Kelly of John Hopkins University, Baltimore, with a large party of friends, is on his way to Wakami Station to make the same trip. The holiday-makers will spend a full month studying the side streams of the Mississauga, and will subsequently publish a report covering a number of lakes and trout streams which have been frequently spoken of by Indians, but which, it appears, have not yet been explored by white men.

Several other parties would take the same trip, if guides could only be obtained. But such is the demand for labor in the outlying districts of Canada that the men who are qualified to act as guides are at present doing work which almost any ordinary laborer could do, and getting good wages for it. But their loss is keeping many people out of the country, which

means a serious diminution in the sums spent by tourists.

It is time the Government, in the interests of the greatest number, revised some of their alien labor laws. When we have no one here qualified to do certain work, those who can do it should be encouraged to come here, whether born in Canada or not, so that they can work for the greater good of the whole country. Maine and Michigan could furnish us with a number of excellent guides, whose presence would mean a great deal of money for the northern country, but they are all kept out by the alien labor laws.

A new Expert Hunting Knife, particularly designed to meet the requirements of the professional hunter, trapper and guide, who require a thin edge for dressing skins and furs, has recently been placed in the market by The Marble Safety Axe Co. of Gladstone, Mich. The back of the blade is designed for scraping skins while on the forms. These knives are made with five or six inch blades—razor ground—with handle of cocobola made in the same manner as the famous Marble Ideal Hunting Knife. Readers of this magazine can procure one of their new 56 page catalogue "U" by mentioning this magazine.

The Canadian Pacific Railway Agent at Rideout, which is the next station west of Wakami, formerly called Winnebago writes: "Guides readily procured at Hudson Bay Co. post, fifty to sixty miles north of here. All one has to do is to follow the river to get there. Three carries owing to rapids — trifling however— only a few rods each. All parties require is an all-round handy man with them to help handle canoes, baggage, etc. None here; has been no demand yet."

Sometimes parties have had to wait a few days for guides at the H. B. C. Post and this might happen again but we are inclined to believe that better preparations have been made at the Hudson Bay Post this year.

Two rotten carcasses of moose were found near the boundary line between Ontario and Quebec and a little further in, the woods were on fire. It was the work they say of two Ontario men, who are be-

ing looked for. The fool killers should be sent after the moose killers and forest burners. There is work for Rod and Gun for a long while yet before our people will be educated. Our Government is trying to do something but it has not yet done what it should do. Imprisonment in addition to being fined is the punishment which should be allotted to those who light fires in the woods and kill moose out of season, letting them rot on the ground where they fall.

Mr. Fred W. Heath, the well-known photographer of Montreal, in writing to Rod and Gun and Motor Sports in Canada says: "Your magazine is a creditable publication and I sincerely hope it has the patronage it deserves."

We are indebted to the Montreal Standard, Canada's best illustrated weekly paper, for the two illustrations of the Great Gorge at the Selkirks Cave, and the Sea of Mountain Peaks, appearing in this issue.

Moose and deer are reported to be more numerous in the northern districts of Ontario than ever before, and this has added to the task of the Provincial game branch in protecting them during the close season. A striking evidence as to the growth in numbers of the moose is afforded by a report of Fire Ranger Murray of the Thunder Bay district to the Department of Lands, Forests and Mines. He says that during one of his trips over the territory south and east of the Mattawin River and south of the base line of Marquis and Strange townships he counted 101 moose and seventeen moose calves.

Quite recently Mr. Harley Crouse dug out a fox den in New Brunswick, and seven young foxes fell victims to his grasp. They have been secured and mounted by Mr. Avery Moorehouse, of Zealand Station, N. B.

Efforts are now being made to clear out the pirate fish from Lake Simcoe, and with that object in view the Ontario Government has given permission for a limited number of night lines to be set. Fourteen

licenses have been issued each containing 200 hooks. The fishermen, whose licenses cost \$2 each, are permitted to retain the white fish and trout that may be caught, but not bass or maskinonge. When the pirate fish have been destroyed it is intended to restock the lake with good fish.

One of the most effective advertisements for Canada and its infinite attractions of forests, fish and game was devised by the authorities of the Grand Trunk Railway System, and carried out with all the effectiveness that marks the advertising policy of that enterprising Company. One of their cars was elaborately fitted up as a travelling picture gallery, the whole of the scenes in enlarged bromides being framed and displayed the entire length of each side of the car. Temagami, Muskoka, Algonquin National Park, etc., furnished the beautiful scenic effects, while the finely mounted fish and game heads, all Canadian, proved to demonstration the wonderful wealth of Canada in these two respects. The car, after touring the States thus edu-

cating the people through their eyes, visited many towns in Ontario, and by this means enabled numerous Canadians, who do not know all they should of their own country, to increase their store of knowledge, while it opened the eyes of some thousands of our neighbors across the border to the mighty possibilities of Canada as the tourist centre of the world. Without doubt, this method of carrying Canada to the people enabled multitudes to make some acquaintance with our infinite resources and proved advantageous to both our friends of the States and Canadians as well, and likewise prove beneficial to the entire Dominion.

The Ontario Government have issued an Order-in-Council applying to both the Nipigon and Mississagua Forest Reserves, and also the Algonquin National Park, the same regulations in respect to firearms as those which now apply to the Temagami Forest Reserve. This means that no firearms of any kind, except small pistols, can be taken into these Reserves during the close

## Famous Safety REVOLVERS ARE BUILT FOR BUSINESS.

The **H**arrington & **R**ichardson  
Hammerless Revolver

season. Game will certainly multiply in these Reserves when this regulation is enforced, and its efficient carrying out ensures the perpetuation of big game in the Province of Ontario.

In our two last issues we have recorded the activity in fish seizures at Niagara Falls, Ont. Inspector Shelley, who was stationed at that important point, appeared to be doing his work well, with the natural result that complaints from those who profited by the illegal traffic followed. A few minutes after he had seized a consignment of undersized whitefish from Midland to New York he was dismissed by telegraph, and the statement is made that this was the result of an imprudent letter which he sent to the Department when requests were made for explanations of his work. In any event this action on the part of the Department does not appear to outsiders to make for efficiency.

is not a toy intended for children, but a safe, durable and accurate weapon for the man or woman who needs a revolver for purposes of offense or defense, or for the huntsman, army officer or policeman.

In the H. & R. Hammerless Revolver there is no hammer to catch in the clothing and cause accidental discharge in drawing it from the pocket. The only way possible to discharge it, is to pull the trigger.

All H. & R. Revolvers are made of the very best obtainable materials in a factory equipped with the most improved machinery operated by skilled mechanics. It is a marvel. Small and light in proportion to its effectiveness. Perfect in balance and finish, and extremely durable. The automatic device for ejecting the empty shells, makes reloading easy. The handle is so shaped as to insure a sure grip.

Every revolver bearing our name passes the most rigid inspection and is thoroughly tested before leaving the factory. We could not afford to risk our reputation by permitting an H. & R. Revolver to be sold unless it is without a single flaw. Our guarantee goes with every one.

H. & R. Revolvers are made in many styles and sizes. Blue and nickel finish. Prices from \$2.50 to \$8.00. The Hammerless illustrated in this ad., finest nickel finish, is \$6.00. Our catalogue gives full particulars.

A postal card will bring it. H. & R. Revolvers are sold by all dealers in reliable sporting goods. If not sold in your town, we will ship direct prepaid on receipt of price.

## Twenty-Nine Tissue Salts

The Ensign Remedies contain twenty-nine tissue salts in combination. These include the twelve salts ordinarily used and seventeen of our own. All physiological chemists support our claim that there are twenty-nine or more salts necessary to normal bodily functions. The secret of the seventeen different salts and the many combinations we have discovered, remains the exclusive property of this Company.

For many years multitudes of cures have been wrought through the sole use of the original twelve salts known to all. These cures would not be possible through any other agency. But frequently, diseases arise that cannot be affected by any one of these twelve salts. Granting that the principle of the curative value of tissue salts is correct, the explanation for these failures to cure must be that there are more than the twelve salts discovered by Schuessler.

This position is confirmed by the fact that, with the twenty-nine tissue salts and their combinations, we now cure nearly every human disease. The few that are still unmoved by our treatments, but further prove the correctness of the principle upon which our system is based. We believe that ALL diseases are curable. We hope that our investigations, thus far so positively successful, will eventually enable us to offer hope to every last sufferer of a so-called incurable disease.

As an explanation of our system we will say in short that our remedies are foods known as tissue salts. These tissue salts are inorganic elements of the human body. The lack of these elements in the body in the proper proportions subjects the individual to disease. An unusual exposure or a heavy strain on some set of tissues or organ of the body is often the cause of this condition. Our remedies supply these tissue building elements when nature is unable to do so.

For more minute information send for our booklets on General Diseases; on Private Disease; on Women's Diseases; on Varicocele, Varicose Veins, free to all. Send for the ones you want. They explain and are worth reading.

## Stray Pellets.

The Grand American Handicap this year was won by F. E. Rogers, St. Louis, from 17 yards, with 94 out of 100. C. M. Powers from 20 yards, won the Preliminary Handicap, with 93. The amateur championship, all at 18 yards was won by Guy Ward of Walnut Log, Tenn., with 144 out of 150 and the professional championship by Walter Huff with 145. Eight Canadians attended the meet, namely, Messrs. Duff, Dunk, Vivian and McGill, Toronto; Upton, Hamilton; Ewing, Montreal; H. Scane, of Ridgetown; and E. G. White, Ottawa. All took part in the G.A. H. with the following result out of 100 targets:—H. Scane (19) 85, Thomas Upton (19) 79, E. G. White (19) 80, Thos. A. Duff (18) 79, G. M. Dunk (18) 76, W. H. Ewing (18) 81, G. L. Vivian (18) 66. In the amateur championship at 150 targets, Ewing scored 134, Upton 113 and Scane 131. In the professional championship White scored 126.

The St. Catharines Gun Club held the opening shoot on their new grounds on Dominion Day with a good number of shooters present. Over 2000 targets were shot at during the day. D. Konkle of the Beamsville Gun Club carried off the honors by breaking 81 out of 85. The target shooting of the members was exceedingly good for beginners. The members of the Jordan and Beamsville Gun Clubs are past masters in the art of target smashing and their presence made the day more enjoyable. The officers of the club are: Dr. Chas. O. Beam, president; F. E. Cov, vice-president; Dr. W. Buchanan, secretary-treasurer.

The Dartmouth, N. S., Rod and Gun Club held an informal shoot at their grounds, July 16th. A large number of members were in attendance. Among the visitors were F. L. Hallford, agent of the Dominion Cartridge Co. Montreal and E. J. Marsh, of Toronto, a prominent member of the Parkdale Gun Club of that city. The visitors were highly pleased with the location of the grounds and with the electric system of pulling the traps. The Dartmouth club is the only one in Canada possessing the electric system.

## Winnipeg Tournament.

The annual tournament in connection with the Exhibition was held at Winnipeg on July 25th and 26th, under the management of Mr. Paul Johnson.

In the international team shoot, the American twelve wrested the international flag trophy from the Canadians who have held it since the tournament of 1906.

H. W. Lightcap, Winnipeg, won the International championship with 47 out of 50.

The main events of the second day were the Dominion of Canada championship and the team shoot. The first of these proved to be full of interest. The event was one of fifty birds, and the tally sheet at the close showed Williamson of Brandon and Lightcap of Winnipeg, tied for first place, with 46 out of a possible 50. Johnson of Winnipeg was third, and F. G. Simpson, Winnipeg, fourth, with 44. A

shoot off of 25 birds was arranged, and in this event Williamson and Lightcap tied again at 22. In the second shoot off of 25 birds, Williamson finally won by a narrow margin.

The team shoot was a contest between the Winnipeg and Fort Garry gun clubs, four men to the side, 25 targets Paul Johnson, F. G. Simpson, G. A. Britton and J. P. Turner, the representatives of the Fort Garry club, were successful in winning the honors of the day for their club, scoring 5 points in excess of their opponents from the Winnipeg club, and received the cup and medals.

The Americans led in the high average for the first day, the honor going to Sprague of Grafton, N. D. who missed twelve birds out of a total of 125, making a trifle over 90 per cent. Paul Johnson, of Winnipeg, was second, breaking 100, and T. N. Williamson of Brandon 3rd, with a score of 107. Other high averages were as follows: J. P. Turner, F. G. Simpson, W. R. McKinnon 106, W. E. Rowe 104, U. Lightcap 103, L. L. Widmar 103, Tom Brodie and E. G. White 102, J. H. Stair, Crookston, 101; E. K. Cavalier 99, R. J. McKay 98, W. J. Sanders 97, George G. Johnston 97.

Averages for the second day were as follows the possible being 125, T. Bernard Grafton, 110, T. N. Williamson, Brandon, 109; E. G. White (professional) 109; H. W. Lightcap 108, Paul Johnson 107; J. D. Neal 107, W. E. Rowe 106, F. H. Sprague 106, J. H. Stair 105, Mr. Newall 103, E. K. Cavalier 101, Fred Bailey 100, F. G. Simpson 99, Tom Brodie 95.

For the two days high averages were as follows, the possible being 250: F. H. Sprague Grafton, 219; T. N. Williamson, Brandon, 217; Paul Johnson, Winnipeg, 216; H. W. Lightcap Winnipeg, 211; E. G. White (professional) 211; W. E. Rowe 209, J. H. Stair, Crookston, 206; F. G. Simpson, Winnipeg, 203; E. K. Cavalier 200, Tom Brodie 197.

E. G. White, Ottawa, of Dupont Powder Co. W. A. Ferguson, Grand Forks, N. D., of the Peters Cartridge Co. and R. Watson, Montreal, of the Dominion Cartridge Co. were the trade representatives present.

## Toronto Traps.

The Stanley Gun Club of Toronto held the fourth shoot of their handicap series on their grounds on Saturday, July 7th, for the Gleason Cup, Laffin Rand Cup, Ellis Medal, Bailey Shield, and Ward trophy. The Gleason Cup, a handsome sterling silver trophy valued at \$100, was presented to the Stanley Gun Club by Dr. Gleason of Boston, and is being shot for at 400 targets divided into a series of eight events of 50 targets each handicap ranging from 16 to 21 yards, members being allowed 10 weeks to complete their scores, thus allowing any member who may be indisposed or out of town a chance to complete his score. No member is allowed to shoot more than two scores in one day, the one making the highest score in the Cup event of the day has his name inscribed thereon, and the one making the highest score in the eight events winning the Cup. In the

first shoot for the Gleason Cup Robert Fleming 18 yards was high with 45. In the second series P. Wakefield 21 yards and J. Massingham were high with 41. The scores on this day were low, it being one of those bright sunshiny days with no wind and a peculiar haze in the air which made the steadiest shots in the club miss their targets in an unaccountable manner. The third event of the series was won by Mr. Elv. 18 yards, with 42. The same weather conditions prevailed on this day as on the previous one. The fourth event being won by Mr. McGill from 20 yards with 45. The following is the result to date:—

Team Shoot at London.

At the Springwood Gun Club grounds, London, Dominion Day, team matches were shot by teams representing Ingersoll, Hyde Park, and the Springwood club. The first match was between Ingersoll and the Springwood club, 12 men in each, 25 birds each man in which the Springwoods won by nine shots. In the second match a three-cornered one the Springwood club again won. The following are the scores:—

Team match, 25 birds each—  
Ingersoll—F. McMulklin 19, W. Staples 17, H. McMulklin 17, J. Winders 23, W. J. Ross 19, R. B. Harris 16, J. Williamson 10, J. Staples 22, W. J. Kirbyson 20, A. R. Walker 21, G. Nicols 22, G. James 16, total 222.

London—B. W. Glover 24, R. Day 24, D. A. Breckon 23, S. A. Webb, R. B. Walker 16, C. Marsh 14, G. Bowman 16, A. W. Bryce 15, Remington 21, Parker 23, W. A. Brock 18, Rutledge 15—total 231.

Team match, 25 birds each—  
Ingersoll—F. McMulklin 14, W. Staples 17, J. Staples 20, W. J. Ross 15, R. B. Harris 16, Kirbyson 20, Nicholls 15, James 14, Total 131.

Springwood—B. W. Glover 25, R. Day 21, Breckon 22, Webb 21, Walker 20, Marsh 18, Remington 22, Parker 24, Total 173.

Hyde Park—Dr. Ross 19, A. Steinhoff 19, K. Routledge 22, S. Lewis 15, J. Fowler 16, F. Harrison 22, J. Harrison 13, W. G. Brown 21—total 141.

Sweep, 10 birds  
Webb 9, Day 9, Glover 8, W. Staples 4, Winders 5, McMulklin 7, J. Staples 8, Breckon 10, Brown 6, Routledge 8, Ross 6, Fowler 8, Marsh 5, Nicholls 10.

Sweep 10 birds—Webb 9, Day 9, Glover 8, W. Staples 4, Winders 5, McMulklin 7, J. Staples 8, Breckon 10, Brown 6, Routledge 8, Ross 6, Fowler 8, Marsh 5, Nicholls 10.

Sweep 10 birds—Webb 8, Routledge 8, Fowler 6, Brown 7, Breckon 8, Day 9, Glover 9, Nicholls 10, Staples 7, Winders 8, McMulklin 3.

Essex Tournament.

A tournament was held July 27th at Essex, Ont., under the management of F. H. Conover, Dupont representative, Leamington. The shoot was in celebration of the 35th birthday of Frank Stotts, the popular proprietor of the Aberdeen, and was well attended by Frank's many

FRANK STOTTS

friends in Essex county and Detroit. About twenty shooters took part altogether. A very enjoyable chicken supper at the Aberdeen wound up the day's proceedings.

High amateur average was won by "Jim." McAuley, Woodslee, who did some good work under difficult conditions and especially as he had done no tournament work for two years. Second average was won by W. A. Smith of Kingsville, and third by J. Marcon, Sandwich. "Injun" Conover struck his old time winning gait and topped the list with 112 out of 135.

Targets	10	20	20	20	20	20	25	
W. A. Smith .....	6	16	14	18	16	18	20	108

These shot at 30—B. Wigle 23, W. Neville 19, E. Marks 12, Alex. O'Neil 20, Ted Graham 17, F. Stenlake 9.								

Hamilton Happenings.

The new grounds of the Hamilton Gun Club were formally opened on Saturday June 30th, by Mayor Biggar, who, after a short speech, in which he congratulated the club on its prosperity, shot the first target. The new grounds are situated at Ghent's Crossing at the beach, and it is doubtful if any gun club on the continent has grounds that are as nicely situated.

#### Sandwich Tournament.

With Jack Marcon as manager, a very successful one day shoot was held at Lagoon Park at Sandwich, July 12th. The grounds are pleasantly situated on the north side of the Park, overlooking Detroit River and with a panorama of the City of Detroit as a back ground.

Fifteen shooters took part. F. H. Conover was present in the interest of the Dupont Powder Co. George McIntosh, Windsor, very efficiently performed the duties of cashier.

The chief event of the day was the contest for a very handsome gold medal donated by the Corby Co., the well known distillers of Belleville, Ont., and known as the "Corby I. X. L. Medal" and represented the amateur championship of Western Ontario. The contest brought out fifteen shooters and a large number of interested spectators who took the keenest interest in the struggle for the handsome emblem. The winner was W. A. Smith, Kingsville, with Messrs. Marcon, Reid and Stuart a very close second.

High average for the day was won by W. A. Smith. The scores:

T. Weir .....	9	15	11	15	16	15	9	5	95
J. Marcon .....		7	6	5	16	19	11	8	42
W. A. Smith .....	8	15	14	13	14	20	40	12	106

\*Medal contest.

#### REFLECTIONS.

Jack Marcon, the manager of the shoot, is one of the most popular hotel men on either side of the River. Lagoon Park is a pleasant retreat in the dog days.

The splendid gift of the Corbys was much admired and appreciated by all the shooters. Such acts as these do much to stimulate interest in one of the finest outdoor sports.

It was like a letter from home to see such old timers as Andy Reid and Tom Weir back on the firing line again.

Marcon's chicken dinner was voted the finest that has been. Both the American and Canadian lawyer picked the bones with as great

## "New Century"

### TELESCOPIC STEEL FISHING ROD

**THIS IS THE ROD YOU HAVE  
BEEN LOOKING FOR**

The "NEW CENTURY" is made of seamless steel tubing; extends instantly to any desired length, automatically locks in any position; guides outside; all joints telescope into the handle joint (17½ to 30 inches).

The "NEW CENTURY" is better made, better balanced, lighter in any length, stronger and more durable than any other steel rod.

It is not necessary to look for our "trade mark," the "NEW CENTURY" is distinguished from "tip to butt"—a beautiful piece of mechanism.

No joints to shake loose—get lost, no wood in the handle to shrink, no unjointing, no line cutting.

A practical fishing rod, combining all the best features of high-grade bamboo with the strength and durability of high-grade steel, and which can be comfortably carried "up a sleeve."

All "NEW CENTURY" rods are equipped with our patented single-grip, one-piece, reversible handle (the only handle of this description on the market and used only on our rods).

Bait, fly, muskallonge and sea fishing rods in all lengths. Telescopic gaff and net handles. Write for catalogue E.

gusto as if it were a rich and deserving client. "Injun" Conover got away from his tobacco field long enough to give Dupont a little push forward.

This is about the only trap shooting Andy Reid has done since an automobile alienated his affections some three years ago. He has not forgotten how.

Stuart was the last man to give up the medal race and he kept the winner on the anxious seat until the last round.

The Detroit bunch are as fine a lot of sportsmen as one will find. "Grandpa" Wilson is a "Foxy Grandpa" and not a really "Grandpa," you know. He is a good shot, a pleasant companion and an all-round jolly boy.

#### Cutler Tournament.

The Cutler, Ont., Gun Club's first trap shooting tournament held July the 2nd, was and everything going off nicely.

declared a success, everyone being well pleased.

The Soo West Gun Club was represented by Messrs. R. Ellis, G. Ellis and Kitcher. The Espanola Gun Club by Messrs. Millington, Blair, Hussy, Gorbey and Renshey. The Little Current Gun Club by Messrs. Jackson and Sims and the Cutler Gun Club by Messrs. Bois, Landriau, Moquin, Turgeon and Gignac.

On account of Dominion celebration many shooters could not attend and that accounts for the small attendance. Gignac and Bois who made the high scores used Dominion Sovereign shells. The score by events was as follows, 20 birds each event:—

#### Elmwood Tournament.

The Elmwood tournament, gotten up and managed by Dr. Cook, was held July 6th at Elmwood, a small but thriving little village in Bruce county. The grounds for the shoot had been selected by the Doctor with more consideration for the comfort of the shooters than is usually the case. The traps were set at the north side of a pleasant little grove and faced the north east. The light and back ground were good and when not at the score the shooter had a cool and shady place to retire to. The traps were on high land affording an extensive view of as fine a farming community as will be seen anywhere. Again, with his usual thoughtfulness, the Doctor had arranged to have luncheon on the grounds, thus saving a long walk on a hot day to the hotel. The Doctor's charming wife, herself an enthusiast in trap shooting, though not yet brave enough to shoot in public, assisted by Mrs. Goodfellow personally presided over the repast, which was exactly the kind to best please a hungry trap shooter on a hot day. In fact, the shoot developed into a summer picnic with the Dr. and Mrs. Cook as host and hostess and the shooters as guests. Needless to say the enjoyment of everyone was complete.

The Doctor had offered a very generous programme and had anticipated a much larger crowd than turned up, but the attendance at the smaller shoots are "most generally, always, sometimes" less than anticipated. The Toronto and Hamilton shooters had, evidently,

### REFLECTIONS.

H. A. Mallory is certainly the great grand "daddy of them all." That is he is a grand dad and his shooting is certainly great.

Mr. and Mrs. J. K. Goodfellow, Elmwood, gave valuable assistance. They might in fact be called aide-de-camp. Their company was much appreciated.

G. B. Smith struck his old winning gait. Dr. Cook broke 90 out of his last 100. The prognosis in his case is favorable to early development into a first class shot. He has alarming symptoms already.

Dr. Perdue, Clifford, is also showing signs of being a pretty speedy colt. He has the right strain for good shooting.

### Clifford Tournamennt.

Clifford Gun Club held their annual tournament at that place on July 20th. To enquiring friends we might say that Clifford is a lively little town of some 1200 inhabitants, picturesquely situated at the Northwest corner of Wellington County and in the center of a rich farming district.

The Club grounds are conveniently situated not more than a block from the centre of the town in the town park. Bowron traps and targets were used.

The system of handicapping adopted was something entirely new in Canadian tournaments. It was intended to give the local amateurs a fair chance as against the outside expert and the result was a surprise to everyone. It proved a severe "killing" to the better shooter and made the shoot the 65 per cent. man's race all the way. The programme consisted of 140 targets. The 85-95 per cent. shooters were "scratched" the 75-80 per cent. men were allowed 14 extra targets to shoot at and the 65-75 per cent. men 28 extra targets. All the shooting was from 16 yards. Easy targets,

a clouded sky, entire absence of wind and a good back ground were all favorable to good scores. Under harder conditions the handicap might not have worked so badly, but as it was few of the shooters made more than one or two misses in every ten and then the extra allowance of one or two targets enabled him to fill up the holes in his score.

G. B. Smith, Ayton, and W. A. Smith, Kingsville, were the only 85-95 per cent. shooters present and although both shot well, averaging 91 per cent. and 93 per cent. respectively, neither shared in any of the six high average monies. Hone Hillhouse, Clifford, with 28 extra birds, scored 136 and won high average money, \$9.00. Dr. Cook, Elmwood, with 14; Beetsche, Clifford, with 28 and "Billy" Huether of Neustadt with 28 extra birds, tied for 2nd, 3rd and 4th average with 133, and divided \$16. Dr. Perdue, Clifford, with 14 and Taylor, Clifford, with 14 extra birds, tied with 131 for 5th and 6th average and divided \$8.

In adopting this system of handicapping we must give the Clifford boys due credit for an honest attempt to solve the problem of so equalizing the shooters as to encourage the poorer shots to shoot through the programme, and it is possible that some modification of this plan would work fairly well for purely local tournaments, but the system must be modified to be a success even locally.

Mr. John A. Gray, principal of the public school, Clifford, the efficient secretary of the Gun Club, was in charge of the office and did this part of the work well.

The Clifford Club has the material in it for good shooting. We hope to see them keep on "climbing" until they reach the top. Good target shots are not made in a day and only constant practice and lots of "stick-to-it-iveness" will do the trick.

## Drayton Tournament.

Drayton Gun Club held its annual tournament July 27th. Drayton Gun Club is another name for H. A. Mallory, the genial manager of the Traders' Bank at Drayton, who in trap shooting matters there, is the foundation, side walls and roof of the edifice.

The programme called for 12 events of 15 birds each, entrance \$1.50 and money divided Rose system 6, 5, 3, 2. Only one cent was charged for targets, just enough to cover the cost of the rocks and the expenses of the shoot, so that each purse was as rich as possible. The result was very satisfactory to the shooters. The shooting was of a high order and some of the young colts got a new mark. Dr. Perdue's average of over 92 per cent. was a fine performance in view of the fact that he has not shot very long at the traps.

High average was won by H. A. Mallory with 166 out of 180 with Dr. Perdue, Clifford a close second with 165. H. Cull of Guelph and G. B. Smith, Ayton, tied for third place with 161.

One squad composed of Perdue, Cull, Doersam and Lewis, broke 59 out of 60, which was certainly "go in' some."

Dominion, Sovereign and Imperial shells were used by all the shooters except G. B. Smith, who used his old reliable Winchester Leader. Dupont, Mullerite, Empire and S.S. (Smith's Smokeless) were the powders used. Mallory's Smith shot from 18 yards, the rest from 16.

### Picton Points.

On July 6th the Picton Club were pleased to receive a visit from several members of the Napanee Gun Club to shoot a return match. The Napanee shooters are thorough sportsmen and their visit was very much appreciated. This match was won by Picton and as each team has a win to its credit the next match will be at Napanee. The scores, 25 birds per man, are as follows:—

Napanee—W. C. Smith 12, G. Van Luvan 16, A. Kennedy 17, C. Maybee 11, S. Parks 10, C. H. Edwards 23. Dr. Stratton 15. Total 104.

Picton—H. S. Noxon 14, J. Hepburn 15, K. Hepburn 12, W. Keoch 19, B. Crandall 22, A. Sullivan 12, M. Tierney 17. Total 110.

### Guelph Visits Stratford.

On invitation a team of the Royal City Gun Club, consisting of twelve men, headed by their president and secretary-treasurer, H. Harris and F. Sweetman—journeyed to Stratford on Dominion Day to participate in a friendly match of 25 artificial birds per man. After the match, which came off in the early part of the day, the shooters entered into 10 bird sweeps, and thus finished out the day's sport. Following are the scores:—

Guelph—L. Singular 20, D. Clark 15, W. G. Mitchell 19, H. Rhodes 21, T. Spalding 19, W. Sleeman 20, F. Sweetman 16, A. Burnett 16, W. Singular 20, H. Harris 23, J. Vogt 21, T. Russell 10. Total 226.

Stratford—K. C. Turnbull 22, A. W. Usher 22, W. Boles 24, G. Rutherford 17, J. J. B. Meyers 25, T. Savage 17, D. Hayes 17, W. Geddie 10, W. Mills 21, F. Nash 23, W. Gillow 14, P. Russell 20. Total 232.

### Rogers Wins the Grand American Handicap.

Two hundred and sixty eight of the best shots in the country took part in the Grand American Handicap Tournament held in Indianapolis, Ind., June 19-22. This event was attended by shooters from all over the country.

The great event of the week was the Grand American MHandicap, which was won by Mr. F. E. Rogers, of St. Louis, who broke 94 out of 100 targets from the 17-yard mark in a gale of wind, shooting Winchester Factory loaded Shells. In each of the other three events on the programme, Winchester Factory Loaded Shells or Winchester Repeating Shotguns landed in first place, making a clean sweep for these justly popular and reliable goods.

### How Cartridges are Made.

Through the kindness and courtesy of Mr. H. W. Brainerd, treasurer of the Dominion Cartridge Co., Limited, Montreal, the writer accompanied by Messrs. G. M. Dunk and G. W. McGill, Toronto, while attending the recent Canadian Indian Tournament at Montreal, were given an opportunity of inspecting the Company's extensive factory and of seeing the interesting process of the manufacture of metallic rifle and shot gun shells and ammunition.

The Company's plant is situated at Brownsburg, Province of Quebec, an isolated hamlet a few miles from Lachute on the C. P. R. and about sixty miles from Montreal. The situation is a picturesque one and its isolation, of necessity, is one of precaution by reason of the explosives used.

A large stream of spring water tumbling down from the high hills surrounding the plant, furnishes ample water power to run the factory, an important item in the current expenses.

The factory, itself, is made up of a number of isolated buildings, the dangerous explosives being kept at a safe distance and every precaution taken to reduce the dangers of having them to a minimum.

When writing advertisers kindly mention Rod and Gun and Motor Sports in Canada.

Always UNIFORM, ROUND and TRUE TO SIZE.

If you load your own shells, be particular when ordering your Shot to specify "M. R. M." brand.

THE  
MONTREAL ROLLING MILLS  
COMPANY

At the factory we were introduced to the gentlemanly superintendent, Mr. McDonald, and were, by him, shown the different operations of manufacture. These proved intense interest and we viewed with great curiosity the evolution of those green and purple shells so plentifully used on every trap shooting ground, from the raw material of tough paper and shining brass to the handsome finished product.

First of all we saw the sheets of paper being pasted, rolled into long tubes, dipped, ironed, and trimmed to proper lengths. We saw the brass battery cups and primers being stamped out of solid sheets of metal and then paper tubes with base was pressed into the brass head and finally completed with primer cup and primer. Then the operation of the loading machines by which the empty shells was supplied with powder, wads and shot and finally crimped and finished with automatic exactness proved most interesting.

We also saw the manufacture of the rifle ammunition for which the Dominion cartridge has such an enviable reputation.

These cartridges are made from sheet metal, which must be rolled with the greatest accuracy and made from special grades of copper, spelter, etc., in most exact proportions. Circular disks are punched from these sheets and at the same time formed into shallow cups, which are drawn out to the required length and diameter by being forced through smaller dies. There are from two to six drawings in the ordinary sizes. Between each drawing, the shells must be annealed, pickled and dried. Great care must be taken in every operation not to strain the brass as any weakness would be disastrous when the cartridge is subjected to the excessive pressure of firing. The shells are then trimmed at the mouth and if for rim fire cartridges, are then ready for heading: in centre fire, a hole is first inserted in the end to start the primer pocket. They are then trimmed on the sides of the head and underneath, and again at the mouth, as the heading slightly alters the length. If the cartridge is "bottle necked" the metal of the shell is then annealed and reduced. After this, the shells are put through a final verifying operation: the primer pocket is sized, the flash hole punched and the primer inserted. The primer cup is formed like the cartridge cup, the charge inserted and covered with a disk of tin foil and then compressed. The charge in an ordinary primer is only 1-10 grain, and is composed of a number of different ingredients. The slightest difference in the proportion of these, size of grain, purity, etc., will affect the quality of the primer, so that it can be seen that this process is a very delicate one. Great attention must be paid also to the uniformity of the metal for the primer cup, temper, etc. Where millions of these are being turned out the uniformly good quality is surprising.

Rim fire cartridges are primed by spinning the mixture into the rim. Many users of rim fire cartridges do not understand that the priming is only in the rim and frequently blame the cartridge when the firing pin strikes too far in the centre. In a similar way, centre fire cartridges are often blamed when the blow is struck on the edge of the primer, the anvil only giving resistance to the blow if it is struck well in the centre.

All operations having to do with fulminate of mercury, primers, etc., are very hazardous, and the greatest pains must be taken to ensure safety, as well as accuracy. Both primers and rim fire cartridges have to be dried very carefully.

The ordinary bullets are either cast in slugs, a number at a time, or cut from wire. The slugs are then swedged to exact shape and weight, securing uniform texture. Different combinations of lead, tin, etc., are used. After swedging the bullets must be cannellured and greased. The quality of the lubricant is most essential, as shooting qualities, fouling, etc., are largely governed thereby. In jacketed bullets, the outside shell is made by a number of

942 First National Bank Building, CHICAGO, ILL.

operations similar to the cartridge shell, the core is swedged similarly to the ordinary bullet, inserted, and then a number of additional swedgings are required to complete it.

There are a number of separate operations in the loading, after which the cartridges are crimped, cleaned and packed.

During all the above operations, frequent inspections have to be made, and tools have to be looked after regularly and gauged in case they show any signs of wear or breakage. The work throughout is most accurate. In some operations, not more than one-tenth of an inch variation is allowed. Much of the machinery runs at a very quick rate and means must be devised to discover promptly any imperfection to prevent waste. In most cases there is no way of detecting an imperfection after the cartridge is finished, so that the operations all through must be carefully watched. A few imperfect cartridges mixed in with a lot of good ones, would spoil the whole batch.

In addition to tests made during the manufacture and when finished, all material must be subjected to most careful scrutiny.

It is interesting to note the different parts of the world which are represented in a single cartridge. For instance, in the brass, the copper comes from the States, mainly and the spelter from Spain. In the powder, the saltpetre from Chili sulphur from Sicily or Java. In the primer, mercury from Spain, shellac from India or South America; in the bullet, lead from Canada, Spain or England, and tin from the Straits Settlements; in the lubricant, wax from Japan or Russia.

The company now turn out a very high grade of shot gun cartridges, the demand for which has so largely increased in Canada with the growth of the sport of trap shooting. The old Vulcan and Trap shells have been entirely superseded by the Sovereign, Regal, Imperial and Crown brands. The first three are for smokeless and the last for black powder only. The excellent quality of these shells are making them very popular in Canada and the sales have increased enormously.

The company was established in 1887 and so have had nineteen years experience. They have over half a million invested in the business and are constantly extending their plant by the erection of new buildings and installation of new machinery,—extensions made necessary by the rapid increase in their business.

The superior quality of their output has created a large demand for Dominion ammunition in every quarter of the globe. It is a curious fact that the company sell more in the United States in competition with established makers there than they do in Canada. They also have a very large market in England and supplied all cartridges, over a million, used in the recent Glasgow exhibition. They have agencies in England, Australia, New

Zealand, Japan, United States, Argentine, Africa, etc. They build much of their own machinery, having a perfectly appointed machine shop. Foreign patented machinery is not made in Canada so they can take advantage of all the best points of other makers.

The company's close connection with the Hamilton Powder Co., the largest powder makers in Canada and Nobel's Explosives Co., Limited, Glasgow, the largest in the world, who have large ammunition, metal, chemical and other works of their own, give the Dominion people advantages not possessed by any other ammunition manufacturers. They therefore, are in touch with all the latest improvements in manufacturing and besides are enabled to get powder and other supplies exactly suitable for every class of cartridge or shot shell.

The inspection department has been develop-

ed and systematized to the highest extent. It is equipped with all the latest electrical and mechanical apparatus for taking velocities, pressures, etc. A certain proportion of each day's work is tested in every detail at different stages of manufacture and before packing.

Definite and high standards have been adopted and no goods are passed unless they come up to these. Comparisons of other makes are all the time being made and any improvement shown is quickly taken advantage of by the Company.

## PAY LESS FOR A BETTER LIGHT

You need not put up with the nuisance and bother of ordinary lamps, merely because you are outside the reach of gas and electricity. You can now have a light as good as the city man's best. You can enjoy the convenience of gas or electricity, and have better, softer and pleasanter light than either for less money than your smoky, troublesome lamp is now costing you. No dangerous new-fangled illuminant either, for

### The Angle Lamp

burns common kerosene or coal oil, but it is constructed on a new principle—a principle that makes kerosene the best, cheapest and most satisfactory of all lighting methods. Safer and more reliable than gasoline or acetylene. As convenient as gas or electricity. It is lighted and extinguished like gas. May be burned high or low without odor. No smoke, no danger. Filled while lighted, and without moving. Requires filling but once or twice a week. It floods a room with its beautiful, soft, mellow light that has no equal. Write for our Catalogue 2, and our proposition for a

## Hunter's Sweater

Every Sportsman going into the woods this Fall should have one. The comfort you will get out of it will re-pay its small cost many times over

PRICE—with pockets—\$3.50; without pockets, \$3.00. Collar is fitted with loops and buttons and can be used as a roll collar. The following letter regarding this Hunter's Sweater speaks more forcibly for the article than anything we could say:

Jordan Station, Ontario.

Scott Knitting Co., Toronto.

Dear Sir:—I deferred writing to you regarding sweater until I had given it a thorough test. I spent two weeks up north shooting. Was out in all kinds of weather, and I can assure you it fully met all my expectations. When my outside coat would be wet through, the jacket would still keep out the wet, and I am highly pleased with it. You may publish this if it will help you in any way, as I consider your sweater the finest on the market.

H. W. Hunsberry.

That's the kind of Sweater YOU are looking for.

Send in your order NOW.

Made in all standard Colors.

# A Chatham Kitchen Cabinet Cuts Your Work in Half That's a Fact!

Just think of the steps you take in your kitchen every day in the preparation of *one single meal*—running to the pantry—running to the cellar—running back and forward across the kitchen getting cooking utensils and supplies together.

A CHATHAM KITCHEN CABINET simplifies all this.

—A place for everything and everything in its place—handy, compact, convenient. It keeps household supplies clean and fresh.

You can sit at this Cabinet, and everything necessary for baking and cooking are within reach without rising.

No housewife will be without one after she has once used it. THE CHATHAM KITCHEN CABINET is mouse-proof—rat-proof—dirt-proof.

It's the most convenient piece of furniture ever put into a house—and the price is within the reach of all.

CHATHAM KITCHEN CABINETS are

## Sold on Time

Our easy terms of payment make it possible to own one of these Cabinets without noticing the expenditure.

I want you to know about this—I want you to have our booklet, which tells you about our various styles and prices. This book is FREE.

Write to me for it and I will send it to you at once.

My Free Book will tell you all about my many styles and sizes of Chatham Kitchen Cabinets. It will tell you how I pay freight on any Cabinet you order, direct to your station, selling it to you at factory price. You should get this book at once. Write today while you think of it.

The "BUFFALO" is in use in all kinds of boats for all kinds of work. Ask any user as to the results they give.

Furthermore the prices are not exorbitant but are low—taking into consideration the quality.

**Buffalo Gasolene Motor Co.,**

1280-1288 NIAGARA ST., BUFFALO, N. Y.

## "A Fisherman's Luck"

is good luck when he has **Shredded Wheat Biscuit or Triscuit**—the favorite food for the lover of outdoor sports and pastimes—containing all the strength-giving elements of the whole wheat berry in concentrated digestible form.

If the fisherman returns without fish there is shredded wheat for the camp—ready cooked, ready-to-serve, palatable and appetizing—good in any climate in any season.

Warmed over the camp-fire, **TR SCUIT** is a crisp, delicious "snack," with or without butter, supplying the maximum amount of nutriment in smallest bulk. It is the whole wheat, cleaned, steam-cooked, drawn into porous shreds, compressed into a wafer, and baked.

**"Made in Canada."**

THE CANADIAN SHREDDED WHEAT CO. LTD.,  
NIAGARA FALLS, ONT.

### LYMAN'S Bow-Facing Rowing Gear

Rowing Gear with handle part detached from the Boat to show the Ball and Socket Joint

Several advantages, viz.: the *front view*, the increased ease and speed in rowing, the raising of the bow instead of depressing it, the clearing up of the oar out of the way while on the boat, the increased facility in loading oars, the diminished effort of hand and eyes in steering, rowing without noise, the better balance and swing of the oars, have commended this gear to all who have tried it.

The gear can be attached to almost any boat, and is especially adapted to hunting (indispensable in duck fishing and all kinds of pleasure boating).

Send for our catalogue of Rowing Gear and Rifle Sights.

Illustrated

"THE COMMON WAY"

From "Camp Kits and Camp Life" copyright, 1906, by Charles Scribner's Sons

By **CHARLES STEDMAN HANKS "NIBLICK"**

Author of "Hints to Golfers."

A practical handbook for the woods, founded on many camping trips with a varied assortment of guides and after many kinds of game and fish. The veteran sportsman as well as the neophyte will read the book with pleasure and profit. It takes up camp cooking, outfit, illness in camp, shooting, fishing, trapping, and general woodcraft.

There are cross-headings for each topic, and in addition there are conspicuous running head-lines giving the subjects of each page. The index is also full and definite; moreover the chapters classify the information in exactly the way the sportman is apt to need it. The book is the size and shape to slip conveniently into the pocket.

A valuable manual of every phase of out-door life. Offers a thousand and one suggestions.—*Boston Transcript.*

AN UNEXPECTED SHOT

"A complete encyclopaedia of the requisites for camping, practical and helpful, and should drive all who can get there to the woods"—*N. Y. Sun.*

# THE Amateur Trainer

BY  
ED. F. HABERLEIN.

A plain, practical and concise, yet thorough, guide in the art of training, handling and the correcting of faults of the dog subservient to the gun afield. Acknowledged by authorities and amateurs alike the most practical book on training ever published. The author is a practical trainer of over 30 years' experience whose system is up to date and stands unequaled, the accepted standard

**NEW EDITION JUST OUT.—ILLUSTRATED.** Comprehensive, popular form, devoid of long-spun theories, based on practical experience throughout. Not a large volume of pastime reading matter, but guaranteed to contain the most practical information on the subject at any price. Sent postpaid on receipt of price—paper cover, \$1.00; finely cloth bound AND GOLD EMBOSSED, \$1.50. ADDRESS:—  
Subscription Department, Rod and Gun in Canada  
Woodstock Ontario.

## TO FILL The ORIGINAL and ONLY GENUINE CONKLIN'S SELF-FILLING PEN

Simply dip in the ink, press with the thumb, and the CONKLIN PEN is filled and ready for instant use. It is simple, convenient, efficient, with no complex mechanism and nothing to get out of order.

The elastic ink reservoir is compressed by the presser bar under the thumb, and, when released, instantly draws in the ink through the feed channels at the point. The quickly adjusted lock-ring prevents ink from being forced out again. Feeds regularly until the last drop of ink in reservoir is used. Always responds without kick or balk. Cleans itself as easily as it is filled. Fully guaranteed.

If your dealer does not handle the CONKLIN PEN, let us make you our Special Offer to Mountain Pen Users. Full information, with illustrated catalogue, sent upon request. Sold by dealers everywhere.

TYPE OF

## 4 Cycle Motor

Built in Sizes 12 to  
100 H. P.

Operates on Gasoline  
or Distillate.

Wolverine Motor Works, Grand Rapids, Mich.

Niverville, Man., Feb. 7, 1906.

Gentlemen:—It gives me great pleasure to tell you that the 6 H. P., 2 cylinder, 2 cycle engine, I bought from you last June has given the best of satisfaction, on the River and also on the Lake.. It drives my 22½ ft. boat close to 11 miles an hour, and does it easily.

The best part, however, is the ease of handling it. It is seldom that I have to use the crank more than once a day as it would hold the compression in the hottest sunshine for four or five hours, and has repeatedly started by the lever alone after not being used for 1½ to 2 days.

We lived through the worst storm on Lake Winnipeg of the season '05 and would surely have been drowned had the engine stopped on us.

Respectfully yours, WM. B. MEY.

# WOLVERINE MARINE ENGINES

## One Grade Only—The Highest

Have stood as the standard of excellence for 20 years—the highest art in marine gasoline engine construction, 5 to 100 h. p., 2 and 4 cycle, self-starting and reversing.

**SPECIAL OFFER** How to get boat plans worth \$50.00 to \$200.00 for pleasure or working boats without cost to you. Write us at once for complete information and Catalog No. 26.

WOLVERINE MOTOR WORKS, Grand Rapids, Mich., U.S.A.

**WE** are probably the largest exclusive marine gasoline engine manufacturers in the world.

**TWENTY** years of scientific study and careful experimentation MUST have resulted in something.

**OUR** special method of construction insures long life and freedom from annoying breakages.

**EVERY** engine is thoroughly tested and inspected before it leaves the factory.

When writing advertisers kindly mention Rod and Gun and Motor Sports in Canada.

# *The Province of Quebec*

## *From the Sportsman's View Point.*

No country in the world possesses a greater variety or more attractions in the line of sport than historic Quebec. When a little better known it will surely become the "Mecca" of devotees of sport; the angler is very much in evidence now even, from 1st May to 30th September, putting forth his best efforts to secure the silvery salmon, the beautiful speckled or sea trout, or yet again the pugnacious bass.

Autumn sees the sportsman again around with rifle or shot-gun, tracking the fleet Caribou or Red Deer or snugly ensconced on the shores of a lake, waiting for an opportunity to lay low the king of the forest, the mighty Moose. Others are content to frequent the hardwood ridges or beaches, in quest of the ruffed grouse, or wild fowl. Few, if any, return unrewarded for their efforts.

A large area of territory is now under lease to clubs, but there is ample room for more; as for the transient sportsman, there is a wealth of territory at his disposal, e. g. in the Upper Ottawa, St. Maurice, Lake St. John and on both sides of the St. Lawrence below Quebec City. Access to all these points is easy, either by rail or water way.

Fishing licenses for the season for non-residents, cost \$10.00 for hunting \$25.00.

Fishing and hunting territories are obtainable at very reasonable rentals, in any part of the Province where crown lands exist. There are still some very desirable salmon rivers available in the Lower Gulf district.

The Government will in all probability, allot territory to Fish and Game Clubs in the recently created Reserve, in the Peninsula of Gaspé, reserving of course the interior for propagation and a limited amount of shooting and fishing.

## *"Laurentides National Park."*

This renowned hunting and fishing territory takes on increased popularity yearly. Dates for hunting and fishing may be applied for at any time. Increased accommodation will be provided for sportsmen by 1st September, 1905, in the great Caribou Barrens.

For information of any kind re Sport, address

The Hon. Minister of Lands, Mines and Fisheries,  
Quebec, P. Q., Canada.

*After Shaving*  
use

## Absolute Safety

## is the first merit of the Famous H. & R. Revolvers

When selecting a firearm for purposes of defence, for hunting or for target practice—the first consideration should be safety. Harrington & Richardson Revolvers are high grade firearms—made of the very best obtainable materials, in a factory equipped with the most improved machinery operated by skilled mechanics, thoroughly trained in its use. Every part is rigidly inspected and every finished revolver thoroughly tested to insure absolute freedom from flaws of any kind. The construction of H. & R. Revolvers is accurate to the thousandth part of an inch. There is none of the shake or rattle you will notice in cheap revolvers. They are built for business and if properly cared for will last a life time.

The H. & R. Hammerless Revolver shown in the illustration is not only absolutely safe, but it is quick in action and effective. There is no hammer to catch in the pocket; it can be fired only by pulling the trigger and cannot be accidentally discharged. Five shots may be fired as rapidly as the finger can be moved. Automatic ejector makes reloading easy. No other revolver sold for the same price is as good; no revolver at any price is more effective. 32 or 38 caliber, nickel plated, 5 shots, price \$6.00. Send for free illustrated catalogue of H. & R. Revolvers and H. & R. Single Guns.

H. & R. Revolvers are sold by all dealers in reliable sporting goods, or will be sent express—age paid on receipt of price.

**HARRINGTON & RICHARDSON ARMS CO., 291 Park Avenue, Worcester, Mass.**

## Hunter's Sweater

Every Sportsman going into the woods this Fall should have one. The comfort you will get out of it will re-pay its small cost many times over

PRICE—with pockets—\$3.50; without pockets, \$3.00. Collar is fitted with loops and buttons and can be used as a roll collar. The following letter regarding this Hunter's Sweater speaks more forcibly for the article than anything we could say:

Jordan Station, Ontario.

Scott Knitting Co., Toronto.

Dear Sir:—I deferred writing to you regarding sweater until I had given it a thorough test. I spent two weeks up north shooting. Was out in all kinds of weather, and I can assure you it fully met all my expectations. When my outside coat would be wet through, the jacket would still keep out the wet, and I am highly pleased with it. You may publish this if it will help you in any way, as I consider your sweater the finest on the market.

H. W. Hunsberry.

That's the kind of Sweater YOU are looking for.

Send in your order NOW.

Made in all standard Colors.

**WINDSOR, CANADA.**

Model 16, Light-Weight 16-Gauge Shotgun. The lightest gun and the lightest load that will do the work, mark the greatest pleasure for the sportsman; the reduced weight of gun and shells to be carried is truly a blessing, readily appreciated by the experienced hunter.

The *Marlin* Model 16 is the only light-weight repeating shotgun made, and so well is it built of selected material, with the special *Marlin* method of boring and choking, that it is actually more effective than most of the 12-gauge guns of a few years ago.

All the features of the famous *Marlin* 12-gauge are present in the Model 16. The solid top and side ejector—the automatic hang-fire safety recoil block—the “Special Smokeless Steel” barrel—the

solid matted rib on the frame—the beautiful hang and finish—but each part is made a little smaller, a little lighter and a little neater.

All the parts of the breech and the closed-in action are made of the time-tried *Marlin* steel drop forgings and are very strong.

The barrel is guaranteed to pattern over 240 pellets No. 7½ shot in a 30-in. circle at 35 yards. No quail or woodcock can get through a pattern like this, and for grouse, prairie chickens, teal, wood ducks, squirrels, rabbits, etc., this gun is unsurpassed.

Write TO-DAY for our Catalog, which describes in detail the Model 16, as well as the full *Marlin* line of guns; mailed free for six cents in stamps.

*The Marlin Firearms Co.,* 67 Willow Street, New Haven, Conn.

IF LIVE BAIT will ever catch more fish than a "Dowagiac" artificial minnow, it is the exception. 19 times out of 20, game fish 'strike' only to attack the lure.

## "DOWAGIAC" Artificial Minnow

MORE "DOWAGIAC" BAITS are sold every year than all other Artificial Casting Baits combined.

The "Dowagiac" Bait Products for 1906 are just a little hand-somer and more perfect in construction than ever before.

A piece of painted wood with a fish-hook attached is not a criterion for artificial bait. "Dowagiac" baits are the result of many years' experience of practical bait casters. Every detail has been carefully worked out and that is why the "Dowagiac" minnow will land your fish at a time when he would slip off the other fellow's bait. "Drop a line" to us and catch one of our booklets showing our minnows printed up in their natural colors.

# A Perfect Rifle Sight

## MARBLE'S IMPROVED FRONT SIGHT

May be justly described as a "long look ahead." Having no stem to obstruct the view when "holding above," it gives a complete view of the object aimed at, and enables one to make accurate shots at any range without stopping to adjust rear sight. It is exceptionally valuable for running shots and is used for snap shooting by the most famous riflemen.

Beads of Ivory or Gold—1-16, 3-32 or 1-8 in. The lustrous convex surface of the Pope's Island Gold Bead instantly reflects the faintest rays of light and is clearly discernable in the early dawn or evening twilight—adding valuable moments to both ends of day and at the most favorable time for getting shots at big game. Price \$1.00. State model and caliber. Marble's Automatic, Flexible-joint Rear Sight described in Catalog "U."

**MARBLE SAFETY AXE CO.,**  
Gladstone, Mich., U. S. A.

"The Harder it Blows—the Brighter it Glows."

## THE Matchless (Practically Indestructible) Cigar Lighter

Lights cigar, cigarette and pipe anywhere, at any time—in wind, rain or snow—on land or sea.

2-3 actual size—With side removed, showing fuse in position to light cigar, cigarette or pipe.

The  
Matchless  
Cigar  
Lighter

The  
Matchless  
Cigar  
Lighter

Fits the vest-pocket like a match box. Is always ready and never fails to work. It's guaranteed for two years.

Is a necessity to the smoker, especially the Automobileist, Yachtsman, Golfer or Sportsman.

Your dealer has (or can get) "The Matchless Cigar Lighter"—if he won't, we will mail you one post-paid with instructions for use and our two year guarantee—on receipt of price, 50 cents. Illustrated and descriptive circulars on application.

**The Matchless Cigar Lighter Mfg. Co., Dept. 12**  
16 John Street, New York City, N. Y.

## FOX TRAPPING

*A book of instruction telling how to trap, snare, poison and shoot.* A valuable book for trappers.

This book is edited by A. R. Harding of the Hunter-Trapper-Trapper, is illustrated, contains about two hundred pages and is divided into twenty-two Chapters, as follows:

- I. General Information.
- II. Baits and Scents.
- III. Foxes and Odor.
- IV. Chaff Method, Scent.
- V. Traps and Hints.
- VI. All Round Land Set.
- VII. Snow Set.
- VIII. Trapping Red Fox.
- IX. Red and Grey.
- X. Wire and Twine Snare.
- XI. Trap, Snare, Shooting and Poison.
- XII. My first Fox.
- XIII. Tennessee Trapper's Method.
- XIV. Many Good Methods.
- XV. Fred and the Old Trapper.
- XVI. Experienced Trapper Tricks.
- XVII. Reynard Outwitted.
- XVIII. Fox Shooting.
- XIX. A Shrewd Fox.
- XX. Still Hunting the Fox.
- XXI. Fox Ranches.
- XXII. Steel Trap.

If all the methods as given in this book had been studied out by one man, and he began trapping when Columbus discovered America, more than four hundred years ago, he would not be half completed.

CLOTH BOUND 50c. Postage 10c. extra

ADDRESS ORDERS TO W. J. TAYLOR, WOODSTOCK, ONT., CAN.

## MINK TRAPPING

*A Book of Instruction giving many methods of Trapping.* A valuable book for trappers.

## AND MOTOR SPORTS IN CANADA

VOL. VIII

OCTOBER, 1906

NO. 5

HOW THE MOOSE WAS TAKEN OUT FOR THE QUEEN CITY HUNT CLUB

### With the Queen City Hunt Club.

BY W. D. ALLEN.

**O**N the evening of October 30, 1905, the G.T.R. Station at North Parkdale, Toronto, was much more lively than usual. Several hunting parties were busily engaged in "checking out" for the annual trip to the Highlands of Ontario after game of all kinds.

One of the largest parties embarking at this point was the main body of the Queen City Hunt Club, composed principally of Toronto men, who were starting out for their camp on the shores of Morgan Lake near Ravensworth on the old Canada Atlantic, the advance guard

having preceded them by two days in order to have the camp clean and ready for occupation. About noon next day Ravensworth was reached, and here wagons were loaded and the final march to quarters began. The trail is without doubt one of the worst in the country. Block and tackle is required to haul a load up the hills, and a skillful teamster is indispensable. A city teamster would refuse to put his horses over the best portion of the trail. However after a

and horses, and also a blacksmith's forge.

The members of the Queen City Hunt Club are consistent supporters of the hound hunting system. In fact our experience has convinced us of the superiority of this system over that of still hunting.

The Club has been in existence for the last ten years and in all that time has not had a single accident from the misuse of fire arms. One of the principal regulations is that no loaded rifle is permitted

SOME OF THE MEMBERS OF THE QUEEN CITY HUNT CLUB ON BEAR CREEK

weary time the camp was reached and all were soon enjoying a hard earned meal. The advance guard had done good work. Boats and canoes were found to have been repaired, and best of all, a good supply of cut wood had been stacked under cover.

The camp is situated near the upper end of Morgan Lake, and is one of the most commodious in the land. Comfortable living quarters are supplemented by a large storehouse, stables for dogs

in the living quarters under a penalty of a fine of \$1 per round found in the chamber or magazine.

Last year we were favored with the most unpleasant weather it is possible to imagine. Snow, sleet, and rain accompanied by high winds, and frequent low temperature tell the story of nearly every day. In fact the two Sundays were the only fine days of the hunt. However the bad weather did not prevent the devotees from following their sport, and it

only enhanced the charm of the camp at night after the day's bag had been brought in. Luck was very fair, and one member of the club, Jack Sanderson, was fortunate enough to secure the largest bull moose ever taken from our district. This was a seven year old bull moose with a spread of antlers of 54 inches, and when dressed weighed 1030 pounds.

The kill occurred on November second when the "Government Road" district was being run. Things had been very slow until late in the day, when suddenly a threshing and breaking of branches was heard near Bear Creek, and all at once there broke into the brule a splendid bull moose! Jack Sanderson was looking after this opening, and of course got busy. The bull was about 250 yards distant and slanting away, when up went Jack's trusty 30.30 Winchester and a pressing invitation in the shape of a "soft nose" went after the speeding guest. Mr. Bull stopped to take notice. Catching sight of Jack, he wheeled and prepared to acknowledge reception in person. After charging about 50 yards, Bang! Bang! spoke the rifle and two more pressing invitations were received in the bull's shoulder. With a last effort to reach the enemy the gallant moose sprang into the air and fell dead into the river where he sank!

A very funny incident occurred when assistance was being summoned to secure the prize. One who shall be nameless, was stationed at the cadge crossing, and was sent back to camp for rope. After arriving at camp he was so excited that he left his rifle and returned with all speed.

When he reached his old post, he was met by a nice nine prong buck! This caused more excitement, and the gallant nameless one attempted to drive the buck away. But Mr. Buck would not be denied and returning to the attack reared up and endeavoured to embrace the bashful one. Now nameless can stand many things but this endearment was too much for him, so hastily seizing a small club from the ground he dealt the amorous buck a mighty blow on the neck which was so discouraging a reception that it turned sadly away and disappeared into the forest, while nameless

made a very hurried trip to camp after his rifle.

Getting the moose into camp was most arduous work. Fortunately we possessed a boat which just carried it, and with canoes to tow and follow up, and a liberal use of the axe in clearing away snags &c from the river bed the job was completed. The kill was fitly celebrated in Camp and everyone was much encourag-

J. W. SANDERSON, MOOSE KILLER TO THE  
QUEEN CITY HUNT CLUB

ed at the magnificent start to the season.

Notwithstanding the bad weather, all were very sorry to break camp on the 16th., and are now anticipating an even better time next season.

The members of the club are:

Walter Laidlaw, President

GRAVEL RIVER, WHERE THE SPECKLED BEAUTIES ARE FOUND

## Our Hunt North of Lake Superior.

BY HAWK-EYE.

**I** knew something of the fine hunting and fishing country north of Lake Superior, and had made my friends so eager to themselves enjoy a trip there that arrangements came to a head last year for me to guide a hunting party to that region. We laid our plans carefully and completed all our arrangements. As the seasoned veteran of the party many of these matters were left to me, and I gave my friends the benefit of my knowledge and experience of these things with the result that we had a fine outing, and no drawbacks that we are not able to make light of now, serious as one of them appeared to us at the time. This one drawback however it may be mentioned was not owing to the fault of

any one of us. The party consisted of myself, M. B. Squire, better known as Hawk-Eye, Messrs. Joe Jones, Alex. O'Neill, and Herbert O'Neill.

Everything that we could possibly require having been packed—and some of our tenderfoots would persist in carrying more than we wanted—we were at last able to set out on Oct. 14th from Windsor, in high spirits and full of anticipations of a pleasant and successful outing. We went Canadian Pacific to Toronto, Grand Trunk to North Bay, and then on the main line of the Canadian Pacific west to Gravel Station on the north shore of Lake Superior. We all enjoyed this journey and the grand rugged scenery about Lake Superior much.

impressed my companions. No sooner were we dropped off on the 16th than we fixed on a camping site, pitching our tent alongside the railway track where wood and water were plentiful and speedily had things comfortable. Being tired out with our journey, and our exertions in making camp and getting supper, we did not linger long over the camp-fire but retired early.

A good night's rest restored our vitality, and with the peep of dawn we were stirring. Breakfast was a lively meal, and by seven o'clock all things had been fixed up and we were off to the north

and all of us hastily scrutinised the surrounding bush for more. I saw another among the pines and pointed him out to my companions, but the trees were too thick for any of us to get a shot.

While we were performing the necessary operations on the caribou, a cow came towards us. We watched it for a time, but she speedily took the alarm and disappeared. I knew there must be a bull somewhere about, so I advised my companions to wait where they were, go on with their work, and keep a sharp look out. Meantime I went to the hills on a bear hunt but met with no success.

OUR CAMP

pool where the year before I had had good success. About two and a half miles from the camp, just as we were approaching the jack pines, and I was quietly telling the boys that this was the place where the scene of which I had before told them was enacted, Joe Jones, who was walking ahead, saw a caribou.

With coolness and judgment he took deliberate aim and fired, the animal falling dead at the first shot. This was the first intimation to those of us who were behind that the game was about

On my return I was informed that they had had better luck than was vouchsafed to me. The boy of the crowd—Mr. Alex. O'Neill—had shot the bull, and we were all delighted a few days later to celebrate Mr. O'Neill's prowess and his sixty-third birthday at the same time.

The first day's hunt was thus extremely successful and we made a plentiful supper on the hearts and tongues. That night the camp-fire was particularly good and the experiences of the day were told over again.

All the following day was occupied with getting our game to camp and taking photos of the scene. We worked with ropes and found our task no light one.

On the 19th Mr. Herbert O'Neill was successful in securing a three year old with antlers as fine as the other one. As I was not particularly anxious for cari-

were packed and the tent taken down it commenced to rain and snow, and for six long hours we waited in discomfort for that train. Things were said that would not look well in print. All things, however, even discomforts, end in time, and so the train came at last, and moved us to the neighbourhood of our new hunting ground.

We reached Trout Lake on the 27th inst., fished, lived on caribou steaks, partridges and rabbits, and enjoyed ourselves generally in the open air till Nov. 1st., when we were joined by Mr. D. A. Banwell of Windsor, and William Brundage, of Harrow, but now of Kingsville.

Deer hunting started the following day, and Brundage, Herbert O'Neill, and Jones each secured one before evening. I allowed two does to pass me, and more than one fawn.

In subsequent hunts we were all successful managing to secure our legal limit. The last deer was killed on the tenth and on the 13th we left for home reaching Windsor on the 15th.

The news of our success had spread and we found every one ready to congratulate us on our fine outing. As the game appetite seemed pretty general in Windsor at that time I gave a game dinner at my house at which one hundred and two hunters and friends sat down, and the venison of Northern Ontario furnished the bulk of the dinner. Here we fought our battles over again with sympathetic and kind friends, forgot any little discomforts, and rejoiced together in the stores of health and rich experiences we had gained from one of the most pleasant holidays any men can take, and all agreed that no other outing can compare with one in our beautiful Canadian woods.

M. B. SQUIRE, WINDSOR, ONT.

bou we hunted for bear, broke camp on the 26th, and left for the moose and deer country one hundred miles east of Chapeau. It was on this occasion that the one unpleasant incident of the trip occurred. There was no way of finding out whether the train was on time, and so we broke up camp to be ready at the scheduled time. As soon as the boxes

# Scientific Deer Hunting.

BY DR. FRANKLIN HAWLEY.

"Soon as the glazed and gleaming snow  
Reflects the day dawn cold and clear,  
The hunter of the West must go  
In depth of woods to hunt the deer".

**T**HERE is a class of men who hunt with their feet. Their plan is to walk at random through the woods from morning to night, in the hope that they may accidentally "jump" a deer, and accidentally hit it, by shooting as fast as possible as long as they "can see a hair".

Many gentlemen hunt in this way, because they know no better method. Experienced hunters are usually reticent; masters in wood craft are seldom given to instructing amateurs in the mysticism of the wilds.

In this article, the writer proposes to afford a glimpse of the occult side of Nature, and to give a few practical hints as to how to hunt deer with the brain instead of the legs.

A deer is a "located" animal. If not constantly molested, he will remain all his life within a few miles of the spot where he was born, and can always be found in the same locality, his home being only a few square miles of country. If chased off his range by wolves or hounds, he will return the moment danger is past. He knows every path of this range, every tree and shrub, every hill and hollow, for this is his home. Before attempting to describe what he does in this home, and why he does it, let us examine the deer himself, and try to understand his nature, and his limitations, for there is a reason for every act of his life, and if we know these reasons, we can predict with tolerable certainty what he will do under any given circumstances, and where he may be found at any time; for, with the exception of the veteran deer which has grown wise by long experience and contact with men, all deer are alike and will act the same under similar circumstances.

Unlike the domestic animals, which are further developed, our deer has not

reason, but only its germ, which we call "instinct". By borrowing a report of an experiment made by another writer, we will try to illustrate clearly what is meant by the word "instinct."

An aquarium was constructed, with two compartments, divided from each other by a glass partition. On one side was put a pike, and in the other compartment were minnows. The pike rushed for the minnows, and bumped his nose against the invisible partition. Hour after hour, day after day, for weeks and months, he continued to bump his nose, until at last his dim consciousness became impressed with the fact that beyond a certain point he could not go. He would still continue to dash at the minnows, but would turn before striking the partition. The glass was then removed, but he continued to sheer off as before. Repeated blows on his nose had erected for him an ideal barrier. Had he been possessed of mind, ability to reason, he would have been able to connect the removal of the barrier with the possibility of entering the other tank; but it had required thousands of blows to impress the fact of the barrier upon him, and thousands more repetitions of experience would have been necessary to remove the barrier from his consciousness. So, we say, "Inherited knowledge learned by animals from repeated experience we call instinct." Why does a deer run from a wolf or a man, and not from a cow? Because for ages deer have perished by the former and not by the latter. Why does the chick just out of the shell, scuttle for cover when a large bird appears flying above him, or when its shadow passes rapidly by him? Because, for ages chickens have been the prey of the birds of the air. This is instinctive fear, with which the chick was endowed when he was hatched. We say he "inherited it", but we know that he did not inherit this knowledge from his immediate ancestors, for chicks hatched from eggs secured in city yards where the fowls have not seen a hawk

for many years, will display the same knowledge. At the risk of being tedious, let me explain the East Indian theory of this inheritance.

Let us suppose that whereas man has an individual soul, and after death continues his evolution as a conscious individual, animals are imbued with a general soul a part of which animates each one of a certain specie, and returns after the death of the individual to the general store. Thus we will say that a soul matter of a certain kind animates all deer. This is called a "group soul". Let us use the illustration of this idea which has come down to us through the ages, and been used by many writers.

We imagine a tank of water as the soul matter which animates all deer. Each one has a cup of that water as his soul, which at his death returns to the tank, slightly colored by his experience. Myriads of other deer pour back their cup, colored the same by similar experiences. These cups of water, all tinted the same, gradually color all the water in the tank, and other animals subsequently receiving their cup of water, receive it already tinted; that is, from the central common soul, an individual is born possessed of a certain knowledge (instinct) which is the result of the sum total of all the experience of his kind. Think awhile before you reject this theory as visionary or far fetched. It explains why a deer, turned loose in a foreign country, will avoid new (to him) dangers, because they are within the experience of his kind. He has, as it were, an unconscious memory. It explains why wild animals of the same kind are so wonderfully alike as though they were in fact all animated by a single soul. This theory is "more ancient than the Roman Eagle", and is believed by millions.

Having explained as well as I can what the instinct of animals is, and how they come by it, we say, that having only this germ of mind, a deer does not reason; he does not initiate thought; he is moved solely and entirely by external objects, by his fears and desires, and not from any controlling force from within. He never thinks ahead, never plans what he will do the next hour or day, but is moved from moment to moment and hour to hour as his fears or desires impel. He

is the creature of circumstances, endowed with innate tendencies and acting entirely on impulse. For him the world divides itself into two parts, one which he desires and seeks, the other which he fears and avoids. He desires food, water, shelter. He fears man, and the carnivorous animals.

To avoid his enemies, he depends on eye, ear and nose. His eyes are not good. If the hunter will stand motionless, a deer only a few yards distant will sometimes gaze at him several minutes without realizing the exact nature of what he sees. His ears are marvels of acuteness, but his nose is his chief reliance. A deer may scent a man at the distance of at least a mile, to my certain knowledge; he has as fine a nose as the best hound ever bred, and yet men will go still hunting, smoking a pipe!

Having glanced at the nature of the deer, let us consider his daily program. He feeds all night, travelling freely over his range. No matter how inky dark the night, he can see perfectly, enabling him to run at full speed in thick timber. This is the reason why his eyes are poor by day, as compared with those of a turkey or goose, whose eyes are useless at night, but marvelous in their perfection by day.

Towards dawn he retires from fields or open country in which he may have been feeding, and retires to the deeper woods for the day. His appetite being satisfied for the time, he now desires rest, and will lie down, his favorite place being in a thicket at the top of a knoll, in such a situation that he can see to leeward, while his nose warns of danger to windward, his sensitive ears standing ceaseless guard in all directions. In fly time, he may choose a more exposed position if there is a breeze, or go into a very dense thicket if there is none, where he can brush off the flies against the brush or he may take to the water to drown them off. If neither insect or a more dangerous enemy disturbs him, he may lie there until the afternoon, when he will begin to feel hungry, and may travel about in a desultory fashion, nibbling here and there. As night approaches, he will go and drink his fill, unless there is snow on the ground for him to eat, and

then away to the feeding grounds once more.

If, during the day, his nose gives him warning of danger, he usually gets away at once, because the information supplied by his nose is definite and complete. If, on the other hand, he hears or sees something suspicious, he may wait to ascertain its exact nature; especially is this true if he only sees the approach of something, without accompanying noise. This is the reason why a leg hunter may sometimes see a deer, or get a dissolving view of a vanishing tail, but deer are as sly as a fox, and often slip most cunningly and noiselessly out of the way of an approaching hunter, so that for each one that he sees, probably ten see him. When running from danger, he will usually run to windward, and if the danger be to windward, he will run to right or left and circle around it. He seldom runs down the wind, unless to take a back track he has just come over, and that in an open country where he can see pretty well. Having made a little run, he will usually stop in a clump of bushes, or behind a big stump, preferably on high ground, and look back to see whether he is pursued. If pursued, he will run at speed across open bits of country, and stop in good cover. For a fine account of the cunning he will display, when pursued, read "The Trail of the Sand Hill Stag", by Seaton. By a consideration of such facts, to be added to by the experience of each hunter, a rational plan for a hunt may be formed. The fact that a thousand circumstances vary the result, only make it the more interesting. However much the attendant circumstances vary, the underlying principles never do, and we confidently assert that ordinary deer, under the same circumstances, will always act the same.

It at once becomes apparent that it is of the utmost importance for a hunter to know the country, in order to play the game intelligently. Upon going to a new district, do not be in a hurry to begin hunting. Spend a day or two, in making a scout of the country, noting the land marks, the water supply, the distribution of timber, hills and valleys, thickets, runways, the amount of "sign" and where most plentiful; and try to judge what the principal feed is, and where.

Having gained a general idea of such matters, and it is far pleasanter to do so for one's self, than to employ a "guide" to do it, we rise early in the morning, ascertain the direction of the wind, the state of the weather, and the temperature and while we eat our breakfast, we try to judge where a deer should be found this morning.

We will start alone and approach the locality which we think a likely one, hunting across the wind because the deer will watch closest up and down the wind. We walk at the rate of about one mile an hour, when we are really hunting, looking where we set our foot at each step, maintaining absolute silence, making as little noise as though we knew a deer was within ten rods, and we were trying to stalk him.

Keeping our eyes alert to detect the slightest movement, we make no quick motions ourselves, but move with deliberate slowness, stopping every time a new view presents itself, to examine minutely every tree and bush, and item of the landscape, but especially those parts of it where cover is best, and which afford the deer the best lookout.

Although the eye is the organ of sight, it is not the eye that sees, but the mind, which is proved by the fact that during a "fit of absentmindedness" the eyes see nothing. The eyes see what the mind has trained them to see. An Indian, looking at a tree covered knoll, sees at a glance, every single tree. His eye has been trained to see detail. A white man, viewing the same hill, sees the trees, en masse.

Inexperienced people would probably suppose that a man, passing through a wood, looking for deer, would be certain to see one that stood motionless, in plain sight, within a hundred yards. On the contrary, he would not see one in ten, if they would stand still.

This opinion is the result of an experiment I once made with three friends all experienced hunters, and one of them the best white hunter I ever knew, with a single exception. A logging road led from our cabin to where our hunt naturally began, and along this road we all passed several times daily. The first morning, I had the fortune to kill a buck near this road, and I cut off the head

and fastened it carefully to a small tree, so that it was in plain sight from the road, and distant about fifty yards, at which distance it looked exactly like a buck looking out from a clump of bushes. I told my friends that I had killed a buck near this road, and advised them to be on the alert in walking that mile, as it was desirable to get our deer near camp. When a week had passed, I told them of the sham. Not a man had seen it and they found it hard to believe that it was as I told them. We passed up and down the road all together, and still not a man saw it! Their chagrin was great when I pointed it out, and my statement that a good Indian hunter would have seen it the first time he passed was received with such scorn, and the matter led to such a discussion, and offers of wagers at such very long odds, that I finally sent an invitation for my friend Na-Kop-A-Toppie (blossoms on a blackberry bush) to join us. The experiment was not quite fair, as illustrating Indian hunting because he was not an average hunter but the best one, white or red that I ever saw.

One evening he walked quietly in, set his rifle in a corner, then said "how", took my hand, and we gazed a long minute into each others eyes. Being introduced to the others, he said "how" to each one, and lighted his pipe. Not another word was spoken to him, or by him, until we had started our hunt the next morning. I knew that what he might say to me would be in a moment of rare confidence, when the others were not present; and there was little that I could tell him, that his powers of observation would fail to detect.

The instant that we made the turn in the road that brought the buck head into view, he stopped like a pointer on a scent, and raised his rifle like a flash, but instantly lowered it with a smile, saying "Eye shut"! In the very act of pulling the trigger, he had seen that the eyes were closed! He felt chagrined that he had ever raised his rifle at it, and abruptly left us. When I returned late that evening, I found him already in camp, and also two bucks that he had killed and carried in that day, both shot through the neck, just at the angle of the jaw.

I have told this incident to impress upon the reader the importance of learning to see in detail, and the difficulty of discerning still objects. If it is so hard for us to see a motionless object, it is also as difficult for our deer to see us if we are still, so we stand and examine each new vista of the forest, searching it inch by inch, and seeing as far away among the trees as possible. If we turn our head, we turn it slowly. We will not be in a hurry to pass on, if the place be a likely one. I once made out two deer standing in plain view not forty yards distant, after I had been standing there fully ten minutes, all the time looking my best.

In this patient use of the eyes lies one of the secrets of good hunting. Most men are impatient to keep going.

If the country is an open one, a glass is a good thing to carry. I have more than once sat down on the edge of a canon, and located a deer by patient study with a field glass.

In very thick timber, when you suspect that a deer is near, kneel down and look with the eye close to the ground. One can see farthest that way, and very often one will meet the eye of a deer with his head close to the ground, trying to locate the danger.

We will suppose now, that we see our deer, within range, and looking at us curiously. You raise your rifle slowly, slowly, and aim at his neck, if you are a good shot. At his neck because a bullet through any part of the neck will knock him down and keep him down until you can deliver the mercy shot, and because a neck shot does not spoil meat, nor the head for the taxidermy. If he is too distant for a sure neck shot, try the shoulder, either high up, to break both shoulders, or low down, to get the heart. If you have overcome the natural tendency to overshoot, the high shot is the best, because the deer falls where he stands, while he may run miles with a shot near the heart. In all cases, choose the exact spot you mean to hit, aiming at an imaginary bulls eye on the deer's hide, and pull the trigger without flinching. Having fired, we try to see the bullet strike. Sometimes a flash of red is visible. We also listen to hear the bullet spat. The sound of the impact on flesh is different from that af-

forded by striking anything else. If he fall, and his head sinks to the ground, there is no need of haste. He will rise no more. If, after falling, he hold his head erect, shoot him again through the neck, without moving. A step forward on your part may cause him to jump up and run, which he may do as long as he can hold up his head. If he falls nose down first, he is hit through the neck or shoulders. If he falls tail first, he will probably also bleat and his back is broken. Run, then, and give the mercy shot, for he cannot rise, but will make desperate efforts with his fore legs. If he kicks up when hit, he is shot through the paunch.

If he gives no sign, but simply runs away, the question is, was he hit at all? If he carries his tail down, he is hit, but if he carries it jauntily upright, that is not sure evidence that he is NOT hit. In all cases, GO AND EXAMINE THE GROUND. No matter how small the chance that he is hurt, GO AND MAKE SURE. Thousands of deer have been left to die a lingering death, or to become the prey of wolves, because the hunter turned away in disgust, taking it for granted that he had missed. A professor once told a class in surgery, in dressing a fracture, to use "too much cotton". After repeating this to a tiresome extent, he told them he entertained the wild hope that he had so impressed them, that POSSIBLY they might use enough cotton. I am purposely tiresome on this point; many things will tempt you NOT to look; always go and examine the ground. It is a duty. Go and look for blood and hair. If there is a breeze, look ten yards down the wind for hairs. If neither is to be found, follow the trail two hundred yards. If the deer kept running, with tracks evenly and naturally placed without faltering, and no blood, it is safe to conclude that he is probably not hurt.

If there is a little blood, sit down and wait an hour before following the trail a step. If there is much blood, wait a half hour. This is to allow time for the sickness and weakness, the "shock" that follows a wound, to make itself felt. As the deer has no memory beyond an instinctive one, he forgets the hunter the moment he is out of sight, his attention

being attracted by his wound. If not followed at once, for which he will instinctively watch, he will soon seek the thickest cover to be found, and lie down. If fatally hurt, the hunter will likely find him either dead, or unable to rise. If able to rise, he will not be able to run as he would have done immediately after the shot; and further, after an interval, he having forgotten the hunter, may be more easily approached. If hotly chased at once after being shot, a deer will often run miles, and finally drop, and the hunter then has to carry him back.

Having waited then, from thirty to sixty minutes, which to the novice will seem an age, we will endeavor to follow the trail.

If there is blood on both sides of the trail, the bullet passed through, and he is bleeding from two wounds. If the bleeding is profuse, and especially if the blood contain bubbles, probably the lungs are punctured. Facial matter will show if the stomach or bowels are hurt. Follow the trail slowly, and so carefully that the deer will not hear you, even though he be lying near. Within a few rods, you will almost always find where the deer stopped, and watched and listened for pursuit. The amount and character of the blood found here, will give valuable information. If he resumed running after leaving this spot, he is not likely to be badly hurt. If he walked away, look ahead for a dense thicket. When one can be located, mark the spot where you leave the trail, so that you can come back to it again, then make a detour and enter the thicket from another direction, and against the wind. If there are thickets on both high and low grounds, he will choose the high, if he have strength to get there.

Should you jump him, shoot "as long as you can see a hair." Take every possible chance to get a deer already wounded. There will sometimes be others with him when he breaks cover. Shoot at the wounded one, no matter how much better shot the others may offer. That is duty again. Having wounded a deer, the sportsman must get him if it be possible, without taking into account how much hardship it may cost. I have

known hunters to quit a trail, saying "Pshaw! I can kill another one, before I can find this fellow!" "This is not right. We must eliminate from our hunting, all cruelty, wantonness, and waste of life.

This is the one place where the writer advocates the use of a dog. Get him, even if you have to use a hound.

Having found our deer, despatched him, dressed him, and hung him up; or, if not practicable to hang him up, having tied our handkerchief or vest, or some other article of clothing to the carcass, to keep wolves or other marauders away we start to find another deer.

We may jump one from a thicket not a hundred yards from where we have made a great deal of noise. A deer is not alarmed by noise which DOES NOT APPROACH HIM. Shouts, gun shots, the sound of an axe, may startle him and put him on the alert for a moment, but if the sounds do not approach, he soon forgets them.

One may often shoot repeatedly at a standing deer, before he will take to flight: The report of the gun confuses him, but will not make him run as would a single foot step.

Approaching foot falls, the creak of oars on a row boat, the lapping sound of wavelets on a paddled canoe, leaves rustling, sticks cracking, these are the sounds that admonish him to fly.

Having jumped another, shall we take a running shot?

I imagine my reader exclaiming, "Of course! Nearly all the deer I ever killed were running." No doubt; and thought on the points brought out in this article will show many reasons why.

I expect many hunters to disagree with my theories about hunting, and probably the majority of my readers will dissent when I say, that in my opinion, TO FAIL TO GET A STANDING SHOT, NEAR ENOUGH FOR A SURE KILL, IS BAD HUNTING. To be able to do it is good hunting, is it not? I believe that is the ideal towards which sportsmen, gentlemen hunters, should strive. If we take life, let it be done mercifully. Many fine woodmen, lovers of nature, condemn all hunting as cruelty, contending that beneath feathers and fur is

part of the same life that animates ourselves, and that the commandment "Thou shalt not kill" does not apply to human life only.

As to the running shot, here is the argument. No gentleman would intentionally wound a deer, and leave him to die slowly. May he so act in following the sport that the probabilities are that he will wound many deer which he will not get? HE MAY NOT.

If one is an expert shot; if the range is short; if the chances are in favor of success, the trial may be justifiable. If the hunter feels sure of hitting the deer, only, without being able to choose the spot with fair certainty, he should refrain. He should not PRACTICE AT LIVING THINGS. I practiced at a beer keg, rolled down a steep bank by an assistant to learn shooting at a moving target. If the shot be hazarded, and the deer run across the field or "quartering" away, hold on the tip of his nose. If he run straight away, his head and neck will come into view each jump, as he rises. Shoot on the rise. Shoot at the head and neck, always, in running shooting, because you are likely to miss outright, or make a killing hit in neck or shoulder.

When a deer starts to run, if he jump high and look back he will probably stop. A whistle, or bleat, will help to stop him. If he run in long steady leaps, he has fully made you out, and is going somewhere.

Do not fancy that you renounce any of the pleasure of the hunt, by refraining from random shooting. As the deer runs away, try to hold on his neck. Not intending to fire, you are not excited, and may be able to get a certain aim. I believe that enough deer will stop that otherwise would not, so that a man will get as many in the long run. But if you allow him to vanish, then the real pleasure of the game begins. When a waving white flag bobs out of sight, I feel the same thrill that inspires the angler, when he has a strike. The contest is about to begin, the preliminaries having now been settled.

Note where he jumped from. What was he doing there? Resting, feeding, or hiding? Did he run against the wind, and toward what kind of country?

Where will he probably stop? Where is he going, and why? Na-Kop-A-Toppie would not follow him at all. He would form a judgment as to where the deer had gone, by an instinct as sure as the deer's own, and go there by a round about way, and kill him where he stands. Bearing steadily in mind, that the deer is a creature of circumstances, impelled by desires and fears, and not by a will of his own, the reasons for all the incidents of the chase will form a most engaging study. The circumstances will never be the same; but the underlying principles will never vary. Therefore, hunt with your mind, instead of with your legs, and as youth passes away, and you lose the blood lust natural to youth, you will find your pleasure in following the deer, and gaining a vantage point from which you MIGHT SLAY, but DO NOT. The real sport lies in the conquest, not in the killing, for who would like to shoot a deer that was tied to a tree? The real hunter can go after them, and have them at his mercy as surely as though they were tied.

This article is written in pure love of true sport, and true sportsmen, in the hope that it may prove helpful. To learn sportsmanship, one must study the book of Nature, and study himself. And he must have Love, and Faith, and Hope, and Patience, and all these will not avail without MEDITATION.

A hunter should enter the woods, as

a temple, feeling himself not an alien, but an integral part of nature. The voices of the silent places are not for the ear of an "outsider." The man who is in harmony with nature feels himself truly "a brother to the insensible rock," and every living thing. His soul is filled with an infinite peace.

In the still twilight reigning at noon-day among those hoary tree trunks, the song of birds among the branches, the sigh of the wind in the tops far overhead, the rustle of leaves, waving of limbs, the hum of insects, the chatter of squirrel, are all the accompaniment to the song of praise in his soul.

A perfumed air, cool and damp, kisses his brow. In the breathing silence he feels the pulsing of eager, crowding growth. He divines the secrets of the pondering oaks, and joins the pines in revery; the joy of the flowers is his; he shares the hope of the seeds, feels the longing and the gladness of the swift waters, the yearning sadness of the brooding shade, and love of the sunlight.

From him dropping away like foul garments fall Selfishness and Malice. He dons the dress of calmness and sympathy. Irritation and strife, all petty cares, are distant as a dream. With heart at rest, and the eye of the soul no longer clouded, he sees the smile and beckoning hand of the Lords of the Solitudes, and hears a thousand voices, the patter of unseen feet, the rustle of invisible wings.

## Touring in Temagami Land.

BY FRANK YEIGH.

**O**H, the thrill of it! the thrill of Temagami at the sight of the wondrous nature picture the mighty World-Maker has produced in Ontario's North land.

The thrill of the eye at the sight of the dancing waters, whipped into wave crests, carrying the diamond sparkle of the sunlight.

The thrill of the senses as the island trees exhale their resinous perfume.

The thrill of life and good red blood

tingling in the veins as the pure wind of heaven caresses one's face.

Oh, the thrill of it all!

Temagami is all arms, and he who reaches it by the luxurious Grand Trunk train must needs utilize the North East Arm as the Gateway. It is that first glimpse of the Lake-of-the-1300-Isles that so stirs the blood and sets the nerves a-tingling with the joy of existence.

For it would seem to the cramped City-dweller that the real world in

which to live the real life is the world of the open air, where the eye can look unobstructed on God's dome and sweep the circle of the sky, where there is a breadth of vision forbidden to the man of the crowded centres.

And when, after an hour's sailing the main basin of Temagami's waters is entered, another sensation is added to all the others: that of being in a corner of the world with elbow room to spare. True it is, for here is a body of water with a circumference sufficient to include over a thousand islands, each crowned with its forest of trees, unseared by the rust of fire.

And if the tourist would qualify as a wise man too, he will close a contract with one of the Friday boys to be his guide, philosopher, friend, fisherman, canoeist, cook and tentmate.

I captured Bill Friday, a swarthy young giant, full-chested and big-boned, who made all the more entertaining a companion because he was charged with being in love, a charge that brought to his face a blush even deeper than its nature hue. And the same charge brought with it a smile of such expansiveness and so instinct with happiness

And if the tourist would qualify as a wise man too, he will close a contract with one of the Friday boys to be his guide, philosopher, friend, fisherman, canoeist, cook and tentmate.

CAMPING ON THE MONTREAL RIVER, TEMAGAMI DISTRICT

An assorted lot of islands they are, moreover, to suit every whim and fancy, from the little fellows that, at a distance, look like flower vases filled with greenery, to many-acred areas notched with deep bays and marked by shining beaches.

An integral part of Lake Temagami—Canada's newest and greatest and loveliest holiday land—is the Friday family. Not the descendants of the other Friday of Crusoe's Isle, but a worthy family with Indian blood, who were wise enough to make Temagami and their home long before the paler

and good-nature as to make of Big Bill<sup>1</sup> a charming fellow-voyageur.

Bill it was who guided me into endless intricacies of channels with the aid of a little brig, over whose wheel he presided. Thus the arms of Temagami were made to yield up their secrets, to reveal their beauty haunts hidden betwixt isles and mainland.

Here we saw the deer runs, where many an antlered beauty had made its way to the Lake of Deep Waters to dine off waterlily roots. We startled beaver and muskrat; we wooded up off a wild shore where our snub-nosed craft

hid its prow in a maze of vines. We also ran aground in a narrow channel, the keel grating on jagged rocks greatly to the discomfiture of Mr. Friday Jr. With what poling and engine backing we struggled with the situation the reader must imagine.

Yet it was royal fun. We had the whole visible world to ourselves, with a stray eagle sailing high in the air and a lonely loon shrieking its maniac cry.

The return journey to the Inn was made in the cool of the evening; as the glory of a northern twilight reflected itself on fleecy cloud and in the placid waters.

Post stands for exploration, fur trading, pay, commerce, romance and tragedy. It stands too for powder, pemmican and produce.

Bear Island stood for the centre of Indian Life in Temagami land, and it happened to be the red-letter day in the Redman's year, viz.: treaty-paying day, when a paternal government gave its wards their annual four-dollar bill.

So it was that from many a distance long and less long, the children of the wild had foregathered.

As I remarked before, Bill was there and so was SHE, and others. Two dusky maidens, shy as fawns, were busy

THE INDIAN BELLE OF TEMAGAMI, LAKE TEMAGAMI

Few other signs of life were manifest beyond the outstanding whiteness of a Camper's tented home sheltered in a cove and backed by a line of protecting pines. And when all was still in earth and sky, there came stealing over the waters the echoes of the camp fire songs.

Such a day it was on fair Temagami, such a day as never was. One in a lifetime is worth hoarding as a precious memory. May kind Fate give me just one more—and one more.

Bill chanced to be at Bear Island next night. Bear Island, you must know, is a Hudson Bay Post, and a Hudson Bay

carrying in hay in big cotton sheets and so perturbed were they at the sight of a kodak that their load became jammed in the barn door whereupon the photographer gallantly came to their rescue.

Old man McLean was also there, and older man Moore, his doughty crony of fifty-seven years' standing, and the two talked to the summer tourist of the brave days of old in these Northern wilds.

Gallant copper-tinted swains were present in plenty, swells in ready-made H. B. garments and flowing red ties.

But SHE was there, with Bill, and in

THE NEW LADY EVELYN HOTEL, DEER-ISLAND, LAKE TEMAGAMI

the evening when the dance was on all the rumors regarding William were fully justified.

Other journeys were made to other arms of Temagami, up the North Arm, for example, past Devil's Island and Kokomis Rock, with their superstitions that make very real his Satanic Majesty;

journeys to the different camps of college boys, and trips to the original and now ruined Hudson Bay Post on Temagami Island, but these and many more must await another place of record.

It is time to say *Finis*, and *Finis* it shall be, and hereby is, without another word.

## In the Woods With Indian Guides.

BY C. C. FARR.

**I** was obliged, for the sake of business, to take a trip north, not by the steel, but by the good old reliable, the birch bark canoe. I had two as good Indians as the country can produce, as my guides, and here is something worthy of a note. This 'guide' business is so profitable to the pseudo guide, that a number of men, who should stay at home, and hoe potatoes, pass themselves off as guides, when many of them do not know as much about woodcraft, as the very men whom they are pretending to guide. They are 'odd job Jerrys', and are worthy of the treatment accorded to that humorous creation, of Bradfords, name-

ly the everlasting, and perpetual bounce. My guides however were of the real H. B. Co. stamp, men whose natural habitat was the bush, and it was a revelation, even to me, to see how spontaneously and unconsciously, their knowledge would peep out, so much so, that when they overcame a difficulty that would completely confound the tyro, it was done without effort, instinctively, and they did not know that they did it.

In the town, while awaiting my pleasure to start, they appeared somewhat ungainly, and incongruous, so that I was obliged to extend a kind of protectional aegis over their ignorance of surrounding conditions, but immediately

that they had struck their native 'environment' and had their canoe, again in use, the relative positions were changed. It was I who was at sea, and they were completely at home. I let them manage everything, and by so doing, showed my common sense.

I watched them while they were cleaning the fish for supper. An ordinary man would have been stuck for a plate. They, naturally, and as a matter of course, stripped the bark from a young birch tree, and lo, there was a plate. I took note of one thing about their method of fish cleaning, which was interesting to me and that was that they invariably skinned the fish, instead of scaling. I asked them why they did this, and they told me that Indians usually skinned such fish as bass or pickerel as the fish, when thus cooked was 'awisamis menopikun'—far better tasting and the result corroborated their assertion. In putting up my camp, they selected a spot that gave me such great comfort, and prepared the ground so well, that I inwardly resolved, that in future, I would not only leave to them the selection of the spot for my tent, but that I would leave the erection thereof entirely in their hands which resolution, put into practice, gave me much comfort upon my whole journey. I am writing this at my camp fire, and they are watching me curiously, as my pencil flies over the paper. 'Egoan tush wendjie kit ushibe i gayn.' They have just asked me 'Why do you write so much?' for writing with them, is usually confined to a letter from a love-sick swain, to his girl, or a letter of instruction regarding the proposed future movements of the writer.

As I had my wife with me, they probably acquitted me of the first excuse and as to the latter, they knew that I had no one to whom to send any communication regarding my future movements. I explained to them that many men who lived in large cities, in case that they could not go to the bush, loved to read about it, enjoying that, which they could not actually experience themselves, by proxy. This seemed to meet with their approval, and many a little fact they told me, facts that they, and those like them, only know, and which should interest the readers of a Magazine, like

"Rod and Gun in Canada." The weather, in consideration of the time of year which is October, has been perfect, and even now, the heavens are bespangled with stars, but there have not been lacking signs of a change, signs of rain and cold, which are the natural conditions of this country, at date. The Mohomisi one of the large horned owls, is hooting lugubriously sure indication, my Indians tell me, that meteorological inclemency is not far away. We shall see.

The owl was right. The storm god was on the way from the north. We were paddling up Montreal River, and we had to cross the wide, but shallow Round Lake, and cross it before Boreas swept down upon us, otherwise, perhaps camp until the wind went down, which, in these latitudes, at this season, might mean three days chafing at enforced inactivity, the hardest work on earth for a busy man, even if he does not happen to be Irish, as the statement might imply. To see how those men worked would give the regular hired man a fit. They acted rhythmically, in unison, like clockwork, each anticipating the other, without words, so that not a minute was lost, and all done as silently as clockwork, bringing us across the dreaded stretch of water, so that we reached the other shore, simultaneously with the first blast of the tempest. We incidentally, learned from our Indians that this lake was a splendid place for duck shooting, during the last weeks of this month, that ducks congregate here, in large numbers, but why so I could not ascertain, as there is no wild rice in the lake, though there are any quantities of rushes, and, as I have said before the lake is very shallow, the weeds growing far out into the centre, which fact probably makes it a good feeding place for the south bound flocks to fill themselves with food, and temporarily to recuperate, from the exertions incidental to a long flight.

I must not forget to mention the wonderful colouring of the trees upon the shore. It was something gorgeous, and though I have lived amongst such sights, for the best part of my life, I do not think that I ever remember witnessing such a wonderful panorama of colour, so varied,

and yet so continuous. There was one thing that struck me regarding this autumn garb of nature, and that was how it happened that the frost seemed to touch trees, of the same species, and leave others, apparently, as exposed to frost, still in the full glory of their summer green. I thought that it might be just possible, that the flow of sap, was greater in some than in others, and this was the only solution that presented itself to my mind.

I am sitting within the sound of rushing water, idly watching Weenisikahbi, as he prepares our noonday meal. He is frying fish, and his whole soul seems to be concentrated upon the operation. His son William, the other guide, has started to pole the canoe, containing all our outfit, except the eatables, up the rapid. He started with enthusiasm, but has met with repulse. The boiling water was too much for him, and had he not been to the manner born, we would probably have lost our outfit, and his father a son. Again he has tried, and, again, he has failed. I called the attention of the older man, to the predicament which his son was in. He cast an indolent eye, in the direction, remarking in pure Ojibway, "The canoe is too heavy for the boy" and returned to his fish. I became very interested, for I saw that the boy was going to try again. "This is something like Bruce and the spider, I thought." The third time may win' but it did not, and back came the lad, through that seething water, in which, any other tyro, would have been most hopelessly, and ignominiously upset. Then the lad changed his course, and his father, seeing where he was making for, shouted out to him that it was bad there. Of course the boy owing to the roar of the rapid, did not hear him, so the old man, resignedly, went back to his fish, leaving the matter to God and the boy. They won out, and with a face beaming with pride and satisfaction, the boy came to the eating place, and punished enough comestibles to last an idle person a whole day.

The way seems to be somewhat barren of life, excepting a few belated summer birds, which being graminivorous, probably have not to hurry down south after insects. I noticed a small hawk,

that was attending to these birds, and by so doing, attending to its own wants. When I said 'barren of life' I should have added, 'so far as I could see for the bush might have been fairly teeming with life, and yet I may not have been able to see it. The ordinary tourist gets disgusted if he does not find all manner of animals, considerably waiting to be shot by him, and while I think of it, we have been very close to a moose.

I heard the Indians, almost simultaneously, exclaim. "What is it?" I asked. "A moose has just crossed the river." "How do you know that?" "You see the muddy water close to the bank, and the wet on the grass, where the moose has shaken itself." Of course I saw it when it was pointed out to me. Again as we paddled along the shore of the grass-bordered lake, William turned to me and said. "Do you see the muskrat in the trap, over there?" I looked, and sure enough there was a little brown form in the grass. "Is that it?" I asked pointing to it, "Yes" "Is it dead?" "No." And then I was sorry, cursing in my heart the steel trap, by which that poor little thing was held in pain, and had to wait there simply for its death. I saw a "Pipoonisic," the large hawk that winters here, one that eats rabbits and partridges, also squirrels, things that live by death, and being in a contemplative mood, I wondered why nature could not have managed without so much cruelty. I wondered at her invention of predatory animals, at man's necessity for fur, and even at "Sport."

One thing is sure, and that is that the bears are going to have an easy time this Fall, especially closer to the precincts of civilization than where I am writing this for the Indians dare not set bear traps, owing to the fact of there being so many mining prospectors in the bush, and as they say, that seeing they are no good to eat, it would be a pity to kill them. When we had surmounted the 'Kay kah be kayguan' the largest rapid on the river, or rather fall, I saw a little house built upon an island at the head of the chute. "What is that for?" I asked. "A hen house?" "No" answered William, seriously. "That is where Mechel's son is buried, who was

drowned in these rapids". I recall the circumstance, though it happened about twenty years ago. He was but a boy, fired with the ambition to imitate his seniors, and run a canoe down the last pitch of that rapid. It was not only the last pitch of that rapid, but it was the last rapid that he ever ran, and hence that little hutch upon the island. This rapid nearly claimed three more victims this passing summer. Two women, with a little child, were on their way to Temagami, to see the priest. They were 'running' the little rapid, that forms two channels around this island, about one hundred yards from the head of the dread chute. Their canoe struck a stone, swung round, and 'buckled' in the centre, against the stone by the weight of the rushing water, which held it there, in shape of an inverted V, with the stone for an apex. All the occupants were cast into the water, one woman at each end, where they had been paddling, and the child in the middle. They grabbed their respective ends of the canoe, while the mother inspired by a mother's instincts, seized the child, with one hand, as she held on to the canoe with the other and placed it upon the rock which had wrecked the canoe. Thus they hung, the women, up to their necks in water, momentarily expecting the canoe to part in two. They naturally shouted for help, and luckily for them, an Indian who was in advance of them, and who had landed at the portage of the big chute had not crossed the portage, though he had picked up his canoe, with a view of carrying it over, just as he heard them shout. He at once put it into the water instead, and went to the rescue. He first, managed to transfer the child from the rock, into the canoe, then the two women, one after another, as they succeeded in climbing on to the rock, so that they, also, were able to embark from it. Had this man not been there, the swift current would have borne them to the head of the chute, and thus to death, as soon as ever the canoe had parted in two, by the strain of the rushing water upon it, which it very nearly did, while they were clinging to it, for shortly afterwards the fragments were found upon the banks of the river, a few miles down

stream, by a party of Indians going down, to the same destination. In the meanwhile, the women had embarked with their rescuer, and gone on, leaving no word regarding the sequel of the accident. These Indians, naturally thought that somebody had been drowned, and one of the party, in hot haste, made his way, back to Matachuan, in order to give the alarm. A rescue party, or rather, a party to recover the dead, left Matachuan for the scene of the accident. When they arrived, they found a letter, set up in a conspicuous place, on the portage, explaining that all was well, and that the women had been rescued, for an Indian, named "Round Eyes" (Woiahskeesicks) had sense enough to know that much anxiety could be saved, by such information being placed in the hands of men, who might think that they had, merely the sorrowful task of taking out the bodies of the supposed drowned ones. This may not appear very exciting to the ordinary reader, but there is a strong touch of humanity in it all, that will please any lover, or student of his race. The poor women, and the child, nearly starved upon their journey, for all their earthly belongings had been swept over those awe-inspiring falls, their fish net, their axe, their twine, their trolls, and, in fact, all that makes life possible to an Indian. The charity of their fellow Indians enabled them to live, in a somewhat precarious manner, and, to-day when I met one of the women, who had such a narrow escape, she appeared to be fairly well nourished.

On this night we camped at the foot of the succession of rapids, and swift currents that make the navigation of this river so difficult. I called it 'The Camp of the Owls', for, here we heard three distinct species of the owl making night harmonious. First there was our old friend the Mohomosi, one of the biggest owls whom, on account of his owlish song, I call the vocal exponent of weirdness, but, on this occasion, he did not give forth his storm note, hence, as Boreas had practically ceased to blow, by eventide, I augured happy days, conditions of Fall ameliorated, and possibly future comfort. All it cried was 'kahg' and it cried persistently, so that, as it

was likely in search of something to eat, I wondered why it gave a note of warning to its intended prey. 'Perhaps' I thought, 'that the dread noise might have the power of intimidation or of fascination, even as the snake and the cat is supposed to fascinate its prey.' As a matter of fact, I had heard the 'patter patter' of an inquisitive bunny, outside the tent, and it, even had the impudence to scratch the tent, right at my head, but, as I heard no death-shrieks, I considered that poor bunny had escaped that time.

I heard the familiar Koo, koo, koo, hoo, the commonest owl of them all, and the noisiest, a regular plebeian, who shouts inanely, and is easily caught.

I thought that I had done with the owl family, for that night, but not so, for I heard the sound of two musical notes, as if evolved from the sweet toned flute. "What is that"? I asked of William, who would often sit up and watch me writing. "Kah kah bish" he answered, and then he went on to explain that this was the smallest owl of them all, a little fellow, no bigger than a Whiskey Jack, which fed on mice and other such small deer, and thus, on that night, I heard about the largest, the noisiest, and the smallest common owls that are found in this northern bush.

Talking about owls, reminds me that the readers of "Rod and Gun" might be interested in knowing with how many species of owls the Indians are familiar and therefore I give a description of them, their Indian names, and habits, colouring, etc., as far as Weenisikiahbie and his son could tell me, as I sit writing here by the camp fire. By the by, what a drowsy effect a good fire, in the bush has, especially at this time of year, if the night happens to be calm, though, even on a windy night, the tree-tops, with the aid of the wind, sing a very nice lullaby. The fire seems to warm up the surrounding atmosphere, and with the gentle sound of the blaze, hums one comfortably to sleep.

But to return to owls.

1. Nesa okunisi. The great owl, with horns like the ears of a dog. (So the Indian spake), leg bones almost the size of a dogs', deep brown, with black markings.

2. Waba koo koo koo hoo. The white owl (Snowy owl?).

3. Mo ho mo si, a large owl, but somewhat smaller than the first, with ears, the owl of -melancholy sounds, brown with light tips.

4. Koo koo koo hoo, or Washaykon-aysie, the common owl, light grey, in colour, with darker markings.

5. Amikopee Koo koo koo hoo. A brown owl, with darker tips, smaller than the common owl. (Perhaps the Lesser Horned Owl.)

6. Pahpanenxie, a still smaller owl, light in colour, but heavily mottled.

7. Kah kah bish, the tiny little owl. No bigger than a Whiskey Jack, feeds on mice, and having the flute-like note.

To-night the men said to me "Let us make bread." I had so far, fed them on the bestbaked variety on bacon, and potted meats, but now their souls began to hanker after the bread that they had been accustomed to, and brought up upon, namely, 'The deadly dodger'. I had eaten that extraordinary farinaceous compound, in all its diverse forms, so I consented—in fact, I had a fancy to renew old experiences, and try it again to see if my tastes had been altered, by time, or my digestive powers remained unimpaired, besides, I was three days out, and already began to feel, of the bush, bushy.

I watched the process of compounding this stuff, for these men rather fancied their culinary ability, in this particular line. The first thing that they did was to cut up a piece of pork fat, into cubes of about half an inch, put them into a frying pan, and turn them into liquid grease, over a slow fire. They opened the flour bag, rolled down the edges, and made a hole in the dry flour. They then took some luke warm water, into which they had sprinkled some bicarbonate of soda, and poured this into the hole, in the flour. Then they poured in the liquified pork, took a stick, and stirred, until the water had taken up sufficient flour to make a good stiff dough. This they transferred to the frying pan, which had already been lubricated by the frying of the pork, kneaded, and thumped it, turned it over, and with their knuckles, spread it out to the size

of the pan. Then they raked out hot ashes, or rather, live coals, piling them up to an angle of nearly forty-five. Upon this they set the pan, with its face towards the fire, and awaited the cooking, which took place in a very short time, that is, sufficient to set the dough, so that it would stand 'upon its own legs'. Then they took it out of the pan and propped it up with a little stick, set into the ground, so that the direct heat of the fire would complete the cooking process, while they requisitioned the frying pan for the purpose of frying the bacon, to act as a relish for the previous occupant of the pan. Whether the fact of having paddled thirty miles that day, against a heavy head wind, or the excellent quality of the cake, incited an appetite, I know not, but I do know that I punished, nearly as much of it, as one of the Indians, and I blessed the cook.

Our way, next morning led through a succession of swift currents, and small rapids. It was then that I fully realized what these men could do in swift water. I sat in the middle of the canoe, they were one at each end, and the use that they made of those 'iron shod' poles, was a sight worth seeing. I avoided using my paddle as a pole, for fear lest by clumsy use, I might retard them more than advance, and, besides, a canoe is very easily upset, under such conditions, so that I had plenty of time to watch them at leisure, as they poled up those irritating little rapids, mile after mile. William, who is practically but a youngster, though married, was in the bow, hence, I had a splendid opportunity of seeing exactly what he did. Even when the water would fly up, split in two by the sharp bow, he was complete master of the situation, nor did they exchange a word, for both seemed to know, intuitively, exactly what the other wanted done. It was one of the best illustrations of skill, in this branch of navigation, that it has ever been my fortune to witness, and though the sweat was pouring off both their faces, I could not help enjoying it all, and, strange to say, they seemed to enjoy it too, in spite of the hard work entailed. They were essentially cheerful, and when an especially hard piece of water had been overcome and a short stretch of deep water lay,

before us, William would take the paddle with a smile, whistling.

I reached my destination, and was able to turn back, so that, assisted by the swift water, on the return journey, we were able to reach the 'camp of owls' that evening. Again, we heard the same owl song, only, this time the Mohomosi is giving his lugubrious note, which is supposed to presage a storm. The evening is just glorious, and the stars are shining through the trees, upon us. Kah kah bish is also here, and William is calling him, so that the bird is answering, and, gradually drawing nearer. A whispered explanation from William, and he points to a small fluttering form, amongst the branches of the cedar trees that overtop our camp. I have been personally introduced to Mr. Kah kah bish, and though I would have liked a somewhat closer inspection than I got, I, at least have seen enough to make it interesting. Mohomosi is howling somewhat further off, but, still, persistently. Are we going to have bad weather? My own meteorological experience would argue to the contrary, though one can never depend upon fall weather.

I am half inclined to think that his dwelling place is close by, and that, like Tommy Tucker, he is singing for his supper.

Another night and we have reached our old camping ground upon Meenayhick-washing, known, upon the maps as Elk Lake, or rather at its outlet, at the head of Round, or Mountain Lake.

The wind developed into a hurricane, so that we heard trees crashing down in the forest. The wind was nearly against us, but sufficiently off the western shore to give us a modicum of shelter, though we had to win every mile by muscles of our arms and the sweat of our brows. The sun was shining brightly, all the while, and the wind being southwesterly, it was as warm as in August. We met some Indians, and William, with great glee, said, "Now we can get some dried moose meat, for I know that they have some." I do not hanker after dried moose meat, for my dental capacity is limited, and I have witnessed the process of drying; but my Indians loved it, and in consideration of their feelings, I procured some flakes of the stuff. They

told me that Indians, when they kill a moose, in the summer, do not attempt to carry the meat out, after the manner of white men, but they make their camp right where the moose falls, and, as the fresh meat gives them all they want to eat, while carrying out the process of drying, there is no hardship about it, for them. They set poles upon forked sticks, inserted into the ground, and beneath them they light the fire. They cut up the meat into any kind of shape, usually rather thin, and, thus, instead of having to carry a lot of water, and of bone, they only have to carry the light, dried meat, when they, finally bring it to their permanent camping ground, which is pure, practical economy provided you like the meat, which my Indians evidently did, for they cooked a huge pan of it, and ate it at the very first place that we stopped at to make a meal.

I have said that an absence of visible life was the characteristic feature of our journey, going down. We had hardly left Kay kah be kayguan, when one of the Indians pointed out a place where a moose had just swam across the river, for the grass, upon the shore, was still wet. All along the banks of the river, sunning themselves, were a number of partridges. We carried no gun, so we left them for others who did, or more probably, for some lucky Pipoonisie, the large hawk that especially affects partridges many of which, we saw on our way, seeking what they might devour. Squirrels were there by dozens, enjoying the bright sunshine, in a very noisy manner. The bushes were alive with small birds, and one could hardly realize, that in a few weeks, perhaps in a few days, the place would be seized in the grip of the snow, and frost, and then become almost Arctic. As we paddled down Elk Lake, we saw a large moose, leisurely walking along the shore, to a point, jutting out into the lake. "He is going to cross," whispered one of the Indians. "Wait," and we did wait, but not only that, but the moose took to the water, and headed for the further shore. We allowed him to get some distance out before we made a move, then we gave chase. By the time that he had gone about three parts of the way, across the

lake, which is about half a mile in width, we had practically overhauled him, being about three lengths of the canoe from him. I noticed that ever and anon, he would dip his head, straight, down into the water, up to his eyes.— "What does he do that for?" I whispered to William. "Because it is rough", answered William, and afterwards he told me that the moose, unlike the caribou, swims very low down in the water, and that his head lies very flat on the surface of the water, so that a wave would lap into his nostrils, and that he did this to empty the water out.

Even yet, the moose had not seen us, so William gave a shout, and the moose turned a frightened head towards us, looked for a moment, and then swam for dear life. I felt sorry for the poor beast for suffering so much fright, and I was glad that he had happened to strike a canoe which contained no gun, nor men who desired to see such a fine animal in its death struggles. We easily caught him up, and turned him back to shore from whence he had come, we paddling quietly along side of him. Poor thing! He felt miserable, but never relaxed his energies, and thus we escorted him back to the point, where he had taken to the water. As soon as his feet touched the bottom, he ceased swimming, and walked out. When he had gained the solid shore, he, deliberately turned round to look at us, as if wondering what manner of creatures we were, in that we had not attempted to do him bodily harm. His horns were not very large, but perfect in shape, and I regretted very much that I had no camera with me. After this brief inspection he ambled for the bush, presenting a very tempting flank to one obeying the call of the 'red gods.' The last we heard of him, was a quickly diminishing sound of cracking branches, and then the episode was over.

The wind is over, or, rather dying down, and the sky is clear, so there is hope of being able to cross Round Lake, in the morning, without danger of swamping. It is worth being in the bush, on a night like this, and one feels that it is almost a shame to go to sleep, but that crackling fire, the toil of the day, and the health giving atmosphere, impel a drowsiness, that irresistibly draws me to

the blankets. This is our last night out in the woods, and though we have made strenuous efforts to get home, for sake of business, we half regret that we have succeeded so well.

As I write, there are three muskrats swimming on the placid surface of the river. Kah kah bish is sounding its sweet little note, and the atmosphere is so perfectly calm that I can hear the distant barking of a dog, in a camp of Indians nearly three miles away. The day has been everything that could be desired, and the bosom of Round Lake has been as peaceful as it was rough, and raging yesterday.

We saw many ducks, one flock, especially, gave us a slight pang of regret in that we had not brought a gun. They flew straight for our canoe, turning, when about 10 yards away. I have a weakness for stewed wild duck, hence the regret.

We saw two deer feeding in the rushes, in a bay, and several other living creatures such as I have already mentioned. At the small rapid, where William first displayed his skill, with the pole, we met two Indians on their way up. They were eating on the portage, we did the same, so, as they started before we had finished, after Weenisikahbie had given them instructions as to the best mode of surmounting the rapids, I had an opportunity of comparing their work with that of my men, and I found a great difference. They would have been upset, had they not been Indians. They barely managed the grade, although their canoe was lighter than the one that

William had poled up, single handed. The reason of this is, that they are lake Indians, that is men, who dwell on the shore of a large lake, and who have not the same opportunity for such constant practice, as these men of Matachuan, who are born within the sound of rushing water, and who can hardly move away any distance, without encountering swift and rough water.

There is one thing that I have forgotten to mention, and that is the peculiarities of the Whiskey Jack. No sooner does the pork begin to sizzle in the pan, than that slate grey form is seen gliding from tree to tree, and the familiar shrill whistle is heard. They must have wondrous powers of scent, for, I imagine that it must be this sense that enables them to find a camp. They cannot be tamed, with success, and I have been told that their nests have never been found, at least, so the Indians have told me. They also, always go in pairs, even when the nesting season is either unthought of, or forgotten. William pitched a piece of bacon rind upon a branch, once, and the Whiskey Jack swooped down upon it, and bore it away, his mate screaming after him. I felt sure that it was the male bird who did the greedy act, for the other came back shortly, and we pitched her another piece, but she had not the courage to come for it, while we were there.

This is the last evening that I shall be writing about my trip, for we are only two hours paddle from the railway and that is altogether too prosaic and incongruous a subject to allude to in an article of this kind.

## A New Brunswick Guide's Successful Hunt.

### Two Bears and a Moose.

BY ADAM MOORE.

A few years ago, towards the end of October, I was camped on Bathurst Lake at the head of the Nepisiquit River, in New Brunswick, in the company of some New York sportsmen, whom I had taken into the woods for a hunt. One of these gentlemen, a man of over sixty

years of age, was my special care. Shortly after going out he had an attack of rheumatism, and was not able to hunt, although he was most anxious to get a bear and a moose, and worried over his disabled condition a good deal. He would not consent to allow me to kill any

game for him, though of course I offered to do so. Towards the end of the trip however he came to a different frame of mind. At five o'clock one morning his knees pained him so badly that he finally gave up the idea of hunting on that trip, and commissioned me to go and try to get him a bear, or a moose. I had five days left in which to do the work and return to camp in order to take him out. My plans were laid without a moment's delay. Immediately I went to the cook and asked how long it would take him to put me up grub enough to last me five days. His reply was that he could do it in one hour. Accordingly I got my canoe ready and put in what few things I wanted—and they were not many—for I intended to travel light.

About the last of September we had killed a moose near the outlet of Upsaliquitch Lake. To reach that lake we went down the Nepisiquit River, about twenty miles to the mouth of Portage Brook, then across country about six miles to Upsaliquitch Lake. I had a camp and a canoe on that lake, knew it was a good place for game, and had gone there quite often.

A few days before this one of the boys had been down to the lake, and on his return he told us that a bear had just begun to eat off the carcase of a moose that had been killed and hung up there. Only very little of the meat had been used, and consequently there was a tempting meal for Mr. Bruin. Ever since I heard the story I had been anxious to visit the lake; but as my sportsman was not able to travel I saw no way of gratifying my desire. However as soon as the gentleman consented to my going alone this was the first place to which my thoughts turned.

By six o'clock I had had my breakfast, and all I required was in the canoe and ready for a start. Just as I was pulling off one of the sports said "I'll bet a dollar he won't get anything." "I'll take you," was the quick response of one of the boys, and he added "Any one else want to bet?" The boys all knew well enough that to turn me loose for five days meant game, and they were ready to take all bets of that kind.

When I left the landing the day had

not begun to dawn, but there were four miles of deadwater to run through, and that I could do in the dark all right. Sixteen miles of a shoal, rocky, rapid stream followed. I made that run before noon, lunched where I landed, made up my pack and hit the trail for the lake. In good time I arrived there and found my canoe all right, where it was hauled up in the woods at the head of the lake. The lake is about a mile and a half long, the moose meat that the bear was working at being at the further end, and my camp about a mile down. I stopped at the camp, left my pack, got a bear trap, and started for the meat with my 30-40 Winchester lying in the canoe, close in front of me and a little ahead, all ready for business.

It was a calm, cloudy day, and I took my paddle and started very quietly along the shore, on the alert for bear and anything else worth the shooting. A thick clump of bushes close to the water hid the meat from view until I was directly opposite to it, when there was a nice open place up the slope from the lake to the trees, on one of which the meat was hung, about ten yards back from the water and six feet above it. Close to the shore the water was quite shoal, and I was out about fifteen yards so that I had sufficient water in which to paddle quietly.

Just as I got opposite to the meat, and could see into the open, a big bear rose up from behind the bunch of bushes, close to the water, and started up the bank right into the open. Well, that paddle was laid down, and the rifle picked up just about as quickly as these things generally are done, and the ivory bead showed clear on that big glossy back. The bear was growling and appeared in no hurry at all though he was growling, and engaged in retreating. At the first shot he dropped but started up again immediately. I was ready, and gave him a second which dropped him again. Once more he rose and started up the bank when the third one hit him and he went down to stay. There was still life enough in the old fellow for him to try and crawl to me for fight, and I had to give him a fourth one behind the ear to keep him quiet.

He was a very big bear and very fat

which was probably the reason he was so slow in getting out of the way. His ears were split and his face scarred with fighting. I hauled the canoe in close against the shore, dragged the bear down the bank, and put him into it. Next I went to work and set a trap at the remnants of the meat. There was not much of it left, but I thought it possible another bear might be in the neighborhood and attracted by it. By the time I got this done it was getting dark, and I returned to camp taking the bear in the canoe. There was a cut bank at the camp about two feet high, with a little strip of beach gravel about two feet wide between the water, which was shoal and the bank. I pulled the canoe up as close to the bank as I could, but there was still about a foot of space between the canoe and the bank. I tried to get the bear out of the canoe and up the bank. He was too heavy for me and got down in the space mentioned. I could not get him up, and so I straightened him out on the little strip of beach to stiffen, and made up my mind to try again in the morning. You will know by this that he was a big one, for I possess a good portion of muscle and could easily have lifted a barrel of pork up that bank. I went to camp, got my supper, and turned in for the night, well satisfied with my day's work. I had my bear—that I hardly expected till next morning.

A short night and an early rise followed. I had breakfast long before daylight, and was out in the canoe listening for moose in the water, though it was late in the season for moose to come much in the water. The weather however had turned so mild that I thought the chances of finding one there were fairly good.

After it began to grow light I heard a moose in the water up near the inlet, and paddled in that direction. When I got near enough I saw it was a moose, and backed off so as not to scare it. Soon after this I saw another moose come out from a small marsh near the end of the lake. The light was not good enough to enable me to distinguish whether it was a bull, and I paddled in that direction. When I got within three hundred yards of it I saw it was another cow, and was about to turn back when I heard a crashing in the alders back of the marsh. I

steadied my canoe, and waited to see what was coming next. I soon saw horns shining through the alders, and moving slowly out towards the marsh where the cow was feeding. The animal crossed a little opening, and I saw it was a big bull moose. He had another point of thick alders to go through, and when he was in them I gave a few quick strokes with my paddle with all my might, steadied the canoe, sending it straight for him, laid down the paddle, picked up my rifle, and waited for him

A LOAD OF CANOES ON THE WAY TO ADAM MOORE'S HUNTING GROUNDS.

to come out as far on the marsh as he would. The cow saw me and started for the shore, but she was fully one hundred yards from the bushes and the mud was deep. Apparently she was not much scared for she moved slowly. The bull came out of the alders and walked across the marsh towards the cow, directly facing me. I saw that they would meet about the middle of the marsh, and fifty yards from the bushes. I knew that he would turn when he met the cow, and give me a broadside shot. My canoe had been steadily drifting towards them. As there was not a breath of air stirring my canoe had not lost its headway, but was within two hundred yards of the moose. I knew I had time to get in six shots before the bull could get out of sight. I had a recissor sight on my rifle, but the light was not good enough for me to use it, and therefore

pushed it up out of the way. As I expected when the moose met, the bull turned and stood fair side on with his nose stretched out towards the cow. Now was my chance! I sighted well up on his shoulder and let go. To my surprise he fell as if struck by lightning! I lost no time in getting to him when I found that the bullet had hit him high on the shoulder and broke the spinal column. I gave him another for a finisher and he was my moose.

I was feeling pretty good about that time—it was not yet sunrise; I had been away from the camp only about twenty-five hours and had a big bear and a big moose.

When I went back to camp I skinned the bear. He was very fat, and I found that the bullets had all hit him on the back, and the whole could easily be covered with one hand, but none of them had penetrated far enough to break the back bone. They had struck about the middle of the back and ranged forward. I have found that there is no animal flesh so hard to penetrate with a bullet as bear flesh and fat. It was a difficult task to skin him, but I got it done at last, leaving the skull and feet in the skin to prepare for mounting. I cut off as much fat as I could carry at one load.

Then I got lunch and went for the moose. The marsh was so wet that I had to bring out spruce brush in the canoe and lay a pile of it at his back. Taking hold of his feet I rolled him over on it, and put some more at his back. By doing this again and again I at last got him where I could skin him and cut him up. Then I took the meat in the canoe to where I wanted to hang it up. I didn't have time to skin out the head, as it was night by the time I made progress thus far. I therefore returned to camp, and had a good night's rest for I knew that there was a hard day's packing ahead of me.

Early the next morning I arose and carried out the moose head to where I had left the canoe at the mouth of Portage Brook. This proved a good first load. Next I took the bear fat, and for the third the skin with the head and feet on. These three trips with three heavy loads over a six mile carry made a long and

hard day, and I had to trot part of the time to finish the work.

One more night I spent at the little camp alone, and early in the morning I started with another load. Three days had now gone and it would take me more than one day to get back to camp at Bathurst Lake. I was up at the head of the lake and had my canoe put away by daylight. I made up my pack of the moose hide, blanket, and a lunch, and started over the trail for the last time that trip. My canoe was well loaded with the results of my four journeys, and it was hard work poling. It was dark when I reached Silver Brook, only twelve miles from the place where I had taken the canoe. At that point there were some lumbermen with whom I stayed and supped. Next morning I made an early start in the hope of reaching the camp, where I had left the sportsmen, by dinner time.

The water was shallow, and for the greater part of the distance I had to get out and tow the canoe. After four miles of this work I reached the dead water, stowed away my pole, got out the paddle, and sat down to my work. When I paddled half a mile I came to a place where there had been a moose killed, and most of the carcass left at the edge of the water. One quarter of the meat had been left out in the water, but as it was also shallow there, the meat could be seen for some distance. When I came in sight of the place I missed the quarter of meat. Next I saw that the rest of the carcass had been hauled up on the bank for some distance. Then I knew just what had happened. It was bear that had been at work! I was going very quietly, my rifle ready and within reach, and when I got to where I could see in over the bank there was the bear putting moss and leaves over the remains of the carcass. He was covering it very carefully as they often do, and was so busy with his own work that he never saw me till I was getting the rifle sight on to him. At the time he was facing me, and when he heard me he raised his head and showed his breast good, just as the sight covered it. I pulled the trigger, and he pitched forward and fell dead. It all happened so quickly that I could hardly realize it. However I ran the canoe ashore and

loaded in the bear. He was very big and very lean, an old male with good fur, as it was then November. Lean as it was; it was all I could do to put him in the canoe. As it was now easy canoeing to camp, and I could get help there, I didn't stop to skin him.

When I reached camp however there was no one there. A note on the table informed me that they had moved over the carry to Nicton Lake in order to be ready to go down the Tobique River the next day on their way home. After lunch I went up the lake two miles to the carry where I met one of my boys, who had been moving the party over and came back to meet me, and render what assistance he could as he well knew that I should have something to carry.

We skinned the second bear, and made two trips over the three mile carry that afternoon, and got to camp at Nicton,

which is my present home camp, soon after dark.

I had been away five days, and got back on time with a big load of game. It was a hard trip but I was feeling pretty happy, and had proved to my sportsmen what can be done by a good keen hunter on a trip all alone.

I have brought in many a canoe load both before and since the time I had the experience I am here relating; but I never seemed to get in at the right time at the right place so easily as I did on this particular trip. Neither before or since have I had better luck in killing game quickly and easily.

We started early next morning for the settlement which we reached in good time and without any further incident; and succeeded not only in interesting the gentlemen from New York, but also the residents with a recital of the incidents of this trip.

## My First Deer.

By J. S. MANDIGO.

**S**OME years ago I had the honor of being invited to join a party of sportsmen who were going on a deer hunting expedition in Western Ontario, and as this is the one sport that I enjoy you can understand that I accepted without hesitation. The party consisted of four men, and myself. We left the railway train, and with the assistance of teams, after covering some twelve miles of rough country, reached a point on the banks of a small mountain stream, where we found our guide waiting with three canoes, and a number of hounds. We then transferred our luggage to our frail barks, and with two men to each boat, dogs and luggage distributed between us we started up stream. I won't tire my readers in relating how many times we unloaded, portaged, and reloaded, but at high twelve we found our selves on a beautiful little lake which I was told was about seven miles long, and of various widths, dotted with islands of all sizes. We pitched camp near its

outlet, and all bunked in as best we could for our first night in camp. The next day being Sunday we spent our time in getting the camp in order, and everything ready to start for the game on Monday, that being the first day of the hunting season.

So that night it was early to bed, and early to rise. I was aroused next morning about five o'clock, and found that every one was up, and dressed, and Joe our guide was busy preparing our breakfast, which consisted of steak, boiled potatoes, bread, butter, and coffee. After doing justice to this sumptuous repast, we were all instructed to prepare for our selves, what we considered would do us for our mid-day meal. At six o'clock we started off, two men in each canoe, and were stationed at different points along the lake, this being done Joe started back inland with the dogs. I had been left on a point where the lake lay at near a right angle, and had a clear stretch of about a quarter of a mile on either side, which I was to watch. Did you

ever sit on a runway waiting for the dogs to put a deer in before you? Well any who have, will appreciate my feelings. My imagination was so affected by the stillness of the surroundings that I thought I could hear hounds in all directions. Well I waited in this way for about three hours till at last I did hear the sweet music (for it is sweet to the hunter) of dogs coming over the mountain to the north of me. The sound would come closer and closer, and then grow fainter, and then come closer again, till all at once I heard the distant report of a rifle twice in rapid succession, which I figured was too far away to be one of our party. That was all I heard that day, till about four o'clock I was aroused by the sound of voices from up the lake, and in a few seconds saw the boats coming round the bend in the lake, and when they came along side to take me in I was surprised to find a nice big doe in one canoe. Our guide told us that it was the only one he could start our way as the wind was against us, and as it was we would have lost that one had he not headed it off in the woods. However I may say that we were all well pleased with our first day's hunt. The next two days I was on the same runway, but hadn't the good luck to be favored with the sight of any game, while the rest of the party all had been given the opportunity, though some had not been successful in bagging the game. On the fourth day I was taken about half way up the lake, and placed on a good sized island, where the lake was about half a mile wide, and was to keep a canoe with me. Joe the guide assured me that the deer would swim across the lake near this island.

In front of me on either side it was quite level, but back of me there was a precipice from ten to twenty feet in height of solid rock, which made a most beautiful back ground for a picture. It was not very long before I heard the dogs, and they were apparently coming my way, and in perhaps twenty or thirty minutes I was attracted by what appeared to be the limb of a tree in the lake above me. While watching it I thought it appeared to be travelling at a pretty good rate across the stream instead of coming down my way with the current, so with as little

delay and noise as possible I pushed off in my canoe, and started after the limb of the tree, as it appeared at the distance. Instead of going straight for it I headed in the direction from which it had come, and in a short time had it between me and the rocky cliff, and as I drew nearer my object I was pleased to see a very pretty head, carrying what appeared to be a portion of a tree, but was rather a very large pair of antlers. It was then about eight o'clock, the sun was well up, and directly behind me, and shining on the rocks for which Mr. Deer was heading.

As I now write I can see the prettiest picture it has ever been my lot to witness. I was now getting close on to my game, and he in turn near the rocky bank that I knew he could not climb, and I felt that my game was before me ready to take, but some how I didn't take it.

Those who have had the sight of their first deer will understand my feelings. I was standing up in a bark canoe, and a good sea rolling, but instead of shooting I was looking at the picture that has left an everlasting impression. Well the first thing I knew the deer realized his position and made a sharp turn down the lake for the island on which I had been standing, and by the time I came to my senses the deer was out of range for the light rifle I carried. So down I went in the boat and after him, but not being a very good paddler it was all I could do to keep in the chase. Just as he struck the island I shot, and my pretty friend was then in full view, he stopped for an instant, and then with one leap he was out of sight. So I put around the island with all haste but by that time he was well out in the lake again and making for level shore, and I could see that it was marshy at the place for which he was heading. I knew that I must do something quickly or my game was gone if he once struck the rushes, as I could not follow with the canoe, and would have to give up the chase. All but exhausted I came in range just as he struck for freedom, but for him to travel here he had to go in great jumps, and at every leap his whole body came in view, and every time it did so I fired. After six or seven shots, instead of going on he came back on his haunches. He tried

several times to go on, but was unable to rise. It was now that my real labor commenced, and that was in getting my canoe in through the reeds. After some time I succeeded in reaching the carcass which lay across the trunk of an old tree, and this helped a whole lot in the work that followed. I was soon out of the canoe in cold water up to my knees, and it was in this position I bled him, which you know is a necessity to preserve the meat. I was just about done when two of the fellows came along in another canoe, and with their assistance my deer was put aboard, and when we were

settled down for our evening meal that night three of us had great adventures to relate.

That was the only deer I saw that fall, although I have shot several since. During the ten days we were in the woods we shot eleven deer, and had a most pleasant holiday. At the railway station on our way home I found that I had the prize package, my buck having dressed 218 pounds, and should you ever call on me I will be pleased to show you the limb of the tree I saw floating in the lake that beautiful November morning, which proved to be the horns of my first deer.

## Western Ontario Woods in 1830.

BY HOPKINS J. MOORHOUSE.

**H**E was a pleasant-looking old codger with a plump, rosy face in a silver frame of white, curly whiskers and he was sitting on an empty soap-box, waiting for his mail in Williams' Emporium where you can buy anything under the sun but second-hand coffins and where the post-office is kept. Shetland is to be found in Western Ontario after a ten mile drive out of Newbury or Bothwell and is situated on what used to be called "Bear Creek" but what now boasts the more dignified name of the Sydenham River. Of all the neighborhood residents, none can remember farther back into the years than Mr. William Dobbyn who spent his boyhood there and whose father was one of the first to settle in that vicinity.

That part of the country in 1836 was greatly overrun with wolves, so much so that they were a menace not only to the material welfare but also the very lives of the settlers; their attacks upon live stock were no less persistent and destructive than their boldness and audacity in haunting the shanties during a cold snap, making it none too safe for a man to be caught alone in the woods after dark.

"We had to keep the sheep penned in pretty tight" said Mr. Dobbyn or Uncle Will, as I learned to call him. "One of us boys had to be out beating a tin pan to scare away the wolves. They

got so bad, the sheep had to be brought in while we were eating our dinner even. The pens were built open enough for fresh air only and too high for a wolf to jump. But they hung around just the same and I remember one ewe that didn't know enough to mind her own business but went to smell a wolf at a small opening in the fence and the wolf caught hold of her nose and ate it off up to the eyes.

Then, there was a boy named Pat Short who was chased up a tree by the wolves and the starving brutes gnawed around the bark till they nearly felled the tree, which was only a small one. A man named Mulligan happened to hear the boy screechin' and managed to rescue him. And d'you know, that boy never spoke a word for three days."

Mr. Dobbyn's eyes have a mischievous twinkle in them and his laugh is a funny little "Te-he-he" that serves as a pop-off to his keen sense of humor.

"The Injuns roamed all through this section in them days" he continued "an' they was mighty jealous over the whites killin' off the deer. Thomas Mulligan was a great hunter and the redskins had a grudge against him. During the summer season, the cattle were always out feedin' in the woods an' one day Mulligan went out to hunt 'em up, takin' his gun along with him, of course. His wife, back in the shanty, heard two shots just

beyond the clearin' and when she ran out to the edge of the bush, she found an' Injun lyin' dead an' her husband dyin'. The redskin had waited behind a tree for him, shot him an' then rushed out with a tomahawk. But Mulligan had shot the sneak, while lyin' where he fell !"

Mr. Dobbyn tells of a man whom everybody called "Crazy Brooks" but who, in the light of advanced civilization, was "not as crazy as folks said he was." He used to go about the country saying he had had a revelation to the effect that there were people then living who would see steam-boats running over the land and people in different countries talking with one another without seeing one another and that too, without the aid of steam-boats. Brooks was a man of about sixty years of age, thin, spare and with wild, piercing eyes that looked right through one. He was terribly in earnest and it is no wonder the unsophisticated backwoodsmen of 1830 held him in some awe. He had been a settler like the rest of them until after his wonderful dream which came to him three times over. He then took to wandering about from house to house, telling what he had dreamed and receiving his board free. The lonely families in the bush allowed him to stay as long as he would, just to hear him talk. It is at least a remarkable coincidence that several of his auditors lived to see the country opened up by railroads, the Atlantic cable laid and the telegraph in general use.

Mr. Dobbyn can relate many thrilling and amusing adventures through which he passed in the days of his boyhood and early manhood. For instance there is the story of

#### The Wolf That Rose From the Dead.

The Dobbyn boys had missed no less than five valuable sheep, one after the other, and they believed the depredations to be made by a single wolf, judging by the tracks in the snow. William and his brother, Richard, who were respectively about fifteen and fourteen years of age at the time, baited a trap with part of the wolf's last kill and set it in an old slashing in the woods near by,

where a wind storm had played havoc. Next morning sure enough, they found their quarry with both forefeet in the trap. He was an immense, shaggy timber wolf, whose "natural born cussedness" was aggravated to a frantic pitch, now that he was at bay.

"Better go in easy, Richard" cautioned the elder of the two as they approached ; "he's going to show fight."

For answer, Richard threw his rifle to his shoulder and took a careless shot, but dropping the animal at once. The boys threw down their guns and ran over to the trap with whoops of satisfaction ; a dead wolf meant a scalp bounty of twelve dollars from the Government in those days.

Richard pressed down the spring of the trap with his foot and was pulling the wolf free when William fancied he caught the glint of an opening eye. He stood watching the animal while his brother went over to the basswood to strip off some bark with which to tie the legs together, preparatory to slinging the carcass on a pole and carrying it home. A sudden shout brought Richard hurrying back.

"What's up ?" he called out.

"That wolf ain't dead" cried William excitedly. Richard laughed uproariously.

"He is dead. I broke his neck, you dunderhead."

"That wolf ain't dead, I tell you. He didn't kick an' I saw him roll his eye round an' look at me just now. I bet if you grab him by the tail, he will jump up."

"Bah ! To satisfy you, I will grab him by the tail. So you ain't dead yet ain't you, old boy ? Get up here ! I'll see whether you're dead or not. GET UP HERE !" and he gave a mighty yank.

With one tremendous spring, the wolf leaped higher than his captor's head. But Richard didn't intend to lose that twelve dollars bounty and hung on like grim death, the maddened animal snapping viciously at him and flinging the foam from his chops at every snap. With a yell, Richard jumped this way and that, throwing the wolf's rump around at every leap, to keep out of reach of the fangs.

"He'll get away ! He'll get away !"

he yelled with a wild spring to the right-about. "Shoot! Shoot! you blockhead Why don't you shoot 'stead of —Whoa-oa! — SHOOT! — Confound! — Whoa! Back you! — You would, would you! — SHOOT!!"

William, who was rolling all over the ground with laughing, managed at this juncture, to catch up his gun, and a bullet through the head put an end to the farce.

And then there is the story of

### The Bear Fight

between William, his brother Thomas and two dogs on the one hand and an immense black bear on the other. It was one night when they were out on a coon hunt with nothing but the two dogs and an axe. One dog was a mongrel, a cross between a bulldog and a hound; the other was a young bull terrier.

A young moon was sinking over beyond the swamp and the light from that source together with the stars overhead was scarcely more than a twilight. They had reached a wild part of the woods and the dogs, scouring through the underbrush some distance ahead, suddenly set up a great noise of barking.

"Treed!" shouted William, and they dived through the bushes, straight for the noise of the dogs, whom they found barking up an immense tree at least six feet through. Some distance up, it forked and just at this point was a large knot.

"There's the coon!" cried Thomas, and in the dim light, the knot had that appearance. But no sooner were the words out of his mouth, as they say in the story books, than out from the hollow butt of the tree jumped a tremendous black animal, which they soon knew for the biggest bear they had ever clapped eyes on. As he rose on his hind legs, William swung the axe, missing the brute's head but cutting the jaw just above the tusks. The bear didn't seem to relish this reception and went back into the tree, followed by the little terrier who grabbed on to a hind leg and hung there for dear life. Up went the bear out of sight, taking the plucky little dog with him. Thomas ran up to save the

dog but the little critter wouldn't let go until he was kicked loose.

The young men then got a resinous torch and Thomas tried to look up the hollow trunk, only to get his eyes full of bark from the scrambling bear. Then they cut a sapling and sharpened one end for the purpose of prodding Bruin out of the hole. But he had climbed up beyond reach.

"Smoke him out!"

So they built a fire in the hollow trunk

MR. WM. DOBBYN, SHETLAND, ONT., A PIONEER OF WESTERN ONTARIO

and retired to await developments. A moment later they heard a peculiar noise. It wasn't a grunt but rather a long-drawn sigh repeated at regular intervals. They finally located it in the fork of the tree where the bear's snout protruded through the big knot-hole afore mentioned. He seemed to be quite comfortable and unconcerned in spite of the smoke that was rolling up from below; there was only one thing left to do and that was to chop the tree down.

When it fell, the trunk split at the fork and out came the bear. One dog jumped at his throat and the other fast-

ened onto a hind leg. The bear had both fore legs around the large dog and was hugging him to death when William ran in with the axe. With a swift toss the bear threw the dog clean over his head and faced his new adversaries. The young men jumped quickly out of his way but Thomas stumbled and, before he could escape, the bear's paw sent him sprawling on his back with his coat sleeve ripped completely off. The bear was quick to see his advantage but a desperate kick from the man's boot and the sudden attack of the big dog who just then rushed back into the fight, disconcerted him. The dog took a flying leap and caught hold of the skin on top of the

bear's head, toppling over in front with the impetus of his spring and dragging down the brute's snout in the fall. Then, while the bear was deliberately thrashing the plucky mongrel with his fore-paws, one after the other, standing on three legs, William stepped up with the axe and broke the bear's neck just in front of the dog's nose.

"Both dogs laid down alongside the dead bear just where he fell," said Mr. Dobbyn in conclusion. "They were so badly done out they couldn't walk, but there wasn't a whimper out of 'em. We drew the carcass over on to a dry knoll and went home. The moon had set by this time."

## A Big Fish From Lake Ontario.

**O**NE afternoon last September Mr. Geo. Guy, of Springfield, Mass., who was in Canada on business connected with the Guy Brothers' Minstrel troupe, found himself in Deseronto, Ont., with a few hours to spare. Of course he hunted up Mr. Thomas J. Naylor, the manager and secretary of the main line circuit theatres, and by him was well entertained. Amongst other treats Mr. Naylor rowed his friend over to the Forester's Island, and they made a thorough inspection of the Orphanage located there. On the way back Mr. Naylor suggested that Mr. Guy should try his luck as a fisherman. Mr. Guy professed to have no skill in this line, but just by way of passing the time threw a troll over the side and watched the spinning with interest. As the line was dragging well behind, Mr. Guy suddenly called out to his friend to cease rowing, declaring that the troll was caught on a saw log. In another minute he said it must be a raft, and unless help came he would have to go overboard.

Mr. Naylor went to the rescue and together they hauled in the line. When about ten feet away a monster fish leaped up, and Mr. Guy, who was considerably startled, cried out "Cut the line, Tom. Cut the line. It's a shark, and it will smash the boat! Don't let it get any nearer."

Maskinonge caught by Tom J. Naylor, and Geo. R. Guy, Manager of Guy Brothers Minstrels at Deseronto, Sept. 26, 1905; weight 34 lbs., length 48 in.

Mr. Naylor knew the captured one for a maskinonge, and was eager to have it on board. To this proposition however Mr. Guy would not listen for a long time, but at length, after many protests, he remained passive. He continued to mutter "If that thing gets into this boat it will either upset us, or bite a leg off one of us."

The fish was nevertheless taken on board, and when they reached the shore at Mr. Guy's earnest request (for he was now proud of his capture) it was measured, weighed, and photographed. Mr. Guy had it cleaned, packed in ice, and forwarded to his home in Springfield, Mass.

## How We Won Our Qualifications.

By A. H. S.

**I**T was the thirteenth day of the month and a Friday; and it needed only that thirteen answered to the roll-call for the weak minded and superstitious amongst us to declare the omens opposed to our attempt and shrink from the fight. To the consolation, however, even of the strong minded, when Mr. Wheeler read out the list only twelve, including the guides, made a response to their names and we were comforted. Some did more than smile, they even laughed, when the President wished that the "dew of Heaven" might fall upon us, and that our efforts might be crowned with success.

On that eventful day we had been called at four o'clock in the morning, had washed and dressed in the cold air to be found at that hour on the summit of the Yoho Pass, and had breakfasted in the rain. We all had a good breakfast, and persuaded ourselves that the cloudy early hours betokened a warm and clear day. On parade the guides appeared with bags of provisions and each had his ice axe. The ladies were furnished with alpenstocks and the men with ice axes, and the serious work in front of us was emphasised by the President who laid upon us the injunction of absolute obedience to the judgement of the guides, and in particular the necessity of following strictly the directions of our head guide, Mr. M. P. Bridgland.

We took the upward trail at an easy walk and chatted gaily, soon catching another and a different view from any seen before of the wonderful Takkakaw Falls. There were three ladies and nine gentlemen in the party, and from the moment of starting out we had plenty to see in the ever changing panorama of sky, clouds, and mountains before us. The brilliant color effects, ever changing and developing new beauties, elicited our warmest admiration, and it was enough to sit and gaze at the most wonderful series of Nature's own pictures any man can ever hope to see. Soon we left

the trail, which goes on to the head of the Yoho Valley, and followed our guide across one of those grassy slopes of which there are too few in the mountains. Here it began to rain again and we were allowed to rest under the shelter of some friendly trees. It appeared as if the rain was only a passing shower, but the guide, in view of the long and trying day in front of us, gave the word when he thought we had sufficiently rested, and we stepped out in defiance of the wet. By that time we had learned that no one who goes into the mountains must mind getting wet. We were sure to get wet anyhow for bodily exertion at that height is so trying that every one perspires freely, and we felt we might just as well be wet one way as another. So it was with Indian stoicism we set out again and soon we passed through the rain into brilliant sunshine.

Now the ascent became more steep and we reached a bed of shale. To go up by any other than the zig-zag method was impossible, and in this particular instance we were not so careful in following our guide. Every man who thought he saw a better way took his own course, and for three quarters of the way we each scrambled over the loose shale as best we could. Arriving breathless at the place where the guides had stopped we had a much needed rest, for the ascent had been very steep and the loose shale exceedingly trying. When they thought we had rested sufficiently the guides brought out the ropes, and knotted them in the business like manner peculiar to their fraternity. One after another we were tied on to the two ropes, and we realized that more serious work was in front of us.

Mr. Bridgland held the post of honor and two ladies were roped after him. Then followed Dr. Campbell, of the Winnipeg Hospital, and for the ascent I held the end of the rope, a rev. gentleman, an enthusiastic amateur photographer, some of whose work illustrates this article, having obtained leave to be

have as a free lance. We were fortunate also in being accompanied by a professional photographer whose fine illustrations add materially to the interest of this sketch. Both the photographers were for the greater portion of the journey free lances, and they showed themselves thorough mountaineers as well as skilled in the art of obtaining nice pictures. When on the ropes they were good helps, and on other occasions di-

although he helped me to slide when he should have checked me, and did this on more than one occasion. It is only fair however to say that he held the rope well, and although burdened with a camera, gave us a splendid example of how to descend a mountain under difficulties.

The shale gave way to rock and the climbing became more and more difficult. Rests were frequent and we

ALPINISTS AT LUNCHEON

rected our attention to views some of us might have missed. They contributed to our enjoyment at the time and will enable us to go over the scenes of that day with keener memories by reason of their pictures, besides enabling us to point out to our friends what feats we performed, and enjoying with them the experiences we encountered. When descending I was glad to have the amateur photographer at the end of the rope,

needed them. One of the ladies amused us by repeating and emphasizing the statement that "although she might be a beast of burden she was not a goat." It did seem to most of us that we were going where mountain goats—the most wonderful of animals for mountain climbing—alone could penetrate. We held on all the same, and wherever the guide went we were] perforce obliged to follow. The

ropes were long and allowed us to tail out nicely, and when both parties rested together the gentleman at the end of the second rope invited us to consider what a long rest he had even after we had started, as it took much time, with the considerable distances between us, before the last man needed to move. The first peak seemed a long way off, and we wound round and round, ever getting nearer but never apparently destined to reach the top. A steady persistence however brought us success, and after scaling what at first seemed inaccessible heights we reached the top and partook of an early but hard earned luncheon. We all knew this was not the finish for we had heard the tales others had told, and accordingly no one was disappointed to find after all this labor another and higher peak confronting us. We had been told that there were four such peaks, and having ascended one we braced ourselves for the labours that yet lay before us. Our guides gave us a long rest here, and we resumed our work with renewed energy.

As we neared the second peak the way seemed barred and we imagined we were going some zig-zag way round it. One of the ladies ventured to remark "Well there's one comfort ; he simply can't go up there !" The guide said nothing, he did not even smile ; guides possess that inscrutable habit, but he walked straight for the face of the rock, which appeared to be about thirty feet high, placed his ice axe in a crevice we had not perceived, put his toes in another one, and although a powerfully built man he was speeding on top. We had not time to admire this feat before it came to our turns to attempt it. Here we had the help of the rope and we needed it, for clinging on with both hands and feet and holding tight for dear life, we required the additional help to reach safety. After each of these severe and dangerous climbs we rested and saw how our companions fared. They had the advantage of our example, but once we had secured the position it was not unpleasant to see how others managed to perform feats which under any other circumstances would have been declared impossible.

We had been told by our predecessors that there were but four peaks ; we seemed to climb a dozen. They had named one Deception Peak because they were sure when they had climbed it that they had reached the last. We became stolid and simply plodded on believing that if we only continued we must in the end reach our goal. It does become a little exasperating when you have climbed peak after peak at the cost of much toil to always find a higher and more difficult one in front, and frowning down upon you in proud defiance of your puny efforts to conquer it. In the course of that day's climbs we truly found all kinds of experiences. The grassy slopes we had long left behind, but we got over the shale beds and the huge boulders, did the rock work conscientiously, and crossed fields of snow and ice. We crawled along a saw back cutting our hands and making our knees feel painful ; we stood on shelves and worked our way round shoulders, we climbed up sheer rock walls, we held on to crevices where it did not seem that a bird could find refuge ; and at length we met with our reward. Our guide, who seldom spoke except to issue warnings and directions, at length observed, after we had climbed an extra difficult peak, "Now we are next door!"

It may be well at this point to relate a little personal experience. At one of the most difficult places the two guides had gone up first, and Mr. H. G. Wheeler had taken my ice axe in order to allow me to cling to the crevices with both hands. When I reached the top, where the climbing was still difficult, I understood him to say that he would bring my ice axe on, and accordingly took my place on the rope. Mr. Bridgland speedily noted that I was without an ice axe and asked me where it was. When I told him he released himself from the rope and without a word strode down to the axe, recovered it, and handed it to me. I understood the implied rebuke and accepted it in silence. More than once or twice during the day did I have cause to feel thankful that I had such a handy little instrument in my hands. Once more I lost it on a snow slide, when it seemed as if my arms would be pulled out if I did not let go, and the rope with

the weight of four others who were slipping and sliding was pulling at me with terrific force. I shouted, and my friend, Mr. Kinney, pulled it out as he came past, and once more I secured it, not again to let it go until I returned to camp. I was much obliged to Mr. Kinney for this service as to climb the steep ascent in order to recover it would have been a task of much difficulty, and I did not wish to stand another silent rebuke from the head guide. I found the axe extremely useful all day. When slipping on the ice or going round a crevasse it gave confidence and security and with-

Now we saw the snow field. Down in the valley, and even in the Camp on the very summit of the Pass, it looked like a long streak of snow. This streak proved to be several miles across. For the most part it was still a steady climb but some portions of it were rolling and we knew that any descent meant a steady ascent later on. The snow was soft and walking was by no means easy. The highest peak of Mt. Vice President was seen in the distance, towering up in grim majesty. The snow line reached nearly to the top, but for the last few yards the rock was bare. Steadily we

CROSSING THE SNOW FIELD

out it the task set would have proved impossible of achievement.

When we found ourselves "next door" our spirits rose. This time however we missed the next peak. Where was it? The last one had been steep and hard enough in all conscience to have proved the final one, and had it not been for the stories of others who had told about a snow field of enormous length we should have deceived ourselves with the assurance that we had triumphed.

crossed the field. To the amateurs the snow appeared about two feet deep, but the others knew better. Occasionally we met crevasses which yawned with uncomfortable closeness to our feet, and startled us by their depth; then again we were on the level; once more on the ascent and getting round or over rocks and other obstructions that disputed our passage, in a manner that only grit and steady perseverance could overcome. The last few yards was a stiff climb, and

then we all shook hands and congratulated each other that we were in very word and truth Alpine climbers and true mountaineers. We added our contribution of boulders to the cairn our predecessors had begun ; we gazed with rapture over the panorama of mountain peak, cloud, snow and glacier which was spread out before us on every side, and despite the keen and biting wind looked and looked again as though we could not withdraw from sights and scenes so wondrous and so beautiful. Even the call for luncheon was for a time unheeded. We were physically exhausted and badly needed that luncheon but the grandeur of the scene held us with irre-

sistable force, and we shivered in the wind time and again before we could persuade ourselves to take shelter under the lee side of that last peak, and stretching ourselves at full length in the sunshine rest and discuss a varied and plentiful cold luncheon. The cooks understood their business and the guides knew the appetising influence of mountain air. As a result there was plenty and to spare for the whole of us, and a small cache was made of the remainder for those who essayed the same task on the following day. All the way up we had the sustaining influences of prunes and chocolates; we had eaten one substantial luncheon, and now we discussed another

<sup>a</sup> s though we had eaten nothing since the day before. Meat sandwiches formed the basis of our meal but there were also sweets, and washing the whole down with the cold water from a glacial stream we lingered long before we made preparations to face the descent. Nearly seven hours of hard exhausting toil had been ours—to be quite accurate the climb took our party six and three quarter hours—and we had now to face what is often worse than the ascent—the descent.

As the guides again tied us on the ropes we thought with a sinking of hearts of those rock-work ascents and wondered how in the world we were to get down except by dangling at the end of a rope. As soon as we got on the snow we were startled by the rumblings of thunder, though the sun was shining brightly and there was no rain in the valley. Soon we discovered that the noise was caused by a rushing torrent beneath our feet, and we learnt how those chasms known as crevasses are formed. As we recrossed the snow field we saw Mt. President, snow covered, grim, defiant, and unconquered, and as far as we could see unconquerable, for we failed to discover any possible path, though doubtless in the time to come some one will succeed in that ascent. To the left was the last peak we had climbed and on it we discovered our amateur whom we had missed, and who but for the thoughtfulness of our guide would have lost his luncheon. He came down and we found he had met with a slight accident and cut his arm. We had another rest while he lunched and then he was tied to the end of our rope. To our relief our guide soon turned off on a different route, skirting round the peak and continuing on the snow. At places the descent was so steep that we had to turn round and go down backwards in steps cut by the guide; at others we dug our heels in and checked the descent; while again we stuck our ice axes in and held on. Despite every effort however there was much slipping and sliding, and the difficulty was to pull up, as inevitably when one man went, the extra strain on the rope was too much for his fellows, and we all went down together. More than once we were pulled up by digging our ice axes in when the guide gave the word

and found ourselves uncomfortably close to a crevasse. We had learnt to unquestioningly and unhesitatingly obey our guide, and we owed our safety to this fact.

At one place Mr. Bridgland told us all to sit down in the snow and to hold on with our axes till he gave the word "go." We obeyed, and at the word lifted the ice axes and went down that mountain side with the speed of an express train. No one but the guides had ever had such a slide in their lives. All school boy experiences of sliding fade before the memory of that lightning-like descent known in mountaineering as a glissade. Only the thrill of rushing through the air gave us an idea of the speed at which we were going. It was all over in a minute or two. We might have gone much further but Mr. Bridgland pulled us up at the edge of a crevasse. It turned out to be only a small one which we could easily have skirted round, but it was best to err on the side of safety, and we grumbled not as we resumed the descent on our feet. As soon as we regained the perpendicular we turned round and looked for the second contingent. It was then we realized a little how fast and how far we had come. Our companions looked like specks in the distance and there seemed miles in the intervening space between us. Our thrilling experiences were soon theirs, and they came down the slide with the same rapidity. Under the watchful care of Mr. H. G. Wheeler they were pulled up at the same crevasse. It looked as if the snow field would never end and we zig-zagged over it avoiding treacherous crevasses until we appeared to be stopped altogether. An immense crevasse yawned in front of us and there were others near by, which seemed to bar our passage. Between two of these however, Mr. Bridgland cut steps with his ice axe, and we went down and round one foot at a time and holding on to our ice axes which we dug into the ice before moving. Perhaps after all this was the most exciting experience of all that wonderful day's adventures as a slip would have been a serious matter. The care taken of each of us was characteristic of the guides' watchfulness, patience and skill which

was notable throughout the day. This was tedious and slow work and had to be repeated several times before that immense snow field was crossed. There was much ice to be negotiated, and when we came to a standstill the guide cut steps and we succeeded in passing all the dangerous places. It was a mighty relief to all of us when we reached the limit of the snow line, and the ropes were taken off. Here the last distribution of chocolate was made, and we knew that although there was much rough road still to be traversed to the Camp the most exhausting parts were over. A long bed of rough shale and many boulders proved trying, and at one point we had to scramble down and holding on had to step from a position on to the guide's shoulders, and reach the next stage by jumping. However with perseverance everything comes to an end at last, and to the relief of everyone (even the veterans, though they would not admit it at the time) the pony trail was reached.

A mountain trail is not much of a road, and under other circumstances we might have considered this path no easy one to traverse. When we reached it however it was as welcome as the best city road, and when once we put our feet upon it we considered our task fully accomplished. The few miles to the Camp were less wearisome than usual on these outings, for though hard enough they were easy by contrast. They were soon passed over, everyone keeping up a steady walk and no one thinking of resting until the welcome sight of the Camp, with its neat rows of white tents, the beautiful emerald green lake, the fine forest trees, and the enclosing background of high mountain peaks, appeared. We gave the usual Club yell of triumph, received the congratulations of our fellows, and while some changed their clothes, others were too much done up to wait and partook of recuperative cups of tea, the usual excellent Camp supper, and with refreshment and rest were soon restored. Not one was missing from the Camp-fire entertainment, and not a single individual would have forgone the arduous work, the pleasures far outweighing the discomforts, and the wonderful sights being

well worth all the trouble and toil, and even the dangers encountered.

The heartiest acknowledgements are due to our guides, Messrs M. P. Bridgland and H. G. Wheeler. For more than twelve long hours they bore with us, guided, guarded and assisted us in every way, and a very large share of our success was due to them. They were never irritable but bore our questionings and our foolish observations with the greatest good humor. They carried our food, they were careful not to make our exertions too long without resting, and they were always ready to hand out chocolates and prunes and other helpful refreshments just when they were needed. They erred on the side of carefulness and yet managed to give us enough thrilling experiences to form life long remembrances of our climb of Mt. Vice President. In all kinds of mountaineering work they showed themselves proficient and though some prefer Swiss guides, particularly for ice work, we all felt that when again we take to mountaineering we can wish for no better guides than the two good Canadians who were our "guides, philosophers, and friends" on that never-to-be-forgotten occasion.

Of all forms of strenuous outdoor work commend me to mountaineering. It is one requiring endurance and courage in no mean degree. Its rewards however are immense and no man who fails to go mountain climbing can ever hope to see the grand panorama of Nature in all its infinite beauties and varieties; to watch the marvellous play of light and shadow; to see the wonderful color effects; to note the fierce conflicts of the elements; and to see the confusion of mountain peaks as though giants had been at play. To one who has seen these things is opened some of the pages of the Book of Nature, and grand indeed are his views of them. Most of us who saw these wonders for the first time in our lives owe these marvellous experiences to the Alpine Club of Canada, for whose complete success in opening up these wonderful mountain regions of the Dominion to the tourists and mountaineers of the world we express our best hopes. The success of the first Camp must lead to an incre-

ased interest in the Canadian Alps, in many respects the most wonderful part of the Dominion and assist to keep Canada more than ever in the eyes of the world. No one who goes to the mountains can possibly forget the thrilling and marvellous experiences which will be theirs. Increased health and vigor and a storehouse of pleasant memories will be their sure and certain reward.

### Climbing a Virgin Peak.

BY THE REV. DR. McRAE.

The last day of the first Summer Camp of the Alpine Club of Canada was signalized by the successful climbing of Mt. Marpole, a virgin peak. The party consisted of the Rev. Alexander Dunn, the Rev. Dr. A. O. McRae, Calgary; and the Rev. A. M. Gordon, Lethbridge, with Edouard and Godfrey Feuz, Swiss guides.

A start was made at daybreak and the descent of a thousand feet was the first experience. A climb over shale and moraine followed till the steep and often overhanging cliffs were reached and scaling began in earnest. The two unclimber peaks were then in sight, and it was decided to "traverse" them from the West to East. The first was sufficiently difficult to give good practice for the much harder second. Between the peaks lay an immense glacier, falling steep and slippery towards the North in a fearful abyss, while the upper edge ended in a cornice of snow overhanging a gorge dizzy in depth. Here some distance was made by footholds cut in the blue ice of the glacier, but this proving too slow, the guides, after much deliberation, decided to risk crossing upon the suspended snow cornice, even although the cling of the cornice had been greatly weakened by huge holes melted by the sun and rain.

After some stiff climbing over ridges so sharp that safety depended on the sure and steady grip of both hands and feet, further progress was suddenly stopped by a wall of rock, all but perpendicular fifty feet in height, and almost perfectly smooth. One of the guides, in a fashion known only to Swiss,

bodied his way up this face. The others reached the top dangling at the end of a rope. A few moments later the "stone-man" was set up on the summit of Mt. Marpole.

Then began the descent down the perpendicular face on the west side. This descent was slow owing to the many debates by the guides at various points as to whether it were prudent to go further; and also because a terrific storm of thunder, hail and rain made descending except by falling almost impossible.

At length however the snow fields and glaciers were reached and after a number of swift glissades we stood on the green carpet of the valley. The guides were greatly relieved to reach the snow for parties carrying polished ice axes are in great danger on mountains during electric storms.

A ten mile tramp through forest and over moraine, and a hundred torrents streaming from afar up glaciers brought the party, drenched with rain and hail to the Camp to sleep the sleep of the just arrived after an absence of over fifteen stressful hours.

### First Ascent of Number Seven.

By Miss H. L. Tuzo.

A small permanent camp has been established this season by the shores of the lonely blue Moraine Lake, some eleven miles from Lake Louise in the Rockies. This is the starting point for the ascent of the greater number of the "Ten Peaks." These mountains rear gigantic cliffs from the vast moraines of the Wauchemka (?) glacier, and stand guardians of a spot whose wildness is considerably enhanced by the presence of a fine cinnamon bear who prowls round the two small tents of the Camp.

On the morning of July 21st, I rose early, and while my guide, Christian Kauffman, was packing, cooked breakfast, and we succeeded in getting off at four a. m. Our object was the climb of Number Seven, the second highest of the Ten Peaks (10,648 ft.)

A scramble over the extensive moraine led to the base of the couloir between Three and Four, where alone the ascent can be started. At nine o'clock

we stopped for a second breakfast, having reached the snowfield, whence the mountains rear their summits on the eastern side.

Behind Number Four a long snow walk was taken, then a little pass was climbed between Five and Six, and from that point the harder work begun, for Number Six is made of rock more rotten than usual even in that region of bad rock. In consequence much care had to be given to the selection of hand and footholds, whilst vast quantities of shale, balancing above precipices, gave considerable elements of danger to the climb.

Number Six has to be ascended to a very considerable height before a way over to its neighbor can be found, while its position is such that it has to be nearly circled before Seven is even seen. A steep snow field and glacier lie between the two mountains, and the summit of Number Seven is reached by a route over and up these. The final portions are rock and present no serious difficulties.

At four forty the summit was reached and the climbers could congratulate each other on the conquest of the last of the Ten Peaks. No time could be spent on the top as the remaining hours of daylight were few. A small cairn was rapidly built by Christian Kauffman and the descent begun. It really was hard, for we slid down on the moving shale and dislodged vast quantities which sullied the snow slopes far below. Thanks to this shale and the rapid travel over the snow slopes the return was made in very quick time. We had one narrow escape from an avalanche. Fortunately the rock broke off with a loud report, and we had just time to race back a few steps when the enormous boulders came tearing down in our path carrying clouds of snow with them.

By nine o'clock the head of the last couloir was reached, and by dint of strenuous exertion two thirds of it were passed before darkness fell. Then indeed the work became anxious and very slow. The last rock ledges and the vast boulders of the moraine sorely taxed our patience. We were indeed thankful when after a final scramble among fallen timber and rocks we saw the camp-fire, and by one thirty were seated round it, while the tea billy boiled up, and the

rest of the campers listened to our tale.

### Club Notes and News.

Mr. William Whyte, Second Vice President of the Canadian Pacific Railway, sent his heartiest congratulations to the Club on the success of their first Camp. Mr. Whyte adds:—"It is to be sincerely hoped that the success of the first meet is but a forerunner of what will attend future meets, and that in the end our brother mountain-lovers in the Old Country, who now go far afield in foreign lands for their pleasure grounds, will find in the Canadian Rockies, through the good offices of the Canadian Alpine Club, the Mecca of their desires."

Now a beginning has been made the work may be expected to go forward with increased vigor, because in this as in all other cases it is the preliminaries that are the hardest, and once a few of the old country mountaineers are persuaded to test the charms of the Canadian Rockies they are quite certain to find them irresistible and to act themselves as missionaries of the wonderful field of exploration now opened to the mountaineers of the world.

Professor Fay, President of the American Alpine Club, accompanied by Mr. Curtis, of Boston, was present during the closing days of the camp, and proved himself a courteous gentleman full of the true mountain spirit. Professor Fay is keenly appreciative of the charms of the Canadian Alps, and he particularly won the hearts of the members present when he assured them that though the Americans knew a good thing when they saw it—and many of them woke to the beauties and possibilities of the Canadian Alps before the Canadians themselves—there was never a thought or wish that those wonderful mountains should ever be otherwise than Canadian. Canadians can heartily welcome to their marvellous playground every American who will come in that spirit.

The suggestion made by Capt. F. P. Armstrong, of Golden, B. C. might well be taken up by the Alpine Club. To

Mountaineers climbing out of the Great Gorge at the Selkirk Cave. This cave, with its strange and wonderful formations, eclipses the great Mammoth Cave in Kentucky.

call new peaks after those who made the first authenticated ascent might not in all cases result in nomenclature that would commend itself to aesthetic tastes, but it would have the advantage of substituting a regular system for an irregular and most unsatisfactory one ; and it would give a stimulus to mountain climbing such as possibly no other means could accomplish. When it is remembered that there are many peaks within sight of the railway which have not been climbed so far as records go, it will be seen that there is good ground for the suggestion, and it might be acted upon with advantage. The Alpine Club possesses the organization to take up this question and press its consideration upon the Government.

Another thing which the officials of the Club might do almost at once is to start a Record Book. In this book all new and well authenticated climbs

could be registered, and before long that book would obtain a value which would make it one of the best assets of the Club. At present the records are so scattered that it is difficult sometimes to ascertain which is really a maiden peak. An official entry in the Alpine Club Book would soon gain a value such as would make it an object of any man's ambition to establish a record worthy of appearing in its pages. Of course all records would have to be well substantiated and their value would consist in that fact.

It is indeed impossible to place limits to the future developments of the Club in this and other directions. One can only say that there is more than ample room for its work and plenty to be done, and its membership, consisting of sturdy mountaineers, form just the people to do it.

## A Fishing Experience in Vancouver Island.

BY OSCAR C. BASS.

**K**OKSILAH is the name of an Indian village on the Island of Vancouver, near Victoria, the beautiful capital of British Columbia. The name has also been given to a stream which forms the subject of this article.

To the fisherman on his first visit it means a silent, forbidding - looking stream, running through narrow gorges with precipitous unscaleable sides ; the pools scattered far apart and seemingly unapproachable and when reached by the route which the uninitiated one chooses they are as black and unpromising as the dark slippery sides of the massive walls with which Nature has enclosed them.

The railway station is on the last reach of the river where it seems to emerge from nowhere out of the woods, and rejoicing in its new found freedom, dashes musically over the shingle. It is there, where the unwary, uneducated fisherman is lured to try his luck, but it is when he attempts to proceed farther

that he hastily concludes to curse, as only fishermen can, the chump who recommended him to try the fighting qualities of the finny denizens of the Koksilah. In vulgar parlance unless he is a fisherman born and trained from the cradle he is bound to get "skunked" that first time.

Jimmy Boal keeps the place where the fisherman must stop unless he camps. The house is not a pretentious one, and the bill does not stagger you by its tremendous size when you come to settle up ; but Mrs. Boal bakes the nicest bread you ever saw a fisherman with a big appetite (and they all have big ones) tear apart ; she can bake a meat pie that will hurt your nose with a delicious smell just as soon as you come inside the door, and she keeps the bedroom spotlessly clean and rather too comfortable. She will get your breakfast at any time in the morning, but if you are a good fisherman you will get it yourself and quietly slip out, letting her have her rest undisturbed, for she will

KOKSILAH RIVER.

leave you everything ready—the big jug of creamy milk, the bread, butter, tea, coffee, eggs and bacon, jam and syrup even down to a bundle of matches on the stove lid over the ready laid fire. What more luxurious attendance does a real fisherman desire? It is enough to spoil the best of us.

This however is dwelling too much on creature comforts, and departing from the discussion of the mysteries of the Koksilah, the silent and mysterious stream of Vancouver Island. It is as shy and retiring as the primitive Indian.

KOKSILAH RIVER: "A QUIET SPOT."

Langley, photo.

It steals quietly on its way over its rocky bed; it does not jump merrily, laughingly over the rocks like most mountain streams; its eddies do not play tag with each other in the corners. Where it is forced out of its silence and reticence it seems to have made an arrangement with the overhanging bluffs and the sheltering branches of the giant firs to hush its voice. At only one spot does it forget its staidness, its seeming vow of perpetual silence. That is at the falls at Gosnell's Pool. There it is betrayed into something like laughter, but it speedily becomes ashamed of its weakness at temporary frivolity, and does penance by sinking itself in an immense pool of impenetrable blackness.

The Koksilah is the grave of many reputations. Unconquered and unconquerable Isaac Waltons have gone there and come away vanquished, crestfallen, and crushed. They have gone to the great pools with magnificent, costly tackle and brilliant reputations in the piscatorial world, and they have been deprived of both tackle and reputations by

the trout of that, to some, most attractive of fishing streams.

The class of fisherman who measures his sport by the number he slaughters has no use for the Koksilah. The fisherman who will match skill, science, patience and fine tackle against a four or six pound trout that can, and what is more will, fight him to a finish, and then at times get away from him, has nothing but words of respect for every fish in those great pools. Your big gay-looking Jock Scott drops into the upper part of the pool and immediately a couple of big sober-looking trout will come like a rifle ball from the shelter of a rock. Seeing them rush you instinctively haul in your slack line and prepare to strike but when within an inch or less of Jock, they will turn disdainfully away. You try again with the same result; or perhaps a great steel-head, looking like a torpedo destroyer will come tearing from the inky mysteriousness. He, too, will size up the situation, and again your nervous and physical tension has gone for naught. You try the old reliable Royal Coachman, having crept back carefully out of sight in order to effect the change. This time one or two of the finny monsters will rush to the surface, and when almost on the fly will deliberately turn and strike it with his tail to knock the white wings off. Woe betide your tackle if the hook gets caught; you will imagine you have got in tow of a Japanese cruiser chasing a Russian man-of-war. The Coachman does not effect a junction, so you return to the Jock Scott. He floats out gaily from the beginning of the pool, and glides aside into the slack water. He is subjected to severe scrutiny by those knowing old chaps below but is not touched. You let him float down stream and into the ripple, where the water is running in a milky foam and one of two things happens. Either you get a tug that nearly yanks the rod out of your hand or you see a polished silver body jump clear out of the foaming water. Then is the time to look out for squalls. That chap has got your seventy-five cent Jock Scott, and it will take you all your time to save it. He is full of Satan himself in the matter of tricks: he will run at you

COWICHAN RIVER (SAHTLAM), VANCOUVER ISLAND. A pool full of possibilities for the fisherman.

Binns, photo.

and from you, and he will run across you ; he will keep an automatic reel with the finest spring just as busy as it can be. There is no plunging and splashing for the mere fun of the thing ; that fellow is full of method in his efforts to do you up ; he is tactful and thoughtful. If you don't know his tribe you will treat him as an ordinary trout for the first minute, endeavoring to keep a taut line on him, and hold him head on to the stream. Before the first minute of the struggle is over however you have

come to realize that he is every whit your equal, with large chances in favor of being your superior ; and you, if you are a real fisherman, will then settle down in dead earnest to the work of saving your tackle and your reputation. For perhaps the first time in your life you are forced to admit that there is a fish to whom you should take off your hat. But don't do it—at least not just then ; for if you relax a finger from the management of your rod and reel, it is all hunky-dory with you.

The situation is ideal—the towering, black, rocky bluffs overhanging the river the great British Columbia pine trees all around you ; the solitude of the woods, the river at your feet, not exactly sullen but reserved, reticent, not repellant but yet not inviting any great friendship, and withal apparently somewhat resentful at the intrusion you have made upon its privacy.

When that fish is conquered, if you succeed in conquering him, you take him up on the bank, and laying him out on the cool damp moss, you admit that he comes of a stock that is worth fighting. If you have never met his like before you conclude, unreservedly and generously, that in spite of your vast and varied experience as a fisherman, hitherto you have only been playing at fishing, and at last you have tasted something of the experience of which you have read or heard and now know—"Royal Sport!"

That is the kind of fishing the real fisherman enjoys on the Koksilah!

## The Deer Hunt of "Union Camp."

By W. HICKSON.

**I**T has been said that "The anticipation of a deer hunt far exceeds the realization of it," but such a statement as this would be a libel on our hunts for the last three seasons, in the green pines of the "Dickson Limits," in the rugged township of Anstruther, in the northern part of the county of Peterborough, Ontario.

The writer of this article had been in

this district trout fishing and was struck with the matchless beauty of the scenery of this lake region, which lies about thirty five miles north east of Bobcaygeon.

Here in the months of October and November you will always find the most delightful, clear, cool, life-giving and invigorating atmosphere, laden with the ozone wafted from the sturdy green pines whose majestic splendor rival that of the huge granite rocks which run in parallel

HOW WE TOOK OUT OUR GAME

ridges. From what could be seen here it seemed an ideal resort for deer ; in fact a veritable Paradise for them, and hence a party of ten consisting of Byron V. Covert, Jno. Marshall, Bert. Green, and Jean Fierre of Lockport, all of whom had hunted for some years in the Adirondacks, and E. Irwin, Jos. Irwin, and Jas. Irwin of Inviorlock summer resort Sandy Lake ; and Percy Reid, Jno. Reid and the writer of Bobcaygeon, who had hunted in Haliburton and Bass Lake districts, in Ontario, for several years determined to try this play ground of the red deer, for their hunt in 1903.

After we had all our hunting requisites packed in three waggons, we started out from Bobcaygeon, in high hopes, along a tortuous road, through a luxuriant growth of maple, fir and pine till we arrived on the bank of the east branch of Stony Creek, and here we pitched our tents on the last day of October.

On the first day of the hunt we kept our dogs tied, and as none of us knew

the grounds well, we started out with compasses, axes, hatchets, hunting knives and our rifles to make a reconnaissance ; we located runways, blazed trails noted landmarks, made a systematic plan for the season's hunt and succeeded in killing two deer.

What beautiful mornings we had ! They broke, bright and calm, mostly with heavy grey frosts, so that our dogs could be heard great distances, and the only thing we had to watch was the direction of the wind, which must be observed in a successful deer hunt. Every morning before old Sol had made the eastern sky aglow, we were busy, so were the dogs, so were the deer, and the tall pine woods were made alive with the music of the dogs and the "pings" of the rifles. At the end of eight days every one in the party had had that sort of electrifying pleasure which comes to hunters in killing one or two deer ; and we had a goodly number to load for home.

In 1904 we determined to try our

fortune in the same locality and "do business at the old stand", and an interesting hunt it proved with deer hunters on every side of us. Our success the previous season had caused thirty or forty amateurs in the chase, to think they had nothing to do but to come to the same vicinity, let a few dogs loose, and then sit down near their camps and kill deer. They found these to be idle dreams before a week had passed, as half of the season had elapsed before some of these

and knew game was afoot. Soon a 30-40 rang out clearly and Percy Reid stopped a large buck in his headlong career.

After we had carried this fellow about two miles, we concluded it would be better to let the next 240 lb. buck come nearer the camp, but Percy thought that was the one thing he could not do.

At the end of thirteen days we had our legal number, and were off the next

A FINE BUCK

parties had a deer. As we knew the grounds and took advantage of wind and weather we managed to hang a number up at the end of the first week.

As the first day of the second week's hunt, was clear, calm and frosty we had no choice of direction, but our guiding star led us towards the north, and it was not long before our dogs were making music, which reverberated among the lofty granite ridges, and was carried gently along on the clear, cold atmosphere. Every man was at his runaway

morning, rolling along, before the sun had gilded the eastern horizon, and reached Bobcaygeon just as he cradled himself in the western sky, all being highly pleased, as each member of the party had killed at least one deer.

As nothing succeeds like success, we drove our stakes, on the same ground on the last day of October, last year, and were out early, very early on the first day of the hunt, in good time, to be caught in a driving snow-storm, so we returned to camp and did nothing til

the third, and on that day we hung up two fine deer.

We had discovered by this time that the spruce swamps which are such splendid coverts for deer, were so full of water that neither we nor the dogs could follow them in these retreats and although we could get as many as eight or nine "starts" in a morning, not a deer came to the runways, for they well knew they were perfectly safe, in the middle of a spruce swamp, standing in a foot or two of water, although the dogs were howling around the edge of it. However on the fifth day Alf, who had been putting out the dogs came in at noon with, "Well boys I had four starts this morning and the old dog, Oscar, left a large buck in the little swamp just over the hill to the south."

A dinner fit for a king was ready, and the odor from the fried venison steak and hot coffee, whetted our already sharp appetites, so down we sat to partake of it, with a relish only peculiar to hunters; and, at the same time discussed the feasibility of driving the buck a distance of a mile and a half to the creek which was frozen over to the depth of an inch. As soon as dinner was finished five of us seized our rifles and in a few minutes Alf had us at the place the buck entered, but we soon found his track out from his hiding place. We formed in a semicircle, with two on the right, and two on the left of the one who followed the track, each being about 300 yards apart. We kept the same position as nearly as possible and drove our

game to the creek. The rattle of the ice was the first intimation of his arrival there and four of us ran to the crest of a high bluff and saw him plunging through the ice furiously. We all opened fire on him simultaneously, and kept it up till he rolled over on his right side, and made a swirl, in his dying agonies in the middle of the stream. Just at this moment Perce came up in hot haste, from the right, pale, gasping and winded and asked "What on earth was that fusilade about"! We pointed to a 210 lb. buck lying in the centre of the creek, with the sun glinting from his left antler that stood so proudly above the water. "Fine shots indeed!" exclaimed Perce, "to use forty or fifty cartridge to kill one deer." We picked up our empties and counted fifty-three. At this Perce said "Wait till I knock that horn off him," and so saying he raised his 30-40 and fired twice in quick succession, but both bullets hit a foot or so low, and one of us remarked, "You must have been shooting at the horn under the water!"

We hunted the remaining days that were fine, with varying success, and had quite a number hung up at the end of the 15th of November.

On the 16th we returned to Bobcaygeon, far more recuperated, strengthened and energized, both mentally and physically, than if we had taken several dollars' worth of liquorzone, Ferrozone or any doctor's medicine.

May we all be able to repeat these hunts!

## My First Bear.

By J. C. MORRISON.

**O**N the seventh day of the month of May, last, Mr. Dave Woolsey and myself boarded the East bound transcontinental train, both of us looking as though we were after Chief Bombaata and his Zulu warriors. "Dave" had a Martini army rifle, while I had a 30-40 Winchester. Our outfit consisted of two pairs of blankets, a light five pound tent, and

about twenty pounds of bacon, hard-tack, tea, coffee, etc.

We got off the train at "Flat Creek", a flag station, with telephone connections about twelve miles from Glacier House. After lunch we put our "ictahs" into two packs, and then, rifle in hand, we shouldered these packs and started on our seven mile walk through a cedar and pine forest. We kept on the right bank

of "Flat Creek", a roaring, foaming torrent of snow water, direct from the fields of eternal snow and ice, on the mountains which were on three sides of our route.

As we rested, at different points on the trail, Dave, who has a record of forty two bears, pointed out where he had shot different kinds of game, bears, caribou, and goat. When within half a mile of camp, we heard several sharp whistles, and looking ahead we saw several hoary marmots, "whistlers" or ground hogs, sitting on the rocks. I tried the 30-40 on them, getting two big fat fellows. The fur is an iron grey color and very pretty. We carried them to camp intending to try a steak, but hadn't the courage.

About five o'clock we reached the foot of the Pass and camped at the junction of Marmot and Flat Creeks. A supper of bacon, hard-tack and coffee, put us in good spirits, and, to the thunderous harmony of the two waterfalls nearby, we swapped yarns by a roaring fire until bed time.

Four o'clock found us awake, just as the shadows of night were creeping back into the deeper gloom of the forest. After breakfast, with packs on up we climbed to the summit of the Pass, where we found rivers of ice and snow piled in "tumultuous ruin" right across the trail, from slides that had come down the sloping sides of the towering peaks above. Dave said he was crossing here one day and saw a grizzly and her two cubs crossing a slide above him. He crept back and around to shelter, and when they came within fifty yards, he bagged all three.

We now started down towards Fish River, with a new creek on our left. We wound down the Pass over three miles of snow, from ten to twenty feet deep, in two places winding along the face of a canyon, where a misstep meant death down in the raging torrent below. Then, suddenly we burst out of the forest and snow, into a fine view of the river, and valley away below us. In front was Jeopardy Slide, half a mile across, all green and beautiful, fairly carpeted with large yellow lilies and the white Texas star flowers. Away to our left like a gigantic shield of silver, a glacier, miles in extent and a thousand feet deep gleam-

ed in the bright sunshine, while above and beyond, spire after spire in spotless white, in this great Temple of God, shone fair and beautiful.

Down across the slide we went, meeting a fresh bear track on the way, to camp, under the "Big Tree", on the river bank. It was May the eighth and yet we found a snow field from two to three feet deep stretched all around for miles up and down the river, making a high-class, cheap storage plant. After pitching camp and getting in good humor with ourselves internally, Dave led the way up Bain Creek just as the sun was setting. We climbed up along the steep bank for half a mile, watching closely the lily patches above where the bear feed, the lily bulbs being "pie" for them.

Suddenly Woolsey grabbed my arm and pointing to a dark object, standing in some heavy alder bushes, about two hundred and fifty yards away, said the magic words "a bear."

He was a whopper of a Silver Tip, standing broadside on to us and digging lilies, like a Jamaica nigger at the Panama canal. We could not see his head, and had no yearnings to ask his permission, so, both taking aim, with sights at two hundred and fifty yards, we let go. Shades of Corbett! He did a whirl on his hind pins and came down hill, to call on us, at about 52.4 miles an hour! With his head up and the hump he got on himself he looked to "yours truly" like a cyclone of the maddest meat I'd ever looked at, and he got bigger every second. All this time that "Human Icicle" alongside of me was saying, "Don't shoot! don't shoot!" By the time I'd swallowed my larynx three or four times and pushed my heart back with my tongue, his Bearship was within seventy five yards, and coming up a little sideways. Disregarding Dave's orders, (I believe he wanted to ride him to camp) I let drive at the bear's shoulders. With a roar of rage Mr. Grizzly slid backward and came about twenty-five yards further, then another 30-40 across the spine, disabled him and he lay helpless, with his great, massive head swaying from side to side. Dave took my rifle and shot him down the back, the expanding

bullet tearing the heart clean in two ; the head dropped and "my first bear" was dead.

Then I let off such whoops, that four startled mountain goats came out on the cliffs above and looked over at us, with cold disapproval at such actions. We had some fun turning that five hundred pounds of porter-house steak over in skinning him. Then taking the head and skin with about twenty pounds of tenderloin, we went back to camp. Next morning we waded the river and went down along the bank to the different slides. Going by one, near camp, we saw a fine black bruin moving along above us in the thick alders. I took a shot at him, he felt that the air didn't suit him and went, leaving no trace, and without a dog it was useless to follow.

We climbed high up the mountain side, and got a view worth the effort a thousand times over. Below us was the silver river winding through a dark pine and cedar forest ; across the valley a chain of mountain peaks with massive, frowning fronts, rearing their majestic, snow crowned heads into the "Infinite blue untrod," and nestling like jewels of emerald hue ; in the crevices, were seven glaciers in three miles from opposite our camp to where we were.

After inspecting some mining claims Dave owned, that showed a fine vein of ore carrying zinc, copper and silver, we went back to camp, passing on the way a hunter's cabin. They had a fine caribou hide with splendid fur that they had shot in season, rolled up and drying.

Next morning we went up the river saw some fine specimens of wood duck on the water, quite tame and apparently nesting near by ; found some fresh caribou tracks, a bull and two cows that had been near our camp the night before,

also a fresh bear track, a big one too, but didn't see him.

That evening we saw a large black bear across the river on a slide, so across the river we waded. What was water to the middle with a "mukwash" in sight ? We climbed up the bank and got so near in the thick alders that we could smell his Bruinship and I remarked to Dave, "Smells like a pig don't he" ? Just when we were planning how we'd dry his hide to pack over the Pass, the traitor wind changed, a gust came up over the hill, the enemy scented our plans, and "woof—woof"—he was gone, like a Scotch, down Reggie's throat. Back to the woods went we wet, mad, and making cursory remarks on the way.

We hit the back trail next day over the Pass, making record time, as we went over the Summit at noon, for though a "mukwash" might swat a man into pulp just for physical exercise, a playful slide is apt to put a hunter into cold storage for a century.

At lunch we stopped at Marmot Creek in Van Sice camp and after lunch Dave spread the remnants of our "ictahs" on a log for a fat porcupine, who was sitting watching us, from a log about forty feet away. People speak of tea strong enough to "make your hair curl". I took about a quart of Dave's brand over and tried it, on the porcupine. It certainly made him wiggle his quills, but he looked very disgusted to think that I'd waste such "amber brew."

We reached Revelstoke tired but happy and had to prove both by ocular and muscular demonstrations, that we didn't hold up a Siwash Indian for the bear, or kill him by "handicapping". My first bear measured seven feet six inches by six feet.

## Fish and Game Protection in Alberta.

**A**LTHOUGH Wheat is King in the West, there are those who do not allow the whole of their energies to be absorbed, or their interests entirely centred either on Wheat, Cattle, or Real Estate. These are highly important to the West without a doubt, but they do not make up the whole of life. There are those who like to forget them, if only for a day or two, and find some profitable change to themselves in fishing, hunting and communing with nature. Now the West is becoming settled these men are increasing in numbers, and freed from the first anxieties of getting bread for themselves and families—a task inevitable to all pioneers—they are in larger numbers seeking some relaxation from exhausting toil. The West can give them all they wish in the means of healthy recreation as well as in work. All through Canada the fish and the game have at one time been abundant, and the prairies, the foot hills, and the mountains have had their share. Recklessness has done its work in the West as well as in the East, but the West, like the East, is waking up, and means with characteristic Western energy to make up for lost time.

Enterprising Alberta is not going to be the last in the race. The people of that beautiful Province have a Government willing to lead instead of being led and in several instances have they adopted broad views of their duties, and taken steps to keep Alberta well to the front.

Throughout the Province the feeling in favor of the protection of fish and game has taken root and is bearing fruit. Already the ground work has been laid. It is proposed if possible to form a local association in every town and district. in the Province, to hold a representative Convention later on at some central point, and at such gathering to form a Provincial Association, and lay down some of the lines along which fish and game protection in Alberta shall proceed. The views of such a representative gathering will command respect anywhere, and already several members have promised that the decisions that may be arrived at shall receive careful attention from the local Legislature.

In all good work a start has to be made somewhere, and in this particular matter of forming local associations, Calgary took the lead though that go ahead city was not far in front of Wetaskiwan, Red Deer, Okotoks, High River, MacLeod, Lethbridge, etc. in all of which places active steps have been taken to form local associations. The educational effect of the formation of these associations is likely to be considerable, and at least they call attention to a pressing need of the West—the improvements of the game laws, and the organization of a special body of men to see to their enforcement. The difficulty of covering the whole ground can be largely overcome by each member of these local associations constituting himself an extra fish and game warden, and seeing that his own district is well looked after.

The usual instances were quoted at the Calgary meeting of a single individual killing from two hundred to three hundred ducks per day many of them young ones not of the slightest use to anyone, and merely gratifying a lust for slaughter. Tales were also told of immature trout caught in season and out of season, and the failure of men doing this work to even trouble to return such fish to the water. Everyone agreed as to the absolute necessity, if anything in the way of fish and game is to be saved at all, of immediate and active steps being taken to give better protection, and to educate the farmers and settlers up to the point of seeing that these matters are of deep concern to them. When the time comes that these individuals recognise their true interests in this matter the days of the pothunter and game hog will have passed. Sport is one thing and ruthless destruction quite another. The two have nothing in common between them.

The right spirit was struck at these Alberta meetings. It was admitted that rigid observance of the game laws could not perhaps be expected. They will however go nearer to it for trying and when they show every farmer and settler how the observance of these laws come home to them, and mean a continuance of fish and game for themselves,

as well as an asset of value in addition to their land they will go a long way towards hastening the day when fish and game will be properly protected throughout Alberta. Then fish, game and bird life will increase, and there will be enough for all in their seasons.

The Calgary officials of the local association are :—

Hon. President, C. A. Stuart, M.P.P.

President, Rev. G. H. Hogbin.

Vice-President, R. A. Darker.

Secretary, K. D. Johnston.

Treasurer, G. L. Peet.

Executive Committee :— Wm. Riley, Dr. Ings, W. A. Thompson, J. Mosley, Major Barwis, Geo. Hope Johnston, O. E. Brown, and the officer commanding the R. N. W. M. P. The membership fees were fixed at one dollar.

## Sport in Crows Nest.

BY A. HENEAGE FINCH.

**L**ATE last fall Sid. McCabe and I went up to Crows Nest and got a dandy "black tail" — and thereby hangs a tale. We were away two days, and if there had been a little snow we might have got all kinds of game as signs were abundant.

I would have given a dollar, mostly cash, just to see you laugh at me wrestling with that three hundred and twenty pounder. Carrying the camp kit up the mountains the previous summer was a Sunday school pic-nic compared with the work of getting out that deer.

We got a pack horse from Crows Nest—one that was all wool and a yard wide, warranted not to rip, rend or run down at heel. We went west about six miles on an old trail, then had three miles up and down ravines so steep that the pony had at times to slide down on his haunches; and ascending we had to use all kinds of suasion, moral and the other kind—I used the moral kind.

After about half an hour of rearing, snorting, bucking and cavorting, we got the carcass on and tied with two big ropes. It was nearly as big as the pony, and of all the slipping and sliding you ever saw we had it to our hearts' content.

The first steep hill we had to climb all went well till we were nearly at the top, when at a place a little steeper than the rest, the pony lost his balance and rolled heels over head to the bottom. He however brought up on his feet with the carcass still clinging to him though much awry.

Fetching the hill on an angle we made it all right. This plan we tried success-

fully both up and down, till the last steep descent as we neared the trail. This was the steepest of all, and when about a quarter of the way down we struck a deer trail running straight down hill, his Nagship concluded to follow the trail. The carcass, now much thawed out, slid forward on his neck. He snorted, bucked, and overbalanced, and with a series of somersaults he plunged into the stream at the bottom which was about two feet deep.

Such a churning and snorting, I never again wish to see. He never desisted till he freed himself from his troublesome burden, saddle and all. Well, we were on hand in time and captured him. After mending the broken girths, and with much trouble we managed to saddle him.

Would he allow us to load the quarry? Nay, verily! We had to tie him to a tree, blindfold him, hobble all four feet, and then he would throw himself. So we had to prop him up with poles across and under his belly, fore and aft, and at last got him loaded and well bound on. Such squealing, snorting, and bucking I never saw before even in breaking a new broncho.

Did we perspire? Well, I guess!

However where's the fun in such things, if you have no trouble? This is a slice of Teddy's strenuous life, and it is the part I enjoy the most! If deer stalking were but a summer pic-nic every tender foot and scented dude would soon be past master!

By moonlight we were home, happy, and as proud as kings, and with appetites the like of which Rockfeller would give a fortune to possess!

# Camping, Tramping and Fishing in Nova Scotia.

By W. D. TAUNTON.

**F**OR a solid hour and a half the rain had been coming down in torrents. It seemed as though our hut was situated directly under the falls, and the entire contents of the big lake were coming our way. The branches of the tall spruce and birch trees were lashing one another, and occasional roars of thunder would startle the occupants, and the continuous flashing of lightning told us plainly that the elements were doing their worst.

Old Josh Umlah, our guide, refilled his pipe, trimmed the greasy oil lamp and took a look without.

"We are lucky to be under kiver" he said. "It's a great forest storm, but it will be all over before the sun rises. The fishing will be good on the lakes the morrow." And then he told us hunting and fishing stories, of how he took ten "dizzen" beautiful trout out of the very lake we were to fish; how he killed his 43rd moose and his 109th bear, to say nothing of coons, partridges, foxes, and the other occupants of the forest in the heart of which we were. We could almost imagine we heard bruin sniffing at the door of the hut and the crackling of the branches brought the impression that a fine bull moose had passed close to our quarters in his mad flight to escape the storm!

We were on what is known in this part of the world, and probably nowhere else as "a walking and fishing excursion." Our hut, or the hut we were occupying, was situated fifteen miles from Halifax, partly on the main road, if you cared to take it, and partly over a beaten path through the forest primeval.

We left Halifax in the early morning. Our party consisted of five. One, a New Yorker named Purcelle, was a novice. He had heard of such excursions and gladly joined the party to satisfy his curiosity. That men could start off and walk fifteen miles through the woods, carrying their fishing gear, a gun and provisions, sleep in a hut all night, fish all the next day and after another night

resting on a bed of spruce boughs, tramp back to the city and enjoy it all, was a mystery to him. And this in the month of July, too! But July in the woods of Nova Scotia and in the City of New York are entirely different propositions, and he soon found that out.

It was 7 a. m. when we got into a row boat on the Halifax side of the beautiful North West Arm, and in a few minutes were landed on the other side and had started to climb Jollymore's Hill. This hill rather tended to discourage the New Yorker, for it was almost a perpendicular climb, and he was carrying his pack like the rest of us. But it was soon accomplished and we were on the level, jogging along at a three mile clip close by the shores of Williams Lake, an immense sheet of fresh water, studded with little islands and brush everywhere to the water's edge. Trout are here in abundance, but they are small and consequently the lake is left to the tender mercies of the small boy from the city. We were after big fish, so we viewed the lake rather contemptuously. A passing reference was made in a rather shamed face way of the time we fished there with worm or minnow, when we were boys. But we are fly fishermen now, and scorn to use bait of any kind.

We stopped at Topple's, a place where they sell ginger beer, and off we are again. Not a house in sight for three miles, and it soon passed. Only another one and we were out on the Prospect Road, and swinging along towards "Josh's", only stopping long enough to allow me to take a snap shot of my companions.

We arrive at Josh's at 9 a. m. or a few minutes later, deposit our traps on the wood pile and go inside for breakfast.

The menu was elaborate—to us. We had oatmeal porridge; bacon; eggs, boiled or fried; jam; tea; toast.

There was no printed bill of fare. It was only the humble home of a trapper, but it was clean and inviting, and there is no better cook—plain cook—in New York, than Mrs. Josh Umlah—so Pur-

celle said. Josh now joins our party. And, before starting, for the first time in his life, Josh poses for his picture.

We are off again at ten o'clock. We have a five mile tramp to the Nine Mile River Bridge, over an old post road that has not been used for over forty years, and we do not expect to see, (except for ourselves,) a human face until we return to Josh's. At the Nine Mile River we halt for refreshments and a short rest. We have only about three miles to tramp to the camp and the scenery here is delightful, while the whole place seems to breathe contentment. Josh tells us that there are Salmon in the river as well as big trout. Our fishing gear is not comeatable, but 'I was once a boy and now I am a boy again.' The New Yorker tells me he is a born photographer and uses my kodak with deadly effect. I succeeded in turning over a small trout and that was the sum total of my catch. I suppose the salmon laughed at my primitive fishing rod.

But while we have only about three miles to our destination, we have a different road to travel. We have now only a very narrow path to follow, and this path is almost through a dense growth of young birch and firs, and we find that it takes us as long to cover the three miles as it took to cover half a dozen at the other end of the journey.

Josh has gone on ahead, and when we arrive we find he has a fire lighted outside the camp and boiling water is ready for tea making.

We are at the camp and we are not sorry. The tramp has been an extremely pleasant one, but rain is "spitting" and, as Josh says, we want to get "handy kiver." One by one we are relieved of our packs and in a short time our dusty clothing is hanging on the spruce boughs and we are having a delightful plunge bath in one of the sweetest and coolest fresh water streams that ever ran across country and a blinking owl is all there is to disturb our privacy.

Then comes dinner. Such a dining room! Combination carpet, chairs and table cloth of the brightest and purest green and as soft as the finest silk. No need of electric fans. We are not very far from the Atlantic Ocean and as the sun moves down a gentle mist—some

call it fog—comes in from the sea, that is when the wind blows that way, and penetrates even the thickest woods. That is why the verdure is so sweet and green. But by this same sign the old trapper knows that rain will follow, because he says, it always rains when the wind blows up from the Southeast.

Purcelle said the dinner was the treat of his life time. But then a man who is tramping through the woods all day with a twenty pound pack on his back, is liable to work up a gigantic appetite! Here was the menu: Cock O' the North;

"NOW I AM A BOY AGAIN."

beefsteak and boiled potatoes; sardines; bread and butter; tea.

Perhaps it is necessary for me to explain that Cock O' the North is not soup. The vulgar call it Scotch Whiskey. The potatoes had their jackets on, but that did not matter.

Dinner over we all turned "slaveys" and polished up the tinware. Fishing gear was looked over and Josh started to "make up the beds." He had to gather our mattresses piecemeal, that is, the tender boughs of the spruce trees and it required a lot for five beds. He was anxious to have our beds made up before the rain came and he succeeded.

The day was fast waning and the spluttering embers told us that we had better desert our camp fire and seek the seclusion and shelter of our cabin. It was a regular log hut, the seams stuffed with moss, and the roof covered with birch

bark. But it was watertight and comfortable and as we spread ourselves on our couches, we watched old Josh as he proceeded to make his famous punch. It was a simple task we thought. A bottle of old Jamaica Rum was produced. This was emptied into a tin can holding perhaps a quart of hot water. Three lemons and some grated nutmeg were added, and then was served a drink fit for the gods. I do not know how that punch would taste at the club, but certainly it tasted well that night, and more than that it helped to loosen Josh's

JOSH UMLAH, GUIDE AND TRAPPER

tongue and we listened for several hours to stories of the hunt, wonderful in their conception and told to the accompaniment of a howling rainstorm.

"Curious how bears like rum", said Josh, as he emptied his panican down his throat. "Onst I hid a bottle of rum in a mossy bank beside this very stream. We went off in the morning and when we returned at night the rum was gone and so was all our bread. I found the empty bottle, and, as there were fresh bear tracks all about, I could have sworn bruin drank my rum. So says I to myself, some day I will get that bear drunk and catch him alive. Unbeknown to anyone I soaked a pint of strong rum into a loaf of bread and one day set off by myself, placed the loaf close to the cabin door there and went home. The next morning I started back to get my intoxicated bear."

"Did you get him?" we all inquired. "No" replied Josh, as he made a reach for the punch, "I only came a mile from the house when I decided to return home."

"Why"? we asked.

"Because," replied Josh, "I decided them fellows are bad enough to tackle when they are sober and I was not going to monkey with a drunken one."

That was his good night story.

Josh was up before the sun rose the next morning. We had planned to be on the lake at 5.30, and there was coffee to be made. Some dry birch bark stowed away inside the hut, soon solved the problem. But for the dripping trees there was no sign of the storm which raged so furiously all night, though the sun tarried behind the clouds and our guide assayed to again remark that it was "jist the day to catch fish!" It was like anything but a day in July, and the stout man in the party even donned an old reefer which he found in the hut. We were soon at the side of the Lake. Rods were brought out, casts adjusted and Josh consulted as to the proper fly. I snapped the fat man as he made a cast, but a drizzling rain prevented me from getting a picture of the New Yorker as he landed a two pound trout. Did we have luck? Some. But this is not a fish story and I do not wish to introduce anything that might throw doubt on the general truthfulness of the narrative. We had good sport. I will say that much. Further I will venture that parties have taken as many as five dozen beautiful trout out of the same lake in one day. We were sports, as I have already remarked, and not hogs, and I may in all safety venture that as an excuse for our not taking so many.

At noon we lunched. All the viands were "Made in Canada" excepting a small package, the contents of which came from the highlands of Scotland.

During the afternoon the sun came out in all its glory and the fish apparently sought the bottom of the lake. An early dinner at the hut, another evening of story and song, for this time we were able to stay out of doors. Another night of unbroken slumber and an early start on our journey homeward.

# How I Didn't Get the Bear.

Notes From the Canadian Camp Club.

By J. A. HOPE.

**I**T is only the 17th of August, yet the pothunter is at work on winged game. Although the Game Laws of Ontario have decreed that the first of September for duck and the 15th for grouse begin the open season, the pothunter is already at work. The pothunter respects neither the laws of God or man. Six months in jail without the option of a fine should be the lowest sentence imposed on game hogs in season and pothunters out of season. 'Tis the only law they will learn to respect.

Bear seem to be fairly plentiful round Lake Waquakobing and neighbourhood, judging from the number seen and killed. One came round close to the Canadian Camp Clubhouse on the first of August. I was trying for a bass under some cliffs about two hundred and fifty yards south and east of the Clubhouse about half past seven in the evening when I heard a cracking of brushwood nearly overhead. Looking up my eyes encountered a fine black bear where I had only expected to see a deer. Although in plain sight and coming towards me he failed to see me in the canoe, though he looked down at the water splashed up by a rock he dislodged with his foot, and which plunged into the lake. A bear's worst point is his eyes; a slight breeze blowing mostly from the west saved me for the time from being winded. Keeping the canoe moving parallel and behind him as he made his way towards the Clubhouse I kept him in sight for three hundred feet or more when the rocks broke off abruptly ending straight up and down. There was a small trail full of loose rock winding down its face. Down this Bruin came—tail first—the loose rock clattering to the bottom. While he was messing about

among the brushwood below I drove the canoe forward towards the Clubhouse for my rifle. I had nearly managed to pass him when he walked to the edge of the lake not sixty feet away and saw me. For fully half a minute we examined each other intently. A puff of wind soon dispelled my hopes that he might take the canoe for a floating log. Giving a snort of disgust he dashed into the bushes, making quite a racket in his hurry to get away. Knowing there was a ridge behind the Clubhouse I drove the canoe ashore with three strokes of the paddle and lost no time getting the rifle, making my way out of the house and behind it, in an effort to cut him off. Quick as I was however he was quicker still, for I was just in time to catch a glimpse of him among some raspberry bushes on top of the ridge one hundred and fifty yards away. I made a snap shot and a dull thud told me I had the range all right. There was no chance for a second shot as the smoke (black powder) hung like a blanket in front of me on the still atmosphere. This was a position in which all the advantages were with the smokeless rifle. I picked up his trail and found blood but not the owner—better luck next time! As he was heading straight for the Clubhouse, perhaps I should not have fired at him, for he might only have intended to register his name, and perhaps wished to become a member! Two more have been seen since, one at each end of the lake, while three have been shot further north, and others seen on the Mississauga River.

It is a little too early to pass an opinion on how young grouse have come through the season. Present signs point to a scarcity close by. Duck are coming in from the north, and quite a few are seen on the lake night and morning.

OUR CATCH WAS A RECORD BREAKER

## A Day's Fishing on the Shores of the Georgian Bay.

BY VINCENT S. STEVENS.

**T**IS up in the Georgian Bay district of the Great Lakes that one gets close to the heart of nature, while along its rocky isletted shores is found some of the finest fishing on the continent.

Pointe Au Baril, situated on the eastern shore midway between the rare beauty of the northern shore where the blue waters of the Bay break into crested foam on the rocky bases of the mountains rising up from the water's edge, and the quiet farming country stretching away from Georgian's southern borders, is probably the finest fishing point in that whole region. At least that is what we four noted it one September evening af-

ter the rarest day of sport in fishing we had ever had.

Mr. and Mrs. Patton, their son, Frank, and I made up the party. We were making the circuit of Georgian Bay by steamer and thought we would stop off for a day's fishing at Pointe Au Baril. Three steel rods and a hand line was our equipment.

Indian guides skilled in the knowledge of that wild region are to be found at most of the towns and fishing points. We secured two, "Bill" and "Jim", in the language of the Anglo-Saxon, but who still retain Pamajewong for their last names in remembrance of their native tribe.

We had hoped to find that our guides, when they came in the morning, would be dressed in the traditional buckskins and moccasins, but instead they wore the clothing and machine made shoes of civilization. Their high cheek bones, bronzed faces and strange reticence, though, placed them unmistakably in the ranks of the race which is fast disappearing from our American continent.

We made an early start. Mr. and Mrs. Patton had Bill, the father, for their guide, while Jim, the son, was at the oars in the boat for Frank and me.

"Um, show you good place, five mile up shore," said Bill as he headed his boat out into the bay and then started up along the shore. Jim followed his lead.

We four had our trolling spoons out, but not even a nibble did we get on the row of five miles up the shore. Then as the Patton's boat headed in between some rocky islets, we saw them get a strike, and soon land a fine fish.

"I've got a good one," soon exclaimed Frank as his pole nearly bent double and his line went out with a swish. Then followed a pretty fight until he finally landed a beautiful seven-pound grass pike.

My turn came next and mine proved to be a fine four pounder.

Back and forth we trolled over a bed of seaweed between the little islands, but the Pattons seemed to be having the best of the luck.

By the time they waved to us that it was the hour for dinner. Frank had landed three fine pike and a two-pound small mouthed black bass, while two pike was the extent of my "string".

Imagine our chagrin upon pulling up alongside of the other boat to see lying in its bottom, six fine black bass and eight pike running from three to nine pounds in weight.

Landing on a rocky islet topped by a cluster of scrubby pine trees, our guides were not long in making preparations for dinner. An interesting scene they made squatting over the fire frying the fish and boiling our coffee. At their back was the dark green of the pines, under their feet the bare rock of that primordial granite, and a pretty spray of golden-rod, lifting its beautiful golden plume from

a crevice in the rock a short distance away gave evidence of Nature's adorning hand even in this wilderness, while on every side stretched away the glistening blue waters of Georgian Bay, with a sky o'erhead rivaling their hue with its azure depth.

The exhilaration of the morning's sport in that bracing atmosphere gave an added zest to the appetites with which we dispatched our dinner. Never before had we tasted fish to compare with the black bass cooked fresh from those cold waters.

Bill and Jim must have put their heads together during the dinner hour for in

BILL AND JIM COOKING DINNER

the afternoon they took us to a still better fishing ground.

Frank and I were the lucky ones during the latter half of the day, and of us two, I had the larger string for the day, though my luck had been so poor in the morning.

My "prize" catch was a twelve and a half pound pike, half crossed with a muscalonge. What a mighty tug he gave as he grabbed my spoon, my reel ringing sharp as the line spun out! Then followed a battle royal to the death. Back and forth he raced making a gallant fight to get away with that tiny linen line which was ever drawing him closer to the boat. Once he jumped clear from the water in a vain attempt to spit out the hook. A beautiful sight he made as he leaped from the water his shining scales sparkling in the sunlight. There was little fight left in him when I finally drew him alongside the boat. We had no landing gaff, and then came a

moment of suspense while I ran my hand along his back and seizing the big fellow just behind the gills, I flung him into the boat. Even then I thought he would get away such a valiant effort did he make to regain his native element.

"My, this is the time a fellow would like to have his worst enemy watching him!" exclaimed Frank, as he landed another big fish.

Four times did beauties which we had nearly landed cut our lines with their sharp teeth and get away with our spoons in their mouths, while twice we had such heavy strikes the fish parted our lines before we had a chance to even start to reel in.

"It will be the same old story," re

marked Frank, "it's the biggest fish one never lands."

We spent the afternoon trolling in the channels between the different islets, starting for the point some time before sunset. Comparing notes as we pulled along together on our way back, we found that Mrs. Patton had landed the largest catch of the day, a thirteen and a half pound fish, one like mine, half pike and half muscalonge, while the day's catch from our four lines was ten small mouthed black bass and forty-six pike running from two pounds in weight to Mrs. Patton's thirteen-and-one-half pounder.

Our catch was declared to be a record breaker by those living at Pointe Au Baril.

## Wintering Birch Bark Canoes.

BY MARTIN HUNTER.

**I** think from my personal care and supervision of Birch Bark canoes for thirty years that I am qualified to give advice as to wintering them successfully.

I may say at the outset that the larger the canoe the more danger there is of the bark splitting by contraction from frost. A canoe of twelve, or fifteen feet, providing it has been in use a season and pretty well loaded at times requires no further precaution than to see it is thoroughly dry at the end of service and placed under cover mouth down, over a couple of beams in a hay loft is as good a place as can be got.

A new canoe, however, of this size or one that has been very little used, should have all the timbers well slacked back except the first three or four in the ends which are not necessary to touch. The ribs should be so slack that they almost tumble out. The best way to loosen them is with a piece of three-quarter inch board, four inches broad, and a couple of feet long. The upper part can be edged off to accommodate the hand and the lower end left perfectly square and flat. This you guide along the edge of the rib and strike with a hammer or wooden mallet, being careful not to

knock too hard or too frequently in one place.

Commence by the timber in the middle immediately aft, or forward, of the middle bar, and work towards both ends of the craft doing two or three at each side of the centre as you go along.

Begin your first blow where the timber bulges first from the almost flat bottom and slacken up to within six inches of the gunwale and the same at the other side.

It goes much quicker and safer to have a man on each side as it avoids the necessity of reaching over or passing from side to side.

It may not be out of place while on the question of Birch Bark canoes to instruct the reader as to the proper way to bind or tighten his craft, as any violent treatment of the bark in the spring after its remaining in a dead, unelastic state all winter would surely lead to regrettable damage.

First, don't be in too much of a hurry to put the canoe into commission in the spring unless you are to give it immediate use. Often in the month of April we have some very cold nights and a canoe newly bound tight and not used would surely rend.

A favorable day in May might be chosen, preferably a day of warm showers and intermittent hot sunshine. Put the canoe out of doors, bottom up and let it undergo this wetting and drying process for half a day. The bark will then be soft and elastic. Now place her on a soft level sward or a couple of horse blankets on the barn floor, and reverse the order of knocking the timbers from what was done last autumn, i. e., commence at each END working TOWARDS the middle and try not to hurry matters. Time taken in the hammering process is time well spent.

The gum on the seams may have become cracked either from the frost or during the binding and extension of the bark. In such a case when your canoe is finished and tight-bound from end to end, turn her over and with a hot poker, or some other piece of heated iron, pass gently over the gum, rubbing the softened pitch with a wet hand behind the iron's passage.

Here again two can do better work than one, one man manipulating the hot iron while the other follows smoothing the soft gum into the cracks.

At some of the inland posts where canoe transport is carried on, as many as twenty or thirty canoes of different sizes are in use from a single man's hunting canoe of twelve feet long, up to big transport ones of thirty feet long, the latter carrying a load of fifty-five hundred pound dead weight, a crew of seven men and provisions for same for a couple of weeks, besides tent poles, cooking utensils and the personal dunnage of the men. And the large and useful vessel is made of Birch Bark, cedar lining and ribs, the only tools required in the construction are a crooked knife, awl and axe.

The safest way we found to winter all canoes longer than eighteen feet, was to slacken the timbers moderately and winter them mouth up on a prepared sandy or soil bed, with a gradient of a few inches in forty.

Each canoe as it was placed in position and the ribs slackened had some of the gum knocked off the lower end. This provided a leak or outflow for the melting snow in spring. Opposite to each bar of the canoe on both sides, stakes were driven into the ground at such an

angle that the end would just catch and engage itself under the gunwale. This kept the canoe in true shape and prevented her opening out from the pressure of winter snows for be it understood where they were placed at the end of the season of navigation, they remained until the next May, open to wind, snow and rain, and a better or safer way could not be found after years of trying different modes.

It must be further explained that at each post there was a commodious building especially for the storage of canoes, but this was only used in summer after the canoes were taken from their winter quarters.

We always had two or three new transport canoes on hand in case of loss in a rapid or some other accident, these were put into the canoe barn fresh from the builder's hands, without gum and the ribs only partially driven, and they remained there over winter suspended on poles, or beams, until required for use.

Before the final binding and gumming the bark was subjected to liberal douces of hot water to soften it up, thus imparting a safe elasticity to insure it from breaking.

The first year a transport canoe was put into commission her work was to carry out to the frontier the valuable packs of pelteries, and return laden with dry goods, guns, ammunition, etc., thereby insuring their safety from the newness and staunchness of the vessel that carried them.

Following this she transported for a couple of years flour, pork, lard, shot, hardware and other coarse portions of the trading outfit. The rest of her life was local trips or use about the post loading hay or wood to the establishment.

Each canoe had a name or number and a record of when first used, thus we knew the age of each craft and the work it had done.

As one of the secrets of having a water tight canoe is in the gumming thereof and properly prepared gum, I would refer the reader to an article in "Recreation" published in New York, January, 1906, entitled "Canoe Gum" in which he will find valuable information regarding the kind of gum to use and the process of preparation.

# Backwoods' Reminiscences.

By H. JERVIS.

**T**O some few of mankind is given the power of portraying nature in her own colours, and in many public exhibitions it is possible to see, beautiful scenes of landscape from various parts of the world ; where, guided by the artist we study with delight, those excellencies, which his good taste and careful judgement have produced. In the present condition of railroad transportation many such views are accessible at a small cost, with the still greater advantages of exercise and pure air, both so necessary to the unnerved and overworked citizen of the crowded cities of this continent.

One morning the first thing after rising, happening to glance along the road which passes the front of the house in in which I was staying in a beautiful part of Ontario, I saw a skunk dodge along. It followed the road a considerable distance, when probably hearing some strange sound took to the bush. Whilst enjoying a pipe, and looking at the various blossoms of the flowers growing in the garden, I saw a humming bird, who darting here and there gathered his sips of honey from the deep cord-loe of various plants, apparently created by nature to fertilize these plants whose funnel structured blossoms are too deep and narrow for the bee to enter. It seemed to have much pleasure in a bunch of Touch-me-not (*impatiens biflora*), a so frequently visiting some *salvia* and morning glories.

This house is situated near Lake Nipissing on the bank of a small river, commanding an excellent view of the lake toward the setting sun. To the north, east and south the view is curtailed by wooded hills, through which a wandering road connects with the more civilized districts of the south, also with other lumbering depots yet further north. The lake teams with fish. Sturgeon, great pike, large eyed pickerel, black bass and other members of the finny tribe found in dark waters, but no trout. On its shores many varieties of beautiful plant life exist.

At the mouth of a small creek on the sandy shore I came across a colony of Horned Bladderwort (*uticularia cornu-*

ta), showy yellow bonnets on naked scapes, with spicy fragrance. Under the fringe of water myrtle from whence the forest clad hills, raise from the shore were bunches of *tobelia cardinalis* which being safe from the hands of children is plentiful and touches up the landscape, nature versus Vibert. On the rock where it penetrates in the sandy shore lanced-leaved golden rods (*enthamia graminea*) spring out of the fissures, breathing a delicate perfume in the healthy atmosphere of this northern district. In the surrounding forest are many plants requiring shade, most curious of all the Indian pipe (*monotropa uniflora*), which when plucked insists on turning black, perhaps as its hanging head suggests, ashamed of itself.

As the lake teams with fish so do the forest protect and feed its numerous inhabitants, bear, wolf, lynx, moose and red deer roam, but little disturbed by man, with exception of the deer during the hunting season. Canada grouse, ruffed grouse, duck, snipe, plover and sandpiper are plentiful and large flocks of geese rest during their southern journey in the flight season.

The hunting season will soon be at hand, many adventures and much amusement will be the result with some venison. A few years ago some friends of mine were camped at the mouth of one of the large rivers flowing into the lake. They were nimrods and they had guides and dogs. Each of them watched a portion of the river for some distance up, the hounds being put out on the opposite side, driving the deer to the river. As soon as the deer attempted by swimming to cross the river, those watching were to shoot the deer.

One deer watered opposite to a huntsman armed with a repeating rifle. He saw it, and at the same time was seized with buck-fever. Shooting at the deer many times, the welkin rang with the echoes of his fusillade. The deer kept on its course, the hunter still firing. The hunter shot again and the deer walked over him, quietly trotting into the cover of the woods, behind the bewildered huntsman. Some of his bullet marks were found in neighboring pine stubs fifteen and twenty feet above the level.

BLACKSTONE HUNT CLUB—MOON RIVER—GEORGIAN BAY DISTRICT

## Hunting in the Highlands of Ontario.

BY C. R. HAMILTON.

**T**HERE is something peculiarly fascinating about deer hunting, or the thousands of sportsmen that each year penetrate the Highlands of Ontario and undergo the hardships necessarily incident in the life of the successful deer hunter would not repeat the journey annually. Bankers, lawyers, doctors, merchants, clerks, and in fact all sorts and conditions of men, early in the fall, as soon as the green forests begin to give way to their autumn hue,

take down their rifles and accoutrements, oil and grease them, sight them, and make ready for the opening season when the law allows the killing of deer. At that time the prevailing topic of conversation in all sporting circles is deer hunting.

Then, when the first frost has nipped the leaves, and the cold north winds have swept them from the trees, the deer hunter packs up his kit, gathers his party together, and hies him to some favorite hunting grounds in the districts of Northern Ontario, there to engage in his enthralling pastime.

The deer hunting season throughout the "Highlands of Ontario" resulted most satisfactorily to the hunters that went into the district during the open season of 1905 (November 1st to 15th). It is estimated that over 10,000 deer and 200 moose were killed during the open season. It is somewhat marvellous how the stock of deer keeps pace with the number killed, but it seems that each year they are becoming more numerous, and there is an increase instead of a diminution. This is accounted for by the shortness of the open season and by the strict prosecution by the Ontario Government of anyone transgressing the

RED DEER HEAD FROM THE "HIGHLANDS OF ONTARIO"

ONE DAY'S CARGO.—MUSKOKA WHARF

laws. The wanton slaughter, which no doubt would have prevailed had hunters been allowed to kill at their pleasure, has thus been prevented to a great extent, and one of the best heritages of the public saved. During the open season of 1905 the Canadian Express Company alone carried, 2,889 deer, the total weight of these shipments amounting to 316,300 pounds. All these carcasses were shipped

ed from points located on the Grand Trunk Railway System, the largest number being taken out of the Maganetawan River Region, the Muskoka Lakes District and points on the Northern Division north of Huntsville. Of course, this is not a criterion of the numbers that are killed, as this does not include those killed by settlers, Indians and half-breeds, and by those hunters

PARTRIDGES ARE PLENTIFUL IN THE "HIGHLANDS OF ONTARIO"

who do not have to express their deer to their homes; nor the wounded ones that get away and die; nor those killed and eaten by the 7,000 hunters and their dogs during the two weeks they are in the woods. Taking all this into consideration it is estimated that there could not have been less than 10,000 deer killed during the season of 1905.

No person is allowed to kill more than two each open season, which extends from the first to the fifteenth of November, both days inclusive. Each license is supplied with two coupons, one of which must be attached to each deer killed, and the carrier who transports

region comprises the moose, caribou and red deer. The moose are plentiful in this district, but are a wary animal, and not a little skill is necessary to get one. During the month of June and early part of July hundreds of these "Monarchs of the Forest" are seen by the canoeist as they are forced to the waters by flies, which infest the woods until about the middle of July. After July 15th the flies and mosquitoes disappear and the moose go back into the woods and fatten up. They are, therefore, not seen so frequently during the month of August, excepting in the early morning or late evening, when they come for their

COMING INTO CAMP—MAGANETAWAN RIVER

the deer is obliged to cancel these coupons when delivered to him for transport. Non-residents are allowed two deer on each license. The license for non-residents is \$25.00.

There are immense tracts of rocky but well wooded territory in the northern districts which can never be brought under cultivation, and which, so long as the forests are not denuded, will continue to be a veritable sportsman's paradise, the haunt and home of the red deer, as well as other game animals native of the province.

#### Moose and Caribou.

The big game found in the Temagami

drink at the water's edge. During September, which is known as the running season, moose are seen in large numbers throughout the district. The open season for hunting these animals commences on October 16th and continues until November 15th, both days inclusive. Only one moose, reindeer or caribou may be taken in any one season by any one person, and no cow moose or young moose or caribou under one year of age can be killed.

Caribou is also an inhabitant of this territory. Signs of them are seen everywhere. They are a much more wary and timid animal than the moose, and are consequently harder to see, and prove

A TEMAGAMI MOOSE HEAD

much more difficult to capture. When seen, they are usually in bands or droves of various numbers. The country lying south and east of Smooth Water Lake, and northwest of the Wakenika Lake and River seems to be the best suited to these cautious animals, as it is a rough and hilly country in which the caribou dwell in greater numbers than in any other localities in the region.

The game birds found in this locality are the ruffed grouse, common willow partridge, and the pine grouse, besides geese duck and other water fowl. In the northern portion of the territory towards the head of Lady Evelyn Lake, Lady Evelyn River, Sucker Gut and

the east branch of the Montreal River, are found duck in abundance. The varieties embrace the following species: Mallard, wood duck, merganser, blue-bill, sheel drake, widgeon etc. Partridge are found almost anywhere in the forest, and are abundant. The open season for shooting ducks is from September 1st to December 1st, both days inclusive, and for partridge from September 15th to December 15th, both days inclusive.

The most numerous of the fur-bearing animals are the bear, martin, mink, otter fox, beaver and muskrat. The otter and beaver, however, are protected and are not allowed to be killed until November 1910.

A MORNING CATCH AT HUNTSVILLE, ONT

# Ontario Fish and Game Convention.

## Important Suggestions for the Government.

**N**O one who considers the past record of Ontario could doubt the position the Premier Province of Canada would take on the questions of fish and game protection. The Province has now spoken, and with a representative voice that demands and will receive consideration. Some of the propositions are of far reaching importance and it may well be that the Government will hesitate before attempting to give full effect to all of them. They will now know, however, that in any endeavors to strengthen the protection already given by the Province to its wonderful assets in fish and game, they will have behind them a large and growing body of public opinion prepared at any time to throw its whole weight in support of authorities who will make this protection a reality.

The Ontario Convention held on the last day of August in the University Buildings at Toronto was notable for the completeness of its arrangements and the consequent success that attended the gatherings. Scattered throughout the province are branch associations and each one was supplied with a carefully prepared pamphlet containing every point that has arisen in connection with the various questions brought to the front in enforcing the acts dealing with fish and game. This pamphlet was the result of consultation with the best authorities, both scientific and practical men being called into consultation and the result was a programme that embodied every possible point that has caused controversy or appeared to require further consideration, both in preparing the acts and in strengthening weak points. Each branch was asked to discuss every point at its own meetings and to send its delegates fully prepared to state the views of the members upon all the questions put forward. Through these means the Convention that assembled at Toronto was not merely representative but practical and ready at once to state their views upon the great variety of ques-

tions that came before them. In every detail the organization was complete and the business discussed and dispatched with a business-like promptness that might well be imitated elsewhere. There was no hurry; there was intelligent and well informed discussion, but there was no dawdling, with the result that the whole ground was covered in one day and the best of work done. As a preliminary a meeting of Secretaries was held in the afternoon of August 30th and the committees arranged, with the result that no time was lost in getting the Convention to work and dispatching an amount of business that was astonishing to all who knew the usual procedure at such gatherings. Of course, the wheels had been well oiled beforehand and the business ability, genius for organization, hard work and the bright cheery spirit of Mr. A. Kelly Evans was accountable for this meritorious performance. The kindly but firm manner of Chief Justice Falconbridge who presided had, also, much to do with the manner in which the time was fairly proportioned and full consideration given to every subject before the Convention pronounced upon it. The missionary work done in the province on behalf of the cause by Mr. A. Kelly Evans and Mr. Oliver Adams was seen in the manner in which the whole Province was represented at the Convention and the true spirit of sportsmanship was shown on every question when the representatives of old Ontario displayed sympathy with any special difficulties that were pointed out in dealing with the newer portion of the Province; and the representatives of New Ontario reciprocated this spirit when points arose which placed the sportsmen of Old Ontario in any similar difficulty. These are considerations which should not fail to influence the Government when they come to consider, in the light of the decisions of the Convention, what proposals shall be submitted to the Legislature next session.

Chief Justice Falconbridge defined the

policy of the Association in a quintette of pertinent paragraphs, which are well worth quoting, so thoroughly do they cover the ground and represent the whole matter to the public:—

That game fish and game, through the attraction they form to tourists, are a most valuable financial asset to the Province, and that therefore, their protection should be encouraged.

That the food fish in our waters should be conserved and regulated for the good of the masses of the people, and not wasted or used for the benefit of one small class of the community.

That certain game birds and song and insectivorous birds are an immensely valuable friend to the farmer in destroying harmful insects, weed seeds, rodents, etc., and the lack of knowledge by the public on such subjects should be combatted steadily.

That the wild lands of the Province suitable to game and the waters of the Province suitable to game fish should be ever kept the property of the public, and that the Association must always endeavour to prevent the acquisition by individuals or groups of individuals of large tracts of territory for the purposes of forming private game preserves.

That the Association should have no connection with politics or any political party.

First in importance it may be pointed out is the proposal to unite the fish and game interests of the Province in one Department with a Minister responsible to the Legislature and to the public for the proper conduct of the same. Such a proposal if carried out could at once be followed by uniting the offices of Fish and Game wardens; and it would not be asking too much of the Department of Lands, Forests and Mines to confer the additional office of Fire Warden upon the same individuals. If this were done sufficient salaries could be paid to allow the men selected for such offices to devote their whole time to the service. The further suggestion to give to every member of the Association and its branches the honorary but authoritative office of Deputy Wardens would strengthen protective work enormously and give an additional honor to membership which would give equally beneficial re-

sults to the Association and to the public service. The Association would do well to put these matters in the forefront of their demands for if they are once conceded they will form a solid foundation of improvement upon which can well be built a system of protection that should prove well nigh perfect and which should form a model for the other Provinces.

The spirit in which the members have entered upon the work and may be trusted to push these reforms, was well illustrated in the numbers of notices which adorned the walls of the hall in which the gathering was held. Conspicuous amongst these notices was one put out by the Lindsay branch offering a reward of \$10 for information of any infraction of the law such as would lead to the conviction of the offenders. The notices came in for much favorable comment and the Lindsay one received some particular words of commendation from the Chariman and others. It was stated that this particular notice had been widely posted and its effect upon law breakers had been most marked.

Another point of human interest was that of licensing of guides. The Convention was heartily in favor of such a course and suggested a fee of one dollar per head. The suggestion to give licensed guides the same powers as Fish and Game wardens and to hold them responsible for any parties whom they accompanied breaking the regulations unless they reported the same, was likewise approved. If these proposals are carried out guides will become responsible men, and the few who injure the names and destroy the confidence necessarily reposed in guides, will be driven out of business. At first sight guides may resent any attempt to regulate them, but a little consideration will speedily convince them that such regulations will be to the advantage of every genuine guide and they need not consider the inefficient ones. Considerable reliance has to be placed upon guides and it is only right that responsible men should alone be allowed in such a calling.

In fishery matters the Convention put itself on record as satisfied with the present close season for speckled trout and with the legal restriction as to size and quantity (viz: six inches long and thirty

of an aggregate weight or ten lbs.) which may be taken in one day. They were opposed to any selling within the Province of speckled trout caught outside either during the close season or any other time.

In the opinion of the practical men present bass should not be introduced into speckled trout waters and they expressed their belief that hatcheries for speckled trout could much more easily

locations in the lakes, stocking these places, and keeping them enclosed from May to November. He quoted from Jacob Reighard of the Michigan Fish Commission who says " That in pond rearing there is not twenty per cent loss from fry to fingerlings, even when left with the parent bass, and much less when the large fish are taken from them. Also that the small fish have no trouble in finding plenty of food, and that repeated

A GROUP OF THE DELEGATES TO THE FIRST ANNUAL CONFERENCE OF THE ONTARIO FISH AND GAME PROTECTIVE ASSOCIATION

be handled privately than by the Government.

The Convention advocated a continuance of the present regulation prohibiting the sale or exportation of black bass and were satisfied with the present limitation and size viz: eight of ten inches long in one day. They thought the open season should be from June 15th to November 30th, both days inclusive. On the question of Government hatcheries for bass Dr. Riggs spoke strongly in favor of screening ponds in suitable

examination of the stomachs of the fingerlings show plenty of nourishment. Thirty thousand pounds were marketed from one lake, which we stocked at the third year." The United States Fisheries tell us that they attain a length of four to eight inches in five to six months and that they have been known to weigh one pound nine ounces in eighteen months. If his proposals were carried out when screens were lifted they could liberate several thousand fingerlings that would come to maturity and would stock

thoroughly any lake with more fish than could be caught in any legitimate manner. This from a commercial standpoint would be a splendid investment as the original cost would be small and the returns enormous, and as the fish would reproduce it would take years to reduce the supply. The small fish might be obtained on the shores of most any of our lakes, about the first of June and could be carried in cans to the ponds that had already been prepared for them. These ponds would have to be cared for all summer and would be the principal item of expense. A thousand dollars would demonstrate the practicability of this system whereas it would take a good many thousands to build artificial ponds and not prove so beneficial in the end. He also urged that the Government should show more energy in protecting the level of our lakes instancing Muskoka where some years ago the bass were almost exterminated owing to an interference by lumbermen with the levels of the waters. A delegate from Bobcaygeon stated that similar results had followed interference with the levels in the Kawartha Lakes and they had wondered what possible reason could be the cause for the dearth of bass. In both instances the bass are recovering and becoming numerous again.

The suggestion to include silver bass in the fishery regulations and provide a limit and season for catching the same was not confirmed.

The prohibition of the sale and export of sturgeon was approved and the regulation limiting the catch to four per day and the size to twenty four inches long was agreed upon. The open season should be from June 15th to Nov. 30th. If found at all practicable the Convention was heartily in favor of steps being taken by the Government Fish Hatcheries to propagate these fish artificially.

It was decided to still leave blue pickerel outside the regulations.

An important recommendation came from the Committee on Public Domain, Parks and Forests to the effect that the northern and eastern shores of Georgian Bay from Killarney to Penetanguishene and the numerous islands and waters adjacent thereto be set aside exclusively for angling purposes. This region is the

natural spawning ground and habitat of the food and game fish of the Georgian Bay, and it is believed also to be the spawning ground of the food fish of a large portion of Lake Huron. The committee also advocated the creation of reservations from time to time, thereby protecting the fish and game and preventing the acquisition by private parties or clubs of large tracts of the private domain for exclusive hunting and fishing privileges.

Important were the recommendations coming from the Committee on Food Fish. These included the prohibition of the catching of all food fish for five years; that the smallest mesh allowed for white fish and salmon trout nets be five inches, and that all nets and net licenses be abolished except those in the great lakes. The close season for salmon trout, white fish and pickerel was recommended to be from October 1st to April 1st and herring from October 16th to April 1st.

It was reported that bull frogs were becoming scarce and the delegates agreed to urge upon the Government the prohibition of the sale or export of frogs and frog legs for five years.

Trap nets, hoop nets, and pound nets were condemned as too destructive to fish life, while in gill nets it was recommended that they be allowed in nonprohibited waters only, and that the mesh should be of such size as would have a tendency to take only the larger of the species. Power should be given to the discoverer of an illegal net to destroy the same on sight. The Convention adopted the recommendation of the committee to prohibit all netting in inland lakes and streams. In the cases of licenses being granted by the Government it was urged that numbers should be placed on the net buoys in plain figures, that the number of such licenses, the names of licensees and for what purpose granted should be issued by the Government and such particulars be obtainable by the public.

Very important indeed is the fact that the goodwill of the great transportation companies has been secured and their representatives worked in accord with delegates in devising a plan whereby the best check possible could be placed upon exports. The Committee recommended

that the Government be asked to make it illegal to accept a consignment of commercial fish for export unless accompanied by a Government Inspector's certificate and a detailed invoice showing exactly how the consignment is made up. Special officers should be appointed for inspection at important points and at others the agents of the transportation companies, be authorized to act. A

be allowed in cold storage for more than fifteen days after the close of the open season, except moose killed by an individual sportsman and being retained by him for his private use. They also were strongly in favor of a regulation prohibiting the sale of any game or game fish during the close season.

Water pollution and its effect upon the fish came in for serious discussion.

HON. W. G. FALCONBRIDGE

Chief Justice of the King's Bench, who presided at the first Conference of the Ontario Fish and Game Protective Association.

small fee would be charged for the certificate.

The recent decision of the Department to charge a fishing license to non-residents was supported, and the further working out of the scheme so as to include shipping companies and to arrange Government statistics was left to the head quarter's staff.

The Convention strongly supported the proposal that no game or game fish

Any interference with the great industries of the country was recognized as a serious matter but no less serious is the effect of water pollution upon the fish. Mr. Kelly Evans had some hopeful words to say on this point. Experiments in the States have shown that science may come to the rescue and that what has hitherto polluted our streams may be made useful, servicable and profitable.

The trouble that comes from the ex-

emption of settlers in unorganized districts was dwelt upon at length and the Government urged to strictly define a "settler". As a suggestion it was put forward that six months' residence might be insisted upon, a clearance of at least two acres, and a house 18 x 24. The settler to secure exemption should in all cases be a bona-fide farmer.

The Committee on Feathered Game reported in favor of the close time for ducks being fixed from Dec 15th to Sept. 15th. They were unanimously opposed to spring shooting, against gasoline or other launches or sail boats being permitted to be used for either duck shooting or routing ducks; against allowing stationary hides more than one hundred yards from any shore line; against boats or punts being permitted to be used in open water for duck shooting or decoys placed at over one hundred yards from any shore line; against power boats or sail boats being allowed to be used at all in duck shooting; against allowing plover or other shore birds being shot in spring; in favor of further protection of quail for three years; allowing the limit in ducks to remain as at present; and a strong recommendation against allowing the sale or export of ducks.

A recommendation to prohibit the shooting of ducks before 6 A. M. and after 5 P. M. was debated at length and ultimately it was decided that the present law covers the whole case.

The difficulties of the duck shooters at Long Point Bay on Lake Erie were also pointed out. Here the shore is under the control of a company and the private sportsman can only obtain a share of sport by shooting a mile off shore. While sympathising with their fellow sportsmen in their predicament the delegates felt that they could not recommend exceptional legislation even for exceptional cases. Once started on such a course there would be no end to the demands made.

Fur bearing animals and their future was the next matter for consideration. The law prohibiting the killing of beaver and otter before Nov. 1st 1910 was declared satisfactory though in the opinion of the delegates the law is not being properly enforced. It was suggested that special reserves should be created for

the propagation of these animals and that reciprocal relations should be entered into with the United States and the other Provinces for the purpose of enforcing the Law. The Convention was of the opinion that the Government should use more stringent measures for protection of these valuable animals and when killing is allowed the open season to be from Nov. 1st to Feb. 1st. The Convention went further than the Committee and asked the Government to say that any infraction of the law for the protection of fur bearing animals should for the first offence be visited with a heavy fine, and for a second offence the penalty should be imprisonment without the option of a fine.

In the cases of muskrats the open seasons recommended for Northern Ontario was Oct. 15th to May 1st; that the take be limited to 100 for each person, and that fifteen days be allowed to dispose of the furs after the season closes.

The delegates expressed the view that the Government should take steps to regulate the hunting, killing and taking of mink, marten and fisher; that the open season for these animals should be from Nov. 1st to March 1st; and that further preserves should be established for the propagation of these animals. It was further decided to recommend a close time for bear, the open season to be from Oct. 15th to May 1st.

Contrary to expectations the Convention expressed a favorable opinion of the present close season. The still hunters and dog hunters had another bout and agreed to call it a drawn battle. In other words the subject proved too contentious for the delegates to settle, and it was agreed to defer it, in the hope that as the Association grows stronger some authoritative decision may be arrived at. One delegate expressed the opinion that three quarters of the men who went into the woods had no business to handle a gun, and three quarters of the dogs found in the woods had no right to exist. In this style the wordy battle went on until peace settled over the scene by the withdrawal of the contentious item.

A law providing for the searching of lumber camps for venison, caribou, and moose meat and holding the jobber and license holder both liable in heavy fines

if any such meat is found was considered favorably. It was thought preferable to give moose and caribou protection for one year in five rather than prohibit the shooting of such animals for five years. The Convention expressed agreement with the present number of deer allowed to each person.

The prohibition of firearms in game districts was recommended, a similar

another interesting discussion. Several delegates pleaded guilty to what is generally considered unsportsmanlike conduct but also stated that they had registered vows never to repeat the offence. Others asked what greater harm there is in this practice than in allowing the deer to get away and die a lingering death. In the end this question waited over for still further consideration and is one of

MR. A. KELLY EVANS, TORONTO  
Secretary of the Ontario Fish and Game Protective Association.

provision having been incorporated in the law of New Brunswick last year. Another provision of the New Brunswick Game Law to the effect that every warden should pass a qualifying examination before a judge prior to appointment, was agreed to.

The Committee recommended the prohibition of the exportation of deer, moose and caribou except by licensee. Should deer be killed in the water? gave rise to

the knotty problems that will trouble future delegates.

It was decided to call the special attention of the Government to the certainty of the slaughter among big game and game fish, unless special preventive measures were taken where construction and survey camps exist or will exist in connection with new railways and the dangers from fire, etc. An exemption should be allowed the delegates thought

in the case of survey camps when ten miles from the nearest supply station, and for killing for their own provision only. It was agreed that foreign laborers &c. should be prohibited from carrying guns when engaged in railway work except in the open season.

The question of the use of poison in the woods was keenly debated. One delegate objected that fur and feathered life was injured through partaking of the poisoned carcass if left in the woods, and that foxes and wolves could

the woods and the subject was thereupon dropped.

Several delegates advocated a gun license but as they were told that they might as well attempt to "jump over the moon" as think of carrying such a proposal in the present state of public opinion, the matter was allowed to go over for another meeting.

The twenty-five cent fee for settlers killing deer was denounced as a farce, and the view was expressed that the sooner it is abolished the better for efficient game protection.

Automatic guns found one defender but the overwhelming force of opinion amongst the delegates was opposed to the use of automatic or machine shot guns and in this view they are said to reflect the general opinion throughout both Canada and the States. The Convention expressed views in favor of legislation prohibiting the possession of firearms in lumber camps.

The delegates expressed themselves as favorable to a reciprocal arrangement with the United States looking towards a restriction of the shipping of fish and game, illegally captured in the Province, into the United States or from the United States into Canada.

Another important discussion arose on the question of the license fee for non-residents for big game. There were earnest advocates for an increase of the fee from \$25 to \$100 but this was considered unreasonable and finally the fee recommended for the future was \$50, equal to that now charged in New Brunswick and British Columbia. On this point of fees Mr. Evans stated that he had found not so much objection either to the fees or to the amount on the part of visiting tourists but to the difficulty of obtaining the licenses, and he suggested that they should be on sale at Post Offices, at reputable hotels and stores and at depots in towns like Pittsburg and Buffalo from whence many tourists came. In all cases, with the exception of Post Offices, the parties entrusted with licenses should be under bond. These facilities, he believed would be much appreciated by tourists.

It was agreed to ask the Dominion Government to instruct the Postmasters throughout the Province to place con-

MR. OLIVER ADAMS, TORONTO

Vice President of the Ontario Fish and Game Protective Association.

be killed in other and better ways. Challenged to name these methods the delegate pointed to the system of digging out the young and shooting with the rifle. He was further asked if he had ever shot a wolf and another delegate took up the challenge replying that a year ago he had shot a wolf as it was in pursuit of a deer. Another gentleman cruelly suggested that the delegate shot at the deer and killed the wolf. Eventually it was discovered that the present law provides against the use of poison in

# Hunting in Western Canada, INFORMATION BUREAU,

## Write Us

Western Canada is a hunter's paradise, and we make it our business to find out where the best hunting grounds are. If you are contemplating a Hunting Trip this Fall, write and let us tell you what kind of sport you may expect in the Northwest.

**THE HINGSTON SMITH ARMS CO. LTD., Winnipeg, Man.**

spicuously in the Post Offices the game laws and fishery regulations when provided either by the Ontario Government or the Association.

The question of a distinctive badge was left for the consideration of the committee at headquarters.

A very warm tribute was paid to the energy and good work of Mr. Kelly Evans and Mr. Oliver Adams, whose constant labours alone rendered the Convention possible, and who did more than any others to secure its undoubted success. The Ontario Government and the University authorities were thanked for the use of the building and the able chairman, whose fine administrative abilities alone allowed the delegates to get through such a press of work in one day, was not forgotten. In the Chief Justice the cause of fish and game protection has "a friend in high places." and his influence is always on the side of making the protection real.

Then came the last important matter—When shall we meet again? Unanimously, Easter 1908 was fixed upon. By that time it is hoped every town and village within the Province will have an active Association and each one will be fully represented. By that time too, a trial will have been made of certain of the recommendations of the first Convention and keen men all over the Province will have watched for defects, thought of possible improvements and be ready to make new recommendations. If these forecasts prove correct the second Convention will be an improvement upon the first, successful in every way as the first one has proved.

The work of covering the whole Province by the formation of local Associations will go steadily forward, and Mr. A. Kelly Evans, Secretary at Headquarters, informs us that Mr. Adams and himself are prepared to set out on their travels just as soon as the hunting season is over. They mean to hold many public meetings during the coming winter, and stimulate activity and interest in the cause in the same manner as they did last winter. As they have already laid the foundation so well their resumed pilgrimage will probably have wider effects than last year and the Association will gain in strength and influence by the work of these active and devoted officials. In some places where a branch has not yet been formed it is hoped the people will, on their own initiative, take up the work of the formation of a branch. Any one who will write to the Headquarters of the Association, 25 Front St. East, Toronto, will be promptly supplied with all information as to the methods of organization, etc.

### How Zoraya Won the Fisher Cup.

Tame to a degree were the Fisher Cup races, regarded from a purely racing standpoint. Zoraya the Mylne boat sent over by the Royal Canadian Yacht Club was the superior of Iroquois in every way they went, and the contest simply proved what Zoraya's supporters have all along maintained—that had she been sent in quest of Canada's Cup instead of Temeraire, the Fife boat, the Rochester Yacht Club would not now claim the proud distinction of being the first yachting organization to successfully defend Canada's Cup.

The outstanding feature of the race, if we get away from Zoraya's all round superiority, were Commodore Frank T. Christie's able handling of Iroquois, and the confidence of the men across the lake in the ability of Iroquois to outpace anything of her inches afloat in a light wind and a moderate sea.

Christie certainly did handle Iroquois in superb fashion, and the way in which he covered Zoraya in the starting manoeuvres of the second race, and beat the redoubtable Skipper Jarvis at his own game, is the only bright spot in the cloud of disappointment which settled down over the Rochester Yacht Club when Iroquois was trimmed in two straight races. Christie blanketed Zoraya as soon as the preparatory gun was fired, and though Skipper Jarvis fought him with every trick his experience taught him, Christie always kept between his only opponent and the wind, and clearly won the start. He crossed the line ahead but leeward and bucketted the wind into Zoraya's mainsail. Her advantage was shortlived however, for Zoraya out-pointed and out-footed Iroquois, and was even up a hundred yards from the mark. Even though Christie

won one start did not run away with the idea that Skipper Jarvis did not handle Zoraya properly. He handled her in his usually masterly style. I was merely giving Christie credit for getting a bit the best of the great Canuck.

The confidence of the Americans in the ability of Iroquois to trim Zoraya, and

One of a class of small yachts obtaining popularity on Lake Ontario.

anything else afloat, was simply sublime. When the wind came off shore in cat-paws, and the sky was a brilliant blue, they were as cocky as game bantams, and their yellow backs, so carefully anchored before Saturday's race, came forth in rolls and bundles. They were so cock sure that all but a few of the Canucks took backwater when they waved the bank notes in the gentle breeze. The Zoraya men, who knew, bet their very last nickel on the sleek little black craft, and then exhausted their credit in the fleet. They knew what Iroquois did to Temeraire in the Canada Cup contest,

and they also had it jogged down in their note books what Zoraya had done to Temeraire in the zephyrs, and they went down, hook, line and sinker, on her chances.

What did Zoraya do to Iroquois in light airs?

Well if you don't know I'll tell you—she simply made her look like a selling plate in a stake race. Why even the Rochester boys will tell you that Zoraya made their Herreshoff craft look as if she were tied to a barge. Iroquois never had a little bit of a look in, and Zoraya could have sailed around her at least half a dozen times, and then have beaten her to the nine mile weather mark—it was a wonderful leeward race—and even on the run she stretched out her lead.

Zoraya beat Iroquois 1.27 seconds in every mile of windward work, and even on the run home she outpaced her, though a freshening breeze enabled the discomfited Iroquois to chop down the time difference by 58 seconds on the spinnaker run, though Zoraya had actu-

ly added a quarter mile to her mile lead at the windward flag.

She won the light air race, 18 miles, by 12.09.

The initial race, sailed in a heavy breeze, she won by 1.32, but the 1.32 represented nigh half a mile. She should have won by four minutes and odd. She was that and more to the good on the buck to windward, but Skipper Jarvis overstood his mark, and lost just about all he had gained to weather of his opponent. Even at that he was 1.33 ahead and did not use Zoraya's spinnaker on a quartering run on the second leg. Iroquois used both balloon jib and spinnaker all the way on the second leg, but Skipper Jarvis decided to leave well enough alone, and contented himself with using a balloon jib only. On Iroquois' fastest point and sailing Zoraya only lost eight seconds without using her spinnaker more than a mile. On the trip home, a close reach which was sailed so that both boats were able to utilize ballooners on the final two mile spring for the finishing flag, Iroquois made her only true gain of the series—a scant four seconds on a seven mile leg. At that gait it would take Iroquois over twenty four hours to catch the fleet Zoraya.

The result shattered the Rochesterian's faith in Charles Herreshoff as a designer, and now they are actively engaged in financing a proposition to secure a Canada Cup defender for the next year from the board of "Blind Ned" Herreshoff, the American wizard.

On this side of the Lake a syndicate has already been formed to secure a Canada's Cup challenge candidate from Mylne, the young Scotchman who turned out Zoraya's lines. Of course Vice Commodore Nicholls will have a candidate, and still pins his faith to the veteran Scot, Charles Fife.

It would not then indeed be strange if we have Mylne and Herreshoff boats competing for the two great international yachting trophies, for to Mylne Sir Thomas Lipton has turned for an America's Cup challenger.

annual racing meet of the Lake Yacht Racing Association, the governing body for yacht racing on Lake Ontario, made a hit this year.

The peculiar situation was responsible for the innovation. The Royal Hamilton Yacht Club wanted the boats for four or five days, but the Royal Canadian Yacht Club fleet wanted to make Charlotte for the Fisher Cup races so the port to port series was arranged. The fleet left Toronto on a Saturday and raced to Hamilton, a 32 mile jump. On Monday the Royal Hamilton Yacht Club gave a day's racing, and on Tuesday the fleet was split into two classes again and sailed to Port Dalhousie, another 30 miles. From Port Dalhousie they jumped to Olcott, N.Y., and then from Olcott, N. Y. to Charlotte, N. Y. The trip was voted the best ever made. There were eighteen or twenty boats on the circuit, and the fact that each night meant a change of scene lent zest to the races, while the yachtsmen were given a grand reception at every place they landed. At Port Dalhousie they had to make their own fire, and all gathered around

a large camp fire on the beach. The song feast which followed will live long in their memories. At Charlotte the Rochester Yacht Club members treated the visitors right royally even though Zoraya did trim the great Iroquois, and their taste of the bitter draught did not make a whit of difference to the hosts of the day.

## Failed to Get Lipton Cup.

Canada's first quest after the Lipton Cup for 21 footers at Chicago was unsuccessful, but the Canadian entry, Raven, of Hamilton, though beaten was not disgraced. Seven boats started and Raven was third in points on the three races. Raven was built and sailed by Captain J. H. Fearnside, of the Royal Hamilton Yacht Club. In the initial race she finished fourth. In the second race she led until the last leg when a wind shift pulled one of her rivals into the lead. The best she could do in the final race was to come out fifth.

Cherry Circle, which won the opening race, also won the cup with a score of 266.7 points. Bill Poster, which won the final race, was next with 244.4 points, and Raven third with 222.3 points. Five out of the seven entries were about on a par as far as speed is concerned. Now that we have the nucleus of a twenty-one foot class here it may flourish as it has on Lake Michigan and Huron, and give us boats fast enough to go after the Cup next year. Raven was not in good shape, and next year with better preparations may even try again.

## Gallant Conduct in Toronto.

The Royal Canadian Yacht Club, of Toronto, has set an example which every aquatic organization in Canada might well follow. As a Club recognition of conspicuous bravery they made Bert. Barber and John W. Bartlett, two of their members, life members of the Club, and gave Harry Sinclair, a professional sailor, a gold medal and a purse. Mr. Barber and Mr. Bartlett were also given gold medals. This action upon the part of the Club as a whole is a sequel to the gallant rescue of Ernie McMurtry, of Zoraya's crew, during a Fisher Cup trial

race on the Lake. A heavy sea was running, and Zoraya rounded a buoy all right. When squared away for the next buoy her mainsail threatened to gibe. McMurtry ran forward to shove it back when Skipper Worts checkmated the threatened gibe by swinging the boat. Now these racing 30 footers spin like tops, and answer every shift of the helm instantly. The sudden swing coming as the boat rose to the crest of the wave hurled McMurtry overboard. He couldn't swim a stroke. A life ring was thrown out to him from the Zoraya but he failed to reach it, and as the black racing craft swept on he disappeared beneath the waves. Bartlett, another member of the crew, sprang overboard as Zoraya sailed on. Temeraire, hard after Zoraya, swung round the buoy, and seeing the trouble bore down, but with the wind aft she could not get within yards of the drowning man. As she passed however, Barber, and Sinclair, the Temeraire's professional sailor, both fully clothed dove in. Sinclair was the first to reach the drowning man and held him until Barber brought the life ring. Bartlett too came up, and the three of them had a desperate struggle to keep McMurtry afloat. Both Zoraya and Temeraire came back at once. Temeraire's crew managed to reach them with ropes but they were not a moment too soon for all were fagged and McMurtry was unconscious. McMurtry is the Secretary of the Lake Sailing Skiff Association.

Too little official attention is paid to rescues of comrades by men who sail together. Many heroic acts have been passed over unrecognised and unrewarded simply because the participants were sailing comrades, and it was to be expected that one would risk all for the other.

#### Power Boat Racing.

Power boat racing has not taken hold in Canada as it should. Down around Gananoque and Montreal there have been a few races, and there has been some desultory racing and chasing at the summer resorts. Outside Toronto however there has not been much real racing, and even at that great boating centre the interest taken has not been of the

kind which brings out real racing models and racing engines. There have been some races between boats of ordinary types. The Queen City Yacht Club, of Toronto, offered a regular program of power boat races but there has been but little competition.

It remained for the Toronto Gas and Gasoline Engine Co. Ltd. to bring off the only real races of the season. The Company put up some handsome silver cups, trophies, and flags for a series of four regattas. All boats equipped with the Company's engines were eligible. The owners took a great deal of interest in these affairs, and some really hot racing resulted. The only restriction was the over all length, but even with this there was excellent racing. The entry list at each regatta varied from 26 to 35 boats. The big class was the 18 foot class where twelve boats struggled for a trophy, and a three cornered tie between Rene, Auto-Float, and Viper resulted.

In the 22 foot class Lieblings, owned by C. S. Acton, was much more heavily powered than her rivals, and won both races in which she competed.

In the 25 foot class Francesca, Dolly Dollars, and Margaret each won one race, but Eddie English with Dolly D. cleaned up the thirty foot class, and also the unrestricted length class. She held the championship emblem all season, though Margeret gave her a hot chase in the final event.

E. D. Grant's Tige had things all her own way in the 16 foot class.

#### Simple Speed Models.

When it comes right down to speed the square bilged flat bottomed scow is IT. Canadians are not going in for speed much this year. We are conservative over here and while there are not a few 16 mile an hour boats carrying Canadian burgees, there are not more than half a dozen speed models on this side of the line. We like to be able to go a bit but place comfort before speed, and the result is that we have hundreds of power boats from 25 to 40 feet which clatter along from nine to thirteen miles an hour and are built so that a bit of a seaway does not mean a drenching. Across the line it is either solid comfort or ultra

JAEGER

Sleeping Bag.

## Experienced Campers

—Those who know *how to camp in comfort*, under all conditions of weather and climate are unanimous in saying that Pure Wool is the only possible wear for health and comfort.

Because "Jaeger" Pure Wool is *absolutely pure*, possessing superior qualities of hard wear, it should form a large part of your camping equipment. The *service* it gives makes it *very economical*.

We can fit you with everything from head to foot—Underwear, Sweaters, Rugs, Sleeping Bags of Camelhair Fleece, Stockings, Caps, Cardigans, Knitted Shooting Jackets, etc. Obtainable from leading dealers in all principal cities.

Write for Catalogue No. 1.

286 Portage Avenue, Winnipeg.

speed—either a big husky cruising boat, with a cabin big enough to hold a lodge meeting in; or a little narrow sneak box with big motors which enable her to travel like a Whitehead torpedo.

Over the border the small speed boats are nearly all of the flatiron or dolphin models—that is a tooth pick nose, square sides, flat bottom, and a square stern. These hulls are easily driven. They skim over the water rather than drive through it, and go like scared cats, but they demand smooth water. In any sort of a sea they throw it in in buckets full. The hulls are light, and a seven horse power engine will shove a 25 foot boat along at 13½ miles per hour. When they get going one wonders how they make the speed. They climb into it, easily forward, the knife like bow splitting the water cleanly and throwing it aside with but little fuss. Along the side they take it easily, but astern they are decidedly fussy. At each quarter they drag up to a two foot wave, and the water shoots out from be-

neath the flat bottom stern like a reversed water fall. Eliminate the excessive drag aft and the same craft would add another four miles to her record.

Some of the Toronto motor boat men are so enthusiastic over the speed of these "flat iron" craft that they intend building off the same model this winter. Toronto has one already—Rochester jr., a boat modelled off the champion Durno, of Rochester, which won at the American Power Boat Association races on Chippewa Bay in the Thousand Islands last year.

# AUTOMOBILES AND AUTOMOBILING

## Legislative Examples.

When next the Ontario Legislative Assembly undertakes the task of regulating automobiles and their speed, they might well bear in mind the examples of others who have tried their hands at similar work. The English Motor Car Act, which is the result of the most careful consideration of the subject, defines illegal driving as follows:—

"If any person drives a motor car on the public highway recklessly, or at a speed or in a manner which is dangerous to the public, having regard to all the circumstances of the case, including the nature, condition, and use of the highway, and the amount of traffic which is actually at the time or which might reasonably be expected to be on the highway."

The New York law on the subject provides that speed must always be reasonable and not exceed ten miles per hour in the business portions, fifteen miles per hour where houses average less than one hundred feet apart, and twenty miles per hour in the country.

## The Romance of Racing.

Autos have their stories of romance and one of the most thrilling is that of a race for a gold mine which took place out in Nevada. Such a mine was for sale at a sacrifice, and what is quite unusual for sacrifices was believed to be really good. Accordingly two parties, one of whom happened to be Charles M. Schwab and his confidential agent, and the other Messrs. Sullivan and Campbell, started off for a 250 mile race against each other and against time to secure the gold concession. As may be well understood both parties took chances, and Campbell stated that Death stared them in the face most of the time. They crossed Death Valley which is generally under

stood to be the best imitation of the inferno it is possible to find upon the earth. In one place they had literally to dig the wheels out of the sand dunes, and keep this up for 200 yards. After that they had cautiously to feel their way for seven miles until they struck hard ground. Through the alkali section the atmosphere was one that scorched. In another place the machine skidded and jumped, and became buried in treacherous soil. Then 80 miles of mountainous desert had to be made, and was got over in three hours. In the end Messrs. Sullivan and Campbell, who had a 40 horse power Pope-Toledo, won, and they barely concluded the purchase, for which they had made such efforts and taken great risks, than they were confronted with the second arrival. In this case the delay of a few minutes meant a fortune, and while Messrs. Sullivan and Campbell are to be congratulated on their pluck and perseverance under all sorts of difficulties, the auto that stood them in such good stead should not be forgotten.

## A New Runabout.

A runabout for which great things are predicted is being made by the Pope Manufacturing Company at their Hagerstown, Md. factory and is to be known as model X. The first of the new machines was tested over several thousands of miles of the roughest roads to be found in the Eastern States, including the sand roads of Long Island. As a sort of final test of these preliminary trials it was taken to Hagerstown from Hartford, Conn. by way of Philadelphia and Gettysburg. The distance is over 400 miles and the exact running time was twenty-three hours. There were no mishaps other than a little tire trouble on the whole trip. The engine will develop from 18 to 22 horse power, and

HOT SULPHUR SPRINGS.

is of the four cylinder vertical type. All cylinders, piston rods and piston rings are ground to a mirror finish, insuring perfect compression. The valves are located in the cylinder heads and are operated by walking beams and tappet rods. All gears are run in an oil tight case protected from dirt and mud. The transmission is ball bearing and has three speeds forward and one reverse of the gliding gear type. The drive is to the rear axle through the propeller shaft and double gears. The brakes are of the double acting type, and the springs are of the semi-elliptical type, the front ones being 40 by  $1\frac{3}{4}$  inches and the rear ones 38 by  $1\frac{3}{4}$  inches.

## Turning the Tide.

Apparently the turn in the tide has come, and automobile makers on this continent instead of looking to Europe for models and ideas are having their own copied by the manufacturers of the old world. The Europeans were first in the field in automobile manufacturing and it is estimated that in the infant days of the industry here the European

models were necessarily taken for guides. This state of dependency soon passed, and with the characteristic ability, progressiveness, and perseverance the Canadian and American manufacturers set themselves to the task of improving upon their predecessors and rivals. It now appears that in their 1907 models 3 European manufacturers—two French and one Italian—have adopted the triple disc clutch first brought into use by the E. R. Thomas Motor Co., on their Thomas Flyer. In all probability a close inspection of the models of the new foreign cars this fall will show a number of other things adopted from the up-to-date American makers.

## Word Coining.

With new industries and new requirements come new words showing the elasticity and wonderful adaptability of the English language. "Warmobiles" is the apt descriptive title given to armoured cars made for carrying gold in Mexico. So thoroughly does this one word convey the whole purpose of the new car that its general adoption appears certain.

### **The Skidding Difficulty.**

Skidding is the bane of the careful automobile driver. Try as he may to avoid this drawback it is not always possible to do so, and slippery streets will cause a car to slide whenever a turn is made, often with results anything but pleasant. Long experimentation has reduced skidding to a minimum, and it is scarcely perceptible on the Thomas Flyer, the designers having kept the car evenly balanced with an equal amount of weight always on each wheel. The car now, even when travelling light, seldom if ever leaves the straight track, though an inexperienced driver may be at the wheel.

---

### **Extensive Auto Driving.**

Henry Ford, President of the big automobile firm of that name, believes he has driven an automobile more miles than any other man in the world. He made his first power wagon in 1891 and from that time to the present he has driven constantly. He spends little time in the factory or designing room, and ten hours out of every day, Sundays included, finds him in one of his cars. He is inordinately fond of long country drives on which he is invariably accompanied by Mrs. Ford, his little son, and frequently by Frank Kulick, his favorite tester. Mr. Ford makes it a practice to drive each new model himself for several months and his driving is what professionals call wicked. He finds the weaknesses, if any, and they are strengthened before the new model is offered to the public. Getting "the bugs out of it" is Ford's way of expressing this search for faults and correcting them. Despite the fact that most of Ford's driving is in the line of duty, he says he has never lost enthusiasm for it, and he enjoys each run as if it were his first experience. In all he believes he has driven in his various models at least 100,000 miles, and he would like to hear from any other driver who thinks he has a record to beat the one he has made.

---

### **The Baggage Truck on the Glidden Tour.**

The fact that the Knox Waterless Truck went over the whole of the Glid-

den tour, a portion of which took place in Canada, is one showing something of the value and possibilities of the commercial vehicle. The total distance covered from the time the truck left the factory until it returned was 2,007 miles, and that over roads not hitherto considered practical either for pleasure or commercial vehicles, and certainly impracticable for the latter. While on tour its daily load varied from 2,000 to 3,300 lbs. which with the weight of its passengers added gave ample demonstration of its capacity for commercial work. On the whole tour the only replacements necessary were two exhaust valve springs, one spark plug, and four dry cells. Several other trucks were entered for this competition but all were withdrawn when the route of the tour was published. Many of the roads had not been used before for motor vehicles and when the Knox started, although it carried the baggage and best wishes of the other participants in the tour, it was not anticipated that it would complete the journey or compare with the pleasure cars in efficiency. Not only did it do this, but it actually made the checking stations in equal time, in several instances before the higher powered pleasure cars, and added in no small way to the comfort of the tourists by having their baggage at the hotels by the time they arrived, and in some instances before. The truck was equipped with the regular Knox air cooled engine. This is cooled by grooved pins inserted in the outer cylinder walls upon which a forced draft is precipitated by fans situated at the outer end of the cylinders. All through the tour level roads were the exception and not the rule, and grades up to 25% were not uncommon. It might also be mentioned that another Knox, Model G, 35-40 H. P. was in the tour and did well. It ran from Springfield to Buffalo and made the same number of miles as the truck, and the total cost of replacement was 54 cents, being for two valve springs. Mr. Wright, Vice-President of the Knox Automobile Company, always carried one more passenger than any other car in the tour and generally two, was always ahead of the schedule time at the controls, and the car completed the run in absolutely perfect condition.

# OUR MEDICINE BAG

**I**N the June number of "Rod and Gun and Motor Sports in Canada" we gave a short account of a projected trip undertaken by Mr. C. G. Cowan, a veteran explorer in British Columbia and Alaska, whose intention it was to proceed to the headwaters of the Skeena River—the one river in that fine Province he had not at that time traversed. Letters have since been received from Mr. Cowan in the course of which he gives the interesting information that he believes he has discovered a new species of mountain sheep. He did not shoot the animal himself but secured it from an Indian who shot it in a range of mountains about half way between the headwaters of the Pelly and the Mackenzie Rivers. The animal is absolutely black all over excepting a whitepatch on the hind quarters. Its horns are very much the same as the horns of a three year old Ovis Montana, except that they are lighter and not quite so massive at the base, though they have a similar curve. The face is similar to that of the Ovis Montana, and judging by the size of the skin, Mr. Cowan is of the opinion that a full grown one would be even larger than a full grown Ovis Montana. Mr. Cowan sent the skin and head just as he received them, to the Hon. Walter Rothschild, whose fine collection at Tring, Hertfordshire, England, has acquired world wide fame. Mr. Cowan expresses his belief that this specimen will prove the first one ever seen in civilization. With the new species of bear recently discovered by Dr. Kermode, of the Provincial Museum of Victoria, and now this new mountain sheep, the appetites of explorers should be whetted to still further efforts in the study of the fauna of the rich Province of British Columbia.

The fighting qualities of the black bass are well known, but a Canadian correspondent of an American paper

relates some instances for which a Canadian paper quoting them declines to vouch. First we are told of a three quarters of a pound fish making off with half a hundred others, all of which had been caught and strung and were simply put into the water for a wash. In the second instance a four or five pound bass towed about a four oared skiff for five hours, occasionally varying the performance by indulging in a series of acrobatic leaps. Even after this experiment the man lost the fish when he attempted to land it. The correspondent further tells of a woman being pulled into the water by two bass, another bass taking a canoe which had been lightly grounded by means of one of the leaders of a rod which had been left trailing in the water; and a still further instance of a bass pulling a six year old boy into the water, his father having entrusted him with a rod. These are all "fish" if not "fishy" stories, and were apparently served up for the delectation of the guileless ones of New York.

Honey Harbor, on the Georgian Bay, is keeping up its record as a fine fishing center as described in last month's "Rod and Gun". A couple of Toronto men—Arthur McCowie, of the Dominion Bank, and William M. Clark, of the Temple and Pattison Company—spending their holidays there caught a fine black bass weighing 6 lbs. 9 oz. and had a desperate fight before they landed their prize. It is stated that the bass is the largest ever landed in those waters. Mr. W. G. Fitzgerald, of Toronto, who also spent his holidays at Honey Harbor, reports catches almost equalling the one recorded. Other successes have been noted and altogether the fishing at Honey Harbor is of the kind to delight the ardent fisherman. Though the bass are plentiful the fine game fish are hard to catch, and the fishermen have the very best of sport, in addition to the gratifi-

cation afforded by success, when it comes to them, as it rarely fails to do when they fish as fishermen should do.

Then they turn back, only to repeat the performance later on.

A fine moose story comes from St. John, N. B. A new fog whistle was recently installed on Partridge Island, one of the principal signalling stations about two miles from the city. The whistle gives out a long drawn blow on a low note, and ends by a short sounding blow two notes lower. It is said to accurately imitate a moose call, and the effect upon the animals frequenting the neighborhood affords ample evidence of this fact. Since the new whistle was established the number of moose round about have largely increased, attracted by what they evidently believe is the call of their mates. The bulls stroll coolly through the suburbs of St. John, and calmly take to the water in their efforts to reach their fellows, though none have got so far as Partridge Island, the distance daunting them or some inner consciousness telling them all is not well.

As was only to be expected the new policy of the Ontario Government in putting on a \$2 license fee for non-residents fishing in the waters of the Province has given rise to some friction. Sportsmen naturally complain that though the fee is small they were not sooner advised of the change; and that in particular the departure from long established practice was made so suddenly that the railways were allowed to advertise free fishing, when Canadian guides were hired, at a time when this was actually misleading. Everyone is ready to recognize that fish and game protection must be paid for by those enjoying the sport, and while the Government were quite justified in exacting the fee, which is a moderate one considering the fine fishing grounds thrown open for the amount charged, they might well have given a much longer notice of the new order of

things, and thus very easily have prevented any friction whatever.

Canadian Fishermen always enjoy hearing of the success of their fellows elsewhere, and many of them will be interested in reading the following notes, written by Mr. W. Stuart Norwood, of Lower Baggott St., Dublin, to a fellow countryman at present in Canada:—

"I had only one week's fishing this year from the 18th May to 26th May. It was bitterly cold, N. and N. E. wind, then a gale from S. and rain. Durward and I fished for six days only and I fished one day after he returned from Scotland. Together we got 45 fish weighing 48 pounds; the day by myself was my best day, six fish weighing 12½ lbs. as follows:—3½, 2¾, 2, 1¾, 1½, 1. We always put back fish under ¾. This was my best day, the big one was on a blow line and a green drake, the 2 lbs. one also on a blow line and an artificial floating green drake, paraffined as there were so few flies to be caught; the others ordinary olive and clarets. Dapping is awful on the eyes, the flies are transparent, the blow line is invisible being no thicker than very fine gut, and in wild dark weather keeping your fly on the surface jigging about 12 yds. from the boat is tiring work, and my rod—the Pennell—was too heavy.

Durward and I got about 9 or 10 every day between us, some days 6. I nearly always got more than he did, biggest was 2½ got by me when fishing together. I tried trolling once or twice, got a 1¾ trout one day and a few ¾ ones—put back—Not good sport, taking it all round, but the weather was vile: casting in a constant gale is tiring. Two fellows I know later on on Lough Dery got in a fortnight's dapping 212 trout, weight 464 lbs., including one 7 lbs., a few 6 bs. and so on. I'll try Lough Mask in September, which is a very good month, I am told.

I've got a new rod, 13 foot long, Palakona cane, with steel centres in top from Hardy, 5 pounds. It weighs 18½ oz., just 11 oz. lighter than my Pennell, and is a lovely rod; you have a composite rod like it. All the same the Pennell did good work on Lough Mask. Hardy's rods are abundant there, but all of them

I saw are 11 ft. or 12 ft. I think this is too short for a boat, especially for dapping. Durward has a 16 ft. greenheart. I could outcast him any day, and I only lost one fish hooked, he lost several. I have nothing now but eyed flies. I'll never use any other, it is easy to change and you need never change the gut either for tail fly or droppers unless you have to cut it and it gets short: the half hitch jam knot opens so easily that there is no trouble and the fly lasts forever.

The Montreal Business Men's League publishes an excellent illustrated pamphlet describing the many commercial advantages of that city, together with an account of some of its important industrial undertakings national in their character, its scenes of historic interest, and its various show places which go far to make the commercial capital of the Dominion so interesting not only to every Canadian but also to every tourist and visitor. The League, which has its offices at the corner of Notre Dame St. and St. Lawrence Boulevard, offers their free use to tourists and visitors, and in addition to free information, supplies shopping lists, and will arrange side trips for them. The League and its work should do much to make the name and fame of Montreal known the world over.

In attempting to procure a flash light photograph of a Virginian deer at Cache Lake, in the Algonquin National Park, Mr. and Mrs. W. P. Kellett and Miss Kellett, of Pittsburg, had an extraordinary adventure. They were on the Madawaska, and nearing the first bend of the river when a dark object was seen crossing in the water. When the deer (as it proved to be) was almost under the bow of the canoe, Mr. Kellett laid down his paddle, and turned his searchlight on. The guide, believing the deer to be some distance away gave a swift silent stroke with his paddle sending the canoe on the almost submerged shoulders of the deer which was a grand buck with a fine spread of antlers. Like a flash the animal turned and being dazzled with the light managed to secure a foothold in the narrow stream, and plunged forward into the canoe half filling it with water. Mrs. Kellett had the full weight

# CLARK'S

**WM. CLARK, Mfr,**  
MONTREAL.

of the deer's forequarters on her lap and at the same time Mr. Kellett received a downward crack on the head from a lusty pair of antlers which nearly knocked him out of the canoe. The guide drove his paddle in the mud and steadied the canoe. Miss Kellett with great presence of mind leaned forward and seized it by the nose, and Mrs. Kellett beat it back with her clenched fist. While the party missed the photograph the animal left his impression with them.

"Honker."—Your query as to the best clothing for moose hunting in winter is one that interests many readers. Allowing for the personal preferences a heavy woolen coat and pants of dark material, with woolen over socks and shoe packs is recommended. Woolen is best for a good many reasons. It keeps out the rain well, will not make any noise going through the bush, is not soon noticed by the game, and is warm. Mr. G. E. Armstrong, of Perth, N. B., a

veteran guide and hunter, now always uses this kind of clothing for winter hunting, having found from personal experiences the best kind of clothing for all round use in the woods in winter, and particularly good for hunting purposes.

Mr. G. E. Armstrong, of Perth, N. B. writes:—"I have had the biggest run of fishermen this summer that I have had since I have been in business, and they have had great fishing. I am also expecting the largest number of hunters this fall that I have ever had. The game is very plentiful, and I believe this is going to be the banner year in the Province for both hunters and game."

Humming birds have been seen at Banff this summer, and the Rev. G.H. Hogbin, of St. Dunstan's Industrial School, Calgary, writes that for several days a pair of these beautiful little birds visited his garden at the school. They were quite tame, allowing one to approach to within a yard of them, and appeared

particularly partial to the blossoms of the scarlet runner bean.

Now that the hunting season is upon us, guns and gun sundries become matters of the first importance. Make, style and other points are discussed with a keenness that do credit to the votaries of the gun, for hunters know that upon the excellencies of their weapons much may depend. The hunter who wants a gun, or anything pertaining to it, will do well to secure the special gun catalogue of the T. Eaton Co., of Toronto. It is well illustrated, has short descriptive notices of the various guns and everything connected therewith that the hunter can desire, together with much about ammunition, and the all important subject of prices. A notable feature is the summary of the Ontario Game Laws printed on the inside of the front cover, which makes the catalogue a work of reference, and should cause many sportsmen to include it in their outfit. Even when one has a favorite gun it is well to know about other guns, and to learn all there is to know of the various sundries which go so far to add to the efficiency of our weapons and the pleasures of using them. To secure this information and enjoy its consideration, one cannot do better than secure a copy of the T. Eaton catalogue, which will be sent, upon request to the Toronto offices of the company, and particularly if you will take the trouble to mention "Rod and Gun and Motor Sports in Canada."

Without doubt the greatest enemy of the forest is the fire which destroys the standing timber without the slightest advantage to any one, and now that timber is becoming increasingly valuable such fires are more serious than ever. Extensive fires are reported from New Brunswick where it is said the damages from this source far exceeds the cost of the maintenance of an efficient corps of fire rangers.

British Columbia, as becomes the Province with the great wealth of timber is doing good work in this direction, though not too much considering its

## A DAY IN THE WOODS

Gives a keen appetite, but as every sportsman knows, it is not always convenient to carry a large supply of food. This is where **BOVRIL** comes in, as it contains in the smallest possible bulk, and in the most convenient form for instant use, the entire nourishment of beef. It makes an appetizing sandwich or a palatable and invigorating drink.

splendid timber resources, and the meetings of the Canadian Forestry Association in Vancouver should have as one of their results the strengthening of any weak points in this work.

After much palaver the Ontario Government have made treaties with the northern Indians, the effect of which will be to give the government rights upon 80,000 miles of territory. It was necessary to secure these rights before the Grand Trunk Pacific could go through. Nearly 3,000 Indians surrendered their rights upon conditions that reserves should be established, one square mile being allowed for each family while a bounty of \$4 per head per annum will also be paid by the government. All the chiefs have signed the treaty, and the two years consumed in bringing about this result have proved time well spent.

Catching whales with a net sounds preposterous and absurd, but it is said to be quite an established industry in

the South Pacific. At one point near the North Island of New Zealand there is a jutting headland, the currents round which are thought to deceive the whales into mistaking it for a passage into the Tasman Sea. Whatever the cause schools of whales frequent that point and hug the shore. Straight out to sea the whale net is stretched between the rocks. This net is made of three-quarter inch wire rope in six foot mesh, each mesh being formed of separate sections of rope attached to iron corner rings which take the place of knots. The top edge is held close to the surface by barrels which serve as buoys. A whale cruising along the shore gets his head through a mesh and instead of attempting to back out he rushes forward and entangles himself hopelessly in the net. He might carry the whole outfit out to sea, but instead he thrashes about, and soon gets fins and flukes so intermixed with the net that escape is impossible. Meanwhile watchers have signalled the approach of whales, boats are in waiting, and harpoon and spear complete the work the net has begun.

One of the greatest sights to be seen in Newfoundland is the semi-annual caribou migration. The animals spend the summer in the northern part of the island, and in the fall collect in large herds and make their way south. They allow neither mountain ranges, deep ravines, or broad lakes to divert them from their purpose, but go steadily forward, despite all obstacles until they have achieved the end they seek. If the weather is very severe they draw near the settlements in the south for further shelter. In the spring they return to their northern homes keeping to the same paths, and always going forward without allowing difficulties to more than hinder them. Advantage is taken of these known habits to kill many animals though their numbers appear to be in no way diminished. When they approach the settlements an indiscriminate slaughter results, and it is stated that after one of these forays caribou meat has been sold in St. John as low as two cents per pound. Apart from man, the grey wolf appears to be the greatest enemy of the caribou, though the stealthy lynx is stated to have worked havoc amongst the fawns, and these wild cats are reported to be numerous in the island. The caribou takes to the water with as much unconcern as wild fowl. The enormous thickness of their dense coats of hair help to float their bodies high above the surface, giving a buoyancy almost equal to that of a cork jacket. The caribou is a strong and gallant swimmer. Each limb is like a paddle, the extended hoof answering to the blade. In the winter the frog becomes completely absorbed while very sharp shell-like edges grow well out on the margins, assisting the animals immensely in crossing frozen lakes and scaling the steep sides of slippery rocky precipices. The caribou appears likely to remain the most attractive big game in Newfoundland for generations to come.

An observant dog lover points out traits in these noble animals which must interest even those who are not great friends with them. He notes that an experienced hound coming across a fresh rabbit track knows which way the animal is running. A young dog may sometimes take the back track and an old one for a few

steps, but as a rule they speedily correct themselves. This feat can be done in the dark and a blind hound can do it. The only possible explanation appears to be that the dog's sense of smell is so acute that he detects the difference in freshness between two successive impressions of the rabbit's feet on the earth. This may appear far fetched, but no other theory seems possible. Another instance of their wonderful powers is related. In the case of the chase ending in the death of the rabbit the dog takes a whiff of the dead bunnye, and if led back and placed on his trail will not follow it. Can every rabbit, like a human being, have its own individual smell, and can the hound distinguish this amongst all others? There is also that wonderful sense of locality which even in a country new to him never allows a dog to get lost.

A correspondent writes:—The "Fishing Gazette" says that "life on a good trout stream is not everything." I quite agree with him. If one were surrounded by pools of the various game fish all the year around I venture to say that he would rarely fish. Getting there is half the enjoyment in fishing. For instance, the Chicagoan takes the steamer to the North shore of Lake Huron, then canoes or drives ten, fifteen or twenty miles inland, gets his bass fishing in one lake, and his trout fishing some miles further on. He has a little rough driving or rough paddling, a little portaging and hardship of one kind or another. He possibly dislikes some of it in the doing; (although this is not necessary), but at the end of the trip he feels that he has been through Paradise, and the older the trip is, and the larger the amount of hardship to which he has treated himself, the more pleasant will be the recollection. Moral: Don't make your fishing or your outing too easy, if you wish to enjoy it thoroughly.

Colonel Andrew P. Haggard has made his permanent home in Victoria, B. C., where he will write. He is a man with a splendid military record and a very delightful writer of novels with an out-of-door atmosphere.

Messrs. Fales and Cowans have sent us

exceedingly interesting notes about the Stikine River. This is only one among a hundred other experiences that our readers have had during the past summer. We have good stories from the Kaslo country and Fry Creek—ideal spots. Another writer speaks of Homathco Inlet and Dean and Burk's Channels. Wild fowl of all descriptions—bear, grizzly, brown, black, and salmon trout, goat and sheep are to be found there. The Indians are the right guides for all that country and while a little difficult to become acquainted with they are honest and friendly and will respond to the same qualities in others. The writer has always used Indian guides, bearing in mind that they were children and must be dealt with as such. The Indian is the natural guide and while a little more patience is required to manage him, on the whole, to a loyal employer he is rather better than the white man.

A Regina, Sask., sportsman writes saying that for over twenty years he has been bird shooting and that the promise for this year seems to be as good as any. One has to drive from three to sixteen miles from Regina Station, which is in the Saskatchewan territory. He says that the President of the Board of Trade will arrange for license fees, which are not so high as in Manitoba. The prairie chicken crop will not be as good as usual, owing to the wet weather during the hatching season.

In view of the continually increasing interest taken in fly and bait casting tournaments, the Chicago Fly Casting Club (the first of its kind to organize) will be pleased to send, free of charge, to anyone interested in this delightful adjunct to the sport of angling, a copy of its Constitution, Rules, and Events on application to Geo. A. Davis, secretary-treasurer, 24 Sherman street, Chicago. This book, which is the result of fourteen years' experience, and careful compilation and revision represents, it is believed, the best modern methods, and the events conform, as far as possible, to the most largely practised methods of scientific angling in America. Many clubs have adopted this Constitution, Rules, etc. verbatim, and the Chicago Club make this offer purely in the interests of the sport.

There are several steamboat trips that we have taken in our lives that we love to take again in imagination. One is from Vancouver, B.C., to Alaska, another up the Columbia South from Golden, B.C., to the mother lakes of that great river, another and a very pleasant one is on the Northern Navigation Co. boats from Owen Sound through the 30,000 Islands of the Georgian Bay to Sault Ste Marie and Petoskey, Mich. The trip has been lengthened to take in Petoskey and its cluster of summer resorts, to meet the wishes of the many people who wish to go and see the Hiawatha Ojibway Indian play which is given at Wawaygamang near Petoskey, Mich.

A correspondent writes to us protesting against the appearance in our pages of an advertisement of a trap on the ground that this particular trap is a "brutal device." We agree with him when he says that cruelty is not sport, and that sportsmen are not cruel. These are mere truisms. It does appear to us however to go a little too far to expect a sportsman's magazine to lead a crusade against a particular kind of trap when as a matter of fact opinions differ widely on the point. Both in America and in Europe this question has been raised again and again, and only within the last few months a very lengthy correspondence has been going on in the sporting and agricultural journals of England over the trapping of rabbits—some correspondents alleging that no merciful trap has yet been invented and that the cries of the animals when caught and subsequently are human in their agony and unbearable to the merciful people who come within their hearing. They advocated the entire abolition of trapping, a course impossible in Canada, and probably quite impossible in England. Many people will argue that trapping is not sportsmanship at all and there is a good deal to be said for that view. Trapping however will go on, and our duty, as we view it, is to educate sportsmen by every means in our power to frown down cruelty in all possible ways, and to present at every possible opportunity the highest ideal of sportsmanship. There never need be any question as to which end of the scale the weight and in

fluence of "Rod and Gun and Motor Sports in Canada" will be thrown in any matter of cruelty. We stand for humane methods all the time, though we decline to enter into particular condemnation of those who may be guided by sentiments as high as those which we cherish. The ethics of trapping are sufficiently wide for us to differ in opinion with regard to them and yet remain good friends. We shall hesitate long before condemning any particular method, as the trapper who follows his own course from long experience will probably have good and sound reasons for his actions, and knows more about his work than his critics. We have no wish to emulate Don Quixote who by unwise interference aggravated the ills he wished to end. Any unwise or ill considered crusade on our part against a particular trap would probably lead to greater evils than those we might attempt to remedy. We will go as far as any of our correspondents can wish in upholding high ideals of good and honest sportsmanship, but we decline to set ourselves up as judges of others who either in sport or work may not govern their actions exactly in accord with our views or those of any of our correspondents. From our standpoint if true sport teaches one thing more emphatically than anything else it is charity, and we believe that trappers generally pursue their work with as much humanity as the nature of their calling permit.

The project outlined in the January issue of "Rod and Gun and Motor Sports in Canada" by which it was arranged that a portion of the lands coming into the possession of the Canadian Pacific Railway by reason of their purchase of the Esquimaux and Nanaimo Railway in Vancouver Island should be set aside as a forest, fish and game preserve, has not up to the present been carried out though it now appears likely that the enlightened policy will bear fruit. The British Columbia Government had agreed to the scheme, but the settlers became frightened that this meant a prohibition of all privileges on their part, and petitioned against it with such effect that the Government withdrew. Mr. A. Bryan Williams, head game warden for British Columbia, has addressed a number of meetings in places likely to be affected if the

scheme is carried through, and explained to the people how groundless were their fears. They are a good deal more likely to gain than lose from such preservation, both personally and by reason of the visitors attracted to the Island; and as a result of the campaign of enlightenment it appears by no means improbable that should the matter again come before the Provincial Legislature it will this time be adopted. If, as we pointed out before, success attends the project it will be extended in the Island itself, and, perhaps even more important, will have a marked effect upon shaping the policy of the Government in this matter on the mainland.

A correspondent writes drawing attention to the advantages possessed by Day Mills, Algoma, Ont., as a holiday resort for those wishing a quiet and pleasant vacation. It is situated four miles north of Dayton, a little station on the Soo branch of the Canadian Pacific Railway, and has the great advantage of being between two beautiful lakes. There is good trout, and first class bass fishing in the neighborhood. In the fall there is excellent hunting. In addition there is splendid scenery round about, and good and clear water is an important item on the health side which should appeal not be overlooked. Some American sportsmen have discovered the advantages of the place, which is likely to grow in favor the more it is known.

The trout captured in the great lakes sometimes reach gigantic proportions. For some year the Fisheries Department at Ottawa had a specimen taken from Lake Superior which weighed 81 lbs. There was another, also caught in Lake Superior, which weighed 74 lbs. There are other records of trout caught in this lake weighing from 60 to 90 lbs. Jordan and Evermann refer to specimens weighing from 60 to 125 lbs. Fishermen giving evidence before the Commission in 1893 stated that specimens in Lake Huron ran from 30 to 40 and even 45 lbs. In 1870 one was caught in Michigan waters weighing 80 lbs.

Reports say that moose and deer were never so plentiful as in the vicinity of Zealand, N. B., as this year. They have been actually seen in the streets of Fredericton,

as well as in many farmers' fields. All game appear to have wintered well, and a good crop of antlers this fall is confidently anticipated. Quite recently a large moose was caught in a wire fence and was liberated by a Douglas farmer.

Some fishermen on their return from angling in the Keswick waters in New Brunswick reported that they saw nine moose and several deer in the lake at one time.

Director of Colonization Southworth has just returned from a trip through Algonquin Park, and reports that the black bass which were introduced into these waters six years ago have flourished exceedingly, and that fish weighing three pounds are common. Up to the time they had not been heard of in that district. The beaver in the park are fast increasing in number, and deer are very plentiful.

It is reported that all fishing records have been broken in the country between Lake Nipissing and the Montreal River, far north of Cobalt, and that the waters are teeming with fish. One man caught a twenty-nine pound pike which he had to go ashore from a canoe to land.

How to catch moose is, according to one old hunter, a very easy matter if only "Old Paquette's" plan is followed, and the plan has at least the merit of simplicity. "Old Paquette" lived in North-western Quebec, and away back in the year of the deep snow in seventy-six, when any one could catch a moose if he had time enough to walk after it, he evolved his plan. In Old Paquette's shanty was more moose meat than he could eat, and after due cogitation the hunter went to Pembroke and returned with two dozen cowbells and straps. On his snow shoes he followed the moose tracks and when he caught one he put a cowbell and strap upon it. By carrying on this system all the winter he had by the return of spring fastened every bell on to some "fool moose." Then in spring and summer, whenever he wanted meat, he had only to go out, listen for the sounds of one of his bells, and carry on a hunt which invariably ended successfully. As a consequence, when other people were nearly

starving, Old Paquette got fat on moose meat. "Did he get all the bells back?" asked the wondering listener of this veracious yarn. "All but one," was the reply. "and he lost that simply because some friend caught on to the trick, and secured both the bell and the moose—and old Paquette never forgave him."

There is nothing like personal acquaintance to enable a Minister to judge fairly on the many weighty questions that daily come before him. The Hon. Frank Cochrane, Minister of Lands, Forests, and Mines for Ontario, last month visited the Thunder Bay and Rainy River districts, his object being to make a first hand acquaintance with those districts which have recently been prominent and as to which there are various problems waiting for his solution.

To break a world's record is always a notable achievement and worthy of chronicling. Word comes from New Orleans that Capt. J. T. MacDonald has caught the largest black bass ever captured with a rod and line—a beauty of 8 feet 2½ inches long, and weighing 440 lbs. The previous record in bass fishing was held by E. R. Llewellyn, of Chicago, who caught a 435 lbs. bass at Catalina Island, Cal., some years ago. Capt. Macdonald was two hours in landing his fish, and he did well to accomplish such a task in that time.

Because of limited quarters the Toronto Swimming Club, the strongest national organization in Canada, has been compelled to limit new members this year to 60. The annual meeting was held a couple of weeks ago and all the "old heads" turned up. F. M. Thomas who has always been a most active and valuable member was honored by the honorary presidency. The other officers are: Hon. Vice presidents, A. C. Goode, Dr. Sheard, and A. L. Cochrane; President, C. S. Norris; vice-president, W. Lock, 70 Grenville street; Assistant Secretary, W. R. McEachren; Treasurer, E. S. Davies; Captain, Harry Cochrane; Executive Committee, J. G. Fleming, W. H. Richardson and N. G. Duffett.

The Club has a couple of men who should be up among the top notchers of the swimming, this season.

# Goin' Fishin'.

By One Who Went.

In the spring the sportsman's fancy turns lightly to thoughts of fishing and the all absorbing question of where shall I go, is at once presented for consideration.

Time was, when he who would go a-fishing, need only be an early riser and a five or ten mile drive in the bright June mornings would land him at a trout stream that was good enough to appease the desires of the most shameless trout hog, but alack; these good old days have gone forever. I speak of the fisher-folk whose habitat was in Western Ontario, Canada, within the confines of the Counties of Wellington, Perth, Grey, Huron and Bruce, good counties too for other than things piscatorial. It is not of ancient history that I write but within the last decade it has been my fortune to have had as fine trout fishing within 10 miles of my good old Perth town as ever has been the lot of any of the brethern of the rod and reel who have gone further afield and mayhap fared worse. Streams there were a plenty, though they never figured much in the Guide books, tributaries of the Maitland, Grand and Saugueen Rivers that abounded with as fine specimens of the brook trout as any properly constituted devotee of the sport would desire. Sad to relate those good days have gone I believe forever, by reason of the ruthless devastation of all timbered land, that conserved only such water supply as trout can live and under-drainage conditions which have resulted in the total drying up of the spring creeks that once were the haunts of the best of all game fish.

In the Caledon Lake, Ont., district conditions are not so bad as the topography is more rugged and not suited to cultivation but time is not far distant when the streams there will have shared the same fate.

It is useless to discuss the remedy; there is none,

Commercialism is the dominating factor of these piping times of peace and plenty. The land must be cultivated

and every vestige of forestry seems doomed which means that the supply of spring water will surely fail and with these conditions in plain view the trout will disappear from Ontario's inland streams for all time..

The trout is a prolific fish and has withstood the assault of his enemies afloat and ashore for many long years, but when the ruthless hand of man is further turned against him, deprives him of water, the very element of existence it is surely "all off." These thoughts bring me back to the question 'Where shall I go? If your readers will bear with me I would a tale unfold, that might in some measure solve the problem. I give the experience of last summer. I am up Calgary way and the denizens of that thriving bailiwick labor under the impression that they have fine trout fishing in the Bow River and many and oft were the tales told me by friends, of the glorious sport to be had with the mountain trout, but those kind are not for mine.

I have had experience and when comparison is made between our Ontario brook trout and those of the mountain streams, the latter suffer very badly in my estimation at least; However I am not quarrelling with the Western people about their trout fishing. I had a yearning for the real thing and it meant a 1000 mile hike, but what about that, I wanted to go fishing. The old stamping grounds offered no prospect of sport and recourse was had to a gaudily covered pamphlet issued by the Canadian Pacific Railway, in which the trout fishing proposition was fully set forth. I found therein a heap of information as to the places where both fish and game mostly congregated and it was a difficult matter to make a selection, as apparently the great highway was built with a view to hit all the trout streams and game resorts in British America.

They were a fine old lot of sportsmen who projected the road and carried it across the continent and it looks as if

the people who are now running the outfit have a dash of sporting blood if the facilities which they offer to all classes of sportsmen are an indication. After Maine, New Brunswick, Nova Scotia, Quebec had all been gone over, "in me mind's eye" finally I concluded that the North shore of Lake Superior would probably afford sport enough for one single handed fisherman. It is a good proposition to assert that every stream terminating in Lake Superior from "end to end" is the sure harbor of brook trout and after arriving at Fort William I soon decided where to strike for, after a little diplomatic discussion with a few of the wise ones "who had been there."

Schreiber the first division point east of Fort William was the objective where I victualled up and hit the back trail for Gravel River, by the freight train route, which was a wise move as I gained some valuable information from the Conductor who knew where the trout were sure. My equipment was not very elaborate, consisting of a tent, pair of blankets, handaxe and a gunny sack in which was stowed a loaf of bread, a hunk of sowbelly and a few odd cans of Chicago chicken and the inevitable beans, as I figured that I ought to catch enough fish anyway to do me and that was all I looked for as I could not expect to send any to my friends on account of the distance.

The important part of the outfit was the rod, and I without digressing from the subject, would say that after a good many years experience with about every device for the purpose of catching trout and bass, I have found the real thing. I had used another fellow's steel rods on one or two occasions and I determined that I wouldn't go fishing any more without one. I obtained it direct from the factory. The Horton Mfg. Co., Bristol, Conn., asking them to select one as described by me as nearly as possible, and I certainly was highly pleased with it, first trying it on a few 4 lb. bass in Lake Huron with the most satisfactory results but I had yet to cast for trout with it. Its advantages are many, it being practically unbreakable, either in active service or while transporting and its lightness and flexibility is a delight and pleasure.

Gravel River is a grand stream and

easily accessible from Gravel River Station, which is a regular stopping place for passenger trains. A good trail is cut to the river from the station and its an easy hike of about  $1\frac{1}{2}$  miles. The river can be fished for the most part by wading, the average depth being about two feet. It is about such a stream as the Saugeen, which all old fishermen know so well, in Ontario or the Manitou River on Manitoulin Island. It is free from snags, jam piles and other obstructions and grand open fishing is to be had for several miles. At the mouth of the river very large fish are to be got and along the shore of Lake Superior fishing off the rocks frequently results in 5 to 7 pounders. These are the true *salmo fontinalis*, not lake trout, bear in mind my hearties, and if there is any higher class sport than those fellows afford, deponent knoweth it not. The Little Gravel is a smaller stream, about 3 miles east of the station which crosses the track and where the fish are more plentiful than in the river but less in size. The contents of the gunny sack did not suffer materially while I loitered around the Gravel River as trout with the necessary adjunct of the "Sow belly" to cook'em is good enough grub without digging into the "boughten truck" very deep, and when finished off with blueberries and raspberries picked as you want 'em and taken ad libitum, one can truly say with Sidney Smith:

"Serenely full the epicure would say,"  
Faith cannot harm me, I have dined today."

Understand I am doing the lone fisherman act and the domestic duties are not very numerous and after the usual smoke and swapping a few fish lies with the agent and other local prominent liars, I prefer to rest. Now you fellows that have sung the praises of the sweet smelling bed of cedar boughs heaped on the surface of nature take a tip from me. That old fairy story is a fraud of the purest ray serene. I have tried that for a good many years and while in duty bound to praise its luxuriousness yet I secretly hold to the opinion that the difference between the cedar bough legend and the bare earth was mighty hard to notice and I always arose from it after a sleepless experience with a pretty sore

set of bones. There's a way to make the limbs of the cheerful cedar do good service and it suits me pretty well. In my kit I have a clothes line rope and after the tent is pitched a few swipes with the aforesaid handaxe will get you a couple of poles 7 or 8 feet long, across the ends of which nail a cleat, to make the bed posts about 3 feet wide, then take your clothes line and string it across the poles and in a few minutes you have a mattress on which to lay your cedar boughs, pile 'em on thick and raise the structure a foot or so off the ground and you will have a camp bed that will make you wonder how you ever tolerated the story-book foolishness of boughs on the ground. While I am in the tipping frame of my mind, here's another one. Of course its a foregone conclusion that where you go trout fishing, you will sure banquet with the festive "skeeters or black flies," you furnish the grub on these occasions and you kill your guest if you can. They always go together as a sort of reminder to the flesh that we must take our sports sadly. You all have been up against all sorts of dope for the amelioration of the skeeter industry but most of your experience has been that they rather like the stuff. Here's a dope that they don't like and it is given to all good fishermen in the fullest spirit of brotherly love.—Take of Oil Cedar, Oil Hemlock, Oil Tansy and Eucalyptus equal parts which can be procured at any druggists, and two bits worth will last all summer. As these oils are volatile it is a good plan to rub a few drops into some vaseline and smear it on the hands, face and neck and if this tip is not a winner I am open to expulsion from the Fish Liars Association.

When satiated with the Gravel River fishing I moved on to Pearl River where conditions were not favorable owing to high water, but my wants being small were easily satisfied. I took matters very easily but it was no trouble to catch all the fish I had any use for and when not fishing, I did a good deal of talking to the natives, while they are not particularly communicative from perhaps a natural desire not to have their preserves invaded by the fish hog, the conclusion could be safely arrived at that per-

# Learn to Mount Birds

Animals, Fishes,  
Heads, Tan Skins  
and Make Rugs.

**SPORTSMEN, FISHERMEN,  
TRAPPERS AND NATURE-**

**LOVERS** can now learn the wonderful art of **TAXIDERMY**—can learn to properly mount and stuff all kinds of game birds and animals. Save your fine and valuable trophies, decorate home, den and office, with beautiful specimens mounted by yourself. Double your interest in out-door sport, and enjoy your leisure hours. Taxidermy is the most fascinating of arts, and is **easily and quickly** learned by **men, women or boys**. The correct methods so long kept secret by professionals are **NOW** taught with complete success **BY MAIL**.

## A Very Profitable Business

Hunters and trappers can greatly increase their incomes by mounting and selling birds and animals, or mounting for others. Many of our students have taken up **TAXIDERMY** as a profession.

**OUR SCHOOL:** Is highly endorsed by leading sportsmen magazines and by the best taxidermists, is incorporated under the laws of Nebr., and is managed by skilled taxidermists. Our display of specimens was given **FIRST GRAND AWARD AND NINE GOLD MEDALS** at the great Lewis-Clark exposition. We teach the most approved methods and **POSITIVELY GUARANTEE SUCCESS** or charge no tuition fee. Full course of 15 lessons covering every branch of the art. Rates reasonable. We want to send every interested reader of this magazine full particulars.

**FREE:** Beautifully illustrated Catalog, copy of *Taxidermy Magazine* and hundreds of letters from students. **Write for these TODAY.** They fully explain our school and cost you nothing. May we send them?

"10 B. STREET."

haps in no part of Ontario is there such fishery as in this district of which I write. Of the Nepegon, nothing from my poor pen could add to its glory, as the finest brook trout stream in North America. It has been written about so much that space would be wasted in any further praise. A few words as to the way to get to the waters would be opportune. For an Ontario resident the most desirable is the Lake route from Owen Sound to Fort William on any of the Canadian Pacific Liners and thence by rail to the points I have named. The Eastern man would naturally come the all rail route, but that is more in the line of the ticket agent, and from whom all information and literature pertaining thereto can be obtained.

Fish, there are in plenty and I was tempted to say something about the big game of the Lake Superior Country, but that's another story.

# On a Runaway Car.

## An Adventurous Journey to the Fishing Grounds.

BY R. L. FORTT.

**I**T all happened several years ago, but the memories of that trip will remain with all who took part in it for the whole of their lives.

In August, 1896, it was that a party of five of us arranged to go back north, and of course trout fishing was the object of our expedition. The party consisted of my father, J. B. Knowlson, his friends Mr. Needlar and Dr. Simpson, while my brother Harry and myself also accompanied the "old boys", though neither of us I am afraid were attracted by the fishing—the outing had other charms for us.

After many preparations everything was ready and we made a start soon finding ourselves dumped off at Kinmount, Ont., with more or less of our belongings still intact. At this point we transferred to the Irondale, Bancroft, & Ottawa Railway, usually well known as the I. B. & O.

Owing to the damaged state of the roadbed we were here compelled, as a makeshift, to pile our luggage, canoes, tents, bedding, etc., on a "Lorrie." This lorrie was indeed a curious looking affair, with a low chimney, overloaded platform, and above all propelled by means of "man power". Two section men accompanied us and sat one on either side, continually pushing the car along with their feet.

We loaded only our "absolutely necessary" baggage and set off. Naturally we had included a case of whiskey—the balance to come on after repairs. We had forty miles of travel ahead of us which, with the means of locomotion at our command, appeared to be quite enough for the simple needs of the party.

For many miles the grade was "up" and the process necessarily slow and laborious, all the "passengers" taking turns to supply the power. When however we arrived at the top of the grade our labours ceased, and the balance of the run to Baptisto Lake, our destination, was all "down" grade.

The work indeed was over, but our troubles were only begun. In the floor of the car was a hole about eight inches by ten, and when the speed, as it often did, became too great, a bar of wood was placed into this hole in such a manner as to jam the wheel, thus effectively "braking" the car. Going down one particularly steep decline this bar broke, and the end flew out of the hands of the section man manipulating it.

At that moment he made one of the most appropriate little speeches which I believe could be uttered at such a time. It was short, concise, and certainly to the point. "Jump, ye devils!" he yelled, and suiting his actions to his words he took a flying leap and was quickly left behind by the now speedy lorrie. Mr. Needlar and Harry also managed to get off with more or less damages in the way of scratches and bruises.

"Your father's a dead man, Harry!" were the comforting words that greeted the latter's ears when he had scraped the sand out of his eyes and looked around. This gentle piece of information started him on the dead run after the car. Whether he ever expected to catch it is doubtful; probably he had no clear idea of what he intended, but run he did as if life depended upon his speed. He covered the whole of the two and a half miles to Baptisto station quicker proportionately than he ever ran a hundred yards at home.

In the meantime—there were four of us still on that car, and almost immediately after the jumping incident we rounded a turn and tore down an incline with terrific speed, crossed a bridge like a flash, and continued our headlong flight towards the end—whatever that might be.

There, away on ahead, but ever nearing us with too great a speed, we could see the "buckled rails," caused by a recent forest fire. It was madness to jump now, either side being strewn with broken rocks. Seeing the buckled rails

ahead we knew that "we'd get off there anyhow," as the remaining sectionman put it, and so we decided to wait.

We had not to wait long. Almost before we knew it the car struck the buckle, jumped, staggered, and in a moment—we were running along the track again past the buckle. To those readers who understand all that this meant, such a statement must seem incredible, but it nevertheless happened. We ourselves could scarcely believe what had happened as we sped on, and saw the blurred rails quickly receding from us. We had so certainly anticipated being dashed to pieces on the rough bed of the line that we could not realize we were still living.

After this Dr. Simpson got hold of a bag of flour and succeeded in getting one end of it through the hole in the platform. By pressing on it with his foot he reduced our speed to the comparatively moderate one of about twenty miles per hour. All this happened in a minute, or a very little more.

It must have looked funny to Harry—that long white line down the track, and if he had been in a mood for joking I know he would have appreciated it. But he wasn't and the leaking flour bag did not appeal to him.

Now our third and last adventure took place. Dad was sitting in front with his feet hanging over the edge, and a section man beside him. The latter now leaned over and yelled (for any speaker had to yell to make himself heard at such a time) "Pull in your feet; there's a flat car round the bluff!" He was obeyed, and in a few moments what he had said proved to be true. On rounding a curve there in front of us stood the loaded flat car.

We all made up our minds at once, and there was a hasty scramble to get off. Fortune or Providence had caused this particular place to have sandy ditches, and notwithstanding our unconsidered flight the section man was the only one hurt. Father lit off with both feet ahead of him in the soft sand and wasn't even scratched, while the rest of us escaped with practically no injury, except the section man, who for a few days, owing to the strain he had undergone, was prac-

tical y out of his mind, though he recovered in the course of a week or so.

It will be best understood at what speed we were travelling at the time by telling you what happened to the lorrie. When it struck the wheels of the flat car it drove them forward under the car as far as the forward inbeds. Our "train" was completely buried under the car.

A standing joke with us afterwards was the singular fact that the only article of baggage that was not more or less damaged was the case of whiskey. This was no doubt owing to being protected and sheltered by the bedding and tent, and perhaps being pitched off less violently than the rest of the stuff, and struck only a sliding blow in the sand. Be that as it may there was not even a crack in the case.

It was next morning before we continued our trip, and reached the camping site known as Benoire. Situated on the shores of one of the most beautiful of all our northern lakes this little old Hudson Bay Post, long since deserted, is unsurpassed for a holiday outing. The old log house constitutes an ideal sportsman's resort.

Around us in all directions stretched the immense and seemingly boundless forests into whose depths the novice should not recklessly enter. Fear of wild beasts need not daunt one, but a novice would most certainly lose his way. All who have experienced it know that a night spent in the woods, while no hardship to those accustomed to it, is anything but enjoyable to those who are unprovided with the means and the skill for making themselves comfortable.

The sun was just showing his face over the trees across the lake when Harry and I set out on an exploration trip into these woods. We were more interested in their wild inhabitants than in the trout. On all sides the ruffed grouse rose thundering from their interrupted morning meal, and would sit quite undisturbed on a low pine branch till a chip tossed mischievously at them compelled them reluctantly to "move on." Several times that morning we saw big red foxes, which on being discovered would slink noiselessly away and out of sight in no time. Once we started a

deer, which rising from behind a huge log seemingly directly at our feet, bounded away like a shadow.

Many times since then I have re-visited Benoire, and always on passing the scene of our miraculous escape have wished to put this little incident into print. At last I have ventured to do so, and if many of my friends who have never gone through anything quite so thrilling fail to believe me,—why I cannot blame them. For I have always been doubtful about writing it, thinking that in print it would look too much like a "fish story". Does it?

(Opposite the Comedy Theatre.)

# Marble's AUTOMATIC FLEXIBLE JOINT Rear Sight

The man who knows uses this sight because When not locked down, a simple spring in the hinge joint instantly brings it into proper position should it be struck on front or back. It can be used on all rifles with long firing bolts.

The lower sleeve is a jamb nut which prevents the elevating sleeve from turning, and holds the disc stem rigid at any elevation.

Interchangeable discs allow changes of aperture at will.

A screw in bottom of stem makes

point blank adjustment easy.

This sight will suit all American Rifles, but when ordering, state if

rifle has pistol-grip stock, and be careful to give caliber and model

PRICE \$3.00.

Full description and numerous illustrations are given in our catalog of Specialties for Sportsmen which also describes **Marble's Improved Front Sight**. Buy of dealer or direct. Write for Catalogue "U"

*ROD AND GUN AND MOTOR SPORTS IN CANADA is the Official Organ of the Dominion of Canada Trap-shooting Association. All communications for this department should be addressed to W. A. Smith, Editor "The Trap," Kingsville, Ont.*

## Stray Pellets.

The Clinton Gun Club have selected Oct. 9th and 10th for their 16th annual tournament. They always have a good one.

Of the gun clubs in Western Ontario none are probably characterized by more enthusiasm or are in a more prosperous condition than that at Ingersoll, Ont. Organized about two years ago, the membership has steadily increased until at the present time over fifty names are enrolled. Recently the club decided to make very important improvements at their grounds. Higher and more suitable grounds have been secured, a new trap house built and three traps installed. When all arrangements have been completed few clubs in Western Ontario will be able to show better grounds—and there is some talk of a tournament there in the near future. Mr. A. B. Walker is the efficient secretary. W. J. Kirbyson, John Staples, F. W. Staples, R. McDonald, R. B. Harris, F. McMullin, H. McMullin, W. J. Ross, W. A. Edgar, L. A. Ewald, Geo. Nichols, and A. Williamson are some of the good shots of the club.

Billy Heer was high professional at Missouri State shoot with 601 out of 615. Spencer was second with 599, Walter Huff third with 598. Harry Taylor of South Dakota was high amateur with 495.

R. O. Heikes was high professional at Wilmington, Ohio, with 394 out of 400. Le Compte and R. R. Barber tied for second place with 383. H. R. Houser was high amateur with 342.

Dr. Gleason won the Climax Cup at East Lexington, Mass., with 49 out of 50.

Wm. Kirbyson of the Ingersoll Gun Club broke 35 straight on the club grounds, Aug. 15th. It is up to some one else to break the record now, but they will have to go some to do so.

W. R. Crosby won the beautiful silver cup presented by the Canadian Indians to the American Indians at the tournament of the latter at Parkersburg, W. Va., with 583 out of 600. This was high average for the tournament. The cup is inscribed "Presented to the American Indians by the Canadian Indians as a token of brotherly regard and esteem." At this shoot D. A. Upson, Cleveland, O., won the cup in class A., 94 per cent. and over, with 47 out of 50. L. J. Squier, Cincinnati, O., won the medal in Class B., 83 to 94 per cent. class, with 46 out of 50 and Ed. Voirs, the medal in Class C., 68 per cent. and under, with 46 out of 50. The Mallory Cup was won by Kelsey (G. E. Painter) with 49 out of 50. The ten high guns out of 600 targets were: Crosby 583, W. H. Heer 570, L. B. Fleming 568, O. N. Ford 567, "Kelsey" 567, "Tryon" 566, Walter Huff 564, J. A. R. Elliott 563, Chris Gottlieb 563, L. J. Squier 563.

S. S. Smith of Souris, Man., Gun Club has been doing some remarkable shooting in the

club contest for the gold button. Aug. 2nd he broke 25 straight in the button contest, this being the first 25 straight made on the Club grounds. On the following practice night, Aug. 9th, he repeated the performance making a total of 50 straight. Since then he has broken 24 and 25, a total of 99 out of a 100. Mr. Smith is one of the most successful field shots in Manitoba, being particularly successful on and geese, and the above scores show that he knows how to shoot blue rocks, also.

The Portage LaPrairie (Man.) Gun Club's 14th annual tournament, held Aug. 20th, was a distinct success. There were a large number of entries and some of the best known trapshooters of the district were present. The contest for the Western Manitoba championship cup, created great interest and was won by W. M. Roxborough, Portage LaPrairie, after twice tying with W. R. McAlpine of Gladstone. The scores in this event were, W. M. Roxborough and W. R. McAlpine 24; W. H. Thomson and A. Singleton, 22; Dr. Keele, 21. In the shoot off between Roxborough and McAlpine each tied with 25 and on the second round Roxborough secured the title and cup with 23.

In the team shoot Winnipeg won out with a score of 73, the next highest being Gladstone with 64.

In the sweep events, Simpson, Dr. Cadham, Dr. Keele, Belcher, Brodie, Lane, McDonald, Britton, Lightcap, Bailey, Harwood, W. Boyd, and O'Reilly, made good scores. The last event, miss and out, was won by Boyd with Lightcap second and Roxborough third.

A splendid programme was shot on the Gladstone, Man., gun club grounds, Aug. 15th. The weather was fine and what was lacking in attendance from outside points was made up in enthusiasm. Gladstone has a good gun club of 18 active members and the visitor is immediately impressed with the fact that each of the eighteen is brimful of sport. While there were no brilliant scores made, the average was good, there being quite a number that broke over 80 per cent. The possible was made in almost every event. The high averages for the day were made by Messrs. Ed. Wells, A. Singleton, B. Boyd and J. White, all of Gladstone. Mr. Cox and Dr. Keele represented Portage LaPrairie and Mr. Watson did justice by Winnipeg. The day was fittingly brought to a close with a banquet tendered to the club and its visitors at the Revere hotel, by Mr. Murdock.

## Dominion Tournament.

The Sixth Annual Tournament of the Dominion of Canada Trap Shooting Association, the premier trap shooting event of the year in Canada, was held this year on the splendid new grounds of the Hamilton Gun Club at Hamilton, Ont., Aug. 8, 9 and 10. These grounds are located on the line of the Radial Street Railway on the south shore of Burlington Bay, east of the city, and are in every respect an ideal spot for the sport and for bringing off successfully such a large shoot as the Dominion tour-

CHIEF KING PIN AND HIS LONG TOM.

FRED. GALBRAITH, WINNER OF GREY CUP AND GRAND AGGREGATE.

nament always is. A fine large club house and suitable outbuildings furnish ample accommodation for even the largest crowd.

As was anticipated the tournament brought together the cream of the Canadian trap shooting world. Over one hundred shooters took part, most of whom shot through the entire programme. The programme presented was a varied and rich one as can be seen by the list of trophies mentioned. The officials of the Hamilton Gun Club, headed by Thos. Upton and W. P. Thomson, President and secretary-treasurer, respectively of the Dominion Association had left nothing undone to assure the success of the tournament and are to be heartily congratulated on the result of their efforts.

Four sets of Bowron traps had been installed and worked perfectly. The flight of the targets was very even except when varied by gusts of wind from time to time. Bowron targets were used and sustained their reputation as being the best breaking and most satisfactory target on the market.

The shoot was under a fixed handicap of 16 to 20 yards. This proved to be the one unsatisfactory feature of the tournament. The difficulty of any handicap committee anticipating the shooting form of any particular shooter on any particular day was amply demonstrated and although the handicap committee were as capable, fair and careful as could have been selected their decisions caused more or less complaint and in some cases, we think, worked a hardship to the shooter. The Association have wisely decided to eliminate this style of handicap in future.

The feature event of the first day was the fifty-bird race for the *Indian* (Champion) of Canada. Here all stood on the sixteen yard mark and it was the best horse to win independent of any artificial aids or restrictions. The big Montreal Rolling Mills *Tro* representative of the championship, was landed in brilliant style by D. McMackon Hiebert, Ont. with a straight score. He did not win, however, without a final struggle with W. J. Johnstone Ottawa, who, also, had a straight score

to his credit. On the first shoot off at twenty birds both broke sixteen. On the second shoot off McMackon ran straight while Johnstone missed one bird. This is the first time the Cup has been won with a straight score. The previous winners were: D. Bain, Winnipeg 1903; F. Westbrooke, Brantford, 1904; W. A. Smith, Kingsville, 1905.

High average for the first day was won by A. W. Throop, Ottawa, and Geo. Beattie, Hamilton, who tied with 190 out of 200. Throop has been known as a cracker Jack for years, but it is only within the last year or so that Beattie has made the old heads sit up and take notice. Second average was tied for by F. Galbraith, Ridgetown and W. Slaney, Ottawa. This was a case of youth and age meeting on common ground, probably half a century marking the difference in the ages of these two contestants. F. Galbraith as will be seen did consistently good work during the whole tournament. Mr. Slaney is looked upon as the nestor of the trap shooting game in Canada and his familiar figure is looked for eagerly by every trap shooter who attends the Dominion tournament each year. Every one was delighted to see him make such a grand score of ninety-four per cent. Very few at the tournament were able to do any better.

The chief feature of the second day, by many considered the principal event, of the tournament, was the Grand Canadian Handicap at 30 targets, \$5.00 entrance, money divided high guns. In this event the shooter kept the handicap given him for the day. Walter P. Thomson, Hamilton, shooting from 18 yards, won out in brilliant style, landing the whole bunch with the splendid score of 42. "Walter P." is one of the most popular men at the traps and he was heartily congratulated on his win.

High average for the second day was won by two brilliant representatives of the East and West, W. H. Ewing, Montreal, and H. Scube, Ridgetown, who tied with 190. Dr. Stockwell, Sherbrooke, was a close second with 185.

High average for the third day was won by T. M. Craig, Sherbrooke, with 192, the highest amateur score of the three days. Mr. Craig was the winner of the Grey Cup last year and can always be depended on to do good work at the traps. Dr. Green, Hamilton and J. E. Jennings were second and third with 189 and 188 respectively.

The grand aggregate for the three days was made by F. Galbraith, Ridgetown, a young shooter who has come into the spot light within the last year, as an exceptionally strong shooter both at live birds and targets. He shot a very steady race during the whole three days and his success was well deserved. Second grand aggregate was won by J. E. Jennings, Toronto, also a young shooter but nevertheless one of the best the Queen City can produce. Third aggregate went to Montreal, Ewing, who was picked by many as a possible winner and Redman of the same place, dividing the honors between them.

Professional average for the three days was won by J. R. Taylor, Newark, Ohio, the Winchester expert, with 584, using Winchester ammunition and a Winchester Repeater.

Considerable interest was taken in the team races which took place on the last day. The two-man team match was won by Ewing and Rainville of Montreal after shooting off a tie with Jennings and Best of Toronto. The five-man team match for the Mail Trophy was won by Hamilton, as was also the eight-man team match for the Dominion Cartridge Co. T. This being the third win of the latter trophy by Hamilton it becomes the property of that club.

The trade representatives in attendance at the tournament were J. R. Taylor and J. H. Cameron of the Winchester Repeating Arms Co.; W. H. Stevens of the U. M. C. and Remington Arms Cos.; E. G. White and F. H. Conover of the Dupont Company; Cant. Du Bray of Parker Bros.; F. L. Hallford of Dominion Cartridge Co.; W. P. Leach of the Ithaca Gun Co. and A. H. Durston of the Lefever Arms Co. Messrs. Taylor, Stevens, White, Durston and Conover did good work for their companies at the score, while Messrs. Cameron, DuBray, Hallford and Leach did equally effective, if less warlike, work behind the firing line.

The office work was in charge of George W. Burkholder, Hamilton and George Cashmore, Toronto. These gentlemen have proved their efficiency on more than one occasion and none more so than on this. The work and worry of handling such a number of shooters was considerable and that their work was so well done reflects great credit on these gentlemen. Genial James Maxwell was score sheet writer and H. Baldwin, score keeper. William Wark was the mechanical genius of the tournament and was invaluable in looking after the traps and other details of the shoot.

#### ANNUAL MEETING.

The annual meeting of the Association was held at the Royal Hotel, on the evening of Aug. 8th. Thos. Upton, Esq., Hamilton, president, presided. There was a good representation from affiliated clubs present. Mr. Deslaurier, Ottawa, raised the question of the distance between stakes and it was decided to have the stakes in future three yards apart. Much discussion arose over the question of handicapping. It was decided to have the handicap in future a sliding one, 16 to 20 yards. A resolution was passed allowing members of a two-man team, who are members of same club, to compete, notwithstanding the fact that they do not reside in the same town.

A resolution was introduced and unanimously passed authorizing the presentation of a gold medal to Thos. A. Duff, Esq., Toronto, to commemorate his win of high average at Ottawa in 1901.

Montreal was offered the tournament for 1907 but gracefully declined in favor of Toronto and Toronto was thereupon unanimously selected. The date of holding the shoot was left to the incoming executive and if financial reasons

# STEVENS

## A trio of STEVENS SUCCESSES

**Little Scout Rifle** \$2.25  
No. 14. LIST PRICE

We are always mindful of the requirements of the Shooting public and know to perfection what the users of guns and rifles desire. Our varied and extensive output of

### Rifles—Shotguns—Pistols

emphasizes the extraordinary popularity of the time-honored STEVENS LINE.

SHOOTERS the WORLD OVER demand the STEVENS—want no others—*insist on our make!*

**Repeating Gallery Rifle** \$12.00  
No. 80. LIST PRICE

Our New "Little Scout" Rifle No. 14—.22 Calibre Repeating Gallery Rifle No. 80—Double Barrel Hammerless Shotgun No. 325—are typical STEVENS productions; that is, they embody firearm virtues of a high order and "will make good" in every particular.

These models will be ready for general distribution as per dates here-with:

Stevens Little Scout No. 14 Rifle—now ready.

Stevens Double Barrel Hammerless Shotgun No. 325—now ready.

Stevens .22 Calibre Repeating Gallery Rifle No. 80—Oct. first, 1906.

Ask your dealer and insist on our popular make. If you cannot obtain, let us hear from you. Send for circulars containing detailed descriptions of these new Stevens productions. Send for two-page illustrated catalog. If interested in shooting, you ought to have it. Mailed for four cents in stamps to cover postage.

High Average Third Day and a \$20 Winchester Repeating Trap Gun won by T. M. Craig, Sherbrooke, Que., with 192 out of 200. Second prize, \$10 donated by Hamilton Gun Club won by Dr. Green, Hamilton, with 189.

Event No. 1, 60 targets, \$50 in gold donated by Eley Bros., Limited, London, Eng., divided by Dr. Wilson, Harry Scane and P. Conture with 58 each.

Event No. 2, 60 targets, \$50 divided, \$25, \$15, and \$10, donated by Royal Distillery, Hamilton.—1st, M. E. Fletcher, 59; 2nd and 3rd, J. E. Jennings, Ben It, W. P. Thomson and F. Galbraith 57 each.

Event No. 3, 60 targets, \$50, divided \$25, \$15 and \$10, donated by Hotel Royal, Hamilton.—1st, F. Galbraith 60, second and third, G. M. Dunk and Dr. Stockwell, 57 each.

Event No. 4, 60 targets, \$50, divided \$25, \$15 and \$10, donated by Hilda Cigar factory, Hamilton.—1st Dr. Green 57, second and third, O. E. Schell, Dr. Wilson, George McCall and P. Conture, 57 each.

Event No. 5, 60 targets, \$50.00, divided \$25, \$15, and \$10, donated by Hamilton Brewing Association, Hamilton.—1st, J. E. Jennings, 59; 2nd and 3rd, M.E. Fletcher and P. Wakefield, 58 each.

Captain Du Bray entertaining the professionals. Left to right: Conover, Cameron, Taylor, Durston, Stevens, Du Bray and Halford (lying down) professionals; and A. Day (extreme right) and A. W. Throop (extreme rear) amateurs.

W. P. THOMSON, WINNER OF THE GRAND  
CANADIAN HANDICAP.

\$40 suit of clothes donated by A. Zimmerman & Co., merchant tailors, Hamilton, for longest consecutive run in the regular events. Mr. Fletcher made the remarkable run of 120.

#### REFLECTIONS.

Messrs. Taylor and Stevens, though comparatively young in the professional class, are making fine records for themselves, as they go down the firing line.

And yet there are few more graceful or effective shooters in the ranks than our own "Teddy" White.

The Hamilton Gun Club entertained the visiting shooters who remained over to an elaborate wine supper at the Hotel Royal. Good refreshments, good speeches and good fellowship characterized the meeting which was a pleasant wind up to a pleasant outing.

M. E. Fletcher's run of 120 straight was a record breaker for Canada. No other competitor was within speaking distance.

The sectional squad style of shooting proved effective after the shooters became familiar with it. The regular programme was finished in the middle of the afternoon, the last day.

To many a warm luncheon in the middle of the day is a necessity, and to these the cold collation supplied on the grounds was a disappointment.

Everyone was glad to see the Ottawa veterans, Slaney and Deslaurier, in their place on the firing line.

W. P. Thomson didn't do a thing but hit them in the team matches running a straight 30 and 20 in the Mall Trophy and Dominion Cartridge Co. events.

The Worcester Repertoire Co. with their usual advertising enterprise, distributed handbills of their match guns to the shooters.

There was a lot of sport thrown during the tournament.

#### Dartmouth Doings.

The monthly shoot of the Dartmouth N.S., Rod and Gun Club was held Aug. 1st in the presence of a large crowd of visitors and members. In addition to trap shooting, rifle and revolver shooting was indulged in. The list of events was as follows:—

First event—10 targets, 1st, A. Edwards and J. Henneberry, tie; 2nd, G. P. Monahan; 3rd, A. M. Stewart.

Second event—10 targets, 1st, A. Edwards; 2, J. Henneberry; 3, E. Walsh and J. A. McLaughlin, tie.

Third event—10 targets, 1st, H. D. Romans, J. Henneberry and A. Edwards, tie; 2nd, E. Walsh; 3rd, J. T. Egan.

Fourth event—10 targets, handicap, 1st H. D. Romans; 2nd, J. T. Egan; 3rd, A. Edwards and J. Henneberry.

Fifth event—Lafin and Rand Cur 25 targets, handicap, 1st, A. Edwards; 2nd, J. A. McLaughlin and J. Henneberry, tie; 3rd, H. B. Romans.

Sixth event—10 targets, 1st, A. Edwards and J. Henneberry, tie; 2nd, J. A. McLaughlin, H. B. Romans and E. Walsh, tie; 3rd, J. T. Egan.

A. Edwards won the Austen-Hill badge for the best straight run having equalled the run of 34 made by L. F. Hill on May 2nd.

The members of the Dartmouth Rod and Gun Club would be pleased to know of any of the trap shooting fraternity who might be in Halifax at any time and who would like to spend an afternoon at the traps. This could generally be arranged by calling on Secretary Monahan of the Club, or Mr. T. J. Egan, dealer in guns and sporting goods.

#### Tournament at Stratford.

The tournament at Stratford under the management of J. J. B. Meyers, Aug. 4, 6 and 7,

**"A  
GOOD  
SHOT."**

"We can help you gain the reputation of being  
"a good shot."

If you load your own shells, be particular  
when ordering your Shot to specify

**"M. R. M. brand"**

and you will get the best that can be made.

Right material, uniform as to size and highly  
polished. These are some of the good features  
of our product.

THE  
**MONTREAL ROLLING MILLS**  
COMPANY.

proved quite a success notwithstanding the fact that the big Dominion shoot following immediately after no doubt kept a great many from participating. F. H. Conover of the Dupont Company, W. H. Stevens of the U. M. C. and Remington Co.'s; J. R. Taylor, the Winchester expert and F. L. Hallford of the Dominion Cartridge Co., were the trade representatives present.

The feature of the shoot were the scores of Taylor and Stevens. The former made a run of 183 and the latter a run of 135.

High average was won by A. W. Mahler, Ailsa Craig, with 178 out of 300, second, G. M. Dunk, Toronto, with 176 and third, K. C. Turnbull, Stratford, with 172. The scores second and third day, only, were counted in the average.

The scores:—

**A SAMPLE**

Of What We Are Receiving Every Day.

Gentlemen.

I find the Red Cross Batteries quite the best thing that I have ever tried for my 50 h.p. Thomas. It seems to me that they are away ahead of any storage cell that I have been able to find, and they last much longer than any other dry cell that we have used and to revive even when apparently run out.

Until some perfection of the Magneto system is arrived at I will continue to use these dry cells. Yours faithfully,  
THE WILSON PUBLISHING CO., Limited,  
C. L. Wilson, Treas.

Gentlemen,—I have been using your batteries in my boat *Lilybell* for the last month and a half and have had better satisfaction with them than I have ever had before with any other batteries which I have used. I have covered over 700 miles on oneset and I am still using them. Yours truly, ROBT. R. DOWNARD, Queen City Yacht Club, Toronto

Gentlemen,—We are pleased to add our testimony to a number of others in stating that we have used the Red Cross Cells on our automobile and they have given us entire satisfaction and we think are superior to anything we have used in the past on our car. Yours truly, PEARSON BROS., per Arthur Pearson

Gentlemen,—In reply to your enquiry as to what satisfaction I was getting from your Red Cross Batteries, I would say that I have been using your batteries since last April in my automobile, a 24 h.p. air cooled car, and must say they have exceeded my utmost expectations. I formerly tried several other makes, but have yet to find a battery with a higher amperage, greater recuperation or longer life. Yours very truly, J. HERBERT HALL, Pres. Conduits Co. Limited

## The Secret of Health.

Health is a normal state it means that every tissue in the body is formed

of perfect cells, containing certain exact proportions of inorganic salts. The difference in texture, firmness, elasticity, pliability, strength and other qualities of tissues, is due to a variation in proportions of the different salts. Disease exists wherever the proportion of salts is disarranged and the equilibrium disturbed. Thus, if the proportions necessary for perfect muscle are not maintained, then the muscle will be imperfect in that degree. If a bone has too little silica it will lose its firmness and polish. If the brain lacks potassium it will work imperfectly; if the nerves need magnesia they act intermittently and painfully. The way in which an organ performs its work tells the skilled biochemist which of the salts are lacking. The cure of the diseased condition depends upon the supply of needed salts and the restoration of the equilibrium.

Ordinary food contains all these tissue salts in abundance. Healthy organisms abstract and use them. Sick people do not. That is why they are sick. In order to prepare salts for admission, what is known as molecular reduction must be performed. This is where the ailing system fails, and the salts cannot be used. The salts in our remedies are ready for immediate assimilation, the reduction of molecules having been accomplished outside of the body. They are in usable form, and are accepted gratefully, greedily by the starving system. The effect seems miraculous in many cases.

We have four booklets and some leaflets which explain our system of feeding diseased tissues and restoring them to health one on General Diseases, one on Private Diseases, one on Women's Diseases and one on Varicose Veins and Varicocle. Any or all of these are sent on receipt of a request, free. We want you to read them. If they are not rational, logical, sensible, we want you to criticize them and tell us wherein they are wrong. We claim to have the only Remedies for Disease. They are not drugs or medicines any more than any foods are medicines. They are foods in usable form. If you are not W. S. ENSIGN, Phys. Ch., perfectly well it will pay you to investigate.

## Rifles Are Reliable

Reliability, strength and accuracy are the cardinal virtues in a hunting rifle. Success and safety often hinge upon them in big game shooting. Winchester rifles possess these virtues to the fullest extent, being reliable in action, strong in construction and accurate in shooting. Winchester rifles and Winchester make of cartridges are a combination that always gives satisfaction. They are made for one another.

**T**HE distinctive feature about my Willow Furniture is not the price, but the quality—lots of Art Furniture is sold at less, but you would not want it at any price when placed alongside of YOUNGER'S WILLOW FURNITURE. I grow my own Willow. I supervise personally the workmanship. I guarantee strength and durability of every article. As to BEAUTY of this Furniture, it speaks for itself. The handsome set, illustrated above, sells for \$12.50. It comprises three comfortable arm chairs, made of Willow. That means coolness and comfort. There is no reason in the world why you should sit in an unventilated and unhealthy upholstered chair when you can buy these artistic chairs at prices from \$3.50 to \$10.

We also manufacture a variety of other Rush and Willow Furniture, including Settees, Arm Chairs, Fancy Chairs, Invalid's Chairs, Tables, Picnic Baskets, Automobilists Baskets, and numerous other articles. Special baskets of any style made to order.

No extra packing charges for shipping to outside points.

TYPE OF

## 4 Cycle Motor

Built in Sizes 12 to  
100 H. P.

Operates on Gasoline  
or Distillate.

Wolverine Motor Works, Grand Rapids, Mich.

Niverville, Man., Feb. 7, 1906.

Gentlemen: —It gives me great pleasure to tell you that the 6 H. P., 2 cylinder, 2 cycle engine, I bought from you last June has given the best of satisfaction, on the River and also on the Lake. It drives my 22½ ft. boat close to 11 miles an hour, and does it easily.

The best part, however, is the ease of handling it. It is seldom that I have to use the crank more than once a day as it would hold the compression in the hottest sunshine for four or five hours, and has repeatedly started by the lever alone after not being used for 1½ to 2 days.

We lived through the worst storm on Lake Winnipeg of the season '05 and would surely have been drowned had the engine stopped on us.

Respectfully yours, WM. B. MEY.

# WOLVERINE MARINE ENGINES

One Grade Only—The Highest

Have stood as the standard of excellence for 20 years—the highest art in marine gasoline engine construction, 5 to 100 h. p., 2 and 4 cycle, self-starting and reversing.

**SPECIAL OFFER** How to get boat plans worth \$50.00 to \$200.00 for pleasure or working boats without cost to you. Write us at once for complete information and Catalog No. 26.

**WOLVERINE MOTOR WORKS, Grand Rapids, Mich., U.S.A.**

WE are probably the largest exclusive marine gasoline engine manufacturers in the world.

TWENTY years of scientific study and careful experimentation MUST have resulted in something.

OUR special method of construction insures long life and freedom from annoying breakages.

EVERY engine is thoroughly tested and inspected before it leaves the factory.

# *The Province of Quebec*

*From the Sportsman's View Point.*

No country in the world possesses a greater variety or more attractions in the line of sport than historic Quebec. When a little better known it will surely become the "Mecca" of devotees of sport; the angler is very much in evidence now even, from 1st May to 30th September, putting forth his best efforts to secure the silvery salmon, the beautiful speckled or sea trout, or yet again the pugnacious bass.

Autumn sees the sportsman again around with rifle or shot-gun, tracking the fleet Caribou or Red Deer or snugly ensconced on the shores of a lake, waiting for an opportunity to lay low the king of the forest, the mighty Moose. Others are content to frequent the hardwood ridges or beaches, in quest of the ruffed grouse, or wild fowl. Few, if any, return unrewarded for their efforts.

A large area of territory is now under lease to clubs, but there is ample room for more; as for the transient sportsman, there is a wealth of territory at his disposal, e. g. in the Upper Ottawa, St. Maurice, Lake St. John and on both sides of the St. Lawrence below Quebec City. Access to all these points is easy, either by rail or water way.

Fishing licenses for the season for non-residents, cost \$10.00 for hunting \$25.00.

Fishing and hunting territories are obtainable at very reasonable rentals, in any part of the Province where crown lands exist. There are still some very desirable salmon rivers available in the Lower Gulf district.

The Government will in all probability, allot territory to Fish and Game Clubs in the recently created Reserve, in the Peninsula of Gaspé, reserving of course the interior for propogation and a limited amount of shooting and fishing.

## *"Laurentides National Park."*

This renowned hunting and fishing territory takes on increased popularity yearly. Dates for hunting and fishing may be applied for at any time. Increased accommodation will be provided for sportsmen by 1st September, 1905, in the great Caribou Barrens.

For information of any kind re Sport, address

## THE Amateur Trainer

BY  
ED. F. HABERLEIN.

A plain, practical and concise, yet thorough, guide in the art of training, handling and the correcting of faults of the dog subservient to the gun and field. Acknowledged by authorities and amateurs alike the most practical book on training ever published. The author is a practical trainer of over 30 years' experience whose system is up to date and stands unequalled, the accepted standard

**NEW EDITION JUST OUT.—ILLUSTRATED.** Comprehensible, popular form, devoid of long-spun theories, based on practical experience throughout. Not a large volume of pastime reading matter, but guaranteed to contain the most practical information on the subject at any price. Sent postpaid on receipt of price—paper cover, \$1.00; finely cloth bound AND GOLD EMBOSSED, \$1.50. ADDRESS:—

Subscription Department, Rod and Gun in Canada  
Woodstock Ontario.

## TO FILL The ORIGINAL and ONLY GENUINE CONKLIN'S SELF-FILLING PEN

Simply dip in the ink, press with the thumb, and the CONKLIN PEN is filled and ready for instant use. It is simple, convenient, efficient, with no complex mechanism and nothing to get out of order.

The elastic ink reservoir is compressed by the presser bar under the thumb, and, when released, instantly draws in the ink through the feed channels at the point. The quickly adjusted lock-ring prevents ink from being forced out again. Feeds regularly until the last drop of ink in reservoir is used. Always responds without kick or balk. Cleans itself as easily as it is filled. Fully guaranteed.

If your dealer does not handle the CONKLIN PEN, let us make you our Special Offer to Fountain Pen Users. Full information, with illustrated catalogue, sent upon request. Sold by dealers everywhere.

PHOTOGRAPHIC ARTIST . . . BANFF, CAN

IF LIVE BAIT will  
ever catch more fish  
than a "Dowagiac"  
artificial minnow, it  
is the exception. 19  
times out of  
20, game  
fish "strike"  
only to at-  
tack the  
lure.

## "DOWAGIAC"

Artificial Minnow

MORE "DOWAGIAC"  
BAITS are sold every  
year than all other  
Artificial Casting  
Baits combined.

The "Dowagiac"  
Bait Products  
for 1900 are just  
a little hand-  
somer and more perfect in  
construction than ever  
before.

A piece of painted wood with a fish-hook attached is not a criterion for artificial bait. "Dowagiac" baits are the  
result of many years' experience of practical bait casters. Every detail has been carefully worked out and that is  
why the "Dowagiac" minnow will land your fish at a time when he would slip off the other fellow's bait.

"Drop a line" to us and catch one of our booklets showing our minnows printed up in their natural colors.

## "THE COMMON WAY"

From "Camp Kits and Camp Life" copyright, 1906, by Charles Scribner's Sons.

**By CHARLES STEDMAN HANKS "NIBLICK"**

*Author of "Hints to Golfers."*

A practical handbook for the woods, founded on many camping trips with a varied assortment of guides and after many kinds of game and fish. The veteran sportsman as well as the neophyte will read the book with pleasure and profit. It takes up camp cooking, outfit, illness in camp, shooting, fishing, trapping, and general woodcraft.

There are cross-headings for each topic, and in addition there are conspicuous running head-lines giving the subjects of each page. The index is also full and definite; moreover the chapters classify the information in exactly the way the sportman is apt to need it. The book is the size and shape to slip conveniently into the pocket.

A valuable manual of every phase of out-door life. Offers a thousand and one suggestions.—*Boston Transcript.*

## AN UNEXPECTED SHOT

## Marble's Jointed Rifle Rod

This rod will not "wobble," bend or break at the joints.

As will be seen by the accompanying sectional cuts, when its three sections are screwed home, it is to all intents as solid as a one-piece rod. A long neatly fitting, steel dowel enters the recess prepared for it in its solid brass section and imparts to the rod a special rigidity which the screw, thus relieved of all side strain upon its

tachable tips. It has two steel joints, steel swivel at its end and is fitted with handsome cocobola handle. Two de-

## Marble's Rifle Cleaner

This cleaner can be attached to any standard rod, and may be freely used in the finest rifle without the possibility of injuring it.

Each of its sections of brushes is composed of six washers, of the softest brass gauze that can be made, and all are a trifle less in diameter than the bore for which they are designed. By this arrangement the spring of its spirally-bent steel

backbone presses but one side of each brush against the bore and the twist in the wire causes the cleaner to follow the lines of the rifling, with the result that every atom of the bore is treated, and that all lead ing, copper, rust or enked powder is quickly removed.

This cleaner does its work thoroughly and is exceedingly durable. Ask your dealer first. Price pre paid, 50 cents. Field Cleaner 75 cents. Mention caliber. Send for 56 page, 100¢, free catalog "U".

**MARBLE SAFETY AXE COMPANY, GLADSTONE, MICH.**

Model '93, Large Caliber Rifle. When the crash of the fleeing buck and doe makes your heart jump and brings your gun with a jerk to your shoulder,

And your eye follows those good *Marlin* sights as you lead the white flag for a shot, it's a comfort to know the gun is going to do its part.

*Marlin* Model '93s are sure-fire and accurate. All *Marlin* rifles are simple, strong, easy to carry and have that balance which makes you shoot well.

*Marlin* '93 rifles are made in calibers .25-36 to .38-55. They are getting the best results everywhere at big game, from Virginia deer to Kadiak bear.

The barrels are of "Special Smokeless Steel,"

the best obtainable, and are rifled deep and severely tested.

The working parts are all of drop-forged steel blocks cut to simple patterns. All *Marlin* parts are interchangeable.

The *Marlin* solid top is accident insurance of the best kind. The *Marlin* side ejection throws the shell aside, not into the line of sight or into the eyes.

Remember all *Marlin* Rifles are proved and tested for safety. Safe, sure and strong. What more can we say to the hunter of big and dangerous game?

These and many other valuable *Marlin* features are fully explained in our handsome catalogue. Sent FREE upon receipt of six cents in stamps.

*The Marlin Firearms Co.*, 67 Willow Street, New Haven, Conn.

We received the highest reward at St. Louis World's Fair

**LIFE SAVING FOLDING CANVAS BOAT CO.,**  
KALAMAZOO, MICH.

## *Everybody Knows*

A true state of health is reflected in an individual's ability to successfully ward off the attacks of sickness and disease.

A healthy man through overwork or some other violation of the laws of Nature, may "run himself down"; and when he is in such a condition his faculties become impaired; he experiences that "unable-to-work" feeling, his temper is spoiled and his appetite, as he would put it, "Falls off." In a similar way a woman may get out of sorts and her household duties become a strain and worry instead of being the source of pleasure which a home and its workings should be to every one of her sex.

# Abbey's Effer- vescent Salt

will place you in that condition that sickness and disease may be warded off — your appetite will be ensured, mental forces renewed, and good health will result.

SOLD BY ALL DRUGGISTS.

**25c. and 60c. Bottle.**

NO. 6

### To Abbitibi With the Prospectors.

BY H. R. HYNDMAN.

**A**MONG the numerous canoe trips into the Canadian woods the cruise from the head of Lake Temiskaming to Lake Abbitibi is particularly attractive, on account of its easy accessibility, beautiful scenery, excellent fishing and interesting experiences all along the route. Lake Temiskaming is located about three hundred miles north of Toronto, and is part of the boundary line between Ontario and Quebec. It lies about forty miles east of the Temagami Lake region which is so rapidly becoming popular with lovers of outdoor life, and is adjacent to the famous Cobalt silver district of Ontario. This lake, an enlargement of the Ottawa River, is almost seventy miles long and one-quarter to several miles wide. The scenery is very picturesque, the shores bounded all the way by wooded hills producing an effect very similar to a trip up the Hudson River. One of the special scenic attractions on the lake is Devil's Rock, a perpendicular cliff rising over two hundred feet above the water, on the western shore about four miles south of Haileybury. The face of this rock is covered in spots with mineral stains of different colors, and the effect produced when the eastern sun strikes it is novel and rarely beautiful. With Pullman sleepers via the Grand Trunk Railway system now landing the tourist directly on Temagami or Temiskaming Lakes this section of Canada, with its beautiful scenery and good fishing, will soon rival Muskoka as a popular summer resort.

It was a cool, bracing day in May when two of us landed in Haileybury, at the head of Lake Temiskaming, ready to leave for Lake Abbitibi as soon as we could engage guides and get our outfits together. There was no difficulty in getting food supplies, but we could not locate any guides and canoes, old or new, were nowhere to be found. It seems a spring rush of prospectors into the mineral regions had temporarily exhausted the supply of canoes, and had more or less reduced the available number of guides. Finally after running around among the different towns for almost a week we landed one guide, a young Canadian, and procured two new Peterborough canoes, one seventeen and the other sixteen feet long. The guide argued, as soon as he saw the canoes, that they were too small for use on such a rough lake as Abbitibi, but we were restless under the delayed departure, and decided to start with the small boats, hoping to rent a larger canoe or possibly a lumberman's "pointer" on Abbitibi Lake. The supplies were purchased at Haileybury, and were shipped by steamboat across the lake to North Temiskaming, the actual starting point. Here, while arranging packs, we found we were short both of sugar and beans, two important factors in the food list; but they were easily obtained from a local store. One cannot be too careful in checking up what is actually received on an order when outfitting for a trip of this kind.

The route from North Temiskaming

DEVIL'S CHUTE, QUINZE RIVER.

started with a sixteen mile wagon portage to Quinze Lake. This was to avoid the swift water and rough rapids in the Quinze River. The Quinze River is really another section of the Ottawa River, and carries into Lake Temiskaming the waters of the lakes and streams extending for several hundred miles to the east and north. It contains fifteen rough rapids or chutes, and during high water in the spring of the year resembles, in the speed of its current, size of swells and volume of water, the Niagara River.

On account of its swift current, which means strong eddies and cross currents, it is almost as difficult to go down stream as up, and consequently the guides have a strong preference for using the wagon portage around the whole river. The roughest place on the river is Devil's Chute, the third chute from the mouth of the river. Here the river narrows to almost one-half its usual width and rushes with fearful speed over a drop of about twenty feet and at an angle of about four hundred and fifty. The enormous volume of water rushing against the hid-

den rocks in the river produces ever changing swells which have the fascination of the Whirlpool Rapids of the Niagara River, and incidentally almost their size. In talking with an old guide about the river he remarked, "The Quinze River is a bugger," and after seeing the river at flood stage one is not much inclined to criticize the expression.

It was at one p. m. on Saturday, May twenty-sixth that we left North Temiskaming on our sixteen mile tramp behind the wagons to Klock's Farm on Quinze Lake. The previous night it rained, which meant a muddy road, but we were more in the humor to tramp over a bad road through the bush, than loaf any longer around the back-woods hotel. The start was made in the teeth of a half rain, half hail storm, unusually cold weather for that time of the year, and rather singular weather in which to go on a canoe cruise, but we had started and decided to take whatever came up. Our object in going so early was to do a little prospecting in the north where rich mineral indications had been said to ex-

ist, and our enthusiasm over the prospecting probably overshadowed our fear of the flies, which we knew would be in their greatest numbers before we should return. During hail storms and freezing nights there is little inclination to think about protection from mosquitoes, but we know better now.

Klock's Road is a typical Canadian lumber road,—made up of mud holes, rocks and stumps, and it is not surprising it is often called worse names than the Quinze River. After walking from twelve thirty to nine p. m. we reached Klock's Depot tired out, and also famished as we had neglected to take along anything to eat. A hearty supper of cold pork, baked beans, raisin pie and plenty of tea soon put new life in us, and later on all turned in their bunks for a night's rest which could not be anything but sound. Klock's Depot, or Farm as it is sometimes called, is a clearing of almost two hundred acres on the shores of Quinze Lake where grain and vegetables are raised for the use of the lumbermen, thus saving considerable hauling of supplies over the road from Lake Temiskaming. It is now practically the northern border of civilization in this section of Quebec, nothing extending beyond but the illimitable bush, excepting at rare intervals the hut and little farm of a half breed trapper or hunter. Instead of starting the next day we were held at the depot two days on account of high head winds. The delay proved to be a pleasant diversion rather than a monotonous loaf as we met at the Depot Mr. Klock, one of the proprietors of the lumber company, and the members of a government expedition to Abbitibi, the James Bay Treaty, Treaty Nine, in charge of Commissioner Scott, going north to establish an Indian reservation. With such genial company the time passed swiftly, but on the morning of the third day the wind had let up enough to enable us to get off. In order to have better control of the boat in the wind and enable him to keep up with the other canoes the guide made for himself a very ingenious arrangement for rowing the small canoe. It was an Indian rig consisting of outriggers, rowlocks and oars, and was made entirely out of small spruce trees with an ax, a knife and a few nails.

The first morning's paddle was through Quinze Lake to Barrier River and up the river a couple of miles to Barrier Rapids. Herewe found a drive of logs coming through the rapids, and had some difficulty in dodging logs in the swift water at the foot of the rapids to reach the portage landing. After making the portage about two hundred yards, we found the upper river blocked with logs, and were compelled to wait at the rapids until the next morning when all the logs had run through. There was also tied up that day at Barrier Portage a Hudson Bay Co. freight canoe with a load of supplies for Abbitibi Post. These canoes are about twenty-eight feet long and carry a load of four thousand pounds, but six dried up looking Indians can push them through the water at a good clip. The afternoon was spent watching the logs go through the rapids, or rather enjoying the interesting and exciting experiences of the river drivers in breaking the log jams which occurred every few minutes. Most of the jams were started with little work, but now and then they would jam so tightly it required the whole crew with their peevies and pike poles, rolling and tugging until they got started. Then there would be a wild scramble for shore as logs in a rapids are too dangerous to take any chances with. Between jams some of the lumbermen had great fun spearing fish with their pike poles; the catch amounting to a half a dozen one pound suckers and pickerel.

This method of fishing, while exciting, was not so easy as the experience we had near Cobalt a week before. Here in a small shallow creek we caught with our hands several dozen suckers from a half to a pound in weight. In the spring these fish come up from the lakes into the small streams to spawn, and are easily pulled out with the hands. At that time of the year they are not bad eating; the flesh is firm, and while without any particular flavor, they are good enough when nothing else is available.

After sundown that evening it turned considerably cooler, and before daylight all were shivering in their blankets. Consequently everybody got up shortly after daylight to try and keep warm around the campfire. We found over a quarter of an inch of ice on a pail of water, and a frost on the ground like a

light snow. Not being prepared for such weather the only way to keep warm was to hurry through breakfast and get to work with the paddles. We had met at the Barrier Portage two young Canadian prospectors bound for Abbitibi, and both parties agreed to travel together; which scheme resulted to our mutual pleasure and advantage.

A short distance up the Barrier River brought us to Barrier Lake, and after a morning's paddle we reached the mouth of the Lonely River. Barrier Lake is

miles down the lake we camped for the night.

Long Lake is about thirty miles long, and from one hundred yards to several miles wide. Here there is a marked improvement over the scenery in Quinze and Barrier Lakes, although the scenery on the lakes south of the Height of Land is not equal to that on the lakes north of it. The next morning we proceeded down the lake and stopped at Sandy Point for luncheon.

While preparing the meal a strong

CATCHING SUCKERS WITH THE HANDS.

noted for its excellent bass and pike fishing; it being common (so the Indians say) to catch the latter weighing twelve to fifteen pounds. After an early lunch we proceeded up the Lonely River. This is a small but deep stream, without rapids, connecting Long Lake with Barrier Lake. It winds through a thick bush remarkable for its absence of bird or animal life, and its generally dreary aspect is incentive enough to give it the name it bears. After paddling the ten miles up the River against the current and several

fair wind came up. The guide remarked that Indians under the same circumstances would drop the dinner, rig a sail and travel as long as they could with the wind. We could not see the wisdom of such forced marching, but after we had finished our luncheon and rigged our own sails out of blankets the wind naturally died to a dead calm. Then we had to paddle the nine miles we could have sailed without effort. This taught us a lesson, and we did not let a fair wind get away from us again.

SUPPER ON FLAT ROCK ISLAND, LONG LAKE.

From the upper end of Long Lake there is a portage of a couple of hundred yards into Summit Lake, a small lake of a few acres which lies next to the Height of Land. In Summit Lake we found the "Alligator," (a side-wheel steamboat used by lumbermen for towing logs), Wm. F. Biederman, a fur trader of Abbitibi, is taking by land and water to Abbitibi Lake. On the land journeys a wide path was cut through the bush, logs laid on the ground, and the boat pulled itself by means of a wire rope hawser fastened to a large tree. Getting this boat to Abbitibi Lake is going to be a difficult and costly undertaking, but when there it will be the first steamboat on the lake.

From Summit Lake there is a portage of a half a mile over the Height of Land into an arm of Island Lake on the northern watershed. This portage has one hill, but the trail is worn smooth and hard from years of packing the Hudson Bay Company's supplies on the way to Abbitibi Lake. There are excellent camp sites on each end, and by the time

we made three trips over it we were ready to camp on the Island Lake end. That night it rained, but shortly after starting the next morning the weather cleared up. Island Lake is a large lake literally packed with islands, and the effect produced by so many islands close together, of all shapes, sizes and character, is beautiful beyond description. As a photograph from the water would show but one continuous shore line we attempted to climb to a bare spot on a hill about one hundred feet above the lake, but found the bush too thick to penetrate and had to give it up. While crossing the lake there was a strong wind blowing, but it did not bother us here where there were so many islands to break it.

After lunching on a small island we continued on to the mouth of the Three Carrying Place River. This river, about fifteen miles long, connects Island Lake with Upper Lake, the water now flowing northward into Hudson Bay. It has an Indian name, which being interpreted means Three Carrying Place, after three portages close together. It runs through

SOME INDIAN BELLES AT ABBITIBI POST.

a thick bush with some open marshy land near the mouth at Upper Lake. The guides shot the first rapids in the empty canoes, but on account of bad rocks near the foot, went only half way through the second. It was an exciting moment when they turned in the swells of the swift and narrow rapid and dropped into an eddy. To let a canoe get broadside on in the swells of a rapid is likely to be disastrous even to the most expert. The third rapid was portaged. There is said to be very good fishing at the foot of the third rapids. How Biederman is going to get his clumsy "Alligator" down these swift and narrow rapids, not much wider than the boat, is the question

mostly discussed whenever his project is brought up.

The camp sites on the portages were not good so we had to paddle down the river several miles before we could get a clearing large enough to pitch a tent. The weather, delightfully cool and bracing during the day, continued to drop to almost freezing at night, which insured a good night's rest. How different it proved to be on the return trip! Shortly after starting the next morning we passed the Transcontinental survey line, the projected route of the Grand Trunk Pacific Railway south of Abbitibi Lake. It is the general impression that this route will be abandoned in favor of the

route along the north shore of Abbitibi Lake. The survey was a clean cut narrow trail through the bush like a path through a field of high corn.

When Upper Lake was reached no time was lost in getting across several open stretches as this lake is but sparsely filled with islands and the wind has a sweep of several miles in places where a bad sea can come up in no time. After an early lunch on an island we pushed on to the Abbitibi River, a larger river than The Lonely or Three Carrying Place Rivers, and a few miles down reached Dancing Portage. This portage, about one hundred yards long, is the last of the eight portages between Quinze Lake and Abbitibi Lake. The limited number of carries on this trip makes it a remarkable one as on most canoe cruises in the North country there is plenty of portaging to be done. The river widened as we approached Abbitibi Lake and a short distance from the mouth a stop was made to make tea. We were looking for a hard paddle at the mouth of the river across a bay to the Post, against a wind which was now coming up, and tied up for a rest.

It is an Indian custom when traveling, especially on hard trips, to stop every few hours to drink tea. It is wonderful the stimulating and recuperating effect of several cups of tea taken when there is particularly hard work ahead. As expected we ran into a bad side sea on the lake that gave us some trouble to reach the Post.

#### Abbitibi Post.

Abbitibi Post of the Hudson Bay Co. is situated on the south shore of Upper Abbitibi Lake at the mouth of the Abbitibi River. It consists of several houses of the Hudson Bay Co., a couple of cabins belonging to the French trading company, a church and, in summer, a camp of several hundred Indians. The Indians gather there early in the summer from their trapping and hunting grounds to trade their fur and arrange for supplies for the next winter. Our camp was pitched on a point across a small bay from the Post. After supper we first called on the Hudson Bay Co.'s representatives in charge of Mr. Driever, Manager, and later visited Mr. Zimmer-

man in charge of the French company's store. At both places we were most hospitably entertained as we were almost the first tourists of the season to call at the Post. For several days we stayed at the Post enjoying the strange and interesting sights on every hand. The Indians camp in family groups, living in small tents where they are evidently packed like sardines. The Indian dogs (called "huskies") are everywhere, and when not quarreling are nosing around for something to eat. It matters not to them whether it is a glove with a little grease on it, a pair of oil-tanned moccasins or a whole ham in the tent covered with duffle; if one gives them half a chance they will get it and soon have it chewed to pieces. Their ravenous appetites are probably due to the custom of feeding them but every other day in winter and then largely fish, and letting them shift for themselves in summer. Each Indian family has a platform supported by poles about six feet off the ground on which they keep dried fish and other food out of the reach of the dogs.

The most picturesque sight at the Post is the church service. The Indians of all ages, from old squaws down to papooses in their wooden cases, attend each service every day. The men and boys sit on benches on the left and the squaws, girls and papooses (as well as a few dogs) squat down on the floor on the right. The service is delivered in Indian, usually by one of the older men. His voice, half the time, cannot be heard on account of the violent coughing on the part of some of the congregation. This is due to the prevalence of tuberculosis among the Indians, over one-half of whom and at all ages suffer from it in one stage or another. One would think these Indians with their outdoor life and hard work should be able to withstand much disease, but their limited diet, careless eating, exposure, ignorance of and indifference to the commonest rules of health, etc., finally break down the strongest constitution. Most of the families use rabbit skin blankets, and a few of the smaller boys and girls have coats made of the same material. These rabbit skin blankets are made by twisting strips of rabbit skin into a strand or

rope, thus having the fur all the way around the rope. These short strands or ropes are fastened together until a rope is made eight or ten feet long; they are then woven diagonally through each other like a willow basket into a blanket any size desired. They are said to be the warmest blankets made; one weighing three or four pounds protecting one person in the severest weather. A large one now costs almost twenty dollars, while a couple of years ago before they were in such big demand by the tourists they could be purchased for less than ten

much salt pork at the prices asked for at the Post; most everything selling at about four hundred per cent over regular market prices. However, when one realizes that all supplies at Abbitibi Post have to be brought one hundred and fifty miles in canoes and portaged eight or nine times the charges are not much out of line. Some are willing to be photographed and some are not, but a little trinket or a piece of bacon usually lands the stubborn ones. They are always glad to trade fish for bacon.

When we arranged to start for Ghost

AN INDIAN CAMP AT ABBITIBI POST. THE MAN ON THE RIGHT IN THE FOREGROUND HAS A RABBIT SKIN BLANKET AROUND HIM.

dollars. One of the amusing sights at the Post is to see an old squaw take out for a paddle in a birch bark canoe a number of small children, the squaw sitting in the bottom of the boat at the stern, and the heads of the little tots just showing over the gunwale. Once in a while some of the men will go off to hunt moose, but they live largely on fish caught in nets. They cannot afford

River at the other end of the lake we stored our small canoes, and instead of taking a "pointer" we rented a large canoe that was not in use at the time. This boat was twenty feet long and fifty-six inches wide, with high sides, and looked like a box car with the upper half cut off. It had places for nine paddlers, and room left for a big load. It was a big proposition for the three of us to try

and paddle, but with it we knew we could sail in almost any wind that might come up. It was finally decided to use it, hoping we would get fair winds most of the time.

The morning we arranged to start a strong, fair wind came up, and it did not take us long to load up, rig our blanket sail and get off. For over two hours it was great, nothing to do but lay back and roll over the swells which would have swamped the small canoes. The guide steered the boat, one of us held the sheet and the other read aloud some paper cov-

In a sense we were disappointed in getting so much calm water, but the guide predicted we would get caught in the real thing before we got back to the Post. We had listened to his campfire stories about himself and others being windbound on this lake for days at a stretch,—once when they were tied up four days on a small rocky island where the wood was exhausted in two days necessitating cold meals, etc.—and we were skeptical about the big seas that were said to come up, but before we returned we had learned all we wanted to know

AN H. B. FREIGHT CANOE UNLOADING AT ABBITIBI POST.

ered novel the guide picked up at the Post. Finally about ten o'clock the wind died to almost nothing, and we had to take to the paddles for the balance of the day, a distance of about twenty-seven miles. The boat was hard to start, but like all Canadian factory made canoes, when once going she slid along in great shape. The several wide open stretches where we expected to find rough water were crossed during a dead calm, and with one stop for luncheon we reached the mouth of the Ghost River at five P. M.

about the rough seas on Abbitibi Lake. The scenery on Abbitibi Lake at this time of the year was particularly attractive, the islands and shores of the lake being thickly covered with fresh new green foliage, the light delicate green tints of the young birch and poplar trees standing out in strong contrast with the dark green of the spruce and cedar.

#### Ghost River.

It does not take much stretching of the imagination to realize where Ghost River gets its name. This deep and sleepy

river winds its way through a comparatively flat country thickly covered with an unbroken thick and silent forest. At the mouth of the river are the cabins of an Indian named Black, who was away when we passed, and across on the other shore is an Indian graveyard, where there is buried Alex. McDougall, an Indian after whom was named McDougall's Chute on the Black River. It was interesting to note there was a white marble tombstone with inscriptions at the head of the McDougall grave, such an evidence of civilization being most conspicuous in this isolated place. Excepting for the home of Black there are no inhabitants in any part of this section. Judging from the skins and bones around his cabins he evidently keeps traps on the river, and hunts in the bush in winter.

We pitched camp at the mouth of the river on part of Black's clearing, and the next morning started up Ghost River. The first five or six miles was not bad going as the current was slow with no rapids or swift places, but as we got into the headwaters of one of the branches the river narrowed to the size of a creek and with a swift current. Before long it was not much wider than the boat, and twisted so much we had to "cant" the big boat around the bends. Every here and there we found a jam of logs; the small ones we pushed through and shoved the boat over the large ones. Finally about eleven thirty we were stopped by heavy jams which prevented further progress, and we unloaded and prepared for our tramp through the bush. Our destination was a spot about four miles back in the bush where we intended to do some prospecting. Three packs were arranged, one for each of us, containing food for several days, blankets, some extra clothing, a 5x7 camera and outfit and prospectors picks etc., and the balance of the stuff was cached at the river. It had been threatening rain all morning so we hurried through our noonday meal anxious to finish the trip before the rain started. Our experiences so far had been at times exciting, but they proved tame compared with what we soon ran into.

The trail, so called, was made by surveyors who had used it a year or so ago, but without the blazes on the trees it

would have been difficult to follow. The first half mile was the toughest traveling one could imagine; through a windfall, a tangle of trees blown down by the wind, where it was a case of walking over the trees as much as on the ground. It is usually pretty hard work to carry a pack with a tump line any distance over a half decent trail, but when half of the time one is tramping over logs three or four feet off the ground, climbing over or under others and every now and then sinking almost over shoe-packs in a swamp there is a nervous tension that makes the work doubly exhausting. The guide got through very well, but we had to watch every step to keep from falling and breaking our necks. It took over an hour to get through this windfall, and when we thought we would have it easier the rain started. It came down in torrents and lasted the whole afternoon. For a while it did not bother us much, but after the bush got thoroughly saturated we got it from above, both sides and below. The country was low and flat and the trail soon got to be one continuous watery bog, the feet sinking at every step making the hardest kind of walking. To get a better foothold, at first we stepped on every root and log in the path, but after a few tumbles down in the puddle with a wrench in the neck from the pack, from slipping off smooth, wet roots, we stuck largely to the swampy trail. Naturally we soon had enough as our heavy wet clothing added to the weight of the packs, but there was nothing to do but keep on. It was a continual plug along the swampy trail with an occasional slip and fall in a puddle, or a slide down and up the slippery clay banks of a little gully. Frequent stops were made to empty the water out of our shoe-packs or to get our breath, but the rests could not be long on account of the liability of getting chilled. Long before we reached our destination we were pretty well "sewed up," and finally we could hardly climb over the logs. By that time we had gotten so used to the packs we would forget they were fastened over our heads until a stumble would jerk them out of place.

In the last quarter of a mile the guide ahead, and the only one going strong, sighted a moose, but in our frame of

LOADED FOR THE PORTAGE.

mind we would not have stepped off the trail for a herd of moose or even native silver; the uppermost thought in our minds was, what we had come on this trip for, anyhow. The only consoling feature ahead was the log hut where we could get under a roof and dry out before a fire, which the guide claimed was close to our destination. This empty cabin was built the year before by prospectors, but if it should have been burnt up in the meantime we would be in a nice fix not having a tent. Finally after travelling from 12:30 until 5 P. M., and covering a distance of only four miles, we reached our cabin and it seemed a tired bunch never threw down their packs. No time was lost in preparing a hot supper, and before dark all were in their bunks; the blankets, fortunately, not getting wet on the way in. The next morning we were kept close to camp until some necessary articles of clothing dried out in the sun.

Several days were spent on the spot, but soon a scarcity of food and a constantly increasing number of black flies who were breeding fast in that thick bush

under a hot sun, compelled us to leave. After an early luncheon one hot day we left with lighter packs, determined to get out as soon as possible. The trail was drier and smoother, but the flies made the journey out nearly as uncomfortable as it was in the rain. We wore towels over our heads and necks, but still had to fight them with both hands all the time. They had a habit of lighting in a bunch on one's eyelash or crawling into the ear while balancing one's self and pack on a single log over a creek or gully. Under such conditions it is needless to say there was no loafing, and in two hours we reached the river. At the water the flies were worse than ever, and after loading our canoe we started for Abbitibi Lake as fast as we could go.

For a while the stream was so narrow it took great hustling on the part of the whole crew to get the big boat around the bends in the swift current without ramming the shore. It was five P. M. when we reached Abbitibi Lake, and instead of camping at the mouth of the river we decided to try and sail with a side wind across six miles of bay after

ABBITIBI LAKE DURING A BLOW.

which we could turn with the wind. After getting about a mile out the wind increased in volume and blew us sideways towards shore. There was nothing to do but to take to the paddles and hunt a place to camp. The latter was hard to find as the shore everywhere seemed covered with thick bush. After rolling around in a heavy side swell for some time we located a small bare spot on a point about large enough for a tent and campfire. Shortly after landing along came our friends the prospectors who had come up with us to the Post, and they dropped into a little bay next to us and camped on the beach. The wind, coming from the northwest, got higher and higher until the swells broke over the rocky shore and almost into the tent. There was no let up the whole night and the next day was worse than ever.

The lake was covered in all directions with big whitecaps, and the shore line was white with spray from the big waves breaking against the rocks. The reason the swells are so large on this lake during a high wind is that it is very shallow, running in depth from ten to thirty feet. At last, we had the satisfaction of experiencing a real Abbitibi blow, and we were ready to admit the stories told about its

rough seas were not much exaggerated. The wind kept up all of the first day and was still blowing hard at daylight on the second day. However, we were so tired of being tied up in such cramped quarters we decided to try and paddle diagonally into the wind for about four miles where we could get into the lee of some islands, and several miles farther we could turn and run with it all the way to the Post. A start was made as soon after daylight as we could prepare and finish breakfast, and for two hours we had all we could do to make any progress into the wind. Our boat, while big enough, did not have a sufficient load to ride well, and bobbed and rolled in the swells like a cork. Finally after going about six miles off our course we turned with the wind, and then it was another story. The blanket sail was rigged, and it was a case of sit back, steer the boat and hold the sheet, almost all the way to the Post, about thirty miles.

At the Post there was much going on. The Indian Treaty Expedition had arrived, and what was of the greatest interest to the Indians, the doctor with them was looking after the sick. Father Ava, of North Temiskaming, who pays an annual visit to the Post for a month was also in, and religious services had

increased to three daily with crowded houses. The visit of the priest is a big event with the Indians as he is their friend and consoler, praying over the sick, hearing confession and performing marriage or burial services.

Their confidence in him is probably strengthened by his ability to address them in their own tongue. There was also at the Post that day Division Engineer Moberly of the Transcontinental Survey and most of his corps to attend the burial of the body of one of his men who was drowned in Whitefish River about a

quinto season of 1906 was on and that we were going to have the time of our lives before the trip was finished. We had spent the previous few days on and about the lake in the wind, and now on the river without any wind they came all at once. It was then decided to get through as fast as possible as we had no netting of any kind, and were in for it. After making the portage we continued up the river to Upper Lake where we stopped at ten o'clock for our first midday meal; then crossing the lake during a dead calm we got several miles up the Three

AN INDIAN FAMILY GROUP. ABBITIBI POST.

month before. Mr. Moberly's headquarters are on the upper shore of the lake where the Transcontinental has a cache for their supplies. The day we reached the Post we returned the big canoe, and got the two smaller canoes we had come up in.

Several days later an early start was made on the return trip to Klock's Depot. All went well until Dancing Portage on the Abbitibi River was reached, where we ran into mosquitoes, and in about two minutes we realized the mos-

Carrying Place River by three o'clock, when we had another luncheon. It would have been torture to have camped on the river that night so we had to get over the four portages and into Island Lake before dark. At these portages we ran into "millions" of mosquitoes, where our dope, however thick we put it on, was of little use: the greatest relief being to rush the several trips over and get out on the river as soon as possible. Of course, we carried out with us a whole boat load but that was nothing

compared with the numbers on shore. Just before dark we reached Island Lake and camped out in the lake on the most exposed point we could find. We figured we had travelled that day forty-two miles, twenty-eight of which was up two rivers against the current, and had made five portages. When it is advisable to travel fast it is wonderful the distance that can be covered by starting soon after daylight and keeping it up all day with stops for four meals, the latter washed down with plenty of tea. That night we had a few hours sleep but not nearly

selected as an ideal spot, for, we argued, even if the wind didn't blow there were no alder bushes or swamps near from which the mosquitoes could visit us. We landed on the rock with the gang that followed us out on the lake, but pretty soon there seemed to be an army buzzing around our heads. Instead of putting up the tent we spread it on the rock and laid on top of it in our blankets. Smudges of damp moss were started where we hoped the smoke would drift over us, but they did no good. The only complete relief was to put the head

FIRST CHUTE FROM THE MOUTH OF QUINZE RIVER.

a full night's rest, and consequently the next day we were not in condition to make long runs.

However, we crossed Island Lake and made the Height of Land and Summit Lake portages into Long Lake. The work on the half mile portage on a hot day is bad enough, but to fight mosquitoes at the same time is hard on one's temper. After reaching Long Lake we stopped early to locate the most exposed camp site where we should get all the wind that might blow. A small island in the middle of the lake, all flat rock, was

in the smoke until one choked, then come out for a breath and go back again.

There was little sleep for anybody that night, and all were up at four o'clock the next morning anxious to start. The trip down Long Lake and Lonely River that day with two stops for meals was not so bad as long as the canoes were in motion, but when we stopped late in the afternoon on Barrier Lake to camp we got the worst dose of all. The weather continued cloudy, hot and sticky and consequently the mosquitoes were thicker

than ever. There were no bare islands anywhere, and the best camp site we could get was partly surrounded by bush. The tent was erected in the shape of a tepee to make it easier to smudge out, but the smudge scheme did not work. They were so thick there was nothing to do but lie down and "listen to the band" overhead most of the night. It rained off and on during the night, which only drove more mosquitoes into the tent. By this time it was anything for a change, so we arranged to start at daybreak for Klock's, about sixteen miles away, no matter how it might pour. The rain didn't come, but we got off as soon as possible. By throwing green grass on the camp fire and standing in the thick smoke from it we succeeded in eating breakfast with reasonable comfort. After paddling a couple of hours we reached Barrier Rapids, where we found one of the largest and hungriest mobs of all. By packing over in fast time we did not suffer so much; the rapid motion keeping a great many of them away.

The balance of the trip down Barrier River and through Quinze Lake to Klock's Depot was without special incident. At the Depot we found much relief, and after sleeping most of the day and all of the next night we were in pretty good condition the following day for our sixteen mile tramp to North Tem-

iskaming. This trip was through the bush all the way, where we expected to suffer greatly, so we started after breakfast with a swish in one hand to fight them off. We soon found the more rapidly we walked the less they bothered us so we pushed on as fast as we could go. After covering the first eight miles in two hours even, and over a road all stones or mud holes, we had to slow up; a hearty breakfast of pork, beans and raisin pie combined with a blistering hot sun would not permit of such a Marathon pace. Therefore, it took three and one-half hours to make the second eight miles.

This finished a canoe cruise which despite the annoyance from the mosquitoes was highly enjoyable. The exhilarating life camping and cruising in the North Woods is too fine a sport to be given up on account of fear of the flies. Most of the discomfort produced by these pests can be avoided by waiting until the worst of the fly season is over, but if one knows how to protect himself there should be no actual suffering however bad they might be. The use of cheese cloth for head nets, canvas gloves for the hands, and an inner tent of fine netting at night, accompanied by expert smudging will reduce the annoyance to a minimum.

## Fishing in Northern Quebec.

BY W. H. ALLISON.

**W**HAT anticipations are those in which a man will indulge when looking forward to a few days outing, and spending the time with the speckled beauties! While overhauling the old tackle and again examining the pet fishing rod to see if it has lost any of its old time spring or graceful curves, he wonders how many beauties he will have the good fortune to land on the morrow!

Such were the reflections of the scribe when my nephew, Mr. J. A. Ferris, of White Plains, New York, (I call him Ben) walked into the hotel at Montreal on June 11th last, and wished to know when we could start for Labelle. Some weeks before that he had written to me asking where he could find good fishing, and I had given him the information which had brought him to Montreal. I was still confident in my ability to make

good my words, and my nephew was eager to test them.

We left Montreal on the afternoon of the same day, travelling via Canadian Pacific Railway, and after a delightful ride of four hours landed at Labelle, where we were pleasantly entertained by Mr. Napoleon Nantel, at the Hotel de Nord. Napoleon is one of the pioneers of that far northern country, and he entertained us with good stories of many a deer hunt. The splendid collection of mounted heads which adorn the walls of his hotel afford ample evidence of his prowess as a sportsman.

By half past seven next morning we had procured a team and light wagon and were driving fourteen miles west to Lake Desert, where a brother named Pierre Nantel entertains tourists and sportsmen arriving at his hotel. At eleven o'clock we took a boat and tried the fishing until Pierre returned from examining his bear traps on the opposite side of the lake. The day was cold and windy, and we only caught four trout of about one and a half pounds each, although Pierre assured us that in the months of May and September they catch both grey and red trout weighing five pounds in weight.

Next morning we were off to Lake Charette, which lies about a mile north of the larger lake, and which took us nearly an hour to reach from the hotel—twenty-five minutes by boat and half an hour's tramp through the woods over a blazed trail. On that little lake of eight or ten acres in extent Pierre has a good boat, and there we certainly enjoyed the best trout fishing of our lives. Ben and I kept Pierre busy landing them with the net, and when we each had a two or three pounder to land, which was frequently the case, he would say, "What you fellows doing? That's a good one!" By two o'clock in the afternoon we had forty-seven of the finest trout I ever saw

in one lot, the smallest measuring ten, and the longest sixteen inches. Our baskets and pails were filled, and having taken only a limited supply of bait we returned to the hotel well satisfied with our day's sport.

The following morning we were up and away for Lake Charette by half past eight, but we did not reach our destination till ten on account of an adventure Ben had with an old mother partridge and her brood. We were "hitting the trail" a couple of hundred yards ahead of our friend Pierre, and were about midway between the lakes, when he ran into them. For a time it looked like a fight between Ben and the old bird. She would make a rush to within a yard of us, at the same time making a peculiar noise. At length the chicks were all securely hidden, and we were allowed to proceed. Ben's deepest regret was that during the excitement he entirely forgot the camera in his pocket, and thus missed getting a snap shot at the old bird, never thinking of this until we had passed the place and cooled down.

After reaching the lake we got very busy, and by half past one had caught thirty-seven fish, even finer ones than the day before, and out of all we caught we had only to return four to the water on account of their being undersized.

During this trip we saw abundance of fresh deer signs, and many bear tracks. There are also beaver, otter, and any number of wolves in that locality.

Five miles west of Lake Desert we bid good bye to civilization and went to the vicinity of Sand Lake where I spent a few days last November. I believe this to be the most beautiful country for deer hunting I ever visited. The woods are all green, and there is very little undergrowth. We hoped to make our camp there in October, and after that you may expect to hear from us again.

# The Golden Eye.

BY BONNYCASTLE DALE.

**D**ID you ever sit shivering on a lee point on a cold November morning, and hear the Whistle-wing coming? Where is it? It sounds right overhead. You twist and turn everywhere and see nothing. Still the clear note, sharp as a schoolboy's whistle, rings out on the frosty air. The Whistle-wing is half a mile away yet; still you grasp your gun and sit tense until you are tired. At last you spy the black, green and white glossy beauty, a few hundred yards out, headed right for the decoys. The bright yellow eye has seen them, and curving to the wind the bird sweeps down to the wooden flock bobbing so naturally there. It must be a good feeding ground, he thinks, as he sees so many ducks gathered in, and with a rushing curve he turns breast full to the wind, out goes the big wings, out spread the feet—"ping" sings the smokeless and the big drake collapses. If you are an amateur you "let him kite" taking careful aim at the poor chap sitting forty yards off; "bang" goes the black powder and as soon as the smoke blows away you look for the duck—not a sign of it! A moment or two and then sixty yards out there is a little fountain of water thrown up, and out of it flies the big drake uninjured. He dived at the flash and is untouched, or at the worst only spattered about the tail!

They call the bird by many names in many places—Merry-wing in some of the New England States, Jingle further south, Conjuring Duck by the natives where it breeds in the short summer of the Arctic Circle; "Mannedoo shesheeb"—the Spirit Duck—of the Mississaugas; correctly American Golden-eye; but at all times and in all places it is the same wary clever bird, and a beauty under the camera's eye.

I made my study of this interesting web-foot on Rice Lake, Ontario. Here they can be seen as early as the last week in March, a few small flocks flying ahead of the great migration, seeking the first open water. They always come too early, and towards nightfall these flocks can be seen winging back to Lake Ontario—always open and always short of duck food. All the month of April these northern birds linger in our genial climate. Full well they know the breeding ground at Moose Factory is still unlighted by the sun; so here they stay offering us the rare sight of their love making. There are usually more males than females in the flocks, and the soberly clad lady has two attendant drakes. Without more than an occasional collision they follow her every movement. When she dives after the elusive minnow down they go, and up the three come almost together, swallow the struggling shiners, and again the males watch to see what her ladyship will do. They swim around her arching and preening, showing off their glossy plumage, and raising and lowering their heads in regular concert. "Creek, creek" they go, as scratchy as a rusty hinge, the least tuneful note I have heard in the bird kingdom. At last towards the end of the month she selects one, and together the pair fight off the discarded drake, pecking at it on the water, and swooping at it when it jumps beside them as they

fly down the lake. Luckily there is no spring shooting allowed here; so the birds are not quite so wild.

By May first, all the Whistlers have left for the far north—all but a few fat drakes. These solitary birds—for each one swims alone—remain on the lake all the month, diving and feeding as if perfectly well. As the

DECOYING FOR THE WHISTLE-WING

A DRAKE FISHING

weather gets warmer they get weaker until at last they are hardly able to swim, but continue to work in circles as long as they can. Day after day we find them dead, though no signs of any wound can be seen and they are in fair condition, while the feathers and general marks do not speak of old age. What is the cause? The Mississaugas say "menewahpenawin" consumption, and perhaps they are right, for these red men have wonderful powers of observation.

The cold clear days of October are with us before the sharp whistle of the Golden-  
— is again heard. Among the many

writers who give many reasons for this wonderful note, this whistle as clear as any school-boy's, one loses one's self in conflicting opinions. For twenty-five years I have made notes on this subject and clarified them. The bird can whistle as it flies, and can also fly without whistling. It cannot therefore be the motion of the wings alone that causes the sound. Again I have heard it approach the decoys with a very riot of clear, almost screeching whistling notes. Suddenly all the whistling ceases, the bird flying as swiftly as ever, and down it sits in the decoys. Up again it jumps, sometimes emitting the

clear notes from the instant it leaves the water, at others sailing away as silently as a teal. Both the male and the female whistle, but I have never heard either make a sound other than a deep "myamph" when sitting on the water or the shore. From this I reason that the sound is made through the wind-pipe—this is of a curious twisted bugle shape—and is assisted by the wing motion, but controlled entirely in the throat, as only when the bird is in motion does it whistle.

The skin always bears the rich yellow tint peculiar to fish feeders. When rank with fish it is almost blue; rice fed it is plump and acceptable. There are few ducks more easily fooled by decoys than this big plump duck, but a few lessons teach them and they will pass the wooden flock within a hundred yards without curving an inch.

Hawk, the Indian guide, came to my camp one cold November day and told me "Meno pauskesega"—good shooting.

THE HIDE

It does not take long for this breed, or any other, to improve in flesh condition on a wild rice and wild celery stocked lake. The Golden-eye prefers vegetable food when it can get it. Thirty days spent amid the succulent wild rice almost clears off the last faint taint of fish, but even then it is not accounted one of our best food birds. It is however very welcome in the camp of hungry hunters.

It was a wild day if ever there was one. A low flying scud flew before a hard nor' easter, chilling one to the bone; huge dull green waves topped with flying spray that froze as it sped through the cold air rolled sullenly up the lake. We had built a fire in the stone "hide" on the south side of the point in shelter of the bank and the red man crouched over it warming his hands. A mile across the

tumbling waters, in a little bay fully exposed to the wind and swell he had the day before built a "hide" of long poles firmly driven down in the muddy bottom, had lain poles in their crotched tops, had tied scrub oak branches on these, and now it glittered in the rare gleams of the sun that broke through the flying scud, a mass of ice. Out into that stormy water the Indian launched his frail bass-wood, riding the swells like a duck, disappearing in the hollows as if amphibious,

the distant reports and streaming puffs of smoke showed that the old muzzle loader was working full time. These birds are completely fooled by a flock of decoys midway out in an open bay where they have been accustomed to feed. It was freezing work watching him with the glass; never once did he dare go out after a wounded bird. All the dead ones were drifting ashore a mile above him. His work was helping us, as the birds disturbed in their feeding ground came

FEMALE GOLDEN-EYE COMING ASHORE

paddling hard to keep her straight, backing and steering as she rode down the rollers; all the while splashed by the glittering spray until he too glistened like the distant "hide." Through the glass we watched him come about beside the "hide," throw out his decoys, and push his canoe in between the poles. The whistlers were flying well up that shore, and

back our way. Right merrily our guns rang out, and many a big white and green drake plumped dead into the decoys. One fell far out into the edge of the swell that swept past the island and lay on its back with its yellow feet pointing up. To save a heavy paddle in rough water I dashed out in the canoe, paddled up to where it lay, put my hand on

DECOYING ON THE ICE ; NOTE HOW THE DEAD BIRDS SLIDE

the yellow feet, and picked it up—not much! The moment it felt the touch down it dived, and as far as I could see hasn't come up yet. These birds when wounded are past masters in the art of diving. I have often watched one swimming away beneath the canoe. To track

the wounded ones we stand up in our craft and follow the tell tale bubbles that stream to the surface from the diving bird. Far below you can be seen the Whistler swimming away for dear life, neck stretched, wings working almost the same as if in flight except that the motion always

seems to me as if they hook the tips much as we do our fingers in swimming. Up it comes breaking through the surface of the water with wings already in motion, and flying before it is fully clear of the water.

We took a good picture of a female coming ashore, a sly interesting bird. Later on we moved further back on the island, and ate our lunch beside the fragrant pine knot fire under shelter of the high bank. While thus pleasantly engaged we watched the distant Indian in the ice coated "hide" and the little plumes of smoke darting away on the wind. Then we turned our eyes on a Golden-eye drake decoying. Down he sat gently among the bobbing wooden birds, pecked himself a moment, smoothed his feathers and swam straight ashore. Our guns were beside us but we had killed enough and so we lay breathlessly watching him. Up over the slippery stones he stumbled and walked very awkwardly. I had moved the machine a few feet back in shore although it was quite calm in the lee. Along came Mr. Drake picking up a dainty bit here and there until he was right in focus. Then "clang" went the curtain and away went the bird. No stinging shot followed his swift course, no—we took off our hats and laughingly thanked him for flying a thousand miles to have his picture taken. See how handsome one of these glossy drakes looks when swimming along the surface searching the shallows below for fish. It is wonderful to see him dart along the water with bill, wings and feet throwing up great splashes, diving half beneath to frighten the darting minnows shorewards, then the swift dab with the bill, the quick capture, the throw aloft and swift swallowing of the still struggling minnow

and my friends ask me if I am not lonely in my Nature study life!

The ice coated basswood was coming over the rollers again. With a steady paddle, plunge, rise again, fall and rise he came. The game was well worth the candle, for the bow of his old "chemagn" was filled with water splashed, foam frozen covered whistlers. We had a dozen ourselves, which goes to show that the wilder the day, and the later in the season it is, the better for whistle-wing shooting.

I well remember a combination of telescope and whistler making an Indian grunt out "Yo tuhyah"—oh dear, oh my. We were on the north point of the Beaver, a mile east of the north point of Black poked out into the rice beds. Outside our decoys a drake whistler sped, an old sly bird, too wise to decoy. Along he went for the next island. Birds always fly down the calm leas just as we seek paths in the woods. I handed the red man the glass, and he watched the swift flying bird. It crossed the point of Black where to his knowledge there were no hunters. Suddenly to his intense astonishment the drake blew up. Feathers flew everywhere, the head collapsed, the wings ceased flapping and down the bird fell out of sight. The red man took down the telescope and turned to me with the most puzzled look I ever saw on an Indian's face. "Yo chahgesa." it is gone. Just then the light "tack" of smokeless shell sounded over from Black and explained the disappearance of the drake.

The end of the season was at hand, the birds were going on their long migration south, and we pictured the last pair we killed, showing how the Golden-eye fails to notice the decoys were sitting on the ice.

# Some Common Mistakes of the Deer Hunter.

BY DR. FRANKLIN HAWLEY.

**T**HE ordinary young man looks forward with lively anticipation of pleasure to the time he will kill his first deer. When he makes the attempt, the longer he fails, the more desirable and mighty the achievement appears. When he succeeds, and his first beautiful victim lies before him, it will seem to him that it was not so great a feat after all. He will then conclude that he has "learned how," and will believe that he will never again experience much difficulty. This mistake is about as universal among young hunters as is measles among children. All must pass through this stage. Additional experience teaches the young hunter that he had not learned *quite* all, when he achieved his first success; and ultimately he will know that no amount of experience will insure a man against making a mistake. When he has killed more deer than he cares to remember, he will still commit blunders that will

DR. FRANKLIN HAWLEY.

Author of "Scientific Deer Hunting,"  
"Some Common Mistakes of the Deer  
Hunter" etc.

he reviews his conduct "after it is all over."

The last deer I saw in the woods "fooled me beautifully." I was walking along an old logging road, and a buck leaped across it about thirty rods ahead, stopped behind an enormous pine stump, and faced me. I could just see his face across the stump, and at that distance it looked no larger than a lady's hand. It was a trying shot, because I realized that I was likely to overshoot, for fear of hitting the stump, which was about five feet diameter. I aimed at it, but my hand was unsteady, and I doubted my ability to hit so small a mark in the half light of the early morning. There appeared to be a good half mile of open country all about us, (the land had been "logged") and after considering a moment, I decided that I would prefer a running shot. I walked slowly forward and had advanced a surprising distance before

surprise him, when he decided to run. Sudden-

ly the head vanished, in its place I saw a flash of a white tail, and that was all! After waiting a moment in surprise, I ran to the stump. The ground sloped abruptly from it into a ravine, and my deer had leaped into it, and disappeared! After removing my hat and bowing toward the woods, where I had no doubt he was standing looking at me, I said to myself "Pooch head! Why didn't you take your shot at his head? Your chance would have been *just as good* for the running shot afterward!" The above admission looks in cold print almost like a confession of lack of common sense, but I was guilty of it. The ordinary hunting story is usually a narrative of a successful hunt. The writers do not report the shots they missed, nor the blunders they made. In the hope of making this article instructive I propose to tell of some more deer I did *not* get, and why.

I once went after deer with a borrowed rifle, an old 44-40 Colt's, It had belonged to the father of my friend, and was valued as an heirloom. I fired a couple of trial shots, found it accurately sighted, and set out afoot. About noon I entered an old "slashing" (a district which has been logged,) moving with great care, because I felt instinctively that it was a likely place, and stood for fully ten minutes, listening intently. I was rewarded by hearing the sharp snap of a breaking stick very near, and in a moment out walked a magnificent buck, and stopped at a distance of forty yards and looked straight at me.

I had not suspected that such a noble specimen existed in the woods of Wisconsin. He was as large as any black tail I ever saw. I slowly raised my rifle, aimed at his neck, and pressed the trigger. The heirloom missed fire! Not wishing to make the noise necessary to "repeat" the rifle, I cocked it, and tried the same cartridge again, with the same result. I then jerked in another cartridge, and his majesty, about satisfied that he had seen enough, turned and took a step in readiness to run. Changing my aim from his neck to his shoulder for the failure of the rifle to shoot had disconcerted me, I pulled once more and it fired. This change of aim was my first mistake, for I ought not to have expected a little old 44 to seriously damage

so huge a shoulder. The buck ran away, and there was no evidence that I had hit him at all. Not a hair! Not a drop of blood! Amazed that I should have missed so large a mark at forty yards, I followed the trail a short distance and mounted a stump to look and listen. In a minute my buck came limping by, not ten yards away! Felling sure of him now, for he dragged his left fore leg, I raised the rifle for the finishing shot. It missed fire, and the next instant he lay down behind a tree top, out of sight except for the very tips of his magnificent antlers. I succeeded in extracting the cartridge and inserting another without noise, then looked at my watch, and resolved to wait a half hour, in the hope that his head would sink, showing me that he could not rise, or that he would rise of his own accord. The long half hour passed, with no change in the situation. What should I do now? I thought of shooting at his head or neck, on my judgment as to where those parts should be, but I feared that I would be shooting through the body of the log. I needed to move only about five steps to bring him into view. I decided to attempt it, and slowly climbed from the stump, and had taken three steps without noise that I could detect when he bounded up and dashed away as though unhurt. He was nearly out of range of my heirloom, before I could get a position where I could see him, and I sent one futile shot at him. To my surprise, a doe ran from behind the same tree top! She had evidently been there the whole time, unsuspected by me, and her presence explained the return of the buck after receiving his wound. My mistake had been in the attempt to walk around to a better position. It was probable that the buck saw me through the branches of the tree top, while I could not see him. I had overlooked this point, and thought that a detour would be successful if noiseless. I should have chanced a shot at his neck, or shoulder, on my judgment as to the position, or I should have given a shrill whistle, or have made him some other abrupt sound, which would probably have brought him to his feet, without having located me, in which event he would almost certainly have paused long enough for me to have made a sure shot.

That evening I recounted the adventure to my friend, and told him that I did not care to hunt again, armed with an heirloom. He expressed surprise, said the gun had never been known to miss fire before, and stepping to the door, he fired nine consecutive shots out into the night, and set the gun down without remark, but all over his countenance the word "Liar" was written large. I was confounded at this rebuttal of my tale by circumstantial evidence, and during the uncomfortable silence which followed, my mind was busy searching for the solution. The gun had been sitting by a hot stove. I filled it with cartridges and set it out of doors for a few minutes, then stood in the door and repeated it on nine more cartridges. Only one of them exploded. I set the gun down as silently as had my friend, and he said simply, "I apologize." Out came his gun tools, and we found the firing pin and lock well gummed with ancient oil, which stiffened to such a degree when the rifle was cold, that it would not work.

I returned the next day, and found where my big buck had bedded for the night. He had been compelled to make a desperate effort to rise, but had succeeded, so I gave him up.

The next season, in the same vicinity, I heard a doe running toward me. I mounted a stump, and allowed her to pass. Behind her came a buck, which I dropped in his tracks, and a minute later along came a monster buck, *lame in his left shoulder*. I let him pass unmolested feeling sure that my errors had caused him that lameness.

On another occasion, I was hunting in heavy open timber, one dark day, when the rain was falling in torrents. The carpet of wet leaves gave forth no sound, and the splash of the rain muffled all noise, so that it was a very favorable time to hunt. Pausing to watch and listen, I was puzzled to observe a white object shaken vigorously at a distance, as though a wood nymph were waving a handkerchief at me. I moved cautiously in that direction, at a loss to account for it, but soon made out the form of a deer, scratching his ear with his hind foot. At each movement of the foot, his tail wiggled. The distance was about a hundred yards, and the light was dim, it be-

ing late in the afternoon on a very dark day. My unpardonable blunder was in not trying for closer range, the conditions for stalking him being perfect. I was using a 38-55 Marlin. I took a knee rest, and fired with the utmost care. That was in the days of black powder, and in the heavy air, the smoke fairly enveloped me. By the time it had cleared away, my deer had vanished, and I heard a snort over a ridge to my left. Jumping to the conclusion that I had missed, and that this was the deer which I had just fired at, I went over the ridge to try for another shot, but without success. "Nother deer," said my friend and teacher, Na-Kop-a-Toppie, (Blossoms-on-a-Blackberry-Bush) when I told the story in camp that evening. "Deer you shot at, no snort. Too close. Deer shot at hardly ever snort. Pobly you kill. Go see in morning."

The next morning I was saddened to find where wolves had left the bones and a few strips of hide of the deer, which had fallen only a few steps away.

At another time, I shot at a standing deer, and thought I saw him run away. I followed him without success. Late the same day, I was returning near the same spot, and was attracted by the glint of something white on the ground. I supposed it was the bleached skull of some animal, but went to see. It proved to be the tail of the deer at which I had fired in the morning. It had been instantly killed, and another had run away. At this point I swore a solemn oath that I would never again leave a spot where I had fired at big game, without making sure by an examination of the ground.

Some years afterward, I was standing on a hill by a river, and a deer walked into view on a hill across the stream, about thirty rods distant. When the smoke from my first shot had cleared away, he appeared standing in the same place, apparently unconcerned. I fired a second and third shot, with the same result, but he disappeared at the fourth report. I had no idea that I had touched him, and thought rather grimly of my vow. The river was wide, the water was ice cold snow lying on the ground, and I was far from camp; but if I were not man enough to take the consequences of the shot, I should have declined it. The water

came up to my chin, as I waded it with jaw set, to find, not one deer, but *two* lying dead within ten feet of each other, and both had been shot twice. The second shot must have laid the first one low, and without my knowledge, another one had stepped out and taken his place.

On another occasion, I took a long range shot at the shoulder of a deer, and he fell, but immediately regained his feet and ran away. The trail showed quite a copious amount of blood, so that I was satisfied that he was shot through the lungs. This was before I had gained much experience, and I pursued at once. Just over a ridge, I jumped him out of a dense thicket, but he ran in such a way that the shot was difficult, and I missed. Twice more during the afternoon, I jumped him, and missed, having chased him about five miles. In the end I lost the trail. The next day, Indians found the trail, followed it, and found the deer within a quarter mile of the point at which I had relinquished the chase. I could narrate a dozen cases within my own experience where deer have been lost by pursuit immediately after shooting. It is a mistake. One loses no advantage by waiting from a half hour to an hour after the wound is given, and there are many points gained. This is hard advice for a young hunter to follow but it is undoubtedly correct practice.

Another mistake is to take a long shot, when one at closer range can be had. An Indian will spend an hour to get a shot at twenty rods instead of thirty. The white hunter wants to shoot the instant the game is sighted. He trusts all to his marksmanship, and the excellence of his rifle. He hurries through the woods, shoots in haste at any part of a deer's body, and some times without being sure that it is a deer, then runs with all his might to ascertain the result and off on the trail at a gallop. This is to the hunting game what catching a bass with hook and line and slamming him on the rocks hard enough to mash him to flatness, "by main strength and awkwardness," is to the fishing game. Such procedure will sometimes attain the secondary object of securing meat, but it overlooks the primary joy of the acquisition and exercise of individual skill.

The young man who aspires to become

a hunter of big game, begins by choosing a rifle. It is immaterial what make he chooses, because all the standard makes are good. The important point is that he should purchase the most deadly rifle made. Greatest killing power is the prime requisite, for his ideal of hunting performance will be to kill his game instantly. For success in the hunt, and in mercy to the game, never carry a low power rifle after *big* game.

Having selected the rifle, take it home and sight it to a point blank bull's eye at thirty to fifty yards. Rifles are usually sighted for point blank range at one hundred yards. I consider this a mistake, for few men can shoot accurately enough to really test a rifle at such range, and even if perfectly sighted, it will then shoot high at any less distance, and the greater amount of effective work done by any rifle is at less than one hundred yards. This explains why most rifles have a tendency to shoot high at fifty yards, and the shooter has to allow for variations in distance *both ways*. This is an unnecessary complication, especially when we take into account that marksmen naturally overshoot. With a rifle sighted for a hundred yards, one must hold about two inches under a partridge's head, at fifty yards. It is desirable, therefore, to sight the rifle at thirty yards, and then allow for greater distance.

Having sighted the rifle accordingly, we travel to the hunting grounds. The morning we start on the hunt, we fire a couple of trial shots, to be certain our sights have not been accidentally displaced.

It is poor judgment to walk twenty or perhaps a hundred miles to get one shot, and then have the rifle out of order at the critical moment. In thick woods, we will not carry our gun on shoulder, allowing the front sight to be rubbed and pounded by overhanging branches. It might be displaced, or a piece of bark may be scraped off the limb, and adhere to the barrel just in front of the sight, or snow may fall on the barrel. Carry it in the hollow of the arm, muzzle pointing toward the ground. If thrown over the shoulder for a rest, hold it by the trigger guard, and carry it "wrong side up." Be *sure* there is a cartridge in the chamber, then if the rifle has a hammer, carry

it at half cock, and if a hammerless, carry it cocked, but with the safety catch on, and in both cases, prepare the arm to shoot as it is raised to the shoulder. Many hunters, especially when hunting alone, carry a rifle at full cock. This is at least unnecessary, for a little practice will render the act of cocking the gun automatic.

We hunt across the wind. We go slowly, not more than a mile an hour, stopping often to look and listen, and making no quick motions.

We do not smoke, because a deer can smell a pipe from one to four miles, and will run at sight of a puff of smoke from a hunter's mouth, when he would not see the hunter himself.

We will not, as a rule, shoot at small game, when deer hunting, but if we do fire a shot, we will make *no other noise*, and after picking up our small game, we will maintain absolute stillness for a few minutes. A nearby deer, hearing the

shot, would be on the alert, but if not followed by other sounds, will forget it in a few minutes. This observation holds good about other accidental sounds. Suppose you break a limb with a crash. After such mishap, keep still five minutes. Trees often fall in the woods, and such sounds do not alarm game. No situation ever arises in deer hunting, where anything can be gained by *hurry*. Act promptly in emergency, but without haste. Remember that you are handling the most deadly of weapons. Finally, the greatest mistake of all, the unpardonable sin of hunting, the inexcusable blunder, the *crime*, is to shoot before you know *for certain* at what you are shooting. The man who will not impose restraint upon himself, and act with self control, should never attempt hunting big game. There are other departments of sport which are less exacting in this direction, such as wing shooting and fly casting.

## Caring for the Buffalo.

**T**HE American Bison Society has not been long in justifying its existence. The members speedily recognised the fact that the animals, for the care of which the Society was specially founded, could not be preserved from ultimate extinction and carried through the centuries by breeding in any Zoological Gardens, however careful the attention given to them, and however great the attempts to make such confinement as far like nature as possible. For their permanent welfare a state of semi-wildness is absolutely essential, and although the herd in the Bronx Park at New York is in fine condition and breeding readily, the members set themselves to consider the problem of the future of this most interesting of American animals.

The result of much discussion and full consideration was an offer to the United States Government to hand over the herd to the care of the nation as national property provided that suitable arrangements could be made for their care and protection. The Department of Agriculture readily accepted the offer, and Mr. J. Alden Loring, representing the Society, and Supervisor Morrissey, who is in charge of the Wichita Forest Reserve in southwestern Oklahoma, selected an area of about twelve square miles of good grazing

ground, provided with permanent water and shelter, on that Reservation as the future home of the herd. Both sides being satisfied with this arrangement, the next step was to secure from Congress an appropriation of fifteen thousand dollars for the erection of a fence necessary for an enclosure for the maintenance of such a herd. There was no difficulty under this head, and the grant having been carried through the work was speedily put in hand. As soon as the fence is completed the herd will be sent to Oklahoma to be turned out into the new buffalo range where the area over which they can wander, and the conditions generally, are sufficiently natural, to secure the future growth of the herd, while protection and care are likewise assured.

In this work the Canadian Government are not behind. The herd of buffaloes at Banff are increasing, and though the conditions might be improved by enlarging the area these are now fairly natural, and that they are not altogether unsuitable to the buffalo is proved by the growth and present condition of the herd. The range might be widened by increasing the fenced-in ground, and seeing that the whole is left as far as possible in a state of nature, a proposition likely to be carried out in the not far distant future.

## Spring Shooting

**A** short paper read by Mr. Edward Tinsley, Chief Game Warden for Ontario, at the annual meeting of the League of American Sportsmen at Buffalo on June 8th last, has been reprinted, and deserves a wide circulation. Mr. Tinsley, both from his wide and long personal experience and his official position, speaks with authority, and his emphatic condemnation of this so called sport should cause those who have practised or advocated it some qualms of conscience. A few sentences quoted from the opening of the paper are sufficient to show where Mr. Tinsley stands on this matter :

"The folly of continuing the unwise and barbarous practice of killing game birds or animals during the period allotted by nature for propagating their species should be apparent to those who have given the question of perpetuating this game of our respective countries the slightest consideration. Anyone stating fifty years ago that in twenty-five years the buffalo and passenger pigeon would be practically extinct would have been considered a false prophet. The same cause will produce the same results with all other species of game, and I sincerely hope that your membership, large as it is, has not an advocate of spring shooting on its roll. The Province of Ontario has the credit of leading the crusade against the foolish, and I may say cruel and wicked, practise of shooting migrating game birds en route to their breeding resorts, when unfit for food, and actually engaged in assisting Nature's plans for reproduction. I am glad to know that our efforts and self denial have not been in vain, as many of your States and our Provinces are now taking part in the good work. . . . This work of extermination has been going on, to a large extent unchecked, and it rests with the true sportsman to determine whether it shall continue. Many of us remember that a few short years ago, our woods were teeming with those grand and hardy game birds, the ruffed grouse, the prairies with untold numbers of prairie fowl, the cultivated lands with quail, the swamps with woodchuck, and the marshes with snipe. Our

lakes and marshes contained millions of ducks and other waterfowl. Where have they gone? I feel you will agree with me in saying that it should be our imperative duty to preserve and perpetuate the grand and liberal heritage left by the Grand Engineer of the Universe, a heritage left us to be used wisely and well in accordance with Nature's laws. Are we doing so? I fail to understand how men claiming to be intelligent sportsmen can be—to put it mildly—so inconsistent as to shoot birds in the spring en route to their nesting grounds or breeding resorts. To do so appears to me to be directly opposed to Nature, and stamps them as being deficient in common sense. Men who kill game birds when in the act of propagating their species or when preparing to do so must be unthinking men, or either of a low order, and too far down into the intellectual scale to have the remotest claim to the name of sportsmen or to be in any way responsible for their actions. . . . Men who desire to be called sportsmen, put your shoulders to the wheel and make an intelligent effort before it is too late, and thereby prevent the next generation having to visit museums to learn what the fauna of this great continent was."

Mr. Tinsley's remarks on fish and game preserves are likewise well worth quoting, coming as they do from a man of his position, standing, experience and knowledge :

"While there is no law to prevent rich men from acquiring large tracts of land from private parties—nor do I think there should be—I am decidedly opposed to wealthy men being allowed to obtain possession of large portions of the public domain for game preserves to the exclusion of the general public. The hunting and fishing instinct is as strongly inherent in the men who constitute the backbone and sinew of our respective countries as it is in the millionaires. This being an admitted fact is it right or is it good policy, that the men who are building up our respective countries and the men whom our countries would have to depend upon for protection and defence from the troubles resulting from international complica-

tions, should be debarred from indulging their love of field sports, for the sole benefit of the wealthy minority? No doubt game preserves have become an absolute necessity, and they should be established in the most suitable localities in our respective countries, and by our respective Governments in the interests of all, and not for the benefit of the few. God forbid that the old country systems should ever prevail on this free and manhood making continent, If we desire to increase anarchy and dissatisfaction, allow the rich men to acquire all the best hunting and fishing grounds in our countries, fence them from the roads and stick up trespass notices, and by so doing we will succeed in building up a dangerous menace to our countries that will have disastrous and lasting results. The great throbbing mass of humanity requires a safety valve and if we fail to protect the one Nature has provided, and keep it in good order, trouble will follow, and boiler explosion will occur when least expected. . . . . It is a safe policy for all Governments to legislate for the masses. The classes will look after themselves."

On license fees as well Mr. Tinsley's views are emphatic and well worth attention. On this important subject he says:—

"The license system is the only measure that will enable sportsmen of moderate means to indulge in field sports in the future . . . . Had more respect been paid to the laws of nature in the past, there would have been far less of the public domain in private preserves from which the general public are debarred. Vandals who claim to be sportsmen are largely responsible for the increase of private preserves, and also for the necessity of a stringent protective system . . . . The protection of game and fish should be self sustaining. This can only be accomplished by those doing the hunting and fishing paying the cost of the sport provided for them. This as a rule would have the beneficial effect of keeping the public lands for private preserves more difficult. In justice to those hunting on non-resident licenses they should certainly be allowed to take at least a portion of the game killed by them. I am more than ever

convinced that the general adoption of licenses for shooting game is the only means of ensuring even a moderate supply of game in the future. Those who object to paying a reasonable fee are not sportsmen, but belong to that numerous class who are always on the alert to procure something for nothing."

Mr. Tinsley points out that large portions both of Canada and the States are unfitted for any other purpose than fish and game protection, and adds :—

"We are told that good government consists in doing the greatest good to the greatest number. Then it is evidently the duty of our respective governments to introduce measures to perpetuate a valuable heritage in the interests of the majority, and wisely prevent its total destruction in a few short years to satisfy the greed and rapacity of a few. If the wild lands composing the public domain are to remain open to the public in our respective countries and the fauna protected, an equitable system of hunting licenses has become an urgent necessity, and will be found to be the only practicable solution of the problem of game protection."

The great majority of sportsmen will heartily agree with Mr. Tinsley, and thank him for such outspoken and emphatic utterances. Mr. Tinsley shows the right spirit, and his sympathetic administration of the department of which he is the head has much to do with the high and honorable position held by Ontario amongst the Provinces of Canada and the States of the Union for fish and game protection, and forest preservation. If every Province would follow suit, we should in Canada go a long way in the solution of some of the most troublesome problems which man has ever encountered. To assist in the work let us all follow Mr. Tinsley's closing injunction when he asks us to "endeavour to imbue our sons with the love of nature, educate them in nature's complete work, by taking them with us on our annual outings, teach them to do what is just and right to God and their fellow men, and become the peer of any man on earth."

# Our Hunting Trip on the Georgian Bay.

BY TAMARAC.

**I**N the season of '94 it was my good fortune to be nominated as one of the members of a party going for a trip to the famous hunting territories of Muskoka. As I had had no previous experience of deer hunting every story the older members of the party told of former trips appeared to me, to say the least, to be slightly exaggerated. However as the time fixed for starting drew nigh, I was caught in the fever of excitement at the prospect of adventures, and doubting a hunting tale, even if exaggeration went with it, was simply to be considered as treason, and everything in that line was eagerly and quickly swallowed.

boarded the Manitou, and were met with the cheerful information that our home would be in Midland until the heavy weather let up. Thanks to the kindness of Captain Cameron and Purser McQuade the best was made of the situation, and the following afternoon the voyage was continued. The same evening we were dropped outside the limits of civilization, feeling thoroughly pegged out.

However there was still work to be done, and we set about doing it. For the next fortnight a house boat was to be our home, and we speedily had things comfortably arranged inside. Shake-downs were hastily made up, and we were

soon pursuing the noble game. Our pleasant dreams were all too soon dispelled by a call to breakfast, and we all agreed that but a few moments had elapsed between bedtime and the first meal of the day.

After breakfast we held a Council of War for the consideration of the problem of how to place our cumber-

some vessel in the hunters's Mecca, and had arrived at no decision, when the knotty problem was solved for us by the appearance of the yacht Minneola, which made her appearance from behind a neighboring island — her plucky crew being greeted with an ovation such as would have delighted the heart of a politician. No time was lost in making fast and getting under way, and we now felt that we were on the last stage of our journey.

The day was perfection. There was not a cloud in the sky, scarcely a ripple on the water, and on every side our eyes were enchanted by scenery indescribable — grim rocks rising abruptly from the blue depths and crowned with the forest

NEAR PENETANG

The first damper to our dreams of unalloyed bliss was a call from our berths at a most unholy hour in the morning. When we had risen and dressed, grumbling all the time at the disturbers of our peace, we discovered that there was no visible means for our further transportation. By the great kindness and energy of a friend the means were found for enabling us to proceed a stage further on our journey via the Grand Trunk Railway. On arriving at Penetang we made the discovery that our boat had left for Midland. By this time we were beginning to thrive on adversity, and it did not take us long to determine to cart all our stuff to Midland. The day was drawing to a close when we

splendours of autumn, amid which the less brilliant plumes of the graceful pine stood out conspicuously. As we neared our destination water fowl, disturbed by our intrusion, rose in flocks and disappeared to safer quarters, and a keen eyed eagle occasionally sailed overhead, inspecting the new comers from a respectful distance.

This arcadian state of things was far too good to last, and we found that our staunch little craft, so obedient in most things, positively refused to climb over the rocky barriers for which the district is notorious. Of course when the yacht came to a sudden stop, the house boat was under no obligation to do likewise until it also had reached the scene of the trouble. Everything was done to make the meeting of the two crafts as gentle as possible, and one guileless youth discovered to his sorrow that his lower limbs were not built for fenders. The engineer (civil) rose to the occasion by making coffer dams of his boots, and carrying everything safely into deeper water.

Once more we were enabled to devote our attention to the rugged grandeur about our course, and the younger members of the party trained their guns on the fowl at impossible ranges.

When we were well within sight of our anchorage, the yacht, in passing through a narrow channel once more refused either to climb or let go. Eight different schemes were simultaneously proposed for getting the vessel off, but instead of trying any one we discussed the whole of them. In the meantime the engineer (marine) a modest youth, who had said nothing, produced a set of blocks by means of which the little steamer was finally released. We then mounted an armed guard over the skipper with instructions to blow the next opposing rock

to—one side. With the help of this stern precaution our destination was reached without further mishap.

A sheltered nook within half a gunshot of the Blackstone Falls afforded our floating home splendid shelter, and things were so speedily made snug that we had an opportunity of making a survey of our surroundings before dark. That evening was passed most pleasantly in card games and making preparations for an early start in the morning. John, the veteran deed slayer, made a most careful examination of the map, and arranged where each expectant hunter should be placed on the following day. We retired full of confidence that before the next roosting time we should have dined off the fleet footed deer.

In the morning we snatched a hasty breakfast and in heavy marching order

ONE OF THE NORTHERN NAVIGATION CO'S BOATS.

were soon scattered through the woods. Everyone settled himself on the runways in the best possible position for seeing and shooting his deer. The dogs were scarcely free when they found game, and the woods were filled with canine music. We waited anxiously for the sounds and the sight of the deer, straining every nerve to hear and see something of the game. A splash to the left drew my attention to a magnificent buck crossing the river but out of range. While I was saying hard things about my luck in not being closer to him, and giving up all hopes of seeing another deer in that neighbourhood imagine my surprise to see a plump doe stealing over the same ground. My com-

panion and myself fired at the same moment but neither shot had the desired effect. With one bound the little animal reached the centre of the stream apparently unhurt. Stopping for an instant another shot followed, but our only satisfaction was to see the animal disappear with a graceful bound peculiar to the tribe. We hurried to the spot and found that blood had been drawn but no meat.

More hard things were said, and the inner man becoming unruly the back track was, perforce, taken for camp. Here we learnt that our companions had met with no better success than ourselves, and there was nothing more for us to do but to vent our feelings upon the ham and eggs which we did with right good will. Thereafter peace reigned once more, and an informal hop was given at which the muscle and old clothes of the settlement were fully represented.

The next two days were simply repetitions of the first one. We rose early and went out each morning filled with hope and breakfast, and returned feeling as though both were forever lost. Blank looks and blander words accompanied each new arrival at our daily assemblies as we found that the deer had carefully kept out of everyone's way; though dinner invariably had the same soothing effect.

Better fortune attended us the fourth day. My companion of the first day and myself were sent in disgrace to the scene of our former exploits, when we managed to both miss our quarry. It was the general opinion that on this occasion there was not the slightest danger of anything coming our way, and as the day wore on we made up our minds that this opinion was about correct. We had been sent to this place because it was judged we were not fit to take charge of a better one.

DUCK HUNTERS' CAMP, WHITE FISH LAKE

However we were determined to show them their error of judgement. Just before we were about to give up, a rustling of the leaves on the opposite side of the river made me grasp my gun tighter, and a moment later a full grown doe showed her graceful head, the gun went off, and the head disappeared as though supported by those graceful legs.

In my excitement I found myself making a path through the chilly waters of the river, like the children of Israel (but not so successfully,) and climbing the opposite bank I saw my first victim a beauty. The other fellow at first thought me crazy, but the excitement was contagious, and we both joined in the warwhoop that proclaimed my triumph. A hint from the hunger belt that we had fasted quite long enough reminded us of more commonplace things, and hurried us back to camp just in time to meet the others bringing in a couple of two year olds. No time was lost in transporting a plentiful supply of steak from its rightful owner to the care of the cook, while a party returned to the runway to bring in the heavy doe.

Everyone's face beamed and hunger belts were laid aside. The three lucky hunters lied with impunity until it seemed the easiest thing in the world to drop a deer at a thousand yards. Next day several parties had opportunities of performing this feat at much closer range, but they forgot to make allowances for the wind of a camp liar and were unsuccessful.

On the day following as if to add insult

PICKEREL ISLANDS, GEORGIAN BAY

clothed in their autumnal splendors, and those of the grey rocks clad with silver lichens and colored mosses.

We were blood-thirsty wretches, and the glorious picture was soon marred by human greed. We were skipping along in fine style when suddenly one of the crews bent to their oars with re-

to injury, the deer passed in flocks but still at Gatling gun range, and the black looks were all in their places.

Hopes were at zero on Friday morning though we wandered to the runways from force of habit, but night found us all in high good humor with hopes completely restored, for there was an addition of two deer on the lodge pole. Once more we all became friendly, enjoyed our dinner more than usual, and settled down with zest to the game of pedro.

At a very interesting stage, play was interrupted by cries which we took to be those of a lost hunter. The cries came from across the bay, and we immediately signalled to the lost one, receiving an answer each time. Volunteers were called for, and before long a skiff was pulling off to the rescue. Then a second wanderer set up a wail, and soon we heard the boys pulling back at a rate of fifty strokes to the minute. As soon as they recovered their breath they informed us that it had been a wild cat chase. To this day, however, I have been unable to learn which of the participants were pursued. For the remainder of the evening we stayed indoors.

On the Saturday morning we were up before sunrise, and everyone was trying to impress upon his neighbor the pleasures to be obtained from portaging the boats. We all took our share in the hard work, and were soon afloat on one of the beautiful little sheets of water so common in the locality. These are long narrow sheets of water whose dark depths reflect every feature of the virgin forests

doubled vigor and we at once knew there was a race, and a close one, and as we passed we saw that the deer was a winner. The animal took to land unharmed and as our boat was in the lead there was nothing to fear from the others.

Again we were going well when the coxswain perceived a break in the glassy surface, and gave the word "pull, boys!" We did pull for this time we were not merely spectators but also actors. The excitement was intense. Like all stern chases this was a long one, and it appeared all the longer because we could not look ahead. Although buoyed up with excitement we could not much longer have maintained the speed at which we were going. To us the seconds appeared hours. A report and all was over. As we cooled down we sincerely wished that the noble quarry had won and each of us registered a vow never again to kill a deer in the water.

After this we landed, made for the woods, selected stands, and awaited developments. The morning passed by in silence. A shot was heard along the line to the left. No dogs had been near us, and so we said to ourselves, "The fool has shot a squirrel!" Then the man who had pulled the trigger began to fill the woods with noise! Out of the confusion came the word "bear" and regardless of consequences the rest of us dashed downhill and uphill till we reached the spot! Then we saw the man who was wild, and the bear—not a very formidable looking animal, a cub, but still a bear! We all caught the contagion and

AN ISLAND IN THE GEORGIAN BAY

vent wild, stark mad, until hunger reminded us that we were far from our homes and loved ones. Bruin was dragged in triumph to the boat, and the back track taken for home. The others joined us lower down the lake, and they were empty handed. A glimpse of a pair of horns, and the black face of Bruin recuperated them sufficiently to stand some banter on their poor luck, and in a famished condition we reached the camp.

A couple of Indians put in an appearance informing us that their wigwam had taken fire in their absence, and everything had been destroyed. Arrangements were made to keep them during the rest of the camp. They were true children of the forest, and gave us much valuable information—and some that was not valuable! No scalps were lost, and we were well satisfied with our Indian friends.

During all these changes in our fortunes, the cook, a man who had remarkable stories of having catered for the highest in the land, became dissatisfied, and threatened horrible vengeance upon us. When we remember the awful mixtures of which we were to partake

or starve we feel that he surely had his revenge! We made a serious mistake in taking him along with us, but a far more serious one in bringing him back alive. Let us however forget him, and remember only the pleasures we obtained from our hunting trip.

Sunrise on Thursday found us once more en

route to the runways. The boats were scarcely drawn ashore when a fine doe bounded in sight of the whole party, and was quickly transformed into venison. The dogs kept up a lively chorus, and we all hurried off to the stands. Throughout the day we kept up the look out, and succeeded in adding five more deer to the string. Hunger alone ordered the retreat, but after dinner hunger belts were cast aside and contentment reigned!

This was the conclusion of our hunt. In wet and dreary weather we made our preparations next day for our return trip. On Saturday morning everything was on board, and the Minneola commenced her return voyage.

As we found all the rocks going in, our pilot had become expert as to the regions where they were not, and we passed out

MICHIPICOTEN FALLS

without a single bump. Shortly after noon our houseboat was safely moored in her berth at San Soucci, and the Minneola, with her gallant crew bade us farewell. The lines were cast off and the yacht vanished among the islands, leaving eight of us to find our way home by the Manitou next morning.

A good night's rest (our last on the houseboat,) an early breakfast, and all was bustle till the cargo was safely on board the Manitou on our first stage to civilization. We had a pleasant run to Midland whose busy streets at once recalled to us the cares and troubles of life.

The same night all the baggage was hustled on board the Favorite. At daylight we stepped on shore at Collingwood and at once struck out for breakfast, and our good friend Roland. The morning

was spent in visiting Collingwood friends, than whom we have found none better !

We were warned to go on board by the steam whistle of the city of Collingwood. To landsmen the prospect was far from cheerful. A gale from the north west accompanied by snow, caused our footsteps to be very uncertain until the lee of the sheltering bluffs of Cape Commodore was reached, and we were once more happy.

There were many friends on the dock to meet us as we filed ashore, tired and dirty, but happy savages. We were no longer a party but separate individuals, and as such made our ways to our separate places of abode to re-appear in the morning at our various callings, once more imprisoned in the stiff collars and regulation garments of civilization !

## Where You May Hear the Bullets Sing Without Going to War.

BY E. J. M'VEIGH.

**A**S we could not hunt in the Park the next best thing was to get close to it, and it was while driving Algonquin National deer into Snowshoe Lake that I learned the songs of the bullet, or one of them, as they may have many, the notes depending on the kind of rifle used.

Snowshoe Lake is so called for the simple reason that it is shaped like a Snowshoe, and it lies a perfect gem between the wooded hills that slope gently down to the water's edge. As you come on to it through the woods your first impression is one of perfect peace ; the water lies so still down there in the hollow where the wind does not come to tease it ; while a black duck swimming out into the middle looked as big as a loon, and you raise your rifle to take a shot at him, but drop it again with the feeling that you do not want to be the first to break the perfect calm ; and you lean up

against a tree and lose yourself in a dream of the beauty of the wilds, "where all of Nature's beautiful, and only man is vile." Man ; the ruthless beast of prey who would be the most dangerous animal that roams the forest if it was not for his noise and ignorance.

But wait ; is man the only hunter ? See that mink slinking along under the bank ; what is he after ? Oh yes ! that muskrat on the root. Now Mr. Rat, it is up to you ; a clear case of get a meal for yourself or make one for the other fellow. He sees the danger just in time, and is gone with a soft splash while the mink snarls at the water where his dinner has disappeared. Just that soft splash in the water, no noise or shouting or bang of guns, but it was for life or death, only quietly and in keeping with the surroundings.

And here right beside you a small snow-white weasel with the little black

tip on the end of his tail, his body the length of your palm, and holding in the teeth a small field mouse. You have been so still he is almost at your feet, but his eye meets yours even as you glimpse him and you read there a challenge to the death "No Sir! you will not get my kill, go and hunt for yourself;" and he is gone. A ripple on the lake and your eye catches a silver minnow as it skips for a few feet along the surface; and a great trout swirls up and it is gone. Whoop! they are all at it, wake up and get into the game, where is the gang with the dogs?

I am at the head of the lake, the toe of the Shoe, and the others are away down by the heel somewhere. Listen! is that a dog? Yes, but heading for the lower end; no shot for me this time. There is the second dog! Bang! a shot, then stillness for a moment, but only for a moment; down there where the lake begins to narrow. Pandemonium breaks loose, dogs howl, men shout, guns bang, and into the water comes the deer with the dogs almost on his back; and bang! goes the heavy gun—a Winchester. That is John K. — Crack! from the wicked Savage; that's John G.—himself. I am

becoming interested and move out into the green to have a good view when Zip! Zip! Whe-e-whang! a bullet passed my nose into a tree. "Go it boys! don't mind me I am supposed to be dead, if not likely to be shortly!" Where are all those trees that were so thick around here a while ago? Ah here is one, but how mean and small it is; what a grand thing is a good big tree. I must peek out to see what is going on! I see two splashes on the water and Whe-e-e-comes another bullet, ten foot off but one. I saw the twigs fall, another peek, Zing! behind me that time, don't know how far off, don't care, no more peeks, first right, then left, eight all told and then quiet. Now a yell from John G.—"Hello Mack! we-have-the-Deer-alright!" and I yell back, "I-guess-you-wanted-him-from-the-row-you-made-but-what-in-H—did-you-want of me?"

And peace once more settles down over Snowshoe Lake, while the trout have gone into the deepest hole they can find, and the mink, the weasel and the other natural owners of the hunting ground retire in disgust of man and his crude ways of making his kill.

SAXIRAGA BRONCHIALIS

DRYAS OCTEPETALA

# The Progress of Game Protection.

**T**HE United States Department of Agriculture in what is known as "Farmer's Bulletin No. 265," gives particulars concerning the whole of the States and Canada of the Game Laws for 1906, including a summary of the provisions relating to seasons, shipment, sale and licenses. The pamphlet which has been compiled by Messrs T. S. Palmer and R. W. Williams Jr., assistants in the Biological Survey, is remarkably complete, and testifies on every page to the advance made throughout the North American continent in the matter of game protection.

"No less than sixty new laws dealing with game matters were passed, while the number of bills under consideration was probably not less than one hundred and fifty. The most important measures enacted were entirely new game laws in Mississippi and Prince Edward Island; the adoption by the new Province of Alberta of a law prohibiting spring shooting of water fowl and establishing a game preserve; statutes creating a large forest, fish and game preserve, and making decided changes in the game laws of Quebec; laws protecting non-game birds in Iowa and Prince Edward Island, and radical amendments in the sale laws of Massachusetts. The passage of the Mississippi statute marks the completion of a chain of non-export laws in every state of the Union and provision for the appointment of special officers to enforce the game laws in every State except Alabama, Arkansas and Texas. It should be noted also that the defeat of such bills as those extending sale in Kentucky, permitting the sale of certain foreign game birds throughout the year in New York, and permitting spring shooting on Long Island, was a distinct gain and was due only to unremitting vigilance and activity on the part of friends of game protection. Such vigilance is always necessary to insure the continuance of good laws, not only in the States immediately concerned, but in others which would be directly affected by the passage of retrograde legislation."

"As most of the provisions in modern game laws have been enacted during the

last twenty years it is of interest to note a few points in which progress has been most rapid. Non-export laws, first enacted in Minnesota about 1871, are now in force in every State in the Union and practically every province in Canada. Non-sale laws are now in force in forty-two States and bag limit restrictions in thirty-eight. Non-resident licenses, first enacted in 1895, are now required in all the States except Alabama, Arkansas, California, Connecticut, Georgia, Massachusetts, Nevada, New Mexico, Oklahoma, Rhode Island, and Texas, and resident licenses are required in sixteen States. A practically uniform law protecting all non game birds is in force in thirty-five States, including all those east of the Mississippi except Alabama, Maryland and West Virginia. State warden service has been established in thirty-six States, and county warden service in nine States, while every organized Province of Canada has a special provincial game officer."

There were some very interesting and novel features in the bills that failed to pass. No less than ten were concerned with prohibiting the use of automatic guns, but none of them gained the distinction of becoming an Act. Three cat bills were introduced into the Massachusetts Legislature, and one in Maryland proposed to make it lawful to kill cats in search of birds. One of the Massachusetts bills declared a cat to be property if wearing a collar with the name and residence of the owner; a second provided a penalty for owners abandoning cats; and a third made it an offence to harbor cats known to kill game or wild birds.

Every State and every Province now has provisions for close seasons, though in the case of the States there is some confusion owing to differences in the various counties or in different districts of the same States. In several cases protection extends all the year round in efforts to save certain species from extinction.

Shipment is a most important feature of the traffic in game. "It has likewise a marked effect upon the perpetuation of game and when permitted without limita-

tion is a great factor in its rapid destruction. A realization of this fact has induced many of the States to prohibit export of all or certain kinds of game and in a few instances all transportation even within the State." In all inter-State shipments the name and address of the shipper and the nature of the contents must be plainly shown. Twelve States and two Provinces (Ontario and New Brunswick) likewise require each package of fish and game to bear a statement indicating the contents. Such general statements as "game," "fish," or "birds" will not do; the kind of game etc., must be shown, and if possible the amount in the package. "Some of the State laws are very explicit on the subject of marking. Nebraska requires all packages to be labeled with the address of the consignor and the amount of each kind of game contained in the package, and provides a fine of ten dollars to fifty dollars for omission of these details. Ohio, and North Carolina have similar requirements. Michigan requires all packages of game to be plainly marked on the outside with the names of the consignor or consignee, the initial point of billing and destination, and an itemized statement of the quantity of game contained therein. Louisiana and Ontario insist that all packages, besides bearing a description of the contents, and the names and addresses of the owners, must be so made as to show the contents. Mississippi requires even more detail; the package must bear the names of consignor and consignee, and an itemized statement of the species of game, and the contents must be packed so as to be readily seen. Several States require big game and game birds carried by sportsmen to be marked with the owner's name, shipped as baggage, and transported open to view. Railroad and express companies should call the attention of their agents to these provisions, and insist that all packages be properly marked before shipment. In Nebraska common carriers are prohibited under a penalty of twenty-five dollars to one hundred dollars from receiving consignments of game not properly labeled. In Texas they may examine suspected packages, and in Arkansas they may cause them to be opened when necessary, and may refuse packages sup-

posed to contain fish or game for export. In Wisconsin packages of fish or game not properly marked may be seized and sold by game wardens."

In some States sportsmen are allowed to carry a limited amount of game out of the State under special restrictions, and exceptions to the laws prohibiting export are also made in the case of birds and animals intended for propagation. Restrictions on shipment from the States have now become so stringent that all the States and Territories west of the Mississippi River except two prohibit export of all game protected by local laws. Of the two exceptions, Iowa prohibits export of all game but shore birds, and Wyoming export of certain species. East of the Mississippi similar laws are in force in nearly all of the States north of the Ohio and Potomac Rivers, and also in Tennessee, Virginia, and West Virginia. The export of most if not all protected game taken within the State is prohibited in all these States except Massachusetts, Rhode Island, Connecticut, New Jersey, Delaware, Maryland, Illinois and Indiana, and in these export of certain kinds of game is illegal.

Deer can be lawfully exported from only seven States—Delaware, (where they do not occur), Alabama, Georgia, Kansas, Kentucky, North Carolina and Ohio. The export of deer hides is prohibited by special provision in the laws of Alaska, California, Florida, Wyoming, British Columbia and Ontario; Wisconsin limits the export of green hides to the period from November 13 to December 3 of each year; Washington and British Columbia prohibit killing deer for hides; Oregon makes all hunting for hides dependent on permission of the State Game and Forestry Warden; and New Brunswick and Newfoundland allow shipment of green hides only under license.

Among game birds the most general prohibition is that of the export of quail which is now in force in every State and Territory with two exceptions. In one of the excepted States, Wyoming, quail do not occur; in the other, Maryland, several counties prohibit their export. A number of States permit imported birds to be exported, however, and Colorado, Illinois, Missouri and Montana allow quail to be shipped from the State

under permit. Besides these exceptions, twenty-three States, including Oregon, permit non-resident hunters to take a limited number of birds out of the State; Maine, Missouri, Montana, South Dakota, Vermont, Virginia, Wyoming, British Columbia and New Brunswick grant the same privilege to resident hunters.

Canada also has a general law prohibiting export of deer (except those raised on private preserves,) wild turkeys, quail, partridges, prairie fowl and woodcock, and permitting each non-resident to export two deer in a year at certain ports within fifteen days after the close of the open season, under permit of the collector of customs of the port from which export is made.

Legislation restricting the sale of game is passing through a transition stage. Some States prohibit the sale of game throughout the year, others only in close seasons, and between these extremes may be found all gradations and exceptions, such as restrictions prohibiting sale of game outside the State or for export, and exemptions allowing sale for a few days in the close season. Forty-two States and Territories, and most of the Provinces of Canada, now prohibit the sale of all or certain kinds of game at all seasons. In a few instances prohibitions against the sale of certain game are so general as to afford protection over a considerable area in adjoining States. Thus ruffed grouse cannot be sold in any state or Province along the Canadian border except Vermont, New York, Pennsylvania, Ohio, New Brunswick and Quebec, nor in the States of Massachusetts, Rhode Island, Connecticut, Missouri, Arkansas, Nebraska, or Wisconsin. Practically every State in which prairie chickens occur now prohibits their sale or export. Hence exposure of these birds for sale in any State where they do not occur, as in any city east of Indianapolis, is strong indication of violation of law.

In general the sale of game is prohibited during the close season, but a brief additional open period is sometimes provided in order to permit dealers to close out stock at the end of the hunting season. In Colorado, Illinois, Iowa, Nebraska, New York, Tennessee, and British Columbia the sale season includes the open season and the following five days

for all or certain kinds of game. An extension of four days for sale is added to the open season in Nova Scotia; ten days in New Brunswick and Newfoundland; fifteen days in Alaska, New Jersey, Pennsylvania and Quebec; twenty days in Ontario; thirty days (for imported ruffed grouse) in Pennsylvania; sixty days in Yukon; and three months (for goose and brant) in New Brunswick.

In order to counteract a tendency on the part of market hunters to anticipate the opening of the season, the sale of certain game is sometimes prohibited at the beginning of the open season, as for example during the first two days in Illinois, the first three in Nova Scotia, and the first month in British Columbia.

In Arkansas non-residents are not permitted to hunt, except on their own premises, and in thirty-six States and Territories and throughout Canada licenses must be secured before non-residents can hunt any or certain kinds of game. In sixteen States and four Canadian Provinces a like restriction is imposed on residents, but the fees are usually very much smaller and often are merely nominal. The fees for non-resident licenses for both big and small game range from ten dollars in a number of States to fifty dollars in Wyoming, British Columbia and Newfoundland; those for resident licenses from seventy-five cents in Illinois and North Dakota to five dollars in Washington, and seven dollars (five dollars for moose and caribou and two dollars for deer) in Ontario.

A new kind of hunting license, often known as the "alien" license, has recently been adopted by several States to restrict hunting by persons who are not citizens of the country. Thus Pennsylvania, Louisiana, Utah and Wyoming provide that all hunters who are not naturalized residents of the State must obtain the same license required of non-residents; Massachusetts has a special fifteen dollar license for resident aliens, Washington a fifty dollar license for non-resident aliens, and Manitoba has a hundred dollar license for all who are not British subjects.

Licenses are generally issued only for the open season and thus expire at fixed dates. Some are necessarily very brief

in duration. Michigan issues a twenty-five dollar non-resident deer license good only for the last six days of October. In a few instances licenses are issued at reduced rates for a week or for a few days. Of this character are the five dollar non-resident bird license good for one week issued by British Columbia; the one dollar guest license issued by Alberta and Saskatchewan, and the daily license issued for hunting birds in Colorado, and any game in Lafayette County, Florida.

Eight States issue licenses good only in the county named therein—Florida, Georgia, (market hunting), Iowa Maryland, Mississippi, South Carolina, South Dakota, and Washington—with fees ranging from one dollar for residents of Washington, to fifty dollars for residents hunting ducks for market in South Carolina.

Twenty-two States and seven Canadian Provinces allow non-resident licenses to carry or ship out of the State or Province a limited amount of game, while this privilege is denied by fourteen States and Territories and two Canadian Provinces. Maine, Michigan, and Montana issue export permits additional to the hunting license.

Non-resident land owners or taxpayers are not required to pay the usual fee in Kansas, Maryland, (most counties) New

Hampshire, New Jersey, North Dakota, Tennessee, West Virginia and Nova Scotia. To secure this exemption in New Hampshire the non-resident hunter must own land to the value of five hundred dollars or more; in Tennessee and Nova Scotia he must pay a tax of at least one hundred dollars or twenty dollars per annum respectively, and in North Dakota must own or cultivate a quarter section of land. Similar exemptions are made in the case of land owners, and in some instances their tenants hunting on their land in Colorado (farming or grazing lands only) Illinois, Missouri, Montana, North Dakota and Oregon, and no license is required of those hunting within their own township in Indiana, or county in Minnesota or Nebraska. In Virginia no license is required of bona fide guests of residents.

In Maine, South Dakota, Wyoming and New Brunswick (on wild lands) non-residents are not permitted to hunt big game unless accompanied by qualified guides, and in Colorado, Maine, Montana, Wyoming, New Brunswick, Newfoundland, and Ontario guides are licensed. Maine and New Brunswick also license camp help. Nearly every State requires licensees to have their licenses in personal possession while hunting, and to exhibit them on demand of any warden, and in New Hampshire of any person.

THE SPRAY RIVER NEAR CONE MT.

BOW RIVER LOOKING TOWARDS THE LAKE.

## How We Found the Alpine Club Camp.

BY A. H. S.

**T**HE morning train to Field was late at Banff on July 9th when there was a large gathering at the station of that most delightful of mountain resorts. Everyone who was going further afield regretted the briefness of their stay, for Banff in the summer time appears an ideal place for dreaming one's life away, or for indulging in any strenuous pursuit should inclination turn in that direction. In the town itself there is enough to see for anyone who does not wish for great exertion. Right in the midst of the beautiful Canadian National Park, surrounded by mountains whose towering peaks gives one ever changing pictures, and past which the Bow River flows, giving the most splendid scenic views, one can get enjoyment enough without moving from the town. Then the Government have made many roads which make driving or horseback exercise a delight, and from many points

of which the most enchanting views are to be obtained.

It is a very easy drive to Sun Dance Canyon, and in that grand work of Nature the visitor can well pass a day looking with wondering awe upon the magnificent scenes surrounding him. No one need go further than the finely situated Canadian Pacific Railway hotel, placed as it is on a beautiful plateau and surrounded by mountains which appear to enclose the entire valley. The whole summer might be spent on the verandah of that hotel without the visitor tiring of the ever changing panorama presented to his view on all occasions. One of the grandest collections of Nature's own pictures is always before him, and nothing artificial can give him anything to equal them. The play of light and shadow, and the many gradations of color give to all lovers of the beautiful such a series of pictures as ensures a life long remem-

CASCADE MOUNTAIN FROM ANTHRACITE.

brance to all who are fortunate enough to see Banff. The animal enclosure is a never ending attraction to visitors. The enclosure is a large one and often the animals can be seen. On the occasion of my visit I was fortunate. Not only did I see the buffaloes at close quarters, but a lordly moose, and a fine buck came out and made close acquaintance. A beautiful doe with her fawns showed curiosity as to their visitors, and gave us a splendid view of their pretty selves. This most inadequate tribute to one of Canada's most charming resorts will enable readers who have never been to Banff to realize a little the feelings of regret animating all who were on the station platform waiting for the train on the occasion to which reference has been made. At other places this waiting might have been tedious; at Banff we were faced by mountains which gave us a series of pictures upon which we could have gazed for hours forgetting that such mundane things as trains and engagements existed. All were present because the necessities of life permitted no longer stay at a place for which nature has done so much, and for which every visitor must always have the most pleasant of recollections. There were some who were at once to take up the cares of life again, and there were others whose holi-

days were to be prolonged by extending them at other places. I was one of the latter fortunate people for I was leaving Banff to join the first Summer Camp of the Alpine Club of Canada, and my destination was Field. I should have left the previous evening, been present at the gathering of Alpinists at Mount

END OF ROAD AT SUNDANCE CANYON.

Stephen House, and joined the early party who started for the scene of the Camp long before the train arrived.

By so doing, however, I should have missed a little adventure which may not be without interest to readers. The late train landed me late at Field, where there were enough of us stragglers to fill a conveyance in which we were driven to Emerald Chalet. We had watched with interest the process of packing the horses, and admired the dexterity with which the diamond hitch was tied. It is necessary to have these packs very securely fastened, as the horses are by no means particular and go through brush strong enough to test the stoutest packing. There were over thirty horses to pack, and consequently though the process was new to most of us we did not care to watch the whole packing, and eagerly took advantage of the conveyance to proceed on the first nine miles of our journey. This drive is wildly and

romantically beautiful, and we were never tired of admiring the scenery we saw on all sides. The views were ever changing not merely because we were proceeding along the road, but also because of the play of light and color upon the mountains, a topic upon which one is never tired of dilating, so truly wonderful are these scenes, and so impossible of description. Nothing but the sight of them can ever convey to any person a sense of the reality, which far surpasses any picture or word painting.

On arrival at the Chalet it was raining but three of us decided to attempt the task of walking to the Camp. We were informed that there was a good trail all the way, and although it necessitated some stiff climbing there was nothing in

THE HOODOOS. AND  
MT. RUNDLE, BANFF

MT. RUNDLE, FROM CANMORE

it to daunt those who wished to be considered mountaineers. Accordingly we took the trail round Emerald Lake, and proceeded across the flats. There were many streams running through this level, and we could see the glaciers, from which they came, high above us. Very soon we all had wet feet. We had negotiated several streams, and picked up the trail again, no easy matter for an amateur, when we came to the main stream which was rushing down at a fine pace and carrying all before it. We went up and down the stream seeking a place where it was thought possible for us to cross, but without success. For the

time being we were completely baffled. We discussed the possibilities of wading, and two of us were for trying it; but the third put his veto upon the plan so far as he was concerned, and there could be no thought of deserting him. We were told afterwards that it was probably well for us that this gentleman balked, as the rushing torrent of ice cold water was as much as the horses could wade, and might easily have carried us off our feet. There was therefore nothing for it but to wait for the pack train, and get ferried across on one of the guide's horses. Accordingly we retraced our steps, re-crossed the smaller streams, and finding

CASTLE MOUNTAIN.

a dry place sat down on a fallen log, and tried to wait with all the patience we could command for the pack train. We admired the bold and rugged scenery with which we were surrounded, and despite its beauties found ourselves wishing we had had the forethought to have brought some provisions with us. A careful search of our pockets resulted in the discovery of one raw onion. Mr. McGillveray, a Dominion Government official, was the lucky finder and he generously offered to share his prize with us. As we both declined his offer he ate one-half himself, and the other gentleman warned me in a solemn tone that the time might come when I should be glad of the other half. He also told a depressing tale to the effect that an American gentleman had been lost in the mountains a few days previously, and when found was so exhausted by his

wanderings that despite medical care and attentive nursing he succumbed and his body was being removed that very day. Both testified to seeing the coffin, and one finished by suggesting that as the pack train ought to have come long before we had struck the wrong trail. We became silent amid the gloom of a British Columbia forest, the darkness growing apace. The situation began to be distinctly uncomfortable.

A PACK HORSE TRAIN.

It was relieved by Mr. McGillveray who suddenly asked if we had noticed a fire ranger's tent a mile back. We had noticed that tent and two of us had wondered for what reason a man could be camping out in that particular place. Mr. McGillveray then informed us that he knew that fire ranger, and it would be a good plan to walk back and see if, even in the wilderness, the man could not give us a sandwich, while we should possibly meet the pack train.

Action, with the prospect of food ahead of us, was far better than sitting still, and we instantly fell in with the suggestion. The mile on the flat was quickly covered, and soon we saw the friendly fire by the little tent which was pitched beside a stream. A dog gave notice of our approach, and the Fire

Ranger came out to see who his visitors might be. We quickly explained our plight, and our generous host assured us that we were welcome to sandwiches, his only regret being that he could not offer us better fare. He wished to boil us some tea, but we were momentarily expecting the pack train and declined. We did not wish to give trouble, and the good sized sandwiches put new heart into us. It

was most interesting to find that when the fire warden knew one of his guests to be a representative of "Rod and Gun and Motor Sports in Canada" he was particularly appreciative of the visit. He assured us that he knew and liked the Magazine, and it was good evidence of the extent and value of its circulation to find out there, in a British Columbia forest and far from civilization, that "Rod and Gun" is known and its work valued.

While we were talking to our host in very different spirits from those which filled us before the meal we heard the bell of the leader of the pack train, and soon the loaded horses, led by one guide and followed at intervals by others, emerged from the forest path into the open flats. We had been discussing the probability of the pack train having gone by another route, and even the possibility of the guides not venturing to go in at all that night. The hour was getting late, the way was long and steep, but we could not believe the visitors would be left for a whole night, six thousand feet above sea level, without blankets, and we scouted the pessimist who doubted the willingness of the guides to do what they had undertaken. The gentleman who declined to think of wading decided to go back to the Chalet, and remain there for the night, hoping to reach the camp on horseback next day, while Mr. McGillveray and myself went forward. The guides guessed they could take us over, and on the strength of that

ON THE TRAIL.

we bade our host good night, thanked him for his sandwiches, and cheerfully followed the pack train, borne up by the anticipations of what the Camp would be like when we reached it. At the main stream the guides pointed out what we should have done, and although Mr. McGilliveray agreed with them (I thought diplomatically) I failed to properly appreciate their explanation.

At this stream I was the last to be taken over and I found this to be a considerable advantage, for when this was crossed there was a swamp and much water through which my friends waded, and where I was allowed to ride through in comfort.

Then followed a long steady upward tramp, the beauties of which even in our tired condition were much enjoyed. As we rose higher and ever higher we obtained different views of Emerald Lake with the moon shining on its wonderful waters, and the valley with the mountains beyond took on new beauties. We forgot everything but the scene before us, and repeatedly lingered to enjoy a picture which will live long in the memory of at least one of the spectators. It proved more than a little annoying however, when one of the horses insisted on making such stops too long, and keeping the whole cavalcade standing. Generally the obstructive one happened to be a

horse about midway between the guides, and sticks and stones showered upon him failed to move him. The animal knew as well as we did that no one could get to it along that narrow path, and even yells and threats failed to prove of any effect. Then Mr. R. E. Campbell, the head guide, with a half apology and pleading the necessities of the occasion, indulged in strong language, and Mr. McGillveray followed suit, proving such an adept as to come in for some approving comment upon his powers from the guides. Curiously enough the animals would start off with the first sentence couched in strong and forcible language, more particularly if its ancestors were reflected upon, and we would again move forward. At several points we would scramble up or down between the zig-zag paths, and thus make the standing horse move, though Mr. Campbell warned us against "overcrowding" the horses on such a narrow path as one might easily go over, and very serious consequences ensue. Strong language therefore, was the usual resort though the stops grew more frequent as the darkness deepened, and the horses felt they could indulge in a surreptitious bite when they had the chance (feed being very scarce along mountain paths and opportunities of getting a bite few and far between); or a few minutes' contemplation of the scenery while keeping us waiting for our supper.

The trail was cut out under the superintendence of Mr. Campbell, and courtesy forbade us from giving our true opinion of that mountain trail. It wound in and out and round about, over every description of ground, but ever upward, and later on when further acquaintance had been made with mountain trails, we thought the work well done. That night however, we believed it to be the very worst trail in existence, and there certainly seemed no end to it. Mr. Camp-

bell developed a dry humor (he was on horseback himself) and constantly cheered us up with the information as to how far we were from the Camp. His information however was of a variable and unreliable character. The longer we kept on walking the further we got from the Camp, and as under his guidance we believed we were going towards it, we

CATARACT CREEK SHOWING MT. HUNGABEE.

failed to understand the position. For some time along this trail we heard the cries of a party behind us, and judging from the emphatic and continuous manner in which these cries were maintained, they evidently had some trouble with their horses as well as ourselves. Compared with our party they were few in number though they made up for their numerical smallness by the strength of their lungs, and the constant use they made of them. Once this party was right upon our heels, but we maintained our lead throughout, and got into Camp a good first. We learned in the morning

BOW RIVER BRIDGE, BANFF.

that these were our friends who drove with us to the Chalet, and who came forward later on horses they were able to obtain while we tramped, as also did the main party, over the long upward trail. In the morning, as we learned subsequently, the stream which stopped us was capable of being easily waded, and was so waded by the bulk of the party.

Perseverance we found to be something more than its own reward, and at length we reached the Summit of the Pass, and emerged from the woods on to the grassy plateau, footsore, wet, dirty and tired, but feeling, as we saw the white tents and glimmering candles that we had at last really reached the Camp. Supper was long over, the Camp cooks had given up their duties for the night and were at rest; but an ample supply of both eatables and drinkables were found in the guides' Camp, and rest and refreshment proved highly recuperative. While most of the visitors were busy in searching out their own particular pieces of baggage, I was fortunate in finding mine under the table in the President's

tent. Mr. Wheeler soon assigned me to No. 2 tent, where I found the best company in the Camp, and spent a happy and never-to-be-forgotten week.

It may be mentioned that Mr. J. D. Patterson was our chief, and he had his work cut out to keep the boys in order. When it is whispered that one of "the boys" was a respected Rev. Dr. and another a frivolous junior of nearly three score it may be imagined that Mr. Patterson's best efforts were almost futile. The display of keen wit and cutting chaff were ably supplemented by brilliant utterances from Mr. Snell, while I made a modest contribution now and then. Mr. McGillveray deserted us after the first night preferring the seclusion of his own tent to the company we gave him. However the occupants of No. 2 are one and all prepared to make solemn affidavits that we had the quietest tent throughout the Camp, and others could be mentioned where noises, neither soft nor low, were indulged in till a late hour. Nothing disturbed us the first night, the healthy exertions we had undergone inducing

sleep so sound and prolonged that the wakeful man amongst us accused all the rest of the high crime and misdemeanor of snoring!

#### Club Notes and News.

The new members recently received for ballot are as under: Miss Kate McEachran, Lake Louise, Ascent of Mt. Stephen. Mr. Charles Francis Miller, Philadelphia, Ascent of Mt. Rogers. Miss E. Cummins, Dayton, Ohio, Ascent of Mt. Hood. Professor H. C. Parker, Columbia University, New York. First Ascents of Hungabee, Goodsir, Lefroy, Deltaform, Biddle, Gordon, Collie and others. Professor Parker, who is one of the founders of the American Alpine Club and a member of the Explorers' Club, of New York, has spent the summer exploring Mt. McKinley in the Alaskan Alps, the highest mountain in America, it being over twenty-three thousand feet, and the actual climbing to be done before reaching its summit being more than on Mt. Everest, twenty-nine thousand feet, the valleys in Alaska being so much lower than in the Himalayas.

Mr. A. O. Wheeler, President of the Club, and his staff have been engaged on Government exploration work in the Ice River Valley.

After the Yoho meet, Professor Fay, President of the American Alpine Club, and honorary member of the Alpine Club of Canada, spent some time in the Lake Louise region, which has long been familiar to him, and many of whose peaks he has climbed.

Mr. Freeman, of Boston, climbed Mts. Temple and Victoria.

The trip to Lake O'Hara proved a popular expedition during the summer, parties going over Abbot's Pass between Mts. Lefroy and Victoria, and descending to the Lake which lies on the south side of Victoria, and returning by the twenty mile trail via Hector Station. Lake O'Hara is exactly nine miles from Hector. Other lakes as Oesa, McArthur and Lindner are in its vicinity.

Next year the club will meet on the beautiful meadow in Paradise Valley, Alberta, right under the shadow of Mts. Hungabee, Temple, Lefroy and Aberdeen. The official qualifying climb will be Aberdeen, but many high peaks in the neighborhood will also be climbed.

The Hon. Sec. (Mrs. H. J. Parker) has received letters of congratulation on the success of the first Summer Camp of the Club from all the original Associate members. At the time the Camp was held Sir Sandford Fleming, the patron of the Club, was in the Highlands of Scotland, but he followed with interest all the records of the Club's doings. Sir Sandford has hung over his fireplace the stick used by him on his journey through the mountains in 1883. As a companion he hangs by its side the one used by him in 1872 when he pushed through the range further north by way of the Yellow Head Pass. We trust Sir Sandford will long be spared to his friends, to his country, and to the Alpine Club of Canada, as its honored patron.

## Duck Hunting on Lake Champlain.

BY J. S. MANDIGO.

**F**ORMING a portion of the international boundary line for some part of its course is a lake whose beautiful scenery has been the subject of many famous pictures, and its renown as a place of beauty is widespread—I think much more so even than its fame from being the home of thousands of wild ducks. Through its entire length of over one hundred miles, and around its thousands of islands, ducks are in abundance after September, and until they are driven south by the lake freezing. The

birds most plentiful in this section are the Whistler, the Blue-Bill, with a few Black Duck, and Teal.

The hunters in these parts are quite plentiful, and their modes of hunting vary. The larger part shoot from blinds, and with the assistance of decoys. We find these blinds of all kinds and sizes; that which is mostly used is built of stone and the manner of construction is very simple. The hunter selects a point as near the feeding grounds as possible, and over which the birds fly in going to and

from the open lake. Here he builds a wall by piling stones on top of each other to the height of about four feet, and usually in the form of a circle. The enclosure is made to accommodate from one to three men. When this is done he must see that all small holes are blocked for the ducks would detect the least sign of life, and they are very shy of any and all strange objects, and the least noise will cause them to fly very wide of the blind. It is also advisable to do your construction work before the season opens, as the ducks notice any change on the shores they frequent.

Another style of blind is that used by the man who wants to shoot from his boat in and about the rushes. This is made by weaving reeds into a long sheet and putting it around the boat, the ends coming up about eighteen inches above the gunwale of the craft. The hunter starts in the morning so as to arrive at his grounds about one hour before daybreak. The first thing on his arrival is to place his decoys, which are usually fifteen or twenty in number, and the kind mostly used in this part are the wooden ducks painted to represent various species. The decoys are scattered so as to form a circle around the blind and it is advisable not to have them more than ten to fifteen feet away at the outside as the ducks when coming in always hit the water outside of your flock. When all are nicely placed, you get back to your cover as quietly and quickly as possible and stay very quiet until daybreak, if this has not already arrived. If you have been early you will often hear the Whiskers go over you while it is yet dark. This is a most thrilling sound to the hunter, and it seems as though the birds would fairly light on your head, though they are usually a long distance away. These early birds in most cases have been disturbed by the hunters coming into the marshes.

Soon after daylight you will be given an opportunity as the ducks begin to fly in and out from the open lake, and the single bird is sure to decoy, providing he does not see you. Then again, it may be a small flock of three or four, or perhaps larger, this being governed wholly by circumstances. Now, when is

the hunter going to shoot? As for myself, and I may say that I have done a considerable amount of duck hunting, and I prefer to shoot just as the bird settles down into the water. At this time, you will find it with its wings wide spread, and the whole body in view; yes, in fact, your target is twice its usual size. Then when the bird is in this position it must of necessity light in the water, and this affords you the opportunity to give the flock a second charge; or if it is the case of a single bird, and you have missed, then you have a second chance. Again in many cases, your ducks will not decoy, and in this case you shoot just as they pass over you, providing they are in range. The advantage in doing this is,—first, you see the bird is not going to light, and second, your shot will take more effect, as they go into the feathers the way they are lying, instead of against the hard surface from which they will actually glance.

I might say for the information of the reader, that fine shot will glance from the breast of a duck, and unless some of them take effect in the head, it is very, very hard to shoot this bird when he is coming towards you. Some of our hunters take bird dogs with them, and these animals are trained so that they will go into the water after the birds that are shot. Others use their boats, if the wind is blowing so as to take the game away from shore; but in nine cases out of ten, the ducks will blow ashore when shot. However, it is a very good idea to have the dog, if you have occasion to go out after your game, because when you are moving around with a boat you are sure to be the cause of ducks flying wide of your blind.

With things going favorable in general, you can, in the good duck sections of Lake Champlain, shoot in the neighborhood of twenty ducks in a morning, and this I consider gives a man a good day's sport, unless he goes in for wholesale butchering, and this the sportsman does not care to do.

I find the hunters of today are using to considerable extent the gasoline yacht; and although it is not in accordance with the law, there is very little effort made to prevent it. As this mode of hunting

increases, we find our shooting much less successful than what it was some time ago, and the birds are much wilder. When I say adopting gasoline yachts, I mean this: We usually see two or more men in a boat, for example we will say three men to start out, one acting as engineer, and the other two in the bow, to watch for ducks, and when the birds are located in the water, the boat is headed for them. Now you will see the men are down out of sight as much as possible. In many cases they will run on to the ducks before they are noticed, and when in range the men who are stationed in the bow of the boat, shoot to good advantage. We see dozens of boats running up and down the lake in this man-

ner, the men shooting at every duck in sight, and sometime before they are anywhere near in range. They wound birds that dive and dodge them and these are often found later crippled and in many cases dead. Some that we kill we find badly shot up, and in most cases this is due to this particular mode of hunting. This makes the ducks so wild that it is almost impossible to get them to decoy.

These are the more important details of the modes of duck shooting in this section; but the most essential thing, if you should care to hunt on these waters, is to get to the proper place for your blind. This done, and other things in general carried out, you can figure on a good day's sport.

## Twin Butte :

### Only a B. C. Flag Station, But a Sportsman's Paradise.

BY B. R. ATKINS.

**O**NLY a flag station—a place for the section and tool houses—worth perhaps a glance at the guide book or careless look from the passing coach. A day off there with rod, gun or camera, and that in your creel or bag to refresh you and next time of passing you will view it with more than time table interest, and from reasons other than outward appearance. By very contrast with more pretentious places of modern conveniences and conventional accessories, the humble flag station appears insignificant. There is however something more than mere novelty in its isolation.

To some of course a day in such a place means no connections with the outside world, no hotel, no comfort, no company, no nothing. The place is not for them. It is only for the vertebrate species. To such people ignorance of trains has no terrors, they are self sufficient and good humored enough to find pleasure in themselves, and enjoy the new experiences of unexpected charms. To them the paper-wrapped lunch is sweeter than the costliest table d'hôte; in the contents of the flask they find a renewal of vigor; and the pipe has the very fragrance of Barrie's brand itself. To these

the absence of guide or gillie is but the raising of latent resourcefulness, the exercise of native craft and art, the development of slumbering energy, all giving prouder joy in their discovery to the trophies of the chase, or spice to the day's adventures. They find that occasion has but brought out the man or woman in them, and being modest people they learn the news with gladness.

These feelings are not in the least injured when by flag or lantern the rushing express stops for them; and back to the comforts and routine of life they have again to go. In the midst of it all they dwell with pleasure on that day in Nature's heart and wonder at the mystic charm which made them least alone while most alone. With a closer acquaintance the knowledge unfolds that Nature is our truest nurse-mother; that she holds sympathies for all our moods, reward for trial, reproof for weakness, and that her seasonable beauties, at all times lovely, makes votaries, not slaves, of all admirers.

When first you visit this place with a name, wait, if you can, till late September sprinkles the summit, with snow; when morning frosts cold bathes the air,

before a late rising sun dry-rubs it into welcome warmth again. This is the time of times. It is the time of shrivelled but sweetened berries; of steaming but scented woods; of falling but flaming leaves; of faded but fruitful flowers; a time of tonic between sultry heats and wintry winds, when paw, hoof, wing and fin go further, fight fiercer, and show more sport. It is a time when things of hill and hollow, brook and brush, show lessening but ripened fare which is sweeter for the trouble of getting and for dread of winter—when strife means life and safety is only spelled by strength or stratagem supreme. It is the time for color contrasts—summit snows and gladed greens, purpling tamaracks and darkening hemlocks, yellow and red of alders, willows and brush maples, and variegated sun-warmed browns of mosses and lichens. To the very last leaf and tint they tell of triumph over tragedy, and in their radiant resurrections proclaim no sting in death. There are beauties in the valleys and in the glades; there is sublimity at the crests. Up there the views are panoramic and absorbing in their expansions, the spirits having risen with the ascents and enlarging with the views. Well can it be understood up there why ancient peoples made temples of their mountain tops, and called them hallowed ground. Up there the great transcontinental railway appears but as a silver thread that is not even mimic to the great work of Nature spread around in grandeur of silence as if scornful of comparison.

To the east the Albert Peaks arise in massive majesty, their glaciers shining in sunlit splendor, and sides robed in forest green. Across the valley spreading Clach-na-cordin, buttressed with many a spur stands grimly grand, and between the rushing river tumbles and plunges westward to the ocean bound Columbia, where glisten gloriously the Gold range

giants—Mts. Begbie and McArthur. Enraptured by the view we had forgotten our fishing and only came back to mundane consciousness by the wild stampede of a bear and caribou disturbed in their happy hunting grounds by our unannounced intrusion.

Once again upon the creeks, one on each of the twin torrents of the place, we shut our eyes to autumnal glories, and plied our rods in eddying pool and sparkling ripple with such success that sixty speckled beauties lay creel-held in two hours. It was dark but fine when we reached the track, and but a little time before the sounding train came to a spasmodic halt for us at sight of the waving lantern gleam. In half an hour we were once more in the hospitable hotel at Revelstoke, pondering over a pipe at the sudden contrast from sylvan silence to railway noise, riot, and still more at the chances of procuring an early and ample meal for which our recent experiences had rendered us fit for discussing with particular justice to ourselves.

FOOT NOTE. Twin Butte—altitude two thousand two hundred feet, eleven miles east of Revelstoke, B. C., on western slope of the Selkirks. Time distance from Revelstoke, thirty minutes. The name was given from the view of the twin peaks of Mt. McKenzie, eight thousand and sixty-four feet. The best view is from the crest above the siding. For fishing the Twin-Torrents, crossed by a trestle, one hundred feet high, about one and a half miles east of the siding are the best. The easterly creek is the more precipitous, the other the more brush rimmed. Flies should be drowned and soaked; rice bait is good. For straight fly fishing Royal Coachman, White Miller, and Blue Quill are best. Grayling are often caught in the Illicellewaet River by a very small fly on a \$12 or \$14 hook.

# A Modern Jonah

BY E. S. KIRKPATRICK

**T**HE fairy-like tales we sometimes read of the returning sportsman with wagons groaning beneath the weight of his spoils; the beautiful pictures we see of woodland, lake and brooklet scenes and of the smiling sun-browned huntsman standing triumphant beside his game; and the vividly told stories of the unalloyed joys of his hunt, with never a hint of anything to detract from its bliss, at times inspires one with the thought that this life, alone, is the one worth living and we eagerly yearn for the time to come when we, too may partake of its joys and return a conquering hero.

Not all, alas, who hie away to seek the wily and elusive game can boast of such pleasant memories and, possibly for this very reason, less is heard and read of them and their exploits than of those having a more happy tale to relate.

The writer has earned, and justly so, as all will agree, the distinction of being known as a "Jonah" and is prepared to defend his right and title to this name against all comers. Beginning with my earliest recollection of cartridges and fire-arms, when, in order to show to my boy friends how a blank Snyder cartridge borrowed during my father's absence—

could be exploded, I held it in my fingers and lighted the paper over the powder and, after throwing it on the grass, picked it up and blew on it, with the result that it exploded in my face and left me minus eyebrows and eyelashes and the skin on my face hanging in shreds and my eyes saved by but a miracle, some evil fate has followed all my ventures with explosives and with hunting expeditions.

I go to a charivari with a few of the boys and a cannon-cracker I had tried to light, as I supposed unsuccessfully, exploded in my hands; I go to Ottawa to the Dominion shooting matches and a shell bursts in the rifle and almost blinds me; I go out with a field battery of artillery as range officer and a shrapnell shell bursts in the air almost directly over my head and the bullets fall like hail all around me.

I am invited—rashly—by a party of three friends to go on a hunting trip with them. We start to cross a big lake with our supplies in a canoe and small flat-bottomed boat. The guide, a man who weighs over two hundred pounds—and I take the boat; he is in the bow and I am in the stern and all the supplies the boat will carry, or we think it will carry, between us. The guide is just telling me that at the point we are now passing the bottom of the lake has not been found at the depth of seventy-five feet, when without a moment's warning, the bow dips under a wave and then another and with but barely time for me to take off my coat I find myself in the water with the boat bottom up and the guide clinging frantically to it and calling for help. I can hear him yet. "Oh, save me! save me! I was drown-ded once and I can't swim a stroke!" I watched him at a safe distance which was all I could do until the canoe came up and towed him to shore, while I swam to a rock without difficulty although I had on rubber boots, two shirts, a sweater, etc and waited for the canoe to return for me.

During the Fall of 1904 I had an experience which was so unique that I think it might be of interest to sportsmen. It occurred during a hunting trip which four of us took to Cronk Lake, York Co. N. B.

In order to form an idea of the plight in which we found ourselves some description of our route is necessary. If the reader will draw a capital letter, F, the bottom of the letter to be the north and the top the south, he will have an exact idea, of the direction of the roads we travelled. Name the stem of the letter from top to bottom A, B, and C, the middle of the upper arm D, and its end E, and the end of the short arm F. The branch roads stopped at points D and F.

We left Woodstock, N. B., or point C, with an express wagon and two horses and drove to the home of our guide, who

lived at point F, an easy journey of twenty-seven miles over good roads.

The same afternoon the guide and his brother hauled our canoe filled with supplies, and a tent, which we had sent ahead of us on a light, two wheeled frame with springs, from point B around to point E, a distance of fourteen miles, where our camping ground was to be ; after which the guide returned home with the horse, leaving his brother in charge of the camp. From point D, where the actual road ended, to E, a distance of five miles, the road was in a indescribable condition. It had, years ago, been the winter lumber road but had never on any previous occasion, to our knowledge been used in the summer. It was overgrown with bushes and branches of trees and filled with rocks, rotten logs and mud holes. To any person having occasion to travel it as I did it will never be forgotten and I have often wondered how our supplies were ever taken over it.

We stayed at the home of our guide over night and early the next morning started in a straight line through the woods, where there was not even a path, towards our objective point E, a distance of ten miles, the last three of which were on the lake. We arrived at the lake thoroughly tired and found the guide's brother awaiting us with the canoe. After making two trips across the lake, as the canoe would not carry us all at once, we finally arrived at our destination and pitched our tent in one of the most beautiful spots that I have ever seen.

That evening was a delightful one, but the last of that nature that I was to spend for some time. Tired out with our long tramp we lay on our blankets in the tent and smoked our pipes in peace as we laid our plans for the morrow's hunt. In front of the tent was a blazing bonfire and above the flaps of the tent an acetylene lantern burned, while beyond the fire lay the beautiful and peaceful lake.

We went to bed early leaving most of our clothes on, but I had taken off my socks as they were wet and did not take the trouble to put on another pair. The tent in which we slept, and the only one we had with us excepting the lean-to to protect our supplies, was made from heavy cotton and had been freshly oiled to make it

waterproof. I had just dropped into a doze, when I was startled by a shout and looking up I saw that the tent had caught fire from the lantern. One of the boys made a jump to put it out but not succeeding he rushed out and all the others followed in safety. I, being in my bare-feet, thought it best to get out under the back of the tent but, as I was trying to get it up the fierce flames fed by the oil in the cotton surrounded me and I then turned and rushed out through them and fell over the bon-fire. I have never been able to understand how it was that I did not know I was being burned at the time. I felt no pain whatever and was not conscious that I had been burning until I saw the condition of my hands and feet. Then I knew nothing for some time afterwards and I guess the boys thought I was done for. My hands and feet were a solid blister ; my cheeks, nose and hair were burned, but, for some reason, not so badly as my feet and hands.

What to do next was now our dilemma. The nearest physician was over thirty miles away. Our horses were nineteen miles away by one road or ten miles by the other across the lake and through the woods where there was not even a path. To travel to even the nearest house meant a journey of five miles over a lumber road almost impassable by day and utterly so by night, so we gave up the idea of trying to get out as hopeless and decided to make the best of the situation for the night at least,
