E. P. Coleman, General Manager, Dominion Power & Transmission Co., Ltd., Hamilton, Ont., and President, Canadian Electric Railway Association, born at Taunton, Mass., June 14, 1867.

W. S. Cookson, General Passenger Agent, G.T.R., Montreal, born at Port Jervis, N.Y., June 12, 1871.

E. L. Cousins, Manager and Chief Engineer, Toronto Harbor Commission, Toronto, born there, June 11, 1883.

A. Craig, City Passenger Agent, C.P.R., Hamilton, Ont., born there, June 5, 1884.

A. E. Doucet, M.Can.Soc.C.E., Quebec, ex-District Engineer, National Transcontinental Ry., Quebec, born at Montreal, June 9, 1860.

E. W. DuVal, formerly Superintendent, Saskatoon Division, Saskatchewan District, C.P.R., Saskatoon, now on active military service, born at Toledo, Ohio, June 5, 1885.

Knowlson Elliott, City Freight Agent, C.P.R., Calgary, Alta., born at Gorrie, Ont., June 26, 1884.

J. M. R. Fairbairn, M.Can.Soc.C.E., Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal, born at Peterborough, Ont., June 30, 1873.

W. E. Foster, Solicitor for Ontario, G.T.R., Montreal, born at Belleville, Ont., June 27, 1866.

A. A. Goodchild, General Storekeeper, Eastern Lines C.P.R., Montreal, born at Peckham, London, Eng., June 3, 1866.

H. W. Harding, Local Secretary, Canadian Northern Ry., London, Eng., born there, June 6, 1869.

Hon. J. D. Hazen, M.P., Minister of Marine, Ottawa, born at Oromocto, N.B., June 6, 1860.

L. K. Jones, I.S.O., Assistant Deputy Minister, Department of Railways and Canals, Ottawa, born at Port Hope, Ont., June 9, 1849.

A. C. Lytle, Assistant Superintendent of Construction, Montreal Tramways Co., Montreal, born at Hemmingford, Que., June 6, 1854.

J. D. McAuley, Commercial Agent, Grand Trunk Pacific Ry., and Grand Trunk Pacific Coast Steamship Co., Ltd., Prince Rupert, B.C., born at Plantaganet, Ont., June 11, 1884.

R. S. McCormick, M.Am.Soc.C.E., Chief Engineer and General Superintendent Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont., born at Quaker City, Ohio, June 22, 1873.

Duncan McDonald, ex-General Manager, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., June 17, 1859.

S. J. McLean, Dominion Railway Commissioner, Ottawa, born at Quebec, June 14, 1871.

C. E. McPherson, Assistant Passenger Traffic Manager, Western Lines, C.P.R., Winnipeg, born at Chatham, Ont., June 7, 1861.

W. R. MacInnes, Freight Traffic Manager, C.P.R., Montreal, born at Hamilton, Ont., June 7, 1867.

J. R. C. Macredie, M.Can.Soc.C.E., Engineer, Saskatchewan District, C.P.R., Moose Jaw, born at St. John, N.B., June 13, 1880.

G. Manson, Assistant to the Vice President, C.P.R., Montreal, born at Thurso, Scotland, June 8, 1863.

J. D. Morton, Assistant Comptroller, Canadian Northern Ry., Toronto, born at London, Ont., June 15, 1857.

L. Mulkern, Division Freight Agent, C.P.R., St. John, N.B., born at London, Ont., June 18, 1871.

J. E. Pinault, General Superintendent, Canada & Gulf Terminal Ry., Mont Joli, Que., born at Rimouski, Que., June 24, 1884.

F. R. Porter, Assistant General Freight Agent, Grand Trunk Pacific Ry., Winnipeg, born at Stratford, Ont., June 13, 1875.

W. G. Powell, Freight and Passenger Agent, Grand Trunk Pacific Ry., Skagway, Alaska, born at Galt, Ont., June 27, 1891.

F. Price, Superintendent of Car Service, G.T.R., Montreal, born there, June 11, 1864.

Allan Purvis, General Superintendent, Quebec District, C.P.R., Montreal, born at Batavia, Java, June 29, 1878.

J. L. Reycraft, Solicitor, Manitoba and Saskatchewan Districts, C.P.R., Winnipeg, born in Orford Tp., Kent County, Ont., June 20, 1868.

L. G. Rogers, Yardmaster, C.P.R., Trenton, Ont., born at Richford, Vt., June 18, 1874.

J. R. Shaw, General Agent, Passenger Department, Canadian Pacific Ocean Services Ltd., Shanghai, China, born at Montreal, June 28, 1871.

J. L. Simpson, agent, C.P.R., Port McNicoll, Ont., born at Mount Forest, Ont., June 9, 1866.

H. H. Smith, Car Accountant, Canadian Northern Ry., Toronto, born at Quebec, Que., June 14, 1872.

N. Van Wyck, Freight Claims Agent, Canada Steamship Lines, Ltd., Montreal, born at Hamilton, Ont., June 29, 1883.

V. G. R. Vickers, Manager, Foreign Department, and Superintendent, Atlantic Division, Dominion Express Co., Montreal, born at Toronto, June 1, 1866.

Walter White, Trainmaster, G.T.R., Palmerston, Ont., born at Toronto, June 4, 1866.

Foot Boards for Yard Locomotives, etc.—The question having been raised as to whether a road locomotive used in joint yard and transfer service should be equipped with foot boards, as outlined in the Board of Railway Commissioners' general order 102, the board has given notice that all locomotives used in yard, joint yard and transfer service must be equipped with foot boards, as prescribed for steam locomotives used in switching service.

Railway Finance, Meetings, Etc.

Algoma Central Terminals, Ltd.—In accordance with the arrangement made some little time ago, holders of the company's 5% first mortgage 50 year gold bonds are required to forward their bonds with all unpaid coupons attached to the Bank of Montreal, London, Eng. A payment of interest at 3% per annum is to be made for the year ended Aug. 1, 1915.

The Canadian Northern Ry. Co. announces that the earning for the half year ended Dec. 31, 1916, were insufficient to enable it to pay any interest on the 5% income charge convertible debenture stock on May 2.

Lacombe & Blindman Valley Electric Ry.—The Merchants Bank of Canada is receiving at its Toronto office, to June 14, tenders for the purchase of \$547,000 of 5% 20 year gold bonds of the L. & B.V.R., guaranteed as to principal and interest by the Alberta Government.

Timiskaming & Northern Ontario Ry.—Passenger earnings for March, \$47,554.51; freight earnings, \$127,641.23; total earnings, \$175,195.74; against \$49,666.24, passenger earnings; \$165,262.27, freight earnings; \$214,928.51, total earnings, for Mar., 1916.

White Pass & Yukon Route.—Gross earnings from Jan. 1 to Mar. 14, \$54,887, against \$36,530 for same period, 1916.

Forest Fires Along Railways.—During 1916, there were reported 558 fires as originating in forest sections, within 330 ft. of railway tracks, under the Board of Railway Commissioners' jurisdiction. This was 128 less than reported in 1915. Of the total for 1916, 69% were attributed to railway causes, 18% to known causes other than railways, and 13% to unknown causes. Of the 388 fires attributed to railways, 101 were incipient fires and did no damage; 287 were larger fires which burned over 11,290 acres valued at \$35,556. The total damages from fires are estimated at \$39,482, of which railways are charged with 90%. This is stated to be a remarkably good showing, considering the unfavorable weather conditions. Of the total fires, 61 were attributed to locomotives and 8% to railway employes. The use of tank cars for fire fighting purposes by the C.P.R., Grand Trunk, Timiskaming & Northern Ontario and Canadian Government Railways, has proved effective in many cases.

The June Mechanical Conventions.—The annual conventions of the American Railway Master Mechanics' Association, and the Master Car Builders' Association, announced to be held at Atlantic City, N.J., June 13 to 20, will not be held this year. A joint meeting of the executive committees of the two associations was held at Chicago, Ill., April 30, when the general opinion was expressed that during the war emergency, it was imperative for all railway employes to remain at their posts ready to give their best services to their roads and the government. A number of the other railway associations have followed the lead given by the foregoing two associations, and have cancelled, or indefinitely postponed, their annual conventions for the present. Among those of which we have been advised are the Association of Transportation and Car Accounting Officers, and the Railway Storekeepers' Association.

The Canadian Society of Civil Engineers' council has approved of the change of name of the Regina branch, to Saskatchewan branch.

Canadian Pacific Ry. Honor Roll Nos. 21 and 22.

Adair, James	Carpenter	West Toronto	Wounded
Anderson, Henry	Clerk	Montreal	Wounded
Andrews, Frederick	Checker	Toronto	Wounded
Bain, William Wilson	Clerk	Montreal	Wounded
Beer, Harold Evans	Clerk	Toronto	Wounded
Bibby, Fred.	Checker	North Bay	Believed killed
Black, Edward Charles	Fitter's helper	Winnipeg	Wounded
Blennerhassett, A. J.	Trainman	Fort William	Killed in action.
Borley, John William	Locomotive fireman	British Columbia Dist.	Wounded
Boyd, James Ira	Wiper	Fort William	Wounded
Brown, John	Clerk	Calgary	Killed in action.
Buck, Sidney C. B.	Carpenter	Winnipeg	Wounded
Bunker, Cecil Elbridge	Fitter's helper	McAdam	Wounded
Canston, Charles	Truck repairer	Ogden	Wounded
Chalmers, James	Carpenter	Ogden	Wounded
Clark, Walter Blackie	Clerk	Winnipeg	Killed in action.
Collett, George	Fitter's helper	Lambton	Wounded

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, compared with those of 1915-16, from July 1, 1916:

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$3,834,200	\$2,636,800	\$1,197,400	\$ 711,000
Aug.	3,684,900	2,612,900	1,072,000	614,300
Sept.	3,187,900	2,456,300	732,600	x177,300
Oct.	3,716,800	2,496,500	1,220,300	x36,700
Nov.	3,722,300	2,472,300	1,250,000	38,600
Dec.	3,485,400	2,661,600	823,800	x378,300
Jan.	2,858,600	2,350,500	482,100	x227,700
Feb.	2,358,600	2,250,400	108,200	x21,200
Mar.	3,273,200	2,655,100	618,100	251,700
Apr.	3,315,500	2,557,600	757,900	208,000
	\$33,411,000	\$25,149,000	\$8,262,400	\$1,436,800
Incr	\$6,452,600	\$6,015,710	\$1,436,800

* Deficit.
Approximate earnings for three weeks ended May 21, \$2,476,900 against \$2,118,800 for same period 1916.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1916, from Jan. 1, 1917:

	Gross Earnings	Expenses	Net Earnings	Increase
Jan. 10.	158,307.86	7,726,829.36	2,431,478.50	341,070.27
Feb.	9,084,276.76	7,098,227.96	1,986,048.80	x308,293.94
Mar.	11,846,542.98	7,909,225.16	3,937,317.82	516,987.46
Apr.	12,355,519.60	8,180,541.98	4,174,977.62	441,241.65

\$43,444,674.20 \$30,914,824.46 \$12,529,322.74\$ 990,005.44
Inc. \$ 4,797,702.51 \$ 3,807,697.07\$ 990,005.44

Approximate earnings for three weeks ended May 21, \$9,262,900 against \$7,965,000 for same period 1916.

Grand Trunk Railway Earnings.

The aggregate traffic receipts from Jan. 1 to April 30 are:

G.T.R.	\$14,617,203	\$13,577,901	\$1,039,302
G.T.W.R.	2,807,321	2,914,947	\$107,626
D.G.H. & M.R.	1,005,933	1,002,511	3,422

Totals \$18,430,457 \$17,495,359 \$935,098

Approximate earnings for three weeks ended May 21, 3,917,291 against \$3,195,883 for same period 1916.

Grand Trunk Pacific Ry. Earnings.

The approximate earnings of the Prairie Section, 916 miles, from Jan. 1 to April 21, were \$1,346,594 against \$1,411,519 for same period 1916.

Cultivating Railway's Right of Way.—Grand Trunk Pacific Ry. employees have been notified that the company's whole right of way is offered for gardening purposes without any charge to employes. Whatever crops can be raised on this land will belong absolutely to the employes who do the work. If the section man is able to lay out his garden 25 ft. wide, he needs a length of 400 ft. only to give him a garden of a quarter of an acre. City gardeners, who often get results worth while from a tenth of this space will realize the opportunity that the section man has in the way of feeding his family and possibly raising crops to sell.

Cost of Handling Freight.—The Minister of Customs stated in the House of Commons, May 3, that the cost per calendar month during the winter of 1916-17 at Pictou, Charlottetown and Georgetown, respectively, of handling freight going to and from Prince Edward Island was:—Charlottetown, Nov., 67c. per ton; Dec., \$1; Jan. 1 to 10, 73c. Georgetown, Jan. 10 to 31, 45c; Feb., 44c; Mar., 40c; April 1 to 21, 38c. Pictou, Jan., Feb. and Mar., 0.626c. At present freight is handled at Pictou for Prince Edward Island at a cost of 0.434c per ton.

The Canadian Railway Club's annual meeting was held at Montreal, May 8. Following are officers elected for the current year: President, G. E. Smart, Master Car Builder, Canadian Government Railways, Moncton, N.B.; First Vice President, C. W. VanBuren, General Master Car Builder, C.P.R., Montreal; Second Vice President, T. C. Hudson, Master Mechanic, Quebec Division, Canadian Northern Ry., Joliette, Que.; Executive Committee, J. Hendry, W. H. Winterrowd, E. J. McVeigh, C. H. N. Connell, A. Crumpton, E. A. Nix; Audit Committee, A. G. Mitchell, D. R. Arnold, G.

Whiteley; Treasurer, E. E. Lloyd; Secretary, Jas. Powell, Montreal.

C.P.R. Baggage Statistics.—During 1916 the C.P.R. handled 7,899,652 pieces of individual baggage, including 1,162,472 milk cans, and 28,309 baby carriages. The amount paid on loss was only \$1,791.79; on damage only \$1,669.08; and on pilferage only \$571.07, the cost to the company in these respects being only 5c per 100 parcels.

The C.P.R. is reported to have subscribed for \$1,000,000 of the Liberty Loan bonds issued by the United States Government.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Alberta-Hudson Bay Ry.—The Alberta Legislature authorized the High River & Hudson Bay Ry. to change its name to the Alberta-Hudson Bay Ry., extended the time for the building of the projected railway from High River to the Alberta-Saskatchewan boundary, and has given power to build the following additional lines: From near Black Diamond, in Tp. 20, Range 2, west 4th meridian, southerly to Lundbreck, or Cowley or the Crowsnest Southern Ry., thence to the Alberta-British Columbia boundary at the South Kootenay or Kisheneckna Pass; from Lundbreck or Cowley southerly to the International Boundary near Waterton Lakes; from Lundbreck or Cowley southeasterly to Pincher Creek, Cardston and Coutts, thence easterly through Tps. 1, 2 and 3 to the Alberta-Saskatchewan boundary; from Cardston to Lethbridge; from Tps. 1 or 2, between Ranges 3 and 10, to Medicine Hat, thence northerly to Tp. 17 or 18 in Ranges 1, 2, 3 or 4, west of the 4th meridian. (May, pg. 193.)

Athabasca Valley Ry.—The Alberta Legislature has granted an extension of time for the building of the projected railway from Busby, on the Edmonton, Dunvegan & British Columbia Ry., 44.7 miles from Edmonton, northwesterly to Fort Assiniboine, 50 miles. J. D. McArthur is principally interested. (May, pg. 193.)

Central Canada Ry.—We are officially advised that the bridge being erected over the Peace River, on this railway, which is in operation from McLennan, on the Edmonton, Dunvegan & British Columbia Ry., to the river, 48.5 miles, is of the single track type, and is designed to carry highway attachments on either side when future development requires them. The length is 1,737.2 ft. between abutment parapets. The approximate height and class of material of the abutments and piers forming the substructure is: East abutment, curved, 58 ft. high, reinforced concrete; piers 1 and 2 are concrete pedestals; pier 3 is of concrete masonry approximately 48 ft. high; pier 4, masonry, 62 ft. high; pier 5, masonry, 70 ft. high; pier 6, masonry, 78 ft. high; pier 7, masonry, 82 ft. high; pier 8, masonry, 86 ft. high; pier 9, masonry, 70 ft. high; pier 10 is a concrete pedestal; while the west abutment is of reinforced concrete, buried, 29 ft. high. The superstructure consists of the following spans: two 70 ft. deck plate girders; two 80 ft. deck plate girders; six 200 ft. deck truss spans, and one 200 ft. through truss span. This latter span will give a clearance of 71 ft. above low water elevation and 54 ft. above extreme high water elevation, sufficient to meet the requirements of all northern river navigation. The deck spans will give 19 ft. clearance above high water level. The substructure is being built by the company by day labor, and a contract for the superstructure has been given to the Canadian Bridge Co., Walkerville, Ont. The cost of the entire structure will be in the neighborhood of \$1,000,000. Work on the substructure was started Feb. 1, and it is hoped to start putting up the superstructure Jan. 1, 1918, and to have traffic operating over the bridge by May 1, 1918.

The Alberta Legislature has authorized the company to build the following additional lines: An extension of the line authorized by chap 46, 1913, from Tp. 81, Range 4, west of 6th meridian, westerly to the western boundary of the Province;

to extend the same line northerly to the northern boundary of the Province, approximately parallel with Hay River; a branch line from Tp. 74, Range 17, west of 5th meridian, near High Prairie, southerly to Snipe Lake, thence westerly to 6th meridian; and a line from near Edmonton to Calgary. The line authorized to be built in 1913 was to start from Tp. 74 or 75, Range 18 or 19, west of 5th meridian, to Peace River Landing, thence to Tp. 86, Range 4, west of 6th meridian, with a branch from Peace River Landing northerly to the Brule River, near Tp. 94, Range 22, west of 5th meridian. (May, pg. 193.)

Dolly Varden Mines Ry.—This projected railway would be about 18 miles long and would extend from Alice Arm, referred to in the discussion in the British Columbia Legislature as Saltchuck, to the Wolfe mineral claims, in the Kitzault River valley. A press report states that construction will be started at once, but the plans do not appear to have been passed by the B.C. Minister of Railways. (May, pg. 193.)

Grand Lake Ry. & Transportation Co.—The railway authorized to be built by the company would extend from Christopher Lake, on Bell River, to Twenty-one Mile Bay, on the Ottawa River, and from Lake Atikamek to Rabbit Lake, on the Ottawa River. The company is authorized to carry on a general navigation business on all waters "south of the National Transcontinental Ry., and between Nottaway and Amos, on the said railway, and the Ottawa River, and elsewhere on the Ottawa River above Quinze River, and on all lakes, rivers, streams and watercourses tributary thereto," and to connect the various routes by roads, etc. The provisional directors are: Hon. Geo. Bryson, J. W. Bryson, J. R. Fraser, W. H. A. Fraser, Hon. Geo. Gordon, A. B. Gordon. (Jan., pg. 19.)

Grand Trunk Pacific Ry.—The City of Brandon, Man., is appealing to the Dominion Parliament to compel the company to complete its line into that city. The line is graded from Harte to the city boundary, and has been lying ready for the steel for four or five years. The company is applying to the Dominion Parliament for an extension of time to complete this and other lines.

Track laying is reported to be in progress from the south branch of the Saskatchewan River into Prince Albert, Sask., 25 miles. Track was laid over the bridge into St. Louis and the grading practically completed into Prince Albert during 1915. (May, pg. 193.)

Grand Trunk Ry.—The Board of Railway Commissioners has given the City of Brantford permission to construct a subway under the G.T.R. at St. Pauls Ave., the plans to be approved by the board's Chief Engineer. A subway for pedestrians is estimated to cost \$10,000, towards which the Railways Department will contribute \$2,000 from the level crossings elimination fund; and the G.T.R. will have to contribute \$4,800; the city bearing the balance of the cost. If the city desires to put in a subway for vehicular traffic, with sidewalks for pedestrian traffic, the order will issue in that form, the Dominion contribution being 20%, not to exceed \$5,000, and the G.T.R. contribution being limited to \$4,800, as the city had agreed with the company in 1905 to close the highway, ex-

cept for pedestrian traffic. (May, pg. 193.)

Greater Winnipeg Water District Ry.—Progress was reported to have been made on the construction of the extension of the line from Deacon to the Red River at the meeting of the commission in Winnipeg, May 3. Track was said to have been laid from Deacon to Maxeanch, and the culverts to have been put in on the remaining length of the line. The consent of other railways had been obtained for this line to cross them. (April, pg. 136.)

Great Northern Ry.—A press report states that R. D. Fry, said to be of the G.N.R. engineering staff, has completed a preliminary survey for a line from Pincher Creek to Cardston, Coutts and Medicine Hat, and is preparing to make a survey for a line from Cardston into Lethbridge, Alta. Another report connects these surveys with the projected Alberta-Hudson Bay Ry., formerly the High River & Saskatchewan Ry., in Alberta, and the High River & Hudson Bay Ry., under a Dominion charter, and points out that the line referred to as being surveyed would connect with the G.N.R. branch from Shelby now running into Coutts. A third report connects the surveys with the Chicago, Milwaukee & Parry Sound Ry. (May, pg. 193.)

Hudson Bay Ry.—The Minister of Railways stated in the House of Commons, April 30, that the amount spent on the Hudson Bay Ry. and the approaches thereto since Jan. 1, 1912, was \$17,790,587.74. The work on the railway, the terminals at Pas and Port Nelson were still being gone on with.

Press reports state that preparations are being made for opening up work for the season on the uncompleted portion of this railway. About nine miles of grading has yet to be completed at the Port Nelson end and about 90 miles of track has to be laid. No more track will be laid until the completion of the bridge across the Nelson River at Kettle Rapids. There are two other single span bridges to be erected. The line is expected to be completed into Port Nelson this year. (Mar., pg. 100.)

Intercolonial Ry.—The Minister of Customs stated in the House of Commons, May 7, for the Minister of Railways, that the Dominion Government proposed to build a station in Levis, Que., on the most suitable site that can be found, as early as war conditions will permit. The existing station is being put in repair. (May, pg. 193.)

Kenora & English River Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from the National Transcontinental Ry. in Kenora District, west of Superior Jct., northerly and westerly, crossing the English River west of Lac Seul, thence northerly and westerly in the District of Patricia, thence westerly and southerly to and in Manitoba to Winnipeg. The office of the company is to be in Toronto; the authorized capital is \$1,000,000, and the company may issue securities for \$50,000 a mile. The provisional directors are: W. Miller, A. LeR. Williams, E. Miller, C. Flatt and A. A. Macdonald, Toronto.

Lacombe & Blindman Valley Electric Ry.—We are officially advised that although the word "electric" is included in the title, it is not really an electric railway. It is being built with a guarantee

of bonds by the Province of Alberta under the terms of an act for the building of light railways. About 36 miles of grading has been completed from Lacombe to near Rinby, the objective terminal, 39.1 miles from Lacombe, and a considerable portion of the fencing has been done. The company has on hand ties for 18 or 19 miles, and a quantity of materials, such as fastenings, switches, Y's, etc. It is hoped to complete the line during this year.

The company purchased in 1914 a car of English manufacture, operated by gasoline hydraulic power, an illustrated description of which was given in *Canadian Railway and Marine World* for Nov., 1915. (May, pg. 203.)

Manitoba & Ontario Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from near Brereton Station, Man., on the National Transcontinental Ry., to English River, between the easterly boundary of Manitoba and the 94th meridian of longitude, thence northerly to Hudson Bay between the mouths of the Albany and Nelson Rivers; to build wharves, docks, etc., there; and to connect the railway with any other railway serving the territory. Ewart, Scott, MacLaren & Kelly, Ottawa, and H. A. Stewart, Brockville, Ont., are solicitors for applicants.

Montreal Central Terminal Ry.—C. N. Armstrong, who is spoken of as Vice President and Chief Engineer, appeared before the Montreal Tramways Commission May 7, to submit the company's plans, and to suggest that arrangements be made whereby the Montreal Tramways Co.'s suburban cars should run into the Central station, which it is proposed to build. The property controlled by the company lies between St. Lawrence and Bleury Sts., from east to west, and between Vitre and Lagauchetiere Sts. from south to north. Mr. Armstrong explained the company's plans as providing for the construction of 13 or 14 miles of track, of which about eight miles would be open cut, and the remainder tunnel and subway work. The carrying out of the plans would involve the widening of Vitre St. An entrance to the proposed terminal station would be provided for the suburban cars along the projected lines. The commissioners were given a set of the blue prints to study. (April, pg. 136.)

Naas & Skeena River Ry.—The British Columbia Minister of Railways, under the authority conferred upon him by the B.C. Railway Act, has extended to May 31, 1918, the time within which the company may begin construction of its railway. The company was incorporated by the B.C. Legislature in 1911 to build a railway from Nasoga Gulf, or Naas Bay, on Portland Inlet, to the headwaters of the Skeena River. Barnard, Robertson, Hesterman & Tait, Victoria, B.C., are solicitors for the company. (Jan., 1916, pg. 10.)

Pas. Man.—We are advised by Hayden, Stone & Co., Boston, Mass., that they are not interested in any mining properties north of Pas. Man., in connection with which a press report stated a 98 mile railway was to be built. (May, pg. 193.)

Quebec & Saguenay Ry.—The British Chancellor of the Exchequer stated in the House of Commons recently that the War Cabinet would consider the possibility of Hamilton Inlet, on the Labrador coast, as an anchorage and outlet for Canadian trade. Hamilton Inlet is about

900 miles from Quebec, and provides practically the shortest route for steamships between the Canadian seaboard and Liverpool. The Q. & S.R., which was taken over by the Dominion Government last year, had a project for extending its line from the Saguenay River to Hamilton Inlet.

The Minister of Railways stated in the House of Commons recently that no money was paid by the Department in connection with the Q. & S.R., but that work to the value of \$180,000 was done on the line. It is estimated that an expenditure of \$1,000,000 is required to complete the line. (Jan., pg. 20.)

Queen's County Ry.—The Nova Scotia Legislature has extended the time for the building of this projected railway from the Halifax and South Western Ry. between Liverpool and Shelburne, to any of the Sable Lumber Co.'s timber limits. V. J. Paton, Bridgewater, N.S.; J. Walker, Newmarket, N.H.; and H. W. Anderson, New Hampstead, N.H., are primarily interested. (June, 1912, pg. 302.)

Skye Mountain Ry.—The Nova Scotia Legislature has granted an extension of time for the building of a railway in the Skye Mountain district of Inverness County. The railway projected is connected with the opening up of some collieries in the vicinity of Orangedale. (Aug., 1914, pg. 371.)

Timiskaming & Northern Ontario Ry.—We are officially advised that nothing definite has been decided with regard to the extension of the Kirkland Lake branch for which the Legislature voted \$125,000 recently.

The work of revising the original line between North Bay and Liskeard, which has been in progress, will, it is anticipated, be continued during this year. Three sections described in our last issue were selected for completion in 1916, but grading only was done on one of them. The work for 1916 will likely cover the other two sections. (May, pg. 195.)

Toronto, Hamilton and Buffalo Ry.—The two sections of the company's bill which came before the Railway Committee of the House of Commons, May 18, to which objection was taken by the Hydro Electric Power Commission of Ontario, have been withdrawn. The first of these sections extended the time for building an extension of the line from Port Maitland to Port Colborne, and the second asked for authority to build an extension of the line now terminating in Crowland Tp., Welland County, to Port Colborne, Ont. (May, pg. 194.)

The Ridge Coal Co. has been incorporated under the New Brunswick Companies Act to carry on mining and certain allied businesses in the province, and in connection therewith to build or acquire wharves, vessels, barges, tramways, cars, motor vehicles, etc., and "to enter into any agreement with any railway company or companies for the construction, use and operation of a spur or siding or line of railway connecting the company's mine with any railway." The company's office is at Newcastle, N.B., its capital \$24,000, and the provisional directors are, H. H. Brewer, R. M. McCarthy, and J. A. Sinclair, St. John, N.B.

Quebec & Saguenay Ry. Sale.—The Senate on April 26, directed that a copy of all proceedings in the Exchequer Court of Canada, and the judgment of Justice Cassels concerning the value of the Quebec & Saguenay Ry., the Quebec & Montmorency Ry., and the Lotbiniere & Megantic Ry., be laid on the table.

Canadian Pacific Railway Co's Annual Meeting.

At the 36th annual meeting in Montreal, May 2, Lord Shaughnessy, who presided, in moving the adoption of the report as published in *Canadian Railway and Marine World* for May, said: The reason for the change in the date of the annual meeting recommended by the directors is explained in the report of the company's affairs that I now have the honor to submit for your consideration and approval. The practice of making the fiscal year of railway companies on this continent correspond with the calendar year will henceforth be quite universal, and the desirability of being able to compare this company's annual statements and statistics with those of other railway companies similarly situated for like periods is manifest.

The revenue statements are very satisfactory. Indeed, the earnings were much better than we had reason to anticipate in October last, but I am afraid that the substantial advance in wages, due in a large measure to the shortage of labor and the abnormal increase in the price of fuel and of all the other articles that we find it necessary to purchase, will have an important bearing on the working expenses in future.

Since the close of the half year, under an agreement with the Imperial Government, 4 consolidated debenture stock to the amount of \$40,000,000, which the company was empowered to issue and you had authorized, was issued and loaned to the Imperial Treasury for a maximum period of five years, at a premium of $\frac{1}{2}$ per annum over the interest payable on the stock. Provision is made in the agreement for the sale to the British Treasury of this stock in annual instalments, should the company require money for any of its purposes in Great Britain, and the Treasury reserves the right to purchase all or any of the stock during the five years at the price of 80 of its face value. The bylaw passed by the directors giving effect to the transaction will be submitted for your sanction. The plan formulated at the request of the Lords of His Majesty's Treasury for creating and selling collateral trust bonds of the company to the amount of about \$199,000,000 against debenture stock and other securities of the company and its leased lines to be deposited by the Imperial Treasury, fully described in the annual report and in the circular to the shareholders, has, because of financial negotiations and arrangements resulting from the participation of the United States in the European war, been abandoned, for the present at any rate. In order, however, that the company may be in a position to co-operate should the occasion arise hereafter, it is proposed, at the instance of the Chancellor of the Exchequer, to ask the Parliament of Canada to grant the statutory powers for which application has been made, and the special general meeting will, with your consent, be adjourned to a later date. The willingness of the company to lend its name and credit to the Imperial Treasury in connection with financial operations at this juncture is keenly appreciated, and I am asked by the Chancellor of the Exchequer to convey to you the thanks of the Imperial Government for the important assistance that you are ready to give.

The report was unanimously adopted and bylaws were approved changing the date of the annual meeting to the first Wednesday in May in each year, respect-

ing consolidated debenture stock, and respecting preference stock.

The retiring directors, E. W. Beatty, K.C., Hon. F. L. Beique, K.C., Jas. Duns-muir, and C. R. Hosmer were unanimously re-elected.

The special general meeting of shareholders to consider the issue of collateral

trust bonds was adjourned to Aug. 13.

The board then met and re-elected officers, etc., as follows: President, Lord Shaughnessy; Vice Presidents, George Bury and E. W. Beatty; Executive Committee, R. B. Angus, E. W. Beatty, K.C., George Bury, Sir Herbert S. Holt, Sir Edmund B. Osler, Lord Shaughnessy.

Investigation into Pacific Great Eastern Railway Affairs.

The committee appointed by the British Columbia Legislature to make an investigation into Pacific Great Eastern Ry affairs presented its report May 1. After recapitulating at length the main facts as to the formation of the company, which were given in detail in Canadian Railway and Marine World for May, pg. 191, the committee presented findings upon 15 distinct points, giving reasons for each finding in considerable detail. Following is a summary of the findings:—

The promotion of the company was brought about by an arrangement made in 1911 between D'Arcy Tate, K.C., and J. W. Stewart, whereby it was agreed that the former should secure the charter and guarantees from the Provincial Government, and a traffic arrangement with the Grand Trunk Pacific Ry. For this he was to receive a commission of one-fourth of the capital stock of the company and \$500,000 in cash, out of which he was to pay incidental expenses and provide campaign funds for the Conservative party. D'Arcy Tate and ex-Premier Bowser refused to give the committee any information as to the money provided for campaign purposes.

The total share capital of \$24,960,000 was issued to the promoters, Foley, Welch, Stewart and Tate, the remaining \$40,000 of stock being fully paid up in cash. The committee consider that this issue of shares was illegal and improper.

The contract for the construction of the line made with P. Welch, was in fact a contract made with the firm of Foley, Welch and Stewart, and was made with Welch to conceal the real nature of the transaction. The committee holds that the contract is invalid, and that Stewart and Foley are disqualified from acting as directors of the company. E. F. White and F. Wilson, two of the other directors, were interested in subcontracts out of which they made considerable sums without giving any apparent value therefor.

The prices fixed in the contract were excessive, which is shown by the fact that on an expenditure by the province of \$18,314,825 P. Welch appears by his own figures, made a profit of over \$5,000,000.

The government has paid out the full amount of its trust funds without proper supervision or inspection of the work. The extent to which advantage was taken of the lack of proper supervision and inspection the committee is not able to fully ascertain. Five specific matters are mentioned in respect of which the committee finds there had been over payments of approximately \$405,000.

The provincially guaranteed bonds of the company amounting to \$20,160,000 were sold for \$18,314,825, which was paid into the bank in the name of the Minister of Finance as a trust fund to be paid in accordance with Schedule A of the company's act. The total proceeds have been paid over to the company, which the committee says "was illegal and improper," as the full subsidy had been paid on a mileage of 480 miles, or 3.09 miles in ex-

cess of the actual total mileage, an over-payment of \$160,800; the full subsidy has been paid on 284 miles on which no track has been laid or bridges built and the full subsidy has been paid upon 51 miles on which no construction work whatever has been done. The over payments in contravention of statute are estimated at \$5,705,316.50 altogether, apart from over-payments for excessive profits or upon wrong classification. It is estimated it will require \$13,000,000 more to complete the line.

The bond of \$250,000 furnished by Foley, Welch and Stewart as a guarantee for the completion of the work was allowed to lapse by the late government.

There is due to the government \$85,524.93 balance of the money deducted by the company's fiscal agent in England on the sale of the guaranteed bonds.

Foley, Welch, and Stewart have defaulted in their covenant to pay interest on the bonds, upon which the Government has already paid \$1,053,827 interest. The contractors the committee state, "have defaulted in their covenant to complete the road and state their inability to complete their contract."

The province has no security for its bonded guarantee against the company's terminals or against the lands held in the Development Co.'s name.

P. Welch's contention that the contractors had lost money is not well founded, as upon the basis of their own figures they made a net profit of \$5,170,177.

The Legislature in 1916 provided a loan of \$6,000,000 to the company without provision for taking further guarantees from the contractors.

A. H. B. Macgowan, a member of the Legislature, was given a share in a subcontract by P. Welch, receiving therefor \$9,000 in cash, for which he gave no consideration either in time, money or otherwise.

The committee found its investigations hampered by its inability to secure certain private ledgers of P. Welch kept in connection with the P.G.E.R. D. McLeod, confidential representative of J. W. Stewart, also by the refusal to testify and disappearance of D'Arcy Tate, and the refusals to testify of R. D. Thomas and W. J. Bowser, M.L.A. The departure of Welch, White, and Tate was in defiance of the committee's orders. The committee feels that in view of the absence of material witnesses and its inability to act after the expiry of the session, further investigations should be by another form of tribunal.

A resolution was passed receiving the report. Warrants have been issued by the Legislature for the arrest of D'Arcy Tate, P. Welch, and E. F. White for contempt.

The B.C. Government, on May 11, filed a writ against the P. G. E. Ry., its subsidiary companies, the contractors, and the individual directors for an accounting of the sums realized from the sale of guaranteed bonds; for an injunction re-

straining them from further proceeding with the work of the railway; for a revision of the agreement; for specific performance of the contract; and for damages. The points upon which judgment is asked cover practically all the facts found by the committee in the report quoted above.

A motion was introduced in the B.C. Legislature, May 14, directing the government to have the necessary legislation passed to take over the company's property and assets and to take such action as may be necessary against the company or any other company, and the individuals forming the company to obtain restitution of funds wrongfully obtained; to amend the loan act so as to allow the \$5,000,000 remaining to be used towards the completion of the line; to give the Minister of Railways power to operate the line; and to apply to the Dominion Government for a bonus of \$12,000 a mile, equal to that granted the Canadian Northern Pacific Ry.

On May 15 notice of motion was given in the Legislature with a view to the appointment of a commission with power to call W. J. Bowser, R. D. Thomas, D'Arcy Tate, P. Welch, D. McLeod, E. White and any other person and to compel them to answer as to their knowledge of the payments of any money whatsoever, whether mentioned above or not, and to whom any part of said amounts were paid and for what purpose, with power to commit to gaol any person for contempt until such times as they answer any or all questions, and that R. D. Thomas and W. J. Bowser, or any other persons who refuses or refused to answer the questions put to him by the P. G. E. committee be turned over to the commission before the prorogation of the legislature; and that warrants or subpoenas issued by the speaker be continued until the parties are produced before the commission. The purpose of this investigation seems to be to ascertain what funds were used for campaign purposes, rather than to deal with the construction end of the affair.

Fortnightly Pay Day for Railway Employees.—The Dominion Parliament has under consideration a bill to amend the Railway Act by adding the following as subsect. 3 of sec. 259: "The salary or wages of every person employed in the operation, maintenance or equipment of any railway company to which the Parliament of Canada has granted aid by means of subsidy or guarantee, shall be paid not less frequently than once in each two weeks during the term of employment of such person." The bill was introduced by Senator Robertson and is on the Senate order paper for second reading on June 5.

Rails for Canadian Railways.—Arrangements have been made whereby the Imperial Munitions Board has agreed to release sufficient shell steel to enable the Algoma Steel Corporation, Sault Ste. Marie, Ont., to roll 10,000 tons of steel rails for the C.P.R.; 5,000 tons for the G.T.R., and 500 tons for the Timiskaming & Northern Ontario Ry. It is also said that sufficient shell steel will be released to enable the Dominion Iron & Steel Co. to roll 10,000 tons of steel rails for the Canadian Government Railways.

Sir Henry Drayton, Chief Railway Commissioner, and one of the Commissioners to inquire into the railway situation, addressed the Canadian Club in Toronto, May 10, in support of the majority report made by himself and W. M. Acworth.

Canadian Transportation Men, Engineers, Etc. in the War.

C.P.R. Enlistments.—Up to May, 6,692 C.P.R. officials and employes had enlisted for overseas service, of whom 293 had been killed and 611 wounded.

The 255th Battalion, Queen's Own's Rifles, Toronto, under command of Lt. Col. G. C. Royce, left Toronto, May 25, for an eastern training ground.

No. 2 Section Skilled Railway Employes, which was mobilized in Montreal, arrived safely in England early in May. A photograph of some of the officers appears on this page.

Timiskaming & Northern Ontario Railwaymen's Patriotic Association.—Up to Mar. 31, the association had contributed \$17,261.95 to the Canadian Red Cross Association; \$23,932.80 to the Canadian Patriotic Fund, and \$11,049.34 direct to enlisted employes.

A Forestry and Railway Construction Depot has been established in Ottawa, under command of Lieut. Col. Cecil Williams, where recruits for railway construction drafts from all parts of Canada will be mobilized for the forestry drafts. Those enlisted in military district 32 have been transferred to the Ottawa depot.

Canadians' Railway Work.—Sir Robert Borden, on returning from England recently, said: "The work of the Canadian railway corps has been of wonderful assistance to the allies. The rapidity in railway building by the Canadians amazed the English and French, and it was such marvellous work in construction of railways that permitted of the aggressive and continuous offensives by the allies on the west front."

PERSONAL NOTES.

Capt. Hon. W. J. Shaghnessy, son of the President, C.P.R., has been gazetted as an orderly officer, and is now in France.

Lieut. J. H. Hannaford, who was killed in action in France, May 10, was a son of R. M. Hannaford, Assistant Chief Engineer, Montreal Tramways Co.

Lieut. Geo. Lawson, who was for 10 years a C.P.R. travelling auditor, and for the past few years a customs broker in Winnipeg, has been killed in action.

Lieut. Eric M. Hersey, who is reported to be at a London, Eng., hospital, suffering from gas poisoning, is a son of Milton L. Hersey, Chemist, C.P.R. Montreal.

James Carnuthers, President, Canada Steamship Lines, Ltd., has given \$100,000 to the Military Hospitals Commission, which is being used to aid returned soldiers.

Brig.-Gen. J. W. Stewart, of Vancouver, who is in charge of the Canadian railway construction forces in France, has been mentioned in Sir Douglas Haig's dispatches.

Acting Lieutenant-Colonel B. R. Hepburn, M.P., formerly President, Ontario & Quebec Navigation Co., who is overseas, has been gazetted as Assistant Director of Timber Operations.

Capt. John Baillies, of the Grand Trunk Pacific Coast Steamship Co.'s service, has entered the naval service for the war, under certain new regulations, with the rank and pay of "skipper."

Sir Edmund Osler, M.P. for West Toronto, and a C.P.R. director, has given \$2,000 to assist in the recruiting campaign which is being carried on in the

Province of Quebec by Postmaster General Blondin.

Capt. F. W. Goosons, who was on the National Transcontinental Ry. surveys a few years ago, and afterwards became a real estate agent in Winnipeg, has been killed in action. He was born in Brussels, Belgium, in 1887.

Norman S. Rankin, formerly Publicity Agent, Natural Resources Department, C.P.R., Calgary, Alta., who lost his commission as captain, owing to the breaking up of the battalion he was in, has enlisted in a signal corps at Ottawa for overseas service.

Lieut. J. Hallisey, who was killed in action, April 8, was formerly a dispatcher on the Halifax and South Western Ry., and was son of J. T. Hallisey, Superintendent, District 6, Intercolonial Division, Canadian Government Railways, Truro, N.S.

Lieut. R. N. Stuart, R.N.R., who was recently awarded the D.S.O., is a son of

Lt. Col. G. S. Cantlie, formerly General Superintendent of Car Service, C.P.R., and now of the 42nd Battalion, Royal Highlanders of Canada, C.E.F., who returned to Canada for a short leave during the winter, was invested with the D.S.O. at Buckingham Palace, London, Eng., on May 12.

Lt. Col. G. S. Rennie, M.D., formerly Surgeon in Chief, Dominion Power & Transmission Co. and Toronto, Hamilton & Buffalo Ry., who has been at Shorncliffe, Eng., for some two years, as A.D.M.S. in charge of hospitals, is reported to have received an important appointment in France.

Brigadier General A. E. Labelle, one of the Harbor Commissioners for Montreal, has received the cross of the Legion of Honor from the French Government. The announcement was made by Marshal Joffre at Montreal, May 13, when he regretted that he was unable to present the decoration personally.

Officers and Non Commissioned Officers, No. 2 Section, Skilled Railway Employes.

This illustration shows some of the officers and non commissioned officers of the above mentioned section, which was mobilized in Montreal and arrived in England early in May. Reading from left to right they are: Lieut. J. Swaile, Lieut. W. W. Webster, formerly Foreman, Steel Car Shop, C. P. R., Winnipeg; Capt. R. McKillop, officer commanding, formerly Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal; Lieut. J. S. Hall, Adjutant, Sergeant Major Oxley, Sergeant Major W. R. Spencer, formerly agent, National Transcontinental Railway, Cochrane, Ont.

the late Capt. Neil Stuart of Prince Edward Island, and has been in Allan Line service for several years. At the outbreak of war he was second officer on the s.s. Alsatian.

Capt. B. T. Eastway, who is reported to have been killed whilst in charge of one of His Majesty's vessels, was for several years in Allan Line service and last year was in command of the s.s. Ionian, after she was released from Admiralty service.

E. S. Scott, formerly train dispatcher, Atlantic, Quebec & Western Ry. and Quebec Oriental Ry., New Carlisle, Que., enlisted as a private with the 244th Battalion, Kitchener's Own, which went overseas in April. Over 50 of the head office staff of the railways mentioned have enlisted and are overseas.

Capt. W. B. Hanna, only son of D. B. Hanna, Third Vice President, Canadian Northern Ry., who went overseas as a lieutenant in the 92nd Battalion, Toronto Highlanders, has been appointed Commandant of the Stationery Service, Canadian Expeditionary Force, in London, Eng.

T. C. Irving, Jr., Vice President, Robert W. Hunt & Co., consulting and inspecting engineers, etc., Montreal and Toronto, has been promoted to Lieutenant-Colonel in the Canadian Engineers. He left Toronto with the first Canadian contingent as Captain in the 2nd Field Company of Engineers. He received the D.S.O. for services at the battle of Langemarck, and was promoted to Major. On the death from wounds of Lt. Col. Inksetter, he was given command of the Canadian Engineers in the fourth Canadian Division.

Harold A. Logan, formerly local manager, Great North Western Telegraph Co., Belleville, Ont., whose death was reported recently as a result of the torpedoing of a hospital ship by the Germans, served in France as a telegrapher from early in 1915. He had been wounded in both arms, and after spending some time in hospitals in France was being transferred to England. He was a native of Halifax, N.S.

Lieut. W. B. McArthur, M.C., who was killed in action recently, was, prior to enlistment, on the C.P.R. staff in London, Eng. He enlisted as a private in the Lon-

don Scottish, and after nine months in France, received a commission in the Royal Scots Fusiliers, in Nov., 1916. He received the Military Cross in May, 1916, for conspicuous determination when in charge of a working party, when with 12 men he captured and brought in as prisoners over 40 armed enemies. At the time of his death, he was acting as captain, during the absence of an officer of that rank.

Major James Arnold Delancey, B.Sc., McGill University, A.M.Can.Soc.C.E., of Vancouver, who has been killed in action, was born at Middleton, N.S., July 15, 1880. He was Assistant Engineer, United Fruit Co., Bocas del Toro, Panama, from May, 1909, to Oct. 1910, and engineer in charge from Oct. 1910 to Jan. 1, 1911. From Jan. 1, 1911 to Feb. 5, 1912, he was Chief Engineer at Paris for United Fruit Co., Bocas del Toro, Panama. Subsequently he did surveying work in British Columbia, including city surveys in Vancouver. When war broke out he returned to his native province of Nova Scotia, enlisted and went overseas as captain and adjutant in an infantry battalion. He was mentioned in dispatches and awarded the Military Cross.

Major John Campbell Galway, B.A., B.E., A.M.Can.Soc.C.E., who has been killed in action, was born at Southmolton, Devonshire, Eng., June 18, 1876. In June 1889 he graduated in engineering and arts at the Royal University of Ireland. Subsequently he was agent and engineer for Fisher & Lefarm, Belfast, Ireland, on a Belfast water works contract, including heavy concrete work and tunneling with compressed air and with shield and cast iron lining. He then laid a second line of 44 in. on the Manchester Corporation's Thirlmere aqueduct syphons. For the same firm he completed the Great Southern & Western Ry. of Ireland's Cashel branch. In 1906 he was a surveyor on the Liverpool Dock Board staff. On coming to Canada in 1907 he was employed as a transit man in the C.P.R. Irrigation Department. Then he was in charge of engineers in construction of camps of the New Canadian Co., Ltd., building the Atlantic, Quebec & Western Railway in the Gaspé Peninsula and then became chief of a survey party on that line. In April, 1912, he was appointed Resident Engineer on Eastern Lines, Canadian Northern Ry., and was shortly afterwards appointed a division engineer, remaining in the company's service until Dec. 1913, when he left on account of the completion of construction. He was subsequently in the Ottawa Water Works Engineering Department until Sept. 1915, when he received a commission as lieutenant in one of the Canadian pioneer corps. He was soon promoted to captain, and a short time before his death was gazetted a major. He was probably killed a few days after the storming of Vimy Ridge, as A. F. Stewart, Chief Engineer, Eastern Lines, Canadian Northern Ry., received a letter from him on May 8, describing that operation.

British Columbia's Relationship with the Canadian Northern Pacific Railway.

The B.C. Minister of Railways presented to the Legislature, on May 14, a report of the auditors engaged by the government to check up the payments made to the C. N. P. Ry., out of the proceeds of the provincially guaranteed bonds. The report states that to Dec. 31, 1916, there

had been paid to the company amounts in excess of the proper value of work done, as follows: On main line, \$2,426,927.81; on branch lines, \$2,127,519.29; on terminals, \$1,117,117.52; total, \$5,671,564.62. These figures, the report states, are confirmed by the Attorney General's Department.

Subsequently a resolution was passed calling for all correspondence and memoranda dealing with the relations between the C. N. Ry. and the B.C. Government relating to the construction of lines on Vancouver Island.

Railway Rolling Stock Notes.

The British Government has ordered 50 six-wheel switching locomotives from the Baldwin Locomotive Works.

The Manville Asbestos Co., Asbestos, Que., has received 2 saddle tank locomotives from Canadian Locomotive Co.

The Canadian Northern Ry. has received 6 snow ploughs, nos. 7333 to 7335, and 7341 to 7343, from its Winnipeg shops.

Canadian Government Railways have received the last 3 Mikado locomotives, of its order for 50, from Canadian Locomotive Co.

The C.P.R. has purchased 20 air dump cars, and has also received 103 automobile furniture cars from its Angus shops, Montreal.

The Reid Newfoundland Co. is having 50 box cars, 50 flat cars, and 50 sets of draft gear, built by Canadian Car and Foundry Co. at Amherst, N.S.

The Greater Winnipeg Water District has added a second hand passenger car to its railway rolling stock. It was bought in Philadelphia, Pa.

Canadian Government Railways have received 2 Mikado locomotives from Canadian Locomotive Co., and 4 box cars, 50 tons capacity, from Eastern Car Co.

The C.P.R. has ordered 2 vans, 51 steel underframe flat cars 40 tons capacity, 70 steel underframe box cars 40 tons capacity and 5 refrigerator cars, to be built at its Angus shops, Montreal.

The Paris and Orleans Ry. (France) has ordered 50 Mikado locomotives, with cylinders, all 711 m. m. and of 200,000 lbs. weight, all equipped with superheaters, from American Locomotive Co.

The Russian Government has ordered 75 decapod freight locomotives from Baldwin Locomotive Works. In addition to these, the company has Russian orders for 150 decapod locomotives and 63 narrow gauge Mallet locomotives.

The Canadian Government Railways have purchased the following cars in the United States since Jan. 1, 1916: 500 coal, 50 sleeping, 10 dining, 18 tourist, 23 first class, 2 baggage and 2 mail and express.

The dimensions of the 50 all wood box cars, 20 tons capacity, which Canadian Car and Foundry Co. is building for the Reid Newfoundland Co., St. John's, Nfld., are as follows:

Length over end sills	30 ft.
Width over side sills	8 ft.
Length over running board	31 ft. 5½ in.
Width of door opening	5 ft.
Height, bottom of sill to top of running board	8 ft. 4 in.

Canadian Government Railways have ordered 1,000 steel frame box cars, 40 tons capacity, from the Eastern Car Co., and 1,000 similar cars from Canadian Car & Foundry Co., and have bought 10 second hand locomotives and 300 second

hand 34 ft. box cars, 60,000 lb. capacity, from General Equipment Co.

Following are chief details of the 1,000 box cars which Canadian Government Railways have on order with the Eastern Car Co., for delivery in December and January:

Capacity	80,000 lb.
Length inside	36 ft.
Width	8 ft. 6½ in.
Height floor to carline	8 ft. 0½ in.
Width of side door opening	5 ft.
Height rail to top of brake mast	13 ft. 11¼ in.
Height rail to centre of coupler	2 ft. 10½ in.
Body bolsters, centre to centre	26 ft. 10 in.
Draft gear	Twin spring
Coupler	M.C.B. 5 by 7 in.
Air brake	Westinghouse K.C. 8 by 12 in.
Axles	M.C.B. 5 by 9 in.
Wheels	M.C.B. chilled cast iron, 33 in.
Journal boxes	M.C.B.
Journal bearings	M.C.B. lead lined 5 by 9 in.
Wedges	M. C. B. drop forged
Truck bolsters and brake beams	Simplex

The Canadian Car and Foundry Co. has received an order from the Russian Government for 1,600 sets of steel work for Russian box cars, without cabs, and for 400 sets for cars with cabs, each of 1,200 pounds, approximately 20 tons, capacity. Following are chief dimensions of the cars:

Length	22 ft. 9 ins.
Width	9 ft.
(Not including thickness of military wall planks.)	
Height at side wall	7 ft. 8½ in.
Height at middle	8 ft. 4 in.
Base of cars	13 ft. 1½ in.
Projection of hand brake cars,	
at brake end	6 ft. 4 in.
at other end	5 ft. 6 in.
Projection of other cars, at both ends	4 ft. 11 in.
Outside length between the two faces of end sills,	
hand brake car	25 ft.
other car	23 ft.
Length with buffer, hand brake cars	28 ft. 10 in.
other cars	26 ft. 10½ in.
Gauge of wheels	5 ft.
Draft gear	European type with draw bar hooks and screw couplings
Journal bearing wedges	Drop forged 5½ x 10 in.
Dust guards	Rotary ring steel
Axles	M.C.B. 5½ x 10 in.
Wheels	Cast iron 39¾ in.
Air brakes	Westinghouse Russian standard 8 in.
Roofing	Galvanized iron

Military Railway Building in France.—The United States War Department has called for the raising of nine engineer regiments—about 10,000 men in all—under the terms of the National Defence Act of June 3, 1916, which prescribed that in time of war the army might be provided with such additional units of a special character as were required, in addition to the establishment of fighting men provided by law. The men to be enlisted will not be drafted. They will be volunteers, and appeal is being made for those who have had railway, bridge building, subway, or other engineering experience in similar or related lines. The first detachment of U.S. army engineers arrived in England, May 23.

Workmen's Compensation on the Timiskaming & Northern Ontario Ry.—From Jan. 1 to Mar. 31, 18 claims were registered with the commission, all for minor accidents. Of these, 5 were passed and paid, 6 were disallowed, and 7 were kept in abeyance. The claims paid amounted to \$248.58. The insurance cost for the period mentioned, based on premium paid in 1915, would have been \$4,416.25, or an average premium of \$883.25 to protect an average award of \$49.71.

British Columbia Railway Expenditure.—The estimated expenditure for the province for the current financial year includes the following items: Cost of Railways Department, \$100,380; Nakusp & Slocan Ry., amount required in excess of earnings to meet interest charges, \$23,000; Pacific Great Eastern Ry., to meet interest on guaranteed bonds, \$907,200. The last two items are chargeable to capital account.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 188, Apr. 23.—Prescribing, for observance of every railway company within legislative authority of Parliament of Canada, regulations for uniform maintenance of way flagging rules for impassable track, effective June 1, and rescinding general order 161, Feb. 23, 1916.

26035. April 17.—Sustaining, until further order, Supplement 1 to G.T.R. C.R.C. no. E-3304 and Supplement 2 to C.P.R. C.R.C. no. E-2931, to become effective May 1.

26036. Mar. 31.—Approving location of C.P.R. proposed station at Evesham, Sask., to be erected under order 25785, Jan. 5.

26037. April 23.—Authorizing G.T.R. to build siding on Lots 12-13, Hawkesbury, Ont.

26038. April 23.—Approving G.T.R. plan showing location of freight shed in New Toronto, Ont.

26039. April 23.—Authorizing Canadian Northern Ry. to join its Prince Albert Branch with Red Deer Lumber Co.'s spur in s.w. $\frac{1}{4}$ Sec. 34-44-28, w.p.m., Man.

26040. April 23.—Authorizing C.P.R. to build spur for Cope, Spencer & March, Calgary, Alta.

26041. Apr. 21.—Ordering Canadian Northern Ry. to erect standard 3rd class station at Excel, Alta., by Sept. 1.

26042. Apr. 23.—Ordering C.P.R. to erect flag station at Grant's Crossing, mileage 50.5, Waltham Branch, Que., by June 15.

26043. Apr. 24.—Authorizing Saskatchewan Highway Commissioners to make highway over Canadian Northern Ry. in n.w. 23-19-21, w. 2, m., cost to be paid by C.N.R.

26044. Apr. 25.—Ordering C.P.R. within 60 days to install bell at crossing of Queen St., Guelph, Ont., 20% of cost to be paid out of railway grade crossing fund.

26045. Apr. 25.—Amending order 8942, Nov. 30, 1909, re Michigan Central Rd. crossing gates at Highgate and Muirkirk stations.

26046. Apr. 26.—Authorizing C.P.R. to extend Pier D at north end of Granville St., Vancouver, B.C.

26047. Apr. 26.—Relieving C.P.R. from providing further protection at Centre St., Orangeville, Ont.

26048. Apr. 26.—Approving location of C.P.R. proposed station at Mossbank, Sask.

26049. Apr. 26.—Ordering Canadian Northern Ry. to provide stock yard and chute at Pas, Man.; work to be completed by June 1.

26050. Apr. 27.—Authorizing Michigan Central Rd. to build spur from Lot 38, across Whirlpool Road, to Lot 57, Stamford Tp., Ont., about 620 ft., and from Lot 58, to its right of way, about 240 ft.; and to connect same with tracks of Hydro-Electric Power Commission of Ontario.

26051. Apr. 26.—Rescinding orders 9342 and 12312, Jan. 18, 1910, and Sept. 5, 1910, respectively, in so far as they order Great Northern Ry. to establish train service on Vancouver, Victoria & Eastern, and New Westminster Southern Rys. from Cloverdale north to Port Kells, and from Port Kells to Fraser River Bridge at New Westminster, B.C.; and authorizing G.N.R. to establish new timetable covering lines from Sumas via Abbotsford and Cloverdale to Vancouver; Guichon via Cloverdale to New Westminster; and Hazelmere to Abbotsford, B.C.

26052. Apr. 26.—Ordering G.T.R. to appoint night watchman at crossing of Niagara St. by its line and Niagara, St. Catharines & Toronto Ry. in St. Catharines, Ont.; N. St. C. & T. Ry. to pay wages.

26053. Apr. 24.—Dismissing C.P.R. application for approval of plan E. 299-1 showing proposed new main freight line, general layout, of new subway on Water St., and approach to Red River Bridge, Winnipeg, Man.; and amending order 9292 to provide that freight track over Water St. be not included in layout of station grounds at Fort Garry, Winnipeg.

26054. Apr. 27.—Authorizing Toronto, Hamilton & Buffalo Ry. to build spur in Hamilton, Ont., from Park Lot 12, MacNabb's survey, northwesterly to point marked 12+53.

26055. Apr. 20.—Dismissing complaint of G. H. Davis, Montreal, that G.T.R. refuses use of McGill St. yard, Montreal, for loading and unloading so-called cartage freight.

26056. Apr. 30.—Amending order 25912, Mar. 1, re Bell Telephone Co.'s poles on Main St., Richmond, Que.

26057. Apr. 19.—Dismissing complaints of City of Sherbrooke and Town of Laprairie, Que., against proposed increases by G.T.R. of tolls for passenger and vehicular traffic over Victoria Jubilee Bridge.

26058. May 1.—Ordering Central Vermont Ry. to provide eavetroughs on station building at Richelieu, Que.

26059. May 1.—Dismissing application of Retail Merchants Association of Canada, Toronto, for order directing that, in cases where demurrage is charged on cars placed on public or private sidings and such charges are deemed by shipper or

consignee to be unreasonable, such shipper pay charges under protest and may, within 10 days appeal to Board, which shall determine such appeal, and if charges found unreasonable, issue order directing carrier to refund amount.

26060. May 1.—Authorizing G.T.R. to rebuild bridge 32 Maitland River viaduct—over Maitland River at Wingham, Ont.

26061. May 1.—Ordering Great Northern Ry. to stop train 355 on flag at Crescent, B.C., during months that campers' special train is not in service.

26062. Apr. 30.—Authorizing C.P.R. to build spur for Hunt Bros. Ltd., London, Ont.

26063. Apr. 30.—Authorizing Grand Trunk Pacific Ry. to build spur, across highway at Duffield, Alta.

26064. May 2.—Authorizing Canadian Northern Ontario Ry. to build siding across Dundas St., Deseronto, Ont.

26065. May 1.—Authorizing Michigan Central Rd. to build spur for American Cyanamid Co., near Niagara Falls, Ont.; and approving clearances.

26066. May 1.—Approving agreement between Bell Telephone Co. and Muskrat Lake Telephone Co., Renfrew County, Ont., Aug. 25, 1915.

26067 to 26069. May 3.—Approving location of C.P.R. stations at Hazelridge, Man.; Richardson, Sask., and Hutton, Sask., according to standard A2 station plan.

26070. May 2.—Dismissing complaint of Toronto Board of Trade against assessment of demurrage at Niagara frontier on cars containing Canadian grain for export through U.S. ports while awaiting Canadian Government inspection.

26071. May 2.—Ordering Grand Trunk Pacific Ry. to appoint station agent at Huxley, Alta., by Aug. 15.

26072. May 3.—Dismissing C.P.R. application for authority to make road diversion in s. e. $\frac{1}{4}$ 13-7-32, w. p. m., Sask., to easterly limit of Redvers station grounds, at grade, across its tracks, and approving crossing to elevators on south side of right of way at Redvers, Sask.; C.P.R. to place a gate in fence at south side of its right of way.

26073. May 1.—Approving revision of C.P.R. North Toronto Branch, as shown on plan; and authorizing C.P.R. to build double track over G.T.R. Toronto Belt Line, at grade, across Tom-morden Road, York Tp., and Macleannan and Summerhill Aves., Toronto; an open space 12 by 12 ft. to be left in bridges over ravines so persons at bottom can get from one side of railway property to other; and proper opening also to be left in bridge over eastern ravine for Toronto Belt Line track.

26074. May 3.—Ordering C.P.R. to provide portable station building and dismantled box car body, temporarily, at Travers, Alta., to take care of perishable freight and express; standard class A2 station to be erected by Aug. 1, 1918.

26075. May 7.—Approving C.P.R. plan showing layout of interlocking plant to be installed at Donlands where Canadian Northern Ontario Ry. connects with C.P.R.

26076. May 3.—Relieving Vancouver, Victoria & Eastern Ry. and Navigation Co. (G.N.R.) to erecting fences, gates and cattleguards at certain points between mileage 201.84 and 215.37; and from fencing station grounds at Princeton and Coalmont, H.C.

26077. May 2.—Ordering G.T.R. to extend train now running from Brantford to Tilsonburg, Ont., arriving Tilsonburg at 6.50 p.m., through to St. Thomas, return to Tilsonburg Jct., and there connect with train from Hamilton, as at present arranged; service to be shown in new summer timetable and continued for three months as trial.

26078. May 7.—Ordering C.P.R. to appoint station agent at Dalroy, Alta., during Sept., Oct., Nov. and Dec. each year.

26079. May 4.—Authorizing C.P.R. to rebuild bridge over its track in line with Notre Dame St., Montreal, Que.; cost to be paid $\frac{3}{4}$ by C.P.R. and $\frac{1}{4}$ by Montreal Tramways Co.

26080. May 4.—Extending for one month from date time within which C.P.R. shall install bell at Duke St., Guelph, Ont.

26081. May 3.—Approving revised location of Toronto, Niagara & Western Ry. through Toronto Tp., Co. Peel, mileage 11.08 to 19.79 from Yonge St., Toronto.

26082. May 5.—Authorizing Vancouver, Victoria & Eastern Ry. and Navigation Co. (G.N.R.) to operate extension of spur to Campbell River Lumber Co., Ltd., at White Rock, B.C., and approving clearances.

26083. May 7.—Authorizing Canadian Northern Ry. to remove spur built for McKenzie-Ellis-Wood Co., Prince Albert, Sask.

26084. May 7.—Authorizing Canadian Northern Ry., at expense of Lomond Municipality 37, Sask., to make highway crossing over its track between s. e. and s. w. $\frac{1}{4}$ sec. 21-5-13, w. 1, m.

26085. May 7.—Authorizing Canadian Northern Alberta Ry. to cross and divert highway between Secs. 25 and 26-53-8, w. 5, m., by carrying highway over railway overhead bridge, at mileage 75, Tollerton Subdivision, Alta.

26086. April 30.—Authorizing town of Montreal South, Que., to build highway crossings over Quebec, Montreal & Southern Ry., at Lasalle and Marmier Aves. and St. Helene Boulevard.

26087. May 3.—Dismissing W. E. Mace's complaint against change in Bell Telephone's Service at Warrington Apartments, Ottawa, Ont.

26088. May 5.—Ordering C.P.R. to erect station at Mud Lake, Ont., and to build spur to accommodate two or three cars for pulpwood there; work to be completed by July 31, and rescinding order 25069, June 14, 1916.

26089. May 8.—Amending order 25709, Dec. 2, 1916, requiring re Canadian Northern Quebec Ry. service between St. Jerome and Montreal.

26090. May 8.—Amending order 25975, Mar. 29, re express delivery and collection limits in Toronto.

26091. May 8.—Rescinding order 25322, Aug. 30, 1916, suspending C. P. R. tariff, C. R. C. no. E-3176, and Temiscouata Ry. tariff, C.R.C. 256; provided rates in said tariffs, where higher, be reduced to St. John, 8th class basis from stations shown therein on C.P.R. and Temiscouata Ry.

26092. May 10.—Extending to Dec. 31, time within which G.T.R. may improve its freight facilities at Windsor, Ont., as required by order no. 25487, Oct. 2, 1916.

26093. May 10.—Authorizing C.P.R. to rebuild interlocking plant at crossing of G.T.R. at St. Polycarpe Jct., mileage 35.41, Smiths Falls subdivision.

26094. May 8.—Authorizing Michigan Central Rd. to build spur in Stamford Tp., Ont., connecting with tracks of Hydro-Electric Power Commission of Ontario.

26095. May 8.—Approving Canadian Northern Ry. drawing 25578, April 1, showing new standard timber cattle pass, size 5 x 6 ft.

26096. May 8.—Authorizing Pere Marquette Ry. to build highway over its tracks on east side Lot 3, Con. 2, Mersea Tp., Ont.; cost of construction and maintenance to be paid by Public School Board of Sec. southwest of township.

26097. May 8.—Authorizing Canadian Northern Ry. to extend siding on n.w. $\frac{1}{4}$ Sec. 10 and s.w. $\frac{1}{4}$ Sec. 15 Tp. 17 R., west of Principal Meridian 7, across highway.

26098. May 10.—Approving G.T.R. plan showing substructure for bridge 56, milepost 34.67 from Port Dover, Ont., clearance between abutments to be 24 ft.

26099. May 10.—Extending to July 1 time within which Canadian Northern Ry. shall complete spur for McKellar Bedding Co., Fort William, Ont., authorized by order 22261, July 23, 1914.

26100. May 10.—Authorizing C.P.R. to connect with Regal Collieries Co.'s spur at Taber, Alta.

26101. May 11.—Ordering Pere Marquette Ry., from May 14, to restore its train service between Sarnia and St. Thomas, Ont.

26102. April 20.—Dismissing Plymouth Cordage Co.'s complaint against rates on binder twine, in carloads, from Welland, Ont., to points east of Toronto, to and including Kingston and Smiths Falls, Ont.

26103. May 11.—Authorizing Saskatchewan Government to build highway over Canadian Northern Ry. in s.w. $\frac{1}{4}$ sec 6, Tp. 29 R., 30, west of Principal Meridian.

26104. May 11.—Authorizing G.T.R. to build spur for Flavelles, Ltd., Lindsay, Ont.

26105. May 11.—Ordering G.T.R. and C.P.R. each to install improved type of automatic bell at Dufferin St., Weston, Ont. 20% of cost to be paid out of railway grade crossing fund and bells be installed by Sept. 1.

26106. May 11.—Authorizing Canadian Northern Ontario Ry. to take portions of Lot 6, Con. 3, east of Yonge St., York Tp., Ont., property of J. R. E. H., and J. W. Watson, required to accommodate slopes of farm crossing, at grade, an off-track ditch for maintaining existing drainage; to build farm crossing, at grade.

26107. May 11.—Extending to Dec. 1, time within which Lake Erie & Northern Ry. may operate its cars over crossing of G.T.R. at station 7-23, Brantford, Ont., pending installation of interlocking plant required by order 22116, July 2, 1914; crossing to be protected by watchmen appointed and paid by L. E. & N. Ry.

26108. May 11.—Extending to June 1, time within which C.P.R. shall install bell at highway at Campbellville station, Ont.

26109. May 8.—Ordering G. T. R. to build siding for Fletcher Pulp & Lumber Co.'s plant at Sherbrooke, Que., old spur two miles farther north to be removed.

26110. May 14.—Ordering G.T.R. within 60 days to install bell at Sealy St., Casselman, Ont., 20% of cost to be paid out of railway grade crossing fund.

26111. 26112. May 14.—Ordering Michigan Central Rd. to keep cars that may be standing on sidings crossing Hornby St. and East St., Springfield, Ont., back 100 ft. from street line; put up posts to mark the zones.

26113. May 12.—Authorizing Quebec & Lake St. John Ry. to build siding for Turner Lumber & Pulpwood Co., Limoilon, Que.

26114. May 16.—Approving agreement between Bell Telephone Co. and Lavant-Dalhousie Telephone Association, operating in Lanark County, Ont., Aug. 20, 1915.

26115. May 16.—Authorizing C.P.R. to build passing siding, at grade, across road allowance between Lots 8 and 9, Con. B, Haldimand Tp., Ont.

26116. May 16. Dismissing complaints of Regina Board of Trade and H. G. Smith, Ltd., Regina, Sask., against increased freight rates on canned goods and dried fruits, effective Mar. 1, from Pacific Coast points to Regina.

26117. May 16. Ordering Grand Trunk Pacific Ry. and C.P.R., as long as they can continue to do so and as long as emergency exists, to supply cars at rate of 75 and 50 a day, respectively, to Canadian Northern Ry., at a transfer at Saskatoon; cars to be taken into Goose Lake District by C.N.R., loaded and returned to G.T.P.R. and C.P.R. at Saskatoon for furtherance to elevators at head of the lakes. Through rate for joint carriage of said grain to be rates published and filed by C.N.R. for carriage of grain over its own rails, or jointly with its eastern connections as so published, east of Saskatoon, from points of shipment to same destinations; allocation of said joint rates between carriers hereby made parties thereto be arranged between themselves within one week from date or, failing such, to be settled by Board.

26118. May 16. Approving plan and specifications showing work to be done on no. 1 drain, under C.P.R. in Lot 125, Con. 6, Rayham Tp., Ont.

26119. May 15.—Authorizing Grand Trunk Pacific Ry. to build spur for Edmonton Cement Co., in n.w. $\frac{1}{4}$ Sec. 35, Tp. 45, R. 1, west of 6th Meridian and s.w. $\frac{1}{4}$ Sec. 2, Tp. 46, R. 1, west of 6th Meridian.

26120. May 11. Approving agreement between Bell Telephone Co. and The Admaston Rural Telephone Association, Ltd., operating in Renfrew County, Ont., April 30.

26121. May 16. Amending order 26034, Apr. 16, authorizing Algoma Eastern Ry. to change inter-switching rate of 1c per 100 lbs. (C.R.C. 169), and amending Supplement 2 to Algoma Eastern Ry. Tariff C. R. C. 169.

26122. May 16.—Approving Maine Central Rd. bylaw, May 9; and rescinding order 25522, Oct. 10, 1916, approving bylaw passed Sept. 13, 1916.

26123. May 18.—Extending to Dec. 1 time limited by orders 23727, 24387, and 25804, respectively, May 22, and Nov. 2, 1915, May 29, 1916, and Jan. 17, 1917, during which Lake Erie & Northern Ry., pending installation of such interlocking plant, may operate cars and trains over crossing of Toronto, Hamilton & Buffalo Ry. in Brantford, Ont.; crossing to be protected by watchman, appointed and paid by L. E. & N. Ry.

26124. May 18.—Extending to July 15, time within which Great North Western Telegraph Co. place its wires on King and William Sts., Chatham, Ont., in underground conduits and remove poles on said streets.

26125. May 18.—Amending order 26076, May 3, 1913, re Vancouver, Victoria & Eastern Ry. and Navigation Co.'s fences, gates and cattle guards at certain points in B.C.

26126. May 18.—Authorizing G.T.R. to build siding and spur therefrom, for John Inglis & Co., Ltd., Toronto.

26127. May 21.—Approving revised location of Canadian Northern Ry., MacRorie Westerly Branch, west of Alsask, Sask.

26128. May 19. Approving Western Canada Telephone Co.'s Tariff, C.R.C. 1, covering rentals and charges for service within rural exchange of Belmont, B.C.

taken up therefrom, and the sections of either line within the territory where they closely parallel each other and which are left intact for operation, to be used jointly by both lines. A lot of negotiations have been going on between the Railways Department and G.T.P.R. and C.N.R. officials, but at the time of writing, May 29, it is impossible to say definitely what will be done, further than that the taking up of rails on the G.T.P.R. has been commenced from Resplendent easterly. D. B. Hanna, Third Vice President, and M. H. MacLeod, General Manager and Chief Engineer, C.N.R., went over the company's whole main line from Vancouver to Toronto recently, and paid particular attention to the question of release of rails in the Yellowhead Pass District. Subsequently they visited Ottawa, and at the time of writing, May 29, Mr. MacLeod is still there in connection with the matter. Sir Henry Drayton, Chief Railway Commissioner, left Ottawa, May 26, for the west, to look into the situation on the spot.

Canadian Railway Rails for Use in France.

A Dominion order in Council passed Dec. 19, 1916, gave authority under certain conditions for the shipment of certain trackage from Canadian railways to France for war purposes. Under that order 800 miles of rails with the necessary turnouts, angle bars, bolts, spikes, and other track material were taken up from the Eastern Division of the National Transcontinental Ry. and shipped. Another request was received from the British Government recently for a further 300 miles of rails and accessories. The acting Minister of Railways referred the matter to the Chief Railway Commissioner, who recommended that the further 300 miles of rails be obtained from the Grand Trunk Pacific Ry., partly from the portion of the line running through the Yellowhead Pass, which closely parallels the Canadian Northern Ry., and partly from some other main track line at other points, this latter track to be replaced by other rails. An order in Council was therefore passed, under the provisions of Sec. 6 of the War Measures Act, 1914, providing as follows:

The Minister of Railways may order the G. T. Pacific Ry. to take up and deliver to him such portions of its line running through the Yellowhead Pass as may be specified by the Chief Railway Commissioner, and to deliver such other rails and track material belonging to the company as may be specified by the Chief Commissioner; and the Minister shall have the power either to relay with other rails the trackage taken up, or in lieu thereof, to grant running rights over other railways. The Minister shall have power, on the recommendation of the Chief Railway Commissioner, to take duplicate trackage belonging to any railway company in Canada for the purpose of laying all or any part of the trackage taken from the G. T. P. Ry. The Chief Railway Commissioner shall have power to compel railway companies in Canada to supply equipment for the transportation of rails in case of a shortage on the carrying line, on such terms as the Board of Railway Commissioners may order, the power to include the right not only of ordering the supplying of cars, but of locomotives to be used in the transportation of these rails to the seaboard, although

the transportation takes place over a line other than the line required to supply the equipment. The Board of Railway Commissioners shall have power to give to the company whose tracks and sidings have been taken up under authority of these regulations, or whose rails, ties, and other track materials have been taken hereunder, running rights over the railway lines and sidings of the other railway companies, upon such terms and conditions as the Board may deem just and proper. All cost, damages, and expenses under this order shall be borne by His Majesty's Government in England.

In pursuance of the authority conferred upon him by the order in council the acting Minister of Railways, on May 7, issued an order to the Grand Trunk Pacific Ry., to take up and deliver to A. Ferguson, C.E., Inspecting Engineer of the Railways Department, the rails and track material, except the ties, of the line through the Yellowhead Pass, extending from near Imrie, on the east to near Resplendent on the west, which mileage had been specified to be taken up, by the Chief Railway Commissioner. The acting Minister of Railways also granted to the G.T.P. Ry. running rights over the Canadian Northern Pacific Ry., between the points above specified, subject to terms and conditions to be determined by the Board of Railway Commissioners.

The distance between Imrie, Alta., and Resplendent, B.C., according to the company's timetables is 207 miles, but the actual mileage to be taken up under the order may be more or less, according as engineers decide the most feasible points to make the connections between the two companies' lines so that the G. T. P. Ry. may exercise its running powers over the C. N. P. R. We are advised that connections will also be made with the C. N. P. R. to give any collieries in the district, which may now be shipping over the G. T. P. R. a connection with the C. N. P. R.

Residents of Edson, Alta., a G.T.P.R. division point, 129.3 miles west of Edmonton, protested against the rails of that section being taken up, and another order was then issued, providing for taking up some rails on the G.T.P.R. and others on the C.N.R., the latter to be laid on G.T.P.R. track to replace the ones

Freight and Passenger Traffic Notes.

The Canadian Pacific Ry. started its upper lakes steamship service between Port McNicoll and Fort William, Ont., May 15.

The usual Saturday to Monday cheap tickets are being issued by the Canadian Pacific Ry., the Grand Trunk Ry., and the Canadian Northern Ry.

The first freight shipped from the east via lake and rail route reached Winnipeg, May 7, by the National Transcontinental Ry. from Fort William.

The Canadian Pacific Ry. has arranged a daily train and boat service in the Okanagan Lakes territory instead of the present six days a week service.

There will be no holiday nor excursion rates given by Canadian railways for the present, and no special trains, except those required for military purposes, will be run.

The Canadian Government Railways have restored the train and ferry service between the South Shore and Murray Bay, Que., which it was recently reported had been suspended.

The New York Central Rd. (formerly Lake Shore and Michigan Southern Rd), passenger trains now arrive at and depart from the Michigan Central terminal at Detroit, Mich., instead of at the Brush St. terminal.

Business men of Rexton, Richibucto, and other points on the Kent Northern Ry., are urging the New Brunswick Government to consider the rates charged for freight on the line, which are alleged to be excessive, and to take steps to have them reduced.

The Grand Trunk Ry. started operating its drawing room sleeping cars from Toronto to Algonquin Park and Madawaska, Ont., Thursday, May 10, and on each succeeding Thursday, at 10.45 p.m., and from Madawaska for Toronto, at 6 a.m. on Tuesday, May 15, and each succeeding Tuesday.

A Vancouver press dispatch of May 14, said the new Great Northern Ry., and Northern Pacific Ry. terminal station, at False Creek, Vancouver, would be opened June 1, that there would be a public reception in the new building from 2 to 4 p.m., and that at the latter hour the first train would be dispatched from the station to Seattle, Wash.

Mainly About Railway People Throughout Canada.

Mrs. W. D. Matthews, wife of W. D. Matthews, director, C.P.R., died at Toronto, May 15.

E. B. Greenshields, who died at Montreal recently, was a director of the Grand Trunk Pacific Ry. Co.

W. M. Macpherson, director, Grand Trunk Pacific Ry., returned to Canada, May 14, after a lengthened visit to England.

A. W. Smithers, Chairman, G.T.R. Co., arrived in Canada, May 14, from London, Eng., accompanied by H. Deer, Assistant Secretary.

V. T. Boughton, Resident Engineer, C. P. R., Sudbury, Ont., has enlisted with the 1st Regiment, Reserve Engineers, United States Army.

Howard Elliott, President, New York, New Haven & Hartford Rd., has resigned, and has been succeeded by Edward J. Pearson, Vice President.

Geo. Stanway Mitchell, the nine year old son of Lorne W. Mitchell, Treasurer, Canadian Northern Ry., died in Toronto April 29, after less than an hour's illness.

G. McLaren Brown, European Manager, C.P.R., London, Eng., entertained the Canadian pressmen in London at the Newspaper Press Fund dinner there, May 12.

W. S. Miller, Travelling Passenger Agent, G.T.R., Montreal, was presented with a cabinet of silver by a number of his friends, May 5, in connection with his marriage.

F. A. Bradley, who has been appointed Contracting Foreign Freight Agent, Union Pacific Ry., New York, formerly lived in Ottawa, where he was at one time a page in the House of Commons.

A. Chapman, train dispatcher, C.P.R., London, Ont., was appointed general chairman of the Order of Railroad Telegraphers of Canada, at the international convention held at Seattle, Wash., in May.

Anton Balzola, President and Secretary-Treasurer, Niagara Spanish Aerial Car Tramway Co., which built and operates an aerial car line over the whirlpool at Niagara Falls, died suddenly at Niagara Falls, Ont., May 21.

J. R. C. Macredie, M.Can.Soc.C.E., of whom some biographical details were given in our last issue, was appointed Engineer, Saskatchewan District, C.P.R., at Moose Jaw, Sask., recently, and not Resident Engineer, as inadvertently stated.

J. A. Dundas, Secretary to Vice President Ogden, C.P.R., was presented with a cabinet of silver and a purse of money, May 5, by a number of the office staff and other employes, on the occasion of his marriage.

D. Pottinger, I.S.O., formerly Chairman, Canadian Government Railways Managing Board, with Mrs. Pottinger, were the guests of Sir Collingwood and Lady Schreiber, at Ottawa, during May, after which they went to their summer home at Shediac, N.B.

L. C. Fritch, General Manager, Eastern Lines, Canadian Northern Ry., Toronto, and E. H. Fritch, Secretary, American Railway Engineering Association, Chicago, Ill., received information, May 2, of the sudden death of their father, Joseph Fritch, on that date.

H. K. Wicksteed, B.A.Sc., M.Can.Soc.C.E., Chief Engineer of Surveys, Mackenzie, Mann & Co., Ltd., addressed the Canadian Society of Civil Engineers, Toronto

branch, on May 8, on Venezuela and the islands of the Carribean Sea, illustrating it by a number of excellent views which he secured during his various trips to the south.

G. A. Stewart, M.Can.Soc.C.E., who died at Victoria, B.C., May 13, aged 87, was engaged on the construction of some of the early railways in the Dominion. He was Assistant Engineer on the Northern Ry., from 1852 to 1854; Chief Engineer, Midland Ry., from 1868 to 1877; practising as a civil engineer in the interval. He retired from active service several years ago, and lived at Victoria since 1909.

Frank H. Alfred, who has been elected President of the reorganized Pere Marquette Ry., began railway work as a rod-

After the taking over of the Nova Scotia Ry. by the Government as a part of the Intercolonial Ry., he was clerk in the General Freight Agent's office, Moncton, N.B., and, later, freight agent and accountant, Halifax station, N.S.; from July 1, 1894, to Oct. 19, 1898, he was acting agent, Halifax, N.S.; Oct. 19, 1898, to Sept. 1, 1907, Division Freight Agent, Northern Division; Sept., 1907, to June 1, 1917, General Freight Agent, Intercolonial Ry.

Ernest Baxter, who has been appointed General Storekeeper, Wabash Ry., St. Louis, Mo., was born at Delmer, Ont., Oct. 11, 1882, and entered railway service in Mar. 1903, since when he has been, to May 1903, messenger, Local Freight Office, Michigan Central Rd.; May to Oct. 1903, messenger, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont.; Oct. 1903 to April 1905, secretary to Superintendent, G.T.R., London, Ont.; April 1905 to Feb. 1906, consecutively, in Operating Department, Cincinnati, Hamilton & Dayton Rd., Indianapolis, Ind., same department, Missouri Pacific Ry., St. Louis, Mo.; Feb. 1906 to May 1909, secretary to General Manager, St. Louis Southwestern Ry., St. Louis, Mo.; May 1909 to June 1914, chief clerk to the President, same road; June 1914 to Feb. 1916, Purchasing Agent, same road; Mar. 1, 1916, to April 30, 1917, Service Inspector, Wabash Ry., St. Louis, Mo.

Frederick Fanning Backus, who has been appointed General Manager, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., was born at Rochester, N.Y., June 4, 1860, and entered transportation service, June 4, 1876, since when he has been, to 1887, with Merchants Despatch Transportation Co.; 1877 to 1881, clerk, Local Freight Office, New York Central & Hudson River Rd.; 1881 to 1883, chief clerk to General Northwestern Agent, Lehigh Valley Rd., Rochester, N.Y.; 1883 to 1885, Travelling Freight Agent, same road, Buffalo, N.Y.; 1885 to Oct., 1886, Assistant Claim Clerk, General Office, Blue Line (New York Central Fast Freight Line), Rochester, N.Y.; Oct., 1886, to Apr. 7, 1887, Assistant to General Agent, same line, Toronto; Apr. 7, 1887, to Dec., 1897, General Agent, same line, and Canada Southern Ry., Toronto; Dec. 1, 1897, to July 1, 1912, General Freight and Passenger Agent, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont.; July 1, 1912, to June 11, 1915, General Traffic Manager, same road, Hamilton, Ont.; June 11, 1915, to May 17, 1917, Assistant to President, same road, Hamilton, Ont.

Lafayette S. Brown, who is said to have been appointed Assistant to the General Superintendent, Intercolonial Division, Canadian Government Rys., Moncton, N.B., was born at Nelson, N.B., Oct. 19, 1864, and entered I.R.C. service, Jan. 15, 1880, since when he has been, to Dec. 20, 1881, cleaning locomotives, and machinist helper, Newcastle, N.B.; Dec. 20, 1881, to Sept. 5, 1882, shunting in Newcastle yard and learning telegraphy; Sept. 5, 1882, to Nov. 25, 1883, assistant agent, Newcastle, N.B.; Nov. 26, 1883, to Oct. 4, 1898, train dispatcher, Moncton and Ste. Flavie District, Campbellton, N.B.; Oct. 4, 1898, to Apr. 30, 1912, Chief Dispatcher, New Glasgow, N.S.; May 1, 1912, to July 31, 1913, Assistant Superintendent, Moncton and Ste. Flavie and Fredericton to Loggieville, N.B., Newcastle, N.B.; Aug. 1, 1913, to June 1, 1917, Superintendent, Truro, Sydney and Oxford District, Intercolonial Ry., latterly known as District

F. F. Backus,
General Manager, Toronto, Hamilton & Buffalo
Railway.

man on the construction of the Columbus, Lima & Milwaukee Ry. in 1887. After being employed on the Norfolk & Western Ry., the Cleveland, Akron & Columbus Ry., and the Wheeling & Lake Erie Ry., he became Assistant Engineer of the Pere Marquette Ry. in 1900. He was made Chief Engineer in Oct., 1902, resigning on Oct. 1, 1905, to become manager of the Canadian White Co., Ltd., in Montreal. In 1908 he returned to railway service as Assistant to the President of the Cincinnati, Hamilton & Dayton Ry. In Apr., 1912, he was appointed Assistant General Manager of the Pere Marquette Ry., being made General Manager later, and then chief executive officer for the receivers, which position he held at the time of his recent promotion.

D. A. Story, who is said to have been appointed General Traffic Manager, Canadian Government Rys., Moncton, N.B., was born at Halifax, N.S., Oct. 26, 1853, and entered railway service, May 26, 1869, since when he has been successively, clerk in Audit Department, telegraph auditor, train dispatcher, and secretary to Superintendent, Nova Scotia Ry., Halifax, N.S.

4, Intercolonial Division, Canadian Government Railways, New Glasgow, N.S.

C. A. Hayes, who has been appointed General Manager, Lines Quebec Bridge and easterly, Canadian Government Railways, Moncton, N.B., was born at West Springfield, Mass., Mar. 10, 1865, and entered railway service in 1882, since when he has been, to 1884, clerk, Freight Auditor's office, Connecticut River Rd., now Boston & Maine Rd.; 1884 to Oct., 1887, similar position, Boston & Lowell Ry., Boston, Mass.; Oct., 1887, to Nov., 1890, clerk, General Freight Agent's office, Boston & Lowell Ry., and its successor, Boston & Maine Rd.; Nov., 1890, to June, 1892, General Freight and Passenger Agent, Central New England & Western Ry., Poughkeepsie, N.Y.; June to Oct., 1892, Division Freight Agent, Philadelphia & Reading Rd., while it had control of the C.N.E. & W.R., Hartford, Conn.; Oct., 1892, to June, 1896, New England Agent, National Despatch Line, Boston, Mass.; June, 1896, to July, 1899, New England Agent and acting General Manager, National Despatch Line, Boston, Mass.; July, 1899, to May, 1903, Manager, National Despatch-Great Eastern Line, Buffalo, N.Y.; May, 1903, to Apr., 1908, Assistant General Freight Agent, G.T.R., Chicago, Ill.; Apr., 1908, to Oct. 16, 1911, General Freight Agent, G.T.R., Montreal; Oct. 16, 1911, to June, 1913, Freight Traffic Manager, G.T.R., Montreal; June, 1913, to June 1, 1917, Freight Traffic Manager, Canadian Government Railways, Moncton, N.B.

Frederick Passmore Gutelius, M.Can. Soc.C.E., was has resigned as General Manager, Canadian Government Railways, Moncton, N.B., on his appointment as Vice President, Delaware & Hudson Co., Albany, N.Y., was born at Mifflinburg, Pa., Dec. 21, 1864, and graduated from Lafayette College as civil engineer in 1887. He entered railway service in 1888, since when he has been, to 1892, Assistant Engineer and Assistant Supervisor, Pennsylvania Rd., Pittsburg, Pa.; 1885 to 1898, General Superintendent, Columbia & Western Ry.; 1898 to 1900, Superintendent, C.P.R., Nelson, B.C.; 1900 to 1902, in various positions in Engineering Department, C.P.R.; 1902 to Mar., 1906, Engineer Maintenance of Way, C.P.R., Montreal; Mar., 1906, to Sept. 15, 1908, Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal; Sept. 15, 1908, to Dec. 30, 1910, General Superintendent, Lake Superior Division, C.P.R., North Bay, Ont.; Dec. 30, 1910, to Jan., 1913, General Superintendent, Eastern Division, C.P.R., Montreal; Jan., 1912, to Apr. 30, 1913, one of the commissioners investigating expenditures and other matters in connection with the construction of the National Transcontinental Ry. On the abolition of the Government Railways Managing Board in May, 1913, he was appointed General Manager, Canadian Government Railways, with all powers usually vested in the executive of railway corporations, reporting to the Minister of Railways and Canals. The appointment was for a definite period of two years, and thereafter during the Minister's pleasure, at a salary of \$20,000 a year. It is said that his position with the Delaware & Hudson Co. carries a salary of \$25,000 a year.

John Duncan McNutt, appointed Inspector of Train Dispatching, Canadian Government Railways, Moncton, N.B., recently, was born at Stewiacke, N.S., Feb. 8, 1873, and entered Intercolonial Ry. service in 1889, since when he has been, to 1890, telegraph operator, Stewiacke, N.S.; 1890 to 1891, relieving agent; 1891 to 1893, operator in dispatcher's office.

Truro, N.S.; 1893 to 1896, dispatcher, Truro, N.S.; 1896 to 1898, dispatcher, Moncton, N.B.; 1898 to 1900, dispatcher, New Glasgow, N.S.; 1900 to 1904, Chief Dispatcher, Sydney, N.S.; 1904 to 1906, Chief Dispatcher, Fredericton, N.B.; 1906 to 1909, Chief Dispatcher, Newcastle, N.B.; 1909 to Mar. 15, 1917, dispatcher, and acting Chief Dispatcher, Truro, N.S.

James E. Johnson, whose appointment as Division Engineer, Canada Division, Michigan Central Rd., St. Thomas, Ont., was announced in our last issue, was born at Tipton, Ind., Aug. 25, 1883, and entered railway service, Mar. 1, 1905, since when he has been, to June 1, 1905, rodman, Cincinnati, Hamilton & Dayton Ry., Hamilton, Ohio; June 1 to Nov. 1, 1905, rodman, Lake Shore & Michigan Southern Ry., Dunkirk, N.Y.; Nov. 1, 1905, to Aug. 1, 1906, assistant on construction, Vandalia Rd., Terre Haute, Ind.; Aug. 1, 1906, to Feb. 1, 1907, transit

F. P. Gutelius, M.Can.Soc.C.E.,
Vice President, Delaware and Hudson Company.

man, Missouri Pacific Ry., St. Louis, Mo.; Feb. 1, 1907, to Oct. 1, 1912, Division Engineer, Hocking Valley Ry., Logan, Ohio; Oct. 1, 1912, to Apr. 16, 1917, Division Engineer, Pere Marquette Rd., Saginaw, Mich.

Saskatchewan Branch Can. Soc. C. E.—The following officers and committee were elected at the organization meeting in Regina, May 10: Chairman, L. A. Thornton, City Commissioner, Regina; Vice Chairman, G. D. Mackie, Moose Jaw; Secretary, J. N. de Stein, Regina; Executive Committee; H. S. Carpenter, E. G. W. Montgomery, Regina; A. H. Dion, Moose Jaw Electric Ry.; C. J. Yorath, City Commissioner, Saskatoon; Prof. A. R. Greig, Saskatoon.

St. John Valley Ry. Directorate.—Owing to the recent change of government in New Brunswick, J. D. Palmer, Fredericton; F. W. Sumner, Moncton; R. O'Leary, Richibucto, and W. S. Fisher, St. John, have resigned as directors of the St. J. V., and the following directors have been appointed: Hon. W. P. Jones, Chairman and Chief Counsel; C. O. Foss, Chief Engineer; E. S. Carter, Secretary and Treasurer; Hon. W. E. Foster and Hon. C. W. Robinson.

Canadian Pacific Railway Construction, Betterments, Etc.

Ontario District.—A press report states that the company is about to erect a bridge of three 27 ft. spans over Buell's Creek, Brockville, Ont.

The Board of Railway Commissioners has approved the plans for a second track on the line from Leaside Jct. to North Toronto. The plans provide for the erection of two bridges across the North Rosedale ravines, and for level crossings at Summerhill, Maclellan, and Bayview Avenues and on Todmorden Road. The Canadian Northern Ry. will connect with this Leaside-North Toronto line, at the east end of the West Don viaduct, from which point to North Toronto station, and west to the end of the track elevation along the north of the city, the track will be operated jointly with the C.N.R.

A press report states that the company is about to erect a bridge of three 35 ft. steel spans over London St., at Windsor, Ont.

Saskatchewan District.—A bylaw is to be submitted to Regina ratepayers to provide \$15,000, in addition to \$32,000 already voted towards the construction of a subway, instead of an overhead bridge, at the Hamilton St. crossing of the C. P. R.

The Regina City Council has approved plans for the extension of a spur track through Lots 3 and 4 in order to connect with the main spur in Block 138, subject to the company being prepared to make any necessary changes should the other lots in the block be linked up.

The recently completed line between Assiniboia and Vanguard, Sask., will, it is reported, be opened for traffic early in June, when a train service will be operated from Moose Jaw through to Shaunavon, on the Weyburn-Lethbridge line. The district between Weybridge and Assiniboia will it is stated, be served by a train making the round trip between the two points daily. The report does not say what service will be given between Shaunavon and the Saskatchewan-Alberta boundary, to which point track has been laid.

Alberta District.—The City of Lethbridge has to the credit of the 13th St. Subway account \$13,000 which it proposes to invest until such time as the C. P. R. is prepared to make the subway carry 4 tracks instead of the 2 now laid. The original plans provided for a subway carrying 4 tracks, but it was decided to lay only 2 tracks until traffic conditions warranted the additional trackage. (May, pg. 182).

Calgary Branch Can. Soc. Civil Engineers.—J. S. Dennis, Chief Commissioner of Colonization and Development, C.P.R., and President, Canadian Society of Civil Engineers, was the guest of honor at the annual dinner of the Calgary, Alta., branch, April 26. The event of the evening was the unveiling of an honor roll containing the names of the members of the branch who were absent on military service. It contains 19 names, representing one-third of the membership of the branch.

The Northwestern Elevator Co., Ltd., has been incorporated under the Ontario Companies Act, with \$250,000 capital, and office at Fort William, to build, own and operate grain elevators, warehouses, etc., and to own and operate steam and other vessels, docks, wharves, railway rolling stock, and other transportation facilities.

The British Columbia Institute of Civil Engineers has formed a branch in Vancouver, B.C. The original branch of the institute was formed some months ago in Victoria.

Canadian Northern Railway Construction, Betterments, Etc.

Ontario Division.—The connecting link between the C.N.R. Toronto-Sudbury line and the Leaside-North Toronto line at present under construction, will run from the station yard at Duncan to a connection with the C.P.R. near the east end of the West Don bridge, 2.2 miles. We are officially advised that the work has been nearly completed. The junction switches at Donlands have not yet been put in, and there is still some work to be done on one highway and several private crossings, also some ditching. Other completion work is in progress. The C.P.R. line from West Don to the eastern end of the North Toronto double track grade elevation, is to be made a double track line (see C. P. R. Betterments, etc., on another page) and will be used jointly. Angus Sinclair is the contractor for the C. N. R. work.

From the east end of the C.P.R. West Don bridge a line has been located to a junction with the company's Ottawa-Toronto line near Scarborough Village, 4 miles. The Board of Railway Commissioners has been asked to approve a revision of this route, which necessitates the alteration of the plans previously prepared for the building of a viaduct over the Don River. It is expected that work will be started on this piece of line as soon as possible after the revised plans are approved.

The company's yards and terminals at Leaside will adjoin those laid out by the C. P. R.

Western Lines.—M. H. MacLeod, General Manager and Chief Engineer Western Lines, is reported to have said or inferred at Vancouver, that the most important work to be carried out during this year would be the laying of an additional mileage of heavy rails on the main line between Winnipeg and Edmonton, in place of the present rails, which would be utilized elsewhere; the laying of track on the Oliver-St. Paul de Metis line, the completion of the Vancouver terminal, the completion and permanent opening of the ferry to Patricia Bay and the line into Victoria, and the laying of steel on the Victoria-Port Alberni line. If steel could be procured work would be gone on with on the branch from Kamloops into the Okanagan Valley.

We are officially advised that the company placed contracts for about 750,000 ties between Port Arthur and Warroad; for approximately 400,000 ties between Fort Frances and Duluth, for about 600,000 ties in the vicinity of Edmonton and west of that point, and for 200,000 ties in British Columbia. Owing to labor scarcity deliveries are slow coming in, and will fall short of the requisitions.

Central Division.—The Board of Railway Commissioners has refused the company's application for a change of levels in its subway at Water St., St. Boniface, Man. The principal reason given is that it would interfere with the Provencher Ave. bridge now under construction across the Red River, on the line of Water St., by the cities of St. Boniface and Winnipeg, the Board's Chief Engineer advising that it would not be safe to lower the grade of the west end and of the Provencher Ave. bridge. The substructure for four of the pieces is reported to be practically completed, and pier 5 and the approaches are reported to be well forward. The Dominion Bridge Co. is preparing to erect the superstructure.

Western Division.—Ballasting on the Goose Lake branch was resumed at the end of April, and it is expected to complete the work this season. There is considerable work to be done on the road-bed between McGee and Kindersley, Sask., and the heaviest ballasting work has to be done between Kindersley and Calgary, Alta. About 500 Chinese are reported to be engaged in the work.

A press report states that the bridge across the Sturgeon River, on the Oliver-St. Paul de Metis branch, Alta., has been completed and that track laying has been restarted.

Pacific Division.—It is reported that a regular ferry service has been started between Port Mann, on the Fraser River, and Patricia Bay on Vancouver Island, and that a train service is being operated from Patricia Bay to Victoria. Three trips are made a day between these points by a gasoline-electric car. (May, pg. 195).

Canadian Coal Fields, Ltd., has been incorporated under the Dominion Companies Act, with \$10,000,000 capital and office at Toronto, to acquire and operate coal lands and other properties, and in connection therewith to own and operate steam and other vessels, wharves, docks, etc., tramways, aerial carriers and other shipping and handling facilities. The incorporators are, F. H. Phippen, K.C., A. J. Reid, K.C., R. H. M. Temple, W. Bowler and F. C. Allen, Toronto, all of whom are connected with the Canadian Northern Ry. legal department.

Railway Lands Patented.—Letters patent were issued during April in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acres.
Calgary and Edmonton Ry.	1,436.15
Canadian Northern Ry.	160.00
Canadian Pacific Ry. roadbed and station grounds	8.70
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	3,511.66
Total	5,116.51

German Locomotives.—In a recent prize court case in England, an affidavit was read to the effect that from information in the British Government's hands, 8,000 locomotives were laid up at Essen alone during March, on account of wear and tear due to the scarcity of lubricating oils in Germany, or to the use of bad lubricants.

Grain Elevator for Port Stanley.—The London Railway Commission, operating the London and Port Stanley Ry., is reported to have issued instructions for the preparation of drawings of the pier and requisite lands for the erection of a grain elevator at Port Stanley, Ont.

Summer Excursions Banned.—At a meeting of the Eastern Canadian Passenger Association at Hamilton, Ont., May 8, it was decided that no summer excursions be run this year, as the locomotives and train crews are required for freight traffic.

The Canadian Northern Ry.'s Agricultural Department at Winnipeg has sent out flower seeds for planting at its stations. Arrangements are being made to supply vegetable seeds to the agents.

The Great North Western Telegraph Co. has opened offices at Beaumaris, Ont.; Vawn, Sask., and Rosebud, Alta., and has closed its offices at Dwight and Odessa, Ont.

The Canadian Pacific Ry. has issued a booklet describing the northwest country reached by its lines, for use in promoting immigration.

George Bury's Work in the War.

As stated in Canadian Railway and Marine World's last issue, George Bury, Vice President, C.P.R., returned to Canada, April 25, after being absent from Jan. 23, during which time he visited Russia as a member of the special British commission headed by Lord Milner. When Mr. Bury reached England, Lord Milner and the other members of the mission were already in Russia, so he proceeded by rail to the north of Scotland, whence he was conveyed on a fast destroyer to Bergen, in Norway, going thence by rail to Petrograd, and being there during the revolution. He travelled over the principal Russian railways from Lapland to the Caucasus, accompanied by Russian Government railway officials, made a thorough inspection, and on his return to England, presented very comprehensive reports to the War Cabinet, for which he was warmly thanked in a letter from Mr. Lloyd George.

On his return to Montreal he stated in an interview, among other things: "There is no doubt whatever that after the war Russia will have to build several hundred thousand miles of railway. Canada has ten times more railway mileage per unit of population than has Russia. Then, again, Russia made the mistake of patterning her railway transportation after that of Europe rather than America. Traffic in Russia moves vast distances in great bulk. The country lends itself to low grades and easy curvature. If that great country is to achieve the destiny in store for her she will have to come to the large train and large car, because these two factors make for economical transportation, and economical transportation is essential if a producing country of wide distances is to hold her own in the markets of the world. Had Russia been equipped with railway transportation, say as in Canada, she would have been able to have played a much greater part in the war."

The selection of Mr. Bury to go to Russia, which was the personal act of Premier Lloyd George, was undoubtedly one of the greatest compliments ever paid to a Canadian railway official, and a recognition of the outstanding position he occupies as a transportation authority. Only a few days after his return to Montreal, he was invited by President Wilson to go to Washington, and while there he had conferences with the advisory committee of the Council for National Defence, and with the leading railway executive heads, at which he undoubtedly fully explained Russia's necessities from a railway standpoint. A few days later it was announced that President Wilson had decided to send a railway commission to Russia consisting of J. F. Stevens, of New York, former Chief Engineer of the Panama Canal, Chairman; W. L. Darling, of St. Paul, Chief Engineer of the Northern Pacific Ry.; Henry Miller, of St. Louis, former operating Vice President of the Wabash Ry.; George Gibbs, of Philadelphia, former Chief Mechanical Engineer of the Pennsylvania Rd.; and J. P. Griner, of Baltimore, Chief Consulting Engineer of the Baltimore & Ohio Rd. Before leaving the United States the commission arranged to furnish the Russian Government with a large amount of locomotives, railway cars and materials, based, no doubt, on Mr. Bury's report of the requirements.

When in New York, on his return trip from Washington, Mr. Bury said, in an interview, among other things: "I have

heard unthinking people say that the U.S. railways might be found wanting. It must be remembered that there is no such vast movements of freight traffic anywhere in the world as on the American continent, and that when the people think as at war, rather than as at peace, and allow the American railways to take the action that is now followed in Europe, the American railways will be equal to any task. If the American railways were called upon to move large bodies of troops and supplied the same accommodation as in Europe, they would be in a position to move a vastly greater number in a shorter time. In Europe during war troops are moved in freight cars, when passenger equipment is not available.

"In Europe the passenger service has been curtailed, and the trains left on

George Bury,
Vice President, Canadian Pacific Railway.

slowed up, and the running of fast freight trains discontinued. Canada and the United States will have to bend every effort to increase the food surpluses by extra production and saving. Large fleets of ships will have to be built to supply Europe with the necessary food. Troops will have to be raised, and a grave labor shortage will immediately materialize unless some means are taken to substitute women for men where the work will admit, and of placing the male population in employments of necessity to win the war; cutting off all frills until after the cause of humanity has been saved. The passenger service ought to be reduced and slowed up; and fast freight service replaced with full trains. This would result in an immense saving of fuel, oil and labor. By other reductions, essentials in times of peace, but non essentials in times of war, such as the closing of outside agencies, taking off freight and passenger canvassers, etc., etc., a number of men would be released for other services. Some of the other belligerent countries, probably through under estimation of the length of the war, or through their eagerness to raise a

large army, drew men that could not be spared from essential employments, causing disruption, which made it necessary to return men from the front for transportation, mining and manufacturing. Some of these nations allowed their cars and locomotives to get out of repair, which has had unfortunate results.

"When the history of the war comes to be written, it will be found what effect efficient transportation has had on victories and how inefficient transportation has brought about dire defeats. You are to be congratulated in so quickly forming a central committee in Washington to deal with the major matters of transportation in the United States as a whole, with such an able chairman and executive. If supported by public opinion, they can quickly make the drastic moves necessary in this crisis."

Mr. Bury was accompanied throughout his European trip by W. H. Winterrowd, Assistant to the Chief Mechanical Engineer, C.P.R., who acted as his secretary.

New Publications Received.

Any of the books mentioned under this heading can be obtained through Canadian Railway and Marine World.

Railway Estimates, Design, Quantities and Costs, by F. Lavis, M.Am.Soc.C.E., member American Railway Engineer Association, special lecturer, railway engineering, Yale University. Cloth, 6 x 9 in., 607 pages; with numerous diagrams and plans. New York, McGraw Hill Book Co., 239 West 39th St. \$5 net.

Railway Nationalization and the Average Citizen, by W. H. Moore. Cloth, 5 x 7½ ins.; 181 pages., Toronto, McClelland, Goodchild & Stewart. \$1.35.

The Irresponsible Five, a new family compact. By W. H. Moore. 5 x 7 ins.; 67 pgs. Toronto: McClelland, Goodchild and Stewart. Cloth, 50c; paper, 35c.

Winnipeg Traffic Club.—The opening meeting of this newly organized club was held April 26, when an address was delivered by W. R. Ingram, Chairman of the Manufacturers' Association, and of the Industrial Bureau, upon the transportation end of business. The President of the club is S. W. Thomas, of the Allan Line; P. D. Dennison is the President, and G. W. Travis is Secretary. The club has about 350 members, and was organized to promote the several interests of transportation men and provide a central meeting place.

Rails for Canadian Government Railways.—Ottawa dispatch, May 16: Arrangements are being made whereby rails required for renewal purposes on the government lines, the Intercolonial and National Transcontinental, may be rolled in Canada. Negotiations are in progress with the Imperial Munitions Board to secure the release of the necessary steel. It is probable that some of the rails will be turned out at Sault Ste. Marie and others at Sydney, obviating the need of importation.

G. T. R. Track Maintenance.—A book of instructions regarding the work of maintaining the track at the highest standard of efficiency has been issued to G. T. R. maintenance of way employes by H. R. Safford, Chief Engineer. The duties of every class of men in the department having the safety of trains in charge are outlined and illustrated.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Steamship Lines, Ltd.—W. J. ROBINSON, heretofore District Freight Agent, Windsor, Ont., has been appointed District Passenger and Freight Agent, Hamilton, Ont.

P. J. PEER, heretofore chief clerk, Passenger Department, Hamilton, Ont., has been appointed City Passenger and Freight Agent, Hamilton, Ont.

J. J. LYNCH has been appointed General Agent, Windsor, Ont.

Canadian Government Railways.—On May 21 we were semi-officially advised from Ottawa that consequent on F. P. GUTELIUS' resignation, to become Vice President of the Delaware & Hudson Co., C. A. HAYES, General Traffic Manager, C.G.R., would be appointed to succeed him as General Manager; that D. A. STORY, General Freight Agent, would succeed Mr. Hayes; that J. K. McNEILLIE, General Superintendent at Moncton, would continue in charge of the Prince Edward Island Ry., the Intercolonial Ry. and the portion of the National Transcontinental Ry. east of the St. Lawrence River, that is, between Moncton and Levis; that F. P. BRADY, General Superintendent, at Cochrane, would continue in charge of the National Transcontinental Ry. west of the St. Lawrence River, and that L. S. BROWN, Superintendent at New Glasgow, N.S., would be appointed as Assistant to Mr. McNeillie. On May 28 we were officially advised from Ottawa that the Minister of Railways had appointed C. A. HAYES, General Manager, Canadian Government Railways, east of the St. Lawrence River, and of Quebec City and Bridge; that he had appointed F. P. BRADY, General Manager of the Canadian Government Railways west of the Quebec Bridge, including the Fort William Branch. Up to May 29, no circulars announcing any of these appointments were available.

J. A. EVERELL, heretofore District Passenger Agent, C.G.R., Montreal, and Superintendent, Montmorency Division, Quebec Ry., Light & Power Co., Quebec, Que., is now devoting his entire time to the Quebec & Saguenay Ry., with the title of Superintendent. Office, Quebec, Que.

T. SAMSON, whose appointment as Travelling Passenger Agent was announced in our April issue, has his headquarters at Quebec, and not at Montreal, as stated.

A. J. ROBERTS, heretofore District Master Mechanic, District 2, Transcontinental Division, Grant, Ont., has been appointed Locomotive Foreman, vice W. Hamilton, transferred.

W. H. ROACH, heretofore locomotive man, Grant, Ont., has been appointed District Master Mechanic, District 2, Transcontinental Division, vice A. J. Roberts, transferred. Office, Grant, Ont.

W. HAMILTON, heretofore Locomotive Foreman, Cochrane, Ont., has been appointed Locomotive Foreman, Armstrong, Ont.

Canadian Northern Ry.—G. EASSON and J. W. DIXON have been appointed Travelling Freight Agents, Toronto.

T. J. BURK, F. R. LOCHE and W. J. DUFFY have been appointed Contracting Freight Agents, Toronto.

R. C. GADSBY and R. M. LALOR have

been appointed Travelling Passenger Agents, Toronto.

A. S. DAVIS has been appointed Soliciting Passenger Agent, Toronto.

G. A. GOULD has been appointed ticket agent, Toronto Union Station, vice R. R. Cooper.

C. A. Hayes,
General Manager, Lines Quebec Bridge and easterly, Canadian Government Railways.

F. P. Brady,
General Manager, Lines from Quebec Bridge westerly, Canadian Government Railways.

P. A. ROONEY has been appointed Travelling Passenger Agent, Winnipeg, vice B. Brown.

F. A. SHAW, heretofore Division Freight Agent, lines west of Ottawa and east of Port Arthur, Ont., Toronto, has

been appointed General Agent, Freight and Passenger Departments, Detroit, Mich. Office, Majestic Building.

R. LOGAN has been appointed Travelling Agent, Detroit, Mich.

J. F. MONGAN has been appointed chief clerk, Detroit, Mich.

T. F. CARTHY has been appointed chief clerk, Chicago, Ill.

S. C. CORFIELD has been appointed Contracting Agent, Pittsburg, Pa.

Canadian Pacific Ry.—R. U. PARKER, General Passenger Agent, Dominion Atlantic Ry., Kentville, N.S., has also been appointed Assistant District Passenger Agent, C.P.R., Halifax, N.S., reporting to N. R. DesBrisay, District Passenger Agent, St. John, N.B. Office, 117 Hollis St., Halifax.

A. O. WOLFF, Resident Engineer, Chapeau, Ont., is reported to have been appointed Resident Engineer, Brownville Jct., Me., vice N. E. Gutelius transferred.

E. BOWIE, heretofore Locomotive Foreman, Sherbrooke, Que., has been appointed Locomotive Foreman, Smiths Falls, Ont., vice C. A. Wheeler, promoted.

C. L. LEIGHTY, heretofore Inspector of Transportation, Eastern Lines, Montreal, has been appointed Superintendent of Telegraph, Ontario District, vice H. J. Lillie, appointed chief operator. Office, Toronto.

N. E. GUTELIUS, heretofore Resident Engineer, Brownville Jct., Me., has been appointed Resident Engineer, Sudbury, Ont., vice V. T. Boughton, enlisted for active service.

C. A. WHEELER, heretofore Locomotive Foreman, Smiths Falls, Ont., has been appointed General Locomotive Foreman, North Bay, Ont., vice W. Wells, promoted.

T. HAMBLY, heretofore Division Master Mechanic, Sudbury Division, Algoma District, Sudbury, Ont., has been appointed acting Master Mechanic, Algoma District, vice J. H. Mills, resigned. Office, North Bay, Ont.

W. WELLS, heretofore General Locomotive Foreman, North Bay, Ont., has been appointed Division Master Mechanic, Sudbury Division, Algoma District, vice T. Hambly, transferred. Office, Sudbury, Ont.

J. R. C. MACREDIE, M.Can.Soc.C.E., heretofore Resident Engineer, Connaught Tunnel, has been appointed Engineer, Saskatchewan District, with office at Moose Jaw, and not Resident Engineer there, as inadvertently stated in a recent issue.

W. G. McPHERSON, heretofore General Foreman, Moose Jaw, Sask., has been appointed Division Master Mechanic, Saskatchewan District, vice S. W. Falkins, transferred. Office, Regina.

F. C. JOHNSON, heretofore Night Locomotive Foreman, Moose Jaw, Sask., has been appointed General Foreman there, vice W. G. McPherson, promoted.

J. H. SCOTT, heretofore Chief Dispatcher, Saskatoon, Sask., has been appointed Car Service Agent, Alberta District. Office, Calgary.

J. YORSTON, heretofore of the construction department, has been appointed Resident Engineer, Lethbridge, Alta., vice E. B. Skeels, resigned.

H. M. SMITH, heretofore Trainmaster, Medicine Hat, Alta., has been appointed Trainmaster, MacLeod, Alta., vice W. E. Cline, transferred.

W. E. CLINE, heretofore Trainmaster, MacLeod, Alta., has been appointed

Trainmaster, Medicine Hat, Alta., vice H. M. Smith, transferred.

Delaware & Hudson Co.—C. S. SIMS, heretofore Vice President, Albany, N.Y., has been appointed Resident Vice President, Montreal.

F. P. GUTELIUS, heretofore General Manager, Canadian Government Railways, Moncton, N.B., has been appointed Vice President in charge of Operating and Traffic Departments, D. & H. Co., vice C. S. Sims, transferred. Office, Albany, N.Y.

Grand Trunk Pacific Ry.—The following station agents have been appointed: Zelma, Sask., D. J. Harnett; Lewvan, Sask., H. House; Gilroy, Sask., E. Briggs; Dodsland, Sask., W. G. M. Corregan; New Norway, Alta., J. W. McGhee.

Grand Trunk Ry.—H. A. CARSON has been appointed City Freight Agent, Montreal, vice A. E. Clare, resigned.

G. PYE, heretofore Road Foreman of Locomotives, Ottawa Division, Ottawa, has been appointed General Foreman, Motive Power House, Ottawa, vice D. J. McCuaig, whose appointment as Master Mechanic, Ontario Lines, Toronto, was announced in a recent issue.

L. I. STONE, heretofore Assistant Engineer, London, Ont., has been appointed Assistant Engineer, Toronto.

W. R. FRASER has been appointed Assistant Engineer, Allandale, Ont., vice W. G. Swartz, transferred.

C. S. COINE has been appointed Assistant Engineer, London, Ont., vice L. I. Stone, transferred.

The following station agents have been appointed: Windsor Mills, Que., J. A. Leroche; Hoards, Ont., W. D. Locke; Utterson, Ont., A. M. Clarke; Parkdale, Ont., F. A. Bamber; Paris Jct., Ont., H. G. Simmons; London East, Ont., J. Gilpin; Pinkerton, Ont., F. F. Phillips; Barrys Bay, Ont., F. Folkard; Whitney, Ont., A. W. Simpson.

Great Northern Ry.—E. C. LEWIS has been appointed Freight Claim Agent, vice G. W. Perry, resigned. Office, St. Paul, Minn.

Lehigh Valley Rd.—T. J. HENNESSEY, heretofore Soliciting Freight Agent, Toronto, has been appointed Soliciting Freight Agent, Chicago, Ill.

V. A. FRADENBURG, heretofore chief clerk to Canadian Freight Agent, Toronto, has been appointed Soliciting Freight Agent, Toronto, vice T. J. Hennessey, transferred.

Michigan Central Rd.—A. G. OLDRIEVE, heretofore in the St. Thomas shops, has been appointed Roundhouse Foreman, Montrose, Ont., vice J. R. Sands, transferred.

J. R. SANDS, heretofore Roundhouse Foreman, Montrose, Ont., has been appointed Roundhouse Foreman, Windsor, Ont., vice J. Farrell, who has been granted leave of absence through illness.

New York Central Rd.—D. W. DINAN, heretofore Superintendent, Mohawk Division, Albany, N.Y., has been appointed General Superintendent, 2nd District, Buffalo, N.Y., vice C. Christie.

D. L. SOMMERVILLE, heretofore Superintendent, St. Lawrence Division, Watertown, N.Y., has been appointed Superintendent, Mohawk Division, Albany, N.Y., vice D. W. Dinan, promoted.

H. SCOTT has been appointed Superintendent, Ontario Division, Oswego, N.Y., vice J. W. Evans.

L. S. EMERY has been appointed Superintendent, St. Lawrence Division, Watertown, N.Y., vice D. L. Sommerville, transferred.

Pere Marquette Ry.—Under the recent reorganization, the name of the company has been changed from Pere Marquette Rd. to Pere Marquette Ry., and the following organization:

E. N. BROWN, Chairman of the Board. Office, New York.

F. H. ALFRED, heretofore General Manager for the Receivers, President and General Manager. Office, Detroit, Mich.

J. L. CRAMER, heretofore Comptroller for the Receivers, Secretary and Treasurer. Office, Detroit, Mich.

A. E. BADGER, Assistant to the President and General Manager, Detroit, Mich.

A. L. GRANDY, heretofore Chief Engineer, Assistant General Manager, Detroit, Mich.

H. O. HALSTEAD, heretofore Superintendent of Transportation, General Superintendent, Detroit, Mich.

L. S. Brown,
Assistant to General Superintendent, Intercolonial
Division, Canadian Government Railways.

E. M. HEBERD, Assistant Secretary, New York.

J. TUTHILL, Chief Engineer, vice A. L. Grandy, promoted, Detroit, Mich.

C. S. SHELDON, Engineer of Bridges and Buildings, Detroit, Mich.

J. L. HAYES, heretofore Superintendent, Port Huron-Grand Rapids Division, Saginaw, Mich., Superintendent, Toledo-Ludington Division, vice A. R. Merrick, Saginaw, Mich.

J. A. ANDERSON, Superintendent, Port Huron-Grand Rapids Division, Saginaw, Mich., vice J. L. Hayes, transferred.

A. C. RHODES, heretofore Chief of Bureau, Departmental Accounts, Auditor Station Accounts, Detroit, Mich.

O. L. KINNEY, heretofore District Passenger Agent, Toledo, Ohio, Western Passenger Agent, Chicago, Ill.

J. K. COOPER, heretofore City Passenger and Ticket Agent, Grand Rapids, Mich., District Passenger Agent, Toledo, Ohio, vice O. L. Kinney, promoted.

W. S. BAKE, Land Agent, Detroit, Mich.

W. W. BRACY, stationer, Detroit, Mich.

C. J. RIST has been appointed Division Engineer, Toledo-Ludington Divi-

sion, Saginaw, Mich., vice J. E. Johnson, resigned to enter Michigan Central Rd. service.

Quebec & Saguenay Ry.—See Canadian Government Railways.

Quebec, Montreal & Southern Ry., Napierville Jct., Ry.—See Delaware & Hudson Co.

St. John Valley Ry.—W. P. JONES has been appointed President and General Solicitor, Fredericton, N.B.

E. S. CARTER has been appointed Secretary, Fredericton, N.B.

C. O. FOSS, formerly District Engineer, National Transcontinental Ry., St. John, N.B., has been appointed Chief Engineer, St. J.V.R., Fredericton, N.B.

Spokane International Ry.—E. PENNINGTON, President, Minneapolis, St. Paul & Sault Ste. Marie Ry., Minneapolis, Minn., has also been elected President, Spokane International Ry., vice D. C. Corbin, who retired on the acquirement of the railway by the C.P.R., mention of which was made in our last issue.

E. S. McPHERSON, heretofore Assistant Secretary, Minneapolis, St. Paul & Sault Ste. Marie Ry., Minneapolis, Minn., has been appointed Assistant to the President, Spokane International Ry. Office, Spokane, Wash.

G. W. WEBSTER, Secretary, Minneapolis, St. Paul & Sault Ste. Marie Ry., has also been appointed Secretary and Treasurer, S.I.R. Office, Minneapolis, Minn.

Following are other officers of the organization:

A. R. HERRICK, Assistant Secretary and cashier, Spokane, Wash.

J. E. HANIFEN, Superintendent, vice E. J. Roberts. Office, Spokane, Wash.

G. H. MARTIN, General Freight and Passenger Agent, Spokane, Wash.

E. F. CARDLE, Assistant General Freight and Passenger Agent, Spokane, Wash.

C. H. PRESCOTT, Master Mechanic, Spokane, Wash.

J. C. WILLIAMS, Auditor, Spokane, Wash.

Toronto, Hamilton & Buffalo Ry.—F. F. BACKUS, heretofore Assistant to the President, has been appointed General Manager, and his former position has been abolished. Office, Hamilton, Ont.

Wabash Ry.—The stores and purchasing departments have been separated and ERNEST BAXTER, heretofore Service Inspector, St. Louis, Mo., has been appointed General Storekeeper, reporting to the Vice President, vice A. J. Sewing, assigned to other duties. Office, St. Louis, Mo.

F. M. NOWELL has been appointed Superintendent, Detroit Terminal Division, which includes the line from Detroit to and including Oakwood yard. He is in charge of all the operating departments, and reports to the Superintendent, Locomotive and Car Department; Chief Engineer, Maintenance of Way, and Superintendent of Transportation, in matters relating to their respective departments. Office, Fort St. Union Station, Detroit, Mich.

Intercolonial Ry. Coal Contracts.—The Minister of Railways stated in the House of Commons recently that the Department had entered into contracts for the supply of coal as follows: Dominion Coal Co., 260,000 tons; Intercolonial Coal Co., 90,000 tons; Bras d'Or Coal Co., 10,000 tons; Milford Coal Co., 5,000 tons; Maritime Coal Co., 10,000 tons; Minudie Coal Co., 5,000 tons; Jones & McKinnon, 8,000 tons; M. F. Keith, 7,000 tons.

Traffic Orders by the Board of Railway Commissioners.

Alleged Underbilling of Freight.

26015. April 13. Granting the application of C.P.R. under section 400 of the Railway Act, for leave to prosecute G. C. Curtis, of Lacombe, Alta., for alleged fraudulent underbilling of certain shipments of freight.

Use of G.T.R. Yard in Montreal.

26055. April 20. Re complaint of G. H. Bavis of Montreal, that the G.T.R. refuses the use of its McGill St. yard, Montreal, for loading and unloading cartage freight. Upon hearing the complaint at Montreal, April 18, the Montreal Board of Trade and the railway company being represented, the complainant appearing in person; the railway companies having been required to justify the laying down or setting apart of certain tracks for the sole use of particular lines of traffic to the exclusion of others. It is ordered that the complaint be dismissed.

Demurrage on Grain at Niagara Frontier

26070. May 2. Re complaint of Toronto Board of Trade against assessment of demurrage at the Niagara frontier on cars containing Canadian grain for export through United States ports, while awaiting Canadian Government inspection; the inspection being a requirement of United States carriers. Upon hearing the complaint at Toronto, April 13, the Toronto Board of Trade, the Canadian Pacific, Grand Trunk, and Toronto Hamilton & Buffalo Railways, and the Michigan Central Rd being represented. It is ordered, that the complaint be dismissed.

Demurrage on Coal Cars.

26059. May 1. Re application of Retail Merchants Association of Canada, Toronto (Ontario Provincial Coal Section) for an order directing that, in cases where demurrage is charged on cars placed on public or private sidings and such charges are deemed by the shipper or consignee to be unreasonable, such shipper shall pay the charges under protest and may, within 10 days thereafter, appeal to the board, which shall determine such appeal, and, if the charges are found unreasonable, issue an order directing the carrier to refund the amount to the appellant, such order to be final. Upon hearing the application at Toronto, April 13, the applicants, the Grand Trunk, Canadian Pacific, and Canadian Northern Railways and the Michigan Central Rd. being represented, the application being withdrawn. It is ordered that the same be dismissed.

Potato Rates from Maritime Provinces.

26091. May 8. Re complaint of Jones & Jones, Woodstock, N.B., on behalf of shippers of potatoes in the Maritime Provinces, against the increased rates proposed to be charged by the Canadian Pacific and Temiscouata Railways under Tariffs C.R.C. no. E-3176 and C.R.C. 256 respectively, suspended until further order by order no. 25322, Aug. 30, 1916: Upon hearing the complaint at St. John N.B., Nov. 9th, 1916, it is ordered that order 25322, suspending C.P.R. Tariff, C.R.C. no. E-3176, and Temiscouata Ry. tariff, C.R.C. no. 256, be rescinded; provided that the rates in the said tariffs, where higher, be reduced to the St. John eighth-class basis, from stations shown therein on the Canadian Pacific and the Temiscouata Railways.

Rates on Binder Twine from Welland.

26102. April 20. Re complaint of Plymouth Cordage Co. against rates on

binder twine, in carloads, from Welland, Ont., to points east of Toronto, to and on hearing the complaint at Ottawa, Feb. including Kingston and Smiths Falls. Up-20, the complainant, the Canadian Manufacturers' Association, the Canadian Pacific and the Grand Trunk Railways and the Michigan Central Rd. being represented, it is ordered that the complaint be dismissed.

Freight Rates on Canned Goods.

26116. May 16. Re complaint of Regina Board of Trade and H. G. Smith, Ltd., of Regina, against the increased freight rates charged on canned goods and dried fruits, effective Mar. 1, 1917, from Pacific coast points to Regina. Upon hearing the complaints at Regina, Mar. 15, the Boards of Trade of Regina, Saskatoon, Moose Jaw, and Yorkton, the Canadian Manufacturers' Association, Codville & Co., Campbell Brothers & Wilson, the Provincial Retail Merchants' Association, and the Canadian Pacific, Canadian Northern, and Grand Trunk Pacific Railways being represented at the hearing, it is ordered that the complaints be dismissed.

Movement of Grain from Goose Lake District.

26117. May 16. Re movement of grain in the Goose Lake District, served by the Canadian Northern Railway and the transportation thereof. Upon its being represented to the board that it is necessary that grain should be moved just as soon as possible, in order to prevent loss, it is ordered that the Grand Trunk Pacific and the Canadian Pacific Railways be directed forthwith, as long as they continue to do so and as long as the emergency exists, to supply cars at the rate of 75 and 50 a day respectively, to the Canadian Northern at the transfer track at Saskatoon; the said cars to be taken into the Goose Lake District by the Canadian Northern, loaded, and returned to the Grand Trunk Pacific and the Canadian Pacific Railways at Saskatoon for furtherance to the elevators at the head of the lakes. That the through rates for the joint carriage of the said grain, as herein proscribed, shall be the rates published and filed by the Canadian Northern for the carriage of grain over its own rails, or jointly with its eastern connections, as so published, east of Saskatoon, from the said points of shipment to the same destinations; the allocation of the said joint rates between the carriers hereby made parties thereto to be arranged between themselves within one week from the date of this order, and, failing such arrangement, to be settled by the board, subject to such submissions in relation thereto as either railway company may desire to make, provided that the uninterrupted movement of the said grain be not impaired pending such settlement.

Algoma Eastern Ry. Interswitching.

26121. Re order, April 16, 1917, granting leave to Algoma Eastern Ry. to charge interswitching rate of 1c per 100 lb. shown in its tariff, C.R.C. no. 169, from Feb. 15, 1917. Upon reading the submissions filed, and the report of the Board's Chief Traffic Officer, it is ordered that the said order be amended by striking out the words, "from the effective date of the said tariff, viz., Feb. 15, 1917," in the two last lines of the order. And it is further ordered that Supplement 2 to Algoma Eastern Ry. Co.'s Tariff, C.R.C. 169, be amended by striking out the words, "effective Feb. 15, 1917."

Moncton & Buctouche Ry. Tariff.

26156. The application of Moncton & Buctouche Ry. Co., under sec. 327 of the Railway Act, for approval of its Standard Freight Mileage Tariff, C.R.C. no. 25. Upon the report and recommendation of the Board's Chief Traffic Officer, it is ordered that the tariff be approved. And it is further ordered that order 25737, Dec. 20, 1916, approving the company's Standard Freight Mileage Tariff, C.R.C. no. 23, be rescinded.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

- Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.
- Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.
- Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.
- Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.
- Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.
- Canadian Society of Civil Engineers—C. H. McLeod, 176 Mansfield St., Montreal.
- Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.
- Dominion Marine Association—F. King, Counsel, Kingston, Ont.
- Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.
- Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.
- Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.
- Express Traffic Association of Canada—C. N. Ham, Montreal.
- Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.
- Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.
- Niagara Frontier Summer Rate Committee—James Morrison, Montreal.
- Nova Scotia Society of Engineers—A. R. McCleave, Halifax, N.S.
- Quebec Transportation Club—A. F. Dion, Quebec.
- Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacrament Street, Montreal.
- Ship Masters' Association of Canada—Capt. E. Wells, 45 St. John Street, Halifax, N.S.
- Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.
- Transportation Club of Vancouver—H. W. Schofield, 553 Granville Street, Vancouver, B.C.
- Twin Cities Local Freight Agents' Association—E. J. Travers, Fort William, Ont.
- Winnipeg Traffic Club—James Gebrey, Bannatyne Avenue, Winnipeg, Man.

New Heavy Freight Car.—The Pennsylvania Ry. is building a hopper car of 85 tons capacity to a design for large load capacity and large bulk capacity in combination. The light weight of the car will be 60,000 lb. Its load capacity will be 170,000 lb., and its volume capacity level with top will be 2,900 cu. ft. The loaded weight will be 115 tons; and as the trucks will be four-wheeled, each axle will carry a load of 57,500 lb. under full load. The car will be 48 ft. 4 in. long over end sills and 38 ft. 4 in. between truck centres. As the trucks will have 5 ft. wheelbase, a pair of such cars coupled together will have four consecutive axles at 5 ft. spacing, each carrying over 57,000 lb. load. This approximates the heaviest engine driving wheel loading used in bridge design. The average weight of the car per lineal foot, however, will be a little less than 4,800 lb.

Car Shortage in the U.S.—The Interstate Commerce Commission has been given power to take complete control of the movement of railway cars engaged in interstate commerce, so that there shall be adequate accommodation for the nation's war requirements, and to relieve the prevalent car shortage.

Electric Railway Department

Electric Railway Statistics for Year Ended June 30, 1916.

The following abbreviations are used in the names of railways:—E, electric; E.R., electric railway; E.S.R., electric street railway; S.R., street railway. The minus mark (—) in the column for net income or deficit, shows that there was a deficit in the operation of the line to the extent of the figures given.

Name of Railway	1st Main track mileage	Gross earnings from operation	Miscellaneous earnings	Operating expenses	Taxes funded debt, etc.	Net income or deficit	Total car mileage	Fare passengers carried
Berlin and Waterloo S. R.	3.28	\$ 51,656		\$ 36,011	\$7,764	\$ 7,881	207,5281	1,010,114

Notes to Electric Railway Statistics.

The figures in the foregoing table are taken from the annual returns to the Dominion Railways Department, which, however, are incomplete, there being again no returns from the Montreal Tramways Co., the Pictou County Electric Co. and the St. John Ry., as has been the case for some years past. The figures prefixed to the following notes refer to similar figures in the first column of the table:

(1) The Edmonton Interurban Ry. was not in operation during the year.

(2) The figures given for the Montreal Tramways Co.'s first main track mileage, 124.26, are those used in the 1915 statistical tables, in which they were stated to be the figures used in 1911 report. The actual first main track mileage at Dec. 31, 1916, was 131.91 miles. The earnings, expenses and passengers carried are apparently taken from the company's report for the year ended June 30, 1916, as given in Canadian Railway and Marine World for Sept., 1916, pg. 375.

(3 and 4) The Railways Department does not receive returns from the Pictou County Electric Co. and the St. John Ry. The latest figures we have of these companies' first main track mileage, 9.10 and 18.15 miles respectively, have been added by us at the bottom of the table to show the total mileage in Canada, viz.: 1,765.63, against 1,730.73 shown by the Railways Department.

The Brantford Municipal Ry. appears in the table in place of the old Grand Valley Ry., which included the Brantford Electric Street Ry. The London & Port Stanley Ry. and the Schomberg & Aurora Ry., formerly steam railways, having been electrified, are transferred to electric railway mileage. The other new lines reporting are the Three Rivers Traction Co. and the Toronto Civic Ry. The total first main track mileage shows an increase of 140.44 miles over June 30, 1915.

Five companies reported that they were operating cars over 210.84 miles of lines leased from other companies.

Twenty-seven of the companies carry freight over their lines, the number of tons carried for the year ended June 30, 1916, being 1,936,674; and 23 of the companies reported a freight, mail and express car mileage of 1,990,375 miles in addition to passenger car mileage.

Winnipeg Electric Railway Advertising.

The Winnipeg Electric Railway is a thorough believer in advertising for business, and for some time past has been carrying on a general campaign in Winnipeg daily papers and by the distribution of leaflets. The company supplies gas, electric light and power, and street car service, and while there is a specialization along each of these lines, the broad general line of argument in all the company's advertising is service. "It is your right as a citizen to expect good service," says one of the leaflets. "It is our duty to serve you, . . . may we have your co-operation." Another says, "We hold our success not in the light of dollars and cents, but rather in the expansion and development of our efforts to better serve the public," says another, while a third says: "We ask you, not as our fellow townsmen, not as a big corporation, but from the point of view of your own citi-

zenship, to consider the transportation question of Winnipeg as having a vital interest to you personally, for man's greatest interest is man, and that man well known to you."

The various leaflets and newspaper advertisements bring out and illustrate various matters in connection with the company's service; show how it aids in maintaining the streets, contributes to the general revenue of the city, and how it is controlled and restricted by law in the public interests. In others the question of the jitney traffic is discussed. The jitney is described as a freelance vehicle, practically unrestricted by authority, operating only in fine weather and then only on short and profitable runs and only paying a small license fee. The company claims "that the jitney is a stumbling block in the way of Winnipeg's future," and in another advertisement recognizes "that the jitney serves to advantage a small number of the public. But can the minority be considered in a big issue which so vitally affects Winnipeg and its future?" Can you as a broad minded citizen, allow one form of transportation all the advantages when, by so doing, you are hourly strangling that system which has helped build Winnipeg to its present greatness and the support of which will mean most for your own and Winnipeg's future?"

The advertisements in the daily papers are mostly in the form of short talks, direct and forceful over the signature of F. Morton Morse, the Secretary-Treasurer and a director. A number of them are illustrated, with views of Winnipeg, with statistical information graphically displayed. One particularly good illustration shows the development of transportation from the oxcart to the present type of interurban car.

Mainly About Electric Railway People.

W. G. Ross, President, Montreal Harbor Commission, and a director, Montreal Tramways Co., has been elected a director of the Canadian General Electric Co.

A. E. Wideman, who resigned recently as Chairman of the Port Arthur Public Utilities Commission, operating the Port Arthur Civic Ry., Port Arthur, Ont., remains a member of the board.

E. P. Coleman, General Manager, Dominion Power & Transmission Co., Hamilton, Ont., and President, Canadian Electric Railway Association, spent a short holiday in Algonquin Park in May, with his two young sons.

Thos. Ahearn, President, and James D. Fraser, Secretary-Treasurer and Director, Ottawa Electric Railway, who left Ottawa on Feb. 20 for California, returned home early in May. They went via New Orleans, spending most of their time at Coronado, and visiting Riverside, Los Angeles and San Francisco, returning via Portland, Oregon, and Chicago.

B. Greenway, General Foreman, and for the last two and a half years, acting Assistant Superintendent, Regina Municipal Ry., Regina, Sask., was presented with a gold watch, fob and gold mounted pipe by the employes recently, on his leaving Regina for Grand Forks, N.D., where he has been appointed Superintendent, Grand Forks St. Ry.

C. U. Peeling, who has been Manager of the electric light and gas properties at Oshawa, Ont., which are operated by the Hydro Electric Power Commission of Ontario, has been appointed Manager of the

Cornwall St. Ry., Light & Power Co. and the Stormon Electric Light & Power Co. at Cornwall, Ont., succeeding Wm. Hodge, who has resigned after occupying these positions for 12 years. Mr. Hodge will remain in Cornwall, and will be prepared to give his assistance and advice regarding the properties.

Jitney Traffic Notes.

About 400 jitney licenses have been taken out in Winnipeg this year up to date. In 1916 there were 558 issued.

The Winnipeg City Council was asked, May 10, by the Winnipeg Automobile Club to pass a bylaw to require jitney men to put up a bond, as is done in other cities.

The Vancouver, B.C., Jitney License Inspector is reported to have stated recently that there were 10 more jitneys in operation in the city than there were at any time during 1916.

The Union Jack Motor Co. put in operation 10 additional cars on its motor service between Vancouver and New Westminster, B.C., May 1. It is operating on a 15 minute schedule, with a 40c fare for the round trip.

Owing to reduction in traffic the Winnipeg Electric Ry. put in force a new car schedule, May 1, which requires 14 less cars to run than were used during the winter. It is reported that on some of the heaviest routes a car is now only making about \$25 a day in place of from \$45 to \$50 a day three years ago. The reduced traffic is stated to be almost entirely due to jitney competition.

In connection with the communication addressed to Winnipeg City Council by the Winnipeg Electric Ry. as to jitney competition, which was given in Canadian Railway and Marine World for May, the City Solicitor has advised the council to refuse to admit that the company has any ground for holding the city responsible for the losses which the company alleges it has sustained through the competition of jitneys, which are licensed by the city to do business.

Fares on Port Arthur and Fort William Municipal Railways.

Canadian Railway and Marine World for April gave particulars of a proposed new schedule of fares for the Port Arthur Civic Ry. and the Fort William Municipal Ry. The two cities have since forwarded a joint application to the Ontario Railway & Municipal Board, for a revision of their fares in accordance with the following schedule.

One fare in each city. This means that after crossing the boundary line between the two cities on a car another fare will be collected.

Regular fare 5c, or 6 tickets for 25c, good from 5.30 a.m. until 12 midnight.

Workmen's fare 5c, or 8 tickets for 25c; good from 5.30 a.m. to 8 a.m., and from 5.30 p.m. to 7 p.m. from Monday to Saturday (inclusive). Sunday tickets, 8 for 25c, good from 5.30 a.m. to 12 midnight.

Children's tickets, up to 14 years of age, 10 for 25c, good all hours, every day of the week, Sunday included. All bona fide students above 14 years privileged to use children's tickets from 8 a.m. to 5 p.m. on school days. Children under 14 years of age may use school children's tickets on Sunday, good for through ride.

The Board decided to hear the application at Port Arthur on June 19.

A Few Disconnected Ideas on Street Railway Operation.

By F. D. Burpee, Superintendent, Ottawa Electric Railway.

I will endeavor in this paper to describe a few ideas we are using in Ottawa. The paper will be short and if the matter it contains is not new to the reader, he will not have lost much time.

Car Service Regulation.—Some years ago, when the service on the different lines of our system was supervised by inspectors, who were for the greater part of the time around the centre of the system, it was found that the motormen made an effort to be on time passing through the centre, but loafed at the termini. They tried to make the lay at the terminus as long as possible, by arriving ahead of time and leaving behind time, making gaps in the service and causing many complaints. To correct this condition, we have established a starting office for each line, situated at or near a terminus. The starters were chosen from the list of conductors and motormen, old hands thoroughly familiar with car service work, and men who showed they were intelligent and tactful. These offices, beside controlling the service on each line, sell tickets, issue transfers, and keep on hand a stock of sand, salt and supplies for minor repairs, which often makes it possible to keep cars in service that would otherwise have to go to the repair shop. The cars leave the barns in the morning with instructions to get to certain points for their first trip. After that the service is entirely in charge of the car starter, who gives the motormen so many minutes for the round trip. He extends or reduces this time as the traffic fluctuates, and works the rush hour extras into the service when they come out. Each starter makes a daily report showing the exact time each car passes his office and gives an explanation of any gaps that may appear. When rush hour extras go into the barns he arranges his regulars so that the gaps are quickly absorbed.

At the centre of the system we maintain a checking office in charge of the Traffic Inspector, whose clerk records on a large sheet the time each car passes east and west. As nearly all lines pass this office the sheet shows at a glance the whole service. It is the duty of the Traffic Inspector to consult the car service sheet, investigate gaps, and keep his eye on the service generally. He keeps in close touch with each starter by telephone and is their immediate chief. He makes a daily report to the Superintendent, explaining each gap shown by the car service sheet and any other items or recommendations concerning his department. We have established four starting offices, two of them being placed at a point where two lines intersect and have control over both lines. They cost us about \$2,500 each per year, but we consider the money is saved many times over in the splendid service obtained. They have proved a splendid means of maintaining the time interval between cars and when blockades occur the service can be reorganized in a very short time.

Each car carries a card giving the time it should pass various time points. The card is held by a clip in the front vestibule where the motorman can easily consult it. Hooks for motormen's watches are just beneath the time card.

I consider the success of our starting offices largely due to the men who were chosen for starters. They should be men who will not antagonize the conductors and motormen, but firm enough to have

their orders promptly carried out. Briefly, they must be intelligent and tactful, with a thorough knowledge of the car service work. It provides an excellent position for the conductor or motorman who is above the average, and worthy of promotion.

Operation of Sweepers.—Each autumn we book our sweeper crews for the winter, taking them from the old hands. We choose men who can be relied upon and who agree to show up whenever called. They are men who are booked on regular day and relief runs, working the same cars. When sweepers are needed these crews are relieved by spare men and go to the barns for their sweeper, or in an emergency run their cars in. Each crew has its own sweeper and route and are held responsible for both. They stay with their sweeper until it is sent in or relieved by their regular relief crew. The relief crews stay out until after midnight if necessary, and come when called between that hour and 6 a.m.

Maintenance of Equipment.—While I think every operating man is convinced that the policy of giving each motorman his own car is a good one, he does not know until he tries it what an effect it has on maintenance cost and regularity of service. Owing to the fact that we have not open terminal barns, it has been considered impossible to inaugurate it here. It was attempted on one occasion, but the shunting necessary to place the cars caused so many complaints from residents in the neighborhood of the barns that it was discontinued. We found recently, however, that by arranging the runs so that the first cars out in the morning are the last in at night, each man could be given his own car and the shunting practically eliminated. We have put this arrangement in force on all our lines. The men are taking a keen interest in their cars, even to the extent of asking for brass polish and cloths to keep everything polished up and looking well. If a day man finds that his car has been abused the night before, he comes down with both feet on the night man, and vice versa. If the man at fault is a spare, he gets a lecture on car operation that he remembers. In the old days a man seldom reported defects, because his chance of getting the same car the next day was remote. Now he reports everything that is not in first class shape on his car and keeps at it until he gets it fixed. The conductors seem to be as keenly interested as the motormen.

Elimination of Skid Flat Wheels.—We have always had the skid flat wheel trouble with us, due to the extreme variations in temperature and the frequency at such times of what the motormen call a "bad rail." Some equipment men will tell you that if a wheel is flattened, scrap it. I have heard this statement from the superintendent of a large system, but during a visit to his city counted over a dozen cars with flat wheels in half an hour. Of course we all know that if the flat spot is small it will, in the course of time, pound out. During the pounding process, however, the passengers have a few things to say about the road. We have installed a wheel grinder and have done well enough with it to justify its purchase, but have had more success by getting at the root of the trouble and preventing the flattening by the motormen. We have established a rule that

each motorman who flattens a wheel must make an accident report of it and give an explanation of the damage he has done. There are times when a man is to be commended for flattening wheels. It may be that he has averted a serious accident. In the majority of cases, though, the damage might be avoided, and is often due to carelessness. The starting office on each line is provided with a pad on which to record verbal reports of motormen who receive cars with flat wheels. If a motorman takes a car in that condition from a barn or from the crew he is relieving, he reports the car number at his starting office at the first opportunity. The starter records the man, and car, and time report is made. The last man to handle this car, who has not so reported it, is held responsible for the damage, and, if he has not already done so, is called upon to make out a report. Due allowance is made for weather conditions. We have days when it is impossible to keep cars from skidding. Under such conditions flat spots are liable to appear with the best of motormen. Whatever the reason, we have succeeded in reducing our flat wheel trouble remarkably. It is partly due, I think, to the fact that each man has his own car, and also to the moral effect of making each man at fault make an accident report and place himself on record as being responsible for the damage.

Car Changers.—When a car becomes disabled it used to be our practice to send it in and give the crew another car. This made a gap in the service. For several years back we have kept a crew at the repair shop who are known as car changers. They are ex motormen of long service and have an intimate knowledge of the various runs. Fortunately for us these men have taken a keen interest in their work and keep themselves informed of any changes in the service, so that they have a pretty good idea, when a car is reported, just where they can meet it. When some trouble develops on a car, which is beyond the ability of the motorman to repair, he reports it at his starting office. The starter telephones the repair shop. When the car comes back to the centre of the city the crew find a car waiting at some convenient point, transfers the passengers and go ahead. The car changers take the disabled car back to the repair shop. There is no delay and no gap.

Bulletins.—It was our practice until a short time ago to post bulletins in a book and have each man sign opposite his number, but we found that there were always a large number of men who neglected to sign and also a large number who signed without reading the bulletin. We have substituted bulletin boards and loose leaf books at each barn, and in the conductors' and motormen's lounging room. We post on the bulletin board a copy of every bulletin issued and in the books copies of those we wish to preserve, so that a man who has been off duty can read all bulletins that have been issued during his absence. We have also started the publication of a small monthly sheet called "The Ottawa Electric Railway Bulletin," which is given to the men with their pay envelopes on the 20th of each month. While this is primarily intended to contain copies of bulletins issued the month previous, it also contains other matter on efficiency, courtesy, safety, etc., set forth in a more or less interesting way. We

hope in the course of time to extend the scope of this publication to taking in all the departments and make it appeal to the employes of every department. In its present form of four pages the bulletin costs us about \$15 a month for 1,000 copies.

Seniority.—Operating men should realize, and probably do, the importance that a conductor or motorman's place on the seniority list has for him. He goes through the hard times of being a spare man and the long spell of night work, and for some years looks forward all the time to something better. These better things depend entirely on his advancement in order of seniority. It does not seem fair that, except in the case of sickness, men should get leave of absence for several months and when they return take exactly the same place on the seniority list as when they left. We have cases where men have been away one year out of five, but have been credited with five full years, whereas they have only worked four. They have held their places on the seniority list ahead of men who have worked nearly five years. This had led to some discontent among the men. Seniority should mean length of actual service rendered. We have established a rule that a man who obtains leave of absence for any period more than one month, will be reduced on the seniority list the length of time he is away from duty.

EDITOR'S NOTE — The foregoing paper was written before Mr. Burpee obtained leave of absence for military service. He is now a major in the 207th Battalion, which was recruited in Ottawa and which is now overseas.

Regina Municipal Railway Earnings.

Following are the earnings, expenses, etc., for April, compared with those for Apr. 1916, and the aggregate totals for 4 months ended Apr. 30, 1917:

	Apr. '17	Apr. '16	4 mths. to Apr. 30, '17
Total earnings . . .	\$18,986.56	\$18,121.67	\$81,296.26
Operating expenses . . .	15,955.08	15,241.47	69,603.27
Capital charges . . .	7,953.34	8,963.80	32,022.22
Operating surplus . . .	3,031.48	2,880.20	11,692.99
Deficit	4,921.86	6,083.60	20,329.23
Exp's per car mile without power . . .	15.83c	10.01c	16.78c
Exp's per car mile with power	20.89c	20.11c	22.45c
Cost per k.w.h.	1.41	1.99	1.41
Cost per car mile	5.06	5.34	5.66
Platform wages per car hour	78.18	72.94	77.58
Total passengers	425,117	410,697	1,820,098
Expenses per cent. of earnings, less capital		84.09	
Expenses per cent. of earnings, with capital		125.97	

One-Man Cars in Edmonton, Alta.—The Edmonton Radial Ry. is operating one-man cars upon two routes, and on May 14 decided to adopt them on a third route. Superintendent Moir reported in favor of using them on all routes on the system except the one from North Edmonton to 124th St. The present wages bill for motormen and conductors is \$461.44 a day, but under the one-man car system if carried out as recommended it would be reduced to \$358.70 a day. There will be no lessening of the service, under the system, but it is hoped to give a quicker service than at present.

The American Electric Railway Association has decided that the convention in its usual form be abandoned for the present year, and that the member companies be communicated with at a later date, advising such a meeting as it may seem proper to substitute.

Answers to Questions on Electric Railway Topics.

Following are answers by Canadian electric railway officials to questions sent in to the American Electric Railway Association's question box:

Changing Wheels.—Do you change car wheels as to defects according to individual inspector, or do you do it by fixed rules?

W. R. McRae, Master Mechanic, Toronto Ry., Toronto.—Equipment inspectors spot wheels and leave for special wheel inspectors, who decide cause and action.

Vestibule Doors.—In operating cars with bulkhead doors and vestibules, do you require the motorman to keep the bulkhead doors closed?

F. L. Hubbard, Assistant to General Manager, Toronto Ry., Toronto.—Yes, in winter; during the summer months doors are kept open.

Automatic Crossing Bells.—How long should automatic crossing bells ring before the train arrives at the crossing?

C. L. Wilson, Assistant Manager, Toronto & York Radial Ry., Toronto.—The Ontario Railway Act calls for warning to be given by whistle or bell 80 yards before arriving at a crossing. This, we think, should fix the length of time an automatic bell should ring.

Fencing Right of Way.—Is it your practice to keep all private right of way and miscellaneous property carefully fenced in?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver.—Yes.

Installation of Cattle Guards.—When operating in territory where the law forbids cattle and other domestic animals to run at large, is it necessary to install cattle guards?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver.—Yes, at all public road crossings we make a practice of installing cattle guards.

Fire Protection on Bridges.—What is your method of protecting wooden bridges and trestles against fire?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver.—Water barrels and water buckets are placed on bridges at about 200 ft. intervals.

Conversion of Cars to One Man Operation.—Is it not possible to make over old cars to one man operation, so that they will be a satisfactory substitute for new equipment for this purpose?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver.—We have not had any experience in rebuilding old cars for one man operation, although last summer we rebuilt one of our old cars to the open air type, centre entrance. From our experience with it so far it has proved satisfactory.

Waiting Rooms in Cities.—Are waiting rooms justified for city traffic, where the headway is less than 15 mins.?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver.—No, we do not think that waiting rooms are justified on lines where the headway is less than 15 mins.; where we give a 30 min. service on suburban lines, we furnish waiting rooms.

Lighting of Waiting Rooms.—On interurbans running through sparsely settled territory, is the lighting of waiting rooms or shelters necessary?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver.—Yes, we think it advisable that shelters on interurban lines should be lighted, and particularly so where the shelter is built up from the roadway.

Automobiles for Officials.—Do you provide open or closed automobiles for the use of your executive officials?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver.—We provide open automobiles for executive officers.

Bridges With Draw Spans.—What is the most practical and economical way to safeguard operation over bridges with draw spans?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver.—We consider the best method is to install section insulators 1,000 ft. on each side of the draw span, which causes the trolley to become dead between this point and the draw as soon as the draw commences to open; in addition to this, a compulsory stop should be made requiring all cars to come to a full stop at all times before proceeding 1,000 ft. on each side of the draw. This has been our practice for some years and has worked out very satisfactorily.

Company Publicity.—What single agency, such as a company publication, do you consider to be the most effective in giving "a soul to a corporation," or in other words, to humanize the company in the eyes of the public?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver.—I am of the opinion that a company publication of a weekly or semi-monthly issue is the most effective.

Change Orders on Suburban Lines.—In operating suburban trolley lines by the dispatcher system, do you furnish both motorman and conductor with change orders?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver.—We do not operate suburban lines by a dispatcher system. On interurban lines, where trains are operated to Standard Rules, train orders are handed to the conductor by dispatcher or given over the phone to the conductor, who writes them down on order blank, and in both cases hands them to the motorman.

Closing Bulkhead Doors.—In operating cars with bulkhead doors and vestibules, do you require the motorman to keep the bulkhead doors closed?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver.—Yes.

A. Gaboury, Superintendent, Montreal Tramways Co., Montreal.—Yes, at all times, except when backing car.

Automatic Crossing Bells.—How long should automatic crossing bells ring before the train arrives at the crossing?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver.—1,000 ft. or 1,500 ft. before the front end of trains reach crossing.

East Kildonan, Man., recently applied to the Public Utilities Commission of Manitoba, May 4, for an order directing the Winnipeg Electric Ry. to provide a better car service and to reduce fares within the municipality. Alternative proposals were submitted, and after hearing what the company's management had to say, judgment was reserved.

Sandwich, Windsor & Amherstburg Railway Franchise.

The S.W. & A.R., which has 40.78 miles of first track lines, is owned by the Detroit United Ry. Co. The railway includes the lines within the City of Windsor, the Town of Walkerville, and the line extending to Amherstburg, together with the Windsor & Tecumseh Electric Ry. For some considerable time past there has been a good deal of friction between the City of Windsor and the company respecting the car service, etc. The franchises within the city and in Walkerville expire in 1922. The question of taking over the lines in the near future has been considered with a view of linking them up with the Hydro Electric Power Commission of Ontario's projected lines. In this connection something like joint action is being taken by all the municipalities within which the company operates. P. Watt, Street Railway Commissioner of Cleveland, Ohio, met a committee of citizens of Windsor and Walkerville, May 3, and advised that complete municipal ownership was the real solution of all the difficulties which surrounded the situation. The present financial situation might render it impossible to carry out such a project, but it might be possible to arrange with the company to operate the line under municipal control. The committee finally decided to send a delegation to Toronto interview the H.E. P.C. of Ontario on the matter.

The delegation appears to have met the commission, in Toronto, for the Mayor of Windsor is reported to have said in an interview, on May 10, that the commission advised against the purchase of the lines at present, and further advised against the city undertaking at present any extensions of the lines which might be desirable in order to give a more adequate service. The commission, he said, pointed out that if the city took over the lines now, instead of on the expiry of the franchise, it would have to pay the value of the property as a going concern, that having been a court decision in a similar matter.

Winnipeg Electric Railway Co's Annual Report.

The report for the calendar year 1916 shows the following results:

Gross earnings from operation	\$3,311,169.69
Operating charges	1,939,041.36
Net operating revenue for year	..	\$1,372,128.33
Miscellaneous income	26,010.42
Gross income available to meet fixed charges	\$1,398,138.75
Fixed charges:		
Sinking fund requirement	\$ 60,000.00
City percentage and taxes	201,797.01
Other charges	691,090.29
		952,887.30
Net income	\$445,251.45

The net income, which decreased \$35,742.33 for 1915, was equivalent to about 5% on the capital stock. The directors regret that owing to very substantial increases in all the materials necessary in the operation of the railway, gas and lighting departments, as well as to the serious competition of the jitneys in the city, the results for the year were disappointing. For these and other reasons, very careful consideration was given to the question of continuing the payment of any dividends. It was felt that, due to financial conditions and the impossibility

of disposing of long term securities at prices to retire temporary loans, a discontinuance of dividends for the time being would strengthen the company's financial position and more quickly guarantee an earlier date for the resumption of such dividends. Having reached this conclusion, no dividend was declared during the year.

It is a matter for congratulation that as a result of a thorough investigation of all the properties by the J. G. White Engineering Corporation, of New York, its appraisal goes to show that the properties have been well maintained and taken care of, which points to the conservative treatment adopted by the board heretofore. The board has therefore adopted the appraisal in accordance with the statement made in its previous report, and is pleased to state that all depreciation has been taken care of to date. With the knowledge that the company's properties have so far been maintained to a high standard of physical efficiency, it is reasonable to assume that with a return to normal conditions the revenue from the various departments of the company's activities may be expected to show satisfactory increases. In accordance with the orders of the Public Utilities Commission in regard to the classification of accounts, the company's system of accounting has been altered to meet the commission's requirements.

The net income for the year, \$445,251.45, added to the surplus brought forward from 1915, as adjusted, \$682,824.47, makes a total surplus carried forward of \$1,128,075.92.

At the annual meeting the directors were all re-elected and the officers were re-appointed.

The London and Port Stanley Ry's Funded Debt.

A Canadian engineer writes from Toronto: "The railway statistics issued by the Dominion Government recently containing the sworn statements of the different railways as to their financial condition and operating results, give for the London & Port Stanley a funded debt in bonds of \$900,000, but include no return of either miscellaneous obligations or outstanding stock. The impression intended to be conveyed to the public is that these bonds are the sole debt of the railway, and, with no stock subscription or government aid, represent its cost, to the interest and sinking fund on which the net traffic returns are in part applicable. As a matter of fact, however, this large item of \$900,000 only covers the cost of electrification, the new cars, and the 19 miles of additional sidings and turnouts, and the return ignores the very large original cost of the permanent way, the entries into cities, the terminals, docks, etc., previously represented for years in these annual statistical returns, as covered by the items, \$1,332,834 of bonds and \$527,158 of actual stock subscribed. A nominal rental of \$20,000 is said to have been arranged, but this would afford only 1/10th% interest on this debt, as against the high rates originally paid and now prevailing.

"In order to induce the people of Ontario to believe that all future lines constructed by the Hydro Electric Power Commission will be profitable, this railway—the first to be constructed under the commission's auspices has been publicly announced by the commission as meeting all the interest on its bonds and other charges, and having a surplus in

addition, when as a matter of fact, the large annual interest and sinking fund of the original cost are ignored. Evidently to appease the conscience of the commission, which appears to take a special care over this railway's affairs, and at the same time to further blind the people of Ontario, this long standing item of \$1,332,854 of bonds on the road, appears in another part of the same government blue book, under the head of 'Aid to steam railways,' where the public is not expected to look for information about electric railways, and is now called 'Loans from municipalities,' while the share subscription of municipalities is given as \$414,000. Is this straightforward dealing with the public?"

Electric Railway Legislation in Nova Scotia.

The Nova Scotia Legislature has passed bill 223 as follows:

1. Chap. 11 of the acts of 1911, amended by chap. 58 of the acts of 1914 is hereby amended by adding the following sections:

16 (d). The Board of Commissioners of Public Utilities, on application being made to it, and on being satisfied that the additional men required can be obtained, and that in other respects it is not unreasonable so to do, shall make regulations, limiting the number of days in every eight days, during which employes or any class of employes of any street railway company may be required or permitted to work, as such employes.

16 (e). The power conferred by the next preceding section may be exercised, notwithstanding the provisions of any agreement, respecting hours of labor, between such street railway company and its employes.

2. Clause (f) of sec. 22 of chap. 180 of the acts of 1914 is hereby repealed and the following substituted therefor:

(f) The Nova Scotia Tramways and Power Co., Ltd., shall, for the benefit of the working people issue tickets for use in the City of Halifax at a price to give 8 single trips for 25c during such hours at noon and evenings and subject to such terms and conditions as the Board of Commissioners of Public Utilities may approve.

Brantford Municipal Ry. Wages.

The Brantford Municipal Ry. Commission advanced conductors' and motormen's wages on the Brantford Municipal Ry. recently 2c an hour. Following is a comparison of the old and new rates:

	Old rate.	New rate.
1st month 16c	18c
Next 11 months 19 1/2c	21 1/2c
Second year 21 1/2c	23 1/2c
Third year 22 1/2c	24 1/2c

Ontario West Shore Ry. Liquidation.—T. Strothers, trustee, Dungannon, Ont., received tenders to May 12, for the material, plant and equipment on the partially built O.W.S.R. between Goderich and Kincardine, Ont. The principal items in the inventory were: 900 tons of 70 lb. steel rails, a large quantity of fish plates, 710 boxes of spikes, 135 boxes of bolts; 6 pairs of steel bridge girders, 25 to 70 ft. spans; 1 locomotive and 3 flat cars. The other property included scrapers, square and other timber, and fence posts. All the above was either stored along the right of way or in stock yards. In addition to this there was 14 miles of track completed, the materials on which can be taken up and removed.

Electric Railway Notes.

The London Township Council passed a bylaw, May 16, authorizing the London St. Ry. to run its cars from London to Broughdale, Ont., on Sundays.

Port Arthur, Ont., Civic Ry. employes asked, on May 13, for a raise of wages approximating 15%, with certain other concessions. The last increase was given in 1914.

The London and Port Stanley Ry. was reported recently to be arranging to ask for tenders for the supply of 30 tons of 80 lb. steel rails for switch lines. We are advised that the building of any additional track this year is not contemplated.

The London St. Ry., in a bulletin issued May 14, stated that the operation of its cars on Sundays is not remunerative and that if the cost of operation continues to increase the company will be compelled to ask for relief in some direction or other.

The British Columbia Electric Ry.'s honor roll of employes who are on active military service contains the names of 452 men. Of the total enlistments, 353 were from Vancouver and 99 from Victoria. Of these 17 have been killed, 25 wounded, 3 are prisoners of war, and 14 have returned.

The Toronto Ry. has placed several new cars in service during the past few weeks. The company notified the city recently that 40 out of the 50 cars ordered by the Ontario Railway and Municipal Board to be in service by May 1 were in operation, and that it was expected the remaining 10 will be running early in June.

The London and Lake Erie Ry. and Transportation Co. was stated recently in a press report to have offered to sell the rails on its line between London and Port Stanley, 28 miles, to be taken up and sent to France. We are officially advised that no such offer has been made. The rails are 60 lb. section, while 80 lb. are required for France.

The London & Lake Erie Ry. & Transportation Co. is reported to have invited the Dominion Government to make an offer for the rails laid in the company's tracks for shipment to France. The company operates an electric railway between London and Port Stanley, Ont., and is in the market for sale. Some details of the company's position were given in our last issue.

The Nipissing Central Ry., operated in the Cobalt district of Ontario, by the Timiskaming & Northern Ontario Ry. Commission, has purchased three second hand cars from the East St. Louis, Columbia & Waterloo Ry., East St. Louis, Ill. These cars are of the interurban type, about 50 ft. long, and will be used to maintain the service until new equipment can be ordered and built.

The Lethbridge, Alta., Municipal Ry., we are officially advised, includes a line to Henderson Park, which is not profitable except during summer. Two of the city cars are being changed so that they can be run in either direction without turning. They will be operated on this line by one man each, as far as profitable, and back, thus giving a service on the line where it is required.

The British Columbia Electric Ry. put its summer schedule in operation on its mainland lines, April 29. The principal feature of the service is on the Fraser Valley Division, where two trains a day in each direction are run through between Chilliwack and Vancouver, without

change at New Westminster. On the Jardine line a special car leaves Jardine at 7.15 on Sunday evenings for Vancouver.

The case of the City of Toronto against the Toronto Ry. Co., in which the former asks for the committal of the company's General Manager to jail, or the company's sequestration, for contempt of an order of the court to supply the city with certain details, came before the court at Toronto, May 14, and the matter was ordered to stand until Sept. 15, to allow certain information to be obtained to supply the desired report.

The British Columbia Legislature has inserted a section in the Vancouver City bill giving the city council power to operate an electric power and light plant, but providing that it must apply to the Legislature again before it can enter into competition with the British Columbia Electric Ry. The company asked the Legislature for an opportunity to appear in protest against the insertion of the section, but was refused.

The North Vancouver, B.C., city council, on May 7, decided to enter into negotiations with the British Columbia Electric Ry. with the view of securing an agreement similar to that in force between the company and the City of Vancouver regarding the electrolysis of water pipes. This agreement provides for the city being compensated wherever it is proved that the electrolysis is due to the imperfect bonding of the company's railway.

The City of Saskatoon, Sask., is in the market for 3 single truck, double end cars for the Saskatoon Municipal Ry. The type desired is similar to those now in use in the city, 33 ft. long over all, with seating capacity for 32 passengers. The equipment includes two 40 h.p. Westinghouse motors, 2 K. 36 I. controllers, hand brakes, centre aisle, reversible cane seats, forced draught heaters, etc. The weight of each car is not to exceed 35,000 lbs.

A. K. Bunnell, City Treasurer of Brantford, Ont., addressing the Rotary Club members there, on May 10, on municipal administration, in referring to the public utilities, said: "The street railway, which had long been a source of public disgust and annoyance, was taken over nearly three years ago. The lines have been extended and improved, and at present the city has an investment of \$430,000. It is not necessary to say that the public appreciate the change, as this is shown by the constant increase in traffic, and it is fairly to be assumed that this latest venture in public ownership is now on a business basis and self sustaining."

The London Street Ry. says in a recent bulletin: "While it may not be desirable at present to consider the matter of increasing the car fares in London, there are several ways in which some saving could be effected for the company without such additional expenditure on the part of the public as higher car fares would call for, such, for instance, as reducing the car service at those hours of the day when few people are riding. Such an economy would cause only slight inconvenience for those few passengers who may just miss a car and have to wait one or two minutes more than usual for the next one."

We are advised that the fire at the Windsor, Essex & Lake Shore Rapid Ry. shops and car barns, Kingsville, Ont., mentioned in our last issue, originated

near the dry kiln user for drying armature, transformer and other coils. The oven is asbestos lined, so it is presumed that the heat set fire to something outside the oven. The electric locomotive no. 50 was damaged on the exterior and pantagraph stands, the cables and connections being entirely destroyed. Three passenger cars were badly damaged, roofs and pantagraphs being destroyed, and the interiors, including seats, rendered useless, from heat and water. The car barn and shops were damaged. The locomotive will be repaired in the company's shops, and the cars will be overhauled by the Preston Car & Coach Co.

Electric Railway Projects, Construction, Betterments, Etc.

Bathurst Electric & Water Power Co., Ltd.—The New Brunswick Legislature is being asked to amend the company's charter in several directions, and to give it authority to operate an electric railway in Bathurst and vicinity. The company controls a hydro electric power plant on Tetagouche River. J. P. Lager, Bathurst, N.B., is President and General Manager.

Brantford Municipal Ry.—The Brantford, Ont., City Council has appointed a committee to interview the commission in charge of the municipal railway in connection with the project to extend the line into the Terrace Hill district. (May, pg. 203.)

London & Port Stanley Ry.—A press report states that tenders will be asked shortly for 30 tons of 80 lb. rails for switching lines. (May, pg. 203.)

Montreal Tramways Co.—The Mayor is reported to have approved of the building of a car line to the top of Mount Royal. Plans are to be prepared by the City Engineer, and when these are approved the city council proposes to ask the Tramways' Commission to approve of them. (May, pg. 203.)

Moncton Tramways, Electricity & Gas Co.—We are officially advised in regard to projected extensions in Moncton, N.B., as follows: The company proposed that the city allow it to take up the present tracks on High St., from Main St. to John St., and from Weldon St. to High St. on Main St., and to replace them on Weldon St. from Main St. to John St., and from Weldon St. to High St. on John St., and to build a new line along John St. and Union St., to connect with the present line at Union and Botsford Sts. with a branch from Union and Church Sts., to Sunny Brae. This would give a much needed improvement in the service over that provided by the present lines. However, the city has decided to pave West Main St. and High St. from Main St. to the fire station on High St., about 7 city blocks on High St., and 5 city blocks on West Main St., and it is also going to pave King St. from Main St. to St. George St., on which the company has tracks. The city has so far refused

Sanitary Conveniences on Hamilton, Grimsby and Beamsville Electric Ry. On Nov. 2, 1916, the Ontario Railway and Municipal Board directed the company to file plans and specifications for sanitary conveniences on its passenger cars and at its station at Grimsby, Ont., which were approved by the board on Jan. 3, 1917, after having been altered as recommended by the board's engineer. On Apr. 27, the board ordered that the installation of the conveniences be completed by July 1.

to grant permission to the company to remove its tracks from High St., and unless it is allowed to make the change in the tracks as proposed, the company will not make any extensions this year. The company's share of the paving work proposed to be done will be so heavy that it is not willing to pay for the paving and make any extensions in addition. (May, pg. 203.)

New Brunswick Power Co.—The St. John, N.B., city council, April 30, decided to inform the company that a reasonably permanent grade would be established on Union St., which it was proposed to pave, and that the city would fill in between the track sections above the railway foundations if the company would raise its tracks to conform to the new grade. (May, pg. 203.)

Nova Scotia Tramways & Power Co.—A press report states that the company is making surveys for extensions of its lines, and that it is in the market for rails, ties, general construction material, and for additional rolling stock. (Dec., 1916, pg. 502.)

Port Arthur Civic Ry.—We are officially advised that the railway is placing a reinforced concrete liner adjacent to the rails on the track between Victoria and McVicar Sts. It is also contemplated to replace the present straight angle bars on rail joints with continuous joints and later on to place reinforced concrete liner adjacent to rails on the double track line on Main St., from Arthur St. to Bay St. An order has been given for 250 pairs of continuous rail joints for 80 lb. A.S.C.E. section. (May, pg. 203.)

Saskatoon Municipal Ry.—We are officially advised that owing to the present shortage of labor the proposed extension of track is being held over for the present. (May, pg. 203.)

Winnipeg Electric Ry.—In giving judgment on an application to order the company to build additional lines in the Morse district, Public Utilities Commissioner Macdonald stated, on May 4, that under existing financial conditions he could not issue such an order. (Oct., 1916, pg. 425.)

Windsor, Essex & Lake Shore Rapid Ry.—The Board of Railway Commissioners has reserved judgment on the application of the Town of Leamington, Ont., requiring the company to remove its tracks from North St. or as an alternative to cease obstructing the street. (Mar., pg. 113.)

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry., and allied companies.—All payments as between the companies not affecting the net earnings, hitherto included, are now eliminated.

Calgary Municipal Ry.—The annual summary of the finances of the City of Calgary, Alta., for the year 1916, issued by the Comptroller, shows that of the public utilities owned the municipal railway showed a profit of \$28,722.09 and the

electric light and power plant a profit of \$15,254.42, while the waterworks and other utilities showed losses.

Edmonton Radial Ry.—The City Comptroller's report on the finances of Edmonton, Alta., for the year 1916, has the following reference to the E.R.R.: "The operation cost of the street railway has been reduced 27%, being \$446,897 in 1914, and \$339,208.50 in 1916. The result of the operations of this utility for the year is a loss of \$115,597.66, which is \$16,161.05 better than in 1915."

Lethbridge Municipal Ry.—From a report issued by the City Commissioner, it appears that for the four months ended April 30, the municipal railway made a profit over operating expenses of \$3,356, against a profit of \$3,462 for the same period of 1916.

Among the Express Companies.

The Canadian Ex. Co. has reopened its offices at Ruthilda, Sask., and Delburne, Alta.

J. N. Johnston has been appointed claim agent, Eastern Division, Dominion Ex. Co., Toronto.

The Dominion Ex. Co. has opened offices at Musquodoboit, N.S.; River Henry, Que., and DeWinton, Alta.

W. A. McDonald has been appointed acting route agent, Western Division, Dominion Ex. Co., Winnipeg.

The Canadian Ex. Co. has reopened its office at Camp Borden, Ont., and has appointed H. H. Cheeseman as agent there.

Wells, Fargo & Co. have placed their express service in effect over the London & Port Stanley Ry., and have appointed E. G. Crook agent at London, and W. H. McPherson agent at Port Stanley.

The Board of Railway Commissioners issued order 26090, May 8, ordering that order 25975, Mar. 29, which prescribed the boundaries within which tolls of express companies shall include collection and delivery in Toronto, published in our last issue, be amended by striking out the words, "thence following the present eastern city boundary," in the third and fourth lines of clause 1, par. 2, and substituting therefor the words, "Summerhill Park Ravine," and by striking out the words, "except southerly," in the sixth line.

Telegraph, Telephone and Cable Matters.

W. T. Leslie, heretofore chief operator, Great North Western Telegraph Co., Quebec, Que., has been appointed local manager there, vice R. V. Aubin, deceased.

C. L. Leighty has been appointed Superintendent, Ontario District, C.P.R. Telegraphs, Toronto, vice H. J. Lillie, who has been appointed chief operator there.

C. E. Lillie, heretofore Office Manager, Great North Western Telegraph Co., Toronto, has been appointed Manager there, in charge of inside business.

G. Hogarth, heretofore Toronto Manager, Great North Western Telegraph Co., has been appointed Commercial Manager there, in charge of the company's outside business in the city.

A standing committee of the House of Commons reported to the House, May 15, that it had had under consideration a bill to incorporate the British America Telephone & Telegraph Co., and had agreed to report same with amendments, and with a recommendation that the name be changed to the Eastern Telephone & Telegraph Co.

The Western Union Telegraph Co. is enlarging its office accommodation at St. John, N.B., by taking over for its own use the whole of the building at the corner of King and Prince William Sts., of which it had occupied a portion. In the operating room on the top floor, five sets of high speed automatic multiplex repeaters are being installed for traffic between St. John, New York, North Sydney and Montreal. The basement is being equipped with shower baths, dressing rooms, etc., for employes.

The New Brunswick Telephone Co.'s annual meeting was held at Fredericton, May 18, when the report for 1916 showed assets of \$2,170,019.05, and liabilities of \$2,145,130. The net revenue for the year was \$109,324.84. The officers and directors for the current year are: S. H. White, President; Hon. F. P. Thompson and F. B. Black, Vice Presidents; A. W. Bennett, R. O'Leary, L. B. McFarlane, A. R. Slipp, W. B. Snowball, R. B. Emerson, F. B. Carvell, J. M. Robinson, F. W. Sumner, G. W. Ganong, J. L. McAvity and H. P. Robinson.

United States Shipping Committee.—

The Council of National Defence at Washington has created a committee on shipping, consisting of Chairman Denman of the Federal Shipping Board; P. A. S. Franklin, President, International Mercantile Marine; H. H. Raymond, President, Coastwise Shipping Association; E. T. Chamberlain, Commissioner, Bureau of Navigation, Department of Commerce; D. T. Warden, Manager, foreign shipping department, Standard Oil Co.; L. H. Sherman, Vice President, W. R. Grace & Co.; E. M. Bull, Vice President, E. M. Bull & Co.; and F. C. Munson, President, Munson Steamship Line. The function of the committee is to advise with the U. S. Shipping Board and to report, through Mr. Denman, to the council as to the best methods of increasing tonnage available for shipment to the allies.

Calvin Austin has been elected President, Eastern Steamship Lines, Inc., recently reorganized, and G. W. Sterling has been appointed General Traffic Manager at New York. The company operates a line between St. John, N.B., and Boston, Mass.

Marine Department

Government and other Shipbuilding Throughout Canada.

Canadian Railway and Marine World for April and May contained very full particulars of all information then available in regard to shipbuilding in Canada for Canadian and British Governments. As stated in the May issue, the Imperial Munitions Board had then placed orders at various points between Montreal and Victoria, B.C., for 26 steel steamships, ranging from 2,900 to 8,800 tons capacity, and with a total tonnage of 130,000. The board has placed and is still placing orders for wooden steamships, ranging from 3,000 to 3,500 tons capacity, and the number to be ordered will only be limited by the capacity of Canadian shipbuilding yards to complete them within the required time. In consequence, there is unprecedented activity in Canadian shipyards from the Atlantic to the Pacific, and many new shipbuilding industries are starting up.

W. I. Gear, Vice President of the Robert Reford Co., steamship agents, etc., Montreal, has been appointed Director of Steel Shipbuilding, under the Imperial Munitions Board, to deal with all questions relating to the construction of steel merchant vessels in Canada for the British Government. He has an office in the Transportation Building, Ottawa.

Any wooden shipbuilding which may be done in Eastern Canada will be handled from the Imperial Munitions Board office in Ottawa. As stated in our last issue, R. P. Butchart, of Victoria, B.C., has been appointed by the Imperial Munitions Board to take charge of the organization of the wooden shipbuilding industry in British Columbia, with the title of Director, and has established a local office there for that purpose. He was connected with the cement industry in Ontario for a number of years, being associated with Mr. Kilbourne, of Owen Sound. Their interests were sold to the Canada Cement Co. some years ago, after which Mr. Butchart and associates organized the Vancouver Portland Cement Co., which has a plant near Victoria, B.C., and of which he is President and General Manager. J. W. Troup, Manager, B. C. Coast Steamship Service, C.P.R., Victoria, has been loaned by that company to assist Mr. Butchart, and has been appointed Assistant Director. Messrs. Butchart and Troup returned to Victoria, May 15, from Ottawa, accompanied by W. H. Stewart, Assistant Purchasing Agent, Imperial Munitions Board, and gave the following statement to the press:

"The Board has decided upon the building in Canada of a standard type of vessel, 250 ft. long, 43½ ft. beam and 25 ft. deep, with a deadweight capacity of about 2,800 tons, on a draught of 21 ft. The vessels are to be built very strongly, with box girder stelsons. They will have a deep tank forward for water ballast. They are to be propelled by steam with triple expansion engines of about 950 i.h.p. The matter of geared turbines from England is being considered for some of the ships. The vessels are to be built of Douglas fir, to Lloyd's requirements for A1 classification. The authorities are in favor of concentrating on steel shipbuilding in Canada, rather than on wooden ships, it being considered preferable to build boats of steel construction. Messrs. Butchart and Troup have, however, placed the facilities of British Col-

umbia before the Board, and as soon as they have had an opportunity of lining up the situation in B.C., they will report to the Board as to the building that could be undertaken here. The programme that has so far been outlined is not very extensive. It remains to be seen what facilities and what inducements B.C. can offer to the authorities."

The Minister of Trade and Commerce said in the House of Commons on May 11: "I cannot go into particulars, but I can say that today every shipyard in Canada which is able to build ships, and is equipped therefor, has not only the opportunity, but has the actual contracts for building every ship and every vessel it can turn out, and that today the building of vessels for the specific purpose of warding off and fighting the submarine peril is being carried on in all the shipyards in this country. And in regard to the building of wooden ships, an arrangement has been completed and is being carried out whereby anybody or any company that can undertake to build wooden ships and complete them within a certain time will get an opportunity to do so and will be assured that over and above the cost of hulling the ships they will have a reasonable profit guaranteed to them." In this connection the Finance Minister has agreed to loan the British Government \$10,000,000 to pay for wooden vessels to be built in Canada.

In connection with shipbuilding in Canada for the British Government, it is interesting to note what is being done in the United States. The U.S. Shipping Board advised Canadian Railway and Marine World on May 1 that it contemplated having 1,000 wooden steamships built, but that it was very likely that number would not be reached, and that the number of wooden vessels which might be built would be augmented by steel ones up to the number of approximately 1,000. We have since been favored with a copy of the specifications for the construction of a standard wood steamship, yellow pine, issued by the U.S. Shipping Board, Emergency Fleet Corporation, which provides the following dimensions: Length over all, 281½ ft.; length, fore side of stem to after side of rudder post, 268 ft.; beam over planking, 46 ft.; depth moulded at side of upper deck, 26 ft.; load draught from bottom of keel shoe, 23½ ft.; total estimated deadweight, 3,500 long tons; sea speed, loaded, 10 knots. The U.S. Shipping Board has also issued standard propelling machinery specifications for single screw reciprocating engine, coal burning, wood steamships; for twin screw reciprocating engine, coal burning, wood steamships, and for single screw geared turbine, coal burning, wood steamships.

Major General Goethals, who is connected with the U.S. shipbuilding work, is reported to have stated at the American Iron and Steel Institute's meeting in New York, May 26, that the proposal to build a thousand 3,000-ton wooden steamships in 18 months is simply hopeless, that he asked permission to change to steel, and that this has been granted.

Shipbuilding Notes.

A shipbuilding plant is being projected at Port Alberni, B.C.

The Kingston Shipbuilding Co. is reported to have purchased the Kingston Foundry Co.'s property for incorporation in its own plant.

The Shipbuilders' Corporation of Toronto, Ltd., has been incorporated under the Dominion Companies Act, with authorized capital of \$250,000.

The Minister of Marine stated in the House of Commons recently that 48 vessels are being built in Nova Scotia by private individuals.

The Goderich Dry Dock & Shipbuilding Co., Ltd., has been incorporated under the Dominion Companies Act, with office at Toronto, and an authorized capital of \$1,000,000.

The Canadian Car & Foundry Co. erected a car building plant at Fort William a few years ago, which has not been operated. It is said that the company may utilize it for shipbuilding.

The Sydney Foundry & Construction Co., Sydney, N.S., is reported, on the authority of W. E. Clark, an official of the company, to have purchased a floating dry dock suitable for the smaller class of steam and other vessels frequenting the harbor.

Pacific Shipbuilding Co., Ltd., has been incorporated under the Dominion Companies Act with an authorized capital of \$50,000, and office at Vancouver. The incorporators include J. C. Shields, lumberman, Vancouver, and J. T. Robinson, broker, Kamloops.

Alfred Wallace, of Wallace Shipyards, Ltd., North Vancouver, B. C., is reported to have announced on returning there recently from Ottawa that the company had contracts for two steel steamships for British interests and for eight wooden ones for the Imperial Munition Board.

The Tusket Shipbuilding Co. is reported to have completed its organization, and to have acquired several old shipyards at Tusket, N.S., and to be negotiating for other yards. It is stated to have four vessels under construction at Shelburne, and four at Liverpool, N.S.

It is reported that a shipbuilding plant is being built at Catalina, Nfld., at a cost of about \$2,000,000, and that wooden shipbuilding is extremely busy throughout the colony. A number of vessels are being built there under a bounty of \$20 a ton, as provided in the government's act of last year.

The Toronto Board of Control, at a meeting, May 9, adopted a resolution calling upon the Dominion Government to establish, equip, maintain and operate a national shipbuilding plant in Toronto. The Minister of Trade and Commerce replied that it was not the government's intention to do so.

Welland Shipbuilding Co., Ltd., has been incorporated under the Dominion Companies Act, with an authorized capital of \$200,000, and office at St. Catharines, Ont. It will carry on its operations at Welland, where it has leased the shipyard and present boiler shop of M. Beatty & Sons, Ltd., who are carrying on their other business as usual. It is said to have a contract for three cargo steamships of full canal size.

Chester Basin Shipbuilders, Ltd., has been incorporated in Nova Scotia to build

sailing vessels at Chester Basin. The officers are: A. H. Zwicker, Lunenburg, President; Wm. Duff, Vice President; H. Oxner, Secretary Treasurer; J. J. Kinley and E. F. Zwicker, directors. The company is stated to have orders on hand for two vessels, which are being built under the supervision of G. A. Gardner, of Liverpool, N.S.

The Pacific Shipbuilding Co. is reported to have been incorporated under the Dominion Companies Act and to be about to establish a yard opposite New Westminster, B.C., on the south side of the Fraser River. Capt. J. T. Robinson and J. C. Shields, of Kamloops, B.C., are among the promoters, and the former is reported to have stated in Vancouver, May 18, that they had been given contracts by the Imperial Munitions Board.

The Falmouth Shipbuilding & Transportation Co., Ltd., incorporated recently under the Nova Scotia Companies Act, is reported to have acquired a site at Falmouth, N.S., for a shipbuilding plant. The location is said to be at the junction of the river and the passenger bridge, adjacent to the Dominion Atlantic Ry. and the Hants Manufacturing Co.'s saw mill, where sufficient lumber has been accumulated for the construction of the first vessel, which will be commenced shortly and launched early in the autumn. The officers are: E. E. Armstrong, President; F. W. Dimock, J. L. Sexton, T. B. Aikins and T. A. Mosher, directors; A. P. Clark, Secretary-Treasurer.

Stranding of the s.s. Maskinonge.

An investigation was held at St. John, N.B., May 9, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Lieutenant-Commander A. J. Mulcahy, R.N.R., and Capt. Jas. Hayes, as nautical assessors, into the causes of the stranding of William Roberts & Co.'s s.s. Maskinonge, under charter to the Dominion Coal Co., in St. John harbor, Apr. 28. The evidence showed that on entering the harbor it was discovered that the berth the vessel was to occupy was taken, and therefore it was decided to anchor, which was apparently effectively done, but five minutes later the vessel dragged her anchors from a broad to an acute angle, and eventually grounded gently on a bank on the starboard side. The method of anchoring was adopted with the view of preventing sheering, but the master acknowledged that if the anchors had been placed at a more acute angle, they would have been more effective. The court found that under the conditions existing the master and pilot did the best they could. A mistake, or error of judgment, was made as to the angle at which the anchors were placed, but the error was not of a culpable nature, and therefore the court did not hold the master or pilot at fault nor censure them.

The Dominion Coal Co.'s Marine Superintendent eulogized the harbor and Government officials, who rendered all possible help in releasing the vessel, which was eventually refloated without any apparent injury.

Renaming German Vessels.—The two interned German commerce raiders taken over by the United States Government will bear the names of famous German generals who served under Washington in the Revolutionary War. The Kronprinz Wilhelm will be renamed the Baron von Steuben, and the Prince Eitel Frederick will be renamed the Baron de Kalb. Both vessels will be put into the U. S. service.

Grounding of the s.s. Lord Antrim.

Judgment was rendered at Sydney, N.S., May 10, in the matter of the grounding of the Irish Shipowners Co.'s s.s. Lord Antrim, May 3, while en route from Baltimore, Md., to Louisburg, N. S., by Capt. L. A. Demers, Dominion Wreck Commissioner, and concurred in by Capt. A. J. Morrison and J. D. MacKenzie, as nautical assessors.

It was found, after weighing the evidence, in which there was no contradiction, that it was the court's duty to accept the evidence given relating to weather, courses, distances of land from the vessel and the last bearing taken prior to grounding, and also as to the striking of an obstacle not visible to the crew, and considered by them to be a submerged obstacle, on account of orders issued owing to war conditions not allowing of verification of these details by the log book. The court, therefore, on this account, came to the conclusion that the vessel struck a submerged object, and exonerated the master and officers from blame. The court, however, commented on certain phases of the evidence, which could not be brought to light satisfactorily, as follows—the reduction of speed due to bad coal; that after leaving Cranberry Island, no allowance was made for possible leeway; that land was 7½ miles distant, and that the master acknowledged having seen surf breaking. Without reflecting on the evidence, these points mentioned were not clear to the mind of the court.

The court pointed out that there is a tendency of the tide to throw vessels in toward land from Cranberry Island to Fourchu, especially during such conditions of wind and sea as existed at the time of this casualty.

The Malahat Motor Ship Co., Ltd., incorporated recently with \$100,000 capital and office at Vancouver, B.C., is a subsidiary of H. W. Brown and Co., Ltd., which is associated with Canada West Coast Navigation Co., of which H. W. Brown is General Manager. The company has a vessel under construction by Cameron-Genoa Shipbuilders Ltd., Victoria, of the same type as those being built for Canada West Coast Navigation Co., an illustration of which was given in our last issue. This vessel will be named Malahat and is expected to be ready for operation by September. It is understood that H. W. Brown & Co. Ltd. represent the western interests of those interested in Canada West Coast Navigation Co., and who are mainly associated with Canada Steamship Lines, Ltd. A second vessel is stated to be under construction for the same company, to be named Esquimalt, and these are to be registered at Victoria.

U. S. Water Supply Regulations on Great Lakes Vessels.—As mentioned in previous issues, the U. S. authorities have made certain regulations respecting water for drinking and culinary purposes on Great Lakes vessels, these being applicable to Canadian vessels calling at U. S. ports, as well as to U. S. vessels. The Dominion Marine Association took this question up with the Dominion Government, which has made an arrangement with the U. S. authorities for the suspension of the regulations so far as Canadian vessels are concerned, until 1918, on the understanding that the Dominion Government shall adopt similar regulations to the U. S., in which event certificates that Canadian vessels have complied with the Dominion law, will be accepted.

The Reid Wrecking Co. Changes Hands.

The Reid Wrecking Co., with plants at Sarnia, Ont., and Port Huron, Mich., including all vessels and properties, are in course of reorganization with a view to their transfer to Canadian interests. R. M. Wolvin, of Winnipeg, appears to be chiefly interested in the transfer, and press reports stated that the properties were being acquired in the interests of Canada Steamship Lines, Ltd., with which Mr. Wolvin is associated. This, however, is officially denied.

The Reid Wrecking Co. was incorporated under the Ontario Companies Act in 1903 by Jas. Reid, father of J. T. and W. H. Reid, the present Treasurer and Secretary respectively of the company. On his death in 1913 he owned 50% of the stock. The company does a large business and owns a considerable wrecking plant, including tugs and dredges and a dry dock at Port Huron, Mich., which cost about \$200,000. The stock has been chiefly held by the Reid family. D. Milne and F. F. Pardee are directors with nominal holdings.

The dry dock at Port Huron measures 375 ft. on blocks, 400 ft. over all, 75 ft. wide at bottom, 100 ft. at top, with 65 ft. at entrance and 16 ft. depth over sill. The vessels owned by the company include tugs James Reid, Sarnia City, S. M. Fischer; propellers J. M. Diver, John B. Ketchum 2nd, Inland, Manistique, Mataoa and Spokane; barge Magnetic, and schooners Belle Hanscom and John Kilderhouse.

The New York State Barge Canal.

This canal was opened for traffic between Oswego, N.Y., on Lake Ontario, and from Whitehall, on Lake Champlain, to Troy, on the Hudson River, May 15, and it is announced that the entire canal system will be ready for traffic by May, 1918. It is anticipated that the opening of the canal will do much toward the relieving of congestion in freight at western freight yards, and, to some extent, lower the cost of foodstuffs, owing to the cheaper transport. It is stated that the rate on wheat will at least be cut in half, as between Buffalo and New York, a similar effect being achieved on ore between Port Henry and New Jersey. Arrangements have already been made for the operation of a number of barge lines between Buffalo and Albany, making daily stops at the more important centres on the Erie Canal. Other lines will run on the Champlain Canal.

The Canal Board is pushing the completion of the work, and has suspended a contract in the western portion, owing to the contractor not making the progress expected. This contract has been taken over by the state. For this year, the canals will be used between Troy and Oswego, Troy and Lake Champlain, and the Erie Canal from Troy to New London, where the old channel will be used for short stretches to Rochester, and then on to Tonawanda, etc.

Purchase of Steamships by Dominion Government.—The Minister of Railways stated in the House of Commons recently that the prices paid for the steamships J. A. McKee and Thomas J. Drummond, which, as stated in Canadian Railway and Marine World for May, were bought under authority of order in council of April 17, to carry coal from Sydney, N.S., to St. Lawrence River ports, were \$500,000 and \$515,000 respectively.

Canada Atlantic Transit Co's Operation by G.T.R. Authorized.

The Interstate Commerce Commission gave the following decision at Washington recently:—In Lake Line Applications under Panama Canal Act, 33 I.C.C., 699, the petitioner the Grand Trunk Ry. Co. of Canada was denied permission longer to operate the Canada Atlantic Transit Co., a boat line which it owns and operates on the Great Lakes. Pursuant to a petition to rehear, the order entered with respect to the C. A. T. Co. was set aside and the case re-opened for further hearing by order dated Mar. 29, 1916. A further hearing was held Sept. 27, 1916, at which time an important jurisdictional question was urged and further evidence was introduced in support of the contentions previously advanced by the petitioner.

The G.T.R. Co. is a railway corporation organized under the laws of the Dominion of Canada, owning and operating various lines of railway within Canada, and by act of the Parliament of Canada dated May 16, 1905, was specifically authorized to acquire the capital stock of the Canada Atlantic Ry. Co. and Canada Atlantic Transit Co. The Canada Atlantic Transit Co. operates a line of boats from Depot Harbor Ont., on Georgian Bay, the western terminus of the C. A. Ry., to Chicago, Ill., and a line of boats from Depot Harbor to Milwaukee, Wis., plying on the International Boundary waters between the United States and Canada. The petitioner contends upon rehearing that the refusal to permit it longer to operate its boat line invades the right of free navigation of the International Boundary water between the U. S. and Canada, which is preserved to the inhabitants of each of said countries by treaties which have been in force for many years, that the Panama Canal Act does not specifically provide that this treaty right shall be curtailed; that accordingly the Panama Canal Act cannot be construed as having any application to the ownership of the petitioner in the C.A.T. Co.; and that this commission consequently has no jurisdiction to deny petitioner power longer to operate. In the view we now take upon the merits of this application, upon rehearing, under which the water service of the C. A. T. Co. as now operated may be extended, we deem it unnecessary to consider or decide this question.

The petitioner upon rehearing again contends that it does not compete with its boat line within the meaning of the provisions of the Panama Canal Act, and that this commission is without jurisdiction in the premises. The petitioner, in addition to the lines of railway which it owns and operates in Canada, owns and operates certain lines of railway within the United States which reach Chicago, connecting with its Canadian lines. The petitioner joins in through routes and publishes joint through rates in connection with the lines from Chicago to Milwaukee, the other port served by its boats. In Lake Line Associations under the Panama Canal Act, supra, we held that this condition brought about a transportation situation under which the petitioner does or may compete with its boat line within the meaning of the provisions of the Panama Canal Act. Nothing shown upon the rehearing would warrant our changing this finding.

The Canada Atlantic Transit Co. is a so called differential line. Because the route from eastern territory to the ports served by this line is more circuitous than

that of the more direct route, a somewhat lower scale of rates is made applicable via this line. For many years the transit company's rate has been lower by 10c per 100 lbs for 1st class traffic from New York to Chicago, than the rate of the so called standard lake and rail routes, and proportionately less for traffic of other classes. It appears from statements filed upon rehearing that the rates via the standard lake and rail routes from New York to Chicago are higher than the transit company's rates on the different classes of traffic as follows, viz.: On 1st class, 19.2 ; 2nd class, 17.4%; 3rd 13.6%; and 6th class, 10.5%. The standard all rail rates from New York to Chicago are higher than the transit company's rates on the six classes of traffic, as follows, namely: On 1st class, 51.5%; 2nd class, 48.5 ; 3rd class, 50%; 4th class 41.5%; 5th class, 43.2%; and 6th class, 38.4%.

The transit company operates three steel vessels, having an aggregate net registered tonnage of 7,118 tons and a cargo capacity of 14,000 net tons. During 1914 it carried 348,727 tons of freight, and during 1915, 321,824 tons. During 1915, up to Aug. 31, it carried 184,738 tons. The transit company provides approximately three sailings a week, both eastbound and westbound, during the season of navigation, with substantially regular service. During 1915 its boats were in commission 205 times and made 68 round trips. During the last season, up to Aug. 31, its boats had made 34 round trips. The traffic transported has its origin or destination at numerous points throughout a large territory, in Canada and in the United States, including the terminal points Chicago and Milwaukee, and points generally in Wisconsin, Illinois, Iowa, Nebraska, and Kansas, and the southwest territory, New England, New York, and Canada, and the Canadian provinces, and also points abroad from which traffic is imported or to which it is exported. During the early part of the season of navigation last past the transit company handled over 34,000 separate and distinct consignments of freight. The traffic representative of many regular shippers and consignees located in the territory who have availed themselves of the service of the transit company appeared at the rehearing and testified to the satisfactory nature of the service, and uniformly expressed the desire that it be continued.

The service of the transit company was originally established to provide a western connection for the Canada Atlantic Ry., which otherwise would have ended in a transportation cul de sac. Thirty per cent. of the gross earnings of the C. A. R. during the season of navigation and 18% of its earnings throughout the year are received on traffic destined to or received from the transit company. The service of the transit company was established solely as a supplement to and extension of the C. A. R. The traffic and business conditions in the territory served by the C.A.R. have materially changed since its organization. Formerly that territory was a large producer of timber and lumber products, with the traffic incident to such production; but now that the timber resources have been largely depleted this traffic has greatly decreased and there has not been, as yet, agricultural development or other local development which furnishes traffic to replace that formerly incident to the lumber pro-

jects. It is urged that the transit company is of increasing importance to the C. A. R., which is an integral part of the G. T. system. The transit company has always operated at a deficit after the payment of fixed charges. In 1913 the deficit was \$704,574; in 1914 it was \$860,453.

The Canada Atlantic Ry. has always absorbed out of its rail revenue the deficit resulting from the operation of the transit company, because there has been Canada Atlantic Transit Co Operation . . . no other way to secure the maintenance of the service performed by the transit company or to secure an equivalent water service west of Depot Harbor for the interchange of traffic to and from Lake Michigan ports. The Canada Atlantic is the only railway which reaches Depot Harbor. Neither the petitioner nor the C.A.R. has ever refused to interchange traffic at Depot Harbor with any other vessel or carrier by water, or to form through routes or make joint rates or enter into arrangement for divisions of rates on an equitable basis with respect to the handling of lake and rail traffic. No request has ever been made to either of them for the making of such arrangement. It is stated on behalf of the petitioner that it heretofore has been, and now is, ready to make reasonable and proper arrangement for the establishment of such through route and joint rates in connection with any responsible water carrier or vessels carrying package freight to and from a connection with it at Depot Harbor, even if the service of the transit company continues under its present control.

It is stated on behalf of the petitioner that the elimination of the interest of the petitioner in the transit company would necessarily result in a discontinuance of the water service of that line, which is the only remaining differential rail and lake route to Lake Michigan ports. It is also stated that the Lake Line Association has been dissolved. It is said that the petitioner has not diverted nor attempted to divert traffic from the boats of the transit company, and that neither the petitioner nor the transit company has acquired any monopoly of or lessened any competition upon the water route served by the transit company, and that the transit company has actively competed and will continue actively to compete with other existing rail and lake routes upon the great lakes.

From a full consideration of the record, upon rehearing we find that the existing service by water of the C. A. T. Co. is being operated in the interest of the public, and is of advantage to the convenience and commerce of the people, and that an extension thereof will neither exclude, prevent, nor reduce competition on the route by water here under consideration. The C. A. T. Co. will be required to file its tariffs in accordance with the provisions of the act to regulate commerce as amended by the Panama Canal Act. An order will be entered in accordance with the views expressed herein.

British Government War Risk Insurance.—The Imperial Colonial Office has announced that, as from Apr. 23, the rates of insurance under the Government war risks insurance scheme are as follows: Hulls, a voyage, 2½%; a round voyage, 5%; 91 days time policy; 5%; cargo, 105 shillings %.

Canada West Coast Navigation Co's Auxiliary Ships.

In view of the pressure on shipbuilding which is at present being exercised, and the regeneration of wooden shipbuilding, the performances of what may be termed the pioneers of the new type of auxiliary sailing vessels, are being watched with considerable interest. While an extensive programme of wooden shipbuilding is being undertaken in Canada, and also in the United States, the whole project is being very freely criticized, and it is being urged that such building should not be undertaken to any great extent, owing to the lack of seasoned lumber, that the vessels would be of low speed and not suitable for avoiding the submarine danger, that they could not be adequately yarmed, and that steel vessels are the only suitable means of meeting the emergency. Whatever arguments may be brought to bear on the subject, the fact remains that Canada West Coast Navigation Co., controlled chiefly by men associated with Canada Steamship Lines, Ltd., have had sufficient confidence in vessels of this type, and nearly a year ago placed orders on the British Columbia coast for the construction of eight auxiliary ships. Several of these have been delivered, and the balance are approaching completion. They are designed chiefly for the transportation of lumber, but without doubt could be so modified as to meet the exigencies of the demands for general cargo carriers. The recent trials of the ship *Margaret Haney*, show that a speed of 10 knots an hour can be obtained with sail and power combined, with a breeze of about 3 Beaufort scale.

The auxiliary power equipment, which is the same on each of the company's vessels, consists of two 160 h.p. Bolinder type, semi Diesel engines, the horse power being developed at 225 revs. per min. giving a speed under power alone of about 3 knots. The engines are of the two cycle type, and are fitted with a direct reversible with a one way clutch only, thus allowing the propeller to run free when the vessel is under sail. The clutch is operated by compressed air. The reversing gear is very simple, being controlled by one lever, which automatically stops the injection of fuel from the pumps, and as the engine comes to rest, injects a single jet of fuel into the cylinder, as the piston is on the up stroke. The pressure thus caused brings the piston to rest and starts it on the down stroke before it reaches the top centre. This is a new system and has not been used previously on engines of this type. The main fuel pumps can draw fuel from any one of the six main fuel tanks, and discharge into the service tanks, and can also be used for trimming purposes by discharging back into any of the tanks. The fuel pumps are in duplicate, and the filters on the main fuel line are so arranged that either of them can be taken out for cleaning without interfering with the flow of fuel to the main engines. All the auxiliary engines on the vessels, including windlass, four winches, and pumps, can be operated either by steam or compressed air. Steam is furnished by a donkey boiler under the fore-castle, and the air by two compressors on the main engines and one auxiliary compressor driven from the electric lighting plant. Crude oil is used as fuel, and the consumption when the engines are developing 160 h.p. is a little over 11 gallons an hour. The tanks have capacity for 30,000 gallons of fuel.

Electric light is furnished by a Canadian Westinghouse generator, driven by an 8 h.p. engine of similar type to the main engines. The officers' quarters are located under the poop deck and the crew's quarters are placed forward. The crew consists of 18 hands, including master, two mates, three engineers, one donkey man, two apprentices, seven seamen, cabin boy and cook.

A photograph of the ship *Mabel Brown* was reproduced in Canadian Railway and Marine World for May, and this illustration can be taken as typical of the other vessels under way for the company.

Shallow Draught Vessels for Indian Service.

Orders have been received recently by Yarrows, Ltd., Victoria, B.C., for the construction of the hulls of two shallow draught, stern wheel steamboats, for use in the shallow rivers and swampy regions of India, where navigation is difficult. This will make four of this type of vessel built at Victoria. One built early in the year is now in India, a second is ready for shipment, and the remaining two are in hand at the yards. The steel hulls only, with superstructure and rudder forgings, are made at Victoria, the engines, boilers, etc., being made by the parent company in Glasgow, Scotland, and shipped direct to India. The hulls are fabricated in Victoria and erected there, the port and starboard sides being painted with distinguishing colors, and all parts carefully numbered and named. They are then dismantled and crated for shipment to destination. The hulls are built of light weight steel, with steel main deck and holds for cargo. The upper deck, which is of wood, is for the cabins and passenger accommodation, with dining room and other conveniences, and above this is a galvanized iron roof. The wood work is done in India by the purchasers. The aim in the construction of these vessels is to have strength combined with lightness, so as to obtain the least possible draught when afloat. The hull is strengthened by 6 king posts of H section steel, 3 on each side, braced together with diagonal trussing of 3 in. double angle steel bars, also a longitudinal bulkhead in the centre running forward to aft, with deck stringers under the main deck. There are 8 transverse bulkheads, making the hull into watertight compartments, so that in the event of one of the compartments being punctured, the remaining ones will keep the vessel afloat. The vessels draw 18 in., light, and when loaded with 100 tons, approximately 36 in., and are engined for a speed of 9 to 10 knots.

Welland Canal Accident.—The s.s. *Natironco*, owned by A. B. Mackay, Hamilton, while upbound light, on May 3, struck and carried out the two head gates of lock 3 of the Welland Canal. The rear of the bank on the easterly side of lock 2 was partly washed away by the rush of water. Two spare gates were placed in position and locking was resumed after an interruption of 11 hours. The cost of repairing the damage done is about \$4,000. The cause of the accident was due to the snubbing wire getting caught in the compressor, and the vessel helper being unable to put it around the mooring post. When this was discovered, the master signalled to the engine room for a reverse, but the engineer put the engines ahead. They were eventually reversed, but too late to avert the collision with the gates.

The U.S. Shipping Board Criticised.

During the past two or three years, considerable criticism has been directed at the shipping legislation undertaken by the U. S. government. The *Pacific Marine Review*, in commenting rather pointedly on some of the work undertaken by the Shipping Board, refers to an instance which may be enquired into, and in which Canada is interested, as follows: "It will be remembered that one clause of the shipping act provides that U.S. goods or shippers are to be in no way discriminated against by foreign ships. There is opportunity under this section of the act for innumerable court actions. As an instance of the class of cases the Shipping Board is going to try there is the case of the White Star-Dominion Line's apple shipments from Portland, Me. From late in April to Dec. 1, the White Star-Dominion vessels run out of the St. Lawrence and the other months of the year from Portland, where they receive nearly their entire cargo from the G.T.R. The White Star-Dominion Co. has a contract for Canadian apple shipments which uses up most of their freight space for months at a time. They refuse to take U.S. apple shipments because they have no space for them if they live up to their contract with the G.T.R. The only reason the steamships of this line go to Portland, in the winter rather than to St. John, N.B., is because of their agreements with the G.T.R.. We understand the Shipping Board is to institute proceedings against the White Star-Dominion Line for discrimination against U.S. shippers. If these proceedings are successful the only losers will be the G.T.R. and the City of Portland. The Canadian shippers may be inconvenienced also; in fact, everyone concerned will be injured with the single exception of the concern against which the action has been taken. It does not look like a very sensible proceeding. Here we have goods of Canadian origin, shipped on a Canadian railway and carried on a British-Canadian ship. In transit, the goods pass through a small section of U.S. territory and are trans-shipped at a U.S. port, thus giving a U.S. city the chance to profit through at least one step of the transfer, the moving of the goods from rail to ship. The parties to the transaction are Canadian shippers, a Canadian railway and a British steamship line. What right has the U.S. to interfere in a case of this kind? Will the U.S. shipper have a better chance to ship goods on a White Star-Dominion vessel when she has been forced to sail from St. John than he has now when she is leaving Portland? If such cases as this one are to be the work of the Shipping Board, we need hardly look for any marked growth of the U.S. merchant marine resulting from the labors of that body."

Plant Line Service Cancelled.—A. W. Perry, General Manager, Plant Line, Boston, Mass., operating Canada Atlantic & Plant Steamship Co., has given notice that owing to conditions in the United States and Canada, on account of the war, the exceedingly high price and scarcity of fuel and of operating expenses, and the consequent falling off in passenger traffic, the company is unable to resume its service between Boston, Nova Scotia and Prince Edward Island. When the resumption of service is decided on notice will be given. All matters pertaining to the company's business will be attended to by F. H. Chipman, Plant Line, 453 Washington St., Boston.

Mainly About Marine People.

Rear Admiral W. C. Storey, Admiral superintendent, Esquimalt, B.C., has been promoted to Vice Admiral.

Artemas Lord, Superintendent of Lights at Charlottetown, P.E.I., under the Marine Department, died there, May 3, aged 81.

F. N. Sinclair has been appointed a pilot commissioner for the pilotage district of New Westminster, B.C., vice A. E. White resigned.

C. A. Lebel, chief clerk and acting agent, Marine Department, Montreal, is reported to have been appointed acting shipping master there, vice H. McLaughlin, resigned.

Vice Admiral C. E. Kingsmill, retired, who has been associated with the Canadian Naval Service Department for some years, has been promoted to Admiral on the retired list.

S. C. Calvin, formerly of the Calvin Co., Garden Island, Ont., has bought Bishop's Court, Kingston, Ont., which was the official residence of the former Anglican bishops of Ontario.

The Governor General in council has approved the action of the Vancouver Pilotage Commissioners in agreeing to pay their Secretary-Treasurer, C. Gardner Johnson, a salary of \$900 a year.

John Miller, who, it is announced, has arrived in Port Arthur, Ont., to become Superintendent, Port Arthur Shipbuilding Co., has been in service with Vickers, Ltd., in England. Canadian Vickers, Ltd., Montreal, and latterly was with the Texas Steamship Co.

J. H. Welsford, President, Union Steamship Co. of British Columbia, and Chairman and Managing Director, J. H. Welsford & Co., Gulf Transport Co. and Leyland Shipping Co., Liverpool, Eng., died suddenly in London, Eng., May 1, aged 53.

William McGuinness, heretofore Secretary, Allan Line Steamship Co., and Manager, Allan Bros. & Co., Glasgow, Scotland, has been appointed to supervise Furness, Withy & Co.'s Liverpool, St. John's, Halifax services, with office in the Royal Liver Building, Liverpool, Eng.

W. E. Burke, Assistant Manager, Canada Steamship Lines, Ltd., has been accompanying the Toronto City Property Commissioner to some of the United States coal mining centres, to make arrangements for a supply of coal for civic institutions and for sale to citizens.

Capt. S. Sigurdson, who died at Winnipeg, May 17, from cerebral hemorrhage, aged 53, was born in Iceland, and came to Canada in 1876, settling in Manitoba. He was well known on Lake Winnipeg, where he commanded various steamships, latterly being captain and owner of the s.s. Mikado.

John V. Foy, whose appointment as General Passenger and Freight Agent, Canada Steamship Lines, Ltd., Toronto, was announced in our last issue, was born at Toronto, Aug. 27, 1882, and entered transportation service in 1901 with Capt. R. S. Melville, General Ticket Agent, Toronto. He was, from 1902 to 1904, clerk, Niagara Navigation Co., Toronto; 1905 to 1910, chief clerk to General Manager, Niagara Navigation Co., Toronto; 1911 to 1912, General Passenger Agent, Niagara Navigation Co., Toronto; 1913 to 1914 District Passenger Agent, Richelieu and Ontario Navigation Co., Toronto; 1914 to 1915 General Agent, Passenger Depart-

ment, Canada Steamship Lines, Ltd., Chicago, Ill.; 1915 to 1916, General Agent, Passenger Department, same company, Buffalo, N.Y.; 1916, Assistant General Passenger Agent, same company, Toronto. He is a son of the late John Foy, who at the time of his death was President of the Niagara Navigation Co.

Dominion Government Vessels for Ocean Service.

Canadian Railway and Marine World for May gave some details of the sailing ship equipped with auxiliary motive power, which the Dominion Government had ordered from the Wallace Shipyards, Ltd., North Vancouver, and stated that another similar vessel was to be ordered shortly.

A press report from South Vancouver, May 17, stated that at a meeting of the Board of Trade there on the previous day, it was definitely stated that the contract for the second vessel had been signed with Lamonde & Harrison, at an approximate price of \$225,000, and that the vessel would be built on a site which the firm had acquired at the foot of Quebec St.

While it is quite probable that the second vessel which the Government decided to order some time ago, will be built by this firm, we were advised May 25, that the contract had not then been signed.

The vessel is to be of the following dimensions: length over all 255 ft., length of keel 225 ft., depth moulded 21 ft. 4 in., breadth extreme 44 ft., and the construction and equipment will follow generally the lines adopted by Canada West Coast Navigation Co., in those now being built for that company, on the Pacific coast, and illustration of which appeared in our last issue.

Ships Needed for U.S. Coast Defence.—The U.S. Navy Department has urged upon the consideration of the House Committee on Naval Affairs its urgent need for ships for the coast defence fleet and has suggested legislation to enable the department to commandeer those it requires at a reasonable price. A number of the finest yachts in the country have been tendered to the government by the owners for use during the war, either free or on a nominal lease, and numerous vessels of other types, including smaller boats, have been bought or leased; but a great many more are needed. The owners of a number of the vessels that are sought by the navy are asking exorbitant prices for them. About 200 yacht owners have refused to sell their vessels to the government at prices to be fixed by the Board of Appraisal, and several have refused to sell at any price.

Canadian Northern Steamships, Ltd., now owns six steamships, which were acquired from the Merchants Mutual Lake Line Ltd. last autumn, viz.: A. E. Ames, Beaverton, Mapleton, H. M. Pellatt, J. H. Plummer and Saskatoon. They are being operated under an agreement with the Canada Steamship Lines, of which H. W. Cowan is Operating Manager. The officers of the Canadian Northern Steamships, Ltd., are: Sir William Mackenzie, President; Sir Donald Mann, Vice President; D. B. Hanna, Second Vice President; L. W. Mitchell, Treasurer; R. P. Ormsby, Secretary; R. C. Vaughan, Assistant to Second Vice President and Assistant Secretary.

The Welland Ship Canal.

During the early part of the year, it was announced that work on the construction of the Welland Ship Canal was to be suspended until the conclusion of the war. Some minor work was gone on with preparatory to shutting down, and work definitely ceased May 2. Contracts are running for sections 1, 2, 3 and 5, the work, taken as whole, being rather more than 50% completed, that on sec. 3, the heaviest portion of the whole route, not being in so forward a state as on the other sections. It was anticipated that construction on the other three sections would have been completed this year, within the contract time, and that on sec. 3 about the middle of 1918, or a year behind the time specified in the contract. The contracts are held as follows: Sec. 1, Dominion Dredging Co., \$3,487,727; Sec. 2, Baldry, Yerburch & Hutchinson, Ltd., \$5,377,185.75; Sec. 3, O'Brien & Doheny, \$9,540,050; Sec. 5, Canadian Dredging Co., \$1,945,788.

The services of the entire staffs have been dispensed with, including those of the Engineer in Charge, J. L. Weller, M.Can.Soc.C.E. Mr. Weller was born at Cobourg, Ont., Feb. 13, 1862, and entered Dominion Government service in 1883, as Assistant Engineer on the Trent Canal, and from 1885 to 1888 was Assistant Engineer on the Murray Canal; 1888 to 1900, Resident Engineer, St. Lawrence Canals, Cornwall, Ont.; 1900 to 1912, Superintending Engineer, Welland Canal, St. Catharines, Ont.

Proposed Government Control of Lake Freight Rates.

The House of Commons committee dealing with the revision of the Railway Act has before it an amendment to sec. 358, providing that the provisions of the act in respect of tolls, tariffs and joint tariffs, shall, so far as deemed applicable by the Board of Railway Commissioners, extend and apply to all freight traffic carried by any carrier by water from any port or place in Canada to any other port or place in Canada. This amendment is being strongly opposed on behalf of the Dominion Marine Association. Francis King, M.A., Counsel for the Association, appeared before the committee, May 22, and stated that while the association had no objection to the railway lake carriers being under the board's control, the consensus of opinion was against the proposal. He claimed that there was no analogy between railways and lake lines, the latter having no public franchises and no exclusive privileges. On the water there was constant competition, which was not possible to the same extent on land. He also contended that the board could not possibly establish fair lake rates, owing to the rapidly changing conditions of the lake trade.

Payment of Freight Charges on Lake and Rail Grain Cargoes.—The railway companies have notified vessels that on delivery of grain cargoes for trans-shipment at Georgian Bay ports, they have discontinued advancing the payments for freight to the vessel. The Dominion Marine Association, acting for the vessel owners, immediately notified the shippers that in these cases the freight must be paid in advance. The Winnipeg Grain Exchange and the Lake Shippers Association of Fort William have since protested to the railway companies, and the matter is under consideration.

Atlantic and Pacific Ocean Marine.

The France-Canada Steamship Co., operating between Canada and France, is reported to have purchased seven sailing vessels from J. S. Winslow, Portland, Me.

The Donaldson Line s.s. Cassandra was the first trans-Atlantic steamship to arrive at Montreal this year, making port on May 2. Capt. R. C. Brown, the master, was presented with a gold headed cane by the harbor commissioners.

Canada Steamship Lines s.s. Cascaedia, which has been extensively repaired and overhauled, is running for a while on the Quebec Steamship Co.'s route between New York and Bermuda. Later in the season she will return to her customary service between Montreal, Gaspé and Prince Edward Island ports.

The British s.s. Lord Antrim, bound for Great Britain from the U.S., grounded near Fourchu, N.S., May 4, during heavy weather. She was floated during the same day and taken to Louisburg, where some temporary repairs were undertaken in order to allow of her proceeding to Halifax, where repairs were completed.

The Gulf Transport Co., operating between Great Britain and the Gulf of Mexico, of which J. H. Welsford & Co., Liverpool, are the managers, is reported to have sold its fleet of five vessels to Liverpool buyers, two of the vessels being sold to Elder, Dempster & Co. A sixth vessel belonging to the company has been held at Hamburg since the outbreak of war. J. H. Welsford & Co. control the Union Steamship Co. of British Columbia.

Furness, Withy & Co. announce that as Allan Bros. & Co. having relinquished the agency at Liverpool, Eng., for Furness Line vessels between Liverpool, Eng., St. John's, Nfld., and Halifax, N. S., all traffic arrangements are now conducted from Furness, Withy & Co.'s own offices in the Royal Liver Building, Liverpool. The services mentioned are under the supervision of W. McGuinness, heretofore Secretary, Allan Line Steamship Co., and Manager, Allan Bros. & Co., Glasgow, Scotland.

The Dominion Government s.s. Durley Chine was rammed and sunk off Sandy Hook, toward the end of April, by the outward bound s.s. Harlem. The captain and crew were saved and returned to New York. The s.s. Durley Chine was a single screw steamship, length 279 ft., beam 40 ft. 1 in., depth 18 ft. 4 in., and was built at Sunderland, Eng., in 1912. She was purchased by the Dominion Government in 1914 from the Alum Chine Steamship Co., London, Eng., chiefly for Hudson Bay service. The Dominion Government has taken action against the owners of the s.s. Harlem in the Halifax Admiralty Court, claiming \$400,000 for the loss of the vessel.

The U. S. Government is reported to have purchased seven steamships from the Austro-American Steamship Co. These vessels have been interned in U. S. ports since the outbreak of war. The price paid for the vessels is given as \$6,778,006.70, and the business was carried out by the U. S. Shipping Board. The vessels had previously been purchased from the Austro-American Co., and a contract had been entered into for their resale at \$148 per deadweight ton, but on the request of the U. S. Government, the resale was not carried out, and the vessels were transferred to the government at the original price paid. The original contract confined the use of the vessels to

neutral waters, but a release was arranged on payment of a further \$20 a deadweight ton, and this release goes with the vessels to the government.

Maritime Provinces and Newfoundland.

The C.P.R. s.s. Empress was taken off her route between St. John, N.B., and Digby, N.S., May 21 to 23 inclusive, for a general overhaul at St. John.

The s.s. William Edwards, owned in Sydney, N.S., and chartered for carrying coal to Grand Falls, Nfld., foundered off Cape Pine, May 16, during a heavy gale. The crew were saved, and the vessel and cargo were fully insured.

The s.s. Aranmore, which has been running between Pictou, N.S., and Charlottetown, P.E.I., in conjunction with the car ferry Prince Edward Island, struck some submerged object while docking at Charlottetown, May 11, making a large hole in her side. Repairs were undertaken at Charlottetown after she was beached.

The s.s. Maskinonge, under charter to the Dominion Coal Co., which stranded off St. John harbor, at the end of April, was released May 5, practically without damage, and docked at no. 1 berth. The stranding was due to the dragging and fouling of the anchors during a freshet.

The Dominion Coal Co. is reported to have purchased the steamships Hochelega and Lingan from Furness, Withy & Co. The Hochelega was built in 1912, and is 4,681 tons gross, 2,601 net, and the Lingan was built in 1911, 4,677 tons gross, 2,603 tons net. Both were built at Middlesbrough, Eng., and were specially designed for the coal trade.

The Governor General in council has approved bylaw 33 of the Pilot Commissioners of the Pilotage District of Sydney, N.S., providing that all licensed pilots and pilot apprentices shall undergo every year an examination as regards form vision and color ignorance, and that the sight tests shall be the same standard

as those passed by candidates for masters and mates examinations.

Province of Quebec Marine.

The Inland Revenue Department received tenders, May 23, for the privilege of ferrying across the Ottawa River between Cumberland, Ont., and Buckingham, Que., for five years from May 1.

It was announced in the House of Commons recently that Capt. E. Angers, of the Dominion Government s.s. Vercheres, had been dismissed for incompetence. No investigation had been held, but one would be granted by the government if the person dismissed desired it.

The Montreal City Council has arranged with the Canada Steamship Lines to operate a ferry service to St. Helen's Island for \$28,000 for the summer, the company to have the privilege of selling refreshments. The ferry is free to the public, the steamboats Longueuil and White Star being used, from May 23.

The Dominion Government s.s. Berthier arrived at Quebec, May 18, from Sorel, on her maiden trip. She was built at the Government shipyard at Sorel last year, being completed during the winter. She is intended for the use of the staff engineers of the St. Lawrence Ship Channel below Quebec. A description and illustration of her were given in Canadian Railway and Marine World for Dec., 1916.

The Quebec & Levis Ferry Co.'s annual meeting was held at Quebec, May 15, when a satisfactory report of the past year's business was presented. A vote of condolence was passed on the death of C. H. Shaw, President of the company. The board for the current year is: J. S. Thom, President; A. Gourdeau, Vice President; G. E. Allen Jones, L. C. Webster and W. J. Thompson.

The Minister of Trade and Commerce announced in the House of Commons recently that a contract had been entered into for a steamship service every two weeks between Quebec and Gaspé Basin, calling at way ports. Last year the service was every week, and was performed

Sault Ste. Marie Canals Traffic.

The Canadian canal opened April 25, and the U. S. canal April 24.

by the Gaspé and Baie des Chaleurs Steamship Co., Quebec, for a subsidy of \$8,500.

In response to questions in the House of Commons recently, it was stated that the harbor master at Quebec, Capt. J. Murray, was, prior to his appointment, master of the C.P.R. s.s. Empress of Britain, and he was selected for the position by reason of the special qualifications he was known to possess, and was appointed at the time extensive works were authorized in connection with the new organization of the Harbor Commission. His salary is \$3,500 a year, and that of his predecessor was \$1,750.

Ontario and the Great Lakes.

The name of the steamship Harvey H., owned by Canadian Stewart Co., Toronto, has been changed to Henriette Stewart.

Canada Steamship Lines s.s. W. Grant Morden, which grounded near Sault Ste. Marie, May 18, was released, May 20, undamaged, and proceeded to Lake Erie.

The Northern Navigation Co. has placed in service at its freight sheds at Sarnia a number of electric storage battery trucks for handling freight to and from the sheds and vessels.

The s.s. Rochester, which is being operated by the Northern Navigation Co., this year, will be on the route between Cleveland, Ohio, and Sault Ste. Marie, calling at Sarnia and Georgian Bay ports.

The s.s. Forest City, which has been running between Port Arthur and Fort William and Silver Islet for several years, is reported to be for sale, and it is expected that she will leave that district.

The U. S. Lake Survey has issued a notice advising vessels to keep to the northerly side of the wrecked s.s. John Plankinton in the Canadian side of the channel in the Detroit River, opposite the foot of Fifth St., Detroit.

The tug Frances B. Hackett, owned by the Hackett Towing & Wrecking Co., Amherstburg, Ont., and Detroit, Mich., has been sold to E. P. Morse, Jr., Brooklyn, N.Y., who is believed to have made the purchase on behalf of the U.S. Government.

The A. B. Mackay Steamship Co.'s s.s. Natironco, which ran aground on Charity shoal, about 20 miles west of Kingston, May 16, was released on the following day, leaking somewhat, and proceeded west to be docked for examination and repairs.

The Pittsburg Steamship Co.'s s.s. Pentecost Mitchell and the s.s. Saxona owned by G. A. Tomlinson, Duluth, Minn., collided, bows on, near Watson's reef, Detour, Mich., May 13, and both sank. The crews took to the boats and reached shore safely. The vessels lie in the channel in a northeasterly direction, but there is sufficient room on either side for vessels to pass.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level for April, as follows: Superior, 602.28; Michigan and Huron 580.78; St. Clair 575.21; Erie 572.57; Ontario 246.24. Compared with the average April levels for the past ten years, Superior 0.72 ft. above; Michigan and Huron 0.63 ft. above; Erie 0.16 ft. above, and Ontario 0.14 ft. below.

The Great Lakes Transportation Co., Midland, Ont., has two steamships under construction by the Port Arthur Shipbuilding Co., Port Arthur, Ont. They are full canal size, 261 ft. long, 43½ ft. beam

and 28 ft. 2 in. deep, 4,200 tons deadweight capacity. In addition to these, the company has on hand the construction of 5 canal size steamships, 3,500 tons deadweight capacity, and 6 smaller vessels.

The s.s. Keystorm, which was wrecked and sunk in Chippewa Bay, near Brockville, in 1913, is reported to have been sold by Lloyd's underwriters to James Richardson & Son, Kingston, for \$7,500, as she lies. Some attempts have been made to raise her, but without success. It is now stated that arrangements are being made for her salvage, and that it is expected she will be raised during this summer. The wreck lies with her stern in about 110 ft. of water and her bows under about 35 ft. Owing to the present high price of vessels, due to shortage, it is considered a good proposition to spend a considerable sum on the work.

The steamships Congercoal and Lloyd S. Porter were destroyed by fire, May 10, while lying alongside each other at North Fairhaven, N.Y. Both vessels were engaged in the coal trade. The Congercoal was owned by the Conger Lehigh Coal Co., Toronto, and was built at Mount Clemens, Mich., in 1882, and named A. Weston. Her dimensions were, length 162 ft., breadth 31.3 ft., depth 13 ft.; tonnage, 276 gross, 333 register, and she was equipped with engine of 48 n.h.p. driving a screw. The Lloyd S. Porter was built at Port Huron, Mich., in 1893. Her dimensions were, length 158.7 ft., breadth 29.5 ft., depth 10 ft.; tonnage, 489 gross, 397 register, and she was equipped with engine of 43 n.h.p. driving a screw.

The U.S. Lighthouse Bureau has marked with two red spars, carrying red lights at night, the channel bank of Pipe Island, opposite and above the wrecks of the steamships Pentecost Mitchell and Saxona, in the St. Marys River. The stacks and spars of the wrecks are visible above water, and are marked at night by lights maintained by the owners. The available channel between the wrecks and Pipe Island Bank has a clear width of 500 ft. of which about 400 ft. is on the easterly side and 100 ft. on the westerly side of the chart vessel course. Vessels are warned not to meet or pass each other in the immediate vicinity of the wrecks. The tug Minta K. has been placed to oversee the passage of vessels in accordance with the rules and masters are requested to co-operate in keeping the channel clear.

Masters and Mates Certificates and Returned Soldiers.—The Governor General in council has amended the scale of fees as previously adopted to provide that in the case of a returned soldier from active service at the front, or in the case of a soldier who has been honorably discharged and returned as medically unfit for service at the front, proof of which shall lie with the candidate, the fee for a master's or a mate's certificate of any grade shall be \$1.

Levis Dry Dock.—Work on the construction of the graving dock at Lauzon, Levis, Que., is reported to be progressing satisfactorily. It is stated that the excavation will be completed this year, with most of the concreting. When completed, this dock will be of the following dimensions: Length, clear, 1,150 ft.; width, 120 ft.; maximum depth, 45 ft., making it the largest dry dock in the world. It will be 10 ft. deeper than the next largest at Boston, Mass., and 130 ft. longer than the Gladstone Dock at Liverpool, Eng., which, however, is 1 ft. deeper.

Manitoba, Saskatchewan and Alberta.

The Ross Navigation Co. is building a stern wheel vessel at Pas, Man., and it is expected that it will be ready for operation early in the summer.

The s.s. Keenora, at one time owned by the Rainy River Navigation Co., Fort William, Ont., and latterly by the Rat Portage Lumber Co., Kenora, Ont., and, as announced in our March issue, sold to Alex. Mackenzie, Winnipeg, has been thoroughly overhauled and lengthened 50 ft. She is being operated in excursion traffic on the Red River. She was built at Kenora, Ont., in 1897, and is screw driven by engine of 38 n.h.p. When she was last sold she was dismantled at Kenora and reassembled at Winnipeg.

British Columbia and Pacific Coast.

Navigation on the Yukon River opened May 15, being the latest since 1899, when it did not open until May 17.

A general meeting of the Alberni Canal Transportation Co., Ltd., was held at Victoria, May 12, to receive and dispose of the liquidator's report covering the winding up of the company's affairs.

The Hudson Bay Co. is operating a gasoline motor boat, this year, on the Stikine River, between Telegraph Creek, B.C., and Wrangell, Alaska. The service commenced May 10, the fare being \$10 each way, meals 50c each.

The Grand Trunk Pacific Coast Steamship Co. is allowing passengers on its steamships to occupy parlor rooms on board, while the vessels remain in port at Skagway, Alaska, for a charge of \$4 a room with bath, for one or two persons, and \$3 without bath.

The s.s. Quadra, formerly owned by the Dominion Government, and operated as a lighthouse and buoy tender on the British Columbia coast, and which was sold recently, after being sunk in collision, to a mining company at Howe Sound, is having oil burning apparatus installed at Vancouver.

The Grand Trunk Pacific Coast Steamship Co. will commence its summer Alaska service June 11, with the sailing of the s.s. Prince George from Seattle, Wash., calling at Vancouver, Prince Rupert, Ketchikan, Wrangell, Juneau and Skagway. The service will be given weekly to Aug. 27, by the steamships Prince George and Prince Rupert.

The New England Fish Co. has put into service the s.s. Canada, which it purchased from the British Columbia Fisheries, Ltd., when that company was wound up about two years ago. The vessel has been thoroughly overhauled and remodelled. The s.s. Imbricaria, purchased at the same time, is now being overhauled, and is expected to be ready for service towards the end of June.

The C.P.R. has purchased the car barge D. L. Co. XXIV, with triple tracks, capable of handling nine cars, from the Drummond Lighterage Co., Seattle, Wash. The barge is 140 ft. long, with 42 ft. beam, and has been used by the Chicago, Milwaukee & Puget Sound Ry. for transportation on Puget Sound. The barge has been transferred to the Canadian register and renamed Transfer No. 6.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert, which stranded on the west coast of Genn

Island, Mar. 22, was refloated at the end of April, and proceeded under her own steam, conveyed by the salvage steamer *Salvor*, to Victoria, where she was docked for examination. It is stated that about 42 new plates will be required, and that a number of plates will have to be removed and faired. The repairs will, it is estimated, take about two months.

The Western Fuel Co., Victoria, has obtained an injunction against Wilhelm Wilhelmsen, restraining him from interfering with the loading of the s.s. *Tancred*, under charter to the plaintiff company in the coal trade between Nanaimo, B.C., and San Francisco, Cal. The charter is dated June 5, 1915, and the master of the vessel stated that he had received instructions to refuse to load the vessel, and to withdraw her from service, unless the company agreed to pay £8,000 a month and to insure the vessel for £200,000.

The British Columbia Salvage Co. has entered suit in the U. S. District Court at Seattle, Wash., against the owners of the s.s. *Congress* for \$314,200, based on 30% of the salvaged value of the vessel, for services rendered by the tug *Salvor*, when the *Congress* was burnt at Coos Bay, Ore., in Sept., 1916. The vessel was owned by the Pacific Coast Steamship Co., which amalgamated with the Pacific Alaska Navigation Co. The *Congress* was not taken over by the amalgamated company, but was abandoned to the underwriters, who have since paid for her as a total constructive loss, and she has since been sold to other parties, for, it is said, \$1,000,000.

It is reported that the Grand Trunk Pacific Alaska Co. has been incorporated at Olympia, Wash., to own and operate the power schooner *Tillamook*, which was announced recently had been purchased by the Grand Trunk Pacific Coast Steamship Co., for operation to Ketchikan, Alaska, from Prince Rupert, B.C. It is said that the company will acquire other similar vessels for the cannery trade. The incorporators named are: J. S. Gibbon, Vice President, Grand Trunk Pacific Dock Co., Seattle, Wash.; J. H. Burgis, General Agent, Passenger Department, G.T.P.C.S. Co., Seattle; F. L. Norman, Commercial Agent, same company, Seattle; C. E. Croser and K. F. Hass.

As the result of an enquiry into the purchase of the launch *Faloma* by the B.C. Government in 1911, on account of the vessel not now being in use, a standing committee of the legislature has reported that the *Faloma* was purchased from the Pacific Marine Brokerage Co. for \$10,000. She was built in 1910 for that company, at an apparent cost of \$8,000. She has been operated satisfactorily by the government for about two years, since when her engines have not been powerful enough to run her economically, and she has been laid up. The committee reported that the transaction was an ordinary business deal, that in view of the demand for boats at the time, the owner did not make any excessive profit, and that there is no evidence of commission or campaign fund payments.

Handling of Vessels in Harbors.—The Marine Department has issued special notice, no. 34, to masters, shipowners and others concerned, giving extracts from the Defence of Canada Order, 1917, relative to the handling, mooring and navigating of vessels in Canadian harbors and the vicinity, showing penalties incurred for contraventions. Copies may be had from the department.

Coast, Lake and River Steamship Officers for 1917.

The following are additional returns received since those published in our April and May issues. The first column shows the names of vessels, the second those of captains, and the third those of chief engineers:

The Arctic Steamship Co., Ltd., has had its authorized capital stock increased from \$20,000 to \$80,000.

The Permissible Draught for the Well- and Canal has been fixed for the present at not exceeding 14 ft.

Stranding of the s. s. Prince Rupert.

As a result of an official investigation at Victoria, B.C., into the causes which led to the stranding of the Grand Trunk Pacific Coast Co.'s s.s. *Prince Rupert*, on Genn Island, Mar. 23, it was found that a violent and blinding snowstorm temporarily obscured all the leading marks, and the unusually high tides caused an in-drift toward the mouth of the Skeena River. The master, Capt. Mackenzie, was perfectly justified in retiring to his cabin on the night of the casualty, after leaving instructions to be called if necessary, as the weather was then clear and all marks visible. The storm arose very suddenly, and the engines were put at slow speed, and later full speed astern, but before way could be got off the vessel, she struck on a reef at the north end of Genn Island, on the top of high water, at a tide which was one of the highest of the year. The court considered that under the circumstances everything possible was done to avoid the disaster, although no soundings were taken, the vessel being fully equipped in this respect, but the court considered that the taking of soundings would have been of no use. The master and officers were therefore exonerated from all blame for the casualty and their certificates were returned to them.

The Atlas Transportation Co., Ltd., has been incorporated under the Quebec Companies Act, with \$20,000 capital, and office at Montreal, to own and operate vessels of all kinds, with or without motive power, and to carry on a general transportation business. The incorporators are: J. G. Rene, L. Gelinas, J. H. Bourque, Maisonneuve, Que., and H. Bourassa and O. Perrault, Montreal. The company has not been fully organized as yet, but the President is A. A. Larocque, and the Managing Director is Yvon Dupre, both of whom are directors of Sincennes-McNaughton Line, Ltd., of which the new incorporation is a subsidiary. Among vessels which the new company is reported to be taking over, are the barge *Russell Sage*, and the steamboat *William L. Proctor*, owned by Sincennes-McNaughton Line, Ltd., and which have recently had their names changed to *Atlasco* and *Conqueror*, respectively.

The Atlas Transportation Co., Ltd., The Barge Twin Sisters Co., Ltd., The Barge Ireland Co., Ltd., and The Barge Menominee Co., Ltd. incorporated recently under the Quebec Companies Act each with \$20,000 capital and office at 75 Common St. Montreal are closely associated with Sincennes-McNaughton Line, Ltd., Montreal and the Touzin Sand Co. The President is A. A. Larocque and the Managing Director is Yvon Dupre, in each case, both of whom are directors of the two latter companies. They own a number of forwarding barges and plan to make further purchases for operation on the Great Lakes.

Notice to Atlantic Navigators.—All vessels sailing from a port on the St. Lawrence River of Gulf, below, but not including, Quebec, must call at Sydney, N.S., for instructions from the senior naval officer there as to the route they must follow, unless they have been given precise instructions for the whole of their route before sailing. This notice has been issued under the Defence of Canada Order, penalty for non-compliance with which is a fine not exceeding \$5,000, or imprisonment not exceeding 5 years, or both fine and imprisonment.

Chartered Vessels and War Region Risks.

The appeal of the Maskinonge Steamship Co. against a judgment in favor of the Dominion Coal Co., as charterer of the s.s. Maskinonge, in respect of insuring the vessel against war risks, was before the English Court of Appeal recently. The s.s. Maskinonge was originally chartered by the Dominion Coal Co. in 1909, for seven seasons, and in 1915 another agreement was entered into for a further six years. In this latter agreement, it was provided that should the vessel be ordered by the charterer into the war region, the war risk insurance premium payable by the owner should be refunded by the charterer. In Oct., 1916, the vessel was ordered by the charterer to go to Boston, Mass., and on or about Oct. 8, a German submarine appeared off Nantucket and sank about six vessels. From this, the appellant claims that that part of the U.S. coast became a part of the war region, and the vessel was insured against war risks. The matter really resolved itself into the definition of the term war region in the agreement, and the appellant contended that as soon as it became clear that the region in which the vessel was trading was one in which there was real apprehension of enemy activity, that district became a war region. The war risk insurance for three months was £1,750.

The judgment was that the appeal be allowed, and the decision of the lower court reversed, the appellant's claim being allowed in full with full costs in the appeal and in the lower court. The judge held that when, as in this case, there had actually been warlike operations by the appearance of a German submarine and the sinking of vessels in the area in which this vessel was trading or ordered to trade in the future, and that there was reasonable apprehension that these operations would recur, and no reasonable grounds for coming to the conclusion that this was a mere sporadic attack, then that constituted this area a war region within the meaning of the contract.

Requisitioning Ships for Government Purposes.

A Dominion order in council was passed on April 24, repealing orders passed Nov. 24, 1916, and Mar. 31, 1917, and providing as follows: Whereas by order in council of Nov. 24, 1916, certain regulations were enacted under the provisions of the War Measures Act, 1914, for the requisitioning of any British ship registered in Canada by and on behalf of His Majesty for the carriage of foodstuffs and of any other articles of commerce; and whereas by order in council of Mar. 31, 1917, further regulations were made and enacted under the provisions of the said act for the requisitioning, for the said purpose, of any ship under construction or about to be constructed in any shipyard in Canada for neutral owners; and whereas it has been represented that it is essential that provision be made for the requisitioning of any British ship registered in Canada, for any other purpose whatsoever, including the requisitioning of any cargo space therein, and also for the requisitioning of any ship under construction or for the construction of which a contract has been entered into, in any shipyard in Canada, whether for British or for foreign ownership; therefore the Governor-General in council, under and

in virtue of the provisions of the War Measures Act, 1914, orders as follows:

Any British ship registered in Canada may until further order be requisitioned by and on behalf of His Majesty for the carriage of foodstuffs and of any other articles of commerce, or for any other purpose whatsoever. Any cargo space in any British ship registered in Canada may until further order be requisitioned in whole or in part by and on behalf of His Majesty for any purpose whatsoever. Any ship under construction or for the construction of which a contract has been or may be entered into in any shipyard in Canada, even in cases where the export thereof for foreign registry has been authorized by the Governor in council, may until further order be requisitioned by and on behalf of His Majesty for the carriage of foodstuffs or for other articles of commerce or for any other purpose whatsoever. The Minister of Marine and Fisheries is authorized and directed to give effect to these regulations by causing notice of requisition to be served on the owner of any such ship, or the builder in the case of a ship under construction, or for the construction of which a contract has or may be entered into.

We were officially advised on May 16 that no requisitions had been passed under the provisions of the order in council quoted above. As stated in previous issues of Canadian Railway and Marine World, the Dominion Government, between Sept. 19 and Nov. 15, 1916, authorized the exportation to Norway on completion of 18 cargo steamships to be built at New Glasgow, N.S., Montreal, Toronto, Port Arthur, Ont., and Vancouver, B.C., and for the exportation to the United States of two others to be built at Toronto. On May 16 we were officially advised that the only companies that had actual contracts for the construction of vessels for neutral owners were: Canadian Vickers, Ltd., Montreal, 2; Polson Iron Works, Toronto, 2; Thor Iron works, Toronto, 2. There appears to be little doubt that these will be taken over for the British Government.

Proposed Shipbuilding in New Brunswick.

The question as to what steps the New Brunswick Government should take in promoting and encouraging shipbuilding within the province was discussed at an impromptu meeting at Fredericton, N.B., led by T. H. Estabrooks. The scheme of aiding the construction and operation of vessels, as being carried out by the British Columbia Government, and also the proposals suggested under the Nova Scotia scheme, were outlined and discussed, and the history of shipbuilding in New Brunswick was reviewed. In the main, it was suggested that the N.B. Government should appoint a commission of business men, some of whom should have some knowledge of the shipbuilding business, with authority to proceed as speedily as possible with the construction of vessels of a suitable type to meet immediate needs. The commission should be provided with a fund of \$1,000,000 for the proper carrying on of the work and for assisting such construction as deemed advisable. The type of vessel to be adopted, method of propulsion, etc., should be left for decision by experts. It was suggested that instead of setting aside the sum suggested to promote the business, the Government should pay a bonus on a tonnage basis. A resolution calling upon the government to take such

steps as would eventually lead to the re-establishment of the shipbuilding industry in the province was passed and sent to the government, and T. H. Estabrooks and J. A. Likely were appointed to select a representative committee to meet members of the government to discuss the proposals.

Repairing the Damaged German Ships Interned in the U. S.

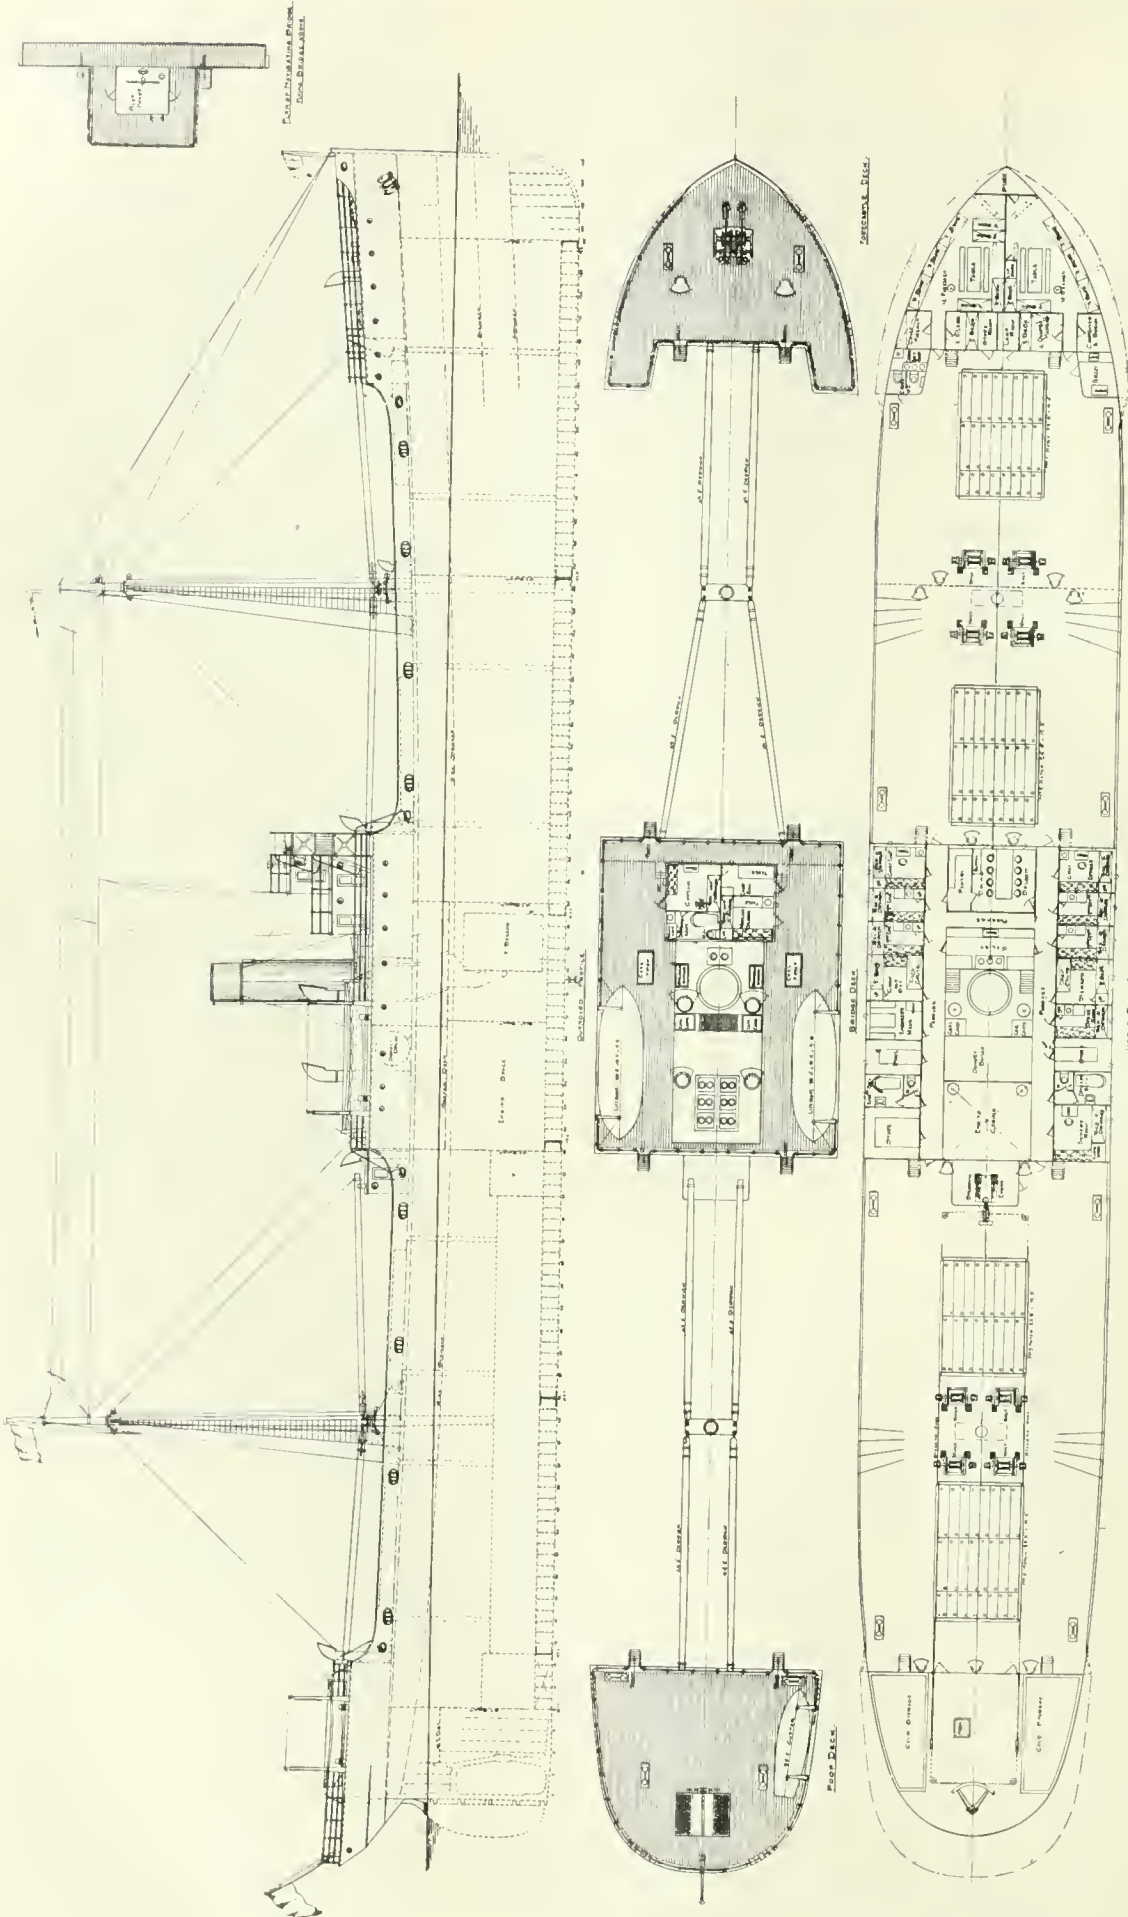

Chairman Denman of the United States Shipping Board has announced that a detailed survey of each of the 71 German and Austrian ships interned in the U. S. has been made, disclosing the damage done each; that draughtsmen have prepared drawings from which the impaired or destroyed parts of the machinery can be fashioned; and that the necessary repair work is being rushed under the supervision of a corps of marine architects in private shipping yards. Mr. Denman said: "Immediately after the removal of the crews from the interned vessels the Shipping Board undertook to repair them. It organized a committee of experts, including F. S. Martin, of New York, and S. Taylor, Chairman of the American Bureau of Shipping. The committee directed a survey of each ship. It was found that many important parts of the machinery had been destroyed or thrown overboard—parts that connected the power with the propelling mechanism. Draughtsmen were engaged to draw designs for the missing machinery, and repairs are being made in U. S. factories. Many of the interned ships were constructed in British yards. The British authorities are furnishing us with the original plans. Within five months the most seriously damaged of the ships will be ready to put to sea. The smaller ships will be prepared for commission in a much shorter time."

The Shipping Board's survey of ships interned in U.S. ports has disclosed that the three great steamships of the Hamburg-American Line, the President Lincoln, the President Grant, and the Pennsylvania, are the most extensively damaged of the German vessels. The repairs on each of these ships will approximate \$250,000.

Rideau Steamboat Co., Ltd. has been incorporated under the Dominion Companies Act, with \$50,000 capital and office at Ottawa, Ont., to own and operate steam and other vessels, and to carry on a general transportation and vessel owning and chartering business. The provisional directors are: F. F. Pardee, A. S. Burnham, N. St. C. Gurd, W. J. Barber, F. W. McKinnon and Andrew Haydon, Ottawa, Ont.

Landbo Transportation Co., Ltd., has been incorporated under the Ontario Companies Act, with \$40,000 capital and office at Sarnia, to own and operate steam and other vessels for the conveyance of passengers and merchandise, and to carry on the general business of common carrier. The incorporators are: W. E. Beaton, W. J. Best, A. W. Campsall, and F. R. Reeves, Sarnia, Ont.

Increased Pilotage Tariff at Montreal.—An order in council has been passed increasing the pilotage tariff at Montreal, on coasting and sea going steamships by 25c a foot draught, making the new tariff \$2.75 for each foot of draught for any coasting steam vessel, and \$3.25 for each ocean going steam vessel. The tariff for piloting inland vessels remains as heretofore, \$2.50 per foot draught.

Profile and Plan Views, Steamship War Dog.

Steel Cargo Steamship Construction at North Vancouver.

A single screw cargo steamship was launched from the Wallace Shipyards, North Vancouver, B.C., May 17, and it is stated that this is the first steel steamship ever to be launched in British Columbia waters. The christening cere-

mony was attended by a number of prominent men in the locality, and the vessel was named War Dog.

The order for this vessel was originally placed with the builders by the Kishimoto Kissen Kabuskis Kaisha, of Japan, but while on the stocks, was transferred to J. W. Chambers, Liverpool, Eng., who we have good reasons for stating is acting for the British Government. Following are the principal dimensions: Length overall, 312 ft. 10½

ft.; length, b.p., 300 ft.; beam moulded, 45 ft.; depth moulded, 27 ft.; load draught, 22 ft. 6¾ in.; load deadweight, 4,750 tons; displacement, 6,750 tons; total capacity of holds, 214,700 cu. ft. The general arrangement of the ves-

sel, which is being built to Lloyd's 100 A1 class, is illustrated by the elevation and deck plans given herewith. The scantlings are shown upon the midship section. The vessel is of the single deck type, with poop, bridge and top gallant forecastle. The vessel will be divided transversely by five watertight bulkheads, the position of which is shown in the accompanying illustrations.

A short second deck will extend between the engine room and boiler room bulkheads, the tween deck space being utilized for coal, in addition to the permanent side bunkers, giving a total coal capacity of 327 tons. The forecastle deck will be about 34 ft. long, the bridge deck about 58 ft., and the poop deck about 35 ft.. The officers' quarters, owners' stateroom and spare room will be on the bridge deck. Ample provision will

each case being 15 ft. Each hatch will be served by two 5 ton derricks, stepped on tables on the fore and mainmasts. The derricks will be operated by 8 separate steam winches, each being capable of handling 5 tons. The double bottom will be used for water ballast, feedwater being carried in no. 3 tank, beneath the engine and boiler rooms. The sanitary and fresh water system is receiving special attention, and the supplies will be ample for all occasions.

The propelling machinery, which will be located amidships, will consist of one set of triple expansion engines having cylinders 24 x 38 x 62 in. x 42 in., and which will be constructed in the builders' own shops. They will have cast iron back and front columns and be of substantial construction and design. There will be 2 Scotch marine boilers. All

on the bridge deck, and a 20 ft. cutter (work boat) on the poop deck. The vessel will be well equipped with fire extinguishing apparatus.

The vessel when complete should easily attain the guaranteed speed of 9 1/2 knots.

Enemy Aliens Barred from U.S. Marine Service.—The Supervising Inspector General of the United States Steamboat Inspection Service has sent the following circular letter to supervising and local inspectors of the 1st, 2nd, 3rd, 5th, 8th, 9th and 10th districts, except the local districts of Albany, N.Y., and Burlington, Vt., Steamboat Inspection Service: "You are informed that, under instructions of the President, given to the Secretary of Commerce, you will not issue, until further advised, certificates of service as able seamen to persons who are enemy aliens."

The Panama Canal.—The terminal ports at Cristobel and Balboa are now closed between sunset and sunrise. All navigational lights are extinguished and it is therefore necessary for vessels to arrive off these ports by daylight. On account of lights being out and buoys removed, it will be unsafe for vessels to approach, either by day or night, nearer than two miles from the harbor entrances, without canal pilots.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

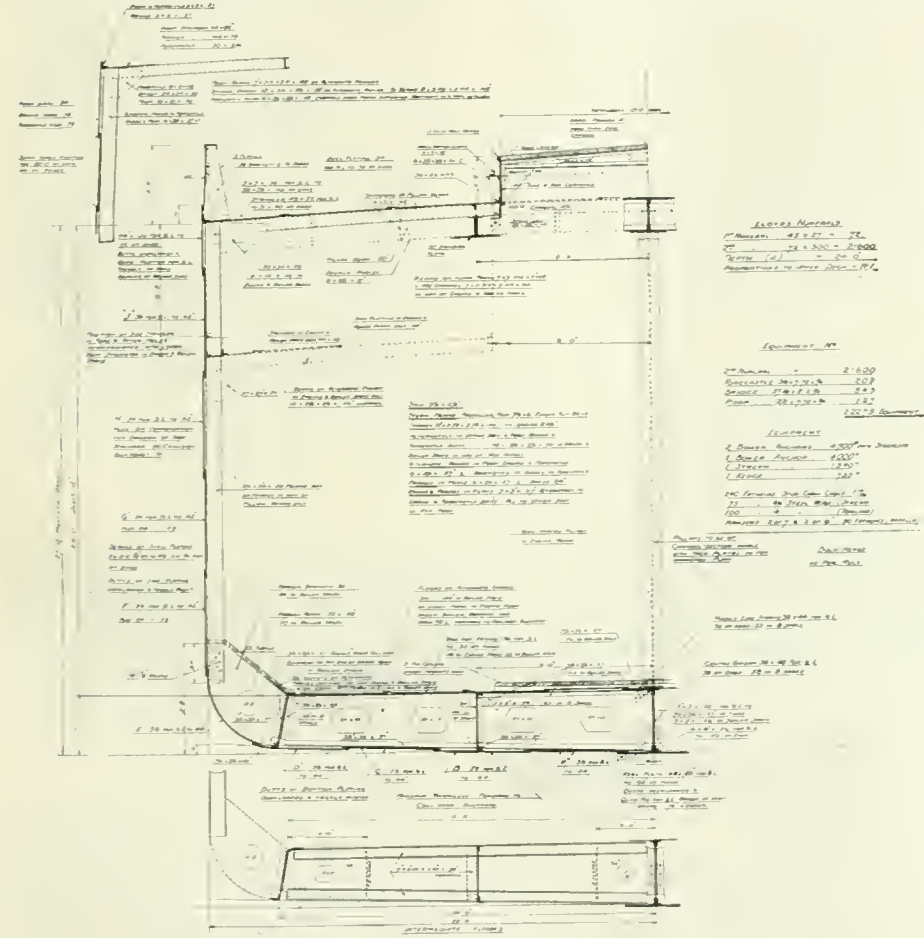

Canuck Supply Co., Ltd., railway materials and supplies, Montreal. F. W. Moore has been appointed Vice President.

Taylor & Arnold Limited, Montreal, have been appointed sole Canadian agents for Chadburn's (Ship) Telegraph Co., Ltd., Liverpool, Eng.

M. Beatty & Sons, Ltd., dredge, hoisting engine, derrick and clamshell bucket manufacturers, of Welland, Ont., have leased their shipyard and present boiler shop to the Welland Shipbuilding Co., Ltd., the incorporation of which is referred to elsewhere in this issue. M. Beatty & Sons have not leased all of their plant, as daily press reports would indicate, but are carrying on business as usual.

Preston Car & Coach Co., Ltd.—Some months ago, Martin N. Todd, who had been President for a number of years, resigned, and was succeeded by Frederick Clare. Donald M. Campbell, General Manager, has resigned recently, and no successor has been appointed, his duties for the present being divided among the other officials, who, in addition to the President above mentioned, and F. D. Palmer, Vice President, include A. N. W. Clare, Managing Director; W. J. Hodgins, Secretary-Treasurer, and C. S. Wright, General Sales Manager.

Independent Pneumatic Tool Co., Chicago. John D. Hurley, who has been Vice President of the company since its organization, and has been identified with the industry since pneumatic tools were first placed on the market, has been elected President to succeed the late J. B.

Construction Details, Steamship War Dog.

be made for bathrooms, lavatories, etc. The galley, pantry, officers' dining saloon, engineers' messroom and stores will also be on this deck. The officers' accommodation will be wood lined and finished in white enamel, and the owners' and captain's rooms in polished hardwood. At the forward end of the bridge deck will be a steel house, consisting of captain's cabin and bathroom, chart room and wireless room; above will be the pilot house, which will also be of steel construction, with a navigating bridge and flying bridge over. The accommodation throughout will be heated and ventilated and installed with electric lighting. The crew's quarters will be in the forecastle, which will have separate galley, wash room, shower bath, lavatories, etc.

There will be 3 main cargo holds and 4 hatches, no. 1 hatch being 22 1/2 ft. long, no. 2 hatch 24 1/2 ft., no. 3 hatch 20 ft. 5 in., and no. 4, 24 1/2 ft., the width in

pumps will be independent, the condenser being of the centre flow type. The installation will include evaporator, feed-heater, filter, etc.

On the upper deck and in the space between the engine and boiler casings will be a donkey boiler, of 10 h.p. capacity, for supplying steam to the cargo winches when in port, access to the donkey boiler being direct from the boiler room, and also by a door leading to the passage alongside the casing on port side. Directly abaft the engine room, on the upper deck, will be a steel house, containing the steam steering gear, 7 1/2 x 9 in. double cylinder horizontal type, the leads being carried along the upper deck direct to the quadrant in the poop. Hand steering will also be provided for on the poop deck.

The life saving requirements will be according to government requirements. Two lifeboats, 28 x 8 ft., will be carried

Brady. Ralph S. Cooper, who has been Manager of the New York office for 12 years, has been elected Vice President, and Robert T. Scott, Manager of the Company's Pittsburg branch, has been elected a director and member of the executive committee.

Electric Service Supplies Co., Philadelphia, has issued a 64 page catalogue of golden glow railway headlights and projectors, including also a complete line of switches and other headlight accessories necessary for use in connection with railway headlights. The book is printed in two colors, and considerable effort has been expended in reproducing different headlights as they really are. It was found particularly difficult to illustrate with ink, the golden glow reflector, which is of a greenish yellow color. Copies of the catalogue may be had on request to the Electric Service Supplies Co., Philadelphia, or the agents for Canada, Lyman Tube & Supply Co., Ltd., 323 St. James St., Montreal, and 33 Melinda Street, Toronto.

Robert W. Hunt & Co., engineers, bureau of inspection, tests and consultation, Chicago, with which Robert W. Hunt & Co., Ltd., Montreal, is affiliated, has offered the United States Secretary of War the services of its organization on terms that will mean their being rendered at actual cost. The company's organization embraces about 700 people, consisting of experienced civil, mechanical, metallurgical, chemical and mining engineers, supported by a corps of subordinates, most of whom are also men of technical and practical education, and the others selected on account of their practical experience in the several lines of duty to which they are assigned. The company's monthly pay roll is about \$100,000. In the letter making the offer, Robert W. Hunt & Co. say: "In regard to our work for the Canadian Pacific Ry., we can refer you to Lord Shaughnessy, President of that company, who has been and is, as you know, so closely identified with the Canadian purchases of the allied powers. We have been and are now performing inspection work on orders for the British, Russia, Italian, Netherlands and French Governments. These services cover not only munitions, but also railway and other equipment and steel rails and their accessories."

General Railway Signal Co. of Canada, Ltd.—C. O. Poor, formerly Assistant Resident Manager of the Chicago District, and later in charge of the munition plant of the General Railway Signal Co. of Rochester, N.Y., has been appointed President and General Manager of the General Railway Signal Co. of Canada, Ltd., Lachine, Que. After finishing a high school course in Port Chester, N.Y., he was employed for two years in the freight office of the N.Y.N.H. & H.Rd. at Greenwich, Conn. In 1892, he was a clerk in the Hall Signal Co.'s construction department at Chicago, and afterwards served as Superintendent of that company's works at Garwood, N.J., from 1896 to 1905, but spent the summer of 1904 in Europe studying the French, Belgian and English signalling systems. From 1905 to 1912 he was Superintendent of the General Railway Signal Co.'s works at Rochester, N.Y., and in 1912 was appointed Assistant Resident Manager at Chicago, which position he vacated July 1, 1916, to take charge of the company's munition plant at Rochester. V. I. Smart, who has been with the General

Railway Signal Co. of Canada for several years, has been appointed Consulting Engineer for the company at Lachine. The other officials are C. Leluau, Secretary-Treasurer, and H. W. Chamberlain, Assistant Secretary-Treasurer.

THE VICTORIA ROLLING STOCK AND REALTY CO. OF ONTARIO, LTD.

NOTICE is hereby given that a dividend of 4% on the paid-up capital stock of the Company for the six months ended May 31st, 1917, has been declared payable June 1st, 1917, to the shareholders of record as of the 31st of May, 1917.

By order of the Board,
H. F. MARRIOTT, Secretary.
Toronto, May 17th, 1917.

THE TORONTO, HAMILTON & BUFFALO RAILWAY COMPANY.

Notice is hereby given that the Annual General Meeting of the Shareholders of this Company, for the election of a Board of Directors, and for the transaction of such other business as may be brought before the meeting, will be held at the Head Office of the Company, in the City of Hamilton, Province of Ontario, on Tuesday, June 5th, 1917, at 11 o'clock in the forenoon.

DWIGHT W. PARDEE,
Secretary.
Hamilton, Ont., May 5, 1917.

NOTICE.

The General Railway Signal Company of the United States of America, the owner of the exclusive rights to Canadian patents No. 92323, No. 93127, No. 96256, and No. 97758, issued to Young and Townsend, and covering methods of signalling electrified railways, wishes to call the attention of all possible users of the devices and systems covered by such patents to the facts that it is prepared to sell and furnish, at short notice, all such devices and to install such systems upon any railway in the Dominion of Canada.

All inquiries regarding the above should be addressed to The General Railway Signal Company of Canada, Limited, Lachine, Province of Quebec, Canada.

Canadian Railway and Marine World

July, 1917.

The Canadian Northern Railway's Station in Montreal.

As previously stated in Canadian Railway & Marine World, a temporary station for the Mount Royal Tunnel & Terminal Co., Ltd., a subsidiary of the Canadian Northern Ry. Co., is being built at the corner of Lagauchetiere and St. Monique Sts., Montreal. It will be a reinforced concrete structure, with two stories above grade and one below. The exterior walls will be lined with 6 in. terra cotta blocks, with an air space between the concrete outer wall and the lining. The main facade will face Lagauchetiere St. The building will be of classic design, the passenger entrances being five large arched openings, above which will be medallions containing the C.N.R. Co.'s insignia. A dignified entablature in

for telegraph office and news stand. The arrangement of the entrance vestibule has been made with the idea of saving the traveller as many unnecessary steps as possible; he may transact all his business here, check his baggage, purchase his tickets, obtain his newspaper, check parcels and proceed directly to his train without traversing the main waiting room. If he arrives well ahead of train time and wishes to sit down for a while, he may cross the entrance vestibule to the main waiting room, which will be immediately behind it, and will be 50 x 80 ft. The beamed ceiling of this latter room will be supported by two reeded columns of novel design, the beams of the ceiling radiating from the column

will be good sized compartments, with seats arranged around the walls, the radiators being concealed in recesses behind the seats. There will be drinking fountains in the main waiting room, women's waiting room and the men's smoking room, to supply iced water.

From the men's smoking room will be doors leading to the entrance vestibule and to the staircase hall. This hall, at the right hand end of the entrance vestibule, will contain broad concrete stairs, leading to the train level, and a narrower staircase to the offices on the second floor. Descending the staircase, the passenger will arrive in the lower staircase hall, which in turn will open to the concourse. The concourse will contain

Canadian Northern Railway Temporary Station, Montreal, Lagauchetiere Street Elevation.

ceiling will surmount the building on all facades. Over the passenger entrances on Lagauchetiere St. will be a marquise, protecting the sidewalk from rain and snow. To the right of the building will be a court, formed on its outer side by a retaining wall 18 ft. high, which will run back for 50 ft. The court will be 33 ft. wide and will be paved with brick. It will serve as a wagon approach to the incoming baggage room, which will have two wide doors opening directly on the court.

A passenger entering the building from Lagauchetiere St. will go immediately into the entrance vestibule, which will be about 30 x 80 ft. It will be the heart of the building, from which all its activities will radiate. It will also be used, in some degree, as a waiting room for those who have not the time or inclination to go back to the main waiting room, which will immediately adjoin it at the rear. Upon this entrance vestibule, on the side opposite the entrance, will open four windows of the ticket office. At its end, to the left, will be the baggage counter and parcel room. At its right will descend a broad staircase, leading directly to the trains. There will also be an entrance to the men's smoking room from the entrance vestibule and it will contain space

heads, forming a diamond pattern. Between the main waiting room and the entrance vestibule will be ticket offices, enclosed with terra cotta walls and ornamented with marble slabs and bronze grilles. In the main waiting room the seats will be of oak and of the latest model, and will be placed back to back, with a radiator between each pair. This will give an efficient heating system and at the same time all the radiators will be concealed. Along the tops of the seats will be lines of electric lights with reflectors.

At the left of the main waiting room will be the incoming baggage room, with an area of 2,100 sq. ft. As before stated, this room will have two large doors opening out on the wagon court, and at the extreme rear there will be a freight elevator, large enough to receive trucks, which will descend to the outgoing baggage room, immediately below, at the train level. There will be a staircase in the incoming baggage room, which will also lead down to the train level.

Opposite the incoming baggage room, at the right of the main waiting room, will be the men's smoking room and the women's waiting room, with lavatories between. Both of these rooms will have windows facing on St. Monique St. They

approximately 3,500 sq. ft., and will be separated from the train room by iron railings, immediately inside of which will be the baggage runway, connecting to the outgoing baggage room at the left. The outgoing baggage room will be immediately below the incoming baggage room on the first floor, and will be of the same dimensions, and as previously stated, will be connected with it by a staircase and large freight elevator.

There are five tracks contemplated in the present construction. From the baggage runway, ramps with a grade of 5% will descend to the platform level.

To the right of the baggage runway will be the machinery and storage rooms, and here are to be installed the apparatus for heating the water supply to the lavatories and cooling the drinking water. The heating plant for the building is to be installed in a separate structure behind the outgoing baggage room.

Along the Lagauchetiere St. front, on the second floor level, will be approximately 4,000 sq. ft. of office space, which is to be subdivided later when its uses are determined. On this floor will be lavatories and other facilities required for the offices.

Additional illustrations are given on pages 258 and 259.

The Canadian Pacific Railway's Honor Roll.

List 23, issued June 21, brings the number of the company's officials and employes on active service shown in the casualty lists up to 1,210, of whom 370 have been killed and 840 wounded. As particulars of army reservists are not available, the lists of those who have given up their lives for their country or been wounded in action are necessarily incomplete and do not indicate fully the extent to which the company's officials and employes are participating in the great struggle. List 23 is as follows:—

Anderson, Frank, locomotive fireman, Moose Jaw, wounded; Armstrong, James W., clerk, Toronto, wounded.

Barton, William, helper, Angus, wounded; Baulch, Sydney, laborer, North Bay, wounded; Beach, Thomas, checker, Revelstoke, killed in action; Bennett, Stanley H., assistant accountant, Winnipeg, wounded; Bissell, Lloyd A., stenographer,

Daly, Daniel David, yardman, Winnipeg, killed in action; Davis, Percy Frederick, cleaner, Ogden, wounded; Diggle, John, deckhand, British Columbia Lake Steamships, wounded; Duncan, Roderick C., clerk, Winnipeg, wounded; Dunlop, John, loader, Lethbridge, wounded.

Edmunds, William, porter, Fort William, wounded; Egerton, Herbert, painter, Montreal, wounded; English, Frederick R., yardman, Winnipeg, wounded and missing.

Forbes, John Hunter, resident engineer, Montreal, wounded; Forsythe, Louis, Loid, clerk, Toronto, shell shock.

Gate, John Millican, checker, Regina, wounded; Guest, Arthur J., wiper, Victoria, killed in action.

Hannaford, John Henry, helper, Lambton, wounded; Harrison, William, conductor, Cranbrook, wounded; Hawkins, Thomas, assistant baggagemaster, Medi-

Maguire, Lloyd Earl, switchman, Ottawa, wounded; Marshall, Henry, car inspector, Keewatin, wounded; Maybank, H. G., switchman, Winnipeg, believed killed; Millership, Wilfred E., locomotive fireman, East Calgary, wounded; Mole, William, carpenter, Macleod, killed in action; Montgomery, James D. L., clerk, Montreal, wounded; Morton, John, porter, Calgary, died of wounds; Munro, George Hossack, watchman, British Columbia Dist., wounded.

Nelson, George Charters, constable, Montreal, killed in action; Nesbitt, Fred Allen, wiper, Coquitlam, wounded.

O'Dell, William, yardman, Calgary, wounded; Orford, Arthur, waiter, Montreal, wounded.

Parsons, Herbert, helper, Winnipeg, wounded; Peacock, Archibald C., constable, Montreal, wounded; Peckham, John Henry, carpenter, Ogden, wounded; Phelps, Thomas, specialist, Angus, killed in action; Pitt, Thomas Reginald, assistant agent, North Transcona, wounded; Platt, Edwin, clerk, Winnipeg, killed in action; Potvin, Louis Victor, clerk, Outremont, presumed dead; Price, William, car foreman, Swift Current, wounded.

Raddish, Fred William, clerk, Victoria, wounded; Reid, Robert, locomotive man, British Columbia Dist., wounded; Robertson, Duncan D., clerk, Regina, killed in action; Rollo, Andrew, fitter, Angus, killed in action; Roy, Robert William, locomotive fireman, Medicine Hat, presumed dead.

Savage, John, wiper, Winnipeg, wounded; Seldon, Jack Prescott, stenographer, Montreal, wounded; Silcox, Harry Lowther, clerk, Paddington, wounded; Slipp, David M., trainman, New Brunswick Dist., shell shock; Somers, George, bridgeman, Medicine Hat, killed in action; Stanbury, Matthew, wiper, Golden, wounded; Stewardson, Ernest, clerk, Fort William, wounded; Surtees, Lawrence R., leverman, Winnipeg, wounded.

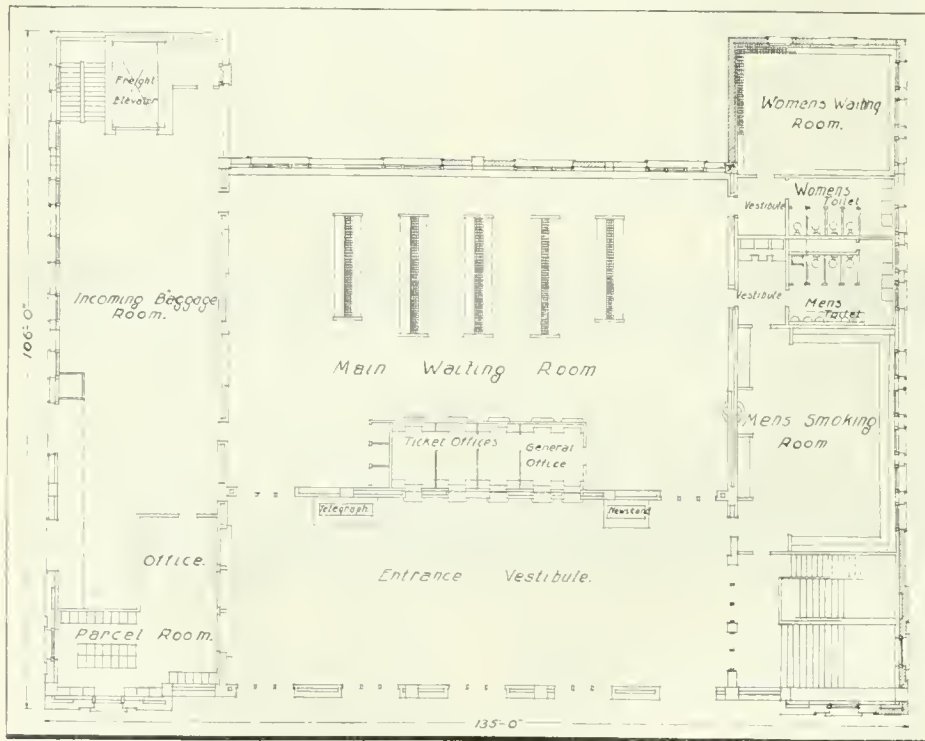

Treloar, Alexander R., stenographer, Montreal, wounded.

Walton, Barclay E., locomotive man, Winnipeg, wounded; Webster, Frank Trevor, switchman, Broadview, wounded; Webster, Robert, cleaner, Winnipeg, shell shock; Whitehead, John, cleaner, Moose Jaw, wounded; Willett, John, furnace operator, Angus, shell shock; Wilson, Robert Francis, yardman, Winnipeg, wounded; Wilson, William, porter, Calgary, wounded; Woolf, Henry Arthur, clerk, Montreal, believed killed; Wright, Alexander, clerk, Calgary, wounded.

Another list will be found on a later page in this issue.

Workmen's Compensation on Timiskaming and Northern Ontario Ry.—For the four months ended Apr. 30, 21 claims were registered, all for minor accidents. Of these, 8 were passed and paid, 9 were disallowed, and 4 were kept in abeyance. The total of claims paid was \$473.08, and the insurance cost, for the period based on premium paid in 1915, would have been \$5,995.52, or an average premium of \$749.44, to protect an average award of \$59.12.

A C.P.R. employment agent at Edmonton, Alta., made a contract with a number of foreigners to work on the line 40 miles from Wetaskiwin for five months. After working for some time the men left the job, but were arrested subsequently charged with a breach of the Masters and Servants Ordinance. The case was dismissed on the ground that the nature of the contract had not been definitely explained to the men.

Canadian Northern Railway Station, Waiting Room Floor. (See page 257.)

Montreal, wounded; Blackwell, Henry, helper, Fort William, wounded; Bolton, Charles, waiter, Calgary, wounded; Bouvette, Wilfred S., messenger, Kelowna, wounded; Bradley, Reuben, clerk, Tillsonburg, wounded; Brindle, William Ernest, wiper, Souris, died of wounds; Bryant, Albert Quant, clerk, Calgary, died of wounds; Buckley, Frederick, checker, Moose Jaw, wounded; Burgess, Harold T., stenographer, Kettle Valley Ry., killed in action; Burton, Valentine F. B., ticket clerk, Regina, wounded.

Cameron, James, clerk, Calgary, wounded; Campbell, George W., conductor, Macleod, wounded; Campbell, Richard, machinist, Vancouver, killed in action; Campbell, William, operator, Shaunavon, wounded; Chandler, Richard, section foreman, Basswood, wounded; Child, Percy K. G., clerk, Ogden, wounded; Clarke, Ernest George, cook, Toronto, wounded; Cohl, Robert, stripper, Ogden, wounded; Craig, Robert, wiper, Sutherland, killed in action; Currie, Thomas, tuber, Toronto, wounded.

cine Hat, wounded; Hewson, Charles Ernest, helper, Lambton, killed in action; Horton, Joseph F., clerk, Angus, wounded; Hunter, Thomas, locomotive fireman, Brandon, wounded.

Inglis, Alexander, coal passer, Medicine Hat, killed in action.

Jerome, Victor, apprentice, Angus, wounded; Jones, Arthur Wyn, wiper, Moose Jaw, wounded.

Kidd, Alexander, constable, Montreal, wounded; Kirk, James, wiper, Medicine Hat, wounded.

Larsen, John, machine runner, Lethbridge, killed in action; Luck, Cecil George J., rodman, Weyburn, wounded; Lynch, John, electrician, Angus, killed in action.

McDonald, James A., wiper, West Calgary, shell shock; MacDougall, John, baggagemaster, Swift Current, killed in action; McKay, Christopher, locomotive fireman, Winnipeg, wounded; McKenzie, Roderick, wiper, Fort William, wounded; McNeil, James Milford, locomotive man, British Columbia Dist., killed in action.

Birthdays of Transportation Men in July.

Many happy returns of the day to:

A. A. Allen, Vice President, The Holden Co., Ltd., Montreal, formerly Master Mechanic, Timiskaming & Northern Ontario Ry., born at Grafton, Ont., July 7, 1870.

J. H. Black, ex-Superintendent, Timiskaming & Northern Ontario Ry., now at Toronto, born near Smiths Falls, Ont., July 8, 1874.

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., July 25, 1877.

D'Alton C. Coleman, Assistant General Manager, Western Lines, C.P.R., Winnipeg, born at Carleton Place, Ont., July 9, 1879.

G. C. Conn, Freight Traffic Manager, Pere Marquette Ry., Detroit, Mich., born at Woburn, Mass., July 1, 1867.

D. D'E. Cooper, Canadian Freight Agent, Lehigh Valley Rd., Toronto, born at Buffalo, N.Y., July 8, 1862.

John Corbett, ex-General Foreign Freight Agent, C.P.R., Montreal, born in Lanarkshire, Scotland, July 19, 1863.

H. Darling, Locomotive Foreman, G.T. Pacific Ry., Smithers, B.C., born in Northumberland, Eng., July 27, 1873.

S. E. Dewey, General Eastern Freight Agent, G.T.R., New York, born at Beckenham, Kent, Eng., July 4, 1879.

A. H. Eager, Assistant Superintendent of Rolling Stock, Western Lines, Canadian Northern Ry., Winnipeg, born at Waterloo, Que., July 15, 1868.

F. C. Foy, Canadian Passenger Agent, New York Central Lines, Toronto, born there, July 5, 1881.

C. W. Johnston, Assistant General Passenger Agent, G.T.R., Montreal, born at Actonvale, Que., July 27, 1879.

M. Kelly, Resident Engineer, Farnham Division, Quebec District, C.P.R., Farnham, born at Thamesville, Ont., July 6, 1874.

A. E. Lock, Superintendent Car Service, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Albany, N.Y., July 14, 1879.

G. A. McNicholl, Assistant General Freight and Passenger Agent, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at Montreal, July 31, 1876.

H. D. Mackenzie, Master Mechanic, Canadian Government Railways, Edmundston, N.B., born at Churchville, N.S., July 22, 1864.

J. M. Macrae, District Freight Agent, Canadian Northern Ry., Saskatoon, Sask., born at Stornoway, Scotland, July 31, 1884.

T. J. Maguire, Accountant, Quebec Central Ry., Sherbrooke, Que., born at Quebec, July 31, 1860.

W. G. Manders, General Freight Agent, Western Lines, Canadian Northern Ry., Winnipeg, born at Owen Sound, Ont., July 24, 1876.

J. E. Morazain, Superintendent, District 1, Intercolonial Division, Canadian Government Railways, Levis, Que., born at Wheatland, Que., July 31, 1875.

R. E. Perry, Assistant General Freight Agent, Canadian Government Railways, Moncton, N.B., born at Drayton, Ont., July 5, 1876.

R. Preston, Assistant Superintendent of Motive Power, Western Lines, C.P.R., Winnipeg, born at Toronto, July 28, 1863.

J. E. Quick, General Baggage Agent, G.T.R., Toronto, born at Richmond, Ontario Co., N.Y., July 10, 1851.

G. G. Ruel, Chief Solicitor, Canadian Northern Ry., Toronto, born at St. John, N.B., July 5, 1866.

George Stephen, Freight Traffic Manager, Western Lines, Canadian Northern Ry., Winnipeg, born at Montreal, July 5, 1876.

Sir Thos. Tait, President, Fredericton & Grand Lake Ry. & Coal Co., Montreal, born at Melbourne, Que., July 24, 1864.

G. A. Walton, General Passenger Agent, Western Lines, C.P.R., Winnipeg, born at Montreal, July 17, 1881.

The Joliette and Lake Manuan Colonization Ry. Co's Difficulties.

The Board of Railway Commissioners, under authority of secs. 26 and 27 of the Exchequer Court Act, made an order

of aid from the Dominion Parliament and the Quebec Legislature, and in 1912, A. M. Laredo obtained control of the J. and L. M. C. Ry. The first 30 miles of the line from Joliette was located in June, 1912, and a contract was let to R. J. Craig, Cornwall, Ont., for the grading, the general work of construction being financed by the British Canadian Construction Co. No very large amount of work appears to have been done, and the project for construction seems to have fallen through, after the Dominion Government in 1914 purchased the rights-of the North Ry. to build from Montreal to the N. T. Ry. via the Bell River Valley. The company evidently is in financial difficulties, the Merchants Bank having obtained judgment against it for \$9,925.-\$1 with costs of \$182.90. Failing to secure a settlement of this judgment the

Canadian Northern Railway Station, Montreal, Train Floor (See page 257).

April 4, directing the sale of this railway's rolling stock, equipment and other accessories. The company was incorporated by the Dominion Parliament in 1903, power being given to build a railway from Joliette to Lake Manuan. Extensions of time for construction were granted from time to time, and in 1911 the company was authorized to extend its line southerly from Joliette into Montreal and northerly from Lake Manuan to a junction with the National Transcontinental Ry. During 1911 and 1912 there was considerable rivalry between the promoters of this company and those interested in the North Ry. as to which had the most favorable route for securing in connection between Montreal and the N. T. R. Both companies secured promises

bank applied for the order for the sale of the property.

Canadian Northern Ry. Employees in a largely signed petition to Premier Borden, have protested in the strongest terms possible against the putting into effect of the majority report of the royal commission, which investigated the Canadian railway situation recently. The report recommended among other things the nationalization of the C. N. R.

The Toronto Terminal Warehouse Co., Ltd., has been incorporated under the Ontario Companies Act, with \$150,000 capital and office at Toronto, to carry on the business of general warehousemen and forwarders in all its branches.

Decapod Locomotives for Canadian Pacific Railway.

The C.P.R., as previously announced in Canadian Railway and Marine World, is building 25 decapod locomotives at its Angus shops, Montreal, for mountain service. The principal general dimensions are as follows:

Capacity	275%
Boiler pressure	200 lb.
Cylinders	24 x 32 in.
Pulling face, rear tender coupler over pilot	76 ft. 10% in.

pegs for the surplus clothing. The wind-dows are double sashed and a wind deflector is provided for the locomotive man while the fireman's eyes are protected by a deflector on the firedoor which eliminates the glare. A deflector is also located on the cab roof, which stops the back dust draught and keeps the cab free from dust. A safety clamp is carried to prevent the tender from sliding forward on

Decapod Locomotive, Canadian Pacific Railway.

Total wheel base	65 ft. 11 3/8 in.
Driving wheel base	22 ft.
Rigid driving wheel base	16 ft. 6 in.
Diameter of drivers	58 in.
Weight on drivers	112.5 tons
Weight on rigid drivers	90 tons
Total weight	120 tons
Total weight, engine and tender	210 tons
Tender water capacity	7,000 imp. gal.
Tender oil capacity	3,200 imp. gal.
Superheater	Locomotive Superheater Co.

One of the most noticeable features about these locomotives is the provisions

to cab in case of a collision.

The Laird crosshead, an old type revived, has been used because it ensures excellent lubrication and is easy to maintain. The leading driving wheels are provided with a flexible arrangement so that a lateral displacement may take place on curves. This reduces the wheel space of the engine to 16 1/2 ft., which is practically the same as used on locomotives with only one leading pair of driving wheels.

Increases in the Cost of Railway Supplies.

E. J. Chamberlin, President G.T.R. and Grand Trunk Pacific Ry., has issued the following circular to officers and employees.—On April 15, 1916, I issued a circular to officers and employees, calling attention to the abnormal increase in the cost of the principal materials and supplies used by these railways as compared with the prices ruling in 1914 before the outbreak of war. I have now had this statement revised showing the prices prevailing in April, 1917, from which it will be noted that practically all of the items shown have still further increased in cost, with no indication as yet that they have reached their maximum. The matter is again brought to your attention, so that you may be informed as to the constantly increasing expense to which the company is put, and further, that you may keep your requisitions for materials and supplies down to the lowest point possible during the present abnormal market conditions. The prices that prevail necessitate partial repairs to structures and facilities rather than general renewals, and in so far as possible, the deferring of new or improvement work until conditions are again normal. This, of course, does not apply to repairs or renewals which are absolutely necessary for the safety of the public and the employees."

The following table shows the increases in cost of material in April, 1917, over July, 1914:

	United States	Canada
Acids	—	73
Antimony	386	290
Batteries and renewals	20	27 1/2
Bolts, machine and carriage	150	123
Bolts, track	149	—
Brake beams	86	120
Brass, rod	210	217 1/2
Brass, sheet	221	228 1/2
Brushes	10	17 1/2
Castings, brass	115	124
Castings, malleable	142	223
Castings, steel	149	119
Cement	36	40

Decapod Locomotive, Canadian Pacific Railway.

which are made in the cab for the comfort and safety of the locomotive man and fireman. This is especially required on a mountain division on account of the severe climatic conditions which sometimes prevail. The cab is roomy and well ventilated and is heated in winter by having part of the insulation which covers the boiler in the cab made in sections which can be easily removed. The seats are exceptionally well cushioned and a coat cupboard is provided with swinging

To accomplish this the leading side rods are articulated by means of a ball joint. A power reverse gear operated by air is also an improvement. The main object achieved in the construction of these locomotives, is maximum power for minimum weight.

The Colchester Coal and Ry. Co. has leased its Debert coal areas to another Nova Scotia concern for three years, on a royalty basis.

Chain	83	122

Reduce Car Shortage by Filling Cars.

Following up the bulletin published in Canadian Railway and Marine World for May the management of the Eastern Lines, C.P.R., has issued the following bulletin, under the above heading:

The object in issuing these bulletins is not to start a controversy with the public, not to shift responsibility to the public but to secure the co-operation of the public. Bulletin 1 contained the following information for the period from 1907 to 1915:

The freight carried on Canadian railways increased	51%
The number of cars increased	91%
The total car capacity increased	131%
The average capacity of cars increased	5.8 tons
The average weight of contents increased	3.0 tons

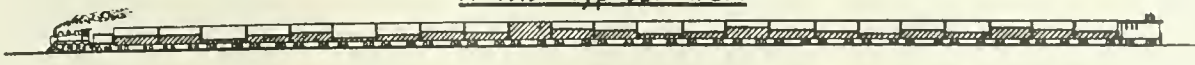

tons of dead car tare hauled one mile.

By increasing now the average load by 5 tons per car the public would improve the efficiency of the equipment, facilities, and man power of the railways to an extent equal to: 54,800 additional freight cars, 482 additional freight and yard locomotives, 415 additional miles of yard trackage and 13.5 increase in man power employed in train and yard service. A car saved is a car gained.

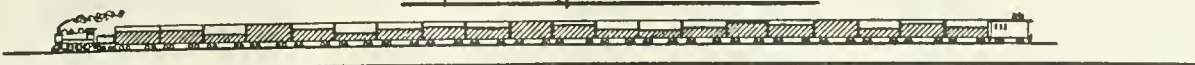

Periscopes in C. P. R. Interlocking Towers.

The C.P.R. has had periscopes installed in its interlocking signal towers at Mile End, Montreal, and at Iberville Jct., on

A 1915 Typical Train

Proposed Typical Train for 1917

Comparison	Cars	Average load	Weight of Train	Weight of Contents	Result
Typical Train 1915	23	18.4 Tons	860 Tons	423 Tons	45 more tons carried in 3 less Cars
Proposed	20	23.4 Tons	848 Tons	468 Tons	

Screws, brass wood	308	260
Screws, iron	121	157
Scoops, shovels	29	61
Spikes, track	155	—
Springs, car and locomotive	183	177
Stationery	88	100
Stationery, printed matter	25	25
Steel bars	200	147
Steel billets	317	324½
Steel firebox plates	285	202½
Steel plates, angles, etc.	300	307½
Steel tool, high speed	400	407½
Tie plates	110	117½

The present heavy volume of traffic will no doubt continue so long as the war lasts. Additional cars and locomotives are needed, but they cannot be secured in large numbers for many months. There is also a serious shortage of labor and in some places of yard trackage. The only way to improve the conditions therefore is to secure greater efficiency in the present equipment, terminal trackage,

the Montreal-St. John, N.B., line, 30.6 miles east of Montreal, to enable the signal men to get views of portions of the track adjacent to the interlocking limits, which are obscured by buildings in the direct line of vision. The periscope is located at a window opening, and the mirrors, one at the top and one at the bottom of the upright tube, are adjustable, the adjustment of the bottom mirror

Periscope on Signal Tower, C.P.R., Mile End, Montreal.

Tin	54	61½
Tires	170	295
Tubes, boiler	147	154½
Tubes, superheater	119	126½
Tubing, copper	135	142½
Valves	94	67
Vitriol, bluestone	—	120
Washers, wrought	60	95
Waste, cotton and wool	44	51
Wheels	77	84½
Zincs, battery	—	131
Stationery Items.		
Blotting papers	100	100
Copying pencils	140	160
Inks	80	80
Paper fasteners	100	200

and man power. The railways alone cannot develop the maximum efficiency; the railways and the public co-operating can. Consignees can help by ordering full car loads instead of minima authorized in the tariffs and classifications, and consignors can help by loading cars to their full authorized cubical or carrying capacity.

The average train	
A comparison—	
Average weight of contents of cars	1915 18.4 tons
Total weight of cars	Proposed for 1917 23.4 tons
Total weight of contents	503 " 448 "
Total weight of train	344 " 399 "
	847 " 847 "

Had the average load per car in 1915 been 23.4 tons, instead of 18.4, the same traffic would have been handled with: 6,947,588 less trains hauled one mile, 1,568,765 less car trips, 29,806,535 less

being convenient to enable signalmen, when either sitting or standing, to obtain the view. The apparatus was built and installed at each place by the company's own forces. The accompanying illustration shows the periscope installed on the interlocking signal tower controlling the various main line tracks and sidings at Mile End, Montreal, by means of which the signalmen are enabled to see trains coming up the grade long before they could do so without it.

Vancouver Transportation Club.—J. A. Cunningham, in addressing the club on June 1, urged the development of the natural resources of the province as being necessary to make the railways pay.

The Canadian Northern Ry. carried 706,414 tons of coal from Alberta coal mines for the year ended April 30, against 476,718 for the year ended April 30, 1916.

Steam Railway Statistics for Year Ended June 30, 1916.

Notes to Steam Railway Statistics.

The table in Canadian Railway and Marine World for June showed the financial results of the operation of steam railways for the year ended June 30, 1916. It has been our practice for a number of years to follow this with a second table of operating statistics, but owing to changes in the form of tables

used by the Railways Department in its statistical report it is impossible to give our second table in the same form as it has appeared since 1910. The following columns contained in the department's report up to June 30, 1915, are omitted in the report to June 30, 1916: Ratio of operating expenses to operating revenue; proportion of total passenger train revenue to total earnings; proportion of

freight plus switching revenue to total earnings; earnings per train mile; passenger earnings per train mile; and freight earnings per train mile. In the table on another page the revenue per passenger per mile, and the revenue per ton per mile are given in place of the passenger and freight earnings per train mile respectively. The other change is that instead of the total revenue train

mileage being given in one column, three columns are given showing passenger, mixed and freight train mileage respectively. To ascertain the revenue per passenger per mile, the actual passenger re-

ceipts, as given in our June table, are divided by the total of the passenger and mixed train mileage; and to ascertain the freight revenue per ton per mile, the freight earnings, as given in our June is-

sue, are divided by the total of the mixed and freight train mileage. The non-revenue train mileage in the last column has nothing to do with calculating the revenue per mile, passenger or ton.

The Mechanics of the Chilled Iron Wheel.

"Tell me," said a business man, "why it is that steel has supplanted iron in the rail, wood in the car, and multitudinous parts of the car and track structure, and has never succeeded in making appreciable inroads on the chilled iron wheel?" The reply was that the material known as chilled iron has been found by continuous use for 67 years to be the best adapted for the service, and its superiority is not entirely because of scientific processes which have been used in making the wheel, but principally because of the material. Chilled iron has remained in the forefront ever since its introduction in 1850, and is today the main factor in America's commerce, and this is because it possesses inherent qualities which are not found in other metals and its principal characteristics are its ability to carry any load without crushing or flowing, that can be supported by the steel rail.

The mechanics of the chilled wheel have never been investigated except in a very superficial way. The fundamental properties of chilled iron, such as specific gravity, modulus of elasticity for varying tensile strengths, action under repeated stresses, relation of operating conditions to temperature stresses, etc., are not established. Dollars are spent in the investigation of steel, cents are devoted to chilled iron. In the face of this neglect, the chilled iron wheel by sheer merit survives the struggle for existence. A belated pause to consider the basis for this vitality will not be wasted. If the properties of chilled iron were fully understood and properly used in the wheel, a large return on the meagre expenditure for investigation would flow in upon the manufacturers in the way of increased profits and to the railroads in the way of reduced costs.

Its economic importance can be realized when it is borne in mind that there are 25,000,000 such wheels in service, representing 5,000,000 tons of metal, requiring an annual production of 3,000,000 wheels, or approximately 1,000,000 tons of chilled iron, to replace those worn out in service. It is not intended to dwell upon the economic phase of the subject, for this is fully established, but rather to offer a few suggestions that will ultimately lead to a more intelligent design and classification of wheels for the service which they are to perform. Since 1875, wheel loads have increased 500 , axle weights 230 , and wheel weights 75 . The 11,000 lb. wheel load, under the 30 ton car, was supposed, at the time of its introduction, to be the maximum that could be carried without breaking down the surface metal of the wheel tread and the top rail. This opinion, however, did not long impede the growth in wheel loads, for soon the 50 ton car was introduced with 20,000 lb. concentrated on one wheel. It was considered that this was the limit in car capacity and that the chilled iron wheel might not be fully satisfactory under this burden. Again this opinion is exploded, not only by the successful performance under a half million 50 ton cars, but the chilled iron wheel has passed the experimental stage under the 70 ton car, with a

wheel load of 25,000 lb. The latest increase is the experimental 85 ton car and 12,000 gal. capacity locomotive tender, requiring an axle having a $8\frac{1}{2}$ x 12 in. journal, and $8\frac{1}{8}$ in. wheel fit, designed to carry 60,000 lb., or 30,000 lb. a wheel. It is a matter of interest to note that in 1890 30 tons was considered the maximum car capacity. We now have a single axle of 30 tons capacity, or 30,000 lb. a wheel, which shows the marvellous increase in wheel burden.

Chilled iron wheels have been in service for the past five years, without structural failure, on axles having $\frac{1}{8}$ in. wheel fit, under ore cars, and in constant service on 2% grades. The question now arises—are we nearing the limit for wheel loads? If so, what is the determining factor? What margin still remains for further increases in bearing power of the metal of wheel and rail; in flange strength; in web and hub? These are the questions it is proposed to answer by considering each part of the wheel separately.

The bearing power of iron or steel is largely controlled by the carbon content, and, naturally, since the tread of the cast iron wheel contains $3\frac{1}{2}$ % of carbon, it has a much greater bearing power than the rail which contains less than 1% of carbon. A 33 in. chilled iron wheel will not perceptibly flatten under a load of 250,000 lb., which is 8 or 10 times the present maximum wheel load. Chilled iron wheels are in common use, carrying 100,000 lb. or more, under large cranes, "unloading bridges, transfer tables, hydraulic locks, etc. To carry these loads wide special flat top rails are necessary. The ordinary railway rail with a 12 in. top radius, will develop a permanent set when the indentation of the wheel into the rail amounts to 0.007 in. If we assume that the maximum load carried in rapidly moving service should not cause, when at rest, an indentation greater than half this amount, the limiting loads from the rail standpoint are readily calculated by the formula— $L = 1,500,00 \frac{d}{D}$ in which L equals load, d equals indentation into rail, and D equals diameter of wheels. In this formula the pressure per sq. in. over the area of contact between wheel and rail is taken at 100,000 lb. a sq. in. The limiting loads for various diameters on wheels are: 42 in. wheels, 34,000 lb.; 36 in. wheels, 31,300 lb.; 33 in. wheels, 30,200 lb.; 30 in. wheels, 28,800 lb. As far as the bearing power of chilled iron is concerned, there is no indication of nearing the wheel load limit.

The pressure which the flange must resist, in guiding the truck around curves, is equal to $\frac{3}{4}$ % of the wheel load, provided the track is perfect and cars in good condition. The pressure is not influenced by degree of curve, velocity, centrifugal force, or obliquity of traction, but an allowance must be made for impacts originating from irregularities in track and locked side bearings and centre plates, which, added to the curve pressure, will make the total maximum lateral pressure against the flange 1 1-3 times the wheel load, or 18,000 lb. for the 30 ton car and 46,500 lb. for the 85 ton car. It is un-

reasonable to suppose that a flange designed for 18,000 lb. pressure will have the same factor of safety for 46,500 lb. pressure, in fact, the thickness of flange was developed when flange pressure did not exceed 8,000 lb. It is just as necessary to increase the flange section as to increase all other sections of the wheel, when increased duty is imposed, and notwithstanding the fact that the Master Car Builders' Association, in its latest report, stated that no increased flange width was necessary, this matter is by no means settled, as far as other associations are concerned, and a movement is again started to determine whether the hundreds of thousands of flanges that are now in use, which are wider than the present M.C.B. standard flange, are not entirely in harmony with present track standards. When this question is answered, and the question of track clearance ought to have been answered long ago, we will then have an opportunity to present to the Master Car Builders' Association a flange with a factor of safety proportional to the load carried, which is not a difficult proposition, and which from an engineering standpoint is demanded.

Stresses within the plate or web.—The University of Illinois has undertaken a thorough analysis of the properties of chilled iron and of the stresses within the wheel, originating from all conditions that can arise in service, as far as they can be duplicated in the laboratory. These include specific gravity, coefficient of expansion by heat, modulus of elasticity, tensile and compressive strengths, stresses in the wheel originating from pressure on the axle, from vertical load, from side pressure on the flange, from difference in temperature between tread and plate; also to discover the probable difference in temperature between tread and plate for continuous application of various shoe pressures at various velocities. An indication of the magnitude of these stresses already has been determined, as follows: From pressing on an axle having a 7 in. wheel fit at 60 tons pressure, 18,000 lb. compression per sq. in. is developed in the single plate; the greatest tensile stress is in the hub. If the machine work is fairly well done these stresses are symmetrical, but if irregularly machined the stresses will be bunched and necessarily greater than normal, at times sufficient to burst the hub. Under vertical load of 300,000 lb. the maximum compressive stress occurs on the radial line between rail and hub, amounting to about 18,000 lb in the 725 lb. M.C.B. wheel; the tensile stresses in the tangential direction are about 12,000 lb. These stresses alternate at each revolution of the wheel. The maximum stresses are in the front plate. In the back plate the load stresses are practically nil.

The stresses from vertical load within the limits of railway practice are practically negligible. The greatest stresses, and therefore the most important, are the temperature stresses; for example, a 625 lb. wheel was placed in a brake shoe testing machine and operated at various velocities under a continuous shoe pres-

sure of 1,500 lb. This corresponds to the retardation required for a 50 ton car on a 3% grade, when operated at 5 miles an hour, and on a 2% grade, when operated at 50 miles an hour. Thermo couples were placed 1/2 in. under the surface of the tread, under the rim, at the plate intersection, and in the hub. These couples were connected by brushes to a collector ring insulated from the axle, so that temperatures could be taken from any part of the wheel at any time without stopping the machine. After running the equivalent of 25 miles the maximum stresses developed near the intersection of plates was found to be at

5 miles an hour	19,000 lb. per sq. in.
10 miles an hour	18,000 lb. per sq. in.
20 miles an hour	15,000 lb. per sq. in.
30 miles an hour	18,000 lb. per sq. in.
40 miles an hour	21,000 lb. per sq. in.
50 miles an hour	24,000 lb. per sq. in.

Since the above is a greater retardation than is required for controlling 30 ton cars, it is evident that if the shoe pressure could be made uniform on all wheels of the train there would be no overheating of wheels, but there are so many opportunities of irregularities in

Delaware and Hudson Co's Annual Report.

The annual report of the D. & H. Co.'s operations for the calendar year 1916, shows a profit of \$4,158,372.18 against \$6,071,440.64 for 1915. The company's railway mileage is 909.38, of which 219.24 are in Canada.

"The Quebec, Montreal & Southern Ry. had an increase in operating revenues of \$79,959; its operating expenses increased \$13,925; its income from time of equipment increased \$20,892.99, and its net income, not making any deduction for interest due the D. & H. Co. was \$190,845, an increase over 1915 of \$94,656.

The Napierville Junction Ry. had an increase in operating revenues of \$37,041, an increase in freight receipts of \$38,570, being accompanied by a decrease of \$1,401 in passenger earnings. Operating expenses increased \$24,390.82 and net income was \$50,531.56, an increase of \$8,608.54 over 1915. A dividend upon the capital stock, at the rate of 6% for the calendar year 1916, was declared.

Mount Chamberlin, Rocky Mountains.

As stated in Canadian Railway and Marine World recently, the Geographic Board of Canada has named a splendid peak in the Rocky Mountains "Mount Chamberlin," in honor of E. J. Chamberlin, President, Grand Trunk and Grand Trunk Pacific Railways. The peak is at the southerly end of a massive mountain range in the Grand Fork amphitheatre, and is surpassed only by its near neighbor, Mount Robson.

service that at least 200% above the theoretical retardation required must be taken into consideration when designing wheels. The test also indicates the great benefit of thermal or cooling stations. When complete data are worked out for each weight of wheel and the information published in the university bulletins, this study will constitute one of the greatest engineering achievements of modern times. Making standards for the car wheel, which ought to be recognized as the most important part of the car structure, without reference to fundamental principles is absolutely unjustifiable.

The foregoing joint paper by G. W. Lyndon, President, and F. K. Vial, Consulting Engineer, Association of Manufacturers of Chilled Iron Car Wheels, was read before the Pittsburg Railway Club recently.

Dynamiter Convicted.—Werner Horn, who was arrested in Feb. 1915, for attempting to blow up the C.P.R. international bridge at Vanceboro, Me., was found guilty, June 14, by the U. S. court at Boston, Mass., of unlawfully transporting dynamite in interstate commerce. Sentence was deferred.

In the statistical tables it is shown that the entire capital stock of the Quebec, Montreal & Southern Ry., \$1,000,000, and of the Napierville Jct. Ry., \$600,000, is owned by the D. & H. Co.

Car Supply Information for Board of Railway Commissioners.

The Board of Railway Commissioners has given notice that railway companies shall make a report to its Chief Operating Officer at Ottawa, on the 1st and 15th of each month, on the condition of the car supply on their respective lines, giving the following information: The total number of cars under load with revenue freight at stations; the different kinds of cars being shown separately, viz., box, stock, refrigerator, coal, flat, other cars. The total number of loaded cars in transit, either in trains or at stations. The total number of empty cars under the different headings. The total demand for empty cars for loading, as per the daily orders, under the different headings. The total shortage or surplus, as the case may be, to be set out. The number of idle cars, if any, under the different headings. An idle car means a car that has not been

moved on account of there being no demand for it. The total number of cars, under the different headings, held for repairs.

Die for Bending Car Grab Irons, Canadian Pacific Railway.

The accompanying illustration shows a steel die operating in a punch for bend-

Die for Bending Car Grab Iron.

Die to be made to suit machine required for.

ing car grab irons, or other necessary bends or that nature. As many right angles can be made as necessary, it not being found necessary to heat the iron in using the die. We are indebted for this information and for the drawing to A. T. Shortt, Superintendent of Shops, Ogden, Alta.

The Board of Railway Commissioners devoted the whole of June to holding sittings mainly outside Ottawa, one section under Sir Henry Drayton, taking Western Canada, and the other, under D'Arcy Scott, taking Eastern Canada. The sittings in the West started at Victoria, June 4; subsequent sittings being held at Vancouver, June 6; Nelson, June 16; Calgary, June 18; Edmonton, June 19; Saskatoon, June 20; Regina, June 21; Winnipeg, June 22 and 23; and Fort William, June 25. The sittings in Eastern Canada included hearings at Ottawa, June 5, and Toronto, June 12. The most important matter was the hearing of statements from interested associations in various parts of the country with regard to the railway companies application for an increase in freight rates.

King's Birthday Honors for Canadian Transportation Men.

The customary list of honors in celebration of the King's birthday, June 3, contained the names of several Canadians, of whom the following are associated with transportation interests:

George Bury, Vice President and director, C.P.R., Knight Bachelor, on the recommendation of the Prime Minister of Great Britain and Ireland.

Augustus M. Nanton, director, C.P.R., and Vice President, Winnipeg Electric Ry.; Knight Bachelor.

Temporary Brigadier General A. D. Macrae, formerly one of the land commissioners, Canadian Northern Ry., Companion of the Order of the Bath.

Temporary Brigadier General F. S. Meighen, director, C. P. R., Companion of the Order of St. Michael and St. George.

G. A. Bell, Financial Comptroller, Department of Railways and Canals, Companion of the Order of St. Michael and St. George.

Lieutenant Colonel C. H. Mitchell, a civil engineer, Companion of the Order of St. Michael and St. George.

Sir George Bury was born at Montreal, Mar. 6, 1866, and entered C.P.R. service in 1883, since when he has been, to 1887, clerk in Purchasing Department, and in General Manager's office; 1887 to 1889, secretary to Vice President, and afterwards to President; 1889 to Mar. 1890, acting Superintendent, Sleeping Dining and Parlor Car Service; Mar. 1890 to Sept. 1899, successively, Assistant Superintendent, Chalk River, Ont., and Superintendent, North Bay, Ont.; Sept. 1899 to Feb. 1901, Superintendent, Fort William, Ont.; Feb. 1901 to Feb. 1902, Superintendent, Crowsnest Pass Line, Cranbrook, B.C.; Feb. to May 1902, Assistant General Superintendent, Lake Superior Division, North Bay, Ont.; 1905 to Feb. 1907, General Superintendent, Central Division, Winnipeg; Feb., 1907, to Mar. 1, 1908, Assistant General Manager, Western Lines, Winnipeg; Mar. 1, 1908 to Oct. 1911, General Manager, Western Lines, Winnipeg; Oct. 1911 to Dec. 1913, Vice President and General Manager, Western Lines, Winnipeg; Dec. 1912 to Dec. 1914, Vice President in charge of Western Lines, Winnipeg; Dec. 1914 he was appointed Vice President of the Company, Montreal, and also elected a director and member of the executive committee.

Sir Augustus M. Nanton was born at Toronto, May 7, 1860, and is a partner of Sir Edmund B. Osler, M.P., in the brokerage firm of Osler, Hammond and Nanton, Winnipeg. He is a director of the C.P.R. and Vice President and a director, Winnipeg Electric Ry., and was Managing Director of the Alberta Ry. and Irrigation Co., until it was taken over by the C.P.R. From 1894 to 1898, he was receiver for the English bondholders in the Manitoba and Northwestern Ry., and has been associated with many public organizations in Winnipeg, among them being: Board of Trade, President in 1898; Stock Exchange, President; Manitoba Cartage Co.; Dominion Bank; Great West Life Assurance Co.; Western Stockyards Co., and Toronto General Trusts Corporation. Since war broke out he has taken a very prominent part in patriotic work.

Temporary Brigadier General A. D. Macrae, C.B., was formerly a partner of

the firm of Davidson and Macrae, Toronto, who were at one time Land Commissioners, Canadian Northern Ry. He lived in Vancouver prior to the outbreak of war, being largely interested in lumber and other business. Since going to England he has performed various services for the Canadian military forces.

Temporary Brigadier General F. S. Meighen, C.M.G., was born at Montreal, Dec. 24, 1869. He is President, Lake of the Woods Milling Co., director, C.P.R., New Brunswick Land and Ry. Co., Canadian Northwest Land Co., and is associated with several industrial and charitable organizations. Prior to the war, he was Lieutenant-Colonel commanding the 5th Royal Highlanders, and volunteered

Sir George Bury

for service in the South African war. He is a son of the late Robert Meighen, a C.P.R. director, and his mother was sister of Lord Mount Stephen, first President of the C.P.R.

G. A. Bell, C.M.G., is Financial Comptroller, Department of Railways and Canals, Ottawa.

Lieutenant-Colonel C. H. Mitchell, C.M.G., is a member of the Canadian Society of Civil Engineers, the American Society of Civil Engineers, and associate member of the Institution of Civil Engineers (London), and of the American Institution of Electrical Engineers. He was for some time with the Westinghouse Electric and Manufacturing Co., and later was manager of the Ontario Power Co. Prior to the outbreak of war, he practised as a civil engineer in Toronto. He has also been decorated with the French Croix de Guerre and the Cross of the Legion of Honor.

The Canadian Northern Ex. Co. has opened offices at Hull, Que.; Camp Mohawk, Ont., and Grand Beach, Man.

Prince Edward Island Car Ferry Terminal.

The Minister of Railways made the following statement in the House of Commons recently: "At Cape Tormentine, N.B. the landing pier and the bridges for transferring cars between pier and steamship deck are completed, some adjustment of machinery in the power house, and the installation of electric light plant, being all that is required to render this terminal available for service. Additional stone is yet to be added to the breakwater, and the capping stone placed, but the structure in its present condition affords good protection to the steamer berth and turning basin. At Point Borden, P.E.I., progress during the season suffered through shortage of labor and the occurrence of violent storms. The railway connection between the ferry landing and the existing lines of the P.E.I.R. has been completed, together with the terminal yard and buildings at Point Borden. Some additional facilities for handling freight at this point will be added as business develops. About a week's dredging is required to clean up some high spots to give a workable turning basin for the steamer, although considerable dredging will be required to enlarge the basin to specifications. This, however, can be done during the summer. Taken altogether, the landing at Point Borden is now usable, except for the lack of a spring fender. The work on this is well forward, and the placing of the fender should be completed in June, and the work in all respects completed this season. The total estimated cost of the work is \$2,910,000, of which we have expended to date \$2,600,000."

Railway Lands Patented.—Letters patent were issued during May, in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acre.
Calgary and Edmonton Ry.	8,740,517

The Imperial Munitions Board, having consented to release the necessary amount of steel, the Railways Department arranged a little while ago with the Dominion Iron & Steel Co., Sydney, N.S., to roll 10,000 tons of rails, C.P.R. section, 85 lb. for main line renewals. Since then, it having been found that at least 15 more miles of track should be relaid in order to be in good shape for next year's traffic, arrangements have been made for rolling an additional 2,000 gross tons. Delivery is expected to commence in July and to be completed as soon as the finishing of the rails can be effected and car supply will admit. It is expected to get the rails laid during the latter part of the summer.

The Canadian Northern Railway Announces that up to June 1 of the present crop year, which began on Sept. 1, 1916, it handled 58,477 cars of grain originating from territory served by it in Manitoba, Saskatchewan and Alberta. This constitutes 30.4% of the total handlings of all the roads operating in Canada to date, and is an increase of 1.6% over the same period last year.

Mainly About Railway People Throughout Canada.

Lord Shaughnessy was given an honorary degree at Dartmouth College, Boston, Mass., June 20.

M. J. O'Brien, railway contractor, etc., Renfrew, Ont., has been elected a director of the Bank of Ottawa.

Hon. William Owens, President, Centray Ry. Co. of Canada, died at Westmount, Que., recently.

Wm. Keating, State Auditor of Montana, and at one time City Passenger Agent, G.T.R., Toronto, died suddenly at Helena, Mont., June 23.

W. R. Baker, C.V.O., formerly Secretary, C.P.R. Co., returned to Montreal, June 15, after a four months holiday trip to China, Korea and Japan.

George Mountain, M.Can.Soc.C.E., Chief Engineer, Board of Railway Commissioners, Ottawa, has been absent from his office for some weeks, owing to illness.

Sir Wm. D. Reid, President, Reid Newfoundland Co., and J. K. L. Ross, director, C.P.R., have been elected directors, Dominion Steel Corporation.

Sir Thomas Tait, President, Fredericton & Grand Lake Ry. & Coal Co., with Lady and Miss Tait, left Montreal, June 19, for St. Andrew's-by-the-Sea, N.B.

F. P. Gutelius was entertained to dinner by the Moncton Club, at the end of May, on leaving Moncton, N.B., to assume the duties of Vice President, Delaware & Hudson Co., Albany, N.Y.

F. E. Dewey, Operating Receiver, Gulf, Florida & Alabama Ry., Pensacola, Fla., has also assumed the duties of General Manager, that position having been abolished.

R. Hayes, chief clerk to General Superintendent, Eastern Lines, Canadian Government Railways, Moncton, N.B., was presented with a leather upholstered rocker, June 2, by the staff, on the occasion of his wedding, which took place at Halifax, N.S., June 5.

J. L. Englehart, Chairman, Timiskaming & Northern Ontario Ry. Commission, has given \$10,000 for the addition of a maternity annex to the Charlotte Eleanor Englehart Hospital, Petrolea, Ont., which he provided as a memorial to his late wife, about six years ago.

H. H. Vaughan, M.Can.Soc.C.E., formerly Assistant to Vice President, and afterwards Consulting Mechanical Engineer, C.P.R., and latterly President, Montreal Ammunition Co., has been appointed General Manager, Dominion Bridge Co., Lachine, vice G. H. Duggan, M.Can.Soc.C.E., appointed Chairman of the Board.

H. R. Charlton, General Advertising Agent, G.T.R., Montreal, has been awarded a gold medal and diploma by the Panama-Pacific Exposition international jury for his work as collaborator, in connection with the G.T.R. pavilion and exhibit, which were considered a feature at the exhibition at San Francisco last year.

Morley Donaldson, Vice President and General Manager, Grand Trunk Pacific Ry., Winnipeg, who has been ill for some time, is at the Royal Victoria Hospital, Montreal, where he is reported to be improving somewhat. When able, he will go to his home in Ottawa for a time. His official duties are being carried out by A. A. Tisdale, his assistant.

Donald Grant, who died at Faribault, Minn., June 13, was associated with railway building for many years. He was born at Glengarry, Ont., in 1837, and

D. A. Story,
General Traffic Manager, Canadian Government
Railways.

L. C. Fritch

from 1863 was actively engaged in railway building, both in Canada and the U.S. He was a contractor on the heaviest portion of the C.P.R., between Winnipeg and the Rocky Mountains, and subsequently built the extension of the St.

Paul & Manitoba Ry., from Minot, N.D., to Great Falls, Mont., 750 miles.

James Spelman, M.Can.Soc.C.E., President, John S. Metcalf Co., designers and builders of grain elevators, Montreal and elsewhere, died at Westmount, Que., May 27, aged 56. He was born at Ottawa, Ont., and educated there and at the Royal Military College, Kingston, Ont. He was engaged for some time on C.P.R. construction in the west, and subsequently allied himself with the John S. Metcalf Co., of which he had been Vice President for some years, and President since 1916. He was a member of the Engineers' Club, Montreal, and of the Western Society of Engineers.

C. O. Foss, whose appointment as Chief Engineer, St. John Valley Ry., Fredericton, N.B., was announced in our last issue, was born in New Hampshire, Mar. 20, 1852, and from 1878 to 1884, was engaged in general engineering practice at Concord, N.H. He was, from 1884 to 1904, Chief Engineer, Nova Scotia Central Ry., Bridgewater, N.S.; from 1904 to 1908, Assistant District Engineer, National Transcontinental Ry., St. John, N.B., and from 1908 to 1914, District Engineer, N.T.R., St. John, N.B.

D. B. Hanna, Third Vice President, and F. H. Phippen, K.C., General Counsel, Canadian Northern Ry., with others, were defendants recently in a case brought by the National Trust Co., as liquidators of the Great West, Iron, Wood & Chemical Works, Ltd., Prince Albert, Sask., claiming that they should contribute the par value of 999 shares to the company's assets, and also alleging that they had been guilty of wrongful conduct. The suit was dismissed with costs, all points being found in defendants' favor.

A. T. Weldon, who has been appointed General Freight Agent, Canadian Government Railways, Moncton, N.B., was born at Dorchester, N.B., Mar. 6, 1876, and entered transportation service in 1890, since when he has been, to Apr., 1900, in different capacities in the Freight Department, Intercolonial Ry.; Dec., 1901, to Aug., 1904, in Division Freight Agent's office, I.R.C., Halifax, N.S.; Aug., 1904, to May 1, 1907, Secretary, Halifax Board of Trade; May 1 to Nov. 18, 1907, General Sales Agent, Port Hood-Richmond Ry. Coal Co., Halifax, N.S.; Nov. 18, 1907, to 1909, Division Freight Agent, I.R.C., Halifax, N.S.; 1909 to Oct. 1, 1914, General Freight and Passenger Agent, Black Diamond Steamship Co., Montreal; Oct. 1, 1914, to June 9, 1917, Assistant General Freight Agent, Canadian Government Railways, Moncton, N.B.

John Earls, who died somewhat suddenly at Toronto, June 3, was born in Ireland, Oct. 30, 1838. He entered G.T.R. service in 1862, since when he was, to 1863, corresponding clerk, Toronto; 1863 to 1866, clerk, Sarnia, Ont.; 1866 to 1868, corresponding clerk, Portland, Me.; 1868 to 1871, cashier and accountant, freight and steamship department, Portland, Me.; 1871 to 1872, chief clerk, General Freight Agent's office, Toronto; 1872 to 1875, chief clerk, General Freight Agent's office, Montreal; 1875 to 1877, Assistant General Freight Agent, Eastern District; 1877 to 1884, Assistant General Freight Agent, Western District; 1884 to 1892, District General Freight Agent, Western,

and Northern and Northwestern Districts; 1892 to Mar., 1896, District General Freight Agent, and from Mar., 1896, to 1905, Secretary and Treasurer, Canadian Freight Association.

Alan H. Jones, who was appointed Assistant Engineer, Canadian Government Railways, Moncton, N.B., recently, was born at Liverpool, Eng., Feb. 16, 1884, and has been, from April, 1902, to Aug., 1904, draughtsman, Jewett Car Co., Newark, Ohio; Aug., 1904, to Jan., 1905, draughtsman, Brooklyn Rapid Transit Co., New York; Feb., 1905, to Feb., 1908, draughtsman, on grade separation work, New York Central Rd., New York; Mar. to June, 1908, Assistant Engineer, Third Avenue Ry., New York; June, 1908, to Jan., 1911, engineering, surveying and Mapping, Delaware & Hudson Co., Scranton Pa., and Montreal; Jan., 1911, to April, 1912, Assistant Engineer, Windsor St. Station, C.P.R., Montreal; April, 1912, to Jan., 1915, instrument man on construction, Campbellford, Lake Ontario & Western Ry. (C.P.R.); Jan. to Nov., 1915, draughtsman, Canadian Government Railways, Moncton, N.B.; Nov., 1915, to Jan., 1917, Resident Engineer, District 4, Intercolonial Division, Canadian Government Railways, New Glasgow, N.S.

Louis Charlton Fritch, who has been appointed General Manager in charge of operation, Seaboard Air Line Ry., Norfolk, Va., was born at Springfield, Ill., Aug. 11, 1869. He took a course in civil engineering at the University of Cincinnati, and subsequently a law course, and was admitted to the Ohio bar in 1899. He entered railway service in 1884 as supervisor's assistant, Ohio & Mississippi Ry., and was from Jan. 1, 1886, to Oct., 1892, Assistant Engineer, same road; Oct., 1892, to Nov. 1, 1893, Engineer, Maintenance of Way, same road; and was also Construction Engineer in charge of construction, Cincinnati & Bedford Ry.; Nov. 1, 1893, to Sept. 1, 1899, Division Engineer, Baltimore & Ohio Southwestern Rd., which absorbed the Ohio & Mississippi Ry.; Sept. 1, 1899, to Nov., 1902, Superintendent, Mississippi Division, same road; Feb., 1904, to Mar. 1, 1905, engaged on special work, Illinois Central Rd., Chicago, Ill.; Mar. 1, 1905, to Nov., 1906, Assistant to General Manager, same road; Nov., 1906, to Mar. 1, 1909, Assistant to President, same road; Mar. 1 to Nov. 15, 1909, Consulting Engineer, same road; Nov. 15, 1909, to Mar. 31, 1914, Chief Engineer, Chicago Great Western Rd., Chicago, Ill.; Mar. 31, 1914, to Aug., 1915, Assistant to President, Canadian Northern Ry., Toronto, and from Aug., 1915, to June 1, 1916, General Manager, Eastern Lines, same road, Toronto. He is a member of the American Society of Civil Engineers, American Institute of Electrical Engineers, American Railway Engineering Association, American Society for the Advancement of Science, Western Society of Engineers, and the Geographical Society. He was President of the American Railway Engineering Association in 1910, a director from 1905 to 1913, and a member of the rail committee in 1913; a member of the railway committee of the American Institute of Electrical Engineers from 1910 to 1913; chairman of the committee on engineering of the American Railway Association in 1913; a member of the committee on electrical working, of the American Railway Association, from 1910 to 1913, and a member of the committee on electricity, of the American Railway Engineering Association from 1910 to 1913.

A. D. MacTier on the Coal Transportation Question.

A. D. MacTier, General Manager, Eastern Lines, C.P.R., issued the following statement recently: "This country is face to face with a coal shortage of very alarming proportions, and by next winter, if conditions under which fuel may be obtained do not alter in the meantime, a great many industrial concerns and householders will be unable to supply themselves with sufficient coal to carry them through the severe weather. The present and prospective difficulties in the way of bringing coal into Eastern Canada may be attributed to a number of causes, principal amongst which are dearth of mining labor and shortage of coal carrying equipment at the mines. The situation in some of the mining territories is that, even with the labor shortage, operators are able to turn out coal at a greater rate than they can obtain cars to carry it away. It, therefore, naturally follows that more coal could be brought into Canada if the car supply was increased. Unfortunately, it is out of the question to obtain any number of new cars at this time, and the situation can be met only by obtaining more service from the present rolling stock. To do this cars must be moved promptly between the mines and destination, and must be unloaded as soon as they reach consignees.

"Railways must have coal, in order to discharge their obligations to the country, and for their own preservation, as well as for the benefit of their patrons, they are putting forth their utmost efforts to minimize delay to cars while en route to and from the mines. All efforts in this direction, however, will be of little avail without the wholehearted cooperation of the man who unloads the coal and releases the car after it gets to its destination. Some consignees, who thoroughly appreciate the situation, have almost a 100% record in the prompt unloading of coal cars, but there are others who are helping to create the prospective shortage of coal by keeping the equipment out of active service. Today there are in one town of comparatively small size 52 coal cars awaiting unloading. The arrival of these cars was spread over 31 days, an average of cars received per day of 1.68. They are consigned to three organizations which have the facilities for unloading a large number of cars each day. These 52 cars have been out of service a total of 1,029 car days. Coal cars that are not held for storage purposes, as these cars are, average at least 50 miles a car a day. Had the 52 cars been unloaded promptly they would have, by this time, travelled 51,450 miles. The distance from the point where they are now located to the coal mining territory is approximately 400 miles. It follows, therefore, that had the 52 cars been in active service they would have been available to bring into the country 64 carloads, or about 3,200 tons of coal. The quantity is not very large, it is true, when the total demand is considered, but it would have kept over 300 families warm for the winter or heated the boilers in an industrial plant for some little time.

"Unfortunately, the case cited is not the only one of its kind. It is one of the worst, but there are hundreds of cars lying idle, waiting to be relieved of their loads, so that they may go back to the mines for more coal. The coal dealer and consignee can do the country an immense service by promptly releasing rolling

stock and helping to reduce car shortage at the mines. There is also the man who has always called for open top cars for the handling of his goods because the loading and unloading with that class of equipment is more economical than in using closed cars. When he insists on being supplied with cars that should be in the coal business he is helping to create a coal shortage by keeping cars away from the mines. No doubt, he is a heavy coal consumer. As a business proposition, would it not be more economical for him if he used closed cars now and enabled the railways to transport more coal into the country so that he would not be in danger of having to close down his plant altogether later on account of being unable to obtain fuel. The C.P.R., for itself, and on behalf of other railway companies, most earnestly calls upon its patrons and employes to do their utmost to fight off the impending shortage of fuel by keeping coal cars continuously in the proper service, which is the transporting of coal."

Dominion Railway Act Revision.

The special committee of the House of Commons appointed to consider the revision and consolidation of the Railway Act, completed its work, June 7, and presented its report, with the bill as amended, to the house, June 8.

Two important clauses were added by the committee. The first provides that the Canadian Government Railways should be subject to the act, except so far as the expropriation of land is concerned, and the second gives cities the right to appeal to the Board of Railway Commissioners to compel steam railways to grant commutation tickets to suburban points. The effect of the first of these clauses will be to bring the rates charged on the government railways under the Board of Railway Commissioners, and the second will be to allow an appeal against the cutting off of commutation tickets from any place to which they are now being issued, and to permit cities to make application to compel railways to grant commutation privileges to points where they are not now available.

After considerable discussion the committee refused to endorse the section sought to be added to the measure by the chairman, J. E. Armstrong, to place inland water carriers under the control of the Board of Railway Commissioners with regard to rates.

The committee recommended that the minutes of proceedings and the evidence given be printed and issued as an appendix to the journals of the house.

Dominion Government Elevators.—The Minister of Trade and Commerce stated in the House of Commons, June 7, that prior to Oct. 1, 1911, there were no government terminal and interior storage elevators in the Dominion, but that since that date five had been built, at Port Arthur, Ont.; Moose Jaw and Saskatoon, Sask.; Calgary, Alta., and Vancouver, B.C., respectively.

Station Telephone Facilities.—In connection with the Great Northern Ry. and Northern Pacific Ry. joint terminal station, Vancouver, which was opened June 1, a 50 pair telephone cable has been laid, and facilities are provided for connecting the switchboard up will all incoming trains, so that passengers can be given connection with any part of the city as soon as the trains pull up.

The National Transcontinental Railway Showed a Deficit, Not a Surplus.

The Hon. G. P. Graham asked the following questions in the House of Commons recently: "In the Quebec Chronicle, dated May 8, 1917, the following statement appears in reference to the Transcontinental Ry., viz.: 'The railway has been in operation from Moncton and Quebec to Winnipeg for over a year, and the return of its first year's operation is just appearing in the government blue book, which shows that the gross earnings amounted to the handsome sum of \$5,798,516, and that a profit has been made in the first year of \$429,455.' 1. Is this statement accurate? 2. If not, what is the accurate statement?"

The Minister of Railways replied: No. The figures quoted are taken from the Annual Report of Railway Statistics for the year ended June 30, 1916, at page 45. Page 99 of that report shows deductions, and the result for the 12 months is shown therein as a loss of \$341,615.51. To this should be added the rental of leased line from Fort William to Superior Junction for 12 months, \$600,000, making the total loss \$941,615.51. The railway was operating from Moncton through to Winnipeg as from May 1, 1915. Operating expenses, including rental of leased line from Fort William to Superior Junction, for 12 months ended April 30, 1916, were \$4,960,434.11, and net operating revenue \$4,083,603.51, a loss of \$876,830.60.

The article in the Quebec Chronicle was apparently written under a misapprehension as to what the columns in table 6, pgs. 44 and 45, of the Report on Railway Statistics for the year ended June 30, 1916, purported to give. The columns contain: 1, passenger earnings; 2, freight and switching earnings; 3, other earnings from operation; 4, total gross earnings from operation. The next column gives the operating expenses, details of which are given in table 8, while the last column gives the net operating earnings, ascertained by deducting the operating expenses from the total gross earnings from operation. So far as the National Transcontinental Ry. is concerned, the figures are: Total gross, including other earnings from operation, \$5,798,516.09; operating expenses, \$5,369,061.58; net operating earnings, \$429,454.51.

The net operating earnings are carried forward to what is called income account, pgs. 94-97, and which brings into account other sources of revenue, which, in the case of the N.T.R., amount to \$37,670.84, giving a total gross corporate income of \$467,135.35. The second part of table 8, pgs. 98-101, shows the deductions from gross corporate income, including rents from lease of other lines, other rents, interest on funded debt, other interest, sinking fund and all other deductions, which, in the case of the N.T.R., amount to \$808,750, showing a net corporate loss of \$341,615.51.

The accounts of all the railways in Canada are dealt with in the same way in the compilation of the tables in the department's statistical report. The point raised by the questions asked by Mr. Graham is, do the statistical tables convey a wrong impression to those who refer to them as to the information they contain? The figures in table 7 evidently conveyed to the writer in the Quebec Chronicle that net earnings from operations means profit, and that being the case, it is not unlikely there are others

who interpret the figures in the same way. A rearrangement of the tables, or the appending of explanatory notes, is very necessary, and should be adopted before the next report is brought out.

Hudson Bay Railway and Terminals Construction.

The Minister of Railways made the following statement in the House of Commons recently: "During the past year the rail bed on the H.B.R. was carried to mile 332, at the crossing of Nelson River, at Kettle Rapids. The work was behind schedule, partly owing to a labor shortage and partly to the destruction by fire of the contractor's tracklaying outfit, thus preventing the construction of the substructure of this bridge before the rise of water which here accompanies ice formation. The substructure of this bridge was expected to be completed on the south side of the Nelson River on May 21, 1917, and preparations for start on north side will follow immediately. The steel work of the superstructure is en route to this site. Of the 92 miles of grade between the bridge and Port Nelson, work remains to be done at isolated points to an aggregating amount of 11 miles of light grading. Some train filling remains to be done on the portion of the line now built, and much of it has only received a first lift of ballast. It is contemplated that track will be laid into Port Nelson this year and the ballasting of the line brought into fair shape to within a few miles of that terminus.

"At Port Nelson a somewhat restricted

programme has been followed, owing to the effect of war conditions upon labor, materials and ocean tonnage. The bridge structure connecting the deepwater wharves with the mainland was completed, and 1,600 lin. ft. of the cribwork of the island placed, built up and filled. The hydraulic dredge worked throughout the season in the channel. The clam shell dredges were employed in dredging stone and gravel from the river bottom for crib filling. During the present season it is hoped that a considerable portion of the island, including the site for the elevator, will be enclosed, and several sections of the deep water dock face cribs placed in position.

"The total estimated cost of this work is \$26,000,000. We have expended to date \$18,175,000, of which \$12,656,000 has been in connection with the railway, and \$5,610,000 in connection with the terminal work at Port Nelson."

The G.T.R. Apprentices at Stratford, Ont., held their annual dinner, June 17, when in addition to a number of the head office and local officials, the Chairman of the Board, A. W. Smithers, London, Eng., was present.

A Steel Car of 85 Tons, or 2,900 cu. ft. capacity, and having 5 hoppers instead of 4, has been built by the Pennsylvania Ry. The car has a length, coupled, of 50 ft. 4 in., and an extreme width of 10 ft. 2 in. The inside dimensions are 46 ft. 6 in. by 9 ft. 4 7/8 in. The height above rail is 10 1/2 ft., and the front wheelbase is 5 ft. 10 in. A heap capacity of 328 cu. ft. brings the total capacity to 3,228 cu. ft. The light weight of the car is 60,000 lb.

Traffic Orders by the Board of Railway Commissioners.

Rates for Canned Goods.

26168. May 31. Re complaint of Dominion Cannery Ltd., against withdrawal of joint commodity rates on canned goods from points on the Canadian Northern Ry. south of Trenton, Ont., to points in Ontario west of Ottawa, Peterborough and Whitby. Upon the Chief Traffic Officer's recommendation, it is ordered that the C.N.R. be required to publish and file its proposed joint tariff on canned goods, in carloads, from and to the said points, to become effective not later than June 15, 1917.

Rates on Grain and Grain Products.

26172. June 5.—Re complaints of Montreal Board of Trade, Montreal Corn Exchange Association, Dominion Millers' Association, and James Richardson & Sons, against proposed advanced rates on grain and grain products published and filed by railways to take effect June 5, and subsequent dates. Upon hearing the complaints at Ottawa, June 1, the Canadian Pacific, Grand Trunk and Canadian Northern Railways, the complainants, and the Lake of the Woods Milling Co., St. Lawrence Flour Mills Co., Ogilvie Flour Mills Co., Dominion Flour Mills Co., Western Canada Flour Mills, Robin Hood Flour Mills Co., Canada Cereal and Flour Mills Co., Goldie Milling Co., and Canadian Manufacturers Association being represented, it is ordered that the following tariffs be suspended until further order: Grand Trunk C.R.C., nos. E-3571, E-3575, E-3576, E-3579, E-3582, E-3585, E-3586, and E-3587; Canadian Pacific C.R.C. nos. E-3304, E-3306, E-3307, E-3308, E-3309 and supplement 2 to C.R.C. no. E-3285; Canadian Northern C.R.C. nos. E-932, E-933, E-934, E-935, E-939 and supplement 1 to C.R.C. no. E-940; Chatham, Wallaceburg & Lake Erie C.R.C. 464, 472 and 476; Essex Terminal C.R.C. 421, 422 and 423; Gleggarry & Stormont C.R.C. 65, 71 and 72; Hull Electric C.R.C. nos. F-74, F-77 and F-78; Lake Erie & Northern C.R.C. 78, 83, 84 and 86; London & Port Stanley C.R.C. 126, 130, 136, 137 and 138; Michigan Central C.R.C. 2646, 2662 and 2663; New York Central C.R.C. 1050 and 1051; Thousand Islands C.R.C. 318 and 319; Toronto, Hamilton & Buffalo C.R.C. 1158, 1163, 1164 and 1165; Pere Marquette C.R.C. 2107, 2108, 2113 and 2114; Wabash C.R.C. 1005, 1012 and 1014; Windsor, Essex & Lake Shore Rapid C.R.C. 204, 212 and 213.

Fruit Shipping Facilities at Jordan.

26181. June 5.—Re complaint of Jordan Co-operative Co., of Jordan, Ont., against facilities which Canadian Express Co. is giving at that point for shipping perishable fruits; and re application of Fruit Growers Association of Ontario for an order making effective this year order 24976, May 15, 1916, and if possible to extend the time of such service so as to read "from June 15," instead of "July 1." Upon its being represented to the board that the service required under order 24976 has been given a thorough test, and that on the showing made the board is not justified in directing that it be continued, it is ordered that order 24976, providing for the continuance of extra car service at Jordan, to be handled on train 97, be rescinded.

Freight Rate on Pedigree Bull.

26184. June 5.—Re complaint of D. A. McPhee, of Vankleek Hill, Ont., against rates charged by Ottawa & New York

and Grand Trunk Railways, on a registered Holstein bull, shipped from Russell to Vankleek Hill. Upon its appearing that the certificate of registration showing the bull to be a pedigreed animal was presented to the company's agent at the time of shipment, with the request that the shipment be made on the released valuation, as provided by the company's live stock contract; and that the failure to carry at the reduced rate was the fault of the company or its agent, and not that of the shipper, it is declared that the charge the Ottawa & New York and the Grand Trunk Railways were authorized to make for the said shipment should have been based on 4,000 lb. at one-half 1st class standard tariff rate, and leave is therefore granted the said railways to refund to the complainant the difference between such charge and the amount collected.

Interswitching at Thorold.

26186. June 5.—Re application of Town of Thorold for an order requiring interswitching between the Grand Trunk and the Niagara, St. Catharines & Toronto Railways at Thorold, it is ordered that the Grand Trunk and the Niagara, St. Catharines & Toronto Railways be directed to provide interswitching facilities between their respective railways at Thorold, the said railways to submit to the board, within 30 days, a plan showing the proposed transfer track, and an estimate of its cost.

Demurrage Improperly Collected.

26187. May 31.—Re complaint of Canadian Handle Manufacturing Co., of Strathroy, Ont., against a demurrage charge of \$23 made by Michigan Central Rd. at Tilbury, Ont., on a shipment of logs from Warren, Mich. Upon its appearing that the toll in question was collected contrary to the provisions of sec. 315 of the Railway Act and rule 20 of Canadian Car Service Rules, it is declared that the M.C.R. was not authorized to make the said demurrage charge, and leave is therefore granted the railroad to refund to the complainant \$23.

Rates on Pedigree Live Stock.

26194. June 6.—Re application of Canadian Pacific Ry. Co., under sec. 340 and 341 of the Railway Act, for approval of its Tariff C.R.C. no. E-3299, being a local freight tariff of rates on pedigree live stock, when shipped by the Ontario Department of Agriculture, Live Stock Branch. Upon the recommendation of the Board's Chief Traffic Officer, the Department of Agriculture offering no objection, it is ordered that the said tariff be approved.

Interchange Tracks at Ottawa.

26200. June 8.—Re application of New York Central Rd., lessee of Ottawa & New York Ry., under sec. 228 of the Railway Act, for an order requiring that the Ottawa & New York and the Grand Trunk Railways' tracks be so connected at or near Ottawa as to admit of the safe and convenient transfer or placing of locomotives, cars, and trains from the tracks or lines of the one railway to those of the other; and that such connection be maintained and used, as shown on the plan on file with the board. Upon the report and recommendation of the Chief Operating Officer and an engineer of the board, and proof of service or notice of the application upon the G.T.R., it is ordered that the applicant company be

authorized to connect the Ottawa & New York Ry. tracks with those of the G.T.R. as shown on the said plan.

Rates on Ore and Rock.

26240. June 23.—Re application of Canadian Copper Co., of Copper Cliff, Ont., for an order disallowing Algoma Eastern Ry. Co.'s Tariff C.R.C. 167, advancing rates on ore and rock, effective Feb. 5, 1917. Upon hearing the application at Ottawa, Mar. 20, 1917, the applicant and the Algoma Eastern Ry. being represented by counsel, and consenting to the withdrawal of the application, it is ordered that the same be refused.

White Pass & Yukon Ry. Season Release.

26243. June 23.—Re complaint of J. E. Lilly & Co., of Dawson, Yukon, against abrogation of its season release with respect to certain items of Northern Freight Classification 6, providing alternative ratings based on stipulated valuations; and against amended Rule 21, item 1 of Supplement 2 to said classification. Upon hearing the complaint at Ottawa, June 19, 1917, in the presence of counsel for the White Pass & Yukon Ry., and upon reading the submission filed on behalf of the complainant, it is ordered that the complaint be dismissed.

"Follow Lot" Rule No. 3.

General order 189. May 23.—Re "Follow Lot," rule 3 of Canadian Freight Classification; and re railway companies being required to show cause why the rule in commodity tariffs filed in conformity with the judgment in the eastern rates case, also rule 8 of Canadian Freight Association's Westbound Transcontinental Tariff 1, stating that rule 3 of Canadian Freight Classification will not apply in connection therewith, should not be disallowed; Upon hearing the matter at Ottawa, Nov. 21, 1916, and in Toronto, Dec. 13, 1916, the Canadian Pacific, Canadian Northern, Grand Trunk, and Toronto, Hamilton & Buffalo Railways, Canadian Freight Association, Michigan Central Rd., Canadian Manufacturers' Association, Montreal and Toronto Boards of Trade, the Thomas Davidson Manufacturing Co., Sheet Metal Products, Ltd., Macdonald Manufacturing Co., and McClary Manufacturing Co., being represented, it is ordered that the said rule 3 be amended as follows: viz.: 1. By striking out the words, "provided first car (or cars) is loaded to the classification minimum," and substituting therefor the words, "provided that each car, except the car carrying the excess, must be loaded to its visible or marked capacity." 2. By striking out the words defining the classification minimum as being "not less than 20,000 lb. per car," and substituting therefor the words, "not less than 24,000 lb. per car." And it is further ordered that rules or regulations of general application, the effect of which is to deprive tariffs of various commodities of the benefit of the so-called "follow lot" rule of Canadian Freight Classification be disallowed; provided that this order shall not be construed as preventing railway companies and shippers, if they so desire, from agreeing, in respect of a particular commodity, or of particular commodities, upon commodities on a lower rate basis, with or without higher weight minima, to which the said rule shall not apply.

Rates for Ice Cream Cones.

General order 190. May 25. Re application of Canadian Manufacturers' Association for an order amending Canadian

Freight Classification 16 by providing a carload rating for ice cream cones; or an alternative direction to railway companies to publish carload commodity rates from Toronto to Montreal, Ottawa, Winnipeg, Regina, Calgary, Edmonton, and Vancouver. Upon hearing the application at Ottawa, May 15, 1917, Canadian Manufacturers' Association, Canadian Freight Association, and Canadian Pacific Canadian Northern, and Grand Trunk Railway Companies being represented, it is ordered that Canadian Freight Classification 16 be amended to provide a carload rating of third class, with a minimum of 16,000 lb., on ice cream cones.

Immigrant Baggage Storage.

General order 191. May 26. Re application of Eastern Canadian Passenger Association for an order amending rule 23 of the Regulations Governing Baggage Car Traffic in Canada, as prescribed by general order 151, Nov. 8, 1915. Upon reading what is filed in support of the application, and the recommendation of the Chief Traffic Officer, it is ordered that the said rule be amended by adding the following: "Storage—Rule 23. Exception (4)—Immigrant baggage will be stored free of charge for any portion of a period of, but not exceeding, five days after arrival, at the ports of Montreal, Toronto, and Winnipeg.

Salt and Ice for Refrigerator Cars.

General order 192. May 30. Re application of Canadian Manufacturers' Association for an order disallowing charges made by railway companies for salt supplied to refrigerator cars with ice; and re the proposed tariffs of railway companies increasing charges for ice supplied to refrigerator cars, the said tariffs having been suspended by general orders 164, April 25, 1916, and 165, May 16, 1916. Upon hearing the application at Ottawa, July 20, 1915, March 21, 1916, June 6, 1916; Calgary, July 10, 1916; Winnipeg, July 14, 1916, and Ottawa, Dec. 19, 1916, the Canadian Pacific, Grand Trunk, Canadian Northern, Grand Trunk Pacific, and Ottawa & New York Railways, the Michigan Central Rd., Canadian Manufacturers' Association, Ontario Fruit Growers' Association, Swift Canadian Company, P. Burns & Co., and the Montreal, Toronto, Winnipeg, Calgary, and Edmonton Boards of Trade being represented, it is ordered that the application for an order disallowing the charges now being made by the railway companies for salt supplied to refrigerator cars with ice be refused. And it is further ordered that the tariffs showing charges for ice supplied to refrigerator cars, which were suspended by the general orders 164 and 165, be disallowed.

Freight Classification Supplement Approved.

General order 193. May 31. Re application of Canadian Freight Association, on behalf of railway companies, under sec. 321 of the Railway Act, for approval of proposed Supplement 9 to Canadian Freight Classification 16, containing certain increases, reduced, and additional ratings. Notice having been given in the Canada Gazette by the railway companies, as required by sec. 321 of the Railway Act, hearings having been held, and the proposed changes having been fixed, by consent of the parties, or by orders of the board, or reserved for order of the board; and upon the recommendation of the Chief Traffic Officer, it is ordered that the said proposed Supplement, as finally revised and submitted for approval by the Chairman of the Canadian

Freight Association, by letter dated May 12, 1917, be approved, subject to the following provisions, viz.: 1. That the proposed carloads ratings and minimum weights for games or toys, other than those of iron or steel, be struck out, and that there be submitted therefor a carload rating of 3rd class and a minimum of 14,000 lb. a car for toys and games of all kinds, as specified in the said supplement (excepting those made of iron or steel), in straight or mixed carloads. 2. That the item providing for popped corn or puffed rice confectionery be added to the grocery list of the classification, and that the ratings provided for these articles in cartons include bags. 3. That the said supplement give effect to general order 190 of May 25, 1917, fixing a carload rating for ice cream cones.

Express Rates on Horses.

General order 194. June 6.—Re application of Express Traffic Association of Canada, on behalf of express companies, for an order authorizing them to advance the estimated weight of horses, in carloads, from 10,000 to 12,000 lb. a car. Upon hearing the application at Ottawa, Feb. 20, 1917, the Express Traffic Association of Canada, the Department of Agriculture, the Montreal and Ontario Jockey Clubs, and other parties interested being represented, and upon the recommendation of the Chief Traffic Officer, it is ordered that the express companies be authorized to amend the Express Classification for Canada so as to increase the weight upon which the express charges for the carriage of horses are based from 10,000 to 12,000 lb. a carload.

Cartage Charges.

General order 195. June 23.—Re complaints of Toronto Board of Trade, Pilkington Bros, and Consolidated Plate Glass Co. of Canada, against proposed increase in charges for cartage as contained in tariffs filed by the various railways. Upon hearing the complaints at Toronto, April 14, the Toronto and Montreal Boards of Trade, Pilkington Bros., the Grand Trunk and the Canadian Pacific Railways, Canadian Freight Association, Dominion Transport Co., and Shedden Forwarding Co., being represented, it is ordered that the companies' tariffs be amended by striking out the clause reading as follows: "Cartage charges will be collected on cartage freight upon the same basis of weights as assessed by the railway companies," and that there be substituted therefor the following: "Cartage charges will be collected on the basis of actual weight, subject to the minimum provided in Canadian Freight Classification."

Building Capacity for Rolling Stock.—

The U. S. Council of National Defence requested recently that a committee of car and locomotive builders be formed to investigate the capacity of car and locomotive building plants in the country, and the extent of their ability to turn out additional motive power and equipment for railways in the U. S. and the various allied countries. A strong committee of the higher officials of the various plants has been formed, and the investigation is proceeding rapidly.

Aerial Railway for British Columbia.—

A press report states that the Delta Copper Co. proposes to build 3½ miles of aerial tramway and a power plant at Skeena Crossing. The company's office is at 703 Tegler Building, Edmonton, Alta., its Chief Engineer being H. E. Clements, with office at Skeena Crossing.

Canadian Pacific Railway Construction, Betterments, Etc.

Manitoba District.—Among the works to be carried out at the eastern end of the district this year are the building of a new station at Dryden, Ont., and the extension of yard facilities at Ignace, Ont.

New station buildings are to be erected at Carey, Hazelridge and Riverton, Man.; automatic signals are to be installed at the Brandon terminals, and the freight shed at Swift Current is to be enlarged.

Tenders are under consideration for the construction of a concrete subway for pedestrian traffic under the tracks at Virnden, Man. J. C. Holden, Brandon, Man., is resident engineer in charge of the work.

Saskatchewan District.—A train service was put in operation from Moose Jaw to Shaunavon, Sas., June 18. This was rendered feasible by the completion of a piece of line between Vantage and Assiniboine.

New station buildings have been, or are to be erected at Consul, Hatton, Kinley, Melaval, Piapot, Stalwart, and Vidora, Sask.

Progress is reported to have been made with the diversion of Frenchmen's River at three points west of Shaunavon, so as to protect bridges against spring freshets.

The new stone building at Regina for the Dominion Express Co., and the addition to the freight shed are reported to be well advanced.

Alberta District.—It is reported that among the additional betterments to be carried out during this year are the enlargement of the station at Macklin, and the erection of new stations at Enchant, Jenner, and Lomond, Alta.

A press report states that plans are being prepared for a rearrangement of the tracks in the yards, and the building of a station and residence at Magrath, Alta. The work, it is stated, is not likely to be undertaken this year.

Grant Hall, Vice President and General Manager Western Lines completed an inspection trip recently through the territory to be served by the projected extension of the Suffield-Redlaw line, into the Turin-Kipp district.

The finishing up work on the extension of the line easterly from Sterling, heretofore terminating at Pakowki, between that point and Manyberries, Alta., has been completed, and the train service was extended to the last named point June 3. (June, pg. 232.)

Alaska Rates.—In the Alaska investigation, in which the Pacific & Arctic Ry. & Navigation Co., the British Columbia-Yukon Ry. Co., the British Yukon Navigation Co., and the American Yukon Navigation Co. were complained of among others, the Interstate Commerce Commission has decided as follows: Respondents' rates, regulations, and practices governing transportation between points within Alaska and between points in the United States and points in Alaska are not found to be unreasonable. Special contract rates accorded cannery and mining companies on through rail and water shipments from points in the U.S. to points in Alaska found unjustly discriminatory. Allegations concerning the payment of rebates and the ownership by respondent railways or their interest in mines or minerals which they transport not sustained.

Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We should be glad to be favored in this respect.

The C.P.R. has, according to a Montreal press dispatch, lent \$10,000,000 to the Imperial Munitions Board, to assist in the purchase of munitions in Canada during this year.

The Canadian Northern Ry. Patriotic Association, for the four months ended April 30, contributed \$24,554.15 to the Canadian Patriotic Fund. The association covers the whole system from coast to coast.

The Timiskaming & Northern Ontario Railwaymen's Patriotic Association, up to Mar. 31, had contributed \$18,278.36 to the Red Cross Society, \$25,491.42 to the Canadian Patriotic Fund, and \$11,860.25 directly to enlisted employees.

No. 2 Section, Skilled Railway Employees, which was mobilized in Montreal and arrived in England early in May, is now known as No. 13 Light Railway Co., R.E., British Expeditionary Force. They left Aldershot, Eng., June 7, for France, to operate light railways running from the base to the front.

C.P.R. Employees Enlisting in the U.S.—The C.P.R. has announced that it will allow all employees who enlist in the U.S. army or navy salary for 6 months, payable monthly, provided that they cross the ocean. On their return they will be given their former positions, or similar ones.

Canadian Railway Builders.—A special war correspondent, telegraphing recently from the Canadian forces in France, said: "One of the most urgent needs after a big push, such as Vimy, is laying railway tracks to a point as near as possible to the front line. Canadian railway units have done fine work in this respect, and completed laying 22 miles of track in five days recently."

G.T.R. Employees and the War. From the commencement of the war to the end of April, 3,342 G.T.R. employees had enlisted. Of these, 178 had been killed and 300 wounded. Two employees were awarded the Victoria Cross, four received the Distinguished Conduct Medal, two received Military Crosses and six, military medals. In addition, three employees were mentioned in dispatches. The company has contributed \$120,000 to the patriotic fund, and had paid to employees enlisting \$810,000 to the end of February. These amounts are in addition to those contributed to patriotic funds by employees.

The Timiskaming & Northern Ontario Ry. News Patriotic Association had up to April 30 subscribed as follows:—Canadian Red Cross, \$18,775.28; Canadian Patriotic Association, \$26,208.51; Canadian donation enlisted employees, \$12,297.59; total, \$57,281.38. In addition to the above, many personal subscriptions for considerable sums have been made by members of the commission and employees and the entire Toronto office staff are active members of the 50,000 Club for the duration of the war. Special arrangements have been made by the Commis-

sion whereby employees are enabled to subscribe for government war savings certificates, and all departments of the road are availing themselves of the opportunity to have and serve.

A war correspondent, F. A. McKenzie, telegraphing to the Toronto Star from London, after a fortnight's visit to the western front, said: "One enormous improvement will be the system of railways, which is largely replacing the motor lorry service. New standard gauge lines are largely built by the Canadian corps, whose record feats are exciting great praise. One C.N.R. battalion which I visited had just completed building a section of line and a bridge 140 ft. long. They started Friday and finished Tuesday, then went at a line beyond, 12,069 ft. long. It was begun Tuesday and finished Wednesday night, the men working solely at night time on account of the enemy fire. The gallantry and ingenuity of these railway pioneers is amazing. They push rails right up to the enemy front. Their leader, Col. J. W. Stewart, maintains his old Western characteristics, saying little and keeping himself in the background, avoiding display, but organizing the machine perfectly."

PERSONAL NOTES.

Jas. Irwin, station agent, London & Port Stanley Ry., Port Stanley, Ont., has enlisted in the 63rd Battery, C.E.F., at London, Ont.

Major Maitland Kersey, D.S.O., Managing Director, Canadian Pacific Ocean Services, Ltd., London, Eng., was appointed to the staff of General Pershing, of the U.S. Army, during the latter's stay in England.

Capt. M. N. McPhee, of the Canadian Infantry, who was killed in action in France recently, lived in Edmonton, Alta., for several years. He was employed as a civil engineer on the Grand Trunk Pacific Ry.

Major W. P. Wilgar, B.A.Sc., M.Can.Soc.C.E., of the 4th Canadian Divisional Engineers, has been mentioned in Field Marshal Sir Douglas Haig's recent dispatches from the Canadian Expeditionary Force's headquarters in France.

George McLaren Brown, Reserve of Officers, Canadian Militia, and European Manager, C.P.R., has been appointed Assistant Director (unpaid) at the War Office in London, with the rank of Lieutenant-Colonel while so employed.

Lt. Col. G. D. Fearman, Chief Accountant, Dominion Power & Transmission Co., who went overseas in command of the 120th Battalion, C.E.F., has returned to Hamilton, Ont., and has reverted to the command of the 13th Royal Regiment there.

Robt. Vaux, Quartermaster-Sergeant, B. Company, Royal Highlanders of Canada, wrote his brother, G. W. Vaux, General Agent, Passenger Department, Union Pacific Rd., Chicago, recently, from France, that he was the only original non-commissioned officer left in the company.

D. Robertson, formerly Storekeeper, Grand Trunk Pacific Ry., Edmonton, Alta., having been honorably discharged from military duty on account of injuries received at the front in France, and not being able to return to duty, has been appointed acting Storekeeper, G.T.P.R., Transcona, Man.

H. L. Chipman, formerly Manager, Plant Line, Halifax, N.S., who has been on military duty almost since the war started, retired from the company's management at the end of 1916. He was Lt. Col., 66th Princess Louise Fusiliers, and is now in command of Wellington Barracks, Halifax.

Lieut. Hugh A. Crombie, who received a severe shell wound in the thigh in France, June 15, is son of David Crombie, General Superintendent, Canadian Northern Ry., Toronto. He went overseas with the Canadian Engineers, and subsequently transferred to a forestry battalion.

Capt. Redmond E. H. Hamilton, of Douglas Lake, B.C., who went overseas about a year ago in the 239th Battalion Overseas Railway Construction Corps, under Lt. Col. J. W. Stewart, is reported dead. He was engaged on construction on the Grand Trunk Pacific and Pacific Great Eastern Railways and lived in Prince George, B.C., for some time.

Major C. F. Hanington, M.Can.Soc.C.E., who is in the 7th Battalion, Canadian Railway Troops, British Expeditionary Force, was engaged on Canadian Northern Pacific Ry. location and construction in British Columbia, and on its completion received an appointment in the Public Works Department, Ottawa, which he held up to the time of joining the C.E.F.

Capt. H. E. Redmond Hamilton, of Vancouver, who went overseas last year with the Railway Construction Battalion, under Lt. Col. J. W. Stewart, with the rank of lieutenant, has been killed in action in France. He was engaged on the Grand Trunk Pacific Ry. construction for a time and was stationed at Prince George. He was a cousin of John Redmond, the Irish Nationalist.

Lieut. T. E. Ryder, Manager, St. John, N.B., branch, Canadian Fairbanks Morse Co., Ltd., who is on leave of absence for military duty was an officer in the St. John Battery previous to the war. When war broke out he enlisted for active service and was attached to the Ammunition Column Heavy Battery. He has been mentioned in dispatches, awarded the Military Cross, and has been promoted to Captain.

Capt. F. H. Moody, B.A.Sc., Jr.Can.Soc.C.E., who was reported wounded, May 26, was for three years prior to the war, Mechanical Editor, Canadian Railway and Marine World. He was in the Queen's Own Rifles, Toronto, for several years, rising to lieutenant, and went overseas as major in command of a company in an Ontario infantry battalion. He reverted to the rank of captain in order to get to France. His injuries from gunshot consist of a fractured left forearm and some flesh wounds. On June 14, we were officially advised that he was in the 4th London General Hospital. He hopes to be back on duty about the end of July.

Lieut. J. B. Thom, of the Canadian Engineers, British Expeditionary Force, who was reported on June 24 as having been wounded, is a son of the late Jas. Thom, Manager of the White Star-Dominion Line Steamships at Montreal for many years. He left Ottawa for overseas Mar. 9, 1916, and was in the same company as Lieut. Bruce H. A. Burrows, of Toronto, who was killed in action Nov. 25, 1916. They went first to the Ypres salient and afterwards to the Somme. In

the last letter Lieut. Burrows wrote before his death, to his father, on Nov. 17, 1916, he said: "Thom and I have built ourselves a very nice dugout, about 11 x 15 inside, with a good open fireplace, and now live in comfort, with hot water in the morning for shaving." Lieut. Thom could only have returned to France from leave a short time when he was wounded, as he was in England at the end of May, staying with his mother in Folkstone, and paid a brief visit to the late Lieut. Burrows' uncle, A. J. Burrows, of Kennington, Kent, on May 28.

Major W. P. Wilgar, who has been given the Distinguished Service Order, was born at Cobourg, Ont., Mar. 9, 1878, and entered railway service in 1899, since when he was, during the summer vacations to 1903, chain man, G.T.R., Cobourg, Ont., transit man, Kingston and Pembroke Ry., Kingston, Ont.; locating engineer, Bay of Quinte Ry., Deseronto, Ont.; and Resident Engineer, same road, Tweed, Ont.; he graduated from the School of Mining, Kingston, Ont., in 1893, with the degree of B.Sc., and from 1903 to 1904, was locating engineer, Central Ontario Ry., Trenton, Ont.; 1904 to 1905, in charge of exploration party in connection with the location of the National Transcontinental Ry.; 1905 to 1906, locating engineer, N. T. R., District C.; 1906 to 1908, locating engineer, N. T. R., District E.; 1908 to 1911 Division Engineer, N.T.R., District E.; 1911 to 1914, Assistant District Engineer, N.T.R., Districts C., D., and E.; Oct. 1914 to 1915, Professor of Civil Engineering, Queen's University, Kingston, Ont. He went overseas early in 1916, and is in command of the 19th Field Company, Canadian Engineers.

Brigadier General Herbert C. Nanton, C.B., R.E., has been gazetted in England as Chief Engineer attached to headquarters, with the rank of Major General while so employed. He is a brother of Sir Augustus Nanton, of Winnipeg, who is one of the C.P.R. directors and Vice President, Winnipeg Electric Ry. He was born in Toronto in 1863, graduated from the Royal Military College, Kingston, Ont., in 1883, and started his professional career as an engineer on C.P.R. location in the Rocky Mountains in 1884, H. S. Holt, now Sir Herbert Holt, being a member of the same party. He saw service in the Canadian Northwest Rebellion in 1885, the Lushai Expedition in 1888-89, the Chitral Expedition in 1895, and the South African War, 1899-1901, when he took part in the relief of Kimberley, and was mentioned in dispatches. When the present war broke out he was Deputy Director General of Military Works at Simla, India, and was transferred to the headquarters of the British Expeditionary Force in France as Colonel and temporary Brigadier General. In Feb., 1915, while acting as Chief Engineer Officer of the Indian forces on active service in the neighborhood of Ypres and La Basse, he was made a Companion of the Bath.

Lake and Rail Rate Cancellations Case.—The Interstate Commerce Commission has decided that a carrier operating exclusively in Canada cannot be required to maintain joint arrangements with domestic carriers for the transportation of traffic from and to points in the United States. It vacated an order of suspension directed against a schedule filed by the Grand Trunk Ry. canceling joint rates with the Northwestern Steamship Co. and eastern trunk lines on traffic from Lake Superior ports.

Demurrage Rules and Coal Supply.

Judging from the opposition to the proposed revision of the existing car demurrage rules, applicable to Canada, at a hearing of the Board of Railway Commissioners recently, railway officials state that it is evident that the consignees of traffic coming from United States points, particularly coal, do not realize how acute is the situation which exists in car supply and transportation. The car shortage on railways which are members of the American Railway Association, on Feb. 1, 1917, totalled 109,988 cars; on Mar. 1, 130,082; on April 1, 144,797, and on May 1, 145,449, showing a rapidly increasing shortage, and with the United States now getting down to war work in earnest, the transportation problems will become more pressing and the car shortage more intense.

Canada's coal supply, at present, is entirely dependent upon the car supply. One Canadian railway official states that his road could not get a pound of coal unless it sent its own cars for it. With the demand increasing in their own territory it is only natural to expect that the U.S. railroads will, as far as possible, confine their cars to their own country, where they state that they are able to get better service out of them than by allowing them to come into Canada, where the demurrage rules are such as to reduce rather than increase car efficiency.

The present Canadian rules were framed in 1906. They may have suited the conditions which prevailed at that time, but they are undoubtedly not suited to meet present day conditions. It is claimed that consignees in Canada have three times the length of free time to unload cars before any charge is involved, compared with what is allowed in the U.S., where the demurrage rate is \$2 a day for each of the first five days and \$5 a day for the sixth and each succeeding day, whereas in Canada the old 1906 code of \$1 a day, after a much longer free time, still prevails.

The shipping public, in their own interest, should not oppose the proposed changes, as if the rules are not changed, and the U.S. railways, for this reason, decline to allow their cars to come into Canada with coal and other commodities, and Canadian railways are unable to provide equipment to take care of traffic offered, Canadian railways will feel that they are not wholly responsible, from a transportation point of view, for any shortage of cars and possible scarcity of coal in Canada next autumn and winter.

J. E. Dalrymple on Car Shortage and Demurrage Rates.

Representatives of various boards of trade and the railway companies are to meet in Ottawa on July 3, to outline a plan for revising the existing car demurrage rules. If an agreement can be reached the Board of Railway Commissioners will be asked to ratify the new regulations immediately. It is felt that if the present rules are not changed car shortage will become more acute month by month.

In this connection, J. E. Dalrymple, Vice President, G.T.R., said recently: "The public should have a clear realization of what is aimed at in the revision of the demurrage rules. The situation is unprecedented. In every territory on the continent there is a demand for cars that cannot be fully met. It is useless to look

to car builders for relief. They have more work than they can handle. If the situation is to be improved, or at least prevented from becoming more serious, there must be the greatest possible co-operation between the shippers, the consignees and the railways. Every car available must be kept moving and every car must be loaded to its capacity. That is, without doubt, the only way out of the present difficulties. Any measures that may be adopted to prevent the undue holding of cars for loading and unloading will, therefore, be of national advantage. Rules that were probably equitable under normal conditions are today hampering the efficiency of transportation.

"The Canadian coal supply will be largely controlled by the number of cars available. The railways have exceptional opportunities for knowing just how serious the fuel problem is. No Canadian coal can be obtained for our use. Supplies of Nova Scotia coal hitherto entering on our line at Montreal and Portland can no longer be procured, and as we can only get a limited quantity through Depot Harbor, and through Midland, Ont., we are obliged to rail our coal from the Pennsylvania mines. Not only are we obliged to do that, but we have to send our own cars down there for service between the mines and tidewater on the lakes, that is to furnish foreign roads with G.T.R. equipment.

"The increased mileage we are called upon to perform, by reason of this abnormal condition, at the four points mentioned, is equal to 132,406,000 ton miles. The extra service the G.T.R. will be called upon to perform this year, over and above the increased cost of \$5,000,000 on the purchase of coal, is equal to one freight train a day for 330 days between Montreal and Toronto. That is the situation as regards railway fuel. If the railways cannot muster sufficient cars to keep a supply of coal on their lines for locomotive purposes their operation will be interfered with, and that would be a national calamity at the present time. Precisely similar difficulties face the country in connection with a general fuel supply for commercial and household purposes.

"Every available car must be used to the fullest advantage, and no individual is entitled, at this critical period, to hold a car for a day or for an hour when it might be released. It is the duty of every user of coal to obtain his winter supply, as far as possible, immediately, and not wait until bad weather comes along, bringing with it transportation difficulties and the always pressing demand for fuel. Surely this is a time for mutual effort and board cooperation. New demurrage rules will help to bring pressure to bear upon the delinquents who selfishly hold up cars and thereby hurt every other shipper. With all cars loaded to rated capacity and every car kept on the move, as far as practicable, the facilities at the disposal of the nation's business will give a good account of themselves."

Canadian Kelp Products, Ltd., has been organized in Vancouver, to manufacture potash from kelp, and has established a plant at Sydney, B.C., where three large rotary driers have been installed, capable of handling 150 tons of kelp a day. Operations will be commenced immediately and shipments will be made to eastern points. A. R. Mann, and A. C. Mackenzie, of the Northern Construction Co., Ltd., are President and Vice President, respectively, the other directors being C. V. Cummings, Secretary Treasurer, J. M. Fahey, Manager, and C. D. Burdock.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Alberta & Great Waterways Ry.—J. D. McArthur, President, returned to Edmonton, Alta., June 11, after a trip over the line. The work to be completed during this year is the finishing of the line into McMurray. This will include ballasting, station building, etc. He is reported to have stated that it was expected to have the line opened up for through traffic from Edmonton to McMurray by Oct. 1. (May, pg. 193.)

Cedars, Limited, is opening up logging operations on its timber properties on the eastern side of Lynn Creek, near Vancouver, B.C. It is grading for 3.5 miles, from the site of the sawmill near the terminus, a B. C. Electric Ry. line. The line will cross Lynn Creek to the west side, a short distance south of the city waterworks intake, and will follow the west side of the creek, passing within a few feet of the caretaker's house, for about 3.5 miles up stream. Eventually, it is the company's intention to extend it a mile up the east fork of the creek, but this will not be undertaken until the timber is taken out en route.

The Dolly Varden Mines Co., which has power to build a railway in British Columbia, has named L. W. Patmore, barrister, Prince Rupert, as its attorney.

Grand Trunk Pacific Ry.—The Brandon, Man., City Council at a recent meeting expressed regret that the Dominion Parliament had not seen it way clear to compel the company to complete the extension of the Hartney-Brandon line into the city at once. Parliament has approved of an extension of time for three years for the completion of this and other branch lines authorized to be built.

The Brandon City Council has asked the company to arrange with the C.P.R. for the installation of equipment for the exchange of freight between the two railways at a point between Forest and Varcoe, at which the C.P.R. Rapid City line crosses the G.T.P.R. main line.

The laying of track on the line from Young into Prince Albert, Sask., has been completed. The branch, which is 110 miles long, starts from the main line at Young, 422 miles from Winnipeg. The branch has been in operation to the Saskatchewan River, 78 miles, for about four years; the bridge across the river, 1,400 ft. long, was completed and track laid over it in 1915, and the grading to Prince Albert was practically completed in the same year. The extension now completed is about 29 miles. (June, pg. 224.)

Grand Trunk Ry.—Representatives of the G.T.R. and the city council met in Brantford, Ont., June 7 and 8, to discuss details in connection with the St. Paul's Ave. subway and other allied matters. The city's propositions, which were discussed, and upon which the company's head office will pronounce, are: That the city waive insistence on the building by the G.T.R. of the Holmedale spur and the Eagle Place switches, and the maintenance of the Colborne St. station as a station and as a stop; that the G.T.R. convey to the city the extension of Clarence St., 66 ft. wide, south through the G.T.R.; that the G.T.R. convey to the city property to enable the city to extend Northumberland St. westerly to the line of Clarence St.; that the G.T.R. assume the total cost of the St. Paul's Ave. subway as a roadway, as directed to be constructed by the Board of Railway Commissioners.

Great Northern Ry.—The new union station on the False Creek flats, Vancouver, erected by the G.N.R. for use jointly with the Northern Pacific Ry., was opened for public use, June 1. The first train into the station carried officials of the companies and other railway visitors. During the afternoon the general public were admitted to inspect the building. The first train out, which carried the railway officials, left at 4 p.m., and was followed by the first G.N.R. train at 7.30 p.m. The Northern Pacific Ry. instituted its service a few days later. The station is at present being used also by the Canadian Northern Ry., which obtains its entrance into Vancouver over the G.N.R. line, but which is building its own station.

Vancouver City Council has issued permits for the erection of the following additional terminal buildings on the False Creek site: Car repair shop, 20 x 60 ft.; coal house, 20 x 40 ft.; car carpet cleaning house, 16 x 60 ft. Grant, Smith & MacDonnell have the contract. (June, pg. 224.)

Intercolonial Ry.—Speaking at a farewell luncheon given in his honor by the Moncton City Club, May 26, F. P. Gattelus, formerly General Manager, Canadian Government Railways, reviewed the I.R.C. development under his management and prophesied that before many years there would be a four track, rock ballasted line between Halifax and the west through Moncton.

The Minister of Railways stated in the House of Commons recently that rails for renewal purposes were required for the I.R.C., and that arrangement had been made with the Imperial Munitions Board to release sufficient steel to allow them to be rolled at Sydney, N.S. (June, pg. 224.)

The Minister of Railways stated in the House of Commons recently that the total cost of the renewal of the Perriac bridge, 81 ft. long, on the Fredericton division, was \$9,009.28, which included \$2,011.53 for improving the grade by raising the track. Thirty concrete piles, having a total length of 90 ft., were used, the cost being \$1.04 a lineal foot delivered; labor cost \$5,339.80, and a pile driver was used for 21 days on the work at a cost of \$1.42 a day, which included fuel and labor.

The Minister of Railways stated in the House of Commons recently that the total area of land bought at Milford for ballast pit purposes was 74,898 acres, at a cost of \$1,497.96. The pit was 3.58 miles from the main line, and land for right of way for a spur track was acquired for \$958.50, the price of one small parcel of land still being unsettled. The cost of building the spur line was \$38,061.01. There had already been 20,000 yd. of ballast taken from the pit, and the estimated quantity remaining was 1,700,000 yd. The ballast taken from the pit was used on the Halifax Ocean Terminals Ry., on the main line and on the spur leading to the pit. The rails on the spur line had been temporarily taken up to lay in sidings, to release National Transcontinental Ry. rails for shipment to France.

Tenders were received to June 29 for the construction of bridge substructures and concrete culverts on the Sydney and Mulgrave subdivisions.

Lacombe & Blindman Valley Electric Ry.—Track laying on the completed grade of this railway from Lacombe to

Rimby, Alta., was started at the end of May, and it was expected that rails would be laid as far as Gull Lake by June 30. Men are at work on the right of way, clearing up the graded portion, finishing up the grading, putting in culverts and laying ties. It is hoped that the entire line will be completed by the autumn. This is a light railway, and although it was originally proposed to use electricity as a motive power, it will be operated by steam. (June, pg. 224.)

Michigan Central Rd.—Work is reported to be in progress upon what will be virtually a reconstruction of the company's bridge at Niagara Falls. The present cantilever bridge was erected in 1883 and was strengthened and improved in 1899. (May, pg. 194.)

Pacific Great Eastern Ry.—The Premier of British Columbia returned to Victoria, June 15, after having made a trip of inspection over the line from Squamish to Clinton, 120 miles. He gave out the following statement: "The general condition of the road is that the grade is substantial enough from Squamish to Clinton, but the side slopes are too steep in many places, and there is a great deal of loose overhanging rock which should be removed. The road needs a heavy coat of ballast and lining up. East of Clinton ties and rails are laid for some distance, but there is no ballast. From there most of the grading is done, and some bridges are in along a distance of 20 miles or so. Further east the grading is done, but in a number of places that came under my observation the slopes of cuts are too steep, and a good deal of stuff has slipped down on the grade. Near Quesnel, what is known as the 'big slide' is continuously shifting, as it has been for the past 25 years at that point, and has carried the grade down twice already. It is still going and the grade is down the hillside 12 or 15 ft. below the level. I looked into the situation at Quesnel very carefully. There are absolutely no engineering difficulties in the way of taking the line into the town. It means lengthening the line somewhat in order to swing over the Quesnel River into the town and on the north a mile or two to a junction with the grade as constructed, but the increased cost of construction incidental to the diversion of the line can partly be offset by a large saving in the abolition of the necessity for the high level crossing of the Quesnel on the present route. This, on the location as laid out, calls for a bridge and trestlework 3,200 ft. long, while a bridge of probably 300 ft. would cross at the low level into the town. This can be so constructed as to serve the double purpose of a railway and a highway bridge, and thus effect a permanent saving in that way. I am very strongly of opinion that Quesnel will have to be connected with the railway, either by a diversion of the main line or by a spur, not so much on account of the town itself, as on account of the country lying west of the Fraser River. The river is navigable from Soda Creek to Prince George, there is an excellent country on the west side, and for the benefit of the settlers we must bring the railway as close to them as possible, by bringing about a connection between it and the river steamboats at Quesnel." (May, pg. 194.)

Quebec & Saguenay Ry.—The Minister of Railways stated in the House of Con-

mons recently that the length of the Q. & S.R., from Ste. Anne de Beaupre, Que., eastward, was 65 miles, on which 13.5 miles of track had been laid. It is proposed to lay track on the remainder of the mileage as soon as the rails are available. (June, pg. 24.)

Red Deer Valley Ry.—The Alberta Legislature incorporated a company with this title to build a railway in the upper part of the Red Deer River valley.

St. John & Quebec Ry.—The New Brunswick Government is having a new investigation made into the cost of the construction of the section of this railway between Centreville and Gagetown, and into the letting of the contract for the building of the Gagetown-Westfield section, which contains a stipulation that the contractors may be called upon to build the Centreville-Andover section at the same prices. This contract is held by the Nova Scotia Construction Co., of which T. Cozzolino is President, and G. H. Lindsay is Vice President and General Manager. The first of these contracts was signed in May, 1916, but prior to the elections in Feb., 1917, the then government entered into a new contract with the Nova Scotia Construction Co. for the building of the Centreville-Andover section at enhanced prices, estimated to add \$77,000 to the cost of the line.

The Minister of Railways stated in the House of Commons recently that the department had not taken any steps since April, 1916, with reference to the proposal to build a bridge across the St. John River at Andover in connection with the railway, and that it is not intended to do anything in connection with the matter this year. (June, pg. 194.)

Toronto, Hamilton & Buffalo Ry.—A press report states that the company has secured 53 acres of land at the western boundary of Bridgeburg, Ont., which is to be utilized as a freight yard, and that the laying out of it will be started early in July. The company at present transfers its freight for Bridgeburg to the Michigan Central Rd. at Welland. It is stated that a spur will be built from the M.C.R. to connect with the new freight yard and that running rights will be obtained by the company over the M.C.R. between Welland and Bridgeburg. An official of the company is reported to have stated, June 14, that the matter was being given serious consideration, but that no decision had been reached. (June, pg. 225.)

The Summer Time or Daylight Saving Act.

The following is the full text of bill 82 as introduced in the House of Commons by Sir George Foster.

1. This Act may be cited as The Summer Time Act, 1917.

2. During the prescribed period in each year in which this act is in force, the time, for general purposes in Canada, shall be one hour in advance of the solar mean time.

3. This act shall be in force in each year during such time as may be prescribed by the Governor in council.

4. Wherever any expression of time occurs in any statute, order in council, order, regulation, rule or bylaw or in any deed, timetable, notice, advertisement or other document, the fixing of the time with respect to which is within the legislative jurisdiction of the Parliament of Canada, the time mentioned or referred to shall be held, during the prescribed

period, to be the time as fixed by this act. Provided, that where, in consequence of this act, it is expedient that any time fixed by any bylaw, regulation or other instrument should be adjusted, and such adjustment cannot be effected except after the lapse of a certain interval or on compliance with certain conditions, the Governor in council may, on the application of the body or person by whom the bylaw, regulation or other instrument was made or is administered, make such adjustment from the time so fixed as in the circumstances may seem to the Governor in council proper.

5. The Board of Railway Commissioners for Canada shall have power to advance by one hour the standard time used by railway companies in Canada for such period as may be prescribed by the said Board, and to make such other orders as may be necessary for the convenient carrying out of the provisions of this act in so far as railway companies may be affected thereby.

Canadian Northern Railway Construction, Betterments, Etc.

Mount Royal Tunnel & Terminal Co.—The important work in progress in Montreal in connection with the building of the temporary station for the C.N.R. system is making satisfactory progress. The work involves the excavation of 250,000 cu. yd. of material near to Dorchester, St. Monique, Cathcart and LaGauchetiere Sts. This excavation is about 50 ft. deep, 250 ft. wide from side to side at the top, and about 1,200 ft. long from Cathcart to LaGauchetiere St. A feature of the excavation will be the bridge or viaduct carrying Dorchester St. across, which will be 165 ft. long and 64 ft. wide. It will be of concrete and steel and will be erected in two sections, the northern half towards Cathcart St., 32 ft. wide, being built first. Shafts 50 ft. deep have been sunk for the steel columns which will carry the girders, and when these are in place the work on the other half of 32 ft. width will be started. This method of erecting the bridge was adopted in order to prevent any interruption of traffic. From this bridge it will be possible to overlook the platforms and the terminal tracks up to the temporary station at LaGauchetiere and St. Monique Sts. on the one side, and towards the mouth of the tunnel under Mount Royal on the other.

The International Bridge & Terminal Co. is making application to the Board of Railway Commissioners for approval of the plan, profile and book of reference of its branch line from its tracks at the northern end of its bridge to the Shevlin Clarke mills. This is the link which will give connection between the company's projected Toronto-Hamilton-Niagara line and lines in the U.S.

Western Division.—Track laying on the line from Oliver to St. Paul de Metis is reported to be making satisfactory progress the track layers being reported to have reached mile 40 on June 14.

A ballast pit has been opened at Camrose, Alta., and gravel trains are being operated in various directions carrying material for the ballasting of the main line and branches in northern Alberta.

The company is reported to have plans prepared for the erection of a large station at Alberta Beach, 42 miles west of Alberta on the main line. It is also planning to carry out a number of improvements at that point to add to its attractiveness as a summer resort.

Pacific Division.—W. E. Siler arrived at Port Mann, B.C., June 10, from Toronto, in connection with the starting of work in the car shops there. He is reported to have said that 100 men are to be employed.

The erection of the company's station on the False Creek flats, Vancouver, is proceeding rapidly. The foundation work was completed some time ago, and at June 14, the basement had been finished, nearly all the concrete for the ground floor put in, and a considerable quantity of the steel frame work for the first floor put in place. Those in charge of the work are reported to have said that the progress was sufficiently forward to warrant the expectation that the building will be ready for opening by Jan. 1, 1918.

Vancouver Island.—We are officially advised that the bridge erected over Selkirk Water, Victoria, B.C., consists of timber trestle work on either side of the navigable channel. Part of this trestle work will be filled in and other parts will be replaced by steel and concrete within 8 years. This work will probably consist of 80 to 85 ft. girders on concrete piers. The navigable channel is crossed by a rolling lift bridge having a clear opening of 70 ft. The piers are being constructed by sinking open caissons with a jet, the interior of the caisson is then excavated by pump to the desired depth when piling is driven and the bottom of caisson is sealed with concrete. Each caisson is then pumped out and braced and the usual pier is erected on the foundation thus obtained. The driving of piles and the sealing of caissons has been completed in the larger pier and work on the other pier is practically completed. The erection of the steel superstructure is expected to be started early in July. (June, pg. 233.)

Ways of Increasing Freight Car Efficiency.

The U. S. Department of Commerce issued some letters to chambers of commerce and other commercial organizations urging the co-operation of the individual members for the purpose of releasing freight cars and increasing the amount of utility each car can be counted upon for. A flood of answers from organizations and individuals came in, and to these a second set of instructions was sent, designating just how this co-operation may be more effective. These suggestions are: Unloading promptly of all loaded cars received; to load promptly all outgoing cars and release them immediately to the railways; anticipate the disposition of freight before its arrival; do not order special types of cars when ordinary types will serve; eliminate the use of railway equipment in trap or tramp cars when the tonnage can be handled by motor truck or wagons; load all cars to their full carrying capacity, so that the maximum use of each car will be obtained.

The Dominion Railway & Plaster Co. was incorporated under the Nova Scotia Companies Act with power to build railways in connection with the development of certain mining properties. The company does not appear to have secured legislative authority to build any railways or to have become a live organization. It failed to pay its annual registration fee on Jan. 1, consequently the Registrar of Joint Stock Companies on April 25 revoked its license to do business.

The Canadian Pacific Railway's Honor Roll.

In addition to list 23, published on pg. 258 of this issue, we have received list 24, issued June 15, which brings the number of the company's officials and employees on active service, shown in the casualty lists, up to 1,309, of whom 404 have been killed and 905 wounded. As particulars of army reservists are not available, the lists of those who have given up their lives for their country, or been wounded in action, are necessarily incomplete and do not indicate fully the extent to which the company's officials and employees are participating in the great struggle. List 24 is as follows:

Allin, Harold J., sectionman, McGaw, wounded.

Barnett, James, car repairer, Regina, wounded; Bates, George, car repairer, Winnipeg, wounded; Baugh, Charles Wallace, locomotive fireman, Montreal, gassed; Brown, John Thomas, section foreman, Woodhouse, wounded; Brumby, Arthur, clerk, Calgary, killed in action; Burke, William, wiper, Farron, wounded.

Cadioux, Owen, conductor, Chapleau, wounded; Callow, William Alfred, checker, Port McNicoll, wounded; Cameron, James, clerk, Winnipeg, killed in action; Campbell, Albert Fraser, caller, Lambton, wounded; Candy, Edgar Percy, wiper, Rogers Pass, wounded; Cooke, William George, clerk, Montreal, killed in action; Crosby, Isaac Stanley, stenographer, Moose Jaw, wounded.

Davenport, James, wiper, Field, killed in action; Davis, Wilfred, inspector, Toronto, wounded; Drysdale, John A., accountant, Winnipeg, wounded; Duncan, Ralph C., cleaner, Toronto, wounded; Dunn, Harold W., clerk, Montreal, wounded.

Eadle, George, helper, Angus, died of wounds; Eaglesfield, Herbert J., time-keeper, Montreal, died of wounds; Ellis, Samuel, cleaner, Winnipeg, wounded; Evans, Thomas, waiter, Sicamous, wounded.

Farley, William, car repairer, Schreiber, believed killed; Farmer, Albert Styles, stower, Ottawa, wounded; Farthing, Arthur, car repairer, West Toronto, wounded; Fletcher, Henry Arthur, clerk, Calgary, killed in action; Flett, Lester Medley, operator, Ignace, wounded; Freeborn, Earle Johnson, operator, Pardee, wounded.

Gale, Arthur William, clerk, Montreal, wounded; Gamble, James Guy, helper, Winnipeg, wounded; Gardner, Herbert L., brakeman, Chapleau, believed killed; Geissler, Charles R., clerk, London, wounded; Geolot, Alfred Wallace, waiter, Montreal, died of wounds; Gibbons, Lancelot J., section foreman, Grafton, wounded; Graftey, William A., transitman, Montreal, wounded.

Halliday, William C., locomotive fireman, Kenora, wounded; Hardwicke, Charles E., clerk, Peterborough, wounded; Haskell, Charles S., checker, Saskatoon, presumed dead; Hetherington, Frank H., locomotive foreman, White River, wounded; Holmes, William Jackson, locomotive fireman, East Calgary, wounded; Humphrey, Ivor Percy, carpenter, Lethbridge, wounded; Hutchinson, David, wiper, Strathmore, wounded.

Innes, John, apprentice, Montreal, killed in action.

Jackson, Gavin Hamilton, clerk, Montreal, wounded; Jackson, George Olaf, storekeeper, Fort William, died of wounds; James, Harold Douglas, cleaner,

Regina, wounded.

Kedge, Frederick George, locomotive fireman, Fort William, wounded; Kennedy, Robert L., sleeping car conductor, Montreal, wounded.

Lake, Gerald, clerk, Wolseley, wounded; Lawrence, Edward Albert, apprentice, Montreal, wounded; Ledbury, Benjamin, sectionman, Tillsonburg, died of wounds; Loup, Alexander George, locomotive man, Montreal, killed in action.

Macdonald, Hugh Stewart, wiper, Medicine Hat, died of wounds; McShane, James, locomotive fireman, Smiths Falls, killed in action; Manley, Reginald James, upholsterer, Ogden, killed in action; Manlove, Stanley H., clerk, Toronto, wounded; Marshall, Robert, locomotive fireman, Fort William, believed killed; Mathison, Albert, craneman, British Columbia Dist., killed in action; Merrikin, George, brakeman, Minnedosa, wounded; Moore, Frank C., apprentice, Montreal, wounded; Morley, Edwin, wiper, Sutherland, presumed dead; Murray, William V., porter, Winnipeg, killed in action; Myles, William Thomas, tuber, Ignace, wounded.

Nairn, Robert George G., rodman, Manitoba District, wounded; Neighbour, Henry, storeman, Winnipeg, wounded; Nickles, Joseph William, trainman, Brandon, presumed dead; Nurrish, James, checker, Toronto, wounded.

O'Toole, Frank, bridgeman, Medicine Hat, wounded; Oldfield, Kenneth, trucker, Toronto, wounded.

Paget, Bruce, bellman, Victoria, wounded; Pascoe, Henry Aitken, clerk, Winnipeg, wounded; Philp, Alexander, helper, Ogden, wounded; Prior, Percy Douglas T., apprentice, Winnipeg, died of wounds.

Rainey, James, porter, Winnipeg, killed in action; Rayton, Richard, helper, Ogden, wounded; Reynolds, George Roger, clerk, Cardston, wounded; Robson, William, helper, Winnipeg, died of wounds; Russell, William, brakeman, Souris, wounded; Ryan, Michael J., yardman, Montreal, wounded.

Sharp, Allison E., watchman, Woodstock, N.B., wounded; Shaw, John, clerk, Winnipeg, wounded; Snodgrass, William, carpenter, Moose Jaw, wounded; Symmers, Alexander, clerk, Montreal, wounded.

Taylor, Thomas Barr, clerk, Montreal, wounded; Tesquet, Jean, cook, Victoria, killed in action; Thew, Christopher, watchman, Cobourg, wounded; Thornton, Albert, helper, Fort William, wounded; Tyler, Thomas Alexander, locomotive man, North Bay, wounded and prisoner.

Upex, Percy, checker, Moose Jaw, killed in action.

Vipond, Howard Cameron, operator, Ignace, wounded.

Walton, William B., clerk, Montreal, killed; Wellspring, William, locomotive fireman, British Columbia Dist., killed in action; Wragg, Herbert, porter, Calgary, killed in action; Wynne, Cyril Brenden, stenographer, Montreal, believed killed.

The following casualties to members of the European staff on active service have been reported: Caird, Alexander Peter, clerk, London, wounded; Evans, George James, clerk, London, wounded; Caryl, Albert Edward, packer, Liverpool, killed in action; McArthur, William B., typist, London, killed in action.

There have been shown on honor lists to date: killed 404, wounded 905, total 1,309.

The Pacific Great Eastern Railway Investigation.

The British Columbia Legislature has added the following section to the Public Enquiries Act: "Whenever the Lieutenant-Governor in council deems it expedient to cause enquiry to be made into and concerning any matter relating to the election of any member of the legislative assembly, past or present, or into and concerning any matter connected with the good government of the province, or the conduct of any part of the public business thereof, including all matters municipal or the administration of justice therein, or into payments or contributions for campaign or political purposes, or for the purpose of obtaining legislation, or obtaining influence and support for franchises, charters or any other rights or privileges, from the legislature or government of the province by any person or corporation or by any of the promoters, directors, or contractors, of such corporation, or by any other person in any way connected with, representing, or acting for or on behalf of such corporation or any of such promoters, directors, or contractors, the Lieutenant-Governor in council may by commission intituled in the matter of this act, and issued under the great seal, appoint commissioners or a sole commissioner to enquire into such matters."

One of the reasons for the passing of the measure which includes the above section, was the refusal of various witnesses at the investigation into the affairs of the Pacific Great Eastern Ry. recently to answer questions as to certain sum which it was suggested may have been used as campaign funds by one or other of the political parties. Under sec. 12 of the act any witness refusing to be sworn, to answer questions, to produce documents or books or papers, shall be held to be guilty of contempt, and the commissioners holding the enquiry may deal with exactly as if they were judges of the Supreme Court, and all sheriffs and other functionaries are directed to give their aid and assistance to the commissioners in the execution of their office.

Prior to an adjournment to Aug. 14, the legislature negatived a motion to call Hon. W. J. Bowser, leader of the opposition, and former premier, to the bar of the House for refusing to answer questions at the recent inquiry. The House also released from the custody of the sergeant at arms R. D. Thomas, Secretary of the Pacific Great Eastern Ry., who had persisted in refusing before the legislature to answer questions he had refused to answer to the committee of enquiry. Mr. Thomas went to Chicago, June 1, but stated that he would return before the session reopened in August.

A motion submitted to the house to take over the entire P.G.E.R. property; to bring action against the contractors and others for the recovery of funds overpaid; to provide for the completion of the line; to provide for its operation as a government undertaking, and to apply for a Dominion subsidy, was ruled out of order.

The Bill to Amend the Ontario Railway and Municipal Board Act by increasing the Chairman, Vice Chairman and Secretary's salaries and by providing a penalty of \$1,000 in addition to any other penalty imposed by the act for neglect to obey the board's orders, was dropped during the Ontario Legislature's last session.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 189. May 23.—Amending Rule 3 of Canadian Freight Classification 16, re minimum and maximum loading of freight cars. This order is given in full on another page.

General order 190. May 25.—Amending Canadian Freight Classification 16, re rating and minimum loading of ice cream cones. This order is given in full on another page.

General order 191. May 26.—Amending Rule 23 of Regulations Governing Baggage Car Traffic in Canada by providing that immigrant baggage be stored free for not exceeding five days after arrival at Montreal, Toronto and Winnipeg. This order is given in full on another page.

General Order 192. May 30.—Dismissing application of Canadian Manufacturers' Association for order disallowing charges made by railway companies for salt supplied to refrigerator cars with ice. This order is given fully on another page.

General order 193. May 31.—Approving Supplement 9 to Canadian Freight Classification 16, re ratings and minimum weights for games or toys, etc. This order is given fully on another page.

General order 194. June 6.—Authorizing express companies subject to Board's jurisdiction to amend Express Classification for Canada to increase weight upon which express charges for carriage of horses are based from 10,000 to 12,000 lbs. a carload.

26129. May 21.—Ordering Kettle Valley Ry. to fence portions of its right of way between Glenfir and Chute Lake, east of Penticton, B.C.

26130. May 21.—Authorizing C.P.R. to build spur to Dominion Government wharf at Vancouver, B.C.

26131. May 21.—Extending to July 1 time within which C.P.R. may build diversion of highway at Sagwa, N.B.

26132. May 18.—Authorizing Rougemont Municipality, Que., to divert highway and crossing over Quebec, Montreal & Southern Ry., at Grande Caroline road, maintenance of crossing to be paid by company.

26133. May 21.—Authorizing G.T.R. to build spur for William Kennedy & Sons, Ltd., Collingwood, Ont.

26134. May 22.—Approving agreement between Western Canada Telephone Co., of Vancouver, B.C., and British Columbia Telephone Co., Dec. 1, 1916.

26135. May 21.—Authorizing C.P.R. to build three spurs for Three Rivers Steel Foundry Co., Three Rivers, Que.

26136. May 22.—Approving Moncton & Buctouche Ry. standard freight mileage tariff, C.R.C. 25, and rescinding order 25737, Dec. 20, 1916, approving its C.R.C. 23.

26137. May 22.—Authorizing C.P.R. to remove station agent at Domain, Man., agent to be reapointed for Sept., Oct., Nov. and Dec., in each year.

26138, 26139. May 23.—Approving agreements between Bell Telephone Co. and British American Nickel Corporation, Sudbury District, Ont., May 15, and St. Vincent Tp., Grey County, Ont., May 9.

26140. May 22.—Ordering C.P.R. to build standard 2 station at Hayter, Alta., by Aug. 1, 1918, meantime present portable building, except portion occupied as office, to be used as a waiting room; foundation to be boarded up or banked, to keep station warm, and entire box car body to be used as freight shed only.

26141. May 23.—Extending for three months from date time within which St. Martins Ry. shall repair bridges and do other work required by order 25865, Feb. 14.

26142. May 25.—Ordering that cost of building and maintaining crossing of Dewey St. by G.T.R., Hamilton, Ont., be paid by city.

26143. May 23.—Ordering C.P.R. to erect standard 6 station, containing waiting room and freight shed, with platform 100 ft. long, at Enterprise, Ont., building to be heated in winter and lighted when necessary; C.P.R. also to erect a 2-pen stock yard with loading pen and chute and provide roadway to team track wide enough for wagon to turn; work to be completed by Sept. 1.

26144. May 23.—Extending to Aug. 15 time within which C.P.R. may complete siding and loading platform facilities on its Moose Jaw Northwesterly Branch, 2 miles west of South Saskatchewan River, as required by order 25617, Nov. 9, 1916.

26145. May 26.—Authorizing G.T.R. to use bridge 290, over Pine River, Essa Tp., Ont., authorized by order 25890.

26146. May 26.—Authorizing Brantford & Hamilton Electric Ry. to use bridge over Toronto, Hamilton & Buffalo Ry., near Cainsville, Ont.

26147. May 28.—Authorizing City of Montreal to build new subway on St. Denis St., under C.P.R.

26148. May 25.—Authorizing City of Montreal to build temporary crossing over C.P.R. at Melrose Ave., for pedestrian traffic, to be protected by watchmen from 7 a.m. to 11 p.m., wages to be paid by city.

26149. May 28.—Relieving G.T.R. from providing further protection at first public crossing south of Brantford, Ont.

26150. May 28.—Ordering C.P.R. to erect new station at Tramping Lake, Sask., by Jan. 1, 1918; pending erection company to take down partition between small living room and other part of structure and provide new sheeting for box car body used as freight warehouse, paint structure standard color, make interior tidy, remove coal altogether from car and provide coal bin.

26151. May 28.—Amending order 25772, Jan. 3, re building of tunnel under Calgary & Edmonton Ry. by A. D. McCormack, Casper, Alta.

26152. May 28.—Ordering that crossing of C.P.R. and Canadian Northern Ry. at Trenton, Ont., be protected by half interlocking plant; derrails be placed on C.P.R.; home signals on both lines; derrails be interlocked with home signals; plant be operated by C.P.R. trainmen, which company pays whole cost.

26153. May 28.—Authorizing G.T.R. to rebuild bridge 56, over public road near Rymal, Ont., and rescinding order 26098, May 10.

26154. May 29.—Authorizing C.P.R. to build three spurs for Mack Brick Co., St. Constant Parish, Que.

26155. May 29.—Authorizing C.P.R. to build passing siding at grade across road allowance at mileage 28.6, Oshawa Subdivision, Hamilton Tp., Ont.

26156. May 29.—Ordering Grand Trunk Pacific Ry. to erect standard A station at Quinton, Sask., by Sept. 1.

26157. May 28.—Relieving Canadian Northern Quebec Ry. from providing further protection at crossing of public highway, continuation of Notre Dame St., Bout de l'Isle.

26158. May 11.—Ordering C.P.R. to enlarge freight shed at Lesage, Que., to not less than 25 x 15 ft. inside, work to be completed by Aug. 1.

26159. May 28.—Ordering Grand Trunk Pacific Ry. to keep station buildings at Kitwanga, Woodcock, Cedarvale and Doreen, B.C., open and heated for arrival of passenger trains; keep all l.c.l. or package freight shipments liable to damage from weather properly housed; place at least a box car body at Kitwanga and Cedarvale, by Sept. 1, for package freight other than perishable shipments, and to place stove in waiting room at Kitwanga and heat same.

26160. May 29.—Authorizing Alberta Ry. & Irrigation Co. and C.P.R. to divert portion of original road allowance between n.w. $\frac{1}{4}$ sec. 1 and n.e. $\frac{1}{4}$ sec. 2, Tp. 9, R. 21, west of 4th meridian, Alta.

26161. May 29.—Rescinding order 26077, May 2, re G.T.R. train service from Brantford to Tillsonburg, Ont.

26162. May 29.—Amending order 25991, April 5, re Canadian Northern Ry. spur for Canadian Cooperaage Mfg. Co., South Crosby Tp., Ont.

26163. May 29.—Authorizing New York Central Rd. to rebuild bridge 43-A, near Northfield station, Ont.

26164. May 30.—Relieving G.T.R. from providing further protection at Browns Crossing, near Tara, Ont.

26165. May 30.—Authorizing Saskatchewan Government to build highway over east end of C.P.R. station grounds at Antler, Sask.

26166. May 30.—Ordering G.T.R. to erect passenger station at Orillia, Ont., to be completed by Oct. 1.

26167. May 31.—Approving Edmonton, Dunvegan and British Columbia Ry. form of live stock contract F-115.

26168. May 31.—Ordering Canadian Northern Ry. to publish joint tariff on canned goods in carloads, from and to points in Ontario, west of Ottawa, Peterborough and Whitby, to become effective by June 15.

26169, 26170. June 1.—Ordering C.P.R. to provide portable stations at Gouverneur, Sask., and Six Mile Creek, B.C., to be completed by Sept. 1.

26171. May 31.—Authorizing Canadian Northern Ry. to build spur for Atlas Coal Co., Drumheller, Alta.

26172. June 5. Suspending, until further order tariffs advancing rates on grain and grain products filed to take effect June 5 and subsequent dates.

26173. May 30.—Relieving C.P.R. from providing further protection at crossing in Redvers, Sask.

26174. May 31.—Authorizing City of Hamilton, Ont., to build highway over Hamilton Radial Electric Ry. at Harvey St.

26175. June 1.—Ordering Canadian Northern Ry. to appoint grain agent at Fenn, Alta., from Sept. 15 to Dec. 31.

26176. June 2.—Authorizing Grand Trunk Pacific Branch Lines Co. to carry traffic over its Young to Prince Albert Branch, Sask., between mileage 87 and 111.8, Prince Albert, until Aug. 31; speed not to exceed 15 miles an hour.

26177. June 2.—Extending for two months from date time within which C.P.R. shall install bell at Duke St., Guelph, Ont., as per order 25786, Jan. 8.

26178. June 5.—Refusing City of Toronto's application for rehearing of application for order regulating use of steam whistles and ringing of bells on locomotives within city limits.

26179. June 5.—Ordering G.T.R. to install gates at Victoria St., Thamesville, Ont., to be operated by day and night watchmen; work to be completed by Sept. 1, 20% of cost to be paid out of railway grade crossing fund, 10% by Howard Tp., 15% by Thamesville, and 55% by G.T.R.; maintenance and operation to be paid, 10% by Howard Tp., 15% by Thamesville, and 75% by G.T.R.

26180. June 5.—Extending, for 30 days from date, time within which C.P.R. shall improve station facilities at Upper Kent, N.B.

26181. June 5.—Rescinding order 24976, May 15, 1916, providing for continuance of extra car service by G.T.R. at Jordan, Ont.

26182. June 5.—Authorizing Canadian Northern Ontario Ry. to connect with G.T.R. belt line at Don Esplanade, Queen St., Toronto.

26183. June 5.—Extending to Aug. 1, time within which C.P.R. shall install gates at crossing of Church St., Weston, Ont.

26184. June 5.—Authorizing Ottawa & New York Ry. and G.T.R. to refund to D. A. McPhee, Vankleek Hill, Ont., amount overcharged on shipment of a bull from Russell, Ont.

26185. June 5.—Approving Bell Telephone Co. agreement with Chippawa Hill Telephone Co., operating in Bruce County, Ont., May 15.

26186. June 5.—Ordering G.T.R. and Niagara, St. Catharines and Toronto Ry. to provide inter-switching facilities at Thorold, Ont.

26187. May 31.—Ordering Michigan Central Rd. to refund demurrage charge of \$23 on shipment of logs from Warren, Mich., to Tilbury, Ont.

26188. June 6.—Authorizing Canadian Northern Quebec Ry. to build two sidings for American Can Co., Maisonneuve, Que.

26189. June 7.—Extending for three months from date time within which G.T.R. shall build spur for International Harvester Co. of Canada, Hamilton, Ont., as per order 24801, Mar. 14, 1916.

26190. June 7.—Authorizing C.P.R. to build spur for James Richardson & Sons, at Port Arthur, Ont.

26191. June 7.—Authorizing C.P.R. to build sidings for Red Deer Board of Trade, Red Deer Grocery Co., Stephenson Bros., and Latimer & Botterill, Red Deer, Alta.

26192. June 5.—Ordering that crossing of Colborne St., Brantford, Ont., by Grand Valley Ry. and G.T.R. be protected to Board's satisfaction.

26193. June 6.—Ordering that cost of installing gates required by order 25633, Nov. 16, 1916, at Gravel Road, Morrisburg, Ont., be paid—20% out of railway grade crossing fund, 5% by Stormont, Dundas and Glengarry Counties, 5% by Williamsburg Tp., 5% by Morrisburg, and 65% by G.T.R. Maintenance—10% by Morrisburg; 10% by Williamsburg Tp., 10% by counties named and 75% by G.T.R., and rescinding order 7319, June 17, 1909.

26194. June 6.—Approving C.P.R. local freight tariff C.R.C. no. E-3299, showing rates on pedigreed live stock when shipped by Ontario Department of Agriculture's Live Stock Branch.

26195. June 6.—Authorizing City of Toronto to build double track street railway across G.T.R. by overhead trestle south of Eastern Ave.

26196. June 6.—Extending express companies' collection and delivery limits in Montreal for period of war only. The order is given more fully later on in this issue under Among the Express Companies.

26197. June 9.—Extending to Sept. 1, time within which half interlockers may be installed at crossings of Victoria Ave. and Franklin St., Fort William, Ont., conductors to flag cars over the crossings.

26198. June 8.—Authorizing G.T.R. to build spur for City of Hamilton.

26199. June 8.—Approving Toronto, Niagara & Western Ry. revised location through Trafalgar Tp., Ont., mileage 19.79 to 27.

26200. June 8.—Authorizing New York Central Rd. to connect Ottawa & New York Ry. with G.T.R. at Ottawa, Ont.

26201. June 5.—Authorizing Esquimalt & Nanaimo Ry. to build spur at mileage 0.16 into Songhees Indian Reserve, B.C.

26202. June 12.—Amending order 26148, May 25, re temporary crossing of C.P.R. at Melrose Ave., Montreal.

26203. June 11.—Rescinding order 25799, Jan. 12, suspending order 25752, Dec. 22, 1916, pending disposition of action against Mathias Range Aqueduct Co., by Quebec & Lake St. John Ry., to restrain it from building water pipe.

26204. June 11.—Approving plan of shelter or train shed over southerly tracks at G.T.R. Central Station, Ottawa.

26205. June 12.—Approving location of C.P.R. Standard A2 station at Carey, Man.

26206 to 26208. June 11.—Approving Bell Telephone Co. agreements with Northcote Farmers' Telephone Co., Renfrew Co., Ont., May 28, St. Marc Co-operative Telephone Association, Vercheres County, Que., May 27, and St. Sebastien d'Iberville Telephone Co., Iberville and Mississquoi Counties, Que., May 29.

26209. June 12.—Authorizing C.P.R. to build passing siding at grade across Hall St., Renfrew, Ont.

Uniform Maintenance of Way Flagging Rules for Impassable Track.

The Board of Railway Commissioners ther protection as follows: (b) By day passed general order 188, April 23, as follows: Re complaint of the Brotherhood of Locomotive Engineers alleging that the Canadian Pacific and the Canadian Northern Rys. have wilfully violated the flagging rules in force on their respective systems in the operation of trains in Western Canada; and applying for the adoption of certain regulations by the board, having in view the protection of railway employes. Upon reading the communications and submissions filed on behalf of certain of the railway companies interested, and the complaints, and the report and recommendation of the Chief Engineer and the Chief Operating Officer of the board, after a conference between the board's officers and representatives of the Grand Trunk, Grand Trunk Pacific, Canadian Pacific, Canadian Northern, and Toronto, Hamilton & Buffalo Railways, the Michigan Central, the complainants, the Brotherhood of Locomotive Firemen and Enginemen, the Brotherhood of Railroad Trainmen, the Order of Railroad Conductors, the Order of Railway Telegraphers, and the International Brotherhood of Maintenance of Way Employes held in Toronto, Aug. 4, 1916, upon notice to the parties in interest, and in pursuance of the powers conferred upon it under secs. 26, 30, 268 and 269 of The Railway Act, and of all other powers possessed by the board under the Act: It is ordered that the following regulations for the uniform maintenance of way flagging rules for impassable track, to become effective June 1, 1917, be prescribed for the observance of every railway company within the legislative authority of the Parliament of Canada:

1. Before undertaking any work which will render the track impassable, or if rendered impassable from any cause or defect, trackmen, bridgemen, or other employes of the company shall protect the same as follows:

2 (a). On double track; (b) on three or more tracks; (c) in mountain territory; and (d) on all lines with frequent or fast train service—Send out a flagman in each direction with stop signals, at least 1500 ft. in daytime, if there is no down grade towards the obstruction within one mile, and there is a clear view of 6,000 from an approaching train; 3,600 feet at other times and places, if there is no down grade towards the obstruction within one mile; 5,400 ft. if there is a down grade towards the obstruction within one mile.

The flagman must, after going the required distance from the obstruction to ensure full protection, take up a position where there will be an unobstructed view of him from an approaching train of, if possible, 1,500 ft., first placing two torpedoes on the rail (not more than 200 nor less than 100 ft. apart), on the same side as the engineer of an approaching train, 300 ft. beyond such position. The flagman must display a red flag by day and a red light by night, and remain in such position until recalled or relieved.

3. On other lines, (a) By day place a red flag and, in addition, by night a red light, on the same side of the track as the engineer of an approaching train, at a point 600 ft. from the defective or working point, with two torpedoes placed on the rail opposite each other so as to cause but one explosion, 150 ft. in advance of the red signal, and provide fur-

place a red flag, supported on two staffs with flag drawn out between them at right angles to the track and 5 ft. above rail level; and, in addition, by night, a red light; on the same side of the track as the engineer of an approaching train so that it will be clearly in his view, at least 3,600 ft. from the defective or working point, if there is no down grade towards the obstruction; 5,400 ft. if there is a down grade within one mile of the obstruction, or as much farther as may be necessary to ensure full protection. (c) Place two torpedoes (not more than 200 nor less than 100 ft. apart) on the rail on the same side as the engineer of an approaching train, 300 ft. in advance of the red signal.

4. Trains stopped by flagman, as per rule 2, shall be governed by his instructions and proceed to the working point, and there be governed by signal or instructions of the foreman in charge.

5. Trains stopped by red signal, as per rule 3, shall replace the torpedoes exploded and proceed to the working point signal, and there be governed by signal or instructions of the foreman in charge, unless in the meantime stop signal had been removed.

6. In the event of train order protection being provided, the defective or working point may be marked by signals placed in both directions as follows: Yellow flags by day and in addition yellow lights by night, 3,600 ft. from the defective or working point; red flags by day, and in addition red lights by night, 600 ft. from the defective or working point, on the same side of the track as the engineer of an approaching train; except on double track, where trains run to left, in which case signals shall be placed to the left hand side as seen by an engineer of an approaching train, and there is a clear view of at least 1,200 ft.

7. When weather or other conditions obscure day signals, night signals must be used in addition.

And it is further ordered that the foregoing rules be printed in the working time tables of the said railway companies for the guidance of all employes. Subdivisions to be named, setting out which of the rules are applicable to each. Frequent service shall mean nine or more trains per diem. And it is further ordered that General Order 161, Feb. 23, 1916, made herein, be rescinded.

Acton Burrows, Managing Director, Canadian Railway and Marine World, has been unanimously re-elected Honorary Secretary-Treasurer of the Canadian Electric Railway Association for the eleventh consecutive year. He has also been unanimously re-elected chairman of the Canadian Press Association's Trade and Class Section, and a director of the Association, for the third consecutive year.

Railway Lands Patented.—Letters patent were issued during March covering Dominion railway lands in Manitoba, Saskatchewan, Alberta, and British Columbia, as follows:

Calgary and Edmonton Ry.	Aces.	6,503.33
Canadian Northern Western Ry.		81.35
Qu'Appelle Long Lake and Saskatchewan Rd. and Steamboat Co.		1,742.38
Total		8,327.06

Transportation Appointments Throughout Canada.

Canadian Government Railways.—The Minister of Railways issued the following circular June 1:—F. P. GUTELIUS has resigned from the position of General Manager of Canadian Government Railways to accept service with another railway. The Canadian Government Railways are divided by the River at Quebec into two operating divisions, to be designated as Canadian Government Railways, Eastern Lines, and Canadian Government Railways, Western Lines. C. A. HAYES is appointed General Manager, C.G.R., Eastern Lines. Office at Moncton, N.B. F. P. BRADY is appointed General Manager, C.G.R., Western Lines. Office at Winnipeg, Man.

The following circular was issued by C. A. Hayes and F. P. Brady, General Managers of Eastern Lines and Western Lines, respectively, June 1:—The following general officers are appointed, all lines: C. B. BROWN, Assistant General Manager Eastern Lines,—Chief Engineer. S. L. SHANNON, Comptroller and Treasurer. H. F. ALWARD, General Solicitor and General Claims Agent. D. A. STORY, Freight Traffic Manager, reporting to General Manager, Eastern Lines. H. H. MELANSON, Passenger Traffic Manager, reporting to General Manager, Eastern Lines. G. R. JOUGHINS, Superintendent of Rolling Stock. W. N. RIPPEY, Superintendent Car Service. Offices at Moncton, N.B.

J. H. NORTON has been appointed Division Freight Agent, Halifax, N.S., vice M. F. Tompkins, promoted.

E. H. MARTIN, heretofore Assistant Superintendent, has been appointed Superintendent, District 4, Intercolonial Division, vice L. S. Brown, promoted. Office, New Glasgow, N.S.

K. STEWART, heretofore Chief Dispatcher, New Glasgow, N.S., has been appointed Assistant Superintendent, District 4, Intercolonial Division. Office, New Glasgow, N.S.

A. T. WELDON, heretofore Assistant General Freight Agent, has been appointed General Freight Agent, vice D. A. Story, promoted. Office, Moncton, N.B.

M. F. TOMPKINS, heretofore Division Freight Agent, Halifax, N.S., has been appointed Assistant General Freight Agent, vice A. T. Weldon, promoted. Office, Moncton, N.B.

L. S. BROWN, heretofore Superintendent, District 4, Intercolonial Division, New Glasgow, N.S., has been appointed Assistant General Superintendent, Eastern Lines, and not Assistant to the General Superintendent, as was reported in our last issue. Office, Moncton, N.B.

J. C. BECKWITH, heretofore Engineer of Construction, has been appointed Division Engineer, vice H. T. Ruhl, resigned to enter Delaware & Hudson Co.'s service, and his former position has been abolished. Office, Moncton, N.B.

A. J. GRAY, heretofore Division Freight Agent, St. John, N.B., has been appointed Assistant General Freight Agent. Office, St. John, N.B.

W. A. COWAN, M.Can.Soc.C.E., heretofore Division Engineer, Transcontinental Division, Cochrane, Ont., has been appointed General Superintendent, Transcontinental Division, vice F. P. Brady, promoted. Office, Cochrane, Ont.

A. V. REDMOND, heretofore Resident Engineer, District 2, Transcontinental Division, Cochrane, Ont., has been appointed Division Engineer, Transcontinental

Division, vice W. A. Cowan, promoted. Office, Cochrane, Ont.

A. H. WILLETT, heretofore Assistant Division Engineer Transcontinental Division, Cochrane, Ont., has been appointed Resident Engineer, District 2, Transcontinental Division, vice A. V. Redmond, promoted, and his former position has been abolished. Office, Cochrane, Ont.

J. H. DUFF has been appointed Assistant Superintendent, District 2, Transcontinental Division. Office, Grant, Ont.

Canadian Northern Ry.—A. S. DAVIS, heretofore Soliciting Passenger Agent, has been appointed Travelling Passenger Agent, Toronto.

A. W. JOBSON has been appointed Soliciting Passenger Agent, Toronto, vice A. S. Davis, promoted.

W. B. MARSHALL, heretofore Night Locomotive Foreman, has been appointed Locomotive Foreman, Humbolt, Sask., vice N. McLean, enlisted for active military service.

H. BAYLIS, heretofore machinist, Winnipeg, has been appointed Night Locomotive Foreman, Humbolt, Sask., vice W. B. Marshall, promoted.

F. G. FLESCHER is reported to have been appointed Locomotive Foreman, Lucerne, B.C., vice W. M. Armstrong, enlisted for active military service.

G. McLEAN, heretofore machinist, has been appointed Locomotive Foreman, Port Mann, B.C., vice T. Young, who has been appointed operator of the gas-electric car operated on Vancouver Island.

V. BATTLE has been appointed City Ticket Agent, Niagara Falls, N.Y.

Canadian Pacific Ry.—W. BLACK has been appointed Locomotive Foreman, McAdam Jct., N.B.

J. PRENDERGAST, heretofore Assistant Foreman, Glen Yard, Montreal, has been appointed Locomotive Foreman, Quebec, Que., vice W. J. Buckley, transferred.

A. E. PALMER has been appointed Locomotive Foreman, Sherbrooke, Que., vice E. Bowie, transferred.

W. J. BUCKLEY, Locomotive Foreman, Quebec, Que., has been appointed Locomotive Foreman, Glen Yard, Montreal, vice A. W. Lowe, resigned.

C. A. WHEELER, heretofore Locomotive Foreman, Smiths Falls, Ont., has been appointed Locomotive Foreman, North Bay, Ont., vice A. E. Palmer, transferred.

H. C. NELSON, heretofore draughtsman, District Engineer's office, North Bay, Ont., has been appointed Resident Engineer, Chapeau, Ont., vice A. O. Wolff, transferred.

K. D. JOSEPH, heretofore acting Trainmaster, McAdam Jct., N.B., has been appointed Assistant Trainmaster, Sudbury, Ont.

JOHN LEE, heretofore locomotive draughtsman, is reported to have been appointed Shop Engineer, Winnipeg.

J. J. McDONELL has been appointed Chief Dispatcher, Saskatoon Division, Saskatchewan District, vice J. H. Scott. Office, Saskatoon.

W. L. CODINGTON, heretofore Resident Engineer, Revelstoke, B.C., has been appointed Resident Engineer, Vancouver, B.C., vice T. E. Price, on leave of absence for active military service.

A. G. BROOKER has been appointed City Ticket Agent, Chicago, Ill., vice G. H. Griffin transferred.

Agent, Chicago, Ill., has been appointed Travelling Passenger Agent, St. Louis, Mo.

S. E. CORBIN has been appointed City Passenger Agent, St. Louis, Mo.

Canadian Pacific Ocean Services.—W. STONE has been appointed General Agent, Passenger Department, Yokohama, Japan, vice G. M. Jackson, transferred.

J. R. SHAW, heretofore General Agent Passenger Department, Shanghai, China, has been appointed General Agent, Passenger Department, Hong Kong, China.

G. M. JACKSON, heretofore General Agent, Passenger Department, Yokohama, Japan, has been appointed General Agent, Passenger Department, Shanghai, vice J. R. Shaw, transferred.

Chicago and Northwestern Ry.—A press report states the office at Vancouver, B.C., operated heretofore as a branch of the Seattle, Wash. agency, under charge of E. A. Dye, Travelling Agent, has been made a separate agency, in charge of Mr. Dye, as General Agent for British Columbia.

Delaware and Hudson Co.—H. T. RUHL, Division Engineer, Canadian Government Railways, Moncton, N.B., is reported to have been appointed Engineer Maintenance of Way, D. & H. Co., Albany, N.Y.

Grand Trunk Pacific Ry.—D. ROBERTSON, formerly Storekeeper, Edmonton, Alta., has been appointed acting Storekeeper, Transcona, Man., vice W. G. Whiteley, who has resumed his former position as chief clerk there.

The following station agents have been appointed, Balcarres, Sask., D. W. McMillan; Riverhurst, Sask., V. D. Sibbald.

Grand Trunk Ry.—Owing to Mrs. Chamberlin's serious illness, E. J. CHAMBERLIN, President, has been granted three months leave of absence, from June 14, in order that he may take her for an extended trip as soon as she is able to travel. The Chairman, A. W. Smithers, has appointed Vice President H. G. KELLEY to perform Mr. Chamberlin's duties during that period, and all communications for the President are to be addressed to Mr. Kelley.

J. L. BURNS has been appointed Chief Dispatcher, Richmond, Que., vice E. C. Potter.

The following station agents have been appointed: Peterborough, Ont., A. MacNab; King, Ont., A. M. Clarke; Lefroy, Ont., F. A. Tebo; Riverdale, Ont., A. G. Gulston; St. Paul's, Ont., C. A. Ober; Holstein, Ont., W. B. Rife; Whitehall, Ont., A. C. Ritza; Edgington, Ont., W. C. Hogan.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—H. T. DUFFY, heretofore District Passenger Agent, Moose Jaw, Sask., has been appointed General Agent, Toronto, vice F. A. Nancekivell, resigned to enter other business.

R. H. ZIEBELL has been appointed District Passenger Agent, Moose Jaw, Sask., vice H. T. Duffy, promoted.

Winnipeg Joint Terminals.—JAMES CLARK, heretofore Night Yardmaster, Canadian Northern Ry., Winnipeg, has been appointed General Yardmaster, Winnipeg Joint Terminals, vice W. McAuley, who has resumed his duties as switchman.

Railway Rolling Stock Notes.

The G.T.R. has ordered 10 locomotives from Canadian Locomotive Co., and 5 from American Locomotive Co.

The Timiskaming & Northern Ontario Ry. has received 2 conductors' cabooses from Preston Car & Coach Co.

Canadian Government Railways have bought 23 second hand Hart-Otis cars, 40 tons capacity, from F. H. Hopkins & Co.

The South African Government has ordered 20 mountain type locomotives, 22 x 26 in. cylinders, 175,000 lb. in working order, from American Locomotive Co.

The Canadian Locomotive Co. has shipped to the British Government 18 consolidation locomotives, of the order of 40, mentioned in Canadian Railway and Marine World for February.

The Russian Government has ordered 5,000 four-wheel freight cars, 1,200 poods capacity, from American Car and Foundry Co., and also 5,000 from Standard Steel Car Co.

The Russian Government has ordered 250 decapod locomotives, and 68 six-wheel tank locomotives, from American Locomotive Co., and 250 decapod locomotives from Baldwin Locomotive Works.

The Timiskaming & Northern Ontario Ry. has ordered 100 steel frame box cars, 40 tons capacity, from Canadian Car & Foundry Co. They will be duplicates of those the company is building for Canadian Government Railways, except that the draft gear will be of the friction type instead of the twin spring type.

Canadian Government Railways have received 13 steel frame box cars, 50 tons capacity, from Eastern Car Co.; 81 wood box cars, 30 tons capacity, from Canadian Car and Foundry Co.; and 10 second hand passenger cars, 97 second hand coal cars, 40 tons capacity, and 2 second hand locomotives, from General Equipment Co.

The C.P.R. has received 78 freight refrigerator cars, and 9 automobile furniture cars, completing an order of 260, from its Angus shops, Montreal. The vans previously mentioned as having been ordered at Angus shops have been increased to 27, but are being built at Winnipeg, and 12 of them have been delivered.

Respecting the 5,000 cars which Canadian Government Railways have ordered, it is stated that the cost will be about \$13,000,000, the cost averaging some \$2,600 each. It is also stated that in addition to those to be used on the government railways, some of the cars will be leased to other lines requiring them. This has not been officially confirmed.

Following are chief details of the 1,000 steel frame box cars, 40 tons capacity, which Canadian Government Railways are having built by Eastern Car Co. for delivery in Dec. and Jan.:

Length inside	36 ft.
Width	8 ft. 6½ in.
Height, floor to bottom of carline.....	8 ft. 9½ in.
Width of side door opening	5 ft.
Height, rail to top of brake mast.....	13 ft. 11¼ in.
Height, rail to centre of coupler.....	2 ft. 10½ in.
Centre to centre of body bolsters	26 ft.
Draft gear	Twin spring
Coupler	Simplex, 5 x 7 in.
Air brake	Westinghouse K.C., 8 x 12 in.
Axles	M.C.B., 5 x 9 in.
Wheels	Chilled cast iron, M.C.B., 33 in.
Journal boxes	McCord, 5 x 9 in.
Journal bearings	M.C.B., lead lined
Wedges	M.C.B., drop forged
Bolsters and brake beams	Simplex

Canadian Government Railways have ordered 1,000 steel frame box cars, 40 tons capacity, for complete delivery by Jan. 31, 1918, from Eastern Car Co.; 1,000

steel frame box cars, 40 tons capacity, for delivery in November and December, and 2,000 similar cars, and 1,000 stock cars, delivery to commence in October and be completed by Mar. 1, 1918, from Canadian Car & Foundry Co. The last two mentioned orders are to be built at Canadian Car & Foundry Co.'s plant at Fort William, Ont. It is expected that the government will place additional orders for rolling stock shortly.

Following are chief details of the 3,000 steel frame box cars, 40 tons capacity, which Canadian Government Railways have ordered from Canadian Car & Foundry Co.:

Length inside	36 ft.
Width inside	8 ft. 6½ in.
Height, floor to bottom of carline.....	8 ft. 0½ in.
Width, side door opening	5 ft.
Height, side door opening	7 ft. 8 3/16 in.
Length between end sills	36 ft. 11½ in.
Width over side sills	8 ft. 9½ in.
Height, rail to top of brake mast.....	13 ft. 11¼ in.
Height, top of rail to running board.....	13 ft. 4¾ in.
Height, top of rail to centre coupler.....	2 ft. 10½ in.
Height, sill to bottom side of plate.....	7 ft. 10 3/16 in.
Height, top of rail to eaves	12 ft. 7 7/8 in.
Width over eaves	9 ft. 3 1/2 in.
Trucks, centre to centre	26 ft. 10 in.
Draft gear	Twin spring
Couplers, bolsters and brake beams.....	Simplex
Air brakes	Westinghouse K.C. 812
Trucks	Diamond arch bar type
Axles	M.C.B., 5 x 9 in.
Wheels	33 in. cast iron
Centre plates	Cast steel
Journal boxes	McCord malleable iron
Dust guards	M.C.B. standard wood
Brake shoes—Dominion Brakehoe Co.'s cast iron,	steel back

Freight and Passenger Traffic Notes.

The C.P.R. has issued a booklet pointing out the advantages offered for settlement in the eastern provinces.

The White Star Line of steamers, trading to Sarnia and Port Huron, Ont., has decided to omit calling at these and any other Canadian ports and confine its trading to United States ports.

The Toronto, Hamilton & Buffalo Ry. re-established its through sleeping car service from Hamilton, Ont., to Pittsburg, Pa., and Cleveland, Ohio; June 4. The train leaves Hamilton at 8.23 every evening.

The Edmonton, Dunvegan & British Columbia Ry., with its associated lines, the Alberta Great Waterways Ry. and the Central Canada Ry., has opened a ticket and express office in the old Quebec Bank Building, Jasper Ave., Edmonton, Alta.

The C.P.R. trains on the its Gatineau Valley branch will continue to be operated in and out of the Broad St. station, Ottawa, this year as usual, the reported proposal for running powers to enable them to run to and from the Central station not having been acceded to by the G.T.R.

The opening of the McArthur lines from Edmonton to Peace River Landing, Alta., has directed considerable attention to that territory, and already tourist travel is being directed thither from the United States. The river steamer D. A. Thomas is being operated on Peace River, on a schedule, in order to work with the railways in handling the traffic.

In order to advertise the attractions of its Rocky Mountain section for tourist travel, the Canadian Northern Ry. is arranging for an exhibition of pictures. H. L. Beatty, of Toronto, is painting a number of pictures; colored photographic views are being made for moving pictures, and these will be explained by talks by O. Scott, of the company's passenger department.

Steamship & Railway Ticket Office has

been incorporated under the Manitoba Companies Act, with a capital of \$20,000, and offices in Winnipeg, to carry on the business of selling railway and steamship tickets, the buying and selling of exchange and other business in connection therewith. The provisional directors are: Jos. Finkelman, Mrs. N. Finkelman, M. Cates, Mrs. F. Cates and S. H. Green, Winnipeg.

The Grand Trunk Ry. has issued a booklet, "The Transcontinental Line," descriptive of the route from the Atlantic to the Pacific, offered by the Intercolonial Ry. from the Atlantic coast to Montreal, the G.T.R. thence to North Bay, the Timiskaming & Northern Ontario Ry. thence to Cochrane, the National Transcontinental Ry. thence to Winnipeg, and the Grand Trunk Pacific Ry. thence to Prince Rupert, B.C.

The Alberta & Great Waterways Ry.'s summer traffic is being carried on by a gas driven car, leaving Edmonton for Lac la Biche, Alta., at 8.30 a.m. on Thursdays and Saturdays, returning at 7 a.m. on Fridays and Mondays. There is also to be a mixed train to Lac la Biche, leaving Edmonton at 7.30 a.m. Tuesday mornings, and returning the following day. The remaining mileage to McMurray is being operated by the contractors.

The summer traffic schedule on the Edmonton, Dunvegan & British Columbia Ry., with its branch line, the Central Canada Ry., came into operation, June 10. A train leaves Edmonton for McLennan and Peace River at 17 o'clock Tuesdays and Fridays, and on the return trip reaches Edmonton at 21.30 on Thursdays and Sundays. On Mondays and Thursdays a mixed train runs from Edmonton to South Jct., returning on Tuesdays and Fridays.

The Grand Trunk Pacific Ry. train service from Young to Prince Albert, Sask., was put in operation, June 24. Heretofore the train service has only extended to St. Louis, the crossing of the South Saskatchewan River. A train leaves Young at 8.35 a.m., Tuesdays, Thursdays and Saturdays, arriving at Prince Albert at 2.15 p.m. the same days, and returning leaves Prince Albert at 3.45 p.m., Mondays, Wednesdays and Fridays, reaching Young at 9.27 p.m. the same days. These trains connect at Young with the daily trains on the main line.

The Central Vermont Ry. is issuing tourist tickets for combined rail and auto trips during the summer. The most important tour is described as "The King's Highway trip." Passengers will leave New England points and travel by railway to St. Alban's and then motor to Montreal, about 70 miles, via Lakewood, ferry across Missisquoi Bay, Lake Champlain, to East Alburg, thence via Clarenceville, Lacolle and "The King's Highway," to Montreal, with an alternative route via Phillipsburg, St. John's and Chambly Canal. This trip takes in the Green Mountains and the White River, Winooski and Champlain Valleys.

Rotenberg's Ltd. has been incorporated under the Ontario Companies Act, with authorized capital of \$100,000 and office in Toronto, to carry on a railway and steamship ticket, tourist, transportation, telegraph and express agency, and other allied businesses. The officers are Louis Rotenberg, Sr., President; Max Rotenberg, Jr., Secretary-Treasurer. The company takes over the ticket agency business heretofore carried on by L. Rotenberg & Sons.

Railway Finance, Meetings, Etc.

Canadian Northern Ry.—A bill has been passed by the House of Commons authorizing the company to issue collateral trust bonds, redeemable in currency, against the company's securities held by the Dominion Government, payable in sterling, which have been or may be acquired by the Imperial Government. This is a war measure, and is being passed for the same reasons as a similar measure for the C.P.R., to enable the Imperial Government to place war loans with these bonds as security, should the necessity arise.

The Finance Minister stated in the House of Commons, June 7, that no advance had been made "to a railway company" by order in council so far as he knew. The question was asked in reference to a report that the government was advancing a further sum to the C.N.R.

The Senate passed a resolution, May 29, asking for copies of all orders in council passed in conformity with the provisions of the act of 1914, under which \$45,000,000 was granted to the C.N.R. under certain conditions. The orders in council had to be passed, it was explained, with reference to the portions of the railway in British Columbia.

Canadian Northern Saskatchewan Ry.—There was deposited with the Secretary of State at Ottawa, June 5, a trust deed made between the company, the British Empire Trust Co., the National Trust Co., and the Crown, securing an issue of 4½% guaranteed debenture stock on certain terminals and bridges in Saskatchewan.

Canadian Pacific Ry.—The House of Commons has passed a government bill, authorizing the company to issue currency securities to retire sterling securities now held by the British Government, so that they may be used as collateral securities for British war loans in the U.S. The Finance Minister stated that this was a war measure initiated by desire of the Imperial Government. It was not intended at present to make such an issue of bonds, but it was desired to have the legislation enacted in order to be prepared for the contingency should it arise. This matter was brought forward at the C.P.R. annual meeting, when it was stated that the arrangement then made for the issuing of a loan in the U.S. had been abandoned owing to the entry of the U.S. into the war on the allies' side.

Central Ry. of Canada.—The Exchequer Court of England has dismissed the application for the appointment of a receiver, giving the company until July 1 for the completion of its plan of reorganization. To carry out this plan it is necessary to obtain consent of 75% of the bondholders, and at the time of writing it was stated that 72% had consented.

Magdalen River Valley Ry.—At a meeting of the directors at Quebec, June 13, a bylaw was passed changing the head office from Quebec to New Carlisle, Que. F. Murphy, Quebec, is Secretary.

Michigan Central Rd.—There was deposited with the Secretary of State at Ottawa, June 8, two agreements relating to the M.C.R. equipment trust of 1917.

National Transcontinental Ry.—Sir James Loughheed stated in the Senate, June 7, that the N.T.R. gross earnings for the fiscal year ending Mar. 31, were \$5,916,550.99, and the working expenses \$7,806,922.20.

St. John & Quebec Ry.—Sir James Loughheed stated in the Senate, June 7,

that the gross earnings of the St. John & Quebec Ry., which is owned by the Province of New Brunswick, but operated as a part of the Intercolonial Ry., for the fiscal year ended Mar. 31, were \$81,325.63, and the working expenses \$98,300.42.

Timiskaming & Northern Ontario Ry.—Passenger earnings for April, \$61,143.72; freight earnings, \$137,094.51; total earnings, \$198,238.23; against \$51,565.76 passenger earnings; \$181,245.31 freight earnings; \$232,811.07 total earnings, for April, 1916.

Betterment Works on the Canadian Government Railways.

The betterments carried out on the Canadian Government Railways during the last financial year, according to a statement by the Minister of Railways in the House of Commons recently, include the following: The relaying of 85 miles of Intercolonial main track with 85 lb. rails, the laying of 10 miles of 85 lb. rails on the New Brunswick & Prince Edward Island Ry., the putting in of 1,100,000 new ties over the system, the reballasting of 170 miles of track, the extension of 8 passing sidings, the construction of 2 new passing sidings, 14 business sidings and 52 private sidings. Terminal yards were enlarged on the Intercolonial, giving additional accommodation for 3,061 cars, as follows: Chaudiere Jct., 580; Ste. Rosalie Jct., 230; Moncton, 369; Truro, 282; Rockingham, 1,600. This work on the terminals alone cost over \$250,000. A concrete grain elevator of 1,000,000 bush. capacity is being erected at Transcona, Man.; and one of 500,000 bush. capacity at St. John, N.B., both to be completed in the autumn. The steamship Northumberland was acquired from the Charlottetown Steamship Navigation Co. for use between Prince Edward Island and the mainland. In addition to repairs to a large number of buildings, 22 steel railway bridges were erected, and 6 overhead bridges were replaced with steel spans.

Transportation Conventions in 1917.

August.—International Railroad Master Blacksmith's Association, Chicago, Ill.

September.—Railway Signal Association, Atlantic City, N.J.

Sept. 11.—Master Car and Locomotive Painters Association of the United States and Canada, Chicago, Ill.

Sept. 18-20.—Association of Railway Telegraph Superintendents, Washington, D.C.

Sept. 18-21.—Roadmasters and Maintenance of Way Association, Chicago, Ill.

October.—American Association of Dining Car Superintendents, San Francisco, Cal.

October.—Railway Real Estate Association, Duluth, Minn.

Oct. 16-18.—American Railway Bridge and Building Association, St. Paul, Minn.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Society of Civil Engineers—C. H. McLeod, 176 Mansfield St., Montreal.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacramento Street, Montreal.

Ship Masters' Association of Canada—Capt. E. Wells, 45 St. John Street, Halifax, N.S.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Transportation Club of Vancouver—H. W. Schofield, 553 Church Street, Vancouver, B.C.

Twin Cities Local Freight Agents' Association—E. J. Travers, Fort William, Ont.

Winnipeg Traffic Club—James Gehrey, Bannatyne Avenue, Winnipeg, Man.

Marine Items too Late for Classification.

Another Icebreaker Proposed.—The Minister of Marine stated in the House of Commons recently that the question of building another icebreaker, to take the place of the J. D. Hazen, sold to the Russian Government, is under consideration.

The Landho Transportation Co., Ltd., the incorporation of which was announced in our last issue, owns the freight steamship Landho. The officers of the company are: E. F. Pardee, President; N. S. Gurd, Vice President; A. L. Burnham, Secretary; J. A. Boland, Buffalo, N.Y., Treasurer. The office is at Sarnia, Ont.

The Reid Towing & Wrecking Co. Ltd. has been incorporated under the Dominion Companies Act, with \$200,000 authorized capital, and office at Montreal, to acquire the business and property formerly owned by the Reid Wrecking Co., Ltd., Sarnia, Ont. As announced in our last issue, the property has been acquired by R. M. Wolvin, Winnipeg, who is associated with several transportation and grain concerns, chiefly Canada Steamship Lines, Ltd., which gave rise to the report that the Reid Wrecking Co. had been acquired by that company.

Men for U. S. Vessels.—The U. S. Shipping Board announces a country-wide call for engineers to serve on the forthcoming merchant marine fleet. Not less than 5,000 additional engineers will be needed on U. S. ships in the next 18 months. Anticipating this demand, the board will establish marine engineering schools, in which to train men not now qualified to receive papers, with terms to begin on July 20. The Board is also recruiting for the merchant marine 5,000 masters and mates, and is establishing a chain of schools in navigation on both sea coasts to train those needing preliminary instruction.

The Rideau Steamboat Co., Ltd., the incorporation of which was announced in our last issue, has bought the steamboat Wanakewan from A. W. Campsall, Ottawa, and operates it between Ottawa and Kemptville for local and general transportation and for private picnic parties. The steamboat was built at Kingston, Ont., in 1910, and is screw driven by engine of 8 n.h.p. Her dimensions are: length, 70.2 ft.; breadth, 15 ft.; depth, 5.2 ft.; tonnage, 68 gross, 44 register. The officers are: W. J. Best, President and Manager; F. W. McKinnon, Vice President; Andrew Haydon, Secretary-Treasurer; W. Campsall and W. E. Beaton, directors.

Electric Railway Department

Operating of Two-Car Trains in City Service.

By D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.

(Copyright, Canada, 1917.)

It is the universal practice on steam railways to operate a string of cars, as long as possible, as a train unit. Elevated and subway services have developed along the same lines. The operation of city street cars in single units is still standard practice almost everywhere. The natural evolution of any custom is usually guided by logical reasoning, but is often influenced or even suspended by questions of expediency. The development of steam railway practice has been guided largely by considerations of efficiency and economy, with relative freedom from local restriction as to direction and frequency of service, because of the occupation of a public right of way. Furthermore the requirements and essentials of long distance transportation are quite different from those pertaining to the incidental movements of people within the

tions, and again as a relief from congestion. In the larger cities, having congested areas, the more important aspect is the possibility of carrying a larger number of people away from a given area in a given time with a minimum number of cars. This last factor introduces the close relation that exists between efficiency and economy. The solution of the problem of congestion is not the simple matter of adding more cars. All effort should rather be applied to the acceleration of the average movement of a limited number of cars away from certain areas, keeping in mind the fact that 10 cars moving around a loop at an average speed of 10 miles an hour will carry as many people as will 20 cars moving around the same loop at 5 miles an hour, and give far better satisfaction to everyone concerned. This does not mean that

body design and inefficient means of entry and exit.

Perhaps the first serious discussions of the possibilities of train operation in city streets are a paper written for the A.E.R.A. by Mr. Franklyn in 1911 and a report by a joint committee of the same association in 1912. The committee arrived at certain conclusions and made recommendations based on experiment as well as careful thought. The opinion expressed was strongly in favor of further development and the idea has now taken firm hold throughout the country. It is safe to predict that we will soon see trains of two or more cars, as standard operating practice, in many growing cities, where public opinion will not countenance the temporary expedient of elevated tracks as an intermediate step between surface lines and subways.

Two-Car Train, Montreal Tramways Company.

limits of a city. On long suburban runs, operated electrically, the advantages of multiple unit trains are pretty well recognized, but the idea of train operation in city streets does not seem to have received the attention that a study of conditions would indicate that it should.

The modern street car is a development of the palanquin, the rickshaw, the ox cart and the horse drawn cab, through the public chaise and bus. One of the fundamental requirements of street car operation is frequency of service. Disregard of this fact results in the loss of the best paying customer, viz., the short haul passenger. This factor tends toward a large number of small independent units. When the density of traffic on a street is such as to demand a service of large single car units, with a headway of less than 3 or 4 minutes, there are several reasons for serious consideration of the combination of two or more units into trains. The practice may be considered first as a means of meeting the variation in the volume of traffic, by the addition of trailers or multiple units to cars running with a reasonable headway on a fixed schedule, instead of confusing and disorganizing the operation of the line by changing the time tables at different times of the day. The troublesome question of extra platform labor is also favorably affected.

The subject can be approached from two distinct points of view, that of economy of operation under ordinary condi-

cars are to be run at dangerous maximum speeds during the few seconds that such speeds could be reached, but that we should make a careful study of all the factors that help to restrict and slow down the average rate of transportation and take serious steps to eliminate the unnecessary causes of delay.

After all the more obvious improvements have been effected, such as educating the public to move quickly, and designing platform arrangements that will enable them to do so, training motormen to make bold but safe acceleration, and to apply their brakes on the same principles, and training of conductors toward sharp and energetic action of an infectious order, we have to turn to such means as the coupling up of single units into trains. Altogether aside from the selfish idea of economy, consideration of efficiency and quality of service rendered to the public demand any modifications of existing practice that tend to minimize the objectionable features of street congestion. The idea of train operation of street cars is by no means new. The first and more obvious method adopted was the addition of a trailer to a motor car. This practice has not always been satisfactory, not because the principle was wrong, but because the means at hand for carrying out the idea were wanting in many respects. The success of this practice was in most cases seriously limited by factors of gradient, tractive effort, motor capacity, unsuitable couplers, car

It is generally admitted that the evils resulting from congestion are hardly appreciable up to a certain density of traffic, but that when a point is reached, when the distribution of the various streams of fairly continuous movement, the confusion and consequent slowing down of motion at intersections increases very rapidly with each further increment. The number of people that can be transported from one point to another on a car line with reasonable regularity in a given time is controlled by several factors, the principal of which are: (1) Speed of movement between stops. (2) Number of stops. (3) Interference of vehicular and pedestrian traffic. (4) Delays at street intersections. (5) Time at rest for loading. (6) Free headway or spacing between car units.

A little consideration will show that items 1 and 2 do not materially affect the comparison between one and two-car trains when the number of stopping points is reasonably restricted. Item 3: The net result of vehicular interference is in favor of two-car trains, principally because the spaces between cars are longer, and drivers have more opportunities of cutting in on car tracks and out again, without interfering with the movement of cars. The greatest time saving is effected under items 4, 5 and 6. The amount of traffic that can be distributed at any intersection depends upon several conditions. When a car or vehicle crosses in one direction, all move-

ment in the other direction must stop. The amount of delay depends upon the time that the intersection is occupied by the moving unit. The interruption of crossing traffic is not restricted by the time a unit takes to pass a given point, because, before a movement occurs, the crossing must be cleared and a safety zone established ahead. When this safety zone is established, a two-car train will occupy the intersection only slightly longer than one car, because by the time the front car has cleared, the train has developed considerable speed and the second car passes very quickly. Furthermore, only half the number of safety zones must be established. Delays on account of actual loading and unloading are cut down nearly one half, because two cars at rest can load as quickly as one.

Mr. Jackson, of the Public Service Railways, New Jersey, who had charge of extensive experiments made with train operation in Newark in 1912, stated before the American Association in that year, that careful records showed that a single car occupied a crossing 118 ft. long, an average of 16.9 seconds, while a two-car train occupied the same crossing only 20.4 seconds, an increase of only 20%. Furthermore, that the actual interchange of passengers at congested

car interferes with that of the car following, the rate of traffic movement begins to slow down. A point is soon reached when the addition of more cars actually results in so much slowing down of the whole chain of cars, the consequence is that fewer people are carried away from a given point in a given time, and, furthermore, the service is less satisfactory to both the company and the passenger, because of the greater time required to deliver the latter at his destination after he has succeeded in finding space on a car.

Coupling cars in pairs almost doubles the free headway between units, and enables every motorman to move more quickly between stops. Interference from cars ahead is very materially reduced and more people will be carried away at a higher speed than when single car units are employed. Experiments with trailers hauled by motor cars have been conducted for about three years on St. Catherine St. in this city. The results have been satisfactory, especially since the public as well as the train crews became accustomed to their use.

A certain slowing down of schedule speed is inevitable on account of limited traction for acceleration and a slightly increased number of stops. It has been our experience that average conditions of

various systems of controlling multiple unit trains, and taking into account the fact that all modern cars in this city are already equipped with the E-35 controller, it was decided to adopt the Westinghouse P-K apparatus. The standard equipment has been modified to suit our conditions. All main wiring and apparatus will be located under the car body. A master controller will be on the front end of each car, and the auxiliary 12 volt storage battery under a seat. The master controller will be a miniature copy of the K-35 in arrangement of notches, and will be handled in exactly the same manner, except that an extra notch has been added, which will give automatic acceleration, within the limits of a current relay, over the whole range. Owing to the fact that motormen may only occasionally be called upon to operate this type of control, and that all motormen would have to be specially trained, it was thought unwise to adopt any system that was radically different in operation from an ordinary car. When making a start the motorman can either throw the controller wide open to the automatic position, or he may advance one notch at a time to take care of unusual traffic or rail conditions, or if he should have to accelerate on a grade on which the automatic advance would be too slow or inoperative

Plan View of Two-Car Train, Montreal Tramways Co.

points, according to a count extending over one week, showed an average of 1.7 seconds per passenger handled in single cars against 1.2 seconds per passenger handled in two-car trains. This comparison takes into account all factors of delay, and is not a simple comparison of the average time occupied per passenger in actually boarding and leaving the cars.

Of perhaps more importance than any is the advantage of greater free headway when cars are operated in pairs. It is an unfortunate fact that when the demand for transportation is greatest, and people are most anxious for quick transport to or from business, the rate of movement of traffic of all kinds slows down. The movement of street cars is especially affected, because they are constrained to move on fixed tracks and cannot move around obstructions or take to less crowded streets. More cars have been added to meet the rush hour traffic. In addition to the extra delays to each car unit, caused by a larger number of people boarding and leaving, and the consequently increased number of stops, the safety zone between cars has been reduced in length. Motormen are unable to get up normal rates of speed in case the car ahead should stop, or slow down unexpectedly. Every delay to any car in the series is repeated back from car to car down the street. At each intersection, several cars are stopped in line. Each of these cars must move up a car length at a time, and again stop while the first car of the line is unloading, loading, and waiting for signal from traffic officer after a stop of a minute or so. It is quite common for a car to require 5 or 6 minutes to move up to and pass a single intersection. In other words, when the number of car units on a line is increased to a point where the movement of one

grade acceleration, condition of rail, and density of traffic, require a motor capacity of from 8 to 9 h.p. per ton of light car weight, for satisfactory and economical operation. Furthermore, that this motive power be fairly well distributed over all wheels of the train, to ensure a fair rate of acceleration and hill climbing capacity.

Bad rail conditions and heavy grades encountered on all cross town lines prevent the general use of ordinary trailers in this city. In order to overcome this difficulty, the management decided to order 50 two-car trains, with motors on both cars, all operated by a master controller in the front car. Each car might be operated as a separate unit, but on account of the special arrangement of doors at front end of the trailer, which has the important result of eliminating indecision of passengers in making choice of car, it is not likely that advantage will be taken of this fact for other purpose than for shunting.

Description of Cars.

Length of body	32 ft. 3 in.
Width of body	8 ft. 5 in.
Weight of motor car without load	43,800 lb.
Weight of trail car without load	36,470 lb.
Weight of train without load	80,270 lb.
Motors, motor car	4 50 h.p.
Motors, trail car	2 50 h.p.
Brakes	automatic air
Doors	air operated
Steps	folding type
Seats per car, motor car	42
Seats per car, trail car	45
Control	electro, pneumatic, automatic
Color	Montreal Tramways green

It is interesting to note that although the total rated power of motors per train is 300 h.p., they can safely develop 600 h.p. for short periods. About 400 h.p. per train is necessary to operate the heavier cross town grades on a fair rail.

Control.—After due investigation of the possibilities and advantages of the

altogether.

The P-K engine has an inherent time lag that is sufficient to prevent any undue rushes of current. The result is that if a motorman should throw his controller open too quickly to any notch, the main controller will notch up at a slower rate to that point. Additional features of the P-E control as applied to the Montreal Tramways Co.'s cars are: a line switch controlling all breaking of main motor circuits, to relieve controller fingers; a door interlock in the master controller circuit, to prevent cars starting until all doors are closed; a train line switch arranged to open the master control circuit, in case of emergency application of the brakes; an emergency hand operated switch to short circuit the door and train line switches, in case they are out of order; buzzer system and motorman's signal light operated from the control battery; paralleling of batteries, the train to load all batteries equally; automatic charging of batteries from compressor circuit.

The air brake system is so designed as to provide a high degree of safety. The motorman applies brakes to all wheels of both cars. Furthermore, should he fail to do so in case of danger, the conductor of either car can instantly apply the brakes on all wheels of train without moving from his position. Should draw bars part, power is cut off and the brakes are automatically applied to both cars. The doors will be so interlocked with the power system that the motorman will be unable to start car until all doors of train have been closed tight. All automatic features are operated from storage batteries, so as to ensure their normal operation when power is off or trolley should leave wire.

A new system of lighting has been

arranged that will have a much better appearance, as well as providing better light. Five 94-watt tungsten lamps, with semi-opaque reflectors and automatic shunting cut-outs will be located down the centre of car. An auxiliary circuit of five 23-watt tungsten lamps will serve to illuminate signs, and provide an emergency light over conductor's position, in case of a burnt out fuse.

Electric heaters will be controlled by a special thermostat and automatic switch, to maintain a uniform temperature in car, and will overcome the discomfort due to local overheating of certain seats in mild weather. The difficult matter of ventilation has received special attention, and it is hoped that the new scheme will ensure sufficient circulation of air in mild weather, without consequent draughts and discomfort during the extreme colds of winter. In addition to the regular floor ventilators, there has been provided a hinged sash at the top of the left hand front vestibule window.

Further improvements in truck design will tend to make cars ride even more smoothly than at present. Springs are arranged to give a graduated reaction that will largely eliminate the track vibration when cars are light. Vibration is further reduced by the substitution of hinged bolster guides in place of ordinary rubber plates.

Power Consumption.—I feel that attention should be called to a more or less mistaken popular idea that the addition of a trailer to a motor car adds very little to the power consumption of the latter. As a matter of fact, the same quantity of energy is actually required to transport a pound of weight, whether that pound is located on the first or second car of a train, and the power necessary for propulsion under stated conditions is simply a question of weight hauled. It can be conscientiously stated that tests will show the contrary. Why this appearance of unreliability of tests? I will attempt a simple explanation by stating that such a test will surely show, if carried to its full conclusion, that the equipment of the single unit has not been properly selected for single car operation and is much more efficient when loaded up by the addition of a trailer.

The tendency of the operating department is always toward a demand for over capacity of motors, and too high a gear ratio for efficiency; the argument invariably being that motormen cannot maintain schedules otherwise. The natural result of the higher power is that train crews are deliberately encouraged to do their work in an inefficient manner, since they do not have to consider the refinements of operation in their efforts to keep on time. If a trailer be added to such car, the result is a slowing down of the motors over the same route, the motor capacity is more in keeping with the weight handled and the crew must study and practice refinements of operation in order to keep on time. The free running speed of such a train is not as great as a single car, therefore acceleration must be prompt and the rate of braking more severe. Both these practices make for higher efficiency, which results in the apparent saving of power shown by tests. The rheostatic losses are cut down, and, of even more importance, perhaps, the amount of power legitimately used for acceleration, and which must be finally wasted in wearing out and heating the brake shoes, will be reduced in proportion to the squares of the maximum speed on the run between stops.

It must be remembered that if you

double the maximum speed, you expend four times as much power, which is nearly all wasted at the end of each run. Incidentally, of course, the conductor must be more sharp in the doing of his work and all loafing must be eliminated. I can safely state that very nearly as efficient operation could be obtained on single cars, if the gear ratios were made higher, to give lower speed, and the motor capacities lowered in proportion, always keeping in mind that hill climbing and winter conditions may justify installation of power above the point of maximum efficiency. Our experiments with trailers in this city has brought us to a realization of this fact, and we expect to get efficient operation, within the economical capacity of our standard motors, by adding only two extra motors of equal unit capacity to take care of 80% additional load.

I should, perhaps, add that there are certain elements that do fairly make for higher power efficiency in trailer operation, as opposed to single cars, but they are not of very serious moment, viz.: (1) Elimination of motor friction on trailer. (2) Slight reduction in wind resistance. (3) Operation of trailer over freshly cleaned rail. (4) Elimination of energy expended in acceleration of extra armatures. Savings under items (2) and (3) apply to multiple trains.

The chief offsetting disadvantages to consider are: (1) Loss of tractive capacity due to idle weight on trailer axles. (2) Overloading of motor car equipment with consequent increased maintenance and liability of breakdowns. (3) Operation at less efficient point on efficiency curve on all but free running speeds.

The questions of whether a simple trailer system, or a multiple unit system, is the best, and whether trains should be operated continuously or only during rush hours, can only be decided after an intelligent study of local conditions, both physical and financial. From a strictly engineering point of view, the advantages of multiple unit operation leave very little room for the consideration of simple trailers, unless the traffic demand is such that trailers can be operated continuously on fairly level streets, without extreme climatic variations. Under these ideal conditions the operation of street cars would be guided by the same principles as steam trains.

Guelph Radial Ry. Wages.—The management of this line, which is owned and operated by the City of Guelph, Ont., has raised its conductors' and motormen's wages 1c an hour, the new rate being: 1st year, 23c; 2nd year, 24c; 3rd year, 25c. The wages of the shopmen are varied, the average being 27½c.

Officials of Division 583, Amalgamated Association of Street and Electric Railway Employees of America notified the Calgary City Council, June 14, that they demanded exclusive recognition, with the following rates of wages: 1st year, 35c an hour; 2nd year, 38c an hour; 3rd year, 40c an hour, with 50c an hour for running one-man cars, together with sundry alterations in the working conditions. The majority of the employes on the municipal railway do not belong to the union, but belong to a local association. The council recognizes both bodies.

The Toronto Ry. is reported to have ordered 100 trucks, to be delivered by the end of the year, in order to carry out the Ontario Railway and Municipal Board's order to provide additional cars for immediate service.

Electric Railway Employees Strike in Vancouver.

The agent of the Street Railway Men's Union in Vancouver, B.C., announced, June 13, that the men had unanimously decided to go on strike immediately. This resulted in tying up the service in Vancouver and on the interurban lines to New Westminster. The line to Lulu Island is operated under a different agreement, the crews being under the jurisdiction of the Brotherhood of Railway Trainmen, but subsequent to the strike on the other the line was closed down by the company lines.

A statement issued by G. Kidd, General Manager, June 11, said: "The company voluntarily increased the men's wages last year, the agreement being extended to June 30, 1918. About a month ago the company intimated to the men that owing to the abnormal conditions they had again considered the question of granting some relief, particularly to the lower paid men, and they proposed to give a war bonus to the employes covered by the above agreement. The bonus proposed was as follows: 15% to employes earning \$60 a month or less; 10% to employes earning more than \$60 and not more than \$70 a month; 5% to employes earning more than \$70 and not more than \$80 a month. I have at meetings with the men pointed out the serious conditions of the company's finances and the losses we are making in our railway business, the increase in the cost of all materials we use, the decrease in the population, and the competition to which we are subjected, making it impossible for us to earn anything like a fair return to our investors. The representatives of the men, though impressed with the company's point of view, have stated that they do not consider the company's offer sufficient, and that the increase in the cost of living is greater than the company's offer will adequately provide for. I pointed out to them that the cost of living in Vancouver, compared with other cities in Canada, is at present very favorable, as the following figures will show: Taking Vancouver as a basis and calling it 100%, the cost of living in Winnipeg is 118; in Toronto 125; in Montreal 110. The wages of the motormen and conductors, four years in service, in Vancouver, are 35c an hour, plus the additional bonus referred to above. In Winnipeg the corresponding wages are 36c; in Toronto 30c; and in Montreal 27c."

Under the scale in force prior to the strike a man starting was paid 27c an hour, and was increased from time to time up to 35c. The men asked for a starting rate of 35c, increasing according to the term of service to 45c.

In referring to the men's decision, Mr. Kidd said, on June 13: "We presented the best offer it is possible to make to the men, and the matter now rests with themselves."

It is reported that the jitneys have been doing a big business, an increasing number being rushed into the service in the endeavor to meet the emergency. The company has made no attempt to operate a service.

A press dispatch from Vancouver, June 22, stated that the strike had ended, and that cars commenced running in Vancouver on that date. It also stated that the company had decided to pay a war bonus aggregating about \$300,000 a year, on the understanding that the transportation situation in the city would be enquired into by an expert.

Canadian Electric Railway Association's Annual Meeting.

The Association's annual meeting in Montreal, June 5 and 6 was largely attended by officials of member companies throughout Canada, and was probably the most successful in the association's history. The President, E. P. Coleman, General Manager, Dominion Power & Transmission Co., Hamilton, Ont., who presided, opened the meeting by an address on the association's work and many other important matters affecting the electric railway industry.

The Honorary Secretary Treasurer, Acton Burrows, presented a very complete report, dealing with the association's work during the past 12 months. In referring to the membership he showed that out of 1,417.62 miles of electric railway in Canada, owned and operated by private companies, at June 30, 1916, only 181.65 miles were controlled by companies outside the Association's membership. The report also dealt with the following questions: Transportation of postal mail; abolition of juries in trials of cases against companies; Nova Scotia legislation re hours of labor and rates of fare; Quebec legislation regulating vehicle traffic; headlights on electric railway cars in Ontario; lavatory accommodation on interurban railways, collection and dissemination of information; wages of employes; standard practice in laying paving blocks; car wheel data; standard cars in cities; one-man car operation; employment of women as conductors, Amalgamated Association of Street and Electric Railway Employes of America; assessment of track in cities; compensation for abolition of perpetual franchise; revenue and free passengers; transportation for officials' wives; commission to town agents for selling tickets and handling freight and express; reporting of accidents in Ontario, jitney regulations. The report was discussed section by section, as read, and action was taken on a number of subjects referred to.

The following papers were read and discussed: Labor questions, by C. L. Wilson, Assistant Manager, Toronto & York Radial Ry. Bonuses to motormen, by W. S. Hart, Secretary Treasurer, Three Rivers Traction Co. Some track maintenance problems, by W. F. Graves, Chief Engineer, Montreal Tramways Co. Car wheels, by G. Gordon Gale, Vice President and General Manager, Hull Electric Co. Purchasing and storekeeping methods, by J. S. Mackenzie, Purchasing Agent, Winnipeg Electric Ry. Storekeeping and purchasing methods, by J. B. Griffith, Purchasing Agent, Dominion Power & Transmission Co. A practical method of stores accounting, by S. Potter, Master Mechanic, Detroit United Ry. Two car electric train operation, by D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co. Commutation books, school books and reduced rate tickets, by A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry. Move quickly and help us take you home quicker, as a step towards rapid transit, by A. Gaboury, Superintendent, Montreal Tramways Co. Interurban motors as feeders to electric lines, by W. N. Warburton, General Manager, and Secretary Treasurer, London & Lake Erie Ry. and Transportation Co. Reasons for the use of the name light-safety-car, by R. H. Wheeler, Engineer, Three Rivers Traction Co. Handling complaints, by A. D. B. Van Zandt, Publicity Agent, Detroit United Ry. Tungsten

versus carbon lamps for car use, by S. Roseveare, Electrical Engineer, Toronto Suburban Ry. These papers are copyrighted and will be published in the association's official proceedings, for distri-

Charles L. Wilson
Assistant Manager, Toronto & York Radial Ry.,
and President, Canadian Electric Railway
Association, 1917-18.

Edward P. Coleman
General Manager, Dominion Power & Transmission
Co., and President, Canadian Electric
Railway Association, 1916-17.

bution to officials of member companies.

The following officers, etc., were elected: President, C. L. Wilson, Assistant Manager, Toronto & York Radial Ry. Vice President, A. Eastman, General Manager, Windsor, Essex & Lake Shore Rapid Ry. Honorary Secretary Treasurer, Acton Burrows, Man-

aging Director, Canadian Railway and Marine World, re-elected for the 11th consecutive year. Executive Committee, E. P. Coleman, General Manager, Dominion Power & Transmission Co.; James D. Fraser, Director and Secretary Treasurer, Ottawa Electric Ry. Co.; A. Gaboury, Superintendent, Montreal Tramways Co.; G. Gordon Gale, M. Can. Soc. C. E., Vice President & General Manager, Hull Electric Co.; H. G. Matthews, General Manager, Quebec Ry., Light, Heat & Power Co.; E. L. Milliken, Manager, Cape Breton Electric Co. Assistant Secretary, A. A. Burrows, Secretary and Business Manager, Canadian Railway and Marine World. Legislation Committee, J. D. Fraser, Director and Secretary Treasurer, Ottawa Electric Ry.; H. M. Hopper, General Manager, New Brunswick Power Co.; George Kidd, General Manager, British Columbia Electric Ry.; H. R. Mallison, Managing Director, Nova Scotia Tramways & Power Co.; H. G. Matthews, General Manager, Quebec Ry., Light, Heat & Power Co.; Wilford Phillips, General Manager, Winnipeg Electric Ry.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

On the evening of June 5 the companies' officials attending the meeting were entertained at dinner at the Windsor Hotel by the Montreal Tramways Co., its General Manager, J. E. Hutcheson, occupying the chair. The dinner was a most enjoyable one, an excellent musical programme having been provided. Brief speeches were made by the chairman, and by E. P. Coleman, James Anderson, Manager, Sandwich, Windsor & Amherstburg Ry.; Patrick Dubee, Secretary Treasurer, A. Gaboury, Superintendent, W. G. Graves, Chief Engineer, Montreal Tramways Co.; George Ham, of the C.P.R. headquarters staff, and Chief Tremblay, of the Montreal Fire Department. On June 6, Mr. Hutcheson entertained the retiring and incoming officers and executive committee at luncheon at the St. James' Club, Sir Alexander Bertram being also a guest. In the afternoon, the company's officials attending the meeting were taken in the Montreal Tramways Co.'s official car on a tour of inspection of some of that company's principal properties, including the Hochelaga power house, the capacity of which is being largely increased, and the Youville shops.

Montreal Tramways Co.'s Wages.—The Montreal Tramways Co. has voluntarily increased its conductors and motormen's wages 2c. an hour.

The Port Arthur Public Utility Commission and the Utilities Committee of Fort William, on June 3, at a meeting, agreed to fix the wages of motormen and conductors on the electric lines in the two cities, commencing June 16, as follows: 1st 6 months, 30c an hour, next 18 months, 35c; over 2 years service, 36c; an extra 1c an hour for operation on one-man cars. Time and a quarter will be paid on regular day off, if called for duty, and also on legal holidays. No overtime allowed for Sundays or for extra time other than mentioned above.

The Windsor, Ont., east end citizens' association were addressed recently on the municipal ownership of street railways by A. Simmers, who claimed that a municipal line would be run for service, whereas privately owned lines were run for profit.

Winnipeg Electric Railway's Employes' Wages Arbitration Etc.

The Board of Conciliation and Investigation appointed by the Minister of Labor on April 27, to deal with differences between the company and certain of its employes, members of Winnipeg Division 99, Amalgamated Association of Street and Electric Railway Employes of America, held meetings between May 16 and June 2, reported that after hearing evidence and after conferences with the company's officials and with a committee of employes, it was successful in negotiating a settlement and a written agreement was executed. The board, which consisted of Isaac Pitblado, K.C., representing the company, R. A. Rigg, M.L.A., representing the men, and Judge R. H. Myers, as chairman, further reported as follows: "The demand for increased wages came at a very inopportune time for the company, whose revenues have declined to an alarming degree since the outbreak of war. Looking at the matter solely from the company's ability to pay, it is not at present in a position to add to its operating expenses. While other business concerns are able to add any increased cost of production to the price of their commodities, the company's rates of fares are fixed by contract with the city of Winnipeg (confirmed by statute) and cannot be increased. Two main features have contributed to the decline in the company's revenues—1st, the business conditions created by the war, and, 2nd, the jitney competition which sprang up shortly after the outbreak of the war. While the decline in receipts, from the falling off of business caused by the outbreak of the war was, of course, uncontrollable, the jitney competition stands on a different footing. The company feels very strongly that this jitney competition as carried on in Winnipeg is extremely unfair to it, and it has urged strongly before the board its position. The company has an exclusive franchise, by which, in consideration of a fixed agreement as to the rates of fares to be charged, it was to have a monopoly of the street car business on the streets of the city. At that time there was no idea of transportation by means of jitneys, and the company contends that the permission by the city of the jitney competition, with the minimum of regulation which now exists, is in effect a breach of the city's agreement with it. However this may be, the Board cannot but appreciate the serious financial loss which is being inflicted upon the company by this jitney competition, which has been strenuously urged by the company as a reason why it is unable to pay the men higher rates of wages. On the other hand, while the board appreciated the position in which the company had found itself, the application for higher wages by the motormen and conductors was justified in view of the increased cost of living. The employes presented to the board very full and carefully prepared statements showing the Winnipeg prices of the various necessities of life, and the great increase which had taken place in such prices in recent years. Both the company and the employes could only be induced to sign the attached agreement after having been assured that the award of a majority of the board would be along the lines set forth in the agreement. Throughout all our endeavors the spirit of conciliation and a sincere desire to reach an

amicable conclusion was evinced, and the board desires to express its appreciation of the fairness and courtesy which marked the conduct of all parties and their representatives alike to the board and to one another, and we feel assured that the good feeling which has heretofore existed between the employes and the company's officers will long prevail. The board expresses its gratitude to all parties concerned for the assistance given in the investigation and the spirit of fair play that was exhibited."

Following are the rates paid up to May 1 and the current ones under the new agreement per hour:—

	Old.	New.
1st 6 months	25c	28c
2nd 6 months	27c	30c
2nd year	28c	31c
3rd year	31c	33c
Over 3 years	34c	36c

Extra conductors and motormen reporting regularly at the company's stated times, according to present system, every day during the week, and ready and able to work, to be paid a minimum wage of \$9 a week. Wages to be paid semi-monthly on the 15th and last days of month, as nearly as possible. Overtime on public holidays to be paid at rate of time and a half; exhibition time and other similarly busy days included. Sunday work to be paid at the rate of 10 hours pay for 8½ hours work, which shall constitute a day's work on Sundays. Conductors and motormen training students to be paid 25c a day extra while so engaged.

Following are some of the other principal provisions of the agreement: Neither the company nor the employes will discriminate against any employe because of his being, or not being, a member of any street railway employment union. Free transportation to be given all conductors and motormen on Winnipeg Electric Ry. when in uniform, or producing a badge furnished by company. Free transportation to be given conductors and motormen on the company's outside lines, on application to general office. Maximum number of passes for any one day to be 10. Passes to be good on any day except holidays. Conductors to be supplied with tickets and change to value of \$25.

Each conductor to be given a uniform pea jacket, and each motorman a uniform overcoat every two years. Any conductor or motorman leaving the service within six months may return the coat by paying \$1 a month for the time he has had it, or may keep the coat by paying for it, less \$1 a month for the time he has had it. The company to pay half the cost of the first uniforms, all uniforms thereafter to be furnished free. Conductors to be provided with a summer cap each year, and a winter cap every two years, and motormen with summer and winter caps every two years. Conductors and motormen leaving the service within four months after receiving a uniform will be charged full price for it.

The agreement to be in force for one year from May 1, 1917, and thereafter from year to year until changed. Either party desiring to change it on May 1, 1918, or on May 1 of any subsequent year to notify the other party at least 30 days before such date.

The Edmonton Radial Ry. had a car destroyed by fire on the Highland Ave. line, June 13, owing to a trolley wire falling. Estimated loss, \$7,000.

Electric Railway Finance, Meetings, Etc.

The British Columbia Electric Ry. has paid the City of Vancouver \$3,464.32 percentage due for May, an increase of \$334.59 over May, 1916.

British Columbia Electric Ry. and allied companies:

	Apr. 1917	Apr. 1916	7 mths. to Apr. 30, '17	7 mths. to Apr. 30, '16

Cape Breton Electric Co.:

	Apr. 1917	Apr. 1916	Jan. 1 to Apr. 30, '17	Jan. 1 to Apr. 30, '16
Gross ..	\$34,508.77	\$28,234.65	\$138,853.72	\$118,859.79
Exp. . .	21,727.37	18,295.86	85,286.22	76,004.32
Net . . .	12,781.40	9,938.79	53,567.50	42,855.47

The New Brunswick Power Co. has placed on the Canadian market \$250,000 of its issue of \$1,000,000 of 7% cumulative first preferred stock, the other \$750,000 having been taken in the United States. The company owns the street railway and other properties formerly owned and operated by the St. John Ry. Co. It has an authorized issue of \$2,000,000 of common stock; \$3,500,000 of first preferred cumulative 7% stock; \$1,500,000 of second preferred non-cumulative 7% stock, and an authorized bond issue of \$5,000,000, of which there is outstanding \$2,000,000 common stock; \$1,000,000 first preferred stock; \$350,000 second preferred stock, and \$1,750,000 of 5% bonds due 1937.

Nova Scotia Tramways & Power Co.—A half yearly dividend of 3% on preferred stock has been declared payable July 2.

Sherbrooke Ry. & Power Co.—It was reported to the Sherbrooke, Que., City Council, June 6, that for F. W. Teele, Vice President, S.R. & P. Co. had discussed with a committee the question of the relations between the city and the company. A draft of a new franchise was discussed, as was also a suggestion for the taking over of the company's electric railway interest at a price to be fixed by arbitration. The estimates as to the value of the railway plant vary from \$225,000 to \$275,000. The committee was authorized to further consider the matter before making any recommendation.

Toronto Civic Ry.—Revenue for May, \$22,512.60; passengers carried, 1,325,856; compared with \$18,714.48 revenue, and 1,106,064 passengers carried for May, 1916.

Toronto Ry., Toronto & York Radial Ry. and allied companies:

The London, Ont., City Council has extended to May 1, 1918, the arrangement with the London St. Ry for the operation of Sunday cars.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—A press report states that the company has applied to the Victoria City Council for permission to build a second track on part of its line on Esquimalt Road. (May, pg. 203.)

Edmonton Radial Ry.—Tenders have been asked for the supply of three miles of grooved trolley wire, about 6,720 lb., to replace the wire from 112th St. and Jasper Ave. to 124th St., both tracks, also one track on Alberta Ave., namely from John St. to Alberta and Kirkness Sts. (May, pg. 203.)

London St. Ry.—The City Engineer reported to the City Council recently that the company was doing as rapidly as possible all the work for which it was responsible in connection with the streets being paved.

In connection with a new agreement for the operation of Sunday cars, the question of building a second track on Richmond St. had been raised. C. Currie, President, informed the committee which arranged the matter that if the city would widen the street about 3 or 4 ft. a second track would be laid. (Jan., pg. 30.)

Moncton Tramways, Electricity & Gas Co.—We are officially advised that the city has let contracts for paving about 11 city blocks on High St., 7 city blocks on Main St., 6 city blocks on King St., and 2 city blocks on Mechanic St. The company's lines run on all these streets, and it will have to pay for 8 ft. in width of this paving along its tracks. In consequence of this the track is being fixed to suit the new grade. New cross ties are being put in where needed.

The company has completed a new machine shop with machinery for doing all kinds of machine work, including lathes, drill presses and grinders. All the machinery is motor driven. (June, pg. 243.)

Nipissing Central Ry.—We are officially advised that the only new work contemplated is the rebuilding of the car barns at North Cobalt, Ont., destroyed by fire, Mar. 4.

We are officially advised that the portion of the buildings at North Cobalt, Ont., destroyed by fire recently, will be rebuilt during the summer. Only the car barn and office portions of the building were destroyed the machine shop and sub-station being saved intact.

Nova Scotia Tramways & Power Co.—We are officially advised that it is not proposed to carry out any track extensions in Halifax, N.S., during this year.

Regina Municipal Ry.—The City Commissioners of Regina, Sask., on June 15, took into consideration a report as to the cost of building an additional half mile of track on Pasqua St., in order to convert the red and blue lines into a belt line. Without providing for an interlocking plant and 4 diamonds, the grading, track laying and other work is estimated to cost \$12,000. It was arranged to have the proposal discussed at the next meeting of the city council.

The building of a second track on Elphinstone St. to the exhibition grounds is under consideration. (Jan., pg. 31.)

Sandwich, Windsor & Amherstburg Ry.—The Walkerville, Ont., Town Council, on June 12, ratified an agreement authorizing the company to build a Yon Ottawa St. One of the provisions of the

agreement reserves the town's right to use the road for its own railway, or allow any other company authorized by the town to have its use. The Y is reported to have been installed. (Jan., pg. 31.)

Winnipeg Electric Ry.—The Winnipeg City Council is applying to the Manitoba Public Utilities Commission for an order to compel the company to pay a share of the cost of the projected Provencher Ave. bridge.

By an order in council of Dec. 7, 1914, the Dominion Government provided for the sale to the W.E.R. of certain water power lands on the Pinawa channel, Winnipeg River, upon which the company has erected a large hydro electric power plant from which power is being delivered in the City of Winnipeg. Subsequent to the passing of this order the Department of Justice ruled against the selling of water power lands. After considerable negotiations the company agreed to accept a lease of the lands in question, which was granted under a recent order in council. The area of the lands leased is 567.20 acres; the lease is to be for 21 years renewable in perpetuity, but at a rental to be fixed with each renewal period of 21 years. The rental of the present lease is 50c an acre. (Nov., 1916, pg. 425.)

Additional Cars for London Street Railway.

The London St. Ry. has ordered in the U.S. 5 single truck, single end, p.a.y.e. cars for early delivery, though it is not anticipated that they will be obtained until December. They will be of the same type as those ordered in 1913, which were fully described and illustrated in Canadian Railway and Marine World for Dec., 1913, and Jan., 1914. Those cars were originally built with 10 cross seats, 2 longitudinal seats and 3 stationary seats, 2 longitudinal and 1 cross; the 2 longitudinal and 1 cross seats being at the forward end, and the rear end being occupied with 2 longitudinal seats; the aisle ran through the centre of the car. This arrangement was changed after the cars had been in service some time, experience showing that more aisle space could be obtained by arranging the cross seats on one side of the car, and placing a longitudinal seat the entire length of the car on the other side. This system will be followed in the new cars, viz.: a longitudinal seat along the left hand side of the car, and 5 cross seats and 2 longitudinal seats on the right hand side of the car. The longitudinal seat has a hand rod above it, instead of straps, and this is considered to be of greater convenience and utility than the usual hand straps. The longitudinal seats accommodate one less passenger than the cross seats. All seats are padded and covered with rattan, no springs being used, thus avoiding all trouble due to broken springs. The cars will be 32 ft. 4 in. long over all, with bodies 20 ft. 8 in. long. They will be 8 ft. 2 in. wide over sheathing. The cars ordered in 1913 cost approximately \$4,500 each, but the ones just ordered will cost about \$6,500 each.

The Edmonton Radial Ry. employees waited on the city utilities committee, June 11, to give reasons for objecting to operate one-man cars. The committee informed the men that it was not intended to run one-man cars throughout the city, and promised to give consideration to other matters raised.

The Ontario West Shore Ry. Fiasco.

The hearing of the case against the Toronto General Trust Co. by T. Stothers and the municipalities of Goderich, Kincardine, Ashfield and Huron, for an accounting of money received and expended in connection with the construction of the Ontario West Shore Ry., was concluded at Toronto, June 15, judgment being reserved. The municipalities guaranteed bonds for \$400,000, and made an arrangement whereby unguaranteed bonds would be issued up to \$200,000, the bonds being secured by a mortgage to a trustee, on the roadbed and assets of the railway. The defendants were appointed trustees, May 1, 1908, and were authorized to issue bonds up to \$15,000 a mile of railway under contract to be built, on certificates signed by the Secretary of the company showing the necessary details. The money realized from the sale of bonds was only to be used for railway purposes and pro rata with the sale of the guaranteed bonds, and payment was to be determined upon progress certificates issued for 90% of work actually done, and signed by the engineer. The balance of 10% was only to be paid on completion of the railway. The railway was never completed, but all the money was paid out, and it is claimed that the trustees are liable for the amounts wrongfully paid. The Chief Engineer, V. M. Roberts, admitted having issued progress certificates in blank, while acting under orders from the President, J. W. Moyes, who has since disappeared. Gross negligence is alleged against the Trust Co., the plaintiffs claiming that the company should have taken precautions to see that the certificates were correct and in order.

As announced in our last issue, tenders were received by the liquidator, during May, for the purchase of a quantity of construction material, rails, etc., lying along the right of way. The tender of the Hydro Electric Power Commission of Ontario was the highest received, and was accepted. The prices accepted include: \$40 a ton for track, including rails, fish plates, spikes, etc.; \$45 a ton for a quantity of steel rails, not laid; \$5 per 100 lb. for bolts out of track; \$80 a ton for spikes out of track; \$45 a ton for fish plates out of track; and 5c a lb. for structural steel. The poles and ties were not sold. The prices given above will enable the liquidator to realize about \$120,000 on the materials mentioned.

Jitney Traffic Notes.

In Vancouver 285 jitneys have been licensed this year, and 347 men have qualified as drivers.

In Winnipeg the question of bonding jitney owners is still under consideration. The Automobile Club, which brought the matter forward, does not desire to interfere with the business except to the extent that necessary protection be afforded to the public.

The Guelph Radial Ry. hauls freight to the Ontario Agricultural College under an agreement made a number of years ago. A deputation, representing the city council, which owns the railway, was, on June 13, instructed to wait upon the Ontario Government in regard to the matter. The city contends that the rate paid for freight does not pay the cost of haulage, owing to the great increase in the cost of labor, etc., since the agreement was entered into.

Mainly About Electric Railway People.

J. G. Kilt, President of the projected Morrisburg & Ottawa Ry., died suddenly in Ottawa recently, aged 54.

W. J. Carrique, President, Canadian Street Car Advertising Co., who died at Montreal, Aug. 15, 1916, left an estate valued at \$476,611, including 1,298 shares in the company, valued at \$31,000.

W. Hodge, formerly Manager, Cornwall Ry. Light & Power Co., and Stormont Electric Light & Power Co., was presented with a silver desk set by the employes of the two companies, on June 17, on leaving.

Charles Lewis Wilson, who has been elected President, Canadian Electric Railway Association, was born at Boston, Mass., May 23, 1871, and from 1888 to 1891 was Master Mechanic, Eureka Milling Co., Toronto; 1891 to 1892, in Freight Department, G.T.R., Montreal; 1892 to 1904, in different positions on Toronto Ry.; 1904 to 1907, Traffic Manager, Toronto & York Radial Ry., Toronto; and since 1907, Assistant Manager, same company.

Arthur Gaboury, who has been re-elected a member of the Canadian Electric Railway Association's executive committee, was born at Montreal, April 6, 1875, and entered Montreal Street Ry. Co.'s service, June 4, 1894, since when he has been, to Oct., 1900, conductor and motorman; Oct. to Nov., 1900, Assistant Inspector; Nov. to Dec., 1900, night clerk, Cote St. barn; Dec., 1900, to Sept., 1903, day chief clerk, St. Denis; Sept., 1903, to May, 1906, Claims Agent; May, 1906, to 1907, Assistant Superintendent; and from 1907, Superintendent, which position he still occupies in Montreal Tramways Co.'s service.

James Dewar Fraser, director and Secretary-Treasurer, Ottawa Electric Ry., Ottawa, who has been re-elected a member of the Canadian Electric Railway Association's executive committee, was born at St. Andrews, Que., Mar. 26, 1851. From 1871 to 1882, he was accountant and telegraph operator, W. McClymont & Co., Ottawa; 1882 to 1891, Secretary-Treasurer, Ottawa City Passenger Ry.; in 1891 he was appointed Secretary-Treasurer, Ottawa Electric Ry., which position he still holds. In 1893 he was also appointed Secretary-Treasurer, Ottawa Car Co., now Ottawa Car Manufacturing Co., and in 1906 he was elected a director. In 1903 he was elected a director of the Ottawa Electric Ry. Co., and in 1914, also a director of the Ottawa Traction Co. In addition to these positions he is a director and Secretary-Treasurer, Wallace Realty Co. He was Vice-President, C. E. R. A. for 1914-15, and President 1915-16.

E. P. Coleman, who, as immediate past President, continues as a member of the Canadian Electric Railway Association's executive committee, was born at Taunton, Mass., June 14, 1867, and educated at the public schools there. He was from Feb. 9, 1885, to Feb. 9, 1896, in the Huber Printing Press draughting room at the shops of the Taunton Locomotive Manufacturing Co., with which his father and grandfather had been associated for many years; Jan. 1, 1896, to Sept. 1, 1900, Treasurer and General Manager, Attleboro Steam & Electric Co., Attleboro, Mass.; May 5, 1898, to Mar. 31, 1899, in U.S. service during the Spanish War as Second Lieutenant and Battalion Adjutant, 5th Massachusetts Infantry; July 1,

1899, to Sept. 1, 1900, General Manager, Plymouth Electric Light Co., Plymouth, Mass.; Sept. 1, 1900, to June 1, 1905, Vice President and General Manager, Consolidated Lighting Co., Montpelier, Vt.; June 1, 1905, to Mar. 1, 1907, in practice as consulting engineer, general, electric light, power, railway and quarry work, and Treasurer and Manager, Wetmore & Morse Granite Co., Montpelier, Vt.; Mar. 1, 1907, to Jan. 1, 1909, General Manager, Great Northern Power Co., Duluth, Minn.; Mar. 1, 1909, to Oct., 1912, Manager of Railways, and since Oct., 1912, General Manager, Dominion Power & Transmission Co., Hamilton, Ont. He has been a member of the Canadian Electric Railway Association's executive committee for several years, and was Vice President for 1915-16 and President for 1916-17.

Electric Railway Notes.

Edmonton Radial Ry. car barn mechanics are to have their wages increased to 50c an hour.

The Ontario Railway and Municipal Board, on June 19, confirmed the new schedule of fares for the Port Arthur Civic Ry. and the Fort William Municipal Ry.

The Ontario Railway and Municipal Board has approved the International Ry.'s standard freight tariff of maximum mileage tolls, O.R.B. no. 1, to be governed by Freight Classification 16.

The Montreal City Attorney advised the Board of Control, June 5, that the contract made with a company on June 12, 1912, to operate a system of auto-busses in the city was null and void, because the company had not carried out its obligations within the time required.

The Montreal Tramways Co. proposes to prevent the practice of riding on the steps of its cars by fitting cars with a device which will close doors to prevent any additional passengers getting on. The device was tested in the presence of the City Engineer recently.

The Calgary Municipal Ry.'s car formerly used on the Ogden St. line, was partially destroyed by fire, June 10. T. H. McCauley, Superintendent, has recommended the commissioners to reconstruct the car as a combined freight and passenger car for use as required on the Ogden, Bowness and Sarcee lines.

The Vancouver, B.C., City Council has instructed its solicitor to notify the British Columbia Electric Ry. that the corporation holds the company responsible for damage done to the city's water system through electrolysis. A conference is being arranged between the officers of the council and the company.

The Toronto Suburban Ry. has bought three semi convertible, p.a.y.e. cars from Tuscaloosa St. Ry., Tuscaloosa, Ala., and also an express car and snow plough from Ridgeway, Pa. All of the foregoing have been received, in addition to four large interurban cars from Preston Car & Coach Co.

The British Columbia Legislature has authorized the Vancouver City Council, subject to certain conditions, to own and operate power plants. The city has for some years been prevented from developing hydro electric power plants for the supply of light and power, owing to a section in the corporation act of 1895, which gave a practical monopoly to the British Columbia Electric Ry.

The Mayor of Toronto stated, June 16, that valuers appointed by the city and

the Toronto & York Radial Ry. had submitted figures relative to the proposed purchase by the city of the T. & Y.R.R. Metropolitan Division. If a satisfactory settlement cannot be arrived at after negotiation, the matter will, it is said, be submitted to arbitration.

One the latest type of one-man cars put on the Calgary, Alta., Municipal Ry., June 13, the front gates, where passengers make exit and enter, are equipped with folding steps, which are closed when the door is shut. This makes it impossible for persons to run and jump on the step before the car comes to a stop. Similarly, the door, after being opened, cannot be closed as long as a passenger has even one foot on the step. This obviates any possibility of a portion of a passenger's coat or skirt getting caught when the door is closed by the motorman before the passenger has fully alighted.

The Toronto Suburban Ry. service, on its extension from Lambton to Guelph, Ont., is being improved to meet the increasing business offering. Additional cars are being placed on the route, and service is being given as follows: Lambton to Guelph, 2 trips a day; Lambton to Georgetown, 3 trips a day, and Lambton to Cooksville, 8 trips a day. For the present, the large interurban cars operated on this route will not be run into Toronto, passengers transferring to the lighter built cars at Lambton. The Sunday traffic is increasing steadily, and a 2-car train is run each way on that day to accommodate passengers.

Edmonton Municipal Railway and Other Public Utilities' Results.

A. G. Davidson, City Commissioner, has supplied the following statement for the year 1916:

Electric light and power ..	\$196,255.16	\$64,788.82
Waterworks ..	173,220.90	24,410.04
Telephone ..	167,965.95	9,570.84
Power house (up to June 30, 1916) ..	119,468.34	39,430.71
	\$656,910.35	\$138,200.41
Street railway ..	132,755.88	\$119,597.66
	\$789,666.23	\$18,602.75

* Deficit.

In commenting on the foregoing, the City Commissioner says: "Taking the utilities as one corporation, they show a surplus of \$789,666.23 over and above operation and maintenance expenses, and a surplus of \$18,602.75 over all charges. In this connection it may be pointed out that a private corporation does not lay aside what is known under municipal ownership as a sinking fund, to retire debentures at the end of a certain number of years. It would be sufficient for a private corporation to pay to its shareholders a moderate rate of interest on their shares and lay aside a certain amount for future contingencies, but utilities operated by a municipal corporation are not only required to pay all operating, maintenance and depreciation charges and interest, but are also compelled to put aside a large sum each year into the sinking fund for the redemption of the capital moneys invested, which is no doubt the safe thing to do, but when comparing municipal ownership with private ownership, this fact should be borne in mind. The street railway has a surplus of \$132,755.88 over operation and maintenance expenses, and is earning 4 1/3% on the capital invested, and showed a betterment of \$16,161.05 over 1915, which is considered satisfactory."

Marine Department

Launching of Canadian Government Vessels in Toronto.

One of the most unique, interesting, and probably unprecedented, events in Canadian shipbuilding, took place at the Polson Iron Works, Ltd., shipyards, Toronto, on June 16, when, starting at noon, four steel hulls for steamships for the Dominion Government were launched within 14 minutes. Six keels were laid early in May, four of the hulls were

down draught, and working at 180 lb. steam pressure. The vessels will be fitted with electric light, are steam heated, and have evaporating outfits fitted complete for salt water service. The machinery, boilers, auxiliaries, spars, booms and joiner work were all ready for installation when the launching took place, and the company expects to make a record in

Maximum speed, 158 ft. a minute.
Maximum list, 22°.
Metricentre in launching condition, 3 ft. 2 in.
Launching attachment used, tricker and sling.
Weather, cloudy and cool.
Total time required for 4 vessels, 14 minutes.

The christening of the vessels was performed by Mrs. Hugh McKay, of St. John, N.B., and Miss Hazen, daughters of Hon. J. D. Hazen, M.P., Minister of Marine and

Profile and Plan Views, Canadian Government Vessels built in Toronto.

launched on June 16, as stated above, and the other two were expected to be ready by the end of June, or early in July.

The dimensions of the vessels are: length over all, 140 ft.; breadth, 23½ ft.; depth moulded, 13½ ft. The machinery will consist of fore and aft compound surface condensing engines; cylinders 18 and 38 in. in diameter x 24 in. stroke, developing 500 h.p. The boiler equipment will consist of water tube boilers, having

the delivery of the vessels during July, which will anticipate the contract delivery date by about two months.

Following are details of the launching arrangements, etc.:

Travel from keel to end of ways: Outside boats, 18½ ft.; inside boats, 49½ ft.
Pitch of ways, 1¼ in. to 1 ft.
Area of sliding ways, 120 sq. ft.
Weight per ft. of sliding ways, 2,500 lb.
Lubricant, 100 lb. tallow; 12 lb. soft soap, per hull.
Number of ways used, 4 per pair of boats.
Hulls listed shorewards, 16°.
Weight of each hull, 150 tons.

Fisheries, and who was present, together with G. J. Desbarats, C.M.G., Deputy Minister of Naval Service, and Admiral C. E. Kingsmill, Director of Naval Service, as well as a number of prominent Toronto citizens. As the four hulls were launched, they were christened Ypres, Vimy, Messines and St. Julien, respectively. The other two will be christened St. Eloi and Festubert. The general arrangements were in charge of J. B. Miller, President, and A. H. Jeffrey, Manager and Secre-

tary, Polson Iron Works, the launching being directly in charge of W. Newman, the company's Naval Architect and Works Manager. After the launching refreshments were served to the invited guests in a marquee in the company's yard.

Mr. Hazen, in the course of a brief speech, said: "The successful termination of the war will depend, to no small extent, on the ability of the British Empire and our allies to maintain sufficient shipping to carry on essential trades. The successes that we have achieved all along since the war commenced are due in no small measure to the efficiency of the British and allied mercantile fleets. Lloyd George has said quite recently that one of the best ways of carrying on the war is by the production of ships, and then more ships. Let me remind you that the losses to shipping, as the result of submarines and other enemy agencies, have been enormous, although they have not

Canadian shipyards merchant steamships totalling approximately 150,000 tons carrying capacity. The cost of producing this tonnage will be in the vicinity of \$25,000,000. In addition, there are building in various Canadian yards wooden vessels aggregating a total carrying capacity of about 30,000 tons."

Referring to the obstacles encountered by Canadian shipbuilders before the war, Mr. Hazen said that owing to the small wages paid in shipyards in Great Britain it was almost impossible for Canadian firms to enter into competition. After the war Great Britain will require all the tonnage that will be available to transport troops to the colonies and take care of her commercial interests. He stated that in connection with the operations at Saloniki there were over 200 ships engaged in the commercial trade. He predicted that after the war there would be a great development in the shipbuilding

Canadian Government Vessels on the Ways in Toronto.

This illustration shows the four hulls just prior to being launched on June 16. Two other hulls will be noticed at the back of the picture.

nearly approximated the Germans' boastful expectations and predictions. They have, nevertheless, been serious, totalling up to the end of April last about 5,811,100 tons. How stupendous this loss is, you will understand when I point out that the replacement value approximates, if it does not exceed, one thousand million dollars. But, notwithstanding these enormous losses, there is the comforting thought that the construction of new ships has, during the period of the war, been well maintained, more especially by Great Britain and the United States.

"Without entering into any details, I may say that the total of the world's mercantile marine tonnage at the close of 1916 was 48,683,136 tons. Even if it should so happen that the present ratio of destruction should be maintained for another year or, say, until the end of June, 1918, if we maintain the present ratio of construction, the net reduction of the world's tonnage would be only about 2%. Recent reports, however, go to show that there is no probability of the present ratio of destruction being maintained. There is tremendous activity in ship construction in Great Britain, the United States and Japan, and there is evidence that the ratio of construction in the Canadian shipbuilding yards from coast to coast will be more than maintained. There are at present under construction in Can-

adian shipyards merchant steamships totalling approximately 150,000 tons carrying capacity. The cost of producing this tonnage will be in the vicinity of \$25,000,000. In addition, there are building in various Canadian yards wooden vessels aggregating a total carrying capacity of about 30,000 tons."

industry of Canada, a condition which would prevail for some considerable time. In fact, he believed that shipbuilding would eventually be one of the greatest of Canada's commercial industries.

Insuring U. S. Seamen.—The U. S. Treasury Department announces the completion of arrangements for the insurance against war risks of masters, officers, and crews of U. S. merchant vessels by the Bureau of War Risk Insurance of the Treasury Department in accordance with the provisions of an act approved June 12. Policies thus protecting seamen of the U. S. merchant marine will be issued by the bureau in connection with vessels sailing from the U. S. on and after June 26 and vessels sailing from abroad to the U. S. on and after July 10.

Channel Markings in Shoal Water in the St. Lawrence.—In some shoal waters, especially on the coast of the Gulf of St. Lawrence, it is the practice to mark the edges of channels by driving bushes or balises in the mud banks along the edges of the deeper water, instead of, or in addition to, buoys. The Marine Department announces that hardwood bushes are to be used on the starboard side of the channels, and evergreen bushes on the port side.

United States Committee on Inland Water Transportation.

The Council of National Defence has appointed an inland water transportation committee, with Gen. W. M. Black, Chief of Engineers, U.S. Army, as chairman. Daniel Willard, President Baltimore & Ohio Rd., and chairman of the council's advisory commission, who has special charge of matters relating to transportation, is a member ex officio. The other members of the committee are: W. S. Dickey, vice chairman, Kansas City, Mo., President Kansas City-Missouri River Navigation Co.; George E. Bartell, President of the Philadelphia Bourse; Capt. J. F. Ellison, Cincinnati, formerly secretary of the National Rivers and Harbors Congress; Joy Morcon, Chicago, director in many financial, mercantile, and transportation companies; J. E. Smith, St. Louis, President Mississippi Valley Waterways Association; M. J. Sanders, President New Orleans Board of Trade, representative Harrison-Leyland Lines; Lieut. Col. C. Keller, of the Corps of Engineers, who will act as secretary of the committee.

It will be the committee's duty to bring together the companies engaged in inland water transportation, including those on the Great Lakes, in order to meet the war situation and increase and make more efficient the freight carrying facilities of the country's waterways. It is hoped through the committee's agency to aid in some degree in meeting the existing shortage of freight cars in the sections where water transportation is possible.

Shipbuilding in the United States for War Needs.

The United States Shipbuilding Board, Emergency Fleet Corporation, which has charge of the U. S. Government's programme for building cargo steamships, is composed of five trustees, namely, Wm. Denman, San Francisco, President; General G. W. Goethals, New York, General Manager; J. A. Donald, New York; W. L. Solean, R. H. Bailey, Jr., T. C. Abbott and E. P. Bertholf, Washington.

Canadian Railway and Marine World was informed some little time ago that the Emergency Fleet Corporation would build 1,000 wooden cargo ships, especially for the Atlantic traffic. We are now advised that it is expected that approximately 200 wooden steamships, and 350 steel ships, will be built under the corporation's supervision within the next 18 months. The approximate dimensions of the wooden ships are: length 290 ft., beam 46 ft. The steel ships will differ in size, depending on the type that the shipyards are capable of building, or have been in the habit of building.

On June 19 it was announced that the following contracts had been given:—Seattle Construction & Drydock Co., Seattle, Wash., 10 steel steamships; Foundation Co., Newark, N.Y., 10 wooden hulls; Groton Iron Works, Noank, Conn., 12 wooden hulls; Ship Construction & Trading Co., Stonnington, Conn., 2 wooden hulls; Sanderson & Porter, New York, 10 wooden hulls; Maryland Shipbuilding Co., Baltimore, 6 wooden hulls.

Gen. G. W. Goethals, General Manager, U. S. Shipping Board, Emergency Fleet Corporation, has ordered through the Southern Pine Emergency Bureau lumber for 100 ships to be sawed by the southern mills at an average price of \$35 per 1,000 ft. at the mills.

Government Statements on Shipbuilding in Canada.

In the House of Commons on June 1. Hon. W. Pugsley asked if the government had any information to give in regard to building of wooden vessels in Eastern Canada and said that the Imperial Munitions Board in giving 2,500 tons as a minimum for the vessels they were ordering for the British Government were discouraging shipbuilding in Eastern Canada. The Minister of Marine, in replying, and in the course of further discussion, said among others: "The reason why the Imperial Munitions Board is not prepared to place contracts for wooden vessels of less than 2,500 tons is because of absolute instructions on that point from the British Government, and the vessels which the British Government wish are limited to 2,500 tons, and they are not, up to the present, willing to authorize the building for them of smaller vessels. That is a policy, of course, which they have to determine; they are the owners of the vessels; and it is for them to declare what sort of vessels they require. The junior member for Halifax stated the other night that vessels of that size could not be built in the Maritime Provinces, because it was impossible to secure the lumber to build them. I communicated this statement both to the Colonial Secretary and to the Director of Shipping, Sir Joseph Maclay, pointing out that I trusted they would reconsider the matter, and that in the public interest they would see whether or not vessels of a smaller size were desirable for their purposes, and, if they were, that orders would be placed in Canada for their construction. I have not received an answer to that communication yet. The answer, of course, has to be decided by the British Government, through the Imperial Munitions Board. There are being constructed in Nova Scotia at present by private individuals 48 wooden vessels, the builders believing that there will be a good margin of profit on vessels of that sort, and that it will prove a profitable undertaking. The information I have is to the effect that the vessels are from 1,500 tons down to about 100. The junior member for Halifax, however, said that he did not think any vessels were being built in the province as large as 1,500 tons. He said that the largest under construction would be no more than 1,000 tons, and I think he even mentioned 600. If that is the case, the information that was sent to me by a gentleman who I thought was very well informed as to conditions in Nova Scotia, must be erroneous.

The junior member for Halifax pointed out the very great difficulty there would be in building large wooden ships in the lower provinces on account of the difficulty in getting timber. Still, there considerable activity in shipbuilding in Nova Scotia, as is evidenced by the 48 vessels now under construction. From the information I have received there is no need to give a bonus to encourage the construction of wooden vessels. The reason is that these vessels can be built and operated at a very substantial profit, providing they escape the submarines and mines, on account of the high freight rates.

The question of building ships in this country for use after the war, to be owned by this government, is a very important one. Hon. gentlemen will, of course, understand that it would involve the expenditure of a very large sum, and at present when such very large sums have

to be raised for carrying on the war, the question of raising additional millions would cause the Finance Minister a great deal of concern; it is a policy that cannot rashly be undertaken, but will require the most careful consideration. If private individuals are willing to go into the building of ships of this sort, the government would not be justified, I think, in entering into competition with them. One of the difficulties in the past about private individuals entering into the building of ships in this country has been the danger of having the ships, after they were completed, commandeered for war purposes, and if commandeered by the British Government they would not earn the ordinary commercial rates, which have been fixed by a special committee in England and which are not as high as the ship could earn under private ownership.

There are under construction at the Vickers works in Montreal 6 cargo steamers of 7,000 tons each. Other vessels are also being constructed at that yard, one of 2,630 tons, and others of less tonnage. The shipyard employs over 2,000 men and keeps them as busy as possible. At the Davie shipbuilding yards, Levis, there is a steel vessel of 5,000 tons being constructed. At Sorel, in certain private shipyards, there is a great amount of activity in shipbuilding. Near Quebec, on the Island of Orleans, a company with which James Playfair is connected, is building 4 wooden ships of from 1,500 to 2,000 tons, and I am informed that a large portion of the lumber is being brought from British Columbia. A gentleman was here today who is largely engaged in shipbuilding, and he states that he has made arrangements for bringing a large quantity of British Columbia lumber to points on the St. Lawrence, where he is going to construct some 8 or 10 wooden ships, as large, I presume, as those that are being built on the Island of Orleans, from 1,500 to 2,000 tons each. The ships that are being constructed at the Island of Orleans are well on the way to completion, and work has been commenced on two others.

The Nova Scotia Steel and Coal Co., of New Glasgow, N.S., has under construction three cargo steamships of a total tonnage of 6,800. The Shelburne Shipbuilders Co. is building a wooden cargo steamer of 320 tons. Robert Rutledge, of Sheet Harbor, N.S., is building a wooden cargo steamer of 325 tons. The Quebec Shipbuilding and Repairing Co., Isle of Orleans, is building two auxiliary schooners of 2,490 tons, and a tug boat is being built at Sorel of 410 tons. In addition, there is a large amount of other construction which I do not care to speak about here, going on at the Sorel shipyards, at the Davie works, Levis, at Polson's, Toronto; at Canadian Vickers, Montreal, and at other shipyards throughout the country. On the Great Lakes the Port Arthur Shipbuilding Co. is building 4 cargo steamships aggregating 9,748 tons. The Collingwood Shipbuilding Co. is building one steel cargo steamship of 7,988 tons, and two steel oil tankers of 4,800 tons. The Polson Iron Works, Toronto, are building 2 cargo steamships of 4,400 tons each and 6 cargo steamers of 3,500 tons each, in all 8 steamships, in addition to other marine construction work which is going on there. The Thor Iron Works, Toronto, has two steel cargo steamships in the stocks of 5,000 tons

each. The Georgian Bay Shipbuilding and Repairing Company, Midland, Ont., launched a large steamer there recently and other construction is in progress. On the Pacific coast a great deal of shipbuilding is carried on. The Coughlin Co. has a contract for 5 large steel steamships of 8,800 tons each, and in the Wallace yards 2 steel vessels of 4,600 tons each are in course of construction.

"I have a list of wooden vessels being built at points on the Atlantic coast aside from those that are building under contracts placed by the Munitions Board. This list is complete so far as I know at present. It may not be uninteresting to call attention to the fact that the British authorities have issued an order excluding sailing vessels from the war area. This step has been taken because of the risk to which these vessels are exposed from submarines, through their inability to escape. In reaching this decision the authorities are moved, I assume, by the consideration, not only of loss of vessels, but of the loss of cargoes as well. They have made a request of us to adopt the same policy and to exclude Canadian sailing vessels from the war area. I suppose that the possession of auxiliary power by a vessel would make the danger much less, and I should think that would make a difference. The following is the list of wooden sailing vessels now under construction, the figures appended giving the gross tonnage:

J. W. Comeau, Comeauville, N.S., 1 schooner, 329.
Dr. McDonald, Meteghan, N.S., 1 schooner, 544.
John Deaveu, Meteghan, N.S., 1 schooner, 400.
I. Comeau, Little Brook, N.S., 1 schooner, 250.
O. Blinn, Grosses Coques, N.S., 1 schooner, 350.
Therault Bros., Belliveau Cove, N.S., 1 schooner, 350.
J. N. Rafuse, Bridgewater, N.S., 3 schooners, 755.
Leary & Sons, Bridgewater, N.S., 2 schooners, 265.
Robar Bros., Bridgewater, N.S., 1 schooner, 130.
William Naugler, Bridgewater, N.S., 1 schooner, 300.
W. R. & C. A. Huntley, Parrsboro, N.S., 1 schooner, 490.
Wagstaff & Hatfield, Port Greville, N.S., 1 schooner, 400.
G. M. Cochrane, Fox River, N.S., 3 schooners, 1,349.
James E. Pettis, Spencer's Island, N.S., 1 schooner, 425.
T. K. Bentley, Advocate Harbor, N.S., 1 schooner, 449.
Esther Harkinson Shipping Co., Belliveau Cove, N.S., 1 schooner, 360.
Peter McIntyre, St. John, N.B., 1 schooner, 450.
Southern Salvage Co., Liverpool, N.S., 2 schooners, 530.
J. S. Gardner, Liverpool, N.S., 1 schooner, 340.
W. K. McKean Co., Liverpool, N.S., 1 schooner, 400.
Albert Parsons, Walton, N.S., 1 schooner, 400.
G. A. Cox, Shelburne, N.S., 1 schooner, 200.
W. C. McKay & Son, Shelburne, N.S., 4 schooners, 620.
Estate Joseph McGill, Shelburne, N.S., 1 schooner, 160.
J. Ernst & Son, Mahone Bay, N.S., 2 schooners, 520.
J. McLean & Sons, Mahone Bay, N.S., 1 schooner, 95.
Smith & Rhuand, Lunenburg, N.S., 3 schooners, 332.
Lewis Hardwood Co., Lewiston, N.S., 2 schooners, 1,000.
J. Brown, Public Landing, N.S., 1 tow barge, 50.
E. F. Williams, Dartmouth, N.S., 1 schooner, 350.
Quebec Shipbuilding & Repairing Co., St. Laurent, Que., 2 schooners, 2,600.
C. Griffin, Isaacs Harbor, N.S., 1 schooner, 40.
J. A. Balcom Co., Ltd., Margaretsville, N.S., 1 schooner, 400.
J. X. Lenteigne, Lower Caraquet, N.B., 1 schooner, 28.
Metechan Railway & Shipbuilding Co., Meteghan, N.S., 1 schooner, 470.
Shelburne Shipbuilders, Ltd., Shelburne, N.S., 1 schooner, 350.
R. Rutledge, Sheet Harbor, N.S., 1 schooner, 300.
J. W. Raymond, Port Maitland, 1 schooner, 375.
Robin, Jones & Whitman, Liverpool, N.S., 1 schooner, 340.

"None of these vessels is large, but the list shows that there is a very considerable activity in shipbuilding. The people of the Maritime Provinces, so far as I can learn, have not shown much anxiety to engage in the building of larger vessels.

"Six or eight months ago a gentleman who was interested in shipbuilding in Montreal told me he was going to proceed with the construction of 10 schooners from 2,500 to 3,000 tons each, and that he would as soon build them in the Maritime Provinces as anywhere if there were people there to take the contracts. I communicated with the St. John Board of Trade and others in St. John, and told them of that proposition. After enquiry my correspondents wrote me that they could not find anybody who was willing to enter into a contract for the construction of such vessels at that time. The question of price was not raised; it would have been satisfactory. These people said that shipbuilding in New Brunswick had become almost a lost art. It flourished years ago. In those days there used to be ship carpenters, sail makers, caulkers, and other ship's tradesmen, but these have pretty well disappeared. At any rate the parties with whom I communicated could not find any one willing to enter into a contract for the construction of these ships. I say this to show that at present there are difficulties in the way of constructing vessels of large size. This applies especially to New Brunswick. In Nova Scotia shipbuilding has been better maintained, schooners and other vessels have always been built in that province, and that accounts, probably, for the greater shipbuilding activity in Nova Scotia to-day. As I understand it, if there are builders who will build what the British Government requires—and they must be the judge of their own requirements—they will have no difficulty in getting contracts from the Imperial Munitions Board.

There is no doubt that there is a greater development of shipbuilding in Canada than the country has known for many years. I believe as a result of what is going on today the shipbuilding yards in Canada will be placed in a considerably better position than they have been at any time during the past 25 or 30 years. I further believe that when the war is over they will be able to compete on more even terms with the shipbuilders of the United Kingdom. But up to the present Canadian shipbuilders have had no protection. British registered ships built in the Old Country have come into our ports to compete with the ships that were built in this country without paying any duty even upon their equipment and the things that were necessary to enable them to sail their ships. But, there has been an enormous advance in wages in the United Kingdom. My belief is that wages there after the war is over, will never get down to the point at which they were before the war and which gave the shipbuilder there an undue advantage in competition with the shipbuilders in this and other countries. Wages in the United Kingdom are quite as high as they are in Canada and I do not believe they will come down for some years, because there will be great activity after the war is over in building ships. The troops will have to be brought back, the munitions and equipment will have to be brought from the front and in consequence of submarine attacks there will be fewer ships than there were at the outbreak of the war. To carry on the business of the world

there will be a great demand for ships, in consequence of which the shipyards of Great Britain and Canada will have a great deal of work to do and they will require to build a good many ships for carrying on the business for some years to come. I expect the Canadian shipyards, with the impetus they are getting now, will be able to compete with the shipbuilders of the United Kingdom. You find shipyards with contracts for 6 and 8 large ships and as a result their yards will be better equipped and in a very much better position to compete than they were before.

"Some contracts were placed in Canada for neutral governments or owners with the full approval of the British Government. That approval was obtained before the contracts were entered into. In most cases these vessels have in the course of construction been commandeered for the British Government and instead of flying the flag of neutral countries they will fly the British flag and be used for the purposes of Great Britain in connection with the war and the carrying on of her trade."

In the course of the discussion the Minister of Trade and Commerce said:—"The Imperial Munitions Board are building such vessels as they are building on the order of the British Government, and they build to the specifications that the British Government requires. The Canadian Government is furnishing no shipyards, making no contracts, planning and building no vessels other than the 2,500 tons vessels that are being built by the Imperial Munitions Board."

Grounding of the s. s. Cape Corso.

An investigation was held recently into the causes of the grounding of the s. s. Cape Corso in the vicinity of Cape Chat in the Gulf of St. Lawrence, May 15. Following is a summary of the judgment given in Montreal, by Capt. L. A. Demers, Dominion Wreck Commissioner, concurred in by Capt. F. Nash and C. Lapierre, as nautical assessors. After reviewing the evidence, the court finds that the story as told by the master, Capt. A. Henderson, does not correspond with the entries in the scrap log. Where he stated straight courses had been steered from Fame Point to the scene of the casualty, the log indicates that varied courses were steered. The court has a suspicion that the master attempted to mystify it when he stated that immediately before the vessel struck he went to the bridge and ordered full speed astern, which he afterwards corrected by saying that the order had been given by the second mate before he reached the bridge. The evidence indicates that the master's actions were not in accordance with what is expected of a careful mariner. He is a stranger in these waters, and said he made good courses in crossing, making Cape Ray as expected, though this is contradicted by the second mate, who said the vessel had to be hauled in in that vicinity. The weather is said to have been thick, the scrap log says rain, and the evidence shows snow. The master says the vessel struck lightly, while the log reports that she struck heavily. The court holds that when a change of course was made, in heading the vessel directly for the land, speed should have been reduced, soundings taken, and the master should have remained at his post until the object for which the course had been changed had been attained. As he failed on these

points, the court holds him at fault, and unhesitatingly affirms that he navigated his vessel carelessly.

An examination of the scrap log reveals the fact that a wholesale erasure of entries formerly made by the second officer for the period prior to, and at the time of the grounding, had been made, and entries concocted subsequently and inserted to correspond with the story told before the court. As a result of this the court was convened a second time to secure a more thorough explanation of the erasures, and the second officer stated that it was the chief officer's suggestion that he erased with a view to abbreviate the entries made. The chief officer offered unsatisfactory explanations regarding the abbreviations, and the master acknowledged having himself made certain entries regarding a course in the place of one erased, but could not recollect what was marked there before. The evidence of the several witnesses differed, in fact the whole evidence and the number of erasures in the scrap log have been very crude attempts to mystify the court. The contradictions in the evidence at both sittings, the tampering with the log, the courses given in evidence and those found in the log, all indicate and cause the court to conclude, that the master did not navigate his vessel prudently, that he attempted to mystify the court, and that he wilfully altered a course entered in the scrap log. The first officer's conduct in advising the second officer to abbreviate his entries on the navigation of the vessel is reprehensible. No other erasures are found in any part of the log. The court reprimands the chief officer, Fred Stark, severely.

The master, in an indirect manner, appeared to reflect on the operation of the Cape Chat fog signal, but enquiries proved that it had been in operation constantly for 32 hours, covering the whole period of the casualty, and for a considerable time before and after the accident occurred.

Since war conditions have existed, the court has exercised leniency, bearing in mind the mental strain to which vessel masters are at present subject, and it is its intention to continue this practice so long as present conditions obtain, with errors of judgment, and when the evidence indicates that elementary precautions have been taken to bring the vessels to their respective destinations without mishap. In this case, had the log not been tampered with in such a barefaced manner, the court would have taken into consideration the fact that the master was surrounded with inexperienced officers and boys of few months experience, who were detailed to steer the vessel, but for the reasons mentioned, the certificate of the master, A. J. M. Henderson, no. 026394 is suspended for two months from May 19. Regarding the second officer, John Shaw, his alteration and erasure of entries in the log, whether voluntarily or under pressure is deserving of the strongest condemnation, and not knowing what led to the tampering, the court does not deal with his certificate, but as he is very young and inexperienced, he is severely censured and reprimanded. The court retains the scrap log for transmission to the Board of Trade in England, with other documents.

A. W. Atwater, K.C., represented the North of England Protective Association, and R. T. Heneker, K.C., looked after the interests of the master and second officer on behalf of the Imperial Merchant Service Guild.

Proposed Government Control of Lake Freight Rates.

Some reference was made in Canadian Railway and Marine World for June to the proceedings of the House of Commons committee, which is dealing with the revision of the Railway Act, especially regarding the clause which gives the Board of Railway Commissioners jurisdiction over the rate for traffic carried by any railway company by sea or by inland water, between places in Canada, so far as deemed applicable by the board, and which clause it was proposed to amend by making it apply to all freight traffic carried by any carrier by water between places in Canada. This amendment was strongly opposed by Francis King, M.A., Counsel for the Dominion Marine Association, as well as by various boards of trade and chambers of commerce and others throughout the provinces chiefly affected.

Mr. King outlined the opposition to the amendment proposed, and reviewed to some extent the opposition made to similar proposals in 1914 and 1915. He emphasized the point that the opposition was to the amendment only, and not to the general clause as it has stood for several years in the Railway Act, and confuted the suggestion made by a member of the committee that the questions dealing with the vessel traffic and railway traffic were analogous. So far as traffic on vessels operated in connection with railways was concerned, the association had no objection to it being under the board's jurisdiction. In the case of a railway, it enjoys a monopoly on the road it uses, and which the government helped to build; it operates between definite points on definite schedules on a fixed roadway. It does not necessarily tie up a whole train and train crew in taking on and unloading freight, and in any event it does not as a rule carry freight and passengers on the same train, although it may so carry express traffic, and it is not subject to marine risks, with insurance against them. Railway traffic does not include the infinite variety of classes of carriers to be found amongst the vessels trading in any one district, which includes everything from a large vessel to a gasoline launch, and it is not subject to variations in carrying capacity due to fluctuations in the available draught of water. Freedom from control of rates as suggested is of itself a remedy for high rates or a monopoly, as it ensures the freedom of absolute competition, not only between boats now on the lakes, but also as a factor in the control of railway rates. Under present conditions the lake carrying companies are working under tremendous difficulties, a large amount of tonnage having been removed from the lakes to the ocean, and rates increase when vessel capacity goes down. From time to time it has been suggested that the coasting laws be abrogated, thus allowing U.S. vessels to compete with Canadian vessels on their own ground. The Dominion Marine Association has consistently opposed this course, but if a reciprocal abrogation were arranged Canadian vessels then could join in the larger traffic on the other side, coal up and ore down. The association has no agreement or understanding amongst its members regarding the regulation of tolls or traffic. A number of years ago some such agreement was made, but it was realized

that a mistake was made, and it was entirely outside the constitution and should never have been attempted. There is no arrangement with any U.S. marine associations or any shipping organization regarding rates, and there never was such an arrangement. The members of the association could be described as common carriers and carriers, as it is contended that so far as the bulk freighters are concerned, they are not common carriers, who are supposed to take whatever is delivered on the dock and carry for the public in the ordinary way as a railway does. He contended that the act as it stands at present should remain in force, so far as the clause under discussion is concerned, that is, that the vessels which carry in connection with the railway companies should come definitely under the board's jurisdiction, in accordance with the words of the statute, but it is not necessary nor desirable to go further. So far as the U.S. is concerned, bulk freight carriers on the Great Lakes are not under the jurisdiction of the Interstate Commerce Commission, but package freight vessels operated in connection with the railway companies were included in the Interstate Commerce Act when it became law. It was then proposed to include in that act the port to port traffic of package freight vessels, but that point was eliminated from the bill. He claimed that the tendency under the board's jurisdiction would be to switch export grain from Canadian to U.S. channels. At present there is more Canadian grain exported from U.S. ports than from Canadian ports, and this, it is claimed, is due to shortage of facilities at Montreal, due partly to the elevators there being used for storage purposes, the longer haul through the St. Lawrence, the higher insurance rates, and the alleged ocean combine, which absorbed any difference made in the tariff on the lake route, which was made in an effort to hold the lake trade to the Canadian ports. The control of tolls and tariffs by the board would be considered most objectionable, not as a question of the vessels' interests, but as not being in the interest of the trade and commerce of the country. It would increase the tendency to drive grain out of the Canadian channel into a channel where it would run through Buffalo. Over 50% of the grain from Fort William runs through Buffalo, chiefly because the shipper orders it by that route, owing to a lower through rate.

Several other speakers were heard by the committee, the objections being more or less the same, with a few additional points of evidence here and there, which strengthened the case against the proposed amendment. The cumulative effect of the evidence, and the strong position occupied by the opposition, caused the committee to strike out the objectionable part which it was proposed to add to the section, thus leaving matters concerning control of lake freight rates as they were.

Permissible Draught on Welland Canal.
—Notice was given recently that from June 15, until further notice, no vessel would be allowed to enter and pass down through the Welland Canal, drawing more than 14¾ ft., and no vessel will be allowed to enter and pass up, drawing more than 14 ft.

Welland Canal Accident.

The wooden steamship Nipigon, owned by W. J. Harlow, Toledo, Ohio, upbound and light, struck and carried out the two head gates of lock 1, Welland Canal, on May 26, about 4.45 o'clock p.m. The vessel and gates were carried out into the harbor below. Owing to the fact that the old and new canals are connected above lock 1, a great quantity of water was released, and it was not possible to close the two foot gates until 4.15 a.m. on May 27, when the water had ceased to lower further. The large quantity of water coming down the old canal, which is used for water power, and from the Cataract Power Co.'s tail race, made it very difficult to close the lower lock gates. When the gates were closed, which operation required but a minute or two, there was a head of approximately 6 ft. of water acting upon them. Two spare lock gates were placed in position and the lock was ready for operation on May 27, at 2 p.m., but navigation could not resume as the reach had not sufficiently filled up. Traffic began again at 6.45 p.m., having been interrupted for 25 hours. About 17 downbound and 4 upbound vessels were delayed for periods varying from the full 26 hours to a few hours.

The Nipigon was not seriously injured. Her propeller was badly damaged, two of the blades being broken off when the boat was carried by the rush of water into the west docking. The estimate of the cost of repairing the damage to canal property is \$4,000. It appears that the accident was due to excessive speed of the vessel in entering the dock. The engines were not working ahead, but centred. They could not be reversed in time to avert the collision with the upper gates. A wire cable placed on a snubbing post slipped through the compressor.

Shipbuilding Possibilities at Quebec.

The Quebec Board of Trade, of which J. G. Scott, ex-General Manager, Quebec & Lake St. John Ry., is President, is urging the claims of Quebec as the most suitable location for a large shipbuilding plant, and recently took steps to bring the matter before the British Premier, in view of the extensive shipbuilding program being undertaken in Canada in British interests. The British Premier referred the matter to the Imperial Munitions Board in this country, and the Chairman communicated with the Board of Trade to the effect that the Munitions Board would be pleased, if Quebec interests made the necessary investment and made a serious effort to equip yards for the construction of vessels, to co-operate with the city, or company which may be established, to secure the necessary plates for steel shipbuilding, provided the company give a satisfactory price for building vessels, and an unmistakable assurance that they will be completed within the time specified on contracts.

During the campaign which the Board of Trade has been carrying on for some time to induce some of the larger shipbuilding firms to locate in Quebec, invitations were extended to several companies in Great Britain, Ireland and France. Several of these have replied, mostly to the effect that the matter had been under consideration previously, but owing to the lack of government support, and to other causes, proposals for such establishments had been dropped.

Shipbuilding Activities Throughout Canada.

British Columbia.—While no definite official announcement is yet available, there are a large number of probably authentic reports as to what R. P. Butchart and J. W. Troup, who are representing the Imperial Munitions Board in British Columbia, are doing, and they are said to have let a number of contracts for wooden steamships. The reports are summarized as follows:

Cameron-Genoa Shipbuilders, Ltd., has been given a contract for 4 steamships.

British Columbia Construction & Engineering Co. will, it is said, get a contract for building some steamships at New Westminster.

Western Canada Shipyards, Ltd., Vancouver, has, as stated more fully in another paragraph, been given contracts for 6 steamships.

Peter Lyall & Sons, contractors, Montreal, have leased or bought Wallace Shipyards, Ltd., yard No. 2 and have been given an order for 6 steamships.

The British Columbia Trades Association has been interviewing Messrs. Butchart and Troup, with a view of having engines, hoisting gear and other equipment for the steamships built in B. C. shops.

The Foundations Co., Ltd., of Montreal, which is really a branch of the Foundation Co., New York, etc., has been given a contract for 5 steamships, which may be increased to 9. It has leased a 10 acre site on the former Songhees Indian reserve, Victoria.

Wallace Shipyards, Ltd., North Vancouver, has been operating two yards, from which it has already launched 3 auxiliary schooners for Canada West Coast Navigation Co. The 4th will be launched shortly, leaving 2 more to complete the order. It will probably be given a contract for 6 steamships by the Imperial Munitions Board.

In reference to the standard type of wooden vessel to be built in Canada, it was stated in our last issue, on pg. 245, as having been officially given out in British Columbia, that the vessels would be propelled by steam, with triple expansion engines of about 950 i.h.p. We are officially advised that the engines will have about 1,000 i.h.p.

J. J. Coughlan, of J. J. Coughlan & Sons, on returning to Vancouver recently, is reported to have said: "Our first boat is well under way and will take to the water in November at the present rate of construction. We are now laying the keel for the second and third vessels. The second vessel will be launched in December and the third in February next. We are contemplating clearing away space for a fourth keel. When the first vessel is launched we will lay the keel for the fifth vessel on the berth which she vacates and the sixth vessel will be built on the berth now occupied by the second one." Mr. Coughlan added that the first vessel is for a British concern and the other five for the British Government.

Western Canada Shipyards, Ltd., has been organized in Vancouver, by an amalgamation of Northern Construction Co. Ltd. and Palmer Bros., Grant Smith & McDonnell, and Armstrong, Morrison & Co. Ltd. The directors are A. R. Mann, President and Managing Director; W. H. Armstrong, First Vice President; P. N. Carlson, Second Vice President; C. V. Cummings, Secretary-Treasurer; Alex. Morrison, Grant Smith, E. V. Hauser, W. C. Ditmars, and A. B. Palmer. It has secured, as a site for its plant, the old

Royal City Mills property, belonging to the British Columbia Electric Ry. on False Creek, Vancouver, with 70 ft. frontage and 100 ft. depth. The site is being prepared, about 2,000 piles having to be driven. The company has a contract from the Imperial Munitions Board for six wooden ships. Ways are being built to lay down four vessels at once. It is expected the first keel will be laid by July 20 and that between 400 and 500 men will be employed.

Shipbuilding Bounties.—Thos. Cantley, Chairman of the Board, Nova Scotia Steel & Coal Co., New Glasgow, N.S., in speaking at the Canadian Manufacturers Association at Winnipeg, June 12, in regard to shipbuilding, said that conditions in the shipping trade at present presented an unrivalled opportunity for Canada to jump to the front as a shipbuilding country. A Dominion Government bounty would stimulate the shipbuilding industry, and he considered that some such encouragement was necessary in order to bring about a shipbuilding revival.

The Pacific Shipbuilding Co., Ltd., which has, as stated in our last issue, been incorporated under the Dominion Companies Act, with authorized capital of \$50,000, has its office at 310 Winch Building, Vancouver, the persons principally interested being J. C. Shields, lumberman, and J. T. Robinson, broker, of Kamloops, B. C. It was stated to be the company's intention to establish a shipbuilding yard at New Westminster, but nothing, as far as can be learned, has yet been done in that connection, and the company does not yet appear to have any contracts for vessel building.

Replacing the Quadra.—When the Marine Department estimates were under consideration in the House of Commons, June 1, on the item \$150,000 for the construction of two steamships to replace the C.G.S. Quadra in British Columbia waters, the Minister of Marine said:—"They will be built in Canada, and of wood. The Quadra was lost in collision, and we find that we can do much better by building two smaller vessels than one large one. We have managed to get along in the meantime by chartering a vessel, and in view of existing conditions, it is not likely we shall proceed with the construction of those vessels this year. That is a matter for consideration."

The Imperial Oil Co.'s oil tank steamship Reginolite, the fourth to be built for it by Collingwood Shipbuilding Co., was launched at Collingwood, Ont., June 21, without any ceremony. The vessel, which is intended entirely for ocean service, has the following dimensions: Length, 250 ft. between perpendiculars, 259 ft. over all; beam, 45 $\frac{3}{4}$ ft.; depth, 25 ft. to upper deck; deadweight carrying capacity, 3,500 tons. The machinery will consist of a set of triple expansion engines, with cylinders 18, 30, and 50 in. x 36 in. stroke. Steam will be supplied by two Scotch boilers 13 $\frac{1}{2}$ x 11 ft. long, working at 180 lb. pressure. The vessel will take the highest class in Lloyd's Registry for ocean service. Her construction has been under the supervision of R. W. Henderson, Marine Superintendent, Imperial Oil Co. A fifth vessel, to be called Talarolite, is still on the stocks at Collingwood.

Polson Iron Works, Ltd., Toronto, in addition to the 6 steel vessels for the Naval Service Department, which are de-

scribed on another page, are building ten 3,500-ton deadweight freight steamships, all of the same type, to British Corporation specifications, highest class for ocean service, the last of them to be finished before the close of navigation in 1918. The plates and other material has all been purchased and are being delivered. The principal dimensions are: Length over all, 261 ft.; breadth moulded, 43 $\frac{1}{2}$ ft.; depth moulded, 22 ft. 11 $\frac{1}{2}$ in. The propelling machinery will consist of triple expansion surface condensing engines, cylinders 20 $\frac{1}{2}$ -33-54 in. x 36 in. stroke, developing 1,250 h.p. Each vessel will have two Scotch marine type boilers, each 14 ft. diameter x 12 ft. long, equipped with forced draught, and designed for 180 lb. working pressure. The vessels will be equipped throughout for ocean service, with electric plants and searchlight, cargo winches, steam windlasses, steam and hand steering gears, and 15-ton evaporator outfits.

Polson Iron Works, Ltd., Toronto, is making the following extensions and alterations to plant: New boiler shop, 250 x 90 ft.; construction of steel, concrete and glass; to be equipped with the most modern electric cranes and up to date machinery. The foundations for this building are being prepared. The present boiler shop will be overhauled and refitted for an extension to the machine shop and engineering departments, to permit that department to expand. A new gantry crane, 65 ft. wide x 50 ft. high, of 10 tons capacity, is being erected on the east side of the dock, which will make it possible to lay down four 3,500 D. 5 vessels at the same time. New buildings have been erected as storehouses, one on the west dock for lumber being stacked for seasoning purposes, and another to accommodate the auxiliaries and parts purchased outside. This building, having already proved too small for certain of the auxiliary machinery, has been placed on the west dock. The company is running continuously, day and night, double shifts, employing at present about 1,000 hands. It has been very fortunate in securing material, having placed orders for in the neighborhood of 10,000 tons of steel.

Terms for Wooden Shipbuilding.—The following letter from W. I. Gear, Director of Steel Shipbuilding, to a member of the House of Commons was read in the house recently: "The Imperial Board has been authorized by the British Ministry of Shipping to arrange for the construction of a certain number of wooden ships in Canada according to a standard type. The design and specifications can be seen at the board's office. The vessels are of approximately 2,500 tons deadweight, being 250 ft. long, 40 ft. beam and 21 ft. draught. The terms on which the board is placing these contracts are the reimbursement of the contractor for the actual cost of building, including labor, material and overhead, plus a fixed sum by way of profit for each vessel constructed. Under these circumstances, and because definite results must be secured, the board will examine closely into the capacity, resources and experience of each firm seeking a contract. With regard to the plant, etc., employed in the construction, individual arrangements will be made in each case on the basis of allowing a reasonable amortization as part of the cost of construction, or in the case of an existing plant allowing a reasonable rental for

the use of the plant as part of the cost. With regard to any construction undertaken in Eastern Canada, the essential point will be for the contractor to satisfy the board that he has or can obtain on reasonable terms a sufficient quantity of suitable lumber to build the type of ship required. It is not safe to reckon on obtaining lumber from British Columbia; first, because we expect that most of the lumber suitable for the purpose, which is cut there, will be taken up in wooden ship construction on the Pacific coast, and second, because it is doubtful whether any large quantity of lumber could be brought across the continent in the present railway situation even if it were available."

SHIPBUILDING NOTES.

The Cotton Co., Ltd., contractors, Vancouver, B.C., is reported as going to establish a shipbuilding plant at False Creek, Vancouver, to build 10 vessels for eastern shipping concerns.

Halifax Shipbuilding Co., Ltd., has been incorporated under the Dominion Companies Act, with \$3,000,000 authorized capital and office at Halifax, N.S. The provisional directors include J. B. Kenny, barrister, and several law students.

The Ernst Shipbuilding Co., Ltd., has been incorporated under the Nova Scotia Companies Act, with \$25,000 authorized capital, to take over and operate the shipbuilding plant hitherto carried on at Mahone Bay, N.S., by J. Ernst & Sons.

The Westminster Marine Railway Co., New Westminster, B.C., is reported to have acquired a lease of Poplar Island, in the Fraser River, from the Dominion Government, on condition that it be used for a shipbuilding and repair plant.

A Sydney, N.S., press dispatch says the Dominion Bridge Co., Montreal, and the Beardmore interests acting together, propose to establish a steel shipbuilding plant in Nova Scotia and that the matter is being considered by the Nova Scotia Shipbuilding Commission.

The Sydney Foundry & Machine Works, Ltd., as mentioned in our last issue, has purchased a small floating drydock, for use in connection with its plant at Sydney, N.S., where it does a large ship repair business. It is the intention to commence a shipbuilding business there, and to build a larger drydock.

The Newfoundland Shipbuilding Co., of which the principal is stated to be Christoffer Hannevig, of Christiania, Norway, is reported to have settled on a site for its proposed plant, at Harbor Grace, Nfld. C. Hannevig is President of Christoffer Hannevig, Inc., general shipping agents and vessel brokers, New York.

The Falmouth Shipbuilding & Transportation Co., Ltd., the incorporation of which was announced in our last issue, has an authorized capital of \$45,000, and its head office at Windsor, N.S. The officers are: E. E. Armstrong, President; A. P. Clark, Secretary-Treasurer; F. W. Dimock, J. L. Sexton, T. B. Atkins and T. A. Mosher, directors. One wooden vessel is under construction at Falmouth, and will be sold on completion.

Shipbuilders Corporation, Ltd., the incorporation of which, with a capital of \$250,000 and office at Toronto, was mentioned in our last issue, was to have been formed for the purpose of engaging in shipbuilding at some point on the Pacific coast, but we are advised that under existing circumstances the promoters, who are associated with the Canadian North-

ern Ry., have postponed the organization of the company indefinitely.

The Tusket Shipbuilding Co., Ltd., mention of which was made in our last issue, was incorporated under the Nova Scotia Companies Act in April, with \$75,000 capital, and office at Tusket, to build wooden vessels. The capital, which is all common stock, is issued in shares of \$1 each. The officers are: L. N. Fuller, President; G. W. Eden, Treasurer, and H. C. W. Power, director. Contracts are reported to have been accepted for the supply of a quantity of lumber, and also for the erection of a sawmill for the handling of it at Tusket.

The Goderich Drydock & Shipbuilding Co., Ltd., the incorporation of which was mentioned in our last issue, is reported to have arranged for a site for the construction of docks, etc., and it is stated that the government has made a concession and undertaken to assist in or facilitate the construction of docks, etc., it being the company's immediate object to build vessels. With regard to this latter statement, it may be remembered that those responsible for the placing of shipbuilding contracts on behalf of the Imperial Munitions Board have already stated that it is not the intention to subsidize or assist in the establishment of shipbuilding

plants. Where a shipbuilding plant has been organized, and those in charge of same can assure the board of their ability to carry out contracts, orders will be given. In so far as government aid in the construction of a drydock is concerned, there is an act granting aid for construction of approved drydocks by guarantees of interest for a term of years on certain expenditure. As the company had not been organized at the time of writing, the government could not have undertaken to assist in or facilitate the construction of docks, etc.

Suggested Suspension of Coasting Laws.—The U.S. Government was reported, June 4, to be considering the suspension of the coasting laws, forbidding foreign vessels to engage in the U.S. coasting trade, thus permitting an interchange of vessel traffic between Canadian and U.S. vessels on the Great Lakes and along the coasts. This, it is stated, would remove the congestion at Atlantic and Gulf ports, as well as on the Great Lakes, at U.S. and other points, and would release a number of U.S. coasting vessels for ocean service. It is stated that the British and Canadian governments will consent to the arrangement if it is proposed by the U.S.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during May.

ARTICLES			CANADIAN CANAL	U. S. CANAL	TOTAL
Flour	Eastbound	Barrels	327,870	648,290	876,160

Sault Ste. Marie Canals freight traffic.

Atlantic and Pacific Ocean Marine.

The Allan Line s.s. Carthaginian struck a floating mine and sank, about June 18, soon after leaving Glasgow, Scotland, for Montreal.

The s.s. Waitotara, owned by Union Steamship Co. of New Zealand, and which sailed from Vancouver, May 19, for Australasia, is reported to have been destroyed by fire, together with her cargo.

The Union Steamship Co. of New Zealand, which operates the mail line between Canada and Australasia, is reported to have amalgamated with the Peninsular & Oriental Steam Navigation Co.

Canadian Pacific Ocean Services, Ltd., is reported to have chartered the s.s. Key West, 8,800 tons. It is reported that the company will operate her across the Pacific, in which service it has a number of other steamships on charter, including Strinda, Arabien, Kenku Maru and Unkai Maru.

The Dominion Government is reported to have purchased the dredge Kennaquhair from Canadian Dredging Co., Midland, for service in James Bay. It is stated that it is leaving Port Arthur immediately, and will take about a month on the journey. The dredge was built at Welland in 1908, with a registered tonnage of 452. Its dimensions are: length, 100 ft.; breadth, 40 ft.; depth, 9.5 ft.

Maritime Provinces and Newfoundland.

The pilot commissioners of the pilotage district of Shepody Basin, N.B., have increased the inward pilotage rate on vessels from 1½¢ to 2½¢ a registered ton, and the outward pilotage rate from 2¢ to 2½¢ a registered ton.

A portion of pier 5 at West St. John, N.B., about 150 ft. long, carrying a warehouse and a portion of the grain conveyor system, collapsed, June 13, and a large number of heavy cases of merchandise for export were reported lost.

The British s.s. Njord, with a cargo of coal from Sydney, N.S., for St. John's, Nfld., was abandoned in a burning condition, about 40 miles east by north of Newfoundland, early in June. The crew were taken off by the British schooner E. B. Walters, and landed at St. Pierre, Miquelon.

The s.s. Premier, while leaving Sambro, N.S., June 4, during foggy weather, ran ashore on Pollock Ledges. The crew were saved and assistance was sent to the vessel, which was hard aground. The Premier was formerly owned in Sault Ste. Marie, Ont., and was sold to Nova Scotia parties about two years ago.

The Canada Atlantic & Plant Line Steamship Co.'s certificate of registration has been revoked by the Nova Scotia Registrar of Joint Stock Companies, it having made default in payment of its annual registration fees. The reason for the company's cessation of Canadian business was given in our last issue.

At a meeting of the Nova Scotia Steel & Coal Co.'s directors, at New Glasgow, N.S., June 5, Thos. Cantley, President, stated that the first steel steamship to be built by the company would be launched early in July. She could have been launched early in June, but it was the intention to keep her on the ways until she was ready for sea. The second steamship, which is about 25% larger than the first,

is well advanced. After the first has been launched, the keel of a third will be laid.

A. & R. Loggie, Loggieville, N.S., are reported to have purchased the s.s. Orontes from Wallace Fisheries, Ltd., Vancouver, B.C. The vessel was built at Beverley, Eng., in 1895, and is screw driven by engine of 60 n.h.p. Her dimensions are: length, 111.5 ft.; breadth, 21 ft.; depth, 11.5 ft.; tonnage, 178 gross, 76 register. The vessel will be taken to Nova Scotia from Vancouver by way of the Panama Canal, in charge of Capt. Reynolds and a crew of 8. It is stated to be the intention of the new owners to secure a complete trawling outfit from Denmark and equip the vessel as a beam trawler.

Province of Quebec Marine.

Canada Steamship Co.'s repair plant, machine shop, upholstering shop and stores, together with three small vessels in course of construction, were destroyed by a fire which threatened the whole town of Sorel, June 10. The company's loss is estimated at \$150,000, which is covered by insurance.

Respecting the steamship service between Gaspe Bay, Dalhousie and Campbellton, for which a government subsidy is paid, the Minister of Trade and Commerce stated in the House of Commons June 4, that all steamship contracts made by the department stipulate certain ports of call, and that such calls are insisted on when it is possible to make them. In many cases calls are not possible in rough weather. No complaint had been made so far this year as to the service, which is performed by the Gaspe & Baie des Chaleurs Steamship Co.

Ontario and the Great Lakes.

The name of the s.s. Roi Tan, owned by the Canadian Towing & Wrecking Co., Port Arthur, has been changed to Siskiwit.

The Rideau Steamboat Co., Ottawa, has appointed G. Depencier, captain, and B. W. Campsall, chief engineer, of its s.s. Wanakewan, for the current season.

The Public Works Department is receiving tenders for the reconstruction of part of the cribwork of the wharves at the entrance to the Kingston drydock.

The Pelee & Lake Erie Navigation Co., Ltd., has applied to the Lieutenant Governor in Council for the acceptance of the surrender of its charter, as from July 3.

The Upper Ottawa Improvement Co.'s s.s. G. B. Greene, which has been practically rebuilt at Quyon, Que., during the winter, was launched there, June 8, and was expected to be ready for service by the end of the month.

The Hamilton Shipbuilding & Ferry Co. is operating the steamboats Aletha and Brockville, P. Walsh being captain, and M. Dorey, chief engineer of the former, and G. Kirk, captain, and J. Kirk, chief engineer, of the latter.

The White Star Line, Detroit, Mich., operating on the Great Lakes, is stated to have decided to eliminate all Canadian calls during this year, owing to the Dominion Government decision that all vessels carrying freight shall install a water sprinkler system as a fire protection.

Canada Steamship Lines' s.s. W. Grant Morden arrived at Port Colborne recently with the largest single grain cargo

ever brought down the lakes. It consisted of 750,000 bush. of oats, valued at over \$600,000. The cargo was discharged in 15 hours, which is stated to be a record in handling grain.

The vessel demand on the Great Lakes was reported to be light during June. Tonnage offered at 6¢ a bush. for wheat was not placed, some of it being utilized for contract ore. A charter cargo of wheat from Fort William to Buffalo was booked at 3¼¢, and grain men are not bidding ahead. Lumber rates from the head of the lakes to Tonawanda, N.Y., were around \$5.

Canada Steamship Lines, Ltd., has offered to provide accommodation on its vessels on the Niagara Division for parties of returned soldiers, twice a week, for trips across the lake, and thinks that trips to Queenston Heights and Niagara Falls might also be arranged. W. E. Burke, Assistant Manager of the company, has placed his services at the disposal of the Overseas Club for this purpose.

Canada Steamship Lines, Ltd., is being sued by J. E. Carter, a vessel broker, for \$50,000 damages for breach of contract. He claims that he and D. Haney entered into an agreement with the company under which they were to receive \$25,000 commission on the sale of each of certain steamships, and that the steamships Glenellah, Rosedale, Strathcona and Trinidad were sold through their efforts, and that the company refused to pay the commission.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level, for May, as follows: Superior, 602.38; Michigan and Huron, 581.14; St. Clair, 576.07; Erie, 572.93; Ontario, 246.51. Compared with the average May levels for the past 10 years, Superior was 0.47 ft. higher; Michigan and Huron, 0.65 ft. higher; Erie, 0.15 ft. higher, and Ontario, 0.36 ft. lower.

Some minor rioting occurred at Port McNicoll, June 15, when about 150 alien employes engaged in loading and unloading vessels at that C.P.R. lake terminal struck work for increased pay. The company employs about 700 dock workers there, of whom about 150 are Austrians and Bulgarians. These attempted to intimidate the other workers to join in the strike, but without success.

The s.s. Forest City, owned by the Silver Islet Navigation Co., Port Arthur, is reported to have been sold to the Great Lakes Transportation Co., Midland, for service on the Georgian Bay route. She was built at Wilmington, Del., in 1891, and was formerly named King Edward. She has a steel hull divided by 5 watertight bulkheads, and is equipped with a beam condensing engine, with cylinder 38 x 108 in., 400 i.h.p. at 25 r.p.m., and supplied with steam by 2 Scotch boilers, 11 x 9 ft., at 25 lb. Her dimensions are: length, 175 ft.; breadth, 31 ft.; depth 9½ ft.; tonnage, 571 gross, 449 register.

The Mathews Steamship Co.'s s.s. Steelton was seized under an order of the Superior Court, at Montreal, recently, at the instance of an employe, as security for an action for damages under the Workmen's Compensation Act. The vessel was released on the company giving security for \$5,000, as fixed by the court. The employe alleges that he was instructed to jump from the deck of the vessel to the St. Gabriel pier, about 15 ft., whereby he was badly injured, and he claims that the company is responsible for the act of its officer in giving such

order and for not providing a means of descent.

The Collingwood Steamship Co. has been organized, with head office at Collingwood, and incorporation is being sought. The following provisional officers have been elected: Capt. G. C. Coles, President; M. P. Byrnes, Vice President; H. Storey, Secretary; J. F. Zimmerman, Treasurer, and Capt. F. G. Moles, Manager. The s.s. City of Meaford has been secured, and has been placed in service between Collingwood and Sault Ste. Marie. She was owned by Perks Bros., Meaford, and was built there in 1906 and originally named Seaman. Her hull is of oak, and she is of the following dimensions: length, 111 ft.; breadth, 24 ft.; depth, 8 ft. 5 in.; tonnage, 328 gross, 223 register.

The U.S. Engineer Office, Detroit, Mich., has given notice that, owing to the obstruction caused by the wrecks of the steamships Saxona and Pentecost Mitchell in the channel to the westward of Pipe Island, in the St. Marys River, the use of the channel has been discontinued temporarily. All vessels have been instructed to take a course starting north-east of the Frying Pan Island light, and running to abreast of the Pipe Island twins, and thence to the old intersection of the two courses southwest of Lime Island. To mark the new channel, the Watson reefs gas buoy 5 has been removed to Pipe Island coal, and gas buoys have been established at the edge of the shoal northeasterly of the Pipe Island twins, and at the southerly edge of the shoal off Squaw Island.

The A. B. Mackay Steamship Co.'s s.s. Natironco and the Detroit & Cleveland Navigation Co.'s s.s. Eastern States collided in the lower Detroit River, near Grassy Island, June 19, both vessels being considerably damaged. The former was beached on the Canadian side of the river, and the latter returned to Detroit with her stem broken and her bow twisted. It is alleged that the Natironco was improperly lighted, and that her lights did not show clearly. The Natironco was built at Detroit, Mich., in 1892, and named Pioneer. She was acquired by the National Iron Co., Toronto, and the National Steamship Co. was formed to own and operate her in the company's interests. She was later taken over by the Merchants Mutual Line, Ltd., a subsidiary of Canada Steamship Lines, Ltd., and early this year was purchased by the A. B. Mackay Steamship Co., Ltd., Hamilton.

Manitoba, Saskatchewan and Alberta.

John Walter, Ltd., is this year operating the s.s. City of Edmonton from Edmonton to Shandro, about 125 miles below Edmonton, on the North Saskatchewan River, calling at intermediate points. The first trip was made May 31. During last autumn some clearing of the channel was done by the Dominion Government, and it is anticipated that further work will be done, including the erection of landing stages at certain points.

The Winnipeg and St. Boniface Harbor Commissioners have given notice that all vessels, power boats, or launches, etc., sailing in Winnipeg and St. Boniface harbor, on the Red River or Assiniboine River, within the limits of the two cities, are required to register with the harbor master, when permits will be issued and number plates placed on each vessel so

registered. The registration fee is \$2, and a penalty of \$50 or imprisonment for 30 days is provided for owners operating vessels without having them registered.

Pas, Man., has been a busy shipbuilding point during the past spring. The North Canada Fish Co. has had built barges nos. 1 and 2, a 40 ft. gasoline tow boat, and another tow boat. These will be employed in carrying fresh fish from the numerable lakes surrounding Pas, all of which are easily accessible by water from that point. The fishing season opened June 15, when the boats were put in service.

The development of the navigation interests in the Pas district has been rapid, and although there is at present over \$150,000 invested in various boats, barges, etc., engaged in commercial work, there are no facilities whatever for the docking of the boats or the handling of the freight moved. The need of them is very apparent, and it is hoped that notwithstanding the war it may be possible to get the Dominion Government to do something.

The Ross Navigation Co. successfully launched its barge no. 7 on May 12, and succeeded in floating down the Saskatchewan River its barge no. 8, which was bought from the City of Prince Albert. The barge was manned by a crew of six men and equipped with long sweeps for guiding it through the crooked channels. The trip, which was made in 10 days, covered a distance of nearly 325 miles. These two barges, which will carry 75 and 100 tons respectively, will be used in transporting copper ore from the head of navigation at Sturgeon River to Pas, for reshipment to the Trail smelter at Trail, B.C. The Ross Navigation Co. has also built the s.s. Nipawin, 85 ft. long, 20 ft. beam, and 4½ ft. draught. She is equipped with dry back Scotch boiler and stern wheel engines.

British Columbia and Pacific Coast.

A meeting of shareholders of Melmore Steamship Co., Ltd., is to be held at Victoria, July 6, to receive the liquidators' winding up report.

The C.P.R. s.s. Princess Maquinna, on the Vancouver Island West Coast route, struck a submerged rock off the entrance to Kyuquot Sound, June 16, and sustained some damage to her hull. She completed her trip and returned to Victoria, June 19, when she was examined and repaired.

The Malahat Motor Ship Co.'s auxiliary powered schooner Esquimalt was expected to be launched from the Cameron-Genoa Shipbuilders' yards during June. It is expected that she will be completed and ready for service by the end of July or early in August, when she will proceed to Vancouver to load about 1,500,000 ft. of lumber for Australia.

The C.P.R. s.s. Princess Victoria was replaced in service early in June after an extensive overhaul. She displaced the s.s. Princess Charlotte on the triangular route, the latter taking the run to Seattle. The s.s. Princess Alice had a general overhaul preparatory to being placed on the Alaska run, June 8, and the s.s. Princess Charlotte will be placed on the same route about July 10.

A delegation of member of the Vancouver Board of Trade waited on the Dominion Government at Ottawa recently and conveyed the board's request that Vancouver should be made a national free port. Members of the government are

reported to have promised that Vancouver would be dealt with in exactly the same way as Montreal had been, with a harbor commission which may secure money from the government for improvements at a low rate of interest. It was stated that a dry dock is to be built by private enterprise, with a government subsidy as an aid.

Capt. Coughlin, of the steam tug Cleeve, has entered action in the Admiralty Court at Vancouver, against the Grand Trunk Pacific Coast Steamship Co., claiming \$1,100 damages sustained in Dec., 1916, when his vessel was in a collision with the s.s. Prince Rupert in the Burrard Inlet. The casualty came before the Wreck Commissioner's court in December, and the blame for the casualty was fixed on Capt. Coughlin. He appealed against the decision, with which one of the nautical assessors disagreed, and a rehearing was ordered. In the second hearing it was decided that as the Prince Rupert was the overtaking vessel, she was to blame.

Mainly About Marine People.

William Dott, of the Allan Line Steamship Co., Liverpool, died there, June 2.

T. R. Joh, of Job Bros., shipowners and merchants, Liverpool, Eng., and St. John's, Nfld., died recently, aged 81. He commenced business in 1866.

Capt. J. A. Tymon, formerly well known as a master of vessels navigating inland waters, and latterly captain of one of the Toronto Ferry Co.'s vessels, died at Toronto, June 5, aged 50.

Capt. D. M. Estes, a veteran mariner of the St. Lawrence River, chiefly in the Thousand Islands district, died at Brockville, Ont., June 20.

H. R. Storey, purser, s.s. Hamonic, Northern Navigation Co., has resigned on his appointment as Secretary, Collingwood Steamship Co., and purser of its s.s. City of Meaford.

Major H. Maitland Kersey, D.S.O., J. A. Martin and Capt. J. V. Forster, of Canadian Pacific Ocean Services, Ltd., were presented to the King recently, on the latter's visit to the s.s. Metagama, while in Liverpool, Eng.

A. C. Sheridan, General Agent, Canada Steamship Lines, Ltd., Buffalo, N.Y., who died there recently, had been with the company and its predecessor for about six years. He was the first agent of the Richelieu & Ontario Navigation Co., when it opened its Buffalo office, and was appointed District Passenger Agent there for Canada Steamship Lines in 1916, and just prior to his death had been appointed General Agent in charge of freight and passenger business.

The International Mercantile Marine Co.'s annual meeting was held at Hoboken, N.J., June 4. The official estimate for 1916, as furnished by the President, showed gross earnings for 1916 of \$26,299,595, compared with \$13,581,660 earned in 1915, and a deficit of \$302,528 in 1914. The President announced that in view of the disturbed shipping situation, it had been decided not to take up the liquidation of accrued dividends on the preferred stock, amounting to about 88%. The exact earnings cannot yet be stated, owing to the delay in getting in the returns from British subsidiaries, but the full report was expected to be issued during June. A dividend of 3% on the preferred stock was paid April 14.

Canadian Railway and Marine World 217

August, 1917.

Train Line Maintenance.

By A. McCowan, Supervisor Car Works, Canadian Northern Railway, Winnipeg.

The report of the Interstate Commerce Commission's Division of Safety for the year ended June 30, 1916, stated that there were 908,566 freight cars inspected, of which 3.72% were found defective; and 27,220 passenger cars, of which 1.82% were found defective. The defects which were found by the inspectors were given in detail in tabular form. Those directly chargeable to the air brake numbered 18,696, which was far above those chargeable to any other part of the car, the next nearest being couplers and parts. The number of defects per thousand cars inspected was 45.06. Of this number 20.58 defects per thousand cars inspected were chargeable to visible parts of air brakes; the next nearest percentage being couplers and parts, 6.09. The remaining 18.39 was chargeable to hand brakes, ladders, steps, hand holds, height of couplers, uncoupling mechanism and running boards as follows: Uncoupling mechanism, 4.17; hand holds, 5.; height of couplers, 1.08; steps, 0.62; ladders, 0.77; running boards, 2.20; hand brakes, 4.55.

We see from this the great relative importance of better train line maintenance. I believe it is possible to cut this percentage down materially by better maintenance of the train line. What are some of the most frequent defects in the train line? I believe they are defective hose and loose and broken train pipes at the hose connection. This percentage shown on visible parts of the air brake does not bring out the actual state of defective train lines, because we, of necessity, have to watch this matter closely and replace most defective hose or broken train pipes immediately. They, therefore, could not be discovered by Interstate Commerce Commission inspectors. In attacking the problem, therefore, we should not only attempt to cut down the percentage of cars which the commission finds defective because of the air brake, but decrease the material and labor in all repairs and renewals. I have gone into the life of the air hose with the idea in mind that there is a chance of decreasing very materially the number of hose necessary for renewals, and thereby the cost of renewals. The general opinion seems to be that the average life of hose is about eight months for air hose and one season for steam hose. I am of that opinion in regard to air hose, but in Western Canada we find the average life of steam hose is a little over four months. This, however, may be looked upon as a season in certain parts of the United States, but could not be considered such in the north.

A railway periodical stated in 1912 that the average life of hose, a couple of years previously, was only eight months, and that at that time the life of hose was probably less because the quality of hose was lower, and that the railways bought poor hose because mechanical destruction killed it in a few months anyway, whether it was good or bad. It is the opinion of

people familiar with the hose question that a hose should last years if not subjected to mechanical injury. Since it seems that the average life is only eight months, there is then a chance for increasing the life of hose 20 months; in other words, making it last 4½ times as long. Let us see what this means in dollars and cents.

In the United States there were in 1915 in service 2,370,532 freight cars, 55,810 passenger cars, and 98,752 company service cars—a total of 2,525,094; and 66,229 locomotives. This means that there were in use 4,741,064 hose on freight cars; 111,620 on passenger cars; 197,504 on company service cars, and 66,229 on locomotives, or a total of 5,116,417 hose. This does not include hose on front ends of locomotives or between engines and tenders. The renewals of these 5,116,417 hose, with a life of eight months, would be at the rate of 7,674,626 a year; while if the life were three years, they would be at the rate of only 1,705,472 a year. This is a saving at which we should aim in the use of materials only. There are many other things which, in the aggregate, probably represent an even larger amount of money, viz., the labor of applying and taking off, the cost chargeable to train delays caused by hose or train pipes bursting in transit, capital account tied up in material, etc. Hose which costs from 30c to 60c or more a foot, if the life of the hose can be increased from eight months to 36 months, will make a saving in renewals of 5,969,154 air hose a year, which, at 55c each for 22 in. hose, would be \$3,293,000.

It is claimed that loose or broken train pipes are even more prevalent than defects in hose, and this is borne out by the table of statistics. The train line often breaks just back of the angle cock, when cars are pulled apart. Mr. Kroft stated before the Car Foremen's Association in 1908 that it was his opinion that there were 20 breaks in the train line to one in the air hose when cars were pulled apart without uncoupling hose. What causes all these defects in the train pipe? And decreases so greatly the life of the hose? An inspection of the scrapped hose pile will show very plainly that most of the defects in hose are at the nipple end. This is where the great majority of hose fails. The train pipe breaks just back of the angle cock, or at least that is where most of the breaks occur. These facts point plainly to the jerking apart of the cars, while hose are coupled, as being the main cause. When cars are pulled apart, the hose bends at the nipple end. The fact that the bend is there and that that is the place where the great majority of defects in hose develops, proves conclusively that the short life of hose is mainly chargeable to pulling the cars apart. I do not mean to say, however, that pulling the cars apart is entirely responsible for defects at the nipple end. When a hose is not coupled up and a car is switched around the yard, the hose

swings constantly and all the strain comes on the nipple end. The strain on the hose when cars are pulled apart without uncoupling, with train line fully charged, is said to be 500 lb. This not only causes rupture of the hose at the nipple end, but it stretches the hose and weakens the fabric throughout the entire length. This stretching is responsible for more hose failures than bending at the angle cock. The porosity of the hose is often charged up to poor material, when, as a matter of fact, it is really caused by jerking apart. In a test of 22,000 pieces of air hose described in a railway periodical, 82% were found to be porous, and the porosity was not localized but extended all along the hose.

We are accustomed to assume that tonnage reduction in winter is necessary because of slippery rails, greater radiation of heat, and therefore less heat applied to the work of heating the boiler, poor lubrication, etc. Investigations of one road have shown that a great deal of this tonnage reduction is necessitated because of leaks in the air line—the impossibility of providing enough air to operate the brakes on long trains. This subject of leakage is a very important one, not only for its effect on the tonnage that may be hauled and amount of fuel consumed, but also because of its effect on the operation of the compressor pump and delays which are caused by air sticking. Leaks may be classified under the following heads: 1. Leaks of hose coupler proper. 2. Leaks in the hose itself. 3. Leaks where the hose connects with the coupler. 4. Leaks where the hose couples to train pipe. Leaks in the coupler proper are usually chargeable to the wear of the materials and gaskets, or to the coupling being poorly made by the brakemen or carmen. Leakage is also caused by snow, frost and ice. Further, when air hose freezes it often becomes so stiff that it will not bend at all. This causes the joint between the two hose to leak whenever there is any movement between the couplings, and also causes leaks at the joints at the angle cock where the hose is often pulled loose. In a report to the M.C.B. Association in 1915, F. W. Brazier, of the New York Central, said that "with a 100-car train, the leakage should be kept down to 2 lb. or less. Keeping the leakage down to a minimum saves fuel, air hose, the compressor and the boiler." He also said that it requires 1 lb. of coal and 7 lb. of water to compress 35 lb. of free air in the compressor. A 100-car train requires 180 cu. ft., and with a 4 lb. a minute leakage (which is not unusual) the compressor has to pump 40 cu. ft. a minute additional. This is equal to 2,880 cu. ft. an hour, which requires burning 82 lb. of coal an hour and using 574 lb. of water. A leakage of 5 or 6 lb. is not uncommon, and a conservative estimate of the coal consumed is 860 to 1,720 lb. On many trains the leakage in five minutes is equal to the air necessary to make a full service application.

Ralph Wolfe, in a paper before the Car Foremen's Association on the care and maintenance of air brakes, said: "In order to get the proper operation of the brakes there are many factors to be taken into consideration: 1. The efficiency of the pump and what it costs to pump against leakage on big trains. 2. The brake pipe leakage and if the rate of reduction is sufficient to cause undesired quick action of the triples. 3. The length of piston travel in order to get the proper brake cylinder pressure on a given brake-pipe reduction, which will have the proper retarding effects on each car. 4. The results obtained due to unequal distribution of braking power, throughout the train. While the question of leakage is the most important of all, with an 80-car train of 10 in. equipment we have a volume of 275,200 cu. in. If the conditions were such that we had a 12 lb. brake pipe leakage a minute, we would be losing 130 cu. ft. of free air a minute, which would be equivalent to the efficiency of the 8½ in. cross compound pump. If the leakage was 6 lb. a minute, we would be losing 65.5 cu. ft. of free air a minute, which would be equivalent to the efficiency of the 11 in. pump. It is estimated that the 11 in. pump consumes 200 lb. of coal an hour. This would require 4,800 lb. of coal to operate the pump 24 hours. Estimating the price of coal at \$2 a ton, it would cost \$9.60 to pump against a 6 lb. leakage on an 80-car train for 24 hours. If thirty trains were being handled under the same conditions for 24 hours, it would cost \$288 for fuel alone. While working under the same conditions with the 8½ in. cross compound pump, the cost of fuel would be approximately \$100 pumping against leakage."

Another report on leakage made up by a railway man is as follows: "Comparative cost of maintaining 70 lb. brake pressure and 100 lb. main reservoir on a 60-car freight train (engine boiler pressure 200 lb.), in one case against a brake pipe leakage of 12 lb. a minute, and in the other a brake pipe leakage of 5 lb. a minute. Twelve pounds a minute brake pipe leakage equals a loss of 18.20 cu. ft. of free air, which represents a loss of 1,092 cu. ft. an hour and 10,920 cu. ft. for 10 hours. Five pounds a minute brake pipe leakage equals a loss of 7.54 cu. ft. of free air a minute, 542 cu. ft. an hour and 4,520 cu. ft. for 10 hours. An engine fitted with an 11 in. compressor would consume about 47 tons of coal, while supplying a 12 lb. a minute brake pipe leakage continuously for 1,000 hours. The same engine and compressor supplying a 5 lb. a minute leakage continuously for 1,000 hours would consume approximately 19½ tons of coal; 47 minus 19.5 equals 27½ tons; 27½ ÷ 47 equals 0.58, or 58% savings obtained by simply reducing the brake pipe leakage from 12 lb. to 5 lb. a minute.

The difficulties encountered and time consumed in coupling and uncoupling hose in winter are considerable. Even at zero the hose becomes so hard as to lose all flexibility, and during coupling and uncoupling it is necessary to bend it, which usually cracks the rubber, making it porous. A hammer is commonly used for hitting hose couplings to make them lock. This tends to jar hose fittings out of place in the frozen bag at the nipple and coupling sleeve, causing them to leak when the train is in motion, especially when rounding curves. The hammering on hose couplings also damages them to such an extent that it is necessary to remove the hose on account of gaskets not fitting properly. The same trouble is

experienced on the road on account of couplings being drawn up by frozen hose on curves, causing the brakes to creep on and making it necessary for trainmen to hammer couplings down in place. Another difficulty is that all angle cocks are not in a proper position to allow hose couplings to meet in line, consequently, the hose is twisted before they can be made to lock, and in case of their being pulled apart they very often do not unlock, breaking the hose or train pipe. The time ordinarily consumed in coupling and uncoupling hose of a 40-car freight train, under ordinary conditions at the different winter temperatures, is as follows:

Zero	1 man uncoupling	Min. 45	Coupling	Min. 50
5 to 10 below	" "	50	"	55
15 to 20 "	" "	55	"	60
25 to 30 "	" "	65	"	70
35 to 40 "	" "	70	"	75

The figures in the last column allow for coupling hose only. Any extra time required for changing hose, gaskets, etc., depends entirely on conditions. This ordinarily takes 15 to 20 minutes, sometimes it takes an hour.

The amount of both yard and road detention, chargeable to train line trouble, not to say anything of car and freight delays, is worthy of consideration. An hour and a half over each locomotive division is considered a good average of road detention to each freight train handled under northern winter conditions, caused mainly through hose troubles, creeping of brakes, and extra time taken for pumping up, in releasing. Along with this comes flat and shelled wheels from creeping brakes; also there is excessive strain on draft rigging. A broken train line means cutting out of car, and not unusually 24 hours delay to same in getting repairs made, which, where freight is concerned, is serious.

The opinion has been quite prevalent that air hose defects could be remedied by more careful attention and adherence to higher specifications in the purchase of hose. This is not altogether true, because the greater number of hose is scrapped because of mechanical injury and not through defective material. J. Sheafe, formerly Engineer of Tests of the Illinois Central, gave in an article in a railway periodical the results of an exhaustive inspection and recording of performance on thousands of air brake hose. This showed that the 30c hose showed up even better than the 65c hose, proving that the railways do not take proper care of hose, and that the majority of renewals are necessitated by mechanical injury. He further stated that there were only two things which would minimize the liability of accidents and increase the life of hose, viz., preventing mechanical injury and showing the date on which the hose should be removed, in legible figures, so that it would not be left on so long that it would be weakened.

The defects which develop because of the present hose connections between cars, as well as safety considerations and convenience, led inventors at an early date to the consideration of an automatic connector. Quite a few connectors have been developed to the point of trial, but until very recently none has had an extensive installation. We are using an automatic connector on the Canadian Northern in both freight and passenger service, and have 207 cars equipped. The first installation was made June 6, 1914, so that we have had three years experience with them. The connector which we are using is the Robinson, and this has also been installed on a large number of C.P.R. passenger cars. In the northern

country, where the climate is sometimes very severe, we have greater need for a connector than railways operating in the south. It requires a good deal more steam to heat our cars, and the results of leakage are magnified. Our trains are harder to move, because the lubricating oils harden, and for this reason we have to cut down unnecessary stops or delays to a minimum. The makers of this connector are so confident of the life of hose which the connector makes possible that they guarantee a life of three years for air hose used with it.

I am not going to give you a description of the mechanical features of this connector, but only some of the results which have been obtained with its use. W. L. Crocker, Chief Dispatcher, Canadian Northern Ry., Fort Rouge, Winnipeg, says that all trainmen have no hesitancy in affirming that, in their belief, both road and terminal detention would be materially reduced if all cars were equipped with these connectors. On the question of leakage I will quote from one of the reports which has been given on the connector: "During the intensely cold weather of December and January, when temperatures sometimes in excess of 40 degrees below zero were recorded in certain parts of Canada, where these cars were in operation, no trouble was experienced from leakage in connection with the device, although at the same time it was found impossible to prevent very serious leakage in ordinary hose." I quote further from the same report the following: "To one familiar with yard and train service, there appears to be no room for argument about the need of such a device. The greater life of hose, the absence of broken train pipes resulting from uncoupling cars without first disconnecting the hose, the saving of time and labor in making up trains, and the reduction in the cost of pumping air, all of which might be classed as direct or apparent economies, would undoubtedly justify the cost of application alone, but the writer is even more impressed with the benefits that would be secured indirectly. Numerous leaks are found in hose and gaskets at all seasons of the year, almost entirely the result of the practice referred to above, viz., pulling hose apart, thereby injuring the fabric and inner tube. In very cold weather, however, when the hose freezes, the difficulty in preventing air leakage becomes a controlling factor in the operation of long freight trains, and they have to be reduced in length to a point where the air pressure can be maintained irrespective of the tonnage ratings or the ability of the locomotives to haul them. Even at the best, this factor is responsible for a very great amount of terminal detention and labor on the part of car men trying to stop leaks." The connector increases the life of hose because it eliminates all mechanical wear thereon. The hose is never jerked or strained. Frozen hose does not interfere with its operation and leakage and breaks are cut down to such an extent that it is possible to run longer trains. We have found on the Canadian Northern that the Robinson connector saves us a lot of money. We estimate the comparative cost about as follows: Cost of present equipment, \$23.90; cost of Robinson equipment, \$36.95; difference, \$13.05; cost of maintenance of present equipment for three years, \$45.05; cost for Robinson equipment, \$37.49; thus the saving in three years is \$7.56. For six years the cost of maintenance of present equipment is \$90.10, while for the Robinson connector it is \$47.80, including the interest on the

difference in cost between the two systems. This means a saving of \$42.30 per passenger car in six years for hose alone, made possible with this connector.

I have not made any mention of signal hose, and but little mention of steam hose. If these were taken into consideration the figures of 3,293,000 would be very materially increased. The economy in hose and train pipe breakage, however, sinks into insignificance when compared with the immense amount which would be saved in eliminating train delays and reducing trainmen's wages and coal consumption. If the figures on acceleration of traffic with a connector could be compiled they would represent a saving which would stagger the closest student of railway operation.

Great Northern Railway Report.

The company's fiscal year having been changed to correspond with the calendar year, instead of running from July 1 to June 30, the Great Northern Ry.'s 28th report covers only from July 1 to Dec. 31, 1916. The directors report that there has been no change in the capital account, which remains at \$250,000,000, of which there has been issued \$249,476,850. The balance is held for acquiring certain stock, etc, still outstanding. The bonds outstanding are for \$197,697,909.09, at June 30, 1916.

The company's investment in Canadian companies, on account of advances made to pay for property, construction, additions and betterments, has been changed during the period, as follows:

Midland Ry. of Manitoba	Credit	\$4,757.50
Manitoba Great Northern Ry.		3,092.65
Brandon, Saskatchewan & Hudson's Bay Ry.		642.16
Crow's Nest Southern Ry.		1,177.65
Nelson & Fort Sheppard Ry.		1,558.92
Vancouver, Victoria & Eastern Ry. and Nav. Co.		254,949.62
Total		\$256,663.50

The Bedlington & Nelson Ry. Co. in Aug., 1916, removed the track and abandoned its railway, extending from the International Boundary to Wilkes, B.C., 12.04 miles.

The President, in his report, refers to the completion of the Vancouver, Victoria & Eastern Ry & Navigation Co.'s line between Connor (formerly Sumas Landing) and Kilgard, B.C., which was placed in operation, Sept. 5, 1916, giving the company a through Canadian line between Oroville and Vancouver.

Total revenue from transportation	\$46,395,269.22
Revenue from operation other than transportation	899,149.45

Gross operating revenue	\$47,294,418.67
Operating expenses	24,677,301.23

Net revenue	\$22,617,117.44
Railway taxes accrued	2,949,432.32

Operating income	\$19,667,685.12
Other income	1,356,137.70

Gross corporate income	\$21,023,822.82
------------------------------	-----------------

Net corporate income	\$17,201,176.43
Dividends	\$8,731,254.00
Appropriations	138,613.74

Balance to profit and loss	\$8,331,308.69
----------------------------------	----------------

The company's Canadian investments are valued in the general balance sheet as follows:

Midland Ry. of Manitoba	\$2,348,218.39
Manitoba Great Northern Ry.	2,070,970.33
Brandon, Sask., and H. B. Ry.	2,150,642.16
Crows Nest Southern Ry.	4,217,663.24
Nelson and Fort Sheppard Ry.	2,120,578.43
Red Mountain Ry.	310,619.07
Vancouver, Victoria & Eastern Ry.	22,503,878.85
New Westminster Southern Ry. ..	260,000.00
Total	\$35,982,570.47

Birthdays of Transportation Men in August.

Many happy returns of the day to:
A. C. Barker, Superintendent of Telegraph and Time Service, Intercolonial Division, Canadian Government Railways, Moncton, N.B., born at Lacadie, Que., Aug. 5, 1878.

V. T. Bartram, ex-Purchasing Agent, Timiskaming & Northern Ontario Ry., now of Toronto, born at Ottawa, Aug. 2, 1880.

J. C. Beckwith, Division Engineer, Canadian Government Railways, Moncton, N.B., born at Fredericton, N.B., Aug. 1, 1875.

C. B. Brown, M.Can.Soc.C.E., Assistant General Manager, Eastern Lines, and Chief Engineer, Canadian Government Railways, Moncton, N.B., born at Ithaca, N.Y., Aug. 27, 1879.

J. S. Carter, District Passenger Agent, C.P.R., Nelson, B.C., born at Aurora, Ill., Aug. 14, 1864.

A. E. H. Chesley, General Accountant, Dominion Atlantic Ry., Kentville, N.S., born near Annapolis Royal, N.S., Aug. 27, 1877.

A. B. Chown, Travelling Passenger Agent, G.T.R., Pittsburg, Pa., born at Belleville, Ont., Aug. 4, 1887.

G. T. Coleman, Car Service Agent, Ontario District, C.P.R., Toronto, born at Carleton Place, Ont., Aug. 25, 1875.

C. H. N. Connell, Engineer Maintenance of Way, Quebec District, Canadian Northern Ry., Montreal, born at Woodstock, N.B., Aug. 26, 1876.

C. E. Croft, Chief of Commissary Department, Canada Steamship Lines, Ltd., Toronto, born at Cobourg, Ont., Aug. 26, 1882.

E. L. Desjardins, Assistant Superintendent, District 1, Intercolonial Division, Canadian Government Railways, Levis, Que., born at St. Jean Port Joli, Que., Aug. 1, 1859.

L. C. Fritch, ex-General Manager, Eastern Lines, Canadian Northern Ry., now General Manager, Seaboard Air Line Ry., Norfolk, Va., born at Springfield, Ill., Aug. 11, 1869.

J. V. Foy, General Passenger and Freight Agent, Canada Steamship Lines, Ltd., Toronto, born there Aug. 27, 1882.

G. W. Groom, Assistant Superintendent, Central Vermont Ry., St. Albans, Vt., born at Rossville, Ill., Aug. 26, 1872.

G. H. Ham, Head Office Department, C.P.R., Montreal, born at Trenton, Ont., Aug. 23, 1847.

W. B. Harper, Resident Engineer, Laurentian Division, Quebec District, C.P.R., Montreal, born at Baie Verte, N.B., Aug. 15, 1882.

M. B. Helston, Superintendent, Division 4, Western District, Canadian Northern Ry., Calgary, Alta., born at Michigan Ind., Aug. 24, 1869.

W. P. Hinton, Traffic Manager, Grand Trunk Pacific Ry., Grand Trunk Pacific Coast Steamship Co., and Western Traffic Manager, Canadian Government Railways, Winnipeg, born at Hintonburg, Ont., Aug. 30, 1871.

J. D. McDonald, Assistant General Passenger Agent, G.T.R., Chicago, Ill., born at Toronto, Aug. 27, 1855.

T. McHattie, ex-Master Mechanic, Eastern Lines, G.T.R., Montreal, born at Dufftown, Banffshire, Scotland, Aug. 8, 1854.

M. K. McQuarrie, Resident Engineer, Dominion Atlantic Ry., Kentville, N.S., born at Sault Ste. Marie, Ont., Aug. 17, 1884.

A. H. Mahon, District Locomotive

Foreman, Grand Trunk Pacific Ry., Edson, Alta., born north of Ottawa, Ont., Aug. 27, 1874.

W. J. Meakin, Locomotive and Car Foreman, C.P.R., Wetaskiwin, Alta., born Toronto, Aug. 22, 1872.

C. Montgomery, Master Mechanic, Pere Marquette Ry., St. Thomas, Ont., born near London, Ont., Aug. 29, 1860.

W. E. Mullins, General Manager (Freight), United Fruit Co., New York, born at Stratford, Ont., Aug. 13, 1870.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver, B.C., born at Greenwich, Eng., Aug. 27, 1875.

F. H. Phippen, K.C., General Counsel, C.N.R., Toronto, born at Belleville, Ont., Aug. 26, 1862.

W. M. Porteous, District Freight Agent, C.P.R., St. Louis, Mo., born at Edinburgh, Scotland, Aug. 3, 1857.

W. G. Ross, President, Montreal Harbor Commissioners, born at Montreal, Aug. 6, 1873.

W. LeB. Ross, Local Treasurer, G.T. Pacific Ry., Winnipeg, born at Ottawa, Ont., Aug. 9, 1868.

F. C. Salter, European Traffic Manager, G.T.R., and Canadian Express Co., London, Eng., born at Sarnia, Ont., Aug. 31, 1863.

A. O. Seymour, General Tourist Agent, C.P.R., Montreal, born at Ogdensburg, N.Y., Aug. 14, 1887.

S. A. Simpson, Superintendent, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Winnipeg, born at Toronto, Aug. 22, 1880.

J. F. Sweeting, Industrial Agent, Natural Resources Department, C.P.R., Calgary, Alta., born at Worthing, Eng., Aug. 20, 1872.

W. J. Sturges, acting Assistant Purchasing Agent, Grand Trunk Pacific Ry., Winnipeg, born at Fairfield, Vt., Aug. 28, 1877.

L. Tait, Secretary-Treasurer, London St. Ry., London, Ont., born at Hamilton, Ont., Aug. 9, 1882.

F. E. Warren, General Car Foreman, C.P.R., Winnipeg, born at Chelsea, Que., Aug. 29, 1872.

W. B. Way, Superintendent, District 2, Transcontinental Division, Canadian Government Railways, Cochrane, Ont., born at Bowmanville, Ont., Aug. 22, 1867.

H. E. Weyman, Master Mechanic, Levis County Ry., Levis, Que., born at Guildford, Eng., Aug. 27, 1883.

Regina Spur Tracks.—From time to time the Regina City Council built spur tracks to give connection to industrial and warehouse sites, charging the owners of these properties a rental. A subcommittee reported at a meeting of the Council, July 4, that the city's interest in the tracks was not being properly looked after. The committee learned that a number of rentals have not been collected for several years, arrears in some cases dating back six and seven years, and in some cases where property has exchanged hands several times, the city is at a loss to know who should be responsible for the payments. Just how much the arrears amount to and how much property is involved the committee did not learn and doubt is expressed whether the officials are in a position to say without some research the amount over due. The council instructed the subcommittee to prepare a statement of all the spur tracks.

Canadian Government Railways Capital and Operating Statistics.

The Canadian Government Railways, on Mar. 31, 1916, the last date at which figures are available, comprised a total of 4,513.92 miles, of which 4,062.92 were being operated by the Department; 32 miles were being operated under lease by the Dominion Atlantic Ry., and 419.10 miles were under construction. The different lines were as follows: Intercolonial Ry., 1,518.39 miles, on which there are 66.92 miles of second track, and 526.64 miles of sidings, spurs, etc.; there were operated as branches of the Intercolonial, the New Brunswick & Prince Edward Island Ry., 36.05 miles; the International Ry. of New Brunswick, 111.30 miles; and the St. John & Quebec Ry., 119.87 miles; making a total for the Intercolonial of 1,785.61 miles; and the National Transcontinental Ry., including the Lake Superior Branch, leased from the Grand Trunk Pacific Ry., had 2,002.91 miles. The Hudson Bay Ry., 418 miles, is under construction from Pas to Port Nelson, Man., and the Quebec Bridge, also under construction, is 1.10 miles. The capital expenditure on these lines has been as follows:

	Year ended Mar. 31, 1915.	Total Expenditure.
Intercolonial	\$7,635,050.25	\$115,766,560.24
New Brunswick and P.E.I.	198,511.28	224,211.28
International Ry. of N.B.	2,637.47	3,937.47
P.E.I. Ry.	1,350,472.73	10,841,372.44
Nat. Trans. Ry.	7,078,451.69	159,881,197.46
Quebec Bridge	2,746,813.70	18,295,181.51
Hudson Bay Ry.	4,889,131.77	15,749,908.43
Total	\$23,901,068.89	\$320,762,368.83

The principal works on the Intercolonial upon which this expenditure was made in 1915-16 included the new terminal facilities at Halifax, upon which \$3,162,304 was expended; strengthening bridges, \$700,000; car ferry and dock at Mulgrave,

Ry.	Passengers carried.	Tons of freight carried.	Loco-motive mileage.	Train mileage.	Car mileage.
Intercolonial	4,124,387	5,447,722	9,705,642	7,890,939	125,915,220
N. B. and P. E. I. Ry.	21,264	74,936	57,176	42,439	275,016
International of N. B.	35,950	80,770	76,404	72,500	507,469
St. John and Quebec	42,864	42,000	72,438	68,444	382,808
Prince Edward Island	412,535	118,852	453,503	367,614	2,280,639
Nat. Transcontinental Ry.	401,805	1,984,479	2,711,429	2,286,109	47,697,538
Total	5,038,805	8,748,769	13,078,392	10,728,045	177,058,690

N.S., \$343,850; Dartmouth to Deans Branch, \$300,360; and rolling stock, \$2,500,000. The principal item of expenditure on the Prince Edward Island Ry. was on account of the car ferry terminal work at Port Borden, P.E.I., and Cape Tormentine, N.B., \$1,322,593.34. The work done on the Intercolonial branch lines was necessary to bring them up to that line's standard, and the expenditures on the National Transcontinental, the the Quebec Bridge and the Hudson Bay Ry. was for construction and completion.

The accounts of the several parts of the Intercolonial Ry. System are kept distinct, as the ownership of the New Brunswick & Prince Edward Island Ry. and the International Ry. of New Brunswick have not yet been transferred to the Government; and as the St. John & Quebec Ry. is operated under an agreement with the New Brunswick Government. Following are the details of operating earnings and expenditure:

Intercolonial Railway.	
Passenger traffic	\$4,010,879.58
Freight traffic	9,200,339.21
Mails, express, freight, etc.	857,572.62
Gross earnings	\$14,068,791.41
Maintenance of way and structures.	\$2,489,798.20
Maintenance of equipment	2,367,679.33
Traffic expenses	256,871.81

Transportation	6,930,096.31
Transportation, water lines	50,619.83
Miscellaneous expenses	152,058.44
General expenses	304,391.92
Total expenses	\$12,551,495.84

Net earnings	\$1,517,295.57
------------------------	----------------

New Brunswick and P.E.I. Ry.	
Passenger traffic	\$10,404.66

Miscellaneous operations	3,796.31
General expenses	91,805.74
Total expenses	\$3,860,528.95
Deficit	\$102,141.36

With the exception of the Intercolonial, all the lines show a deficiency. The surplus revenue on the Intercolonial was absorbed by adding \$190,000 to the rail renewal account; \$100,000 to the fire renewal account; \$1,225,895.57 to equipment renewal account and \$1,400 on special vote as "compassionate allowances." The deficiencies on operating account on the five other lines, totalling \$327,708.76, are provided for out of consolidated account. There was also paid on account of these lines: \$10,186.29 as interest on purchase price of \$270,000 of the N.B. & P.E.I.R.; \$90,000 as interest on purchase price of \$2,700,000 of the International Ry. of N.B., and \$300,000 on account of rental for the National Transcontinental Lake Superior Branch. The rental of the Intercolonial's Windsor Branch, payable by the Dominion Atlantic Ry., is \$22,500 a year.

Following are the general statistics of the various government lines:

Summary of All Lines.		Surplus or deficiency.	
Earnings.	Expenses.		
Intercolonial Railway	\$14,068,791.41	\$12,551,495.84	\$1,517,295.57
New Brunswick & Prince Edward Island Railway	50,414.34	76,844.63	26,430.29
International Railway of New Brunswick	104,623.49	116,651.38	12,027.89

Cost of Maintaining Electric Locomotives

Electric locomotives on the Norfolk & Western Ry., according to that company's report for the six months ended Dec. 31, 1916, proved much more expensive to maintain and operate than steam locomotives. The average cost of repairs, power and lubricants for electric locomotive equipment per 100 locomotive miles was \$6,290, while that of repairs, fuel, stores and lubricants for steam locomotive equipment was only \$25.21. Repairs were respectively \$32.69 and \$12.70. Power and lubricants for the electric locomotives cost \$30.21 per 100 locomotive miles, as against \$12.51 for fuel, stores and lubricants for steam locomotives.

A table in the report divides the steam equipment by divisions and by classes of locomotive (passenger and freight). On the Pocahontas Division, which is the one electrified, repairs to freight and to passenger steam locomotives cost respectively \$14.60 and \$8.53, while fuel, stores and lubricants cost \$15.86 and \$6.01, making totals respectively of \$30.46 and \$14.54.

United States Railways Co-ordinated for the War.

As there appears to be a very general impression that U.S. railways have been taken over by the government in connection with the war, it may be of interest to explain the situation. Almost immediately after war was declared the U.S. railways managements undertook to produce a maximum of transportation efficiency and agreed among themselves to coordinate their operations into a continental railway system. At a meeting of railway presidents in Washington April 7, the following resolution was adopted: "Resolved, that the railroads of the U.S., acting through their chief executive officers here and now assembled, and stirred by a high sense of their opportunity to be of the greatest service to their country in the present national crisis, do hereby pledge themselves, with the government of the United States, with the governments of the several states, and with one another, that during the present war they will coordinate their operations in a continental railway system, merging during such period all their merely individual and competitive activities in the effort to produce a maximum of national transportation efficiency. To this end they hereby agree to create an organization which shall have general authority to formulate in detail and from time to time a policy of operation of all or any of the railways, which policy, when and as announced by such temporary organization, shall be accepted and earnestly made effective by the several managements of the individual railroad companies here represented."

In cooperation with the Council of National Defence and its advisory commission, the direction of this continental railway system has been voluntarily placed in the hands of an executive committee of the Special Committee on National Defence of the American Railway Association, now designated for brevity as the Railroads' War Board, and constituted as follows: Fairfax Harrison, President, Southern Ry., Chairman; Howard Elliott, Chairman of Board, New York, New Haven & Hartford Rd.; Julius Kruttschnitt, Chairman of Executive Committee, Southern Pacific Co.; Hale Holden, President, Chicago, Burlington & Quincy Rd.; Samuel Rea, President, Pennsylvania Rd. System. The ex officio members are: Daniel Willard, President, Baltimore & Ohio Rd., and Chairman of the Advisory Committee on National Defence; E. E. Clark, member of Interstate Commerce Commission.

The railways of the country have been divided into six departments, viz.: the Northeastern, Eastern, Southeastern, Central, Southern and Western, in charge of a general committee of railway managers. In addition, a number of subcommittees have been appointed, covering all parts of the country, on which railway men are handling the railway problems arising from war conditions. The foregoing plan of operation covers all service of the railways—that on behalf of the public as well as that for the government. Under this plan, the government will advise the railways what transportation service it requires, but the responsibility is upon the railway managers to provide it. For that purpose the railways will be operated practically as one system. Government business will receive preferential movement; but for regular service, every effort will be made to prevent abnormal inconvenience. It is believed that this

plan will secure efficiency of service and operation.

The Railroads' War Board has notified all railways that the Secretary of War has approved the board's suggestion that the holding of conventions, which stimulate passenger travel, be discouraged, at least until the railways are more nearly able to handle the freight business that is being offered. This action by the board is another step taken to increase in every possible way the freight and troop carrying capacity of the existing railway facilities. Already carriers have been advised to adjust their passenger service and to discontinue to some extent anyway running summer excursions.

The U.S. Council of National Defence announces the creation of cooperative committees on railway cars and locomotives, to serve with the committee on transportation and communication, of which Daniel Willard, chairman of the advisory commission of the council, is chairman. S. M. Vaucrain, Vice President, Baldwin Locomotive Works, is chairman of both cooperative committees. It will be the function of these two committees to assist in solving the problem of increasing the U.S. output of cars and locomotives through coordination of the efforts of manufacturers, and to aid in making as efficient use as possible of existing rolling stock. Their duties have been made unusually important through the demand of the allied countries, particularly France, Russia and Italy, for U.S. railway supplies.

Freight Statistics for 1915-16.

The total weight of freight carried over Canadian railways for the year ended June 30, 1916, was 109,659,088 tons, of which 62,950,122 originated on the home roads; 20,421,932 was received from other roads, and 26,287,034 was received

from United States lines. No mention is made of freight received from overseas, which is probably treated as freight originating on the home roads. The following table shows the tons carried, with the classification under the heads mentioned:

	Originating on own Lines.	Received from other Lines in Canada.	Received from U. S. Lines.	Total Freight.
Algoma Central & Hudson Bay	729,182	7,476		736,658

Pere Marquette Railway Reorganization.

The order dismissing the receivers who have had charge of the Pere Marquette Rd.'s affairs, for some considerable time, was signed, June 14, by U.S. District Judge Tuttle at Detroit, Mich. The company was reorganized during the past winter, the plans of reorganization having been approved by the state and federal authorities. The intervening period has been devoted to putting reorganization plans in operation and winding up the receivership affairs.

One of the most important proceedings in connection with the receivership and reorganization was the investigation into "the character of the service, physical condition of the equipment and property, financial history and transactions and practices of the P.M.R.," instituted April 24, 1914, by the Interstate Commerce Commission. It subsequently appeared that many of the transactions of the company, after July 1, 1904, were closely interwoven with the affairs of the Cincinnati, Hamilton & Dayton Ry., consequently that company's affairs were investigated also. The affairs of the latter company have no special interest for Canadian railway men, and those of the P.M.R. are only interesting in so far as they are concerned with the purchase and operation of the Lake Erie & Detroit River Ry.

The Pere Marquette Rd. was a consolidation of three lines in the U.S., brought about in 1900, and the Lake Erie & Detroit River Ry. was acquired in Aug., 1902, from Hiram Walker & Sons, of Walkerville, Ont., who were represented in the transaction by F. H. Walker. The Canadian railway had been offered to one of the combinations of capitalists which were dealing with the P.M.R. affairs, in Feb., 1902, for \$6,000,000, but the offer was declined. Another group of capitalists dealing with the P.M.R. control acquired the entire capital stock of the Canadian line, 14,000 shares, at \$205 a share, Hiram Walker & Sons to receive in payment therefor 20 year collateral trust gold bonds of the Pere Marquette Rd. for \$2,870,000, bearing interest at 4%, the contract providing that 3% only was to be paid during the first two and a half years. The Canadian line was to be free from floating debt when the deal was consummated. This contract was finally completed in September, with the National Trust Co., Toronto, as trustee for the \$2,870,000 of P.M.R. bonds, and with the P.M.R., instead of the group of capitalists who had negotiated the deal, as the purchasers of the L.E. & D.R.R. stock. The Canadian company had at the time of the sale outstanding \$3,000,000 of 5% gold bonds which the P.M.R. was to acquire at \$103½. The P.M.R. assumed the obligation by resolution at a special meeting, June 9, 1903, accomplishing this undertaking by the issue of \$3,000,000 of its own 4½% 30 year gold bonds, secured on the L.E. & D.R.R., and guaranteed as to principal and interest by the P.M.R. The arrangements with the Canadian line were completed in Oct., 1903, but the contract was not signed until December of the same year, the prime considerations being: "1. The payment of the interest on the \$3,000,000 bonds of the L.E. & D.R.R., and all other fixed charges and operating expenses. 2. The setting apart out of the earnings of the L.E. & D.R.R., as conducted by the P.M.R., of the amount of interest on the \$2,870,000 bonds given in payment of the L.E. & D.R.R. stock, being

a sum to equal a dividend of 6.15% on the capital stock until June 30, 1915, and a dividend of 8.20% thereafter."

These facts are all set out with considerable detail in an Interstate Commerce Commission report issued recently. The report then sums up the matter of the P.M.R. Canadian connection by pointing out that it secured trackage rights for freight traffic only over the Michigan Central Rd. to the Niagara frontier; that the operations over these lines are accounted for as a part of the operations of the whole system; that officials claim the Canadian lines pay their own way, although it is a matter of controversy between the Canadian and United States bondholders. The accounts, as written into those of the P.M.R., showed the cost of road, with final adjustments to be \$4,659,891; offsetting liabilities: capital stock, \$1,400,000; first mortgage 5% bonds, \$3,000,000; 5% equipment bonds, \$112,000; current liabilities, \$147,891; total, \$4,659,891. The report concludes: "The road's income and profit and loss transactions, beginning prior to Jan. 1, 1892, and including the business of the London & Port Stanley Ry., resulted in an accumulated surplus of \$193,468.13 at the end of 1901. In 1902 there were extraordinary charges made to both income and profit and loss, including \$13,856 paid in dividends, and these left the road on Dec. 31, 1902, with a deficit of \$13,955.57. Those dividends, according to the records available, were the first ever paid. In 1903, under P.M.R. control, gross rev-

enues increased from the \$640,018.92 of 1901 to \$968,875.26, practically 50%, whereas expenses increased less than 30%. The result permitted payment of the bond interest of \$150,000 and stock dividends of \$86,100, all according to contract, it will be observed, and left a surplus of \$12,003.51."

Barbed Wire Along Railway Lines.—The Board of Railway Commissioners passed general order 196, June 29, as follows: Re sec. 254 of Railway Act and complaints filed with the board against the use of barbed wire in fences erected and maintained by railway companies in compliance with the requirements of the said section, it is ordered that in municipalities where barbed wire is prohibited railway companies are forbidden to use barbed wire in the future construction or reconstruction of fences along their respective lines; provided that barbed wire may be strung along the top of woven wire fences in stock range country; barbed wire may be strung along the top of closed board fences to prevent trespassing; barbed wire may be used along the bottom of a woven wire fence, where it is necessary to fence against pigs.

Central Ry. of Canada.—The company's solicitors in Montreal, presented a petition to the Court of Exchequer, June 28, asking for an order confirming an arrangement between the company and its creditors which had been filed with the Court, May 3, 1916. The court fixed Sept. 5, for hearing the application, and has directed any person desiring to oppose the application to file particulars on or before Aug. 28.

Canadian Pacific Railway Honor Roll 25.

Adams, John	Waiter	Montreal	Died of wounds
Armstrong, Robert G.	Hostler	Coronation	Wounded
Bailey, Edgar E. E.	Apprentice instructor	Ogden	Wounded
Barlow, Thomas H.	Clerk	Winnipeg	Wounded
Beattie, Wilfred G.	Clerk	Montreal	Wounded
Bell, George E.	Loco. man	British Columbia Dist.	Killed in action
Brown, Joseph A.	Clerk	Winnipeg	Wounded
Buchanan, George	Loco. fireman	Hardisty	Wounded
Candy, Ernest J.	Loco. fireman	British Columbia Dist.	Presumed dead
Chambers, William L.	Clerk	Winnipeg	Killed in action
Chrisp, Alfred John	Cashier	New Westminster	Wounded
Clark, Samuel	Carpenter	West Toronto	Wounded
Coles, Jack McL.	Storekeeper	Swift Current	Wounded
Crosby, Thomas G.	Agent	Francis	Wounded
Currie, James	Truck repairer	Vancouver	Wounded
Ferguson, John	Loco. fireman	Fort William	Presumed dead
Hamilton, Robert	Laborer	Strathcona	Presumed dead
Harrison, Jonathan	Loco. fireman	Red Deer	Wounded
Hawkins, Kenneth B.	Loco. man	New Brunswick Dist.	Killed in action
Heaton, Philip H.	Clerk	Moose Jaw	Wounded
Hickey, George F.	Trainman	London	Wounded
Johnson, Reginald L.	Electrician	Revelstoke	Killed in action
Keech, Ernest F.	Hammer boy	West Toronto	Wounded
Keir, D. B.	Cook	Calgary	Wounded
Kemp, Maurice T.	Steward	Toronto	Shell shock
Latimer, Archie	Yardman	Moose Jaw	Killed in action
Loewen, John	Apprentice	Nelson	Killed in action
McHardy, Andrew	Loco. foreman	Nendorf	Wounded
McIntyre, Robert L.	Conductor	British Columbia Dist.	Wounded
MacLaren, David L.	Clerk	St. John, N.B.	Wounded
Malpass, Wilfred A.	Porter	Vancouver	Wounded
Marks, Frederick	Car repairer	West Toronto	Killed in action
Masson, Robert	Cashier	Wetaskiwin	Killed in action
Miller, Frederick	Foreman	Winnipeg	Wounded
Millican, William	Loco. fireman	Fort William	Killed in action
Moore, James	Waiter	B.C. Coast S.S. Service	Wounded
Morris, David	Clerk	Lethbridge	Wounded
O'Flaherty, Lawrence	Loco. fireman	Kenora	Died of wounds
Oliver, Frederick C.	Forester	Montreal	Gassed
Parry, John	Bridgeman	Winnipeg	Wounded
Phillips, John O.	Clerk	Calgary	Wounded
Rainy, George E.	Loco. fireman	Winnipeg	Killed in action
Reynolds, William	Waiter	Winnipeg	Wounded
Roy, Charles M.	Machinist	Winnipeg	Wounded
Scott, Henry L.	Assistant Foreman	Montreal	Wounded
Stewart, William D.	Carpenter	British Columbia Dist.	Wounded
Stingel, Charles E.	Wiper	Fort William	Killed in action
Tyrrell, Roy W.	Messenger	Brantford	Wounded
Wallis, Frederick	Helper	Winnipeg	Killed in action
Watts, Arthur S.	Wiper	Arcola	Wounded
White, William	Clerk	Montreal	Wounded
Young, Alexander C.	Brakeman	Moose Jaw	Presumed dead
Young, Charles	Helper	Winnipeg	Presumed dead
Young, James F.	Assistant Agent	Manitou	Wounded

Up to July 3 there were shown on honor lists:

Killed, 433; wounded, 940. Total, 1,363.

Toronto, Hamilton and Buffalo Railway Co's Annual Report.

Following are extracts from the annual report for the calendar year 1916: The report covers the operation of mileage as follows: Main line, 79.88 miles; branches, 20.13 miles; lines operated under trackage rights, 4.36 miles; total road operated, 104.37 miles. The decrease of 2.14 miles in road operated, as compared with the previous year, is due to a reduction of 7.39 miles, caused by a reclassification of tracks, partly offset by the extension of the Dunnville Branch from Dunnville to Port Maitland, 5.25 miles.

	1916.	1915.
Rail operations		
Revenue	\$1,870,236.68	\$1,404,319.55
Expenses	1,144,868.67	899,636.37
Net revenue	\$725,368.01	\$504,683.18
Percentage of expenses to revenues	(61.22)	(64.06)
Railway tax accruals...	\$20,338.78	\$12,497.23
Uncollectible railway revenues		1.20
	\$20,338.78	\$12,498.43

Amount to credit of profit and loss		
Dec. 31, 1915	\$1,275,481.70	
Add surplus for 1916	412,318.77	
Add sundry adjustments (net)	138.81	
	\$1,687,939.28	
Deduct discount, commission and expenses, Consolidated mortgage bonds of 1906, Series A	\$204,627.54	
Deduct abandoned property	450.00	
	205,077.54	
Balance to credit of profit and loss		
Dec. 31, 1916	\$1,482,861.74	

	1916.	1915.
Freight revenue during the year was \$1,239,261.87, an increase of \$341,344.21, due to a greater volume of traffic handled, there having been a substantial tonnage increase in nearly all commodities. Passenger revenue was \$422,460.14, an increase of \$55,140.76, due to a general increase in traffic and to increased average distance each passenger was carried. Express revenue was \$36,644.57, an increase of \$8,191.89, due to a general increase in business. Switching revenue was \$109,137.54, an increase of \$28,373.71, and demurrage revenue was \$32,518.50, an increase of \$27,574.10, largely due to increased activity of industries at Hamilton and Welland. Dining and buffet revenue was \$20,907.72, an increase of \$6,015.77, due to increased passenger business. Operating revenues from all other sources decreased \$633.31. Operating expenses were \$1,144,868.67, an increase of \$245,232.30, and were 61.22% of the operating revenues, which is 2.84% less than the operating ratio of the previous year. An increased expenditure on maintenance of way and structures was largely due to relaying more rail than in the previous year and to higher rates paid for labor. In order to handle the increasing tonnage it was		

found necessary to make large expenditures in maintaining and improving the power and freight train cars, notwithstanding the higher cost of labor. A number of old flat and box cars were retired, and three locomotives were replaced with power of improved type. The increase in transportation expenses is due to increased cost of labor, fuel and materials and also to the larger force made necessary in handling the greater volume of business. The increase in miscellaneous operation expenses is due to a general increase in business. The increase in general expenses is due to increased cost of supervision and miscellaneous expenditures. The decrease of \$44,244.87 in other income is mainly attributable to the falling off in the credit balance for hire of equipment, on account of the greater number of foreign cars used.

On the extension of Dunnville Branch, from Dunnville to Port Maitland, 5.25 miles, \$174,624.95 was spent. There

performed by the Government included the excavation for a turning basin opposite the car ferry slip, and the river has now a navigable depth for about two miles from Port Maitland, with a channel approximately 500 ft. wide. There is every reason to expect that dredging operations will be continued next spring and completed as nearly as is practicable, ultimately resulting in a navigable channel approximately 500 ft. wide, and having a minimum depth of 21 ft. for approximately 4 miles from the port. The plans contemplate dredging of another turning basin in the upper reaches of the river.

performed by the Government included the excavation for a turning basin opposite the car ferry slip, and the river has now a navigable depth for about two miles from Port Maitland, with a channel approximately 500 ft. wide. There is every reason to expect that dredging operations will be continued next spring and completed as nearly as is practicable, ultimately resulting in a navigable channel approximately 500 ft. wide, and having a minimum depth of 21 ft. for approximately 4 miles from the port. The plans contemplate dredging of another turning basin in the upper reaches of the river.

Fuel Consumption on Railways in 1915-16.

The consumption of fuel of all kinds by locomotives on Canadian railways increased from 5,608,954 tons in the year ended June 30, 1907, to 8,995,123 tons in the year ended June 30, 1916. The average cost per ton in the last statistical year was \$3.11, against \$3.02 for the immediate previous year. Following is the analysis of the figures:

Class of Locomotive.	COAL.		WOOD.		OTHER FUEL.		Total.	Miles. Run.
	Anthracite	Bituminous.	Hard.	Soft.	Oil.	Charcoal		
Freight	2,666	5,090,339	1,716	59,532	28,097,737	9,272	6,273,546	66,491,134
Passenger	1,129	1,845,382	1,163	34,553	14,438,906	6,235	1,938,619	42,215,551
Mixed	1,050	413,648	131	5,906	906,613	480	421,425	7,610,281
Switching		1,027,949	529	21,752	3,675,157	2,820	1,053,739	23,636,669
Special	55	265,237	98	4,431	1,845,617	484	307,794	5,062,313
Total	4,899	8,672,455	3,637	126,174	43,963,930	13,292	8,995,123	144,966,448

were issued and sold, at 90% of par, \$2,000,000 4½% consolidated 50-year gold bonds, series A, out of the \$10,000,000 authorized. The proceeds were used to reimburse the treasury for expenditures on construction of a branch line, Smithville to Dunnville, 14.90 miles, and other additions and betterments and to provide for future corporate purposes.

The Toronto, Hamilton & Buffalo Navigation Co. was incorporated July 7, 1916, under Ohio State laws, with a capital stock of \$400,000, all of which has been acquired and is held by the T.H. & B.R. Co. The navigation company operates a steel car ferry boat—Maitland No. 1—between Port Maitland, Ont., and Ashtabula, Ohio, approximately 91 miles, in connection with this company's line, which has, during the year, been extended from Dunnville to Port Maitland. The operation of this boat was commenced Oct. 20, 1916, and for the period ended Dec. 31 there was a resulting surplus of \$6,333.63, the additional benefit of this company being increased earnings of approximately \$44,000, thus justifying the wisdom of the directors in extending the road from Dunnville to Port Maitland, and establishing a ferry connection with the railways to the south of Lake Erie at Ashtabula. The assurance given by the Government that the dredging of Port Maitland harbor and the Grand River would be done to the end that a sufficient depth of water may be afforded for the handling of the largest vessels operating on Lake Erie, has been in considerable part fulfilled. During the past season about 800,000 yards of dredging has been done at the expense of the Government, and the material removed has in large part been deposited on the low lands owned by the company, fronting on the river, thereby greatly improving their value for industrial development. The dredging

Reduction of Passenger Train Service in the United States.

In order to facilitate movements and release passenger train crews for other work, U.S. railways are making drastic reductions, compared to which those made in Canada early this year appear mild. The Pennsylvania, on its lines east of Pittsburg alone, has eliminated 102 trains, or more than double the number taken off the whole of the Canadian railways. This will cut down the passenger movement by an amount equivalent to 2,268,000 train miles a year, or over 6,500 train miles every week day. A number of parlor cars, restaurant cars and observation cars are being discontinued. The Boston & Maine has taken off 255 trains, or more than five times the number taken off in Canada, saving approximately 41,000 train miles a week. Strenuous efforts are being made to increase the carload and to impress on merchants the importance of rapid unloading, so that freight equipment may be kept busy to its utmost capacity, and terminals be kept clear. The U.S. railways realize that speed in freight movement is one of the greatest aids they can give to help to win the war, and, according to all reports, are achieving remarkable results.

Contractors' Suit.—A difference between James McDonald and Thomas McIlvenna, railway contractors, involving the question of a signature to a receipt for \$1,000, was investigated before Judge Scott at Smiths Falls, Ont., July 10. McIlvenna, who had a subcontract for some C.P.R. work from McDonald, declared that his name had been forged on a receipt for \$1,000 by McDonald. After a full investigation McDonald was acquitted of the charge.

Orders by Board of Railway Commissioners for Canada.

- Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.
26210. June 11.—Authorizing G.T.R. to rebuild highway bridge carrying North Front St., Belleville, Ont., over its main tracks.
26211. June 11.—Authorizing G.T.R. to rebuild bridge 19, over Maitland River, near Palmerston, Ont.
26212. June 11.—Authorizing C.P.R. to build spur for M. J. O'Brien in Lot 17, Con. 10, Bagot Tp., Ont.
26213. June 12. Extending the time within which Canadian Northern Ry. shall complete spur to serve Block B, Plan B, Prince Albert, Sask., authorized by order 24930, Apr. 28, 1916.
26214. June 12.—Authorizing C.P.R. to build at grade, an extension to passing siding across road allowance between Lots 24 and 25, Con. 8, Camden Tp., Ont.
26215. June 18.—Authorizing Vancouver, Victoria & Eastern Ry. & Nav. Co. (G.N.R.) to open for traffic its line from mileage 155.92 to 156.56 in British Columbia.
26216. June 18.—Ordering Canadian Northern Ry. to grade highway crossings near mileages 50.9 and 52.1, St. Clements municipality, Man., and authorizing highway crossings at 4 points; all to be completed by July 31.
26217. June 18.—Authorizing Vancouver Harbor Commissioners to join their tracks with industrial spur operated by British Columbia Electric Ry. as lessee of C.P.R., on south shore of False Creek, Vancouver, B.C., subject to city's consent.
26218. June 18.—Authorizing C.P.R. to build extension to passing siding at grade across road allowance between Lots 30 and 31, Con. 2, Pickering Tp., Ont.
26219. June 18.—Ordering G.T.R. to contribute one-fifth of watchmen's wages as appointed under order 4788, May 27, 1908, at Winchester Ave., Toronto.
26220. June 18.—Approving plan and profile showing work to be done on North Black Creek drain under G.T.R. between Gadshill and Brunner station, Ont.
26221. June 18.—Amending order 26179, June 5, re G.T.R. gates at Victoria St., Thamesville, Ont.
26222. June 18.—Ordering that wages of watchmen required under order 26183, June 5, at Church St., Weston, Ont., be paid equally by town of Weston, G.T.R. and C.P.R.
26223. June 18.—Authorizing Grenville, Harrington and Northern Ry. to build across C.P.R. at Grenville, Que., and to provide, maintain and operate half-interlocking plant there.
26224. June 18.—Approving location of C.P.R. A2 station at Riverton, Man.
26225. June 19.—Extending, for 30 days from date, time within which C.P.R. shall erect flag station at Grants Crossing, mileage 50.5, Waltham Branch, Que.
26226. June 19.—Authorizing C.P.R. to operate over crossing near Red Deer, Alta.; speed not to exceed 15 miles an hour.
26227. June 20.—Authorizing G.T.R. to rebuild bridge carrying highway between Sidney and Thurlow Tps., Ont., over its main line.
26228. June 20.—Authorizing G.T.R. to build spur for Thompson Macdonald Co., Cobourg, Ont.
26229. June 19.—Authorizing C.P.R. to extend bridge over Great Lakes Power Co.'s canal Sault Ste. Marie, Ont.
26230. June 19.—Certifying that area of Grand Trunk Pacific Branch Lines Co.'s right of way in s.w. ¼ Sec. 29, Tp. 44, Range 22, west of 3rd Meridian, Sask., should read 7.48 acres instead of 7.47.
26231. June 21.—Approving proposed enw location of gates at Canadian Northern Ry. crossing of Gore St., Fort William, Ont.
26232. June 22.—Authorizing C.P.R. to open for traffic its Moose Jaw Northwesterly Branch, Sask., from mileage 50 to 64.5.
26233. June 23.—Restraining C.P.R. from cancelling trains 27 and 28, between Sault Ste. Marie and Toronto, until further order.
26234. June 22.—Amending order 26190, June 7, re C.P.R. spur for James Richardson & Sons, at Port Arthur, Ont.
26235. June 22.—Ordering Great Northern Ry. to provide a certain train service between Oroville and Princeton, and express fruit service to Vancouver, B.C.
26236. June 22.—Approving G.T.R. plan showing stock pens at Brampton, Ont.; work to be completed within thirty days.
26237. June 22.—Authorizing Canadian Northern Ontario Ry. to build across Boyce Ave., Montreal.
26238. June 23.—Amending order 25889, Feb. 19, re G.T.R. crossing at Amizari, Ont.
26239. June 23.—Extending to Aug. 1, 1918, time within which C.P.R. shall complete station at Tramping Lake, Sask.
26240. June 23.—Dismissing Canadian Copper Co.'s application for order disallowing Algoma Eastern Ry. Tariff C.R.C. 167, advancing rates on ore and rock, effective Feb. 5, 1917.
26241. June 23.—Authorizing Canadian Northern Quebec Ry. to build spur across Prince Albert St., Montreal, for S. Simard, Tetreauville, Que.
26242. June 23.—Ordering Pere Marquette Ry. to build farm crossing opposite existing crossing over Michigan Central Rd., in Lot No. 1, east ½, Con. 8, Aldborough Tp., Ont.
26243. June 23.—Dismissing complaint of J. E. Lilly & Co., Dawson, Yukon, against abrogation by White Pass & Yukon Ry. of season release with respect to certain items of Northern Freight Classification 6, providing alternative ratings based on stipulated valuations; and against amended Rule 21, Item 1, of Supplement 2.
26244. June 25.—Approving C.P.R. plans of bridge at London St., Windsor, Ont., provided proper telltales be erected and maintained on each side of bridge; and rescinding order 25771, Dec. 28, 1916.
26245. June 25.—Approving Canadian Northern Ontario Ry. plan dated Toronto, June 13, 1917, showing location of cattle pass on Lot 92, Ste. Genevieve Parish, Que.
26246. June 25.—Ordering C.P.R. to appoint agent at Senate, Sask., from Sept. 1 to Dec. 1, in each year and to provide standard portable station there.
26247. June 25.—Authorizing C.P.R. to build spur for Canada West Electric, Ltd., Regina, Sask.
26248. June 25.—Relieving C.P.R. from providing further protection at second public crossing east of Galt yard, Ont.
26249. June 18.—Authorizing Village of Forres, Sask., to make highway over C.P.R. on n.w. ¼ Sec. 36, Tp. 12, Range 29, west of 3rd Meridian.
26250. June 20.—Rescinding order 22119, July 2, 1914, re expropriation of certain Standard Fuel Co.'s land at Toronto, by Toronto Terminals Ry.
26251. June 25.—Dismissing application of Price Bros. & Co., of Quebec, Que., for reduction in arbitrary of 5c per 100 lbs. over Grand Mere basis of rates on paper, in carloads, from Jonquiere, Que., on Canadian Northern Ry. to U. S. points and requiring C.N.R. to amend its tariff of rates C.R.C. no. E-775, as supplemented, to provide through rates from Jonquiere that shall not exceed through rates from Donnacona or Grand Mere by more than 5c per 100 lbs., and continue this basis as maximum until further order.
26252. June 22.—Ordering G.T.R. within 60 days to install automatic bell at crossing near Gowansdown station, Ont., 20% of cost to be paid out of railway grade crossing fund.
26253. June 22.—Ordering G.T.R. to move crossing between Lots 5 and 6, Wenceslas Parish, Que., to centre of Lot 6; to be completed within 30 days.
26254. June 27.—Authorizing Vancouver, Victoria & Eastern Ry. & Nav. Co. (G.N.R.) to build spur for Craig-Taylor Lumber Co., Otter, B.C.
26255. June 26.—Authorizing C.P.R. to build spur for Foundation Co., Ltd., Dorval, Que.
26256. June 26.—Relieving Grand Trunk Pacific Ry. from providing further protection at crossing near Biggar, Sask.
26257. June 26.—Authorizing Village of Beaufort, Que., to make highway over Quebec Ry. Light, Heat & Power Co.'s tracks near Everell station.
26258. June 26.—Limiting speed of G.T.R. trains over Marker St., and along Clarence St., Brantford, Ont., to 8 miles an hour.
26259. June 26.—Authorizing C.P.R. to build spur for Kingston Smelting Co., Kingston, Ont.
26260. June 27.—Dismissing Hadley Lumber Co.'s complaint against rate on lumber from Thessalon to Chatham, Ont., compared with lumber rate from Thessalon, Ont., to Detroit, Mich.
26261. June 29.—Ordering that rates in item 18 of C.P.R. Tariff C.R.C. no. E-3287 be continued in effect pending judgment in application for general increase of 15% in freight rates between points in Canada.
26262. June 28.—Approving Salisbury & Albert Ry. Standard Freight Mileage Tariff, C.R.C. 5.
26263. June 29.—Relieving G.T.R. from providing further protection at crossing near Richmond station, Que.
26264. June 29.—Ordering G.T.R. to install at crossing of Forks Road, Moulton Tp., Ont., 20% of cost to be paid out of railway grade crossing fund.
26265. June 29.—Ordering C.P.R. to stop train 35 at Blairton, Ont., for passengers from points east of Tweed to detrain, and to discharge express; and train 36, to allow passengers for points east of Tweed to entrain and to load express; stops to be governed by rule applied to flag stops.
26266. June 30.—Authorizing C.P.R. to open for traffic its Stirling East Branch from mileage 49.2 to 85.1; trains operated between mileage 59 and 84 limited to 25 miles an hour.
26267. July 3.—Amending order 26180, June 5, re C.P.R. station facilities at Upper Kent, N.B.
26268. June 30.—Authorizing C.P.R. to rebuild interlocking plant at crossing of G.T.R. near Komoeka, Ont.
26269. June 30.—Extending for two months from date time within which Kettle Valley Ry. shall fence its right of way east of Glenfir, B.C., according to order 26129, May 21, 1917.
26270. June 29.—Authorizing Canadian Northern Ry. to build bridge across Park Foad and Moose Jaw Creek, second crossing, as revised, mileage 85.8, Moose Jaw, Sask.; and rescinding order 18003, Nov. 11, 1912, approving other plans.
- 26271 to 26275. June 29.—Approving Canadian Northern Ry. revised location at 5 points in Saskatchewan.
26276. June 29.—Amending order 20413, Sept. 24, 1913, re road revision to the north of C.P.R. in Scarborough, Ont.
26277. July 3.—Dismissing application by Notre Dame Investment Co., Winnipeg, Man., for order directing parties interested in Canadian Northern Ry. spur between Market St. and James St., to pay their respective portions of cost of land, laying of tracks and rental, and for premises covered being vested in trustees on behalf of all owners so apportioning shares; or in alternative, that C.N.R. be instructed not to deliver cars to such as shall not meet demands.
26278. July 4.—Approving C.P.R. train service at Tompkins, Sask., effective June 24, and providing that trains 13 and 14 are withdrawn in the autumn, trains 3 and 4 to be made regular stops at Tompkins, instead of flag stops.
26279. July 3.—Authorizing Hart-Parr Co. to build farm crossing over C.P.R. at Saskatoon, Sask.
26280. June 28.—Authorizing Vancouver, Victoria & Eastern Ry. & Nav. Co. (G.N.R.) to break connection between spur built under order 18255, Nov. 29, 1912, and old main line, and to remove portion of latter and ordering that spur, shown in yellow on plan, be not removed for six months from date and until further order.
26281. July 4.—Ordering crossing of C.P.R. by St. Vincent de Paul Tramway, St. Vincent de Paul, Que., be protected by derails on tramway 50 ft. each side of C.P.R.; derails to be normally open, held open by spring and operated by penitentiary officials in charge of lorries; cost to be paid equally by Dominion Department of Justice and C.P.R.; and rescinding order 25598, Nov. 1916.
26282. July 3.—Authorizing C.P.R. to operate bridge 22.28, near Hainesville, N.B.
26283. July 3.—Authorizing McLaren Lumber Co., Blairmore, Alta., subject to terms of agreement, Nov. 27, 1916, to construct log flume under C.P.R. at bridge 95.6, Crownstn Subdivision, B.C.
26284. July 4.—Authorizing G.T.R. to build sidings and spurs for British Forgings, Ltd., Toronto.
26285. July 4.—Authorizing Vancouver, Victoria & Eastern Ry. & Nav. Co. (G.N.R.) to build spur for St. Mungo Canning Co., near Townsend, B.C.
26286. July 4.—Amending Montreal & Southern Counties Ry. train schedule, effective May 6, 1917.
26287. July 3.—Authorizing Greater Winnipeg Water District Commission to carry its railway at grade across Canadian Northern Ry. Dundee Branch, in Lot 74, St. Boniface, Man.; applicant to insert diamond in C.N.R. track and crossing to be protected by half-interlocking plant; and cost to be paid by applicants.
- 26288, 26289. July 5.—Authorizing C.P.R. to use bridges 81.5 and 54.88, Algoma District, Ont.
26290. June 30.—Approving location of G.T.R. new station at Bronte, Ont.
26291. July 3.—Authorizing Greater Winnipeg Water District Commission to carry its railway across Grand Trunk Pacific Ry. at point shown on plan; crossing to be protected by interlocked home signals, set clear for G.T.P.R. and operated by applicants' trainmen; applicants to pay cost, maintaining and operating said signals.
26292. July 5.—Authorizing C.P.R. to build spur for Energetic Explosives Co. in Lot 11, Con. 3, Horton Tp., Ont.
26293. July 6.—Ordering C.P.R. to erect fences along both sides of right of way from Lavant station, Ont., south to mileage 37, by Aug. 1.
26294. July 7.—Authorizing C.P.R. to build extension to passing siding at grade across road allowance between Lots 35 and 36, Con. IX, Gore Tp., Ont.
26295. July 7.—Authorizing C.P.R. to build second passing siding at grade across road allowance between Lots 8 and 9, Con. 1, Oshawa, Ont.
26296. July 6.—Extending for six months from date time within which C.P.R. shall complete spur across Hunter St., Peterborough, Ont., as authorized by order 25986, Mar. 31.
26297. July 6.—Approving location of Grand Trunk Pacific Branch Lines Co.'s station at Red Deer Hill, Sask.
26298. July 6.—Approving Canadian Northern Ry.'s new station and site at Fort William, Ont.
26299. July 6.—Authorizing Town of Aylmer, Que., to extend Borden Crescent across Hull Electric Co.'s tracks and C.P.R. to Lake St., farm crossing at Mountain St. to be closed and Glenholm Ave. opened as shown on plan.

Traffic Orders by Board of Railway Commissioners.

26300. June 30.—Ordering that gates required at crossing of Canadian Northern Ry. and C.P.R., at Bay Bridge Road, Belleville, Ont., be installed by Aug. 31.

26301. July 3.—Dismissing application of Town and Board of Trade of Carlyle, Sask., Wauchope Grain Growers' Association and Rural Municipality of Moose Mountain, Sask., for transfer track and interchange of freight between C.P.R. and Canadian Northern Ry.

26302. July 6.—Approving agreement between Bell Telephone Co. and Mond Nickel Co., Coniston, Ont., June 7.

26303. July 5.—Authorizing Hamilton St. Ry. to cross, at rail level, Hamilton Radial Electric Ry. spur on Burlington St., Hamilton, Ont.

26304. July 7.—Authorizing C.P.R. to build second passing siding at grade across road allowance between Lots 10 and 11, Con. B.F., Clarke Tp., Ont.

26305. July 10.—Ordering G.T.R., within 60 days, to install improved type of automatic bell at Riddell St., Woodstock, Ont., and maintain same; 20% of cost of installing bell to be paid out of railway grade crossing fund.

26306. July 10.—Dismissing C.P.R. application for order directing City of Lethbridge, Alta., to pay \$465.61, unpaid balance of half cost of subway at Westminster Road, as per agreement, May 10, 1913, between C.P.R., Alberta Ry. & Irrigation Co. and City of Lethbridge, upon which order 20740, Oct. 28, 1913, was based.

26307. July 10.—Ordering C.P.R., within 60 days, to install improved type of automatic bell at highway east of Dragon station, Que., 20% of cost to be paid out of railway grade crossing fund.

26308. July 12.—Authorizing Bell Telephone Co. to lay, maintain and operate its telephone lines in underground conduits on certain streets in Hull, Que.

26309. July 12.—Dismissing Canadian Northern Ry. application to remove connection between C.P.R. and Winnipeg Joint Terminals line at Higgins Ave., Winnipeg.

26310. June 30.—Dismissing complaint of Western Canada Flour Mills Co., Winnipeg, against refusal of C.P.R. to furnish cars for shipments to Halifax, and against charge of \$200 demurrage for delay to equipment.

26311. July 12.—Dismissing application of Minnitaki Farmers Club, Minnitaki, Man., for order directing C.P.R. to stop its no. 1 passenger train three times weekly at Minnitaki siding.

26312. July 12.—Dismissing application of Rural Municipality of Assiniboia, Man., for order compelling Canadian Northern Ry. to provide lane from Portage Ave. to property immediately to rear of station grounds at Westside, corner Estella St. Portage Ave., Westside, Man.

26313. July 10.—Authorizing G.T.R. to build spur for Adams Cellboard Co., Toronto.

26314. July 6.—Rescinding order 23314, Feb. 19, 1915, re Canadian Northern Ry. fences, gates and cattle guards between mileage 103½ and 105½ from Jellicoe, Ont.

26315. June 22.—Amending order 10457, Apr. 28, 1910, to provide that work on bridge built under this order be maintained and cost apportioned as follows: City of Lachine to maintain surface, approaches and sidewalks, remove snow and keep bridge lighted, cleaned and watered; G.T.R. to look after abutments, superstructure and guard fences; cost to be paid 62½% by G.T.R., 17½% by Montreal Park & Island Ry., 16% by City of Lachine, 4% by Town of St. Pierre, Que.

26316. July 12.—Amending order 26230, June 19, re Grand Trunk Pacific Branch Lines Co.'s right of way at certain point in Saskatchewan.

26317. July 12.—Authorizing Boston & Maine Rd. to remove speed limitation of 10 miles an hour on trains operating over Comstock bridge crossing.

26318. July 12.—Ordering C.P.R. forthwith to stop train 172 at Oakville to pick up passengers for Toronto; G.T.R. to stop train 106, due at Oakville at 9:47 a.m., for passengers for Toronto and points beyond.

26319. July 13.—Authorizing G.T.R. to connect tracks on its Districts 17 and 19 with lines constructed for Hydro Electric Power Commission of Ontario, on Lots 41, 42 and 90, Stamford Tp.

26320. July 14.—Authorizing C.P.R. to build passing track across road allowance at Grainer, Sask.

26321. July 13.—Authorizing C.P.R. to build spur for Canada Creosoting Co., Trenton, Ont., to connect with industrial sidings now existing, and to extend bridge 0.8 on main line, spanning Ontario St., to provide for construction of spur.

General order 195. June 23.—Amending tariffs of the various railway companies re cartage charges.

General order 196. June 29.—Regulations respecting use of barbed wire by railways in municipalities where it is prohibited. This order is given in full on another page.

General order 197. July 8.—Rescinding general order 187, Apr. 12, 1917, and allowing rates named in tariffs C.R.C. 1 and 2, published by G. C. Ransom, agent, to become effective, excepting rates on sugar to Port Arthur, Fort William and Westfort for furtherance. And directing that present rail and water rates on sugar to Port Arthur, Fort William and Westfort for furtherance be continued in effect until further order.

Paper Rates From Jonquiere.

26251. June 25.—Re application of Price Brothers Co., Quebec, for a reduction in the arbitrary of 5c per 100 lb. over and above the Grand Mere basis of rates on paper, in carloads, from Jonquiere, Que., on Canadian Northern Ry., to points in the United States. Upon hearing the complaint at Quebec, June 27, the complainants and the C.N.R. being represented at the hearing, and it appearing that the railway has published and filed a supplemental schedule to take effect July 1, the effect of which is to increase the rates from Jonquiere, as compared with those from Grand Mere, by approximately 15%, and upon the report and recommendation of the Chief Traffic Officer, it is ordered that the application be dismissed, and that the C.N.R. be required forthwith to amend its tariff of rates on paper commodities to points in the United States, C.R.C. no. E-775, as supplemented, so as to provide through rates from Jonquiere that shall not exceed the through rates from Donnacona or Grand Mere by more than 5c per 100 lb., and to continue this basis as the maximum until further order.

Lumber Rate to Chatham.

26260. June 27.—Re complaint of Hadley Lumber Co. against alleged excessive rate on lumber from Thessalon to Chatham, Ont., compared with rate from Thessalon to Detroit. Upon hearing the complaint at Chatham, May 4, in the presence of counsel for the complainant, City of Chatham, Chatham Board of Trade, and Canadian Pacific Ry., and upon the report of the Chief Traffic Officer, it is ordered that the complaint be dismissed.

Raw Sugar Rates from St. John.

26261. June 29.—Re application of Montreal Board of Trade for suspension of proposed increase in rate on imported raw sugar from St. John and West St. John, N.B., to Montreal. Upon reading the application, it is ordered that the proposed increase in rates on imported raw sugar from St. John and West St. John, by Supplement 2 to C.P.R. Tariff C.R.C. no. E-3287, to become effective July 1, be suspended; and it is further ordered that the rates contained in item 18 of the company's Tariff C.R.C. no. 8-3287, be continued in effect pending judgment in the application of the railway for a general increase of 15% in its freight rates between points in Canada.

Salisbury & Albert Ry. Tariff.

26262. Granting application of Salisbury & Albert Ry., under sec. 327 of the Railway Act, for approval of its Standard Freight Mileage Tariff, C.R.C. no. 5.

Freight Interchange at Carlyle.

26301. July 3.—The application of Town and Board of Trade of Carlyle, the Wauchope Grain Growers' Association, and the Rural Municipality of Moose Mountain, for a transfer track and interchange of freight traffic between the Canadian Pacific and Canadian Northern Railways at Carlyle, Sask. Upon hearing the application at Regina, June 21, the applicants and the railway companies being represented, it is ordered that the application be refused.

Western Canada Flour Mills Co.'s Complaint.

26310. June 30.—Re complaint of

Western Canada Flour Mills Co., of Winnipeg, against refusal of C.P.R. to furnish cars for shipments to Halifax; and against the charge of \$200 demurrage for delay to the said railway's equipment. Upon hearing the complaint at Winnipeg, June 22, in the presence of counsel for complainant and representatives of the C. P. R. and the Canadian Freight Association, it is ordered that the complaint be dismissed.

G. T. P. R. Overcharge on Wheat.

26328. July 17. Re complaint of Farmer's Club Grain Co., of Winnipeg, that a car load of tough wheat, G. T. Pacific, 312409, on account of the G. T. Pacific Ry.'s embargo at Fort William was shipped to Keewatin, for which movement local rates were charged to and beyond Winnipeg. It is declared that the excess charge on the shipment amounted to 2½¢ per 100 lb. and the G. T. Pacific Ry. is authorized to rebate to complainants the excess amount collected by it on the shipment.

Rail and Water Rates.

General order 197. July 6. Re complaints of Board of Trade of Vancouver, Edmonton, and Winnipeg, Saskatoon Branch of Retail Merchants' Association of Canada, Montreal Board of Trade, and Canadian Manufacturers' Association against the proposed increase in rail and water rates between eastern and western Canada. Upon the matter having been set down for hearing at Victoria, Vancouver, Nelson, Calgary, Edmonton, Saskatoon, Winnipeg, and Fort William; and upon hearing what was alleged by the representatives of the Associated Boards of Trade of Eastern British Columbia and the C.P.R., it is ordered that general order 187, April 12, 1917, be rescinded; and the rates named in tariffs C.R.C. 1 and 2, published by G. C. Ransom, Agent, be allowed to become effective, with the exception of the rates on sugar to Port Arthur, Fort William, and Westfort for furtherance. And it is further ordered that the present rail and water rates on sugar to Port Arthur, Fort William, and Westfort for furtherance be continued in effect until further order.

Placing of Safety Appliances on Trains.

The Board of Railway Commissioners passed general order 198, July 16, as follows: Re general order 128, July 20, 1914, and the application of the Canadian Pacific and Grand Trunk Railways for an extension of time until July 1, 1918, within which to make changes in respect of safety appliances on trains as required under said order. Upon hearing the application at Toronto, June 13, in the presence of counsel for the applicant companies, the Canadian Northern Ry., and representatives for the railway employes, the evidence offered, and upon the report and recommendation of the Board's Chief Operating Officer, it is ordered that railway companies be granted an extension of time until July 1, 1918, within which to make the changes required under general order 128, the railway companies to continue their present practice of filing with the board monthly reports of the progress made in complying with the requirements of the said order.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Cascade Scenic Ry.—In passing through the Dominion Parliament the bill incorporating a company with this title to build scenic railways in any part of Canada was amended by limiting the area of the company's operations to the Dominion Government parks in Alberta and British Columbia. The company's immediate object is to build a scenic railway up Cascade Mountain, Banff, Alta. (Mar., pg. 100.)

English Falls & Hudson Bay Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Brereton, Man., on the National Transcontinental Ry., to English River, at the Ontario-Manitoba boundary, thence northerly to the Hudson Bay, between the mouths of the Albany and Nelson Rivers. The company's office is to be in Toronto, its authorized capital is to be \$1,000,000, and it may issue bonds for \$30,000 a mile. The provisional directors are: J. G. G. Kerry, H. A. Stewart, K.C., H. A. Clark, E. L. Weatherhead, Toronto.

The Esquimalt & Nanaimo Ry.'s bridge across Victoria harbor was considerably damaged by a Dominion Government tug on June 29. Traffic was reopened over the bridge, July 9, after repairs had been made.

In connection with building a bridge at Johnson St., Victoria, which forms part of the Songhees Reserve development works, the company has submitted plans for a temporary bridge, pending the full development of plans for laying out the reserve by the railways and the city. The company already has a bridge at this point which must sooner or later be replaced. The city desires to have a traffic bridge, and proposes that a joint railway and traffic bridge be built. The British Columbia Minister of Railways favors this, but the railway company dissents. The matter has been under discussion for a long time but seems now to be in a fair way of settlement. (April, pg. 193.)

The Grand Trunk Pacific Ry. has notified the Calgary, Alta., City Council that it is agreeable to the building of a spur track to connect the main line with the city market, the company to provide the steel rails, angle irons, etc., the city to pay amortization charges, the chief of which will be on the ties. In a discussion at the city council, an opinion was expressed that the city wished to retain the right to take up the spur whenever desirable, and therefore should be sole owner. Commissioner Graves was directed to make a report. The estimated cost of the spur is \$4,300.

The company has deposited with the Minister of Public Works at Ottawa, under the Navigable Waters Protection Act, plan of wharf and fish curing plant proposed to be erected in Prince Rupert harbor, B. C. (July, pg. 273.)

Grand Trunk Ry.—The Brantford, Ont., City Council has adopted a report of its committee on railways, which made four recommendations: (1) That the city waive insistence on the building by the G.T.R. of the Holmedale spur and the Eagle Place switches, and the maintenance of the Colborne St. station as a station and as a stop; (2) That the G.T.R. convey to the city the extension of Clarence St., 66 ft. wide, south through G.T.R. lands; (3) That the G.T.R. convey to the city property for the purpose of enabling the city to extend Northumber-

land St. westerly to the line of Clarence St.; (4) That the G.T.R. assume the total cost of the St. Paul Ave. subway as a roadway, 44 ft. wide, as directed to be constructed by the Board of Railway Commissioners. (July, pg. 273.)

Work is to be started at once on the erection of a brick station at St. Catharines, Ont. The building is to be built on a granite base. The company is erecting a similar building at Berlin, N.H., on the main line between Montreal and Portland, Me.

Great Northern Ry.—The Board of Railway Commissioners has authorized the opening for traffic of the line from a connection with the main line at Grand View cut to the station near Main St., Vancouver, mileage 155.32 to 156.56. This is the piece of line built to give connection with the new terminal station on False Creek flats, used jointly by the G.N.R. and the Northern Pacific Ry. (July, pg. 273.)

Hudson Bay Ry.—The House of Commons, on July 13, voted \$3,000,000, on account of construction of this railway from Pas to Port Nelson, Man., and for terminals and elevators. The Minister said it is expected that the line will be completed to Port Nelson in November, but will not be operated this year. (July, pg. 268.)

Intercolonial Ry.—In respect of the present state of construction of the new deep water terminals at Halifax, N.S., the Minister of Railways said in the House of Commons recently: "To assist in handling the overseas shipment of stores and timber, special efforts were made to complete berths and immense temporary sheds at the new ocean terminals, Halifax. This was a big undertaking, but was satisfactorily completed by Nov. 15, 1916. When war broke out our yards could accommodate 1,844 cars in and around Halifax; we are now able to handle 3,748 cars, which is a striking indication of our overseas development at that point. The grading from Point Pleasant to Fairview has been practically completed. The substructure of the subway at Fairview has been completed and a temporary steel span erected. Two concrete highway arches, one at Mumford Road, and one at Quinpool Road, have been completed, and the foundations finished for Chebucto and Byers Roads and Prince Arthur St." The terminal works include the building of a double track line from Fairview to the terminals and the building of wharves with freight and passenger buildings thereon. These were fully described, with plans, in Canadian Railway and Marine World, Nov., 1914, pg. 496.

We are officially advised that the 10,000 tons of 85 lb. steel rails being rolled for the line by the Dominion Iron & Steel Co. will lay about 75 miles of track. These rails will be used on the main line and the released rails will be used for relaying branch lines, sidings and other appropriation work.

Tenders are under consideration for the erection of an extension to the freight shed accommodation at Halifax, N.S.

Michigan Central Rd.—We are officially advised with respect to a press report as to work being in progress on the rebuilding of the cantilever bridge across the Niagara River at Niagara Falls, Ont., that there is nothing further to be said than was said in February. At that time

the Chief Engineer advised us that surveys and tests were being made, and certain preliminary work being done; that when all this was completed the company would be in a position to determine what really would be done at the bridge, either in the way of strengthening and enlarging the present bridge or of building an entirely new bridge. (July, pg. 273.)

Toronto, Hamilton & Buffalo Ry.—We are officially advised that the company has purchased some acreage at Bridgeburg, Ont., with the intention of utilizing it for a freight yard provided arrangements can be made with the Michigan Central Rd. for running rights between Welland and Bridgeburg. The proposed yard would hold about 2,000 cars. The plans have not been definitely settled, and no contract has yet been arranged with the M.C.R. (July, pg. 274.)

Mikado Locomotives for Grand Trunk Railway.

The 15 mikado locomotives which the G.T.R. is having built, 10 by Canadian Locomotive Co., Kingston, Ont., and 5 by American Locomotive Co., Schenectady, N.Y., are of the 2-8-2 type, G.T.R. class M, the numbers of those being built at Kingston being 485 to 494 and of those at Schenectady, 495 to 499.

The cylinders will be 27 in. diam. by 30 in. stroke, and the 8 driving wheels will be 63 in. diam. The extended wagon top type boiler will be 74 in. diam. at the front end and 83 in. diam. at the dome course, and the pressure will be 175 lb. a sq. in. There will be a 2-wheel truck at the front end, with 31 in. wheels, and a 2-wheel trailing truck at the back end, with 43 in. wheels. The weight on the driving wheels will be 205,000 lb., and the total weight of the engine in working order 276,000 lb. The driving wheel base will be 16 ft. 6 in., and the total engine wheel base 35 ft. 1 in. The tender wheel base will be 20 ft. 10 in., and coupled with the engine the total wheel base will be 67 ft. 6 in., and the total length of engine and tender over all 78 ft. 11½ in. The tractive power will be 51,637 lb., the total heating surface 3,648 sq. ft., and the grate area 56.5 sq. ft. The tender tank, of water bottom type, will carry 9,000 gal. of water and 12 tons of coal. The trucks will be fitted with equalizers and semi-elliptical springs, friction draft rigging being fitted at the back end and radial buffer at the front.

The engines will be fitted with Schmidt superheaters, valve gear, reverse gear, Franklin grate shakers, Detroit 5 feed lubricators, with special lubricator for 8½ in. cross compound Westinghouse air pump, adjustable driving box wedges, metallic packing, Gold steam heat apparatus, sanders, Buffalo brake beams on tender trucks, electric headlights and fixtures. The cylinder and piston valve bushings will be made from Hunt Spiller gun iron.

Carmen's Wages on G.T.R.—On the application of G.T.R. carmen, a conciliation board is being appointed to enquire into the men's claims regarding wages. F. H. McGuigan, formerly Fourth Vice President, G.T.R., has been nominated on the company's behalf, and C. Rodier, K.C., Montreal, will act for the employees.

Canadian Government Railways' Construction and Betterments.

The House of Commons passed the following votes recently: C.G.R. construction and betterments, \$6,500,000; Dartmouth to Deans branch line, \$65,000; to provide car ferry, construction, terminals, etc., \$310,000.

The Minister of Railways, explaining the votes, stated that the \$6,500,000 is on capital account and is not required to complete any line, but is for general betterments, distributed as follows:

Intercolonial Ry.—Buildings, \$571,000; roadbed and track, \$333,000; bridges, \$365,200; miscellaneous, which includes \$3,000,000 for Halifax terminals, \$4,158,000; total, \$5,426,200.

Prince Edward Island Ry.—Roadbed and track, \$7,600; bridges, \$900; miscellaneous, \$2,200; total, \$10,700.

New Brunswick & Prince Edward Island Ry.—Buildings, \$14,500; roadbed and track, \$64,000; bridges, \$55,600; miscellaneous, \$4,000; total, \$138,100.

International Ry. of N.B.—Roadbed and track, \$5,390; bridges, \$1,010; total, \$6,400.

National Transcontinental Ry.—Buildings, \$118,900; roadbed and track, \$151,100; bridges, \$74,000; miscellaneous, \$22,700; Winnipeg elevator, \$425,000; total, \$791,700.

Lake Superior Branch — Buildings. \$3,800; roadbed and track, \$15,400; bridges, \$87,700; miscellaneous, \$20,000; total, \$126,900.

The Minister said in reference to the N.B. & P.E.I.R. that it is hoped to get the betterments completed this year and to relay line with track taken up from the Intercolonial main line. The government is getting 12,000 tons of rails rolled at Sydney to be laid on the main line to release lighter weight rails for branches, etc. It is desired to get this particular piece of line relaid so that when the Prince Edward Island car ferry terminals are completed the line will be in a position to handle the traffic.

The \$3,000,000 proposed to be expended on the ocean terminals at Halifax will complete the unit at present in hand; the station and train shed to be built in the future is estimated to cost \$1,000,000. The total cost of the Halifax ocean terminal work to the date of the discussion was \$3,400,000.

Asked as to what was being done to avoid the gradient between Sackville and Dorchester, the Minister said: "We have spent considerable money in surveying to get the best route possible, and had it not been for the war I have no doubt we would have made the change before this. We will have to build nearly 100 miles to get around the gradient spoken of. Last winter the line from Truro to Halifax was exceedingly busy. We would be very glad indeed if we could go on with the work, but it is impossible now. I think we have a gradient there that will give satisfaction; it is 0.4% both ways."

In regard to the Intercolonial Ry. Dartmouth to Deans Branch, the Minister stated the amount asked is for the completion of the line. The line had not been in operation sufficiently long to have a full year's revenue reported on, but it is doing very well, better than was anticipated, and is proving a valuable feeder to the I.R.C. A telegraph line has been installed.

Referring to the Prince Edward Island car ferry vote, the Minister stated that it is hoped to take over for operation the

car ferry terminals on the island and at Cape Tormentine at an early date. It had not been decided whether, when the car ferry was in operation, the steamship service between Charlottetown and Picton, N.S., and between Summerside and Point du Chene, N.B., would be continued.

Railway Rolling Stock Notes.

The G.T.R. has ordered 1,000 box cars from American Car & Foundry Co., and 10 snow ploughs from Russell Snow Plough Co.

The C.P.R. has received 116 freight refrigerator cars and 2 steel mail cars, 60 ft. long, from its Angus shops, and 6 vans from its Winnipeg shops.

The British Government is reported to have ordered 100 consolidation freight locomotives from Baldwin Locomotive Works, at a cost of about \$4,500,000, for delivery within six months.

Canadian Government Railways have ordered 2,000 box cars, 40 tons capacity, from Canadian Car and Foundry Co.; and 1,000 box cars, 40 tons capacity, from National Steel Car Co.

The C.P.R. has ordered 1,365 composite coal cars of 40 tons capacity, and 10 275-gal decapod locomotives from its Angus shops. The company is also having converted at its Angus shops, 600 stone cars and 1,161 steel side dump ballast cars, in order to handle the coal situation.

The G.T.R. was stated in our last issue to have ordered 10 locomotives from Canadian Locomotive Co., Kingston, Ont., and 5 locomotives from American Locomotive Co., Schenectady, N.Y. These orders were placed in March and mentioned in our April issue, with details, and were advised a second time in error.

The Russian Government is reported to have ordered 250 decapod locomotives from American Locomotive Co. and 250 from Baldwin Locomotive Works, for delivery early in 1918. The cost is stated to be about \$28,000,000, and it is said that payment is practically guaranteed by the U. S. Government.

The Eastern Car Co. has delivered a further 300 cars to the Paris and Orleans Ry., France, making a total of 1,650 cars delivered to July 18, and leaving 350 to complete the order. It has also delivered to Canadian Government Railways 154 steel frame box cars, 50 tons capacity, making a total of 372 cars delivered to July 18, out of an order for 500.

Following are chief details of the 1,000 steel frame box cars, 40 tons capacity, which Canadian Government Railways have ordered from the National Steel Car Co.:

Length over striking plates38 ft. 1 1/4 in.
Length inside36 ft.

Canadian Government Railways have received 138 box cars, 50 tons capacity, from Eastern Car Co.; 30 box cars, 30 tons capacity, from Canadian Car & Foundry Co.; and the following second hand equipment from General Equipment Co.: 4 locomotives, 36 coal cars, 40 tons capacity; 57 of 35 tons capacity; 138 of 30 tons capacity, and 10 box cars of 30 tons capacity.

The Toronto, Hamilton & Buffalo Ry. has ordered 6 six wheel switching locomotives from Canadian Locomotive Co., of which the following are the chief details:

Weight in working order on drivers166,000 lb.
Wheel base11 1/2 ft.
Wheel base, engine and tender45 ft. 4 1/2 in.
Heating surface, firebox and arch tubes142 sq. ft.

Freight Rates on Grain and Grain Products East of Fort William.

The Assistant Chief Railway Commissioner, D'Arcy Scott, gave judgment, July 17, on the application of the railway companies for a general increase in rates on grain and grain products east of Fort William, stating that the board was prepared to authorize an increase of 1c in both the lake and rail, and the all rail rates, applied for in the eastern rates case, but that it saw no justification for placing the heavy burden of a permanently added 2c to the lake and rail rate for the purpose of preventing the Canadian Northern from cutting the all rail rate.

He also said: "With the allowance of increased rates in the eastern rates case, and the increase in rates from the head of the lakes just referred to, it naturally follows that certain increases in the rates on grain and grain products in the territory east of the lakes should be allowed. The system of building up through rates to points in Quebec and the Maritime Provinces, by adding to the rates to Montreal certain fixed special proportional rates, or arbitraries, while it has been criticized, is nevertheless beneficial as a means to maintain the fixed relationship in certain rates. It is not proposed to increase these arbitraries to points in the Province of Quebec, west of and including Levis and Megantic."

The judgment provided for certain other advances, and also certain reductions, and authorized the railway to issue new tariffs, to become effective Sept. 1, order 26172, of June 5, remaining effective in the meantime.

The Roadmasters and Maintenance of Way Association annual convention which was to have been held at Chicago, Sept. 18 to 21, will be reduced to two days, all of which will be devoted to routine business, discussion of reports, election of officers, etc. All entertainments, excursions, etc., will be eliminated.

Michigan Central Rd.—There has been deposited with the Secretary of State at Ottawa, a lease dated June 1, 1917, made between the Guaranty Trusts Co., of New York, as trustee, and the Michigan Central Rd., relating to the Michigan Central Rd. equipment trusts of 1917.

Lifting of Canadian Northern and Grand Trunk Pacific Railway Rails, for Shipment to France.

Canadian Railway and Marine World for June contained particulars of about 300 miles of steel rails, with the necessary turnouts, angle bars, bolts, spikes, and other track material, having been taken up from the National Transcontinental Ry., between Moncton, N.B., and Winnipeg, and shipped to France, for military railways. Of this, 98.2 miles were taken up from the N.T.R., between Moncton and Diamond Jct., 11.8 miles east of Levis, Que., and 206.6 miles were taken up between Quebec and Winnipeg. These rails, etc., were not taken out of the main line, but out of sidings and divisional yards. About two-thirds of the rails lifted have been replaced by lighter rails. The balance have not been replaced, as the sidings and divisional yards were built to take care of a very large business anticipated in the future, and will not be required for some years to come.

It was also mentioned that a request

done, and the G.T.P.R. line to be relaid with light steel.

Starting from the east at Imrie, G.T.P.R., rails are taken up to Chip Lake, 14.4 miles, and both G.T.P.R. and C.N.R. trains run over C.N.R. tracks between those points, a connection having been built from the G.T.P.R. to the C.N.R. at Lobstick. From Chip Lake to Dandurand, 56.9 miles, the G.T.P.R. is used by both companies, the C.N.R. being abandoned for 59.8 miles between those points. From Dandurand the C.N.R. track is utilized for both companies for about 80 miles, to near Henry House, the G.T.P.R. being abandoned, except from Pocahontas west to the new junction point with the C.N.R. The G.T.P.R. line between Pocahontas and the new junction point has been relaid with light rails, so as to maintain shipping facilities for the Jasper Park Coal Co.'s line at Pocahontas. From the point above mentioned, near Henry

to connect with the composite line at mile 1,016. This means a temporary line of 15 miles, and, as practically all shipments of coal from this mine are eastward, it means that it must be hauled back from mile 1,016, in other words, an extra haul of 30 miles, which in one sense is considerable, but in another sense, when it is considered that most of the coal has to be hauled hundreds of miles, it is inconceivable. It is hoped to overcome this difficulty by running a short trestle across Brule Lake, at about mile 1,001, to make a connection with the composite line, which is on the other side of the lake, but it will not be possible to give this service until the rails are lifted and the work of getting the new line operated is completed. The Jasper Park Coal Co. will therefore have some temporary inconvenience in the extra haul.

The arrangements for lifting track, and other matters connected therewith, are in

Track Lifting for Overseas Shipment, Canadian Northern and Grand Trunk Pacific Railways, Imrie, Alta., to Resplendent, B.C.

had been received by the Dominion Government for another 300 miles of rails, etc., which would be taken up from the Grand Trunk Pacific, west of Edmonton, where it closely parallels the Canadian Northern, and that Grand Trunk Pacific trains would be run over Canadian Northern tracks between those points. Subsequently it developed that some places, particularly Edson, Alta., would be seriously affected by removing the G.T.P. track, and the plan was changed so as to take up some G.T.P.R. and some C.N.R. track.

The track that has been, or is being taken up, is situated between Imrie, on the east, and about Resplendent, on the west. Imrie, on the G.T.P.R., is 865.6 miles west of Winnipeg, and Lobstick, the corresponding point on the C.N.R., is 906.4 miles west of Winnipeg. Resplendent, on the G.T.P.R., is 1,073 miles west of Winnipeg, and on the Canadian Northern, 1,117 miles west of Winnipeg. The accompanying map shows the main through line to be retained and to be operated by both the C.N.R. and the G.T.P.R.; the C.N.R. and the G.T.P.R. lines to be aban-

doned, and from Geikie, the C.N.R. is used for about 35 miles to about 2 miles east of Resplendent, from which point both companies continue to use their own lines, the C.N.R. to Vancouver, and the G.T.P.R. to Prince Rupert. On any part of the C.N.R. lines abandoned rails are removed to the G.T.P.R. roadbed, to release G.T.P.R. rails, the reason being that the specifications in this requisition for 300 miles of track are for rails and accessories precisely the same as were supplied under the first requisition, which was filled from the National Transcontinental Ry. The C.N.R. and C.P.R. rails, while of the same weight and section, have different borings, so that it is necessary to ship G.T.P.R. rails only.

By the use of the composite through line above outlined, all industries are taken care of, without having their siding accommodation lengthened, except for very short distances, with one exception, viz., the Jasper Park Coal Co., at Pocahontas, mile 1,001. In this case light rails have been laid on the G.T.P.R. roadbed,

special charge of G. A. Bell, C.M.G., Assistant to Minister of Railways, and Financial Comptroller of the Railways Department, and Alex Ferguson, Inspecting Engineer, the latter having been on the ground in the west for some time.

Quebec and Saguenay Ry. Purchase.—

It was reported in Ottawa recently, that a bill is to be introduced by the government fixing a specific price for the purchase of the Q. and S. Ry. An act was passed last session, under which the government took over the line, the value of the property to be fixed by the Court of Exchequer. The Exchequer Court judge made an investigation and asked for instructions as to allowing interest. Nothing further was done and it is now reported that the Government will, in the new bill, fix a definite price approximating, the report says, \$4,200,000.

The C.P.R. Stirling subdivision has been extended to Manyberries, Alta., by the opening up of the new section of the Weyburn-Lethbridge extension from Pawkowi, 13.2 miles.

Canadian Northern Railway Construction, Betterments, Etc.

Western District.—The Minister of the Interior has been authorized by Order in Council to grant to the C. N. R. a license of occupation of a portion of the bed of Red Deer River, in the S.W. ¼ Sec. 28, Tp. 28, Range 19, west of the 4th Meridian, Alta., as a site for a railway bridge on the Saskatoon-Calgary line.

Pacific District.—It is reported that the B.C. Government has called upon the company to proceed at once with the completion of all the lines on the mainland for which provincially guaranteed bonds have been issued. This covers the branch line from near Kamloops into the Okanagan Valley, for which surveys have been made, and the terminals at False Creek, Vancouver, where considerable work is in progress. The company's traffic at present goes into Vancouver over the Great Northern Ry., the plans for its own line from New Westminster not yet having been definitely settled.

We are officially advised, in regard to the company's car shops, at Port Mann,

False Creek, but that will be attended to after the completion of the sea-wall just west of the Main St. bridge. The filling in will then extend right out to the sea-wall and the Main St. bascule bridge will be unnecessary when that is done. But it may be some time next summer before that is accomplished, although it is expected to have the station and a good deal of the other terminal work done this year.

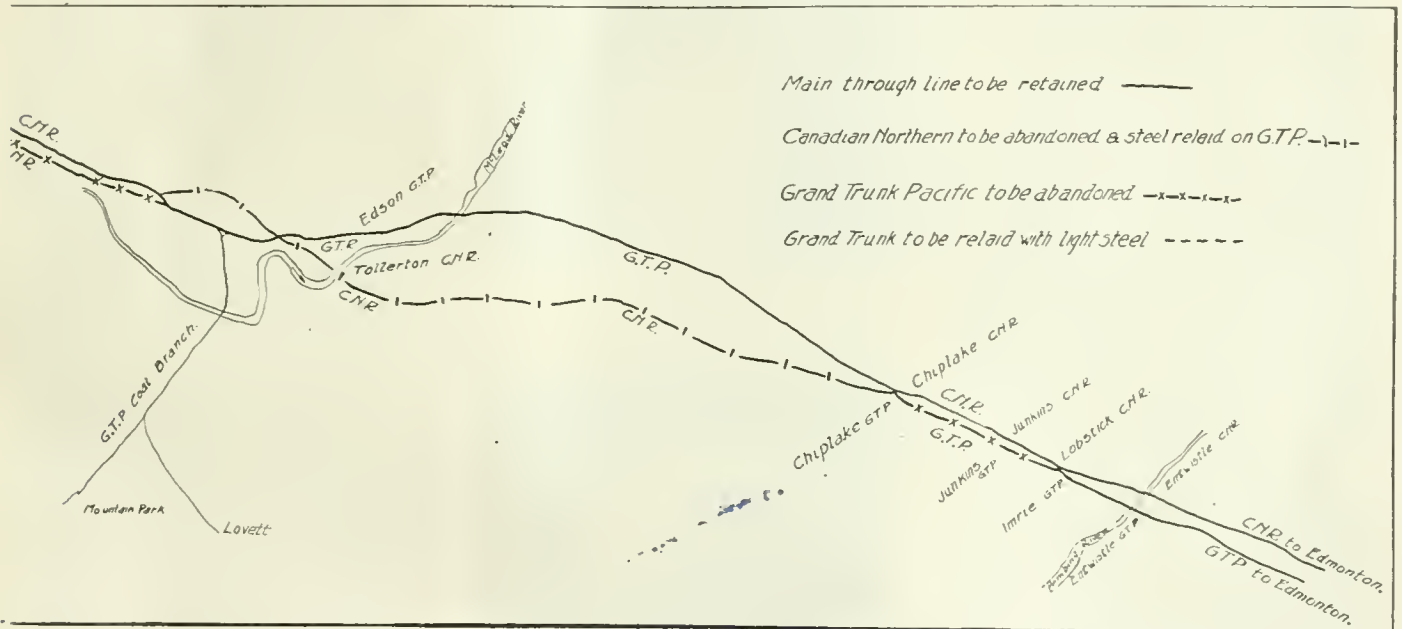

Vancouver Island.—The British Columbia Government has notified the company that it must proceed at once with the uncompleted portion of its undertakings. The time fixed by the late government for the completion of the lines on the Island was July 1, and this company asked for a further extension. There are funds arising out of the proceeds of the sale of provincially guaranteed bonds available for this work, which includes the completion of the line from Patricia Bay to Victoria the line from Victoria to Barkley Sound, and the laying out of terminals in Victoria.

The Patricia Bay-Victoria line is practically completed, and the finishing up work is in progress. A station 40 x 25

Canadian Pacific Railway Construction, Betterments, Etc.

Ontario District.—The C.P.R. has moved the old Lambton station, which about three years ago was moved from its original site, to a new one, up to the golf club grounds, where certain trains have been stopping for some years past. On the site and grounds adjoining the old station, sidings have been laid. Other sidings, principally for coal traffic purposes are necessary and the company has applied to the York Tp. Council and to the Board of Railway Commissioners for approval of the plans. The work will necessitate the closing up of a street, and the strengthening of the walls of a subway. The company proposes to provide a new street 66 ft. wide, but the township council is asking for one 80 ft. wide. The matter came before the Board July 17. Work in connection with the laying of the new sidings is in progress.

Saskatchewan District.—The Board of Railway Commissioners has authorized the opening for traffic of the Moose Jaw south westerly branch, from Vantage to

Track Lifting for Overseas Shipment, Canadian Northern and Grand Trunk Pacific Railways, inrie, Alta., to Resplendent, B.C. (See pg. 308.)

that W. E. Suter, of Winnipeg, is in charge of filling up the plant, which will be operated by electricity generated at the company's own plant, and that no decision has been reached as to the date for the plant being started in operation.

Vancouver Terminals.—Rapid progress is reported on the work of erecting the passenger station at False Creek, Vancouver. All the foundation work has been finished, the form work for the concrete for the second story is practically in place and the concrete men are at work on that floor. Once the concrete is set for that floor, good progress can be made towards finishing the building, as there is a vast quantity of cut stone, tiling and terra cotta on the ground all ready for the completion of the structure. Meanwhile, work on the offices and freight sheds located a short distance south of the station has also been rushed and these are practically finished as far as the acting details to the offices and freight sheds are being attended to by the various subcontractors. There is a considerable amount of filling in to be done yet over the whole area of the C.N.R. grant at

ft. is being erected at Cordova Bay.

Some rails have been laid on the line to Barkley Sound, but generally work is at a standstill on it, owing to shortage of rails.

It is reported that the plans for the terminals in Victoria have not been submitted to the B.C. Government for approval. (July, pg. 274.)

Railway Lands Patented.—Letters patent were issued during June, respecting Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Aces.
Calgary & Edmonton Ry.	11,286.00
Canadian Northern Ry.	3,520.00
Canadian Pacific Ry., grants	6.47
Canadian Pacific Ry., roadbed and station grounds	12.49
Canadian Northern Western Ry.	1.72
Edmonton, Dunvegan & British Columbia Ry.	336.58
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.	800.00
Total	16,963.26

D. O. Lesperance, Chairman, Quebec Harbor Board, has been appointed a senator.

Assiniboia, Sask., mileage 50 to 64.5. The extension was actually opened for traffic June 18, but regular train service was not placed in operation until June 24.

Alberta District.—The distance between Weyburn and Lethbridge, when the new line is completed, will be to 55.8 miles. This line will connect with the line into Lethbridge at Sterling, and the only section now to be built is that between Altawan, at the Saskatchewan-Alberta boundary, and Manyberries, Alta., 37.9 miles. The construction of this section is likely to be undertaken from the Manyberries end. (July, pg. 270.)

Intercolonial Railway Coal Rates.—It was announced recently that a general increase in freight rates on coal, from Nova Scotia and New Brunswick mines, had been put into effect. We were officially advised July 23 that it had been considered advisable to modify these rates for the time being, and that the rates that would be adopted eventually had not then been decided on.

Fuel Economy as Related to its Use in Steam Boilers and Locomotives.

By S. H. Pudney, Fuel Inspector, Eastern Lines, Canadian Pacific Railway.

Fuel economy is a subject that covers such a wide scope for study and investigation that it would be practically impossible to try and treat it with all the consideration that is necessary in a short paper, therefore, I will confine my present remarks to certain lines that will include the items of the heading, and will continue the subject until it has been shown how economy of fuel may be brought about. I have known of efforts being instituted for the purpose of working on the lines of better economy of fuel, but invariably they end in not much being accomplished, as they offer such a wide field that the question usually asked is, where shall we start? or in what way shall we follow up this matter? Specifically speaking, the subject of fuel economy starts with the purchasing of the coal, and continues with the shipping, handling, storing, picking up again from such storage, and the placing into the boiler houses and so on until it is placed in the locomotive firebox or the stationary boiler furnace. In most cases great care is taken to purchase the class of coal suitable for the purpose for which it is intended to use it, but there is not as much care taken in the use of it as might be. This is no worse today than for years gone by, but the science of fuel and its combustion, with a view of getting the greatest efficiency from its use, is not studied as it should be. There is no doubt that this has been brought about by the fact that so many have talked on this subject, who knew very little more than the names of the elements that enter into the process of combustion. This has got on people's nerves to such an extent that, as I was once told, the subject had become worn threadbare. Under the stress of circumstances due to this world wide war, it has been necessary for a great many people, and institutions, and even governments, to make even threadbare articles over again and bring to life subjects that were allowed to lie dormant for years in order to conserve the resources at hand. Therefore, I propose to try and gather up some of the loose threads of the subject of fuel economy and the combustion of fuel, and if possible produce something that will not only be interesting, but will stand the test of all who care to go into the matter thoroughly. I feel quite sure that the facts, as brought out in this paper, will prove of value and the suggestions worth while if tried in practice.

There never was, nor is there likely to be a time in the world's history, and to bring it nearer home to us, in the history of this country, when the economy of fuel needed to be practised, and the consequent saving, not only of fuel, but of money, which would be brought about by it, than at present. Through lack of transportation facilities and labor difficulties, there has occurred such a shortage of fuel of all kinds that there is a certain amount of strain on the nerves of all users or consumers, either great or small, such as we have not before seen in this country. The cost of fuel, as laid down for use, has enormously increased, and the conditions that have arisen have caused the more thoughtful and prominent men to seriously consider the possible reduction of our fuel supply in years to come, probably not in our time, but in years after which may then be due to a

reduction of our fuel areas. This would mean a permanent shortage and in consequence of this the conservation of the natural resources of the country is being seriously considered. The United States Government has, through its Bureau of Mines, and also in various universities, been making special tests with the view of increasing the efficiency of the heating value of the fuel as used, and has proved that a tremendous increment to the mechanical power evolved through the use of coal can be obtained, which will bring the heating value of coal as used, very much nearer to the initial heating value of the coal as purchased and used under the existing everyday conditions. In the early part of the last decade, and covering a period of several years, the U.S. Government made tests at St. Louis of coal from nearly all the eastern seams, and obtained some interesting data. To my mind the most important being the tests that were made with the producer gas plant, the idea being to gasify the coal and use the gas as a motive medium through the gas engine, instead of using the coal to produce steam as the motive medium with the steam engine, and it was found that a 1 h.p. hour could be obtained from the use of from 1 to 1½ lb. of coal, while with the production of steam it took from 3 to 5 lb. of coal to produce a h.p.h. This then brought out the fact that in stationary plants two-thirds of the coal could be saved, and there is no doubt that better results could be obtained where it is possible to use the hot water that passes through the cooling jacket, say for the washing out of boilers, heating shops and offices, one of the important features being that the very lowest grade of coal could be used in this manner. Some coal showing an analysis of 45% ash was used to good account. And most important of all is the fact that this method of using coal is absolutely smokeless.

Before considering the economy of fuel it will be necessary to make ourselves certain that there is now a waste of fuel. Some persons imagine not. So it will be quite in keeping to consider at this stage the subject and extent of our losses in ordinary practice. To do this it will be necessary to quote authorities who have made numerous tests with all classes of steam boilers in an independent manner, that is to say, they were conducted in some cases under the direct supervision of the U.S. Government officials, the only object being to get correct data in regard to the extent of losses that are sustained in the use of coal in the ordinary everyday practice of steam boilers. In the U.S. Bureau of Mines bulletin 1, "The volatile matter of coal," by H. C. Porter and F. K. Ovitiz, it is stated that visible smoke consists of solid particles of carbon and tar vapors, or, in other words, the heavy hydro carbon gaseous portions of the coal, both resulting from incomplete combustion of the volatile products of the coal, and that the most important unaccounted for losses shown in various tests are likely to be found in the gases that are allowed to escape unburned. The bulletin quotes E. J. Constam and P. Schlafer, who show an efficiency loss of 17.2%, and this was due to the formation of CO 3.5%, and hydrogen 1.5%. Neither of these gases is visible to the eye and escape unnoticed in practice. They also

say that the reduction of boiler efficiency under these conditions may be due to several causes, chief among them being loss of sensible heat and loss of combustible gases through the somestack. In view of the high rate of firing, and the small combustion space of the locomotive, the bearing of the nature of the volatile products of the fuel and the incompleteness of their combustion may be readily seen.

In U.S. Geological Survey bulletin 402, "The utilization of coal in locomotive practice," by Prof. W. F. M. Goss, there is shown in the column for unaccounted for losses, 10.59%, and in the CO loss, 3.60%, this all due to imperfect combustion. Not one atom of these losses would have occurred if the essential points governing the fundamental laws of combustion had been carried out. These losses occurred in tests where the firing was being done under special supervision, and there can be no doubt that much greater losses occur.

The U.S. Bureau of Mines technical paper 137, "Combustion in the fuel bed of hand fired furnaces," gives some very interesting and important data regarding the combustion process of coal in the fuel bed, chief amongst them being an analysis of gases taken at the surface of the fuel bed, which show 32% of combustible gases. The most instructive point in regard to the use of coal in locomotives is that they found that the composition of the gases was not changed by increasing the air supply; the rate of coal consumption was increased, but the amount of air per pound of coal consumed remained in the same ratio. This shows us that by decreasing the exhaust we may burn more fuel without getting more efficient results from the coal that is being burned. By combustible gases the authors mean not only the volatile gases but the CO that is generated during the process. Some steps ought certainly to be taken to prevent this gas going away as lost fuel, and in the next article this will be followed up to show how some economy can be effected in this line.

Navigation Collision Suit.—Litigation between the C.P.R., as owning the s.s. Princess Victoria, and the Pacific Alaska Steamship Co., as owning the s.s. Admiral Sampson, in connection with the collision between the two vessels, in which the s.s. Admiral Sampson was sunk near Point No Point, Aug. 26, 1914, has been concluded by a judgment of a U. S. Court made recently. A court had previously awarded \$16,065 to the C.P.R., and \$17,509.08 to the Pacific Alaska Navigation Co., and each of the parties petitioned for limitation of liability. The C.P.R. claim was allowed for \$33,081.77, less \$18,767, and less \$249.77. The charterer of the s.s. Admiral Sampson showed a loss of \$19,488.06, which was allowed, less \$107.50 charter hire, \$400 for fuel oil and \$1,772.48 rentals, etc., leaving a net loss of \$17,509.08. The judgment declared that interest should be added at the legal rate from the date when the voyage would have been completed, that is 21 days after Aug. 26, 1914, and included in the decree for half of the difference between the amounts of the litigants' respective losses.

The Eastern Car Co., to June 16, had shipped 1,650 box cars to the Paris & Orleans Ry. of France.

Mainly About Railway People Throughout Canada.

E. W. Kelly, station agent, C.P.R., Summerland, B.C., was drowned there, July 10, through a canoe capsizing.

Major G. W. Hayes, who died at London, Ont., June 29, was father of H. M. Hayes, station ticket agent, G.T.R., there.

G. H. Webb, Chief Engineer, Michigan Central Rd., Detroit, Mich., has been appointed Lieutenant Colonel of the Sixth Reserve Engineers, Detroit.

Capt. M. J. Powers, U.S.R., General Passenger Agent, Delaware & Hudson Co., Albany, N.Y., has been granted leave of absence for active military service.

F. H. Phippen, K.C., General Counsel, Canadian Northern Ry., Toronto, has been elected a director of Tooke Bros., Ltd., manufacturers of shirts, collars, neckwear, etc., Montreal.

Mrs. Meighen, widow of the late Robert Meighen, director, C.P.R., and mother of Brigadier General F. S. Meighen, director, C.P.R., died at her home in Montreal, July 12. She was a sister of Lord Mount Stephen, first President of the C.P.R.

A. F. Proctor has been appointed acting Chief Engineer, British Columbia Department of Railways, Victoria. At different times he has been engaged in engineering work on the Quebec Central Ry., C.P.R., Cape Breton Ry., Canadian Northern Ry., and Chicago, Milwaukee & St. Paul Ry.

Robert Patterson, Master Mechanic, G.T.R., Stratford, Ont., who was loaned, in January, to the Imperial Munitions Board, and placed in charge of the General Car & Machinery Co.'s plant at Montmagny, Que., has been relieved of his duties at his own request on account of ill health.

J. J. Rose, who has been appointed General Agent, Union Pacific System, Toronto, was born there, and was for 25 years in C.P.R. service, as Travelling Passenger Agent, and until 1912, as chief clerk in the Passenger Department, Toronto. During 1912 he was Travelling Passenger Agent, Robert Reford Co., steamship agents, Toronto, and from Feb., 1913, to July 1, 1917, Canadian Passenger Agent, Union Pacific System, Toronto.

Charles William Stokes, who has been appointed Assistant General Publicity Agent, C.P.R., Montreal, was born in London, Eng., July 27, 1886, and entered C.P.R. service in 1907, since when he has been, to 1911, chief clerk, European Advertising Department, London, Eng.; 1912 to 1916, chief clerk, Publicity Branch, Natural Resources Department, Calgary, Alta.; 1916 to June, 1917, Assistant Publicity Agent, same department, Calgary, Alta.

F. B. Tapley, who has been appointed Assistant Engineer of Maintenance, all lines, Canadian Government Railways, Moncton, N.B., was born at St. John, N.B., Oct. 17, 1876, and entered C.P.R. service in July, 1903, since when he has been, to Apr., 1905, rodman, St. John, N.B.; to Apr., 1905, to Apr., 1907, transit man, St. John, N.B.; Apr., 1907, to July 1, 1908, acting Resident Engineer, Belleville Jct., Ont.; July, 1908, to Dec., 1911, Resident Engineer, Belleville Jct., Ont.; Dec., 1911, to Oct., 1913, Resident Engineer, London, Ont.; Oct., 1913, to June 30, 1917, Assistant Engineer in office of Assistant Chief Engineer, Eastern Lines, Montreal.

James Hunt Norton, whose appointment as Division Freight Agent, Canadian Government Railways, Halifax, N.S.,

A. T. Weldon,
General Freight Agent, Canadian Government
Railways

K. Stewart,
Assistant Superintendent, District 4, Intercolonial
Division, Canadian Government Railways

was announced in our last issue, was born at Shaftesbury, Eng., Apr. 21, 1884, and entered Canadian Government Railways service, June 1, 1899, since when he has

been, to Dec. 31, 1909, in various positions in Car Service Department, from office boy to secretary to Car Accountant; Jan. to Sept., 1910, clerk in General Freight Agent's office; Sept., 1910, to Apr. 30, 1912, secretary to General Freight Agent; May 1, 1912, to Sept. 30, 1916, assistant chief clerk, General Freight Department; Oct. 1, 1916, to May 31, 1917, chief clerk to General Freight Agent, all at Moncton, N.B.

Kempton Stewart, whose appointment as Assistant Superintendent, District 4, Intercolonial Division, Canadian Government Railways, New Glasgow, N.S., was announced in our last issue, was born at Little River, N.S., Oct. 21, 1868, and entered Intercolonial service, Oct. 29, 1883, since when he has been, to Feb., 1888, operator, Oxford, N.S.; Feb., 1888, to Nov., 1890, operator and relieving agent, Spring Hill Jct., N.S., and various other points; Nov., 1890, to Feb., 1893, operator and relieving dispatcher, Truro and Point Tupper, N.S.; Feb., 1893, to Oct., 1912, trick dispatcher and relieving Chief Dispatcher, New Glasgow, N.S.; Oct., 1912, to June, 1917, Chief Dispatcher, Canadian Government Railways, New Glasgow, N.S.

John L. Hodgson, General Car Foreman, Canadian Government Railways, Transcona, Man., died there, suddenly, July 6. He was born at Simcoe, Ont., Nov. 15, 1858, and entered railway service with the G.T.R. as carpenter at Brantford, Ont. He was, from Apr. 1 to Sept., 1888, Car Inspector, Toronto; Sept. 1, 1888, to Mar. 1, 1897, Car Foreman, Toronto; Mar. 1, 1897, to Aug. 12, 1913, Master Car Builder, Western Division, Port Huron, Mich.; Aug. 12, 1913, to Aug. 23, 1915, Master Car Builder, Grand Trunk Pacific Ry., Transcona, Man.; and from Aug. 23, 1915, General Car Foreman, in charge of shops between Port William and Winnipeg, Canadian Government Railways, Transcona, Man.

M. Frank Tompkins, whose appointment as Assistant General Freight Agent, Canadian Government Railways, Moncton, N.B., was announced in our last issue, was born at Margaree, N.S., Dec. 6, 1878, and entered Canadian Government Railways service Nov. 23, 1896, since when he has been, to Feb. 1, 1900, telegraph operator at various points; Feb. 1 to May 1, 1900, freight clerk, Truro, N.S.; May 1, 1900, to Sept. 1, 1902, freight clerk, Sydney N.S.; Sept. 1, 1902, to July 1, 1903, accountant in Superintendent's office New Glasgow, N.S.; July 1, 1903, to July 1, 1904, telegraph operator, New Glasgow, N.S.; July 1, 1904, to Jan. 1, 1911, relieving agent at various points; Jan. 1, 1911, to Nov. 30, 1914, chief clerk, Division Freight Agent's office, Halifax, N.S.; Nov. 30, 1914, to June 1, 1917, Division Freight Agent, Halifax, N.S.

Campbell Ross Mackenzie, who has been appointed General Manager's Assistant, Western Lines, Canadian Government Railways, Winnipeg, was born at Toronto, Jan. 10, 1883, and entered railway service in 1898, since when he has been, to 1900, tranship clerk and freight biller, C.P.R., Toronto; 1900 to 1902, stationery clerk, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont.; 1902 to 1903, clerk to Auditor of Freight and Passenger Receipts, G.T.R., Montreal; 1903 to 1913, Superintendent's accountant, C.P.R., successively at Farnham,

Que., Ottawa, Ont., and Medicine Hat, Alta.; 1913 to 1914, in private business in Medicine Hat, Alta.; Aug. 1, 1914, to May 1, 1915, General Superintendent's Accountant, Canadian Government Railways, Moncton, N.B.; May 1, 1915, to June 1, 1917, chief clerk to General Superintendent, Transcontinental Division, Canadian Government Railways, Cochrane, Ont.

W. A. Cooper, Manager, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Montreal, has been appointed by the Food Controller, as a member of the Food Consumption Central Committee, which will particularly take steps to provide for the conservation of food, and the prevention of its waste, and will govern its consumption in hotels, restaurants, clubs and private houses. He was born at Montreal, Mar. 22, 1871, and entered railway service in Feb., 1886, since when he has been, to June, 1891, secretary to Assistant General Manager, G.T.R.; June, 1891, to Dec., 1894, chief clerk to General Superintendent, Eastern Division, C.P.R., Montreal; Dec., 1894, to July, 1897, Inspector, Sleeping and Dining Car Department, same road; July, 1897, to Dec., 1905, Assistant Superintendent, same department; Dec., 1905, to Aug., 1908, Superintendent, same department; Aug., 1908, to Feb. 1, 1913, General Superintendent, and since Feb. 1, 1913, Manager, Sleeping, Dining and Parlor Cars and News Service, same road, Montreal.

H. T. Ruhl, who has been appointed Engineer, Maintenance of Way and Structures, Delaware & Hudson Co., Albany, N.Y., was born at Mifflinburg, Pa., Sept. 29, 1882, and entered railway service, Sept. 22, 1902, since when he has been, to June, 1904, rodman, C.P.R., Nominigüe, Que.; June, 1904, to July, 1905, transit man, Construction Department, Residency 2, Toronto-Sudbury Branch, C.P.R.; July to Aug., 1905, transit man on location, C.P.R., Ingersoll, Ont.; Aug. to Oct., 1905, transit man, on bridge surveys, C.P.R., Coldwater, Ont.; Oct., 1905, to Jan., 1906, transit man, on bridge surveys, C.P.R., Parry Sound, Ont.; Jan. to May, 1906, transit man on location, C.P.R., Parry Sound, Ont.; May, 1906, to Jan., 1908, Resident Engineer on Construction, C.P.R., Point au Baril, Ont.; Jan. to Oct., 1908, Resident Engineer on Construction, C.P.R., Muskoka, Ont.; Oct., 1908, to Nov., 1909, transit man on maintenance, C.P.R., North Bay, Ont.; Nov., 1909, to Oct., 1911, Resident Engineer, C.P.R., Sudbury, Ont.; Oct., 1911, to Sept., 1913, Resident Engineer, C.P.R., Farnham, Que.; Sept., 1913, to Nov. 20, 1915, Resident Engineer, Intercolonial Ry., New Glasgow, N.S.; Nov. 20, 1915, to June 15, 1917, Division Engineer, Canadian Government Railways, Moncton, N.B.

F. C. Gamble, M.Can.Soc.C.E., Chief Engineer, British Columbia Railways Department, whose connection with the government service has been severed, was born at Toronto, Oct. 23, 1848, educated at Upper Canada College, and moved to British Columbia about 30 years ago, on his appointment as Assistant Engineer on the government section of the C.P.R. above Yale. He was later transferred to the Dominion Government Public Works Department in B.C., and in 1887 was appointed Resident Engineer of the department there, in charge of all river and harbor improvements, public buildings and wharves, the dock at Esquimalt and the telegraph service. He resigned from Dominion service in 1897 on his appointment as Public Works Engineer and Inspector

of Dykes for the Provincial Government, and in 1911 he was appointed Chief Engineer of the Provincial Railways Department. He was President, Canadian Society of Civil Engineers, in 1915, and is ex officio a member of the council of the society. He is also a member of the American Society of Civil Engineers.

Augustine V. Redmond, whose appointment as Division Engineer, Transcontinental Division, Canadian Government Railways, Cochrane, Ont., was announced in our last issue, was born at Kingston, Ont., May 16, 1879, and graduated from Queen's University, Kingston, in April, 1903, with the degree of B.Sc. He entered railway service in May 1903, and was to Dec. 1903, engaged on concrete construction on the C.P.R.; Jan., 1904, to July, 1905, leveller on location surveys, Grand Trunk Pacific Ry.; Aug. 1905 to Oct. 1907, transit man and acting engineer in charge of location surveys, Dis-

W. A. Cooper,
Manager, Sleeping, Dining and Parlor Car and
News Department, Canadian Pacific Railway

trict E, National Transcontinental Ry.; Jan. to Oct. 1908, Resident Engineer on location and construction, Canon City pipe line, Canon City, Col.; Oct. 1908 to Oct. 1909, Resident Engineer, District E, National Transcontinental Ry.; Oct. 1909 to May, 1915, Division Engineer, District E, N.T.R.; June to Sept. 1916, Resident Engineer, District 2, Transcontinental Division, Canadian Government Railways, Cochrane, Ont.; Oct. 1916 to Mar. 1917, acting Division Engineer, Transcontinental Division, C. G. R., Cochrane, Ont.; April to May, 1917, Resident Engineer, District 2, Transcontinental Division, C.G.R., Cochrane, Ont.

Canadian Government Railways Operating Charges.—The House of Commons on July 14, voted \$25,000,000 on account of operating expenses for the current financial year. It was explained by the Minister of Railways that this amount would be distributed as follows: Intercolonial Ry., \$16,000,000; National Transcontinental Ry., \$8,000,000; Prince Edward Island Ry., \$750,000; International Ry. of New Brunswick, \$250,000.

Railway Finance, Meetings, Etc.

Algoma Central & Hudson Bay Ry., Algoma Central Terminals, Ltd.—A circular was issued by the bondholders committee recently to holders of the 5% first mortgage 50 year gold bonds, announcing that the arrangement scheme had been made effective. The accounts for the 21 months of the receivership showed that the net income of the companies, including the deposit and other interest, but before charging bond interest, terminals rent, or providing for depreciation, was \$830,007. From this is to be deducted interest on the equipment trust bonds, \$56,323, leaving \$773,684, or approximately £155,000, from which must be deducted £31,000, being 3% interest payable to A.C.T., Ltd., bondholders for the year ended Aug. 1, 1915, leaving a balance of £124,000 subject to provision for depreciation and contingencies. The committee considered that the balance should be held available in Canada to provide for depreciation, renewals, repairs and contingencies, and that no further payment on account of interest should be made at present on the bonds of the terminal company or of the railway company. The committee reported that it was evident that the undertakings required very careful handling and nursing, and that the next year or two should be devoted to reorganizing the concerns and putting them into a condition to make the best of their opportunities.

Atlantic Quebec and Western Ry.—The first mortgage bondholders are being asked to assent to a modification of their rights, to enable the company to tide over the conditions created by the war. The Quebec Government land grant is part of the bondholders' security, and the cash derived from its sale is paid over to the trustees, who have invested it, and regularly supplement the principal by the annual interest. It is proposed that the interest shall be diverted to help to pay operating expenses, and that what is left should be used in meeting the bond interest. If there is nothing to meet the bond interest, it is suggested that the interest should be waived altogether. It is also suggested that the land grant investments should be realized and the proceeds devoted to the purchase of rolling stock and for other capital purposes.

Pacific Great Eastern Ry.—The British Columbia Minister of Finance was officially notified recently that the P.G.E. Ry. was not prepared to meet the interest on its bonds, guaranteed by the province, falling due July 1. The government has provided the money necessary to pay the interest; about \$423,000. The government had previously paid interest on the guaranteed bonds as follows: Jan. 1916; \$316,016.80; July, 1916, \$315,366.39; Jan., 1917, \$422,444.08.

Timiskaming & Northern Ontario Ry.—Passenger earnings for May, \$57,719.46; freight earnings, \$118,473.50; total earnings, \$176,192.96, against \$54,720.76, passenger earnings; \$119,302.65, freight earnings; \$174,023.41, total earnings, for May, 1916.

White Pass and Yukon Route. Gross earnings from Jan. 1 to June 7, \$290,000 against \$247,837 for same period 1916.

The International Railroad Blacksmith's Association has postponed for a year its annual convention, which was fixed to be held in August at Chicago.

Important Changes in Handling Less Than Carload Freight.

Plans which will be put in effect shortly will effect a complete change in the methods of receiving, loading and forwarding less than carload freight, of all descriptions, upon all portions of the Pennsylvania Rd., east of Pittsburg. The new arrangements will constitute probably the most far reaching improvement that has ever been attempted, on a large scale, in freight transportation practices. The present custom of receiving less than carload freight indiscriminately, at all stations, at any time of the day, for all destinations, which has been followed since the early days of railroading, will be abolished. In its place there will be substituted a carefully devised plan whereby the acceptance and loading of freight, in less than carload lots, will be conducted according to a regularly established system, and such freight will be automatically concentrated into full loads at the point of shipment.

The two most important features of the new plan for handling less than carload freight are: 1. The inauguration of shipping days, or substantially "sailing dates," on which cars will depart from various points of origin to specified destinations. Freight will be accepted on the proper shipping days only, and the cars will "sail" as specified. 2. The designation of particular stations at which freight will be exclusively received for specified destinations; freight for such points will be accepted at the stations named only. The new plan represents the results of prolonged investigation, conducted by the Pennsylvania Rd. officers, for the purpose of determining the best practical means of obtaining increased efficiency and dispatch in the handling of less than carload freight. The primary purposes for the adoption of the new method are four fold: 1. Elimination of delay incident to rehandling of freight under the present methods of consolidating small shipments into full carloads at transfer stations. This will give the shipper quicker service than is possible under the old method. 2. Conservation of car supply by effecting better average loading than is possible under the transfer system. This will increase the cars available for commercial freight, as well as government supplies. 3. Reduction in number of car and train movements required to transport a given volume of freight. This will increase the capacity of the whole railway's plant, and will release trackage and locomotives for the movement of troops, government supplies and commercial freight. 4. Improvement in the regularity of freight service by systematizing and simplifying operation. This will result from the elimination of a large proportion of the complicated rehandling of freight, which is now unavoidable, with the attendant liability to damage. It is the belief of the management of the railway that the proposed change will increase the efficiency, promptness and regularity of the freight service, and therefore will commend itself to shippers as facilitating the conduct of their business.

Under the present method of handling less than carload freight, a shipper having a small consignment to transport from city A to city B can take his goods to any freight station in city A at any time during the ordinary working hours. In the course of the day, or perhaps the next two or three days, the freight will be loaded into a car and run out to a trans-

fer station, which may be a few miles, or more than 100 miles, distant. There it will be unloaded and trucked into another car, in which numerous small shipments, from many other points, for city B are being consolidated in the effort to make up a full car. Under the proposed plan there will be certain days on which less than carload freight for city B will be accepted at one or more specified stations in city A, and such freight will be accepted only on the days, and at the particular station, or stations, named. On the days specified a car for city B will leave the originating station or stations. The service will be daily, tri-weekly, semi-weekly or weekly, according to the average volume of traffic, and freight for city B will be taken only in such cars. Under this method there will be no subsequent transferring or rehandling of the freight, and the car will move straight through to city B without breaking bulk.

In large cities, where a number of freight stations are maintained, traffic to the various principal destinations will be apportioned between the stations. For example, where conditions permit, very large shipping centres will be subdivided into zones, each embracing several freight stations. From each zone service will be given on specified days to a number of destinations. In such cases cars for various points will be alternated between the stations in a given zone. If, for instance, a certain zone, containing several freight stations, is to have three cars a week to a certain destination, the car may leave station A on Monday, station B on Wednesday, and station C on Saturday. This will equalize drayage distance between shippers in various portions of the zone.

To eliminate the congestion of trucks and teams occurring at nearly all large freight stations in the afternoon, the "sailing hours" of cars for certain destinations will be made earlier than the general closing time of the station. To illustrate—at a station from which several regular cars are operated daily, to sundry destinations, the "sailing time" for the cars to city B and city C may be fixed at noon and for city D and city E at 1 p.m., while freight for other points may be accepted up to the closing hour. This will require the delivery of a considerable quantity of freight in the morning hours of the "sailing day." The result will be to distribute the receipts throughout the day, extend the capacity of the station and facilitate the movement of traffic. Shippers will be benefited, as their teams and wagons will not be forced to stand idle for several hours before being able to get to the platform, as is often the case under the present conditions.

The application of the plan at smaller stations—those at which less than carload freight would not accumulate into carloads with sufficient frequency to operate through cars to any given point—will be limited to the establishment of shipping days. It is the intention to continue sufficient local "pick-up" freight service to meet the requirements for that form of service. One important result which the plan is expected to bring about will be a reduction in loss and damage to freight, owing to the greater promptness with which it will be loaded and dispatched. The simplification of railway operation, as well as the elimination of rehandling of less than carload freight at transfer stations, will also diminish the amount of freight going astray.

The proposed plan is being worked out on scientific lines. A most careful and elaborate study has been made of the movement of less than carload freight to and from all points on the entire Pennsylvania Rd. and its connections, and the nature and frequency of service to be afforded at each station will be based upon that study. Future changes in the current of traffic will be taken care of promptly as they become evident. A conservative estimate shows that the adoption of the proposed plan will result in the saving of at least 1,000 box cars a day in the handling of less than carload freight on the lines east of Pittsburg and Erie. The new plan will be put into effect first in the Philadelphia district, where it will become operative in the near future. As soon thereafter as possible it will be applied at New York, Baltimore, Pittsburg and Buffalo, following which it will be inaugurated at all stations. When making the new plan effective in any locality it will be explained, as to its purpose and method of operation, to the local board of trade, chamber of commerce and other trade bodies. This duty will be performed personally by the various division freight agents. The working out of details for the various stations will be completed, on each grand division, under the joint direction of the Superintendent of Stations and Transfers and the division freight agent, representing respectively, the transportation and traffic departments. They will be assisted in this work by the division superintendents' staffs.

Last winter some of the principal Canadian railways adopted the principle of consolidating carload freight, but have not extended it to the same extent as is being done by the Pennsylvania. The matter was discussed at a meeting in Toronto early in July, and committees were appointed to work out details for an extension of the system.

C.P.R. Stations in Ottawa and Hull.—The Board of Railway Commissioners has granted the company permission to handle its Hull passengers at Beemer station, Que., instead of the city station used heretofore. The commissioners heard the objections against the closing of Broad St. station, Ottawa. E. P. Flintoff the company's solicitor, stated that while the company had not been petitioned or asked to close the Broad St. station, it had been under the impression for several years that such a change would be welcomed by the greater majority of those in Ottawa who were frequent travellers. An order in the matter will be issued in due course. It is said that all passenger trains will be operated into the central station, Ottawa, and that freight trains will be operated into Broad St. Considerable work will be necessary at the G.T.R. central station before the C.P.R.'s Ottawa passenger business can be centralized there, and it is not yet known how soon it can be done. The closing of the present Hull station will then be necessary. Beemer station is also in Hull, being on the main line, within a short distance of Hull station, and when the change takes place all the Hull business will be handled there. Its location, both as to the city of Hull and the electric railway lines, is much more convenient for the travelling public than the present Hull station.

Minister of Railways' Statements on Canadian Government Railway Operation.

The Minister of Railways, in introducing his estimates in the House of Commons recently, said the Canadian Government Railways now extended to 4,063 miles, made up as follows: Intercolonial, 1,562; National Transcontinental, 2,009; Prince Edward Island, 275; International of New Brunswick, 112; St. John & Quebec, 105.

During the financial year ended Mar. 31, the Intercolonial earned \$16,802,290, and the expenditures were \$15,664,577, giving a surplus of \$1,137,713, which will be absorbed by the equipment renewal account. The surplus at Mar. 31, 1916, was \$1,517,295.

On the National Transcontinental the earnings were \$5,916,550, and the operating expenses \$7,883,177, compared with \$3,758,387 and \$4,410,528 respectively for the 11 months ended Mar. 31, 1916. The deficit for the year was \$1,966,627 against deficit of \$625,141 at Mar. 31, 1916.

The Minister did not give any separate figures for the Prince Edward Island Ry., the International Ry. of New Brunswick, or the St. John & Quebec Ry., but concluded his references to the operations of the government railways by stating that the earnings of the entire system were \$23,465,566, compared with \$18,373,143 for the previous year, while the operating expenses were \$24,645,433, against \$17,797,061 for the previous year. The deficit on the combined operations was \$1,179,867, against \$576,182 in the previous year. The deficit on the years operations was, he explained, due to increased wages, the increased cost of coal, extreme weather conditions, which caused an expenditure of \$169,288 on the Intercolonial for snow fighting, as compared with \$64,757 in the previous year, and the necessity of establishing train service on the National Transcontinental not yet warranted by the business offering.

The total number of passengers carried over the system for the year 1916 was 5,673,796. Included in this number were 277,135 military and naval passengers. There were few accidents, no passengers had been killed, but 22 had sustained injuries.

Sir James Loughheed laid before the Senate, June 19, the following statement as to the earnings of the Intercolonial and the National Transcontinental Railways for the following three districts:

District	Track mileage	Passenger Earnings	Freight earnings	Mails and express.	Total.	Less micellaneous.	Grand total.	Earnings per mile.
No. 5. Moncton to Diamond Jc Via Transcontinental.	456	\$ 64,128.96	\$1,147,920.17	\$ 9,270.84	\$1,221,319.96	\$ 178,291.38	\$ 1,043,028.59	\$ 2,292.37
No. 1. Montreal to Mont. Joli.	355	1,830,510.61	3,981,529.89	335,989.85	6,167,930.35	302,531.89	5,865,398.46	16,522.25
No. 2. Mont Joli to Moncton, including Br'ch Derby Jct. to Fredericton.	421	1,231,067.66	2,172,261.76	235,718.58	3,639,078.30	105,629.30	3,533,448.96	3,392.99

The Hamilton Radial Electric Ry. has been ordered to pay the County of Wentworth, Ont., \$1,165.30, representing annual payments for the years 1915, 1916, and 1917 for a portion of the highway occupied by its track. The company contended that it was no longer compelled to make such payment, as the portion in question had been annexed by the city, and in any event, the company no longer claimed any franchise privilege over it.

The Toronto, Hamilton & Buffalo Railway and the Town of Dundas.

The consideration of the Toronto, Hamilton & Buffalo Ry.'s bill for the confirmation of an agreement with the Hamilton & Dundas St. Ry., has been referred to the House of Commons for consideration by the Minister of Justice. The agreement provides for the handling of freight from the T.H. & B.R. into Dundas by the H. & D.R. The original agreement was made 20 years ago, and was to run

the ratification of the 29 year period of the agreement. The Town of Dundas opposes the application, first on the ground that freight cars were left on the streets, and, secondly, after the company agreed to spend \$15,000 on a new switching ground and freight lines, to the use of steam locomotives in such yard. The cost of two electric locomotives to handle the traffic would be \$80,000, which would mean an interest charge of \$4,800 a year, while the total earnings from the traffic are about \$5,400 a year. The company could not see its way to adopt electric power, but offered to leave the matter with the Board of Railway Commissioners. This did not satisfy the representatives of Dundas, and the Railway Committee amended the bill by ratifying the agreement making the term of its operation five years, instead of the further period of 29 years asked. It was contended in the House of Commons on behalf of the company that the agreement must be ratified for the whole period or the ratification must be refused. The company had made up its mind, however, that if the Town of Dundas would not grant what it is thought to be entitled to it will withdraw the two clauses of the bill referring to the matter and leave the town to handle its freight as it sees fit. On behalf of the town it was contended that the railway company, having received the benefit of the agreement up to the present, ought not to use the threat of withdrawal on the expiration of the 21 years to compel the town to carry out what it was alleged was a bad bargain.

Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We should be glad to be favored in this respect.

The Timiskaming & Northern Ontario Railwaymen's Patriotic Association, up to Apr. 30, had contributed \$18,775.28 to the Red Cross Fund; \$26,208.51 to the Canadian Patriotic Fund, and had donated \$12,297.59 direct to enlisted employes.

The British Columbia Electric Ry. reports that approximately 21% of its employes have joined the military or naval forces, or have entered munition plants, and their places have been filled temporarily, until their return, or for the duration of the war. The various branches are represented as follows: Platform men 19%, shopmen 13%, electricians 20%. The last mentioned class includes substation men, who form the largest percentage of those enlisting.

Railway Building Records.—Following is an extract from a letter from one of the officers of No. 2 Battalion, Canadian railway troops, which is commanded by Lieut.-Col. F. F. Clarke, formerly a Canadian Northern Ry. engineer: "We hold the record for railway building in France. We had a very difficult piece to build, because it was in full view of the German lines in daylight for about 1½ miles across a valley. On Tuesday night at 6.30 it started to rain and got very foggy and we got to work, and by midnight on Wednesday we had built 12,069 feet of line and ran a train over it. When the air cleared on Thursday the Germans saw the railway track from their observation balloon and started to shell it, and after sending over about 200 shells they broke a rail, which was repaired in a few minutes. This line can only be used at night, without light or noise. We have built 22 miles of light railway and 15 miles of standard gauge, with 4 railway yards of about 3 miles of track in each. This makes about 49 miles of railway built and completed in 75 days."

Personal Notes.

Jas. Carruthers, President, Canada Steamship Lines, Montreal, has given three aeroplanes for war purposes.

J. L. B. Smith, Roadmaster, Toronto Civic Ry., St. Clair Ave. Division, has joined the Royal Flying Corps.

Lieut. A. S. Bertram, whose death from wounds was reported July 13, was a son of Henry Bertram, of John Bertram & Sons Co., Ltd., Dundas, Ont.

Capt. S. Stibbard, who was reported recently as missing, was, prior to the war, chief clerk to Division Superintendent of Telegraphs, Grand Trunk Pacific Ry., Winnipeg.

Capt. H. J. Hall, who has died of wounds, was formerly on the staff of the Dominion Government Railway to Hudson Bay, and prior to the war held a commission in the 79th Cameron Highlanders of Winnipeg.

Lieut. F. Clarke, who has been engaged with Grant Smith & Co., railway contractors, etc., Vancouver, B.C., for some time,

is reported to be organizing a railway construction draft for overseas service.

E. W. Beatty, K.C., Vice President and General Counsel, C.P.R., is said to have headed a syndicate of Montreal and Toronto men, who subscribed \$10,000 to send a platoon of the 48th Highlanders, Toronto, to the United States for recruiting purposes.

F. P. Gutelius, Jr., son of F. P. Gutelius, ex General Manager, Canadian Government Railways, was graduated from Lafayette College, Easton, Pa., recently, with his degree in civil engineering, in absentia, he being on active service with a Canadian battalion.

A. A. Wright, formerly Managing Director, St. Lawrence & Chicago Steam Navigation Co., Toronto, has been spend-

Lieutenant R. S. Richardson
Formerly Superintendent Canadian Government Railways, Fort William, Ont., now of No. 13 Light Railway Company, R.E., British Expeditionary Force

ing most of his time in Montreal for some months past, in connection with the building of steam trawlers and drifters for the Naval Service Department.

Lt. Col. F. M. McRobie, General Manager, Canadian Transfer Co., Montreal, who went overseas in March in command of the 244th. Kitcheners Own, Overseas Battalion, C.E.F., Lt. Col. J. M. MacDonnell and Capt. W. L. Lanigan, of the Railway Troops, were among some 800 C.E.F. officers and men who arrived at Halifax, N.S., July 21, from England.

Capt. John MacLeod, Prince Albert, Sask., who joined the Inland Water Transport Section, Royal Engineers, recently, has been operating on various rivers in the west for the past 20 years, and is stated to be the first man to run a steamboat on the Peace River, having navigated the s.s. Peace River there, 17 years ago.

E. Camp, younger son of W. J. Camp, Assistant Manager, C.P.R. Telegraphs, Montreal, has joined the Royal Flying

Corps, and is at Toronto for training. F. E. Camp, the older son, and formerly Inspector, C.P.R. Telegraphs, Brandon, Man., who has been in overseas service for more than a year, has been transferred to Bramshott Camp, Eng., as chief signal officer.

Frank Jones, of F. & W. Jones, grain, vessel and marine insurance brokers, Fort William, Ont., left there recently to take a commission in the Canadian Navy for the duration of the war, and is now training at Halifax, N.S. This is the second member of the firm to enlist. Edward Jones, who went overseas in Aug., 1916, is now a lieutenant in charge of a patrol boat in the Mediterranean.

Flight Sub-Lieutenant Hugh Allan, who died in France, July 6, was the only son of Sir Montagu Allan, formerly of the Allan Line Steamship Co. No details have been received. He had qualified recently in the Royal Flying Corps, and had been in France a short time. While in Montreal, the late Lieut. Allan held a commission in the 5th Royal Highlanders of Canada, of which his father was honorary colonel. Sir Montagu is at present associated with the Canadian Pensions Board in London, Lady Allan is actively engaged in war work, and Miss Allan is acting as a voluntary nurse in France. Lady Allan and two daughters were passengers on the s.s. Lusitania when she was sunk by the Germans, the two daughters being drowned, while Lady Allan was severely injured.

John Stoughton Dennis, Chief Commissioner of Colonization and Development, C.P.R., Montreal, has been loaned to General White, commanding the British-Canadian recruiting mission in the United States, to assist in obtaining British and Canadian recruits for the army and has been given charge of recruiting operations in the northwest portion of the United States, with headquarters at Chicago, whence he will carry on an active campaign to give all British and Canadian citizens of military age resident in the Western States an opportunity of joining the army. He was born at Toronto in 1856, the son of the late Lt. Col. J. S. Dennis, who was the first Surveyor-General of Canada, and subsequently the first Deputy Minister of the Interior. He was educated at the Toronto and Kingston Grammar Schools, and Upper Canada College, Toronto, and graduated from the old military school at Kingston, Ont., before the establishment of the Royal Military College there. He served articles as a Dominion land surveyor with the late Lindsay Russell, Assistant Surveyor General, and was appointed Dominion topographical surveyor in 1877. From 1872 to 1879, he was engaged on survey work for the Dominion Government in Manitoba and the North West Territories, and from 1879 to 1882, was engineer and surveyor for the Hudson's Bay Co., and laid out what is now a portion of the southern part of the city of Winnipeg, constructing the first trunk sewer there. In 1882 he became a member of Vaughan, Dennis and Co., consulting engineers, land agents, etc., Winnipeg, and in 1885 entered Dominion Government service as Inspector of Surveys, becoming Chief Inspector in 1892. In 1896 he entered the Northwest Territories Government service and in 1899 was appointed Deputy Minister of Public Works, Northwest Territories. He en-

tered C.P.R. service in 1902, as Superintendent of Irrigation and Chief Engineer of Irrigation Works, then being carried out in Alberta. He was subsequently appointed Land Commissioner for British Columbia, and in 1904, Assistant to the Second Vice President. In 1910 he was appointed Manager of Irrigation, and Assistant to the President, C.P.R., at Calgary, Alta., and was removed to Montreal, Nov. 1, 1916. After graduating from the military school, he served for a short time as lieutenant of the Governor General Foot Guards at Ottawa, and in 1885, commanded, as captain, the Intelligence Scout Corps attached to General Middleton's column, during the Riel rebellion, being mentioned in dispatches for service at the battle of Batoche. He was later transferred to the reserve of officers with the brevet rank of major, and in 1916 was appointed lieutenant colonel commanding the Calgary battalion of the reserve militia. He joined the Canadian Society of Civil Engineers as a member, Nov. 21, 1901, was a councillor for 1906 and 1911, was Vice President in 1907 and is President this year. He is a past President of the American Society of Irrigation Engineers.

Canadian Railway Troops' Work in France.

The Dominion Government received recently from general headquarters in France the following summary of the work of the Canadian railway troops for the month of April:

Broad gauge lines—	
Miles located	44.75
Miles graded	36.25
Miles grade repaired	43.55
Miles track laid	51.50
Miles ballasted	46.45
Miles surfaced	43.67
Average number of miles maintained	60.70
Average number, ordinary ranks, C.R.T., daily on construction	1,597
Average number, ordinary ranks, C.R.T., daily on maintenance	686
Casualties from shell fire: officers, nil; ordinary ranks	7
Average number of British unskilled labor attached	2,660

In most cases these lines were laid over the remains of old metre gauge lines, which tended to hinder rather than help the work. Owing to the destruction of the lines by the enemy, it was necessary to do a considerable amount of bridge work.

Narrow gauge lines—	
Miles located	57.58
Miles graded	64.98
Miles grade repaired	28.74
Miles track laid	72.89
Miles ballasted	57.84
Miles surfaced	49.63
Average number of miles maintained	100.06
Average number, ordinary ranks, C.R.T., daily on construction	2,504
Average number, ordinary ranks, C.R.T., daily on maintenance	1,258
Casualties from shell fire: officers, 3; ordinary ranks	75
Average number of British labor attached	3,276

A Canadian Engineer's Grave in France.

The accompanying illustration shows the grave of the late Lieut. Bruce H. A. Burrows, B.Sc., of Toronto, in Bapaume Post Military Cemetery, about a mile north-east of Albert, France. Following are extracts from letters of other lieutenants of the same company of Canadian Engineers, referring to the funeral, grave, etc.

From Lieut. J. Balfour Thom, Nov. 26, 1916: "The funeral was held today at 4 p.m., being attended by Major Irving, D.S.O., of Toronto, the C.R.E. of the division, Major Ward, the Adjutant, and all the officers of this company; the officers of the other two companies were unable to attend. The service was performed by Capt. J. J. MacCaskill, chap-

lain of the 73rd Battalion, and afterwards a wooden cross, painted white with black lettering, was erected."

From Lieut. J. Balfour Thom, Nov. 27, 1916: "To-day I had a wooden railing, painted white, placed around the grave and the grave itself outlined with chalk. Much to my surprise, when I went over to see the grave this afternoon I found that one of the men of his section had made a small design in chalk of the engineers' badge at the head of the grave and that a number of maple leaves had been placed on the grave by various members of the company."

From Lieut. C. Ivey, Dec. 4, 1916: "We laid him to rest in a little British cemetery about a mile from Albert, on the south side of the Albert-Bapaume road. The whole company turned out, together with our headquarters staff, and after the service and he was laid to rest they filed by and saluted him."

A Canadian Engineer's Grave in Bapaume Post Military Cemetery, Albert, France.

Hon. Capt. the Rev. J. R. McCaskill, mentioned above, was reported early in July as wounded. He was educated in the United States and had a pastorate there, subsequently becoming pastor of Douglas Ave. Presbyterian Church, St. John, N.B. He spent some time in Montreal, while the 73rd Battalion was recruiting, and went to the front as its chaplain.

G.T.R. Apprentices.—The G.T.R. is said to have reduced the apprenticeship period for boys in its locomotive shops from 5 to 4 years, to have raised the pay from \$10, \$12, \$14, \$17 and \$20 a month for the respective years to \$12, \$14, \$17 and \$20 a month. Boys who are entering upon the 5th year of their apprenticeship will be freed; and the boys who heretofore have been acting as assistants to men working on the percentage system and receiving a proportion of pay, will hereafter receive the full schedule of pay. A railwayman has been made First Lord of the Admiralty. This is not surprising. The railway business everywhere is associated with brains and capacity.—Toronto Globe.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1916, from Jan. 1, 1917:

	Gross		Net	
	Earnings	Expenses	Earnings	Increase
July	\$3,834,200	\$2,636,800	\$1,197,400	\$ 711,000
Aug.	3,681,900	2,612,900	1,072,000	614,300
Sept.	3,187,900	2,455,300	732,600	x177,300
Oct.	3,176,800	2,496,500	1,220,300	x36,700
Nov.	3,722,300	2,472,300	1,250,000	38,600
Dec.	3,485,400	2,661,600	823,800	x378,300
Jan.	2,832,600	2,350,500	482,100	228,700
Feb.	2,858,600	2,250,400	108,200	x21,200
Mar.	3,273,200	2,655,100	618,100	672,900
Apr.	3,315,500	2,557,600	767,900	208,000
May.	3,784,700	2,730,300	1,054,400	377,290
	\$37,196,100	\$27,879,296	\$9,316,809	\$1,764,000
Incr	\$7,148,300	\$5,384,300	\$1,764,000
	x Decrease.			

Approximate earnings for June, \$4,048,600, against \$3,377,200 for June, 1916, and for three weeks ended July 21, \$2,710,000 against \$2,626,900 for same period 1916.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1915-16, from July 1, 1916:

	Gross		Net	
	Earnings	Expenses	Earnings	Increase
Jan.	10,158,307.86	7,726,829.36	2,431,478.50	\$41,070.27
Feb.	9,084,276.76	7,098,227.96	1,986,048.80	x308,293.94

	x Decrease.			

Approximate earnings for two weeks ended July 14, \$5,968,000 against \$5,354,000 for same period, 1916.

Grand Trunk Railway Earnings.

Aggregate traffic receipts from Jan 1 to June 30—

	1917	1916	Increase
G. T. R.	\$23,969,070	\$21,061,761	\$2,907,309
G. T. W. R.	4,687,643	4,597,519	90,124
D.G.H. & M.R.	1,665,745	1,631,250	34,495

Totals . \$30,322,458 \$27,290,530 \$3,031,928

Approximate earnings for three weeks ended July 21, \$4,759,338 against \$4,031,339 for same period, 1916.

Grand Trunk Pacific Ry. Earnings.

The approximate earnings of the Prairie Section, 916 miles, from Jan. 1 to June 30, were \$2,509,457 against \$2,339,991 for same period 1916.

Board of Railway Commissioners Jurisdiction over Canadian Government Railways.—In Committee in the House of Commons on the Consolidated Railway Bill, July 14, the Minister of Railways said: "It is our intention to introduce an amendment to the Government Railways Act to put government railways under the control of the Board of Railway Commissioners. I expected that the bill would be drawn before this, but my law clerk has been ill. Under the Railway Act, the Government railways are not under the Board of Railway Commissioners' jurisdiction, and in the bill for the consolidation of the Railway Act, sec. 5, which deals with the question of the persons, companies and railways affected, provides that the act, when passed, shall apply to railways "other than government railways." The matter was allowed to stand as it was until the new bill referred to by the Minister is considered.

The Canadian Ticket Agents Association has, in consequence of the war, abandoned its idea of holding a three days meeting and outing in Montreal, on Sept. 25, 26 and 27, and will hold its annual meeting only, on Sept. 26, at the Windsor Hotel, Montreal, at 10 a.m.

Canadian Railway AND Marine World

ESTABLISHED 1898

Military Honors Etc., Given C.P.R. Officials and Employes.

Following is a partial list of C.P.R. officials and employes who enlisted for active service in Europe, to whom the King has awarded decorations and medals for bravery, gallantry and devotion to duty in the field:

Companion of Order of St. Michael and St. George—Lt.-Col. C. W. P. Ramsay, Engineer of Construction, Montreal.

Distinguished Service Order—Lt.-Col. G. S. Cantlie, General Superintendent of Car Service, Montreal; Lt.-Col. F. A. Gascoigne, Superintendent of Car Service, Montreal; Major J. A. Hesketh*, Assistant Engineer, Winnipeg.

Military Cross—Temp'y Lieut. C. F. Casey†, bridleman, Brandon; Lieut. J. A. Hamilton†, conductor, Brandon; Lieut. E. Irvine, transitman, Schreiber; Reg. Sergt.-Major J. Jeffery, clerk, Montreal; Major W. M. Kirkpatrick, Assistant Freight Traffic Manager, Montreal; Lieut. W. B. McArthur†, clerk, London, Eng.; Lieut. W. H. McMurray, clerk, Lacombe East; Lieut. J. K. Matheson*, clerk, Calgary; Co. Sergt.-Major H. Neighbour*, storeman, Winnipeg; Lieut. A. M. Robertson*, transportation student, Montreal; Sergt.-Major D. Stuart*, constable, Calgary; Capt. L. B. Unwin, Accountant, Schreiber; Lt.-Col. F. A. Wilkin*, Surveyor, Winnipeg.

Distinguished Conduct Medal—Corp. A. P. Hancock. For conspicuous gallantry in action. He established his machine gun close to the front line and broke up enemy counter attacks. Later, with a small party, he advanced on an enemy machine gun which he had located, and captured the gun with great skill and determination. Freight checker, Winnipeg.

Pte. R. Jobling. For conspicuous gallantry in action. With an n.c.o. he jumped on the parapet and bombed the enemy back, accounting for many with his revolver, after his supply of bombs ran out, and saving the situation at a critical time. Bridgeman, Lethbridge.

Pte. R. H. Jones. For conspicuous gallantry in action. He carried seven messages to the front line under very heavy fire. Later he rescued many wounded men. He set a splendid example of courage and coolness. Yardman, McAdam Junction.

Sergt. J. R. Langford. For conspicuous gallantry. He displayed great bravery and coolness in the performance of his duties under heavy fire and most trying conditions. Fireman, Ottawa.

Corp. W. N. Legg*. For conspicuous gallantry. A machine gun in the enemy's position having caused heavy losses and held up an attack, he crept out in the night, under heavy fire, located the gun and enabled it to be silenced. His bravery and devotion were very marked. Fireman, Revelstoke.

Sergt. D. MacRae. For conspicuous gallantry when rescuing men buried by a shell. He was exposed to the view of the enemy and under continuous fire. Fitter, Calgary.

Co. Sergt.-Major H. Neighbour*. For conspicuous gallantry. He had invariably shown the greatest bravery, coolness and devotion to duty and has given a fine example to all with him, under the most trying conditions. Storeman, Winnipeg.

Second Corp. J. F. Norton. For conspicuous gallantry and devotion to duty as a telephone lineman. He set a fine ex-

ample under heavy shell and rifle fire. Inspector, Swift Current.

Gunner S. Stickland*. For conspicuous gallantry as battery telephone lineman. During operations he was constantly under shell and rifle fire, patrolling and repairing battery lines, until he was finally wounded by shrapnel while on duty as a telephonist in a forward infantry trench. Machinist, Angus.

Pte. B. A. Stiles*. For conspicuous gallantry during an action. He assisted to carry wounded all day and night under heavy fire, and only gave up when thoroughly exhausted and having been slightly wounded. Fireman, B.C. District.

Military Medal—Pte. A. Anderson, locomotive man, Souris; Sergt. R. J. Cameron, fitter, Calgary; Pte. T. Campbell*, sectionman, Ibsen; Acting Corp. D. S. Charleson, inspector, Boston; Pte. T. C. Christie, trainman, Fort William; Corp. A. W. Courtney, wiper, Calgary; Gunner J. R. Coutts*, operator, Goderich; Gunner S. L. England*, clerk, Montreal; Sergt. W. Figsby*, fireman, Kenora; Sergt. W. Forsyth*, wiper, Brandon; Pte. H. Hamer, foreman, West Toronto; Gunner A. P. Hourd*, clerk, Winnipeg; Lance-Corp. C. M. C. Hoyt, inspector, Angus; Pte. D. Hutchinson*, wiper, Strathcona; Pte. M. S. Kennedy, assistant agent, Gimli; Co. Sergt.-Major R. Kennedy, clerk, Montreal; Staff Sergt. Wheeler C. Landry, carpenter, Farnham; Sapper E. A. McCready, operator, Winnipeg; Lance-Sergt. C. Moore†, heater, Angus; Corp. R. H. Morton, baggageman, Yorkton; Corp. R. G. Morrow, clerk, Liverpool, Eng.; Sergt. G. Nuttall, locomotive man, Calgary; Pte. R. G. Oke*, brakeman, Souris; Pte. W. G. Pavey*, watchman, Shuswap; Sergt. P. T. Roberts*, clerk, London, Eng.; Pte. W. L. Rutledge, brakeman, MacLeod; Pte. J. Savage*, wiper, Winnipeg; Corp. S. W. Shackell, transitman, Smiths Falls; Pte. District; Sergt. E. Young, specialist, Angus.

Meritorious Medal—Staff Sergt. C. A. Hewett, clerk, Winnipeg.

Marked thus (†) killed in action; (*) wounded.

The G.T.R. Directorate.—A bill introduced in the Senate by Senator E. Lynch Staunton, and which was specially aimed at the G.T.R., providing that no person shall be qualified to be, or shall be elected a director of a railway company in Canada unless he is actually a resident of Canada and remains so during the period of his directorate; that all meetings of directors shall be held in Canada, and that these provisions shall apply after Jan. 1, 1918, was withdrawn when it came up for a second reading, July 13. It was stated that the proposal would be brought up as an amendment to the Consolidated Railway Act when it comes up for consideration.

Transportation Appointments Throughout Canada.

Algoma Central & Hudson Bay Ry.—C. D. RAFFERTY has been appointed Master Mechanic, vice T. Fraser, resigned. Office, Sault Ste. Marie, Ont.

Atlantic, Quebec & Western Ry., Quebec Oriental Ry.—E. LINDSAY has been appointed Assistant Master Mechanic, New Carlisle, Que.

Canadian Government Railways.—F. B. TAPLEY, heretofore Assistant Engineer in Assistant Chief Engineer's Office, C.P.R., Montreal, has been appointed Assistant Engineer of Maintenance, all lines, C.G.R., reporting to the Chief Engineer. Office, Moncton, N.B.

J. J. McLEOD, heretofore first trick dispatcher, has been appointed Chief Dispatcher, New Glasgow, N.S., vice K. Stewart, whose appointment as Assistant Superintendent there was announced in our last issue.

J. DAVIDSON, heretofore Instructor of Interlocking Rules, Campbellton, N.B., has been appointed Chief Dispatcher there, and his former position has been abolished.

J. H. BRASSARD, heretofore Chief Dispatcher, Riviere du Loup, Que., has been appointed Chief Dispatcher, Levis, Que., and his previous position has been abolished.

J. H. DUFF, heretofore acting Assistant Superintendent, has been appointed Assistant Superintendent, District 2, Western Lines, and his previous position has been abolished. Office, Grant, Ont.

D. W. STEEPER, heretofore acting Assistant Superintendent, has been appointed Assistant Superintendent, District 3, Western Lines, and his previous position has been abolished. Office, Graham, Ont.

R. KING, heretofore acting Superintendent, has been appointed Superintendent, District 3, Western Lines, and his previous position has been abolished. Office, Fort William, Ont.

C. R. MACKENZIE, heretofore General Superintendent, Transcontinental Division, Cochrane, Ont., has been appointed General Manager's Assistant, Western Lines, Winnipeg.

H. K. GOODWIN has been appointed Local Treasurer, Western Lines, Winnipeg.

E. B. HAGARTY has been appointed Local Auditor, Western Lines, Winnipeg.

W. J. AMOR has been appointed Superintendent of Car Shops and Yards, Western Lines, vice J. L. Hodgson, General Car Foreman, deceased. Office, Transcona, Man.

W. D. STEWART has been appointed General Storekeeper, Western Lines. Office, Transcona, Man.

Canadian Northern Ry.—A. L. SPROULE, heretofore machinist, Winnipeg, has been appointed Locomotive Foreman, Neepawa, Man., vice W. Gibb, transferred.

N. J. LOWES has been appointed station ticket agent, Regina, Sask., vice R. J. Burland, enlisted for military service.

R. CROSBY, heretofore Car Inspector, Blue River, Sask., has been appointed Car Foreman, Moose Jaw, Sask.

W. GIBB, heretofore Locomotive Foreman, Neepawa, Man., has been appointed Locomotive Foreman, Radville, Sask., vice W. Bryce, transferred.

A. LYDON, heretofore Car Inspector, Prince Albert, Sask., has been appointed Car Foreman, Radville, Sask.

G. R. STEEVES, heretofore machinist, Saskatoon, Sask., has been appointed

Locomotive Foreman, Hanna, Sask., vice A. T. Hannah, who has left the service.

W. BRYCE, heretofore Locomotive Foreman, Radville, Sask., has been appointed Locomotive Foreman, Kipling, Sask., vice H. Mann, resigned.

F. J. MYERS, heretofore chief clerk to General Superintendent, Central Division, Winnipeg, has been appointed Trainmaster, North Battleford, Sask.

J. E. GILES, heretofore machinist, has been appointed Locomotive Foreman, Lucerne, B.C., vice F. G. Flesher, transferred to Port Mann, B.C., and since resigned.

Canadian Pacific Ry.—C. W. STOKES, heretofore Assistant Publicity Agent, Department of Natural Resources, Calgary, Alta., has been appointed Assistant General Publicity Agent, Montreal.

A. E. GOUGH has been appointed Chief Dispatcher, Farnham, Que., vice O. M. Lavoie.

J. H. BARBER, heretofore Resident Engineer, Toronto Terminals, has been assigned to the Construction Department, and has charge of the double track construction between North Toronto and Leaside. Office, North Toronto.

H. R. H. SILCOX, heretofore transitman, Trenton Division, Toronto, has been appointed acting Resident Engineer, Toronto Terminals, vice J. H. Barber, transferred.

W. THOMAS has been appointed Car Foreman, White River, Ont., vice J. Flynn, who has been transferred to the Car Department, London, Ont.

C. GRIBBIN, heretofore Master Mechanic, Toronto, has been appointed Master Mechanic, Algoma District, vice T. Hambley, who has been acting temporarily. Office, North Bay, Ont.

T. HAMBLEY, who has been acting as Master Mechanic, Algoma District, North Bay, Ont., has been appointed Division Master Mechanic, Sudbury Division, Algoma District, vice W. Wells, transferred. Office, Sudbury, Ont.

W. WELLS, heretofore Division Master Mechanic, Sudbury Division, Algoma District, Sudbury, Ont., has been appointed Division Master Mechanic, Schreiber Division, Algoma District, vice F. Grant, transferred. Office, Schreiber, Ont.

J. W. KEPPEL, heretofore Locomotive Foreman, North Transcona, Man., has been appointed Locomotive Foreman, Kenora, Ont.

A. J. PENTLAND, heretofore Locomotive Foreman, Souris, Man., has been appointed Locomotive Foreman, North Transcona, Man., vice J. W. Keppel, transferred.

JOHN NORTON has been appointed Locomotive Foreman, Souris, Man., vice A. J. Pentland, transferred.

J. A. MCGREGOR, Superintendent, Edmonton Division, Alberta District, Edmonton, is acting General Superintendent, Alberta District, during the absence of J. M. Cameron in Alaska. Office, Calgary.

W. H. WORTMAN has been appointed acting Superintendent of Shops, Ogden, Alta., during the absence of A. T. Shortt, due to ill health.

S. F. PIERCE, heretofore acting Manager, Royal Alexandra Hotel, Winnipeg, is reported to have been appointed Manager, Palliser Hotel, Calgary, Alta., vice E. H. Godwin, resigned.

J. W. JACKSON, heretofore Locomotive Foreman, Kamloops, B.C., has been

appointed acting Division Master Mechanic, Cranbrook Division, British Columbia District, vice W. H. Wortman, transferred to Ogden Shops, Ogden, Alta. Office, Cranbrook, B.C.

W. SMALL, heretofore acting Shop Foreman, Revelstoke, B.C., has been appointed Locomotive Foreman, Kamloops, B.C., vice J. W. Jackson, promoted.

Chicago, St. Paul, Minneapolis & Omaha Ry.—EDWARD A. DYE has been appointed General Agent in charge of freight and passenger traffic in British Columbia, west of Field, including C.P.R. lines, Nakusp to Kaslo, and Gerard to Lardo, and the position of Travelling Agent, Vancouver, B.C., has been abolished. Office, 905 Dominion Building, Vancouver.

Delaware & Hudson Co.—W. J. MULLEN, General Traffic Manager, Albany, N.Y., is dealing with all matters hitherto handled by M. J. Powers, General Passenger Agent, who has been granted leave of absence for active military service with the U.S. Army.

H. T. RUHL, heretofore Division Engineer, Canadian Government Railways, Moncton, N.B., has been appointed Engineer, Maintenance of Way and Structures. Office, Albany, N.Y.

Grand Trunk Ry.—D. J. McCUAIG, heretofore acting Master Mechanic, has been appointed Master Mechanic, Ontario Lines. Office, Toronto.

W. C. TOMKINS has been appointed Local Treasurer for lines west of Detroit and St. Clair Rivers, vice G. W. Alexander, resigned. Office, Detroit, Mich.

F. A. RUTHERFORD, heretofore Trainmaster, District 26, Battle Creek, Mich., has been appointed Trainmaster, Districts 27 and 28, Detroit Division, vice N. P. North, assigned temporarily to other duties. Office, Durand, Mich.

Grand Trunk Pacific Ry.—T. P. WHITE, heretofore Car Service Agent, has been appointed Superintendent of Car Service, and his former position has been abolished. Office, Winnipeg.

Michigan Central Rd.—G. H. WEBB, Chief Engineer, having been commissioned as Lieutenant Colonel, Sixth Regiment Reserve Engineers, U.S., for service in France, J. F. DEIMLING, heretofore Assistant Chief Engineer, has been appointed acting Chief Engineer. Office, Detroit, Mich.

G. H. HARRIS has been appointed acting Assistant Chief Engineer, Detroit, Mich.

Quebec Ry., Light, Heat & Power Co.—See Electric Railway Department, pg. 327.

Union Pacific System.—J. J. ROSE, heretofore Canadian Passenger Agent, has been appointed General Agent. Office, 53 Yonge St., Toronto.

Bilingual Trainmen for Quebec Province.

In the debate on the bill to amend and consolidate the Railway Act, in the House of Commons, July 18, H. Boulay, Rimouski, Que., proposed an amendment to sec. 302, sub. sec. 2, to the effect that all employes coming in contact with the travelling public shall understand both official languages. The subsection as it now stands provides for printing timetables in English and French, for use on

railways within the limits of the Province of Quebec. It was urged that there was considerable difficulty on trains in Quebec where trainmen could speak English only, but the amendment was objected to on the ground that it would compel railways to employ men speaking both languages on every train, not only on those operating entirely within the province, but also on those passing through any portion, however small, of the province. The Minister of Railways stated that so far as the Intercolonial Ry. was concerned, he might accept the proposal for trains running in the Province of Quebec, but it was a different matter for other railways running trains out of Montreal, to Ottawa, Toronto, etc., and he could not accept it to apply to interprovincial or international trains.

Later in the day, on the motion of the Minister of Railways, the section was amended by the following addition: All railway employes on local passenger trains running in the Province of Quebec having to deal with the travelling public, shall be conversant with the English and French languages, from and after Jan. 1, 1919.

Freight and Passenger Traffic Notes.

The Board of Railway Commissioners has ordered the C.P.R. to stop train 172 at Oakville, Ont., to pick up passengers for Toronto, and has ordered the G.T.R. to stop train 106 at Oakville for passengers for Toronto and points beyond.

In last month's issue, in referring to the Toronto, Hamilton & Buffalo Ry. sleeping car service from Hamilton, Ont., to Pittsburg, Pa., the time of the train leaving Hamilton was given as 8.23 p.m., instead of 8.13 p.m.

The British Columbia Government has authorized the Canadian Northern Ry. to operate a workman's train between New Westminster and Port Mann daily, without paying the usual tolls for the use of the provincially owned bridge over the Fraser River.

The Canadian Northern Ry. reports that up to June 1, covering the first three-quarters of the present crop year, it had handled 58,477 cars of grain originating in Manitoba, Saskatchewan and Alberta. This, it is said, represents 30.4% of the total handlings of all railways in Canada, and is an increase of 1.6% over its own handlings for the same period of the 1915-16 crop year.

In connection with the removal of rails from portions of the Grand Trunk Pacific Ry. in the Rocky Mountain District, for shipment to France, the company says some of these rails will be replaced by steel taken from the adjacent Canadian Northern Ry. line, and in some cases the Grand Trunk Pacific Ry. trains will be operated over the C.N.R. grade. There will thus be a considerable length of railway which will be operated as a joint section. As the work proceeds there will doubtless be certain adjustments in the original plan, and consequently only this preliminary advice is given so that all concerned will understand that the operation of G.T.P. trains will continue over the joint section the same as under previous conditions. G.T.P.R. terminals at Jasper and Edson will still be used.

The Grand Trunk Pacific Ry. started operating a through service from Watrous to Prince Albert, Sask., June 24. A passenger train is run from Watrous on Tuesdays, Thursdays and Saturdays, and from Prince Albert on Mondays, Wed-

nesdays and Fridays. A mixed train is run from Watrous on Mondays, Wednesdays and Fridays, and from Prince Albert on Tuesdays, Thursdays and Saturdays.

The Reid Newfoundland Co. has announced that it will endeavor, as far as possible, to forward all freight routed in its care at North Sydney via that port, but it will reserve the right, whenever circumstances require it, to forward freight originally routed via North Sydney, via Louisburg, collecting extra charges over the North Sydney rate for additional haul North Sydney to Louisburg, and also the right to forward freight by steamship from North Sydney or Louisburg to St. John's direct or Newfoundland ports other than Port-aux-Basques.

Prevent Car Shortage by Filling Cars.

Canadian Railway & Marine World has already published bulletins 1 and 2, issued by the Eastern Lines management, C.P.R., and which appealed more especially to shippers. The officials who have been carrying on the campaign have visited most of the large shipping points in the country, but of course shippers are often unable to load cars fully, because they cannot ship the consignees more freight than is ordered. A third bulletin has, therefore, been prepared, addressed to consignees, and is being distributed from the company's general offices, through its local officers and through station agents. The company has also offered to supply shippers with as many copies as they wish for distribution among their customers. In this connection it may be mentioned that on the Eastern Lines, C.P.R., the cars are being loaded 8% heavier than last year. Bulletin 3 is as follows:

"NOTICE TO CONSIGNEES

"The railways solicit your co-operation in their endeavor to provide all their patrons with a satisfactory freight car supply. Consignees can help by ordering full carloads. Many consignees never order more than the minimum authorized under the tariffs and classification. The result is an economical waste which reduces the efficiency of the railways and the public suffers. To increase the average car loading by one ton, would be equivalent to placing 10,960 additional freight cars in service in Canada. To fully load cars would go a long way towards solving our transportation difficulties. We realize that some consignees cannot always order full carloads, but they are requested to help by ordering in as large units as possible. A car saved is a car gained. The difference between minimum loads and full loads of certain standard commodities is given herewith:

"Flour shipped in 214 lb. barrels; minimum load, 210 bbls.; 1 30 ton car will hold 300 bbls. A 40 ton car will hold 315 bbls. 98 sacks; minimum load, 459 sacks; 3 30 ton car will hold 673 sacks; a 40 ton car will hold 900 sacks.

"Sugar shipped in 100 lb. sacks; minimum load, 300 sacks; a 30 ton car will hold 660 sacks; a 40 ton car will hold 940 sacks.

"Cement shipped in 87½ lb. sacks; minimum load, 457 sacks; a 30 ton car will hold 754 sacks; a 40 ton car will hold 1,074 sacks.

"Nails shipped in 107 lb. kegs; minimum load, 280 kegs; a 30 ton car will

hold 616 kegs; a 40 ton car will hold 878 kegs.

"Consignees can help by promptly releasing cars. To most consignees such an appeal is unnecessary—they do not delay cars under load. There are others, however, who appear to be satisfied if they release cars in what is known as "free time." Again, there are others who hold cars in storage service for weeks, and such consignees are largely responsible for car shortages and terminal congestion. A recent check of cars placed for unloading and held by consignees at some of the stations on one of the railways showed 700 cars delayed an average of 12 days. Had these cars been released within even 5 days they would have made nearly 1,400 trips, and would have handled about 35,000 tons of freight. 2,615 other cars unloaded within 3 days could have been placed for delivery on the tracks occupied by these 700 delayed cars to earn demurrage, but want them employed in carrying freight. A rolling car gathers no demurrage.

"If consignees will order freight from shippers so as to increase the average loading by 5 tons per car, and if they will reduce the average delay in unloading by 24 hours, it will prevent car shortages. In co-operation there is efficiency."

Railway Construction in Alberta in 1916.

The Alberta Railways Department annual report for 1916 shows that the provincial guarantee has been attached to bonds providing for the construction of 2,656.97 miles of railway, on which 1,706.78 miles of steel had been laid, and 417.85 miles of additional grading completed at Dec. 31, 1916. There were laid 132 miles of rails on provincially guaranteed lines during 1916, and the C.P.R. laid 11 miles in the province, making a total mileage of 143 miles of new track. The lines include the Lacombe & Blindman Valley Electric Ry., on which 37 out of 39.1 miles of grading have been completed, but upon which no track has been laid. The other lines belong to three systems, the Canadian Northern Ry., the Grand Trunk Pacific Ry., and the McArthur lines. Under the Canadian Northern charter 774.8 miles are guaranteed, of which 503.8 are completed; while under the Canadian Northern Western Ry. charter 662.57 miles are guaranteed and 264.67 miles are completed. These two lines have also 248.15 miles of grading completed and ready for track laying. Under the Grand Trunk Pacific Ry. charter 259.5 miles were guaranteed, and this was all completed in 1915. The three McArthur lines show: Of the 471 miles guaranteed on the Edmonton, Dunvegan & British Columbia Ry., 407 miles have been completed, and an additional 54.19 miles was ready for track laying Dec. 31, 1916; of the 350 miles guaranteed on the Alberta and Great Waterways Ry., 212.5 miles have been completed and 78.5 miles of grading were completed Dec. 31; of the 100 miles guaranteed on the Central Canada Ry., 49 miles of rails had been laid. Of the total mileage guaranteed 74% was either in operation or ready for track laying.

The total mileage of railways in the province at Dec. 31, 1916, was 4,566, distributed as follows: Canadian Pacific, 1,920 miles; Canadian Northern, 1,250; Grand Trunk Pacific, 707; McArthur lines 689.

Electric Railway Department

The Toronto Suburban Railway's Guelph Extension and Other Lines.

Previous to 1914 the Toronto Suburban Ry. had in operation in the City of Toronto and York Tp. 9.92 miles of single track, comprising three distinct lines and a short branch line. The three principal lines were respectively, from the corner of Keele and Dundas Sts., in West Toronto, along Dundas St. to Lambton Mills, from Keele and Dundas Sts. to Church St., Weston, and from Keele St., along St. Clair Ave. and Daveport Rd. to the subway under the C.P.R. on Bathurst St. The branch line leaves the Dundas St.-Lambton line at Gilmour Ave. and runs south to Evelyn Crescent. In 1912, contracts were let to the Suburban Construction Co. for the extension of the Weston line to Woodbridge, 7.9 miles, and from Lambton Mills to Guelph, 46.3 miles. Ewen Mackenzie was given subcontracts for all work, except buildings and overhead line, on the Weston-Woodbridge extension, and for the grading, bridging, fencing, etc., of about 41 miles of the Lambton-Guelph line, and the tracklaying

St., where it runs through the G.T.R. subway. Where the line is on private right of way, the sharpest curve, with two exceptions, is 10 degrees, and the steepest grade 2%. The exceptions are at the point where the line leaves the road allowance for a private right of way, where there is a 12 degree curve, and at a sharp bend in the Humber River, at mileage 7.1, where a 15 degree curve had to be used to avoid the necessity of diverting the river. For the first three miles the grade is undulating, following the valley of the Humber River until, after crossing the west branch of the river, it rises 80 ft. in a little over a mile to a summit near the Albion Road. Thence the grade falls for another mile to the Humber River, which it follows to Woodbridge village.

Cuttings were made 20 ft. wide and embankments 14 ft. Culverts, where small openings were required, are of concrete or corrugated galvanized iron pipe. Larger culverts and cattle passes are of

used as a passing siding.

The overhead line is of trolley construction, 2/0 copper trolley wire, on poles spaced 100 ft. apart, and 8 ft. clear of centre line. The feed wire is of aluminum, equivalent to 4/0 copper wire. There is one substation on this line, at Thistle-town, built of brick with stone trimmings and tar and gravel roof.

The Guelph extension, generally known as the Lambton-Guelph line, leaves the Dundas St. line at the top of the hill on the east side of the Humber River, where it enters on private right of way and continues thereon throughout. After passing through Lambton Park, the Humber River is crossed at an elevation of 82 ft. above the water level; thence paralleling the C.P.R. for 0.8 mile to near Mimico Creek, the line curves sharply to the left, and reversing, crosses Mimico Creek and runs under the C.P.R. at the latter's bridge over Mimico Creek. The line then rises on a short stretch of 2% grade to and through Islington village,

Toronto Suburban Railway, Lambton yard, showing the switches and Y.

Toronto Suburban Railway, Lambton yard and car barn.

and ballasting of all of this line, excepting the part lying east of the west bank of the Humber River, 0.6 mile. The grading and bridging of this 0.6 mile were done by the Lewis Construction Co., and the tracklaying and ballasting by the Suburban Construction Co. The grading on the westerly five miles was done by Chas. Cook & Co., and the tracklaying and ballasting, as above stated, by Ewen Mackenzie. At the same time that the work was going on, the Suburban Construction Co. did considerable work on the improvement of the city lines, particularly the Dundas St.-Lambton line.

The Weston-Woodbridge line, commencing on Main St., Weston, at its intersection with Church St., runs northerly on Main St. half a mile to beyond the under crossing of the G.T.R.; thence for another half mile the track is on the road allowance, but on the west side next to the fence, so that it does not interfere with the roadway. The balance of the line is on private right of way. The line, where it is on the street or road allowance, has necessarily to conform to the roadway, grades and alignment. The maximum grade of this part is 3% and the sharpest curve is 20 degrees, which is rendered necessary at the turn in Main

cedar box construction. The principal bridges are of steel, on concrete abutments and piers, as follows: Mileage 1.6, Humber River, 1-24 ft., 1-60 ft., 1-90 ft. deck plate girders. Mileage 2.7, West branch of Humber River, 2-45 ft. through plate girders. Mileage 3.1, creek, 24 ft. I beams. There is also one frame trestle on this line. All bridges are designed for Class 2 loading, Department of Railways & Canals specification.

The track is laid with 60 lb. A.S.C.E. rail, rolled by the Algoma Steel Co., with 4 bolt angle bar splices, on ties spaced 17 to 33 ft, rail length. Surfacing was done with material from shoulders and side ditches. The right of way is 66 ft. wide, fenced throughout with no. 7 wire woven fence on posts spaced 25 ft. centres. Gates are of iron frame construction, covered with woven wire. There are two small shelter stations at Thistle-town and Albion Road respectively, and one larger frame station at Woodbridge. Passing sidings are provided at the north end of Weston and at Thistle-town and Albion Road, in addition to which there is a siding at Woodbridge. There is also a spur about three-quarters of a mile long, leading to a material yard on the C.P.R., a mile north of Weston, which is sometimes

after which it parallels Dundas St. for 4 miles, excepting for a mile at Summer-ville, where it swings to the north, in order to get an easier grade down to the Etobicoke River valley, and, swinging back, a crossing under Dundas St. is obtained. Leaving Dundas St. at mileage 6, the line then runs for three-quarters of a mile through level fields and then parallels the C.P.R. for about a mile and a half to beyond Cooksville. There it strikes northwesterly on a rising grade and 4½ miles further on passes over a summit 200 ft. higher than Cooksville and thence descends to the valley of the Credit River, which is crossed at Meadow-vale, mileage 15.3. The C.P.R. is crossed underneath, at mileage 15.9. The Credit valley is then followed through Church-ville and Huttonville villages, at which latter point the line again rises out of the valley until it reaches the meadow land on the higher ground, which it follows, passing Norval village on the top of the hill at mileage 22.4. The west branch of the Credit River is crossed, at mileage 23.4, on a timber trestle, 70 ft. high, west of which there is located the longest tangent on the line, which extends to George-town, mileage 26.0. The West Credit River is again crossed at that point, on a

timber trestle, and Water St. is crossed overhead on a steel span. The only level highway crossing in Georgetown is Main St., on which the station is located. West of Georgetown the line rises along the slopes of the Credit River valley, and at mileage 26.7 crosses under the G.T.R.'s Hamilton and North Western Branch. Thence the line rises almost continuously, passing through the limestone quarries at Limehouse and Dolly Varden to a summit immediately west of the latter point and reaches Acton at mileage 32.7. At that point the line runs through the Beardmore tanneries yards and crosses a G.T.R.

standard, there being very much less curvature and it was altogether a more expensive line to build. The principal bridges, which, with the exception of the Humber River bridge, were designed for class 2 loading of the Department of Railways & Canals specifications, are generally of steel and concrete, with a number of frame and pile trestle bridge at the less important streams. The principal bridges are as follows:

Humber River bridge, mileage 0.6. Total length, 711 ft.; maximum height above bed of stream, 86 ft. Commencing at the east end there is 209 ft. of frame trestle

footing. They are battered out 1 in 4, giving them a thickness or projection beyond the neat work of 4 ft. 8 in. at the top of footing. The land tower is supported on 4 pedestals of ordinary construction 6 ft. square on top, with side batters of 1 in 6. The river towers each rest on two piers, which are carried full size, 39½ ft. x 6 ft., to above high water, from whence they are carried up an additional 4 ft. in the form of pedestals at each end of the pier. There is a 90 degree cut water on each end of each pier. The west abutment is on the slope of the hill, immediately west of the river, and

Toronto Suburban Railway, Humber River Bridge.

Toronto Suburban Railway, typical trestle construction, west fork of Credit River.

spur in the yard at grade. The station is on Main St. West of Acton, the line passes through a somewhat swampy country and reaches its highest summit one mile west, where the track elevation is 755 ft. higher than at Lambton Jet. It then descends into the country tributary to Speed River's Eramosa branch, following Blue Springs Creek to the junction of

on mud sills, with a maximum height of 55 ft. This trestle ends on a high pier, which also supports the end of the first steel span. The balance of the bridge is of deck plate girder construction on steel trestle towers. The spans, commencing at the east end, are: 95 ft. 2 in., 40 ft. 4 in. tower; 95 ft. 4 in., 40 ft. 4 in. tower; 95 ft. 4 in., 40 ft. 4 in. tower; 85½ ft.

is of ordinary wing construction. All piers and pedestals are founded on solid rock. The west abutment is on stiff clay foundation, in which no piling was necessary. The steel work of this bridge was designed for class heavy loading of the Department of Railways and Canals specification.

Mimico Creek bridge, mileage 1.8. 80 ft.

Toronto Suburban Railway, standard shelter.

the latter with the Speed, and then for the most westerly five miles close to the Speed itself. The grade on the last 12 miles is generally slightly undulating, with a total drop of 130 ft. between the summit, west of Acton and Guelph. This western part of the line is generally through a limestone country and although there are good farms but a short distance away, the land immediately adjoining the railway is generally barren or covered with scrub brush.

The construction standards of this line are similar to those of the Weston-Woodbridge line, but the location is to a higher

The easterly pier is of somewhat unique construction. It is 55 ft. from the ground to the bridge seat and the bridge seat is 14 ft. x 7½ ft. in plan. End batters are 1 in 24 and side batters 1 in 18. In order to lessen the concrete quantities, an opening 30 ft. high and 5 ft. wide, was left in the pier from front to back, and commencing 7 ft. above the footing. As the slope of the embankment comes against the back of the pier, 35 ft. above the footing, a counterfort was built on each side of this opening. These counterforts are each 3 ft. wide, and commence at the face of the pier, 24 ft. above the

through plate girder, on concrete piers and abutments, 14 ft. from bed of stream to base of rail. This bridge is in a bad location, owing to the angle at which it crosses the stream, and to the sharp curvature of the track. In order to ease the flow of the stream, the river was widened on the east side, and protected with a sheet pile bulk head for 180 ft. up stream from the bridge. A short bulk head was also built on the down stream side of the east abutment and the banks on both sides were further protected with heavy rip rap. Both abutments are founded on gravel, in which no piling was necessary.

Etobicoke River bridge, mileage 5.0. Two 50 ft. through plate girders on 2 concrete abutments and 1 pier. Bed of stream to base of rail 12 ft. Both abutments and pier are on solid rock foundation.

Dundas St. overhead bridge, mileage 5.4. Reinforced concrete construction. Two abutments supporting slab on which the road is carried. Clear span 16 ft., at right angles to centre line of railway. Bridge on 47 degrees skew. Clear height, top of rail to trolley wire, 16 ft.

Dixie Creek, mileage 6.1. Timber trestle on mud sills 165 ft. long. Maximum height 23 ft.

Creek, mileage 10.3. Timber trestle on mud sills 35 ft. long. Maximum height 7 ft.

Creek, mileage 14.2. Timber trestle on crib piers. 90 ft. long. Maximum height, 20 ft.

Credit River, mileage 15.3. Three spans through plate girders, one 40 ft. and two 80 ft. The 40 ft. span is over an old tail race, and is supported on 2 concrete abutments. The two 80 ft. spans are over the main river and are supported on 2 concrete abutments and 1 pier. Bed of stream to base of rail 12 ft.

C.P.R. crossing, mileage 15.8. The

Limehouse Creek, mileage 29.3. Pile trestle 180 ft. long. Height above bed of creek 8 ft.

Mileage 30.8. Frame trestle, 180 ft. long, on mud sills, over Toronto Lime Co.'s at Dolly Varden Mine. Total height, 13 ft.

Creek, mileage 31.3. Pile trestle 60 ft. long. Maximum height, 17 ft.

Creek, mileage 32.8. Frame trestle on piles 75 ft. long. Maximum height 18 ft.

Fairy Lake, mileage 33.3. Pile trestle 180 ft. long. Maximum height, 14 ft.

Blue Springs Creek, mileage 35.4. Pile trestle 75 ft. long. Maximum height 8 ft.

Blue Springs Creek, mileage 40.3. Pile trestle 75 ft. long. Maximum height, 8 ft.

Speed River, mileage 41.3. 80 ft. through plate girder on concrete abutments. Bed of stream to base of rail 10 ft. Abutments are founded on coarse gravel, in which no piling was necessary.

Speed River, mileage 43.4. 80 ft. through plate girder on concrete abutments. Bed of stream to base of rail 10 ft. Abutments founded on coarse gravel and boulders.

The track is laid with 60 lb. A.S.C.E. section rail rolled by the Algoma Steel Co. and laid on jack pine and hemlock

mosa. At Georgetown a brick station of neat design, with waiting room, office and baggage room, was built adjoining the substation. At Acton there is a 2 story frame station 18 x 24 in plan, with waiting room, office and baggage room downstairs, and living rooms upstairs. At Guelph, pending the construction of a better station, there is a platform adjoining the track, and across the street from this platform, a stone building is being used for station purposes. This building has a large waiting room, an office and an express room downstairs and 4 good sized living rooms upstairs.

There is a large car barn at Lambton, which was fully described and illustrated in Canadian Railway and Marine World for May, 1916, in which there are in addition to the car storage space, inspection, repair, machine, paint, and blacksmith shops, boiler room, coal store, offices and lavatories. It is the intention to put up a 2-car barn at Guelph, construction of which will commence immediately.

There are three sub-stations, at Islington, Georgetown and Guelph respectively. The Islington one is a frame building, covered with galvanized, corrugated iron; the Georgetown one is of brick, attached to the passenger station, and the Guelph

Toronto Suburban Railway, Georgetown station and substation.

Toronto Suburban Railway, combination passenger and baggage car at Georgetown.

C.P.R. is crossed underneath, and an I beam bridge, on concrete abutments, was built to carry the C.P.R. track. The width at right angles to the Toronto Suburban Ry. track is 16 ft. in the clear, and the clear height 15 ft.

West Credit river, mileage 23.3. Timber trestle, partly on mud sills, and where in the stream on crib work piers; 315 ft. long, with a maximum height of 64 ft.

West Credit River, mileage 25.8. 410 ft. timber trestle on piles. Maximum height above bed of stream 32 ft. This trestle is extended on the west, with a 3 span I beam bridge on 2 abutments and 2 pairs of pedestals, to carry the railway over Water St., Georgetown. This bridge consists of 2-16 and 1-24 ft. spans, giving a clearance above the roadway of 14½ ft.

G.T.R., mileage 26.7. The G.T.R. Hamilton & Northwestern branch is crossed underneath and a bridge of I beams, on concrete piers, with a clear span at right angles to the Toronto Suburban Ry. of 16 ft., was built to carry the G.T.R. track. Clearance from rail to trolley wire under the bridge 16 ft.

West fork of west branch of Credit River, mileage 28.1. Timber trestle 270 ft. long, on mud sills, and where in the river on timber cribs. Maximum height, 45 ft.

ties, 17 to the rail length. Generally, continuous joints were used, but there are a few miles also of ordinary 4 bolt angle bars. There is throughout 6 in. of good gravel ballast. Main line switches are laid with no. 7 frogs, with the exception of Lambton and Guelph Y tracks, in which no. 5 frogs were used. Yard switches and tails of Y have no. 5 frogs.

At Lambton there is a yard in connection with the car barn, and at the same point there is room for considerable additional trackage. Passing sidings are provided at Eaton farm, Summerville, Dixie, Cooksville, Huronbrow St., Streetsville, Meadowvale, Churchville, Huttonville, Norval, Georgetown, Dolly Varden, Acton, Blue Springs, Eden Mills and Eramosa. There are Y's at Lambton, Cooksville, Georgetown and Guelph. The Y's are all laid with curves of 100 ft. radius, with the exception of the east leg of the Georgetown Y, which is 130 ft. radius. Guard rails are used on all of these sharp curves. There is a yard at Guelph, with room to handle a considerable amount of freight.

Shelter stations have been built at Islington, Eaton Farm, Summerville, Cooksville, Huronview St., Streetsville, Meadowvale, Churchville, Norval, Limehouse and Eden Mills, and platforms at Lambton, Dolly Varden, Blue Springs, and Era-

one is also of brick. The high tension supply is from the Toronto Power Co., 12,000 volts, 3-phase, 25-cycle, although all the high tension wiring is installed to meet 35,000 volt standards, as the voltage of the supply will later on be raised to 25,000 volts. The Islington and Guelph substations each have one 500 kw. rotary installed, and the Georgetown substation has two of these rotaries. Each rotary converter receives its energy supply from 3 H.P. 25-165 kva.-12,500/25,000 volts to 965 volt oil-cooled, single-phase transformers. These transformers have four 2½% reduced capacity taps in the primary, and 50% starting taps in the secondary. The rotary converters are rated T.C.C. 4-500 k.w.-750 r.p.m.-1,500 volt, compound-wound commutating pole. The converters receive 3-phase energy, at 965 volts, from the transformers, and deliver 1,500 volt direct current to the trolley. The converters are equipped with brush raising mechanism for starting. Each substation is protected against lightning by an aluminum cell lightning arrester, and is provided with the standard arrangement of choke coils, disconnecting switches and oil switches on the high tension side. The switchboard panels are of natural black slate, the instruments having a dull black finish. The K-21-25,000 volt automatic oil switches are provided

with series relays. The rotary starting panels are located near the rotary converters, and are separate from the main switchboard. In addition to the main lightning arresters, aluminum surge protectors are installed directly across the armatures of each of the rotaries. The operation of the substations is proving very satisfactory, the design of the rotary converters permitting very heavy momentary overloads without injurious sparking. The complete electrical equipment was built by Canadian General Electric Co., at its Peterborough works.

The contact system.—In general the side bracket type of catenary construction is employed; 25,000 volt high tension transmission is carried on the same poles; also the feed wire, the telephone and signalling system. The standard pole spacing on tangents is 150 ft. More than 30% of the main line mileage is curved track, and on account of this the pole spacing varies according to the curvature. The standard pole length for construction is 35 ft.; for transmission and catenary 40 ft. Local conditions, such as crossing of railways, telephone and telegraph and public highway, increase these lengths.

The details of the material used in supporting the contact system are along standard lines, some modifications having been made to meet local conditions. All pole line hardware is either galvanized or sherardized. The messenger cable consists of 7/16 in. high standard steel strand, 90,000 lb. per sq. in., supporting a 4/0 standard grooved trolley wire. Five-point catenary construction is used with 23 in. deflection. A 4/0 feed wire is run all along the line and tapped into the trolley every half mile. The contact system is anchored every half mile, on tangents, and against a curve at both ends. The line is sectionalized at all substations, and where the voltage changes from 1,500 to 600 volt. The high tension transmission consists of 3-phase, 25 cycle, 115,000 C/M copper cable and is supported on a buerrow bracket construction. All along the line is a 5/16 in. ground wire, protecting the line from lightning and grounded every half mile. Three types of bonds have been used, one brass welded, one gas welded and one electric welded bond. The track is cross bonded with a 4/0 copper cable every half mile; also cross bonded on the intersections and switches. The entire electrical installation was designed and constructed by the company's own engineering staff.

This line between Lambton and Guelph was opened for operation on April 14 of this year. The passenger cars were described in Canadian Railway & Marine World in March, 1916, and May, 1917.

The present daily passenger service consists of 2 cars each way between Toronto and Guelph, 1 additional car between Toronto and Georgetown, and 5 additional cars each way between Toronto and Cooksville. The Sunday service consists of 2 cars each way between Toronto and Guelph, 2 cars each way between Toronto and Georgetown, and 1 each way between Toronto and Cooksville.

On the lines in Toronto last year, the track on Dundas St., from Keele St. to Gilmour Ave., and on Keele St. for 500 ft. north of Dundas St., making a total distance of 4,500 ft., was relaid with a 93 lb. grooved girder rail 7 in. high. This year the switches have been renewed with heavier steel, on Dundas St. at Gilmour Ave., near Mavety St., and on the Davenport line at the Y. At the junction with the Weston line at the corner of St. Clair Ave., and Keele St. This is preparatory

to running the interurban cars into the city.

For the foregoing information, photographs, etc., we are indebted to H. T. Hazen, M.Can.Soc.C.E., Chief Engineer, and T. Malm, Electrical and Mechanical Engineer.

The Death of H. G. Matthews.

H. G. Matthews, General Manager, Quebec Ry., Light, Heat & Power Co., died at the Jeffrey Hale Hospital, Quebec, July 4, following an operation for intestinal tumor. He had been in poor health for some months and was unable to attend the Canadian Electric Railway Association's annual meeting in Montreal early in June, but he went to his office nearly every day until June 28. On June 29 he was taken to the hospital and was operated on on July 3, when it was found that gangrene had set in, affecting the main blood arteries of the intestines. He died the following morning. The removal of his body from his house to the station

The Late H. G. Matthews

at Quebec was attended by over 100 mourners and conductors in uniform, and representatives of many local clubs, societies and public bodies. The funeral took place at Mount Royal Cemetery, Montreal, July 6, and was attended by the President of the company, Sir Rodolphe Forget, several directors and other friends, including representatives of the Montreal Tramways Co. and the Montreal Light, Heat & Power Co.

Mr. Matthews was born at Montreal, July 1, 1878, and educated at the Montreal High School. After being with the Marconi Wireless Telegraph Co. of Canada from Dec. 1903 as Sec.-Treas., and from Oct. 1908 also as General Manager, he entered Quebec Ry., Light, Heat & Power Co.'s service in Aug., 1911, as Assistant to the President. In Jan., 1912, he was also appointed General Manager. He was also President, Lotbiniere & Megantic Ry. Co., and a director of all the subsidiary companies of the Q.R.L.H. & P.Co. He was a member of the Garrison

Club, the Quebec Board of Trade, the Quebec Golf Club, a director of the Y.M.C.A., and also a member of the executive and legislation committees of the Canadian Electric Railway Association. He was unmarried, and is survived by his mother, one sister and one brother.

Reported Offer of Sale by British Columbia Electric Railway.

The Mayor of Vancouver stated recently that at one of the conferences during the British Columbia Electric Ry. employes' strike, G. Kidd, General Manager, said the company was willing to sell out its entire system on the mainland, and on Vancouver Island. The mayor's statement was that the company suggested that the B.C. Government purchase the company's hydro electric power plants on the mainland and on Vancouver Island, as well as the interurban lines, viz., the Saanich, Chilliwack, Lulu Island and Steveston lines, and the line between Vancouver and New Westminster, and that Victoria, Vancouver, North Vancouver and New Westminster take over the various local systems within their respective boundaries. The idea is that the cities would purchase power at a fixed rate from the government owned and government controlled plants. General Manager Kidd is reported as saying that the company would be willing to accept provincial bonds and city issues of debentures at a reasonable rate of interest in payment for the properties. The price reported to be set on the various properties is said to approximate \$30,000,000. The proposition is reported to have been unofficially laid before the city councils of Vancouver, Victoria and New Westminster and to have been received with favor. No action will be taken by either body unless a definite proposition is made. Nothing has been said as to any offer having been made to the B.C. Government.

Mr. Kidd, in an interview, stated that such an offer had been made in general terms. The plan was one that would require special legislation to allow of the transfer of charter privileges and permit the three cities concerned to carry out the line of procedure outlined. But if all three cities signified their willingness to do their share in the plan, and passed recommendations to the provincial government to that effect, he thought the government would be sure to look upon the matter favorably and the necessary financing would be satisfactorily arranged.

Toronto Ry. Pape Ave. Extension Delayed.—At a hearing by the Ontario Railway and Municipal Board, July 13, as to why the Pape Ave. extension ordered by the board had not been carried out by June 1, both the company and the city declared that the reason the work was not completed was that it was impossible to get either T or girder rails. The rails were on order, but it was not expected that delivery could be obtained until the autumn. The board considered that everything possible had been done, and enlarged the order to Sept. 14.

Edmonton Municipal Ry. and other Public Utilities' Results. In publishing some information in this subject in our July issue, page 287, it was, owing to an error in typewriting, which was not discovered in proof reading, stated that "A. G. Davidson, City Commissioner," had supplied the matter. The City Commissioner is A. G. Harrison.

Toronto Railway Overcrowding Case Decided.

The Judicial Committee of the Imperial Privy Council has allowed the Toronto Ry.'s appeal against a conviction at Toronto assizes, Nov. 2, 1914, for criminal negligence in overcrowding cars and for not taking reasonable steps to avoid such nuisance. The action was originally taken against the company at the city's instance under the Public Health Act. This matter has been before various courts in Canada for at least 6 years, a conviction having been obtained for a similar offence in 1911. At intervals some feeble attempts have been made to remedy the overcrowding, which is admitted by the company, but in no case has the proper remedy been applied, or even attempted, and as, without doubt, the city has the remedy in its own hands, it may be given as an unprejudiced opinion that the city does not intend that the trouble should be obviated, but rather that it should be aggravated chiefly for the purpose of influencing public feeling during the expiring years of the company's franchise. Apart from this is the feeling among a certain class of people, and especially so when the final decision does not favor their views, that cases should not be taken to the Imperial Privy Council for decision, it being contended that it is impossible for the Judicial Committee to judge correctly, not being in touch with local opinion. There is no doubt that there is sufficient legal ability in Canada to enable all appeal cases to be decided on this side, but the main safeguard in appeals to the Privy Council is, in reality, the fact that cases are taken there for decision on legal points alone, where local opinion should have no effect whatever, and of which, of course, the Judicial Committee is entirely ignorant. The history of this case alone is sufficient to prove that local opinion and feeling on the matter of overcrowding had its effect in each court in which the case was brought. The contention for the defence, that the courts had no jurisdiction to deal with the matter under the Public Health Act, but that it was entirely within the province of the Ontario Railway and Municipal Board, being ignored. It was mentioned in one of the appeal hearings in the First Divisional Court, Toronto, Oct. 13, when it was held that the courts had jurisdiction, and that the contention of the company might hold good as between the company and private persons, but not between the Crown and the company. The decision seems absurd, when the complainant is the City of Toronto, which does not represent the Crown, and even though prosecution is under indictment by a grand jury, it is not, of necessity, a Crown prosecution. On the other hand, the Ontario Railway and Municipal Board, by virtue of its authority from the Ontario Government, does represent the Crown, and its powers to deal with the case have time and again been pointed out on the company's behalf.

Under clause 38 of the agreement between the city and the company, the City Engineer is required to decide as to the carrying capacity of the various cars operated by the company, and on May 4, 1895, the then City Engineer recommended to the City Council, who adopted the same, that the carrying capacity of closed cars be limited to 50% above their seating capacity, allowing a space of 18 in. on the seat for each person; that open cars be limited to their seating capacity, and that notices should be placed in the

cars giving the number of passengers each was entitled to carry. No attempt seems to have been made to enforce the city's bylaw, but early in 1915 the company drafted a bylaw on precisely similar lines, and submitted it to the Ontario Railway and Municipal Board for approval. This was approved by the Board, on the understanding that it be redrafted, and that the company adopt a device to show when the cars were full, the bylaw not to be operative until a date to be fixed. The Vice Chairman of the Board, A. B. Ingram, dissented, and stated that in his opinion it was utterly impossible to carry out the bylaw, unless the company made alterations to its rolling stock. Immediately following the company's submission of its bylaw, the city council repealed its own bylaw worded similarly, and decided to oppose the application.

Other steps taken with the view of eliminating overcrowding, included some new designs of cars. Various types were tried, but as none of the types carried more passengers than those now in use, nothing was gained. Additional cars were suggested and ordered, but as additional trackage is blocked by the city, there is naturally a limit to the number of cars which can be added. There are at least three things which have interfered to a great extent in carrying out a proper method of dealing with the trouble: the war, the destruction of a number of cars by fire at the company's barns, and the fact that the franchise expires in March, 1921 and that the city has declared its intention of taking over the system.

The jurisdiction of the Ontario Railway and Municipal Board to deal with the complaints, is now unquestioned, but to remedy the evil it would require considerable expenditure, not only by the company, but also by the city, and the Board's Chairman stated recently that under existing circumstances it would be distinctly unfair to compel the company to expend large sums on new equipment, etc. There are several ways in which overcrowding evils may be lessened, if not removed, but as there appears up to the present, no disposition on the part of the city to have the matter handled properly, or to co-operate with the company, it is probable that the evil will continue.

The Privy Council's judgment is not to hand at the time of writing, but dispatches state that the company's appeal was allowed and the conviction quashed.

Suit against Sandwich, Windsor & Amherstburg Ry.—The Ontario Court of Appeals gave judgment at Toronto, July 4, in the action of the Windsor City Council against the S. W. & A. Ry. in reference to the Ferry Ave. loop. The city sued for damages for trespass on Ferry Ave. and injury thereto from excavations, for costs of filling such excavations, injunction and declaration that defendants have no rights upon said streets, without bylaw assented to by electors authorizing same. At the trial, April 27, 1916, judgment was given plaintiffs for \$900 damages and costs, with declaration and injunction as asked. The Court of Appeals has upheld the judgment in all respects, except as to the \$900 damages. Each party pays its own costs of the appeal.

Sudbury-Copper Cliff Suburban Electric Ry.—We are officially advised that the company has under construction at Sudbury, Ont., a car barn 50 x 115 ft., and a station building 20 x 30 ft.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—We are officially advised that in May last the Victoria City Council, on the company's application, authorized the laying down of 420 lin. ft. of second track, paralleling the existing single track on Esquimalt Road, between Catherine and Mary Sts. The linking up of this short stretch will make a complete run of double track from the city to Constance Ave., a little over three miles. The company's right of way over this portion of Esquimalt Road had long been in dispute, and was finally settled by an order of court. (July, pg. 286.)

International Transit Co.—We are officially advised that the company proposes to relay 1,720 ft. of track in Sault Ste. Marie, Ont., in advance of city permanent improvements.

Lake Erie & Northern Ry.—We are officially advised that the overhead construction necessary to operate the company's cars into the Grand Trunk Ry. station at Port Dover, Ont., has been completed, and that since July 9, the cars run over about half a mile of the G.T.R. tracks. This enables the company to have a connection with the wharf at Port Dover. Negotiations to secure this connection were started in March, and plans had been prepared, in the event of their not being successful, for the company to build its own line on St. Patrick St.

Ottawa Electric Ry.—We are officially advised that the company is about to relay track on Sussex St., from Rideau St. to St. Patrick St., Ottawa, 1,600 ft., with 80 lb. T rail. The city will renew the paving at the same time. Work is expected to be started at once.

Port Arthur Civic Ry.—Plans are reported as being prepared by the City Engineer, for the erection of two new bridges over the McIntyre River, Port Arthur, Ont., one for each track. They will, it is said, be of timber construction, as there is a remote possibility that the track may be diverted to May St. The existing bridges are not considered adequate and cars are operated over them at the rate of two miles an hour. It is not expected that any construction will be done on the bridges before September. (May, pg. 203.)

Sherbrooke Power & Ry. Co.—The City Council is applying to the Quebec Public Utilities Commission to consider and settle various matters which are in dispute between the council and the company. The city contends that the company is not living up to the terms of its franchise in regard to street paving and other matters. (May, 1916, pg. 194.)

Toronto Civic Ry.—Tenders were received July 19 for building a single track extension to the Bloor Division, from Quebec Ave. to Runnymede Road. The contractor is to provide all track and overhead work, ballasting, grading, alterations and additions to existing track, and to supply two single truck cars. Only one tender was received for the track, including secondhand T rails and second quality ties, for \$7,655; or as an alternative, for \$2,500, if the city supplies rails, bolts, spikes and the plates. The work is to be completed in 20 days from the start.

Montreal Tramway Co.'s Wages.—The M. T. Co.'s management voluntarily increased its conductors' and motormen's wages 2c an hour all round, from July 1.

British Columbia Electric Railway Employes' Strike.

We have been favored with the following statement in reference to the recent strike of the British Columbia Electric Ry. Co.'s carmen and the causes which led to it:

The employes were working under an agreement entered into by the Amalgamated Association of Street and Electric Railway Employes of America and the company on Sept. 16, 1916. This agreement was supplementary to an unexpired agreement between the same parties, which was executed on Sept. 1, 1915, providing for certain schedules of pay for the employes who were members of the association. In view of the increased cost of living the company voluntarily offered the men certain increases, which resulted in the supplementary agreement above mentioned, although the agreement of Sept. 1, 1915, was not due to expire until "six months after the cessation of the war, provided that the period for which the agreement shall continue shall not be less than 12 months nor more than 22 months from that date." In view of the revised agreement, the period of the contract was extended to June 30, 1918, or at the expiry of six months after the close of the war, whichever date came first. Under that agreement conductors and motormen received the following wages per hour: 1st year, 27c; 2nd year, 29c; 3rd year, 31c; 4th year, 33c; after 4th year, 35c. Conductors and motormen on interurban lines received 1½c an hour in addition to the above rates. In the early part of May, the men governed by the agreement mentioned above made a demand through their union for an additional increase in wages. As the men's demands were too much for the company to consider, a counter offer was made them of a war bonus as follows: 15% increase to men receiving up \$60 a month; 10% to men receiving more than \$60, and not more than \$70 a month; 5% to men receiving more than \$70, and not more than \$80 a month. The men refused to accept this offer, but modified their original demand and asked for increases as follows: For trackmen, 27c an hour for the first 6 months, and after that 35c; a minimum wage of 35c an hour after 6 months service in all departments; all men on a monthly salary to receive an increase of \$10 a month; conductors and motormen on city and suburban lines, car repairers, etc., 1st six months, 27c an hour; next 18 months, 35c; 3rd year, 36c; 4th year, 38c; 5th year and after, 40c; conductors and motormen on interurban lines to receive 1½c an hour in addition.

The men voted to strike when the company refused to meet these demands, and as a consequence no cars were operated on June 13 in Vancouver, North Vancouver and New Westminster and on the interurban lines between Vancouver and New Westminster, known as the Central Park and Burnaby Lake line. The following day the men on the Victoria lines, and the Saanich interurban line, on Vancouver Island, ceased work. The service on the company's other interurban lines, the Lulu Island and Fraser Valley branch, continued to operate, as the trainmen working on these divisions are members of the Brotherhood of Railway Trainmen, and are not associated with the Amalgamated Association, but as the rolling stock on these lines was maintained by members of the Amalgamated Association, the company was forced to suspend operations on the Lulu Island line on June

17, and to reduce the service on the Fraser Valley branch from 3 car trains to single car operation. The equipment on these lines had been looked after since the beginning of the strike by the foremen, but the company was notified by the Electrical Workers Union that it considered this a breach of the arrangement whereby the company promised not to employ strike breakers, and in order to give the electrical workers no excuse for ceasing work and jeopardizing the light and power service of the district, it removed these foremen from maintenance work, and as a result of being unable to keep the rolling stock on these divisions in proper repair, the operation on the Lulu Island line ceased.

The company considered that the offer it had made of war bonuses was adequate for the increase in the cost of living, and moreover the company's revenue would not permit the payment of the increases demanded and the continuation of operation.

On the Vancouver and Victoria city systems a fare of 4 1/6c is charged, while in North Vancouver and New Westminster, which are separate systems, a straight 5c fare is charged. On the interurban lines liberal concessions in the form of books of tickets have been made by the company from time to time, and on many of the suburban lines on the city system of Vancouver similar reductions of fare have been granted. These arrangements and agreements were entered into several years ago, on the strength of the traffic carried on the shorter city lines. Since Dec., 1914, the revenue which the company expected to receive from these shorter rides has been seriously depleted by jitney competition. When the strike occurred, about 150 jitanys were operating on the paved car line streets in Vancouver. The jitanys limited their operations to the paved streets and car line streets, and also the short hauls, and did not give transfers, consequently a much larger proportion of the long non-paying hauls was imposed upon the company. The City of Vancouver has passed certain regulations respecting jitanys, but these had no effect upon the number operating.

After the street cars had ceased operation for several days, the Retail Merchants Association took action and passed a resolution recommending the elimination of the jitney as the first step towards obtaining a resumption of the car service. This resolution brought action by the city council, which invited the company's officials to a conference. The officials told the city councillors that it was not possible to pay the demands of the men while the jitanys were allowed to operate, but as the city wished to receive proof of this statement, it was agreed between the council and the company that the whole transportation situation be investigated by a commission to be appointed by the British Columbia Government. The city council agreed by resolution to put into effect whatever recommendations this commission should make. The company agreed to endeavor to resume operation immediately in the meantime. The company's officials therefore met the union's officials and after negotiations agreed to pay the men their demands, stating that they did so in the interests of the public, and also because they felt assured that the investigation by the commission would relieve the com-

pany of many of the onerous burdens under which it now operates, and the operation of the system was resumed provisionally, depending upon the rectification of the economic conditions by a provincial commission. The Provincial Premier invited Prof. Adam Shortt, head of the Dominion Civil Service Commission, to be chairman of the special commission, and Sir Robert Borden has agreed to allow Professor Shortt leave of absence to undertake the work.

Adam Shortt, who was appointed commissioner as above mentioned, arrived in Victoria, July 10, and had a conference with the Attorney General and other members of the government, representatives of the municipalities interested and B.C.E.R. officials as to the scope of the enquiry. The commissioner held his first sitting at Vancouver, July 13, when the B.C.E.R. was represented by G. Kidd, General Manager; W. G. Murrin, Assistant General Manager; V. Laursen, Solicitor, and W. Saville, Comptroller. The municipalities interested and the jitney league were also represented. After preliminaries had been settled the investigation was adjourned to July 16, when the taking of evidence was begun. The enquiry is expected to last some time.

Winnipeg Electric Railway Suburban Fares.

The Manitoba Public Utilities Commission has issued an order fixing fares from Winnipeg to Kildonan Park. For traffic between any point in Winnipeg and Templeton Ave. in Kildonan, which is the terminus for service to Kildonan Park, the rate shall be as follows: Single cash fares to be 5c each from any point in Winnipeg to Templeton Ave., or from Templeton Ave. or any point south to any point in Winnipeg, with a transfer if required. Provided that tickets shall be sold as follows: White tickets, good at all times, 6 for 25c. Red tickets, good going north, on Sundays and other days, within the hours specified for use of same, but only good going south on Sundays, 8 for 25c. Tickets for school children to be used only on school days, and for the purpose of attending school, 10 for 25c. Children under five years of age, when accompanied by parents or guardians to be carried free.

A Manitoba court, on July 12, granted the Winnipeg Electric Ry. and the Winnipeg, Selkirk & Lake Winnipeg Ry. authority to appeal against the decision above mentioned, but refused to grant a stay of proceedings as against the order. The effect of this is that the new fare schedule becomes operative at once, while the appeal against it cannot be argued until September.

Accident on the Niagara Gorge Ry.—Owing to heavy rains a portion of the track was undermined about 50 ft. south of the cantilever bridge above the whirlpool rapids, Niagara Falls, July 1, and a car with from 50 to 60 passengers was precipitated into the river. Some disagreement has occurred as to the number of passengers actually on the car, and missing, but it has been accepted that 10 were killed and 31 injured. It is feared that the bodies will not be recovered from the whirlpool, although at times some of them have been seen. One was recovered July 11. An enquiry has been held.

Mainly About Electric Railway People.

Mrs. H. W. Mills, widow of the former Manager of the Sarnia St. Ry., died in Sarnia, Ont., June 26.

George Scott, who has been in the company's service in various capacities for several years, has been appointed Superintendent, Moncton Tramways, Electricity & Gas Co., Moncton, N.B., vice A. B. Corryell, resigned to go into the moving picture business in Buffalo, N.Y.

William J. Lynch, who has been appointed General Manager, Quebec Ry. Light, Heat and Power Co., Quebec, Que., was born there, June 17, 1882. He entered the Montmorency Electric Light Co.'s service as a clerk in 1897, and in 1900, when the company was amalgamated with the Quebec, Montmorency and Charlevoix Ry., he was appointed cashier, from 1905 to 1907 he was accountant; 1907 to 1909, Treasurer, and from 1909, when the various properties comprising the Quebec Ry. Light, Heat and Power Co. were consolidated, he has been Treasurer and Comptroller.

Albert Eastman, who has been elected Vice President Canadian Electric Railway Association, was born in Bosanquet Tp., Ontario, Aug. 21, 1870. He entered transportation service in 1889, and was to 1891, operator, Michigan Central Dd.; 1892 to 1900, freight and ticket clerk and operator, G.T.R., Detroit, Mich.; 1901, assistant agent, Michigan Central Rd., Detroit, Mich.; 1901 to Nov., 1902, Travelling Express and Passenger Agent, Detroit United Ry.; Dec. 1902 to May 1903, General Express Agent, Utica and Mohawk Valley Ry.; May to Nov. 1903, Division Superintendent, Detroit United Ry.; Nov. 1903 to Nov. 1907, Superintendent of Employment, Public Service Corporation of New Jersey; Nov. 1907 to May 1910, General Express and Passenger Agent, New York State Railways, Syracuse and Utica, N.Y.; May 1910 he was appointed General Manager, and in 1914, also Vice President, Windsor, Essex and Lake Shore Rapid Ry., Kingsville, Ont., which position he still holds.

Duncan McDonald, who has been selected to represent the Toronto Ry. on the board of conciliation appointed under the Industrial Disputes Investigation Act, to deal with the matters between the Toronto Ry. and its employes, was born at St. Thomas de Montmagny, Que., June 17, 1859, and removed to Montreal in 1875. He entered Montreal St. Ry. service in 1881, as a driver, in order to acquire a thorough knowledge of street railway work from its very commencement. He was soon changed to conductor and after about a year in that capacity, was appointed roadmaster. In 1886 he severed his connection with the company and engaged in other business. Anticipating the progress that the trolley system would make, he went to St. Paul and Minneapolis, Minn., in 1889, and secured a practical knowledge of electric railways. He returned to Montreal in 1892 and re-entered Montreal St. Ry. service as inspector, and in 1894 was appointed Superintendent of Transportation, which position he held until 1898, when he resigned to become General Manager, Parisian Tramways Co. Paris, France, in which position he organized the Parisian system to a high degree of efficiency. In 1903 he returned to Montreal, having been offered the position of Manager, Montreal St. Ry., which position he held to Nov. 1910, when he was appointed General Manager, and on

the organization of the Montreal Tramways Co., in 1912, he was appointed General Manager of the new company, resigning in July, 1912, since when he has devoted his time to his other interests, including the Montreal Tunnel and Ter-

terminal Co., the Prepayment Car Sales Co., of which he was President, and which controls the pay as you enter car, of which he was one of the patentees, and also the pay within car. He is a director of the Dominion Park Co., the Automobile Club of Canada, a member of the Civil Engineers Society of France, a member of the Institution of Electrical Engineers of England, and was connected with the

Canadian Street Railway Association, now Canadian Electric Railway Association, from its inception until his retirement from actual street railway service, being President for two years and member of the executive committee for several years. For two years he was a city controller of Montreal, and was an unsuccessful candidate for the mayoralty at the last election.

Earle L. Milliken, Manager, Cape Breton Electric Co., Sydney, N.S., who was elected a member of the Canadian Electric Railway Association's executive committee at its recent annual meeting, was born at Bideford Me., May 15, 1888, and was educated at Springfield Technical High School and the University of Maine, whence he graduated in 1908 with the degree of B.S. in electrical engineering. During the summers from 1903 to 1908, he engaged in various work, respectively as follows: General electric work, Westbrook Electric Light & Power Co., Westbrook, Me.; in the brass department, Coffin Valve Co., Mepouset, Me.; in tool making department, Chapman Valve Co., Indian Orchard, Mass.; rodman, Maintenance of Way, Bangor & Aroostook Rd.; in machine shop, Portland Co., Portland, Me., and on inventory work, South Massachusetts Telegraph and Telephone Co. From Sept. to Nov., 1908, he was engaged in Stone & Webster's statistics department, Boston, Mass., and entered the service of the Cape Breton Electric Co., which is managed by Stone & Webster, Nov., 1908, since when he has been, to Oct., 1909, clerk to Manager; Oct., 1909, to Feb., 1911, Superintendent of Distribution and Electrical Engineer; Feb., 1911, to May, 1912, Superintendent, Light and Power, and Electrical Engineer; and from May, 1912, Manager.

Increased Electric Railway Fares in Fort William and Port Arthur.

On Mar. 1 the City Corporation of Fort William and the Public Utilities Commission of Port Arthur, Ont., entered into an agreement as follows: "Whereas the city is operating an electric street railway within the limits of Fort William and the commission is operating an electric street railway within the limits of Port Arthur, subject to certain agreement for a through service of cars. And whereas the said railways are operating at a loss and it is necessary to increase the fares. Now therefore the parties hereto agree as follows: Notwithstanding anything to the contrary in any bylaw or agreement or order in council the fares to be hereafter charged on the said street railway shall be as follows:

"(1) One fare in each city. (2) Regular fare 5c or 6 tickets for 25c, good from 5.30 a.m. until 12 p.m.

"(3) Workmen's fares, 5c or 8 tickets for 25c, good from 5.30 a.m. to 8 a.m. and from 5.30 to 7 p.m., from Monday to Saturday inclusive. Sunday tickets, 8 for 25c, good from 5.30 a.m. to 12 p.m.

"(4) Children's tickets up to 14 years of age, 10 for 25c, good all hours every day of the week, Sunday included. All bona fide students, above 14 years, privileged to use children's tickets, between 8 a.m. and 5 p.m. on school days.

"(5) Fares from 12 p.m. to 5.30 a.m. 10c each, good for a through ride.

"(6) Children under 14 years of age may use school children's tickets on Sunday, be good for through ride."

The Ontario Railway and Municipal

Board met at Port Arthur on June 19 to consider the agreement, and on July 6 recommended to the Ontario Government that the agreement be ratified.

Electric Railway Notes.

The Ottawa Electric Ry. has received one semi steel car, with 33 ft. body, from Ottawa Car Manufacturing Co.

The Toronto Ry. has instructed its motormen that returned disabled soldiers are to be allowed to enter cars by the front doors instead of by the back.

The Edmonton Radial Ry. received tenders recently for the supply of trolley wire, the price being \$43.93 per 100 lb. against \$16 before the war.

A. Beaudoin, Ottawa station agent, Hull Electric Co., was on July 7 sent for trial before a jury on a charge of converting to his own use \$255.45 belonging to the company.

The Premier of British Columbia wrote the Victoria Board of Trade, July 6, that the government had decided to introduce into the legislature next session a bill providing for the establishment of a public utilities commission.

The Winnipeg Electric Ry. is reported to be considering the advisability of reducing the car service on a number of lines in the city and the advisability of operating some of its car in the outlying parts of the city as one-man cars. complied with.

A United States federal court at Seattle, Wash., on July 12, gave judgment restraining any person from operating a jitney in Seattle without compliance with the city regulations as regards bond, etc. The jitney men state they will not fight the order and the result will be that jitney traffic in the city will cease.

The Sherbrooke St. Ry. is reported to have placed in operation a car of a new design with some special features patented by F. X. Couture, Superintendent. The car has seating capacity for 32, and separate entrance and exit are arranged at each end, both working in conjunction with the steps.

The Sarnia, Ont., police magistrate, on July 12, dismissed a case in which the Sarnia St. Ry. was charged with violating the traffic bylaw by blocking Davis St., at the intersection of Front St., with its cars. The magistrate stated that the proceedings had been instituted with a view of letting the company understand that the provisions of the bylaw must be

The Guelph Ry. management was notified by the Ontario Government, July 10, that it was prepared to make a substantial concession in the rate paid the railway for hauling freight to and from the Agricultural College. The G.R.R. notified the college authorities recently it would cease hauling freight unless granted an increased rate. The government's offer has been accepted.

Of the nearly 450 jitney drivers in Winnipeg, over 300 are members of the Jitney Association, which has offered to the city to back a bond covering claims from \$25 to \$1,000, on behalf of its members. This offer is made because the association claims the premiums charged by standard companies are too high. The proposal is to be considered by the license committee.

The Mayor of Montreal claims that the commission appointed by the Quebec Legislature to draw up a new franchise for the Montreal Tramways Co. should

show more energy in its work. The commission has been at work for six months, and although the task it was set demands much research and careful consideration, he is of opinion that it is time for the commission to show results by submitting the details of the new franchise.

The Calgary Municipal Ry. was opened for traffic, July 5, 1909, the system comprising 3 miles of track over which 2 cars were run. On the eighth anniversary the system comprised 47 miles of track over which 78 cars were being operated, all of them on the one-man system. Commissioner Graves is reported to have said the C.M.R. is the only system of the size on the continent successfully operated on the one-man car plan.

Quebec Railway, Light, Heat and Power Co's Appointments.

In consequence of the death of H. G. Matthews, General Manager, the following appointments have been made, the offices in each case being at Quebec, Que.:
W. J. LYNCH, heretofore Treasurer and Comptroller, has been appointed General Manager.

R. A. WILSON, heretofore cashier, has been appointed Treasurer.

H. K. TENNANT, heretofore accountant, has been appointed Comptroller.

J. J. O'BRIEN, heretofore assistant accountant, has been appointed accountant.

C. J. PIGOT, heretofore Maintenance of Way Engineer, has been appointed Chief Engineer.

M. VALLEE has been appointed cashier.

H. MYRAND has been appointed assistant accountant.

Transportation of Postmen in Regina.—As stated in Canadian Railway & Marine World for April, the Regina, Sask., City Council decided, on July 3, by a majority vote, to accept the Post Office Department's offer of \$35 a man per year for carrying postmen on the Regina Municipal Railway, instead of \$25 as previously paid, although the proposal was strongly opposed by the mayor and three other councillors and had been reported against by the city commissioner. It was decided that the contract be for one year, the postmen only to ride, without paying fares, when on duty and not after 6 p.m. At another meeting of the council on July 3, it was decided, against the mayor's advice, to make a contract with the department has arranged to issue serially numbered tickets, one for each postman, so as to try and prevent a greater number riding than the Department pays for.

Dynamiter Sentenced.—M. J. Herlihy, financial secretary of one of the Amalgamated Association of Street and Electric Railway Employes' Divisions, in New York, was sentenced recently to from 10 to 20 years imprisonment for participating in the attempt to destroy an uptown subway station, by dynamite, during the transit employes' strike in October last.

Toronto & York Radial Ry. Wages.—The T. & Y.R.R. increased its motormen's wages \$10 a month on July 1, making them as follows: 1st year, \$70; 2nd year, \$75; 3rd year and after, \$80. These rates are for a 10 hour day.

Toronto Civic Ry. Employes' Wages.—The Board of Control has under consideration, the matter of some increases in the wages paid to employes on the Toronto Civic Ry.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.—The percentage paid to the city of Vancouver in respect of the street railway traffic for June was \$2,309.34, compared with \$3,121.94 for June, 1916. The number of passengers carried during June was 1,708,429, about 500,000 less than in June, 1916, and about 860,000 less than in May, 1917. There was a strike throughout the system for 9 days during June.

The Toronto Railway Employees' Strike.

Following a demand served on the company for an increase of 10c an hour in wages, and some changes in general working conditions, the Toronto Ry. employees struck work at midnight, July 10, certain night cars completing their schedules and returning to the barns at 5.30 a.m., July 11.

The agreement under which the men had been working, was entered into July 12, 1915, and was for 2 years from June 16, 1915. The rates of pay per hour being as follows:

Motormen and conductors—1st year, 23½c; 2nd year, 25½c; 3rd year and after, 27½c; Sunday work 4c an hour in excess of week day rate.

Shed men, foremen, 27½c; assistants, 24½c; car washers, 23½c; motor and truck repair men, 1st year, 23½c; 2nd year, 25½c; 3rd year and after, 27½c. On Nov. 1, 1916, although the agreement had 7½ months to run, the company, on account of cost of living, etc., voluntarily increased the wages 2½c an hour, except to car washers, who were advanced 1½c.

Some weeks prior to the expiry of the two years agreement negotiations took place as to a new agreement, but owing to the absence of officials, etc., the matter was somewhat delayed. At a mass meeting of employees, July 8, it was resolved that a demand be made for an all round increase of 10c an hour, with time and a half for work on holidays, and this was sent, and 48 hours given for consideration. The company's management after considering the demand, replied that it could not accede to it, but offered an increase of 2c an hour as a war bonus, which with the voluntary increase of 2½c an hour, and 1½c an hour to car washers would make increases of 4½c and 3½c respectively over the rates provided in the expiring agreement. In the event of this offer not being accepted, the company offered to arbitrate the matter, either under the Industrial Disputes Investigation Act, or before an independent board, and to abide by the decision.

A final meeting of employees took place at midnight, July 10, when after several futile efforts had been made to bring the parties together, the men decided to reject the company's offer, and also declined to arbitrate, the vote for a strike being almost unanimous. An international union official who was present announced that the union's constitution provided for arbitration, but that the matter rested with the men themselves. If, however, they declined arbitration, the international union could not, in the face of the provisions of the constitution, countenance the strike.

On the application of the Mayor of Toronto, the Ontario Railway and Municipal Board intervened, on July 11, and A. B. Ingram, Deputy Chairman of the Board endeavored to bring the parties together, suggesting to the company that it pay, and to the men that they accept, an increase of 5c an hour, pending investigation. This attempt at settlement failed, and it was later announced that the board intended giving the company notice that unless the service was restored within a certain time, it would take hold of the system and operate it pending settlement. It was also stated that a "street railway expert" had been engaged to manage the system, and that he was in Toronto ready to take hold. The question as to whether the Ontario Railway and Municipal Board has the necessary power to operate the

system under the conditions which existed, is an interesting one. A careful reading of the Ontario Railway and Municipal Board Act does not show that the board has such power, except possibly by inference, but it is almost impossible to see that any such inference can be drawn correctly from any of the clauses in the act covering the board's jurisdiction or powers to enforce its orders.

On July 12 some members of the Ontario Government met the company's General Manager, and after considerable negotiating, the company announced its willingness to pay an increase of 6c an hour until the differences were settled by an arbitration board. This was submitted to a meeting of the men at midnight, July 12, and was accepted, the men agreeing to arbitration under the Industrial Disputes Investigation Act. It was also agreed that car service was to be resumed as soon as possible, and this was done on July 13, at noon. Subsequently the men appointed D. A. Carey, of the Toronto Telegram, as their representative on the board, and the company appointed Duncan McDonald, formerly General Manager, Montreal Tramways Co., as its representative. These two representatives failed to agree on a third party to act as chairman, so the Minister of Labor appointed Judge Snider, of Hamilton, Ont., July 26.

The dislocation of business, caused by the interruption of the service, was considerable, vehicles of all kinds being requisitioned for the carrying of passengers from outlying points. Jitneys naturally reaped a harvest, as all regulations respecting their operation were temporarily suspended.

It was announced, July 12, that the Mayor of Toronto had communicated with the company, advising that he intended taking action against it for the loss of revenue, being percentage of receipts of the railway, owing to its non-operation, and that the claim would be based on an average of \$20,000 a day. It is not known if this is intended seriously or not. He showed his hostility to the company in various other ways and undoubtedly seriously complicated the whole situation.

The position adopted by the employees apparently brings them under the operation of the Industrial Disputes Investigation Act, chap. 20 of 1907, clauses 56 and 59, where it is provided that it shall be unlawful for any employer to declare or cause a lockout, or for any employe to go on strike, on account of any dispute, prior to or during a reference to a board of conciliation and investigation under the provisions of the act, provided that nothing in the act shall prohibit the suspension or discontinuance of any industry or of the working of any persons therein for any cause not constituting a lockout or strike, and provided also that nothing in the act shall be held to restrain any employer from declaring a lockout, or any employe from going on strike in respect of any dispute which has been the subject of reference under the provisions concerning railway disputes in the Conciliation and Labor Act. It is also provided that any employe who goes on strike, contrary to the provisions of the act, shall be liable to a fine of not less than \$10, nor more than \$50, for each day or part of a day that he is on strike, and any person who incites or encourages or aids in any manner, any employe to go or continue on strike, contrary to the pro-

visions of the act, shall be liable to a fine of not less than \$50, nor more than \$1,000.

Transportation of Postmen at Reduced Rates Prohibited in Nova Scotia.

The Nova Scotia Board of Public Utilities gave the following decision on June 14 in re Cape Breton Electric Co., Ltd., re transportation of postmen at reduced fares:

"This matter is brought to the attention of the board by a letter from the company, requesting the opinion of the board as to the legality of a practice, for some time prevailing, by which special priced tickets for car fares on the company's tramway are issued to mail carriers. The tickets are issued in books containing 100, the price per book being \$3, and each ticket entitling a mail carrier in uniform to one ride. The lowest rate charged to all other customers is 5c a trip.

"This company was incorporated by chap. 130 of the acts of 1900. By rule 8 of schedule A to that chapter, which is incorporated with the act and is to have the force of law, the minimum rate of a single fare is to be 5c. The Public Utility Act prohibits any discrimination in rates and no authority or legal sanction for the rate under consideration has been suggested. Such being the case the board is of the opinion that the special rate is contrary to both the company's act of incorporation and the provisions of the Public Utilities Act. The practice referred to must be discontinued."

For several years the Cape Breton Electric Co. sold tickets for postmen, at the special price of \$3 per 100, but some months ago notified the Post Office Department that it would discontinue to do so. However, the local postmaster had a considerable stock of the reduced rate tickets on hand and the postmen have been continuing to use them. In view of the decision above quoted it is a question whether their use should not be immediately discontinued.

Regulation of Electric Railway Service in Glace Bay, N.S.

The Glace Bay Town Council has passed an ordinance, providing that no tram passenger car, while operating within the town limits, shall carry more passengers than there is seating accommodation for, and in no event more than 50 passengers. It also provides that the Cape Breton Electric Co. shall, when traffic requires it, place in service a sufficient number of extra cars, following the regular car, to provide comfortable accommodation for all persons desiring to travel on the company's lines, through, from, or to, the town.

The ordinance was passed under the Cape Breton Electric Tramway & Power Co.'s Act of Incorporation, Nova Scotia Statutes, 1900, chap. 130, schedule A, rule 13, which provides as follows: "The municipal council of the County of Cape Breton, and the councils of the incorporated towns and the towns to become hereafter incorporated, shall have power to make such other rules and regulations as may in their judgment be necessary for the safety and comfort of their citizens, and to impose such penalty for the breach thereof as they may deem proper."

Marine Department

Nova Scotia Steel and Coal Co's Shipbuilding Operations.

In May, 1916, the Nova Scotia Steel & Coal Co. began building a small cargo steamer primarily intended for its coasting trade. A site on the East River, near the plant of its subsidiary, the Eastern Car Co., was selected. This site is an

Length over all, 230 ft.; length between perpendiculars, 220 ft.; molded depth, 20 ft.; beam, 35 ft. Her load draught will be 17 ft., with a carrying capacity of 1,800 to 2,000 tons; displacement when loaded, 2,870 tons, and a speed of 11 knots.

with solid and open floors, having centre divisions and two longitudinal girders on each side, running the entire length. The space between the bottoms is arranged for water ballast, so that a desired draft can be obtained when the ship is sailing without cargo. Four watertight bulkheads, extending to the main deck, divide the two cargo holds from the machinery space and peaks. The forward hold has two hatchways, each 28 $\frac{3}{4}$ x 19 ft. wide, one hatchway of the same dimensions being fitted to the after hold. The holds are large and clear of stanchions. The forward ones have a capacity of 53,000 cu. ft., and the after hold 22,000, or a total capacity of 75,000 cu. ft. In the forehold, at a point between the two hatchways, a deep web and arch frame has been fitted, with large brackets to the deck, thus eliminating stanchions and leaving the hold clear of obstruction. The ship will have 2 steel masts, each about 55 ft. high above the main deck, and for the handling of cargo the foremast will be provided with 2 derricks, while the mainmast will have 1, each derrick having a lifting capacity of three tons. For this purpose deck winches of the latest type will be supplied.

The vessel is of steel throughout, the frames spaced 23 in. apart, from the sternpost to abaft the collision bulkhead, where they are spaced 20 in., and, to cope with ice conditions, the spacing in the forepeak is reduced to 17 in., with heavy side plating at the load water line. This, together with panting beams and stringers, will make the vessel exceptionally strong at the forward end. At the fore end of the bridge will be a deck house, containing, on the bridge deck level, the captain's room, a spare room, steward's room, dining room, pantry, stores and other offices. Above this will be the chart room, pilot house and navigating bridge. Aft of the captain's quarters, the chief officer and chief engineer, together with the junior officers and engineers, will be

Cargo steamer, War Wasp, built by Nova Scotia Steel & Coal Co.

admirable one, as during the past few years considerable dredging has been done, which when completed during this present year, will make the river navigable for large ocean going vessels. Naturally, a considerable amount of pio-

The general arrangement of the vessel, which is being built to Lloyd's 100 A1 class, is shown by the accompanying illustration. She is of the single deck type, with bridge and topgallant forecastle, the propelling machinery being placed

Cargo steamer, War Wasp, built by Nova Scotia Steel & Coal Co.

neer work was necessary. The site was cleared, buildings erected, a berth laid, and a capable staff organized, the keel of the vessel being laid early in the autumn of 1916. This vessel has several unique features. The principal dimensions are:

amidships. The forecastle deck is 26 ft. long and the bridge deck is 56 ft. long, the space between main and bridge decks being available for cargo or bunkers. The ship is provided with complete double bottom of the cellular type, constructed

housed, also the cook. Accommodation in the forecastle will be provided for 5 seamen and 4 firemen. Here also will be the crew's wash room, lamp room and dunnage room.

The propelling engines will be De Laval

geared impulse type steam turbine, the first of this type to be placed on any ship in Canada. They are also said to be the first set of De Laval geared turbines to be placed in a freighter, although since the vessel was laid down similar engines have been adopted by many United States shipbuilders. These engines will be capable of developing 1,000 brake shaft h.p. when running at a speed of 4,000 revolutions a minute. This will be reduced to 80 r.p.m. at the propeller, through two sets of reduction gears. The gears will be supplied with oil from a tank placed on the main deck. A separate pump will be used to draw the oil from gear casings and deliver it to this tank through a water cooler. There will also be a separate pump to supply cooling water. Air and circulating pumps will be driven by a separate engine, capable of maintaining a vacuum of 28½ in. with the engines developing full power. The feed pump will be driven by a chain from the propeller shaft. The vessel will be provided with the usual installation of ballast, general purpose and bilge pumps and fittings. Steam will be furnished at a working pressure of 185 lb. a sq. in. by 2 Scotch type marine boilers, each 11½ ft. in diameter and 11½ ft. long, and a high degree of steam economy is guaranteed. The three winches, of the usual type, have been designed and built locally.

This vessel, which was launched on July 9, has been bought by the Imperial Munitions Board for the British Government and has been named War Wasp.

The keel has been laid for a second vessel of the following dimensions: Length over all, 257¾ ft.; length between perpendiculars, 248¾ ft.; breadth molded, 35 ft.; depth molded 20 ft. This vessel will be of the single deck type, with bridge, fore-castle and raised quarter deck aft and steel deck house and chart room on top of deckhouse, and will be built on the transverse system of construction. The propelling machinery will be located amidships, with the coal bunkers in wings. There will be 2 cargo holds, with 2 large hatches forward and 2 aft.

The propelling engines will be direct acting surface condensing triple expansion type, with condenser of the uniflex type, and the usual equipment of air, feed and bilge pumps, etc. Steam will be supplied from two boilers, 11½ ft. diameter, and 10¾ ft. long.

As before stated, the keel is laid, the double bottom is all in place, and a considerable portion of the frames erected. A large quantity of the material has been accumulated, and much of the work completed. It is expected that the vessel will be launched late in the year. It has been sold to the British Government through the Imperial Munitions Board.

A third vessel, which will be practically a duplicate in size and equipment of the second, will occupy the berth on which the first vessel now stands, the keel of which will be laid at once. This vessel will probably be retained for the building company's own use, at least, it will not be disposed of until construction is considerably advanced.

The investment in new plant in connection with the shipyard has been comparatively light. The building berths are served by three electric cranes, which command and serve the entire area of the berths. Shop work, such as bending frames, shearing, punching and counter-sinking plates, shop rivetting and similar work, is done in the Eastern Car Co.'s plant, which company also supplies the yard with electric power for the

necessary cranes, lighting, etc., and compressed air for pneumatic rivetting, chipping, caulking, reaming, etc. The great bulk of the material entering into the construction of these vessels is of Nova Scotia manufacture. The stem sternpost and rudder frogings, all propelling shafting, propeller, and all fittings are made at the Nova Scotia Steel & Coal Co.'s plant, and the frame angles, floor plates, etc., are rolled in the company's mills.

Canada Steamship Lines' Dividends.

The Canada Steamships Lines has made an announcement respecting the declaration of dividends on preferred stocks. The entire declaration consists of 7.58 and ⅞%, and is divided as follows: 2 1/3% payable Aug. 1 to shareholders of record of July 15; 1¾% payable Nov. 1 to shareholders of record of Oct. 15; 3½% payable Jan. 2, 1918, to shareholders of record of Dec. 15, 1917. The uneven payment of 2 1/3% is explained by the directors' decision to clear up the payment for one month dividends, regarding which there has been some discussion. This was settled by allowing 0.58 1/3% for last December. The declaration also introduces the new policy of making payments quarterly hereafter, instead of annually, as announced a couple of years ago. The change is due to the fact that the company is now operating all the year round, instead of only during the summer, as formerly. The declaration of the dividends on the preferred stock for the balance of the year was made for the purpose of disposing of the matter finally, and clearing up all outstanding obligations on the preferred stock, together with those which would accrue during the balance of the year. The company will then start the new year with a clean sheet and make its declarations quarterly hereafter.

Atlantic and Pacific Ocean Marine.

The s.s. Sellasia, owned by Wm. Thomson and Co., St. John, N.B., is reported to have been sold to a British firm.

The Don Norske Amerikainje s.s. Kristianiafjord, of Christiania, bound homeward from New York, was reported ashore near Cape Race, Nfld., July 15.

The schooner Letitia T. Mackay, built recently at Meteghan, N.S., for A. B. Mackay, Hamilton, Ont., and which sailed the Atlantic recently, for France, is reported to have been sold at Bordeaux, France, for \$110,000.

The France & Canada Steamship Co.'s s.s. Kansan was reported, July 11, to have been sunk near the French coast with a cargo of foodstuffs. The vessel was valued at \$3,000,000 and the cargo at \$2,000,000. She sailed from New York, June 28.

The s.s. Collingwood, owned by the Farrar Transportation Co., Toronto, carried 7,000 tons of ore between two U. S. ports, July 16, being the first Canadian vessel to run under the recently revised coasting regulations permitting reciprocal coasting privileges for Canadian and U.S. vessels.

The Marine Department has established an occulting white light on the outer end of the revetment wall on the south side of the Mission Channel entrance to Fort William. The light is shown from a lens lantern, on a wooden pole, sur-

mounting a shed. It is 26 ft. above water level, is visible for 10 miles from all points of approach, and flashes 0.33 sec. alternating with an eclipse of 1.67 sec.

The s.s. Unkai Maru No. 5, recently under charter to Canadian Pacific Ocean Services, Ltd., for Pacific Ocean operation, was formerly the s.s. Robert Dollar, and owned by the Robert Dollar Steamship Co. It is stated that she originally cost \$250,000 to build, and that in 1915 she was sold to Japanese interests for \$2,000,000. She has again been sold since completing her charter, and is stated to have realized \$2,600,000.

The Farrar Transportation Co.'s s.s. Meaford, under charter to the French Government for Atlantic and Mediterranean service, was attacked by a German undersea boat early in July and, after a fight, succeeded in sinking the submarine by gunfire, about 50 miles southwest of the Scilly Isles. Toronto daily papers in reporting the occurrence stated that the vessels was sunk 50 miles southwest of Scilly in the Mediterranean. The war is improving knowledge of geography, but there is yet something to learn. It's a long way from Scilly to the Mediterranean.

The Marconi International Marine Communication Co. has declared a dividend of 15% for 1916. The report shows that the Marconi system has been installed on 1,855 vessels, and there were 3,347 operators employed. Many gallant acts of operators sticking to their posts while the vessels were sinking, and sending positions, etc., were recorded, while it is shown that 333 operators were saved from vessels sunk, 45 were drowned, 29 injured, 1 killed and 19 were taken prisoners. One operator was torpedoed three times in three months and was anxious to go to sea again, but the company rewarded him for his devotion to duty and placed him in a position ashore.

The Peninsular & Oriental Steam Navigation Co. is reported to have absorbed the Union Steamship Co. of New Zealand, which operates steamships between Australasia and Canada, and carries the mails under Dominion Government subsidy. The Union Steamship Co. has an authorized capital of £2,000,000, half preferred and half common. It is stated that holders of the common stock will receive 10s. of P. & O. deferred stock and £1 10s. in cash for each £1 share, which is stated to be equivalent to 62s. for Union Co.'s shares, which were quoted recently at 52s. The Union Steamship Co. owns 76 vessels, aggregating 243,000 gross tons, and this absorption will bring the P. & O.S.N. Co. tonnage to over 1,725,000 tons.

Canadian Lake & Ocean Navigation Co.'s s.s. Scottish Hero, which, early in 1915, was chartered to the Dominion Iron & Steel Co., Sydney, N.S., for three years, has been torpedoed and sunk. She sailed from Sydney, May 31, with a cargo of steel products for England and France. Capt. Luke Holmes, who was in command of her, was master of the s.s. Morwenna when she was torpedoed in 1915 while en route to England. The s.s. Scottish Hero was well known on the Great Lakes, being the largest of the turret type of vessel which were operating on the Upper Lakes for some years, and which have now disappeared. She was built at Sunderland, Eng., in 1895, her dimensions being: length, 297 ft.; breadth, 40 ft.; depth, 24.1 ft.; tonnage, 2,201 gross, 1,386 register. She was equipped with triple expansion engines route from England to Canada in ballast, and three Scotch boilers.

Maritime Provinces and Newfoundland.

A steamship built recently at Shelburne, N.S., and engined at Yarmouth, N.S., is expected to be placed in service between St. John, Westport and Yarmouth, by Hugh Cann & Sons, during August.

The Wedgeport Steamship Co.'s s.s. Vera B. Collin was launched recently at Wedgeport, N.S. She is intended for freight service and has a speed of about 8 knots an hour when loaded. She is equipped with 2 steam winches, steam steering apparatus, electric light, etc., and is schooner rigged. Her dimensions are: length, 137 ft.; beam, 25 ft.; depth of hold, 12 ft.; register tonnage, 200. She is reported to have been sold to C. Hannevig, New York, for operation in connection with the National Shipbuilding Co., which is being established at Harbor Grace, Nfld.

Province of Quebec Marine.

The Dominion Public Works Department received tenders to July 26 for the erection of a transmission pole line between the old and new dry docks at Lauzon.

The Dominion Government s.s. Argenteuil, built recently at the government yards at Sorel, for Marine Department buoy service on Lake St. Louis, Ottawa River, etc., has been completed, and entered service, July 9. She was launched at Sorel in Oct., 1916, and was described and illustrated in Canadian Railway and Marine World for Dec., 1916.

Judgment was given in the Quebec Admiralty Court recently in the matter of the cross suits arising out of the collision between Furness, Withy & Co.'s s.s. Hochelaga, under charter to the Dominion Coal Co., and the s.s. Etoile, in the St. Lawrence River, July 19, 1916. The former claimed \$20,000 from the owners of the Etoile, while the latter counterclaimed for \$7,000. The judgment given was that each party should pay half of the other's claim, and each pay their own costs. From this it would be taken that each party was held to be equally culpable, but the judgment concludes with the warning to the owners of the Etoile that they should "depart from the habit of taking a short cut to reach the shore at the point where the collision occurred and rely strictly on the law governing navigation."

U.S. Canal at Lake Washington Opened. A canal about 8 miles long, connecting Lake Washington with tide water through Lake Union, Seattle, Wash., was opened for traffic, July 4. The right of way is 300 ft. wide, the channel 100 ft. wide, and the depth 36 ft. The fresh water level is 9 ft. about Puget Sound at high tide, and the lock is capable of lifting larger vessels than any other lock in the U. S., apart from those on the Panama Canal. The lock has two chambers, one 825 by 80 ft., and the other 150 by 30 ft. The work was commenced in Nov. 1911, and the total cost is \$5,000,000.

The Beaver Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with authorized capital of \$100,000 and office at Montreal, to own and operate steam and other vessels and carry on a general transportation business.

Ontario and the Great Lakes.

The Brockville Ministerial Association is endeavoring to restrain the steamboat Thousand Islander from making Sunday trips out of that town.

Kolbe and Co., Port Dover, have placed a new vessel, the s.s. City of Port Dover, in service between Port Dover and Erie, Pa., making four round trips a week.

The Collingwood Steamship Co.'s s.s. City of Meaford is operating on a weekly schedule between Collingwood and Sault Ste. Marie, under command of Capt. F. G. Moles, who is Manager of the company.

The wreck of the s.s. John Plankinton, which sank in the Canadian channel of the Detroit River a few weeks ago, is being demolished by dynamite. The cargo and machinery have been salvaged.

The C.P.R. s.s. Manitoba and the Lake Erie Transportation Co.'s s.s. William S. Mack collided during a heavy fog off Whitefish Point in Lake Superior, July 9, the latter vessel being damaged and beached.

We have been officially advised that there is nothing in the report, referred to in our last issue, that the Great Lakes Transportation Co., Midland, had purchased the s.s. Forest City for service on the Georgian Bay route.

The s.s. Saronic, which was practically destroyed by fire about two years ago, and which was salvaged, overhauled and refitted, has again been placed in service, after being renamed W. L. Kennedy. She was formerly owned by the Northern Navigation Co.

The s.s. Rochester, owned by Canada Steamship Lines, Ltd., and registered in the U.S., now under charter to the Northern Navigation Co., a Canada Steamship Lines subsidiary, has been placed on the route between Cleveland and Detroit, thus acting as a feeder for the company's Lake Superior vessels.

The underwriters are offering for sale the wrecked s.s. Natironco, as she lies beached on the Canadian bank of the Detroit River, opposite the Ecorse Shipbuilding Co.'s plant. She was owned by

the A. B. Mackay Steamship Co., Hamilton, and was sunk in collision with the s.s. Eastern States, June 19, and abandoned to the underwriters.

The U.S. Lake Survey reports the levels of the Great Lakes for June, in feet above mean sea level, as follows: Superior, 602.60; Michigan and Huron, 581.53; St. Clair, 576.31; Erie, 573.53; Ontario, 246.98. Compared with the average June levels for the past 10 years, Superior was 0.34 ft. above; Michigan and Huron, 0.76 ft. above; Erie, 0.62 ft. above, and Ontario, 0.06 ft. below.

A portion of the bank of the Welland Ship Canal, at a point where the highway between St. Catharines and St. Davids crosses the canal, near Homer, gave way, July 14. All work on the canal has been suspended by the government for the remainder of the war, and questions have been asked in Parliament in connection with the matter, it being strongly urged that the stoppage is causing serious deterioration of the work already done.

The Allan Line Taken Over.—Canadian Pacific Ocean Services, Ltd., which was organized for the purpose of taking over and operating the steamships hitherto run by the C.P.R., and by the Allan Line Steamships Co., the control of which had been in C.P.R. hands for several years, has completed all the arrangements necessary for the transfer and has taken over the vessels of the Allan Line and the company's offices in the United Kingdom, as from July 1. When the company was organized in 1915, it was the intention to take over the vessels of the two companies, as from Jan. 1, 1916, but it was thought desirable to defer this until a later date, and in the meantime, Canadian Pacific Ocean Services, Ltd., has been managing the C.P.R. and the Allan Lines.

Vancouver Drydock.—C. S. Meek, promoter of Vancouver Drydocks Ltd., is reported to have stated recently that the company is prepared to construct provided the Dominion Government will grant a subsidy.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during June.

ARTICLES			CANADIAN CANAL	U. S. CANAL	TOTAL
Flour	Eastbound	Barrels	420,838	853,190	1,274,028
Wheat		Bushels	10,325,995	16,292,901	26,618,896

Manitoba, Saskatchewan and Alberta.

The Ross Navigation Co.'s steamboat Nipawin was launched at Pas, Man., June 16. Her dimensions are: length, 100 ft. over all; hull, 85 ft.; beam, 20 ft.; depth, 4½ ft. She will be fitted with one pair sternwheel engines, 8 in. diameter, with 42 in. stroke, and a dry-back Scotch boiler 6 ft. in diameter by 8 ft. long, with 150 lb. steam pressure. She will be equipped with all modern conveniences, including electric light and hot and cold water, and will have accommodation for 30 passengers and a carrying capacity of 30 tons of freight on a 2 ft. draught. She will be used in passenger and freight traffic between Pas and Sturgeon Landing, in connection with mining development north of that point. It is also intended to establish a regular service as well between Pas and Nipawin, a prosperous farming settlement about 200 miles west of Pas on the Saskatchewan River. The Ross Navigation Co. has been operating boats from Pas for the past eight years, and has 2 steam tugs each towing barges, hauling copper ore from Sturgeon Landing to Pas.

British Columbia and Pacific Coast.

The Wallace Shipyards, Ltd., North Vancouver, B.C. is being sued by the Matsuo Co., Seattle, Wash., for \$52,500, claimed as commission on the sale of four steamships to Otto Dahl, Philadelphia, Pa., representing certain Norwegian interests.

Preliminary plans for a freight shed to be erected on the Government wharf at Vancouver, show a building 1,005 ft. long, 92 ft. wide and 20 ft. high under trusses. As soon as the final plans have been approved, tenders will be invited by the Dominion Public Works Department for the construction of the shed.

Mention was made in a recent issue of an action by the British Columbia Salvage Co. against the Pacific Coast Steamship Co. for salvage service in connection with the s.s. Congress. The Pacific Coast Steamship Co. has now entered a counter action, claiming that the salvage company's tug abandoned the Congress and when it returned the vessel had drifted from a soft bottom to a ledge where she pounded, receiving considerable damage. The counter claim is for \$200,000.

The C.P.R. is being sued at Vancouver by Balfour, Guthrie & Co. for loss sustained by the heating of a cargo of grain on the s.s. Monteagle in Mar., 1915. It is alleged that the heating was caused by improper ventilation of the vessel. The C.P.R. contends that its vessels are equipped with the most modern ventilating appliances and there are none on other of its vessels which is not on the Monteagle. Expert evidence was called to prove that the structural arrangement of the vessel was correct and that moisture in the grain was the most frequent cause of heating.

The United States Navy Yards shipbuilding facilities are being expanded so that eventually 16 war vessels may be on the ways at one time, while fully 32 may be in course of construction. This number does not include submarines and submarine chasers.

The Port Arthur Shipbuilding Co. reports that its orders in hand for delivery by the close of navigation in 1918, approximate \$6,000,000.

Mainly About Marine People.

D. O. Lesperance, Chairman, Quebec Harbor Commission, has been elected President, General Car & Machinery Co., Montmagny, Que.

James Playfair, President and General Manager, Great Lakes Transportation Co., returned recently from California, where he went to recuperate after an operation for appendicitis.

Capt. R. F. Carter, who has commanded the s.s. Maid of the Mist, the sight-seeing steamboat at Niagara Falls, for 32 years, has retired, and has been succeeded by Lieut. Williams.

Capt. F. W. Livingstone, master of the barge Baroda, and formerly foreman, Empire Stevedoring Co., and subsequently in charge of the B. C. Longshoremen's Association, and member of the Shipmasters' Association of British Columbia, died at Cumberland, Vancouver Island, recently, from pneumonia, contracted as a result of exposure after rescuing his only boy from Union Bay.

W. I. Gear, Vice President, Robert Reardon Co., steamship agents, etc., Montreal, who is acting as Director of Steel Shipbuilding for the Imperial Munitions Board at Ottawa, has been elected a director of Wabasso Cotton Co., Ltd.

F. S. Henning, Superintendent of the filtration plant at Toronto Island, died at Toronto, from cancer of the bowels, aged 58. In his early life he was a marine engineer in the Maritime Provinces, and later went west, where he continued the same business on Lake Winnipeg. He was in city service in Toronto for about 19 years.

H. W. Crawford, who was recently appointed General Agent, Canada Steamship Lines, Ltd., Cleveland, Ohio, was born at Bowmanville, Ont., Aug. 24, 1887, and entered Richelieu and Ontario Navigation Co.'s service, May 1, 1913, since when he has been, to 1914, Travelling Passenger Agent, Rochester, N.Y.; 1915 to 1917, District Passenger Agent, Chicago, Ill.

David Sylvester, who died at Toronto, July 18, aged 79, was first connected with lake navigation in 1848, when, at the age of 10, he sailed on the schooner Clarissa, then operating from the Humber River, Lake Ontario to Oswego, N.Y., with flour. He gave up the actual sailing of vessels in 1868, and in partnership with his brother, leased the Church St. wharf and elevator, where he carried on a general wharfage, grain storage and vessel owning business, from which he retired a few years ago. It was an interesting feature of the grain elevator operated by the brothers, that the grain was elevated in buckets containing 5 bush. at a time, which were drawn to the top of the cupola by a rope, running over grooved pulleys, and attached to a horse, which strolled a regulation number of feet into the yard every time a bucket of grain was elevated.

Japanese Steamships for the U.S.—It is reported that arrangements are being made between the U. S. and Japanese Governments, that the latter will supply about 50,000 tons of shipping for U. S. use, in return for shipments of steel. The Japanese Government is also endeavoring to induce the U. S. Shipping Board to place orders for steamships in Japan. It is said that steel vessels can be turned out there in about four months provided steel can be supplied.

Lake Vessels for Winter Service on the Atlantic.

A correspondent of the Toronto Globe, in writing in reference to the destruction of a German submarine by the Canadian s.s. Meaford, says: "I wonder why the large fleet of steamships similar to the Meaford should be idly tied up for four months of the year, in various Great Lake ports, when they could be usefully employed during this period in aiding materially to solve the critical transportation problem, which is of such vital moment to the allies at this time, and will be more so as the winter approaches, and the need becomes more urgent for the transportation of food supplies and munitions from America to Europe. Practically all of the lake steamships are capable of standing the test for ocean service, and there is no reason why this great fleet of Canadian and United States owned ships such as the Meaford should not be transferred with the approach of winter to the Atlantic seaboard and employed in helping to solve this transportation problem. Such employment would be both profitable to the owners of the vessels and helpful to the great cause, and with such a large fleet of ships of fairly uniform capacity and speed steps could be taken to convoy them that would largely, if not entirely, guard against submarine attacks, since experience shows that, where sufficiently convoyed, vessels can safely traverse the route between Europe and America, as witness the record established in the transportation of some 400,000 men from Canada to Britain without the loss of a transport.

Reciprocal Coasting Arrangement between Canada and the United States.—The following order in council has been passed changing the coasting regulations for U.S. vessels: Vessels of the United States shall be permitted to engage in the coasting trade of Canada on the inland waters between Lake Superior ports and Montreal without penalties being imposed, during the remainder of 1917. This regulation shall remain in force so long as similar privileges are in effect granted to Canadian vessels by the United States. An arrangement in the form of the practical suspension of penalties imposed by the navigation laws, on application from the foreign ships concerned, has also been made by the United States Department of Commerce, whereby Canadian vessels are enabled to carry cargoes from one U.S. port on the Great Lakes to another.

The Reid Towing and Wrecking Co., Ltd., which took over the Canadian business of the Reid Wrecking Co., Ltd., Sarnia, Ont., recently, has acquired the complete wrecking outfit, together with docks lands and buildings of the old company. The steam tugs, etc., named James Reid, Smith, Sarnia City, S. M. Fisher and Manistique, are also included. The company is at present engaged in salvage work on the s.s. Saxona, near Detour, R. M. Wolvin, Montreal, is President; and F. S. Isard, Comptroller, Canada Steamship Lines, Montreal, is Treasurer, and Capt. J. T. Reid, Sarnia, is Manager.

The Seattle Construction Co. has entered action at Vancouver against Grant, Smith & McDonnell, contractors, for \$150,000 damage done to a floating dry dock which was capsized and smashed while under lease to the contractors on their work on the construction of the breakwater at Victoria.

Standard Specification for Wooden Steamships for British Government.

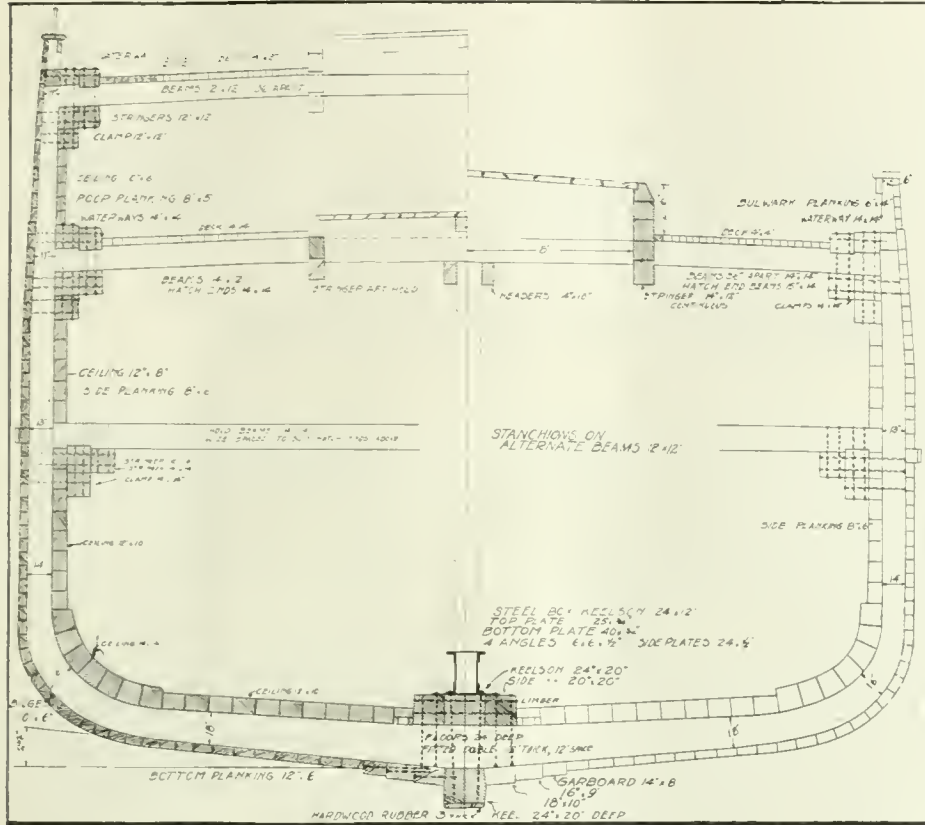

With the demand for immediate and speedy construction of steamships to replace losses due to submarine warfare,

vessels in Canada has been placed in the hands of the Imperial Munitions Board at Ottawa by the British Government and

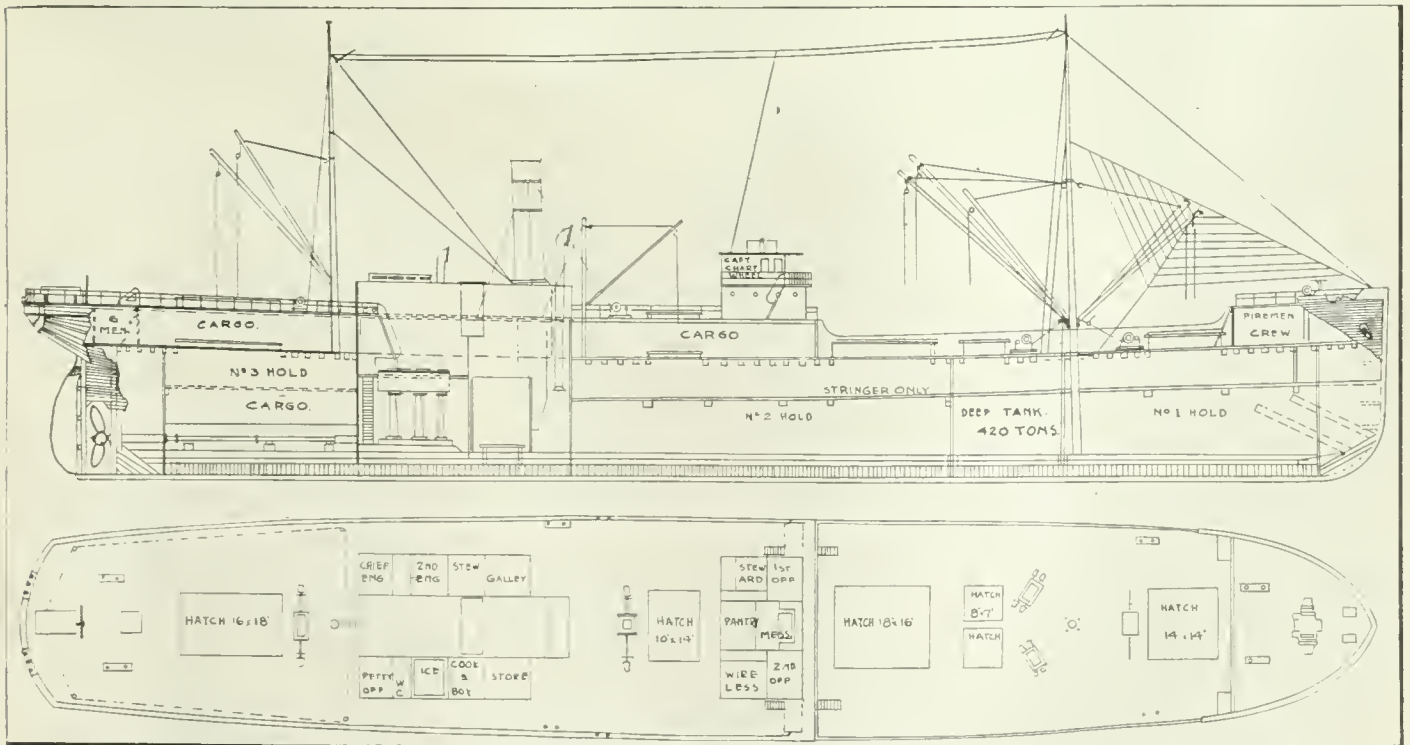

but for the wooden vessels a general specification, with plans of general arrangement and amidship section, have been prepared. They are not intended to furnish working details, but are to be treated as general data intended to indicate in outline the class and construction of vessel required. The details of hull construction, fastening, etc., in specification are such as will meet in general with the approval of Lloyd's and the board's technical advisers, but nothing in the specification will relieve the contractor from the responsibility of employing a skilled staff to work out detail drawings and submit proposals for such details to the Classification Society and to the board's advisers, who will however, give all assistance in their power to help contractors, without accepting responsibility for the proper carrying out of the contract. The vessels are to be built to Lloyd's requirements for A1 classification and to the British Board of Trade requirements as far as necessary for cargo steamers. The hull's dimensions are to be as follows—

- Length between perpendiculars 250 ft.
- Breadth, extreme 43 1/2 ft.
- Breadth, molded 42 1/2 ft.
- Depth, molded 25 ft.
- Depth over keel 27 ft.
- Draught for displacement 22 ft.
- Draught over keel 21 ft.
- Deadweight on 20 ft. max. draught to Lloyd's summer freeboard, approx. 2,500 tons
- Deadweight on 21 ft. max. draught, approx. 2,800 tons

The hull is to be divided by 4 bulkheads, in addition to deep tank bulkheads, viz., collision and aft peak bulkheads, and bulkheads at fore and aft ends of machinery space. All lumber used in construction is to be Douglas fir, unless otherwise specified, but in the case of yards in the Eastern and Maritime Pro-

Cross section, standard wooden steamships, for British Government.

Standard wooden steamships being built in Canada for British Government.

and to enhance the merchant service equipment generally, came the necessity for the adoption of a standard specification. The whole question of securing

orders have been given for a large number of both wooden and steel steamships. For the steel steamships it has not been possible to have a standard specification,

vinces, the lumber may be such as can be easily obtained, but it must be approved by the board. Owing to the danger of corrosion arising in the steel work

specified, the keelson logs are not to be of oak except with the board's special permission.

Each vessel is to be fitted with top gallant forecastle and combined poop and bridge, 2 masts and derrick posts with cargo gear, 4 hatches with 5 steam winches, steam windlass with outfit and gear as required by rules, deep water ballast tank for approximately 400 tons of water, accommodation for officers and crew, bridge house with navigation bridge to be located at the forward end of the combined poop and bridge, officers and engineers to be housed alongside engine room casing. There is to be electric lighting equipment of 7½ k.w. capacity, driven by single cylinder, forced lubrication engine, to be supplied, with all cables, fittings, lamps and switchboard. Each vessel is

to be provided with 2 class A lifeboats to British Board of Trade requirements, one on each side of the vessel, each fitted with yellow metal air tanks, compass, etc., and each boat to be capable of taking the whole crew; a dinghy and service boat are also to be supplied, and all boats are to be supported in davits to the Classification Society's requirements.

The machinery is to consist of one set of triple expansion surface condensing engines to develop 1,000 i.h.p. at sea at 65/70 r.p.m.; cylinders approximately 20, 33, and 54 ins. diam., by 40 ins. stroke; condenser with about 1,500 ft. cooling surface; independent main feed pump with long stroke simplex type and with float control tank under; air, circulating, feed and bilge pumps to be driven by levers from main engine; general service pump

of duplex type to be fitted to serve as boiler feed pump; main feed pump of simplex long feed type, fresh water pump; ballast pump, duplex, 100 tons capacity; exhaust surface type feed heater; evaporator of 15 tons capacity; auxiliary condenser for winches; feed filter of gravity tank type; two boilers of Howden water tube type, three furnace design, for forced draught, and fitted for coal or oil burning, and oil burning installation and pumps to be fitted.

After completion, the trials are to consist of a 6 hr. set run at full power, and builder must guarantee workmanship and material for six months after delivery. Everything is to be supplied to complete the vessel as a full sea going ship to Lloyd's requirements and to the board's satisfaction.

Shipbuilding Activities Throughout Canada.

Wooden Steamship Building for British Government.

The Imperial Munitions Board gave out the following memo. on June 29: "Canada's production of wooden cargo ships has now become a real factor in the industrial life of the country. Contracts have been placed by the Imperial Munitions Board, under instructions from the British Ministry of Shipping, and at present there are about 30 ships under order on the British Columbia coast, and about 15 on the St. Lawrence, the lakes and in the east. These vessels are all from 2,500 to 2,800 tons d.w., and are 250 ft. long, by 43½ ft. molded breadth, by 25 ft. molded depth. Douglas fir is used for the hulls in the west and native hardwood is the principal material in the east. The vessels will be driven by triple expansion marine engines, 20 x 33 x 54 x 40, driving a single propeller approximately 14½ ft. in diameter, and developing about 1,000 h.p., at from 65 to 70 revolutions a minute. The boilers will be of a marine water tube type. The leading engine and boiler shops of the country now have this programme in hand. The vessels will be equipped with 5 standard cargo winches and a 7½ kilowatt electric lighting set of approved type. It is expected that the engines as well as the hulls will be built in Canada, a number of contracts for engines having already been let in this country. It is expected that some of the vessels will be in the water before the end of 1917. The board's plans involve as complete standardization as is possible, in order that in the future a maximum production may be realized if this type of vessel proves a success. Plans and specifications of the standard wooden steamships are given on another page of this issue.

The following information about wooden steamships to be built for the British Government, under contracts placed by the Imperial Munitions Board, is taken from press dispatches and local papers, but has not been verified, there not being sufficient time to do so before publication.

Cameron-Genoa Shipbuilders, Ltd., Victoria, B.C., has laid keel blocks at their Point Ellice yards, for the first 4 wooden steamships which it is said are to be built there under contract from the board.

The Dominion Bridge Co., Lachine, Que., has taken contracts to build a number of marine boilers, and several sets of engines, for wooden steamships for the board, and is adding to its plant and equipment, so as to be able to carry on

similar work on an extensive scale.

The Foundation Co., Victoria, B.C., which is said to have a contract from the board for 5 wooden steamships, is proceeding with the preparation of its yards, on the site formerly occupied by Turpel's ways. Four runways to tide water have been excavated. Machinery for the power plant is being assembled, and the frame work of a 2 storey mill building is about completed.

Grant & Horne, St. John, N.B., are stated, by the St. John Board of Trade's Secretary, to have a contract from the board for 2 wooden steamships.

Lyall Shipbuilding Co., North Vancouver, B.C., Wm. Lyall, President, P. Lyall Construction Co., Montreal, and associates, have organized a shipbuilding company, and are said to have either bought or leased from Wallace Shipyards, Ltd., its no. 2 yard at North Vancouver. The Lyall Shipbuilding Co. is said to have contracts from the board for 10 wooden steamships.

Pacific Construction Co., Coquitlam, B.C., is said to have a contract for 2 wooden steamships.

Quinlan & Robertson, Ltd., contractors, Montreal, is reported to have a contract for 4 wooden steamships.

St. John Shipbuilding Co., St. John, N.B., is reported, by the St. John Board of Trade's Secretary, as arranging to start building wooden ships immediately with the expectation of going into steel shipbuilding later on.

D. A. Saker, an English shipbuilder, is reported, by the St. John, N.B., Board of Trade's Secretary, to have bought the Warner mill property there, fronting on the main harbor, and to be about to build 3 vessels.

The Thunder Bay Contracting Co., Fort William, Ont., will, it is said, build the first wooden sea going vessel to be built there.

Toronto Shipbuilding Co. Ltd., Toronto, in which J. E. Russell, of the Russell Contracting Co. and J. J. Manley, of the C. S. Boone Co., are principally interested, is said to have a contract from the board for 2 wooden steamships.

New Westminster Construction & Engineering Co., Ltd., has been incorporated under the British Columbia Companies Act, with authorized capital of \$30,000. It is said to have acquired a site on Poplar Island, in the Fraser River, near New Westminster, from the Dominion Government, and to be proceeding rapidly with the construction work necessary to

enable wooden steamships to be built there. It is reported that it has contracts from the board for 4 wooden steamships.

Western Canada Shipyards, Ltd., Vancouver, B.C., the organization of which was mentioned in our last issue, has been incorporated under the British Columbia Companies Act, with an authorized capital of \$30,000, A. R. Mann, of the Northern Construction Co., being President and Managing Director. It has contracts from the board for 6 wooden steamships.

R. R. Gray Chisholm, representing the British Shipping Controller, was in Victoria early in July, with T. A. Russell, of the Imperial Munitions Board, consulting with the board's local representatives regarding wooden shipbuilding generally, and particularly as to the facilities offered for the manufacture of engines, boilers and auxiliary equipment required for the wooden steamships under contract on the Pacific coast. They went to Prince Rupert afterwards. Orders are reported to have been placed by the board with various engineering works at the Pacific coast for a number of sets of engines and auxiliary machinery for wooden steamships.

Representatives of South Vancouver and Point Grey municipalities, B.C., have asked the board that contracts for wooden steamships be awarded on condition that they be built on the north arm of the Fraser River, within the boundaries of those municipalities. Attention is called to the excellent sites available for shipbuilding plants, and to the fact that most of the artisans engaged in shipbuilding reside in the municipalities.

Steel Steamship Building for British Government.

The Minister of Marine, in speaking in the House of Commons recently, referring to steel steamships being built in Canada for the British Government under contracts placed by the Imperial Munitions Board, promised full information, which he furnished subsequently as follows:

Canadian Vickers, Ltd., Montreal, 2 vessels, each 7,000 tons dead weight; draught, 24 ft.; mean sea speed, 11 knots; delivery, opening of navigation, 1918.

Collingwood Shipbuilding Co., Collingwood, Ont., 2 vessels, each 2,900 tons dead weight; draught, 17½ ft.; mean sea speed, 10 knots; delivery, May and Aug., 1918.

J. Coughlan & Sons, Vancouver, B.C., 5 vessels, each 8,800 tons dead weight; draught, 24 ft. 2 in.; mean sea speed, 11

knots; delivery, Jan., Feb., Mar., May, and July, 1918.

Midland Drydock Co., Midland, Ont., 3 vessels, each 3,400 tons dead weight; draught, 19½ ft. to 19 ft. 10 in.; mean sea speed, 10 knots; delivery, 1 in July, 1918, 2 before close of navigation, 1918.

Nova Scotia Steel & Coal Co., New Glasgow, N.S., 1 vessel, 1,800 tons dead weight; draught, 17 ft. 1½ in.; mean sea speed, 9½ knots; delivery, July, 1917; 1 vessel, 2,400 tons dead weight; draught, 17 ft. 4 in.; mean sea speed, 8¾ knots; delivery, Jan., 1918.

Polson Iron Works, Toronto, 6 vessels, each 3,500 tons dead weight; draught, 19¾ ft.; mean sea speed, 10 knots; delivery, 2 in June, 1918, 2 in July, 1918, and 2 before close of navigation, 1918.

Port Arthur Shipbuilding Co., Port Arthur, Ont., 1 vessel, 4,200 tons dead weight; draught 22 ft. 10 in.; mean sea speed, 10 knots; delivery, Aug., 1917; 5 vessels, each 3,400 tons dead weight; draught, 19¾ ft.; mean sea speed, 10½ knots; delivery, 1 by close of navigation, 1917, 1 in June, 1918, 2 in Aug., 1918, and 1 before close of navigation, 1918.

Wallace Shipyards, Ltd., North Vancouver, B.C., 1 vessel, 4,500 tons dead weight; draught, 22½ ft.; mean sea speed, 10 knots; delivery, June, 1917; 2 vessels, each 4,600 tons dead weight; draught, 22½ ft.; mean sea speed, 10 knots; delivery, Dec., 1917, and Aug., 1918.

Steel Steamships Authorized to be Built For Neutral Owners.

As previously stated in Canadian Railway and Marine World, the Dominion Government, last year, authorized 20 vessels to be built for delivery on completion, to neutral owners, 18 for Norway, and 2 for the United States. The present position in regard to these is as follows.

Canadian Vickers, Ltd., Montreal, 2 for Norway. These will be requisitioned for the British Government.

J. Coughlan & Sons, Vancouver, 3 for Norway. Only one was contracted for and this will be requisitioned for the British Government.

Nova Scotia Steel & Coal Co., New Glasgow, 2 for Norway. No contracts were entered into. The company has sold to the British Government one vessel, War Wasp, which it built on its own account. It has started another for the government and will build a third, the disposition of which has not yet been decided.

Polson Iron Works, Toronto, 4 for Norway. These will be requisitioned for the British Government.

Port Arthur Shipbuilding Co., Port Arthur, Ont., 3 for Norway. At least 2 of these will be requisitioned for the British Government.

Thor Iron Works, Toronto, 2 for the United States. It has not been decided whether these will be requisitioned or not.

Wallace Shipyards, Limited, North Vancouver, 4 for Norway. No contracts were entered into, but one steel steamship was built for Japanese owners and was sold, presumably, to the British Government, and named War Dog. The company has contracts for 3 more steel steamships from the board.

SHIPBUILDING NOTES.

Canada West Coast Navigation Co.'s auxiliary ship Jessie Norcross, completed recently at North Vancouver, has been chartered to convey 1,600,000 ft. b.m. lumber from British Columbia to Adelaide.

Canada West Coast Navigation Co.'s seventh auxiliary ship, Janet Carruthers, was launched from the Wallace Shipyards, North Vancouver, June 28. The launching took place at midnight, which is somewhat of a novelty, even for war time.

The American Shipbuilding Co. has completed a full Welland canal size steamship, at Superior, Wis., named Poitiers, for the Cie. des Chemins de Fer d'Orleans, Paris, France. She is sister vessel to the s.s. Toulouse built there for the same owners, and launched in April.

The Yarmouth Shipbuilding Co., Ltd., Yarmouth, N.S., held its first official meeting recently and elected the following officials and directors: Capt. A. Cann, President; John D. Kirk, Vice President; George R. Earl, Secretary-Treasurer; and H. S. Crowell, L. C. Gardner, George Killam and Donald Cann, directors.

The Dominion Bridge Co., Lachine, Que., is reported to be working in conjunction with Sir Wm. Beardmore & Co., shipbuilders, admiralty contractors and armament makers, Glasgow, Scotland, with a view to jointly establishing a shipbuilding yard in Canada, for which the Dominion Bridge Co. has practically all the equipment necessary. The greatest difficulty about going ahead appears to be the uncertainty of being able to secure the steel necessary for shipbuilding.

Auxiliary Schooner Building in British Columbia.—The fifth auxiliary schooner to be built by Cameron-Genoa Mills Shipbuilders, Ltd., is in an advanced stage, and it is expected will be launched shortly, and named Jean Steedman. The keel of a sixth has been laid, and when the sixth is completed, the contracts for six of these vessels, two for Canada West Coast Navigation Co., and four for subsidiary of allied interests under the management of H. W. Brown & Co., Vancouver, will be finished. All the vessels for Canada West Coast Navigation Co. are registered at Vancouver, and those for the subsidiary companies are to be registered at Victoria.

Regarding vessel building for the Dominion Government, Sir James Loughheed announced in the Senate, recently, that contracts had been awarded for the construction of two wooden auxiliary sailing vessels of about 2,500 tons each, at an approximate price of \$230,000 each, for service between the Pacific and Atlantic coasts. These contracts have been awarded to Wallace Shipyards, Ltd., and Harrison & Lamonde Shipbuilders, Ltd., Vancouver, B.C., respectively.

Transfer of Canadian Vessels Stopped.

—Following the recent regulation by the British Government stopping the transfer of the registry of British vessels, from ports inside, to ports outside, the United Kingdom, an order in council has been passed, at Ottawa, providing that no application for the transfer of the registry of a British ship from a port of registry in Canada to a port of registry outside of Canada, shall hereafter be made or granted without the written consent of the Minister of Marine and Fisheries.

Vessel Draught for Sault Ste. Marie Canals.—The upbound draught for vessels passing through the U.S. lock has been increased to 20¼ ft., and the draught for downbound vessels passing through either the N.S. or Canadian canals to 20½ ft. The upbound draught for Lake St. Clair remains as before, 20¼ ft., while the downbound draught has been increased 2 in.

Government Shipbuilding in the United States.

Maj.-Gen. Goethals, General Manager, U.S. Shipping Board, Emergency Fleet Corporation, announced, on July 13, that contracts for 348 wood ships have been let or agreed upon, with a tonnage capacity of 1,218,000 tons, at a cost completed of approximately \$174,000,000. In addition, there are under negotiation contracts for about 100 wood ships. Contracts for 77 steel ships have been let or agreed upon, with a tonnage of 642,800 tons, at a cost of approximately \$101,660,356. There are thus provided 425 ships of all sorts, with an aggregate tonnage of 1,860,800, at a cost of approximately \$275,000,000, besides 100 more wood ships under negotiation. He will continue to let all contracts for wood ships (of design approved by the corporation's naval architect) which he can secure from responsible bidders.

He also made the following statement: "My main reliance for getting the greatest amount of the most serviceable tonnage in the shortest time will be on the construction of fabricated steel ships of standard pattern. For that purpose I shall use to some extent the existing yards. On July 16, I shall offer contracts for the building of two plants (to be owned by the government) for the construction of fabricated steel ships, to produce 400 ships of an aggregate tonnage capacity of 2,500,000 tons within the next 18 to 24 months. For the building of these two yards and the construction of ships in them I shall offer as compensation to the agents who undertake the work a fee of approximately 6% of the total cost of the work, with rewards for savings on cost and for speed in delivery. Provision will be made for decreasing the fee to prevent unnecessary cost. The contracts will give the government the benefit of government-fixed commodity prices and will provide for cessation of work at any time, so that the appropriation may not be exceeded. Options will be given to the contractors to purchase the plants at arbitrated values on the completion of the work. The design of the ship and the plans of the yards are ready, the distribution of the work of furnishing the material and of fabrication is arranged.

"On July 16, I shall deliver to shipbuilders a general statement of the programme which I have long been maturing for commandeering ships now under construction for private account (such ships having an aggregate tonnage considerably in excess of 1,500,000 tons). The essence of this programme is to commandeer all such ships and expedite their construction by adding labor and cutting out refinements. By thus federalizing each yard, giving it government help and putting it on a speed basis, we shall produce its greatest efficiency. As fast as the berths are cleared each yard will be devoted to the production of a single type of tonnage."

On July 24, it was announced that, owing to differences between the Chairman of the U.S. Shipping Board, Wm. Denman, and the General Manager of the Emergency Fleet Corporation, Maj.-Gen. Goethals, the former had resigned, at President Wilson's request, and the latter's resignation had also been accepted. E. N. Hurley, Chicago, formerly Chairman of the Federal Trade Commission, has been appointed Chairman, U.S. Shipping Board, and W. L. Capps, Chief Constructor of the Navy, General Manager, Emergency Fleet Corporation.

Motor Boat Submarine Chasers Built in Canada.

During recent months much has been heard of submarines and submarine warfare. Many devices have been made to combat the undearsea craft, one of the best and most successful being fast motor

driven boats, and practically of a new design. The dimensions are: length overall, 80 ft.; beam extreme, 12 ft.; depth at side, from top of rabbet to top of beam, 6 ft.

this power plant a speed of 20 knots was easily exceeded. Fuel is carried in four tanks. The boats have fine lines and are very handsome looking, although sturdily built, and when running at high speeds leave a good clean wake. They are flush decked, with a small steering and chart room just forward of amidships, and also a small house or casing over the engine and state rooms. Forward of the steering shelter is a quick firing gun, while aft is a lifeboat about 14 ft. long.

The hulls are subdivided by 5 steel and 1 wooden, watertight bulkheads. In the fore peak is a store room for provisions, etc., also gasilen tanks, behind which is a crew space, with ample accommodation for 8 men, while aft are smaller but more comfortable quarters for 2 officers. The floors in the living quarters are covered with linoleum. The engine room floor, of white oak, is covered with light sheet metal. Hinged hatches and ladders lead into the store room and crew's quarters, also the engine and dining rooms. A companionway, with slide and steps, leads down to the staterooms. The keel and stem are of white oak, 1 $\frac{3}{4}$ in. frames, 2 $\frac{1}{2}$ in. deck beams and 2 $\frac{1}{4}$ in. roof beams of the same material. The keelsons and planking are of yellow pine, bulkheads and cabin top of white pine decking and cabin sides of Oregon pine. The rudder is of the outboard balanced type and is

Five Submarine Chasers Loaded on Cars for Transport to the Atlantic Coast.

Fleet of Thirty Submarine Chasers in a Canadian Dry Dock.

boats known as submarine chasers. Several hundred of these submarine chasers have been built in Canada within the past 12 months, 550 having been built at one shipyard. They are twin screw, gasoline

They are furnished with 2 standard right and left gasoline marine engines, having 6 cylinders 10 x 11 in. and developing 220 h.p. The engines are fitted a short distance aft of amidships. With

made of manganese bronze, as are also the propellers. They are elaborately fitted out, being complete in every detail, and have electric light. They have proved very useful as patrol boats.

Outturns of Grain Cargoes on the Great Lakes.

Canadian Railway and Marine World for May gave some details of the agreement arrived at between the Grain Clearance Corporation of Buffalo and its subscribers, relative to the methods of dealing with the outturns of grain cargoes in international business and on business purely between U. S. ports. The business between Canadian ports is covered by the regulations adopted by the Grain Commission for Canada. Under this agree-

corporation be directed to terminate its business and give notice of such termination and withdrawal of its contracts to subscribers and other parties in interest. Accordingly, you are hereby notified that while we regret such action is necessary, we withdraw our contract with you so far as boats loaded after June 30 are concerned, and that we now discontinue business and will wind up the affairs of the company as soon as possible, settling the unpaid accruing shortages so far as our assets will permit, or paying pro rata in case the assets are not sufficient to pay in full."

Wireless Telegraph Operators on Pacific Coast Vessels.

The board of conciliation appointed to enquire into the complaint of employes of Marconi Wireless Telegraph Co. of Canada, engaged on vessels operating on the Pacific coast, reported recently. Twenty-three operators were affected; of these 7 were paid \$30 a month; 8, \$35; 6, \$40; 1, \$55; and 1, \$60; the two latter being engaged on trans-Pacific vessels, where a minimum of \$40 a month obtains. The employes complained that the salary was insufficient, that there was lack of proper accommodation on the coastwise vessels, that the annual holiday and the uniform allowance has been discontinued, and that there was unfair discrimination by the company's Pacific coast manager. They claimed that the minimum wage should be \$60 a month rising by annual increments to \$80. J. H. Lauer, General Manager, offered a minimum wage of \$40 a month, with annual increases up to \$60.

The board considered that the evidence fairly established the employes' claims, with the one possible exception of unfair discrimination by the local manager, on which it would express no opinion. It also considered the amounts of monthly pay suggested by the employes as excessive, and those suggested by the company, low, the revenue being satisfactory and the margin of profit a fair one, though it contended that the financial position of a company should not be the deciding factor in arriving at a fair wage scale. It was unanimously recommended that from May 1, 1917, the minimum

A Submarine Chaser on the St. Lawrence River.

ment the contribution of the subscribing vessels was at the rate of half a bushel per 1,000 bush. from and to all ports. To provide funds for operation vessels were to pay \$200 on first arrival with grain cargo, and the rates of 12c and 24c under the previous year's contract were increased to 15c and 30c respectively. During this season, the run of shortages has been tremendous, while the over runs have been in comparison infinitesimal. In view of this, the Grain Clearance Corporation issued a circular to its subscribers, June 28, as follows:

"At a conference held at Buffalo, N.Y., June 28, between the Grain Clearance Corporation and representatives of the United States and Canadian carriers subscribers to our 1917 contract, the results of this season's business were laid before them, showing that the shortages were running more than a bushel to the thousand and that the shortages so far have amounted to approximately \$77,377.20, as against overruns of only \$8,846.89; and that the unpaid shortage balances amounted to approximately \$16,000, with the only uncollected assets the amount due from the Canadian shipping elevators at Fort William and Port Arthur, on their allowance of one-sixth bushel to the thousand, which would in all probability fall short of meeting the unpaid losses anywhere from \$1,000 to \$5,000; and, therefore, as the heavy ratio of losses was continuing, the company could not continue business with fairness to its subscribers. It was the sense of the conference that the Grain Clearance Corporation should discontinue its business and wind up its affairs, carrying out its contracts with reference to ships loaded before midnight June 30, so far as its assets and collections would enable it to do. The directors met later in the day, and after consideration of the reports and the sense of the conference, resolved that the Grain Clearance Corporation pay no further shortages or losses until after all shipments loaded prior to midnight, June 30, shall have been received and unloaded and the total amount of shortages and losses of the corporation be ascertained; and that the managers and officers of the

On Canadian business, the report to the Grain Commission covering business between June 11 and 25, shows there were 138 cargoes unloaded at all ports, including Buffalo, and only 22 overruns. The Dominion Marine Association has taken the matter up with the Grain Com-

Loading of Submarine Chaser on Transport for England.

mission to see if it has any explanations or suggestions to offer in view of the extraordinary situation.

The Beaver Tow Boat Co., Ltd., has been incorporated under the British Columbia Companies Act, with \$15,000 authorized capital and office at Vancouver, to own and operate steam and other vessels, to carry on a general tugboat business, and to transport mails, passengers and merchandise.

wage paid be \$45 a month, after a year of service, \$50; after 2 years, \$55; and after 3 years, \$60; that the company investigate the accommodation furnished on the vessels and see that the terms of the contract are adhered to and that complaints of poor accommodation receive prompt attention; that after a year of service each employe be granted 2 weeks holiday in each year with full pay, or in lieu thereof, 2 weeks pay extra; that each employe be granted \$30 annually for

uniform, payable half yearly, and that there be no discrimination against union or non-union men, and also that an employe wishing to make a complaint be entitled to be represented by whomsoever he may choose to appoint.

Telegraph, Telephone and Cable Matters.

H. Bott, formerly of the C.P.R. Telegraphs staff, Toronto, has been appointed Inspector at Edmonton, Alta.

The Great North Western Telegraph Co.'s employes met in Toronto, July 29, and decided to apply for the appointment of a conciliation board to enquire into the demands for improved working conditions and increased wages.

W. Marconi, G.C., V.O., who is serving in the Italian Army, and who is at present attached to the Italian mission to the U.S., has been given the honorary degree of Doctor of Science by Columbia University.

S. Hutchison, who died at Winnipeg recently, was appointed local manager, Great North Western Telegraph Co., there, in 1890, and on the inauguration of the Grand Trunk Pacific Telegraph Co., was appointed city manager there, later being transferred to Prince Rupert, B.C., returning to Winnipeg in Aug., 1916, as circuit manager, which position he held at the time of his death.

The Great North Western Telegraph Co. has opened offices at Lake St. Joseph Hotel, Little Metis Beach, and Pointe au Pic, Que.; Alderdale, Brent, Cardinal Canal, Crystal Beach, Dwight, Field, Helderleigh, Lake Joseph Station, Nelles Corners, Petewawa Camp, Royal Muskoka Hotel and Sparrow Lake, Ont.; and has closed its offices at Athens, Campbellford, Carleton Place and Merritton, Ont., and Jasper, Alta.

Among the Express Companies.

The Dominion Ex. Co. gave recently to employes who had been in the company's service for one year and on salary of less than \$2,500 a year, a bonus of 10%, and to those who had been in the service over one year, 20% of their salaries.

The Dominion Ex. Co. is reported as declining to carry shipments of intoxicating liquor to points outside the province of Alberta from within, and it is reported that certain interests contemplate taking action against the company for such refusal.

V. G. R. Vickers, whose retirement from the Dominion Ex. Co.'s service was announced in our last issue, was, on June 30, presented with a silver service, with a diamond pendant for Mrs. Vickers, by the eastern division officers and employes, a gold watch and fob by the western division officers and employes, and a cheque by the directors of the company.

A. J. Seaton, who has been appointed Assistant Superintendent, Eastern Division, Canadian Ex. Co., Montreal, entered the company's service in 1886 as clerk at Galt, Ont. From 1887 to 1901 he served as train messenger; from 1901 to 1908, joint agent, Canadian and American Ex. Cos.; 1908 to 1912, route agent, Eastern Division, Canadian Ex. Co.; and 1912 to June 16, 1917, Assistant to Superintendent, Eastern Division, same company.

Z. N. Middleton, agent, Canadian Northern Ex. Co., Vancouver, B.C., was defendant in an action at Chilliwack, B.C., July 11, by Jas. Cartnell and several other valley fruit growers, for the recovery of

the difference between the price of a carload of prunes and the price realized by auction sale in Winnipeg, after the carload had been refused by consignees. For the plaintiffs it was stated that Z. N. Middleton represented that he acted as an agent for the consignees, and for the defence it was claimed that he acted simply in his capacity as agent for the express company, and in the course of his business had found a market for plaintiffs' fruit.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Vapor Car Heating Co., Inc., Chicago.—A. D. Bruce, heretofore in charge of purchases and supplies, has been elected Secretary and Comptroller, vice A. P. Harper, resigned.

Canadian Ingersoll-Rand Co., Ltd., Montreal, has issued Bulletin E-300-A, illustrating power driven, single stage, straight line air compressors, designed for motor or belt drive and furnished with a special short belt drive where floor space is a consideration. They are intended for use in industrial and mining plants where units of 950 cu. ft. displacement and under a minute are required. Eighteen sizes are built giving a wide range of choice. The leaf inlet, and outlet, valves and the dust proof, self oiling and self contained construction of this type of compressor are fully described.

Canadian Fairbanks-Morse Co., Ltd., Montreal, has issued a catalogue, under the title "F.-M. Book," containing 1,048 pages and nearly 4,700 illustrations. It deals with articles handled in 12 distinct departments, viz.: railway and contractors department, machine tools, wood-working machinery; transmission department, engines, electrical goods, scales, valves and steam goods; supply department, safes and vaults, pumps, automobile accessories and motor fittings. The book is very completely indexed and contains a considerable amount of reference information in tabulated form.

National Steel Car Co., Ltd., Hamilton, Ont. Basil Magor, Vice President and General Manager, having resigned, J. E. McAllister, consulting engineer, Toronto, has been appointed to succeed him, with the same title. The other officers are: President, Sir John Gibson; Vice President, Sir Henry Pellatt; Secretary-Treasurer, T. O. Scott; Works Manager, B. B. Hamilton. In February last, owing to Mr. Magor's absence in Europe, one of the directors, Samuel King, of London, Ont., accepted the post of Managing Director temporarily and is still acting in that capacity (but he hopes to be relieved of the responsibilities at an early date).

The Pennsylvania Rd. has given the Westinghouse Electric & Manufacturing Co. a contract for furnishing the electrical equipment for the hotel being erected at 7th Ave. and 33rd St., New York, N.Y., which will, it is said, when completed, be the largest hotel in the world, containing 2,200 rooms, each with a bath. The hotel is being erected by the Pennsylvania Rd. and will be operated under the Statler management. The electrical equipment

will consist of 44 ventilating motors, with a total capacity of over 800 h.p.; 7 pump motors, with a capacity of over 200 h.p., and an additional number of motors for refrigerating machinery. The contract also includes three 500 k.w. rotary converters, transformers and switching equipment, and six 250 kva. transformers for the substation, to which alternating current will be supplied from the railroad company's power house.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Canadian Society of Civil Engineers—C. H. McLeod, 176 Mansfield St., Montreal.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Nova Scotia Society of Engineers—A. R. McCleave, Halifax, N.S.

Quebec Transportation Club—A. F. Dion, Quebec.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacramento Street, Montreal.

Ship Masters' Association of Canada—Capt. E. Wells, 45 St. John Street, Halifax, N.S.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Transportation Club of Vancouver—H. W. Schofield, 553 Church Street, Vancouver, B.C.

Twin Cities Local Freight Agents' Association—E. J. Travers, Fort William, Ont.

Western Canada Railway Club—Louis Kon, Box 1707, Winnipeg. Meetings at Winnipeg 2nd Monday each month, except June, July and August.

Winnipeg Traffic Club—James Gehrey, Bannatyne Avenue, Winnipeg, Man.

Vessel "Accidents" on the Great Lakes.—It is announced that U.S. Government agents are investigating some recent casualties to U.S. vessels on the Great Lakes, as the view is held that they were caused by the enemy. They have mostly occurred in the neighborhood of the Sault Ste. Marie canals, and taken in conjunction with a number of cases of tampering with locks and buoys, it is believed that some attempts have been made to block the canals and thus suspend traffic. The reports state that some persons when pursued have escaped to the Canadian side, but that Canadian assistance has been sought and an agreement is to be made under which fugitives may be pursued across the boundary line in order to avoid delays due to extradition proceedings.

The United States Railroads War Board has created a subcommittee consisting of vice presidents of the different express companies to coordinate the work of the companies with the general prob-notes coming due July 18, and will have the same collateral as under that issue, consisting of first mortgage bonds guaranteed principal and interest by the Dominion of Canada or Canadian provincial governments."

The Ventilation of the Connaught Tunnel, Selkirk Mountains.

By J. G. Sullivan, M.Can.Soc.C.E., Chief Engineer, Western Lines, C.P.R.

When the Connaught tunnel was first planned, it was generally supposed that it would be necessary to operate by electricity, but upon further studies of the subject it was found that the large cost of installing a plant for this short section and the enormous extra expense of operation, would have entirely wiped out any economical saving made by the construction of the tunnel. Therefore, a study was at once commenced on other methods of operation. As a result of the study a plan was adopted of blowing air through the tunnel by the use of fans, similar to the method adopted by an Italian engineer, in the ventilation of the St. Gothard tunnel, a number of years ago. However, instead of putting up an obstruction at the portal of the tunnel, where the fans are situated, to prevent the air from coming out of that end, a nozzle patented by C. S. Churchill and the late C. C. Wentworth was adopted, plans of which are illustrated in figs 1, 2, and 3. With this system we can with perfect safety operate this tunnel with steam locomotives.

The principle of the nozzle is as follows: Air is forced into a comparatively large chamber, which terminates in a nozzle inside the tunnel. If the pressure is great enough, there is sufficient energy in the air, leaving the nozzle at high velocities, to overcome the resistance of-

general, where tunnels are comparatively short, the ventilating plant would be locomotives reduced to a speed lower than the velocity of air in the tunnel, so that the

of the question, but as the tunnel is of a large area, it was decided to establish the ventilating plant at the higher end of the tunnel, and blow fresh air against the approaching trains on the up grade, and thus dilute the gases coming from the locomotive. The dangerous gas generated by a locomotive is carbon monoxide, and it is usually generated in cases of an accident, where the draught to a heavy coal fire is shut off. The ordinary carbon dioxide, the usual resultant of complete combustion, is not so dangerous, and a much larger percentage of the latter gas is permissible. As our locomotives on this section use oil for fuel, in case of a sudden stop the fire can be shut off, and there is no danger of producing the deadly carbon monoxide.

Returning again to the plans of the ventilating system. The usual method is to put the fans at the side of the track, a little above the elevation of the base of rail. In this case, however, since the portal of the tunnel is in a very deep cut, it was decided to put the fans over the portal. Instead of running the fans by engines driven by steam, it was further decided to use Diesel engines. These will only consume 0.4 to 0.5 lb. of oil per horse power of work, while the best we could hope to get from a boiler would be one horse power for every 2 or 2.5 lb.

Connaught Tunnel, C.P.R., East Portal

Fig 2.—Connaught Tunnel Ventilation.

ferred by friction, variation in barometric cated at the lower end of the tunnel, and pressure, or other resistance to the flow of air, that may occur in the tunnel. In

smoke and gases are blown ahead of the moving train. In a tunnel as long as the Connaught one, this method of operation with a fan system was entirely out

oil, and possibly not as good results in this case, where the work is only intermittent, the fans being run only at intervals when a train is on the up grade

through the tunnel, and for a sufficient length of time after the train passes to entirely clear the tunnel of gas.

In fig 1 is a small diagram, showing the location of the plant in reference to the spiral of a 4 degree curve at the entrance of the tunnel. The reason I

and sections, with the arrangements of figures are shown in fig 2.

A change was made in the original plans, by building the inside arch, from the portal proper, as far back as the engine house extended, of concrete, and in this way eliminating entirely a great

the moving air approximately at the centre of the section of the tunnel.

The tunnel was opened for operation Dec. 9, 1916, and no annoyance or trouble of any kind from gases or smoke has been experienced in it. The work was laid out and commenced under F. F. Busted, M.Can.Soc.C.E., Engineer in Charge of Double Tracking. It was subsequently under the supervision of W. A. James, M.Can.Soc.C.E., Engineer of Construction, Western Lines, with H. G. Barber, as Assistant Engineer, T. Martin, Resident Engineer at the west end and J. R. C. Macredie, M.Can.Soc.C.E., Resident Engineer at the east end. The contractors were Foley Bros., Welch & Stewart. The construction work was supervised for the contractors by A. C. Dennis.

Fig. 1.—Connaught Tunnel Ventilation, Sectional Plan.

show it here is to give a general outline of air space and nozzle, and I may state that this air space was greatly reduced from the original plans, on the suggestion of the engineers of the company supplying the fans; the idea being that there was nothing to be gained by changing from dynamic pressure, as the air left the fans, to a static pressure in a large chamber, and then again change to dynamic pressure in the air leaving the nozzle at a high velocity. All that was required was a chamber large enough to allow the air to spread out to the flat long nozzle on the circumference of the tunnel. The fan house between the two engine rooms is being left entirely open, thereby offering as little resistance as possible to the flow of air from the outside to the fans.

Fig. 1 is a general plan, and on the right hand side shows a deflector, keeping the air from each fan separated to a point within 7 or 8 ft. of the opening of the nozzle. The reason for introducing this feature is, that Diesel engines run at a constant speed, and will carry practically no great overload. When it is necessary to shut down one engine, and run only one fan, if the air was allowed to spread over the entire nozzle, the resistance would be reduced, the fan would throw somewhat more air, and paradoxical as this may seem, would require more horse power to drive the fan, which would necessitate installing dampers, to choke the output of the fan, and also to entirely shut off the opening of the idle second fan to prevent the air coming back through it. The Diesel engines are of Swedish pattern, manufactured at Auburn, N.Y. Each engine consists of 4 cylinders, 4 cycle type, and is of 500 rated horse power at sea level. The elevations

number of rods that were in the air chamber holding the wooden arch in place. Another innovation was the use of rails as arch ribs for the nozzle lining. This only required one stay to be put through the air space for each rib, instead of having stays every 3 or 4 ft.

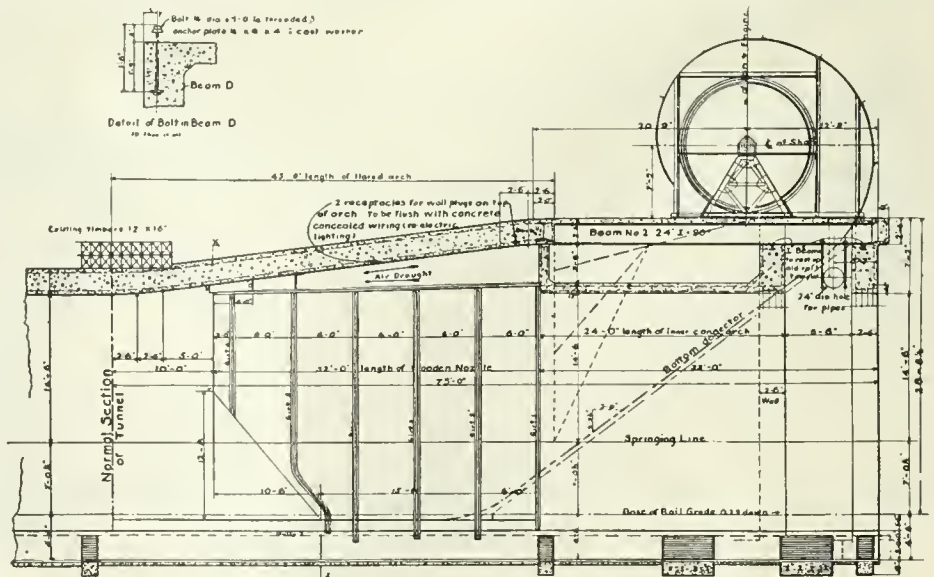

Fig. 3.—Connaught Tunnel Ventilation, Longitudinal Section.

which would offer obstruction of the free passage of the air. These features are shown in figs. 1, 2, and 3. The bottom of the nozzle is cut away, to enlarge the opening of the nozzle at grade line, which is a development of the opening of the nozzle, to keep the centre of gravity of

pany's appeal. Other municipalities are said to be interested in the decision, although they were not parties to the action. New Westminster is said to be interested to the extent of \$150,000; Burnaby Tp. to the extent of about \$20,000, and Kelowna to about the same extent.

Canadian Northern Pacific Railway Taxation Appeal Case.

The Imperial Privy Council gave judgment, Aug. 3, on the Canadian Northern Pacific Ry.'s appeal against the British Columbia Court of Appeal's decision as to the right of municipalities to tax railway owned lands not actually used for railway purposes. The case was taken direct from the Court of Appeal to the Privy Council. The case involved a rather important point, viz., whether a provincial government has the right to give away a second time something which it has already granted by charter to a corporate body. Under the powers vested in it by the British North America Act, the British Columbia Legislature had granted municipal charters, which confer the right to tax all lands within their bounds, with certain specific exemptions, which exemptions do not cover railway lands. The company has title to certain lands in New Westminster City and Burnaby Tp., which it claims are exempt from assessment for taxes under its agreement with the government, which agreement was confirmed by the legislature. The final court of the Empire has now affirmed the provincial court's decision by dismissing the com-

Birthdays of Transportation Men in September.

Many happy returns of the day to:—
 G. W. Alexander, ex Local Treasurer, G.T.R. Western Lines, Detroit, Mich., born at Lightcliff, Yorks., Eng., Sept. 10, 1859.
 H. Bailey, ex Bridge and Building Master, Canadian Government Railways, Parent, Que., now of Huntsville, Ont., born there, Sept. 2, 1879.
 W. B. Bamford, District Freight Agent, C.P.R., Toronto, born at Belleville, Ont., Sept. 10, 1863.
 G. T. Bell, Passenger Traffic Manager, G.T.R., Montreal, born there, Sept. 7, 1861.
 W. H. Biggar, K.C., Vice President and General Counsel, G.T.R., and G.T.P.R., Montreal, born at The Carrying Place, near Trenton, Ont., Sept. 19, 1852.

Ry., Winnipeg, born at Stratford, Ont., Sept. 4, 1872.
 J. P. Ferguson, representing Galena Signal Oil Co., Ottawa, Ont., born at Drummondville, Que., Sept. 12, 1856.
 C. B. Foster, Assistant Passenger Traffic Manager, Eastern Lines, C.P.R., Montreal, born at Kingston, N.B., Sept. 30, 1871.
 G. J. Fox, Superintendent, Schreiber Division, Algoma District, C.P.R., Schreiber, Ont., born at Montreal, Sept. 24, 1883.
 R. S. Gosset, Auditor of Disbursements, Canadian Northern Ry., Toronto, born there, Sept. 28, 1879.
 E. Goulet, Agent, C.P.R., New Westminster, B.C., born at Quebec, Que., Sept., 1865.

G. S. Lytle, Car Service Agent, Manitoba District, C.P.R., Winnipeg, born at Dennison, Ia., Sept. 23, 1878.
 C. D. Mackintosh, Superintendent, Medicine Hat Division, Alberta District, C.P.R., Medicine Hat, born at Auckland, New Zealand, Sept. 24, 1882.
 W. A. Mather, Assistant General Superintendent, British Columbia District, C.P.R., Vancouver, born at Oshawa, Ont., Sept., 1885.
 J. F. Mundle, City Freight Agent, C.P.R., Montreal, born at Prescott, Ont., Sept. 20, 1857.
 M. B. Murphy, Manager, Winnipeg Joint Terminals, Winnipeg, born at Napa, Cal., Sept. 11, 1866.
 J. Paul, District Freight Agent, Canadian Northern Ry., Winnipeg, born in Euphrasia Tp., Ont., Sept. 13, 1858.
 W. D. Robb, Superintendent of Motive Power, G.T.R., Montreal, born at Longueuil, Que., Sept. 21, 1857.
 H. T. Ruhl, Engineer, Maintenance of Way and Structures, Delaware & Hudson Co., Albany, N.Y., born at Mifflinburg, Pa., Sept. 29, 1882.
 A. Scott, Resident Engineer, Prince Edward Island Ry., Charlottetown, P.E.I., born at Kirkcaldy, Scotland, Sept. 6, 1884.

 W. B. Howard, District Passenger Agent, C.P.R., Toronto, born at Chatham, N.B., Sept. 15, 1877.
 W. R. Howard, Chief Dispatcher and Trainmaster, Brownville Division, New Brunswick District, C.P.R., Brownville Jct., Me., born at St. Andrews, N.B., Sept. 14, 1871.
 E. Humphreys, Storekeeper, C.P.R., Winnipeg, born at Hull, Eng., Sept. 24, 1869.
 J. E. Hutcheson, General Manager, Montreal Tramways Co., Montreal, born at Brockville, Ont., Sept. 15, 1858.
 C. B. King, Manager, London St. Ry., London, Ont., born at Galena, Ind., Sept. 12, 1871.
 S. King, Director, National Steel Car Co., Hamilton, Ont., born at Thetford, Norfolk, Eng., Sept. 12, 1853.
 R. E. Larmour, General Agent, Freight Department, C.P.R., New York, born at Brantford, Ont., Sept. 26, 1868.

When To Use Trestles in Making Rail Embankments.

When to use trestles in making railway embankments and when to raise the track as the fill progresses are questions not to be settled by any general rule, according to the roadway committee's report at the American Railway Engineering Association's last convention. Some engineers, the committee states, consider it almost always preferable to use a trestle, while others would raise the tracks up to 25 ft. or more.

In treating each individual problem, the cost of raising the tracks, it is pointed out, should be carefully figured, including the delays and interference caused to and by traffic (if this exists), and this total should be set against the cost of trestling, including labor and materials. In some cases a run-around, to carry traffic clear of the work, can be made very cheaply, while in others this requires an auxiliary fill or trestle. In estimating for trestles that are not to carry regular traffic, the length of haul is important, because where this is less than two miles light side dump cars may be used and a very light trestle will suffice. Geographical location has an important influence, as climate, character and availability of materials, labor, lumber and other supplies vary enormously in different sections of the country.

Long service medals were presented to four Canadian Government Railways employees, Aug. 2, on their retirement on pension, as follows: George Moore, formerly foreman motion shop; John Gillespie, formerly foreman, erecting shop; William Steeves, formerly of the frog shop, and John H. Brown, formerly in the power house. Medals were also sent to Arthur Stockall, formerly in the blacksmith shop, and James C. Wortman, locomotive carpenter, who were too ill to attend. All the men were engaged at Moncton, N.B.

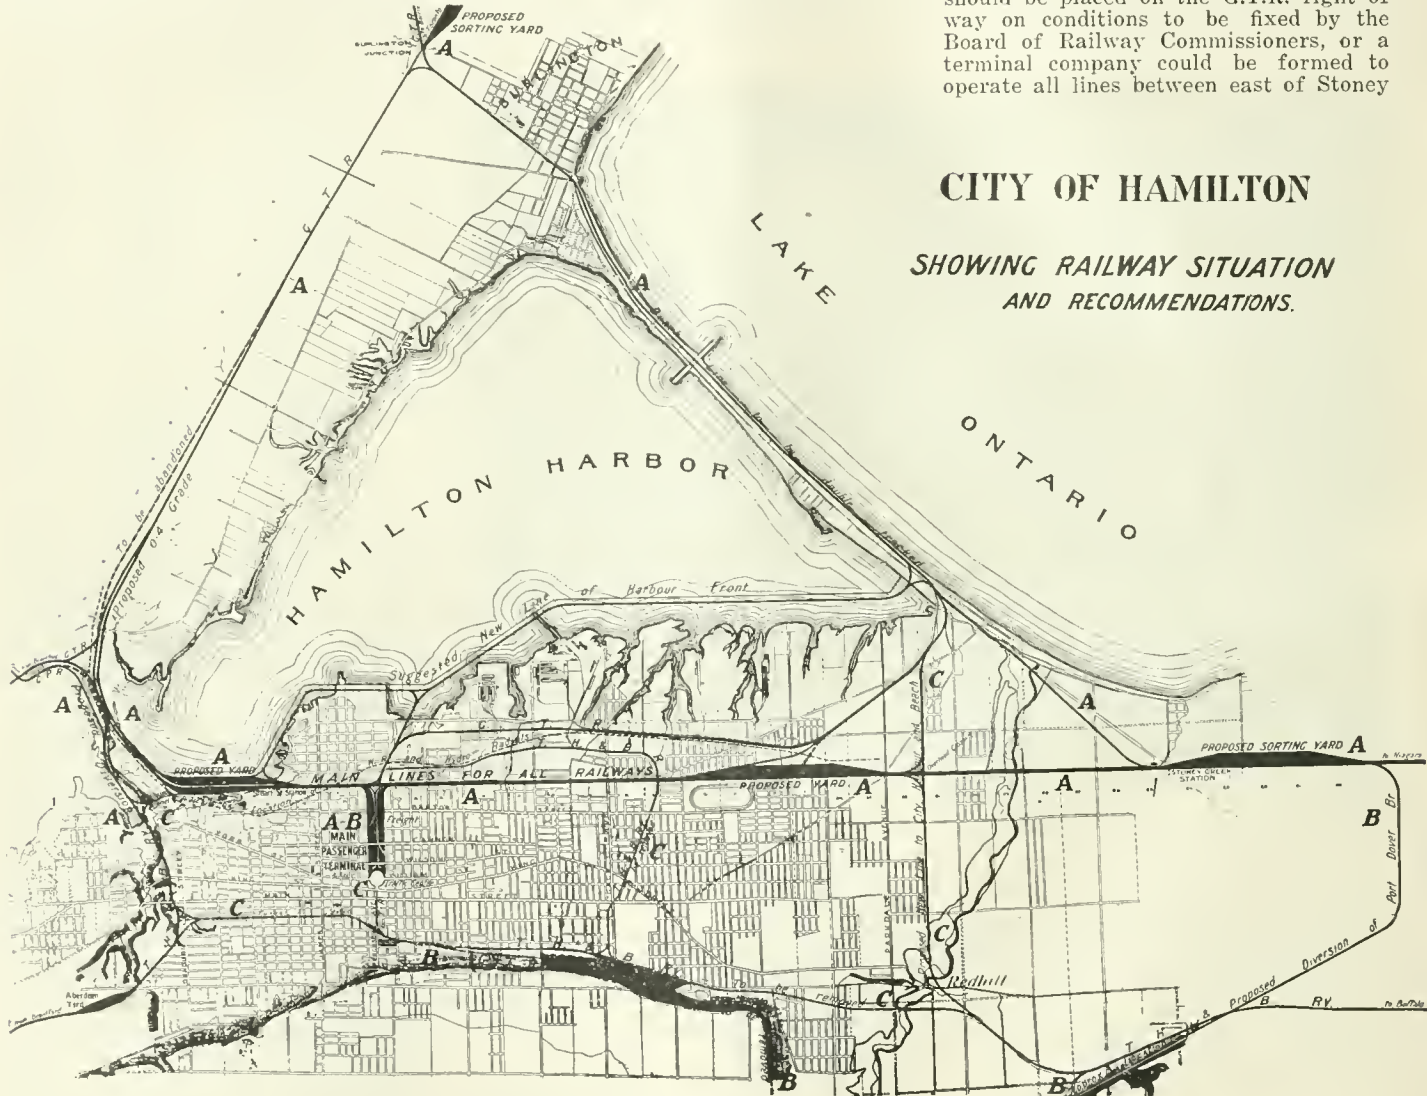

Engineers' Report on Railway Situation in Hamilton.

An important report bearing upon the railway situation at Hamilton, Ont., prepared at the instance of the city council by W. F. Tye, M.Can.Soc.C.E., consulting engineer, Montreal, and N. Cauchon, A.M.Can.Soc.C.E., consulting engineer, Ottawa, was made public recently. The railway situation in Hamilton has been a source of constant discussion for some years past between the city and the two companies at present owners of lines there, the G.T.R. and the Toronto, Hamilton & Buffalo Ry., the situation with the latter company in regard to the elimination of level crossings, either by depressing or elevating its line on Hunter

sult the city council engaged the two engineers named to look over the whole situation and make a report thereon.

After a lengthy introduction, in which the engineers review the present situation, they proceed to develop and discuss their suggestions under three heads as follows: Proposal A, referring to the entrance for new railways on a basis whereby the city would not be obliged to contribute in any way to their cost; proposal B, referring to the entrance of new lines and the elimination of the Ferguson Ave. cross town line, and proposal C, which is recommended for adoption; the entrance of new lines and the concentra-

ated. A double track should be built and electrified so as to permit the use of both steam and electricity. If the G.T.R. desires to reduce its gradients the line should be constructed as a 4 track one, of which 2 should be electrified. If this were done the junction of the G.T.R. line to London would be made about half a mile nearer to Toronto than at present. The T.H. & B.R. connection with the new line would be made by depressing the present line about 22 ft. and drilling a short tunnel under the Hamilton-London line, while the C.P.R. line to Guelph Jct. would be diverted a little westerly. From the present Stuart St. station all the lines should be placed on the G.T.R. right of way on conditions to be fixed by the Board of Railway Commissioners, or a terminal company could be formed to operate all lines between east of Stoney

St., having been before the Board of Railway Commissioners for the past two years. The Canadian Northern Ry. plans for a line through the city brought in some new factors, and the recently expressed desire on the part of certain municipalities, in conjunction with the Hydro Electric Power Commission of Ontario, to build a system of electric lines in the Hamilton district, using a parallel or the same route as the C.N.R., was a further complication. Some tentative plans for dealing with the problem as a whole, instead of continuing to negotiate with all the different companies concerned, were made during 1916, and as a re-

sult on one main line right of way through the city of all lines existing and to be built.

Proposal A.—All through freight traffic on the G.T.R. and new parallel lines from the Niagara frontier to Toronto should go by way of Burlington Beach. New sorting yards should be immediately built east of Stoney Creek station and at Burlington Jct. All new lines entering the city from Toronto should be on a common right of way, which should parallel the G.T.R. right of way on the south and east side from west of Burlington Jct. to the Valley Inn, thence to Stuart St., with a 0.4% gradient compen-

sation. There should be a 4 track line through the city, 2 tracks, with sidings, being electrified. A western yard for freight for new lines to be laid out north of the present Stuart St. yards; a new central yard to be laid out between Ottawa St. and Parkdale Ave., and small team delivery yards at various points. The new line should have access to all industrial spurs and sidings, and all switching to and from industries should be done by steam until the G.T.R. lines to the Niagara frontier are electrified. The gradients between Bay St. and Victoria Ave. should be reduced to a maximum of 0.4%. A

new union station should be built at the intersection of Cannon St. and Ferguson Ave. This would be a more convenient situation than would be one at James St., but would necessitate the putting of Barton St. in a subway. On this basis the city would not be called upon to contribute any of the cost, as the proposed route would give the new railways a better entrance at a lower cost than they can get on their one proposed route. The engineers recommend, however, that the present grade of the G.T.R. between Birch Ave. and Kenilworth Ave. be raised a maximum of 6 ft. at Gage Ave. to permit of future subways being easily drained. The city would probably be called upon to contribute part of this cost, as the principal advantage to be gained by such a change would accrue to it.

Proposal B.—All tracks, yards and spurs as they now exist to be removed from Ferguson Ave. The G.T.R. to build new lines from some point near Rymal station, on its Port Dover line, to a connection with the main line at Stoney Creek. A union station to be located at the intersection of Cannon St. and Ferguson Ave., to be built with a circular loop, so that trains may pass directly through without having to back in. A freight station to be built at Cannon St., having a connection with the main line, the tracks for both passenger and freight traffic to be depressed and Barton St. carried over them. Three plans are discussed, but the loop station is recommended as being the best, although it is estimated to cost \$175,000 more than either of the others. The street railway and local radial railways should be brought to circulate around this traffic centre.

Proposal C.—The Toronto, Hamilton & Buffalo Ry. main line, yards and spurs from Red Hill Creek, between Stoney Creek and Bartonville, and the Y at Dundurn St., west of the Hunter St. tunnel, together with the greater part of the Gage Ave. cross town line, should be eliminated and replaced by a line from near Red Hill Creek to the G.T.R., near Parkdale Ave., and to the Burlington Beach line near the south end of the beach, and that company should join with the other companies in the formation of a terminal company to operate all main lines, yards and spurs between Stoney Creek yard on the east and Burlington Jet. yard on the west, including the Burlington Beach cut-off. The T.H. & B.R. should also build a tunnel under the park and cemetery to provide a connection between its Brantford line and the terminal tracks. All T.H. & B.R. through freight traffic to be sent round by Burlington Beach. A new union station to serve all lines entering or to enter Hamilton, to be built near King William St., with a circular loop, so that trains might pass directly into it; all tracks to be depressed and streets carried over them. This would be the most expensive station plan, costing about \$1,250,000 more than the cheapest (a through station on James St.), but the cost might be shared by all the railways and the city. In the event of proposal C being adopted in its entirety, the engineers recommend further that no industries requiring spur track accommodation should be permitted south of Barton St.; the erection of a sea wall along the harbor front, with the reclamation of the intervening low lying land for industrial purposes, and the laying out of switching tracks on the reclaimed area, connecting with the main line at the westerly end and with the Burlington Beach line at the

easterly end.

In conclusion, the engineers strongly recommend proposal C as the ideal to which the city should work, and appends numerous reasons why it would be advantageous, not only to the city, but to the railway companies. The engineers, in a statement made July 13, asked for a very careful consideration of the report, suggesting there was plenty of time to do so, as, owing to present financial conditions, any work of considerable magnitude was not likely to be taken in hand for a time. The statement concludes: The first of the works outlined in the report to be carried out should undoubtedly be the construction of the Stoney Creek yard and the improvement of the Burlington Beach line. . . . When the new roads are prepared to come in, Hamilton should insist that they follow the route outlined and should vigorously press for the carrying out of the various other works outlined.

The report, which was accompanied by plans, is being considered by the city's board of control.

The report was considered by the city's board of works and sent on to the city council with a recommendation that it be forwarded to the Board of Railway Commissioners as representing the city's views on the railway situation.

Small Turntable for Car Repair Yard.

New Union Station at St. Paul.

The plans for a new union terminal station in St. Paul, Minn., have been prepared, and the work of laying out the yards and erecting the station and other buildings will be started at an early date. The terminal project is being carried out by the St. Paul Union Depot Co., which represents the nine railways for which facilities will be provided. The site lies along the banks of the Mississippi River, upon the same frontage as formerly, the proposal to change the river channel having been abandoned, owing to the restrictions imposed by the U. S. War Department. The yard accommodation is to be widened by the purchase of all property out to Third St., while the passenger station will occupy a block along Third St., between Sibley and Waconta Sts., being connected with the tracks by a tunnel and a bridge. The tracks will be elevated through the terminals on a solid fill between concrete retaining walls, except where space is provided beneath the tracks for baggage, mail and express facilities. Jackson and Sibley Sts. will be carried under the tracks clear through to the waterfront, where there is a public levee for steamboat accommodation.

The track layout at the station provides for 22 passenger tracks and 2 freight

tracks, while in addition there will be 2 outside freight tracks of the Chicago, Milwaukee & St. Paul Ry. Of the 22 passenger tracks, 8 will be for the use of trains for which St. Paul is the terminus, while the remaining 14 will be for through trains. There will be about 5 miles of trackage in the yards, making the total length of tracks in the terminal 12½ miles. There will be a large interlocking switch and signal tower at each end of the station. A 4 stall house for the switching locomotive will be provided. The several companies using the station will maintain their car cleaning, storage yards and locomotive facilities upon their own independent properties.

The station building will be 150 x 300 ft., facing towards Fourth St., but set back nearly half way to Third St. The ticket office and other main public facilities will be on the level of the Fourth St. entrance, while the upper floor will contain offices, kitchen and rest room for women. Two lower, or basement floors, will provide for station facilities, immigrants' quarters, branch post office, etc. As the main floor, entered from Fourth St., will be 26 ft. higher than Third St., this will permit the latter to be spanned by a bridge carrying the smoking room and a connection with the main waiting room. This room, with the concourse,

will form a separate structure, 80 x 400 ft., extending across the tracks, with an elevator and stairway at each platform.

The estimated cost of the work is \$11,000,000. The plans for the new terminal were laid out by W. C. Armstrong, Chief Engineer, and the Architect for the station building is by C. S. Frost.

Small Turntable Cuts Cost of Handling Relay Rails.

The turntable shown in the accompanying sketch is proving a big labor and time saver in handling rails for the Pennsylvania Rd.'s new car repair yard, now under construction at Greenville, N.J. The 85 lb. rails used are second hand, and the ball of each is badly worn on one side. Since it is therefore necessary to place the unworn side on the inside of the track being laid, it happens that many of the rails have to be turned end for end before placing them. Previous to building the turntable it required considerable manoeuvring by a gang of at least six men to turn one rail. With the turntable, however, which is set up about 18 ft. from the track being laid, two men can turn a rail with ease. The device was made complete for \$8.—J. S. Sawkins, in Engineering News Record.

Fuel Economy as Related to its Use in Steam Boilers and Locomotives.

By S. H. Pudney, Fuel Inspector, Eastern Lines, Canadian Pacific Railway.

The article under the above heading in Canadian Railway and Marine World for August ended by giving the results of tests made with hand fired furnaces, and the showing of combustible gases at the surface of the fuel bed. The author's figures represent the whole of the air, and gases, rising from the surface of the fuel bed, and the 32 means that amount of combustible material was going up with the products of combustion.

How many of the actual consumers of coal and by this I mean locomotive men and locomotive firemen, as well as the heads of the mechanical departments, ever consider the possible saving of 10% of coal, due to the more perfect combustion of it in our furnaces or fireboxes? I venture to say not one in a hundred. The idea of escaping gases and black smoke, and the possible loss of fuel due to these causes, is usually ridiculed by mechanical men. But there is no valid reason why a 10% saving should not be effected in our fuel, and this would mean more than \$1,000,000 to some companies. Allowing good combustible gases to escape unburned to the atmosphere, is detrimental to the good of the community, and is a loss of fuel, which at such a time as this becomes virtually a crime.

The locomotive has become a machine of wonderful power and size, and it is nearly up to its state of perfection in hauling power. It has, in the last few years gone up in leaps and bounds until it will now pull a load four times that of its predecessor of 25 years ago. This has not come about by any haphazard method but through extensive studies and experiments in all parts of the world, the testing of the strength of steel, of valves, of lubricants, of metals for wearing parts, the superheater, the computing of engines, etc., have all been parts towards perfecting such a great machine as the modern locomotive. The greatest part that has been taken towards this perfection is that brought about by scientific mechanical engineering researches. How far would our locomotive have progressed if it had been left to the ordinary mechanical man, without the scientific assistance that has been given to it. This does not need any more remarks, as we each appreciate the fact that there would have been no modern locomotive.

With all that has been accomplished in the locomotive mechanically how far have we advanced with the burning of the fuel in it? I hardly like to say so, but we are today in practically the same age as we were when Stephenson left us, the same methods obtain today as then. Stephenson found that he could not get enough steam without increasing the draught on his fire, today if an engine does not steam we increase the draught by decreasing the exhaust pipe nozzle. This enables the engine to burn more fuel, and so we get the steam, and at the same time by decreasing the exhaust pipe we get much more back pressure on our cylinders, which increases the consumption of fuel per ton mile. So far, with the exception of the brick arch, and the costly Gains firebox, and a few freaks, such as chemical fuel economizers and steam jet devices nothing has been added to our locomotives to give a greater efficiency from the coal that is being burned.

There is no doubt that most of this is due to the total indifference of mechani-

cal men as to the question of the waste due to escaping gases and smoke. Some will tell us, even today, that they do not place much stock in the claim of loss due to this. Of course this is due to their deficient knowledge of the science of fuel and combustion or they would never make such statements. The same people will then tell us how much may be saved by the brick arch, and will exploit the saving effected by the use of powdered fuel. The saving brought about by both of these is due to the better combustion of the fuel being used, and if there was not any loss before it would have been impossible to effect the saving which they mention.

It is therefore quite necessary to reconcile ourselves to the fact that we do lose a lot of fuel in this way, before we can ever hope to accomplish any saving. It is not long since the idea of the superheater on the locomotive was scoffed at by the ordinary mechanical man, and even up to the last decade there was a great diversity of opinion as regards its use. But the laws that govern its beneficial properties were found out and given to the world about 115 years ago by Gay Lussac and are known as Lussac's law governing the expansion of gases, steam being practically a gas. I remember that only a few years ago a master mechanic told me that no benefit was received from the superheating of steam except that it was dried and free from moisture. When I asked him if no benefit was obtained, due to the increased heat units contained in the steam causing a greater expansion, he said "certainly not." I am only mentioning this to show that people have necessarily to change their opinions as facts are brought to light. Today I find the same doubtful ideas as to the loss and the possible saving of fuel due to better combustion, and a great deal of antagonism is brought to bear against suggestions as to a means whereby we might try and save fuel on these lines; all due to the lack of knowledge.

I have even had mechanical men tell me that the idea of anything like perfect combustion is all rubbish in locomotive practice, all they want is plenty of steam. One prominent man, a few years ago, told me when suggesting a system for imparting knowledge to the men, that we did not want science men firing our engines, but coal shovellers. But if that was so at that time no one will deny that at this time we want fuel savers, not coal shovellers. We have not yet in locomotive practice seriously attacked the combustion problem, in a systematic manner. Very few are able to do so, because of the long and tedious study that is needed before one becomes well enough versed in the science to impart it to others as well as to improve the conditions mechanically. Of one thing we are certain, and that is losses do occur. But to work out some idea for the saving one must be versed not only in the knowledge of fuel of different classes, but should also understand the principal mannerisms of each, the distinctive distillation, the formation of the chemical compounds, and the breaking up again of these, as the process of combustion goes on, with the formation of others, all of which are necessary to complete combustion. The prevailing idea is that coal is bought to burn, and that is an end to it, hence the

heavy losses in every day practice.

However little some may think of losses, yet they will exploit the wonderful results obtained by the use of powdered fuel. If the promoters of this device had not made a study of the subject they would never have been able to show us these results. Though my own opinion is the same today as for years past, viz., that powdered fuel is not destined to become the locomotive fuel of future use. Such enormous sums would have to be spent in the construction of plants, from one end of the system to the other, and then the cost of upkeep of our tenders, etc., would make it prohibitive, especially when the day is rapidly approaching that other mechanical means will be adopted, in which we will both increase the efficiency and at the same time do away with the dense smoke as seen today.

It is only necessary that we confine ourselves to the simple rules that govern combustion to get results. Any class of fuel of a certain given b.t.u. value will evaporate a given quantity of water. It does not matter if this fuel is powdered, or in commercial sizes, it is all the same. But what is different is the way we use it. If we use the commercial sizes in a haphazard manner we cannot expect to get results. The difference is not in the fuel, but in the supporter of combustion, and how it is administered to the fuel. The powdered fuel device is worked out on the principle of giving a sufficient supply of air intimately mixed with the fuel. Hence the results shown.

All great authorities on fuel matters are agreed on what is needed for the perfect combustion of fuel, 1st, That there must be plenty of air. 2nd, That this air must be well mixed with the fuel. 3rd, That the temperature must be kept high enough for their combustion. The first two are the most important for us to consider and if they are properly carried out the last will be a certainty, and it has been the carrying out of this principle that has made the powdered fuel show up in such a way. There is nothing new in this principle, the action and combustion of explosives is carried out in a theoretical manner, by actual weight and measurements, and it is on this principle alone that combustion of the explosive material is so rapid that it immediately turns the solid material to a gas of many thousands of times more volume than its original size. If this matter had not been taken care of any more than our every day use of fuel, a gun would fire about two rounds and then would become choked with unconsumed combustible matter, which would destroy its usefulness. Therefore, if one difficulty can be overcome why not the other; which we will have to admit is so much more simple to accomplish?

There is one reason and only one why the chemical fuel economisers and steam jet devices did not save fuel, because they operated in direct opposition to the laws that govern combustion, yet thousands of dollars have been spent throughout the country on these useless articles, without making a move towards the essential points that govern perfect combustion of fuel. A test made by the Pennsylvania Rd. with the brick arch, as against one which showed a saving due to the better facilities for the mixing of the gases and air showed a saving of 15% on fuel.

That the modern locomotive can burn its fuel much more economically than it at present does, recent tests show conclusively. I am confident that we can get a better arrangement for the supply of air to the fuel, than we have under existing conditions, and with far less effort on the part of our locomotives. That is to say, I believe and will endeavour in the next article to show how we can get these results, without decreasing the exhaust tip, which in turn means less back pressure on the cylinders, with a better working capacity of the locomotive.

person or persons operating the locomotive, to see a dark object, the size of a man, for a distance of 300 ft. or more ahead of the locomotive, under normal weather conditions. It is further ordered that these regulations be made applicable to all new locomotives acquired for road service, and to all road locomotives given a general overhauling subsequent to the date of this order, and that all road locomotives of the railway companies be equipped in conformity with the requirements of those regulations not later than Jan. 1, 1921. Every such railway com-

Cutter for Tube Sheets, Canadian Northern Railway.

The body of the cutter, a plan of which is given herewith, is made of mild steel and has four cutters screwed at right angles. The shank is turned down to a Morse standard taper and is used in a standard chuck on an air drill. Four slots are milled in the sides for cutters, which are of high speed steel and are screwed down, then the whole is put in a lathe and the cutters turned down on the lathe and

Equipment of Locomotives with Electric Headlights Ordered.

The Board of Railway Commissioners passed general order 199, July 24, as follows: Re equipment of locomotives with electric headlights. Every railway is hereby required to equip its locomotives used in road service, between sunset and sunrise, with headlights which will enable persons with normal vision in the cab of a locomotive, under normal weather conditions, to see a dark object, the size of a man, for a distance of 1,000 ft. or more ahead of the locomotive; such headlight to be maintained in good condition. Every locomotive used in road service, which is regularly required to run backward for any portion of its trip, except to pick up a detached portion of its train, or in making terminal movements, to have on the rear a headlight which will meet the requirements of this order. Nothing in these regulations shall prevent the use of a device whereby the light may be diminished, in yards and at stations, to an extent that will enable a

pany failing to comply with the requirements of the provisions of these regulations will be liable to a penalty of \$100 for each such failure.

Canadian Northern Ry. Accident.—A collision between a freight train and an excursion train from Alberta Beach, on the Canadian Northern Ry. near Edmonton, Alta., July 28, killed five persons and injured a considerable number of others. At the inquest, Aug. 1, the jury returned a verdict that the deaths were caused by a head on collision owing to employees of the company not strictly complying with the Board of Railway Commissioners' Standard rules which have so long been disregarded that it has become habitual for employees to so conduct themselves." S. J. Harrington, the train dispatcher, alleged to be responsible, was arrested on a charge of manslaughter, and released on \$10,000 bail.

The Vancouver, B.C. Transportation Club held its annual picnic at Bowen Island, July 28, the party travelling from Vancouver by the Terminal Steam Navigation Co.'s s.s. Bowser.

ground slightly for clearance. The cutters can be slightly adjusted by slipping a filler between the cutter and the face of the tool. The cutters are set to follow one another and each engages at the same time, taking a successive cut and cutting more metal than the ordinary double cutter tool. With this cutter three sheets, or 22 holes, can be cut without regrinding the tool. We are indebted for the foregoing information and for the drawing from which the illustration was made to W. H. Hollingshead, Foreman, Tool Room, C.N.R. shops, Winnipeg.

The C.P.R. Recreation Club has opened a country club at Sortin Jet., Montreal, where it has secured 60 acres of land, with the right to use a further 40 acres, and has built a club house with 45 rooms. There are over 700 members, the officers being: President, G. H. Horn; Vice President, F. Taylor; Secretary, A. E. Col-lary; Treasurer, Miss M. O'Keefe; chairman of grounds committee, J. B. Blair.

Railway Facilities in Great Britain are to be further reduced on account of the military situation's exigencies.

Canadian Car Demurrage Rules.

The Board of Railway Commissioners passed general order 201, Aug. 1, its principal feature being a considerable increase in demurrage charges as shown in rule 9. The order is as follows:

The rules hereinafter set forth shall be known as the "Canadian Car Demurrage Rules," superseding the "Canadian Car Service Rules," prescribed by order 906 (General order 1), Jan. 25, 1906.

Rule 1.—Cars held for or by consignor or consignee for loading, unloading, forwarding directions, or for any other purpose. Exceptions: (a) Private cars (loaded or empty) on private tracks of the car owner. (b) Empty private cars stored on carriers' or private tracks. (c) Cars containing freight for transhipment to vessel, when moving on through bill of lading and held at railway terminal awaiting boat.

Rule 2.—Notification: (a) Notice shall be sent or given the consignee by the carriers' agent in writing, or as otherwise agreed to in writing by carrier and consignee, with all dispatch, after arrival of the car and billing; such notice to show the point of shipment, car initials and number and the contents, also the initials and number of the original car if transhipped in transit. If notice is mailed the consignee shall be held to have been notified at 7 a.m. following the date of mailing. The carrier shall notify the consignee or his carter on application where his car has been placed for unloading. Any time within the free time allowance lost to the consignee by default of the carrier in giving such information shall be added to the free time allowance. (b) Delivery of cars upon private sidings or industrial interchange tracks shall constitute notification thereof to the consignee. If such delivery cannot be made, owing to such tracks being fully occupied, or from any other cause beyond the control of the carrier, written notice of readiness so to deliver shall be given and shall constitute notification to the consignee for the purposes of these rules, in which case the free time shall be computed from 7 o'clock a.m. of the first following day. (c) In all cases where notice is required, by removing any part of the contents of the car the consignee shall be considered to have received such notice.

Rule 3.—Free time allowance: (a) Twenty-four hours (one day) after notice of arrival (exclusive of Sundays and legal holidays) shall be allowed for any or all of the following purposes, if necessary: (1) For clearing customs. (2) In the case of the consignees not served by private sidings or industrial interchange tracks, to give orders for special placement. (3) For reconsignment or reshipment in same car. (4) When cars are held in transit for inspection or grading, or are stopped in transit to complete loading to partly unload, or to partly unload and partly reload, when such privilege of stopping in transit is allowed in the tariffs of the carriers. (b) If the 24 hours allowed for the above mentioned prices are exceeded demurrage shall be charged. (c) Forty-eight hours (two days) free time (exclusive of Sundays and legal holidays) shall be allowed for loading or unloading all commodities.

Exceptions: (1) In the portion of Canada, Port Arthur and west, in which the Canada Grain Act applies, 24 hours free time only shall be allowed for loading grain. (2) Five days free time shall be

allowed at Montreal and at tide water ports for unloading lumber and hay for export. (3) Manufacturers, lumbermen, miners, contractors and others, who have their own motive power and handle cars for themselves or others, shall be granted an additional allowance of the time necessary for them to do the switching from and to the designated interchange tracks, but not to exceed 24 hours.

Rule 4.—Computing Time: (a) On cars held for loading, time shall be computed from the first 7 a.m. after placement, until loading is completed and proper billing instructions are furnished, except that on cars placed for loading grain at stations west of and including Port Arthur free time shall be computed under the provisions of "The Canada Grain Act." (b) On cars held for disposal (see Rule 3a), time shall be computed from the first 7 a.m. after the day on which notice of arrival is sent or given to the consignee. (c) On cars held for unloading, time shall be computed from the first 7 a.m. following placement on public delivery tracks, provided notice of arrival has been sent or given to the consignee. (d) On cars to be unloaded on private delivery tracks, time shall be computed from the first 7 a.m. after actual or constructive placement on such tracks. (e) On cars to be loaded or unloaded on tracks of manufacturers, lumbermen, miners, contractors or others, who have their own motive power and handle cars for themselves or others, time shall be computed from the first 7 a.m. following actual or constructive placement on the interchange tracks until returned thereto. Cars returned loaded shall not be recorded released until billing instructions and other necessary data are furnished. (f) When empty cars are placed for loading on orders and are not used, demurrage shall be charged from the first 7 a.m. after placement until released, without any free time allowance. (g) When an empty foreign car is placed for loading via a specific route, so as to protect the ownership of the car according to the Car Service Rules, and when loaded is consigned by any other route, demurrage shall be charged until the car is unloaded and released, without any free time allowance. (h) Time lost to the shipper or consignee through switching of cars, or through any other cause for which the railway company is responsible, shall be added to the free time allowance. (i) In computing free time or demurrage time, Sundays and holidays shall be excluded. The exemption for holidays shall not include half holidays.

Rule 5.—Weather interference: (a) If wet or inclement weather, according to local conditions, renders loading or unloading impracticable during business hours, or exposes the goods to damage, the free time allowance shall be extended so as to give the full free time of suitable weather. If, however, the cars are not loaded or unloaded within the first forty-eight hours of suitable weather no additional free time shall be allowed. (b) Should bulk freight be so frozen in transit, or before placement, as to render unloading impossible within the prescribed free time, such additional time shall be granted as may be necessary.

Rule 6.—Bunching: (1) Cars for loading. When, by reason of delay or irregularity of the carrier in filling orders, cars are bunched and placed for loading in accumulated numbers in excess of daily or-

ders, the shippers shall be allowed such free time for loading as he would have been entitled to had the cars been placed for loading as ordered. (2) Cars for unloading or reconsigning: When, as the result of the act or neglect of any carrier, cars destined for one consignee, at one point, are bunched at originating point, in transit, or at destination, and are delivered by the line carrier in accumulated numbers in excess of daily shipments, the consignee shall be allowed such free time as he would have been entitled to had the cars been delivered in accordance with the daily rate of shipment. Claims for refund or demurrage under this rule to be presented to the carriers' agent within 15 days.

Rule 7.—Placement: (a) "Actual placement" is made when a car is placed in a reasonably accessible position for loading or unloading. (b) Delivery of cars to private sidings or industrial interchange tracks shall be considered to have been made when such cars have been placed thereon, or when they would have been so placed but for some condition for which the consignee is responsible. When cars cannot be so placed, the carrier shall notify the consignee in writing that he has been unable to deliver the cars because of the condition of the private siding or interchange tracks, or because of other conditions attributable to the consignee. This shall be considered "Constructive placement." Should the delivery require interswitching, the switching carrier shall notify the line carrier when for the aforesaid reason cars cannot be placed, and the latter shall furnish the former with particulars of cars ready for transfer (numbers and initials and points of shipment, contents and consignee, and if transhipped in transit the numbers and initials of the original cars). The switching carrier shall give this information to the consignee, with notification that the said cars are under constructive placement. (c) When delivery cannot be made on specially designated public delivery tracks on account of such tracks being fully occupied, or from any other cause beyond the control of the carrier, the carrier shall end or give the consignee notice in writing, or as otherwise agreed to by carrier and consignee, of its intention to make delivery at the nearest point available to the consignee, naming the point. Such delivery shall be made, unless the consignee shall before delivery indicate a preferred available point, in which case the preferred delivery shall be made.

Rule 8.—Customs or inspection delays. Demurrage shall not be collected from the consignee for any delays for which government or railway officials may be responsible.

Rule 9.—Demurrage charge. After the expiration of the free time allowed, the following charges shall be made until the car is released: For the 1st day, or fraction thereof, of delay, \$1; for the 2nd day, or fraction thereof, of delay, \$2; for the 3rd day, or fraction thereof, of delay, \$3; for the 4th day, or fraction thereof, of delay, \$4; for the 5th and each succeeding day, or fraction of a day, \$5.

Rule 10.—Non-payment. If payment of demurrage charges properly due on cars held on public delivery tracks be refused, delivery of only the car or cars on which such charges are due shall be withheld by means of sealing or locking, or by placing where such cars shall not be accessible. If the owners or users of

Railway Rolling Stock Notes.

private tracks, or the owners of industrial tracks referred to in rules 3 and 4, refuse to pay any charges which may already be due, delivery of cars to such sidings or tracks shall be suspended, and delivery shall be made on any available public team track until such charges have been paid.

This order becomes effective Aug. 20, 1917.

Railway Finance, Meetings, Etc.

Canadian Northern Manitoba Ry.—There was filed with the Secretary of State at Ottawa on Aug. 15 a duplicate original of a trust mortgage dated Jan. 2, 1916, made between the C. N. Manitoba Ry. and the Province of Manitoba—the Provincial Railway Commissioner and the Provincial Minister of Public Works being trustees—securing certain debenture stocks and bonds of the company.

Central Ry. of Canada.—Notice of the cancellation by resolution of the bondholders, of a mortgage deed of the company's undertaking, to the City Safe Deposit and Agency Co., London, Eng., dated Dec. 16, 1913, was filed with the Secretary of State at Ottawa, Aug. 10.

Diamond Coal Co.—An order has been granted by an Alberta court confirming the granting of an option for the sale of the company's assets to H. V. Hudson, Winnipeg, for \$675,000 partly in cash and partly in bonds. The assets are heavily encumbered by an issue of bonds on which nearly \$700,000 is owing, and miscellaneous mortgages and charges of about \$175,000, so that on the reconstruction the secured creditors will not be paid in full and the shareholders and unsecured creditors will not receive anything. The Trust and Guarantee Co., Toronto, is permanent liquidator and trustee for the bondholders. The property sold includes a six mile railway from Kipp, on the C.P. R., to Diamond City, Alta., and several miles of sidings and colliery tracks.

Temiscouata Ry.—Earnings for May, \$23,769; operating expenses, \$20,225; net earnings, \$3,544.

Coal Freight Rates, Intercolonial Railway.

Attention was called in the House of Commons, on Aug. 9, to the increased freight rate on coal from Sydney and other Cape Breton points to Lewis and other places on the I. R. C. from \$2.25 to \$3.75 a net ton. The Minister of Railways said it was well known that the old coal rate was exceedingly low; it was put into effect when traffic on the line was largely to the east, enabling it to take back loaded cars. The situation has changed; practically all the loading is now west; and if very much coal business was done it would be necessary to take down empty cars for it. The rate mentioned is less than ½c a ton per mile, which is as low a rate as obtains in the United States. It is 1,000 miles from Sydney to Montreal and ½c a ton per mile would bring the rate up to a good deal more than the one in force. It is only in proportion that this rate has been increased to Quebec City and other places in Quebec Province. Having regard to the tremendous increase in wages and the increased amount being paid to coal producers for coal for the operation of the line the Minister considers the new rate amply justified.

Canadian Government Railways have ordered 8 second hand baggage cars and 1 store car from Hotchkiss-Blue Co.

The Timiskaming and Northern Ontario Ry. has received 4 conductors' vans, the balance of an order of 6, from Preston Car and Coach Co.

The supplementary estimates laid before the House of Commons recently contain \$25,000,000 for rolling stock for Canadian Government Railways.

Canadian Locomotive Co. has delivered 11 consolidation locomotives to the Imperial Munitions Board for the British Government, and one 0-4-0 saddle tank locomotive and one 10 wheel locomotive to Canadian Equipment Co.

The Russian Government is reported to be about to place a second order for 10,000 four wheel box cars of 1,200 poods capacity, out of 40,000 such cars authorized. A number of this type of car has been built in Canada, and it is said that the order for 10,000 is to be placed in Canada.

The National Steel Car Co. is reported to have received orders from the U.S. and French Governments for a large number of regulation army wagons and trucks mainly for immediate delivery. The U.S. order is said to also include freight cars.

Canadian Government Railways have on order with Canadian Car and Foundry Co., 5,000 steel frame box cars, 40 tons capacity, and 1,000 stock cars. Some of the box cars have been delivered, and it is hoped to complete the order early in 1918. Of these orders, 2,000 box cars and 1,000 stock cars are being built at the company's Fort William, Ont., shops.

The C.P.R., between July 11 and Aug. 20, received the following rolling stock: 1 compartment car, 1 steel mail car, 73 freight refrigerator cars and 1 decapod locomotive from its Angus shops, and 6 vans from its Winnipeg shops. There have also been purchased 10 air dump cars, 26 ft. long, and 44 converted vegetable cars, 600 coal cars converted from stone cars, and 775 coal cars converted from ballast cars, were received from Angus shops.

The U.S. Government has on order with American Locomotive Co. and Baldwin Locomotive Works, 1,064 locomotives of various types for service in France. It has also ordered at various plants 8,997 freight cars of different types for similar service. Of the locomotives, 680 are of standard gauge, and the balance of 60 c/m (23½ in.) gauge, and of the cars, 6,000 are of standard gauge and the balance of 60 c/m gauge.

Canadian Government Railways received the following additions to rolling stock between July 13 and Aug. 16: 15 box cars, 50 tons capacity, from Eastern Car Co.; 89 box cars, 30 tons capacity, from Canadian Car & Foundry Co.; 23 second hand Hart-Otis cars, from F. H. Hopkins & Co.; 10 second hand passenger cars; 4 second hand coal cars, 40 tons capacity; 10 coal cars, 35 tons capacity; 32 second hand coal cars, 30 tons capacity; 38 box cars, 30 tons capacity; and 2 second hand locomotives, from General Equipment Co., and 4 baggage cars, from Hotchkiss-Blue Co.

The C.P.R. has ordered the following rolling stock: 102 steel underframe box cars, 36 ft. long, 40 tons capacity; 19 steel underframe flat cars, 41 ft. long,

40 tons capacity; 2 freight refrigerator cars, 41 ft. long, 30 tons capacity; and 4 coal cars, from its Angus shops, Montreal; and 4 vans, 1 snow plough and 2 flangers from its Winnipeg shops. Orders have been placed for the conversion of 336 single insulated refrigerator cars to vegetable cars, half of the work to be done at Angus shops and half at Winnipeg.

The French Commission, with the assistance of the United States Government, has, according to a report from Washington, placed contracts for 17,000 four-wheel low side gondola freight cars with U.S. builders for railways in France. The distribution has been made among five or six builders, including Standard Steel Car Co., Pressed Steel Car Co., American Car & Foundry Co., Haskell & Barker Car Company and one or two other builders. Cars will be of 12 metric tons capacity with flat bottoms. Each car will require from 5 to 7 tons of steel, or a total of 85,000 to 120,000 tons. The orders for the steel are being distributed among the mills through the Iron and Steel Institute. The contract price is estimated at between \$20,000,000 and \$25,000,000.

The G.T.R. was stated in our last issue to have ordered 1,000 box cars from American Car and Foundry Co. These will be G.T.R. standard steel framed, inside sheathed cars, with friction draft gear, special drawbar uncoupling device, improved roller side bearing, outside all steel carline roof, latest design of door hangers and fixtures, flexible dust guards, etc. Delivery of cars will commence in October or November. Following are the chief details:

Length inside between end sheathing	36 ft.
Width inside between side sheathing	8 ft. 6½ ins.	
Height top of floor to inside carlines at centre	8 ft. 3 13/16 ins.
Length inside between end sills	37 ft. 2½ ins.
Centre to centre of bolster	26 ft. 10 ins.
Width over side sills	9 ft. 9¼ ins.
Width over all lat eaves	9 ft. 0¼ ins.
Height top of rail to roof at eaves	12 ft. 1 15/16 in.	
Height top or fail to roof at eaves	12 ft. 1 15/16 in.
Height top of rail to top of running board	13 ft. 1 in.
Height top of rail to top of brake mast	13 ft. 11 ins.

A press dispatch from Columbus, Ohio, states that the State Public Utilities Commission and the State Attorney General are investigating reports that the Toledo and Ohio Central Ry. and the Hocking Valley Ry. have sold coal cars to the Canadian Government Railways. It is said that John Kay, of New Brunswick, acting as agent for the Canadian Government, has admitted that he has purchased 1,700 coal cars from railways in Ohio. The Attorney General is reported to have stated that he is prepared to take drastic action to prevent another car from being sold for use in another state or country, and the discovery that the railways have been selling cars to another Government, while urging as a reason for increases in freight rates the need of additional rolling stock, is said to have caused much amazement. H. E. Speaks, General Superintendent, Toledo and Ohio Central Ry., Columbus, is reported to have stated that his company has sold 250 cars to the Canadian Government, and that they are undergoing repair at the company's shops at Logan. M. S. Connors, General Manager, Hocking Valley Ry., Columbus, is reported to have denied that his company has sold any cars recently, the last sale of cars having been made four years ago.

Great Northern Railway Terminals in Vancouver.

The accompanying illustrations show the passenger and freight stations which have been completed recently in Vancouver, B.C., by the Vancouver, Victoria and Eastern Ry., a subsidiary of the Great Northern Ry., and which are being used jointly by the company last mentioned and by the Northern Pacific Ry.

The Passenger Station, which is L shaped, the main front facing west, is about 375 ft. east of Main St. As the whole property is a fill, the building is

the plastering of the end walls for placing oil paintings showing the Glacier and Yellowstone National Parks. The lighting fixtures are of special design, and are executed in plaster. Alcoves off the main waiting room are fitted with seats and tables for the public. The ticket office is in the centre of the east wall, opposite the two main entrances. There are two principal entrances to the main waiting room from the west, directly opposite to which are

men's room, lavatory, mail room, Great Northern and Northern Express. The leg of the L is about 228 ft. long by 42 ft.

The ground in front of the passenger station is to be laid out in an attractive manner. The station will be reached by two driveways from Main St., and the remaining portion, not taken up by drives and walks, will be laid out with lawn and trees.

A hundred and fifty feet east of the baggage room wing, and in a direct line

Union Passenger Station, Great Northern and Northern Pacific Railways, Vancouver, B.C.

supported on a pile foundation, cluster piles being driven and cut off below the line of perpetual saturation. Upon these, concrete piers were poured, which support reinforced concrete beams, which in turn carry the exterior walls, columns and floors. The skeleton of the building is reinforced concrete, hollow tile, and concrete floors and roof. The exterior has a granite base, carrying up and around all exterior doors terracotta surbase, and red brick above, with terracotta trimmings and cornice.

two entrances leading to a glass covered concourse, running the full length of the building, which in turn leads to 11 tracks, the platforms being covered by umbrella roofs, 700 ft. long. Off the main waiting room in the south wing are located the smoking room, which has access to the concourse, women's retiring room and lavatories. In the south wing are an immigrants' room and lavatories, but having no connection with the main waiting room. A corridor, 12 ft. wide, runs down the centre of the north wing to a

power house, 50 ft. x 42 ft., with a brick stack at the east end 90 ft. high. The power house supplies heat to the different buildings through an underground reinforced concrete tunnel, steam to the passenger cars at the stub tracks, and to the passenger car yards. In connection there is a transformer room and a motor driven air compressor. Provision is made in the boiler house for three 125-h.p. return tubular boilers.

There are two freight sheds, the Great Northern one being next the passenger station and the Northern Pacific farther over. They are both 50 x 600 ft. set back 15 ft. from Park Lane, providing a small parking strip in front of the buildings. The Great Northern freight shed is separated from the passenger station at the narrowest point by a 60 ft. driveway. Between the two sheds there are 6 tracks, and on the north side of the Northern Pacific shed is a 60 ft. driveway, and then come the team tracks. The westerly 66 ft. of both sheds, adjoining Park Lane, are two stories high, containing the office portion, the remainder being simply a one story shed, cut in the middle by a fire wall, the easterly half for bonded goods and the westerly half for free goods. Customs accommodation is provided in both sheds. The foundations for the freight sheds are similar to the passenger station, above grade a granite base, brick with terra cotta trimmings, wooden floors.

Locomotive House.—At the east end of the yard there is a 15 stall locomotive house, with a machine shop and boiler house in connection. The depth of the locomotive house is 92 ft., and the machine shop and boiler house is 50 x 160 ft. The foundations are similar to the passenger station, with brick and wood construction above grade. In close proximity to the locomotive house are an oil house, 20 x 36 ft., and a store house, 60 x 73 ft., of similar construction to the machine shop, etc.

In connection with the passenger car

Freight Stations, G.N.R. and N.P.R., Vancouver, B.C.

The centre portion, 45 ft. high, and approximately 106 ft. long, contains the main waiting room, 60 x 100 ft., which runs the full height. Flanked on either side are two wings, about 56 x 65 ft., two stories high. The upper floors of the wings are appropriated to the Great Northern and Northern Pacific for offices.

The main waiting room is panelled in Alaska marble, 7 ft. high, and has marble and terrazzo floors and ornamental plaster ceiling. Provision was made in

carriage entrance. Off the waiting room in the north wing are the parcels and news office and station master's, validating and information offices. Off the corridor leading to the carriage entrance are an exhibition room, a room for station officials and a checking lobby which is connected direct to the baggage room.

The leg of the L, or baggage room wing, is a one story building containing the baggage room, bonded baggage, Canadian and United States customs, train-

yards there are a commissary building, 100 x 40 ft.; an oil house, 20 x 20 ft.; car repairers' building, 30 x 20 ft.; car foreman's building, 20 x 12 ft.; car cleaners' building, 16 x 20 ft.; carpet cleaning building, 16 x 20 ft., and a coal house, 40 x 20 ft.

Under the direction of A. H. Hogeland, Chief Engineer, G.N.R., the buildings were designed by Fred L. Townley, architect, Vancouver, in whose office all the drawings were made and under whose supervision the buildings were erected.

In connection with the erection of the terminals the Vancouver, Victoria and Eastern Ry. has filled in the whole of the area from the southern boundary of the property, which is purchased from the city, to the shore line on the north side of False Creek. This area was previously part of the bed of False Creek. The average depth of the fill required to bring

those now in service to be so stencilled from time to time when shopped for repairs.

Assessing Grand Trunk Pacific Railway Property in Calgary.

The Supreme Court of Canada has, in a recent judgment, upheld in several respects the contention of the City of Calgary, Alta, as to the assessment of the old Royal North West Mounted Police barracks in the city, acquired by the Grand Trunk Pacific Ry. for station purposes, and the company's other property in the city. The City Solicitor in reporting on the judgment to the Council said: "The company contended that the city's method of assessing in 1916 was illegal, claiming that the site comprising 25.3 acres should be assessed on a mileage

pany is entitled to have 4.8 acres assessed at the mileage basis instead of 3.64. The judgment is in effect a practical affirmation of the method of assessment contended for and adopted by the city."

Freight and Passenger Traffic Notes.

The Canadian Government Railways have opened a train enquiry office at Moncton, N.B., station.

The Lethbridge, Alta., Board of Trade is urging the C.P.R. to open a downtown ticket office there.

The Pacific Northwest Tourist Association, which is co-operating with the railway companies in promoting tourist travel in British Columbia, Oregon and Washington is said to have sent out \$150,000 of advertising matter this year.

The trans-Pacific steamship lines operating to the far east, out of Victoria and Vancouver, have advanced the steerage rates by approximately 10% from Sept. 1. The C.P.R. rates on the Empress of Russia are advanced from \$55 to \$60 and on the Empress of Japan and Montague from \$51 to \$55.

The Grand Trunk Pacific Ry. announces in connection with the removal of rails in the Yellowhead Pass district that tickets must not be sold to Alpland, Burrows, Dyke, Galloway, Geikie, Miette, Hot Springs, Obed, Parkgate, Pedley, Rainbow, rant Brook, Hinton, Hurgwen, Lucerne, Medicine Lodge, Red Pass, Resplendent, Roundcroft, and Yellowhead. Track connection is, however, being maintained and a stub service is in operation between Henry House and Pocahontas, and tickets may be sold to Pocahontas, Hawes and Interlakes.

The Canadian Freight Association issued on Aug. 1 a new all-rail tariff from Montreal and all eastern territory to Fort William and points west, effective Sept. 1. The new tariff provides an increase in class rates per 100 lbs. as follows—Class 1, 6c; class 2, 3c; class 3, 3c; class 4, 3c; class 5, 2c. Nos. 4 and 5 of Canadian Freight Association's tariff cover respectively class and commodity rates. This is a similar advance to the allowed recently by the Board of Railway Commissioners in connection with raid and water rates.

Delaware and Hudson Co. trains which now run into the G.T.R. Bonaventure station, Montreal, will after Oct. 1 be operated into the C.P.R. Windsor St. station, and from same date Rutland Rd. trains now operating to Montreal over the C.P.R. will be operated over the G.T.R. The new arrangement of the Rutland service is as follows: The Montreal-New York route will be as follows: Montreal to Rouse's Point, N.Y., by G.T.R.; Rouse's Point to White Creek, N.Y., by Rutland Rd.; White Creek to Troy, N.Y., by Boston & Maine Rd.; Troy to New York, by New York Central Rd. The Montreal-Boston route is: Montreal to Rouse's Point, by G.T.R.; Rouse's Point to Bellows Falls, Vt., by Rutland Rd.; Bellows Falls to Boston, by Boston & Maine Rd. The Ottawa-New York route is: Ottawa to Rouse's Point, by G.T.R.; Rouse's Point to White Creek, by Rutland Rd.; White Creek to Troy, by Boston & Maine Rd.; Troy to New York, by New York Central Rd.

Martin N. Todd, President, Galt, Preston & Hespeler St. Ry., and General Manager, Lake Erie & Northern Ry., who had been in ill health for some months, died at his home at Galt, Ont., Aug. 29, aged 59.

Main Waiting Room, G.N.R. and N.P.R. Union Station, Vancouver, B.C.

the property up to the approximate level of Main St. was about 12 ft. The company also owns considerable property on the south side of False Creek.

Stencilling Cars for Bulk Grain Shipments.

The Board of Railway Commissioners passed general order 205 Aug. 15, as follows: Re petition of Alberta Pacific Grain Co. and others, for an order requiring railway companies to stencil inches in box cars suitable for shipments of bulk grain. Upon hearing the matter at Calgary, June 18, the petitioners, the Alberta Farmers' Co-operative Association, and the Canadian Pacific, Canadian Northern, and Grand Trunk Pacific Railways being represented. It is ordered that railway companies be required to stencil inches, on the inside walls of cars used in the grain traffic in Manitoba, Saskatchewan, and Alberta, so as to show the depth of grain loaded therein, one stencil on each side of each door and 3 or 4 ft. therefrom; all such cars hereafter built to be so stencilled before going into service, and

basis of \$1,000 a mile. The city did assess the registered right of way, comprising 3.64 acres, according to the Alberta statute, which says that the roadway and any superstructure thereon of any railway company shall be limited to an assessment of \$1,000 a mile. The area actually comprised in the company's roadway from the eastern limits to the terminal site at the station is 4.8 acres, owing to the fact that the company did not build its station on the registered right of way which would have made it face Eighth Ave, consequently there is more land in the right of way. The Supreme Court rejected the company's contention that all of the terminal site should be assessed on a mileage basis, but allowed the company's appeal as to 4.8 acres comprising its actual roadway. All the rest of the acreage in question is to be assessed according to the method adopted by the city, viz., its actual value per acre. This means that the company's assessment for 1916 must be reduced by the difference between the assessment of 4.8 acres at \$8,000 an acre and the assessment figured on a mileage basis. For each subsequent year it means that the com-

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Athabaska Northern Ry.—The Dominion Parliament has granted an extension of five years for the building of this projected railway from Edmonton to Athabaska Landing, Alta. The company was incorporated in 1905 to build a railway from Edmonton along the valley of the North Saskatchewan River to Tp. 59, Range 4 west of 5th Meridian, thence north easterly past Smoky Lake to Lac la Biche, and thence northerly to the Athabaska at the confluence with the Clearwater River. (Jan., pg. 18.)

British Columbia and White River Ry. The Dominion Parliament has extended for five years the time within which this projected railway may be built. The route authorized in the act of incorporation is from Bear Creek, where it is to cross the International Boundary between Alaska and British Columbia to the Chilkat River, thence northwesterly to the Alsete River, through the Shakwak valley to Lake Kluane, along the Donjek valley to the White River, thence to the International Boundary between the Yukon Territory and Alaska between the 62nd and the 64th parallels of latitude. The provisional directors named in the act of incorporation, passed 1911, are: C. M. Marpole, G. E. MacDonald, Angus McDonnell, Jas. Ironside, Vancouver, B.C., and J. Rosene, Seattle, Wash. (Mar., pg. 100.)

Calgary & Fernie Ry.—The Dominion Parliament has extended for five years the period within which the company may build its projected railway between Calgary, Alta., and Fernie, B.C. (Feb., pg. 50.)

Canadian Western Ry.—The Dominion Parliament has extended for five years the time within which the company may build its projected railway from the International Boundary through Pincher Creek and Cowley and along the Old Man River to Livingstone Mountain, and thence to Calgary, Alta., with a branch to Michel, B.C. This railway is projected by the same interests as are concerned in the Calgary and Fernie Ry. (Feb., pg. 50.)

Capilano Timber Co.—Rapid progress is reported to have been made with the logging railway being built by the company from the waterfront, immediately east of the Vancouver creosoting works, North Vancouver, along the west bank of the Capilano River to a short distance above the Vancouver waterworks intake. Grading is being gone on with from both ends and rails have been laid from the waterfront to the Capilano River, where a 200 ft. Howe truss span bridge is being erected. Grading was expected to be completed by Aug. 30, and the entire line completed and in operation by Oct. 1. (See Cedars Limited, July, pg. 273.)

Essex Terminal Ry.—The Dominion Parliament has authorized the company to build a branch line from its existing line near Ojibway to Pelton, Ont., seven miles. (May, pg. 193.)

Esquimalt & Nanaimo Ry.—A proposal with a view to settling the controversy with respect to the Johnson St. bridge, Victoria, has been submitted to the company and the Board of Railway Commissioners by the British Columbia Government. It is proposed to erect one bridge capable of carrying all traffic, but the details have not been made public. The three plans which have been under discussion at different times for nearly three years are: (1) A joint highway and rail-

way bridge, being the original scheme. (2) Two bascule bridges in close proximity (the railway company's plan shows a swing span); and (3) To adapt the present bridge for highway purposes and allow the railway to reach the Store St. yards by a more northerly route. (Aug. pg. 306.)

Grand Trunk Ry.—The Dominion Parliament has granted an extension of five years for building of the Lachine, Jacques Cartier, and Maisonneuve Ry. The projected route of the line is from the G.T.R. in Lachine parish, passing in the rear of Mount Royal to Hochelaga Ward, Montreal, or to Maisonneuve, with power to extend the line from the starting point to Dorval in one direction, and to the northern end of the Montreal Island in the other. This is a G.T.R. subsidiary, the company having been incorporated in 1909, and declared a work for the general advantage of Canada in 1911. The company has experienced considerable difficulty in securing its right of way, largely on account of the number of street crossings. It is reported that all difficulties have been cleared up, and that construction may be started next year. (Aug., pg. 306.)

Work is reported to have been started at Campbellford, Ont., on the Belleville-Peterborough line, on the preliminary work of raising the railway bridge over the Trent Valley Canal, which involves straightening the line as it approaches the bridge, and building a new bridge a short distance from the present one. The new bridge will be of steel on concrete piers. It is expected to complete the work this year.

Grand Trunk Pacific Branch Lines.—The Dominion Parliament has extended for five years the time within which the following lines may be built: (1) The completion of the partially graded line from Harte into Brandon, Man., and on to Regina, Sask., with a branch from Brandon to the southern boundary of Manitoba at Turtle Mountain. (2) The extension of the existing Melville-Canora line to Fort Churchill on Hudson Bay. (3) The final completion of the Young-Prince Albert line, on which a train service has been placed in operation recently. (4) The completion of the Tofield-Calgary line from Calgary to the southern boundary of the Alberta at Coutts. (5) The completion of the Regina-Moose Jaw line—this covers the terminal work in Moose Jaw. (6) The extension of the line from Biggar, Sask., now terminating at Loverna, 105 miles, to a junction with the Tofield-Calgary line, or by an independent route into Calgary. (7) A line from the last mentioned line easterly and south easterly to Moose Jaw. (7) The extension of the line now in operation from Oban through Battleford, Sask., to Caruthers, 104 miles, to the main line between Arland and Wainwright, Sask. (Aug., pg. 306.)

Great Northern Ry.—A press report states that plans are being prepared for the construction of a three-car barge landing with trestle approach on Burrard Inlet, at an estimated cost of \$20,000. Application has been made to the Vancouver Harbor Commissioners for permission to build. It is expected that tenders will be asked for at an early date. (Aug., pg. 306.)

Kenora and English Bay Ry.—The Dominion Parliament has incorporated a company with this title to build a railway

from the National Transcontinental Ry. in Kenora District, west of Superior Jct., northerly and westerly, crossing the English River west of Lac Seul, thence northerly and westerly in the District of Patricia, thence westerly and southerly to and in Manitoba to Winnipeg. The office of the company is to be in Toronto; the authorized capital is \$1,000,000, and the company may issue securities for \$50,000 a mile. The provisional directors are: W. Miller, A. LeR. Williams, E. Miller, C. Flatt, and A. A. Macdonald, Toronto. (June, pg. 224.)

Minden, Ont.—A press report states that the project to build a railway into Minden, Ont., has been revived; E. A. Rogers, clerk of the municipality, being interested. The G.T.R. has a line from Lindsay to Haliburton, the nearest point to Minden being at Gelert, about 9 miles off; while the Canadian Northern Ry.—the old Irondale, Bancroft and Ottawa Ry., connecting with the G.T.R. near Kinmount, is about 12 miles off. The country is a difficult one for railway construction.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—A press report states that a contract has been let for the erection of a 1,150,000 bush. grain elevator at North Minneapolis, Minn., and for a 2-story brick and reinforced concrete station at Stevens Point, Wis. (Mar., pg. 101.)

Pacific Great Eastern Ry.—A press report states that C.P.R. engineers have been inspecting this line, looking into its condition, and its possibilities for traffic. The report added that the C.P.R. might acquire the line. The Premier of British Columbia is reported to have stated that the C.P.R. had not made any approaches to the government on the matter. (July, pg. 273.)

The Pere Marquette Ry. is reported to have purchased six lots of the old Chain Co.'s property on Clifford St., Sarnia, Ont., upon which to erect a new station and that the present station near the Imperial Oil Co.'s plant, will be taken down. It is reported that building will be started at once and that the new station will be ready for occupation before the end of the year. (Jan., pg. 20.)

Prince Edward Island Ry.—The Minister of Railways said in the House of Commons recently that the Government had decided not to standardize the P.E.I. Ry. this year. It would take a considerable time to make the change of gauge. The rails would have to be shifted over, the bridges would have to be widened, the road would have to be straightened, and rolling stock would have to be widened or built new. It was, therefore, not desirable that the work be gone on with at present as the war is taking all the money the government has. The government had not decided as to the running of steamships between Pictou and Charlottetown, and between Summerside and Point du Chene for the balance of the year after the car ferry is put in operation. The government will endeavor to keep on all the steamships for which there may be business. (May, pg. 194.)

Red Deer Valley Ry.—An act passed at the Alberta Legislature's last session incorporating a company with this title authorizes the building of a railway from Princess, mileage 192, on the C.P.R. Swift Current-Empress-Bassano line, generally north westerly along the Red Deer River Valley to the Canadian Northern Ry. in Tp. 29, Range 20, west of 4th Meridian;

Canadian Pacific Railway Honor Roll 26.

with branches not exceeding 20 miles each along Berry Creek Valley, Bull Pound Creek Valley, Willow Creek valley, Michichi Creek valley, and a branch along Mitjwin Creek valley to Gem, thence south westerly to Bassano. The capital stock authorized is \$1,000,000, the office is to be at Medicine Hat, and the provisional directors are L. N. Laidlaw, C. S. Blanchard, J. W. Dempsey, H. O. Knowles, and C. F. H. Long, Medicine Hat. (July, pg. 274.)

St. John and Quebec Ry.—A press report states that the New Brunswick Government has cancelled the contract let in February to Nova Scotia Construction Co. for building the northern section of this line from Centreville to a connection with the C.P.R. at Andover, N.B.

The history of the letting of contracts on the line is being investigated by a commission, which has resulted in an admission by A. R. Gould, President of the company, that prior to its being taken over by the government, he had paid Hon. J. K. Fleming, the then Premier, \$100,000 in connection with the negotiation of the contract; and that there were agreements for payments, or actual payments, made in connection with other construction contracts let. A. R. Gould and his associates have entered action to recover about \$350,000 from the Government for the cancellation of the general contract, and the taking over of the undertaking. (July, pg. 274.)

Toronto, Hamilton and Buffalo Ry.—A press report states that work has been started on laying out for yard and terminal purposes the 50 acres acquired recently by the company at Bridgeburg, Ont. The work being done is probably of only a preparatory character, as we were advised recently that plans for laying out the area had not been settled. (Aug. pg. 306.)

Western Dominion Ry.—The Dominion Parliament has extended for two years the time for constructing the main line from the International Boundary in Range 23, west 4th Meridian, northerly via Cardston and Pincher Creek to Lundbreck, on the C. P. R. Crownsnest line, thence to Calgary and Edmonton, Alta, and Fort St. John, B.C., with a branch from Pincher Creek via the south fork of the Old Man River to the Alberta-British Columbia boundary; and has extended for five years the building of a branch line along the north fork of the Old Man River to the Alberta-British Columbia boundary; a branch line along the Highwood River to the Alberta-British Columbia boundary, and another branch along the south branch of the Sheep River to the Alberta-British Columbia boundary. (April, 1915, pg. 137.)

C. P. R. Water Supply in Winnipeg.—The question of the renewal of the contract with the C.P.R. for the supply of water is under consideration by the Winnipeg City Council, and has been referred to a sub-committee of the light, heat, and power committee. Some years ago the C.P.R. promised to pay the city \$200,000 in 10 or 20 yearly instalments for its water supply. The company now desires to be supplied with water from the Shoal Lake plant under construction for the Greater Winnipeg Water District. The constitution of this district provides that water cannot be supplied to any one not paying taxes except under a special agreement. The company contends that the payments made were the equivalent of taxes.

The Switching Problem at Fort William.—A conference of railway officials and representatives of industries at Fort William, Ont., was held there recently. The switching question was left in the hands of W. F. Hogarth, President, Mount McKay & Kakabeka Falls Ry., to draw up proposals whereby all railways may have equal facilities to all industrial plants in the city limits. It was arranged pending the preparation of the plans, that the Mount McKay & Kakabeka Falls Ry. will take over the operation of the spur line to the industrial property owned by the city in the west end.

Cost of Railway Enquiry.—The cost of the commission which reported on the railway situation in Canada, recently, was stated in the Senate recently by Sir James Lougheed, to have been \$70,088.41. W. M. Acworth received \$15,330 for services and \$1,127.99 for expenses; A. H. Smith received \$137 for expenses, he has not yet been paid for his services; Sir Henry Drayton returned the cheque for \$15,000 sent him for his services. Twenty-three engineers were employed in connection with the work, receiving \$28,016.33 for their services, and \$3,854.15 for expenses.

Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We should be glad to be favored in this respect.

Canadian Northern Ry. Employees are being canvassed to raise \$101,000 a year for patriotic purposes. The idea is that the amounts subscribed will be deducted from the monthly pay and paid over to the local patriotic funds according to the number of men in the several districts.

Royal Naval Reserve, Auxiliary Motor Boat Patrol Section.—The Canadian Naval Service Department, during the fiscal year ended Mar. 31, entered almost 300 sub-lieutenants, and over 100 men, for

tion and entry of Canadian officers for this service is being continued through the Naval Service Department. Up to the end of the last fiscal year, 382 officers were entered and sent overseas, and several have been decorated for good service.

Royal Naval Canadian Volunteer Reserve (Overseas Division).—The Admiralty accepted the Dominion Government's offer of a number of men belonging to this reserve force, and an overseas division was formed during last year. From the commencement of recruiting for this branch of the service, in the autumn of 1916, to the end of the fiscal year, 1,331 men were enlisted, of whom 1,188 were sent overseas.

Personal Notes.

Major F. D. Burpee, formerly Superintendent, Ottawa Electric Ry., Ottawa, Ont., who went overseas as major in the 207th Battalion, C.E.F., recruited in

Major Jas. A. Macdonnell, D.S.O., (temporary Lt. Col.) of the 1st Canadian Pioneers, familiarly known on the Pacific coast as "Big Jim," has returned to Vancouver on sick leave, after having been at the front for nearly two years.

Lt. Col. H. A. C. Machin, M.L.A. for Kenora, Ont., who went overseas in command of the 94th Battalion, C.E.F., which was recruited from the Port Arthur, Fort William and Kenora districts, and which was broken up after arrival in England, and who was subsequently appointed in command of the 1st Canadian Labor Battalion, which has been engaged in railway construction in France for the 4th Canadian Division, is in Canada on leave of absence.

Lt. Col. D. S. MacInnes, D.S.O., of the Royal Engineers, Imperial Army, who has been granted the French Legion of Honor, is a son of the late Senator Donald MacInnes, of Hamilton, Ont., who was for years a C.P.R. director, and is a brother of W. R. MacInnes, Freight Traffic Manager, C.P.R. He was born in Hamilton, July 19, 1870, graduated from the Royal Military College Kingston, Ont., in 1891, winning the sword of honor and the Governor General's gold medal; was made a second lieutenant in the Royal Engineers in 1891, lieutenant 1894, captain 1905; served in the Ashanti expedition in 1895-6, and was honorably mentioned (star); was through the South African war, 1899-1902, commanding the Royal Engineers throughout the defence of Kimberley; conducted operations in Orange Free State, 1900, and in the Orange River Colony the same year, where he was twice mentioned in dispatches and received the Queen's Medal, with three clasps, the King's Medal, with two clasps, and the D.S.O.; served under the Canadian Government, heading the organization of the Canadian staff service; was D.A.Q.M. General, Halifax, N.S., 1905-7; was appointed chief staff officer, Maritime Provinces command, Sept., 1907, till Mar. 31, 1908, when he was transferred to England, since which he has been a member of the general staff.

Lt. Col. C. H. Mitchell, M.Can.Soc.C.E., of Toronto, who was created a Companion of the Order of St. Michael and St. George recently, has been decorated with the Order of Leopold by the King of the Belgians.

Major R. Falshaw Morkill, Signal Engineer G.T.R., now serving overseas in the British army, has, it is stated, been appointed by the Director-General of Transportation to take over all signalling work in the area occupied in France and Belgium by the British forces, and is now at general headquarters.

Robert Patterson, formerly Master Mechanic, G.T.R., Stratford, Ont., and later with the General Car & Machine Works, Montmagny, Que., addressed a large meeting at Stratford recently, at which returned soldiers from Stratford and Perth County were welcomed home.

Lieut. Clifford Pestell, who is reported as lost in the North Sea, is said to have been in C.P.R. and G.T.R. service formerly, returning to England in 1915.

J. E. Pinault, who has resumed his duties as General Superintendent, Canada & Gulf Terminal Ry., Matane, Que., enlisted Jan. 20, 1916, in the 189th Canadian Battalion, as Major, and left for England, Sept. 21, 1916. On Feb. 25, 1917, he was recalled to Canada to re-

Canadian Government Railways Box Car upholding a portion of the United States Army at the Officers' Training Camp at Plattsburg, N.Y.

duty as chief motor mechanics and motor mechanics, for this branch of the Imperial service.

Canadian Troops Reach England.—It was officially announced, Aug. 27, that the following, among other Canadian troops, had arrived safely in England: Forestry and railway construction drafts from Ottawa and Camp Borden; railway construction draft from Regina; no. 1 draft, railway troops, from London, Ont.; Inland Water Transportation draft from Montreal.

Railway Men and the War.—Sir Eric Geddes, M.P., First Lord of the Admiralty, in his maiden speech in the British House of Commons, recently, said: "You have been told that I am a railway man and that I was once a porter. That is true, and I am very proud of it. Railway men I hold in the highest regard, and that regard has been intensified by what I have seen of their work in France. The railway men out there have given movement to the army. The railways are now ahead of the guns everywhere, and their work has saved thousands of lives at the sacrifice of many of their own."

Royal Naval Air Service.—The selec-

Ottawa, has been gazetted as a temporary lieutenant in the Canadian Railway Troops.

Lt. Col. J. J. Creelman, of the Field Artillery, C.E.F., who has been on active service since the beginning of the war, and who was some months ago made a member of the Distinguished Service Order, and also of the Russian Order of St. George, has returned to Montreal, and has announced that he will run for the House of Commons as a soldier's candidate in the St. Antoine district, there. He is a son of the late A. R. Creelman, K.C., at one time General Counsel, and a director, C.P.R., and is a member of the firm of Casgrain, Mitchell, Holt, McDougall, Creelman and Stairs, advocates, barristers, etc., Montreal. He is said to be the youngest artillery brigade commander in the service, being only 36.

Lieut. C. S. L. Hertzberg, M.C., who is on active service with the 7th Field Company, Canadian Engineers, has been transferred from associate member to member of the Canadian Society of Civil Engineers. He is a son of A. L. Hertzberg, M.Can.Soc.C.E., Engineer, Ontario District, C.P.R., Toronto.

cruit railway construction men, and returned to Canada, Apr. 21, 1917, after spending four weeks in France. He resumed his railway position, July 1, 1917, and is now a reserve officer, C.E.F.

Lt. Col. G. S. Rennie, formerly Chief Medical Officer, Toronto, Hamilton & Buffalo Ry., and Dominion Power & Transmission Co., Hamilton, Ont., has, according to a press dispatch, been made administrator of all British, Canadian and United States military hospitals in the district near Rouen, France, as well as maintaining command of No. 2 Canadian General Hospital. For nearly two years he was in charge of a chain of hospitals in England, and left for France some two months ago to take an important command.

Major J. M. Rolston, M.Can.Soc.C.E., of Vancouver, has been created a Chevalier of the Legion of Honor, by the French Government, for services in railway construction. He graduated from the Royal Military College, Kingston, in 1900, and was for a time in the Grand Trunk Pacific Ry. service, during the building of the mountain section. When war broke out, he was in northern British Columbia. He left Canada as Captain in "Tobin's Tigers," and after serving two months at the front was transferred to a railway construction corps. He was mentioned by Sir Douglas Haig in dispatches in February last.

Capt. Wm. Stewart McTier, who was reported recently to have been awarded the Military Cross for gallantry in the firing line, is the son of A. D. McTier, General Manager, Eastern Lines, C.P.R. He went to the front with the first Canadian Contingent and has been twice wounded, first at Ypres, and lately at Vimy Ridge. At the outbreak of war he was on the ocean returning from Europe and immediately on landing joined the 13th Battalion under Lt. Col. Loomis, now Brigadier-General and D.S.O. He went to the front with that unit and fought with it at Ypres and Festubert. He was wounded by shrapnel and returned to Montreal to convalesce. On returning to the front he was attached to Brigadier-General Loomis' staff, the latter having taken over the command of a brigade in the meantime. After serving in that capacity for a short time one of Lieut. MacTier's feet gave out and an operation was necessary. On his return to the front on this occasion he was transferred to a Montreal Highland battalion and promoted to captain.

Lieut. R. N. Stuart, V.C., D.S.O., was for many years in service of the Allan Line Steamship Co., and since that line came under the management of Canadian Pacific Ocean Services, Ltd., has been second officer on the s.s. Alsatian. He is a son of the late Capt. Neil Stuart, of Prince Edward Island, and obtained a commission in the R.N.R. soon after the declaration of war. In the early stages he was awarded the D.S.O. for services of a distinguished character, and for further services has been awarded the Victoria Cross. It has not transpired what the nature of the services is, but it is understood that he was selected by his brother officers for the honor, under rule 13 of the Royal Warrant of Jan. 29, 1856.

Lieutenant A. E. Voysey, who is reported to have been killed in action, was, prior to enlisting for active service, chief assistant to European Manager, C.P.R., London, Eng.

Lt. Col. F. A. Wanklyn, who has been gazetted a Wing Commander in the Royal

Flying Corps, is the eldest son of F. L. Wanklyn, General Executive Assistant, C.P.R.; Montreal. He was born at Montreal, Aug. 14, 1888; educated at St. Andrews School, Brockville, graduated from the Royal Military College, Kingston, in 1909; received a commission in the Royal Artillery (Imperial), in June, 1909; seconded to Royal Flying Corps in 1911. Since war broke out he has served as Flight Commander in France and Belgium, received the Military Cross June, 1915, and was mentioned in dispatches. In 1916 he was Squadron Commander in command of R.F.C. experimental depot at Orfordness, on the east coast of England, until gazetted Deputy Assistant Director at War Office, London. In July 1917 he was appointed Wing Commander, R.F.C., with lieutenant colonel's rank and sent to Canada to take command of one of the new aviation camps. He is now officer commanding at North Toronto.

Major Chas. Wesley Weldon McLean, D.S.O., of the Royal Horse Artillery, son of Col. (temporary Brig. Gen.) H. H. McLean, M.P. for Queens-Sunbury, N.B., and formerly President, St. John, N.B. Ry., has been given a second bar for distinguished service. Twice in the same day he went forward, at great personal risk, into a heavy barrage to reconnoitre. The following day he led a party under heavy shell fire, threatening to cause grave casualties, and saved the guns and ammunition. He served in the South African War and was in operations in Cape Colony, south of Orange River, 1899-1900, in operations in the Orange Free State, Feb. to May 1900, including operations at Paardeberg and actions at Poplar Grove and Driefontein, and in operations in Orange River Colony, May to Aug. 1900. He was given the Queen's medal, with three clasps, for his South African services.

Canadian Northern Railway Construction, Betterments, Etc.

Quebec Division.—The Dominion Parliament has extended for five years the time for building the projected branch line from St. Jerome to St. Eustache,

Mount Royal Tunnel and Terminal Co.—The Dominion Parliament has extended for five years the period within which the railways and other works authorized to be constructed by the company in Montreal may be built.

Central District.—The new passenger station to be built at Fort William, Ont., will be on Vickers St., between Victoria Ave. and Miles St. The main portion will be 2 stories high, with full sized basement and at the north side of the main building will be the baggage and express building, 1 story high. The main portion of the building will be 56 x 40 ft. with a total height of 28 ft. above the sidewalk. The baggage and express building will be 81 x 30 ft. and will be 16 ft. high over the sidewalk. The footings, foundation and basement walls will be of concrete. The main walls will be of stone and brick and the roof will be covered with felt, pitch and gravel. All floors will be double boarded with maple finish, and all doors and inside finish on ground floor will be selected oak. The first floor will be finished in fir. The interior of walls will be furred and plastered and all windows will be glazed with 32 oz. glass. The three main entrances will be covered over with ornamental iron canopies or marquises. The waiting room, ticket offices, women's waiting room and vestibule will have da-

dos of burlap and the lavatories will be finished with porcelain enamel. The whole of the color scheme will be strictly in accordance with C.N.R. standard colors. The building will be steam heated throughout, and lighted with electricity. There will be cement sidewalk round three sides and paved platform, 700 ft. long, on the track side, the top of which will be level with the rail. The estimated cost is about \$45,000. The plans have been prepared by the company's architect at Winnipeg, J. Schofield, and the work will be done under his supervision.

Tenders are under consideration for the erection of a 205 ft. addition to the company's freight shed on Water St., Winnipeg. J. Schofield, the company's architect, Winnipeg, is in charge.

Vancouver Terminals.—M. H. MacLeod, General Manager, Western Lines, is reported to have stated on a recent visit of inspection to Vancouver, that satisfactory progress was being made with the terminal works at False Creek, and that there was no doubt that the new station would be ready for operation by Dec. 31. A report has been prepared by F. L. Fellowes, City Engineer, covering the work yet to be done by the company on the terminal property in order to fulfil the terms of the agreement of Feb. 1913. He says that two pieces of work mentioned in the agreement are not likely to be accomplished within the time fixed, Feb. 1918, viz., the complete filling of False Creek to the grade of city datum and the boring of the double track electrified tunnel to give access to the terminal yards. Nothing has been done toward carrying out the latter work. Alderman Hamilton, chairman of the utilities committee, is reported to have said in an interview on Aug. 3, that the acquisition of the C.N.R. by the Dominion Government probably means that the city is at the end of its trouble with regard to the carrying out of the agreement under which the company acquired part of the False Creek flats from the city. The government was proposing to take over the line by the purchase of stock, which meant that the government would be in the same position as the company with respect to the city. He had no doubt that the terms of the agreement would be carried out by the government in a fair spirit.

Vancouver Island.—Track laying is reported to be progressing on the line between Victoria and Alberni, a number of Chinamen being employed. (Aug., pg. 309.)

A Grain Shipping Case.—The Matheson Grain Co. shipped a car containing 2,272 bush. of oats from the Dominion Government elevator at Moose Jaw to Ogema, Sask., on the C. P. R. The bill of lading showing the quantity of oats in the car was signed by a C.P.R. employe in the ordinary course, but the consignment was found on being delivered out to be 500 bush. short. The consignors made a claim against the C.P.R. which went to the courts, and was carried on appeal to the Supreme Court of Saskatchewan by the C.P.R. That court on Aug. 3, affirmed the judgment of the lower courts, giving a verdict for the grain company for the full amount claimed, with costs. The court held that the railway company, as a common carrier, was responsible for the safe delivery of the grain shipped.

The Pacific Northwest Passenger Association held its regular meeting at the Empress Hotel, Victoria, B.C., Aug. 10.

Mainly About Railway People Throughout Canada.

Arthur S. Piers, Manager, Real Estate Department, C.P.R., Montreal, was married there, Aug. 21, to Miss Marguerite Helen Lodge.

G. B. Kirkpatrick, formerly Surveyor General for Ontario, who died recently, aged 82, was, in his early life, in G.T.R. service.

J. M. Cameron, General Superintendent, Alberta District, C.P.R., returned to Calgary at the end of July, after a vacation trip to Alaska.

Sir Augustus M. Nanton, director, C.P.R., and Vice President, Winnipeg Electric Ry., spent a short holiday on the Pacific coast in August.

Lord and Lady Shaughnessy have been entertaining some members of the Governor General's family, the Ladies Maude, Blanche, Anne and Lord Charles Cavendish at St. Andrews, N.B.

D. B. Hanna, Third Vice President, Canadian Northern Ry., was at Kennebunk Beach, Me., for a few days early in August, Mrs. and Miss Hanna spending several weeks there.

George Ham, of the C.P.R. head office staff, Montreal, was entertained to dinner there, Aug. 23, by a number of his friends, in celebration of his 70th birthday. C. E. E. Ussher, Passenger Traffic Manager, C.P.R., presided.

B. Grant Mont, Senior Assistant Engineer on the construction of the Dominion Government dry dock at Lauzon, Que., has been transferred from a student member to an associate member of the Canadian Society of Civil Engineers.

R. M. Halpenny, Superintendent, and W. Jackson, Principal Assistant Engineer, Edmonton, Dunvegan and British Columbia Ry., were entertained to dinner at Edmonton, Alta., Aug. 6, by their associates, on leaving the company's service.

W. B. McAllister, who has been in Allan Line Steamship Co.'s service at Boston, Mass., for 20 years, has, since the taking over of the Allan Line offices by Canadian Pacific Ocean Services, Ltd., entered Furness, Withy & Co.'s service there.

George M. MacLeod, who died at St. John, N.B., Aug. 21, aged 65, was father of R. F. MacLeod, Assistant General Passenger Agent, Canadian Government Railways, Moncton, N.B., and A. MacLeod, who is in C.P.R. service in Montreal.

H. K. Goodwin, whose appointment as Local Treasurer, Western Lines, Canadian Government Railways, was announced in our last issue, was, prior to this appointment, for 25 years, clerk in the Comptroller and Treasurer's office at Moncton, N.B.

A. G. Balcer, heretofore in the office of Assistant Manager, Canadian Pacific Ocean Services, Ltd., Montreal, has been appointed Freight Claims Agent, in charge of loss and damage claims in connection with cargoes carried on the company's vessels. Office, Montreal.

G. W. Alexander, who has resigned as Treasurer, Western Lines, G.T.R., Detroit, Mich., spent the summer with his family in the Georgian Bay district. He will continue to reside in Detroit, and contemplates a leisurely tour around the world on the termination of the war.

E. Pennington, President, Minneapolis, St. Paul & Sault Ste. Marie Ry., and J. C. Be-

langer, Agent, M. St. P. & S. S. M. R., Minot, N.D., are being proceeded against at Minot, on a charge of importing intoxicating liquors into North Dakota.

George H. Pope, land valuator for the Dominion Government, who died at Winnipeg, Aug. 2, aged 82, was for some time in Grand Trunk Pacific Ry. service there as Right of Way Agent. His brother, W. W. Pope, is Secretary Hydro Electric Power Commission of Ontario.

L. C. Fritch, who recently resigned from the position of General Manager, Eastern Lines, Canadian Northern Ry., Toronto, was presented with a silver service by the company's officials, prior to leaving Toronto, on his appointment as General Manager, Seaboard Air Line Ry., Norfolk, Va.

J. J. Rose
General Agent, Union Pacific System, Toronto

Lord Shaughnessy, President, C.P.R., dined with the Governor General at Ottawa, Aug. 9. The presence of several leading politicians gave rise to a report that he had been called upon for his views on the current political situation, and even went so far as to say that there was some likelihood of his being asked to head a national government for the remainder of the war.

H. B. Dufief, who has been appointed Assistant to Solicitor, Grand Trunk Pacific Ry., Winnipeg, was born at Washington, D.C., Sept. 16, 1883. He entered G.T.P.R. service, as Solicitor's assistant, at Winnipeg, in which capacity he remained until his present appointment. Prior to entering G.T.P.R. service, he was in the Chicago & North Western Ry.'s legal department, claims section, Chicago, Ill.

E. B. Hagarty, whose appointment as Local Auditor, Western Lines, Canadian Government Railways, Winnipeg, was announced in our last issue, was for some time District Accountant, Intercolonial Ry., New Glasgow, N.S., and since the

operation of the National Transcontinental Ry. by Canadian Government Railways, he has been special auditor at Winnipeg under the Comptroller and Treasurer.

Robert Crosby, who was appointed Car Foreman, Canadian Northern Ry., Moose Jaw, Sask., recently, was born at Hawick, Scotland, May 2, 1886, and entered C.N.R. service Oct. 1, 1911, since when he has been, to Dec. 3, 1911, car repairer, Winnipeg; Oct. 4, 1911 to Apr. 1, 1912, car repairer, Atikokan, Ont.; Apr. 2 to June 9, 1912, car repairer, Winnipeg; June 10 to Aug. 8, 1912, car repairer, Rhien, Sask.; Aug. 9 to Oct. 28, 1912, car repairer, Emerson, Man.; Oct. 29, 1912 to Jan. 23, 1915, Car Inspector, Neepawa, Man.; Jan. 24, 1915 to June 2, 1917, Car Inspector, Blue River, B.C.

John Joseph Rose, whose appointment as General Agent, Union Pacific System, Toronto, was announced in our last issue, was born at Toronto, Nov. 22, 1870, and entered transportation service, Jan. 1885, since when he has been, to Jan. 1887, ticket clerk and stenographer, C. P. R.; Jan. 1887 to Feb. 1891, ticket agent, C.P.R.; Feb. 1891 to May 1892, ticket, telegraph and express agent, C.P.R. Parkdale; May 1892 to Oct. 1906, Travelling Passenger Agent, C.P.R.; Oct. 1906 to Mar. 1911, chief clerk to District Passenger Agent, C.P.R.; Mar. 1911 to Mar. 1912, Travelling Passenger Agent, Robert Reford Co.; Mar. 1912 to July 1, 1917, Canadian Passenger Agent, Union Pacific System, all at Toronto.

Harry Roy Silcox, whose appointment as acting Resident Engineer, C.P.R., Toronto, was announced in our last issue, was born at Mount Brydges, Ont., Jan. 16, 1888, and was educated at the Collegiate School, Ingersoll, Ont., and McMaster University, Toronto, graduating with the degree of B.Sc. in 1912. During the vacations from July 1905 to Sept. 1908, he was engaged variously as section man, brakeman, fireman, operator, etc., on the Tillsonburg, Lake Erie and Pacific Ry., Tillsonburg, Ont.; May to Sept. 1909, on Grand Trunk Pacific Ry. construction with Fauquier Bros. and Foley, Welch & Stewart, contractors, Cochrane, Ont.; May, 1910 to Oct. 1915, chainman, rodman and transit man, C.P.R., Toronto; Oct. 1915 to Apr. 1916, Inspector, Canadian Inspection Co., St. Catharines, Ont.; Apr. 1916 to Apr. 1917, Inspector, Canadian Stewart Co., Toronto; Apr. to June 11, 1917, transit man, C.P.R., Toronto.

J. A. DeWolfe, who has been appointed Terminal Trainmaster, C.P.R., Moose Jaw, Sask., was born at Woodstock, Ont., Aug. 31, 1884, and entered railway service July 10, 1899, since when he has been, to Apr. 16, 1900, stenographer to Locomotive Foreman, G.T.R., London, Ont.; Apr. 17, 1900, to May 12, 1903, not in railway service; May 13 to June 23, 1903, clerk to Car Foreman, C.P.R., Toronto; June 23, 1903, to May 22, 1905, clerk in offices of Trainmaster, and of Superintendent, C.P.R., London, Ont., and Toronto; May 22, 1905, to May 7, 1907, clerk to Manager of Construction, C.P.R., Toronto; May 7, 1907, to June 21, 1909, secretary to General Manager, C.P.R., Montreal; June 23 to Aug. 23, 1909, assistant chief clerk, Second Vice President's office, C.P.R., Winnipeg; Aug. 24, 1909, to Dec. 31, 1914, chief clerk, Engineering Department, Western Lines, C. P. R., Winnipeg; Jan. 1, 1915 to Aug. 1,

1917, chief clerk to Vice President and General Manager, Western Lines, C.P.R., Winnipeg.

Morley Donaldson, M.Can.Soc.C.E., who has resigned from the position of Vice President and General Manager, Grand Trunk Pacific Ry., and Grand Trunk Pacific Coast Steamship Co., Winnipeg, on account of ill health, was born near Edinburgh, Scotland, May 1, 1851, and was educated in France and Canada. After spending some time in E. Gilbert & Co.'s engine works, Montreal, he entered W. & F. Shanly's service, and was with them during the construction of the Hoosac tunnel in Massachusetts. He entered railway service in 1881, as chief draftsman, Canada Atlantic Ry., since when he has been, consecutively, Superintendent Mechanical Department; Superintendent of Traffic and Mechanical Department, and to Apr. 11, 1898, Superintendent, same road, Ottawa; and on the absorption of the Canada Atlantic Ry. by the G.T.R., and its operation as the Ottawa Division, G.T.R., he was appointed Superintendent, retaining that position until June 17, 1912, when he was appointed to the position from which he resigned, Aug. 1.

William Pittman Hinton, who has been appointed Vice President and General Manager, Grand Trunk Pacific Ry. and Grand Trunk Pacific Coast Steamship Co., Winnipeg, was born at Hintonburg, Ont., Aug. 30, 1871, and entered railway service May 3, 1887, since when he has been, to Aug. 1891, clerk, freight passenger and car accounts, and travelling auditor, Canada Atlantic Ry.; Aug. 1891 to Mar. 1898, rate clerk, same road, and accountant, Canada Atlantic Fast Freight Line; Mar. 1898 to June 30, 1901, Assistant General Freight Agent, same road, and Canada Atlantic Transit Co.; June 30, 1910, to Jan. 30, 1913, General Freight Agent, same road; Jan. 30, 1903, to Oct. 1905, General Passenger and Freight Agent, same road; Oct. 1905 to Jan. 1907, General Agent, Passenger Department, G.T.R., Ottawa, Ont.; Jan. 1907 to Apr. 1909, Assistant General Passenger and Ticket Agent, same road, Montreal; Apr. 1909 to Feb. 1914, General Passenger Agent, Grand Trunk Pacific Ry., Winnipeg; Feb. to Oct. 1914, Assistant Passenger Traffic Manager, same road, Winnipeg; Oct. 1914 to Nov. 11, 1915, Assistant Passenger Traffic Manager, G.T.R. and Grand Trunk Pacific Ry., Montreal; Nov. 11, 1915, to Aug. 1, 1917, Traffic Manager, G.T.P.R., and Grand Trunk Pacific Coast Steamship Co., and Western Traffic Manager, Canadian Government Railways, Winnipeg.

Great Britain's Reduced Railway Service.—Roughly speaking, all train services in Great Britain have been reduced by one-third during the war. The companies intend to adhere to the present restricted time table, and in no circumstances will extra holiday trains be run. So many locomotives have been withdrawn for service in France and man power has been so severely depleted that any increase in number is out of the question.

Punishment for Intoxication.—J. W. Maher, a C.P.R. relieving agent, was sentenced at Camrose, Alta., Aug. 14, to two months imprisonment for being under the influence of liquor at Bawlf station, of which he was in charge. He was also charged with stealing liquor from a shipment under his charge and was sentenced to one month additional therefor.

Fuel Economy on the Canadian Pacific Railway.

Alfred Price, Assistant General Manager, Eastern Lines, has issued a circular to employes as follows:

War conditions have brought about a serious situation in the fuel supply of the country, both for railway and commercial purposes. As a patriotic duty, therefore, if not for any other reason, everyone in the railway service particularly, is called upon to exercise every effort within his power to conserve the fuel supply, so that the transportation of supplies, which is such an important factor in the successful prosecution of the war in the interests of the Empire, may not suffer throughout the coming winter as the result of a fuel shortage. Although on some few divisions of Eastern Lines our fuel consumption per 1000 ton miles hauled has recently been showing some slight decrease as

Morley Donaldson
ex Vice President and General Manager, Grand Trunk Pacific Railway

compared with previous years, on most divisions there have been heavy increases. It is, therefore, important that, quite apart from the heavy increased expense involved on account of the greatly advanced prices, we should economize in our consumption, so as, at the very least, to bring it down to what has been accomplished in the past. This appeal is, therefore, made to all employes to assist, in so far as they are personally able to do, in this important and patriotic effort in the country's interests. Close observation of the following rules by the various classes of employes mentioned, will materially assist in effecting a reduction in fuel consumption.

Locomotive Foremen.—Keep in close touch with yard and be kept advised of the probable time of arrival of inbound engines, and advise the yard of the time engines, in the round house will be available for service. Engines for regular passenger trains to be turned out of round house on time, unless trains are reported to be more than 30 minutes late. Unassigned engines that are dead, not to be put under steam while there are engines

in the house or on shop tracks under fire and ready for service. Engines to be put under steam not to be lighted up more than an hour and a half before they are to be placed in charge of the engine crews. When it is known that an engine placed in the round house is to go into service again within 12 hours, the fire should not be dumped, unless upon special authority. Carefully select bank firemen and thoroughly post them in the best methods to employ in banking fires, and the proper amount of water and steam pressure required. Sufficient water to be put in boilers before fires are banked or dumped so as to avoid the necessity of having to work the inspirators while engines are in the round house. Excessive use of blowers to be avoided. Coal shutes and surroundings to be kept clean and all coal picked up regularly. Maintenance regulations, covering pistons, valves, mountings, boiler leaks, etc., to be strictly observed.

Hostlers.—Take charge of engines as soon as they arrive on the shop tracks and house them as quickly as possible. See that coal is properly trimmed forward on tenders, and so as not to fall off, at all coaling plants. Tenders to be given only the amount of coal prescribed by the superintendent and not to be overloaded. Excessive use of the injector and blower at the ash pit and on shop tracks to be avoided.

Air Brake and Car Inspectors.—Inspections and tests to be made promptly and thoroughly so as to avoid delays. Where there is yard testing plant in operation, endeavors to be made to have train line charged 15 minutes before the time set for departure.

Engineers and Firemen.—Examine their engines as soon as they come on duty, ascertaining condition of fire and build it up gradually so that when coupled on trains, start can be made with a good fire. Get away from shop track early enough to permit of engine being coupled to train at least 15 minutes before time set for departure. Take full advantage of velocity grades under conditions consistent with speed regulations. When switching is done at water stations take water after completion of switching, and while conductor is obtaining waybills and orders. On completion of trips, engine should be delivered to the hostler with sufficient water in boiler and a good fire in front of grates. Fire carefully and economically, avoiding waste of steam through safety valves.

Yardmasters and Yard Foremen.—Keep round house advised of probable arrival time of trains, and be kept advised of time engine in the round house will be ready for service. Keep tracks open for prompt movement of road engines between the shop tracks and trains. Use good judgment in ordering trains to leave at hours at which they will be ready and be able to get away. Avoid overloading engines in switching movements.

Conductors and Trainmen.—Where required to bring engines from shop track, be on hand to do so 25 minutes before time train is ordered for. Before beginning to switch cars first see that all hand brakes are released. Keep sharp look out for sticking brakes and air leaks, bleeding and carding cars when detected. On arrival at destination and clear on siding, detach engine and when required deliver it promptly on shop track. Avoid delays

within their control.

Train Dispatchers.—Order trains at hours when they can get away from terminals and move to best advantage. Anticipate train orders needed and have them ready before trains reach stations at which they are required, using "19" orders when permissible. Orders and telegrams, when at all possible, to be put out at stations where trains must stop for water or to meet other trains, so as to avoid unnecessary stops. Extra stops are

expensive and result in a waste of fuel. Take adverse grades into consideration in deciding which train is to hold main track at meeting points arranged by train orders. Avoid the running of light engines and full tonnage trains in the same direction, but divide tonnage moving in the opposite direction to the preponderating traffic equally between engines moving in that direction.

Agents and Operators.—Avoid unnecessary stops and delays to trains,

using train order hoops for "19" orders, clearances and telegrams. When switching is necessary prepare form 77a in triplicate, handing one copy to front trainman when train stops, the second copy to conductor, retaining the third on file.

[EDITOR'S NOTE.—The division superintendents are holding meetings of their local officers and employes, to enlist their interest in the campaign, and the management hopes to obtain very good results.]

The First Battalion, Canadian Railway Troops' Organization and its Work in France.

The organization of this battalion, under the name of the 1st Canadian Overseas Railway Construction Battalion, was started in Toronto, early in May, 1916, the head office being at 189 Queen St. West; branch offices being opened at St. John, N.B., Montreal, Ottawa, Pembroke, Hamilton, London, North Bay, Sudbury, Cochrane and Fort William. Recruits were taken everywhere throughout the territory between Halifax and Winnipeg, a few men coming from Edmonton and other western centres to enlist. On July 28, 1916, after recruiting was completed, the battalion went into camp at Valcartier, Que., for training, sailing for England on Sept. 13, 1916. While it was expected that a sojourn of at least two months would be made in England, the battalion found itself actually engaged on railway work in France on Oct. 28, 1916. Probably no other battalion from Canada spent so short a time in getting its men, and its training; and in afterwards getting overseas and down to actual business in France. There have been a number of changes in the officers since the battalion went overseas, owing to promotions, but with one exception, all the original officers are still with the battalion, the other, Capt. G. S. F. Grant, having been invalided home to Canada. The organization is now as follows:

Headquarters Company: Officer commanding, Lt. Col. Blair Ripley, M.Can. Soc.C.E., M.Am.Soc.C.E., Engineer of Grade Separation, C.P.R., Toronto; 2nd in command, Major T. T. Loudon, Professor Civil Engineering, Toronto University, and consulting engineer, Toronto; Chief Engineer, Major Wm. Monds, of Clarke and Monds, consulting engineers and contractors, Toronto; Capt. and Adjt., E. D. Toye, Storekeeper, Eastern Lines, Canadian Northern Ry., Toronto; Quartermaster, Capt. E. P. Muntz, B.A.Sc., Welland Canal staff; Paymaster, Capt. H. G. Henson, B.A.Sc., McGill University; Medical Officer, Capt. C. P. Fenwick; Chaplain, Capt. E. F. Church; Transport Officer, Mechanical and Horse Transport, Lieut. G. O. Fleming, Toronto Ry.; Officer in charge Technical Stores and Equipment, Lieut. L. McD. Fleming, formerly private secretary to Sir George Bury, Vice President, C.P.R.; Veterinary Officer, Capt. T. R. R. Hogan.

A Company.—Officer commanding, Major J. B. Heron, Division Engineer, Canadian Northern Ry.; 2nd in command, Capt. G. B. Little, contractor, Canadian Northern Ry.; Lieutenants, G. A. Butler, Division Engineer, National Transcontinental Ry.; C. P. VanNorman, Engineer, Toronto and York Radial Ry.; F. G. Pusey, engineer and contractor; W. J. Wright, civil engineer.

B Company.—Officer commanding, Major A. R. Ketterson, Assistant Bridge Engineer, C.P.R.; 2nd in command, Capt. H.

B. Muckleston, Assistant Chief Engineer, Natural Resources Department, C.P.R., Calgary; Lieutenants, G. H. Pethick, engineer and contractor; F. A. R. McNair, Superintendent, Toronto Works Department; J. A. Hamilton, Bridge and Building Master, C.P.R.; H. J. Black, Resident Engineer, C.P.R.

C Company.—Officer commanding, Major Holland, Division Engineer, National Transcontinental Ry.; 2nd in command, Capt. L. B. Allan, Assistant Engineer, City Works Department, Toronto; Lieutenants, W. J. Norman, Resident Engineer, C.P.R.; R. F. Francis, structural contractor; E. H. Jupp, civil engineer and contractor; O. P. Hertzberg, Engineering Department, C.P.R.

D Company.—Officer commanding, Major F. G. Cross, Inspecting Engineer, Natural Resources Dept., C.P.R.; 2nd in command, Capt. A. T. MacDonald, Resident Engineer, C.P.R.; Lieutenants, C. M. Saul, civil engineer; H. M. Jupp, engineer and contractor; H. R. McQueen, civil engineer; H. L. Gilmour, civil engineer; R. E. Lindsay, civil engineer.

The battalion's total strength is 1,062, including 6 warrant officers, 52 staff sergeants and sergeants, 89 corporals, and 40 lance-corporals, making a total strength of 1,065 all told. The transport consists of 10 riding horses, 100 teams of mules, 2 motor cars, 8 light motor lorries, 9 heavy motor lorries, 4 field kitchens, 4 water carts, etc. The equipment consists of practically the same articles that would be used in Canada under peace conditions. Each company and headquarters is furnished with first class engineering and surveying equipment, and each carries one surveyor with the regular survey party. Tools comprise practically everything that is necessary in building a road bed, culverts, bridges and buildings and the tracklaying and ballasting of a railway, and the size of the outfit can be judged from the fact that it took three train loads, totalling 130 cars to move the battalion from its former location in France to its present one. The battalion's headquarters staff is quartered, and move about in railway cars that have been fitted up specially for the purpose. These comprise an office car for the officer commanding and the second in command; orderly room car, in which the battalion's regular business, including preparation of plans and reports, etc., is carried on; tool car, messing car, cooking car, and two sleeping cars. The battalion also carries with it a pile driving apparatus, which was built in France, and occupies three cars. The majority of the men live in tents, but comfortable huts are being acquired to carry about with the battalion when conditions permit. They are collapsible and are easily taken down and set up again.

When the battalion first arrived in

France it was put on to double tracking of a then existing standard gauge line, which it double tracked for 8 miles, and station yards and terminals were doubled in capacity. In addition to the laying of track, putting in switches, ballasting, etc., the men moved 34,000 cu. yd. of earth, and the whole work was done in 28 days, which would probably compare favorably with similar work done in peace times in Canada. There was rather a novel experience on this work, in connection with putting in a water supply, which had been under consideration for months. Water was being hauled in in railway tanks and dumped into a reservoir, and on several occasions the consumption was such that the reservoir was nearly emptied before a further supply was brought in. A "push" was contemplated at the time, and it was deemed of the utmost importance that a safe and sufficient water supply be put in. Surveys were quickly made by members of the battalion, and it was found necessary to lay 30,000 ft. of 6 in. pipe line, and to pump the water against a head of nearly 300 ft. The pumps and other material were quickly secured and the excavation for the laying of the mains and the elevated water tanks were started at once. It was explained to the men that the work must be completed in less than two weeks time, and notwithstanding the terrible weather encountered, the system was in operation on the tenth day.

From the above mentioned work and location the battalion was suddenly moved on to light railways on a portion of the western front. Two weeks afterward it took over a portion of the French area, which was further augmented at a later date, and during last winter the battalion handled not only the maintenance of all the light railways in the Army, but did all the construction on the forward lines, some of which ran well in advance of the field guns. The light railway handled in the area referred to constituted more than half of the light railways on the western front at the time. Six light railway construction and maintenance companies of 250 men each, were organized and worked with the battalion, under its instructions on this work.

The importance of light railways and the difficulties of maintenance and construction, should not be underestimated. Some of them are built in summer when the ground is dry, and when it is possible to operate them without ballast, and of course when winter comes on, the maintenance is a very big matter, the battalion's experience last winter being, that in some cases it took 20 men per mile, which is very large when it is considered that two or three men per mile will maintain standard gauge railways in Canada. For ballast, brick from ruined towns and villages is hauled in and

tamped underneath the steel ties, and where ballast is not obtainable, it is necessary to salvage boards, pieces of planks, sheets of galvanized iron, or whatever is available, to be laid longitudinally under the track to keep it from sinking into the mud, so that operations can be carried on and rations and munitions carried up to the men at the front. A good deal of not only construction but maintenance had to be done at times when weather conditions would not permit the enemy's viewing the battalion, otherwise heavy casualties would have resulted. This necessitated the doing of considerable work at night, and the choosing of dull and foggy days, which were not uncommon, for the rest. The lines of course were built as far as possible so as not to be under observation, but could not always be done.

When lines were taken over from the French, in order to keep things going, it was necessary for the battalion, not only to handle maintenance and construction, but operation also. The operation was very novel and pleasing to the men, and the locomotive men and firemen, fitters, etc., were brought into play. This was their work, and they were right at home again. The battalion was able to furnish 25 locomotive men immediately.

Last spring, when the German retreat began, the battalion was at once taken off the light railways and put on to standard gauge ones. Surveys were made quickly and the first 11 miles connecting up with a well known city which had been blown to pieces by the Huns before retiring, was put in and operated on the fourteenth day. The battalion had a good many trains off the track during construction, on account of the mud, shell holes, etc., but fortunately the line has been doing good service ever since. Four days after it was handed over for operation, it was munitioning and feeding 80,000 men. The battalion was very short of equipment on this work, and notwithstanding the fact that it had only 6 spike mauls of the regular pattern to put in the spikes, an average of a mile a day, including grading and track laying, was maintained. The rails and ties had to be man handled. The battalion had on this work, attached to it for labor, two brigades, consisting of the flower of the British Army, including many titled officers. One of them, an Earl, was called by the rest of the officers "Lizzie," and as a matter of fact they all had nicknames. The spirit of these officers was splendid.

On standard gauge work in that area last spring the battalion built altogether about 60 miles of track, the larger portion of which is double tracked, and the line was of such importance that it was ballasted with crushed rock. A large volume of traffic is being carried over it. It was blown up in one or two places by the enemy during construction, but quickly repaired without casualties. This line was carried so close to the Hindenburg line that the Army command deemed it wise to discontinue the work, which the men of the battalion were only too anxious at the time to carry on.

The battalion is now in a new area, and on a very agreeable piece of work, where its experiences will not be quite so strenuous as they were at a previous location. Since spring the battalion's equipment has been brought up to what it should be, and it is now in a position to do good work. Without the use of an American track laying machine the battalion accomplished a mile and three-quarters of standard gauge track laying in a single day.

Transportation Appointments Throughout Canada.

Canadian Northern Ry.—G. A. KEELER, heretofore Manager, Prince Edward Hotel, Brandon, Man., has been appointed Manager, Prince Arthur Hotel, Port Arthur, Ont., vice J. F. Harvey, resigned.

H. MILNES has been appointed Service Inspector, Sleeping, Dining and Parlor Car Department, Western Lines, Winnipeg.

P. K. HUNT, heretofore Assistant Manager, Chateau Frontenac, Quebec, Que., has been appointed Manager, Prince Edward Hotel, Brandon, Man., vice G. A. Keeler, transferred.

L. E. AYER, heretofore Commercial Agent, St. Louis, Mo., has been appointed General Agent there, with supervision of both passenger and freight matters.

Canadian Pacific Ocean Services, Ltd.—H. F. BRADLEY, heretofore Passenger

Jaw, Sask., vice D. England.

S. F. PIERCE, heretofore acting Manager, Royal Alexandra Hotel, Winnipeg, has been appointed Manager, Hotel Paliser, Calgary, Alta., vice E. H. Godwin, resigned.

F. B. MacSWAIN, heretofore storeman, Ogden, Alta., has been appointed storekeeper, Calgary West, Alta., vice G. F. Rosengren, transferred.

G. F. ROSENGREN, heretofore Storekeeper, Calgary West, Alta., has been appointed Storekeeper, Lethbridge, Alta., vice N. C. Stibbs, transferred.

N. C. STIBBS, heretofore Storekeeper, Lethbridge, Alta., has been appointed Storekeeper, Nelson, B.C., vice D. S. Schofield, transferred.

D. S. SCHOFIELD, heretofore Storekeeper, Nelson, B.C., has been appointed Storekeeper, Revelstoke, B.C., vice T. W. Madden, transferred.

T. W. MADDEN, heretofore Storekeeper, Revelstoke, B.C., has been appointed Storekeeper, Coquitlam, B.C.

Grand Trunk Ry.—H. G. KELLEY, heretofore Vice President (Transportation, Maintenance and Construction), has been elected President, vice E. J. Chamberlin, resigned. Office, Montreal.

G. C. JONES, heretofore Vice President and General Manager, Central Vermont Ry., St. Albans, Vt., has been appointed Assistant to President, G.T.R. Office, Toronto.

U. E. GILLEN, heretofore General Superintendent, Western Lines, Chicago, Ill., has been appointed Vice President, in charge of operation. Office, Montreal.

W. D. ROBB, heretofore Superintendent of Motive Power, has been appointed Vice President, in charge of motive power, car equipment and machinery. Office, Montreal.

O. W. DUFF, heretofore dispatcher, has been appointed Chief Dispatcher, St. Thomas, Ont., vice J. A. McLardy, resigned.

Grand Trunk Pacific Ry.—H. G. KELLEY, heretofore Vice President (Transportation, Maintenance and Construction), G.T.R., who has been elected President, G.T.R., vice E. J. Chamberlin, resigned, has also been elected President, G.T.P.R. Office, Montreal.

W. P. HINTON, heretofore Traffic Manager, has been appointed Vice President, and General Manager, G.T.P.R. and Grand Trunk Pacific Steamship Co., vice Morley Donaldson, resigned on account of ill health. Office, Winnipeg.

H. B. DUFIEF has been appointed Assistant to Solicitor, vice H. Wismer, resigned and enlisted in the United States Signal Enlisted Reserve Corps. Office, Winnipeg.

Kettle Valley Ry.—O. E. FISHER, heretofore Auditor-Traffic Manager and Superintendent, has been appointed Comptroller-Traffic Manager. Office, Penticton, B.C.

W. J. MULHERN has been appointed General Superintendent. Office, Penticton, B.C.

A. A. SMITH has been appointed Superintendent, vice O. E. Fisher, Office, Penticton, B.C.

New York Central Rd., West Shore Rd.—JOSEPH W. HICKSON, heretofore Contracting Freight Agent, Toronto, has been appointed General Canadian Freight Agent, in charge of Canadian traffic west of Sharbot Lake and Kingston, Ont., vice W. A. Wilson, retired under the pension system. Office, Toronto.

W. P. Hinton
Vice President and General Manager, Grand Trunk Pacific Railway and Grand Trunk Pacific Coast Steamship Co.

Manager, Allan Line Steamship Co., Montreal, has been appointed Assistant General Passenger Agent, Trans-Pacific Lines, C.P.O.S. Office, Montreal.

A. G. BALCER, heretofore in Assistant Manager's office, has been appointed Freight Claims Agent, in charge of loss and damage claims in connection with cargoes carried on the company's vessels. Office, Montreal.

Canadian Pacific Ry.—B. A. NEALE, heretofore accountant, Lake Louise, Alta., is reported to have been appointed Assistant Manager, Chateau Frontenac, Quebec, Que., vice P. K. Hunt.

A. MENARY has been appointed Yardmaster, Farnham, Que.

A. L. DUBOIS has been appointed Passenger Department representative, French River, Ont., to Nov. 30, to look after the hunter traffic to that district.

J. A. DeWOLFE, heretofore chief clerk to Vice President and General Manager, Western Lines, Winnipeg, has been appointed Terminal Trainmaster, Moose

The Dominion Government's Policy Respecting the Canadian Northern and Grand Trunk Pacific Railways.

The Finance Minister announced in the House of Commons, Aug. 1, that the government had decided to make a demand loan of \$7,500,000 to the Grand Trunk Pacific Ry. Co., to meet the deficit on operating account, and for betterments and rolling stock, the same to be secured by mortgage and to bear interest at 6%. He said that the government would take power to constitute the G.T.P.R. board of directors as it might see fit and that he looked forward to the government acquiring the line in the future. The G.T.R. would not be released from its obligations in respect to the G.T.P.R.

In regard to the Canadian Northern Ry., he said that the government already held \$40,000,000 of the capital stock, and that it proposed to acquire the remaining \$60,000,000 for the Dominion, making it the absolute owner of the C.N.R. system, including its many constituent and subsidiary railway, express, transfer, elevator, steamship, telegraph and other companies and giving the government entire control of the company's system from Nova Scotia to British Columbia. He gave notice of the following resolution to be moved in committee of the whole house:

"Resolved, that it is expedient to provide: That His Majesty may acquire on such terms and conditions satisfactory to the Governor in Council as may be set out in the agreement to be made with the owners and pledgees of not less than five-sixths thereof, and for a price to be determined as hereinafter provided, the 600,000 shares of capital stock of the Canadian Northern Ry. Co. (par value \$60,000,000), not now held by the Minister of Finance, in trust for His Majesty.

"That the Governor in Council shall appoint one arbitrator, the said owners and pledgees shall appoint another, and the two so appointed shall appoint a third, or failing agreement as to such appointment, the third arbitrator shall be appointed by the Senior Judge of the Exchequer Court.

"The said arbitrators shall determine the value of the said 600,000 shares as of the date of the said agreement and the said arbitrators shall proceed in a summary way and may apply their own judgment in determining such value and may receive with respect thereto, such reports and statements authenticated in such way as they may decide and such evidence as they may deem necessary or helpful, examine witnesses under oath and hear the parties by counsel or representatives and that the unanimous determination of the arbitrators shall be final, but should the determination not be unanimous an appeal from such determination shall lie to the Supreme Court of Canada on behalf of the Governor in Council, or of the owners or pledgees, upon any question of law or fact, such appeal to be made within 30 days from the rendering of the determination.

"That the amount of the value so determined shall be paid out of the Consolidated Revenue Fund, or otherwise secured in accordance with the terms of the said agreement.

"That upon the making of said agreement, at least five-sixths of the said 600,000 shares shall be transferred to the Minister of Finance in trust for His Majesty, and if there be any of said 600,000 shares not transferred as aforesaid, the Governor in Council may declare said

shares to be the property of the Minister of Finance in trust for His Majesty, and the same shall thereupon become the property of His Majesty and shall be paid for pro rata with the shares so transferred.

"That so soon as five-sixths of said shares has been transferred as aforesaid, the Governor in Council may assist the Canadian Northern Ry. Co., or any company included in the Canadian Northern Ry. System, in paying and settling any indebtedness of such company or postponing the payment thereof on such terms as may be agreed upon, and for such purposes may make advances out of the Consolidated Revenue Fund, may guarantee payment in whole or in part, and may give the obligations or securities of the government in connection therewith.

"That the Canadian Northern Ry. Co., and each company included in the Canadian Northern Ry. System, shall from time to time do such acts and things, make and issue such agreements, obligations and securities in connection with the payment or settlement or postponement of payment of the said claim as the Minister of Finance may require.

"That the necessary qualification shares for directors may be transferred to or allowed to remain in their names by the Minister of Finance on such conditions as he may determine."

After considerable debate, the resolution was agreed to on Aug. 9, and the Finance Minister at once introduced a bill providing for carrying out its terms. When the motion for the bill's second reading was under consideration, Hon. G. P. Graham, ex Minister of Railways, moved on Aug. 14, an amendment as follows:

"Whereas this Parliament was induced to guarantee the securities of the Canadian Northern Ry. for \$45,000,000 on the representation that with that amount the said railway could be completed and operated without further aid from Parliament, which arrangement is contained in chap. 20 of 4-5 George V. And whereas by sec. 24 of the said act it is enacted as follows: 'If authorized by the Parliament of Canada, the Governor in Council may on such terms and conditions (if any) as Parliament may prescribe at any time while any event of default shall exist and be continuing, by order declare the equity of redemption of the Canadian Northern Co. and of all other persons whomsoever in the mortgaged premises to be foreclosed, and thereupon the equity of redemption of the Canadian Northern (and of such other persons) in the mortgaged premises and every part thereof shall be and become absolutely barred and foreclosed, and the same shall thereupon be vested in His Majesty in right of the Dominion of Canada, any statutory enactment or any rule of law or equity to the contrary notwithstanding. And whereas the Minister of Finance in introducing this measure stated that the company is unable to pay its underlying interest charges and to continue the operation of the road. And whereas the report of the commissioners appointed by the present government to investigate and report upon the conditions of the Canadian Northern Ry. states that there is no value, either actual or potential, attached to the capital stock of the C.N.R. Co. It is therefore resolved that in the

opinion of this house, Parliament should proceed to take over the said railway for the benefit of the people of Canada under the said provision of the said act, and that the capital stock of the said C.N.R. Co. should be considered in the said foreclosure order as possessing no value and that nothing should be paid therefor."

This amendment was negatived on Aug. 16 by a vote of 67 to 41, the second reading was carried by the same vote reversed, and the bill was subsequently taken up in committee of the whole, the debate continuing until Aug. 29, when the second reading was carried by the application of closure by a majority of 27.

During its passage through the house the bill was amended in several respects, and it may, of course, be further amended before being finally passed by the Senate.

The Daylight Saving Proposal.

The bill introduced into the House of Commons to provide for the time in Canada being in advance of the solar mean time during the summer months, commonly referred to as the Daylight Saving Bill, has been dropped for the present session. While the measure was introduced early in the session it did not come up for a second reading until July 23. The full text of the measure was given in Canadian Railway and Marine World for July.

The Minister of Trade and Commerce, who had charge of the bill, said in part: "Daylight saving is a somewhat new thing in most countries and absolutely new, on a national scale, in Canada. The arguments in favor of daylight saving during the summer months are based upon a good many considerations. The primary consideration is that of economy. The substitution of an hour of early daylight, which may be used instead of an hour of artificial light, naturally lends itself towards economy, particularly in the matter of lighting, and in the use of coal for the manufacture of gas, and of electric light. Outside of these reasons of an economic kind, there are many collateral considerations, which, though not financial, are perhaps more important." He then reviewed what had been done in other countries since daylight saving had been first mooted in 1908, as shown by the report presented by a Committee of the Imperial House of Commons in 1916. The summer time act was now in its second year of operation in the United Kingdom. The operation of this proposal in Canada had been in restricted areas, consequently its benefits could not have full force and effect. There were, however, strong testimonies of its good effect during 1916. To be really effective it must be adopted nationally, and it would be better if it would be put in operation in Canada contemporaneously with a similar measure in the U.S. In Canada a very thorough enquiry was made, at which the railway companies were represented. He read the following letter from Sir George Bury, of the Canadian Pacific Ry.

"There may be various views on the advisability of daylight saving, but there is one point on which there is no diversity of opinion, and that is if daylight saving is to be successful it must be a measure passed by the government at Ottawa, which would require that all clocks in the

Dominion be set ahead one hour at a stated time in the early spring, and set back an hour at a stated time in the fall. The daylight saving scheme has been tried in many localities, and the main reason for its failure was entirely due to it not having been universally adopted all over

Canada. As I see it, if the people of Canada as a whole wish daylight saving, it should be adopted; and so far as the railways are concerned, I believe they would gladly support it. If it were made universal in Canada, it could not, in any way, embarrass train operation."

Canadian Pacific Ry. Construction, Betterments, Etc.

New Brunswick District.—An exceptionally heavy thunderstorm on July 30 did considerable damage to the C.P.R. transcontinental line through Maine. As a result of the floods consequent, several embankments between the Quebec boundary and just east of Brownville Jct., were washed away, leaving the ties and rails suspended in some cases. At 25 miles east of Megantic, between Holeb and Jackman, Me., where 100 ft. of embankment which had been carried out by a flood on June 18, was under repair, the new work was carried away, with the addition of 50 ft more of the old embankment. At other points the sections of the embankment washed clean out were 20, 25, 50 and 60 ft. respectively and from 15 to 25 ft. in depth. A smaller amount of damage was done at other points of the 70 miles included in the area covered by the flood. No accidents resulted, but traffic had to be diverted while temporary repairs were made. Through traffic was resumed Aug. 4.

Northern Colonization Ry.—The Dominion Parliament has extended for five years the time within which to build the projected line from Labelle, westerly to Rapide de L'Orignal, now called Mont Laurier, thence westerly to Timiskaming Lake, Que. The railway has been built by the C.P.R. from Labelle to Mont Laurier, 57 miles.

Interprovincial and James Bay Ry.—The Dominion Parliament has extended for five years the time within which to build this projected line from Lumsdens Mills, on the C.P.R. line from Mattawa into the Kippawa Lakes district, to Des Quinze River, Que. The company is authorized to sell or lease its line to the C.P.R.

Ontario District.—The company, according to a press report, contemplates adding a number of sidings in the yard at Cobourg, Ont.

The second track construction between Leaside Jct. and North Toronto consists, we are officially advised, of building a second track between Leaside Jct. and North Toronto for the main line, and a third track over Reservoir ravine to form a switching lead to the yard. The switching lead will be laid on the location of the existing track, and the two new main lines will be on the north side. The old steel trestles over both ravines will be removed entirely and will be replaced by reinforced concrete structures. During construction the traffic will be carried over temporary trestles which are being erected. The contract for the erection of the bridge 1.8, at Reservoir ravine, has been let to Wells & Gray, Toronto, and that for bridge 0.9, near Leaside Jct., to the Dominion Bridge Co.

Manitoba District.—Application is being made to the Public Works Department, Ottawa, for approval of plans of a raft or float proposed to be constructed by the company in McKellar River, Fort William, Ont., for the protection of the north pier of the railway bridge there.

Saskatchewan District.—The Board of Railway Commissioners has authorized the company to build a spur track to

serve the Canada West Electric Co.'s warehouse at Regina.

Grant Hail, Vice President and General Manager, Western Lines, accompanied by J. G. Sullivan, Chief Engineer, made a trip of inspection recently through the country south of the Weyburn-Lethbridge line in connection with a projected extension there. The Saskatchewan Railways Department is desirous of having a section of the country beyond the Frenchman River given a railway connection and G. Spence, M.L.A., accompanied the officials on the trip.

Alberta District.—The distance between Weyburn, Sask., and Lethbridge, Alta., when the new line is finally completed between these points will be 455.8 miles, not 55.8 miles as stated in our last issue on pg. 309, owing to a compositor's mistake which was unfortunately overlooked in proof reading.

A contract is reported to have been let to Thomas, Jamieson & McKenzie Co., for laying out an additional stockyard at Calgary, at an estimated cost of \$75,000. In connection with this work the city council has under consideration the company's application to lay a spur track across Burns Ave., to increase the railway facilities at the yard.

Application was made to the Edmonton City Council, Aug. 14, for authority to lay a spur track crossing 111th St., and was referred to the City Commissioner for consideration.

British Columbia District.—A contract is reported to have been let to S. E. Junkins & Co. for salvaging the track material and snow sheds on the abandoned section of the line in Rogers Pass between Courlie and Stoney Creek, about 18 miles. This piece of line has been abandoned since the completion of the Connaught Tunnel. The old right of way will, it is said, be converted into a tourist highway in time for the tourist season of 1918.

The Kaslo and Sloean Ry. was built under a charter passed by the British Columbia Legislature in 1892. It has been operated for a considerable period by the C.P.R., and the Dominion Parliament has now declared it a work for the general advantage of Canada, and has given the company power to amalgamate with or sell its line to the C.P.R. The lines authorized to be built are: From Kaslo along the Kaslo River and its north fork to Fish and Bear Lakes, and thence to the mines in the vicinity of Carpenter and Sandon Lakes; a branch line from the confluence of the north and south forks of the Kaslo River to Montezuma mining camp; and from the mouth of Bear Creek to Jardine's mining camp. The line has been built from Kaslo to Sloean, 29 miles. (Aug. pg. 309.)

WANTED.—Complete sets of 12 copies of Canadian Railway and Marine World (Railway and Shipping World) for years 1904, 1905, and 1906. If you have these for sale write Box 3780 Canadian Railway and Marine World, Toronto, stating price.

Traffic Orders by Board of Railway Commissioners.

Penalty for Misdescription of Freight.

General order 200. July 26. Re application of C.P.R. under sec 29 of the Railway Act, for an order amending order 3249, dated June 29, 1907, approving Canadian Freight Classification 13; it appearing to the board that the clause objected to does not provide definitely the penalty recoverable under the order—it is ordered that order 3249 be amended by striking out the clause which reads: "That any person or company violating the provisions of sec. 400, sub-sec. 1, of the Railway Act, shall, in addition to the regular toll, be liable to pay to the company a further toll not exceeding 50% of the regular charge." and substituting therefor the following clause, viz.: "That any person or company violating the provisions of sec. 400, sub-sec. 1, of the Railway Act or any amendment thereto, shall, in addition to the regular toll, be liable to pay the company a further toll of 50% of such regular charge."

Increased Rates on Grain and Grain Products.

General order 202. Aug. 2. Re proposed increased rates on grain and grain products in the portion of Canada east of and including Fort William, which were included in, and were subsequently withdrawn by the applicants from, the application of the railway companies for a general increase in freight rates in eastern Canada, known as the Eastern Rates Case judgment and general order in which issued June 19, 1916; the said application with respect to grain and grain products having been renewed by tariffs filed by the companies and suspended by order 26172, June 5, 1917: Upon hearing the application at Ottawa, June 1, in the presence of counsel for Canadian Pacific, Grand Trunk, and Canadian Northern Railways, and the report and recommendations of the Chief Traffic Officer, judgment, dated July 17, was delivered by the Assistant Chief Commissioner, and concurred in by Commissioner Goodeve, a certified copy of it being attached hereto. It is ordered that order 26172 be rescinded, and the tariffs enumerated therein are hereby authorized, subject to the changes to be made therein as set forth in the said judgment dated July 17, which is made part of this order.

Transportation of Dangerous Articles Other Than Explosives.

General order 203. Aug. 11. Re application of Canadian Freight Association, for approval of regulations for transportation of dangerous articles other than explosives. It is ordered that the proposed regulations, as amended, marked A and certified by the Board's Secretary, on file with the board, be authorized, with the following exceptions:

(1) That all the restrictions pertaining to "Oil, described as 'oil,' or 'oil, n.o.s., or 'petroleum oil,' or 'petroleum oil n.o.s.' as described in the list at page 8 of the regulations, be struck out, except that paragraph 1867 (c) be amended to provide for a certificate on the shipping order, over the signature of the shipper, or of his duly authorized agent, in the following terms: "This is to certify that the above mentioned barrels contain . . . oil only, and are in fit and proper condition for safe transportation."

(2) That the barrels at present in use for the carriage of wood alcohol, when labelled as required by the regulation pertaining thereto, be accepted for transportation, provided that the shipping or-

der bear a certificate over the signature of the shipper, or of his duly authorized agent, in the following terms: "This is to certify that the above mentioned barrels contain wood alcohol only, and are in fit and proper condition for safe transportation."

(3) That paragraph 1892 of the regulations be amended to provide that when the necessary supplementary stripping to the car lining is furnished by the shipper, he shall be allowed therefor \$2.50 a car.

(4) That all reference to paints be eliminated from the regulations.

Transportation of Explosives.

General order 204. Aug. 11. Re application of Canadian Freight Association for approval of revised regulations for the transportation of explosives: It is ordered that the said revised regulations as amended and filed by letter dated Dec. 16, 1916, from the Chairman, Canadian Freight Association, on file with the board and certified by the board's Secretary be authorized for the observance of the railway companies which accept explosives for carriage. It is further ordered that general orders 100, Jan. 16, 1913, and 105, May 22, 1913, be rescinded.

Cars Partially Loaded with Canned Goods or Live Stock.

26365. July 23. Re stopover charge for completion of part carloads of canned goods in transit. Whereas certain railway companies have published and filed schedules effective during the present month, showing an increased charge for stopping cars containing partial loads of canned goods for completion to full

carloads in transit, notwithstanding that order 25527, Oct. 13th, 1916, has not been rescinded. It is ordered that the increased charges for stopping cars containing partial loads of canned goods or livestock for completion to full carloads in transit, contained in the following schedules of the carriers named, be disallowed, and the pre-existing charges for the said services are hereby continued from and including July 30 until further ordered.

Transfer Tracks at Rosetown.

26386. July 31. Re application of boards of trade of Moose Jaw and Rosetown, Sask., for an order directing the Canadian Northern and Canadian Pacific Railways to provide transfer facilities between their respective railways at Rosetown, Sask. It is ordered that the Canadian Northern be directed to construct a transfer track between its railway and the C.P.R. at Rosetown; detail plans to be filed within 30 days from date; the work to be completed within 60 days from the approval of the plans; and the cost of constructing the track to be apportioned equally between the Canadian Northern and the C.P.R.

Interchange Tracks at Port Hope.

26400. Aug. 1. Re application of Town of Port Hope, Ont., for an order requiring the interchange of traffic between the Canadian Pacific and Grand Trunk Railways there. It is ordered that the C. P. R. be directed, at its own expense, to construct interchange tracks between its railway and the G.T.R. at Port Hope, detail plans of the tracks to be submitted within 30 days from date for the board's approval and the track to be completed within three months after the approval of the plans.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

26322. July 14.—Authorizing C.P.R. to divert road allowance at grade across its tracks at mile 2.5, Kerrobert Subdivision, Sask.

26323. July 13.—Amending order 1330, July 25, 1906, re crossing of G.T.R. by Napierville Jct. Ry.

26324. July 14.—Relieving Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) from providing further protection at crossing at mile-age 150, near Vancouver, B.C.

26325. July 18.—Ordering Montreal & Southern Counties Ry. to rearrange stops by certain trains at Springfield Park, Que.

26326. July 17.—Approving C.P.R. plan showing clearances of outside track to Pier D, at north end of Granville St., Vancouver, B.C.

26327. July 18.—Ordering C.P.R. to protect crossing of Rockland Ave., Outremont, Que., by gates operated from elevated tower, to be operated day and night.

26328. July 17.—Declaring that excess charges on shipment of tough wheat (G.T.P. 312409), shipped to Keewatin account of G.T.P. embargo at Fort William, amounted to 2½¢ per 100 lb.; and authorizing Grand Trunk Pacific Ry. to rebate to Farmers Club Grain Co., Winnipeg, the excess amount.

26329. July 19.—Ordering that Canadian Northern Ry. station at Birch Hills, Sask., remain as at present located, platform to be extended 50 ft. west.

26330. July 16.—Approving agreement between Bell Telephone Co. and Weedon Telephone Co., June 7.

26331. July 17.—Dismissing application of Village of Fort Qu'Appelle, Sask., for order directing Grand Trunk Pacific Ry. to provide level crossing to connect with Seguin Ave.

26332. July 18.—Authorizing C.P.R. to build extension to spur for Regina Development Syndicate, Ltd., Regina, Sask.

26333. July 17.—Authorizing Town of Pointe Aux Trembles, Que., to carry Sixth Ave. across Canadian Northern Quebec Ry. within town limits.

26334. July 18.—Amending order 25202, July 24, 1916, re Edmonton Radial Ry. crossing of Grand Trunk Pacific Ry. at 27th St., Edmonton, Alta.

26335. July 17.—Ordering that 1/3 of cost of building bridge over Hereward Road, Victoria, B.C., be paid by Esquimalt & Nanaimo Ry., balance by municipality; cost of grading highway and approaches to be paid by municipality.

26336. July 18.—Authorizing C.P.R. to remove spur at mileage 9.0, Arborg Subdivision, Man., at Airdale, and to eliminate station from its tariffs.

26337. July 18.—Approving agreement between Bell Telephone Co. and the Hope Lumber Co.'s telephone system, June 14.

26338. July 19.—Ordering Grand Trunk Pacific Ry. to remove gates between station grounds and town site of Ribstone, Alta.

26339. July 18.—Ordering C.P.R. to repair loading platform at Benalta, and extend it to accommodate 2 cars and for at least 15 ft. clear of buildings; to repair culvert and make approach to station platform and buildings safe, and to build crossing over track west of station from south to Railway Ave.

26340. July 20.—Authorizing Militia Department to build public crossing over C.P.R. 50 ft. east of westerly boundary of Lot 89, Winnipeg, Man., and declaring that leave to move to set aside this order is reserved to C.P.R.

26341. July 20.—Authorizing Canadian Northern Quebec Ry. to build spur for International Mfg. Co., Montreal.

26342. July 20.—Extending to Jan. 1, 1918, time within which Vancouver, Victoria & Eastern Ry. & Navigation Co. shall complete bridge carrying North Road over its line near Sapperton, B.C.

26343. July 20.—Ordering that, for present and until earnings at Ribstone station, Alta., increase and business warrants employment of station agent, railway shall appoint caretaker, who shall have authority to act as grain agent, to see that station is kept clean and heated for passengers on arrival and departure of trains and care for l.c.i. freight and express matter.

26344. July 20.—Authorizing St. John & Quebec Ry. to operate trains over crossing of C.P.R. near mileage 20, Fredericton, N.B., without first stopping; and to operate over crossing, as provided by order 22559, Sept. 17, 1914; trains limited to 15 miles an hour.

26345. July 21.—Authorizing Village of Winnipegosis, Man., to build Jubilee Ave., Third St. and Second St. across Canadian Northern Ry.

26346. July 21.—Authorizing G.T.R. to build two sidings for Steel Co. of Canada, Belleville, Ont.

26347. July 23.—Authorizing C.P.R. to build spur for Toronto Electric Light Co., Toronto.

26348. July 20.—Ordering Canadian Northern Ry. to erect third class station at Birdview, Sask., to be completed by Oct. 31.

26349. July 21.—Authorizing G.T.R. to rebuild

bridge 125 over Potawattami River, Owen Sound, Ont.

26350. July 21.—Relieving C.P.R. from providing further protection at highway 3¼ miles south of St. Jerome, Que.

26351. July 21.—Amending order 24610, Nov. 7, 1916, re crossing over C.P.R. at Ensign, Alta.

26352. July 21.—Authorizing Canadian Northern Ry. to build spur for Fort William Grain Co., Fort William, Ont.

26353. July 16.—Approving agreement between Bell Telephone Co. and Charlevoix & Saguenay Telephone Co., June 26.

26354. July 24.—Authorizing C.P.R. to build two spurs for Britnell & Co., Toronto.

26355. July 24.—Authorizing Canadian Northern Ontario Ry. to build spur for Trenton Cooperage Co., Tudor Tp., Ont.

26356. July 24.—Authorizing G.T.R. to build siding for Office Bureau, Ltd., Whitechurch Tp., Ont.

26357. July 24.—Authorizing British America Nickel Corporation, to connect its spur with C.P.R. in McKim Tp., Ont.

26358. July 24.—Authorizing C.P.R. to build spur for Gunns' Packing Co., Toronto.

26359. July 24.—Authorizing Steel Co. of Canada to build overhead narrow gauge railway on concrete trestles across G.T.R. on north side Lachine Canal.

26360. July 24.—Authorizing C.P.R. to build spurs for Wayagamack Pulp & Paper Co., on Bellerive Island, Que.

26361. July 24.—Authorizing G.T.R. to build siding and spur for Dupont Fabrikoid Co., New Toronto, Ont.

26362. July 24.—Ordering Canadian Northern Ry. to build fourth class station at Legal, Alta.

26363, 26364. July 24.—Approving Bell Telephone Co. agreements with Heath, Head & Grey Telephone Co., May 3, 1915; and Chisholm Tp., Ont., July 6, 1917.

26365.—July 23. Disallowing increased charges for stopping cars containing partial loads of canned goods of livestock for completion to full car loads in transit.

26366. July 3.—Relieving Grand Trunk Pacific Ry. from building highway over Government road allowance in Alberta, as authorized by order 26119, until public requirements demand otherwise.

26367. July 24.—Ordering Edmonton, Dunvegan and British Columbia Ry. to erect station at Donnelly, Alta., plans to be filed for approval.

26368. July 24.—Ordering Alberta Government to pay towards cost of maintaining bridge in n.e. ¼ sec. 34, Tp. 45, Range 21, West of 4th Meridian, \$100 a year, first payment to date from April, 1915, balance of maintenance to be paid by Grand Trunk Pacific Ry.; and that \$700 deposited with Canadian Bank of Commerce at Edmonton, with accrued interest, be paid to G.T.P.R. as provided by order 11823, Sept. 19, 1910.

26369. July 24.—Approving changed location of C.P.R. station at Mara, B.C.

26370. July 25.—Authorizing clearance of rock loading bins to be erected by Grand Trunk Pacific Ry. over Edmonton Cement Co.'s spur in n.w. ¼ sec. 35, Tp. 45, Range 1, West 6th Meridian; knee braces shown at top of diagram to be eliminated; no box cars to be used on siding, and no locomotive allowed to pass by or under east end of bin structure; sign post to be erected at east end of bin structure to this effect.

26371. July 24.—Authorizing C.P.R. to take certain lands in York Tp., Ont., for enlarging its terminals at West Toronto, Ont.

26372. July 26.—Ordering Canadian Northern Ry. to build a station at Kuroki, Sask., to be completed by Sept. 15.

26373. July 24.—Authorizing Town of Kenora, Ont., to remove bridge over Lawrinson's Creek, used for spur for Rat Portage Lumber Co., and operated by C.P.R.

26374. July 27.—Extending to Oct. 1, time within which Edmonton, Dunvegan and British Columbia Ry. shall build siding and station facilities at west switch of branch connection in Sec. 15, Tp. 78, Range 5, west 6th Meridian, Alta., as required under order 25961, March 22.

26375. July 25.—Ordering G.T.R. to widen culvert under its tracks near St. Gregoire Station, Que., to provide opening 40 sq. ft.; Quebec, Montreal and Southern Ry. to provide 24 in. pipe under its tracks at certain points and 30 in. pipe between St. Gregoire station and G.T.R. and change three 15 in. pipes under G.T.R. interchange track to 24 in., work to be done within 60 days

26376. July 27.—Authorizing City of Toronto to build double track electric street railway at grade over Don industrial spur and G.T.R., protection to be settled by Board's engineer.

26377. July 27.—Approving agreement between Bell Telephone Co. and Muskoka River Telephone Co., Sept. 21, 1915.

26378. July 26.—Dismissing application of Great North Western Telegraph Co., C.P.R., and Grand Trunk Pacific Telegraph Co., for order amending order 162, March 30, 1916, approving conditions of telegraph forms used by companies reserving leave for companies to apply for a stated case, for Supreme Court of Canada upon question of law involved.

26379. July 26.—Relieving C.P.R. from speed limitation of 10 miles an hour at highway crossing at mileage 7.67, St. Romuald de Farnham Parish, Que., upon installing improved type of automatic bell, 20¢ of cost to be paid out of railway grade crossing fund.

26380. July 27.—Extending for four months from May 1, time for completing C.P.R. interchange track on Pinnacle St., Belleville, Ont., required under order 25950.

26381. June 20.—Ordering C.P.R. to raise grade of and extend spur to Gibson, McCormick & Irvine Co., Toronto, Ont.

26382. July 26.—Approving agreement between Bell Telephone Co. and Emily Tp., Ont., July 17.

26383. July 28.—Amending order 23169, Jan. 6, 1915, re Canadian Northern Ontario Ry. location through Trenton, Ont.

26384. July 30.—Rescinding order 22200, July 11, 1914, requiring packages containing celluloid to be conspicuously labelled "Celluloid—Inflammable."

26385. July 24.—Ordering Canadian Northern Ry. to install shelter sheds for hogs at Mannville, Lavo, Ranfurly, and Vegreville, Alta., to be completed by Sept. 1, company to dig 25 ft. or bore 40 ft. at Volmer, Alta., to obtain water for use in stock yards.

26386. July 31.—Ordering Canadian Northern Ry. to build transfer track with C.P.R. at Rosetown, Sask., to be completed within 60 days from approval of plans; cost apportioned equally between C.N.R. and C.P.R.

26387. July 26.—Ordering G.T.R. to rebuild crossing under its tracks on Lot 379, Laprairie Parish, Que.

26388. July 26.—Ordering C.P.R. to remove platform and shelter from north to south side of Bolger Creek, Ont., and trestle.

26389. Aug. 1.—Ordering C.P.R. to install its class A2 standard station at Magrath, Alta., to be completed by Sept. 1, 1918

26390. July 26.—Approving revised location of C.P.R. siding between Stations 84-50 and 101, and across Summerhill Ave., at grade in Toronto.

26391. Aug. 1.—Requiring Canadian Northern Ontario Ry. to stop trains on flag at Trenton Jct., Ont.

26392. Aug. 2.—Prohibiting C.P.R. from allowing cars to stand within 125 ft. of centre of Horne Ave., Mission, B.C.; signboard to be erected at point 125 ft. from centre of street, containing notice to trainmen that cars must not be placed between such signboard and Horne Ave.

26393. Aug. 3.—Authorizing C.P.R. to build highway crossing over its line between Lots 8 and 9, Con. 5, Kirkpatrick Tp., Ont.

26394. Aug. 2.—Amending order 26357, July 24, substituting McKim Tp. for Murray Tp. This error was noticed and corrected in our summary before this amending order was issued.

26395. Aug. 3.—Dismissing International Bridge Terminal Co.'s application to build branch line along Front St., Fort Frances, Ont., from junction with Canadian Northern Ry. at Front St. to Shevlin-Clarke Lumber Co.; and to cross or join C.N.R. with its railway lines.

26396. Aug. 3.—Authorizing Niagara, St. Catharines and Toronto Ry. to build spur for Herbert Morris Crane and Hoist Co., Stamford Tp., Ont.

26397. Aug. 2.—Authorizing G.T.R. to build siding for James Bogue, Peterborough, Ont.

26398. Aug. 3.—Approving proposed change of location of C.P.R. station at Carey, Man.

26399. Aug. 3.—Authorizing C.P.R. to build spur for Independent Quarries, Ltd., at Garson, Man.

26400. Aug. 1.—Ordering C.P.R. to build interchange tracks with G.T.R. at Port Hope, Ont.; to be completed within three months after approval of plans which are to be submitted within 30 days from date.

26401. Aug. 3.—Authorizing C.P.R. to build spur and change location of present siding for E. W. Gillett Co., Toronto.

26402. Aug. 3.—Authorizing Canadian Northern Ry. to build highway over its railway between n.w. ¼ sec. 9 and s.w. ¼ sec. 16, Tp. 36, Range 5, West 3rd Meridian, Sask.

26403. Aug. 7.—Authorizing Algoma Central & Hudson Bay Ry. to build branch line at mileage 132.33, main line, in Tp. 28, Range 20, Algoma District, Ont.

26404. Aug. 7.—Relieving G.T.R. from providing further protection at St. Laurent Road crossing, near South Durham, Que.

26405. July 26.—Authorizing Niagara, St. Catharines & Toronto Ry. to cross certain highways in Thorold and highway to Allanburg, Ont.

26406. Aug. 8.—Approving G.T.R. plan of steel superstructure for high level bridge over Trent Canal at Campbellford, Ont.

26407. Aug. 11.—Extending for three months from date time within which C.P.R. to erect fences along both sides of its right of way from Lavant station south to mile 37.

26408. Aug. 10.—Amending order 26371, July 24, re C.P.R. diversion of St. Clair Ave., Toronto.

26409. Aug. 10.—Authorizing Canadian Northern Saskatchewan Ry. to cross certain highways on its Wroxton-Yorkton line.

26410. Aug. 11.—Extending to Nov. 15 time in

which St. Martins Ry. shall complete certain work which St. Martin's Ry. shall complete certain work on bridges on its line.

26411. Aug. 10.—Extending for 30 days time within which C.P.R. is to build flag station at Grant's Crossing, mileage, 50.5, Waltham Branch.

26412. Aug. 11.—Authorizing Grand Trunk Pacific Branch Lines Co. and Canadian Northern Ry. to operate trains over crossing in n.w. ¼ Sec. 18, Tp. 4S, Range 25, west 2nd Meridian, Sask.

26413. Aug. 11.—Authorizing C.P.R. to divert road allowance on eastern boundary of s.e. ¼ Sec. 4, Tp. 7, Range 19, west 4th meridian.

26414. Aug. 11.—Approving rearrangement of interlocking plant at C.P.R. crossing of G.T.R. at Woodstock, Ont.

26415. Aug. 11.—Approving C.P.R. clearances for 300-ton coal hopper track.

26416. Aug. 10.—Approving Northern Pacific Ry. bylaws authorizing A. M. Cleland and H. Blakeley to prepare and issue tariff of tolls.

26417. Aug. 11.—Authorizing C.P.R. to build second passing siding and to rebuild highway bridge across road allowance in Whitby Tp., mileage 76.92, Oshawa Subdivision, Ont.

26418. Aug. 11.—Authorizing C.P.R. to build spur for Constructing & Paving Co., at mileage 8.75, Galt Subdivision, Ont.

26419. Aug. 14.—Approving Central Canada Express Co. bylaw 7 authorizing C. Dowling, General Superintendent, to prepare and issue tariffs.

26420. Aug. 14.—Approving agreement between Bell Telephone Co. and Glengarry Telephone Co., July 30.

26421. Aug. 14.—Authorizing Saskatchewan Government to build highway crossing over C.P.R. in s.e. ¼ Sec. 12, Tp. 15, Range 14, west 3rd meridian.

26422. Aug. 13.—Authorizing Canadian Northern Ontario Ry. to take two portions of block G, Parry Sound, Ont.

26423. Aug. 14.—Prohibiting whistling by C.P.R., G.T.R. and Canadian Northern Ry. locomotives within limits of Brighton, except where necessary.

26424. Aug. 13.—Ordering Brantford & Hamilton Electric Ry. to erect shelter at Mountain Sanatorium.

26425. Aug. 9.—Relieving G.T.R. from providing further protection at blind line crossing near Petrolia, Ont.

26426. Aug. 15.—Rescinding order 26318, July 12, requiring G.T.R. to stop trains 94 and 14 at Oakville.

26427. Aug. 15.—Authorizing C.P.R. to build spur for Great Lakes Dredging Co., at Fort William, Ont.

26428. Aug. 15.—Authorizing Michigan Central Rd. to build spur for Quality Cannery Co., near McGregors station, Ont.

26429. Aug. 15.—Approving plan showing proposed installation of half interlocking plant at crossing of C.P.R. and Hull Electric Ry at St. Hyacinthe St., Beemer, Que.

26430. Aug. 15.—Approving plan and description of proposed protection at bridge over Kaministikwia River, Fort William, Ont.

26431. Aug. 16.—Extending for three months time within which fences to be erected by Kettle Valley Ry under order 25967, March 27, Midway to Penticton, B.C.

26432. Aug. 16.—Approving plan showing proposed location of new G.T.R. station and track changes at Orillia, Ont., and rescinding order 26166, May 30.

26433. Aug. 17.—Extending for 90 days time within which bell may be installed at G.T.R. crossing of Dufferin St., Weston, Ont., as required by order 26105, May 11.

26434. Aug. 17.—Ordering that gates installed at crossing of Lake Shore Road by G.T.R. and C.P.R. at Vaudreuil, Que., be operated by day and night watchmen and rescinding order 22255, July 22.

26435. Aug. 16.—Authorizing Esquimalt & Nanaimo Ry. to build spur for Cameron-Genoa Mills Shipbuilders, Ltd., Victoria, B.C.

26436. Aug. 15.—Approving proposed cancellation by Marconi Wireless Telegraph Co. of requirements of minimum toll as for 10 words on messages between ship and shore filed as supplement to tariff C.R.C. 7.

26437. Aug. 17.—Authorizing C.P.R. to build third track across Clavet, Nelson and McDougall Sts. at grade and under Steven St., Port Arthur, Ont.

26438. Aug. 17.—Authorizing C.P.R. to build spur for R. A. Lister & Co., Winnipeg.

26439, 26440. Aug. 17.—Extending for 90 days time within which gates may be installed at crossing of Victoria St., Thamesville, Ont., by G.T.R., as required by order 26179, and for 60 days time within which bell may be installed at crossing of G.T.R. near Gowanstown, Ont., as required by order 26252.

26441. Aug. 17.—Authorizing G.T.R. to re build bridge crossing public road immediately north of Danville station, Que.

General order 198, July 16.—Granting extension of time until July 1, 1918, to railway companies subject to jurisdiction of board within which to make changes required under general order 128, July 20, 1914, companies to continue present practice of filing with the board monthly reports of progress made in complying with requirements of said order.

General order 199. July 24.—Prescribing regulations for equipment of locomotives with electric headlights, and providing a penalty of \$100 for each failure to comply with requirements.

General order 200. July 26.—Amending order 3249 by striking out clause respecting violation of sec. 400, subsec. 1 of the Railway Act.

General order 201. Aug. 1.—Prescribing Car Demurrage Rules to supersede Canadian Car Service Rules prescribed by order 906 (General order 1), to become effective Aug. 20.

General order 202. Aug. 2.—Rescinding order 26172, June 5, and authorizing tariffs enumerated therein, subject to changes to be made as set forth in judgment, July 17, which is made part of this order.

General order 203. Aug. 11.—Authorizing with certain exceptions proposed regulations for transportation by freight of dangerous articles other than explosives.

General order 204. Aug. 11.—Authorizing observance of railway companies which accept explosives for carriage revised regulations for transportation of explosives as amended, and rescinding general orders 100 and 105.

General order 205. Aug. 15.—Requiring railway companies to stencil inches on the inside walls of cars used in grain traffic in Manitoba, Saskatchewan and Alberta, so as to show the depth of grain loaded; one stencil on each side of each door and 3 or 4 ft. therefrom; all such cars hereafter built to be so stencilled before going into service, and those now in service to be so stencilled from time to time when shopped for repairs.

Canadian Government Railways to be Under Board of Railway Commissioners.

A bill to amend the Government Railways Act has been passed by the House of Commons and was given its second reading in the Senate, Aug. 16. Section 3 provides that certain sections of the Railway Act, as amended and consolidated at the present session, shall apply to the Government Railways, which in section 2 are defined to include "all railways and all property and works in connection therewith owned, leased or in any way controlled by His Majesty in the right of his government of the Dominion of Canada, and all running powers or other rights held or enjoyed by His Majesty over or with respect to any other railway or part thereof." Section 4 provides that notwithstanding anything contained in the present or in the Railway Act no penalty can be imposed on the Crown or the Minister of Railways, and no order of the board requiring any expenditure of money shall have effect until it has been approved by the Governor-in-Council. Section 5 provides that the board may, subject to the approval of the Governor-in-Council, make general rules regulating the practice and procedure to be followed in cases affecting the government of railways. Section 6 repeals all sections of the Government Railways Act of 1906 which are inconsistent with this measure. Section 7 makes provision for the preservation of the rights of His Majesty, given by the Expropriation Act, or by the Exchequer Court Act, or any other general act; preserves the jurisdiction of courts; provides that pending litigation and agreements are not to be affected, and that existing bridges, crossings, etc., are to be maintained until any orders are obtained under the new state of things directing changes. The schedule sets out the various sections of the Railway Act which are applicable to the Government Railways. The measure is to come into force on the proclamation of the Governor-General.

It was explained in the House of Commons that the measure placed the Government Railways under the control of the Board of Railway Commissioners in the same way as other railways with the exception of claims against the railways and the appropriation clauses of the Railway Act. E. M. Macdonald, M.P., claim-

ed that the position was an anomalous one and entirely new in the realm of government ownership and operation of public utilities. Did the Minister mean to say that he had no confidence in himself and his officers that he must have the benefit and advantage of the control of the Board of Railway Commissioners in order to properly operate the railways? In respect of the Intercolonial Ry., which was constituted by virtue of the terms of the British North America Act, the people of the Maritime Provinces should have been consulted. F. B. Carvell, M.P., on the other hand, contended that the bill did not go far enough. The government was operating railways and it should be liable to all the obligations of a railway company. He contended the present operation of the Intercolonial Ry. is political operation, and as long as it is run as a government road I am afraid it will be a political operation. An honorable member says, 'Not necessarily.' Well, there must be a great regeneration in the minds of the people of Canada if you can run a government railway without having it a political affair." Hon. G. P. Graham, formerly Minister of Railways, pointed out that it might as well be taken for granted that the result of the Intercolonial Ry. being put under the Board of Railway Commissioners would be to raise the rates. The Minister of Railways stated that the Intercolonial rates were lower than on other railways, and he hoped and trusted they would not be lowered, as it was hoped to get something for running the road.

Proposed Changes in Freight Bills of Lading.

The Canadian Freight Association has applied to the Board of Railway Commissioners, under sec. 340 of the Railway Act, for an order approving the amendment of the conditions of the forms of bills of lading approved by order 7562, July 15, 1909, by adding to the first paragraph of sec. 6 of the said conditions the following: "Such notice shall be held to have been duly given if deposited in the post office, postage prepaid, addressed to the person to be notified, or to the consignee if no such person be named, at the address stated therein," and for an order varying order 7562 accordingly.

It is stated that the object of the proposed amendment is to remove the doubt whether notice so sent is a sufficient compliance with sec. 6 as it now stands. It is also stated that the practice of railway companies has been to give notice under the said section in the mode suggested, and contends that any other requirement would be unduly expensive and oppressive, and it submits that both as respects the identity and address of the person to be notified the proposal affords a reasonably certain and prompt means of communication.

Railway Lands Patented.—Letters patent were issued during July, in respect of Dominion railways lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acres.
Calgary and Edmonton Ry.	9,610.17
Canadian Northern Ry.	3,441.00
Canadian Pacific Ry.	20,385
Edmonton, Dunvegan and British Columbia Ry.	53.11
Grand Trunk Pacific Ry.	17.95
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	4,630.12
Total	17,772.735

Electric Railway Department

The Ottawa Electric Railway's New Cars.

The Ottawa Electric Ry. Co. has added to its equipment recently 3 semi-convertible, double truck, single end, p.a.y.e. cars of semi-steel construction, similar to its last previous order. The principal dimensions are as follows: Length of body, 33 ft.; length of front vestibule, 4½ ft.; length of rear vestibule, 6½ ft.; length over all, about 45¼ ft.; width of body, 8½ ft.

New Car for Ottawa Electric Railway.

The underframes are of steel; the side sills are composed of a 5 x 3 x ¾ in. L, rivetted to an 18 x ¼ in. plate, forming a plate girder, whose top flange is made of a heavy double beaded bar on the outside and a 4 x 3/16 in. flat bar on the inside, and stiffened over the bolsters with 4 ft. x ¾ in. flat bar about 10 ft. long. The posts are of 2¼ x 3/16 in. steel, fitted with best white ash, and rivetted to the side sills with large gusset plates, also rivetted to the belt rails and wall plates. The belt rails are of 2 x ½ in. round edge steel; the window stools are pressed out of no. 16 gauge steel, pressed to shape and rivetted to the belt rails. The letter boards are of 6 x ¼ in. steel plates, reinforced with plates and angles and rivetted to the side posts. The side panels, between the side sills and the belt rails are of no. 16 steel, and made so that they can be removed easily by taking out a few screws.

The roof is of monitor type, and built of wood, reinforced with steel carlines, and covered with no. 10 duck and painted. The exterior of the car is finished naturally in red cherry, also the sash and doors. All metal trimming in the interior of the car, such as sash locks, lifts, curtain brackets, etc., are of red bronze, highly polished and lacquered; the p.a.y.e. rails, also the window guards, are of solid bronze tubing, with a special heavy wall. The cars are equipped with stationary rattan seats, with lift up cushions, to allow easy cleaning of the car floor. They are also equipped with curtains; buzzer system, with push button on each post; signal bells, alarm gongs, pneumatic sanders, conductors folding seat, also a seat for the motorman. The lighting is the railway company's standard, 3 circuits of 7 lights in series in each circuit, using special lamps, also using a method of automatically lighting front exit as designed by T. Ahearn, President of the railway company, some years ago, and which, owing to its adaptability, has been

made a standard. The cars are also equipped with sanitary hand straps, H-B life guards, Coleman stationary fare boxes, and 3 heavy brass stanchions in the centre of the body of the car, extending from floor to roof, between the longitudinal seats.

Each car is mounted on no. 27 F-E-1 trucks and equipped with 4 Westinghouse 1-1-B-2 motors and 1-K 35 controller, also Westinghouse S-M-E air brake equipment.

The cars were built by Ottawa Car Manufacturing Co.

the first 5 days of July, saved \$3,294.64 and if one-man-cars had been operated over all the system an additional \$1,236.-48 would have been saved.

City Commissioner Graves issued a statement Aug. 1, in which he said: "I wish to direct attention to statements to the effect that I am conniving with the Superintendent of the street railway to juggle the financial report of the railway and thereby bolster up a deficit that would influence the members of the city council in favor of the general operation of one-man-cars. The above statement is absolutely false, as I would never knowingly be guilty of such a practice." He then went on to state that the street railway accounts are audited monthly by chartered accountants; that its finances are at present on as sound a basis as is possible under present day conditions; and that he has nothing whatever to do with its finances, nor with the distribution of the accounts. In conclusion he said: "The railway belongs to the public and it is in the interest of all citizens that this department be able to meet its annual expenditures and not become a burden on the taxpayers of the city. Further, it is at least some achievement that the railway can be operated at its present low fares, when numerous other railways in the United States are applying to utility commissions for permission to increase their rates, and are invariably receiving the consent of such boards to this course."

A special committee of the City Council to investigate the cost of operation of one-man-cars, as well as two-man-cars was appointed as a result of the meeting Aug 6 on the Mayor's casting vote, the appointment being made an amendment to a motion to endorse the one-man-

Operation of One-Man Cars on Calgary Municipal Railway.

The Calgary Municipal Ry. is claimed to be the largest street railway system on the continent with the biggest proportion of one-man cars in operation. Superintendent McCauley is in favor of using one-man-cars entirely on the line, but the

Automatic Lighting Arrangement, Ottawa Electric Ry. Cars.

project is not altogether favorably entertained, and even the use of such cars to a moderate extent does not meet with general approval. The question came up for discussion by the city council Aug. 6, after considerable prior discussion. According to a report made to the Mayor on July 25 by Mr. McCauley, the operation of one-man-cars on the system for

car system. The committee met Aug. 7, appointed Ald. Broatch chairman, and directed that information be tabulated by the City Electrician and the Controller.

Lethbridge Municipal Ry. employes are asking an increase of 22½% in wages, and that men employed on one-man cars be given 5c an hour extra.

The Sandwich, Windsor and Amherstburg Railway's Franchises.

At a public meeting held in Windsor, Ont., recently, called by the joint transportation committee for Windsor and Walkerville, a resolution was passed recommending the councils of the two municipalities to submit bylaws to the people granting an extension of franchise to the company with the right to purchase the entire system at any time during the continuance of the same on giving one year notice. The committee presented a lengthy report, in which it was stated that the company's system is operated under nine different franchises, which will expire as follows: In Windsor and upon the belt line in Walkerville in 1922; franchise in Sandwich in 1931; the franchises for the Windsor & Tecumseh Electric Ry., on Sandwich St., in Windsor, Walkerville and Ford, and on the Walker Road, Walkerville, in 1934. The company claims a perpetual franchise on the line from Sandwich to Amherstburg, and from Askin's Point in Ford to Tecumseh, by virtue of owning the right of way. The question of acquiring the railway and running it as a public ownership enterprise by two, three or more municipalities was dealt with in the report. It was pointed out that legislation might be obtained to give the Essex Border Utilities Commission the necessary power to apply to the Hydro Electric Power Commission of Ontario, which could operate the system for the nine municipalities served. A conference was held with the officers of the railway, and they agreed, if given new franchises until 1931 in Windsor and Walkerville, to build the needed extensions at once and sell to the municipalities at any time, upon one year notice, the entire system at its actual value as fixed by a board of arbitration, the valuation to include no value whatever for the extended, i.e., new, franchises. The board of arbitration would consist of three men, one appointed by the company, one by the municipalities, and the third by the two appointed members. One half of the cost of arbitration would be borne by the company, and the other half by the municipalities. An agreement was reached whereby the municipalities might decline to take over the property of the company at the valuation set by the board of arbitration, but the award would be binding on the company. The company was not disposed to enter into any operating agreement for municipal control or supervision, such as in Cleveland or Chicago.

The committee recommended that the electors be given, as soon as possible, an opportunity to vote on both plans; viz.: (1) That the municipalities of Windsor and Walkerville build the tracks (across Ottawa St. in Walkerville and Erie St. in Windsor) and have them operated at a fair rental, to be determined by the Ontario Railway and Municipal Board, even though the rental does not meet the interest, sinking fund and maintenance charges. (2) That the company be given an extension of franchise to 1931, without franchise values attached, and the right to purchase the entire system at appraised valuation whenever the people wish to purchase, which will be governed largely by market conditions of money, material and labor. In conclusion, the committee said: "If the Ontario Hydro Electric Power Commission is to operate the system for the municipalities we must

wait until after the war, because the Ontario Legislature passed an act in 1916 whereby the commission cannot borrow any money for new undertakings until after the termination of the war. In order to put the two plans before the people the two municipal engineers should ascertain the approximate cost of construction of needed tracks, poles and overhead wires, with the apportionment of such costs between Windsor and Walkerville, and the two solicitors should prepare the necessary franchise and debenture bylaws for submission to the electors."

At a meeting of the Windsor City Council, July 3, it was resolved to submit two questions to the people, the first whether they want to have the electric railways municipally owned, and secondly whether they are willing to grant an extension of the franchise to 1931, subject to conditions. (June, pg. 242; July, pg. 286.)

Calgary Municipal Railway Wages and Working Conditions.

An agreement signed June 22, between the Calgary, Alta., City Commissioners, and the Calgary Municipal Ry. employees provides for the following wages: Per hour, 1st year, 32c; 3rd 6 months, 33c; 4th 6 months, 34c; 5th 6 months, 35c; 6th 6 months, 36c; 7th 6 months, 37c. Five cents an hour additional is to be paid to motor-conductors operating one-man cars. Men operating one-man cars outside the boundaries of Eighth Ave. and Eighth St. West, and Seventeenth Ave. and Second St. East "shall be paid conductor and motorman's rate. Bonus included when not operated within these limits. Five cents an hour extra to be paid motormen when training students. Wages to be paid on the 6th and 21st of each month. Nine hours to constitute a day's work; straight platform rate to be paid for overtime, and time and a half for work on Good Friday, Victoria Day, Dominion Day, civic holiday, Labor Day, Thanksgiving Day, Christmas Day and New Year's Day. Fifty cents to be allowed employes for attending once a month lectures on street car practice. Regular and spare men are to be paid time, from time reporting to time relieved, when called for active duties; spare men to be allowed on hour for each report if not allotted a run or given two hours work at other employment.

Clothing to be supplied by the city to become the property of the men after six months, except as regards overcoats; first year men to pay half the cost of their clothing. Motormen and conductors are to be allowed to select their runs in accordance with their seniority in service, a new working to be posted every three months. Other sections provide for the granting of leave up to three months for men to go harvesting or proving up on homesteads; the recognition of the right to join any labor organization; giving the right to union men and conductors to be represented by a grievance committee, in the same way as non-union employes, for the settlement of grievances by arbitration; and guaranteeing the provision of all modern equipment for the safe and comfortable operation of the

cars. The agreement is to be in force until April 1, 1918, and from year to year thereafter, unless either party gives 30 days notice, prior to April 1, in any year.

Montreal Tramways Mutual Benefit Association.

The report for the year ended April 30 gives the following summary of relief work done during the year:

	1916-17
Members disabled through sickness or injury	1,426
Visits made by physicians to disabled members	567
Consultations given by physicians to disabled members	8,329
Prescriptions issued	6,026
Paid for sickness and injury	\$13,002.60
Paid for medicine	1,927.68
Paid for pensions	1,231.50
Paid for withdrawals	549.82
Paid for death and burial insurance	8,600.02

Twenty members died during the year. The committee reports the appreciation shown by the beneficiaries of deceased members for the prompt payment of the amount due to them for death and burial benefits. Since the formation of the association, to the end of April last, 261 members died, and the association paid in death and burial benefits \$107,509.53. During the year a motorman requested to have his benefits commuted, which was agreed to by the committee.

The committee gratefully acknowledge a special Christmas donation of \$2,500 from the Montreal Tramways Co., making the contributions received from the company \$17,256.56, which amount, added to the fees and dues received from the members, \$16,448.50, and interest received on investments and bank deposits, \$10,239.87, makes a total revenue for the year of \$43,944.93. The expenses being \$35,463.93, leaves a surplus of \$8,476.

The officers are: J. E. Hutcheson, President; Patrick Dubee, Secretary-Treasurer; the other members of the committee being C. Gagnon, E. A. Robert, N. Allard, A. Gaboury, N. Surprenant, A. S. Byrd, A. Morency, R. M. Hannaford, U. Perron, D. E. Blair, O. Morin, Hon. J. L. Perron, K.C., J. J. Gethings.

Winnipeg Electric Railway Co's Position.

Winnipeg press dispatch, Aug. 15:—"The city was astounded at the announcement that for \$100 shares of the Winnipeg Electric Ry., \$36 was bid in Montreal today. This is the same stock for which \$269 a share was actually paid in Toronto in March, 1912, and for which \$268 a share was actually paid in this city in February of that year. The value of the property hinges on the action which the City of Winnipeg may take on the jitney issue. The lowest estimate that is made of the loss which the railway suffers from the jitney competition is \$1,000 a day, or \$300,000 a year. The number of passengers carried by the jitanies is estimated at 20,000 a day, or 500,000 in a year. What the jitanies are doing to the Winnipeg Electric Ry. is indicated by the company's statement for June. For the first time in its history, the receipts were not sufficient to pay operating and fixed charges, where the company before the war made \$150,000 net a month. This year's June deficit was \$11,000. The late Sir Wm. Whyte's fortune was largely in W. E. R. shares, and many leading Winnipeg citizens have large holdings."

New Car for Sherbrooke Railway & Power Co.

The Sherbrooke Ry. & Power Co., Sherbrooke, Que., has added to its equipment, for its Lennoxville line, a semi convertible car, of semi steel construction, 32½ ft. long, 8½ ft. wide, and 8 ft. high inside, with seating accommodation for 32 passengers, and standing room in the aisles and rear for 50 more.

It is mounted on a single truck and equipped with two 101 B motors and resistance. It is equipped with entrance and exit folding doors, and folding step device, the latter comprises a handle staff and swing rocker arm. By pressing on the steps or doors, the doors open automatically; they close by raising the step, or they can be shut by pulling them out from the ends. A whaleback top is especially constructed to prevent snow sticking, and the top is equipped with six stationary ventilators. Eight heaters are

company's property at Gorge Park is an integral part of the system, and a goodly part of the revenue is furnished by visitors and city people who have an inclination for this famous beauty spot. The street railway also reaches many other places of interest, including Caddboro Bay (within a short distance of the terminus of the Uplans line), Fowl Bay, the Willows Beach, Beacon Hill Park, and Esquimalt. There is also an interurban system from Victoria to Deep Bay, 24 miles, running along the whole length of the Saanich peninsula. This system takes in the Dominion Government Observatory, Brentwood Bay, the Dominion Government farm at Bazan Bay, and other points of interest. The round fare is \$1.10. There are two freight trains a day each way. An interesting fact in connection with the city street railway system is that on a 5c fare, with transfer, it is possible to travel 9½ miles, from Esquimalt to the terminus of the Uplans line."

pany's territory is divided into three classes, in order that each division may be charged according to traffic offered and expense of conducting the same. These classes are: Cities; towns connecting the cities; and rural territories.

About a year ago the company asked the Public Service Commission for a general increase on all its lines from a 5c to a 6c fare. After a protracted hearing before the commission and representatives of the various communities served, the company was allowed to advance its fare on certain rural lines to the 6c basis. This was far less than needed and particularly so, since in the intervening period the cost of operation, because of rising prices, had advanced to much higher levels. The events leading up to the present agreement were begun in April last when the company stated its case before the representatives of the communities affected and then went before the Public Service Commission for a new hearing. Meanwhile the representatives

Sherbrooke Railway & Power Co.'s Semi Convertible Car for Lennoxville Line.

mounted under the seats, electric buzzers connect direct to the trolley. The car is equipped with life guard, and has illuminated revolving route signs. It is built of steel, hard pine and red oak and finished in birch, with ceiling of imitation bird's eye maple.

The car can be operated from both ends, as a two-man car, or as a one-man car. When used as a one-man car the rear end is closed, and passengers enter and leave at the front. When used as a two-man car, passengers enter from the rear and alight at the front. The car was designed by the company's Superintendent, F. X. Couture, and built in Sherbrooke under his direction, the approximate cost being \$3,000. It is said the company may build some more as necessity arises.

Electric Railway Service in and Around Victoria, B.C.

The Victoria Times, in a review of Vancouver Island, in connection with the jubilee of Confederation, says: "The British Columbia Electric Ry and its allied industries form one of the big institutions of Vancouver Island." In addition to its electric power and gas enterprises, "the company owns a street railway trackage in the city and immediate suburbs of 41½ miles, 56 cars being operated. The

Electric Railway Fares Advanced in Massachusetts.

After a long and strenuous attempt to secure a raise in fares that would bring it a just and equitable increase in revenue, which it has demonstrated, time and time again, was perfectly justified and absolutely necessary under the changed conditions of operating, the Bay State St. Ry. Co., which has its headquarters in Boston and operates some 950 miles of line, has been authorized by the Massachusetts Public Service Commission to increase its fares on all lines to 6c, with certain adjustments and eliminations of transfers. For the present, in the opinion of the officials this will work out as a more or less satisfactory relief. In accordance with the order there is the proposition of selling in certain city sections and under certain restrictions ticket books at a slightly reduced rate from the straight 6c fare. The arrangement is to be under the plan of a 6 months trial. The order followed an agreement between the company and the communities served and varies somewhat from the company's original request.

There are three outstanding features to the new situation which are generally commendable: (1) the 5c fare as a unit is eliminated. (2) The free transfer is limited principally to cities. (3) The com-

of the communities and the railway company reached an agreement whereby the company would be allowed to give a 6 months trial to an increase in fares from 5c to 6c and, with a few exceptions, pay a cent for transfers between cities and towns. The schedule provides, however, that roads' patrons be allowed to purchase 20 tickets for \$1, which will not be good on Sundays and holidays and Saturday afternoons after 1 p.m. There are other schedules, such as increases in workmen's tickets, and withdrawal of commutation tickets, which will be settled later. It is estimated that the new schedule will result in an increase of about \$800,000 a year.

British Columbia Electric Ry. Investigation.—Adam Shortt of Ottawa, who was appointed a commissioner to make an investigation into the economic and other aspects of the transportation situation in Vancouver, Victoria, and other places in which the British Columbia Electric Ry. operates, began his investigation in Vancouver, July 15. After hearing considerable evidence, inspecting the system, the company's power development plant at Buntzen Lake, and the distributing plant, he went to Victoria, July 27, began his investigations there, and subsequently returned to Vancouver, where on Aug. 13 he recommenced hearing evidence.

Edmonton Municipal Railway Matters.

An Edmonton, Alta., correspondent wrote recently: "During the last year or so, economy of management has done much to lessen the burden of Edmonton's municipal railway, and it is now having the first opportunity for consolidation and getting things on a fair working basis. Last year there was a reduction in the cost of operation and management of about \$16,000, and it is hoped to pursue this policy of economy still further and to make a better showing, even with a dwindling population to contend with. To begin with, jitney competition is no longer a menace to street railway profits. At the last session of the legislature an amendment was secured to the city charter which practically put the jitneys out of business, and in a very short time they were no longer to be seen on the streets.

"Now a trial is to be given to the operation of one-man cars, with the idea of lessening expenses. It is claimed by the railway superintendent that if the whole system was worked by one-man cars that there would be a saving of \$100 a day in wages alone. The idea, however, is somewhat of a venture, as the one-man cars have been tested at Calgary with somewhat uncertain results, for, although the management say they are satisfied, yet there is a demand from a certain section that the old system should be reinstated. At Edmonton the cars have been tried on two or three stub ends of lines, with fair results, and other cars are being fitted for the work and will be tested on main routes. The railway employes have registered an objection to their use, sending a delegation to the commissioners and protesting on the ground that one-man cars are difficult of operation, will give a slow service, and fail to make any appreciable saving of expense.

"On the subject of the zone system, Commissioner Harrison says: 'We are carrying passengers for less than cost and know it. We cannot charge more than the straight 5c fare, and to get over it we must ask for an amendment to the city charter in order to use the zone system and charge for the distance that we carry. Now, for each passenger that we carry we go behind 1c, and by using the zone system we can obviate the great distances over which we now carry without making any revenue. What we have to do is to see how far we can carry passengers for 5c.'

"A straight 5c fare is charged on the railway, the only exceptions being that workmen's tickets, to be used before 8 a.m., are sold 10 for 25c, and school children are sold 12 for 25c. Special cars can be hired at \$5 an hour. The average number of cars in daily service is 32, and the daily bill for motormen and conductors' wages is something like \$460. The city has an agreement with the street railway employes, or rather with the local branch of the Amalgamated Association of Street and Electric Railway Employees of America, and the provisions of this agreement include all the employes of the department. In addition to the operating staff, there is a well organized staff at the barns, and Superintendent Moir says the department is equipped for and able to build its own cars should occasion arise.

"In 1916 the railway revenue was \$524,737.15, and expenditure \$664,334.81, leaving a deficit of \$119,597.66. During April 879,848 passengers were carried,

revenue totalled \$42,015, and there was a surplus over operation of \$2,433.55. Maintenance cost \$5,345 and operation \$26,013. This last was exceptionally heavy, the reason being that the figures include the payment of two damage claims for \$8,336. Otherwise there would have been that much extra surplus over the cost of operation. Capital charges amounted to \$60,875.03, and depreciation to \$2,194.70, and there was a deficit of \$18,636.17 on the whole."

Erection of Wires on Public Highways.

Under sec. 373 of the Railway Act, respecting the erection of wires along public highways, it had been held by the Privy Council that the word "company" therein mentioned, referred solely to a railway company, and that power companies, which were given powers by their special acts, could erect wires along public highways without the consent of municipalities concerned. Another section put certain restrictions on telephone lines, and distinguished between highways in cities, towns and villages, and those elsewhere. The House of Commons committee dealing with the revision of the Railway Act has made a change in this, and has defined a company to mean one with authority to erect wires, etc., for the transmission of electrical energy, etc., but not to include a railway, telegraph or telephone company. In dealing with this matter in the House of Commons, it was referred to as "the grossest piece of class or local legislation ever proposed, much less enacted into law." The House of Commons Railway Committee for many years has been carrying out the general provision of the act, that nothing shall be done in any municipality without the consent of the municipality, and if the parties interested cannot agree, they appeal to the Board of Railway Commissioners, whose decision is final. The changes made were especially aimed at the Toronto Electric Light Co., which is controlled by the Toronto Ry. Co. The change in the definition of the word "company," together with additional change in the section, which declares that the powers of such company are declared to have been so restricted, notwithstanding anything in a company's special act, since Jan. 31, 1907, are the chief points around which discussion centred. In the course of the discussion it was pointed out that the Toronto & Niagara Power Co., the parent company, had sold \$15,000,000 of bonds in England in good faith, and that the change was now practically confiscating the company's rights and reducing the value of the bonds, if not entirely destroying it. A motion to strike out the portion making the law retroactive 10 years was negatived, and the clause as changed in committee stands.

During the discussion of the bill in the Senate committee, the clause which abrogates the right of the Toronto and Niagara Power Co., to distribute electrical energy within the municipality of Toronto, was vigorously attacked by J. M. Beck, a former Attorney General for the State of New York, on behalf of U. S. bondholders of the company, Glyn Osler, K.C., Toronto and A. Geoffrion, K.C., Montreal, for British and Canadian bond holders, and D. L. McCarthy, .C., for the Toronto companies concerned. The argument present-

ed developed the point, that even if the T. & N. P. Co. acquired the Toronto Electric Light Co., which, he said, had not yet been done, the acquirement would be subject to all the franchise rights of the latter company, and therefore the city, which was favoring the proposed legislation, had nothing to fear. If the legislation were passed, the company would practically be put out of business, since the city would turn over to the Hydro Electric Power Commission, the business of the street railway and electric light companies, when they were acquired by the city, thus leaving the power company with 70,000 surplus horse power to dispose of and no customers. It was urged that the result would be to jeopardize a capital investment of \$35,000,000 and injure Canada's credit abroad.

Representatives of the City of Toronto strongly urged the retention of the clause, arguing that public ownership and operation should not be subjected to competition by a private company, which did not have to secure consent before doing business in a municipality.

At the time of writing no vote has been taken on the matter, but reports indicate that he clause will be killed, or at least considerably amended.

Application for Increased Electric Railway Fares in New York State.

At Albany, on Aug. 7, in opening before the Public Service Commission the cases of 28 up-state electric railway companies applying for an increase of fares from 5 to 6c, Prof. T. Conway, of the Wharton School of Finance, submitted a statement based on reports to the commission that more than half of the petitioning companies were not only paying no dividends, but they were not even earning the interest on their bonds and faced receivership if they obtained no relief. He stated that the net corporate income of 27 of the companies, despite an increase of total business, had fallen from \$1,143,294 in 1912 to \$423,711 in 1916. In the same period the interest on bonds in default had increased from \$11,875,000 in 1912 to \$374,007,000 in 1916. He said that 14 of the 28 companies failed to earn their fixed charges in 1916. He said even a 6c fare would not make up for the loss of purchasing power of the nickel in the buying of supplies for street car service, and unless relief were granted some of the companies must go into receivership.

E. P. Waller, Manager of the General Electric Co.'s railway department, and R. Seybold of the Westinghouse Electric & Manufacturing Co., testified that all kinds of electric apparatus used by street companies cast from 50 to 125% more than in 1914. Labor costs in the production of these supplies had advanced from 30 to 40% since 1914; steel plates had increased 700%, copper 120, steel castings 100, steel forgings 340, coal 80, and brass 200%. Other witnesses gave similar testimony as to cost increases.

Strong opposition to the application was voiced by corporation counsels of more than 30 up-state cities which have organized to fight the proposed general increase.

The Ontario Legislature has amended the Assessment Act, so that an electric railway owned or operated by or for a municipal corporation is not liable to be assessed for business tax.

Toronto Railway Employes' Wage Arbitration.

The conciliation board, consisting of Judge C. G. Snider, Hamilton, Ont., Chairman; Duncan McDonald, formerly General Manager, Montreal Tramways Co., representing the company; and D. A. Carey, Toronto, on behalf of the employes, appointed to enquire into the complaints of the men which led to the strike lasting from July 11 to 13, reported to the Minister of Labor, Aug. 23. The report was signed by the chairman and the men's representative, and Duncan McDonald, on behalf of the company, dissented from the recommendations made, on the ground that the award was not warranted by the evidence placed before the board. He is reported to have said that though the company might not reject the award, he felt that he could not join in the recommendations without its positive assent. Following is the board's award:

In the operation of the lines the parties hereto agree with each other as follows: The company through its officers will meet and treat with the officers or representatives of division no. 113, who must be members thereof, and elected as representatives at the regular meeting, in all matters of grievance and dispute which may arise from time to time with any of the company's employes who are members of the association, and will meet and treat with any others of its employes in the same class who are not members of the association who may have grievance or disputes with the company.

From June 16, 1917, until the termination of this agreement, the wages per hour shall be as follows:

Motormen and conductors, first 6 months, 30c (to apply only to men employed after this date); second 6 months, 32c; second year, 35c; third and subsequent years, 37c.

Motor and truck repair service, first 6 months, 30c (to apply only to men employed after this date); second 6 months, 32c; second year, 35c; third and subsequent years, 37c.

Shedmen, foremen, 37c; operating shedmen, men who operate cars and do general shed work, 33c; shedmen, men doing general shedwork, but not operating cars, 32c; car cleaners, 31c.

Wages for motormen and conductors engaged in train work on Sunday shall be 4c per hour platform time in excess of weekday rates. Emergency crews of motor and truck repair men shall receive time and one-fifth for Sunday work.

Extra motormen and extra conductors are to receive the same extra remuneration for all trips as they have been receiving in the past. Extra men to be told off the night before for all crews known to be open, as far as this can be done without risk of leaving cars out of service on the following day. Motormen and conductors while in charge of trainers shall be paid 25c a day extra.

The company will pay half the cost of uniforms for motormen and conductors who have been in service for one year, and will provide free uniforms for motormen and conductors who have been in the service longer than two years. No employe shall be required to pay for more than one uniform and a half. Regulations from time to time to be made by the company to provide for protection against loss in this matter from employes leaving the company's service.

All motormen and conductors (known

as regulars) shall have their respective places in the barn to which they are assigned, in accordance with their continuous employment in the service, and men known as regulars longest in the continuous service as motormen and conductors at the barns in which they are employed shall have first choice of runs. The right of such selection of runs shall be granted at least four times a year.

All motormen and conductors required to take the car at the car house shall at the first time reporting for the day report to the car starter at least 10 minutes before scheduled time, and in the event of them not reporting 10 minutes ahead of time the car starter shall fill the runs with other men. When the relief point is not at the car house, men shall at their first time reporting for the day report to the car starter 15 minutes ahead of scheduled time, as at present. Motormen and conductors shall be relieved at a point nearest to the barn at which they are employed, and if required to go to any other point or barn after reporting at their own point or barn for the purpose of relieving or taking out cars shall be paid for time occupied in so doing. Motormen and conductors on scheduled runs shall be paid for any overtime caused by being late from being relieved or running cars into barn when such delay is ten minutes or over.

The company will provide seats on all cars. Motormen to have the right to use such seats upon certain portions of the system. Notice governing will be issued by the company from time to time.

No man to be given a set off day from month to month, but shall take off day in accordance with his position on the board, except in cases mutually agreed upon between the company and the men or their representatives. Motormen and conductors reporting for duty after being off sick, on production of a doctor's certificate of unfitness, shall not be required to go on duty until the following day, when they shall take their regular place.

Only men in the shops required for the necessities of the service shall be compelled to work on Saturday afternoon, excepting when, in the management's opinion, the services of all the men or any of them are required on Saturday afternoon to meet the necessities of the business.

Tools necessary for work in the motor shop shall be supplied employes. The men shall not take tools away from the shops, and shall be responsible for breakages and losses occasioned by their negligence, and must return tools in good condition; in default of doing so, they must pay for them.

Men in the motor shops and its branches shall be given five minutes in which to wash before leaving work, and any employe abusing this privilege, in the management's opinion, shall be subject to discipline or may be released from further service with the company.

The following regulations shall apply to motor and truck repair and shedmen: The company shall supply suitable locks and keys for lockers at the shops and barns, and in case a man loses his key, he is to provide another at his own expense. Rubber boots and coats are to be supplied for emergency crew at the different shops and barns. In case of a lay off or reduction of staff, the men laid off, other things being equal, shall receive preferential consideration as to being

first taken into the service again. In laying men off, junior men, as a general rule, shall be the first men off, and in taking men on again, the senior men shall get first chance, qualifications being equal. On pay days the company will continue to pay until 8 p.m.

The following regulation is agreed upon as to discipline. Any employe against whom charges may be received will be required to report when off duty to the superintendent. His case will then be considered by the proper officials of the company, and will be dealt with upon the following principle: For minor cases he is to be warned. For serious cases, including drunkenness, drinking in uniform or drinking on cars, destruction of property, accidents through carelessness or neglect, missing fares through neglect, or carrying friends free, using stools on portions of route not allowed by the company, incivility to passengers, profanity on the cars, he may be disciplined or released from further service, but he shall in all cases have the right to appeal to the General Superintendent and have his case considered by him.

Any employe against whom a charge is received shall have the right of appeal in person to the General Superintendent, and, except as to a charge of dishonesty, may bring with him in his interest a deputation or any committee of the employes, or where the employe in question is a member of Division 113, he may be represented by its duly elected representative. Attendance in such capacity shall not operate to the employe's disadvantage. An employe attending on such deputation or committee shall give due notice to his car starter or foreman, and, if he be a motorman or conductor, shall take his car upon reporting to his car starter. Employes acting as dues collectors, board members, or otherwise doing work for the association, shall be allowed the time off required for such work.

All cars shall be properly equipped before being taken out each morning, but this shall not relieve the conductor and motorman from their obligation to see that their car is properly equipped.

The company will, upon application to the car starter or foreman, give leave of absence to employes for a reasonable period, when their services can be spared, and in the event of the refusal of the car starter or foreman, the matter shall be settled by the superintendent.

On lines where no office of the company is passed or close by, an officer of the company will collect and exchange fare boxes at points appointed for the purpose. The company shall also provide waiting room or shelter at these points if the city consents to the erection of the same on public streets and squares.

When the service was resumed after the strike on July 13, on the intervention of the Ontario Railway and Municipal Board, a temporary increase of 6c an hour was granted to the men, and the present award adds another 1c an hour to that increase, the men originally demanding an increase of 10c an hour. At a meeting of the employes, Aug. 25, it was decided by a vote of 684 to 289 to accept the award.

Up to the time of writing, Aug. 29, the company had not officially signified its acceptance of the award, but little, if any, doubt is entertained that it will accept.

Electric Railway Projects, Construction, Betterments, Etc.

Brandon Municipal Ry.—The financial position of this railway is being considered by the city council. Up to the present the railway has barely earned operating expenses, and the taxpayers are being called upon to provide approximately \$35,000 a year for interest, sinking fund and depreciation. A street car expert from Montreal was in the city recently discussing the situation with the railway committee. Alderman Curran, chairman of the committee, in an interview expressed the opinion that the city should develop the 50 acres given to it by the Dominion Government some years ago as a public amusement park and extend the car line there. Such an extension would not be a very expensive piece of construction, and would provide accommodation for the asylum, the experimental farm, the golf links and the Indian industrial school. There are other points in the vicinity of the city which might be developed if the car line was extended to them. It is expected that the committee will report on the whole matter to the council at an early date. (Oct. 1916, pg. 421.)

British Columbia Electric Ry.—Plans are being considered in North Vancouver, B.C., for the laying of rails on the east side of the ferry wharf in order to take care of increasing traffic. The work would be done by the municipalities owning the ferry. (Aug., pg. 324.)

Calgary Municipal Ry.—We are officially advised that about half a mile of temporary track is being laid to the site of the new reservoir, to haul gravel and other construction supplies. T. H. McCauley is Superintendent, Calgary, Alta. (Dec., 1916, pg. 502.)

Lake Erie and Northern Ry.—The Mayor of Brantford, Ont., wrote the company's management, Aug. 7, asking the carrying out of the Board of Railway Commissioners' order for the widening of Water St., Brantford. (Aug., pg. 324.)

London & Port Stanley Ry.—An agreement between the London Railway Commission and Beatty Bros., for the construction of a siding to the latter's factory has been approved by the City Council of London, Ont. The agreement provides that the firm is to pay for the work, including grading and ballast; the commission to pay for ties and poles and interest at 6% on the permanent materials with money advanced by the city and to be repaid by the commission from freight and operation charges. The sum to be advanced by the city will amount to \$3,435.37 and includes \$1,100 for ties and poles and \$2,200 approximately for rails and other non-perishable materials. Beatty Bros. will deposit with the commission \$1,719, the estimated cost of the work. The siding may be removed by the commission on two months notice by either party and the ownership of the material will remain vested in the commission.

The London Board of Control has authorized the taking up of the siding on Bathurst St., between Wellington and Waterloo Streets. (June, pg. 243.)

London & Lake Erie Ry. and Transportation Co.—Negotiations are reported to have been resumed with the St. Thomas, Ont., City Council, by representatives of the company with a view to the sale of that portion of the line from St. Thomas to Port Stanley. It is claimed that if this piece of line was owned by the city, it would be possible to make the city line,

which is owned by the municipality, a paying concern. (Sept. 1916, pg. 378.)

Niagara, St. Catharines & Toronto Ry.—In connection with the erection of a new passenger station by the G.T.R. in St. Catharines, Ont., the N., St. C. & T. Ry. will extend its tracks over the new Burgoyne bridge, across the old Welland Canal. (May, 1916, pg. 200.)

Port Arthur Civic Ry.—The Port Arthur, Ont., Public Utilities Commission has under consideration tenders for supplying the materials and for the erection of timber bridges across McIntyre River, to replace existing bridges which are not considered safe. The new bridges are to be built of timber because it is thought that it may be desirable to divert the street railway track to May St., in the near future. (Aug., pg. 324.)

Sandwich, Windsor and Amherstburg Ry.—We are officially advised that the company is moving about 0.75 mile of track from the side to the centre of

William J. Lynch,
General Manager, Quebec Railway, Light, Heat
and Power Co.

the streets in Amherstburg, Ont. The work includes new concrete paving. The company has just completed an addition to its power house in Windsor, Ont., in which is installed a low pressure turbine, 450 k.w. (July, pg. 286.)

Winnipeg Electric Ry.—We are officially advised that the company is building a Y at the end of the run at East Kildonan, Man., for turning cars, and that it is also building a small office and men's room at Fort Rouge, Winnipeg. (July, pg. 286.)

Electric Heating for Calgary Cars.—The Calgary Municipal Ry. is arranging to heat its cars by electricity. It is contended to use electricity only in the early mornings and the cool evenings in the autumn, and to augment the coal stoves during the very cold weather in winter. Electric heaters were too expensive when the railway had to pay 2c per kilowatt hour for power, but now when the city is producing power at 3/4c per kilowatt hour they can be used with advantage.

Mainly About Electric Railway People.

B. Sharpe has been appointed Assistant Roadmaster, Toronto Suburban Ry., Toronto.

D. Kinsman, heretofore Roadmaster, Toronto Suburban Ry., Toronto, has been appointed Timekeeper.

Frank Lindsay, heretofore Inspector, Toronto Suburban Ry., Toronto, has been appointed Roadmaster.

Jno W. Walker has been appointed Superintendent of Rolling Stock and Substations, Toronto Suburban Ry., Toronto.

James D. Fraser, Secretary-Treasurer and Director, Ottawa Electric Ry., went up the Gatineau River in August on a fishing trip.

G. W. Lang, acting Superintendent, Ottawa Electric Ry., has returned to duty after being absent for several weeks on account of ill health.

E. N. Horsey, Resident Engineer in charge of maintenance of way, city and suburban lines, British Columbia Electric Ry., Victoria, B.C., has been elected an associate member of the Canadian Society of Civil Engineers.

Robt. Gilbert, Purchasing Agent, Toronto Suburban Ry., who was a lieutenant in the 255th Battalion, Queen's Own Rifles, Toronto, during its recruiting and training before going overseas, has returned to his business duties.

William James Lynch, whose appointment as General Manager, Quebec Ry., Light, Heat and Power Co., Quebec, Que., was announced in our last issue, was born there, Jan. 17, 1882, not in June as then mentioned. He has held the following positions: Sept. 1897 to 1900, clerk, Montmorency Electric Power Co., and on the absorption of that company by the Quebec Ry. Light and Power Co., in 1900, was appointed cashier, holding that position until 1905; 1905 to 1907, Accountant; 1907 to 1909, Treasurer, Quebec Ry. Light and Power Co.; 1909 to July 18, 1917, Treasurer and Comptroller, Quebec Ry. Light, Heat and Power Co., all at Quebec, Que.

Increased Fares in Twin Cities.—The increased fares, details of which were given in Canadian Railway and Marine World for August, were put in force on the municipal railways in Fort William and Port Arthur, Ont., and on the inter-urban line connecting the two cities on July 25. The Port Arthur Chronicle says: "For the first time since the Port Arthur-Fort William St. Ry. was built nearly 25 years ago, an inter-city ride costs more than 5c. . . . However, the innovation of collecting a double fare at the boundary proved less troublesome than anticipated. The street railway management had posted extra conductors at the dividing line and they boarded each car, assisting the regular conductors to collect the second fare. As the public becomes accustomed to the new idea the extra help at the boundary will be dispensed with. There was little delay in collecting the fares, so that the schedule was not interfered with. The wait at the boundary was while Fort William men collected fares on cars going into that city and Port Arthur men on cars coming to this city. The plan is that conductors shall as heretofore change boxes at the boundary so that each city will get the fares collected therein."

Toronto Railway Overcrowding Judgment.

It was announced in our last issue that the Imperial Privy Council had allowed the appeal of the Toronto Ry. against a conviction at Toronto for overcrowding its cars, thereby maintaining a public nuisance. The judgment stated that the wrong done was a civil one, and consideration of the arguments disposed of the point as to the competency of the appeal, and in the Judicial Committee's opinion, the demurrer should have been allowed. The judgment continues as follows:

"The obligation of the appellants was a contractual obligation to the corporation. There was no duty to the public generally. These cars were on the street in recognition of a public right which the Ontario Legislature and the Toronto corporation have thought it advantageous to interfere with. The cars were not less thereby the property of the appellants, which the public could only enter by invitation. Whatever conditions in the grant of the appellants' title the corporation had contracted for, obtained merely between them and the appellants. The overcrowding was not a matter that affected the public as such, but only those members of the public who have obtained from the appellants licenses to enter the cars. This being, in their lordships' opinion, the conclusion to which the Court of Appeal ought to have come, it follows the demurrer should have been allowed and acquittal directed. Their lordships will, therefore, advise the appeal ought to be allowed, and the judgment of the Ontario Supreme Court set aside, and the matter remitted to the Supreme Court so that a verdict of acquittal may be pronounced in favor of the appellants. The respondents should pay the appellants' cost, and those of the proceedings in court of first instance should be left to the discretion of the court. The Attorney-General will neither receive nor pay costs."

Thus, therefore, ends a case which has, in various phases, served as campaign material in Toronto municipal elections for several years, and which, for waste of public time and money and general contumacy on the part of the prosecution, has not often been equalled. Comments by the Toronto press show that the judgment is taken generally as a condonation of overcrowding, but this is not the case. The company was charged with maintaining a public nuisance by overcrowding its cars, and a conviction was obtained, notwithstanding arguments for the defence, which, while admitting the overcrowding, clearly showed that, in law, it was not maintaining a public nuisance. This view has been upheld by the Privy Council.

Cape Breton Electric Co.'s Employees.—A conciliation board appointed to enquire into alleged grievances of Cape Breton Electric Co.'s employees, consists of Judge Chisholm, Chairman; Finlay McDonald, K.C., for the company, and D. A. Cameron, K.C., for the employees. It is stated that the chief point at issue is the discharge of three employees, two of whom the company has taken back, but refuses to re-employ the third. E. L. Milliken, General Manager, is reported to have stated that he is willing to meet employees, individually or collectively, to discuss all matters relating to employment or any grievance that they may have, but he declines to deal with any delegation of the Street Railwaymen's Union or persons not in the company's employ.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.—

	June, '17	June, '16	6 mths. to June 30, '17	6 mths. to June 30, '16

Net	21,245	56,399	1,063,375	853,782

Edmonton Municipal Ry.—The six months ended June 30 show a surplus, over operation and maintenance, of \$42,488.04.

Hamilton St. Ry.—The City Treasurer of Hamilton, Ont., has received \$14,680.24 from the company, being the city's percentage of earnings for the quarter ended June 30. The total receipts were \$183,503.03, compared with \$175,926.84 for the corresponding three months of 1916.

London & Port Stanley Ry.—The Ontario Legislature has authorized the London City Council to borrow upon debentures \$100,000 for the London Railway Commission, and another \$100,000 to build a grain elevator at Port Stanley for use in connection with the London & Port Stanley Ry.

The Three Rivers Traction Co., which is a subsidiary of the Shawinigan Water & Power Co., held its annual meeting in Montreal, Aug. 22. The results of operation for the past year were encouraging, showing a slight surplus, and if conditions had been normal would undoubtedly have been still more satisfactory. The steam railway companies are not running the usual excursions this year, owing to war exigencies, and consequently the Three Rivers Co. did not get the pilgrimage business expected but which will undoubtedly be revived when conditions become normal again.

Toronto Civic Ry.—Receipts for July, \$23,262.63; passengers carried, 1,280,801, against \$19,812.72 receipts, and 1,169,411 passengers carried in July 1916.

Toronto Railway:

The fixed charges for June were \$61,136, thus showing a deficit for the month of \$11,472 in June, 1916. The net charges for six months ended June 30, were \$369,605.

Calgary, Alta., City Council has authorized the sale of 2 trailer cars to the Edmonton, Dunvegan and British Columbia Ry.

Electric Railway Notes.

The London St. Ry. has been authorized by the Ontario Legislature to operate its cars on Sundays in London Tp., between the north limits of the city and Brough's bridge.

The Brantford & Hamilton Ry. has been ordered by the Board of Railway Commissioners to erect a shelter at the Mountain Sanatorium, Hamilton, by Oct. 15.

The Quebec Ry. Light and Power Co. is building in its shops at Ste. Anne de Beaupre, 2 of the 650 class p.a.y.e., closed double truck cars, 40 ft. long overall. They will be numbered 656 and 657.

The Edmonton, Alta., City Council on Aug. 14 referred the municipal railway men's application for increased pay to the Utilities Commission. The men ask for a 20% increase all round, with 55c an hour for men operating one-man-cars, and an 8-hour day with a shift of 6 hours.

The Ontario West Shore Ry.'s rails have been sold to the Hydro Electric Power Commission of Ontario, and have been shipped to the Niagara Peninsula for use on the construction railway being built in connection with the commission's power development project at Chippewa Creek.

The Winnipeg Jitney Drivers' Association met Aug. 14, to discuss the bond question, and adjourned to meet again. The association offered a general bond by the association, but the city council desires bonds for every driver issued by an insurance company.

The Toronto & York Radial Ry. has filed a claim against the City of Toronto for damages to its property by the lowering of the grade of Yonge St. near Farnham Ave. The amount claimed is \$102,811 as follows:—Damages to land and depreciation of building, \$70,000; damages to 50 ft. on Yonge St., \$32,000; damages to railway track, \$811.

The Edmonton Radial Ry.'s agreement with its employes terminated Aug. 31. They notified the City Clerk, July 30, that they were willing to extend the agreement for another year on an increase of 20% over and above the present rate of wages, with 55c an hour for operating one-man cars; an 8 hour day and that no shift shall be longer than 6 hours without relief.

The Hamilton St. Ry. has made a contract with the Post Office Department to carry postmen on its cars for four years for the following amounts: 1st year, \$3,500; 2nd year, \$3,550; 3rd year, \$3,600; 4th year, \$3,650. There are said to be about 70 active postmen in Hamilton at present so that the rate for the first year averages about \$50 a man. The contract is retroactive to Oct. 1, 1916.

Moncton, N.B., City Council appointed a special committee, Aug. 7, to take up with the Moncton Tramways, Electricity and Gas Co., the question of noise made by the street cars. It was asserted at the meeting that the noise was "due to old and defective machinery and cars," and that "it would be more practicable to make the company move the tracks in the vicinity of the hospital than to keep the cars in repair."

Application was made to a British Columbia court, Aug. 9, for a mandamus to compel the Vancouver City Council to restore the license of a jitney driver which had been cancelled May 17 because he would not keep on a specific route as required by the bylaw. The case was

adjourned to enable counsel for the jitney driver an opportunity to show that a mandamus was the proper way to obtain relief.

The London and Port Stanley Ry. has placed in service one of the two new cars which were ordered from Newark, Ohio, in Nov. 1916. They are 71 ft. 7 ins. long over all, and are arranged with seating capacity for 72 passengers. The weight of the car body, including heat equipment, seats, light foundations, brake, draft gear and supports ready for the installation of the control equipment and air brakes, is about 49,733 lb., and the car complete with full equipment, weighs about 102,459 lb. The electrical equipment was supplied by Canadian General Electric Co., Toronto.

Telegraph, Telephone and Cable Matters.

The Great North Western Telegraph Co. has opened offices at Manoir Richelieu, Pointe au Pic and Valcartier Camp, Que., and Bala Park, Ont.; and has closed its offices at Carrot Creek, Jasper and Tollerton, Alta.

The Board of Railway Commissioners on application of the Marconi Wireless Telegraph Co. of Canada, has ordered that the proposed cancellation of the requirement of a minimum toll as for 10 words, the address and signature counted, on messages between ship and shore, be approved, and added to the company's tariff C.R.C. 7.

The Great North Western Telegraph Co. has appointed F. H. Markey, K.C., Montreal, as its representative on a board of conciliation to be formed to discuss a revised schedule for its employes. David Campbell, Winnipeg, has been appointed to represent the employes and Judge Gunn of Ottawa has been appointed as Chairman by the Minister of Labor.

The Minister of Marine, in the House of Commons, Aug. 6, confirmed the report that wireless telegraph services between Canada, the United States and Great Britain, had been suspended for the present. No reason for the suspension was given, but it is reported that messages were being intercepted, and that the enemy was benefitting.

The C.P.R. has arrived at an agreement with the Commercial Telegraphers Union regarding a revision of wages, etc., for its telegraph employes. The company grants a revised wage scale, including the Morkrums, and the right to legislate for all telegraph employes, and an 8½ hr. day and 7 hr. night on all tricks starting at, or later than 8 p.m., with a 10 hr. day, including 1 hr. for lunch, at one-man offices. It also grants a minimum increase of \$5 a month for each Morse telegrapher, and a rearrangement of percentages as follows: Vancouver, Calgary, Moose Jaw, and Winnipeg, each 30% at \$105, 30% at \$100, 30% at \$95 and 10% optional; Toronto and Montreal, each 30% at \$95, 30% at \$90, 20% at \$85 and 20% optional. The operators now receiving the maximum at these points, are increased \$5 a month over the fixed maximum, that is \$110 in the west and \$100 in the east. A \$60 minimum is fixed for Morkrum operators, \$65 after 6 months and \$70 after a year of service. Vacations will be granted to all employes who have been in the service 3 years or more, instead of 4 years as hitherto.

In the matter of the application to the Board of Railway Commissioners by the Great North Western Telegraph Co., the

C.P.R., and the Grand Trunk Pacific Telegraph Co., for an order approving conditions on telegraph forms on which messages to be transmitted are written, on hearing evidence by representatives of the applicant companies, Canadian Manufacturers Association, the Toronto, Montreal and Winnipeg Boards of Trade, the Winnipeg Grain Exchange and the Canadian Freight Association, and upon reading written submissions, the board has ordered that the application be dismissed, but that leave be reserved to the applicant companies to apply for a stated case for the opinion of the Supreme Court of Canada upon the questions of law involved. The changes which the companies desire to have made would make the same conditions prevail between the telegraph company and the addressee of a message, as exist between the company and the sender, and also that the same conditions should prevail in the transmission of a message over connecting lines, as between the sender and addressee and the company originally receiving the message for transmission. The companies also desire to limit the liability for damages in the case of repeated telegrams, to \$200. At present the liability is limited to 50 times the amount received for sending and repeating. To those conversant with English law on this point, the application for such a change seems unnecessary, as it has been finally settled, under English law, that the addressee has no right of action, and this law is applicable in all provinces of Canada except Quebec. It is chiefly to meet the possibility of some such action in Quebec, that the application is made.

Among the Express Companies.

T. W. Harrison has been appointed agent, Foreign Department, Adams Ex. Co., Montreal, vice G. C. Kaestner.

The Board of Railway Commissioners has approved the Central Canada Ex. Co.'s bylaw authorizing C. Dowling, General Superintendent, to issue tariffs.

The Board of Railway Commissioners, on the application of the Express Traffic Association of Canada, has rescinded order 22,200, July 11, 1914, requiring that packages containing celluloid be conspicuously labelled "Celluloid, inflammable."

The Manitoba Public Utilities Commission has ordered the Winnipeg Electric Ry to route every alternate car leaving St. Boniface for Dufferin Ave. so that instead of turning off at Dufferin Ave. it shall proceed continuously along Main St. to Redwood Ave., and thence along Hespeler Ave and Kelvin St. to a Y which is to be installed near the John Black memorial church, returning over the same route to St. Boniface, maintaining a 10-minute service to the Y. A 22-minute service is to be maintained between the new Y and the north end of the line. The present schedule of fares is to be continued. This is the result of an application by East Kildonan residents for reduced fares and better service. The order went into effect Aug. 13.

Taxation of Public Utilities.—At a conference of Saskatchewan municipal officers at Regina, Aug. 3, a suggestion was made that public utilities operated by municipalities should be taxed in the vately. The conference was held in the same manner as if they were owned in taxation within the province at the provincial government's instance.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

month, 8.30 p.m., except June, July and August.

Canadian Society of Civil Engineers—C. H. McLeod, 176 Mansfield St., Montreal.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Nova Scotia Society of Engineers—A. R. McCleave, Halifax, N.S.

Quebec Transportation Club—A. F. Dion, Quebec.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacramento Street, Montreal.

Ship Masters' Association of Canada—Capt. E. Wells, 45 St. John Street, Halifax, N.S.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Transportation Club of Vancouver—H. W. Schofield, 553 Church Street, Vancouver, B.C.

Twin Cities Local Freight Agents' Association—E. J. Travers, Fort William, Ont.

Western Canada Railway Club—Louis Kon, Box 1707, Winnipeg. Meetings at Winnipeg 2nd Monday each month, except June, July and August.

Winnipeg Traffic Club—James Gebrey, Bannatyne Avenue, Winnipeg, Man.

Sailor's Compensation Case.—The Montreal Transportation Co. has been ordered to pay \$287.45, and an annuity of \$230.33, representing half of the reduction in earning power, to an employe on the s.s. Indian, who was struck by a flying cable in the course of his work at Montreal. The company claimed that as the employe was engaged at Kingston, Ontario law should apply, but it was held that the accident occurred in Montreal, and therefore came under the Quebec laws, under which, it is not necessary for the employe to prove fault or neglect on the employer's part.

The British Corporation Registry, Glasgow, Scotland, in view of the amount of shipbuilding being carried on throughout Canada for British register, has established a branch in Toronto. The work has hitherto been carried on at Toronto by Capt. J. B. Foote, Manager of the Marine Department, Toronto Insurance and Vessel Agency, and under the new arrangement, he will have associated with him, D. Arnott and P. R. Court, naval architects and surveyors, who have arrived from Great Britain.

The Bellerive Towing Co., Ltd., has been incorporated under the Quebec Companies Act, with \$20,000 capital and office at Three Rivers, to carry on a general towing and transfer business there, as a subsidiary of the Wayagamack Pulp and Paper Co. The following are the officers, etc., C. R. Whitehead, Three Rivers, President; A. Pringle, Montreal, Vice President; J. W. Pyke, Montreal, director; and C. S. Smith, Three Rivers, Secretary-Treasurer.

Marine Department

Freight Steamship Orleans for France Launched at Toronto.

The s.s. Orleans was launched at the Thor Iron Works, Toronto, Aug. 1, the christening ceremony being performed by Mrs. Stuart Playfair, Toronto. The vessel was originally ordered by James Playfair, President, Great Lakes Transportation Co., Midland, Ont., for his company, and was subsequently transferred to the Oriental Navigation Co., Nantes, France.

The hull is of the following principal dimensions: Length over all, 261 ft.; length between perpendiculars, 251 ft.; breadth moulded, 43½ ft.; depth moulded, 28 ft. 2 in. It is of the single deck type, with poop bridge and forecastle, steel deck house on bridge, and deck and chart room on top of deck houses, with navigating bridge. The hull is built on the transverse system, with the propelling machinery amidships, with the coal bunkers in wings. There are two cargo holds, with two hatches to each, one hold extending from the collision bulkhead to the boiler room bulkhead, and the other

rudder is of the single plate type, with arms alternately on the port and starboard side. The hull is divided by 4 watertight bulkheads, and a watertight sliding door is fitted in the engine room bulkhead, to give access to the tunnel. There is a screen bulkhead between the boiler and engine rooms, with door and portable plate for drawing the condenser tubes. The engine foundation is built up of plate and angles, with girders under the foundation, to line up with the fore and aft girders on the water bottom. The boiler foundations are of longitudinal plate girders, with large bouble angles on top edge, and connected to tank top with double angles at bottom. The deck house on the bridge is of steel, 7 ft. high, of plating, 12.2, stiffened with 3 x 3 x 6.1 angles, as are also the engine and boiler castings. The flying bridge is built from the roof of the chart house to the ship's sides, and is 4 ft. wide, carried on angle iron framing supported on angle iron stanchions. Steam windlass is 8 x 8 in.,

The Steamship Orleans, launched at Toronto recently.

from the engine room bulkhead to the after peak bulkhead, and there is a water bottom, 3 ft. deep, from the collision bulkhead to the after peak bulkhead. The construction is for the highest class of British Lloyd's ocean service, and in accordance with the British Board of Trade's requirements. The size of the machinery space has been arranged to approximate 13% of the gross tonnage, thus attaining a reduction of 32% from capacity tonnage.

The hull is built with flat plate keel and bilge keels, the latter extending for about 100 ft. amidships, and are of plate 9 in. deep, connected to the shell with angle bars fitted on short lengths, extending from butt to button shell, the plate being continuous. She has a straight stem and elliptic stern. Channel frames are fitted and extend from tank margin to main deck, and alternately to bridge deck, without hold stringers or 'tween deck beams. Plate floors are fitted on every third frame, except in engine and boiler space and forward, of 3/5s length, which are 24 in. centres. The propeller frame is according to Lloyd's requirements, with rudder post extending to main deck, to which it is attached by angles and deep transom plates. The

fitted with hand attachment and friction brakes. The steam steering engine, 6 x 6 in., is placed in the after end of the engine casings, with the horizontal shaft protruding through the after side, with the bracket and chain drum on deck. Two 22 ft. lifeboats, and one 18 ft. working boat, are to be provided, together with life belts and life buoys as required by law. The bridge deck will provide accommodation for the captain's, first and second officers' quarters, which, with the accommodation for the crew, are to be complete with every modern convenience. The electrical installation will include one 7½ k.w. generator, with equipment for lighting the whole vessel, the sidelights to be fitted for electric light as well as for oil.

The propelling machinery, which is being built by John Inglis & Co., Toronto, consists of engines of the single screw, 3 cylinder, 3 crank type, with cylinders 20, 33½ and 55 in. diam. by 40 in. stroke, developing about 1,400 i.h.p. at 80 r.p.m. Steam will be supplied by 2 boilers, each 14 ft. diam. by 12 ft. long, built for natural draught, at 185 lb. pressure. The boilers will be equipped with corrugated furnaces, 42 in. inside diam., with separate combustion chamber for each fur-

nace. It is expected that the vessel will be completed and ready for service before the winter.

Canadian and United States Coasting Regulations.

Canadian Railway and Marine World for August contained a copy of the order in council permitting United States vessels to engage in the coasting trade on the Great Lakes, so long as a similar regulation by the U. S. authorities as regards Canadian vessels in U. S. waters, shall remain in force. The U. S. Shipping board has submitted a resolution to Congress for approval along these lines, and in commenting on this, the Secretary of Commerce said: "The chief purpose of the resolution is to allow Canadian vessels on the Great Lakes to do coastwise business between U. S. ports. The Canadian Government very handsomely acted on the matter some time since, as concerns us, allowing the coastwise privilege to U. S. vessels in Canadian ports. There is urgent necessity for the employment of all possible tonnage on the Great Lakes in coal and iron ore hauling. The stocks of coal at lake distributing points are thousands of tons short of what they should be, so it is important to get every possible bottom carrying coal to the northwestern points before navigation is stopped. The unprecedented demand for iron and iron ore makes the need for additional ore carriers acute, almost as much so as for more coal carriers. There are numerous Canadian vessels that will engage in this trade if the restrictions are removed during the war emergency."

Stranding of the s.s. Clematis Investigated.

An enquiry was held at Halifax, N.S., July 12, into the cause of the stranding of the British s.s. Clematis, near Red Cape, Framboise, N.S., June 16, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Commander E. Wyatt, R.N.R., and Capt. T. A. Hill, master of R.M.S. Chaleur, as nautical assessors.

The court found that the master was foolhardy in his navigation, when he found himself in shallow water, and it also wondered how it was possible for the master being unable to differentiate between a fog horn of the power of the one at Scatarie and one blown by a vessel. The weather was foggy, but calm, and the court considered that too great a speed was maintained during such weather. It therefore found him in default, not for negligent navigation, as his deviation book shows that some painstaking efforts were made to bring the vessel safely to her destination, but he erred greatly in judgment, in not taking means to assure himself of the nature of the fog horn he heard, and he committed a fatal mistake in maintaining the good half speed while such climatic conditions existed. Having regard to the circumstances, and to the fact that his navigational work previous to this was faultless, the court did not deal with his certificate, but reprimanded him severely, and trusts that it will serve as a lesson to exercise more prudence in future. It did not appear that the officers were negligent, and they were exonerated from blame.

Encouragement of Shipbuilding in Nova Scotia.

Some details of the Nova Scotia legislation to encourage shipbuilding there have already been given in *Canadian Railway and Marine World*. Under the act passed last session, the Governor in council is authorized to appoint five, and not more than seven persons to form a shipbuilding commission, together with a secretary, all of whom may be remunerated. The commission's duties are to investigate the province's facilities for vessel building and for the carrying on of other manufacturing incidental thereto, to make suggestions for regulations for the use of all resources for such development, and for such purposes to engage technical and expert assistance and enter into arrangements with similar commissions in other provinces, or with the Dominion Government. The Governor in council may create the commission a body corporate under the name of the Nova Scotia Ship Building Commission, with all the rights and powers of a corporation, so that it may build, purchase, and operate vessels, establish shipbuilding plants, and generally carry on business as usual with an incorporated company. It is authorized to issue bonds or other securities, expropriate lands, and raise \$2,000,000 on the province's credit, etc., under order of the Governor in council. The proceeds of the loan raised are to be paid into the provincial treasury, and applied for the following purposes—payment of the commission's expenses in carrying out the objects of the act, payment of subsidies granted to the Commission, or to any company engaged in the building, equipment or operation of vessels, and payment of obligations which the commission may incur in carrying out its objects.

The following commissioners have been appointed,—D. Macgillivray, Halifax, Chairman; C. F. McIsaac, K.C., Antigonish; D. E. North, Hantsport; A. MacKenzie, River John; F. L. Kelly, North Sydney; and Murray Macneill, Halifax, Secretary.

Imperoyal-Maisonneuve Collision.

An investigation was held at Montreal, recently, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. Nash and C. Lapierre, as nautical assessors, into the cause of the collision between the steamships Imperoyal and Maisonneuve, near the intersection of Contrecoeur range lights (traverse), in the St. Lawrence River, June 5. The court found that the Imperoyal was being navigated with improper lights, the additional red light which was exhibited with the red side light being contrary to the regulations and therefore misleading, and also stated that it failed to find any regulations directing a vessel carrying dangerous goods to exhibit additional lights, other than those prescribed for a vessel under way. If it can be shown that there is any regulation empowering a vessel carrying dangerous goods to exhibit an additional red light when under way, the court will withdraw its conclusion of default against the master of the Imperoyal and the pilot, but until then, the master stands to be censured for a wrong action. The court considered that the master of the Maisonneuve was misled by the lights in the first instance, but had he kept a proper lookout he would have seen the masthead light, and that

the vessel was moving, and he should have adopted precautionary measures, as called for by article 29. He also showed lack of elementary bravery, in abandoning his vessel without making himself acquainted with the injury sustained; the fact that three members of the crew returned to the vessel and steered her to shoal water shows conclusively that the master lost his head. He ordered the engineer to leave his post, and the engines were left full speed ahead. The Imperoyal was correctly navigated, apart from the matter of lights. The court, after weighing these facts, found that the master of the Maisonneuve, Jean Paquet, had been negligent and is not competent to command a vessel, and therefore cancelled his master's certificate 5033. The engineer of the Maisonneuve abandoned his post without first stopping the engines, but as this was done under the master's personal orders, the court could not express an opinion on the engineer's conduct.

In the course of the investigation it developed that two men and a child were on board, not members of the crew, or the owner's family, nor servants of his household, and the Maisonneuve being a freight vessel, not licensed to carry passengers, sec. 671, par. vii., chap. 113, R.S.C., was violated. The court therefore recommends that the fine mentioned in this section, viz., \$100, be imposed.

Coal Supply for the Maritime Provinces.

The question of a coal supply for the Maritime Provinces was raised in the House of Commons, Aug. 2, by Hon. W. Pugsley of St. John, N.B., who asked for a definite statement as to what arrangements, if any, had been made to provide against a shortage; what steamships have been placed at the disposal of the authorities, and what are to be the rates of freight.

The Minister of Trade and Commerce, in reply referred to the appointment of a Fuel Controller, who had Dominion wide authority and who had had the question of Canada's fuel supply under consideration for over a month. An agent has been appointed in the United States to act under him, whose duty it is to report upon the supplies of coal, at what points these supplies are, the prices at which they can be obtained, and the transportation facilities available between the point of production and the Canadian border. At the time of speaking that officer was gathering information in Canada as to requirements. The Fuel Controller was in communication with the Board of Railway Commissioners and the different Canadian railway companies as to the arrangements necessary for the distribution of coal in Canada. The Minister then said:

"The anthracite situation in Halifax and St. John is somewhat different, because it is practically impossible to take coal in there by rail, and the ordinary way hitherto has been by vessel. At present facilities for water carriage are very scarce, and very difficult to obtain. It is true that the disparity of cost as regards St. John and Halifax is mainly due, not so much to different prices at the points of production, although in obtaining coal from independent companies in New York there is a difference in the prices paid as compared with prices at the point of production where the coal is taken up by the railway companies. The matter

of freights comes in there. They are very high. Schooners and small vessels which take lumber from St. John and which hold themselves open to bring back freight, have their own costs and charges and they are very high. How to obtain the necessary transport is a difficult question. The Fuel Controller has appointed an aide in St. John and another in Halifax. The appointee in St. John, Mr. Frink, is, with committees, working upon the problem there. I am not aware that the government has any steamships that can be placed at the disposal of parties in St. John and Halifax for the carriage of this coal. I am inclined to think it has not. It is equally difficult for the government to obtain vessels for that purpose. In the main, the transport will have to be arranged, I think, by the parties interested in obtaining coal, aided as far as they possibly can be, by the Fuel Controller and such agents as he is working in co-operation with."

The Minister of Trade and Commerce again referred to the matter, Aug. 4, when he said: "The government has intervened in the matter to the extent of arranging for the necessary transport for supplying hard coal to Halifax and St. John and the districts supplied therefrom. The difficulty appears to be the finding of suitable accommodation for these vessels, which are of large size, and have to be unloaded quickly to avoid unnecessary expense. This matter is being looked into by the authorities of Halifax and St. John, and it is hoped that they will be able to arrange for the docking and unloading of these vessels. If so, they will be at their disposal at reasonable rates for carrying the coal that is required to supply these two cities and the surrounding districts."

Government Naval Vessels and Dockyards.

The Minister of Marine stated in the House of Commons recently, that H.M. C.S. Rainbow is maintained in full commission, as is also the Shearwater (submarine depot ship), and the submarine flotilla. The Niobe is being utilized as a depot and receiving ship, and a large number of men have passed through her, in addition to her regular complement and drafts for patrol vessels. The naval dockyards at Halifax, N.S., and Esquimalt, B.C., have been worked to their full capacity, the nature of the work done being practically all repairs. Halifax is being used as the base for vessels of the North Atlantic fleet, which has been strengthened lately. At Esquimalt yard, work has been carried out on Imperial vessels as well as on those of the Canadian service. The floating dock at Prince Rupert has been completed, but it has not been operated for the use of the mercantile marine. It has proved very useful in connection with the repairing of Royal Navy ships. In addition to repairs to vessels of the fighting fleet, the docks are carrying out a large number of small repairs to vessels employed for auxiliary purposes, patrol and other defensive work on the coasts.

War Profits on Shipping.—The Chuyetsu Steamship Co., a comparatively small Japanese steamship concern, which had one of its vessels sunk by a German submarine recently, decided to sell its vessels and retire from business. In the liquidation, stockholders, who paid \$2.50 a share originally, received \$500 a share.

Shipbuilding Activities Throughout Canada.

Steel Steamship Building for British Government.

The Port Arthur Shipbuilding Co. launched the s.s. War Fish at its yards at Port Arthur, Ont., Aug. 4. This is the second vessel launched this summer. It is 251 ft. long over all, 43½ ft. beam and 28 ft. 2 in. deep, and of 4,200 tons capacity. The keel has been laid for another similar vessel. Keels have also been laid for a number of trawlers.

The s.s. War Dog, which was built at the Wallace Shipyards, North Vancouver, recently, and described and illustrated in Canadian Railway and Marine World for June, underwent her trials at the end of July. She was built for an average speed of 9½ knots an hour, and in her trials reached 10.4 knots, with an average of

interests. It is stated that eight of these vessels are under contract, with the first vessel in the frame and partially plated. Among the information given in Canadian Railway and Marine World for August, which was as far as could then be ascertained, the Dominion Government had authorized the construction of seven steel steamships in British Columbia, on foreign account, for export, four of them to be built by Wallace Shipyards, Ltd., North Vancouver, and three by J. Coughlan & Sons, Vancouver. Of these latter, a contract was made for one vessel, and this was requisitioned by the British Government. In the former case, no contracts were entered into, but one steel vessel was built for Japanese interests, and was taken over by the British

vessels of the tonnage required, have received contracts except the Prince Rupert yards, where suitable timber is not available, and one other firm, which did not care to undertake wooden shipbuilding.

Cameron-Genoa Mills Shipbuilders, Ltd., Victoria, B.C., has laid the first keel of its order for 4 wooden steamships for the Imperial Munitions Board. A number of shipbuilders engaged by the Foundation Co. have been loaned to the Cameron-Genoa Shipbuilders, to rush construction as much as possible, until the Foundation Co.'s plant is advanced to the stage when it can commence actual shipbuilding. In the meantime, it is expected that the Cameron-Genoa Mills Shipbuilders will be able to release other men for the Munitions Board's orders, as the vessels under construction for Canada West Coast Navigation Co. and H. W. Brown & Co. are about completed.

The Foundation Co. has keels laid at its plant at Hope Point, Victoria, B.C., for three of the five wooden steamships, for which it has a contract from the Imperial Munitions Board. The frame has been erected on the first keel. Before the last keel is laid, a considerable quantity of filling will have to be placed on the west side of the plant.

Imperial Munitions Board.—E. H. Gurney, Second Vice President, Gurney Foundry Co., Toronto, who has been in Ottawa for some time, assisting the Imperial Munitions Board in connection with shipbuilding, has been appointed Assistant Director, Marine Machinery Supply.

The William Lyall Shipbuilding Co., Ltd., has been incorporated under the Dominion Companies Act, with \$1,000,000 capital, and head office in Montreal, to carry on shipbuilding throughout the Dominion, or elsewhere, and to manufacture and deal in materials incidental thereto. The directors are, Wm. Lyall, President, P. Lyall Construction Co., Montreal, President; J. N. Greenshields, K.C., and H. W. Beauclerk. The company has acquired Wallace shipyard no. 2, from Wallace Shipyards Ltd., North Vancouver, B.C., and is making extensive additions to the plant. It has an order from the Imperial Munitions Board, for 10 wooden steamships, and is reported to have laid the first keel, which is in two sections, with a 16 ft. scarf, pinned with hard wood keys, and fastened with galvanized bolts, the ends being secured with 19 in. spikes.

The New Westminster Construction & Engineering Co., which has an order for 4 wooden steamships for the Imperial Munitions Board, laid the first keel at Poplar Island, New Westminster, B.C., July 28, and the second one, July 30. This is an entirely new plant, and no time has been lost in getting construction under way. It is stated that there is no difficulty in obtaining the necessary labor.

The North Shore Iron Works, North Vancouver, B.C., has received orders from the Imperial Munitions Board for a number of windlasses, winches, etc., for delivery by April, 1918, for wooden steamships under construction for the Board in B.C.

General Shipbuilding Notes.

The British American Shipbuilding Co., Ltd., has been incorporated under the Dominion Companies Act with \$1,000,000 authorized capital and office at Toronto, to build all types of vessels and to carry

S.S. War Fish, launched at Port Arthur, Ont., August, 1917.

10.2 knots. The test runs were between Point Atkinson and the Hollyburn wharf, a measured course of 4.12 nautical miles. In the three tests, the engines developed 1,260 h.p. at 98 r.p.m.; 1,155 h.p. at 80 r.p.m., and 1,305 h.p. at 98 r.p.m., respectively. The tests of this vessel, the first steel steamship to be built in British Columbia, are considered most satisfactory. When she leaves for England shortly, she will be in charge of Capt. J. H. Kay, with J. Black and T. Thom, all of Liverpool, Eng., as first officer and chief engineer respectively.

The s.s. War Fish, the seventeenth vessel built at the Port Arthur Shipbuilding Co.'s yards at Port Arthur, Ont., was launched there Aug. 4. She was built to the order of James Playfair, President and General Manager, Great Lakes Transportation Co., Midland, Ont., and has been acquired by the Imperial Munitions Board for the British Government. Her dimensions are, length 261 ft., beam 43½ ft., depth 28 ft. 2 ins., and she has a gross tonnage of 2,406, with deadweight carrying capacity of 4,280 tons.

Vancouver Steamship Building.—It is stated that the British Government had taken over a number of steel steamships under construction there for Norwegian

Government. This company has contracts for three steel steamships for the Imperial Munitions Board.

Wooden Steamship Building for British Government.

In response to complaints to which publicity has been given in the British Columbia press, that contracts for the building of wooden steamships have been awarded to eastern contractors, who have located their yards in the west, in preference to local yards already established, the Imperial Munitions Board has issued a statement to the effect that out of 27 wooden steamships ordered in British Columbia, two contracts covering 11 vessels, have been let to firms hitherto established in the east. Both of these firms were in negotiation with the board prior to any offer being received from British Columbia, and it was their intention to build in the east until the board stated that as a certain amount of B.C. lumber was to be used, it would be better to locate their yards in that province. Of the total number of vessels ordered by the board, three-fifths have been ordered in British Columbia, and all yards in the province, which are equipped to build

on a general constructing and contracting business. F. H. Keefer, Thorold, Ont., and A. A. Kinghorn, Toronto, are chiefly interested.

Canada West Coast Navigation Co.—M. J. Haney, of Toronto, Chairman of the company, who was in Vancouver, B.C., recently, is reported to have stated that the company is in the shipbuilding business to stay, and what is planned for the future might be a surprise to local concerns. The company, he said, had contributed 10 ships toward the prosperity of the province, and originally contemplated building 50, but owing to existing conditions, the company's individual plans cannot be extended for the present.

Canadian Government Wooden Steamships for Panama Route.—It was announced in our last issue, that the Dominion Government had concluded two contracts with Wallace Shipyards Ltd., and Harrison and Lamond Shipbuilders, Ltd., Vancouver, B.C., respectively, for the construction of two wooden steamships for service between Pacific and Atlantic coast ports via the Panama Canal, at an approximate price of \$230,000 each. It was announced in the House of Commons, Aug. 25, that the firms had declined to proceed and had cancelled their tenders, offering instead to proceed with the work on a cost, plus 10% basis.

Concrete Vessel Building.—A syndicate has been formed in Montreal, under the name of the Atlas Construction Co., for the construction of concrete vessels, and is said to be building a steamship of reinforced concrete, 125 ft. long, 20 ft. beam and 11 ft. deep, as an experiment. Barges of concrete construction have been in limited use for special purposes for a number of years in Italy and France, and of recent years on the Welland and Panama Canals.

The Eureka Shipbuilding Co., Ltd., has been incorporated under the New Brunswick Companies Act, with \$32,000 capital, and office at North Head, N.B., to build, own and operate vessels of all kinds, and to carry on the business of traders and the transportation of merchandise, mails and passengers. The incorporators are: F. Ingersoll, J. E. Gaskill, F. S. McLaughlin, F. L. Lakeman, Grand Manan, and N. M. Mills, St. Stephen.

The Montreal Dry Dock & Shipbuilding Co. has practically rebuilt its dry dock property on Mill St., Montreal, and is now able to handle any vessel which can go through the canal. The dock is now 428 ft. long and 30 ft. deep.

North Vancouver Drydock, Etc.—It is reported that negotiations are proceeding for the purchase of the site acquired by the Dominion Drydock and Shipbuilding and shipbuilding plant at North ing Co., for the establishment of a dry Vancouver, B.C. This company originally planned a dry dock, provided a Dominion subsidy could be obtained. No doubt the subsidy would have been granted if the company had been able to finance the affair and to arrange for a dry dock of the type necessary to gain the subsidy, but so far as can be seen, the financing of the construction depended on the granting of the subsidy, so no progress was made.

Nova Scotia.—It is reported that a steel shipbuilding plant will be located at Dartmouth, N.S., under the Nova Scotia Government's scheme for aiding shipbuilding in the province.

Nova Scotia Schooner Building.—A 3-masted schooner, named Esther Adelaide, 148 ft. long, 36 ft. wide and 12.4 ft. deep,

was launched at Port Greville, N.S., Aug. 8, and on the same date a schooner, named William Melbourne, 158.4 ft. long, 12.7 ft. deep, was launched at Parrsboro, N.S., for C. T. White & Son, Sussex, N.B. It is reported that both vessels have been sold to Australian parties.

The Nova Scotia Shipbuilding and Transportation Co. has commenced the construction of two 500-ton schooners at Liverpool, N.S., and is arranging to launch one similar vessel every three months as long as the demand continues. The two vessels now laid down have been sold. H. A. Frank, New York, and W. E. Hansel are chiefly concerned in the company's management.

The Ontario Gravel and Freighting Co., Windsor, Ont., had a wooden steam tug named Windsor launched from R. Morrill's yards, Collingwood, Ont., Aug. 18. Her dimensions are: length 105 ft., breadth Her dimensions are, length 105 ft., breadth 23 ft., depth 12 ft. She is equipped with fore and aft compound engine, supplied with steam by a Scotch boiler 13 by 13 ft., at a working pressure of 155 lbs. On completion she will be taken to the Detroit River for towing scows and for general freight purposes.

Prince Rupert Drydock, etc.—The Liberal convention held in Winnipeg in August passed a resolution urging the Dominion Government to instal a permanent and efficient staff, and to assemble materials for the operation of the Grand Trunk Pacific drydock and shipbuilding and repair plant at Prince Rupert, so that shipbuilding and repairing may be carried on in the national interest.

The negotiations which were reported to have been in progress with the Union Iron Works, San Francisco, Cal., for the lease of the G.T.P. plant at Prince Rupert, are stated to have fallen through, though it is announced that negotiations are proceeding with other firms with some signs of success, the chief obstacle being the supply of steel for shipbuilding.

The St. John Shipbuilding Co., mention of which has been made in previous issues, is completing arrangements for commencing the building of wooden vessels at an early date. The directors include J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines, Ltd.; Senator W. C. Edwards, R. M. Wolvin, President, Montreal Transportation Co., and President, Canada West Coast Navigation Co.; M. J. Haney, Chairman, Canada West Coast Navigation Co.; Angus McLean, Bathurst, N.B., Richard O'Leary, Richibucto, N.B., Thos. Bell, St. John, N.B., and Thos. Nagle, St. John, N.B., the last mentioned being the General Manager.

The St. John Shipbuilding Co., organized recently, has plans for the construction of five ways at Courtenay Bay, St. John, N.B., where it intends laying keels for five 5-masted schooners with auxiliary power. It is reported at St. John that 10 ways are to be laid down, that vessels will probably be built there for the Imperial Munitions Board, and that eventually steel vessels will be built.

The schooner Malahat was launched at the Cameron-Genoa Shipbuilders' yard, Victoria, Aug. 11. Considerable delay has been experienced in obtaining delivery of the Bolinder engines intended for this vessel, they being made in Sweden. It has, therefore, been decided that she will accomplish her first voyage as a schooner, after which, it is hoped that her engines will have arrived. The Malahat has been sold to Canada Steam-

ship Lines, Ltd., and she is at present under charter with lumber for Australia. She was built for Malahat Motor Ship Co., a subsidiary of H. W. Brown & Co., the principal of which is General Manager of the Canada West Coast Navigation Co., and which, in turn, is closely associated with people interested in Canada Steamship Lines, Ltd.

The Steel Co. of Canada is extending its plant at Hamilton, Ont., and it is stated that in addition to manufacturing general sheet metal, it will arrange a special department for rolling steel plates for shipbuilding.

Steel Shipbuilding Probabilities.—Mark Workman, President, Dominion Steel Corporation, Montreal, is reported to have stated recently, that Canada will not be in a position to build steel steamships to any considerable extent for two or three years, owing to the scarcity of steel. He said that his company's entire output had been contracted for by the Imperial Munitions Board, up to the middle of 1918, and it was probable that the contract would run into the following year. The company is expending about \$5,000,000 for extensions and improvements, but the additional resulting output is all covered by existing contracts.

Toronto Dry Dock Co., Ltd., has been incorporated under the Ontario Companies Act, with \$100,000 authorized capital, and office at Toronto, to take over a dry dock, or dry docks, at Toronto, and to build, own and operate steam and other vessels. Among those interested in the company are C. S. Boone, President, and J. E. Russell, Vice President and Managing Director, Toronto Shipbuilding Co.; L. Solman, Manager, Toronto Ferry Co.; J. J. Manley and H. Dickson. The company bought a floating dry dock at Sturgeon Bay, Wis., which has been towed to Toronto and installed on the company's property on the harbor front at the foot of Cherry St. The dock is a small one, capable of handling vessels up to about 160 ft., and is more in the nature of an experiment. It is said that if there is sufficient inducement in the way of vessel repairs, etc., the company will build a modern floating dry dock to accommodate the larger type of lake vessels. The company is stated to have made application to the Dominion Government for a subsidy.

The Toronto Shipbuilding Co., Ltd., has been incorporated under the Ontario Companies Act, with \$100,000 authorized capital, and office at Toronto, to build, own and operate steam and other vessels of all kinds, and to carry on a general contracting business. Following are the officers: C. S. Boone, President, Boone Dredging & Construction Co., Toronto, President; J. E. Russell, Contractor, Vice President and Managing Director; C. A. Boone, Second Vice President; J. M. Russell, Secretary; J. J. Manley, Treasurer, and C. L. Hayes, Engineer and Superintendent. A plant is being laid out on the harbor front at the foot of Cherry St., where the company will build two wooden steamships, for which it has a contract from the Imperial Munitions Board.

The s.s. Ugelstad, which was launched recently at the Port Arthur Shipbuilding Co.'s yards at Port Arthur, Ont., was completed and handed over to the Great Lakes Transportation Co., early in August. It is said that negotiations are under way for the transfer of the vessel to Norwegian interests, but it is anticipated that such transfer would not be authorized by the Dominion Government, but dently made a mistake in referring to

rather that she would be taken over for the British Government.

Wallace Shipyards, Ltd., which, as previously announced, has sold its no. 2 yards at North Vancouver, to Wm. Lyall Shipbuilding Co., does not give up actual possession until the completion of two auxiliary powered ships being built there for Canada West Coast Navigation Co., the last one, named Mabel Stewart, being launched Aug. 11.

Western Canada Shipyards Ltd. has secured a permit for the construction of an office building, etc., on the site it has acquired from the British Columbia Electric Ry., at the foot of Carroil St., Vancouver, B.C.

C. T. White & Son, Ltd., Sussex, N.B., have, it is reported, added shipbuilding to their other industries, and have laid out a yard at Alma, N.B., on the west side of the river, beyond the breakwater.

The Yarmouth Shipbuilding Co. Ltd., is reported to have leased O'Hanley's wharf formerly the Gilbert Sanderson shipyard, at Yarmouth, N.S.

British Columbia Steamboat Men's Work.

From the glacier-fed waters of the Upper Fraser River in British Columbia to the Garden of Eden is a far cry, but many of the adventurous steamboat men, scowmen and canoemen who blazed the trails of progress in the north and are remembered as the pioneers of navigation in central British Columbia, made the long trip to the plains of Arabia to play their part in the Empire's battles. Glowing tributes have been paid to British Columbia men so active in the Inland Water Transport Service, and owing to the efficiency of the rivermen who have learned through years of experience on the Fraser and the Skeena Rivers, how best to master the problem of river transportation, special calls were sent out from Britain for more men from the Pacific province. The work on the northern rivers is similar to that on the Tigris and Euphrates, and a short period of acclimatization finds the rugged frontiersmen no fthe far west at home in the land of Caliphs.

Patrol Steamship Building for British Government.

In response to questions by members as to the progress in building ships in Canada for the British Government, the supervision of which was undertaken by J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines, Ltd., the Minister of Marine stated in the House of Commons, Aug. 6, that the work is progressing satisfactorily, but not as rapidly as had been hoped for. There is difficulty about getting engines and boilers, which has caused delay. A number of vessels have been launched, and it is hoped to have a number of them in patrol service in such places as the British Government desires to place them. The British Government asked the Marine Department to undertake the work, and this is being done, with the assistance of Mr. Norcross and other gentlemen. The work is being performed in a number of places in Canada. In Quebec it is being done by George Davie of Levis, in Montreal by Canadian Vickers, Limited, and in Toronto by Norcross and Polson. Work is also being done at Collingwood and Port Arthur, and other points. On the whole it is going ahead satisfactorily, but there are delays in obtaining material, and it has not proceeded as quickly as was hoped for at the time the orders were placed.

[EDITOR'S NOTE.—The Minister evi-

vessels being built in Toronto by "Norcross and Polson." J. W. Norcross is acting as Director of Naval Construction, under the Naval Service Department, in connection with the building of steam trawlers and drifters. The Polson Iron Works has a contract for a number of patrol boats as well as trawlers and drifters, as referred to elsewhere, and others are being built by other concerns in Toronto as well as in other places.]

Lake Vessels for Winter Service on the Atlantic.

In Canadian Railway and Marine World for August, some mention was made regarding the suggestion of a correspondent of a Toronto daily paper, as to utilizing lake vessels for Atlantic service during the winter, when lake navigation is closed. It might betaken from the correspondent's letter that on the closing down of navigation on the Great Lakes, all the vessels are tied up until the spring. So far as Canada is concerned, especially since the commencement of the war, this is not the case. During the last two winters, a considerable number of Canadian registered lake vessels have been transferred to the coast and to Great Britain and France, under charter for any service which they may be called upon to perform. Some of these charters were for winter service only, such vessels returning to their customary service in the spring, and other charters have been for periods of from two to five years. Canadian Railway and Marine World has from time to time given details of the vessels so engaged.

There are still a number of vessels which might engage in this service with advantage, but it must be understood that all vessels operating on the Great Lakes are not suitable for salt water service, and also that there are several vessels which would have to be cut in two and towed through the canals, and pieced together again before taking up the ocean service. A great many of the lake vessels have been built in Great Britain, and so have had some Atlantic experience, but there is very little doubt that vessels of the customary lake type, with propelling machinery located in the stern, are not suitable for continuous service in trans-Atlantic trade. This conclusion is not derogatory to the type or construction of the vessels. They are originally designed and built for lake service, and fulfil their duties in that service, but the type is not of the kind adapted to ocean service.

Several U.S. shipping companies are considering the question of sending some of their vessels to the coast for coast service during the winter, and consider that they could be used to advantage on the east coast between November and April. The cost of refitting the vessels for salt water service is mentioned as about \$5 per horsepower, and it is believed that with some government backing, the plan is feasible. It is hoped to get the government to pay the initial cost of changing the equipment, the owners to repay the amounts out of the profits of the winter business.

Press reports state that arrangements are being made in the United States to select about 80 vessels, which are deemed suitable for ocean and coast service, and take them through the Welland and St. Lawrence canals. Those which are too long for passage through the Welland Canal will be cut in two and joined, pos-

sibly at Montreal. It is also reported that a Canadian Government representative has classified a number of Canadian vessels suitable for ocean service, and it is stated that all vessels which can pass the Welland Canal, and are deemed suitable for the service, will be taken. These number about 100, and are additional to those Canadian Lake vessels which have been in such service from the commencement of the war.

Enquiry into Triple Strandings of Steamship Turbinia.

Capt. L. A. Demers, Dominion Wreck Comissioiner, assisted by Capt. J. B. Foote and Jas. McMaugh, as nautical assessors, held an enquiry at Toronto recently, into the causes which led to the stranding of Canada Steamship Lines s.s. Turbinia in the Niagara River, June 30, on Centre Island, Toronto, July 1, and in Toronto harbor, July 5. The court found that the grounding in the Niagara River, between Queenston and Lewiston, was due to an error of judgment on the part of the master, A. Jeffreys, in miscalculating the force of the current and wind, but that it was not of a culpable nature. Regarding the second grounding, the court considered that the master did not apply his judgment in the proper channel; he had expressed his doubts as to the correctness of the compass but did not take means to ascertain its deviation; he was running at too great a speed during fog, and did not use the lead as he should have done. He bears a good reputation as an officer, and for this reason the court dealt leniently with him and suspended his certificate for one month from July 20. The court absolved the mate, M. J. Lawless, from blame for the stranding, but remarked that his conduct indicated indifference. With respect to the third grounding, the evidence was not very clear, as the master stated that a number of small boats were almost blocking the channel, and in endeavoring to clear them he grounded. The wheelman and second officer said that they saw no boats. The court found that he was not in fault in this case, but warned him to be more careful in future and not to lose sight of his responsibilities as a master.

The Federal Shipbuilding Co., associated with the United States Steel Corporation, is credited with the intention of building the largest shipbuilding plant in the world at New York. It is said that 10 shipways are to be established, each about 500 ft. long, which will probably be extended to take vessels 1,000 ft. long, later in, that the steel buildings, which are planned to cover 10 acres, will include a plate mill, structural steel, fabricating and assembling shops, all the equipment is to be made in the plant, and that a large basin, 1,000 by 220 ft. is being dredged, large enough to enable six vessels to be fitted out simultaneously. The plant is being modelled on plans adopted by the most modern yards in Scotland.

The Oriental Navigation Co. of Nantes, France, which has acquired the s.s. Orleans, now under construction at Toronto, from the Great Lakes Transportation Co., is reported to have also bought the s.s. Turert Crown from the Coastwise Steamship and Barge Co., Vancouver, B.C. The Turret Crown, which was formerly operated on the Great Lakes, has latterly been in the ore trade between Granby Bay and Puget Sound.

Atlantic and Pacific Ocean Marine.

A derelict vessel about 220 ft. long, floating keel upward in the North Atlantic, was reported recently by the s.s. Rounton Grange, as a menace to navigation.

The Blue Funnel Line will resume its trans-Pacific service about the end of this year. It was interrupted owing to a number of the vessels being commandeered for war work.

The British s.s. Heliopolis, formerly Maine, is reported to have been purchased by Canadian Pacific Ocean Services, Ltd., and renamed Methven. She was built at Glasgow, Scotland, in 1906, and is 4,852 tons gross, 3,042 register.

Maritime Provinces and Newfoundland.

The Public Works Department received tenders, Aug. 31, for extensions and repairs to Negro Point breakwater, St. John harbor, N.B.

The Eastern Steamship Corporation is not operating its usual direct service between St. John, N.B., and Boston, Mass., this year, but is continuing its service on its International Division, to St. John, via Portland, Me.

The Dominion Iron and Steel Co.'s s.s. Heathcote was sunk in a collision with a Dutch steamship in the St. Lawrence, toward the end of July, while carrying a cargo of limestone to Sydney, N.S. She was built at Sunderland, Eng., in 1888, and was 2,345 tons gross.

The British s.s. Clematis, which stranded near Red Cape, Framboise, N.S., June 16, and which was towed to Halifax for examination, will be repaired there. The contract was given the Halifax Dry Dock Co., for \$164,000, against a New York tender for \$210,000.

On Aug. 22, the s.s. Northumberland was withdrawn from service between Point du Chene, N.B., and Summerside, P.E.I., for repairs, and thae service was discontinued temporarily at least. The s.s. Aranmore is continuing the service between Pictou, N.S., and Charlottetown, P.E.I.

The Department of Marine has bought for \$7,000 the s.s. Wilfrid C. from the Shepody Navigation Co., Moncton, N.B., for use in connection with the naval defence of Halifax harbor. She was built at Yarmouth, N.S., in 1897, and is screw driven by engine of 16 n.h.p. Her dimensions are, length 80 ft., breadth 18.5 ft., depth 8 ft.; tonnage, 90 gross, 48 register. The name has been changed to Wilfrid.

The Norwegian s.s. Kristianiafjord, which was reported in our last issue as ashore near Cape Race, Nfld., has become a total loss, owing to the heavy weather prevailing. The Quebec Salvage and Wrecking Co.'s s.s. Lord Strathcona, which was sent to her relief, did some good work, but the wreck was driven farther inshore, and her bows and keel were badly ripped, as well as causing considerable damage to her machinery, making salvage practically impossible. The sale of the vessel as she lies, by public auction, has been advertised.

Toronto Coal and Dock Co., Ltd., has been incorporated under the Dominion Companies Act, with \$100,000 capital and office at Montreal, to own and operate steam and other vessels, and to deal generally in coal, lumber and other merchandise.

Province of Quebec Marine.

The Quebec and Levis Ferry Co.'s s.s. John S. Thom, was reported ashore at Devil's Neck, near Charlotte, N.Y., Aug. 21.

Canada Steamship Lines Ltd., has decided that it will not deliver grain from its vessels to any elevator, above lock 2, on the Lachine Canal, unless such unloading was pre-arranged when the contract for freight was made.

Ontario and the Great Lakes.

The s.s. Thousand Islander, which, during the summer, has been making a Sunday call at Brockville, has eliminated it on the objection of the Lord's Day Alliance.

The Marine Department has announced that the flashing white catoptric light at the west end of Long Point, Lake Erie, has not been discontinued, a previous notice to that effect having been cancelled.

The light near the outer end of the west pier at Charlotte, N.Y., has been changed from a fixed red light to an occulting white light, visible 6 secs. and eclipsed 4 secs alternately.

Supplementary estimates laid before the House of Commons, Aug. 17, include \$1,020,000 for the purchase of the steamships J. A. McKee and Thomas J. Drummond, to which allusion has been made in previous issues.

The s.s. Agwinde, formerly owned by the Rainy River Navigation Co., Fort William, has been sold to Capt. I. Bureau, for fishing service at the mouth of Rainy River, and it is stated that it may later on be placed in passenger service on the river.

The s.s. Natironco, which was wrecked in collision with the s.s. Eastern States in the Detroit River, June 19, and beached on the Canadian bank, opposite the Ecorse Shipbuilding Co.'s plant, has been sold to Theo. Colombier, Bordeaux, France, through A. B. Mackay, Hamilton, Ont., for \$32,500. She is to be taken as she lies. There were six bids received, all approximating this sum.

It was reported recently that Canada Steamship Lines' s.s. Turbinia, at present running between Toronto and Hamilton, would probably be taken over by the British Government, for war service. We are officially advised that the vessel has been looked over by representatives of the British Government, but that no arrangements have been made for requisitioning her.

The Minister of Marine stated in the House of Commons, Aug. 16, that the s.s. Laurentian was purchased recently from Canada Steamship Lines Ltd., for \$50,000. She was formerly known as King Edward, and was built in Great Britain in 1902. She is a screw driven vessel, with engine of 84 n.h.p., and her dimensions are, length 149 ft., breadth 24 ft., depth 11.1 ft.; tonnage, 355 gross, 155 register.

The Brockville-Morristown Transportation Co. is reported to have sold the s.s. John Webster to the United States War Department for about \$40,000. This vessel was built in April and was operated between Brockville, Ont., and Morristown, N.Y. She is being taken down the St. Lawrence to the Atlantic and thence to the Delaware River, where it is proposed to use her for transporting soldiers at Fort Dupont.

The Montreal Transportation Co.'s s.s. Westmount, which ran aground at Caribou Island, in St. Marys River, July 30,

was released Aug. 4, after about 60,000 bush. of her cargo of grain was lightered.

The Canadian Steel Corporation has filed plans for the construction of a marine slip, harbor works, docks and wharves with a canal running through the property for 2,500 ft., 200 ft. wide and 25 ft. deep, at Ojibway, Ont. It is proposed to build docks along this canal, and also on the Detroit River front.

The Public Works Department has refused an application for the construction of a wharf at Lot 10 at the junction of the Mission and Kaministikwia Rivers, Fort William, on the ground that it would restrict the navigable area in the basin there. The department has also notified the City of Fort William, that its water mains under the Kaministikwia River are dangerous to navigation, and that they must be laid at a greater depth and subject to the department's approval.

A Sarnia dispatch of Aug. 9, stated that the s.s. Rochester, "purchased recently from American parties by the Northern Navigation Lines, and tried on the Georgian Bay run, has been sold to Toronto parties, and will be taken there." The s.s. Rochester was built in 1910 for the Richelieu and Ontario Navigation Co. of the United States, and placed on the U. S. register. On the acquirement of the R. & O. N. Co. by Canada Steamship Lines, Ltd., the ownership of this vessel passed to the new company, and she was retained on the U.S. register, and owned by American Interlake Line. She was not in operation last year, being laid up in Canadian waters, but this year she was chartered to the Northern Navigation Co., which is under Canada Steamship Lines control, and used on that company's Georgian Bay route. We have been advising that nothing is known officially of the reported sale of the vessel.

Furness Withy and Co.'s annual meeting of shareholders was held in London, Eng., July 28. The accounts for 1916 showed a profit, including the balance brought forward from the previous year of £1,182,845 1s. 5d., after providing for the tax on excess profits. Three quarterly dividends were paid on the ordinary shares, at 10% per annum, and the usual half yearly dividends on preference shares, leaving an available balance of £1,004,720 1s. 5d. Of this balance, £350,000 was applied to depreciation account, and £200,000 to trades contingencies fund, making the company's total reserves £1,500,000. A bonus of 10% free of income tax was declared, in addition to the usual 10% dividend on the ordinary shares. The fund which has been formed for distribution amongst the company's masters, officers and engineers, at the close of the war was augmented by £40,000, bringing the total of the fund to £70,000. The company has disposed of its interest in Irvine's Shipbuilding and Dry Docks Co., West Hartlepool, and has acquired a controlling interest in the Prince Line, Ltd., and has also purchased the capital stock of the Queenstown Dry Docks, Shipbuilding and Engineering Co., of Passage West, Ireland. The company is acting as agent for the Admiralty transports loading in America for account of the allied Governments, and the London office is devoted almost exclusively to government work, which is undertaken by the company without remuneration.

It was announced in the British House of Commons, Aug. 7, that the first of the standardized steamships built in Great Britain under the new war schemes, would be placed in service during August.

British Columbia and Pacific Coast.

During June the coastwise tonnage inbound at Vancouver, was 306,958, and outbound 343,314. The ocean tonnage, including all vessels of foreign registry, was, inbound 172,559, and outbound 120,454 tons.

The Dominion Public Works Department has authorized the commencement of dredging work at the entrance to the inner harbor, Victoria. The channel is to be widened about 100 ft., and temporary lights will be placed during the progress of the work.

A motor boat service has been established between South Prince George and Quesnel, on the Fraser River, during the navigation season. The boat leaves South Fort George on Wednesdays and Saturdays, and Quesnel on Mondays and Thursdays. The single fare is \$10, and \$15 for the round trip; way points at 10c a mile, meals 50c and beds 50c.

The C.P.R. is reported to be dismantling the s.s. *Rosslund*, which has been operated in the Arrow Lakes service for several years. She was built at Nakusp, B.C., in 1897, and was driven by a paddle wheel, with engine of 38 n.h.p. Her dimensions were: Length, 183.4 ft.; breadth, 29.1 ft.; depth, 7 ft.; tonnage, 884 gross, 532 register.

The C.P.R. put a new schedule in effect, Aug. 8, for its steamship service to the west coast of Vancouver Island. The s.s. *Princess Maquinna* leaves Victoria on the 1st, 8th, and 22nd of each month, for Quatsino Sound, calling at way ports, and on the 16th of each month she will run to Nootka Sound, calling at intermediate ports.

The Coastwise Steamship & Barge Co.'s s.s. *Anyox* was launched from the Winslow Marine Railway & Shipbuilding Yards at Seattle, Wash., Aug. 2. On completion she will be used in the ore trade between Anyox and Puget Sound ports. She is 205 ft. long, 39 ft. beam, 23 ft. deep, and is equipped with oil burning engines for a speed of from 10 to 12 knots an hour when fully loaded. The company also owns the steamships *Amur*, *Henriette* and *Turret Crown*.

The Grand Trunk Pacific Alaska Co.'s auxiliary powered vessel *Tillamook* has been placed in service between Prince Rupert, B.C., and Ketchikan, Alaska, and intermediate ports. The owning company is a subsidiary of the Grand Trunk Pacific Ry., and was recently incorporated at Olympia, Wash. The vessel is registered in the U.S. She is 119 ft. long, 29 ft. beam, and has berth accommodation for 21 passengers. The cargo capacity is about 450 tons, and she will be used chiefly in the fish trade. Two round trips will be made weekly, and an additional trip each week should occasion warrant it.

British Shipping Statistics.—The British Prime Minister stated in the House of Commons, Aug. 16, that during the first six months of this year, 484 of new shipping tonnage was built, and during the last six months, including purchases, the additional tonnage would be 1,424,000 tons. During April, 560,000 gross tons of shipping were lost through enemy submarines, while in July, the lost tonnage due to enemy submarines dropped to 320,000 gross tons. He stated that with the co-operation of the U.S., there would be sufficient tonnage for 1918, and if necessary 1919 as well.

Canadian Government Vessels Launched at Toronto.

By the launching of 2 hulls, Aug. 1, Polson Iron Works, Ltd., Toronto, completed the preliminary stage of the construction of 6 steel steamships for Canadian Government service. Four of these hulls were launched June 16, and a full description with diagrams of the vessels and a view of the hulls on the launching ways, were given in *Canadian Railway and Marine World* for July. The first four launched were named respectively, *Ypres*, *Vimy*, *Messines* and *St. Julien*, and the last two launched were named *St. Eloi* and *Festubert* respectively. The christenings on Aug. 1 were carried out by Mrs. J. B. Miller and Mrs. A. H. Jeffrey, and the wives respectively of the President and the Manager and Secretary, Polson Iron Works.

The dimensions of the vessels are: Length over all, 140 ft.; breadth, 23½ ft.; depth moulded, 13½ ft. The propelling machinery consists of fore and aft compound surface condensing engines, with cylinders, 18 and 38 in. diam. by 24 in. stroke, developing 500 h.p., and supplied with steam by water tube boilers at 180 lb., and equipped with down draught. Each of the vessels will be fully equipped for salt water service before leaving the Toronto yards, and some special equipment is to be added at Montreal before the vessels enter their ultimate service.

Grounding of the s.s. *Letitia*.

Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Commanders C. White, R.N., and E. Wyatt, R.N.R., as nautical assessors, held an enquiry at Halifax, N.S., Aug. 13 and 14, into the grounding of *Anchor-Donaldson Line s.s. Letitia* near Portugese Cove, in Halifax harbor, Aug. 1. The vessel was being utilized as a hospital ship, and conveying a number of wounded and convalescent soldiers to Canada. One life was lost as a result of the casualty. After hearing the evidence, which the court pronounced as straightforward and to the point, the commissioner commented on the conduct of the master and officers. In the former case, he said, "His share in the landing safely of the wounded soldiers and others, speaks well in his favor, as well as his long and successful career, and these are sufficient reasons for belief that in trusting so faithfully to the pilot, was under the circumstances an excusable error of judgment, and a warning in his case is unnecessary, as the court is positive that no pilot well ever succeed in imposing in such a manner on him again."

Regarding the pilot, it was found that the exceptional prudence and care demanded, owing to the exceptional circumstance of navigating a hospital ship, were not exercised, and a haphazard method was adopted, with the consequence that a valuable vessel was lost, one life lost and one officer crippled for life. It is providential that a greater disaster was not registered, and this was due to the calm weather, strict discipline and sang froid shown by the military and the ship's staff. The court also considered what was described as the unenviable reputation which the coast and the port of Halifax is gradually gaining, and hopes that this action, not wilful, but stupid, of this pilot, will not remain a stigma on a port with such natural facilities and so easy of access. While condemning the pilot for gross negligence, it also condemned the custom which seems to pre-

vail, as admitted by the pilot, of giving and receiving a course or bearing from a member of the cutter's crew. That such a man should offer a bearing and that it should be accepted by a licensed pilot, supposedly rational, would seem a fable, were its reality not brought so forcibly to general knowledge. The court felt keenly about this casualty, and in order that a repetition may be impossible and as a deterrent to any inclined to carelessness, decided to deal severely with the pilot. Had it not been the custom for pilots to take their possible position from another, the criminal courts would have been requested to deal with this case, but under the circumstances the court cancelled the license of the pilot, Walter White, no. 24, and the Halifax Pilotage Commission was requested to see that the court's order is carried out. The court also suggested that a general and thorough enquiry should be made into the pilotage system in Halifax, in order to bring about a betterment so as to induce the confidence of the shipping public. A better and more thorough system of examination is needed.

Mainly About Marine People.

W. G. Ross, President, Montreal Harbor Commission, has been given the British Navy League's special service decoration, as a recognition of his services for British sea power.

Robert Preston, organizer and Manager of the Westminster Towing & Fishing Co., died at New Westminster, B.C., Aug. 1. He was a native of St. Stephen, N.B., and had lived in British Columbia since 1864.

C. H. Nicholson, Manager, Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C., was presented with a silver tea and coffee service by the local office staff and vessel crews, Aug. 1, to mark the 25th anniversary of his wedding.

Major H. Maitland Kersey, D.S.O., Managing Director, Canadian Pacific Ocean Services, Ltd., London, Eng., is offering a prize to be given at the end of each year, to the cadet studying on the training ship *Conway*, showing the greatest proficiency in the management of boats. The prize consists of a sextant.

T. H. Allan, heretofore yard superintendent, Wallace Shipyards, North Vancouver, B.C., has been appointed General Superintendent. He has been 25 years connected with shipbuilding, having served his apprenticeship at Superior, Wis., though of English birth. He was later in service with John Brown & Co. and Vickers Son & Maxim, shipbuilders, of Scotland and England respectively; Collingwood Shipbuilding Co., Collingwood, Ont.; British Columbia Marine Railway Co., Esquimalt, B.C., and since Jan., 1916, with Wallace Shipyards, Ltd.

Hugh A. Allan, Chairman of the Allan Line Steamship Co., was presented with an illuminated address by the directors and staffs of the London, Liverpool and Glasgow offices, recently, on his retirement, due to the Allan Line passing under C.P.R. control. He was connected with the Allan Line for 40 years, 32 of which were spent in Canada, and the last 8 years in London, Eng. In referring to the passing of the Allan Line, Mr. Allan said: "The Allans have been in the North Atlantic trade for 98 years, and now that my brother, Andrew, and I, the last representatives of the family, are giving up the agencies on both sides of the Atlantic, I feel that the connection has been broken."

Overseas Transportation and the War.

The overseas transportation service, which is under the direction of the acting Director of Overseas Transport, is closely associated with the Marine Department, and its work was referred to by the Minister of Marine in the House of Commons, Aug. 6, in dealing with his report for the year ended Mar. 31, generally as follows: The branch is responsible for the movement of all transports, carrying either troops or munitions, for the provision of all necessary escorts at sea, and for advising the Imperial authorities, giving detailed information by telegraph of the cargoes of all transports before they arrive in England, the Admiralty and War Office then being able to make the necessary arrangements for handling the cargoes on arrival. During the year under review, the work increased greatly. There is general control of the traffic inland, by rail or otherwise, covering its reception and storage at points of shipment, the allocation of cargoes to different vessels, and the storage on board. The Naval Service Department is responsible for the movement of these vessels, the supply of sufficient tonnage to meet transportation demands, and the routing of same. Through co-operation, the transportation problems have to a large extent been overcome, and a high degree of efficiency has been attained. All expenses in connection with this service are defrayed by the Dominion Government on behalf of the Imperial Government, on presentation of certified invoices. Contracts are made for the supply of bunker coal as required, and during the year, 230,000 tons were purchased from Canadian firms for transports. Arrangements were also made for repairing and fitting vessels for special purposes, and for the supply of provisions, stores and gear as are required while vessels are in Canadian ports.

The average export movement for the year ended Mar. 31, was over 200,000 tons a month, or roughly, 8 fully loaded freight trains of material a day. The monthly total now exceeds 360,000 tons, and the sailings average two a day. During the year, a total of 386 sailings, comprising 2,429,829 tons, cleared from Canadian ports. These figures show a large increase over the previous year, when 198 sailings comprising 970,911 tons, were made. The Minister said that the department's thanks were due to the C.P.R. for the services of a number of experienced transportation officers, as well as for its ready co-operation at all times.

Stranding of the s.s. Singapore.—An investigation was held at Montreal recently by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. Nash and C. Lapierre, as nautical assessors, into the causes which led to the stranding of the s.s. Singapore at Metis Point in the River St. Lawrence, July 1. The court found that the master, F. W. Hatswell, showed proof of poor judgment, and that a very indifferent lookout was kept by the second officer. Under the circumstances the master's certificate was not dealt with, but he was reprimanded very severely. The court said that it had no warrant to eulogize or to condemn the St. Lawrence or Canadian waters, but having had 14 years in exploring every part of it, it could safely say that if ordinary prudence be exercised, there is no reason for such a casualty to occur.

The Equipment of Auxiliary Powered Vessels.

With reference to the auxiliary powered vessels built for the Canada West Coast Navigation Co., on the Pacific coast, *Motorship*, a paper devoted to the interests of motor driven vessels, says: "If the motors are genuinely used as an auxiliary to the sails, the power is sufficient, but if the sails are auxiliary to the engines, she is without doubt underpowered. The non-success of several auxiliaries has been due to the fact that when such vessels were ordered, owners intended to use the motors for getting in and out of harbors and for docking; but after the vessels were in service the captains receive instructions to use the engines continuously, which, of course, is quite unfair to the machinery. Personally, we think that these vessels are underpowered and that two 300-400 b.h.p. motors should have been installed, because the motors are sure to be used constantly, which, of course, is too much work to expect from engines which are not meant to drive the boat at any substantial and prolonged speed. The engines are there, and doubtless the crew, if not the owners, will expect them to do the work of machinery of a full powered ship of this size." The vessels are equipped with two 160 b.h.p. Bolinder surface ignition oil engines.

Radiotelegraphy in Canada During the War.

In a statement to the House of Commons, Aug. 6, respecting the work of his department for the fiscal year ended Mar. 31, the Minister of Marine, in dealing with radiotelegraphy, said that the government's policy, to develop and maintain under government control, the radiotelegraph service, was being continued. All amateur stations, which were closed down at the commencement of the war, remained so. The service is playing an important part in the war, particularly in providing communication for such vessels of war as may be operating in the vicinity of Canadian waters. The government stations on the Atlantic and Pacific coasts are well adapted for such purposes, and by reserving certain stations for naval work solely, adequate facilities have been provided. There are 156 coast, land and ship stations in the Dominion, 67 being government land and ship stations, 75 are commercial ship stations and the remaining 13 are commercial land, coast and instructional stations. There are 404 persons employed in the service, or whom 137 are in the government's employ. Of the 43 coast stations, 42 are owned by the government. Those on the west coast and Hudson Bay are operated directly by the Naval Service Department, and those on the Great Lakes and east coast, with certain exceptions are operated by the Marconi Wireless Telegraph Co. under contract. During the war, certain stations on the east coast have been taken over and operated directly by the Naval Service Department, for naval purposes solely. The section of the Radio-Telegraph Act calling for the compulsory equipment of certain steamships with wireless facilities, has been efficiently carried out, and no attempts to evade the act's requirements were reported. During the year, 141 operators were examined for certificates and 87 were successful, and to the end of the year, 176

proficiency certificates had been issued. The regular work of the stations was carried on so far as war conditions permitted, and there were large increases in the number of messages and words, as well as in revenue over the previous year.

Government Hydrographic Surveys.

In discussing the estimate to provide \$200,000 for hydrographic surveys, the work under W. J. Stewart, Chief Hydrographic Officer, was outlined by the Minister of Marine, in the House of Commons, Aug. 6, as follows:

Atlantic Coast.—Survey along the southeast coast of Nova Scotia, from Halifax harbor; to modernize present charts.

Lower St. Lawrence, s.s. Cartier.—Extending eastward from the river; work has been completed as far east as Point des Monts on the north shore and Cape Chat on the south shore. It is intended to carry the work along the south shore, covering the route of vessels approaching the St. Lawrence.

Lake Superior.—The s.s. Bayfield will survey the more exposed coasts on the lake, in the vicinity of Caribou Island and Michipicoten. The s.s. La Canadienne is surveying more sheltered waters; that on Nipigon Bay has been completed, and Black Bay is to be completed this year, and if time permits the vessel may be moved to work in the north channel of Lake Huron.

Pacific Coast.—The s.s. Lillooet is working round Queen Charlotte Islands and Hecate Strait.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

L'Air Liquide Society.—E. Jordan has been appointed Canadian Representative and Chief Engineer, succeeding C. Royer, resigned.

Independent Pneumatic Tool Co., Chicago, Ill., and 334 St. James St., Montreal, has issued circular Z, describing in detail its line of Thor pneumatic tools and electric drills.

Berry Brothers, varnish manufacturers, Walkerville, Ont., have arranged for group life insurance, covering all their employes who have been in their service for six months, the insurance ranging from \$500 to \$1,000, according to the term of service.

Smoke Nuisance Along Navigable Waterways.—The Dominion Marine Association is taking up this matter with the Ontario Department of Lands, Forests and Mines, with the view of obtaining some changes in the regulations respecting the burning of brush, and the making of fires of any kind which tend to increase the smoke nuisance along navigable waterways, particularly in the Upper Lakes channels. The Department is investigating with regard to the period during which the lighting of fires shall be permitted.

Canadian Railway and Marine World

October, 1917.

Some Present Day Problems in Railway Maintenance Work.

By F. B. Tapley, Assistant Engineer of Maintenance, Canadian Government Railways, Moncton, N.B.

Railway maintenance, as performed by the maintenance department is a constant building up of the breaking down process caused by the wear and tear of traffic, and the effect of the elements and time. It covers a pretty broad field, embracing in its scope the roadbed, track, bridges, waterways, fences, buildings, water supply and other kindred work. The subject is too extensive to be covered, even in a general way, by one paper, so this paper will be confined to a few notes on the track structure itself, and the present day problems pertaining thereto. The track structure, as it is called, embraces the roadbed as well as the rail and ties. The roadbed and track of a railway is one of the most important parts of the complete railway structure, and may, on account of its importance, be called the backbone of the system. To keep it in good condition, the railway must provide a certain sum of money each year, have a stock of material, and a trained organization of men.

The present day tendency in Canadian railway practice is toward the large car and the long train, and, as Canada is a country of long distances, this tendency will grow. Large cars and long trains require big locomotives to haul them, and big locomotives mean more wear and tear on the track. This condition is manifesting itself at a time when material is high in price and hard to get hold of; when labor is scarce and independent in attitude; when operating costs are growing in volume; while rates, both freight and passenger, remain almost stationary. Yet the Canadian railways must have and maintain good tracks if passengers and freight are to be carried safely and expeditiously. Canada's long winter climate and short season for the carriage of water borne inland traffic places the railways in the premier position in the transportation field.

The railway maintenance men of Canada, in common with those of the rest of the continent of North America, are today facing three important problems, viz., (1) Stronger and more permanent track; (2) The obtaining and holding of labor; (3) The more economic use of material and labor. The first may be obtained in a degree by better drainage, both of the surface and under type; ballast of a better grade and more of it; heavier tie plates of the shoulder type, and the more extensive use of treated ties.

Should you ask a maintenance man what he thinks of the importance of track drainage, he will concede right off that it is one of the most important matters there is, and nine times out of ten he will tell you that the farther you keep the water away from the subgrade the better the track will be. He generally recognizes water as an enemy to be feared and guarded against, all as a matter of theory. As a matter of practice, track drainage gets secondary consideration. There are many good reasons for this.

When the extra forces are put on in the spring there is great anxiety to get the ties in, the new rail laid, and the track surfaced, because the men higher up know about these things, and take a natural interest in their completion. The side ditches and other drainage work, instead of receiving first attention in the spring, are left until the last. We go into the winter with nice clean side ditches, when there is little or no water running, and through the spring and summer with dirty ditches, when it rains the greater part of the time. All this time the drains are working the moisture down into the subgrade, and storing up trouble and extra expense for cold weather. My own opinion is that we should start in the first thing in the spring and carry on the ditching work, simultaneously with the tie renewals, surfacing and other work, with extra section men specially taken on for this purpose. In this way all the work in connection with the track will be carried on in an orderly manner, and the greatest benefit derived. There are many locations where conditions must be met with drainage works of a special character, but for ordinary conditions, and ordinary conditions predominate, a good ditch well maintained is all that is required.

Ballast pits in the past have, in the majority of cases, been chosen more with a view to short haul and low cost in handling rather than to the desirability of the ballast. The result has been that a lot of fine dusty ballast has been put out, which has given us dusty track, and the money put into the venture has not proved a good investment. In the future we shall have to make a closer study of these things, and when it is not possible to obtain bank gravel of the right quality, resort to the use of broken stone or washed gravel. Ballast of this kind is bound to be high in cost, so that we shall have to be more critical of the quality of the material chosen, pay more attention to our handling methods, and see to it that the dead ballast is stripped off the roadbed so that the new ballast will not become mixed with the old.

Shoulder tie plates have proved money savers in lessening labor in holding track to gauge; and those with the canted rail seat have helped to prolong the life of the rails by adjusting the wearing surface of the railhead to conform more closely with the coning of the wheels. My own opinion is that we should lengthen the outside margin of the plate an extra inch to get more bearing on the outside, and to prevent the plate being shoved down into the tie by the crushing force of the loaded rails. This feature should prove a help on the inside of curves. The extra margin would of course, increase the weight of the plate about three-quarters of a pound, and, no doubt, it would have to be thickened slightly to make it stiffer, on account of the increased length, making the increase in weight around a full pound. The ex-

tra cost at ordinary prices would amount to about 2c each, and at present prices about 4c each. Personally, I would favor a tie plate with shallow, blunt ribs, or a smooth bottom, rather than those with deep sharp ribs, as there is less danger of the wood fibre being cut into and destroyed by rot. With a more extensive use of treated ties, which must surely take place in the future, this feature will require close attention.

Time was when the cedar tie occupied the first place in Canadian railway tracks. It was chosen because it was low in price, easy to manufacture, and resisted rot for a longer time than other woods. Under heavy loads it has not lived up to the first impression it gave, and has given out in other ways. Experience has shown that it is not so good as the harder woods for curved track, and without tie plate equipment it is very easily cut by the rail bases. This led the railways to cast around for a harder tie, and the result has been that you will see the harder woods, such as jack pine, tamarack and hemlock favored today, although the life in some respects is shorter. Oak ties are nearly out of the question in Canada, as the supply of native timber is too small, and the cost of importing too high. With the treated tie we can increase the lifetime to about 12 years, and bring into use varieties of wood which today cannot be used in the untreated state. The argument has been set forth that the treated tie showed such a small margin in saving over the untreated article that a drop of a cent or two in the price of a tie would wipe the saving out. This argument carries a good deal of weight with the powers that hand over the money, but my prediction is that the prospective future supply of ties will alter this viewpoint.

The second problem which is staring us in the face is the obtaining of labor; and the retention of it after it has been obtained is becoming a still more serious matter. It is the opinion of some quarters that wages may remain high after the war, and that there will be a scarcity of good labor. This is a reasonable view and the prophets may be right. Be that as it may, we are sure to face a labor shortage for the next three or four years. The solution of the problem would, at the first glance, appear to be to go into the market and bid up to the price the other employers of labor are offering, and take our chance of getting men. However, there are some sceptical people who will tell you that you cannot make bricks without straw, that men are scarce, and that the few who are available are offered more attractive living conditions by other branches of industry. It is true that the manufacturer and the contractor have offered higher wages and more attractive living quarters to the men than the railways have, but we can overcome this in a degree by providing better living accommodation. Railways with their commissary departments for the supply of their dining car services, should be in a

position to feed their men in a more substantial way and at a lower relative cost than they can do it themselves, or have it done for them by contractors. Better and more sanitary living quarters, combined with good food, will increase the efficiency of the worker and go a long way toward establishing a contented body of men willing to stay on the job until the work is finished. Railway maintenance work should appeal to the laborer, on account of its variety and its outdoor environment. The railways should be as keen to obtain and hold men as the contractor or manufacturer. Railway maintenance work has not in the past been regarded with favor by the better class of men. If a quick improvement in the housing and feeding conditions can be effected, then a little work by the publicity department of the railways, setting forth the attractions of railway maintenance work might work wonders. Railways buy a lot of advertising space in the daily papers, and a live advertisement once in a while, appealing to labor, would undoubtedly help. If we give our track laborers as good quarters as are enjoyed by the bridge and building men, we will have taken a long step in the right direction.

I read the other day of the experience of a prominent American railway in doing some track elevation work in a large city. It hired 2,874 laborers in six months to keep a working force of 400 men filled up. In other words they hired the men over seven times, and the average working time of each laborer amounted to a trifle over 21 days. In the same article the experience of a firm of contractors doing public work adjacent to another large city, by force account, is given. The work consisted of ordinary hand work in a lock, which is about as hard and unattractive as you could make it, yet very few changes in the working force took place, in spite of the fact that the rate of wages paid was on the whole considerably below the scale obtaining in the vicinity, and that labor agents from munitions plants endeavored to entice the workmen away by the promise of higher wages. The reasons for the successful holding of the men on the job were quite simple. The contractor saw to it at the start that comfortable buildings were provided in which to house the men, and that a supply of good food, cooked and served in the way the different nationalities desired it, was on hand. These two influences were the main things which kept the men satisfied and on the job for a year, in spite of the efforts to get them away. Keeping the men on the job has the big advantage of a larger output of work per man, and a more efficient working gang. It is obvious to anyone familiar with the various features of maintenance work that the longer a gang works together and the fewer the changes made, the more the work goes with a better swing, and a higher class of work and more of it will be turned out in the working day.

So much has been said about the vast amount of money to be saved by the care, rehabilitation and the re-use of old material, that one is prone to approach the subject with fear and trembling. We can, however, by a freer use of the rail saw, treat our released rails to advantage and prolong their life in branch line service. My idea would be to do the sawing work in the winter when the work is slack, maintaining a small gang for this purpose, or the work might be carried on throughout the entire year, if there were enough of it to justify it. Take a year when main rail renewals were fairly heavy. The re-

leased rail could be sorted over, and after the main line repair rail had been set aside, the remainder could be gathered up and hauled in to the saw, there to be treated and laid in a branch track the next season. In this way we would get a pretty fair sample of branch line rail, and one calculated to last a good many years under light traffic.

Handling the rails after this fashion should not tie up cars for any great length of time, if the location of the saw were carefully chosen to provide ample piling and handling space. The work of relaying would be facilitated in the end, as holding the rails over the winter would permit of a start the first thing in the spring, instead of in the early fall, as is usually done under present methods of handling. Care should be taken to oil all bolts to be wrenched off a sufficient time in advance of the wrenching to soften the rust. As many as can should be carefully wrenched off and oiled, packed in boxes and sent into the reclaim yard, to be held there until the sawn rail goes out again. I think this way of handling bolts a better one than the usual one of putting them through the joint bars and leaving them to rust. Many bolts, which have been successfully wrenched off, have been lost because they had to be cut off from the angle bars later. In the opinion of many men, second hand bolts cannot be successfully used in relaying rail. I think this is a mistake, as they will keep tight if equipped with a good spring lock washer. Angle bars and tie plates should be similarly reserved to accompany the rail when laid.

A process for rerolling worn rails into rails of slightly lighter section, with heads of an altered shape, both symmetrical and unsymmetrical, for use on branch lines, has been patented in the United States, and several of the prominent railways over there have had some of their rails treated in this manner. In the majority of cases the alteration to the rail is so slight that the old fastenings can be used. Briefly, the process consists of a reshaping of the worn head. This process is worth looking into.

We can make better use of our locomotive cinders than we have in the past, by spreading them on the sides of new cuts and banks, where vegetation is slow to start, and the material slides. Cinders will prevent sliding to a considerable extent, and are useful in keeping down the dust. They make good ballast in rock cuts, and in other places where rails batter because of a hard, unyielding subgrade.

There is an extensive field for the introduction of motordriven section cars to convey section crews to and from their work. The time saved in pumping a hand car will, under the right kind of foreman, be used to the railway's advantage in increasing the day's output of work. Having employed the man, it is essential that he be kept working profitably and effectively during the hours of work.

I think it can be safely estimated that the use of motor-driven section cars will save one hour a day per man employed on the track section. This saving under present schedule hours will amount to about 10% of the day's work, and this time, if properly and efficiently employed, would add just so much more work to the upkeep of the track. In other words, the gain of one extra day in every ten would be made, or say three days each month. Apart from the gain in time, I believe the motor section car would help to attract men to, and hold them on the job. The

railway maintenance practice of the future will bring labor saving machinery into more extensive use; the tools will be improved, so that a larger output of labor, with the same or less effort on the part of the men, will be obtained. The tendency will be towards permanency of the gangs, both section and extra; our men will be better trained by keeping them steadily employed. I believe the extra gangs will be smaller and more efficient, made so through training, and a more liberal use of labor saving machinery. The large, unwieldy, not very efficient, and wasteful extra gangs will gradually disappear.

In concluding I wish to make an appeal to the maintenance engineers of Canada for closer co-operation in the detailing of track material. The conditions on each of the various railways do not differ so widely that we cannot get together and adopt a standard to which we can all work. With one type of material in each class or weight, better deliveries and slightly lower prices from the manufacturers will be obtained, as they will be under a lighter investment expense and providing fewer machines than they are to date. With one type of bolt, spike, or angle bar, they would carry larger stocks, as they would feel more certain of a ready sale for their product, than if they waited to see which railway was going to come into the market and buy. About the only thing in railway track material which is interchangeable today is the track spike; our angle bars, bolts, and rail drilling are pretty much all different, not in any important feature, but in the little unimportant details. Yet these small differences prevent the material from interchanging.

The foregoing paper was read before the Canadian Railway Club in Montreal recently.

Set Slope Stakes a Foot Outside.

A deviation from the usual manner of setting slope stakes for railway grading has been used successfully by L. M. Mitchell, Assistant Engineer, Minneapolis & St. Louis Ry, Oskaloosa, Iowa. Instead of the stake being driven slanting at the toe of the embankment or top of the cut, it is moved out 1 ft. farther and driven down straight. Thus, each centre line stake is practically referenced by two hubs, which are much less likely to be displaced than if set at the edge of the slope. If the contractor is advised of the method of setting the stakes, it has proved easy and convenient for him to make his measurements accordingly.

The Winnipeg Traffic Club has been incorporated under the Manitoba Companies Act, with authorized capital of \$5,000 in \$10 shares, to establish and maintain a social club in order to promote closer relations between the shipping and travelling public and transportation interests by personal acquaintance and the friendly discussion of traffic problems. The provisional directors are: C. A. Taylor, local freight agent; D. W. Thomas, steamship company manager; P. G. Denison, traffic manager; E. W. Travis, clerk; R. K. Gemmell, railway agent, all of Winnipeg.

United States Military Transportation in France.—W. W. Atterbury, Vice-President, in charge of operation, Pennsylvania Rd., Philadelphia, Pa., has been appointed Director General of Transportation for the U.S. expeditionary forces in France.

Birthdays of Transportation Men in October.

Many happy returns of the day to:

E. W. Beatty, K.C., Vice President and General Counsel, C.P.R., Montreal, born at Thorold, Ont., Oct. 16, 1877.

L. S. Brown, General Superintendent, Eastern Lines, Canadian Government Railways, Moncton, N.B., born at Nelson, N.B., Oct. 19, 1864.

R. A. Burford, cashier, C.P.R., ticket office, New York, N.Y., born at Brooklyn, N.Y., Oct. 4, 1878.

Lieut.-Col. G. E. Burns, ex-Freight Claims Agent, Eastern Lines, C.P.R., Montreal, now District Intelligence Officer, Military District No. 4, Montreal, born at St. Thomas, Ont., Oct. 6, 1863.

F. F. Busteed, C.E., formerly Engineer in charge of C.P.R. revision and second tracking, west of Calgary, Kamloops, B.C., born at Battery Point, Que., Oct. 10, 1858.

J. M. S. Carroll, Sales Manager, Canadian Consolidated Rubber Co., Montreal, born at Ballarat, Australia, Oct. 22, 1875.

C. E. Cartwright, M.Can.Soc.C.E., ex-Division Engineer, C.P.R. Vancouver, B.C., born at Toronto, Ont., Oct. 13, 1864.

A. F. Dion, Traffic Manager, Quebec Harbor Commission, Quebec, born at L'Islet, Que., Oct. 1, 1871.

L. V. Druce, Division Freight Agent, Grand Trunk Pacific Ry., Edmonton, Alta., born at London, Eng., Oct. 20, 1873.

C. E. Dewey, Freight Traffic Manager, G.T.R., Montreal, born at Cheshunt, Eng., Oct. 2, 1873.

C. E. Friend, General Auditor, Canadian Northern Ry., Winnipeg, born at Brighton, Eng., Oct. 12, 1871.

W. P. Fitzsimmons, Commissioner of Industries, G.T.R., Montreal, born at Detroit, Mich., Oct. 27, 1868.

C. N. Ham, Secretary, Express Traffic Association of Canada, Montreal, born at Winnipeg, Oct. 21, 1884.

G. Hodge, Assistant to General Manager, C.P.R., Montreal, born there, Oct. 2, 1874.

J. H. Hughes, Assistant Superintendent, Ottawa Division, Quebec District, C.P.R., Montreal, born at Charlottetown, P.E.I., Oct. 7, 1865.

H. Irwin, M.Can.Soc.C.E., Consulting Right of Way and Lease Agent, C.P.R., Montreal, born at Newgrove, County Down, Ireland, Oct. 27, 1847.

W. B. Johnson, Master Mechanic, District 6, Intercolonial Division, Canadian Government Railways, Truro, N.S., born there, Oct. 8, 1872.

K. deS. Joseph, Assistant Trainmaster, C.P.R., Sudbury, Ont., born at Quebec, Que., Oct. 6, 1892.

W. M. Kirkpatrick, ex-Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, now on active military service, born at Kingston, Ont., Oct. 3, 1874.

W. B. Lanigan, Assistant Freight Traffic Manager, Western Lines, C.P.R., Winnipeg, born at Three Rivers, Que., Oct. 12, 1861.

F. McDowell, Storekeeper, Canadian Northern Ry., Winnipeg, born there, Oct. 22, 1883.

Sir William Mackenzie, President, Canadian Northern Ry., Toronto, born at Kirkfield, Ont., Oct. 30, 1849.

C. Malcolm, chief clerk, Auditor of Stores and Mechanical Accounts, Alberta Division, C.P.R., Calgary, Alta., born at Tatamagouche, N.S., Oct. 18, 1881.

R. Marpole, General Executive Assistant, C.P.R., Vancouver, B.C., born in Montgomeryshire, Wales, Oct. 9, 1850.

C. R. Moore, Assistant to Vice Presi-

dent in charge of operation, G.T.R., Montreal, born at Hamilton, Ont., Oct. 12, 1867.

Hugh Paton, President, Shedden Forwarding Co., Montreal, born at Johnstone, Renfrew, Scotland, Oct. 5, 1852.

J. W. Porter, Chief Engineer, Hudson Bay Ry., Pas, Man., born at Aberdeen, Scotland, Oct. 15, 1877.

T. F. Rahilly, Superintendent, Algoma Eastern Ry., Sudbury, Ont., born at Diorite, Mich., Oct. 6, 1892.

H. G. Reid, Assistant Superintendent of Rolling Stock, Canadian Government Railways, Transcona, Man., born at Pembroke, Ont., Oct. 27, 1863.

A. G. Richardson, District Passenger Agent, C.P.R., Winnipeg, born at Rockford, Ill., Oct. 16, 1880.

W. S. Rollo, joint agent, G.T.R. and Central Vermont Ry., St. Johns, Que., born at Dundee, Scotland, Oct. 8, 1852.

J. K. Savage, Superintendent, Smiths Falls Division, Quebec District, C.P.R., Smiths Falls, Ont., born at Forreston, Ill., Oct. 5, 1876.

Lord Shaughnessy, K.C.V.O., President, C.P.R., Montreal, born at Milwaukee, Wis., Oct. 6, 1853.

T. Duff Smith, Fuel Agent, Grand Trunk Pacific Ry., Winnipeg, Man., born at Barking, Essex, Eng., Oct. 2, 1868.

E. Sterling, Assistant Superintendent, Interurban Lines, British Columbia Electric Ry., New Westminster, born at Thornbury, Ont., Oct. 3, 1875.

K. Stewart, Assistant Superintendent, District 4, Intercolonial Division, Canadian Government Railways, New Glasgow, N.S., born at Little River, N.S., Oct. 21, 1868.

C. E. Stockdill, Assistant to Vice President and General Manager, Western Lines, C.P.R., Winnipeg, born at London, Ont., Oct. 25, 1881.

D. A. Story, Freight Traffic Manager, Canadian Government Railways, Moncton, N.B., born at Halifax, N.S., Oct. 26, 1853.

E. N. Todd, Division Freight Agent, Eastern Division, C.P.R., Montreal, born at Huntingdon, Que., Oct. 17, 1879.

J. H. Valteau, Secretary-Treasurer, Thousand Islands Ry. and Oshawa Ry., Gananoque, Ont., born at Selby, Ont., Oct. 14, 1889.

A. W. Wheatley, President, Lima Locomotive Corporation, Lima, Ohio, born at Ashford, Kent, Eng., Oct. 12, 1870.

The Pacific Great Eastern Railway Situation.

P. Welch, the general contractor, announced, recently, that an audit of his books had been made by chartered accountants, showing that he received \$16,422,262.42 for work which cost him \$13,690,394.90. This shows a profit of \$2,731,867.52, and the books also show that Welch made a profit from stores and other sources of \$1,081,255.08. This gross profit, the auditors find, was reinvested in various ways, including equipment and development company, with the exception of \$409,000, which is on deposit in the Union Bank, and is available for the use of the government when it takes over the contract. The auditors find that Welch put \$149,409.45 of his own money into the construction, and is that amount poorer than when he took the contract. The auditors also find that the P.G.E.R. Co. received as the proceeds of the pro-

vincially guaranteed bonds \$19,296,886.31, all of which is accounted for, and they affirm that none of that money was used for political purposes or by appropriations in large profits.

K. Walkem, solicitor for Welch, said recently: "It is clear from a perusal of the audit report that neither P. Welch nor Foley, Welch & Stewart put the profits on the the P.G.E.R. into their pockets, but instead placed the earned profits back into the general project, in addition investing store profits and other revenue and bringing to the road in the first place about \$750,000 worth of contractors' equipment, which has been used or has depreciated to the extent of \$500,000. No charge was made for the use of this equipment, it is claimed. Nor did Foley, Welch & Stewart take profits from any of the sub-contracts."

Negotiations are reported to be in progress between the general contractor, the company and the government, for a settlement of the matter, and the auditors' statement referred to was made public to put the contractors' case before the public.

The Toronto, Hamilton & Buffalo Ry. and the Town of Dundas.

The question raised in committee of the whole, in the House of Commons as to the legality of the Railway Committee of the house amending an agreement made between the Hamilton and Dundas St. Ry., and the Toronto, Hamilton & Buffalo Ry., which as stated in Canadian Railway and Marine World for August, was referred to the Minister of Justice for consideration came before the house upon the Minister's report on July 27. After reciting the facts, the Minister concluded as follows: "The proposed amendment to the bill obviously would effect a material change in the terms of the original agreement, and in my opinion this is incompetent to Parliament, seeing that the Hamilton and Dundas St. Ry. is a provincial corporation and consequently that its contract rights and obligations are not within the legislative authority of Parliament."

T. J. Stewart, M.P., who had charge of the bill for the T. H. & B. Ry., said the parties had come to an understanding and he would move that sections 1 and 2, which confirmed the agreement, be struck out. This was agreed to and the bill was passed as amended, containing only two sections, enabling the company to enter into agreements under sec. 364 of the Railway Act with the Michigan Central Rd., the Canada Southern Ry. and the Grand Trunk Ry., or any of them, for a term exceeding 21 years, and to authorize the company to hold stock in any navigation or steamboat company.

The position of the T. H. & B. Ry. agreement with the H. & D. St. Ry. continues the same as it has been since the agreement was entered into, and confirmed by the Ontario Legislature. Under the agreement the T. H. & B. Ry. operates its freight traffic into the town of Dundas over the H. & D. St. Ry. tracks.

The Railways Department has sold to the Edmonton Junk Co., Edmonton, Alta., a quantity of second hand railway spikes and bolts, which were removed from the Canadian Northern and Grand Trunk Pacific Railways west of Edmonton, and which, upon inspection, were found not to be suitable for shipment with the rails and other materials for use in France.

Little Things in a Railway Office.

By Charles Dorian, Sudbury, Ont.

A bank manager, spick and span in neatness, and happy with the reflection that things were running as smoothly as a well oiled dynamo, stepped into a railway office where papers were scattered chaotically and the typewriters jarred raucously. He intended to interview the superintendent but felt instinctively that he would be sworn at.

He was agreeably surprised, of course, to find that the superintendent was the most urbane of men. The appearance of the office had undoubtedly given him the opposite impression. The unit system was in the throes of birth there. The office had just been enlarged, to take in the staffs of the superintendent, assistant superintendent, chief dispatcher, trainmaster, bridge and building master, resident engineer and roadmasters. The movement had been rigidly opposed. Each officer had grown conservative under the old system, and the habits of himself and the staff clung like barnacles. The unit system brought them into the sunlight, where the dust motes were glaringly prominent. Reductions were not made at first, because the system would automatically weed out the ones not fitted to take up the new order of things efficiently and cheerfully.

The first of the many little things to be taught them was order. One clerk had not a square inch of his desk top clear of correspondence, invoices, partly used writing paper, soiled blotters, etc. He had a ruler with a rough edge and a calendar out of date. Somehow he managed to push aside enough of the miscellany to place a dust covered typewriter into position for operation. In his erstwhile cubicle some of this litter often overflowed, but since the private offices were given over to the use of officers only, and the clerical work all done in one big office, a literal clean sweep was imminent. All papers were to be taken off desks at closing time and typewriters put away in a cabinet. The move was taken apathetically at first and it was some time before the desks were absolutely clear at closing time.

In one desk an important file was found beneath a heap of crushed papers, which brought about a further sweep. In the drawers of that desk were stowed each day's stack of unfinished work, in such a state of disorder as to require ten times the work to straighten it out. Mixed in with it were mussy carbon papers, ink stained letter heads, rubbers, pins, pencils, pens, an old cap, a pair of hair brushes—and some pills. It all reflected the state of mind of the man who sat at that desk as plainly as a littered backyard reveals the habits of the tenant. That clerk had his desk publicly cleaned out for him, papers put in order, ink stains removed from the wood, etc. But he had the wrong habits. Instinct prompted him to poke papers into the handiest receptacle, and no amount of drilling would get him to keep his surroundings clean. He had to make room for one who would.

The truly clean will not only bathe frequently, and wear neat clothes, but will contribute to the freshening of their environments. They will not leave it to the office boy to clean the ink wells, or the janitor to wipe the spots off their desks, and the floor and wall in their vicinity. They will, rather, prevent the ink spots from appearing. Cleanliness, then, was

another thing to be taught that staff. The junior clerk, when running off a mimeograph, usually daubed on more ink than was necessary and spilled some on the floor. When he was compelled to clean it up once, he became more careful. It saved work for the janitor. He did not respect the janitor, but he was taught to do so. He was taught the golden rule. Another clerk had a habit of knocking his pipe against a radiator, emptying the tobacco on the floor, and after lighting up, throwing the burnt match in the same direction. This was usually in a vacant private office. Now and then a burning butt of a cigarette would be found on the edge of a desk, the resultant pyrography marring an otherwise handsome piece of furniture.

The care of office equipment was another detail, then, to be taught this errant staff. When a clerk, with a number nine boot, puts it into a waste basket, to press down the contents, the result is a requisition for a new basket. Waste baskets were, however, finally done away with. There are enough drawers in the average desk to reserve one for waste paper. Energy in an office employe is much to be desired but when it slops over it means breakages. Clumsiness in handling typewriters, telephones, filing cabinets and chairs, brings around a big repair bill. When the chief is absent there is likely to be horse play, with the usual toll of broken glass, walls and furniture.

Silence was another of the little things to invoke. Loud talking was condemned. It disturbed those who were calculating. Whistling and humming were likewise under ban. There was one clerk who invariably started off his day with a loud sneeze, and repeated it occasionally, purposely prolonging the sound. Such things as scraping a chair along the floor, when rising or sitting down, shuffling of feet, opening cabinet drawers loudly, tapping with a pencil, slapping books down hard, stamping letters on a bare desk, instead of using some kind of padding to deaden the sound, were all prominent under the old regime.

Economy had to be preached frequently. Using company's paper and envelopes for private purposes ran away with more stock than one might imagine. Pencils were made to last longer, by a system of exchange. Red carbon paper was made the standard for copies of telegrams. The long sheets were cut in two as the supplies came in, and these half sheets distributed to the clerks who were to use them. A too lavish use of carbon paper invariably resulted in much of it becoming wrinkled. As much as \$2 worth of carbon paper thus spoiled was taken out of one desk. When the distribution was curtailed a saving of 75% on this item alone was noted. In taking stationery from the cabinet where it was kept, it was noticed that some clerks would turn over several packages to get something choice, leaving behind bruised and torn paper. It was the habit of stenographers to throw into the waste basket letterheads and the two accompanying sheets which made up the office record, if they happened to make a typographical error. This was changed. The two under sheets when reversed could be used again and the letterhead saved to be used for memorandum paper. Forms that had served their purpose, or grown obsolete, were used for scribbling paper. Thus the sta-

tionery bill was cut 50%.

Economy in other things came in due course. An electric light was found burning at 8 a.m., had been burning all night, was passed between dark and daylight by at least a dozen employes—and only the last one thought of turning it out. Wasting time is something that only the very conscientious will not do, but when it comes to placing a magazine in the centre drawer of one's desk and snatching surreptitious glances at it, the payroll is due for another trimming. A number of little things that marked improvement would be done by some clerks instinctively, while others learned only by example.

A fountain pen should never be filled until a blotter has been placed under it to catch the possible overflow.

If papers are pinned together, the pin should be put in perpendicularly with the long side of the sheet on the left top side, so that when it is placed in the cabinet for filing it will not tear papers placed beside it. The file number should be placed in the top right corner. It can there be seen at a glance when thumbing the files.

A clerk loses time tearing sheet after sheet off a pad of paper when preparing for typing, it takes so much less time to roll the pad from the loose end back to the gummed edge, the process forcing off the gum and releasing the whole pad for instant use. Stenographers were taught to have their pencils sharpened at both ends and always to have notebook ready and dated, and to spend two minutes in the morning cleaning their typewriters. That two minutes would save two hours some day—the day of a certain big rush.

When all these details were brought out and acted upon the staff was a hundred per cent. smaller and a hundred per cent. more efficient. The bank manager dropped in one morning, six months after his first visit, just before the day's work had commenced and saw rows of shining desks, drawers closed and locked and a general air of freshness about the place. His appraisal of railway offices from that date was more complimentary.

[EDITOR'S NOTE.—The writer of the foregoing was formerly the C.P.R. Superintendent's chief clerk at Sudbury and is now in the Canadian Copper Co.'s transportation department.]

Locomotive Manufacturing at Montreal. — The American Locomotive Co.'s annual report for the year ended June 30 contains the following paragraph: "The munitions work at Richmond, Va., and Montreal, Que., will be completed in Aug. 1917. The work of restoring these plants to locomotive production uses has already been started and when completed the entire capacity of all of the company's plants will be devoted exclusively to the manufacture of locomotives, which are urgently needed abroad as a war necessity, and also by the railways of this country."

The Avon Coal Co. has been incorporated under the New Brunswick Companies Act, with a capital of \$150,000, and offices in Queen's County, to carry on a coal and general mining business, and in connection therewith to construct or acquire tramways, sidings, switches, spur tracks and telegraph lines, and to own and operate steam and other vessels. The provisional directors are: S. M. Jones, Bangor, Me.; Miss A. F. Coughlan, and G. L. Dodge, St. John, N.B.

Official Evidence on the Hudson Bay Route.

W. A. Bowden, B.A.Sc., M.Can.Soc.C.E., Chief Engineer, Railways and Canals Department, Ottawa, appeared before the Dominion's Royal Commission in Ottawa recently and in response to questions by some of the commissioners gave evidence, of which the following is a summary:—

The project is designed to connect the western provinces with Europe by the most direct route. The railway makes connection with a Canadian Northern branch at Pas, Man., and runs in a direct line northeasterly to Port Nelson, at the mouth of the Nelson River. It will be 425 miles long. Track has been laid to mileage 332, where a delay results from the necessity for the construction of a rather large bridge over the Nelson River. Grading is nearly completed between the end of track and Port Nelson.

The mouth of the Nelson River is a typical estuary. The site of the terminals is about 15 miles upstream from deep water of the bay proper, and about 7 miles below the limit of tide action in the river. The range of tides is from 11 ft. at neaps to 16 ft. at extreme of ordinary spring tides. There is a deep water natural channel extending up the middle of the estuary, in which a depth of 20 ft. exists near the site of the development and a greater depth is available for the remainder of the distance to the bay. It is intended to provide a depth of 30 ft. in the immediate neighborhood of the wharves, and allow the 20 ft. to remain as the limiting depth at low tide, in the approach channel. Vessels drawing more than 20 ft. would await a suitable stage of the tide for entering or leaving. The wharves are being built near the deep water channel and are connected with the shore by a steel bridge. The cost of the enterprise is not exceeding the estimates made before construction was commenced, which were, for the railway \$16,000,000, and for the harbor works and terminus at Port Nelson, including a grain elevator, \$11,000,000.

Development of the route was undertaken primarily for the transportation of grain. Neglecting all other considerations than geographical position a saving would be possible of the cost of transporting grain from the head of the Great Lakes to Montreal, for which rates vary from about 5c to 12c a bushel in different seasons of the year. Port Nelson is as near to the centres of grain production as is Fort William, and is as near to Liverpool as is Montreal. It will not be possible to give the shipper the full benefit of this saving of the haul from Fort William to Montreal, owing to the effect upon costs of the short traffic season by the Hudson Bay route, and to the special difficulties inherent to the marine end of the enterprise. Nor can it be expected that the route will have any material effect upon grain rates in general, owing to the fact that its capacity is limited. Its advantage will lie in the circumstance that while the season of operation will be short it will approximate fairly well to the most desirable period of the year. Further, in so far as the route will add to existing facilities at all, it will become an "enlargement of the spout" for the ultimate disposal of the grain, and not merely an additional channel for the conveyance of grain to an already congested seaboard.

It was formerly thought that the season of navigation opened in June or early in July. Our experience has shown that

June is out of the question and also the greater part of July. The date when navigation would close was not stated definitely in early discussions. We have sent out tramp steamers as late as Oct. 23 without accident. A government survey vessel which was especially constructed for navigation in ice came out once on Nov. 1, but she reported having encountered ice which would have damaged an ordinary tramp. The close of navigation under present conditions results from the arrival at the western entrance of Hudson Strait of the Fox Channel ice. This ice starts down from the north during the summer, and the loose strings which precede the main floe usually arrive between Mansel and Coats Island about the middle of October. These strings may cause a slight delay, but are then a serious menace to navigation, as vessels may either pass around them or pass in through in a few hours. Later, heavier strings arrive. In the interest of safety we have had to act on the assumption that these block the whole western entrance of the strait, which would effectually stop navigation. We have no positive evidence on this subject. Extended observation may reveal that for some considerable further period the conditions are not insurmountable with suitable aids to navigation, such, for instance, as a wireless station at the north end of Mansel Island, through which vessels could be advised of the results of observation by aeroplane as to the position of ice and open water. Such a course would be quite practicable, as the critical area is of very limited extent. Hudson Bay ice has in some seasons a bearing on the question of the date of opening navigation, but is not a factor in the matter of closing navigation.

While the grain trade was the prime motive, the possibilities of developing other traffic are not negligible. There is great promise of mining development in the territory tributary to the railway. In the Grass River region there are some good agricultural lands, but in general the country is of a muskeg character and perhaps not easily drained; while in the neighborhood of the bay the climate is probably too cold for profitable cultivation. The soil throughout is very rich. Something may be done in the export of live stock, the short route having a distinct advantage for this trade. The Hudson Bay fisheries are reported to be valuable, and will no doubt furnish some traffic. There is sufficient timber for local use in the region, but probably insufficient for the development of an export trade. Westbound imports would be coal and general merchandise.

The shipping season would cover the months of August, September and October, with the possibility of extension at the latter end, but with little hope for improvement in the opening date. The grain which would be shipped out in August would be from the crop of the preceding year, of which there is always some available at that season. During two months shipments would be made of the new crop. No arrangements were made to ensure a steamship service before commencing construction, and in my opinion none should have been made. Such arrangements would have been based upon the assumption of the worst possible conditions that might then have been anticipated, and which will probably never occur.

It is improbable that for a few years tramp steamers would utilize the route

without special inducements. Nor can we hope for a just and reasonable arrangement with vessel owners for the provision of a regular line of steamers at the inception of operation. The best interests of the country, and of the route, require that, for a few years at least, vessels owned or chartered by the government should be put on and operated by the government. With these vessels the feasibility of the route could be demonstrated, after which it might be left to stand on its own merits. At any rate information would be available to form a sound basis for negotiations for further service. The trade will take some time to work up, particularly with respect to that westbound. Provision for the handling of 5,000,000 or 6,000,000 bushels of grain would probably best meet requirements at the outset. The ultimate capacity of the route would be that of the single track railway, about 50,000,000 bushels.

Our experience with respect to insurance is characteristic of the difficulties which must be overcome. In 1913 the insurance rates on vessels and cargoes for Port Nelson were guessed at, and were very high. That year two vessels were lost at the mouth of the Nelson River under circumstances which had no bearing upon merits or demerits of the route. The result, however, was that rates proposed for the following year were prohibitive, and we have operated during the past three seasons without insurance. During this time we have not met with a single accident, although in one of the seasons 38 passages through Hudson Strait were made.

The European & North American Ry.—The name of which is still maintained by a separate corporation in the state of Maine, extended from Bangor, Me., via St. John, N.B., to Shediac, N.B. The portion of the line in Maine is leased to the Maine Central Rd., while part of the Canadian section was taken over by the Canadian Government and utilized in the building of the Intercolonial Ry., and the remainder ultimately passed into C.P.R. control. The section of the line from Moncton to Shediac, 17 miles, was opened for traffic, Aug. 20, 1857, and was ultimately extended to Pointe du Chene, which was made the station for the summer steamship traffic to Prince Edward Island. A large amount of money was spent at Shediac for machine shops, deep water terminal, etc. The principal commercial business and shipping traffic, which hitherto had been conducted at Shediac Cape, nearly three miles distant, were transferred to Shediac and Point du Chene, two miles east. Later the machine shops were burned and reconstructed at Moncton, which then became the headquarters of the system under the government ownership.

H. A. Woods, who has retired from the position of Assistant Chief Engineer, Grand Trunk Pacific Ry., and who has been on Canadian Railway and Marine World's subscription list since coming to Canada some years ago, writes from paper to be forwarded to him at that address, and says: "I shall want to keep in touch with railway matters in Canada, and I know of no better way than through your journal."

The G.T.R. has moved its San Francisco, Cal., passenger office to Monadnock Arcade, 681 Market St., from 687 Market St.

Conversion of Canadian Pacific Freight Cars.

As stated in Canadian Railway and Marine World for September, the C.P.R. is converting 336 single insulated refrigerator cars to vegetable cars, half at Angus shops, Montreal, and half at Weston shops, Winnipeg, and is also converting 1,161 steel side dump ballast cars to coal cars, and 600 stone cars to coal cars at Angus shops.

The 336 vegetable cars being converted from standard single insulated refrigerator cars are 38 ft. 8 in. long over end sills and have standard refrigerator doors. After removing the ice bunkers, floor slats and meat racks, the side and end walls are covered with refrigerator insulating paper, and on the inside of this, vertical strips are spaced about 2 ft. centres along the sides of the car. These vertical strips are 2 in. square, fastened to 1 in. blocks, providing a total of 3 in. air space. The linings on the inside of the strips consists of 3/8 in. t. and g. insulation, 1 layer of insulating paper and 13/16 in. standard t. and g. car lining. This inside lining extends to within 6 in. of the car floor and to within about 12 in. of the ceiling, leaving an opening at top and bottom, so that the heat, supplied from the charcoal heaters, located at the centre of the car, may be circulated freely all along the sides and ends of the load, and return to the centre of the car through a space 5 1/2 in. high provided by a false floor, which is made of two courses of t. and g. lumber with insulating paper between. The floor is in sections, about 4 ft. wide, extending between inside linings. This permits of the floor being taken up, whenever necessary, for cleaning underneath, and for repairs to underframe, draft timber bolts, etc.

At each end of the car there is a bulkhead, just in front of the hatch opening, constructed in the same manner as the side linings. The open space, above the side lining and end bulkhead, is covered with heavy wire mesh, to prevent consignees throwing culled vegetables over into the air spaces. At the bulkhead this mesh also prevents theft through the hatch opening. Hatch openings are equipped with standard insulated plugs, attached to chains, so that they can be lowered into the space back of the bulkheads when the car is operating under ventilation. Hatch covers are hinged so as to open towards the centre of the car. It is believed that this arrangement provides the best distribution of fresh air throughout the interior of the car.

The heating of each car is to be accomplished by means of standard no. 2 charcoal heaters. In moderate weather one or two heaters may be used in the collapsible galvanized iron heater cages attached to the inside of the car doors. These cages are so arranged that, when the heater requires to be recharged with fuel, it is not necessary to enter the car, and the exchange of air from the outside to the inside of the car is reduced to a minimum by one side of the heater cage being secured in a position to close the aperture of the open car door in much the same manner as revolving doors in public buildings. In severe weather additional heaters may be used suspended from the ceiling from substantial fastenings provided for the purpose.

The company has 1,161 50-ton steel side dump ballast cars that are to be fitted with end gates and extension sides so as to carry their maximum tonnage in bituminous coal. The extension sides consist of planks, 30 in. high, secured to stakes

that pass through openings in the top channel of the steel side construction, and secured at the bottom in malleable blocks provided for the purpose. To prevent the wooden sides bulging near the centre of the car, tie rods are provided, reinforced against bending, by means of a cross timber, 3 x 8 in., securely supported and fas-

tened at the ends to the extension sides. In order that these cars may meet the safety appliance requirements, additional hand holds are required, and the brake mast, originally located on the corner, is removed, and a new brake mast and fittings are applied about 18 in. from the centre of the car.

Canadian Pacific Railway Honor Roll 27.

Amos, Alfred V. H.	Clerk	Vancouver	Wounded
Anderson, Henry T.	Machinist	Ogden	Wounded
Baxter, George L.	Brakeman	Lethbridge	Wounded
Bingham, William H.	Bridgeman	Sutherland	Wounded
Blakey, Harold A.	Bell boy	Victoria	Wounded
Breeze, Jack	Locomotive fireman.	Kenora	Wounded
Brundrett, Walter	Clerk	Calgary	Died of wounds
Bryan, John W.	Locomotive fireman	Strathcona	Wounded
Burns, Archibald	Brush hand	Ogden	Wounded
Campbell, R. H. M.	Checker	Smelter	Wounded
Caprani, Joseph	Carpenter	Winnipeg	Wounded
Cassidy, Patrick J.	Switchman	Brandon	Wounded
Chapman, Horace	Laborer	Angus	Wounded
Clarke, Joseph V.	Yardman	Winnipeg	Wounded
Cochrane, Robert H.	Watchman	Strassburg	Wounded
Collins, Lewis	Chef	Toronto	Killed in action
Curveon, James L.	Conductor	B. C. District	Wounded
Dallas, Donald	Conductor	Calgary	Gassed
Daly, James R.	Clerk	Maniwaki	Killed in action
Davies, Edward V. H.	Clerk	Weyburn	Wounded
Devlin, William T.	Trainman	Minnedosa	Presumed dead
Douglas, William	Checker	Coquitlam	Wounded
Eades, Robert	Constable	Montreal	Died of wounds
Ellinson, Joseph G.	Clerk	Calgary	Wounded
Farrow, Thomas	Car repairer	West Toronto	Wounded
Fergie, Richard H.	Linen handler	Winnipeg	Presumed dead
Ferguson, John	Fitter	Winnipeg	Wounded
Ferguson, Thomas	Car repairer	Place Viger	Gassed
Forrest, Thomas	Clerk	Calgary	Wounded
Gaff, Wilfred J.	Clerk	Winnipeg	Killed in action
Grant, John C.	Wiper	Swift Current	Wounded
Gray, Donald H.	Clerk	Montreal	Wounded
Hall, Samuel	Helper	Winnipeg	Believed killed
Henderson, William M.	Locomotive man	Bay Shore	Presumed dead
Herron, Jack	Tracer	Toronto	Died of wounds
Hewitt, Henry	Boilermaker	Calgary	Presumed dead
Hillman, George C.	Craneman	North Bay	Killed in action
Hook, James A.	Seaman	Victoria	Wounded
Hornsby, John	Machinist	Angus	Killed in action
Hutchinson, W. K.	Clerk	Fort William	Wounded
Irvine, Earl	Transitman	Schreiber	Wounded
Jackson, Edward J.	Blacksmith	Calgary	Presumed dead
James, Harold C.	Clerk	St. John, N.B.	Wounded
Jarvis, Arthur H.	Boilerwasher	Kenora	Wounded
Johnson, Peter	Checker	Innisfail	Wounded
Kay, John T.	Yardmaster	Medicine Hat	Wounded
Kelly, George	Chef	Vancouver	Wounded
Kelly, Michael J.	Clerk	North Bay	Wounded
Kinnear, Alfred	Helper	Angus	Wounded
Kirkbride, William B.	Wiper	Kamloops	Wounded
Kubota, James	Wiper	Swift Current	Wounded
Leslie, David	Wiper	Regina	Wounded
Lewis, Jesse S.	Operator	Moose Jaw	Wounded
Lucas, Albert J.	Fitter	Winnipeg	Wounded
McBurnie, John	Helper	Winnipeg	Killed in action
McCalden, John	Locomotive fireman	West Toronto	Wounded
McCubbin, Alexander	Apprentice	Angus	Killed in action
McDonald, John H.	Operator	Minnedosa	Wounded
McGibbon, James R.	Operator	Weyburn	Presumed dead
McGowan, Anthony	Clerk	Vancouver	Wounded
McNamee, Leslie B.	Assistant agent	Canmore	Died of wounds
McVeigh, Charles H.	Clerk	Kenora	Wounded
Mallin, Patrick	Inspector	Angus	Wounded
Miller, Harry	Stower	Calgary	Wounded
Milne, John D.	Clerk	Fort William	Presumed dead
Minshall, Charles E.	Cleaner	Montreal	Killed in action
Moir, Lyall T.	Laborer	Field	Wounded
Olden, Fred	Trimmer	Toronto	Wounded
Owens, Thomas	Apprentice	Winnipeg	Wounded
Parks, Andrew	Car repairer	Calgary	Wounded
Parnell, Harold	Trucker	Toronto	Killed in action
Paterson, John S.	Locomotive man	Winnipeg	Wounded
Pearce, Harry J. L.	Clerk	Calgary	Wounded
Pearce, Leo Elmira	Operator	Camrose	Wounded
Phipps, Frank	Checker	Midway	Wounded
Poole, John	Locomotive fireman	Kenora	Killed in action
Porrirt, Stanley	Brakeman	Revelstoke	Wounded
Post, Fred	Locomotive fireman	Havelock	Wounded

Teape, George F.	Clerk	Edmonton	Killed in action
Turner, Alfred W.	Clerk	Pembroke	Wounded
Underwood, Arthur	Laborer	Calgary	Wounded
Weber, Andrew	Trucker	Sudbury	Presumed dead
Wilson, Charles	Locomotive man	Medicine Hat	Killed in action
Wilson, Harold W.	Timekeeper	Vancouver	Wounded
Wilson, Stanley	Yardman	Lethbridge	Wounded
Willshire, William H.	Clerk	Montreal	Killed in action

Shown on Honor lists to date: Killed, 487; wounded, 1,064; Total, 1,551.

Special Trade Commission's Report on Transportation.

The special trade commission, which was appointed by the Dominion Government, in April, 1916, to visit Great Britain, France and Italy, to make an enquiry into the new conditions brought about by the war, and as to the possibilities for the supply of many commodities needed in Canada, and which were obtained formerly from Germany and Austria, and also to look into the question of profitable exchange with Great Britain and allied European countries, consisted of J. W. Woods, Toronto, Chairman; T. H. Wardleworth, Montreal, Vice Chairman; G. W. Allan, Winnipeg; H. E. Dupre, Quebec; W. F. Hatheway, St. John, N.B.; and F. Pauze, Montreal. The commission's report, issued recently, deals with transportation as follows:

"The commission was at every point confronted by the problem of ocean transportation. Prior to the war regular lines were running between Great Britain and Canadian ports, viz.: the Allan, C.P.R., White Star, Dominion, Canadian Northern, Donaldson, Cunard, Manchester, La Compagnie Generale Transatlantique, and La Navigazione Generale Italiana. Between France and Canada the only British line operating at the outbreak of hostilities was the Allan Line between Montreal and Havre. La Compagnie Generale Transatlantique established in 1912 between Montreal and Havre, and only ceased at the outbreak of hostilities. Communication between Italy and Canada was established by La Navigazione Generale Italiana, which ran a regular steamship line, Genoa-Canada. However, as soon as war was declared, this line was suspended. The C.P.R. also had a line running between Canada and Trieste, but naturally this service was immediately suspended on the declaration of war.

"In taking a general view of the transportation between Canada and the allied nations, it would appear that the established lines have not given that service in linking up Canada with other countries which might have been expected. It has been felt for years that the rates of freight have been of such a character as to seriously impair their usefulness as a means of developing Canadian trade. Canada's ocean transportation will have to be completely reorganized if the Dominion is to derive the fullest benefit from her natural resources and manufactured products. The question is one of such serious importance to the Dominion that the commission feels that it calls for prompt and scientific treatment by the government. It was suggested to the commission that greater use might be made of tramp steamers, but this class of vessel requires a cargo outward as well as home, and if encouraged to come to Canada, a steamer of this class is heavily penalized in the matter of insurance, particularly if the voyage is by the St. Lawrence route. As the tramp steamer forms by far the larger proportion of ocean cargo tonnage, it would appear that Imperial control centralized, say in London, might so adjust the employment of ships that the different needs of the Empire might be met as the requirements of the crop or season might demand. Mr. Pauze dissented from this. If such a mobilization of imperial transportation facilities could be achieved, it would lead to an adjustment of freight carrying which would ensure adequate return to the steamships and at the same time

bring about a reduction of freight rates which would enormously assist transportation between Canada, the ports of Great Britain and the allied nations.

"In the commission's opinion the question is too important to be left to the decision of private corporations, as the future of Canada in respect to overseas trade will depend almost entirely upon the securing of favorable service and freight rates. It is to be remembered that a great number of Canada's competitors are geographically in a much better position, owing to their nearness to the markets of Great Britain and the allies, and it will be necessary to overcome this drawback if Canada is to have an important share of European trade now so freely offered to her.

"At Havre, Bordeaux, Marseilles and Genoa, the establishment of direct lines was urged as a matter of supreme importance. In the commission's opinion the service could be better rendered by the adoption of an imperial scheme of mobilization of our transportation resources. While direct lines have their advantages, it was felt that many of the subsidized lines in the past had not rendered the service which might have been expected from them. In the Italian conference which the commission held, it was pointed out that one of the assets which Italy boasted was surplus manual labor, which gave rise to the large emigration of recent years. While it is not likely that the emigration movement from Italy to Canada will assume pre-war proportions for some time to come, still, it may be reasonably expected that the movement of emigrants from Italy to Canada would in a large measure compensate for any shortage of cargo from that country to Canada on the return voyage. It may be recognized that full cargoes from both France and Italy to Canada could not always be looked for, seeing that Canadian shipments were of large bulk as a rule—lumber, wheat, etc., whereas French and Italian cargoes consisted of finer and less bulky goods.

"It may be claimed that governmental interest in transportation would encourage mainly a certain section of the community; but looked at broadly, an ocean service is simply a sort of bridge between one country and another, and while the direct benefit which may be enjoyed by one section is manifest, all sections profit by the easier and cheaper means of transit. As the conditions brought about by the war are abnormal, the commission does not wish to deal specifically with them as regards transportation. The question for the future will be the prevention of conditions which interfere with cheap and adequate distribution of Canada's products.

"The commission ventures to suggest that the question of shipbuilding in Canada should receive the government's most careful attention. It is convinced that the expansion of this industry would contribute much to the industrial welfare of Canada, and at the same time would help in some measure to provide the additional tonnage required to bring about a better condition in the matter of transportation. The commission is strongly of opinion, Mr. Hatheway dissenting, that no subsidies, bounties or other concessions should be granted to any steamship companies or to individual vessels until the whole question of transportation has been thoroughly studied, and not until

the methods of moving our grain, etc., are based upon sound and scientific methods. The commission on more than one occasion in Great Britain had the question of unsatisfactory bills of lading brought to its notice. The claim was put forward that bills of lading should be uniform, that a standard should be fixed which would be equitable to the shipper and to the shipping companies. The commission feels that this subject is one of great importance and merits the careful attention of the Department of Trade and Commerce. It was suggested to the commission that an expert official should be employed by the department to advise on shipping matters, to watch freight rates, movements of shipping, and to act as general adviser to exporters and importers on all matters connected with transportation of goods by sea.

"The commission found at all shipping points in Great Britain that there was a strong desire to encourage Canadian trade. This applies perhaps with special reference to Bristol, where the dock authorities have made special provision for handling Canadian produce and welcome every indication of increased trade with Canada. Cold storage plants of the most modern type, and grain warehouses have been erected, and the commission was assured that every possible encouragement would be given to merchandise coming from the Dominion. Hull has also made special provision for Canadian trade, and would be disposed to give every possible facility for this development. Manchester importers and exporters display the keenest interest in Canadian trade and desire that the traffic between that port and the Dominion should grow. The wonderful development of the Trafford Park Estate promises to place Manchester in a unique position for handling and storing goods. London, Liverpool, Glasgow and Belfast also encourage the development of Canadian imports and exports, and are prepared to encourage to the full any efforts which are made for its expansion.

"In France the port authorities at Havre, Nantes, Bordeaux, Marseilles, all expressed the desire that trade between their ports and the Dominion should increase. At Havre, Bordeaux and Marseilles, the commission found that special provision had been made for handling cargoes such as Canada is prepared to send to France. In these ports extensive improvements were being carried out by the harbor commissioners for the purpose of extending the facilities of the ports, in the building of warehouses and providing mechanical appliances for loading and unloading vessels, so as to reduce to a minimum the time occupied in discharge and receipt of cargo. Nantes was also visited by one of the commissioners and the same evidence of good will and desire to foster the trade between Canada and France was manifest. The commissioners are now advised that a direct line has already been established between Canadian ports and Ste. Nazaire. The main port of Italy, Genoa, was visited by the commission, which found that extensive improvements are being executed in the harbor and facilities were being provided for loading and unloading, which the port has not hitherto possessed.

"The commission feels that it can only report conditions respecting freight rates as it finds them, but it would reaffirm that it believes the question is a matter of

such material importance to the country's export and import business, that it recommends as strongly as possible a complete governmental survey of the freight situation, and prompt application of such remedial measures as may be found necessary. One of the most important factors that will have to be considered by the Canadian authorities in connection with the encouragement of vessels to use the St. Lawrence route, will be the question

of an improved rate of insurance. Exactly how this is to be done does not come within the province of the commission, but undoubtedly until the high rate of insurance charged on vessels coming up the St. Lawrence is remedied, there will be reluctance on the part of ship owners to send their vessels to Quebec and Montreal, as the difference in premium constitutes a serious charge on the vessel. It may, however, be suggested that the

plan adopted by the British Government for controlling marine insurance rates be seriously considered by the Canadian Government. Some improvement is vital to the development of the St. Lawrence route, even if the Canadian Government has to absorb the difference between the insurance rates to Quebec and Montreal, where they are higher than those charged by insurance companies to other North Atlantic ports."

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

26442. Aug. 20.—Ordering Grand Trunk Pacific Ry. to build farm crossing for J. E. Holdercroft, McBride, B.C., at his expense.

26443. Aug. 18.—Authorizing C.P.R. to rebuild bridge 77.6 Sherbrooke Subdivision, Little Magog Lake, Que.

26444. Aug. 18.—Extending to Oct. 18 time within which bell may be installed at C.P.R. crossing at Duke St., Guelph, Ont.

26445. Aug. 18.—Authorizing C.P.R. to build spur for Canada Feldspar Corporation at mileage 22.47, Belleville Subdivision, Bathurst Tp., Ont.

26446. Aug. 18.—Authorizing C.P.R. to build spur for Grain Growers Grain Co., Ltd., at East Kildonan, Man.

26447. Aug. 18.—Authorizing London & Port Stanley Ry. to build spur on Bathurst St., London, Ont.

26448. Aug. 20.—Ordering G.T.R. to build farm crossing for G. French, McBride, B.C., at his expense.

26449. Aug. 18.—Ordering Grand Trunk Pacific Ry. in connection with application of residents of Edgerton, Alta., for overhead crossing of railway to remove material to a depth of at least 2½ ft. at northeast angle of the railway and road allowance intersection; also to take a small point off n.w., s.w. and s.e. angle of same at least 1 ft. deep.

26450. Aug. 20.—Ordering that lever operating crossing of G.T.R. and Toronto Ry. at Queen St., Toronto, be placed in electric cabin and additional signal be erected for westbound trains.

26451. Aug. 20.—Extending to Nov. 20, time in which bell may be installed at G.T.R. crossing of Riddell St., Woodstock, Ont.

26452. Aug. 20.—Approving crossing by Kettle Valley Ry. of Lake Shore Drive, Martin, Winnipeg, Brunswick, Bigsby, Bassett, Eckardt and Hastings Sts., Westminster Ave., and along and across Fairview Ave., between Pentiction and Coldwater Summit, B.C.

26453. Aug. 20.—Authorizing C.P.R. to build spur for Forsythe Elevator Co., Transept, Man.

26454. Aug. 20.—Extending for six months after the war, time within which Toronto, Hamilton & Buffalo Ry. shall build new bridge at King St., Hamilton, Ont., over its track, as required by order 24614, Dec. 28, 1915.

26455. Aug. 21.—Authorizing C.P.R. to build three spurs for A. McArthur & Co., Hochelaga Ward, Montreal.

26455. Aug. 21.—Authorizing C.P.R. to build revision to existing spur for Ontario Stone Corporation, Ltd., in Lot 10, Co. 4 and 5, North Orillia Tp., Ont.

26457. Aug. 9.—Ordering C.P.R. to erect class A station at Oakbank, Man.

26458. Aug. 23.—Ordering Canadian Northern Ry. to erect 4th class station at Fairmount, Sask., and to make roadway on north side of right of way through station grounds.

26459. Aug. 23.—Directing Victoria & Sidney Ry. (G.N.R.) to divert Brookleigh Road, Saanich District, Vancouver Island, in Sec. 57, Lake District.

26460. Aug. 18.—Ordering Canadian Northern Pacific Ry. to build transfer track with Victoria & Sidney Ry., near Sidney, B.C.

26461. Aug. 22.—Extending to Oct. 15 time within which C.P.R. shall build spur for Jas. Richardson & Sons, Port Arthur, Ont., authorized by order 26190, June 7.

26462. Aug. 22.—Extending to Oct. 22 time within which Kettle Valley Ry. may fence its right of way east of Glenfir, B.C., as required by order 26129, May 21.

26463. Aug. 23.—Authorizing Grand Trunk Pacific Ry. to build spur for David Bowman Coal & Supply Co., Winnipeg.

26464. Aug. 21.—Ordering Grand Trunk Pacific Ry. to build farm crossing for T. R. Lloyd, McBride, B.C., at his expense.

26465. Aug. 24.—Approving Niagara, St. Catharines and Toronto Ry. plan showing interchange track with G.T.R., at Thorold, Ont.

26466. Aug. 20.—Amending order 26232, June 22, re opening for traffic of C.P.R. Moose Jaw Northwesterly Branch from mileage 50 to 64.5.

26467. Aug. 24.—Extending for one year from Apr. 10, 1917 time in which City of Regina, Sask., shall build bridge across C.P.R. on Hamilton St., as authorized by order 26082, Dec. 31, 1914.

26468. Aug. 25.—Authorizing G.T.R. to build certain extensions of existing sidings at Camp Borden, Ont.

26469. Aug. 25.—Authorizing C.P.R. to build loading platform and provide stock yard at Tyn-dall, Man.

26470, 26471. Aug. 27.—Approving Bell Telephone Co. agreements with Hazeldean Rural Telephone Co., Ltd., Carleton County, Ont., July 15, and Wright & Pontiac Telephone Co., Ottawa and Pontiac Counties, Que., Aug. 13.

26472, 26473. Aug. 28.—Extending to Oct. 15, time within which Canadian Northern Ry. shall build standard third class stations at Sibbald and Excel, Alta.

26474. Aug. 29.—Extending to Nov. 15, time within which C.P.R. shall install bell at Queen St., Guelph, Ont.

26475. Aug. 29.—Approving G.T.R. revised plan B2-53A, of station and track changes at Nelles Corners, Ont.

26476. Aug. 29.—Suspending advanced rates on pulpwood in carloads from stations on Canadian Northern Ry. to Campbellford, Ont., as published on page 3 of Supplement 20 to C.N.R. Tariff C.R.C. no. E-860, issued to become effective Sept. 1, 1917; also suspending cancellation of supplement 1 to C.N.R. tariff C.R.C. no. E-156, effective Sept. 1, and ordering that rates on pulpwood published in C.N.R. tariff C.R.C. no. E-156, effective Oct. 2, 1912, be continued in effect, pending hearing by board.

26477. Aug. 29.—Approving location of Canadian Northern Ry. third class station at Palmer, Sask.

26478, 26479. Aug. 30.—Extending to Nov. 30, time within which Canadian Northern Ry. shall erect station at Stanmore, Alta., required by order 25614, Nov. 6, 1916, and also to complete erection of station at Krydor, Sask., required by order 25282.

26480. Aug. 30.—Relieving G.T.R. from providing further protection at 4th Range Crossing, 2½ miles east of Actonvale, Que.

26481. Aug. 31.—Authorizing C.P.R. to build extensions to Swift Canadian Co.'s siding at mileage 5, Galt Subdivision, Ont.

26482. Aug. 31.—Authorizing G.T.R. to build spur for Montreal Country Club, St. Bazile Parish, Que.

26483. Aug. 30.—Approving location and details of G.T.R. new station at St. Catharines, Ont., and rearrangement of sidings west of station.

26484. Aug. 28.—Approving C.P.R. plan, of Jan. 12, 1914, showing interchange tracks to be built between C.P.R. and G.T.R. at Port Hope, Ont.

26485, 26486. Aug. 27.—Authorizing Saskatchewan Government, on behalf of rural municipality of Edenvold no. 158, to build highway crossing at east end of C.P.R. station grounds, at Richardson, Sask., and on behalf of rural municipality of Montmartre no. 126, to build highway over Canadian Northern Ry., Regina-Brandon Branch, Sec. 18, Tp. 15, R. 12, West 2nd Meridian.

26487. Aug. 31.—Authorizing C.P.R. to build sidings for Northern Elevator Co., St. Boniface, Man.

26488. Aug. 31. Extending to Sept. 30, time within which C.P.R. shall install gates at Church St., Weston, Ont.; and ordering that, pending installation of same, crossing be protected by day and night watchmen.

26489. Aug. 31.—Extending to Nov. 30, time within which Canadian Northern Ry. shall erect station at Carmel, Sask., as per order 24991, May 18, 1916.

26490. Sept. 1.—Approving agreement between Bell Telephone Co. and Sydenham Union Telephone Co., Grey County, Ont., Mar. 10, 1915.

26491. Sept. 1.—Approving clearances, shown on C.P.R. plan, of proposed box structure for carrying pipes from old to new locomotive house at Smiths Falls, Ont.

26492. Aug. 27.—Authorizing C.P.R. to reopen highway crossing on northwest boundary and to close crossing on north boundary of Sec. 22, Tp. 29, R. 11, West 3rd Meridian.

26493. Aug. 27.—Authorizing G.T.R. to build siding for Lincoln Paper Mills Co., Merritton, Ont.

26494. Aug. 27.—Approving C.P.R. plan showing extension to spur for Gibson, McCormack,

Irvin Co., West Toronto, Ont.

26495. Aug. 31.—Extending to Nov. 1, time within which Canadian Northern Ry. shall erect gates at Bay Bridge Road, Belleville, Ont., as required by order 25932, Mar. 10.

26496. Sept. 1.—Approving location and detail plans of G.T.R. new station at Scotia Jet., Ont.

26497. Sept. 5.—Authorizing C.P.R. and G.T.R. to operate trains over crossing at St. Polycarpe Jet., Que., without first stopping.

26498. Sept. 5.—Approving agreement between Bell Telephone Co. and Balsam Hill Telephone Co., Renfrew County, Ont., Aug. 25.

26499. Sept. 5.—Authorizing Grand Trunk Pacific Branch Lines Co. to open for traffic its Young to Prince Albert Branch between mileage 87 and 111.8 (Prince Albert); speed not to exceed 15 miles an hour.

26500. Sept. 5.—Extending for four months from date time within which G.T.R. shall install interlocking plant at Gilkinson St., Hamilton, Ont., as required by order 21305, Jan. 31, 1914.

26501. Sept. 5.—Authorizing Kettle Valley Ry. to build spur for F. Demuth, at mileage 27.6 west of Pentiction, B.C.

26502. Sept. 6.—Approving C.P.R. plans showing layout of bridges 0.9 and 1.8, North Toronto Subdivision; and rescinding order 26073, May 1, in same connection.

26503. Sept. 5.—Relieving C.P.R. from providing further protection at crossing of Cremanze near Jacques Cartier station, Que.

26504. Sept. 7.—Approving Canadian Northern Ry. Standard Freight Tariff, C.R.C. no. W-1025, cancelling C.R.C. no. W-862.

26505. Sept. 7.—Ordering C.P.R. to erect a one-pen stock yard at Enchant, Alta., to be completed by May 31, 1918.

26506. Sept. 7.—Authorizing Esquimalt & Nanaimo Ry. to build spur for Imperial Munitions Board, into Foundation Co.'s premises, on former Songhees Indian Reserve, B.C.

26507. Sept. 7.—Authorizing G.T.R. to build extension to siding for Beaver Wood Fibre Co., Thorold Tp., Ont., and approving clearances shown on plan.

26508. Sept. 7.—Authorizing Berlin & Northern Ry. to operate its cars over crossing of Louisa St., Kitchener, Ont., without first stopping; speed not to exceed 10 miles an hour; trainman to stop its trains before crossing, so that granter can operate interlocking levers.

26509. Sept. 10.—Approving agreement between Bell Telephone Co. and Glenview Rural Telephone Co., Lanark County, Ont., Aug. 9.

26510. Sept. 10.—Amending order 26438, Aug. 17, re C.P.R. spur for R. A. Lister & Co., Winnipeg.

26511. Sept. 10.—Approving agreement between Bell Telephone Co. and Wallingford Bros., East Templeton, Que., July 25.

26512. Sept. 5.—Approving plan of City of Lachine, Que., showing lighting Rockfield Bridge, Rockfield, Que.

26513. Sept. 10.—Authorizing C.P.R. to build spur for Nicola Branch, B.C.

26514. Sept. 11.—Authorizing G.T.R. to build spur for Canada Paper Co., Factory St., Windsor Mills, Que., and to build additional track across Factory St.

26515. Approving automatic bell installed at Grier St., Belleville, Ont., by G.T.R., and protection by watchman, during rebuilding overhead bridge on North Front St., authorized by order 26210, June 11.

26516. Sept. 13.—Authorizing C.P.R. to build spur for Reliance Investment & Developing Co., Winnipeg.

26517. Sept. 14.—Approving location of Essex Terminal Ry. from Lot 39, Con. 1, Sandwich West Tp. to northerly limit of Amherstburg, Ont., 9.3 miles.

26518. Sept. 13.—Requiring G.T.R. to erect fruit shelter, 16 x 48 ft., at east end of station platform, at Bronte, Ont., to be completed by May 1, 1918.

26519. Sept. 10.—Approving agreement between Bell Telephone Co. and Gore G. Telephone Co., Prince Edward County, Ont., July 30.

26520. Sept. 14.—Extending to Sept. 30 time within which C.P.R. shall build interchange track on Pinnacle St., Belleville, Ont., between C.N.R., C.P.R. and G.T.R., required by order 25980, March 20.

26521. Sept. 13.—Ordering C.P.R. to erect Standard 2 station at Amisk, Alta., by Sept. 1, 1918.

26522. Sept. 13.—Authorizing C.P.R. to build ballast pit spur across road allowance between Secs. 26 and 27, Tp. 34, R. 26, west 2nd meridian, Sask., mileage 62.5, Sutherland Sub. Div.

26523. Sept. 13.—Authorizing C.P.R. to rebuild bridges 56.4 and 56.5, Galt Subdivision, Ontario District.

26524. Sept. 13.—Extending to Nov. 15 time within which Canadian Northern Ry. shall build station between east switch and road crossing at Kuroki, as per order 26372, July 26.

26525. Sept. 15.—Relieving Quebec & Lake St. John Ry. (C.N.R.) from providing further protection at highway at mileage 13.1 from Quebec, Que.

26526. Sept. 17.—Approving Canadian Northern plan showing transfer track between C.N.R. and C.P.R. at Rosetown, Sask.

26527. Sept. 11.—Ordering that Burwell, Adelaide and Rectory Sts., London, Ont., crossed by G.T.R., be protected by gates, operated by day and night watchmen; gates to be installed by Dec. 31, and reserving, for further consideration, question of apportionment of cost.

26528. Sept. 14.—Authorizing Grand Trunk Pacific Ry. to build highway over Ottawa St., Prince George, B.C.

26529. Sept. 18.—Dismissing complaint of H. E. Dumphy, Excel, Alta., against demurrage charge of \$24 on car of grain.

26530. Sept. 15.—Authorizing Essex Terminal Ry. to build across certain highways between Ojibway and Anderson, and between Ojibway and Amherstburg, Ont., and across certain unopened road allowances.

26532. Sept. 14.—Authorizing C.P.R. to rebuild bridge 77.8 over Horner's Creek, Galt Subdivision, Ont.

26533. Sept. 14.—Approving clearances at New York Central Rd. mechanical coating plant at Valleyfield, Que.

26534. Sept. 17.—Authorizing Toronto Hamilton & Buffalo Ry. to take certain lands belonging to estates of late Senator McCallum and late T. C. Street, in Sherbrooke Tp., Ont., for storage of bulk shipments of ore, coke, and coal, and for freight sheds and trackage.

26535. Sept. 17.—Relieving Windsor, Essex, & Lake Shore Rapid Ry. from providing further protection at 8th Concession road between Lots 12 and 13, Sandwich South Tp., Ont.

26536. Sept. 17.—Refusing application of residents Neapan Tp., Ont., for order directing Canadian Northern Ry. to establish flag station where its crosses forced road on Lot 17, Con. 3.

26537. Sept. 18.—Rescinding order 26249, June 18, and authorizing Village of Forbes, Sask., to build highway over C.P.R. 600 ft. west of west switch at Hatton, Sask.

26538. Sept. 18.—Approving Canadian Northern Ry. Standard Howe truss plans showing 60 ft. and 120 ft. deck Howe trusses.

26539. Sept. 20.—Ordering Pere Marquette Ry. to erect station and freight shed at Tupperville, Ont., and place man in charge to sell tickets, bill out freight and express and receive same, and deliver in proper manner; to build stock yard there, suitable for two or more shippers, with loading chute at each end and separation fence in centre; all to be completed by Nov. 1.

26540. Sept. 20.—Rescinding order 26325, July 18, and authorizing Montreal & Southern Counties Ry. to resume train service in effect prior to order 26325.

26541. Sept. 20.—Authorizing Esquimalt & Nanaimo Ry. to build spur for C. Hoard, Bainbridge station, B.C.

26542. Sept. 20.—Authorizing C.P.R. to rebuild bridge 56.6, Galt Subdivision, Ont.

26543. Sept. 19.—Authorizing Niagara, St. Catharines & Toronto Ry. to build branch line from Ontario St. to G.T.R. station at St. Catharines, Ont., to be completed within three months from date.

26544. Sept. 20.—Ordering Vancouver, Victoria & Eastern Ry. & Navigation Co. (G. H. R.) to extend bridge 528 for 42 ft. at west end, to widen channel to original width; remove gravel bar to east of bridge 530; and clean out channel from Thynne Lake to lower side of bridge 530; J. C. Thynne, Otter Valley, Merritt, B.C., to remove fish dam near outlet of Thynne Lake.

26545. Sept. 20.—Authorizing C.P.R. industrial tracks serving Gunn Packing Co., Toronto, and rescinding orders 16834, 18451, 22867, and 2336, June 21, 1912, Jan. 10, 1913, Nov. 18, 1914, and Dec. 12, 1906, approving clearances and authorizing G.T.R. to operate over said spurs.

26546. Sept. 19.—Authorizing Central Vermont Ry. to build spur for Bennett, Ltd., Chambley Tp., Que.

26547. Sept. 20.—Rescinding order 24915, Apr. 22, 1916, subject to condition that rates on wood Hawkesbury and Buckingham to destinations in pulp and sulphite pulp, from Ottawa, Hull, Central Freight Association's territory included in suspended tariffs, except Jackson, Battle Creek, Vicksburg, and Kalamazoo, Mich., be revised to basis of 19 1/10c to Chicago in accordance with established percentages; fractions of 1c in rates, excepting 1/2c, be eliminated as follows: under 25c drop, 25 to 74c—1/4c; over 74c, 1c; rates from Ottawa, Hull, Hawkesbury, and Buckingham to Jackson, Battle Creek, Vicksburg and Kalamazoo,

Mich., to be made 1c less than rates from Grand Mere, Que.

26548. Sept. 19.—Ordering that rates and minimum weight to be charged by railway companies on fibreboard cheese boxes, in carloads, be those concurrently charged between same points in Canada on wooden cheese boxes, in carloads; prompt effect be given this order by amendment to Canadian freight classification, or by commodity tariff of general application.

26549. Sept. 20.—Authorizing Alberta Government to build highway over C.P.R. in n.e. 1, Sec. 34, Tp. 24, R. 2, west of 5th Meridian.

26550. Sept. 21.—Extending to Nov. 30, time within which C.P.R. shall install gates at crossing of Church St. by G.T.R. and C.P.R. at Weston, Ont., and that pending installation, crossing be protected by day and night watchmen.

26551. Sept. 22.—Exempting Toronto, Hamilton & Buffalo Ry. and Michigan Central Rd. from complying with conditions referred to in Sec. 364 of Railway Act, in connection with agreement of Oct. 2, 1916, between the companies, for joint use, for interchange of traffic between them, of T. H. & B. R. spur between Smithville and Port Maitland, connecting with M. C. R. near Attercliffe, Ont., at Erie and Ontario Jct., and recommending agreement to Governor in council for sanction.

26552. Sept. 21. Rescinding order 15965, Feb. 12, 1912, in so far as it exempts C.P.R. from fencing right of way from mileage 83 to 92, Bigwood Tp., Ont.; and ordering C.P.R. to fence said portion of right of way by Dec. 1.

26553. Sept. 21. Approving Edmonton, Dunvegan & British Columbia Ry. bylaw 7, Sept. 1, and rescinding order 23459, Mar. 29, 1915.

26554. Sept. 13.—Approving plan and specifications of Blanchard Tp., Ont., showing work to be done on Bolton Drain, under G.T.R.

26555. Sept. 22.—Approving location and details of G.T.R. station at Delhi, Ont.

26556. Sept. 20.—Ordering C.P.R. to repair fences on its Kootenay Central Subdivision, B.C., mileage 10 to 166.

26557. Sept. 24.—Authorizing G.T.R. to build extension to spur for Jefferison Glass Co., Toronto. General order 206. Sept. 7.—Amending general order 203, Aug. 11, re regulations for carriage of explosives.

Canadian Pacific Railway Construction, Betterments, Etc.

New Brunswick District.—The new locomotive house at Bay Shore, St. John, is reported to be completed, and grading on the surrounding area for additional trackage is being gone on with.

Montreal Terminals.—Four umbrella protections of reinforced concrete are being erected over the platforms at Place Viger station, Montreal. Each covering is 500 ft. long, with a spread of 20 ft., and composed of 16 central pillars, with arms stretching out to each side of the platform. The ends of the arms of each pillar are connected up with concrete beams 30 ft. long, 2 ft. wide, and 6 in. high; a similar beam connects the pillars at the centre. Cross beams of concrete, 10 ft. long, 10 in. wide and 10 in. thick are then laid transversely, on which the roof is laid. The roof slopes inward from each side to the centre and the water will be drained off by spouts placed in alternate pillars. About 300 tons of cement will be used, and the cost of the whole work is estimated at \$40,000.

Ontario District.—Good progress is reported to have been made to date with the second track work on the line between Leaside Jct. and North Toronto station. The grading is comparatively light, and is being done by the company's own forces, which will also do the track laying. The heaviest part of the work is the removal of two single track steel viaducts which are being replaced by reinforced concrete structures. Each structure will be approximately 400 ft. long and 100 ft. high to base of rail; that over the belt line ravine will carry two tracks, and that over the reservoir park ravine three tracks. The first is being built by the Dominion Construction Co., and the second by Wells & Gray, Ltd. Work on both structures is well advanced and it is expected that they will be completed and ready for use by the end of November.

Traffic is being carried over the ravines at present on temporary timber trestles.

The yard at West Toronto is being increased by the addition of tracks to accommodate 500 cars, thus bringing its capacity up to 2,200 cars. The biggest piece of the work is the completion of the subway at Runnymede Road. When the capacity of the yard was last increased, the substructure for a 12-track subway was put in, but the superstructure for 6 tracks only was completed. The superstructure for the additional 6 tracks is now being put in. Reinforced concrete is being used, the contractors being Archibald & Hilmer, Ltd., Toronto. The grading and track laying, with the exception of that over the subway has been completed by the company's own forces, and ballasting is being gone on with. The last extension of the yards was fully described and illustrated in Canadian Railway and Marine World, Nov. 1913, pg. 532. The present extension lies between the locomotive house built in 1913, and the old West Toronto yard.

Work has been started on a new bridge at London St., Windsor, Ont., which will be wider and of heavier construction than the old one. One third of the cost is being contributed by the city.

Grand Trunk Pacific Inspection Trip.

An official trip of inspection over the Grand Trunk Pacific Ry. was begun at Winnipeg, Sept. 14. The official party, which started from Montreal, Sept. 12, consisted of A. W. Smithers, Chairman of the Board, G.T.R.; W. Molson Macpherson, director; Jules Hone, Dominion Government representative on the directorate; H. G. Kelley, President; J. E. Dalrymple and F. Scott, Vice Presidents. The party was joined at Winnipeg by P. Mc-Ara, the other government director, and W. P. Hunter, Vice President and General Manager. Three days were spent in Winnipeg, the party leaving Sept. 17, and travelling by day in order that they might have the best opportunity of seeing the whole of the line and the country which it traverses. At Regina, Sask., on Sept. 20, the party was met by the mayor and other civic officials and was entertained at the Assiniboia Club, the ladies of the city taking charge of the ladies in the party. The principal feature of the visit was a luncheon given by the Canadian Club, at which Mr. Smithers was the chief speaker. The party returned to the main line at Melville, Sept. 22, and proceeded westward to travel over the line to Prince Rupert, thence to Victoria, where they are expected early in October. President Kelley is making his first official trip over the line.

Canadian Northern Ry. property in Hamilton.—The assessment commissioner for Hamilton, Ont., prepared a list of properties owned by the company and its subsidiaries there showing a total assessment of lands, \$247,080, and of buildings, \$417,280. The taxes for this year are \$9,594.44. This statement was prepared with a view of considering the city's position in regard to the taking over of the company's properties by the Dominion Government.

Consolidated Railway Bill.—The bill to consolidate and amend the Railway Act, which passed the House of Commons at the recent session, after having been considered by a special committee, did not get through the Senate before prorogation.

Mainly About Railway People Throughout Canada.

J. J. Kennedy, foreman painter, C.P.R., Lethbridge, Alta., died there Sept. 4, aged 51.

J. J. Hill, of St. Paul, Minn., left an estate which has been appraised recently at about \$60,000,000.

Wm. Watson, at one time Paymaster, Toronto, Grey & Bruce Ry., died in Toronto, Aug. 31, aged 88.

E. W. Tobin, M.P. for Richmond and Wolfe, Que., began life as a railway brakeman and is now a prominent lumberman.

A. W. Smithers, Chairman of the Board, G.T.R., was in Canada during September, and toured the various lines of the system.

G. E. Johnson, who has resigned the general managership of the Cape Breton Ry., at St. Peters, N.S., after 14 years

new headquarters being Magor Car Corporation, 30 Church St.

Sir Henry Drayton, Chief Railway Commissioner, has been appointed a Royal commissioner to investigate the exportation of power generated at Niagara Falls, Ont., to the United States.

G. McL. Brown, European Manager C. P.R., has written the *Tariff Reformer and Empire Monthly*, in England, urging a comprehensive scheme by which returned soldiers could be placed on land.

John Harvie, of Toronto, who died at Guelph, Ont., Sept. 5, aged 85, was conductor on the first train which left Toronto on the Northern Ry., and was subsequently Traffic Master of that line.

C. W. W. Field, who has been City Passenger Agent, Grand Trunk and Central Vermont Railways at Boston, Mass.,

ern train dispatcher, who was arrested in connection with the accident near Edmonton, Alta., July 28, in which five persons were killed, was subsequently released on bail and later under instructions from the Attorney General's Department the proceedings were abandoned.

G. Morgan, who died at Blenheim, Ont., Sept. 21, aged 78, was, some years ago, engaged in railway contracting, and had contracts on the construction of the Lake Erie and Detroit River Ry., between Walkerville and St. Thomas, Ont. He also built the concrete coal docks at Ronleau, Ont., for the Lake Erie Coal Co., and did considerable bridge work on the London and Port Stanley Ry.

N. Cauchon, consulting engineer, Ottawa, who was associated with W. F.

H. G. Kelley
President, Grand Trunk Railway and Grand Trunk Pacific Railway.

W. H. Biggar, K.C.
Vice President and General Counsel, Grand Trunk Railway and Grand Trunk Pacific Railway.

U. E. Gillen
Vice President in Charge of Operation, Grand Trunk Railway.

occupancy of the position, is now in California, on account of ill health.

Joseph Heffernan, for many years City Passenger Agent, C.P.R., and agent, Dominion Express Co., at Guelph, Ont., died there Sept. 12, aged 77.

M. P. Fennell, heretofore Assistant Secretary, Montreal Harbor Commission, is reported to have been appointed Secretary-Treasurer, vice David Seath, resigned owing to ill health.

N. R. DesBrisay, District Passenger Agent, C.P.R., St. John, N.B., was married at Halifax, N.S., Sept. 18, to Miss C. A. Worrell, daughter of the Archbishop of Nova Scotia.

R. C. Barker, agent, C.P.R., Summerland, B.C., was drowned in Okanagan Lake, Sept. 2, whilst bathing. He was formerly at North Bend and Revelstoke, B.C., as chief dispatcher.

Basil Magor, who resigned his position as Vice President and General Manager, National Steel Car Co., Hamilton, Ont., recently, has removed to New York, his

has been appointed First Lieutenant in the United States army and has trained at Plattsburg, N.Y.

H. E. Byram, Vice President in charge of Traffic, Chicago, Burlington & Quincy Rd., Chicago, Ill., is reported to have been appointed President, Chicago, Milwaukee & St. Paul Ry., Chicago, Ill., vice A. J. Earling, appointed Chairman of the Board.

H. K. Wicksteed, M.Can.Soc.C.E., who has been Chief Engineer of Surveys, Mackenzie, Mann & Co., Ltd., for a number of years, is at present acting as Manager of the Rosedale Coal and Clay Products Co., at Rosedale, Alta., which is owned by Mackenzie-Mann interests.

T. J. Oakley, who died at Toronto, Sept. 19, aged 68, was at one time dispatcher, G.T.R., Stratford, Ont., and was transferred to St. Marys, Ont., in 1907. He was later appointed station master at Craigville, Ont., and retired from active service a few years ago.

S. J. Harrington, the Canadian North-

ern train dispatcher, who was arrested in connection with the accident near Edmonton, Alta., July 28, in which five persons were killed, was subsequently released on bail and later under instructions from the Attorney General's Department the proceedings were abandoned.

C. Manning, who has been appointed Assistant to Vice President in charge of motive power, car equipment and machinery, G.T.R., Montreal, has been in the company's service for over 30 years, latterly acting as secretary to W. D. Robb, when the latter was Superintendent of Motive Power. He has lived at Verdun, Que., for several years, and served a term as Mayor of the town.

Neil Marple, who has been appointed Master Car Builder, Canada Southern Division, Michigan Central Rd., St. Thomas, Ont., was born in McKillip Tp., Ont., July 1, 1860, and entered Michigan Central service in Dec. 1886, since when he has been, to July 1, 1888, machinist;

July 1, 1888, to April 1, 1903, Foreman of Machine Shop; April 1, 1903, to Sept. 1, 1904, also in charge of blacksmith shop; Sept. 1, 1904 to Aug. 1, 1917, General Foreman, all at St. Thomas, Ont.

Elias Stewart McMillan, who has been appointed Road Foreman of Locomotives, G.T.R., Montreal, was born there, Dec. 14, 1880, and entered G.T.R. service in July, 1897, since when he has been, to Mar. 1900, clerk; Mar. to Sept. 1900, locomotive dispatcher; Sept. 1900 to Dec. 1903, locomotive fireman; Dec. 1903 to Jan. 1917, locomotive man; Jan. to May 1917, acting travelling locomotive man; May to Sept. 1917, locomotive fireman instructor, all at Montreal.

Edwin Roy Battley, who has been appointed Master Mechanic, Eastern Lines, G.T.R., Montreal, was born at Stratford, Ont., Oct. 21, 1886, and entered G.T.R. service, Dec. 1, 1902, since when he has been, to Dec. 1, 1907, machinist apprentice, Stratford, Ont.; Dec. 1, 1907 to Jan. 1909, machinist, Stratford; Jan. 1909 to Mar. 12, 1910 to July 1, 1914, Locomotive Foreman, Fort Erie, Ont.; July 1, 1914 to Sept. 1, 1917, General Foreman, Deering, Me.

S. N. Parent, of Quebec, formerly Chairman, National Transcontinental Ry. Commissioners, and **A. B. Lowe**, the International Brotherhood of Maintenance of Way Employes' representative at Ottawa, are among the 12 persons nominated by Sir Wilfrid Laurier, as leader of the opposition, to act as members of the board of selection, to be appointed by joint resolution of both Houses of Parliament, to select members of the local appeal tribunals throughout Canada under the Military Service Act.

James E. Giles, who has been appointed Locomotive Foreman, Canadian Northern Ry., Lucerne, B.C., was born at Toronto, Jan. 18, 1882, and entered railway service in Sept. 1902, since when he has been, to 1905, machinist, Union Pacific Rd., Pocatello, Idaho; 1905 to 1909, machinist, Northern Pacific Ry., Ellensburg, Wash.; 1909 to 1910, Assistant Locomotive House Foreman, same road, Ellensburg, Wash.; 1910 to 1913, machinist, C.P.R., Lethbridge, Alta.; 1913 to 1914, Shop Foreman, C.P.R., Lethbridge, Alta.; 1914 to 1917, acting Master Mechanic, Pacific Great Eastern Ry., Squamish, B.C.

W. D. Robb, whose appointment as Vice President in charge of motive power, car equipment and machinery, G.T.R., Montreal, was announced in our last issue, was born at Longueuil, Que., Sept. 21, 1857, and entered G.T.R. service in 1873, since when he has been, to July 1882, machinist apprentice, Montreal; July 1882 to Jan. 1883, charge hand, Montreal; Jan. to Aug. 1883, night locomotive house foreman, Montreal; Aug. 1883 to Jan. 1897, Locomotive Foreman, Belleville, Ont.; Jan. 1897 to July 1901, Master Mechanic, Toronto; July 1901 to Sept. 1, 1917, Superintendent of Motive Power, Montreal.

W. R. Davidson, who has been appointed General Superintendent, Western Lines, G.T.R., Chicago, Ill., was born at Everton, Mo., Nov. 8, 1871, and entered railway service in Jan., 1890, since when he has been, to July, 1901, operator at various points, Missouri Pacific Ry.; July, 1901, to Mar., 1904, dispatcher, same road, Wichita, Kan.; Mar. to Oct., 1904, Chief Dispatcher, same road, Wichita, Kan.; Oct., 1904, to Mar., 1911, Trainmaster, same road, Wichita, Kan.; Mar., 1911, to Feb., 1913, Trainmaster, G.T.R., London, Ont.; Feb., 1913, to Nov., 1916, Superintendent, same road, London, Ont.; Nov.,

1916, to Sept. 1, 1917, Superintendent, Detroit Division, Western Lines, same road, Detroit, Mich.

Vice President in Charge of Motive Power,
Car Equipment and Machinery, Grand Trunk
Railway.

dent, Eastern Lines, Canadian Government Railways, Moncton, N.B., was born at Lacadie, Que., Aug. 5, 1878, and entered railway service Oct. 1, 1895, since when he has been to April 1900 agent and operator at various points, Eastern

Division, C.P.R.; May 1900 to Oct. 1913, dispatcher, and Chief Dispatcher, consecutively, Lake Superior Division, C.P.R., Chapeau, Ont.; Oct. 1913 to Oct. 1916, Inspector of Stations, Trains and Train Dispatching, Canadian Government Railways, Moncton, N.B. In October, 1916, he was appointed Superintendent of Telegraph and Time Service, which position he continues to fill.

Daniel Francis Coyle, who has resigned as Industrial Commissioner, Canadian Northern Ry., Winnipeg, on taking service with the Home Bank of Canada, was born at Stayner, Ont., June 13, 1875, and entered railway service, Aug. 15, 1892, since when he has been, to Sept. 1896, stenographer, General Superintendent's office, Western Division C.P.R., Winnipeg; Sept. 1896 to Aug. 15, 1901, private secretary to Manager, Western Lines, C.P.R., Winnipeg; Aug. 15, 1901 to Jan. 2, 1917, assistant to R. J. Mackenzie, who was in charge of the construction of all Canadian Northern Ry. lines west of the Great Lakes, for Mackenzie, Mann & Co., the general contractors; Jan. 2 to Sept. 30, 1917, Industrial Commissioner, Canadian Northern Ry. He was presented with a travelling case by C. N. R. officials and employes at Winnipeg recently.

Wilmer Herbert Sample, who has been appointed Superintendent of Motive Power, G.T.R., Montreal, was born at Altona, N.Y., Aug. 20, 1864, and entered railway service Aug. 20, 1882, since when he has been, to 1887, fireman, Central Vermont Ry., St. Albans, Vt.; 1887 to 1890, locomotive man, Atcheson, Topeka and Santa Fe Ry., Albuquerque, N.M.; 1890 to 1901, locomotive man, Central Vermont Ry., St. Albans, Vt.; 1901 to 1906 Road Foreman of Locomotives, Central Vermont Ry., St. Albans, Vt., 1906 to 1911, Superintendent of Motive Power and Car Department, Northern Ry. of Costa Rica (United Fruit Co.), San Jose, Costa Rica; Mar. 15, 1911 to Oct. 1914, Master Mechanic, G.T.R.; Ottawa, Oct. 1914 to Oct. 1916, Master Mechanic, G.T.R., Battle Creek, Mich.; Oct. 1916 to Sept. 1, 1917, Master Mechanic, Eastern Lines, G.T.R., Montreal.

Charles Ketchum Howard, who has been appointed General Agent, Traffic Department, Canadian Government Railways, Boston, Mass., was born at St. Andrews, N.B., Aug. 28, 1877, and entered railway service April 1893, since when he has been, to 1900, operator and agent at various points, Atlantic Division, C.P.R.; 1900 to 1901, agent, C.P.R., Brownville Jet, Me.; 1901 to 1906, agent, C.P.R. McAdam Jet, N.B.; 1906 to 1910, agent, C.P.R., Fredericton, N.B.; 1910 to 1911, Superintendent, Aroostook Valley Rd., Presque Isle, Me.; 1911 to 1912, Travelling Freight Agent, C.P.R., St. John, N.B.; 1912 to 1915, Right of Way Agent, St. John and Quebec Ry., Fredericton, N.B.; 1915 to Mar. 1916, agent, Canadian Government Railways, Woodstock, N.B.; Mar. 1916 to Sept. 1, 1917, Commercial Agent, Canadian Government Railways, Boston, Mass.

H. B. Fleming, who died suddenly at New Glasgow, N.S., Sept. 19, was born at Moncton, N.B., in 1858, and entered Intercolonial Ry. service in 1873, since when he had been, to 1874, in stationery stores; 1874 to 1878, relieving operator and station agent; 1878 to 1879, relieving dispatcher at Truro, N.S., and Moncton and Campbellton, N.B.; 1879 to 1898, dispatcher, Moncton, N.B.; 1898 to Nov. 7, 1912, Chief Dispatcher, Springhill and St. John Division; Nov. 7, 1912, to Aug., 1913, Assistant Superintendent, Division 3,

Moncton, N.B.; Aug., 1913, to Nov., 1914, Assistant Superintendent, Moncton to Edmundston, N.B., National Transcontinental Ry., Edmundston, N.B.; Nov., 1914, to Feb., 1917, Superintendent, District 5, Intercolonial Division, Canadian Government Railways, Edmundston, N.B.; Feb., 1917, he was appointed Chief Dispatcher, Canadian Government Railways, Edmundston, N.B., and latterly acted as Inspector of vision and color tests.

Ulmus E. Gillen, whose appointment as Vice President in charge of operation, G.T.R., Montreal, was announced in our last issue, and whose portrait appears in this issue, was born at Brooklyn, Mo., Feb. 27, 1867. He entered railway service in 1884, and was, to April, 1885, clerk, telegraph operator and relief agent, Chicago, Milwaukee and St. Paul Ry., Canton, S.D.; April 1885 to 1888, telegraph operator, Missouri Pacific Ry., Pacific, Mo.; 1888 to 1892, operator in dispatcher's office, same road, St. Louis, Mo.; 1892 to 1901, dispatcher, and chief dispatcher, same road, St. Louis; 1901 to 1902, Trainmaster, G.T.R. Belleville, Ont.; 1902 to 1904, Assistant Superintendent, same road, Belleville, Ont.; 1904 to 1907, Assistant Superintendent same road, London, Ont.; 1907 to 1912, Superintendent, same road, Montreal; 1913 to Sept. 1, 1917, General Superintendent, Western Lines, same road, Chicago, Ill. He was President of the G.T.R. Maintenance of Way Association for 1916, and in 1917 was elected President of the General Superintendents' Association of Chicago, and he is a member of the American Railway Engineering Association, the St. Louis Railway Club and the Traffic Club of Chicago.

Lt. Col. F. L. Lyndon, who died in Montreal, Sept. 10, aged 81, had been in C.P.R. service continuously from 1882, first in the stores department, then in the general ticket office and latterly in the General Manager's office. Both his grandfathers fought under Wellington in the Peninsular and Napoleonic wars. His father served 26 years in the 30th Regiment. He began his military career in the South Devon Militia in 1854, and later served with the Dorset Militia. In 1861 he came to Canada as a soldier, in 1866 he enlisted in the 4th Battalion of the 60th Regiment of the King's Royal Rifles. He then went to the 28th Battalion of Perth, Ont., as adjutant and instructor and subsequently moved to St. Marys, Ont., and joined the Grand Trunk Brigade. On moving to Montreal he remained with the Grand Trunk Brigade and at the time of its dissolution he assisted in re-organizing the 5th Royal Highlanders, becoming adjutant and major in that regiment. He organized and for a long period commanded the Montreal Highland Cadet Corps. He retired from the Canadian Militia Mar. 21, 1917, retaining rank as Lt. Col. He served in the Fenian raid in 1866 and had the general service medal with one clasp.

W. E. Duperow, who has been appointed General Passenger Agent, Grand Trunk Pacific Ry., and Canadian Government Railways, Winnipeg, was born at Stratford, Ont., Sept. 4, 1872, and entered transportation service Nov. 3, 1893, since when he has been, to Oct. 15, 1894, in G.T.R. service at Seaforth, Ont.; Oct. 15, 1894 to June 1, 1896, ticket clerk, G.T.R., London, Ont.; June 1, 1896, to July 11, 1898, ticket clerk, G.T.R., Toronto; July 11, 1898, to Aug. 1, 1899, theatrical and excursion clerk, General Passenger Agent's office, G.T.R., Toronto; Aug. 1, 1899, to April 19, 1902, chief clerk, same

office; April 19, 1902, to Feb. 15, 1907, General Manager, Secretary and Treasurer, Huntsville, Lake of Bays and Lake Simcoe Navigation Co., Huntsville, Ont.; Feb. 15, 1907 to June 1, 1910, Travelling Passenger Agent, G.T.R., Toronto; June

W. H. Sample
Superintendent of Motive Power, Grand Trunk Railway.

E. R. Battley
Master Mechanic, Eastern Lines, Grand Trunk Railway.

1, 1910 to April 15, 1912, City Passenger Agent, G.T.R., Toronto; June 1, 1910, to April 15, 1912, City Passenger and Ticket Agent, G.T.R. and Grand Trunk Pacific Ry., Victoria, B.C.; Apr. 15, 1912 to Mar. 1, 1914, General Agent, Passenger De-

partment, G.T.R., G.T.P.R., and Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C.; Mar. 1, 1914, to Sept. 3, 1917, Assistant General Passenger Agent G.T.P.R., Winnipeg.

Howard G. Kelley, whose appointment as President, G.T.R. and Grand Trunk Pacific Ry., Montreal, was announced in our last issue, was born at Philadelphia, Pa., Jan. 12, 1853, and entered railway service in 1881, since when he has been, to 1884, Assistant Engineer on location, construction and bridge construction, Western and Pacific Divisions, Northern Pacific Ry.; 1884 to 1887, engaged in mining; 1887 to Jan. 1860, Resident Engineer and Superintendent of Bridges and Buildings, St. Louis Southwestern Ry. System, including the St. Louis South Western Ry. of Texas; Jan. 1890 to Mar. 1898, Chief Engineer, same road; Mar. 1898 to July 1907, Chief Engineer, Minneapolis and St. Louis Rd.; July 1900 to July 1907, also Chief Engineer, Iowa Central Ry.; Mar. 1898 to Mar. 1899, also Consulting Engineer, St. Louis South Western Ry.; July 1907 to Oct. 2, 1911, Chief Engineer, G.T.R., Montreal; Oct. 2, 1911, to Sept. 1, 1917, Vice President in charge of construction, transportation and maintenance, G.T.R., Montreal. He is also a director, G.T.R., and director and Chairman of the board of the Central Vermont Ry. He is a member of the Institution of Civil Engineers of Great Britain, of the Canadian Society of Civil Engineers, and has served two terms as President of the American Railway Engineering and Maintenance of Way Association.

James Kerr McNeillie, who has been appointed Superintendent, Susquehanna Division, Delaware and Hudson Co., Ontario, N.Y., was born at Toronto, Feb. 23, 1874, and entered railway service in May, 1890, since when he has been, to Nov., 1891, call boy and apprentice, G.T.R., Lindsay, Ont.; Nov., 1891, to Sept. 1896, apprentice, locomotive fitter and machinist, G.T.R., Point St. Charles, Que.; Sept. 1, 1896, to Nov., 1899, trainmaster's clerk and chief clerk, Superintendent's office, C.P.R., Farnham, Que.; Nov., 1899, to June, 1902, clerk and chief clerk, General Superintendent's office, C.P.R., Winnipeg; June, 1902, to Feb., 1903, Mar. 1903 to Oct. 1907, Car Service Agent in charge of distribution of passenger equipment, C.P.R., Montreal, Que.; 1907 to July, 1908, Assistant Superintendent of Terminals, C.P.R., Toronto; July 1908, to Feb., 1909, Superintendent, District 1, Ontario Division C.P.R., Toronto; Feb., 1909, to Mar. 1911, Superintendent, District 2, Ontario Division, C.P.R., London; Mar., 1911, to Feb., 1913, Superintendent, District 1, Eastern Division C.P.R., Farnham, Que.; Feb. 1913, to June, 1914, Superintendent, District 2 (Montreal Terminals), Eastern Division, C.P.R., Montreal; June, 1914, to May, 1915, Superintendent, District 3, Eastern Division, C.P.R., Montreal; May, 1915, to Sept. 15, 1917, General Superintendent, Eastern Lines, Canadian Government Railways, Moncton, N.B.

Thomas King, who has been appointed Superintendent, Detroit Division, Western Lines, G.T.R., Detroit, Mich., was born at Dunbarton, Ont., July 18, 1869, and entered G.T.R. service Mar. 28, 1885, since when he has been, to Oct. 7, 1885, switch man Pickering, Ont.; Oct. 8, 1885 to Oct. 1886, operator, Sidney, Ont.; Nov. 1, 1886 to Dec. 1889, operator, York, Ont.; Jan. 1, 1890, to June 1907, operator, Don Station, Toronto; July 1, 1897 to Oct. 1898, ticket clerk, Oshawa, Ont.; Nov.

1898 to Jan. 1899, operator, Belleville, Ont.; Jan. 1899 to Aug. 1902, agent, Whitby, Ont.; Aug. 1902 to May, 1905, agent, Brockville, Ont.; May 1905 to Nov. 1907, agent, Sherbrooke, Que.; Nov. 1907 to May 1909, agent, Lewiston, Me.; May 1909 to Aug. 1910, Travelling Passenger Agent, Montreal; Aug. 1910 to Dec. 1912, agent Pontiac, Mich.; Dec. 1912 to Sept. 1, 1917, agent, Detroit, Mich.

W. H. Biggar, K.C., who has been appointed Vice President and General Counsel, G.T.R., Montreal, was born at The Carrying Place, near Trenton, Ont., Sept. 19, 1852, and was educated at the Trenton Grammar School and Upper Canada College. He began the study of law in 1875, after having for a short time engaged in commercial pursuits, and was called to the bar in 1880. He then became associated with John Bell, Q.C., then General Counsel, G.T.R., in general practice in 1881, was made a Q.C. in 1900, and was appointed Assistant General Counsel, G.T.R., Montreal, Jan. 1903, and General Solicitor, Dec. 1904, and General Counsel, G.T.R., and Grand Trunk Pacific Ry., Montreal, in Jan. 1910. In October, 1914, he was also appointed ice President, G.T.P.R. He was Mayor of Belleville, Ont., in 1887, and represented West Hastings in the Ontario Legislature from 1890 to 1897.

George C. Jones, whose appointment as Assistant to President, G.T.R., Toronto, was announced in our last issue, was born at Clyde, N.Y., Sept. 24, 1869, and entered railway service in June, 1874, since when he has been, to 1878, messenger, yard clerk and operator, consecutively, Erie Rd.; 1878 to 1887 dispatcher, Cleveland, Cincinnati, Chicago and St. Louis Ry., Erie Rd., and Chicago, Burlington and Quincy Rd., respectively, except for a short service with the Western Union Telegraph Co.; 1887 to 1896, dispatcher, chief dispatcher, and district operator, Wabash Rd.; July 1896 to Mar. 1898, Superintendent, G.T.R., London, Ont.; Mar. 1898 to May 1899, Superintendent, G.T.R. and Wabash Rd., St. Thomas, Ont.; May 1899 to Dec. 31, 1904, Superintendent, Middle Division, G.T.R., Toronto; Jan. 1, 1905 to Sept. 1, 1917, General Manager, and Vice President and General Manager consecutively, Central Vermont Ry., St. Albans, Vt.

R. W. Burnett, who has been appointed Master Car Builder, Delaware and Hudson Co., Albany, N.Y., was born at Farmer City, Ill., in 1868, and entered railway service in 1890, in the Car Department, Union Pacific Rd., Denver, Col., subsequently transferring to Pennsylvania Rd. service, as Car Inspector, Chicago, Ill.; he was from Aug. 1892 to July 1899, foreman and General Foreman, consecutively, Car Department, Lake Shore and Michigan Southern Ry., Chicago, Ill., 1900, General Foreman, Car Department, Long Island Rd.; 1900 to 1904, General Foreman, Car Department, Central Rd. of New Jersey, Elizabethport, N.J.; 1904 to Jan. 1907, Assistant Master Car Builder and Master Car Builder, consecutively, Erie Rd., Meadville, Pa.; Jan. 1907, to July 1909, Assistant Master Car Builder, C.P.R., Montreal; July 1909 to Apr. 1915, General Master Car Builder, C.P.R., Montreal. Since leaving C.P.R. service, he has been Vice President, National Car Equipment Co., Chicago, Ill.

Leonard E. Ayer, who has been appointed General Agent, Canadian Northern Ry., St. Louis, Mo., was born at Henderson, Ia., Jan. 11, 1877 and entered railway service, Apr. 9, 1898, since when he has been, to Sept. 1898, student sta-

tion work, Burlington and Missouri River Rd. in Nebraska, Saronville and Fairmont, Neb.; Sept. 1898 to Nov. 1900, clerk, local freight office, Burlington Route, Sioux City, Ia.; Nov. 1900 to Apr. 1902, station ticket clerk, Chicago

1911, City Ticket Agent, Duluth, Misabe and Northern Ry., Duluth, Minn.; Mar. 1911 to Apr. 1916, chief clerk, Canadian Northern Ry., Chicago, Ill.; Apr. 1916 to Sept. 1917, Commercial Agent, same road, St. Louis, Mo.

Carl Howe, who has been appointed Traffic Manager, Michigan Central Rd., Chicago, Ill., was born at Berrien Springs, Mich., Jan. 11, 1870, and entered railway service in Oct. 1889, since when he has been, to Oct. 1890 clerk in local freight office, Michigan Central Rd., Michigan City, Ind.; Oct. 1890 to April, 1893, chief clerk and cashier, same office. April 1893 to Sept. 1894, local agent same road, Chicago Heights, Ill.; Sept. 1894 to May 1898, Travelling Freight Agent, same road, Chicago, Ill.; May 1898 to Oct. 1899, assistant chief clerk, Freight Traffic Manager's office, same road, Detroit, Mich.; Oct. 1899 to July 1900, chief clerk, same office; July 1900 to Jan. 1907, Assistant General Freight Agent, same road, Buffalo, N.Y.; Jan. to Oct. 1907, Manager, Merchants Despatch Transportation Co., New York; Oct. 1907 to Sept. 1, 1917, Manager, Merchants' Despatch and other fast freight lines, Buffalo, N.Y., and latterly, Manager, New York Central Fast Freight Lines, Chicago, Ill. He was President, Canadian Freight Association for the year 1905-6.

Lafayette S. Brown, who has been appointed General Superintendent, Eastern Lines, Canadian Government Railways, Moncton, N.B., was born at Nelson, N.B., Oct. 19, 1864, and entered I.R.C. service, Jan. 15, 1880, since when he has been, to Dec. 20, 1881, cleaning locomotives, and machinist helper, Newcastle, N.B.; Dec. 20, 1881, to Sept. 5, 1882, shunting in Newcastle yard and learning telegraphy; Sept. 5, 1882, to Nov. 25, 1883, assistant agent, Newcastle, N.B.; Nov. 26, 1883, to Oct. 4, 1898, train dispatcher, Moncton and Ste. Flavie District, Campbellton, N.B.; Oct. 4, 1898, to April 30, 1912, Chief Dispatcher, New Glasgow, N.S.; May 1 1912, to July 31, 1913, Assistant Superintendent, Moncton and Ste. Flavie and Fredericton to Loggieville, N.B., Newcastle, N.B.; Aug. 1, 1913, to June 1, 1917, Superintendent, Truro Sydney and Oxford District, Intercolonial Ry., latterly known as District 4, Intercolonial Division, Canadian Government Railways, New Glasgow, N.S.; June 1 to Sept. 17, 1917, Assistant General Superintendent, Eastern Lines, Canadian Government Railways, Moncton, N.B.

Wages of C.P.R. Station Agents, etc.—

The board of conciliation appointed to enquire into the wages of the C.P.R. station agents, operators, dispatchers and linemen has recommended an increase of not less than 18% in the case of station agents, operators, relief agents and linemen, and of not less than 12% in the case of the dispatchers. It is recommended that the increases be distributed as requested by the employes, having regard to the reduction in the differential between eastern and western lines, due to the difference in the cost of living. Several of the matters brought forward by the employes have not been dealt with, being left for future negotiation between the parties concerned. The report is signed by the Chairman, Judge Gunn, of Ottawa, and by D. Campbell, Winnipeg for the men, and it is said that W. N. Tilley, K.C., Toronto, on behalf of the company, though not signing the report, is in accord with the other members.

J. K. McNeillie
Superintendent, Susquehanna Division, Delaware & Hudson Company.

H. A. Woods
Ex-Assistant Chief Engineer, Grand Trunk Pacific Railway.

and North Western Ry., Sioux City, Ia.; April 1902 to Nov. 1903, station ticket clerk, same road, Ashland, Wis.; Nov. 1903 to Nov. 1907, Contracting Agent, Duluth, South Shore and Atlantic Ry., Duluth, Minn.; Nov. 1907 to Aug. 1908, agent, Minnesota and International Ry., Tenstrike, Minn.; Sept. 1908 to Mar.

Railway Finance, Meetings, Etc.

Atlantic, Quebec and Western Ry.—There has been deposited with the Secretary of State at Ottawa an agreement dated June 30, between the Company and E. B. Read, and F. H. Jones, relating to a supplemental trust deed modifying the trust deeds of June 26, 1905 and July 3, 1906.

Canadian Northern Ry.—Further details have been made public of an issue of \$10,000,000 of C.N.R., one year 6% collateral trust notes placed on the market recently by W. A. Read & Co., New York. They are a direct obligation of the company specifically secured by the pledge of \$15,333,334 C.N.R. general-mortgage 4% bonds, due Sept., 1934, which have unconditional guarantees both as to principal and interest by the Government of Canada. The proceeds of the \$10,000,000 notes, which are dated Sept. 1, will be used to refund \$11,500,000 5% notes due that date, \$1,500,000 of the maturing issue being paid from other resources. The trust deed provides for the pledge with the trustees of the same amount of collateral as now pledged for the maturing notes. The new notes will be convertible at par and interest into the pledged guaranteed bonds at 79 and interest at the option of the holder on or before June 1, 1918, on 10 days notice. The bonds acquired by this conversion on June 1 will yield more than 6%. Interest on the \$10,000,000 notes is payable Mar. 1 and Sept. 1 in New York or Toronto.

There has been deposited with the Secretary of State at Ottawa duplicate original of an extension agreement, dated Aug. 20, made between the company et al and the Central Trust Co., of New York, as trustees, extending the time for payment of certain one year 5% gold notes.

Pacific Great Eastern Ry.—The annual meeting of shareholders was held at Victoria, Sept. 19, A. H. Sperry, General Manager, presiding in the absence of the President, Brigadier-General J. W. Stewart, C.M.G., on active service. Several other officials and directors were absent for a variety of causes connected with the recent action by the British Columbia Government in relation to the company's affair. The directors' report was received and adopted, and the officers and directors were re-elected. The government was not represented at the meeting, as it holds that the directors are not legally entitled to hold the shares, that they were illegally elected, and that all the proceedings at the meeting were illegal. These claims are made in the writ which the government issued against the company, and upon which proceedings are pending. The report points out that the government decided to have an audit of the company's financial relations with the former government. The investigation, according to the report, led to some of the officials removing themselves from the investigating committee's jurisdiction rather than submit to a prying enquiry into their personal affairs. The report also states that, "paralyzed by the effects of the war and further embarrassed by the ill timed action of the government in bringing suit against your sponsors and directors for their failure to complete this contract, of which the cataclysm of war is the cause, but one course is open, which is the policy being pursued, viz., to mark time until the advent of normal conditions and the settlement of all litigious disputes."

St. Martins Ry.—The financial position of this railway is reported to be precarious. A press dispatch states that at a recent meeting an intimation was given that the Dominion Government had declined to take it over as a branch of the Intercolonial. As the line has been operated at a loss for several years, it is thought likely that the rails and other fixtures will be sold and removed and the line abandoned.

The railway was originally known as the Hampton & St. Martins Ry., and was built about 30 years ago under a charter granted by the New Brunswick Legislature. The line extends from Hampton, on the Intercolonial, to St. Martins, 30 miles, via Hammond, Titusville, Glen Titus, Upham, Hanford Road, Porter Road, Henry Lake and Quaco. Three trains a day have been operated in either direction, the principal freight being lumber. For the year ended June 30, 1916, the gross earnings were \$21,506, and the net earnings, after paying operating expenses, were \$918. The capital of the company is reported to be \$189,000, on which no dividends have been paid for years. The President is Hon. W. E. Foster, Premier of New Brunswick.

Timiskaming & Northern Ontario Ry.—Passenger earnings for June, \$58,782; freight earnings \$119,131; total earnings \$177,913, against \$64,550 passenger earnings; \$94,029 freight earnings; \$159,579 total earnings, for June 1916.

Toronto, Hamilton & Buffalo Ry.—The Dominion Parliament authorized the company to enter into agreements with the Michigan Central Rd., the Canada Southern Ry. and the G.T.R., or with any one or more of them, under sec. 364 of the Railway Act, for terms exceeding 21 years, and authorizing it to take and hold stock in any navigation or steamboat company. (Aug., pg. 306.)

Toronto Terminals Ry.—The annual meeting was held in Montreal, Sept. 11. Following are the directors for the current year: H. G. Kelley, President; Sir George Bury, Vice President; E. W. Beatty, K.C., J. E. Dalrymple, U. E. Gillen, and I. G. Ogden. The other officers are Henry Phillips, Secretary; H. E. Suckling, Treasurer; W. H. Ardley, Auditor; J. W. Leonard, General Manager.

Victoria & Sidney Ry.—A press dispatch states that \$200,000 of the company's bonds, which matured Sept. 1, have not been taken up. The railway, extending from Victoria to Sidney, Vancouver Island, 17 miles, is owned by the Great Northern Ry. Co. (U.S.), and has been losing money at the rate of about \$15,000 a year for several years past. The opening of the British Columbia Electric Ry.'s Saanich Peninsula branch two or three years ago, and the recent opening of the Canadian Northern Pacific Ry. from Victoria to Patricia Bay, both parallel lines, have considerably affected the company's local business. If the G.N.R. does not come to the rescue the company will pass into the hands of a receiver and its property will be sold.

R. W. Burnett, who was appointed Master Car Builder, Delaware & Hudson Co., recently, in writing to have his address changed from Chicago to Albany, says: "I always take great interest and pleasure in reading Canadian Railway and Marine World, which you always keep up to the high standard you established several years ago."

Railway Rolling Stock Notes.

Canadian Government Railways have ordered a ditcher from F. H. Hopkins & Co.

The Toronto Hamilton and Buffalo Ry. has received 2 six wheel switching locomotives from Canadian Locomotive Co.

The Grand Trunk Pacific Ry. is reported to be asking prices for 50 or 100 refrigerator cars for passenger train service.

Canadian Car and Foundry Co. has delivered to the French State Railways, 1,000 high sided gondola cars, type L.F.C., the order for which was received in Mar. 1916.

The Canadian Locomotive Co. has delivered 2 consolidation locomotives to the British Government, the order for which was received through the Imperial Munitions Board.

The C.P.R., between Aug. 20 and Sept. 15, received the following additions to rolling stock: 16 steel underframe coal cars and 2 decapod locomotives, from Angus shops, and 3 vans from Winnipeg shops.

The Eastern Car Co., between Aug. 16 and Sept. 14, shipped 58 box cars, 50 tons capacity, completing order for 500 cars, for Canadian Government Railways; and 200 gondola cars, the first shipment of a second order for 1,000 similar cars, for the French State Railways.

Canadian Government Railways have received 6 refrigerator cars from Canadian Car and Foundry Co.; and the following second hand rolling stock from General Equipment Co.: 2 locomotives, 10 coal cars, 35 tons capacity; 6 coal cars, 30 tons capacity, and 11 box cars, 30 tons capacity.

The C.P.R., between Aug. 20 and Sept. 15, ordered the following rolling stock from its own shops: 10 flat cars, 6 freight refrigerator cars, from Angus shops; 7 vans, 3 single track wooden snow ploughs, 2 double track wooden snow ploughs, and 2 single track wooden flangers, from Winnipeg shops.

Fortnightly Pay Day for Railway Employees.—The Dominion Parliament has passed an act providing for the payment of salaries or wages of railway employees fortnightly instead of monthly as at present. A measure for this purpose, the Premier explained, when the bill was laid before the House of Commons, Sept. 18, had been passed by the House of Commons on a previous occasion, but had been rejected by the Senate. A bill to effect this purpose was introduced this year into the Senate, where it had been passed. On the other hand a provision to provide for payment of wages to railway men every two weeks had been incorporated in the Consolidated Railway Act, which had passed the House of Commons and was before the Senate. There was some controversy as to some of the clauses of that measure and it was therefore desirable that a special bill should be passed. The measure was passed through the committee stage, Sept. 18, and finally passed on the following day, and was assented to, Sept. 20.

Argentine Freight Rate Advances.—The privately owned railways of the Rosario district in conjunction with other lines have given notice to the Argentine Federal Railway Commission of a contemplated increase of 22% in all their tariffs to take effect Dec. 15. An increase of 10% went into effect Oct. 1, 1915. It is said that freight rates in the district average between 1.4 and 1.8c (Canadian currency) per ton mile.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alaska Rd.—J. F. Baird, a mining engineer, who returned recently to Vancouver from Alaska, stated that 100 miles of rails were laid and that work was going right ahead. Seventy-one miles of the old Alaska Central Rd. were purchased from receivers for \$1,100,000, and recently the old Tanana Valley Rd. was also acquired for purposes of connection. The government railway when completed will tap great coal beds on the Kinik Arm, Matinuska River, and will provide transportation facilities for wonderful agricultural possibilities throughout the northern regions. Efforts were being made to dredge a suitable harbor at Anchorage harbor, one of the terminals of the line at tidewater, near Seward. The railway is being built by a special commission appointed by the United States Government. (Oct., 1916, pg. 400.)

Burrard Inlet Tunnel & Bridge Co.—The annual meeting of shareholders, the majority of whom are representatives of the manufacturers surrounding the inlet, was held at North Vancouver, B.C., Sept. 13. The report of the auditors showed that since the company was incorporated \$115,685.44 has been expended. The company in the first instance was capitalized at \$3,000,000 and of the \$764,500 in shares issued, \$118,000 was paid up. There is \$3,025.40 remaining in the bank. The following were elected directors: Alderman Woodside, Vancouver; Alderman McBain, North Vancouver City; Councillor Maclurg, Councillor Loutet, North Vancouver district, and Carter Cotton. The official directors by virtue of office are the mayors of Vancouver and North Vancouver, the reeve of North Vancouver district and the reeve of West Vancouver. At a subsequent meeting of directors, Reeve Bridgman, North Vancouver district, was elected president; Mayor Vance, North Vancouver city, vice president. R. F. Archibald was appointed secretary. The company's charter expires in Feb., 1918, and it was decided to notify the shareholders of this fact and ask them for a definite expression of opinion as to the desirability of taking steps to have it renewed.

Cascade Scenic Ry.—The Dominion Parliament has incorporated a company with this title to acquire the rights and privileges of T. R. Deacon, Winnipeg, for the construction and operation of an incline railway up the face of Cascade Mountain, Rocky Mountain Park, Banff, Alta. The provisional directors are: T. R. Deacon, H. B. Lyall, E. J. Burleigh, J. A. McCulloch and E. Anderson, Winnipeg. (Aug., pg. 306.)

Edmonton, Dunvegan & British Columbia Ry.—The Dominion Parliament has revoked \$258,797.16 as a subsidy for building a branch line from near Spirit River to and through the Grand Prairie land district, Alta., for 60 miles. The Minister of Railways stated that the revoking of this subsidy was necessary because the contractors had not fully completed the line in time for it to be inspected and paid for during the last financial year.

J. D. McArthur, President, who returned to Edmonton, Sept. 12, after a trip of inspection over the line, is reported to have said that satisfactory progress had been made during the season with the construction of the bridge over the Peace River, and that there was every prospect of its being ready for traffic by the autumn of 1918. (Mar., pg. 101.)

English Valley & Hudson Bay Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from near Brereton, Man., on the National Transcontinental Ry., to English River, Ont., between the eastern boundary of Manitoba and longitude 94, thence northerly to Hudson Bay, between the mouths of the Albany and the Nelson Rivers. The provisional directors are: J. G. G. Kerry, Toronto; H. A. Stewart, K.C., W. H. Kyle, H. A. Clark, E. L. Weatherhead, Brockville, Ont. The applicants asked to be incorporated as the English Falls & Hudson Bay Ry., but "Valley" was substituted for "Falls" in committee. (Aug., pg. 306.)

Grand Trunk Ry.—On account of the construction of the Trent Canal at Campbellford, Ont., the G.T.R. is building a new single track bridge, together with the necessary approaches, to give the clearance required for shipping. The new structure is 25 ft. south of the present bridge, with 29 ft. clearance above high water level, and consists of seven spans as follows: 4 deck plate girders, 35 ft. 4 in. each; 1 through plate girder, 98 ft. 11 in.; 2 deck plate girders, 99 ft. 8 in. each; 1 deck plate girder, 35 ft. 10 in.; total length 269 ft. 9 in. The approaches to the bridge make it necessary to raise the present embankments from 5 to 20 ft. above the present level. The abutments and piers are of concrete. The new bridge tangent will connect at the east end with the present main line by a 1° curve, and the west end will intersect the present tangent at the west end of the Campbellford yard. The approach grades to the bridge will be 0.76% and 1.5% westbound. The material for raising the embankments is being taken from the cut at the west end of the work, about half a mile from the bridge. This permits of the alignment through the cut being reduced from an 8° curve to a 1° curve. The contractors for the substructure of the bridge is the Foundation Co. of Canada. The superstructure will be built and erected by the Hamilton Bridge Co. The removal of two single track viaducts, and track changes with company forces, under the direction of H. R. Safford, Chief Engineer, and A. S. Going, Engineer of Construction. W. G. Swartz is Resident Engineer in charge at Campbellford.

The Board of Railway Commissioners has ordered the company to put up gates, to be operated day and night, at the crossings of Burwell, Adelaide and Rectory Sts., London, Ont. (Sept., pg. 350.)

Hudson Bay Ry.—\$3,000,000 chargeable to capital was voted in the House of Commons, Aug. 29, on account of construction of line, terminals and elevator on this railway. Hon. W. Pugsley raised the question whether under existing financial conditions parliament was warranted in voting such a large sum for this work. There was, he said, no immediate necessity for rushing the work to completion, especially when it was considered that before it would be used to carry on the shipment of grain, etc., there would have to be very large expenditures on terminals and for the provision of steamship lines. The Minister of Railways stated that a contract was let in the autumn of 1916 for the bridge over the Nelson River, for which \$350,000 was required this year, and money was also required to complete the work already in hand. It was not proposed to go on with the terminal works at Nelson any further

at present. Although the \$3,000,000 was asked for, it might not be necessary to spend it all during the current financial year. (Aug., pg. 306.)

Intercolonial Ry.—Tenders are under consideration for the erection of 40,000 gal. wooden tanks at Hampton, N.B., West Bay Road, N.S., and Pugwash, N.S.

Tenders are under consideration for the construction of the substructure of a subway under three tracks at Trenton, N.S.

An agreement was reached with the Moncton City Council, Sept. 12, for the exchange of certain pieces of land in the city owned by the railway for others owned by the city. The city at the same time arranged for the construction of a spur line into the city property near the Massey-Harris building. (Aug., pg. 306.)

Lachine, Jacques Cartier and Maisonneuve Ry.—Judgment was given in a Quebec Court, Sept. 17, on the company's appeal against an award of \$94,000 for land expropriated and \$60,000 for damages given in the case of the Molson's Park property. The court held that as the company had offered \$90,000 for the land, the award of \$4,000 over that amount was not an exaggerated value. As to damages, it was held that the arbitrators had exceeded their jurisdiction, and this part of the award was quashed.

Lacombe and Blindman Valley Electric Ry.—A special meeting of shareholders was called to be held at Lacombe, Alta., Oct. 1, to authorize any modification of the existing contracts for the construction of the line; to enter into any new contracts in addition to or substitution for existing contracts; to confirm arrangements entered into with respect to financial matters; to elect directors to fill vacancies, and for other general business. J. B. McBride, Lacombe, Alta., is Secretary. Although the word "electric" is used in the title the line is to be operated by steam.

Montreal Central Terminal Co.—The Dominion Parliament has extended for five years the time within which the company may build its roadways, bridges, tunnel and terminals in Montreal and vicinity. (June, pg. 225.)

Mount McKay & Kakabeka Falls Ry.—We are officially advised that this railway extends westerly from the boundary of Fort William, Ont., for five miles, and is operated by steam. The city council has built an industrial spur line, about half a mile long, at the west end of the city to serve three elevators and some other industries. The C.P.R., the Canadian Northern Ry., the Canadian Government Rys., and the M.McK. & K.F.R. have the right to switch over this track. A proposition is under consideration to extend this spur track so as to serve various other industries and to put the whole of the interswitching work under the charge of the M.McK. & K.F.R. (Sept., pg. 351.)

National Transcontinental Ry.—Sir Jas. Loughheed stated in the Senate, Sept. 4, that the cost of the N.T.R. shops at St. Malo, Que., up to Mar. 31, was \$1,872,780.32. They were not being put to any use. An enquiry had been received from the military authorities asking what it would cost to install heating and lighting systems in the shops so that they could be used to house returned soldiers, but no terms were discussed. (Mar., pg. 101.)

New Brunswick & Prince Edward Island Ry.—A press report states that 80

lb. steel rails have been laid from the car ferry terminal at Cape Tormentine, along this line to within five miles of Sackville, N.B., the point at which the line connects with the Intercolonial Ry. The report adds that all the rails available have been utilized and that it will be possible to replace the present light rails now remaining this season. (See Intercolonial Ry. Betterments, etc., June, 1916, pg. 231.)

Pacific Great Eastern Ry.—The British Columbia Minister of Finance informed the Legislature recently that \$1,085,290.-35 had been paid by the government on account of its guarantee of the company's bonds, viz., on account of interest, Jan. 15, \$422,443.08; July 15, 423,175.01; and on account of construction, Jan. 12, \$67,116.57; Jan. 22, \$74,145.34; Feb. 9, \$64,558.14, and Mar. 7, \$33,852.21. (Sept., pg. 351.)

Prince Edward Island Ry.—The Roger Miller Co., contractors, entertained a number of Maritime Provinces business men for an inspection of the practically completed car ferry terminals at Cape Tormentine, N.B., and Port Borden, P.E.I. Sept. 7.

The car ferry reached the ferry terminal at Cape Tormentine, N.B., Sept. 17. No announcement had been made to Sept. 22 as to when the ferry service to Port Borden, P.E.I., would be started.

C. A. Hayes, General Manager, and other officials of the Canadian Government Railways, have been visiting the terminals, and arranging for the operation of the car ferry, which is undergoing an inspection at Montreal. It is expected the ferry will be put in operation Oct. 10 and that two round trips will be made every 24 hours. Freight will be transferred from the standard to the narrow gauge cars and vice versa at Port Borden. The transfer sheds for this purpose are in course of erection. (Sept., pg. 351.)

Quebec and Saguenay Ry.—The House of Commons in committee of supply on Sept. 6, passed a vote of \$3,667,745.07 to provide amount required to be paid for the Quebec, Montmorency and Charlevoix Ry., the Quebec and Saguenay Ry. and the Lotbiniere and Megantic Ry., and for the equipment, appurtenances and properties used in connection with such railways, to be acquired under the authority of a statute passed at the last session; and to provide for the cost of completing, equipping and operating the said railways—the operating expenses to be chargeable to revenue.

The Minister of Railways explained that this was a revote of the unexpended portion of the \$4,000,000 voted for the same purpose in 1916. The amount of money represented by the difference between the two figures had been expended upon construction work. Hon. J. D. Reid, who was Acting Minister of Railways in 1916, stated that the whole matter was thoroughly explained when the \$4,000,000 vote was passed last session. The value of the three lines was left entirely to the Judge of the Exchequer Court. It was still before the judge, and upon his judgment the government must settle the matter. After the vote had been obtained the government started to finish up construction on the Quebec and Saguenay Ry. in order to prevent the work done deteriorating further. The work was put in hand and some \$300,000 odd had been expended in building bridges, grading and getting the roadbed ready for laying the rails. The work of completing the line would be gone on with, and as much as is possible put in operation so as to bring

in some revenue. No payments on capital cost would be made to the owners of the lines until the Exchequer Court had given final judgment. At the time of the vote in 1916, it was reported that about 80% of the grading had been completed on the Quebec and Saguenay Ry. The grading was completed practically through to Murray Bay about three months ago, but there were a few bridges to be completed. If it was possible to get rails the line would be completed this year. (June, pg. 225.)

St. John & Quebec Ry.—The Dominion Parliament has extended to Dec. 31, 1918, the time within which this company, which is owned by the New Brunswick Government, may complete the railway from Gagetown to the C.P.R., near Westfield, N.B. The subsidy agreement and the agreement for the operation of the line as a part of the Intercolonial Ry. are also similarly extended. The last mentioned agreement is to be extended only after the New Brunswick Government has assented to it. (July, pg. 274.)

Toronto Union Station.—At the Toronto Terminals Ry.'s annual meeting in Montreal recently good progress was reported on the construction of the new union station building in Toronto, which has proceeded as rapidly as supplies of construction material will permit.

Freight and Passenger Traffic Notes.

Cartage rates on competitive car load traffic in Vancouver, B.C., were cancelled Sept. 1.

Steamship fares between Vancouver and Victoria, B.C., have been increased from \$2 to \$2.50 single, and from \$3.50 to \$4.20 for the round trip.

J. Williams, of the Pacific Great Eastern Ry. passenger department, is reported to have stated in a recent interview that there had been a larger tourist traffic over the line during the summer.

A Vancouver press dispatch states that owing to a shortage of fuel oil some curtailment of train service has been made on the C.P.R. in British Columbia, and that a further reduction is under consideration.

It is reported that arrangements are being completed under which additional coal shipments will be made to Port Stanley, from U. S. points, and thence distributed over the London and Port Stanley Ry.

The Great Lakes Express, running on the National Transcontinental Ry. between Winnipeg, Man., and Fort William, Ont., and vice versa, was taken off for the winter, east bound Sept. 13, and west bound, Sept. 14.

The gasoline car which has been operated on the Victoria and Sidney Ry., on Vancouver Island, has been sent to the United States, and a steam locomotive is being used to operate what traffic offers. The future of the line as an operating road is at present doubtful.

The Maine Central Rd. put in operation Sept. 1, an increased schedule of fares on its lines in Vermont, and New Hampshire, and on its extensions into Canada. The new rate is 2½¢ a mile for mileage books and 2¼¢ a mile for tickets, the old rates being 2¼¢ and 2½¢ respectively.

Train service in the Hudson Bay Ry. from Pas, Man., to the Nelson River, which is being given by the contractors, will, it is said, be discontinued as soon as the construction work is done for the year. Residents along the line are taking steps to have the government arrange for

some service to be given during the winter.

The conference of C.P.R. Western Lines passenger officials, on winter train arrangements was held at Winnipeg, Sept. 5 to 8. Representatives of the Canadian Northern and the Grand Trunk Pacific Railways attended the meeting on the first day, to discuss matters of joint interest to the three railways.

F. W. Peters, General Superintendent, C.P.R., Vancouver, is reported to have said in an interview Sept. 15, that it was absurd to suppose that the company was opposed to the carrying of grain to Vancouver for shipment. The question of handling wheat through Vancouver was purely a matter of securing tonnage, and a reasonable ocean tariff.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1916, from Jan. 1, 1917:

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$3,834,200	\$2,636,800	\$1,197,400	\$ 711,000
Aug.	3,684,900	2,612,900	1,072,000	614,300
Sept.	3,187,900	2,456,300	732,600	x177,300
Oct.	3,716,800	2,496,500	1,220,300	x36,700
Nov.	3,722,300	2,472,300	1,250,000	38,600
Dec.	3,485,400	2,661,600	823,800	x378,300
Jan.	2,832,600	2,350,500	482,100	226,700
Feb.	2,358,600	2,250,400	108,200	x21,200
Mar.	3,273,200	2,655,100	618,100	672,000.
Apr.	3,315,500	2,557,600	757,900	208,000
May.	3,784,700	2,730,300	1,054,400	377,290
June	4,048,600	2,961,000	1,087,600	102,600

	\$41,244,700	\$30,840,300	\$10,404,400	\$1,866,600
Incr	\$7,819,700	\$5,953,100	\$1,866,600
July	\$3,844,600	\$2,940,000	\$904,900	x\$ 292,500
Incr	\$ 10,700	\$ 303,200
Decr	\$292,500

x Decrease.
Approximate earnings for August, \$3,405,000, and for three weeks ended Sept. 21, \$2,237,300, against \$3,684,900, and \$2,102,900 for same periods 1916.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, compared with those of 1916, from Jan. 1, 1917:

	Gross Earnings	Expenses	Net Earnings	Increase
Jan.	10,158,307.86	7,726,829.36	2,431,478.50	341,070.27
Feb.	9,084,276.76	7,098,227.96	1,986,048.80	x308,293.94
Mar.	11,846,542.98	7,909,225.16	3,937,317.82	516,987.46
Apr.	12,355,619.60	8,180,541.98	4,174,977.62	441,241.66

June	13,556,979.69	9,641,073.49	3,915,906.20	226,273.09
July	13,377,850.65	9,617,853.33	3,760,007.22	x257,084.51

	\$84,734,637.07	\$59,977,181.15	\$24,757,455.95	\$1,138,630.90
Incr.	\$ 9,475,474.78	\$ 8,386,843.88	\$1,138,630.90

x Decrease.
Approximate earnings for August, \$12,023,000 and for three weeks ended Sept. 21, \$8,321,000, against \$12,880,000 and \$8,186,000 for same periods 1916.

Grand Trunk Railway Earnings.

Aggregate traffic receipts from Jan. 1 to Aug. 31—

	1917	1916	Increase
G. T. R.	\$33,936,381	\$29,885,953	\$4,050,428
G. T. W. R.	6,392,338	6,269,093	123,245
D.G.H. & M.R.	2,224,632	2,210,735	13,897
Totals . . .	\$42,553,351	\$38,365,781	\$4,187,570

Approximate earnings for three weeks ended Sept. 21, \$3,955,037 against \$3,840,360 for same period 1916.

Grand Trunk Pacific Ry. Earnings.

The approximate earnings of the Prairie Section, 916 miles, from July 1 to Aug. 31, were \$976,829 against \$693,756 for same period 1916.

Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We should be glad to be favored in this respect.

Arrivals in England.—Cables announce the safe arrival in England of a number of different classes of troops, including nos. 12 and 10 reinforcing draft railway troops from Prince Edward Island and Regina, Sask., respectively; forestry and railway construction draft, Camp Borden, Ont., and railway construction draft, Ottawa.

The C. P. R. and Dominion Express staffs in Great Britain before the war numbered 213, of whom 179 were of military age, and of those 158 have joined the colors.

Railway Construction.—Sir George Perley, High Commissioner for Canada in England, and Overseas Minister of Militia, on returning to London, early in September, after visiting the Canadian Army Corps in France and Belgium, stated that the railway construction and forestry corps were doing most valuable work at the front.

PERSONAL NOTES.

Eric Bate, formerly of the Canada Steamship Lines service, is reported to have been given the Military Cross in connection with the capture of Vimy Ridge.

Lieut. E. F. Ellis, Royal Field Artillery, who has been given the Military Cross, was formerly on the C.P.R. registry department's staff in London, Eng.

Capt. W. B. Hanna, son of D. B. Hanna, Third Vice President, Canadian Northern Ry., who went to England as a lieutenant in the 92nd Highland Battalion and has been in charge of the C.E.F., stationery department, in England, has returned to Canada on sick leave, accompanied by his wife and child.

Lieut. W. G. Hazlett, formerly of the Canada Steamship Lines service, is reported to have been given the Military Cross. After being wounded in the right arm and head, he collected his men and captured an enemy machine gun.

Lieut. C. S. L. Hertzberg, A.M.Can.Soc. C.E., of the Canadian Engineers, second son of A. L. Hertzberg, Engineer, Ontario District, C.P.R., who was seriously wounded on Jan. 21 last, when he was shot in the chest, and who was given the Military Cross, has been appointed acting assistant adjutant at Spadina Military Convalescent Hospital, Toronto.

Engineer Sub-Lieutenant C. L. Pestell, whose death while on active service in the North Sea, was mentioned in our last issue, was born in England, June 17, 1888. He served his apprenticeship at the engineering works of Ruston, Proctor & Co. Lincoln, and was later engaged at the London & South Western Ry. works at Eastleigh, Eng. He subsequently came to Canada, and was engaged for some time in the G.T.R. shops at Stratford, Ont., and later transferred to C.P.R. service, eventually settling in Victoria, B.C. Soon after the outbreak of war, he returned to England and enlisted with the Army Service Corps, mechanical transport sec-

tion. He was in France until June of this year, when he transferred to the Navy.

Capt. A. C. Lewis, formerly Secretary, Toronto Harbor Commission, was slightly wounded in his right hip during the fighting at Hill 70 recently.

Quartermaster General A. D. McRae, of the Canadian Expeditionary Forces, in England, formerly of Davidson & McRae, land agents, etc., Canadian Northern Ry., has come to Canada on two months leave.

Douglas Millar, of the General Baggage Agent's office, Grand Trunk Pacific Ry., was presented by the staff with a wrist watch, on his leaving Winnipeg, for Toronto, where he has enlisted with the Royal Canadian Dragoons.

Lieut. A. E. Voysey, Chief Assistant to European Manager, C.P.R., who, as mentioned in Canadian Railway and Marine World for September, was killed in action on July 29, entered C.P.R. service as

services to his headquarters, crossing a ridge three times in daylight through heavy machine gun and rifle fire to obtain exact information as to the situation and dispositions of his battalion. He successfully accomplished his task under very difficult circumstances." He is only 21 years of age.

Canadian Railway Troops' Work at the Front.

Roland Hill, a war correspondent, wrote from the British western front, Sept. 4: "The Huns, almost up to the present battle, used to ignore the tremendous network of light railways which British and Canadian engineers have been building behind our offensive. When the big attack at Ypres commenced and thousands, perhaps millions, of shells rained over on him in one night, he began to sit up and take notice. Now every day

Light railway laid over captured ground on the British Western Front
Official photograph issued on behalf of The Press Bureau. Crown copyright reserved. Loaned by C.P.R.

junior clerk in 1900, received several promotions, and in Mar., 1910, was appointed private secretary, and in Nov., 1913, Chief Assistant to European Manager at London. Although he held an exemption from military service, he volunteered, joining the Royal Horse Artillery as a private. In Dec., 1916, he was given a commission in the Royal Garrison Artillery, and three months later was at the front.

Capt. D. B. Watson, of the Middlesex Regiment (England), who was awarded the Military Cross recently was, prior to the outbreak of war, in the C.P.R. Freight Department at Charing Cross, London, and enlisted as a private. He was gazetted second lieutenant in Sept. 1914, and was mentioned in dispatches for services in the Egyptian Expeditionary Force, and promoted to acting Captain whilst in charge of a company, and latterly acted as Major whilst at battalion headquarters. The London Gazette, in recording his services, says: "When acting Adjutant he performed most valuable

and every night he pounds away with large calibre shells at everything that seems like a railway. It is the work of the Canadian railway troops, of which there are several companies in this Ypres area, to keep these lines working, and advance them as the victorious infantry gain new ground. As a consequence, these construction battalions are always under fire, yet day and night they are out in the land behind the front line, sometimes in and out around the very advanced British batteries laying new tracks or repairing old ones. Emergency gangs are always ready to be rushed to any part where Fritz has been paying impolite attention. Sometimes it is only a few yards torn up and only a few minutes work for these trained crews. But always before a few hours have passed the line is repaired and the signal has gone back to the ammunition dumps that the line is clear, and the limitless lines of little puffing engines and bogie trucks, loaded with everything explosive, are flowing steadily to the guns. Sometimes

things get out of gear. Then the telephone in the Canadian colonel's hut rings an S.O.S. from the battery commander. Twelve-inch howitzer shells are badly needed at a certain battery. Eight cars have been ditched at Clapham Junction or Timbuctoo. Will the colonel send out a gang to the rescue. Out it goes, and with luck the track is repaired and the trucks replaced by an hour's hard work. In case it should occur again farther ahead, a wrecking crew goes with it right up to the guns, no matter how hard the Huns are shelling. That is the work of railway troops.

"Today in a large yard, crowded with everything that is needed to build and maintain a railway, I witnessed one of the rewards. There was a big mogul that came from Canada only a few months ago, standing on the standard gauge, and from the cab window leaned a locomotive man in brown jumpers. I asked him whether I could use his cab as a grand stand, and when he replied, 'Sure, Mike!' I felt I was at home. Six months ago he was running a C.P.R. locomotive out of Toronto. These Canadians, almost in the mighty army which Britain was attacking, were being presented with the Military Medal for episodes which have happened in the preparation for the great attack. In a little cleared space in the yard seven Canadians from Lt.-Col. Martin's company were lined up, and before them was the British Corps Commander. In a very sincere speech he told them how the work of their railway battalions was appreciated, and how happy he was to present them with the decorations they had won as bravely as their comrades in the fighting line with bayonet and bomb. These are the men, and this the bald, official tale:

"Sergt. Del Plain, who comes from Washington State. He ran levels over a projected light railway line under heavy enemy barrage, and when it was completed went over the line again, marking his stakes.

"Sergt. K. Armstrong, from Prince Albert, under heavy shell fire drove a motor engine and box car to a battery and removed three badly wounded gunners to a dressing station.

"Sergt. J. Manahan, from Moose Jaw, assisted, under heavy shell fire a wounded n.c.o. to a place of safety and also conducted his section from a badly shelled area into artillery dugouts.

"Corp. R. Webster, from Montego Bay, Jamaica. While the enemy had a heavy barrage on the area he ran a transit over a projected light railway for a distance of a mile.

"Sapper W. Jacobs, of Toronto, carried a badly wounded soldier from a wrecked railway line to a shell crater and then went for stretcher bearers and assisted in bringing him to the dressing station, all under machine gun and shell fire. He also carried a wounded soldier from an exposed position to a dugout and gave him first aid.

"Sapper R. H. Clark, a Kentish man, who joined in Canada, when the locomotive man of a ballast train was severely wounded, took charge of the locomotive, refilled the tank while under fire, and ran the train out of the danger zone.

"These are incidents all in the day's or night's work of the Canadian railway troops, and they never seem to rest. Infantry have their turn in the trenches and some out to refresh. The railway troops must always be on the job, because the railway must always be there and working."

In another letter, Roland Hill said: "Building a military railway is not like

constructing a transcontinental. You don't quite know what the route will be, and your right of way has to be purchased with blood and shells. But you have to make a roadbed and string rails just as swiftly, perhaps more so, for the penalty clause in the contract is defeat. I couldn't find the colonel of the Canadian railway battalion I visited. He was somewhere out in front among the field ambulances where disgruntled German shells were still bursting, locating the grade for his next section, through the quagmire of a much fought over no man's land. But the adjutant was there, in a battered estaminet which had been, until yesterday, an advanced dressing station. His painter—they carry painters and divers, too,—had changed the Red Cross symbol into the sign that means Canadian Railway Construction Corps, and which has a Canadian brigadier, whose name is a text book in railway construction, at its head. The adjutant had his ear glued to the telephone and he was asking how his trains of material were coming along.

"When you at home read that 'the guns were being brought up satisfactorily,' and that there 'have been heavy rains all day,' you picture struggling teams of horses dragging batteries into advanced positions.

"I'll want 200 12-in. shells at Ottawa dump tomorrow night," said the gunner captain. "Mind you, the line isn't built yet, and the gun is somewhere back at Vancouver, which is an old, before-the-push station." "All serene," answered the Canadian adjutant. "I can pick them up at Halifax dump and bring them with the train taking the 8-in. to Oshawa." (Dominion geography is a bit mixed up here.)

"It is swift travelling for a newly constructed line, but then when the combination of railway and artillery experts gets going, things do travel with celerity. If Hindenburg wants to keep away from the big guns he will have to fall back more than 5,000 yards in two days. Thanks to sacrifices by British and Canadian railways, we have plenty of material, and we have the blended brains and labor, too, in these men of modern war, who pave the way for the huge guns and clear the way for the fighting men who 'go over.' And when the guns are satiated, among the same lines will come anything from tin huts to house those men in the line, to tin hats to shelter them from shrapnel and tinned bully beef to feed them. There's never any want for traffic on the military railway.

"There are some of the old pictures of war left, but they are few and far between. Sometimes the gun and ammunition have to take the muddy streaks, but if luck is the least with us now they go over well planked roads where hauling is fairly light, and by the time the roads are getting wearily worn of the traffic the railway is there. We learned the value of lumber and railways at the Somme. On a huge stand, such as you might see at the draftsman's office at railhead on construction at home, there was a large scale map of what was yesterday 'Germany in Flanders.' There are blue and red lines which begin behind our old trenches and end nowhere—perhaps on the Rhine. There are the standard gauge and the light railways, and they are wanted quickly. Already this particular 2,000 yards of advance had been platted out with little stakes and tapes and the red-tabbed, keen staff captain of heavy artillery was putting the finishing touches to the plan. He had worked with the Canadian adjutant before they both

knew what speed meant.

"If it was easier to build a spur for a 12-in. howitzer a few yards farther east, the gunner gave the builder the concession and phoned back to get his ranges corrected accordingly. If the gun had to go to that particular spot this Toronto captain would put on another hundred men for the job and build through the crater. There was no argument. Each knew the other knew his job. Some of the material was already up. British labor parties under the direction of a Canadian major who had worked gangs on the prairies and in the western mountains were out in the shell-pocked area making the first 1,000-yard grade. The new railway which had been advanced from yesterday was fact filling up with metals, fish plates, spikes and ties. There were just enough for the length to be built. Right and left hand switches were labelled off for the stations and gun spurs where they would be laid. The junctions and stations were sympathetically named after the places, big and little, in the Dominion, where they were torn up months ago and cast into this melting pot of the Empire's war. I am not giving the names that are on the map, but don't be surprised if tomorrow or this week you hear that new Regina or Le Pas, or even Ottawa has been shelled. There will be a good 8 or 12, perhaps 15-in., howitzer to give an account of itself there."

United States War Notes.

Three brigades of volunteer engineer regiments, composed almost entirely of railway men, from high railway officers to track layers, have been organized for service in France.

The U.S. Government has bought 150,000 tons of 80 lb. steel rails, to use in building a double track railway from its French port to its battle front in France, paying \$38 a gross ton for Bessemer rails and \$40 for open hearth rails. For angle bars \$3.25 was paid and for track bolts and nuts \$5.50. Deliveries were to be made by Oct. 1. Three hundred locomotives have been ordered for this railway, and 17,000 cars are being negotiated for. About 100,000 kegs of spikes are wanted. The U.S. Government will also build a considerable mileage of light railways in France.

C.P.R. Inspection Trip.—Sir George Bury, Vice President, C.P.R., arrived in Winnipeg, Sept. 18, on a trip over the company's Western Lines. Grant Hall, Vice President and General Manager, Western Lines, arrived in Winnipeg the same day from Vancouver, and after a conference the two vice presidents started west from Winnipeg on Sept. 20. They travelled first to Arcola, and then to Weyburn, from which point they went over the line to Alsask, travelling back via Moose Jaw to Regina and then on to the Pacific coast via Calgary. It was expected that the return trip would be made by the Kettle Valley Line and the Crownsnest Pass Line to Calgary, then on to Edmonton, returning to Winnipeg by other branch lines.

Operation of Government Railways Bridge at Fort William.—An electric switch, installed in the signal tower of the Canadian Government Railways draw bridge over the Kaministikwia River, at Fort William, Ont., will be used to signal masters of vessels which desire to pass. Whenever a vessel whistles to have the bridge opened, the operator, if in position to open it, will immediately flash all lights in the tower three distinct times.

Transportation Appointments Throughout Canada.

Algoma Central & Hudson Bay Ry.—E. B. BARBER, heretofore Treasurer, has been appointed Comptroller, vice I. L. Godfrey, resigned. Office, Sault Ste. Marie, Ont.

J. M. ALTON has been appointed Treasurer, vice E. B. Barber, promoted. Office, Sault Ste. Marie, Ont.

R. E. KING has been appointed Assistant Comptroller, Sault Ste. Marie, Ont.

H. HOODLESS has been appointed Auditor of Traffic Accounts, Sault Ste. Marie, Ont.

Canadian Government Railways.—L. S. BROWN, heretofore Assistant General Superintendent, Eastern Lines, has been appointed General Superintendent, Eastern Lines, vice J. K. McNeillie, resigned to enter Delaware & Hudson Co.'s service, and his former position has been abolished. Office, Moncton, N.B.

A. C. BARKER, Superintendent of Telegraph and Time Service, has also been appointed Assistant to General Superintendent, Eastern Lines.

R. W. SIMPSON, heretofore General Fuel and Tie Agent, has been appointed Assistant to General Manager, Eastern Lines, Moncton, N.B., and his former position has been abolished.

LOUIS LAVOIE, Purchasing Agent, Railways Department, Ottawa, now purchases fuel and ties for the Eastern Lines, C.G.R. also, the position of General Fuel and Tie Agent having been abolished.

D. H. WILLIAMS, heretofore Assistant to General Manager, at Moncton, has been appointed Special Representative, reporting to General Manager's office, Eastern Lines, Moncton.

W. E. DUPEROW, who has been appointed General Passenger Agent, Grand Trunk Pacific Ry., Winnipeg, has also been appointed General Passenger Agent, Canadian Government Railways, with jurisdiction, Armstrong and Fort William, Ont., and west. Office, Winnipeg.

C. K. HOWARD, heretofore Commercial Agent, Boston, Mass., has been appointed General Agent, Traffic Department, there, and his former position has been abolished. Office, Old South Building, 294 Washington St.

Canadian Northern Ry.—D. F. COYLE, Industrial Commissioner, Winnipeg, has resigned, having been appointed Superintendent of Western Offices, Home Bank Canada. We are advised that it is not the immediate intention to appoint a successor.

S. G. KATHAN, heretofore in Canadian Bank of Commerce service, is reported to have been appointed City Ticket Agent, C.N.R., Regina, Sask., vice — Watson, enlisted for military service.

S. PATTERSON is reported to have been appointed Travelling Freight Agent, Vancouver, B.C.

Canadian Pacific Ry.—H. HEFFERNAN has been appointed acting City Passenger Agent, C.P.R., and acting agent, Dominion Express Co., Guelph, Ont., in place of his late father, J. Heffernan.

F. TURNER, station master, Moose Jaw, Sask., is reported to have been appointed Trainmaster there. This is stated to be an additional appointment, making two Trainmasters at Moose Jaw.

C. E. CALZA, formerly of the Waldorf Astoria Hotel, New York, has been appointed Manager, Empress Hotel, Victoria, B.C.

Cape Breton Ry.—J. W. DOYLE, heretofore Auditor, has been appointed Gen-

eral Manager, vice G. E. Johnson, who retired on account of ill health, after 14 years occupancy of the position.

W. E. Duperow
General Passenger Agent, Grand Trunk Pacific Railway, and Western Lines, Canadian Government Railways.

Neil Marple
Master Mechanic, Canada Southern Division, Michigan Central Railroad.

Central Vermont Ry.—G. C. JONES, Vice President, having resigned, on his appointment as Assistant to President, G.T.R., Toronto, as announced in our last

issue, all reports formerly made to him are now made to the President, E. C. SMITH, St. Albans, Vt.

H. G. KELLEY, President, G.T.R. and Grand Trunk Pacific Ry., Montreal, has been elected a director, vice C. R. Batt, deceased, and also Chairman of the Board and member of the Executive Committee, vice E. J. Chamberlin, resigned.

Chicago, Milwaukee & Puget Sound Ry.—A. W. NASE, Agent, Vancouver, B.C., has been appointed Commercial Agent, Bellingham, Wash.

J. W. STEVENSON has been appointed Commercial Agent, Vancouver, B.C., vice A. W. Nase transferred.

Delaware & Hudson Co.—F. P. GUTELIUS, Vice President, has also been appointed General Manager, Operating Department, during the absence of J. T. LOREE, who entered U.S. military service July 31. Office, Albany, N.Y.

R. W. BURNETT, formerly General Master Car Builder, C.P.R., Montreal, and latterly Vice President, National Car Equipment Co., Chicago, Ill., has been appointed Master Car Builder, D. & H. Co., reporting the General Manager, and with charge of the construction, design, maintenance, repair and cleaning of all cars, and in charge of all car shops. He is responsible for the proper maintenance of cars and the efficient and economical operation of the shops under his charge, and performs such other duties as the General Manager may direct. Office, Albany, N.Y.

J. K. McNEILLIE, heretofore General Superintendent, Eastern Lines, Canadian Government Railways, Moncton, N.B., has been appointed Superintendent, Susquehanna Division, D. & H. Co., vice R. J. McCarty, Jr., appointed Assistant to General Superintendent of Transportation, Albany, N.Y. Office, Oneonta, N.Y.

Grand Trunk Ry.—W. H. BIGGAR, K.C., General Counsel, G.T.R., and Vice President and General Counsel, Grand Trunk Pacific Ry., has been appointed Vice President and General Counsel, G.T.R., in charge of all legal matters pertaining to the system. Office, Montreal.

C. MANNING, heretofore secretary to Superintendent of Motive Power, has been appointed Assistant to Vice President in charge of motive power, car equipment and machinery (W. D. Robb). Office, Montreal.

W. H. SAMPLE, heretofore Master Mechanic, Eastern Lines, Montreal, has been appointed Superintendent of Motive Power, vice W. D. Robb, promoted. Office, Montreal.

E. R. BATTLE, heretofore General Foreman, Motive Power Department, Deering, Me., has been appointed Master Mechanic, Eastern Lines, vice W. H. Sample, promoted. Office, Montreal.

G. H. WILSON, heretofore Assistant Master Mechanic, has been appointed Master Mechanic, Montreal shops, vice A. A. Maver, resigned.

A. McDONALD, heretofore Foreman of Erecting Shop, Stratford, Ont., has been appointed Assistant Master Mechanic, Montreal Shops, vice, G. H. Wilson, promoted.

E. S. McMILLAN has been appointed Road Foreman of Locomotives, Montreal Terminals, vice F. H. Holland, assigned to other duties.

M. A. HUMBER, heretofore Instructor of Apprentices, Stratford, Ont., is reported to have been appointed Examiner of

Apprentices for the system. Office, Stratford, Ont.

A. B. OGILVIE has been appointed Road Foreman of Locomotives, Districts 31 and 32 including Ottawa Terminal, vice W. M. Cooper, assigned to other duties.

T. KING, heretofore Agent, Detroit, Mich., has been appointed Superintendent, Detroit Division, Western Lines. Office, Detroit, Mich.

W. R. DAVIDSON, heretofore Superintendent, Detroit Division, Western Lines, Detroit, Mich., has been appointed General Superintendent, Western Lines, vice U. E. Gillen, promoted. Office, Chicago, Ill.

Grand Trunk Pacific Ry.—H. A. WOODS, Assistant Chief Engineer, having resigned, all correspondence and other matters relating to the Engineering Department are dealt with by J. A. HEAMAN, Assistant to Chief Engineer, Winnipeg.

W. E. DUPEROW, heretofore Assistant General Passenger Agent, has been appointed General Passenger Agent. Office, Winnipeg.

Michigan Central Rd.—CARL HOWE, heretofore Manager, New York Central Fast Freight Lines, Chicago, Ill., has been appointed Traffic Manager, M.C.R. Office, Chicago. This is a new position.

NEIL MARPLE, heretofore General Foreman, St. Thomas, Ont., has been appointed Master Mechanic, Canada Southern Division, reporting to Superintendent of Rolling Stock, Detroit, Mich. Office, St. Thomas, Ont.

J. A. MICHENER, heretofore Assistant General Foreman, St. Thomas, Ont., has been appointed General Foreman there, vice Neil Marple, promoted, and his previous position has been abolished.

Pere Marquette Ry.—T. EUSEL has been appointed General Storekeeper, vice W. R. Culver. Office, Saginaw, Mich.

Quebec, Montreal & Southern Ry.—J. B. DICKSON has been appointed General Superintendent of Transportation, vice C. E. Burr. Office, Albany, N.Y.

Canadian Northern Railway Construction, Betterments, Etc.

Central District.—M. H. MacLeod, General Manager and Chief Engineer, was in Port Arthur, Ont., Sept. 12, with other officials, looking over the ground with a view of laying spur tracks from the main line to some new elevators now under construction, and to working other track-age improvements necessary to meet the increasing traffic.

Western District.—The C.N.R. enters Moose Jaw, Sask., by a branch line from Radville, which at present terminates at South Hill, the station being located on Howe St. As originally laid out the branch was to extend through Moose Jaw to connect up with Saskatoon, either directly, or by joining up with another of the company's lines. Provision has been made for the laying out of terminals in the centre of the city, with a station on Athabasca St. In April last work was started at Athabasca St., on the construction of a timber trestle across the river to connect with the existing line at South Hill. The trestle work is about three-quarters of a mile long. Eighty car loads of lumber have been used, and the only part at present unfinished is a short piece at the crossing of the river, where two 30 ft. Howe truss spans have to be placed. It is expected that the work will be completed by Oct. 31. A temporary station will be built on Athabasca St.,

pending the laying out of the terminals. The trestle has been built by the company's own forces under the charge of W. J. Hopewell of the Bridge and Building department.

Vancouver Terminals.—It is reported that construction on the station building at the False Creek terminal is about 70% complete, and that the freight sheds are finished and ready to be taken over by the company. It is reported that orders to commence the train sheds are expected. Everything is said to be in readiness for this work which will take about four months. Tracklaying will be started as soon as the filling is all in. Apart from this work on the terminal itself there is the seawall construction at False Creek, near the station site. The piles have all been driven and the concrete pillars are all in. The wall itself is about half completed.

The work now progressing at Port Mann is the establishment of yards, and track is being laid as rapidly as possible.

L. S. Brown
General Superintendent, Eastern Lines, Canadian Government Railways.

Vancouver Island.—It is reported that about 10 miles of track have been laid on the line from Victoria in the direction of Port Alberni.

The Board of Railway Commissioners has directed the company to construct a transfer track between its railway and the Victoria and Sidney Ry. near Sidney.

Railway Lands Patented.—Letters patent were issued during August, in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acres.
Calgary & Edmonton Ry.	629.00
Edmonton, Dunvegan & British Columbia Ry.	40.03
Grand Trunk Pacific Ry.	2.34
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.	2,865.98
Total	3,537.38

Hudson Bay Ry.—Notice was given at Pas, Man., Sept. 13, that after construction work ceases this autumn train service on the line will be discontinued.

Box and Stock Cars for Canadian Government Railways.

Following are the general dimensions, etc., of the 5,000 40-ton, steel underframe, single sheathed box cars which the Canadian Government Railways ordered recently from Canadian Car & Foundry Co.:

Capacity	80,000 lb.
Length, inside	36 ft.
Width, inside	8 ft. 6 1/2 in.
Height, floor to bottom of carline	8 ft. 0 1/2 in.
Width of side door opening	5 ft.
Height of side door opening	7 ft. 8 7/16 in.
Length, between end sills	37 ft. 1 1/2 in.
Width, over side sills	8 ft. 9 1/2 in.
Height, rail to top of brake mast	13 ft. 10 in.
Height, rail to top of running board, 13 ft. 4 3/4 in.	
Height, rail to centre of coupler	2 ft. 10 1/2 in.
Height, sill to bottom of side plate, 7 ft. 10 3/16 in.	
Height, top of rail to eaves	12 ft. 7 13/16 in.
Width, over eaves	9 ft. 3 1/2 in.
Centre to centre of body bolsters	26 ft. 10 in.

These cars will be of the same design as some built two years ago for the C.G.R., but in a number of cases details will be altered slightly to conform to the requirements. One feature will consist in strengthening the end framing. The new cars will have 2 centre 5 in. Z bar end posts and in addition 2 intermediate 3 in. Z bar end posts, which will make a much stronger construction than used on the last cars of this type. The cars will have 15 in. 33 lb. per ft. channel centre sills; 10 in. 15 lb. per ft. channel end sill and 8 in. 11.25 lb. per ft. channel side sills, with the usual Z bar posts and braces common to this type of car.

The 1,000 all wood 30-ton stock cars also ordered from Canadian Car & Foundry Co., will have the following general dimensions:

Length, over side sills	36 ft. 10 1/2 in.
Width, over side sills	9 ft.
Length, inside	36 ft.
Width, inside	4 ft. 4 1/4 in.
Height, top of floor to underside of carline	8 ft.
Height, top of sills to underside of plate	7 ft. 11 3/4 in.
Height, top of sill to underside of girth, 3 ft. 10 in.	
Outside of end sill to centre of body bolster	5 ft.
Centre to centre of cross-tie timbers	7 ft. 8 in.
Centre to centre of body bolsters	26 ft. 10 1/2 in.
Door opening	5 ft.
Height, top of rail to centre of draw-bar	2 ft. 10 1/2 in.

These cars will be similar to some now in service on the C.G.R., which were built by Canadian Car & Foundry Co. about two years ago, but the new cars will be equipped with the economy cast steel draft arm and will have the following body specialties:

Couplers	Simplex 5 x 7 in. shank
Air brakes	Westinghouse KC-8-12
Body bolsters	Simplex
Draft springs	Class G.
Door fixtures	Camel type

The roof will be built up of 2 courses of 13/16 in. pine; one course will be laid longitudinally and the other crosswise on car, with a layer of insulation paper between. Trucks will be of the standard 30-ton arch bar type, 4 1/4 x 8 in. journal, with McCord malleable iron journal boxes, simplex truck bolsters, simplex no. 2 trussed brake beams and Laughlin roller side bearings.

The Minister of Railways is reported to have stated in the House of Commons, Aug. 25, in connection with the vote of \$25,000,000 for rolling stock for the Canadian Government Railways, that the orders included 6,000 cars, 4,000 of which would be required for the government system, the balance being needed for the Canadian Northern Ry., the G.T.R., and other railways; and that 4,000 of the cars would be supplied by the Canadian Car & Foundry Co., 1,000 by the Eastern Car Co., and 1,000 by the National Steel Car Co., deliveries to be made between Oct. 1 and Feb. 1.

Canadian Railway AND Marine World

ESTABLISHED 1896

Devoted to Steam and Electric Railway, Marine, Express, and Telegraph, also Railway and Canal Contractors' Interests.

Official Organ of various Canadian Transportation Associations.

Published on the first of each month.

Act for the Acquisition of the Canadian Northern Railway.

Following is the full text of the act passed by the Dominion Parliament at its recent session to acquire the C.N.R. Co.'s capital stock:

1. His Majesty may acquire the 600,000 shares of capital stock of the Canadian Northern Ry. Co. (par value \$60,000,000) not now held by the Minister of Finance in trust for His Majesty, on such terms and conditions satisfactory to the Governor in Council as may be set out in an agreement to be made between His Majesty and the owners and pledgees of not less than five-sixths thereof, and for a price to be determined by arbitration as hereinafter provided.

2. (1) Upon the making of said agreement, at least five-sixths of the said 600,000 shares shall be transferred to the Minister of Finance in trust for His Majesty, and if there be any of the said 600,000 shares not transferred as aforesaid, the Governor in Council may declare the said shares to be the property of the Minister of Finance in trust for His Majesty, and the same shall thereupon become the property of His Majesty and shall be paid for pro rata with the shares so transferred.

(2) The necessary qualification shares the entrance to Pictou harbor, N.S. Aug. for directors may be transferred to or allowed to remain in their names by the Minister of Finance on such conditions as he may determine.

3. (1) So soon as the said five-sixths of the said shares have been transferred as aforesaid, the Governor in Council may assist the Canadian Northern Ry. Co., or any company included in the C.N.R. System, in paying and settling any indebtedness of such company or postponing the payment thereof on such terms as may be agreed upon, and for such purposes may make advances out of the Consolidated Revenue Fund: provided, however, that until authorized by parliament, the total of such advances shall not exceed \$25,000,000. A statement of any such advances, showing in detail the purposes for which they were applied, shall be presented to Parliament by the Minister of Finance within 20 days after the opening of the next ensuing session thereof.

(2) The Canadian Northern Ry. Co., and each company included in the C.N.R. System, shall from time to time do such acts and things, make and issue such agreements, obligations and securities in connection with the payment or settlement or portnement of payment of the said indebtedness, as the Minister of Finance may require.

4. (1) The Governor in Council shall appoint one arbitrator, a majority of the said owners and pledgees shall appoint another and the two so appointed shall appoint a third, or failing agreement as to such appointment, the third arbitrator shall be appointed by the Judge of the Exchequer Court of Canada.

(2) The said arbitrators shall determine the value of the said 600,000 shares as of the date of the said agreement, and the said arbitrators shall proceed in a summary way, and may receive with respect thereto such reports and statements authenticated in such way as they may decide and such evidence as they may deem necessary or helpful, examine witnesses under oath and hear parties by counsel or representatives, and the unanimous determination of the arbitrators shall be final but should the determina-

tion not be unanimous, an appeal from such determination shall lie to the Supreme Court of Canada on behalf of His Majesty, or of the owners or pledgees, upon any question of law or fact, but no such appeal shall lie unless notice of appeal is given within thirty days from the rendering of the determination. In determining the value of the said six hundred thousand shares the arbitrators, should they regard it as expedient to take into consideration the reproduction cost of the C.N.R. System, shall not include therein the increase in value, due to the war, of labor, materials, equipment or of any property.

(3) The amount of the value so determined shall be paid out of the Consolidated Revenue Fund.

The Railway Situation in Hamilton.

The Hamilton, Ont., City Council passed the following resolution, Sept. 11: "That the report of W. F. Tye and N. Cauchon on the railway situation in Hamilton, as embodied in proposal C, be approved, that it be sent on to the Board of Railway Commissioners for Canada, as representing the views of the City of Hamilton, and that the board be petitioned to permit no new railway entrance into Hamilton and no new extensions, additions or changes in existing railway works in Hamilton or its vicinity unless same are in accordance with said proposal, and to so notify the railway companies concerned; and that for the purpose of relieving congestion and freight traffic through the city the railways be asked to adopt the measures proposed."

A suggestion was made that the council should endeavor to get officers of the railways together to discuss the project with a view of reaching some agreement, and this was passed on to the railway committee for action. Full details of proposal C, which has been endorsed by the council, and of the other two proposals made by the engineers, with a plan showing all of them, was given in Canadian Railway and Marine World for September, pg. 342.

Railway Crossings and the Public.

— During the past few weeks there have been quite a number of fatalities at points where railways cross public highways, with the customary demand by the public for the elimination of level crossings. It goes without saying that level crossings are dangerous. So also are street crossings, and it will take time to eliminate them. In the meantime why not eliminate the fool motorist? Signs, signals, crossing bells, red lights, etc., seem to have no effect on this class of individual, who is always ready to rush a crossing and "take a chance." When a man states that he cannot hear a freight train of about 3,000 tons, travelling about 30 miles an hour, approaching a crossing, until it hits his car in the centre, one is apt to question his sanity.

Motor Freight Service—It was announced at Victoria, B.C., Sept. 15, that a motor freight service would be put in operation on Oct. 1 between that city and Sidney, on the east coast of Vancouver Island, a distance of about 18 miles. It is said that a 5-ton motor truck will be used, making one round trip a day.

The Quebec Bridge from its Inception to the Placing of the Suspended Span.

The bridge across the St. Lawrence River, near Quebec, is an accomplished fact. The project was first discussed in 1853, but for one reason or another it was not until 1897 that a really serious endeavor was made. It took four years from the reorganization of the old company to the letting of the contracts, and six years later the bridge, when nearly half completed, collapsed. The Dominion Government then took the matter in hand and after nearly three years of investiga-

of the engineers of the then newly completed Forth bridge in the undertaking. The idea then advanced was to erect a bridge on the cantilever plan, which the erection of the Forth bridge had demonstrated to be the last word in big bridge designing. This second proposal also failed to get beyond the project stage.

The third attempt was made in 1887, when the Dominion Parliament incorporated the Quebec Bridge Co., with an authorized capital of \$1,000,000, to build a

railway, and 2 ordinary roads for vehicles and foot passengers. In 1899 the Dominion Parliament granted a subsidy of \$1,000,000 towards the erection of the bridge, and in the following year one-third of this amount was allocated to the substructure and approaches, and two-thirds to the superstructure. On Nov. 12, 1900, a contract under this legislation was signed between the company and the Railways Department. Three tenders were received early in 1900 for the build-

Designs for the Quebec Bridge, for the first one which failed in 1907, and for the second one now erected.

tion, over six years of construction work, and the expenditure of about \$12,000,000, the structure is now in the last stages of completion.

As before stated, the project dates back to 1853, at which date there was no other bridge across the river at any point. A New York engineer, named Serrell, made surveys and prepared plans for a railway bridge, on the suspension principle, to be located somewhere near the site of the present bridge. The estimated cost was \$3,000,000. Whether the cost was considered too great an obstacle, or whether it was a lack of courage on the part of en-

bridge across the St. Lawrence at or near Quebec, to build one or more lines of railway to connect with the bridge, to connect it with existing or future lines of railway, and provide for vehicle and foot passengers crossing the bridge. The provisional directors were: Hon. J. G. Ross, Lieut.-Col. Rhodes, R. R. Dobell, Thos. McGreevy, Lieut.-Col. J. B. Forsyth, G. Lemoine, E. Chimic, H. M. Price, J. I. Tarte and C. Duquet. The company's powers were extended in 1891, and in 1897 they were revived and confirmed, new interests led by S. N. Parent, then Mayor of Quebec, and afterwards Premier of the Pro-

ing of the bridge, that recommended for adoption being for \$3,600,000, exclusive of approaches, which were estimated to cost an additional \$400,000. The contract for the erection of the piers and abutments was let in April, 1900, to W. Davis & Son, Cardinal, Ont., at an estimated cost of \$1,000,000, the work to be completed within two years. Work was started on the substructure in Aug., 1900, the estimated quantity of masonry required to be put in place being 50,000 cubic yards. The preliminary work took up the whole of the summer and the autumn, and it was not until the spring of 1901 that the first

General Scheme for hauling the Suspended Span for the Quebec Bridge.

gineers, nothing further was done, and the first bridge erected across the St. Lawrence was built at Montreal by the Grand Trunk Ry. This was the Victoria tubular bridge, opened for traffic in 1860, and built by Robert Stephenson on the model of one he had previously erected over the Menai Straits, on the line to Holyhead, Wales, and a few years earlier the suspension bridge was built across the Niagara River, also for railway purposes. The project for building a bridge at Quebec to connect that city with the south shore of the St. Lawrence lay dormant until 1882, when M. W. Baby obtained a charter to erect a bridge. He had associated with him A. L. Light, a well known engineer, who interested some

vince, having obtained control of the company. U. Barthe became Secretary of the company, and United States capitalists were interested. A New York engineer undertook the designing of the bridge, and E. A. Hoare was Chief Engineer in charge of all local work. The same site as the present bridge is built on was selected and together with the plans were approved by order in council on May 16, 1898. The plans provided for a cantilever structure, composed of 2 approach spans of 220 ft. each, 2 anchor spans of 500 ft. each, and a centre span of 1,800 ft. from centre to centre of the piers, the underside of the bridge to be 150 ft. above highwater. The bridge was to provide a double track railway, 2 lines of electric

caisson for the erection of the north pier was got into position. The contractors for the superstructure organized the Phoenix Bridge Co., of Phoenixville, Pa., to fabricate the steel work and to erect it. In 1901 that company began operations at the mills in rolling the steel and at the bridge in doing other preliminary work, and the actual construction work was started on the north side of the river in the summer of 1902. During the summer shifting sand was struck at the corner of the caisson for the south pier, resulting in delay to the work owing to the fact that the foundations had to be carried to a greater depth than anticipated in order to secure stability. The substructure work was completed at the end

of 1902, and from that time forward the erection of the steel work went on apace, and was carried on without interruption until Aug. 29, 1907, when over 1,300 ft. of the steel work had been erected from the south end. This comprised the an-

gate the cause of the collapse, and after a lengthened hearing of expert evidence, and the consideration of plans, etc., the commissioners came to the conclusion that the accident was caused by a defect in one of the chords.

Engineer of the London, Eng., County Council, and one of the construction engineers of the Forth bridge; and R. Mojeski, Chicago, Ill. They prepared plans which were made public in Feb., 1910, and which provided for the reduction of the

Quebec Bridge. The placing of the suspended span

First row: Span being towed up the river. 2, Pinning south end of span to hoisting chain. Middle row: 3, Pontoons floating from under span, during its third lift. 4, Span as suspended at luncheon time, Sept. 17. Lower row: 5, Entire bridge, showing main span as suspended early on Sept. 18. 6, Entire bridge, with span in position, Sept. 20, 3 p.m.

chor span, and practically one-half of the central span, reaching out to within about 100 ft. of what would have been the centre of the completed bridge. The whole of the completed structure collapsed, occasioning the death of 65 men who were working on it. The Dominion Government appointed a commission to investi-

The next stage in the history of the matter was the determination to take over the bridge undertaking and to carry it to a completion as a Dominion Government work. The design of the bridge was placed in the hands of a commission consisting of H. E. Vautelet, a former C.P.R. Chief Engineer; M. Fitzmaurice, Chief

main span from 1,800 to 1,758 ft., with the necessary readjustment of the anchor and shore spans. The new plans necessitated the rearrangement of the substructure, and a contract was let to M. P. and J. T. Davis, details of which were given in Canadian Railway and Marine World for Mar., 1910, pg. 189. Bridge builders

were asked to tender on the engineers' design, but were given permission to submit designs of their own if they so desired. Several alternative designs were submitted, and after some time—the composition of the engineers' commission having been changed by the retirement of Mr. Fitzmaurice, who felt his duties to have been accomplished by the submission of the plan, and the resignation of H. E. Vautelet, who was succeeded as chairman by C. N. Monsarratt, formerly Bridge Engineer, C.P.R.—one of the designs submitted by the St. Lawrence Bridge Co., Montreal, was accepted. This plan provided for a central span of 1,800 ft., carrying a railway track and two 4 ft. side-walks. The cost of this bridge was estimated at \$8,650,000. It is of the K web-system in the cantilever and anchor arms, the suspended span being a modified Pratt. All members in the anchor arm and those immediately over the main pier, as well as the floor system, are carbon steel, the cantilever arms and suspended span being of nickel steel. The top chords are composed of built up riveted members extending over one full truss panel or two floor panels. The design has an 1,800 ft. channel span, as in the old bridge. The suspended span is 640 ft. long, 110 ft. deep

adian Railway and Marine World, Oct., 1916, pg. 417, was not changed except that extra precautions were taken in connection with the manufacture and getting in place of the hoisting apparatus, etc. A larger number of men were arranged for at the lifting jacks and at other points, and it was decided to raise the span only 2 ft. at each lift, instead of 4 ft., as was done in 1916. The scows bearing the span were towed out of Sillery basin on Sept. 17 at 5.10 a.m. and reached the bridge at 7.03, and the lifting operations were begun at 9.45. The span weighed about 5,000 tons, and this weight had to be raised so that there would be a clearance of 150 ft. at high water, thus the height to be raised would be 150 ft., less the height of the scows and the supports thereon. The hoisting proceeded steadily and with but two interruptions, once on Sept. 18 by a slight fog, and again on the following day by high wind. The final lift was completed Sept. 20, at 2.19 p.m., after which the bolting of the span into place was taken in hand. The work of laying the floor of the span and placing the rails for traffic will be proceeded with at once, and it is expected that it will be completed in two months, and the bridge formally opened for traffic about the

to C.N.R. Tariff C.R.C. no. E-860, to become effective Sept. 1st, 1917, be suspended; that cancellation Supplement 1 to C. N. R. Tariff C.R.C. no. E-156, to become effective Sept. 1, 1917, be suspended, and that the rates on pulpwood as published in C.N.R. tariff C.R.C. no. E-156, effective Oct. 2nd, 1912, be continued in effect, pending a hearing by the board.

Canadian Northern Standard Freight Tariff.

26504. Sept. 7.—Re application of Canadian Northern Ry. Company, under sec. 327 of the Railway Act, for approval of its Standard Freight Tariff C.R.C. no. W-1025, cancelling C.R.C. no. W-862. Upon the report and recommendation of the Chief Tariff Officer, it is ordered that the said tariff be approved.

Japan Buys Old Rails. Seattle, Wash., press dispatch, Sept. 19.—Large quantities of old steel rails have been bought in the northwest by Japanese brokers and shipped to Japan. In the last few weeks 2,300 tons have been shipped and additional shipments are being assembled. The brokers are paying \$70 a ton for the rails, which originally cost \$24 a ton. In turn, they are selling them to the Japanese railways for \$100 a ton.

The Quebec Bridge as completed, from the Contractors' Sketch.

at the centre, and 70 ft. deep at each end. The cantilever arms are 580 ft. long, 70 ft. deep at the end, and 310 ft. high over the main post. The anchor arms are 515 ft. long. The trusses are 88 ft. apart, and there is a clear headroom of 150 ft. above extreme high water. The train load allowed for on each track is equivalent to two E-60 locomotives followed by a train load of 5,000 lb. per lineal foot of track. The contracting company was a combination of the Dominion Bridge Co. and the Canadian Bridge Co.

Work was started promptly by the contractors, both for the substructure and for the superstructure, and everything went on so successfully that the St. Lawrence Bridge Co. expected to complete its work at the end of 1916—earlier than was estimated. Sept. 11, 1916, was set for floating out the suspended member of the central span. The first part of this work had been successfully completed, and the 640 ft. long span had been raised several feet when, owing, as was afterwards ascertained, to the failure of a portion of one of the castings in the hoisting apparatus, the span slipped, crumpled up and fell to the bottom of the river. The fullest investigation was made into the matter, and it was found that there was no defect in the span, or in the plan, and that the other sections of the bridge had received no damage from the accident. The company immediately put in hand the fabrication of the steel for a new span and to prepare for its being got into position. This was done and the new span was ready for erection at the time of the September high tides this year. The method of erection, described in Can-

middle of November.

The work of raising the span into position was supervised by Phelps Johnson, President, St. Lawrence Bridge Co.; G. H. Duggan, Chief Engineer; G. F. Porter, Construction Engineer; S. P. Mitchell, Consulting Engineer; W. B. Fortune, General Superintendent, and C. N. Monsarratt, Chairman of the Quebec Bridge Commission.

Traffic Orders by the Board of Railway Commissioners.

Interchange Track at Thorold, Ont.

26465. Aug. 24.—Re application of Niagara, St. Catharines and Toronto Ry., for approval of plan showing interchange track proposed to be constructed between the applicant's railway and the G.T.R. at Thorold, Ont., as required under the order 26186, June 5, 1917. Upon the report and recommendation of an engineer of the board, it is ordered that the plan filed by the applicant, dated July 4, 1917, be approved; the applicant to construct the tracks within three months from date of this order; and the question of the apportionment of the cost of the work to be reserved for further order.

C.N.R. Pulpwood Rates to Campbellford.

26476. Aug. 29.—Re application of Hydro-Electric Power Commission for suspension of proposed increased rates on pulpwood from stations on the Canadian Northern Ry. to Campbellford, Ont. Upon reading what has been submitted in support of the application, it is ordered that the advanced rates on pulpwood, as published on page 3 of Supplement 20

Electric Railway Department Items too Late for Classification.

A Usher, who died in Ottawa, Sept. 19, aged 59, was at one time in the old Canada Atlantic Ry. service and for the last eight years was airbrake inspector, Ottawa Electric Ry.

Joseph Gibbons, Toronto, and F. A. Hoover, Vancouver, B.C., were elected Vice Presidents of the Amalgamated Association of Street and Electric Railway Employees of America, at the annual convention at Providence, R.I., recently.

Sir Adam Beck stated recently that next year a service of hourly limited trains will be put in operation between London and Port Stanley, Ont., on the London & Port Stanley Ry. The present practice is to run every second car as a through car between the terminal points, the other car being for service to all intermediate points. The only intermediate stop made by the through cars is at St. Thomas.

Guelph Radial Ry.—In order to provide accommodation for traffic to the Military Convalescent Hospital at Guelph, an arrangement is reported to have been made with the Toronto Suburban Ry. for running rights over a portion of its line. This will necessitate the making of a connection between the G.R.R. and the T.S.R. and between the latter railway and the hospital grounds. It is proposed to provide a 20 minute service between the city and the hospital. The cost of operating the service is estimated at \$8,000 a year. (Feb., pg. 73.)

Electric Railway Department

Montreal and Southern Counties Railway Cars.

The Montreal & Southern Counties Ry. has received recently from the Ottawa Car Mfg. Co. two of an order of three trailer cars for interurban service, the main features of which are as follows:

Length over vestibules	53 ft. 8 in.
Length of car over buffers	55 ft.
Length over corner posts	43 ft. 4 in.
Distance between bolsters	30 ft. 8 in.
Width over all at eaves	8 ft. 6 in.
Width over side sills	8 ft. 1 1/4 in.
Height, top of rail to top of roof	12 ft. 8 1/2 in.
Normal seating capacity	60 persons.

The car's sides are straight and sheeted with poplar sheeting. The roof is of monitor type, with ventilating deck sash, operated by M. & S.C.R. standard deck sash fixtures, and glazed with opalescent glass. The side sash are of mahogany; top sash glazed with opalescent glass set in lead, cathedral design. All body side windows are equipped with wire screens. The interior is finished in Mexican mahogany, dull finish. All metal parts are

Montreal and Southern Counties Railways' Trailer Car.

Ottawa Car Mfg. Co.'s standard car bronze, highly polished and lacquered. The seats are of the railway company's standard reversible type, upholstered in green imitation leather. The car is built on a steel underframe of specially light and strong construction, and is of through platform type. The cars are equipped with heaters, automatic couplers, Westinghouse a.m.m. air brake equipment with synchronizing governor equipment and Westinghouse electro-pneumatic signal equipment, also control train line for h.l. control. The basket racks are of M. & S.C.R. standard design. The lighting consists of clusters on the ceiling, also individual lights along the lower deck rail moulding. The cars are mounted on trucks with 33 in. cast iron wheels. A special feature of the underframe is a specially constructed anti-climbing spring buffer, built to take all ordinary buffing shocks and minor collisions. The car is equipped with marker brackets, also steel trap doors at the side openings. These trap doors are hinged to the vestibule doors with heavy bronze hinges, bolted on in such a way that when the door is open the trap is folded up behind the door. The car is also equipped with a lavatory on one side, with a standard improved dry hopper closet, also a

5 gallon water cooler. The curtains have spring plug rollers. The sash locks are of single cam type, with a heavy rack on the stop. The sash are also equipped with anti-rattler and improved drop handle hand brakes.

Edmonton Railway Employees' Wages.

The Edmonton, Alta., Radial Ry. employees applied to the city council, July 30, for an increase of wages, under the terms of the agreement which was due to expire Aug. 31. The men asked for renewal of the agreement for a further 12 months in all its details, with the exception of the following: "All employees under the agreement to be increased 20% over and above the rate received at present, and further, that owing to the extra responsibilities placed upon the operators of one-man cars the operators of same shall receive 55c an hour, with an 8 hour day, and that no shift be longer

The men at a mass meeting, Sept. 1, refused the offer and decided to stand by their resolution of going out. They then went out and the car service was suspended. On Sept. 2 the council offered to pay 30c an hour for new men, with a 2 1/2% increase annually until a maximum of 40c an hour was reached, with a rate of 45c an hour for one-man car operators. The superintendent was empowered to engage motormen and conductors on the above terms, men of experience to be given standing according to superintendent's decision. All late employees to deliver up uniforms and other street railway property by noon, Sept. 4.

The Dominion Fair Wage Officer was in the city, Sept. 3, but failed to get the parties to come together. After several days of fruitless discussion the council, on Sept. 10, as a final offer to the men, promised to restore them to their standing as of Aug. 31, if they returned to work by the following day. On the day the offer was made the city had secured men sufficient to operate cars. There was some little rough conduct in connection with the running of the cars, but no actual violence. Sept. 11, at 10 a.m., the new agreement—on the city's terms—had been signed by 125 men, and others subsequently came in, so that it was possible to put on the full service, Sept. 13.

It is estimated that the strike cost the city \$2,500 in cash, and a loss in wages to the men of between \$400 and \$500.

The employees' representatives served notice on the Mayor, Sept. 14, of an application to the Minister of Labor, under the Industrial Disputes Investigation Act, making the following demands: The renewal of the agreement with the city and as provided for in the said agreement. Increase in wages in all cases, and more particularly as follows: A 20% increase over and above the rate paid on Aug. 31, 1917, pursuant to said agreement. That all men be taken back in seniority, and as they vacated work on Sept. 1, that no man be discriminated against for taking any part in this vacation. That all men, irrespective of their position, be reinstated to their former position prior to vacation on Sept. 1. And generally, all matters relative to those contained in said agreement, and the welfare of the men and their condition, having regard to the economies of the times. A press dispatch of Sept. 19 stated that the application had been granted and that the men had appointed H. A. MacKay, of Edmonton, as their representative on the arbitration board.

One-Man Cars on Calgary Municipal Railway.

The committee appointed by the Calgary, Alta., City Council to investigate the cost of operating one-man cars on the Calgary Municipal Ry., in comparison with the two-man system, concluded its work Sept. 13, and reported to the City Council as follows: We are of the opinion that there is very little saving between the operation of 2 and 4 motors in a double truck car at the present low price of power, and therefore approve of the use of 4 motors in all double truck cars. Alderman Arnold opposed the last part of the recommendation.

We approve of the operation of the

than 6 hours without relief, and further we desire this change to take effect from Aug. 31, and remain in force until Aug. 31, 1918."

The council referred the application to the utilities committee for consideration, and on Aug. 20 the men's representatives met the committee. The matter was discussed, but no decision was reached, and there was no further meeting with the committee. On the morning of Aug. 31 the men met and passed the following resolution: "Resolved, that our executive committee meet the city officials today and inform them that we want a meeting immediately, that unless our agreement is signed, sealed and delivered with the 20% increase included in the agreement, by 12.30 p.m., Aug. 31, our president be instructed that we take a vacation on Saturday morning."

This ultimatum was delivered to the mayor, and a meeting was held with the council in the afternoon. After discussion the council made the following offer: "That all motormen and conductors under 35c an hour be raised to 35c; second six months, 35c; third six months, 35c; fourth six months, 35c; fifth six months, 38c; sixth six months, 38c; seventh six months, 38c; eighth six months, 38c; ninth six months, 40c."

one-man cars on the system, under the conditions of the period in which they have been operating, on the ground only that they have led to an economy in operation. Aldermen Broatch and Adthead opposed.

That the present one-man and two-man car routes be kept as they are, and that accurate records for one month of the cash and ticket fares on the whole system, route by route, be kept, and report made to this committee.

We recommend that consideration be given to the safety of the front entrance, and that the reflection of the light in the motorman's face be drawn to the Superintendent's attention.

That the rule that no car be in motion unless the motorman-conductor can give his whole attention to the running of the car be strictly enforced.

A Calgary press dispatch Sept. 26 says that the Calgary City Council adopted the Committee's majority report and that this means that the use of one-man cars on the municipal railways will be made permanent.

Dismantling of London & Lake Erie Railway & Transportation Co's Line Probable.

The London & Lake Erie Ry. & Transportation Co.'s electric railway which runs between London and Port Stanley, Ont., 23 miles, has not paid any interest on its bonds for the past 2½ years and since the London & Port Stanley Ry. was taken over by the city of London and electrified, the L. & L. E. R. & T. Co.'s position has steadily grown worse. There is not sufficient business for two electric railways between London and Port Stanley and as the L. & P. S. Ry. is the shorter route, has the better roadbed, and makes quicker time, it gets the greater portion of the through traffic between London, St. Thomas and Port Stanley.

The L. & L. E. R. & T. Co.'s bondholders decided, at a meeting on Sept. 18, that if the municipalities through which the line runs will not come to its assistance financially, the franchise and property will be sold, either in block or in parcels. The President, G. B. Woods, of Toronto, John Purdom, of London, and Sidney Jones, of Toronto, were appointed a committee to negotiate with the municipalities and if the negotiations prove futile to dispose of the line without delay. It is believed that the line could be dismantled and the rails, wire, rolling stock, etc., sold for a higher price than the Hydro Electric Power Commission of Ontario was disposed to offer for the whole property a little while ago.

G. B. Woods is reported to have informed the London City Council, Sept. 26, that the company is willing to accept 60c on the dollar of its bonded indebtedness, or \$505,000, for the railway. Failing this, he stated, the road would be scrapped immediately, and its equipment disposed of. The offer has been referred to the London Railway Commission for a report, and if this is favorable, it is stated the matter will be submitted to a vote of the ratepayers in January.

The L. & L. E. R. & T. Co.'s line was opened for traffic about 12 years ago. The original company, the Southwestern Traction Co. went into liquidation in 1909, the present company taking over the property Dec. 15, 1909.

A large jitney bus, with seating capacity for 18, operated in Ottawa during the exhibition recently.

Montreal Tramways Co's Annual Report and Meeting.

Following are extracts from the report for the year ended June 30. The financial statements show the following results:

Gross earnings	\$7,725,498.88
Operating expenses	4,601,771.84
Net earnings	\$3,123,727.04
From which deduct:	
City percentage on earnings	\$491,430.95
Interest on bonds and loans	858,542.38
Interest on debenture stock	800,000.00
Taxes	98,400.00
	2,248,373.33
Net income	\$875,353.71
Dividends	337,880.50
Surplus	\$537,473.21
Less:	
Transferred to contingent renewal account	\$350,000.00
War tax (estimated)	110,000.00
	460,000.00
Transferred to general surplus	\$77,473.21

The gross passenger earnings were \$7,374,295.79, compared with \$6,443,309.66 for the previous year, an increase of 14.45%, while the operating expenses increased \$894,718.80, or 24.14%. The ratio of operating expenses to passenger earnings was 62.40%, compared with 57.53% for the previous year.

Contingent renewal account was charged with \$567,082.66 during the year, representing expenditures made for special renewals, compared with \$313,575.99 last year. \$792,848.06 was expended during the year in the maintenance of properties, plant and equipment, and charged to operating expenses, compared with \$583,894.20 the previous year. This amount, together with \$567,082.66 charged to renewal account, makes a total expenditure during the year on the upkeep of the properties of \$1,359,930.72, compared with \$897,470.19 the previous year. During the year there was expended on capital account \$1,509,488.90, compared with \$320,872.17 the previous year. During the year the company issued \$3,000,000 of 5% 30-year gold bonds. From the sale of these bonds there remains at the company's credit at the Harris Trust & Savings Bank, Chicago, \$1,063,985.22, which is at the company's disposal for extensions and improvements.

While the gross passenger earnings show a satisfactory increase over last year, the operating expenses have increased in greater proportion, the ratio of operating expenses to passenger earnings being 62.40%, against 57.33% for the previous year.

The company has continued the work of placing its overhead feeder wires in the municipal conduit and has completed during the year the work commenced in the previous year on Bleury St. and Park Ave.

With reference to the rearrangement of system of power distribution referred to in the last annual report, the installation of the first unit of 17,000 h.p. is practically completed, and it is expected will be in operation in August. Work has commenced on the installation of an additional unit of 17,000 h.p.

The work on the contract for machining shells, referred to in the last annual report, is practically completed, but there still remains some final adjustments to be made. An estimated amount has been provided for the war tax on the results of the whole operations of the company, the present accounting period being the third and final period for this company under the Business Profits War Tax Act, 1916.

During the year the company placed an order for 100 motor and trailer cars, with the necessary equipment. These cars are of the very latest type, and contain every known device and improvement to assure comfort and safety to the travelling public. The first deliveries are expected shortly.

At the last session of the Quebec Legislature the government appointed a commission of five members, with power to make a new contract between the City of Montreal and the company, and the directors trust that this matter will be settled shortly, and result in enabling the company to develop and maintain its system to the best interest of the public and your company.

The property has been maintained in a high state of efficiency and is in excellent condition.

Statistical Statement.	
New construction during year	\$1,509,488.90
Expenses % of passenger earnings	62.40
Passengers carried	179,974,549
Car earnings per passenger	4.10c
Transfers	63,451,272
Total passengers carried	243,425,821
Car earnings per passenger, total carried	3.03c

At the annual meeting, Aug. 31, the directors were all re-elected. They are as follows: E. A. Robert, President; J. W. McConnell, Vice President; F. Howard Wilson, Vice President; W. C. Finley, Hon. G. G. Foster, K.C., P. J. McIntosh, J. M. McIntyre, W. G. Ross and Hon. J. M. Wilson. J. E. Hutcheson is General Manager and Patrick Dube, Secretary-Treasurer.

Jitney Traffic Notes.

Application has been made to the Winnipeg City Council by W. J. Tupper, K.C., on behalf of a company which desires to operate a motor bus service in the city. The company asks for a 10 year franchise, the right to fix tariffs, to use tickets and to operate a fast line and a slow line. The matter is under the consideration of the market and license committee, which, it was stated, Sept. 6, was preparing a bylaw for submission to the council.

Winnipeg jitney men, who, it was reported on Sept. 4, numbered 475, will under the bylaw adopted that day have to furnish a bond to the city to provide against damage to persons and property by accident. The amount of the bond is fixed at \$1,000 against personal damage to any one person, \$5,000 against personal damages in any one accident, and \$200 against damage to property. This bond will cost each jitney driver \$150 a year under an insurance policy. The new regulation became effective Sept. 20.

Judgment was given, Sept. 6, by Justice Murray in the application of J. L. Mackay for an order to compel the Vancouver City Council to restore his jitney license, which had been cancelled under a city bylaw. Mackay refused to conform to the regulation requiring him to select a route and to operate his jitney thereon only. The legal point reserved was whether the city's charter and powers under the act covering motor vehicles gave power to confine cars to particular routes. The judge held that such power had been expressly given in the amendments made in the act recently and refused the application.

The Winnipeg Electric Ry. in its current advertising is directing attention to points of interest reached by its suburban lines. The trip most recently described and illustrated is that to Lockport, for St. Andrews Rapids and the Indian mounds.

Supreme Court Judgments re Contributory Negligence in Accident Case.

Canadian Railway and Marine World some little time ago gave particulars of a decision given by the Supreme Court in the case of Mrs. J. P. Hayes vs. Ottawa Electric Ry. Co. The judgments given by the various judges are of such importance to electric railway companies generally that they are given in full as follows:

DAVIES, J. I am to allow this appeal and dismiss the action on the ground that no negligence on the part of the motorman was proved or could be properly inferred from the evidence. The car was only 35 ft. away from the unfortunate man at the time the motorman could have appreciated or believed from the man's conduct and actions that he intended crossing the track. From that moment the motorman did everything in his power to prevent the accident and I fail to find from the evidence anything that he omitted to do that he should have done or that from the moment he did anything he should have refrained from doing. Even if it was possible to conclude that he then committed an error of judgment it was clearly in the "agony of collision," for which the company could not be held liable.

ANGLIN, J. If the question in this case were whether on the findings of the jury the judgment for the plaintiffs should be upheld, it may be that the cases of Long v. Toronto Ry., 50 S.C.R. p. 224, cited in the judgment a quo, would have some bearing upon it. But the grounds of appeal in this court are, as they appear to have been in the Appellate Division, that there is no evidence to sustain the findings of negligence against the defendant's motorman, and that the finding that the contributory negligence of the deceased did not continue up to the moment of the accident is contrary to the evidence. In so far as the result must depend upon a consideration of the evidence for the purpose of ascertaining how far it justifies these impeached findings, the Long case affords no assistance. So rarely are the circumstances of two cases identical in all material particulars that a decision upon a question of fact is scarcely ever of value as a precedent. The circumstances under which the motorman was found to have been negligent in the Long case differ widely from those with which we now have to deal. In the Long case, the unfortunate man who left the sidewalk was visible to the motorman at a much greater distance; a longer interval of time elapsed and the motorman had much greater opportunity for appreciating that Long was in a state of absent-mindedness. Moreover, the victim himself became aware of his plight a moment or two before he was struck though too late to save himself, while the unfortunate Hayes appears never to have been conscious of the oncoming car.

I have reached the conclusion that in the case at bar there was no evidence to support the findings of negligence against the defendant. It is conceded that the finding of defective equipment cannot be sustained. The other finding of negligence is "that the motorman should have stopped when he realized the danger." The jury subsequently added to this latter finding the following explanatory rider: "According to evidence submitted, the motorman first realized the danger of an accident when at a distance of 45 or 50 ft. Instead of taking up the

slack, as stated, had he applied the brakes immediately, we think the accident would have been avoided. The motorman in his evidence admitted that he realized the man was going to cross the street, that he had in his hands the power to stop the car either by brake or reverse. We find that had the motorman acted more promptly, the accident would have been avoided."

The first observation to be made on this part of the verdict is that the jury was manifestly under a misapprehension in regard to the taking up of the slack. The only evidence on that point, given by the motorman himself, is that he had taken up the slack and had his brakes partially tightened before he reached Bronson Ave., i.e., while the deceased was still on the sidewalk and before the motorman had seen him. Upon all the evidence, it is well established that when the deceased stepped off the kerb to cross Somerset St., the front of the car, travelling at about 10 miles an hour, or 14½ ft. a second, was about midway on Bronson Ave., and some 45 to 50 ft. from the point of contact. To reach that point, the deceased had to move slightly less than 10 ft. The motorman's statement is that he first saw the deceased as he stepped from the kerb; that because he then apprehended that an accident might happen he immediately rang the gong to warn him; that at 30 ft., or about one second later, he realized that the deceased was not going to stop, became seriously apprehensive and at once applied the brakes as vigorously as he could, still gonging, and also shouting to the deceased, who continued to walk on with his head down, apparently oblivious of danger. That the motorman did all in his power and exercised his best judgment from the moment when he was 30 or 35 ft. from the point of contact, is not, and, upon the evidence, could not be contested. If he was at fault at all, it must have been in not applying his brakes or reversing the moment he saw the deceased step from the kerb at a distance of 45 or 50 ft. from him. That would imply that he should instantly have anticipated, merely because he saw the man step on to the roadway, that he was in a brown study, or otherwise so abstracted that the gong might fail to arouse him and that he might walk into the car without having become aware of its approach. It must be remembered that realization of these possibilities—they cannot be deemed probabilities—and action upon them to be effective must have been instantaneous. In a single second the car had travelled to within 30 or 35 ft. of the point of contact. No doubt a motorman driving a street car must always be alert. But, having regard to the practical necessities of street car operation, I am not prepared to hold that it was open to a jury to find, under the circumstances of this case, that in failing to apply his brakes instantaneously upon the deceased stepping off the kerb and before he had seen, or had any reason to think, that the sharp clanging of the gong would be ineffective, the motorman was guilty of negligence.

Every case of this kind must depend upon its own facts. A very slight difference in the circumstances may render conduct, which is justifiable and not improper in one case, negligent and indefensible in another. It would be quite wrong, and probably entirely futile, to

attempt to define any standard of general application. I can only say that I fail to discover in the facts before us anything to warrant a finding of fault or negligence on the part of the motorman. If he made any mistake at all it was at most an error of judgment in a sudden emergency (The Khedive, 5 A.C. 876, 891), but even that is not established.

Moreover, although there is no finding of excessive speed, and the company therefore cannot be held liable on that ground, the distance travelled by the car after the motorman had applied the brakes with all his strength—about 150 ft. according to the weight of evidence—would rather indicate that no effort on his part made at 45 or 50 ft. from the point of contact would have prevented the accident.

In the view I have taken, it is unnecessary to dwell upon the finding that the contributory negligence of the deceased did not continue up to the moment of the accident. If, as the jury found, the deceased was negligent "by not using proper precautions crossing the street," there is nothing in the evidence to indicate any change in that respect before the accident. On the contrary, it would seem that Hayes remained oblivious of any danger, and proceeded with his head down towards the point of contact, until he was actually struck by the car. The learned trial judge, having had his attention called to the Long case, explained to the jury that by the 9th question—"Was the negligence, if any, of the deceased a continuing act of negligence up to the very moment of the accident?"—he meant, "did he become aware that the car was approaching and was he oblivious of the danger, that is the sense in which that question is put." The jury answered "No." There was no evidence that the car was approaching. The evidence was all to the contrary. If it was essential to his being negligent in the last moment before the accident that he should have been aware of the approach of the car, this answer of the jury may be intelligible. But it is, from any point of view, very difficult to reconcile it with their finding that there was contributory negligence, in view of the evidence that there had been no change from the moment he left the sidewalk either in regard to his knowledge of the oncoming car, or in his attitude in, or manner of, approaching the danger point. But it is not necessary further to consider this aspect of the case.

Notwithstanding my reluctance to set aside the verdict of a jury upon a question of negligence, and my sympathy for the plaintiffs in their misfortune, I am for the foregoing reasons constrained to allow this appeal. The defendants are entitled to their costs throughout, if they should see fit to exact them.

BRODEUR, J. This is another of those too numerous street railway accidents. The victim, J. P. Hayes, was crossing Somerset St., in Ottawa, at the corner of Bronson Ave., when he collided with a street car and was killed. The verdict of the jury at the trial is a very unsatisfactory one. At first, it is found that the victim, by not using proper precautions in crossing the street, was guilty of negligence. It is common ground that the deceased stepped off the kerb and reached the track without looking if there was any danger. His negli-

gence had been evidently a continuous one up to the very moment of the accident, however differently the jury may have reported. Such a finding is certainly unjustified by the evidence. If, as the jury found, the deceased was negligent in starting to cross the street without taking the necessary precautions, he was equally negligent in continuing to cross without seeing whether there was danger or not. Their answer to question 9 seems to me then conflicting with their answers to questions 1 and 2.

They found also that the death of the victim was caused by the negligence of the defendants, and that if the latter had exercised reasonable care the accident would have been prevented notwithstanding the negligence of the deceased. But the reasons they have given at different times for such a finding are not sustained by the evidence. At first, they came back with the answer that the company was negligent for not having their car equipped with up to date appliances and that the motorman should have stopped when he realized the danger. The trial judge then observed that there was no evidence as to any defective equipment, and suggested to the jury that their verdict of negligence on the part of the company should be connected with the conduct of the motorman. They returned with the same answer as to defective equipment and added the following: "According to the evidence submitted, the motorman first realized the danger of an accident when at a distance of 45 or 50 ft. Instead of taking up the slack as stated, had he applied the brakes immediately, we think the accident would have been avoided." The learned trial judge was not satisfied with that answer and asked them to suggest whether the use of the reverse, instead of the brakes, would not have been more effective. And the jury subsequently added the following to their previous answers: "The motorman in his evidence admitted that he realized the man was going to cross the street, that he had in his hands the power to stop the car either by brake or reverse. We find, had the motorman acted more promptly, the accident would have been avoided."

It has been admitted at bar by counsel for respondent that the evidence does not justify the verdict as to the defective equipment. As to the conduct of the motorman, the evidence does not disclose any negligence on his part. Before reaching the corner of Bronson and Somerset Sts., the motorman started to ring his bell according to the rules of the company and to take up the slack of the brakes. When at about 45 ft. he saw the deceased stepping off the kerb, he began to apply the brakes and continued to ring the bell and at 30 ft he became apprehensive of danger and tightened his brakes the best he could. He could certainly not, even at 45 ft., change the braking operation for the reverse. The loss of time which such a change would have occasioned would not have been of any advantage. There is no excessive speed charged against the motorman and no lack of control on his car. He fulfilled his duty as promptly as he could when the serious apprehension of the danger came. But it was then too late to avoid the accident.

There is no evidence on which a case of negligence has been made against the company. The proximate cause of the injury was the negligence of the victim. The latter was injured by his own fault with no fault on the part of the com-

pany. The action should have been dismissed, as the judgment a quo maintained the action. The appeal should be allowed with costs.

THE CHIEF JUSTICE: I was at first disposed to dismiss this appeal on the ground that there was evidence to support the judgment at the trial which has the approval of the Court of Appeal. At the time of the accident the deceased was not casually crossing from one side of the street to the other, but continuing his way along Bronson Ave. at the point where it is crossed by Somerset St. It was the duty of the driver of the car to exercise great care and vigilance, when coming to the point of intersection of those two busy thoroughfares, so as not to violate the rights of foot passengers proceeding along either.

The jury found that the car was imperfectly equipped, that the brakeman was not diligent and some of the witnesses said that the car was going at a speed of 20 miles an hour, but there is no specific finding as to this. It is said that in the absence of that finding there is not sufficient evidence to justify the judgment of the court below, but assuming that to be the case, I am of the

opinion that we might on the evidence supply what the jury has omitted as to the speed. The evidence of the witnesses is to the effect that the car ran several lengths beyond the place of the accident before it was stopped. It was about 28-30 ft. long and could, going at 10 miles an hour, be stopped in less than 60 ft.

Assuming that there was some evidence of negligence on the part of the deceased, that negligence would not disentitle him to recover, because the motorman if he had been alert and vigilant, and kept his car in proper control, might have, in my opinion, averted the consequences of the deceased's negligence. I do not, however, wish to enter a formal dissent, because it may reasonably be said that the negligence found by the jury is not conclusively proved to be the proximate cause of the accident. Vide: 14 Gray Mass, 69, 75. 159 Mass, 142-146. 7 Revue Trimestrielle, p. 22, No. 24. N.Y.C. Appeals, 6th Jan. 1909. B.C. Electric v. Loach in P. C. 1914 (8 Western Weekly Reporter, p. 1263).

DUFF, J. I concur in the judgment, allowing the appeal and dismissing the action with costs.

The Toronto Railway Overcrowding Case.

The main points of the judgment of the Judicial Committee of the Imperial Privy Council on the Toronto Ry.'s appeal against a conviction for maintaining a public nuisance by overcrowding its cars, was given in Canadian Railway and Marine World for September, since when the full text of the judgment outlining the argument leading to the setting aside of the judgment of the Appellate Division of the Supreme Court of Ontario and the remitting of the case to the Supreme Court for the granting of an acquittal, has been received. This contains matter of considerable interest to street railways, similarly situated, in their relations with municipalities, and an extended summary of the arguments therefore follows:

The appeal, for which special leave was given, was from a judgment of the Ontario Court of Appeal. The question is whether the appellant was properly found guilty on an indictment for having failed in breach of an alleged legal duty to take reasonable precautions to avoid undue, dangerous and illegal overcrowding of passengers in its cars, whereby the property and comfort of the public, as passengers in these cars, were endangered. The indictment was brought under the Criminal Code, which enacts that the criminal law of England, existing at a certain date, is to be the criminal law of Ontario, except as modified by the code itself, or other statutes. It defines a common nuisance to be an unlawful act or omission to discharge a legal duty, which would endanger the lives, safety, health, property or comfort of the public, or by which the public is obstructed in the exercise or enjoyment of any right common to all of His Majesty's subjects. Such nuisances are divided into two categories. In one, a person is guilty of an indictable offence and liable to one year imprisonment who commits a common nuisance which endangers the life, safety or health of the public, or which occasions injury to an individual. In the other, anyone convicted on indictment, or information, for any common nuisance other than those covered in the previous

item, shall not be deemed to have committed a criminal offence, but all such proceedings or judgments may be taken and had as heretofore to abate or remedy the mischief done by such nuisance to the public right. The effect of this, in the committee's opinion, leaves the indictment as a method of procedure for trying the general question, regarding a common nuisance, but it deprives a conviction of its criminal character. Another section enacts that an appeal from a conviction will lie to the Court of Appeal, and when the judges are unanimous, their decision shall be final, but if a judge dissents, an appeal will lie to the Supreme Court of Canada. Another section enacts that notwithstanding any Royal prerogative, or anything contained in the Supreme Court Act, or in the Interpretation Act, no appeal shall be brought in any criminal case from any judgment or order of any court in Canada to any Court of Appeal or authority by which in the United Kingdom appeals to His Majesty in Council may be heard.

The appellant is a street railway company incorporated by statute, and operating a street railway under an agreement ceived \$500 from the Dominion Naval in the conditions of the agreement that cars are not to be overcrowded, a comfortable number of passengers for each class of car to be determined by the City Engineer and approved by the City Council. It does not appear that the obligation thus imposed on the appellant was invested by the statute with anything further than the contractual character which it originally possessed. The indictment contained a number of counts, some of them for criminal common nuisances, based on a section of the code which deals with the life, safety or health of the public. The only count, however, on which the jury found a verdict of guilty at the trial was one based on danger to the property and comfort of the public, under another section. The appellant demurred to the indictment, but the demurrer being overruled, the appellant pleaded over, and on request, the judge stated a case for the Ontario Ap-

Marine Department

Freight Steamship Building at Port Arthur.

As previously stated in Canadian Railway and Marine World the s.s. Ugelstad was launched at the Port Arthur Shipbuilding Co.'s yards at Port Arthur, Ont., on June 23 and the s.s. War Fish on Aug. 4. Both vessels were ordered by Jas. Playfair, of Midland, Ont., and the War Fish is being taken over for the British Government by the Imperial Munitions Board. Following is a description of the vessels:

The hull is of the following principal dimensions: Length over all, 261 ft.; length between perpendiculars, 251 ft.; breadth moulded, 43½ ft.; depth moulded, 28 ft. 2 in. It is of the single deck type, with poop bridge and fore-castle, steel deck house on bridge, and deck and chart room on top of deck houses, with navigat-

alternately on the port and starboard side. The hull is divided by 4 watertight bulkheads, and a watertight sliding door is fitted in the engine room bulkhead, to give access to the tunnel. There is a screen bulkhead between the boiler and engine rooms, with door and portable plate for drawing the condenser tubes.

The engine foundation is built up of plate and angles, with girders under the foundation, to line up with the fore and aft girders on the water bottom. The boiler foundations are of longitudinal plate girders, with large double angles on top edge, and connected to tank top with double angles at bottom. The deck house on the bridge is of steel, 7 ft. high, of plating 12.2, stiffened with 3 x 3 x 6.1 angles, as are also the engine and boiler

also building a number of other full canal size, ocean going steamships similar to the Ugelstad and War Fish and has also considerable government work on hand.

Regulations Respecting Desertion from Merchant Vessels.

Whereas a large amount of trouble and delay has been caused by the prevalence of desertion and improper absence among the crews of merchant vessels lying in Canadian ports, whereby the carriage of urgently required munitions, provisions and other essential stores for the British and allied governments has been seriously hindered, and evidence has been produced to the Minister of Naval Service both of the existence of this state of affairs and the gravity of its consequences, in written reports from responsible officers concerned, an order in council has been passed amending par. 28 of the Defence of Canada Order, 1917, to include all ships or vessels carrying government cargo or passengers, and to provide for keeping in custody deserters apprehended. A new paragraph is also added, numbered 28A, providing that no seaman lawfully engaged to serve on board any ship belonging to, or chartered, or requisitioned by the Admiralty, or by the Dominion Government, or upon any ship which has embarked, or is about to embark cargo belonging to any British or allied government, or which has on board any British or allied government passengers, shall be absent from his ship, whether upon duty or otherwise, without a written pass which shall state the period of his authorized absence, signed by the master, mate, purser or first engineer, and any such seaman so being absent without such a pass, or being found without the same in his possession, shall be guilty of an offence against this order and subject to the exercise of the authority conferred by sec. 28, as if absent from his ship or duty without leave.

Arrangements for Moving Northwestern Grain Crop.

Cleveland, Ohio, press dispatch, Sept. 11.—“All uncertainty regarding the ability of the government to move the grain crops from the northwest to lower lake ports was removed today after a meeting here of the Lake Carriers' Association, representatives of the Canadian and United States Grain Commissions, and J. H. Barnes, director of the U.S. Government's Food Commission's grain division. The vessel owners not only assured the government of plenty of tonnage, but accepted a rate that was named by Mr. Barnes. The rate from ports at the head of Lake Superior to Buffalo was fixed at 4½¢ a bushel for the regular season of navigation, viz., up to midnight, Nov. 30. The rate for December loading and storage will be fixed at a later meeting. The action taken at the meeting means that all vessel owners will have to do their share and that boats that have been operated exclusively in the ore trade will have to carry grain if they are needed. The business will be pooled and handled by the Duluth Grain Chartering Co.”

The Dominion Department of Public works has cancelled its call for tenders for dredging at Port Maitland.

The Steamship Ugelstad prior to launching.

ing bridge. The hull is built on the transverse system, with the propelling machinery amidships, with the coal bunkers in wings. There are 2 cargo holds, with 2 hatches to each, one hold extending from the collision bulkhead to the boiler room bulkhead, and the other from the engine room bulkhead to the after peak bulkhead and there is a water bottom, 2 ft. 9 in. deep, from the collision bulkhead to the after peak bulkhead. The construction is for the highest class of British Lloyd's ocean service, and in accordance with the British Board of Trade's requirements. The size of the machinery space has been arranged to approximate 13% of the gross tonnage, thus attaining a reduction of 32% from capacity tonnage.

The hull is built with flat plate keel and bilge keels, the latter extending for about 100 ft, amidships, and are of plate 9 in. deep, connected to the shell with angle bars fitted on short lengths, extending from butt to button shell, the plate being continuous. The hull has a straight stem and elliptic stern. Channel frames are fitted, and extend from tank margin to main deck, and alternately to bridge deck, without hold stringers or 'tween deck beams. Plate floors are fitted on every third frame, except in engine and boiler space and forward, of 3/5s length, which are 24 in. centres. The propeller frame is according to Lloyd's requirements, with rudder post extending to main deck, to which it is attached by angles and deep transom plates. The rudder is of the single plate type, with arms

castings. The flying bridge is built from the roof of the chart house to the ship's sides, and is 4 ft. wide, carried on angle iron framing supported on angle iron stanchions. Steam windlass is 8 x 8 in., fitted with hand attachment and friction brakes. The steam steering engine, 6 x 6 in., is placed in the after end of the engine casings, with the horizontal shaft protruding through the after side, with the bracket and chain drum on deck. Two 22 ft. lifeboats, and one 18 ft. working boat, are to be provided, together with life belts and life buoys as required by law. The bridge deck will provide accommodation for the captain's, and first and second officers' quarters, which, with the accommodation for the crew, are to be complete with every modern convenience. The electrical installation will include one 7½ k.w. generator, with equipment for lighting the whole vessel, the sidelights to be fitted for electric light as well as for oil.

The propelling machinery, also built by Port Arthur Shipbuilding Co., will consist of engines of the single screw, 3 cylinder, 3 crank type, with cylinders 20, 33½, and 55 in. diam., by 40 in. stroke, developing about 1,400 i.h.p. at 80 r.p.m. Steam will be supplied by 2 boilers, each 14 ft. diam. by 12 ft. long, built for natural draught, at 185 lb. pressure. The boilers will be equipped with corrugated furnaces, 42 in. inside diam., with separate combustion chamber for each furnace.

The Port Arthur Shipbuilding Co. is

Government Vessels for Pacific-Atlantic Service.

As previously stated in Canadian Railway and Marine World, the Dominion Government some months ago awarded two contracts for the construction of wooden auxiliary power schooners, for operation between Pacific coast ports and Atlantic coast ports, via the Panama Canal, one to Wallace Shipyards, Ltd., North Vancouver, and the other to Lamond & Harrison, Vancouver. When this matter came before the House of Commons, Sept. 6, on a vote for \$600,000 for the building of these vessels, the Minister of Railways stated that the tenders had been accepted and the contracts let, but the contractors had not put up the required bonds and had asked to be released on the ground that the Imperial Munitions Board had taken over six wooden shipyards in British Columbia and had contracted for the whole output of the British Columbia lumber mills for the next nine months. They therefore claimed that it was impossible to obtain the necessary lumber to build these vessels, and that materials and labor had so largely advanced that they could not carry out their tenders, but they offered to build the vessels on a basis of cost, plus 10%. The Minister added that the contracts had been cancelled and no other contracts had been entered into.

Copies of the contracts submitted to Parliament show that the vessels were to cost approximately \$230,000 each. The contracts were entered into by the Minister of Railways, under authorizing orders in council of Nov. 24, 1916, and Jan. 30, 1917, the one with the Wallace Shipyards, Ltd., on Mar. 8, and the other with Lamond & Harrison, June 1. It was the intention of the two contractors in the latter case to turn the contract over to the Harrison & Lamond Shipbuilding Co., formed at Vancouver recently. Each contract provided for the construction and delivery of one wooden auxiliary sailing ship. Delivery on the first named contract was to be made by Feb. 28, 1918, and on the second contract by June 1, 1918. The dimensions of the vessels were to be: Length of keel, 225 ft.; breadth, 44 ft.; depth of hold, 19 ft. In case of failure to deliver the vessels by the dates named, or by dates otherwise authorized, a penalty of \$50 a day was fixed, and \$50 premium was to be paid for each day gained in delivery. It was provided that the contractor was to provide and install all propelling machinery, such machinery to be similar to that installed in vessels built for the Canada West Coast Navigation Co., or of similar Diesel type, or of a type satisfactory to the government's architect, and of equivalent horse power, and to comply with Lloyd's standard for seagoing oil fuel, internal combustion engines.

The price to be paid for each vessel was based on \$48 per ton of 2,240 lb. deadweight cargo capacity, which was to be estimated on the usual allowance for cargo, fuel, fresh water and stores, and \$110,000 was to be paid for machinery and plans. Payments were to be made as follows: Upon the execution of the agreement and furnishing of bond, \$5,000; when square frames set up, \$20,000; when ceiling and deck frames in and deck laid, \$15,000; when ship successfully launched, \$15,000, or such portion thereof as was justified by the value of the work done. In respect of the propelling machinery and various additions and improvements, and necessary additions to

the hull to produce a complete vessel fully equipped and launched and ready for sea the \$110,000 was to be paid as follows: Upon certificate of the architect that satisfactory evidence had been produced to him showing actual amounts paid by the contractor for the propelling machinery and other equipment were to pay from time to time such amounts as had been certified to have been paid, and to have a lien upon such machinery, etc., for such payments, which should not exceed in any event \$90,000. Progress payments upon the cost of installation of the machinery and other equipment were to be made from time to time upon the architect's certificate as to the amount of work done. The balance of the total price, if any, respecting both hull and machinery, was to be paid on delivery of the ship and the acceptance of same. A further clause of the contract provided that any bonus or subsidy that might be granted by British Columbia, or by the Dominion, on account of the construction or operation of the vessel, should be the property of the government, whether or not such was payable to the contractor, and the contractor agreed that he would comply with all requirements that might be necessary to procure such bonus or subsidy.

It was intended that the vessels to be built for the government should be similar in all respects to those built recently for Canada West Coast Navigation Co. In case of those vessels, the construction price was based as follows: Wooden hull, 2,500 tons at \$48, \$120,000. Additional work found necessary after contracts were signed, in order to meet Classification Society's and Canadian Steamboat Inspector's requirements:

Additional anchors, increased thickness of cable, increased equipment of wire rope, towing lines both steel and manilla . . .	\$1,264
Increased thickness of wales and bilge fastenings	3,000
Additional knees at mast butts and edges in way of frames	3,200
Cost of carbolinum at butts and edges in way of frames	500
Increased height of hatch coamings	400
250 tons salt, cost in place of \$15 a ton . . .	5,750
Additional strong backs at all hatches . . .	2,000
Increased size of lifeboats, boat davits, and additional lifebuoys, lifesaving equipment, sea anchors, buoyant tanks, etc. . .	1,000
Additional fittings in cabins	1,000
Increased size and weight of windlass to take care of increased size of anchors and chains	365
Additional stiffening in fuel oil tanks . . .	4,600
Additional diameter of rigging wire, and rearrangement	500
2 water tanks	2,500
2 fuel tanks	3,000
Increased size of donkey boiler	1,500
Additional piping of fuel and water tanks . . .	1,650
Changes in style of pumps	350
Day tanks, air tanks and lubricating tanks . . .	1,000
Changes in design and construction of winches and fittings, all cut gears, 4 winches at \$150	600
Copper expansion bends in steam lines to winches and windlasses	565
	\$35,044

Propelling Machinery, etc.

2 165-h.p. Diesel engines, including air compressor, electric generating, f.o.b. Vancouver, including freight and insurance	\$50,000
Built to comply with Classification Society's standards for seagoing engines, 2 sets shafting and propellers	5,300
Cast steel stuffing boxes, stern glands, etc., with lignum vitae bushings and fittings in place	850
Installation of propeller shafting struts and intermediate shafting	2,500
Additional diameter of shafting	400
Fitting continuous bronze liner to shafts . . .	1,200
2 cast steel propeller struts	700
Installation of engine	5,000
	\$73,950

Total \$228,994

United States Restriction on Coal Exports.

Washington, D.C., press dispatch, Sept. 14.—"Continued export of coal to Canada in large amounts through Great Lakes ports at the expense of the Northwestern United States will be checked immediately by the Fuel Administration. H. A. Garfield, the Fuel Administrator, has requested the Export Administration Board to permit no more coal to be shipped from the country except under license restrictions, and asked that no licenses be granted unless they are approved by the Fuel Administration. Coal heretofore, along with other U.S. products, has gone to Canada under blanket licenses issued by Collectors of Customs.

"The Fuel Administration," said Mr. Garfield, "does not intend to cut off Canadian exports, but with this supervision it will be able to equalize the distribution of coal and see that the U.S. northwest and Canada both get their fair shares." Complaints coming to Mr. Garfield that much of the coal going to the lakes was not reaching the northwestern States prompted an investigation, which revealed that a great part of it was reaching Canada. In the period between Aug. 24 and Sept. 8, out of a total of 1,755,812 tons of coal that reached lake ports, 530,973 tons went into Canada. This is far in excess of the proportion of Canadian shipments by lake boats in normal times. While Canada has been piling a reserve store of coal, the northwest is threatened with a shortage this winter, which, it is declared, may force industries to close down."

Ottawa press dispatch, Sept. 21.—An arrangement has been made with Dr. Garfield, U.S. Fuel Controller, whereby no general licensing system will be instituted as far as Canadian imports are concerned, but the authorities at Washington will call for periodical statements from U.S. exporters showing the daily movement of coal to Canada. No serious inconvenience is anticipated as the result of these arrangements.

British Standardized Ships.—London, Eng., press dispatch, Sept. 17: "Complete success has attended the trial of the first standardized ship built to the British Government's order. It was of a most exhaustive nature, and experts are unanimous in their praise of the vessel which, with its sisters, will now be taking to the water in quick time, and is destined to play an important part in the campaign against submarines. The standardized ship has been designed to provide a good style of cargo carrier in the shortest possible time, with the minimum expenditure of material. The keel was laid last February, and in less than six months the vessel was fully loaded and ready to go to sea. During the trial trip, Sir Joseph Maclay, the Shipping Controller, made a statement with regard to the new ships, for the construction of which he and his advisers are responsible."

English Channel Car Ferry Service.—The British Government is credited with the intention of inaugurating a car ferry service across the English Channel in the neighborhood of Dover Strait. I. W. Watts, Windsor, Ont., J. McCarthy, Sandwich, Ont., and G. Plant, London, Ont., are stated to have been engaged by the British Admiralty for this purpose, each of them having had considerable experience in car ferry operation on Lake Michigan.

United States Government Shipbuilding, Commandeering and Purchasing.

The U.S. Shipping Board sent the following statement relative to the shipbuilding programme to the Secretary of the Treasury recently for transmission to Congress:

SHIPBUILDING PROGRAMME.

	No.	Tonnage.	Estimated cost.
Ships contracted for.	433	1,919,200	\$285,000,000
Ships ready to be contracted for when funds are available	452	2,968,000	455,500,000
Ships under negotiations	237	1,281,400	194,000,000

\$934,500,000			
Miscellaneous vessels	150	1,800,000	300,000,000
Organization and other miscellaneous expenses			35,000,000
Amount authorized by Congress, June 6, 1917. (\$300,000,000 appropriated)			550,000,000
Amount to be authorized for building programme immediately in sight, making no allowance for changes in cost of labor or material			719,500,000

COMMANDEERING PROGRAMME.

For commandeered ships, amount required	\$515,000,000
For commandeered ships, amount authorized by Congress, June 6, 1917	250,000,000

Balance requiring authorization by Congress \$265,000,000

PURCHASE PROGRAMME.

For vessels to be purchased other than under construction or commandeered	\$150,000,000
---	---------------

SUMMARY.

Total amount, in round figures, to be purchased in addition to amounts already authorized	\$265,000,000
For construction of new vessels	719,500,000
For purchase of new vessels	150,000,000
Grand total	\$1,134,500,000

Amounts desired to be appropriated for remainder of fiscal year 1918:

For commandeered vessels	\$365,000,000
For building programme	400,000,000
For purchase of vessels	150,000,000
Total	\$915,000,000

Details of the Programme.

Washington, D.C., press dispatch, Sept. 7.—“The U.S. Government will build a great fleet of merchant vessels of from 10,000 to 12,000 tons, capable of attaining a speed of 16 knots or better, in its effort to defeat the German submarines, supply its troops in Europe and carry foodstuffs and munitions to the allies. Contracts already entered into for ships of smaller capacity and lower speed will be carried out, but practically all of the millions which Congress has been asked for, in addition to the original appropriation of \$500,000,000 for construction, will be devoted to the fast ships, unless plans now in the hands of the Shipping Board go awry. Delay in the letting of contracts for fabricating yards to be owned by the Government, it is stated, was caused in part by the fact that, under the new plans, changes would have to be made. It is possible also that additional yards will be constructed in order to turn out the new fleet in the shortest possible time. Not less than 150 cargo ships, aggregating from 1,500,000 to 2,000,000 tons, will be built under the Shipping Board's new plan, and not one of them will make less than 16 knots an hour, while many of them will be capable of 18 knots or more.

“Diesel engines and engines of that type will be used as far as is possible. It is said that a number of the Diesel engines have been brought to this country, and that certain manufacturers have been hard at work for some time developing a standard engine along the same lines. They permit of greater speed and a tremendous saving in fuel. The original contracts were for ships of from 5,000 to

7,000 tons, which would be capable of considerably less than 16 knots an hour, and which, with the development of the German submarines, might well have been helpless unless guarded by large fleets of fast cruisers and destroyers. Careful investigations made by Chairman Edward N. Hurley, of the U.S. Shipping Board, and Secretary Redfield, of the Department of Commerce, however, showed that vessels capable of 16 knots an hour or more were practically free from successful submarine attack, and that none had been sunk since the latest inventions to cloud, by smoke bombs or otherwise, the ‘eye’ of the submarine, had been used. A comprehensive report of this situation was prepared, and, as a result of that report, the new plan of construction was formulated.”

Government Shipbuilding Yards.

Washington, D.C., press dispatch, Sept. 13.—“Contracts for construction of a government-owned shipbuilding yard at Hog Island, Pa., and for the construction therein of 50 fabricated steel merchant vessels, were let by the Emergency Fleet Corporation today to the American International Corporation. These contracts are the first actually signed for the three new plants in which the government will have built a large number of fabricated ships. The Hog Island plant will cost slightly less than \$20,000,000. The other contracts will go to the Submarine Boat Corporation for a plant at Newark, N.J., and to the Merchants' Shipbuilding Co. for one at Chester, Pa. The first of the 50 ships will be completed by the American International Corporation within 10 or 11 months, and the entire number will be finished probably within 15 or 16 months. Long before they are finished, however, the Shipping Board, in all likelihood, will have asked for additional money to build more ships.”

New York press dispatch, Sept. 16.—“The Submarine Boat Corporation announces that it has entered into a contract with the Emergency Fleet Corporation for the immediate construction of 50 steel cargo ships, which will be supplemented later by another contract for 150 more of the same type. The ships will be built in the metropolitan district in a plant which will be among the largest in the country. The first keels will be laid in December, it is said, and the first launching will be in February. Under the corporation's plans, when the plant is in full operation, deliveries will be at the rate of one vessel every two days.”

White Oak for Ship Construction.

Shipyards building wooden ships for the U.S. Government are in the market for extra large white oak construction timber or logs of good quality. The 2,000-ton ships now building each require 2 rudderposts of this species, 14 x 24 in., 40 ft. long. Logs measuring 28 in. in diameter at the small end will cut out such timbers and are worth from \$50 to \$60 per thousand board feet measured in the log. Sticks hewed or sawed to this size will bring \$70 to \$80 per thousand board feet loaded on the cars within 100 to 200 miles of the shipyards. Sticks squared to the size mentioned above contain 1,120 board feet, and would, therefore, bring from \$78 to \$90 each, f.o.b. cars at loading point. Though these prices apply to the south Atlantic and gulf shipyards, it is probable that they would also hold good for those located in the north. The yards are also in need of other white oak structural timbers for

shaft logs, horn timbers, deck and chock rails, and keel shoes. These range in size from 6 x 8 in., x 20 to 30 ft. long, to 14 x 14 in., 18 ft. long. Farmers having white oak trees that will produce timbers of these sizes are urged to take advantage of the demand for such material and get in touch with shipbuilding concerns.

Customs Drawback for Shipbuilding in Canada.

An order in council was passed, Oct. 21, 1916, providing for the granting of a drawback of customs duty on articles used in the construction of vessels built in Canada, dating from Nov. 1, 1916, not exceeding 99% of the customs duty paid. The material concerned is to be used in the original construction in Canada of ships and vessels measuring over 500 tons gross tonnage, and when such ships or vessels are authorized by order in council to be exported for registry outside Canada, or are British registered in Canada, and built to obtain a class in Lloyd's, Bureau Veritas, British Corporation, or other recognized classification satisfactory to the Minister of Customs. Such drawback is in lieu of any drawback based on a specific rate per registered ton, and the claimant must be the builder of the vessel, and the drawback is paid only on ships or vessels which have within themselves the power of independent navigation, either by means of sails, steam or other motive power.

A further order in council was passed, Sept. 11, 1917, amending the order of Oct. 21, 1916, by providing that it shall apply to drawback on imported materials used in the original construction of ships and vessels over 80 tons gross tonnage, built in Canada, on and after Sept. 1, 1917.

The s.s. Turret Crown, owned by the Coastwise Steamship and Barge Co., is reported to have been sold to the Clinchfield Navigation Co., of New York, representing the Oriental Navigation Co., Nantes, France. She was built at Sunderland, Eng., in 1895, of steel with double bottom for winter ballast. Her dimensions are, length 253 ft., breadth 44 ft. 4 ins., depth 19 ft. 4 ins.; tonnage, 1827 gross, 1,142 register. She is equipped with triple expansion engines with cylinders 22, 36 and 59 ins. diam. by 39 ins. stroke, 1,100 i.h.p. at 70 r.p.m. and supplied with steam by 2 Scotch boilers 14 by 11 ft. at 180 lbs. She was equipped with new boilers in 1912 by the Western Dry Dock and Shipbuilding Co., and was purchased by the Coastwise Steamship & Barge Co., from Turret Crown Ltd., Toronto, one of the Mackenzie, Mann & Co.'s interests. For a number of years she was operated on the Great Lakes, and latterly was run between British Columbia and Puget Sound ports. She is being taken to New York and thence to Europe, where she will be handed over to her new owners.

Grain Rates for U. S. Lakes Service.—

A Cleveland press dispatch states that J. H. Barnes, director of the U. S. Food Commission's grain division, has named 4½c a bush. as the grain rate from the head of Lake Superior to Buffalo, for the regular season to midnight Nov. 30, and that this has been accepted by vessel owners. The rate for December loading and storage is to be fixed later.

Atlantic and Pacific Ocean Marine.

The s.s. Grampian Range, owned by Furness, Withy & Co., is reported to have been sunk a few weeks ago by a German raider.

The Nippon Yusen Kaisha, it is reported, has announced that a line of steamships will be put in operation shortly between Japan and Vancouver.

The s.s. War Viceroy, built in Japan recently for the British Government, was expected to arrive at Vancouver towards the end of September, where, it is stated, she will load Alberta wheat for Europe by way of the Panama Canal.

Holt & Co. have announced the resumption of sailings of the Blue Funnel Line vessels to Pacific coast ports, the first vessel arriving from the Orient about Nov. 19. These sailings were interrupted for a time owing to the demands of the war.

The schooner Minas Queen, owned by W. S. Job & Co., and registered at Parrsboro, N.S., was reported, Sept. 10, to have been sunk by a German submarine, while en route from a U.S. port to France in ballast. Only one member of the crew was saved. She was built at Parrsboro, N.S., in 1916, and was on her first ocean voyage.

The s.s. Bowlar, which has been anchored at Vancouver for several years, is reported to have been sold, by local owners said to be Japanese, to the French Government for \$800,000. The vessel was originally a British one, and was purchased from British interests by Admiral Dewey at Manila, during the American-Spanish war, and used as a collier. She has been at Vancouver, and as a steamship she was considered worthless, having been stripped of all fittings. Latterly she has been thoroughly overhauled and repaired, and is still at the Wallace shipyards.

Maritime Provinces and Newfoundland.

The Dominion Department of Public Works received tenders, Sept. 25, for dredging at West St. John, N.B.

The s.s. Keith Cann was launched at Shelburne, N.S., Sept. 18, for Hugh Cann & Sons, Yarmouth. On completion she will be placed on the route between Yarmouth and St. John.

The Newfoundland Government has entered into a contract with E. Barry, Summerside, Bay of Islands, for a steamship service for the Bay of Islands route for a payment of \$200 a week.

The Board of Pilot Commissioners for the pilotage district of Buctouche, N.B., is constituted as follows: M. McLaughlin, F. T. Richard, H. Berthe, H. Irving and W. Robichaud, the last mentioned acting as Secretary-Treasurer.

The Tow Boat Owners' Association of British Columbia is being incorporated under the B. C. Benevolent Societies Act, to further the interests of tug boat owners in the province and to assist in the promotion of commerce in British Columbia. The first directors are to be: C. A. Prowse, Vancouver, President; G. McGregor, Victoria, First Vice President; E. Gilley, New Westminster, Second Vice President; E. J. Coyle, J. Walters, Vancouver, directors, and P. A. Jones, New Westminster, Honorary Secretary-Treasurer. The head office is to be at Vancouver, and the annual meetings are fixed for Aug. 17.

Province of Quebec Marine.

The last of the wrecked Allan Line s.s. Bavarian is to be removed from the beach at Indian Cove, Quebec, where it has been lying for about 12 years. The forward part of the wreck was sold last year, and the stern part has now been sold. The purchaser, in both cases, was J. G. Mayer, Vice President, Dominion Iron & Wrecking Co., Montreal.

The addition to the Quebec Harbor Commissioners' grain elevator on the Louise Embankment, Quebec, will double its capacity, making it available for 2,000,000 bush. There are 62 bins, each 18 ft. diam., and 93 ft. high, and grain will be delivered from the shed to vessels at the rate of about 60,000 bush. an hour. The new portion will be ready for operation in January.

The Dominion Public Works Department will receive tenders to Oct. 12 for the purchase of the Steam tug Montmorency. She was built at Sorel, Que., in 1894 and named Nile. She is screw driven by engine of 22 n.h.p., and her dimensions are, length 71.1 ft., breadth 11.1 ft., depth 4 ft.; tonnage, 28 gross, 19 register. The engine is triple expansion of the Robert type, with pipe boiler.

Ontario and the Great Lakes.

The C.P.R. s.s. Prince Charlotte is stated to have been withdrawn from the Gulf service for overhaul and repairs, having stripped a propeller blade, Sept. 16.

The s.s. Saxona, owned by G. A. Tomlinson, Duluth, Minn., which was sunk in collision at Detour in the spring, has been raised.

It is reported from Sarnia that the s.s. Western Star, which was wrecked a few years ago in Georgian Bay, has been raised and taken to Little Current, Manitoulin Island.

The Governor General in council has approved a revised code of bylaws submitted by the Toronto Harbor Commissioners, for the regulation and control of

navigation in Toronto Harbor, and also providing a tariff of wharfage on goods landed and shipped over the wharves.

The Northern Navigation Co.'s steamships Noronic and Wanbic, and the s.s. Rochester, chartered from the American Interlake Line, were docked at Sarnia for the winter at the end of September.

The name of the s.s. Byron Whitaker, formerly owned by F. E. Hall & Co., Montreal, and now owned by Steamer Marian W., Ltd., a subsidiary of Canada Shipping Co., Montreal, has been changed to Marian W. She was built at Mount Clemens, Mich., in 1890.

The Northern Navigation Co.'s s.s. Noronic arrived at Sarnia, Sept. 15, completing her last trip for the year, after which she went to Port Huron, where, it is stated, she is to be used during the first few days of October as an hotel for a female convention.

The shipping tonnage handled at Vancouver during August was as follows: Coasting, inward, 236,071; outward, 383,159; ocean, inward, 174,953; outward, 159,221. There were increases over the figures for Aug., 1916, in each case, except in coastwise tonnage inbound.

The Montreal Transportation Co.'s barge Hiawatha foundered near Gallop Island, Lake Ontario, Sept. 20, during a gale, while loaded with coal, in tow from Oswego, N.Y., for Montreal. The captain of the barge was saved, and six persons, including two women and a child, were drowned.

The Nanaimo Cannery & Packers Co., Nanaimo, B.C. is reported to have purchased five fishing vessels, named Dreadnaught, Esther, Wadena, Wamega and Wauneta, from U.S. owners. It is stated that the sale and transfer from the U.S. to Canadian register has been authorized by the U.S. Shipping Board.

The s.s. Midland Prince, owned by Canada Steamship Lines, Ltd., which arrived at Duluth, Minn., Sept. 5, with coal, is said to have been the first Canadian vessel to carry a cargo of coal from Buffalo to Duluth, since the new arrangement respecting the operation of Canadian ves-

Comparative Grain Shipments from the Head of the Lakes.

The following table shows the total grain shipments from Port Arthur and Fort William, Ont., for the last four crop years, classified, and the number of cargoes shipped in Canadian and U.S. bottoms respectively.

	Wheat. Bush.	Oats. Bush.	Barley. Bush.	Flax. Bush.	Sample Mixed Grain. Lbs.	Elevator Screenings. Tons. Lbs.
1913-14—						
788 cargoes in Canadian vessels	64,121,076-43	25,276,164-16	5,942,638-35	2,218,179-14	26,076,624	16,854-1,808
350 cargoes in U.S. vessels	62,105,746-	14,351,323-22	4,031,185-25	9,927,058-05	48,942-1,025
1,138 cargoes	126,226,822-43	39,627,488-04	9,973,824-12	12,145,237-19	26,076,624	65,797- 833
1914-15—						
617 cargoes in Canadian vessels	58,732,476-50	15,505,597-22	1,837,021-32	1,448,747-42	7,292,247	14,321-1,305
95 cargoes in U.S. vessels	18,813,926-40	1,130,202-21	690,854-07	3,035,977-01	17,246-1,750

1,849 cargoes	257,129,687-30	59,794,510-07	8,954,815-14	4,684,648-54	12,458,833	74,225- 143
1916-17—						
683 cargoes in Canadian vessels	76,749,071-10	32,342,495-12	4,000,267-12	1,698,326-04	11,167,307	5,007-1,240
451 cargoes in U.S. vessels	61,824,965-40	15,344,189-30	2,810,565-30	4,659,769-45	9,967,119	20,256- 50
1,134 cargoes	138,574,036-50	47,686,685-08	6,810,833-30	6,358,095-49	21,134,426	25,263-1,290

sels in the U. S. coasting trade on the Great Lakes, came into effect.

The Canada Steamship Lines is reported to have notified the Mayor of Toronto that by an expenditure of \$35,000 it has completed arrangements for handling coal during the winter, that a channel will be kept open in the harbor, and an effort made to bring in 40,000 tons for sale to the public, providing it can be secured.

The United States Lake Survey reports the levels of the Great Lakes in feet above mean sea level for August, as follows: Superior, 602.69; Michigan and Huron, 581.90; St. Clair, 576.62; Erie, 573.57; Ontario, 247.35. Compared with the average August levels for the past ten years, Superior was 0.05 ft. above; Michigan and Huron 1.10 ft. above; Erie 0.95 ft. above, and Ontario 0.75 ft. above.

The Reid Towing & Wrecking Co.'s steam tug James Reid, which foundered in Georgian Bay recently, will remain where she sank during the winter. Some reports state that as she sank in about 225 ft. of water, it is impossible to raise her. She was built at Wilmington, Del., in 1875, and named Protector. She was screw driven by engine of 94 n.h.p., and her dimensions were: Length, 117 ft.; breadth, 23 ft.; depth, 12 ft.; tonnage, 181 gross, 123 register.

A Trenton, Ont., press dispatch, says it is reported that another steamboat will operate out of Rochester another season, making the run to the Thousand Islands through the Bay of Quinte. The last boats to be on the service out of Rochester were the Captain and North King. Neither of these is now in use as a passenger boat. The scarcity of boats, as a result of the war, led to the abandonment of the route at the end of the 1915 season.

The name of the s.s. Stanstead, owned by Steamer Colin W., Ltd., a subsidiary of Canada Shipping Co., Montreal, has been changed to Colin W. This vessel was formerly owned by F. E. Hall & Co., Montreal, and was built at West Bay City, Mich., in 1881, and then named Clyde. She was caught in a storm on Lake Ontario, Sept. 11, and had her rudder damaged, and when making Kingston for repairs, she ran ashore there near the foot of Johnston St.

The Reid Towing & Wrecking Co.'s steam tug S. M. Fischer is reported to have been sold to the French Government and to have left Sarnia for Montreal, where she is to be fitted for ocean service. The price paid is said to be \$265,000. The tug was built at Toledo, Ohio, in 1896, of steel, with spar deck, double bottom for watertight ballast and three watertight bulkheads. She is 140 ft. long, 31 ft. beam and 22 ft. deep, and equipped with triple expansion engines with cylinders 18, 30 and 50 in. diam. by 36 in. stroke, supplied with steam by 2 Scotch boilers, 11½ by 11½ ft., at 170 lbs.

The Farrar Transportation Co. has received \$500 from the Dominion Naval Service Department, for distribution among the crew of the s.s. Meaford for sinking a German submarine in the Mediterranean Sea, June 12. The s.s. Meaford has been under charter to the French Government for Mediterranean service for some time. She was en route from Swansea to a Mediterranean port, when she encountered a German submarine near Sicily, and sank her with the third shell. Prior to entering this charter service, the Meaford had been engaged in the Great Lakes trade for the Farrar Transporta-

tion Co., since 1903, when she was built at Newcastle upon Tyne, Eng.

Little Current, Ont., press dispatch, Sept. 17.—The steel steamer Western Star of Buffalo, sunk in the autumn of 1915, with a cargo of coal, was raised and towed to a sheltered bay yesterday. The vessel lay in 80 ft. of water at the stern. Capt. Alex. Cummings, Superintendent for the Great Lakes Wrecking Company, built a timber cofferdam from the deck of the boat to the surface of the water and then pumped it out. As soon as the ship cleared from the bottom large tugs towed her into good bottom, and as she was raised she was pushed farther ashore to avoid accident. She was valued at \$400,000 and was insured for \$250,000.

It was stated in our August issue that the s.s. Collingwood, owned by the Farrar Transportation Co., Toronto, had carried 7,000 tons of ore between two U.S. ports in July, being the first vessel to run under the revised coasting regulations permitting reciprocal coasting privileges for Canadian and U.S. vessels. By an unfortunate error in "making up" the matter, it appeared under "Atlantic and Pacific Ocean Marine," instead of under "Ontario and the Great Lakes." We are now advised that the cargo contained 8,000 tons, that it was carried between Allons, Wis., and Ashtabula, Ohio, and that the s.s. Collingwood was the first Canadian vessel to carry a cargo of U.S. ore between two U.S. ports.

British Columbia and Pacific Coast.

The Pacific Steamship Co. is reported to have signed an agreement with the Canadian Northern Ry., whereby passengers can book from San Francisco to all points east at the regular transcontinental rates.

The Grand Trunk Pacific Ry. has deposited with the Dominion Public Works Department plan and description of site of wharf and plant it proposes to build in front of water front block G in Prince Rupert harbor.

The Union Steamship Co.'s s.s. Cassiar, which was wrecked at Ingcombe Inlet, at

the end of August, has been taken to the Wallace Shipyards, North Vancouver, for overhaul and repairs. The damage is estimated at \$30,000. Temporary repairs were made at the scene of the casualty by the British Columbia Salvage Co.

The s.s. Coosa, which is being operated by the Pacific Steamship Co., between Seattle, Wash., and British Columbia ports, was formerly the German s.s. Loongmoon, and at the commencement of the war was interned by the United States at Honolulu, and taken over by the U. S. when that country declared war against Germany.

The Union Steamship Co.'s s.s. Cassiar was docked at the Wallace Shipyards, North Vancouver, Sept. 17, for examination after having struck a reef. The bottom of the hull was considerably damaged from stem to stern, the forefoot being crushed, and the keel for about 25 ft. was stove in, damaging the plates for some distance up on either side. The stern was knocked forward about 12 in., and the rudder was broken.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince George left Victoria, Sept. 12, on her 301st trip. Since being built, she has been operated regularly on the route between Seattle, Vancouver, Victoria and Prince Rupert, with the exception of a few weeks when she was under Admiralty orders at the commencement of the war. The s.s. Prince Rupert, a sister vessel, has recently completed her 250th trip, the continuity of her service having been broken by an unfortunate accident in the early part of the year, which necessitated her withdrawal for about three months.

The Grand Trunk Pacific Coast Steamship Co.'s steamships Prince Rupert and Prince George commenced their autumn schedule Sept. 23, the former leaving Victoria and Vancouver on Mondays, and Prince Rupert on Wednesdays, and the latter leaving Victoria and Vancouver on Thursdays and Prince Rupert on Mondays. The s.s. Prince John is operating on alternate Alaskan routes, and the s.s. Prince Albert is operating a freight and passenger service out of Vancouver approximately fortnightly.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during August

ARTICLES		CANADIAN CANAL	U. S. CANAL	TOTAL

Shipbuilding Activities Throughout Canada.

Steamship Building for British Government.

Cameron-Genoa Shipbuilders, Ltd., has completed the framing of the second of the four wooden steamships being built for the Imperial Munitions Board. The ceiling and planking of the first hull is well under way. It is anticipated that the first vessel will be ready for launching early in December. The company only undertakes the construction of the hulls, and as soon as these are ready they will be taken to a central assembling plant which is to be located at the Ogden Point piers.

J. J. Coughlan & Sons, Vancouver, B.C., expect, it is stated, to launch the second steel steamship to be built on the Pacific Coast for the British Government, early in November. The first one, the s.s. War Dog, was built by Wallace Shipyards, Ltd., and has already been described and illustrated. The second will be named War Champ.

The Foundation Co. has the framing of its first wooden steamship placed and the framing of the second practically so.

The Three Rivers Shipyards, Ltd., which was incorporated under the Dominion Companies Act, Aug. 15, 1917, with authorized capital of \$49,000, and office at Three Rivers, Que., is establishing a shipbuilding yard there. It is said that that city is guaranteeing the company's bonds for \$100,000, taking a mortgage on the plant, and that the bonds will be underwritten by the Credit Canadien, Inc., Montreal. The company is said to have a contract from the Imperial Munitions Board for hulls for two wooden ships, and is also said to be likely to receive further contracts. T. M. Kirkwood, Toronto, is President; J. E. Kirkwood, Treasurer, and T. M. Donnelly, Manager.

Western Canada Shipyards, Ltd., Vancouver, which has an order for six wooden steamships for the Imperial Munitions Board, have completed erecting the frames for the first hull, those for the second and third being well advanced. Night and day shifts are being worked.

The William Lyall Shipbuilding Co., is reported to be making good progress with the construction of the 10 wooden steamships on order for the Imperial Munitions Board. The framing of the first vessel was placed early in September, and the framing of the second was erected during the month. Keels for the second pair were expected to be laid before the end of the month, and considerable of the framing placed.

General Shipbuilding Notes.

The Annapolis Shipbuilding Co. launched a tern schooner at Annapolis Royal, N.S., Sept. 1, for Montreal parties. The dimensions are: Length, 145 ft.; beam, 35 ft.; depth, 12.9 ft.; tonnage, 500 gross, 430 register. The company has two other schooners under way.

British Columbia Shipbuilding. — A Vancouver press dispatch, Sept. 15.—British Columbia's shipbuilding programme provides for the construction of some 17,000 gross tons of commercial shipping, to have a total carrying capacity of nearly 185,000 tons. The value of these ships, about 50 in all, is in the neighborhood of \$25,000,000.

H. Elderkin & Co. are reported to have launched the schooner Adam B. Mackay,

of 370 tons register, at Port Greville, N.S., Sept. 3, for the A. B. Mackay Steamship Co., Hamilton, Ont.

Foley Bros., Halifax, N.S., have purchased North's shipyard at Hantsport, N.S., and are reorganizing and enlarging the plant. Two vessels are reported to be under construction there.

The Gardner Co. have built an auxiliary schooner, named Bianca, at Liverpool, N.S., for Bowring Bros., St. John's, Nfld. She is 129 ft. long, 33 ft. beam, and 408 gross tons and is equipped with a 100 h.p. crude oil burning engine, for a speed of about 6 knots an hour.

Government Shipbuilding in Maritime Provinces.—Sir James Loughheed stated in the Senate, Sept. 5, that the government had under consideration the building of ships in Prince Edward Island, Nova Scotia and New Brunswick, for commercial use or government purposes, but that no contracts had been concluded.

The International Shipbuilding Co., which purchased property recently at Rosebank, N.B., on the bank of the Miramichi River, for the establishment of a wooden shipbuilding plant, is pushing matters ahead, and is reported to be receiving stocks of vessel timbers for early construction.

Leander Graham is building a schooner, Khaki Lad, of about 325 tons, at Port Greville, N.S., for J. W. Kirkpatrick and others. She will be launched early in October, and is reported to have been sold to Newfoundland parties.

J. Lewis & Son, East River, Sheet Harbor, N.S., launched a four masted schooner, 215 ft. long over all, 680 tons register, Sept. 1. She is fully equipped with steam winches, and is intended for southern trade. The company has a larger schooner under way.

The Midland Shipbuilding Co. Ltd., has been incorporated under the Dominion Companies Act, with \$1,000,000 capital and office at Midland, Ont., to carry on the business of shipbuilders in all its branches. It is said that it will take over the Midland Dry Dock Co., Ltd.

Port Arthur Shipbuilding Co.—The steam trawlers under construction at the company's yards at Port Arthur, Ont., are progressing rapidly. The second one was launched Sept. 10, and it was anticipated that two more would be launched by Sept. 30 and another two early in October, and then at the rate of about one a week for the balance of the order.

Wallace Shipyards, Ltd., is reported to have leased a site on Granville Island, in False Creek, from the Vancouver Harbor Commissioners, for the construction of a foundry for the supply of castings for its own and other shipbuilding plants.

Wallace Shipyards, Ltd., expected to launch the last of the auxiliary powered schooners built for Canada West Coast Navigation Co., about the end of September. She is to be named Marie Barnard. She was built at the no. 2 yards, which have been sold to Wm. Lyall Shipbuilding Co., and as soon as she is launched she is to be moved to the no. 1 yards for completion.

British Shipbuilding in United States.—A press dispatch says that the s.s. War Banner, which is being built for British registry, was launched at Chicago, Sept. 16, by the Chicago Shipbuilding Co., for the Cunard Line, the approximate cost being \$800,000.

Lake Vessels for Overseas Service.

A Kingston, Ont., press dispatch of Sept. 13, stated that the Canada Steamship Lines had sold six steamships, viz., H. M. Pellatt, J. H. Plummer, Beaverton, A. E. Ames, Mapleton and Saskatoon, to the British and Canadian Governments jointly, to replace losses caused by the German submarine campaign. The vessels mentioned are not owned by Canada Steamship Lines, but by Canadian Northern Steamships, Ltd., as stated in Canadian Railway and Marine World for June. They are operated, for the owners, by Canada Steamship Lines, as the Merchants Mutual Lake Line. We are officially advised that they have not been sold, and while no further information in regard to them is available, there appears to be little doubt that at least four of them, viz., A. E. Ames, Beaverton, H. M. Pellatt, and J. H. Plummer, have been chartered for overseas service for the ensuing winter, if not for the duration of the war. The H. M. Pellatt went into dry dock at Kingston early in September to be overhauled and re-painted, and have some slight changes made to fit her for ocean service and the other three will probably be drydocked at early dates. The Mapleton and the Saskatoon have been in the coal trade this year, running between Sydney, N.S., and St. John, N.B., and between Sydney and Montreal, most of the time. The Mapleton was brought west a little while ago, to carry coal between Lake Erie ports and Montreal.

Reciprocal Coasting Arrangement with the United States on the Great Lakes.—Some little misunderstanding seems to exist as to the arrangements made between Canada and the U. S. as to the coasting laws appertaining to the Great Lakes. So far as Canada is concerned, the coasting laws have been changed to permit U. S. vessels to engage in the Canadian coasting trade of Canada on the inland waters between Lake Superior ports and Montreal without penalties for the balance of the season, the change to remain in force so long as similar privileges are in effect granted to Canadian vessels by the U.S. The U.S. regulations were settled by an act of Congress, and the administration there has not the authority to abrogate or suspend such regulations, as the Dominion cabinet has. Accordingly, pending action by Congress, the administration acted, not by suspending the regulations or the law, but by suspending the penalties, and Canadian vessels are therefore free to engage in the trade on this basis, and inspectors and collectors, acting on instructions from Washington, are not interfering.

The Henderson Transfer and Lighterage Co., Ltd., has been incorporated under the Ontario Companies Act, with \$100,000 authorized capital and office at Fort William, to carry on a general lightering, towing and wrecking business, and in connection therewith to own and operate steam and other vessels, and to engage in foreign and domestic commerce by water. R. J. Henderson and J. R. Smith, grain merchants, Fort William, are chiefly interested.

Lumbergrass Shipbuilding Co., Ltd.—At an extraordinary general meeting, at St. John's, Nfld., Aug. 27, it was resolved that it having been proved to the shareholders' satisfaction that the company cannot, by reason of its liabilities, continue business, it is advisable to wind up the company voluntarily. P. J. Shea, St. John's, Nfld., was appointed liquidator.

Changed Subsidies for Dry Docks.

The following act was passed by the House of Commons Sept. 17.

1. This Act may be cited as The Dry Docks Amendment Act, 1917.

2. Paragraph 1 of section 7 of The Dry Docks Subsidies Act, 1910, as enacted by chapter 20 of the statutes of 1912, is repealed and the following is substituted therefor:—

“(1) Dry docks of the first class for naval and general purposes costing, for the purposes of the subsidy calculation, not more than \$5,000,000 in the case of dry docks specified in sub-paragraph (a), and not more than \$4,000,000 in the case of dry docks specified in sub-paragraph (b) hereunder, being—

“(a) dry docks, other than floating dry docks, of dimensions when completed of not less than the principal dimensions next hereinafter mentioned, that is to say, clear length on bottom from caisson groove or hollowquoin to head, 1,150 ft., clear width of entrance 125 ft., depth of water over sill at high water ordinary spring tides, 38 ft; and

“(b) floating dry docks of a lifting capacity of at least 25,000 tons, in which vessels can with ease and safety be received and repaired:

Provided, however, that any such dry dock shall not, for the purposes of this act, be deemed to be a dry dock of the first class unless there can be received and repaired therein with ease and safety the largest ships or vessels of the British Navy existing at the time at which the contract is entered into.”

3. Paragraph (a) of subsection 1 of section 8 of the said act (as enacted by chapter 29 of the statutes of 1914, is repealed and the following is substituted therefor:—

“(a) if of the first class, a sum not exceeding 4½ per annum of the cost of the work as fixed and determined under subsection 2 of this section, half yearly during a period not exceeding 35 years from the time the Governor in Council has determined under this act that the work has been completed.

No bonds, debentures, or other securities shall be issued with respect to and as a charge upon any dock until it has been established to the satisfaction of the Minister that not less than \$1,000,000 have been spent on the work and the material upon or for such dock, and that there are no outstanding and unsettled liens, encumbrances or claims upon or in respect of such dock, but thereafter the Minister may permit the issue of bonds, debentures, or other securities, and any subsidy mentioned by this section may, with the approval of the Minister, be assigned to a trustee for the holder of such bonds, debentures, or other securities, and the subsidy shall, in that event, be payable directly to such trustee, but, until the dock has been completed to the satisfaction of the Minister, the total amount of the bonds, debentures, or other securities issued shall not at any time exceed 75 per cent of the amount actually expended for the work and the materials upon or for the dock and in no case shall any bonds, debentures, or other securities, be issued without the consent in writing of the Minister.

Provided, however, that half yearly payments on account of the subsidy at the rate of 4½ per annum on 75 per cent of the cost of all work done and material provided at the time of such payment may be made during the construc-

tion of the said dock and for such period as may be determined by the Governor in Council, not exceeding 35 years from (and including) the first payment thereof, the amount of such cost to be determined by the Chief Engineer of the Department of Public Works, but no such payment on account shall be made until the work done and materials provided shall have cost the sum of at least \$1,000,000. No such payments on account shall be made unless the said chief engineer reports that the work of construction of the dry dock with respect to which the payment is to be made has been done to his satisfaction, and no subsidy shall be paid except payments on account as aforesaid unless the Governor in Council, in the manner prescribed in section 10 of this act, has determined that the work required by the agreement is completed. The total subsidy, including such payments on account during construction shall not, however, in any case, exceed the amount of subsidy hereinbefore authorized.”

4. The provisions of section 3 of this act shall not apply or extend to any agreement heretofore made for the construction of any dry dock.

5. The Dry Docks Amendment Act, 1912, chapter 20, of the statutes of 1912, and The Dry Docks Subsidies Act, 1914, chapter 29 of the statutes of 1914, are repealed.

Canadian Pacific Ocean Services and the War.

The services performed by the vessels owned by Canadian Pacific Ocean Services, Ltd., comprising those of the C.P.R. and Allan Lines, have been of inestimable value to Great Britain, and to the allied countries generally. The tonnage owned has, since the commencement of the war, increased by nearly 30 per cent, and the company employs about 15,000 men. At the outbreak of war, the C.P.R. and Allan Lines had in service 35 vessels with a gross tonnage of 313,000 tons, and a large proportion of these was requisitioned by the Admiralty, including all the larger and newer vessels of both fleets. Two of the Allan Line vessels were commissioned as armed cruisers, and the four “Empresses” of the C.P.R. Pacific fleet were also fitted out as armed cruisers. A number of other vessels of both companies were taken for troop service, or for transporting supplies and munitions, not only across the Atlantic, but over all waters from the far west to the far east. Notwithstanding this exceptional call on the companies' resources, they were able to carry on a regular passenger and freight business, maintaining an uninterrupted mail service and passenger and freight traffic westbound, as well as carrying eastbound large numbers of troops and stores and munitions of war. From the commencement of the war, the two companies transported 700,000 troops and passengers from and to Canada, the Mediterranean, India, China, Egypt, Gallipoli, Mesopotamia, across the English Channel, and the Pacific Ocean. During the same period the vessels steamed over 1,230,000 miles, and carried eastbound and westbound, over 3,000,000 tons of cargo, munitions, supplies, etc. The combined fleets, though suffering some slight diminution of tonnage by reason of war, have been gradually increased by purchase and building, so that today the number of vessels owned is 40, with a gross tonnage of 411,000 tons,

while orders have been placed for four additional vessels of large tonnage. Services are being maintained in carrying mails for the different parts of the Dominions and the outer European ports of the allied countries.

Mainly About Marine People.

C. O. Weldon has been appointed Superintendent, International Transit Co., Sault Ste. Marie, Ont., succeeding J. Summerhayes, resigned.

W. G. Ross, President, Montreal Harbor Commissioners, was re-elected President of the American Port Authorities at the recent annual meetings at Cleveland.

W. J. Vigers, Steamboat Inspector, Port Arthur, has been appointed Examiner of Masters and Mates, to examine candidates for temporary masters' certificates.

Capt. H. Oldenburg, master of the G.T.R. car ferry Lansdowne, operating on the Detroit River, died at Windsor, Ont., Sept. 4, aged 68. He had been in the service for 45 years.

Mrs. Stevenson, wife of the captain of the Canada Steamship Lines s.s. Rapids Prince, died at Cornwall, Ont., Sept. 21, from being run over by an automobile at Avonmore.

Capt. J. D. Warren, a pioneer sealing captain on the Pacific coast, and one time owner of the s.s. Beaver, said to be the first steamship plying along that coast, died at Victoria, B.C., Sept. 10, aged 80.

John W. Nutt, formerly Manager for British Columbia for the Allan Line Steamship Co., was presented with a purse of money and an address by a number of his transportation associates, at the Transportation Club, Vancouver, B.C., recently, on leaving for Winnipeg.

Jas. W. Crosby, who was in the Halifax Electric Tramway Co.'s service for some 19 years, his last position being General Manager and Purchasing Agent, and who, since the taking over of the company's business by the Nova Scotia Tramways & Power Co., has been in the latter company's service, is leaving it.

J. O. Cameron, of Cameron-Genoa Shipbuilders, Ltd., and the Cameron Lumber Co., Victoria, B.C., was elected a Vice President of the Association of Pacific Coast Port Authorities, at its annual meeting at Los Angeles, Cal., recently. It is probable that the association will meet in Victoria in 1918.

Alfred Erwin McMaster, who was appointed Secretary and Treasurer, Port Arthur Shipbuilding Co., Port Arthur, Ont., recently, was born at Perth, Ont., Oct. 22, 1885. He entered transportation service in 1902, since when he has been, to May, 1903, clerk in Freight Department, C.P.R., Keewatin, Ont.; May, 1903, to 1905, clerk, C.P.R., Port Arthur, Ont.; 1905 to Aug., 1907, chief clerk, C.P.R., Port Arthur, Ont.; Aug., 1907, to Aug., 1908, agent and chief clerk to Superintendent, Grand Trunk Pacific Ry., Fort William, Ont.; Aug., 1908, to July 15, 1913, agent and General Agent, G.T.R., G.T.P.R. and G.T.P. Coast Steamship Co., Prince Rupert, B.C.; July 15, 1913, to Sept. 30, 1916, Commercial Agent, G.T.P.R., Regina, Sask.; Sept. 30 to Dec. 21, 1916, Division Freight Agent, G.T.P.R., Edmonton, Alta.; on Dec. 21, 1916, he was appointed Assistant Secretary for British Columbia, Canadian Manufacturers' Association, with office at Vancouver.

Reinforced Concrete Vessel Building in Montreal.

The Atlas Concrete Shipbuilding Co. has been organized in Montreal, to build a self propelling, reinforced concrete vessel for demonstrating purposes. The shell of the hull will be: length, 125 ft.; width, 22 ft.; depth, 13 ft. The vessel will be of the single screw type, capable of making about 8 miles an hour, and will first be tried on the lakes, and will perhaps later be used for ocean service. In the accompanying illustration the concrete hoist is shown in place ready to pour concrete as soon as the formwork is completed. The structural steel ribs shown are 5 in. at the top, and 14 in. at the base and are set at 27 in. centre to centre. Before plans were prepared by C. M. Morssen, M.Can.Soc.C.E., and E. Brown, Professor of Applied Mechanics

machinery has been added, but no actual details of the resulting operation of the vessels are available, although it is said that a completed vessel, with reinforced concrete hull, and equipped with propelling machinery, has been, or is very shortly being, placed in operation. The chief building of this type of vessel is taking place in Norway, where the hull of a 200 ton vessel was reported to have been launched Aug. 23. That hull was built bottom upward, and launched in that manner, eventually righting itself in the water. The frame used for the concrete is immediately available for another hull of similar size. Concrete barges, or lighters, have been in use also for several years, on the Manchester Ship Canal, Manchester, Eng., the Welland

crete vessel construction being undertaken there in the near future, and it is announced that the Torcrete Shipbuilding Co. has been organized in Chicago, to build similar vessels for operation on the Great Lakes.

Lake Sailors' Wages.

Detroit, Mich., press dispatch, Sept. 12.—Following the custom of previous years the United States Lake Carriers Association has adopted a scale of wages effective Oct. 1, for men employed on its members' boats, which represents a substantial increase for each class of workers over scale now in effect. Increases represent an addition of from \$5 to \$13 a month to members of crews ranging from a little more than 4 to more than 21¹/₂ over summer schedule for different classes of labor. The classes of workers benefitted, their present monthly rates of wages, and monthly rate effective Oct. 1 are as follows:—

Classification.	Present wages.	After Oct. 1.
Boatswain	\$ 85.00	\$ 95.00
Cooks, vessels over 4,000 tons	120.00	125.00
Cooks, vessels under 4,000 tons	105.00	110.00
Second cooks	60.00	65.00
Porters	47.50	57.50
Firemen, oilers, water tenders	72.00	85.00
Wheelsmen, lookout men	72.00	85.00
Ordinary seamen	47.50	57.50
Coal passers	45.00	50.00

While no fixed amount of increase in salaries of licensed officers is announced, the provisions of the wage card in effect last season with reference to bonus payments will again be operative. Under this plan all licensed officers who have served all season on a single vessel or in a single employ, and have laid their vessels up at the end of the season, will receive a full month's extra pay.

U. S. Lake Vessels for Ocean Service.—

With reference to some information in our last issue as to the transfer of some 80 U.S. steamships from the Great Lakes to the Atlantic coast for winter service, it is now reported that the proposals may be abandoned owing to the alleged lack of docking facilities in the St. Lawrence. As most of the vessels which it was intended to transfer, would have to be cut in two to allow of their passage through the Welland Canal, arrangements would have to be made with Canadian yards on the St. Lawrence for refitting them, which, owing to the pressure under which these yards are working, is considered impossible. The U. S. Shipping Board is reported to be endeavoring to make arrangements with Canadian yards, and if this cannot be done, it is stated that only some 20 steam tugs will be taken to the coast.

S.S. Leebro's Work on Pacific Coast.—

Sir Jas. Loughheed stated that the s.s. Leebro is owned by the Crescent Shipping Co., Ltd., Victoria, and is under charter to the Marine Department at \$150 a day so long as the Department shall require her services. She has been chartered by the Department from time to time since June 3, 1908, the rate being \$135 a day until Dec. 16, 1911, when the rate was reduced by \$10 a day. From that date until Aug. 1, 1917, she was in service at \$125 a day, since when, owing to the increased cost of coal, supplies and wages, the rate has been \$150 a day. The rates referred to are for the vessel found in supplies of all kinds and cover wages of all necessary officers and crew for navigating the boat, also for fuel and provisions, and the owning company has to keep the vessel in repair.

Framework, Etc., for Concrete Vessel Building in Montreal.

and Hydraulics at McGill University, tests were made on small ship beams to ascertain the resistance of concrete to the effects of hogging and sagging. The hull is expected to be ready for launching by Oct. 15.

The building of vessel hulls of concrete reinforced with steel, has, to a minor extent, been going on spasmodically since 1849, when a small vessel was built in France, and which is stated to be still in use. About 20 years ago a number of vessels were built of reinforced concrete in Italy, and in 1898 a schooner was built and operated for a few years in the North Atlantic trade. It is said that this vessel was injured after having been driven on the rocks near Cape Charles.

A few years later a concrete barge, 50 ft. long by 13 ft. wide and 3 ft. 4 in. deep, was built in France, and operated for dredging purposes on the River Lozere, where it has been at work continuously ever since. Until quite recently this type of hull construction was confined solely to barges, lighters, etc., but latterly the construction of larger vessels has been undertaken, and propelling

Canal, Ontario, and on the Chesapeake Bay, U.S., and the Panama Canal.

It is claimed that there is considerable advantage to be gained, by the use of concrete for barge construction and vessels of similar type, and that for machinery propelled vessels for ocean transportation, it is perfectly safe, and of equal, or superior advantage, but some doubts are expressed as to the possible disintegration of the mixture by the action of salt water, and as to the effects of a lack of resiliency in ocean service. After a rather serious collision between the C.P.R. s.s. Empress of Britain, and the collier s.s. Helvetia, in the St. Lawrence, July 27, 1912, some rather extensive damage to the former vessel was repaired with concrete, and similar material was used for temporarily repairing the Canadian Northern Steamships s.s. Royal George, after she grounded at the Isle of Orleans, in the St. Lawrence, Nov. 5, 1912. Both vessels crossed the ocean under these repairs in perfect safety.

A British Columbia press report indicates that there is a possibility of con-

Canadian Railway and Marine World

November, 1917.

Locomotive Design and Construction from a Maintenance Standpoint.

By W. H. Winterrowd, Assistant to Chief Mechanical Engineer, Canadian Pacific Railway.

It is a question if there has ever existed a locomotive house foreman who has not, at some time or other, had the feeling that if some part of a locomotive had been designed a little differently, he could make repairs quicker, easier, and at less expense. While in many instances he may have been justified in this feeling, there are, however, cases influenced by other factors which may have been of greater importance from the standpoint of ultimate economy of operation.

The type and size of a locomotive have an important bearing on certain details of design. A discussion of the factors relating to the selection of the desired type and size is far beyond the scope of this paper, as it would involve a thorough consideration of the economics of railway operation. Some of these factors, usually considered from the standpoint of both present and future, are grades, track curvature, train speeds, train resistances, kind and nature of business, size and type of existing locomotives, transportation expenses, maintenance of equipment, and physical conditions, such as clearances, bridges, turntables, locomotive houses, repair shops, terminal and water facilities, etc. Occasionally certain of these factors may be such that some detail of the resulting design, while undesirable from a maintenance standpoint, is unavoidable. However, the majority of locomotive details are free from other than purely local restrictions and may be designed almost entirely from a maintenance standpoint.

It should not be inferred from what follows that mechanical and operating men, as well as locomotive builders, have not given a great deal of consideration to the points mentioned. Very many locomotives in service today bear witness of such consideration. However, there are at present justifiable reasons for emphasizing and reviewing the importance of locomotive design from a maintenance standpoint. Today, under changed conditions, the railways are being called upon to render greater service than ever before. But little new equipment is available other than that which the railways may build in their own shops. Repair shops are being worked to capacity. Skilled railway mechanics are scarce. Material of all kinds is difficult to obtain. All of which means that maximum service must be obtained from every bit of existing equipment. It is, therefore, essential to consider every legitimate means whereby the out of service period of a locomotive may be decreased and the in service period increased. All new locomotives should be constructed to give maximum service with minimum maintenance. All locomotives being rebuilt, or modernized, should be turned out of the shops prepared to give similar results. Any improvement that can be made to any locomotive, new, modernized, or under repairs, which will result in increased service, increased efficiency, or decreased maintenance, will help to increase the capacity of the railways. The following covers briefly a few of the points worthy of consideration:

Boiler.—It is hardly necessary to state that a well designed boiler of ample capacity is easier and cheaper to maintain than one of smaller capacity and which has to be forced continually. The importance of ample capacity can scarcely be overemphasized, either from a maintenance or operating standpoint. Within its limits of weight and size, a boiler should be designed to have a capacity as large as possible, consistent with other governing factors. In this connection the valves of the superheater, the brick arch, and the feed water heater are unquestionable. These values have been practically demonstrated from the standpoint of economy as well as locomotive capacity. The maintenance of locomotive boilers is an important factor, the greatest difficulties being leaky flues, leaky mud rings, broken staybolts, and cracks in firebox sheets.

Knowing that firebox heating surface does a great deal more work per square foot than flue heating surface, boiler capacity does not depend upon long flues. Short flues are the easiest to maintain. Flue location and spacing should be carefully considered, so as to permit easy maintenance, proper distribution of stresses, with a minimum amount of staying, and also to facilitate washing out, particularly in bad water districts. Many failures are frequently the result of crowding in too many flues, placing them too close to the heel of the flue sheet flange, and the use of too small a bridge. The flue sheet flange radius should be carefully considered in relation to the flue layout. Too small a radius, with flues located close to the heel, will not give as much flexibility as may be desired and will make the top flues difficult to maintain. Continued expanding of the flues will cause the sheet to flow, often resulting in flange cracks. The bead on the flues adjacent to the flanges should always rest on the flat surface of the sheet and never on the curved inside surface of the heel. With 2¼ in. or greater diameter flues it is best that the width of bridges be not less than ¾ in. Assuming that these points have been taken into consideration, it is important to see that the shop layout and driller follow the design. There have been cases where a layout has located flues incorrectly and also added one or more. It is also important that flue sheet holes be drilled the proper diameter as it is almost impossible to keep flues tight in holes that are too large.

The radii of door and hack head sheet flanges should be studied in relation to the staybolt stresses. A moderately large back head sheet radius will reduce the stress in outer rows of bolts by transferring a portion of the load to the wrapper sheet. Too small a door opening radius will frequently result in cracking of the sheet at this point as provision is insufficient for expansion.

Mud ring corners of ample radius will be easy to construct and maintain. Trouble due to small radius has, in many instances, been overcome by electric or acetylene welding the bottom edges of

the sheets at this point to the mud ring.

Flexible staybolts reduce staybolt breakage. A careful investigation will indicate the zones of maximum staybolt stress and sheet movement. In these zones the flexible bolts will give good results and reduce staybolt renewals.

Washout plugs should be so located that all points of the firebox and barrel can be easily reached with standard washout equipment.

Grates should have sufficient air space, be free as possible from dead spots, and be easy to remove. Where certain kinds of fuel are used, properly designed dump grates may be a means of reducing the time the engine is on the ash pit.

As far as possible, all brackets, clamps, or fittings applied on the boiler or firebox should be so located that staybolts, rivets, or portion of caulking edges will be accessible with a minimum of labor.

In connection with the barrel of the boiler, points which may be mentioned are—throttle and dome arrangement which will permit interior inspection of the boiler without the removal of the standpipe; also the elimination, as far as possible, of all small studs. The latter will apply equally to all parts of the boiler under pressure.

Expansion slides, instead of an expansion sheet, under the front of the mud ring, will eliminate the maintenance of a considerable number of bolts and rivets. Proper consideration of all other expansion sheets will further reduce maintenance of many bolts and rivets and tend to eliminate the many resulting troubles as well.

The front end, or smoke box, should be arranged to permit of access to all parts with the least possible work.

Frames should be of ample cross section and well braced to hold them rigid. Maximum cross section may be of little avail unless accompanied by sufficient and properly located bracing. In this connection, it hardly seems necessary to mention the advantages of a valve gear located outside the frames. The outside gear has made possible better frame bracing, to say nothing of the advantages of easier inspection and maintenance of the gear itself. As far as possible, bolt holes in frames should not be located where stresses are greatest. Where cylinder design will permit, a one piece frame with a top tie splice seems desirable. Where large cylinders prevent the above arrangement, a one piece frame with ample depth under the cylinders and having no reduction in thickness, will give excellent service.

Cylinders.—The advantages of outside steam pipes are self evident from the standpoint of both construction and maintenance. Cylinders should have saddle faces well bolted together to prevent working. All other things being equal a double row of bolts is better insurance than a single row. Weakening grooves cut in covers will reduce repairs to a minimum in case of failure.

Motion.—All bearing pressures should be as low as consistent with good practice

in order to reduce the wear and resultant replacement. Ample pin length is desirable in order to obtain lateral stability. Arrangement of motion and design of back steam chest and back cylinder covers should be such that both valve stem and piston rod packing will be easily accessible. Fillets on pins, axles, etc., should be of ample radius. Small fillets are frequently factors in failure. Where possible a piston rod of sufficient length to permit piston ring renewals without the removal of the rod from the cross head will reduce maintenance cost. Rod bolts and wedges may be dispensed with by the use of solid bushes. Rods should be designed and arranged so that it may be possible to remove them with a minimum of labor.

The C.P.R. has found that knuckle pins with a small extension on the threaded end through which a strong flat cotter can be placed have been excellent insurance against the usual consequences of loose nuts. Valves of light weight will reduce the load on all valve parts and result in reduced maintenance. Selection of high grade, close grained, cast iron for cylinder and valve bushes, piston heads and rings, and in some cases rod bushes, is more than warranted in view of the increased mileage obtainable and the corresponding decrease in maintenance. If conditions permit the consideration of heat treated, or alloy steels, unbalanced forces may be very materially reduced by the use of light reciprocating parts. The reduction of such forces will in turn tend to reduce maintenance of pins, bushings, etc.

Equalization.—Locomotives should be equalized so as to secure the most efficient guiding power from both leading and trailer trucks, or wheels. This involves the proper distribution of weight and a means of keeping the proper amounts on the various axles at all times. In general, the best results seem to be obtained by dividing the equalizing system so that the division between the front and back systems is as directly under the centre of gravity of the locomotive as wheel base and other conditions will permit. The spring gear and equalizing system should receive particular attention when being erected and also when being repaired. The tops of the driving boxes should be milled out squarely and in a plane parallel with the journal bearings. The equalizer and saddles should be fitted to their seats squarely with the pin holes so that the engine will ride squarely on her springs and track properly. The same will apply to the trailer truck equalizers and spring rigging. Trailer trucks that do not carry the back of the engine level are responsible for much avoidable tire wear.

Spring and Brake Rigging.—The application of bushes will facilitate and cheapen renewal of worn parts. Hangers and their connections should be accessible and easily removable. A driver brake main fulcrum shaft in two pieces of equal length, the outer ends supported in bushed bearings integral with the main frames and the central portion supported by a sleeve, will give more even distribution of braking power and maximum accessibility for repairs and adjustments. Brake cylinders, if at all possible, should be located vertically, in order to reduce packing wear and provide accessibility. Brake shoe heads and hangers should be so constructed and hung that shoes will swing clear of wheels when pressure is released and permit easy application of new shoes. Safety hangers should be provided to support and prevent sagging of brake rods. The ratio of brake cylinder

to brake shoe pressure should be kept as low as consistent, and should not exceed commonly accepted ratios. This will insure that false travel will be kept to a minimum.

Piping.—The importance of ample clamping and provision for expansion cannot be overemphasized. Piping should be as short as possible consistent with conditions. Accessibility is of prime importance. Piping should be so located that there is no obstruction of washout plugs, arch tube covers, pads, etc. Where pipes pass through the front of the cab, provision should be made for clearance or for sleeve protection to prevent wearing or cutting. The C.P.R. has found it a decided maintenance economy to place lubricator piping from cab to cylinders, etc., in a slightly larger wrought iron pipe where the feeds pass beneath the jacket and lagging. By this means the feed pipes can be removed or applied without the necessity of removing any outside covering. Air brake and steam piping should drain properly and contain no traps in which water can accumulate and freeze. It is desirable that pipes from the sand dome be as nearly vertical as possible, the bottom ends being securely clamped in alignment with the rail.

Miscellaneous.—Ash pans should be as simple as possible, and the sides should have sufficient slope to prevent the accumulation of ash under the grates. Swing doors can be suspended so that their own weight helps to keep them closed. This results in less strain on the door operating rigging.

Easy inspection and maintenance results from placing main reservoirs in an accessible location. Where this is impossible, and drain cocks are hard to reach, an extension handle, the end of which is easily accessible, makes the reservoir easy to drain.

Removable liners on locomotive and tender truck pedestals makes it easy to take up wear and reduce pedestal renewals. To prevent rapid wear between wheel hub liner face and driving box sufficient provision for lubrication should be made.

Shoes and wedges should be so designed that wear can be easily reduced and wedges kept in their proper place with a minimum of labor. Improperly maintained shoes and wedges soon result in increased maintenance of boxes, rods, pins, etc.

Pilots made of scrap boiler flues cost less to maintain than those of wood.

All oiling points should be made as accessible as possible. Handholds or small steps, properly located, to make some oiling points accessible, will soon pay for themselves. Lubricator chokes should be placed in proper position and located as near to the cylinder, or steam chest, as possible. Proper inspection and maintenance of chokes has been found the key to many lubrication troubles. The location of the lubricator in the cab where the feeds may easily be seen and adjusted will result in better lubrication. When located close to the front of the cab, or where the light is poor, proper adjustment is exceedingly difficult.

Four pane cab side windows are easier and cheaper to maintain than those containing one large pane.

Boiler jacketing should be applied in sections so that panels can be removed with a minimum of labor.

The foregoing are but a few of the multitudinous details which merit most careful thought. But little mention has been made of the possibilities of simplified design by the use of cast steel. It is felt that with the development of the

cast steel industry and the production of castings which are practically equivalent to wrought iron, locomotive construction in the future may be greatly simplified. We are today, using castings that 10 years ago would have been deemed impossible to successfully cast. For example, one-piece locomotive frames are now under consideration and will soon be in experimental service. These consist of the two main frames and all cross braces cast in one piece. This is an indication of the degree of simplification that may be obtained. The maintenance of such parts has in turn been made possible by the development of the art of electric and acetylene welding.

The foregoing are simply a few indications of the importance of design in its relation to maintenance. To mention all the points that merit attention and to discuss them in detail would be far beyond the scope of this paper. Good and far reaching results can be obtained by inviting criticism and suggestions from those directly responsible for construction and maintenance. Simplicity, correlated with efficiency, should be one of the keynotes of locomotive design. This principle, which in other words is simply good judgment, will make for that degree of efficiency which will be reflected, not only in reduced maintenance costs, but also in the increased capacity of the locomotive plant as a whole.

The foregoing paper was read before the Canadian Railway Club in Montreal recently.

United States Wireless Telegraph Stations.

The United States Navy's new high radio station in the Hawaiian Islands, which was opened recently, is said to be the most powerful radio station in the world and is designed for direct communication with Washington and the Philippines. Exchange of messages was carried out on Sept. 20 between the radio station, Sayville, Long Island, and the Honolulu station, a distance of approximately 5,000 miles. This is said to be the world's record for long distance exchange of communication by radio, and marks a distinct advance in the radio art. The tests to date indicate that communication between Washington and the Philippines will easily be accomplished with but one relay through the Hawaiian station.

The Hawaiian station is one of a chain of high power radio stations under construction by the Navy Department. The principal stations completed to date, in this chain, are Arlington, Darien (Canal Zone), and San Diego. The remainder of the stations, at Caviet (Philippines), Guam, and Tutuila, will be completed during the next two months. The high power stations consist of three masts at each station to support the aerial, each mast being steel, self supporting. The apparatus is of the Poulsen arc type, which is standard in stations of the high power chain.

A Freight Rate Suit.—The C.P.R. is claiming through a Manitoba Court \$60 for freight and other charges on a shipment of horses, from W. T. Alexander, who sent several horses to Calgary and other exhibitions west of Winnipeg, during the past season. The horses were conveyed in a palace car, and it is alleged that Mr. Alexander put some vehicles in the car also. The company claims that this raised the rate, and is suing for \$60, the difference between the rate for the horses and the rate for the vehicles.

Conversion of Canadian Pacific Freight Cars.

Canadian Railway and Marine World for September and October contained some information about the conversion of a number of C.P.R. freight cars, since which time additional information as well as photographs have been received. Of the 336 single insulated refrigerator cars, converted to vegetable cars, 44 have been done at Angus shops, Montreal, and 292 at Winnipeg shops. On the 1,161 steel side dump ballast cars converted to coal cars the work was divided about

1/2 in. standard t. and g. car lining. This inside lining extends to within 6 in. of the car floor and to within about 12 in. of the ceiling, leaving an opening at top and bottom, so that the heat, supplied from the charcoal heaters, located at the centre of the car, may be circulated freely all along the sides and ends of the load, and return to the centre of the car through a space 5 1/2 in. high provided by a false floor, which is made of two

ped with standard insulated plugs, attached to chains, so that they can be lowered into the space back of the bulkheads when the car is operating under ventilation. Hatch covers are hinged so as to open toward the centre of the car. It is believed that this arrangement provides the best distribution of fresh air throughout the interior of the car.

The heating of each car is to be accomplished by means of standard no. 2 charcoal heaters. In moderate weather one or

C.P.R. Vegetable Cars Converted from Refrigerator Cars.

equally between Montreal and Winnipeg shops. The 600 stone cars converted to coal cars were all done at Montreal.

The 336 vegetable cars converted from standard single insulated refrigerator cars are 38 ft. 8 in. long over end sills

courses of t. and g. lumber with insulating paper between. The floor is in sections, about 4 ft. wide, extending between inside linings. This permits of the floor being taken up, whenever necessary, for cleaning underneath, and for repairs to

two heaters may be used in the collapsible galvanized iron heater cages attached to the inside of the car doors. These cages are so arranged that, when the heater requires to be recharged with fuel, it is not necessary to enter the car, and the exchange of air from the outside to the inside of the car is reduced to a minimum by one side of the heater cage being secured in a position to close the aperture of the open car door in much the same manner as revolving doors in public buildings. In severe weather additional heaters may be used suspended from the ceiling from substantial fastenings provided for the purpose.

The 1,161 fifty-ton side dump ballast cars, converted to coal cars, are fitted with end gates and extension sides so as to carry their maximum tonnage in bituminous coal. The extension sides consist of planks, 30 in. high, secured to stakes that pass through openings in the top channel of the steel side construction, and secured at the bottom in malleable blocks provided for the purpose. To prevent the wooden sides bulging near the centre of the car, tie rods are provided, reinforced against bending, by means of a cross timber, 3 x 8 in., securely supported and fastened at the ends to the extension sides. In order that these cars may meet the safety appliance requirements, additional hand holds are provided, and the brake mast, originally located on the corner, is removed, and a new brake mast and fittings are applied about 18 in. from the centre of the car.

C.P.R. Coal Car Converted from Side Dump Ballast Car.

and have standard refrigerator doors. After removing the ice bunkers, floor slats and meat racks, the side and end walls are covered with refrigerator insulating paper, and on the inside of this, vertical strips are spaced about 2 ft. centres along the sides of the car. These vertical strips are 2 in. square, fastened to 1 in. blocks, providing a total of 3 in. air space. The linings on the inside of the strips consist of 3/8 in. t. and g. in-

underframe, draft timber bolts, etc.

At each end of the car there is a bulkhead, just in front of the hatch opening, constructed in the same manner as the side linings. The open space, above the side lining and end bulkhead, is covered with heavy wire mesh, to prevent consignees throwing culled vegetables over into the air spaces. At the bulkhead this mesh also prevents theft through the hatch opening. Hatch openings are equip-

The Canadian Northern Ry. Land Department has issued a homeseekers' guide descriptive of the resources of the districts opened up for settlement by its line through British Columbia.

New Grand Trunk Railway Passenger Stations.

The G.T.R. is erecting a new passenger station at Berlin, N.H., on the line between Portland, Me., and Montreal. We are officially advised that it is located on the site of the original frame structure, and will be a substantial one-story building of brick and stone. The plans show that the outside dimensions of the new station will be 137 x 29 ft., and walls 13 ft. high, with central bays projecting 6 ft. on the track side and 8 ft. on the city side. The office 41 x 22 ft., will be located in the centre of the building, and will provide accommodation for the agent, operator and clerical staff, the ticket, operating and telegraph sections being located toward the track. The women's waiting room will be on the right; and the general waiting room on the left of the office. Each waiting room will be 28 x 26 ft., and will be provided with lavatory accommodation. There will be entrances to each waiting room from the platform and from the street. The baggage room, 25 x 26 ft., will adjoin the general waiting room and will be connected with it by a counter and wicket. A covered platform will be provided under the main roof at the west end of the building. The basement, in which the heating plant and a room for storing records will be located, will extend under the baggage room, the remaining space not being excavated.

All construction below ground level is to be of concrete, above the floor line the walls will be of brick, faced with Saginaw pavers, with base and dressing of Vermont pink granite. The roof will be covered with green Ludowici tiling of imperial Spanish pattern. The interior finish will be dull oak stained dark, all walls and ceilings to be plastered. The waiting rooms will be panelled in oak to the height of the doors, the fields of the panels being covered with burlap and painted. The floors of the general waiting room, women's waiting room and office will be of maple laid diagonally, with a 15 in. border of the same; the lavatories will have tile floors, and the baggage room will be of ordinary boards. The building will be heated by hot water and lighted by electricity. It was designed in the office of H. R. Safford, Chief Engineer, and the contract has been let to Forgiione & Rowans, Portland, Me. The estimated cost is \$40,000.

A station is also to be built at Orillia, Ont., to replace the one destroyed by fire. It will be 54 x 142 ft., with umbrella roof, 22 x 34 ft. at each end. The foundation will be of concrete to grade line, with Longford stone base to height of sills (3 ft. 8½ in.). The superstructure above the base will be of dark brown fire flash brick with a light mortar joint. The roof will be covered with asbestos shingles laid diagonally, roof to project 6 ft. beyond face of wall, with Georgian pine rafter heels and sheathed soffit, oiled. The lighting will be electric, of the a.c. system. It will be heated with hot water from boiler located in basement below baggage room. The street approach to the building will be by a porte cochere supported by brick and stone piers supporting same. The entrance doors will be of a French pattern, with divided lights on either side, having pilaster mullions between them and the door. On entering the station from the street side there will be a small alcove with vaulted ceiling, and seat on each side of same. The side walls of the main waiting room will be divided into

five ornamental plaster arches with pilasters between. The plastering will be trowelled stucco finish, with white plaster moulds and ceiling beams. The floor will be of terrazo, composed of varied color marble chips. On one side of the main entrance there will be a ladies' rest room and lavatory, on the other side a men's smoking room and lavatory. The smoking and rest rooms will be finished in Georgia pine with burlap dado to height of 4 ft., panelled with 3 in. strapping. Lavatories will be finished in cement, marked off with 4 x 4 in. blocks, tile pattern. The rest and smoking rooms will have French doors between them and main waiting room. The walls of main waiting room to height of 4 ft. will be covered with burlap. The office will be of quarter cut oak. The trim of main waiting room will be Georgia pine, and all wood work will be finished in bog oak. The platform will be of paving blocks with standard concrete curb.

At St. Catharines, Ont., a new station is to be erected on the site of the old one, but it will be considerably larger. The main building, containing waiting rooms, office and baggage room, will be flanked by large platform shelters and the Canadian Express building will be attached to the further end of the west shelter. The station proper will be one storey, containing a general waiting room, 77 x 22 ft., with an alcove, 22 x 10 ft. From this general room will be entered smaller waiting rooms, with lavatories attached for men and women respectively. The small waiting rooms will be 16 x 10 ft., and the lavatories, 11 x 10 ft. The ticket office, approximately 20 x 14 ft., will be placed on the centre line of the general waiting room, opposite to the alcove, and will have a large projecting bay, in which will be the telegraph operator's table, and the windows of which will command views of the tracks in both directions. A panelled oak screen will enclose the office and will project into the general waiting room and will be provided with two ticket wickets. The baggage room, attached to the west end of the building, will be placed in direct communication with the general waiting room for handling small hand baggage. There will be three entrances to the station, two directly facing the tracks, on each side of the ticket office, and one from the platform shelter at the east end. The basement will be devoted to the steam heating apparatus and storage of fuel. The Canadian Express Co. will be housed in a building, 44 x 25 ft., situated 65 ft. from the station proper, the intervening space being roofed over to form a platform shelter. The platform shelter will cover 4,500 sq. ft., and the buildings will have an area of 5,000 sq. ft. The building will be constructed generally of brick on concrete foundations. The walls outside will be faced with Hocking Valley vitrified brick, with grey sandstone dressing, and the roof will be covered with asbestos shingles. The floors of the station will be finished with marble terrazzo and those of the baggage and express rooms with cement. All interior finish in station will be Georgia pine and oak stained to bog oak color, the walls being plastered and painted and the dados panelled and finished with burlap. All lavatory walls will be lined with tiles to a height of 4 ft. All seating will be oak stained to match interior finish. The lighting will be by electricity.

News Print Paper Rate from Jonquiere to Wilkes-Barre.

The Interstate Commerce Commission gave the following decision recently in the case of Price Bros. & Co., Ltd., vs. Canadian Northern Railway, et al:

The complainant is a Canadian corporation, engaged in the manufacture of lumber, laths, shingles, wood pulp board and news print paper, with its principal office in the City of Quebec, and a paper mill at Jonquiere, Que. By complaint, filed April 28, 1916, it alleges that the combination rate of 37c per 100 lb. charged by defendants on a carload of news print paper shipped May 5, 1914, from Jonquiere to Wilkes-Barre, Pa., was unreasonable to the extent that it exceeded 27c per 100 lb. Reparation is asked. Rates are stated in cents per 100 lb.

The shipment, weighing 52,500 lb., moved as routed by complainant over the Canadian Northern Ry. to Montreal; C.P.R. to Delson Jct., Que.; Napierville Junction Ry. to Rouses Point, N.Y.; Delaware & Hudson Ry. to Wilkes-Barre. Charges thereon were collected in the sum of \$194.25 based on a rate of 37c, composed of a rate of 15c to Montreal, which rate is not on file with this commission, and a rate of 22c beyond, which rate was legally applicable. At the time of movement a joint commodity rate of 27c was in effect on news print paper, in carloads, from Jonquiere to Harrisburg, Pa., over the Canadian Northern to Hawkesbury, Ont.; G.T.R. to Rouses Point; Delaware & Hudson to Wilkes-Barre; and Pennsylvania Rd. to Harrisburg, or Central Rd. of New Jersey from Wilkes-Barre to Allentown, Pa., and the Philadelphia & Reading Ry. to Harrisburg.

This rate, which was published by the Canadian Northern, was not applicable on shipments to Wilkes-Barre, an intermediate point, but that carrier's tariff provided, conformably to rule 77 of Tariff Circular 18-A, for the publication, upon reasonable request therefor, of rates to any intermediate point not in excess of those to more distant points. This is a substantial compliance with the requirements of the fourth section.

Witness for complainant testified that on April 20, 1914, the Canadian Northern was requested to advise the best rate on news print paper from Jonquiere to Wilkes-Barre for immediate shipment; that on April 24, 1914, no reply having been received, the complainant communicated with defendant's agent over long distance telephone requesting the establishment of the Harrisburg rate to Wilkes-Barre; that on the same day a rate of 33c was quoted via the route of movement. No evidence was introduced tending to prove the rate applied unreasonable, complainant's sole contention being that it was forced to pay the rate assessed on account of the failure of the Canadian Northern to comply promptly with its request for the establishment of the Harrisburg rate to Wilkes-Barre. None of the defendants was represented at the hearing. In its answer the Canadian Northern denies that it was requested to establish the Harrisburg rate to Wilkes-Barre on the dates mentioned; that in response to request from complainant in June, 1914, it established, effective Aug. 17, 1914, a rate of 25c, since increased to 26c. Complainant requested the best rate for immediate shipment. This the Canadian Northern attempted to give, although by doing so it erroneously quoted a rate of 33c.

Northern has in other instances refused to establish rates at intermediate points, notwithstanding the fact that the tariffs naming the rates to the farther distant points carried reference to rule 77 of Tariff Circular 18-A. The effect of the failure to establish rates at intermediate points in conformity to such rule was

fully discussed in Missouri River Building Stone Rates, 28 I.C.C., 269, and need not be repeated here. The establishment in August of the rate requested in June cannot, under the promise made in the tariff, be considered as properly prompt action. The complaint must be dismissed and an order will be entered accordingly.

temporary grades, there are less than 6 miles of 1' and less than 1 mile of 1.15' grade. All other temporary grades are less than 1'.

Canadian Pacific—Ruling grades vary from 0.3% to 1.1% on different subdivisions eastbound and from 0.4% to 1.25% on different subdivisions westbound.

National Transcontinental—The total adverse grade eastbound from Winnipeg to Quebec amounts to 608.0 miles in length and 8,946.7 ft. of a raise. The total adverse grade westbound over the same distance and between the same points amounts to 536.8 miles in length and 9,730.3 ft. of a raise.

Senator Casgrain accepted the answers to the distances, but stated that the information given in reply to the questions as to adverse gradients did not answer them at all. The "total adverse grade" is the grade up which a locomotive must haul a train. The total on the National Transcontinental Ry. and on the G. T. Pacific Ry. is 6,900 ft.; while on the C.P.R. it is 23,000 ft. On the C.P.R., for instance, between the Pacific and the Atlantic every ton of freight had to be raised to a height of 23,000 ft., or nearly five miles, while on the National Transcontinental it had to be raised only 6,000 ft. He thought the Canadian Northern would make a very good showing in this respect.

Senator Casgrain repeated his questions as to the total adverse gradients on Canadian railways between Quebec and Winnipeg, and between Winnipeg and Quebec, Sept. 18, and Sir James Loughheed in reply said the mileage between Quebec and Winnipeg was: Canadian Pacific Ry., 1,587 miles; Canadian Northern Ry., 1,640 miles; National Transcontinental Ry., 1,351 miles. The railways concerned had supplied the following information as to total adverse gradients: C.P.R., 681.51 miles in length, with 14,102 ft. of rise, going east; 659.83 miles in length with 14,578 ft. of rise going west. C.N.Ry.—9,655 ft. going east, 10,393 ft. going west. The elevation above sea level is: 18 ft. at Quebec, and 756 ft. at Red River bridge, Winnipeg. N.T.Ry.—608.0 miles in length and 8,946.7 ft. of rise going east; 536.8 miles in length and 9,730.3 ft. of rise going west.

The Necessity for Loading Cars Fully.

A. H. Harris, Director Overseas Transport, Montreal, has issued the following circular: The volume of Imperial Government war material and supplies which Canadian railways will be called upon to move to the Atlantic seaboard during the coming winter will tax their resources to the limit. If the demands of the allied governments are to be met, conservation of railway facilities is absolutely necessary. A careful analysis of government overseas traffic moved to winter ports last season shows an underloading of 30% in cars containing packing house products, ammunition, explosives, shells, forgings, acetate of lime, carbide, etc. In all cases cars should be loaded to the full capacity authorized by the various railways, and traffic of a bulky nature to the full cubic capacity of car. Had this rule been observed last winter, about one third less cars, and fewer locomotives, would have been required, while seaboard terminal accommodation would have been relieved to that extent. The question is one of national importance, and I earnestly request every Imperial Government contractor will realize the seriousness of the situation.

Birthdays of Transportation Men in November.

Many happy returns of the day to—

F. W. Alexander, A.M.Can.Soc.C.E., Engineer, Alberta District, C.P.R., Calgary, born at Fredericton Jct., N.B., Nov. 22, 1878.

J. O. Apps, General Baggage Agent, C.P.R., Montreal, born at Tara, Ont., Nov. 9, 1877.

A. B. Atwater, Assistant to President, lines west of Detroit and St. Clair Rivers, G.T.R., Detroit, Mich., born at Sheffield, Ohio, Nov., 1845.

H. E. Beasley, General Superintendent, Esquimalt & Nanaimo Ry., Victoria, B.C., born at Hamilton, Ont., Nov. 10, 1862.

C. C. Bonter, General Baggage Agent, Canada Steamship Lines, Ltd., Montreal, born at Toronto, Nov. 13, 1884.

G. B. Burchell, Managing Director, Bras d'or Coal Co., Ltd., North Sydney, N.S., born at Sydney, N.S., Nov. 1, 1877.

J. R. Cameron, Assistant General Manager, Canadian Northern Ry., Winnipeg, born at Truro, N.S., Nov. 5, 1865.

F. H. Clendenning, Division Freight Agent, B.C. Coast Service and Ocean Steamship Lines, C.P.R., Vancouver, B.C., born at Montreal, Nov. 9, 1881.

F. Conway, City Freight and Passenger Agent, C.P.R., Kingston, Ont., born at Ernestown, Ont., Nov. 19, 1850.

W. L. Crighton, Advertising Agent, Canadian Government Railways, Moncton, N.B., born at Derby, Eng., Nov. 9, 1871.

W. R. Davidson, General Superintendent, Western Lines, G.T.R., Chicago, Ill., born at Everton, Mo., Nov. 8, 1871.

W. R. Devenish, A.M.Can.Soc.C.E., Superintendent, District 3, Intercolonial Division, Canadian Government Railways, Moncton, N.B., born in County Tipperary, Ireland, Nov. 21, 1882.

A. C. Douglas, acting Assistant General Purchasing Agent, C.P.R., Montreal, born at Montreal, Nov. 10, 1881.

W. Downie, ex-General Superintendent, Atlantic Division, C.P.R., now of Whitby, Ont., born at Rock Currie, Ireland, Nov. 12, 1850.

Jos. Dubrule, jr., Manager, Canadian Pacific Car & Passenger Transfer Co., and President, Prescott & Ogdensburg Ferry Co., Ltd., Prescott, Ont., born at Spencer-ville, Ont., Nov. 14, 1872.

R. L. Fairbairn, General Passenger Agent, Canadian Northern Ry., Toronto, born at Stillwater, Minn., Nov. 24, 1880.

W. A. Fitch, Assistant Superintendent, District 3, Intercolonial Division, Canadian Government Railways, Moncton, N.B., born at Kentville, N.S., Nov. 25, 1867.

J. E. Gibault, A.M.Can.Soc.C.E., Resident Engineer, District 1, Transcontinental Division, Canadian Government Railways, Quebec, Que., born at St. Jerome, Terrebonne County, Que., Nov. 16, 1887.

H. E. Haanel, Trainmaster, Regina Division, Saskatchewan District, C.P.R., Regina, born at Cobourg, Ont., Nov. 2, 1880.

Grant Hall, Vice President and General Manager, Western Lines, C.P.R., Winnipeg, born at Montreal, Nov. 27, 1863.

N. B. Jones, Car Foreman, C.P.R., Kenora, Ont., born at St. John, N.B., Nov. 9, 1869.

W. E. Ladley, Superintendent of Motive Power, Reid Newfoundland Co., St. John's, Nfld., born at Leeds, Eng., Nov., 1875.

J. McGillivray, Receiver and Manager, Inverness Ry. & Coal Co., Inverness, N.S., born at Nairn, Scotland, Nov. 13, 1867.

J. McMillan, Manager of Telegraphs, C.P.R., Montreal, born at Liverpool, Eng., Nov. 2, 1866.

A. B. McNaughton, General Yardmaster, Ottawa Terminals, G.T.R., Ottawa, Ont., born at Arnprior, Ont., Nov. 10, 1877.

C. Murphy, General Superintendent, Manitoba District, C.P.R., Winnipeg, born at Prescott, Ont., Nov. 20, 1865.

G. H. Nowell, Master Mechanic, Nelson Division, British Columbia District, C.P.R., Nelson, born at Montreal, Nov. 13, 1885.

W. J. Quinlan, District Passenger Agent, Grand Trunk Pacific Ry., Winnipeg, born at Montreal, Nov. 21, 1883.

J. J. Rose, General Agent, Union Pacific System, Toronto, born there, Nov. 22, 1870.

G. H. Shaw, General Traffic Manager, Canadian Northern Ry., Toronto, born at Smiths Falls, Ont., Nov. 25, 1859.

P. D. Sutherland, General Agent, Passenger Department, Canadian Pacific Ocean Services, Ltd., Hong Kong, China, born at Toronto, Nov. 2, 1879.

L. C. Thomson, General Storekeeper, Eastern Lines, Canadian Northern Ry., Toronto, born at Kingston, Ont., Nov. 25, 1882.

H. P. Timmerman, Industrial Commissioner, Eastern Lines, C.P.R., Montreal, born at Odessa, Ont., Nov. 6, 1856.

H. E. Whittenberger, General Superintendent, Ontario Lines, G.T.R., Toronto, born at Peru, Ind., Nov. 9, 1869.

C. G. Washbon, Resident Engineer, Medicine Hat, Alta., born at Morris, N.Y., Nov. 27, 1887.

W. A. Whyte, District Freight Agent, Canadian Northern Ry., Regina, Sask., born at Hornsey, Eng., Nov. 24, 1890.

Distances and Gradients Between Quebec and Winnipeg.

In the Senate, on Sept. 3, Sir James Loughheed gave the following information in answer to series of questions by Senator Casgrain. The railway distances between Quebec and Winnipeg are as follows: National Transcontinental, 1,356 miles; Canadian Pacific, 1,587; Canadian Northern, 1,640.

The following information was supplied by the managements of the three railways mentioned in respect to the adverse grades:

Canadian Northern—Main line from Quebec to Winnipeg is built to 0.5% westbound and 0.4% eastbound grades, with the exception of 53 miles of westbound and 84 miles of eastbound short momentum grades, which can be reduced later when necessary. Of these latter

The Canadian Northern Railway's Station Work in Montreal.

Work is being pushed on the excavation for the station site at the C. N. R. terminal in Montreal which was described and illustrated in Canadian Railway and Marine World for July. More surface activity is seen than at any time since work on the Mount Royal Tunnel and Terminal project opened, there being since early in July three steam shovels, two 8-car trains of dump cars and numerous wagons opening up the site. Two whole city blocks, between Lagauchetiere and Dorchester Sts., are being excavated. The present station building as planned is a

The material from the yard cut is loaded by steam shovels into 6-yd. cars, and these are hauled by dinkies to a point over the east portal of the tunnel under Mount Royal. Here the spoil is dumped into a baffled chute, discharging into spotted 12-yd. tunnel cars. The tunnel track and electric power systems are complete from the east portal to beyond Cartierville. There are three dump trains running to carry the spoil to a fill, where the Cartierville yards are to be. No other traffic is being handled as yet through the tunnel.

loaded cars. Like all the equipment, it is painted battleship gray and bears the letters "U.S.A." for United States Army. The locomotive weighs about 166,400 lb., with the tender about 275,000 lb.

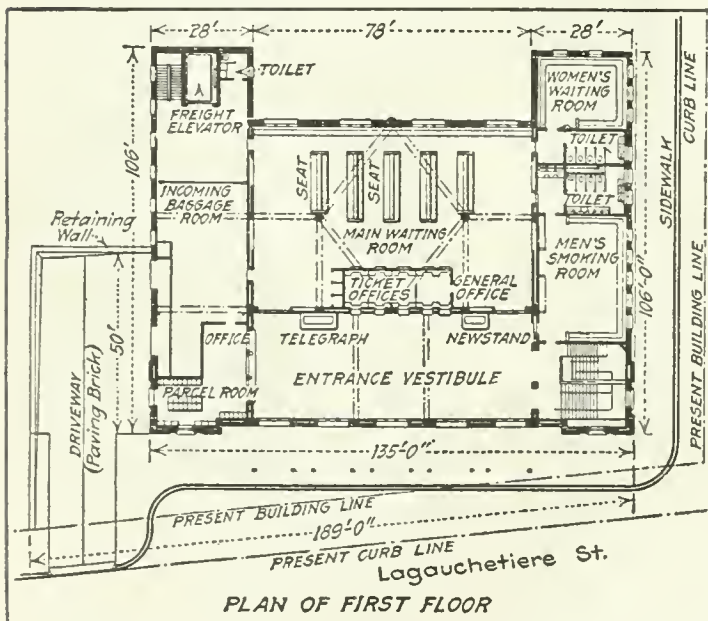

The box cars for the U.S. lines in France have about three times the capacity of the standard gauge box cars used by the French railways until recently. They have the same coupling equipment, etc., as the French rolling stock, so as to be interchangeable with it. The iron railing which runs the length of the car along the top is used to throw a tarpaulin over

The Canadian Northern Railway Temporary Station in Montreal.

temporary structure occupying less than half of the area of the terminal site. The rest of the cut will remain open and the five track platforms will be protected by umbrella sheds. The portal of the Mount Royal tunnel is at Dorchester St., and from there the two 2-tunnel tracks will fan out to five for the station yard. The future plans are for the whole site to be occupied by combined station and office or hotel buildings, and two tracks will continue south down the right of way which the company owns leading directly to the waterfront.

There are 260,000 cu. yd. of earth and 18,000 yd. of rock to be removed from the terminal site—20,000 yd. of earth being at the temporary station building. The contract for the station proper was let to Norcross Bros. and the yard cut to Angus Sinclair & Co. The spoil from the building site is loaded by a steam shovel directly into the wagons in the pit, and the loads are snatched up an incline by an electric hoist. The wagons haul to Victoria Bridge, where the city is dumping for river front improvements.

Rolling Stock for United States War Railways in France.

The first locomotive for U.S. war service railways in France was completed in 20 working days, and others of this type are now being turned out at the rate of about 30 a day. About 680 of these locomotives and over 9,000 standard gauge freight cars are on order. Narrow gauge equipment for transportation along the battle front is also on order, and additional orders for both narrow and standard gauge equipment are likely.

The first order for war locomotives was placed on July 18 and the first one was completed on Aug. 9, in spite of the fact that the superheater boiler is constructed specially for this type of locomotive. Otherwise, the locomotives are much similar to locomotives built for the British Government. It is not the most powerful type used in the U.S., but on a road where the heaviest locomotives would haul a train of about 90 loaded freight cars this war locomotive would haul 60

to protect the contents of the car from the weather. The inside length of the car is 36 ft. and its capacity 33 tons.

Increased Railway Rates, etc., in United States to be approved before coming effective. The U.S. Congress at its recent session passed the following amendment to the act to regulate commerce, sec. 15: "Provided further until Jan. 1, 1920, no increased rate, fare, charge, or classification shall be filed except after the approval thereof has been secured from the commission. Such approval may, in the discretion of the commission, be given without formal hearing, and in such case shall not affect any subsequent proceeding relative to such rate, fare, charge or classification." This means that the approval of a proposed increased rate, fare, charge or classification must be secured before the tariff containing it is filed with the commission by the carrier. The commission prepared a tentative form of order recently, to carry the provision referred to into effect, and submitted the same for consideration.

Cross Ties Bought in Canada in 1915 and 1916.

The following bulletin, prepared by the Interior Department's Forestry Branch, is based on reports received from 34 steam railways and 33 electric railways buying ties in 1916. The average prices in the tables are based on the cost at the point of purchase, and may or may not include long haul transportation charges. Only in the cases of those woods which are used in large quantities can value given be taken to represent the relative value of the wood.

A total of 7,839,515 ties was bought in 1916, an increase of 246,985 or 3.2% over 1915. This is the first year there has been an increase in the number since 1912.

Of the total ties bought 109,099 were treated with preservative to withstand decay. This is 2.5% of the total, compared with 5% in 1915 and 7% in 1914.

Jack pine heads the list in number of ties cut with 47.3% of the total. It has held this position since 1911, when it displaced white cedar. White cedar still holds well on to second place, the percentage of cedar ties being more than double that of hemlock its nearest competitor.

The average value was 42c a tie in 1916, compared with 44c in 1915. Electric railways bought 3.4% of the total in 1916, compared with 2.5% in 1915 and 1.1% in 1914. The electric railways paid an average of 44c a tie while the steam railways paid an average of 42c.

The number of ties imported in 1916 was 622,819, valued at \$424,599, compared with 1,219,594 imported in 1915, valued at \$749,407. The majority of these ties were of species of wood either not native to or not abundant in Canada such as oak, hard pine, chestnut, and gum.

Photographic Survey of Proposed Railway Route

A panoramic photographic survey of the proposed Oregon, California & Eastern Ry.'s route has been made to show the character and possibilities of the country to persons interested. The camera used was capable of making a picture 8 in. wide and up to 4 ft. long. It revolved on the head of the tripod and was driven by clockwork, so as to cover any desired degree of a circle. From a high point it was possible to cover a distance of 10 to 30 miles. In most cases it was found practicable to take a view from one valley to another, the points being selected by the engineer. Each picture was begun at about the point where the previous one ended.

It required 31 pictures, each 3 to 4 ft. long to cover the entire route. This work consumed 19 days, as much time was taken in getting to and from the viewpoints. Pictures were taken only under favorable conditions of light, atmosphere and absence of wind, in order to get good results. After the photographs had been made, the Chief Engineer had a draftsman plot the line of the survey upon each picture, so as to show the cuts, fills, structures and other main features.

The G.T.R. Time Service Department reports that during the past 12 months 8,914 employes' watches were submitted for approval, of which 96 were rejected. There was an average of 6,958 men coming under the watch inspection regulations each week, which means that the department checked ratings of 145,132 comparisons during the year.

Cost of Maintaining Electric Locomotives.

By an unfortunate error in type setting, which was not discovered in proof reading, it was stated in an article on this subject, in Canadian Railway and Marine World for August, that the average cost of repairs, power and lubricants on the Norfolk & Western Ry., for electric locomotive equipment, per 100 locomotive miles, for the six months ended Dec. 31, 1916, was \$6,290. It should have been printed as \$62.90. The article referred to is reprinted correctly as follows:

Electric locomotives on the Norfolk & Western Ry., according to that company's report for the six months ended Dec. 31, 1916, proved much more expensive to maintain and operate than steam locomotives. The average cost of repairs, power and lubricants for electric locomotive equipment per 100 locomotive miles was \$62.90, while that of repairs, fuel, stores and lubricants for steam locomotive equipment was only \$25.21. Repairs were respectively \$32.69 and \$12.70. Power and lubricants for the electric locomotives cost \$30.21 per 100 locomotive miles, as against \$12.51 for fuel, stores and lubricants for steam locomotives.

A table in the report divides the steam equipment by divisions and by classes of locomotive (passenger and freight). On the Pocahontas Division, which is the one electrified, repairs to freight and to passenger steam locomotives cost respectively \$14.60 and \$8.53, while fuel, stores and lubricants cost \$15.86 and \$6.01, making totals respectively of \$30.46 and \$14.54.

Association of Manufacturers of Chilled Car Wheels.

Following are extracts of the address delivered by President Geo. W. Lyndon, at the annual meeting, New York, Oct. 9.

It is needless for me to tell you that the chilled iron wheel stands on a firm foundation. You do not see the criticism in the press of the limitation of chilled iron for car wheel purposes. The recognition of a standard \$50 lb. chilled iron wheel by the Master Car Builders' Association will dispel the illusions of our competitors with respect to the limit of the carrying capacity of chilled iron. It is a well established fact that the load that can be carried on a chilled iron wheel is only measured by the ability of the rail to support it. Many 33 in. 950 lb. chilled iron wheels are running under heavy locomotive tenders of 12,000 gall. capacity and are giving such a good account of themselves that no other type of wheel is considered by the users. It has taken a long time to bring this about, and the work we have accomplished this year is the result of persistent effort and close association with all the leading organizations in the country that study the wheel question, and we have also followed up with individual railways the introduction of new standards. We deal not only with the Master Car Builders' Association, but are in close association with the American Railway Association, the American Railway Engineering Association, the Interstate Commerce Commission, the Bureau of Standards, the American Society of Testing Materials, the American Foundrymen's Association, and the state universities. All this work through associations, railways and universities is educational and must be beneficial to our

association in determining standards through the Master Car Builders' Association. We must pay the closest attention to the quality of our product. While we have accomplished two-fifths of our programme, we should not rest until we have secured the other three-fifths. We must see that the interior of the 625 and 725 lb. wheel receives recognition in the matter of increased plate thicknesses, which can only be obtained by additional weight. We must have a reasonable factor of safety when measured by excessive stresses encountered in service, and these heat stresses are now recognized everywhere, due to our educational campaign. We are not influenced by commercial considerations in asking for heavier wheels. We know the increased weights are necessary. Who knows what the result of the work of the University of Illinois may be? Perhaps the analyses of the stresses within the wheel may suggest a redistribution of the metal, and we may be able to decrease weights, which we will be ready to do with as great an interest as

we are now anxious to increase them. With the flange improvement settled to our satisfaction and extra weight added to withstand heat stresses, the chilled iron wheel will have a future record as wonderful as it has maintained during the past 67 years of universal use.

The following officers were re-elected for the ensuing year: President & Treasurer, Geo. W. Lyndon; Vice Presidents, E. F. Carry, J. A. Kilpatrick; Secretary, Geo. F. Griffin; Engineer, F. K. Vial.

The Railway Situation in Hamilton.—The Hamilton, Ont., City Council has appointed a special committee to work out the recommendations of the Tye-Cauchon report for the rearrangement of the railway lines in the city and the entrance of new lines. Part of the committee's duty will be to take note of anything the railways at present entering the city propose to do which is at variance with the recommendations of the report, and to take all necessary steps to protect the city's interests.

Shown on Honor Lists to date: Killed, 515; Wounded, 1,111; total, 1,626.

Organization of Canadian Railway Association for National Defence.

An organization of Canadian railway officials has been formed to co-ordinate the various railway companies' work during the war, on similar lines to the American Railway Association's Special Committee on National Defence, which is generally known as the United States Railroads' War Board. Following are full particulars of the steps taken to effect the organization.

In response to a request from Sir Henry Drayton, Chief Railway Commissioner, stating that the Minister of Railways wished to consider the question of ensuring close co-operation between the various railways, and the common use of rolling stock, during the war, a meeting was held at the Minister's office in Ottawa, Sept. 24, at which, in addition to the then Minister, Hon. F. Cochrane, there were present: Sir Henry Drayton, Chief Railway Commissioner; G. A. Bell, Assistant to the Minister and Financial Comptroller; E. W. Beatty, K.C., Vice President and General Counsel, and Alfred Price, Assistant General Manager, Eastern Lines, C.P.R.; U. E. Gillen, Vice President in Charge of Operation, and C. G. Bowker, General Superintendent, Eastern Lines, G.T.R.; R. C. Vaughan, Assistant to Third Vice President, and S. J. Hungerford, Superintendent of Rolling Stock, Canadian Northern Ry.; and C. A. Hayes, General Manager, Eastern Lines, Canadian Government Railways.

The Minister stated that the object of the meeting was to advise the railway managements that the government considered there ought to be closer co-operation between them, and he suggested that the lines should be handled by a committee, composed of the best railway men in the country, who should arrange the distribution of equipment, as between the companies, in the event of one company being short and another having a surplus. He pointed out as the most important questions the distribution of equipment, the diversion of freight, and the per diem amount to be allowed by one company to another for rolling stock loaned. He suggested that the railway officials present should go to the United States, to get fuller particulars as to the operations of the U. S. Railroads' War Board.

Messrs. Beatty, Gillen, Price and Vaughan then went to New York, where they saw the Railroads' War Board's Secretary, and obtained a large amount of information as to the board's operations. Messrs. Gillen, Price and Vaughan afterwards went on to Washington, where they saw the Commission on Car Service, which works under the Railroads' War Board's directions, and obtained information as to its work.

Another meeting was held at the Minister's office in Ottawa, Oct. 11, there being present Hon. J. D. Reid, who has succeeded Mr. Cochrane as Minister; Sir Henry Drayton, Sir George Bury, E. W. Beatty, D. B. Hanna, and U. E. Gillen, the matter being further discussed and a decision arrived at to hold a more general meeting in Montreal.

In response to an invitation from Sir George Bury to the principal railway companies, the following officials met at the C.P.R. general offices in Montreal, Oct. 23: Sir George Bury, Vice President, Canadian Pacific; U. E. Gillen, Vice President, Grand Trunk; D. B. Hanna, Third Vice President, W. A. Kingsland, General Superintendent, Quebec Lines, Canadian Northern; C. A. Hayes, General Manager, Eastern Lines, F. P. Brady, General

Manager, Western Lines; L. S. Brown, General Superintendent, Intercolonial and Prince Edward Island Divisions; H. H. Melanson, Passenger Traffic Manager, Canadian Government Railways; W. A. Griffin, Superintendent of Traffic, A. J. Parr, General Freight and Passenger Agent, Timiskaming & Northern Ontario; F. F. Backus, General Manager, Toronto, Hamilton & Buffalo; J. H. Walsh, General Manager, Quebec Central; E. C. Smith, President, Central Vermont; S. R. Payne, Manager, New York & Ottawa; H. Shearer, General Superintendent, Michigan Central; C. S. Sims, Resident Vice President, Delaware and Hudson; J. H. Hustis, Temporary Receiver, Boston & Maine; C. A. Montgomery, Vice President and General Manager, Algoma Central; A. L. Smith, President, Algoma Eastern. Mr. Hanna presided.

The following resolution was adopted unanimously: That the railways of Canada, realizing the national need of co-ordinating all industrial activities toward the prosecution of the war, and desiring by further co-operation with each other to render the most efficient possible service to the national cause, do hereby agree to establish, for the period of the war, an organization which shall have authority to formulate in detail, and from time to time, a policy of operation of all or any of the railways, which policy, when it is announced by such organization, shall be accepted and made effective by the several managements of the individual railway companies. To that end the following committees shall be established: (1) A committee of four, to be chosen from the chief executive officers of the several railways, to be called "The Special Committee on War and National Defence," which shall have general direction of the said scheme. (2) A committee to be chosen from the vice presidents and chief operating officers of the railways, composed of seven members, to be called "The Administrative Committee," whose duties shall be to carry out the policies laid down and arrangements made by the Special Committee on War and National Defence. That the Administrative Committee shall have power to appoint sub-committees, who shall have supervision over the following: (i) Passenger transportation; (ii) Freight transportation; (iii) Tariffs and statistics; (iv) Materials and supplies. That a general secretary to both committees shall be appointed, with such duties as shall be assigned to him, together with such staffs as he may require, to be selected by him from the employes of the several railways. That the expenses incurred in carrying out the arrangements of the above shall be assessed against all railways operating in Canada, on a basis of half the cost in proportion to the mileage operated, and the other half in proportion to gross earnings. This applies to mileage and gross earnings in Canada.

The committees were constituted as follows:

Special Committee on War and National Defence: Lord Shaughnessy, President, Canadian Pacific; Sir William Mackenzie, President, Canadian Northern; H. G. Kelley, President, Grand Trunk; A. H. Smith, President, New York Central.

Administrative Committee: U. E. Gillen, Vice President, Grand Trunk, Chairman; Sir George Bury, Vice President, Canadian Pacific; D. B. Hanna, Third Vice President, Canadian Northern; C. A.

Hayes, General Manager, Eastern Lines, Canadian Government Rys.; F. F. Backus, General Manager, Toronto, Hamilton & Buffalo; J. H. Walsh, General Manager, Quebec Central; E. D. Bronner, Vice President and General Manager, Michigan Central.

Car Service Committee: A. Hatton, General Superintendent, Car Service, Canadian Pacific; J. E. Duval, General Superintendent, Transportation, Grand Trunk; W. A. Kingsland, General Superintendent, Quebec Lines, Canadian Northern; W. N. Ripley, Superintendent, Car Service, Canadian Government Railways; A. E. Locke, Superintendent, Car Service, Toronto, Hamilton & Buffalo; W. A. Griffin, Superintendent of Traffic, Timiskaming & Northern Ontario Railway.

Sub committees will be established in each province to report to the administrative committee.

W. M. Neale, acting Superintendent of Car Service, Canadian Pacific, Montreal, was appointed Secretary of the association and of all its committees.

Grand Trunk Pacific Railway Annual Meeting.

At the adjourned annual meeting of the company at Montreal, Oct. 17, A. W. Smithers, Chairman of the Board, in reviewing the results for the past year, said it was gratifying to note an improvement, although much remained to be accomplished before the property could be on a self sustaining basis. This condition, however, could only be the natural result of constructing lines through hitherto unsettled and undeveloped country, and was the history of all other transportation lines. It was therefore encouraging to note marked improvement in these conditions from year to year as the advent of the railway had made possible the discovery and opening up of almost unlimited natural resources. Notwithstanding the stopping of foreign immigration during the war, a very considerable immigration from the U. S. well equipped financially for farming and other pursuits, continued to go into the new country, and in addition to the increased acreage taken up, a number of lumber mills along the Fraser River, in British Columbia had been built to supply the increasing demand for lumber on the prairies, all of which made traffic for the railway.

The following board was elected for the current year: A. W. Smithers, Chairman; H. G. Kelley, President; J. E. Dalrymple, Vice President; W. H. Biggar, K.C., Vice President and General Counsel; Frank Scott, Vice President and Treasurer; W. H. Ardley, Comptroller; Sir H. M. Jackson, J. A. Clutton-Brock, Sir W. L. Young, E. J. Chamberlin, Hon. R. Dandurand, W. M. Macpherson, P. McAra, J. B. Fraser and Jules Hone. The Vice President and General Manager is W. P. Hinton, and the Secretary is H. Phillips.

Systematic Thefts of Freight from C.P.R. cars west of Toronto brought about an investigation, the result of which was that at Galt, Ont., Oct. 15, a car checker and a brakeman were each sentenced to three years in the penitentiary; a fireman was sentenced to 12 months imprisonment, a yardman to six months imprisonment, and a fireman and a night operator were fined \$200 each for handling whiskey which formed part of goods stolen.

Jacking Stall for Repairing Steel Cars. Freight and Passenger Traffic Notes.

The Canadian Government Railways has installed recently in its freight car shop at Moncton, N.B., a jacking stall for use in repairing steel cars, illustrations of which are given herewith. The frame was made up complete from second hand bridge material, and is of ample size to repair the largest type freight cars. It is 38 ft. 5 in. long and 16 ft. 3 in. wide, the top being open. The foundation is of concrete, 5 ft. deep, in which are embedded anchors for use in holding down a car when the jacks are applied for straightening bent and twisted portions of frame. Rails have been placed on the top of the frame, on which a traveller is operated. This traveller is fitted with a

The C.P.R. General Agent's office and city ticket office at Detroit, Mich., has been removed to 199 Griswold St., from 7 Fort St. West.

The Alberta & Great Waterways Ry. winter train service will consist of a train leaving Edmonton at 8 a.m. on Wednesdays and Saturdays, returning from Lac la Biche on Mondays and Thursdays.

The Canadian Government Railways has placed separate combination dining cars on the National Transcontinental Ry. between Quebec and Cochrane, and standard sleeping cars between Quebec and Winnipeg.

The sailing of the C.P.R. afternoon steamer, leaving Victoria for Vancouver, B.C., was altered from 3.00 p.m. to 2.00

British Columbia Ry. and its allied companies, the Alberta & Great Waterways Ry. and the Central Canada Ry. The rate is asked for via the Canadian Pacific, Canadian Northern and Grand Trunk Pacific Railways.

A press report states that the Board of Railway Commissioners has received a report from its engineering department favoring the granting to the Grand Trunk Pacific Ry of running powers over the Canadian Northern Ry. into Saskatoon, Sask., and that an order will be issued at an early date. The G.T.P.R. passes about two miles south of Saskatoon, and a bridge would have to be built over the South Saskatchewan River in order to provide a separate entrance.

A press report states that the railway companies are taking steps to put a stop

Jacking Stall for Repairing Steel Cars, Canadian Government Railways.

chain block, which is mounted on a small trolley, and is used for supporting rivet busters, jacks and other heavy tools when they are required. The frame has only been in use for a short time, but it has already proved its usefulness. It enables repairs to be made quickly to cars which are badly bent and twisted. We are indebted to G. E. Smart, Master Car Builder, C.G.R., for the foregoing information and for the photographs.

M. J. O'Brien, Limited, has been incorporated under the Dominion Companies Act, with an authorized capital of \$20,000,000, and office at Ottawa, to take over and carry on all the business enterprises of railway contractor, lumberman, mine owner, manufacturer, agriculturist, etc., heretofore cared on by M. J. O'Brien, of Renfrew, Ont.

The U.S. Director General of Railways, S. M. Felton, has announced that units of railway officers, comprising division superintendents and their staffs, under a general manager and two general superintendents, are being sent to Russia to assist in the rehabilitation of the Trans-Siberian Railway.

p.m., on Oct. 1, so that passengers might make connection with the 7.00 p.m. train east via the Kettle Valley Ry. route.

The Edmonton, Dunvegan & British Columbia Ry. gave notice recently that passengers and freight would be handled to points north of La Biche up to and including mileage 202, on the Alberta & Great Waterways Ry., every two weeks, instead of weekly as heretofore.

The National Transcontinental Ry. local passenger train operating between Winnipeg and Redditt, Ont., was discontinued Sept. 30. The mixed trains, which were run during the summer, one in each direction daily between Winnipeg and Graham, are being continued.

The Edmonton, Dunvegan & British Columbia Ry. put its winter time table in operation Oct. 20. The train for Peace River and other points leaves Edmonton at 4.30 p.m. on Mondays and Thursdays, instead of Tuesdays and Fridays, as during the summer. The return train leaves Peace River on Tuesdays and Fridays.

The Board of Railway Commissioners is being asked to sanction a joint railway rate from Winnipeg to the district opened up by the Edmonton, Dunvegan &

to car tracers entering the railway yards at the different terminals. It is stated that representatives of large firms, particularly coal dealers, have been in the habit of visiting terminal points with a view to locating cars consigned to their plants, and when such shipments are located, get them out on the first train by remunerating men in charge of the yards. It is pointed out that this practice is a discrimination against the smaller manufacturers or dealers, who, perhaps, were unable to make such expenditures.

Suggested Union Station for Edmonton, Alta.—At a sitting of the Board of Railway Commissioners in Edmonton, Alta., Oct. 16, a Board of Trade delegation advocated the erection of a union station for all railways entering the city. The site suggested is between 101st and 109th Streets and between the Canadian Northern Ry. tracks and Jasper Ave. The commissioners stated that the board had no power to direct that railway companies erect union stations, but they would look over the proposition with a view of future developments.

Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We should be glad to be favored in this respect.

The G.T.R. Patriotic Association contributed \$2,000 to the British Red Cross Fund, for which special contributions were raised throughout the Dominion during October.

Overseas Transport Service.—A. H. Harris, Special Traffic Representative, C.P.R., Montreal, who has been loaned by the company, since early in the war, to direct the assembling and transportation overseas of supplies for the Canadian, British and other allied forces, is said to

to his order should be given priority over all traffic, excepting passenger. As a consequence, notwithstanding the volume of tonnage affected, transports have not been held for cargoes, nor has there been congestion at the Canadian seaboard, such as has been experienced at some U.S. ports. The actual time occupied by vessels in loading at Montreal has been under 4½ days.

The Timiskaming and Northern Ontario Railwaymen's Patriotic Association, up to July 31, contributed \$15,223.67 to the Canadian Red Cross; \$18,216.26 to the Canadian Patriotic Association, and \$13,660.91 direct to enlisted employes. The T. & N. O. R. Commission has subscribed \$5,000 and \$10,000 respectively to the Canadian Red Cross and Canadian Patriotic Associations.

Toronto Ry. employes are reported to have contributed 860 men to the army, since war broke out.

his splendid coolness and personal example he so influenced his men that the work of evacuating the wounded was promptly and successfully achieved."

Lieut. John S. Hall, formerly of the C.P.R. Mechanical Department, who was in no. 13 Light Railway Operating Co., R.E., in France, has been transferred to the Reinforcement Depot, Tank Corps, B. E. F.

Capt. W. B. Hanna, son of D. B. Hanna, Third Vice President, Canadian Northern Ry., who returned from England recently to Toronto, on sick leave, has relinquished charge of the Canadian Expeditionary Force's stationery service in London.

Sergt. N. W. Hanna, of Toronto, who has been wounded on four different occasions, has been awarded the distinguished conduct medal for services in connection with an enemy party which was destroyed after refusing to surrender. He was formerly engaged on C.P.R. construction.

Transportation of Troops to the Front in France.

In the first years of the war, the troops reached the trenches tired out by long and weary route marches. Now things are different, having been changed by the building of military railways. Official photograph issued by Press Bureau. Crown copyright reserved. Loaned by C.P.R.

be now taking charge of four-fifths of Canada's export trade, inland and overseas. Between Aug., 1914, and Feb., 1915, War Office supplies were moved overseas in chartered vessels; between Feb., 1915, and date transports have been supplied by the Admiralty. The bunkering of transports is done on this side, under the direction and supervision of the Director, as is also the dry docking of vessels when necessary. Exclusive of officials and representatives at Vancouver, Calgary, Edmonton, Regina, Winnipeg, Fort William, Toronto, Quebec, Three Rivers, Halifax and West St. John, there is a clerical staff of 45 in Montreal. The number of checkers, longshoremen and dock laborers under the Director's control at the several Canadian ports used by the department exceeds 1,600 men, with a pay roll of \$33,000 a week. The volume of tonnage cleared from the seaboard has been facilitated and delays minimized from the fact that the Canadian Pacific and Grand Trunk presidents, recognizing the growth of the transport service, considered concentration of authority necessary to efficient direction, and accordingly issued instructions to their operating officials that the regulation and control inland of all Imperial transport should be vested in the Director of Overseas Transport. Instructions were issued concurrently that all transport consigned

PERSONAL NOTES.

Capt. W. H. Bennett, Quebec Regiment, C.E.F., who was reported killed, Aug. 13, was formerly on the C.P.R. staff at Montreal, enlisted in the early stages of the war as a private, and went overseas with the first contingent. His commanding officer wrote that he had taken his company over the top, and received a hit, but continued and reached the first objective, when, perceiving that an enemy machine gun in the final trench was accounting for several casualties, he, with three men, made a dash for the gun and captured it, receiving a fatal wound in so doing. He declined to have the wound dressed and ordered his men to carry on.

Lieutenant E. F. Ellis, Royal Field Artillery, B. E. F., who has been awarded the Military Cross, enlisted in Oct. 1914, and prior to that was in the Registrar's Department, C.P.R., London, Eng. The work which earned him the Military Cross is officially described as follows: "Whilst constructing observation posts on two separate occasions, he displayed the utmost disregard for his own personal safety, when the parties he was in charge of had serious casualties. Under heavy fire he withdrew his party to a place of comparative safety, and returned and proceeded to collect the wounded and get them away, remaining for half an hour in the shelled area until all was clear. By

Lieut. Hay Hebson, West Yorkshires, who was reported, Oct. 21, as killed in action, went overseas with the 2nd Canadian Contingent, and was formerly on the C.P.R. staff.

Lieutenant Frank Quinlan, Montreal, who was reported killed in action, Sept. 29, was a son of Hugh Quinlan, of Quinlan & Robertson, railway and general contractors, and prior to enlisting was engaged in the Canadian Government Railways shops at Transcona, Man. He went overseas with one of the pioneer units, and had been in France for about three months, where he was attached to a railway construction battalion.

Lieut. R. S. Richardson, of the 13th Light Operating Co., R.E., British Expeditionary Force, formerly Superintendent, Canadian Government Railways, Fort William, Ont., while riding up to the front in July, on a load of steel, which apparently had not been well loaded, and slipped off the car, carrying him with it, had one of his legs badly cut, both above and below the knee. He was in hospital for about 10 weeks, but a letter, dated Sept. 29, stated that his wounds had healed and that he had returned to duty, after spending a few days touring the war area and visiting Nieuport, Arras, Lens, Vimy Ridge, etc. His company has had a number of casualties, a few fatal, and a number gassed and shell shocked.

Major Ian Sinclair, of No. 1 Company, 13th Battalion, Royal Highlanders, of Montreal, who has been awarded the Military Cross, is the second son of Angus Sinclair, railway contractor, Toronto. He went overseas at the beginning of the war and has been throughout with the third brigade of the first Canadian division, having been wounded four times.

The Canadian Railway Troops' Work.

A recent report on the Canadian Railway Troops shows that during July last they did the following work on railway lines:

	Standard gauge.	Narrow gauge.
Miles located	21.10	82.71
" graded	11.12	90.27
" grade repaired02	28.00
" track laid	11.23	88.09
" ballasted	16.53	99.71
" surfaced	17.86	60.06

In addition to this, the troops, which approximate 8,000 men, maintained a large mileage of both standard and narrow gauge lines.

A London cablegram of Oct. 15 said: "Officers of the Canadian Forestry and Railway Troops found not technically suitable are being combed out. Those serving overseas are transferred to home establishment. Those who have served already as infantry officers are given an opportunity of transferring to a unit. The others are being returned to Canada."

The Militia Department, Ottawa, made public, on Oct. 10, a letter from Roland Hill, from the war correspondent's headquarters in France, in which he said: "The Dominion Railway Troops have done their little share so well that this morning the Director-General of Transport came over and congratulated them. All these Canadian units are delighted to be near the battle that is driving the Hun further than ever from coveted Ypres."

Roland Hill, in another letter given out by the Militia Department, Oct. 16, says: "In the present phase of warfare on the Western front, when trench lines have practically disappeared and advanced posts have taken their place, the Hun artillery does not attempt the old front line barrages that made life in the trenches so uncomfortable. It is that section immediately behind these new posts that comes in for Fritz's constant attention, and it is in this area that the Canadian Railway Troops have been winning great praise from all sections of the army. In this devastated country, where a pile of broken bricks overgrown with weeds, and a sign with a map location, designate a former village, where roads have altogether disappeared, and even cross country trails melt in a single night, the Canadian railway men construct and maintain their lines. They are shelled by Fritz, if anything, more persistently and in greater volume than the infantry, yet night and day tons of ammunition and rations and men go forward over repaired lines, feeding guns and men alike. The experiences of the railway troops are not lacking in excitement.

"A colonel of Peace River fame and his battalion from Alberta have one of these areas to look after. In a district which can be compared in size with Hamilton and Dundas, Montreal and Ste. Agathe, or Vancouver and Burnaby Lake, they have constructed nearly 150 miles of light railway. It has been planned strategically, so that if one line is suddenly destroyed by shells, traffic can be sent around another way. The men and guns ahead never want for anything. They are not supposed to be operating troops, but when the hot times come they are always

found running trains and loading cars, in addition to doing their own jobs. They are the 'trouble hunters' of the first line of communication.

"During one of the recent attacks Sergt. Oscar Samson, of Alberta, was seriously wounded in the arm. Instead of trekking for medical assistance back in the rear, he attempted to carry on at his job of mending lines destroyed by Hun shells, so that more ammunition could be rushed up. Finally his arm got so painful he decided to go forward on the track that had been mended to an advanced dressing station he knew of. His wound had been fixed by a comrade, and his arm was tied up in an improvised sling. Samson climbed on a tractor that was hauling a trainload of Stokes gun ammunition. When they got to a junction near the front line, both guard and driver were wounded by splinters from a high explosive shell. The little train had made the crest of the grade and was gathering momentum every second, with the driver of the tractor hanging limp and unconscious from his seat. Samson pulled him up to a place of safety and shut off the engine, but the heavy train had too much headway to be stopped, and in addition the brake gear had been blown away by another shell. Climbing back to try to get the brakes on the cars, Samson came across the wounded guard. He had been knocked off the top of the truck and his foot, catching in the framework of the car, he was being dragged along with his head and shoulders bumping on the ballast. The Canadian sergeant released his foot, but failed in his attempt to gather him up into the rapidly moving car. About a hundred yards ahead was another ammunition train, its cargo of high explosive shells being unloaded at a battery position. By good luck, and a knowledge of braking learned on the grades in the Rockies, Samson managed to slow down his train just as it reached the standing trucks, and a serious collision and explosion were avoided. Then, although the shell fire was extremely heavy, the sergeant went back and rescued the wounded guard. Samson won the Military Medal for his splendid exhibition of pluck.

"There are many such tales of courage. In another of the Alberta companies there is an officer with a Military Cross and a man with a Military Medal. This is how they were won: The 'gang' were repairing a shelled-out switch which had marooned a trainload of Stokes gun ammunition, badly wanted up at the front. A fragment of Hun shell detonated a whole cargo, knocked out about a score of men, and sent Lieut. K. Corbitt spinning, a piece of casing cutting his Sam Browne belt in half. Corbitt gathered himself up and found his company commander wounded and unable to 'carry on.' The lieutenant, assisted by acting sergeant Simpson, also from Alberta, dived in among the burning truckloads of ammunition and removed all the wounded to a safer place and got them medical assistance. With the same non-commissioned officer, he vainly tried to put out the fire with sand ballast, but the shells were exploding too fast, and the flames continued to gain headway. Simpson, finding it was impossible to save the ammunition, crawled around and collected the railway tools that had been scattered by the first explosions."

In another letter, made public in Ottawa, Oct. 23, Roland Hill said: "Today the Colonel of Canadian Railway Troops invited me to accompany him to an exhibition he was giving to French, Belgian

and British engineers. He walked along a new main military line built with rails from Canadian railways. The ties had been cut in a miniature Canadian sawmill not many miles south, in woods where the Kaiser's Uhlans roamed early in the war. Out in the large yard there was a big steam shovel eating away the side of the hill, filling a truck a minute—the Belgian officer timed the great engine—to go forward where the light railway crews—Canadians there, too—were ballasting new lines. Fritz's airmen spotted them one day, and for weeks afterwards his artillery searched for them, wasting hundreds of rounds of ammunition. The Germans thought it was some new mastodon of destruction. It used to work on a Canadian Pacific grade in Northern Ontario. When the Huns broke back along the coast they left various bits of tangled machinery. The Canadian Colonel gathered these up, commandeered a big railway truck, and built a track layer in his own blacksmith shop.

"At railhead there is a young Canadian railway transport officer who used to be train dispatcher at a little place on the prairie. In the next yard another (in Canada he was manager of an electric railway company) is quartermaster for railway stores.

"The dockmaster at the great port away back was in the stevedoring business on the Pacific coast. Under his command were more transporters and cranes than Vancouver and Victoria combined will see for years. In the dock was a tramp ship straight from his home on the Pacific coast.

"A lieutenant-colonel from Nova Scotia, with his labor battalion men from all parts of the Dominion, who knew the job, had trebled the port for unloading the rails. At another port I found a colonel, an Ontario member of parliament, handling a bunch of Chinese coolies piling lumber, and even the native interpreter claimed Canadian association with saw-mills on False Creek."

The C.P.R. and Vancouver Tide Lands.—A claim is being made in an action brought by the Pacific Box Co. against J. G. Woods in a British Columbia court that the C.P.R. has no right to collect rents on certain waterfront land on the north side of False Creek near the Courbe St. bridge, Vancouver. Woods originally leased the property, which comprises two parcels, one the property down to high water mark, the other the reclaimed land beyond that point. Woods leased to A. J. Forsythe, who gave the Pacific Box Co. permission to store lumber, etc., on the wharf. Forsythe, it is alleged, was in arrears with his rent, and Woods seized lumber belonging to the Pacific Box Co. in satisfaction. A press report states that point raised will involve the question of the C.P.R. title to all of the tide lands it is using in Vancouver.

C.P.R. Inspection Trip.—Sir George Bury, Vice President, and other officers completed their inspection trip over the company's western lines, Oct. 1, and left Winnipeg, Oct. 2, reaching Montreal, Oct. 4. R. B. Angus, the oldest director of the company; F. L. Wanklyn, General Executive Assistant, and J. G. Sullivan, Chief Engineer, joined the party in Vancouver, Sept. 25, and returned east with it.

The Esquimalt & Nanaimo Ry., a C.P.R. subsidiary, has issued a number of writs asking for an injunction restraining further prospecting on lands on the Chemainus land district, Vancouver Island. Among the defendants is the Canadian Collieries (Dunsmuir) Ltd.

Mainly About Railway People Throughout Canada.

C. R. Morrill has been appointed Assistant General Manager of the Southern Pacific Ry. at Houston Texas.

F. P. Drake, M.D., one of the G.T.R. surgeons at London, Ont., died there suddenly Oct. 7.

Col. F. Firebrace, R.E., who died in England recently, was a director of the G.T.R. and the Grand Trunk Pacific Ry., and also of the Great Indian Peninsular Ry.

N. R. DesBrisay, District Passenger Agent, C.P.R., St. John, N.B., was presented with a silver coffee urn and serving tray by his staff, recently on the occasion of his marriage.

Hon. Chas. Stewart, M.L.A., who has succeeded Hon. A. L. Sifton as Premier of Alberta, has also been appointed Minister of Railways and Canals for the province, as well as President of the Council.

Miss Florence Page Black, daughter of James Black, Claim Agent, British Columbia Division, C.P.R., Vancouver, was married there recently to W. Harold Sim, of that city.

Geo. W. Yates, for many years secretary to Hon. Frank Cochrane, until recently Minister of Railways, has been appointed secretary to the Prime Minister, Sir Robert Borden.

J. Sydney Roe, who has been private secretary to Hon. J. D. Reid, as Minister of Customs, for the past six years, will continue to act as private secretary for him as Minister of Railways.

A. Grills, General Roadmaster, G.T.R., St. Thomas, Ont., was elected President, Roadmasters and Maintenance of Way Association, for the current year, at the recent annual convention in Chicago.

W. A. Wilson, who retired from the position of Canadian Freight Agent, New York Central Lines, at Toronto, recently, has been given a silver service and an illuminated address by a number of friends.

Lincoln Smith, Assistant to Manager, B.C. Coast Steamship Service, C.P.R., Victoria, is reported in a press dispatch as about to resign to become Managing Director of Peter McQuade & Sons, ship chandlers, Victoria.

George Beckingham, Superintendent of Track, G.T.R., Montreal, was elected a member for four years, of the executive Committee of the Roadmasters and Maintenance of Way Association, at its recent annual convention in Chicago.

R. F. Hill, Assistant General Freight and Passenger Agent, Toronto, Hamilton & Buffalo, Ry., Hamilton, Ont., was presented with a cabinet of silver by head office officials and employes, Oct. 11, on the occasion of his recent marriage.

Hon. Hugh Guthrie, M.P. for South Wellington, Ont., since 1900, who has been appointed Solicitor General in the Dominion Government, was for several years Chairman of the House of Commons Railway Committee.

Wm. Murdoch, City Engineer, St. John, N.B., died there suddenly, of apoplexy, Oct. 8, aged 69. He was the son of Wm. Murdoch, one of the first conductors on the European & North American Ry., between St. John and Shediac.

Charles E. Donovan, who died in Toronto, Oct. 9, was at one time freight agent on the Toronto, Hamilton & Buffalo Ry., and was subsequently employed by the Quaker Oats Co. at Chicago, and latterly at Traffic Manager, T. Eaton Co., Toronto.

G. C. Peters, local manager, New Brunswick Telephone Co., Moncton, N.B., who died there suddenly, Oct. 3, aged 73, was engaged on construction on the Intercolonial Ry., between Dorchester and Sackville, N.B., many years ago. He had been with the New Brunswick Telephone Co. for over 30 years.

F. P. Gutelius, formerly General Manager, Canadian Government Railways, Moncton, N.B., and now Vice President and General Manager, Delaware & Hudson Co., Albany, N.Y., has also been elected Vice President of the United Traction Co., Albany, and the Schenectady Ry., Schenectady, N.Y., which companies operate electric railways in the Albany and Schenectady districts.

A. C. Boyce, K.C., D.C.L., who has been appointed a member of the Board of Railway Commissioners for Canada.

H. S. Rogers, Maintenance Engineer, Delaware & Hudson Co., Albany, N.Y., has been appointed Division Engineer in charge of maintenance of way on the Susquehanna Division, at Oneonta, N.Y. This is the division of which J. K. McNeillie, formerly General Superintendent, Canadian Government Railways, Moncton, N.B., was appointed Superintendent recently.

F. C. Salter, European Traffic Manager, G.T.R., London, Eng., expressed regret at his inability to accept an invitation to attend the unveiling of the Bell memorial, at Brantford, Ont., Oct. 24, in commemoration of the invention of the telephone there. As a boy, he was one of the party to speak over the world's first telephone line in 1876 between Brantford and Tutela Heights, where the inventor, A. G. Bell, lived.

W. W. Atterbury, Vice President of the Pennsylvania Rd., who is now supervising railway operations for the U.S. troops in France, was nominated, on Oct. 2, to be a brigadier general in the National Army. He was appointed Director General of

Transportation of the U.S. Expeditionary Army in France, on Sept. 14, after a month's service in active charge of all railways, docks and highways under General Pershing.

James William Doyle, whose appointment as General Manager, Cape Breton Ry., St. Peters, N.S., was announced in our last issue, was born at Summerside, P.E.I., Oct. 12, 1872, and entered railway service in April, 1895, since when he has been, to Sept. 1902, clerk, C.P.R., Montreal; Sept. 1902, to July 1903, accountant, Montreal Terminal Ry., Montreal; July 1903 to July 1917, Auditor, Cape Breton Ry., St. Peters, N.S.

Albert John Michener, whose appointment as General Foreman, Michigan Central Rd., St. Thomas, Ont., was announced in our last issue, was born there, Nov. 9, 1874, and entered M.C.R. service July 3, 1889, since when he has been, to July 3, 1894, apprentice on car building; July 3, 1894, to Dec. 1, 1902, car builder; Dec. 1, 1902, to June 1, 1908, freight and wood machine foreman; June 1, 1908, to Oct. 1, 1916, Coach Foreman; Oct. 1, 1916, to Aug. 14, 1917, Assistant General Foreman, all at St. Thomas, Ont.

Milo Clifton Dawson, who died at Toronto recently, was born at Beekmantown, N.Y., June 28, 1852. He was, from Aug., 1887, to June, 1890, conductor, Wagner Palace Car Co., Weehawken, N.J.; June, 1890, to June, 1898, Assistant District Superintendent, same company, Weehawken, N.J.; June to Sept., 1898, agent, same company, Saratoga, N.Y.; Sept., 1898, to Feb., 1900, Superintendent, same company, Montreal; Mar., 1900, to Oct., 1906, agent, Pullman Co., Toronto; November, 1906, up to the time of his death, conductor same company, Toronto.

D. F. Burk, who died at Port Arthur, Ont., Sept. 29, aged 68, was associated with a number of land development schemes in western Ontario for several years. In partnership with a brother he entered railway contracting business in 1884, and carried out several contracts. He was, at various periods, Vice President and director, Port Arthur, Duluth and Western Ry.; President and director Ontario and Rainy River Ry., both of which have since been incorporated with the larger systems, and President, St. Joe Ry. He was also at one time Manager and Secretary, Lake Superior Dock Co.

Arthur Cyril Boyce, K.C., who has been appointed a member of the Board of Railway Commissioners, to fill the vacancy caused by the retirement of Jas. Mills some time ago, was born at Wakefield, Eng., Sept. 12, 1869. On coming to Canada he took a law course, and was admitted a barrister, with honors and bronze medal, in 1890, and make a K.C. in 1908. He practised at Port Arthur, Rat Portage and at Sault Ste. Marie, Ont., and was elected Chancellor of the Algoma Diocese in 1910. He was elected M.P. for Algoma in 1904 and was re-elected, sitting until the dissolution of parliament recently.

George C. Conn, Freight Traffic Manager, Pere Marquette Ry., Detroit, Mich., has resigned, to enter private business. He was born at Woburn, Mass., July 1, 1867, and entered railway service Oct. 1, 1864, in the Boston & Lowell Rd.'s general freight department, and was later, to 1888, with the Boston & Maine Rd., since when he has been, to 1890, Travelling Freight Agent, Pennsylvania Rd.; 1890 to

1897, Travelling Agent, Canadian Pacific Despatch; 1897 to 1900, Commercial Agent, Flint & Pere Marquette Rd., Minneapolis, Minn.; 1900 to 1904, General Agent and Assistant General Freight Agent, Pere Marquette Rd., Milwaukee, Wis.; 1904 to 1909, General Freight Agent, Minneapolis, St. Paul and Sault Ste. Marie Ry.; 1909 to Mar. 7, 1912, Freight Traffic Agent, Pere Marquette Rd.; Mar. 7, 1912, until the recent reorganization of the company as the Pere Marquette Ry., Vice President, Pere Marquette Rd., Detroit, Mich.

E. B. Skeels, formerly Resident Engineer, C.P.R., Lethbridge, Alta., after leaving there some months ago, was appointed by the United States War Department, Central District, as Assistant Superintendent of Construction at Camp Robinson, Wis., which was built entirely for artillery forces. Upon the completion of Camp Robinson, he resigned from the U.S. Government service and was appointed Superintendent of Pumping Plant Construction for Bates & Rogers Construction Co., which has the contract for building Camp Grant, Wis., one of the 16 large cantonments for the U.S. Army. This camp is being supplied by 6 artesian wells, the water from which will be pumped into a 300,000 gal. concrete reservoir by means of an air lift system. Centrifugal pumps, two stage, of various makes, some direct connected, motor driven; others driven by motor, with belt; and gasoline engine, with belt, pump the water from the concrete reservoir to a 250,000 gal. steel tank and mains, the maximum pressure being 85 lb. With the exception of one pump, the centrifugal pumps are guaranteed to pump 1,000 gal. a minute each against a 175 ft. head. It is said that Camp Grant will be enlarged so as to finally accommodate 60,000 men, instead of 40,000, as originally planned. On the completion of his work at Camp Grant, Mr. Skeels was transferred to Madisonville, a suburb of Cincinnati, Ohio, where he is now Superintendent for Bates & Rogers Construction Co. on the replacement of a stone arch bridge under the Baltimore & Ohio Rd. double track main line, east of the city. He also had charge of a track connection between the Baltimore & Ohio Rd. and the Cincinnati Hamilton & Dayton Ry., at Dayton, Ohio., involving approximately 2½ miles of grading and 5,000 lin. ft. of trestle and bridge work. He will probably be at Madisonville all winter.

J. W. Mulhern, whose appointment as General Superintendent, Kettle Valley Ry., Penticton, B.C., was announced in a recent issue, and whose portrait appears in this issue, was born at Naples, Ill., in 1863, and entered railway service in 1881, since when he has been, to 1887, successively water carrier, track hand, freight trucker, freight clerk, brakeman and freight and passenger conductor, Chicago, Burlington & Quincy Rd., Beardstown, Ill.; 1887, Yardmaster, same road, Beardstown, Ill.; Oct., 1887, to Jan., 1890, Yardmaster, Kansas City Terminals, same road; Jan., 1890, to Dec., 1902, Trainmaster, same road, Brookfield, Mo.; Dec., 1902, to Aug., 1904, Superintendent, Kansas City Terminals, same road; Aug., 1904, to Dec., 1905, Superintendent, Hannibal-St. Louis Division, same road, Hannibal, Mo.; Dec., 1905, to July, 1908, Superintendent, Galesburg Division, same road, Galesburg, Ill.; July, 1908, to May, 1910, Superintendent, Illinois Lines, Chicago & Alton Rd., Bloomington, Ill.; May, 1910, to May, 1911, Assistant to Second Vice President, Western Pacific Ry., San Francisco, Cal.; May, 1911, to Aug., 1912,

General Superintendent, Utah Line, Denver & Rio Grande Rd., Salt Lake City, Utah; Nov., 1912, to July, 1914, Superintendent, Chicago-Petoskey Division, Pere Marquette Rd., Grand Rapids, Mich.; July, 1914, to Mar., 1917, Superintendent, Northern Division, Chicago Great Western Ry., St. Paul, Minn. He was in charge of the C.B. & Q.R. terminals at Kansas City, Mo., during the flood of 1903, and had charge of all the company's trains in and out of St. Louis, Mo., during the World's Fair of 1904. While at Galesburg, Ill., he had charge of the building of the C.B. & Q.R. new hump yards there, and of the heavy grade reduction and realignment of that division. While with the Chicago & Alton Rd., at Bloomington, Ill., he completed the heavy grade reduction in the second main track to Carlinville, on the Illinois Lines, and on going to the Western Pacific Ry., he took

J. W. Mulhern,
General Superintendent, Kettle Valley Railway

over the road from the construction department, completed the construction and organized the line for operation, together with its marine service, putting it into operation Aug. 22, 1910.

Grand Trunk Pacific Ry. inspection.—A. W. Smithers, Chairman of the G.T.R. and G.T.P.R. boards of directors, and the party of directors and officers of the G.T.P.R., which accompanied him on his recent trip of inspection, reached Vancouver from Prince Rupert, Oct. 8, and travelled eastward, visiting points not touched on the westward trip. The party arrived at Winnipeg, Oct. 12, and Montreal, Oct. 14.

Suit for Recovery of Rails.—The Grand Trunk Pacific Ry. has entered suit against M. Gordon to recover 1,590 ft. of 80 lb. steel rails, together with the angle bars and bolts belonging thereto, now lying in the Canadian Northern Ry. yards in Vancouver. Gordon purchased certain effects of Foley, Welch & Stewart at Tete Jaune and it is alleged that in addition to these he removed the rails and bolts claimed by the G.T.P.R.

The Wabash Railway in Canada.

The agreement under which the Wabash Ry. operates over the G.T.R. Air Line Division will expire Jan. 24, 1919. This covers the G. T. R. line and ferries from Detroit, Mich., to Black Rock, N.Y., and the line from Welland Jet. to Suspension Bridge, Ont., which are used under a joint operating agreement. The rental provided for was \$275,000 a year for the five years ended Mar. 1, 1903; \$300,000 a year for the five years ended Mar. 1, 1908; \$325,000 a year for the five years ended Mar. 1, 1913; and \$350,000 a year for the remaining period of the lease. The Wabash has also to pay its proportionate share of the cost of maintenance and operation. This a report says is calculated on a wheelage basis, representing 70% of the traffic and works out at approximately \$100,000 a month. The Wabash does a local, as well as a through, freight and passenger business over the route, the G. T. R. only operating a few local trains mainly in connection with the branch lines, connecting with the main G. T. R. system.

One press report states that the Wabash will, on the expiration of the lease, abandon the Canadian field, and make a contract for its U. S. business with another U. S. company, while another report states that the Wabash will buy the Air Line from the G.T.R. and become an owning as well as an operating railway in Canada.

We are officially advised in regard to the foregoing that negotiations respecting a renewal of the lease are pending.

Military Railway Platforms of Old Ties.

Material of all sorts is so scarce now in France that the engineers laying out the various railways behind the lines experience difficulty in getting material for the platforms on which men and equipment—mainly the latter—are landed. These platforms have to be close to the railway track and about as high as the distance of the floor of the car from the ground. A solution of the difficulty has been found in the utilization of old railway ties. Two forms of platforms are in use. One is built between two lines of track, where an earth fill is retained between walls made up of ties. The other is alongside of one track, where the platform fill is retained by a row of ties held back to deadmen. In the double wall type a trench is excavated and ties set in the hole thus made are held tight by tamping in earth around them. Along the top of the ties then run falling pieces tied across the filled area with iron rods. In the single row type the ties are likewise set in excavation and sticks driven back of the face form deadmen to which occasional tie rods from the upper part of the ties are fastened. The fill is then made up to the level of the tops of the ties. It is found easier to excavate holes for the ties and fill in afterward than to attempt to drive them as piles.

The Canadian Northern Ry. is seeking to recover through a Saskatchewan court a sum approximating \$4,000 from Judge Ousley, J. E. Chisholm, K.C., and J. Thompson, an alleged overcharge. The three defendants were arbitrators in the matter of Green against the company, and the company alleges that there has been an overcharge of the amount named in the fees charged and expenses incurred in the hearing.

Some Present Day Problems in Railway Maintenance Work.

The paper on this subject by F. B. Tapley, Assistant Engineer of Maintenance, Canadian Government Railways, Moncton, N.B., as read before the Canadian Railway Club in Montreal, and published in Canadian Railway and Marine World for October, was discussed by the club members at some length. The following are the most important parts of the discussion:

G. E. Smart (President), Master Car Builder, Canadian Government Railways: There is room for improvement in track work. My own experience has not been great—in fact, all I know is from the work I had when in charge of a wrecking crew. Usually the first thing was to find where the car was derailed, then with the resident engineer or roadmaster find the cause. The cost of ties is very high. I was talking to a section foreman the other day and he referred back 15 or 20 years, when ties could be purchased for from 15c to 20c each whereas now they cost 75c. When you consider this you begin to realize that it is time we looked around for something that will prolong the life of the tie. I do not know that we have gone into this very extensively in this country, but there are sections in which they are using treated ties and find them an improvement and cheaper, notwithstanding the additional cost of treating the tie.

We must provide proper facilities for housing men if we are going to keep them together. The time has passed when you can pick out an old box car with leaky roof and decayed sills and turn it over to the track department for the use of their men. Mr. Tapley speaks about the use of motors on the sectionmen's cars. I know of cases where the men have purchased the motors and applied them themselves at their own expense.

R. M. Hannaford, Assistant Chief Engineer, Montreal Tramways Co.: There is one thing in the paper that I cannot understand, and that is the stress which is laid on the use of the treated tie. The treatment does not lengthen the life of such a tie as the cedar tie but it will lengthen the life of ties from other woods more susceptible to rot. The trouble with the cedar tie is that it not only rots, but it will split and break down under rail. The best thing to make the tie last is to use a tie plate, which is a step forward, as the proper use of tie plates will increase the life of the ties. In regard to the labor trouble; I think the main trouble is to keep the men on the regular sections and not so much on the extra gangs. The life of the regular sectionman is rather dull and the work is hard, and after working hard all week if he is sent up the line 20 or 30 miles on some work of emergency on Sundays—which happens from time to time—in one of these cases that the President spoke of—he is apt to become dissatisfied. The track is one of the hottest places on which a man can work, and the work is somewhat dispiriting, and could be alleviated to an extent by the use of motor cars. If you start out fresh in the morning, by the time you reach the place of work and remove the tools from the hand car you feel you have done enough for a few hours at least, and it is the same thing going home. It is hard to pump against a heavy grade, or a heavy wind, and you feel like getting off and letting someone else pump the car while you walk home.

Cutting the end of rails is a good thing if you can overcome the objection of us-

ing old plates. The trouble is that the rail is liable to hammer down the plate. Sometimes you can twist it around and use it in the opposite way, but the hammering down of the following rail makes an offset in the plate so that it will not fit. The street railways use a large file in a frame, which grinds the joints, or levels them up, after the joints have been tightened.

You can get men more readily for extra gangs than for regular gangs, as the men do not like to go out into the country where life is monotonous and it gets on their nerves. They want a little recreation, which they do not get on regular sections.

In regard to the heavy work on the track, such as tamping: There are certain types of power tampers which are used and which can be used with economy in large gangs, and they also help the men as they take away a lot of the drudgery of tamping by hand.

In regard to the life of ties: The other day in speaking to a practical man, he stated that he did not consider it would pay to treat ties until they were worth 95c each, they are now 80c, so that they would soon have to begin to treat them.

I believe that too little attention has been given to the quality of ballast used. The practice has been to use any old thing that looked like gravel, and while good ballast may have to be hauled some distance it pays to apply the proper quality. On the Grand Trunk, the nearest ballast pit to Montreal, as I remember it, is River Beaudette, and I think there is another pit not far from Acton, on the line to Richmond. When you have to haul your ballast 40 miles it is going some. I believe the roads will eventually come to use broken stone ballast. It costs more to produce and to handle, but it is the cheapest in the end to use for the track.

W. H. Yost, Engineer, Hart Otis Car Co.: My experience in ballast maintenance work has been mostly in building the ballast car and seeing the work from that point of view. Many of the roads in the United States have gone into the use of washed ballast and broken stone ballast, which is more expensive, but cheapest in the end, as the poor material loosens up by reason of moisture and results in pockets in the roadbed. In Canada, where you have ballast pits at convenient points and the material is of good quality, it is cheaper to use it and it does very well, but with the heavy equipment used today good ballast is very necessary.

In regard to housing of men: I have been to some of the camps and have stayed in them. The men are housed fairly well and the food is very good. Of course, you do not want to look twice where you sleep and you probably will require to be fumigated when you leave, but that is all in the day's work.

C. W. Van Buren, General Master Car Builder, C.P.R.: We are all interested in track work. The locomotive and car men particularly know what effect certain conditions of track have on the equipment. The President made a remark about the wrecking foreman, the first thing he did was to look for a bad rail. I do not agree with him, in every case, as I knew of a wrecking foreman who reported to the maintenance of way department, and he did not find any bad rails. He found various car defects, but, of course, when he was turned over to us we got him busy looking for bad track.

I do not know just how expensive rock

ballast is, but as a matter of information should like to know if it is not a fact that in the long run rock ballast is more economical, and is it not the only thing that gives automatic drainage and a good, clean roadbed? It might be interesting to hear about that.

Another thing is the process for re-rolling worn rails. Some officers have been hauled over the coals about grinding cast iron wheels and reclaiming them, and they have had to explain at length why this should not be done in Canada. If it is profitable to re-roll rails it is something which we should look into, but I would like to have some information as to whether the re-rolled rail is as safe as the new rail, as it comes from the mill. This is a very serious question, as we all know the troubles we have had in this country during the winter with broken rails.

We can understand that a tie plate will assist in preserving the tie and probably save considerable trouble and expense in track maintenance, but the tie plate is only a little wider than the base of the rail, and I would like to know why it would not be better to make the plate wider.

Jas. Powell (Secretary): I understand the C. P. R. has a machine for regrinding wheels.

C. W. Van Buren: It has none, and it is not likely that it will have any.

Jas. Powell: You regrind the wheel to make it serviceable for a little longer, but in the case of the rail, if it is re-rolled it will never be like the new rail. On the English roads they have a chair which holds the rail much firmer than the tie plate which we use in this country. I would like to ask something about the ditching machine. It seems to me it would be very helpful in maintaining the track, especially in the spring after heavy snow when the water accumulates, and if there is no means of carrying it away the ties become loose.

C. W. Van Buren: I think Mr. Tapley's idea of the ditching machine is something like the man who wanted to hire a janitor. He asked the man who applied if he had ever been in jail, and he said "No." He then asked him if he ever used intoxicating liquor, and he said, "You don't want a janitor; what you want is an angel." Mr. Tapley knows what he wants, but I do not think it has been discovered yet.

F. B. Tapley: We have a machine built like a small steam shovel. Several types are made. These machines will ditch or clean out a cut, but they will not finish it. The machine I have in mind is a ditch cleaner with a bucket belt which will cut a ditch of standard section or clean the ditch out the same as a man would do with a shovel. When the man cleans it out with a shovel, he put the earth on the side of the ditch and in a few weeks it is washed back again. If we could take this material, and by using a belt conveyor and dump cart, put it down the side of a dump, it would take this work off the sectionman. I have only just a crude idea. I have seen trench excavators, and they are mighty good machines.

A Member: How long would the arm have to be to carry that?

F. B. Tapley: Say 12 ft. on the average. We should keep the centre of the ditch 11 ft. from the centre of the track, or a little farther, depending on the depth and width of the ditch. My idea is to have it so that it would elevate the material from the ditch on one side and then turn

round and work on the other side. The man in charge could watch it to see that it did not cut too deep. It is a hard job to grade a ditch and any practical trackman will tell you that. If we could get something like that and get it working, it would save time and money.

R. M. Hannaford: I think you should have the arm at least 15 ft., because the average railway embankment being 14 ft. that would give you 7 ft. You have got a bank of 2 ft., then a very small bank with a slope of 1½ to 1, which gives 3 ft. more. You have also to allow 4 ft. for the ditch, so that you have got at least 15 ft. and that is with only a single track. I think something is needed for ditching the cuts a great deal more than the fills, as the fills will take care of themselves. I also think that rock ballast with a sloping subgrade would obviate a great deal of the trouble.

F. B. Tapley: The Lehigh Valley, when it built a portion of its line, used a roller to roll the subgrade, and never surfaced the track for two years afterwards. It had a solid subgrade that was firm enough to take the water away without soaking into it.

A Member: That was specially prepared?

F. B. Tapley: Yes, it was tried as an experiment.

A Member: It would be very expensive.

F. B. Tapley: No, not when you rent a roller for \$10 a day and consider how much work you can do with it.

A. Bromley-Smith, Asst. Engineer, C. P. R.: I think that from an engineer's point of view, the greatest difficulty at present is to obtain material. Mr. Tapley states his preference for a plate with a smooth bottom. A tie plate should be large enough to eliminate cutting into the ties and thus destroying them by mechanical wear, and the base should be of such a character as not to accelerate rotting by cutting the fibre of the wood and so permitting water to enter. One of our roads is using a 8½ x 6½ in. shoulder plate with the rail seat canted 1 in 20 and having a corrugated base, under 85 lb. rail, with very satisfactory results.

The question of treating ties is one which comes up periodically and is a matter of economics. There is only one creosoting plant in Canada at present, and the available supply of creosote is probably not sufficient to justify the railway companies adopting this method of prolonging the life of ties to any large extent just now.

Mr. Tapley referred to rerolling rails. A considerable tonnage of rails has been rerolled into rails of lighter and modified section during the past few years in the United States, but the practice has not yet reached a stage where the railways can make use of it to a very large extent. After rail has been in service for some time, a large number of minute cracks develop in the running surface, and the use of rerolled rail must be extended with caution until experience shows the reliability to be placed upon it. Before being rerolled, rails are sorted according to the extent they are worn, then heated and run through rolls which increase their length, and reduce the section of the head. The process is patented, and no Canadian firms are handling it at present.

Better standardization of track fastenings is certainly desirable, a move in that direction was made this year, and, I believe, we shall shortly see a considerable reduction in the number of types of rail and fastenings being ordered by the various railways.

E. A. Cunningham, Vice President's

Office, C.P.R.: About 15 years ago I visited a plant on the Great Northern at Somersmont, where they creosoted ties; they took every class, jack pine, fir, spruce, etc.; they used every sort of local grown timber, and seemed to think they got excellent results. At that time they were also using a three-cornered tie with 12 in. face known as the "Jim Hill self-tamping tie." I mention this in passing so that if any member desires to get some statistics on treated ties he might do so by communicating with the Great Northern as the time which has elapsed must have proven many things.

A. Bromley-Smith: The practice in Europe, where creosoting has been carried on for many years, is to force as much creosote as possible into the ties, and, I think, a life of only 12 years, for ties so treated, would be considered very disappointing. In this country, the tendency at first was to restrict the amount of preservative used, but I consider ties should be treated under the pressure process, and given a full injection of creosote.

F. B. Tapley: We have had some experience with the use of creosoted piles used in salt water. I think the process was the same as described by Mr. Smith. These piles have been in service nearly 30 years, in salt water, and they are as good above as they are below water, but unfortunately we have no records to show just how they were treated.

R. M. Hannaford: The piles under the G. T. R.'s Galt wharf at Portland, Me., were renewed in creosote about 26 years ago. I know the piles there were eaten away by a small worm known as the *Limnoria*. Before these piles were renewed they were eaten down in some places to 3 in., but after the creosoted piles were put in there was no sign of them being attacked by this worm.

G. T. Bell, Passenger Traffic Manager, G.T.R.: What is the relative proportion of the cost of maintenance that should be charged against passenger and freight trains?

F. B. Tapley: The only way I could answer that would be by taking the amount of passenger and freight tonnage handled. From my own experience I should say the passenger equipment is not so hard on the track as freight equipment.

G. T. Bell: Based on train mileage, with modern passenger and freight trains, what is your idea as to division of the expense?

F. B. Tapley: The cost is about two-thirds in favor of freight and one-third in favor of passenger.

Experiments with Storage of Bituminous Coal.

A series of experiments, started in 1910, to determine the effects of storage upon the properties of bituminous coal has recently been completed by the University of Illinois Engineering Experiment Station. The object has been to devise methods of storing which will avoid the risk of spontaneous combustion and to determine the extent to which coal deteriorates in storage. Prof. S. W. Parr, under whose direction the tests have been conducted, summarizes the results in Bulletin 97 of the Engineering Experiment Station. It is shown that, if properly sized and carefully handled, coal may be stored without danger of spontaneous combustion; that the actual loss of heat value, or deterioration, resulting from storage is slight; and that underwater

storage eliminates entirely all risk of spontaneous combustion or of deterioration. The extent of the waste and economic loss incident to the present method of seasonal production, with its attendant abnormal demands upon transportation facilities is discussed, and it is estimated that the lack of storage facilities in large distributing centres necessitates a capital investment in mines and railway cars of \$500,000,000 in excess of the amount which would be required if production could be maintained at a uniform rate throughout the year. Copies of the bulletin may be had without charge by addressing C. R. Richards, Director Engineering Experiment Station, University of Illinois, Urbana, Illinois.

German Plot to Destroy Canadian Pacific Railway.

The United States Secretary of State made public on Oct. 10 two cablegrams sent by the German Foreign Office in Jan. 1916 to Count Bernstorff, German Ambassador at Washington, as follows:

"Jan. 3. Secret. General staff desires energetic action in regard to proposed destruction of Canadian Pacific Railway at several points, with a view to complete and protracted interruption of traffic. Capt. Boehm, who is known on your side and is shortly returning, has been given instructions. Inform the Military Attache and provide the necessary funds.

(Signed) "Zimmermann."

"Jan. 26. For Military Attache. You can obtain particulars as to persons suitable for carrying on sabotage in the United States and Canada from the following persons: 1. Joseph MacGarrity, Philadelphia, Pa.; 2. John P. Keating, Michigan Avenue, Chicago; 3. Jeremiah O'Leary, 16 Park Row, New York. One and two are absolutely reliable and discreet. Number three is reliable, but not always discreet. These persons were indicated by Sir Roger Casement. In the United States sabotage can be carried out on every kind of factory for supplying munitions of war. Railway embankments and bridges must not be touched. Embassy must in no circumstances be compromised. Similar precautions must be taken in regard to Irish pro-German propaganda. (Signed)

"Representative of General Staff."

Quebec's Interest in Canadian Northern Ry.—The Quebec City Council has instructed the City Attorney to attend before the board of arbitration which will fix the value of C.N.R. common stock to be taken over by the Dominion Government, in order to protect the city's interests. It was stated at the council meeting that the city has interests valued at \$420,500 in the railway.

Coupler Repairs.—One of the larger U.S. railways undertook an investigation recently into the question of repairs to car couplers, with the result that, for 1916, it was shown that the expense per car per year was \$197. The rate of coupler renewals was 0.14 coupler per year, thus showing the average service life of a coupler to be between seven and eight years.

The Canuck Supply Co., Ltd., Montreal, has made the following appointments: E. L. Foley, Eastern Sales Manager, with headquarters at Ottawa; W. J. Espey, Manager of Toronto Branch; J. T. Dohm, heretofore Manager, Toronto Branch, has been appointed Manager of Winnipeg Branch, in charge of territory west of Fort William.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Burrard Inlet Tunnel & Bridge Co.—Local interests in North Vancouver are organizing to bring pressure to bear on the directors of the company, who are representatives of the municipal councils, to apply to the Dominion Parliament for a further renewal of the company's charter, and not to permit it to lapse, as was suggested at the recent annual meeting of shareholders. Public meetings are being arranged for to discuss the whole matter. The Vancouver City Council finance committee was instructed, Oct. 5, to take the matter into consideration. (Oct., pg. 393.)

The Canadian Northern Ry. is applying to the Dominion Minister of Public Works to approve of site and plans of a bridge across the Assiniboine River at Kamsack, Sask., mileage 279.3 on its main line.

Canadian Pacific Ry.—The new locomotive house at the Bay Shore terminal, St. John, N.B., is reported to be practically completed. The heating plant has been put in and the installation of the lighting plant is reported to be in progress. A new water tank in the yard and an extension to the coal trestle at Bay Shore are being built. Grant & Howe being the contractors.

A press report from Lethbridge, Alta., states that it is understood that the building of the gap between the east and west terminals of the Weyburn-Lethbridge line will be undertaken next year. The present westerly terminus is at Altawan, the boundary between Saskatchewan and Alberta, and the present easterly terminus is at Manyberries, Alta., the distance between these two points being 37.9 miles.

A press report states that plans are under consideration for the erection of a new station at Lethbridge, Alta., and that its site will be about the same location as that occupied by the existing icehouse, on First Ave. South, opposite Galt Gardens. Another report states that the plans for the new station are being considered in conjunction with plans for the enlargement and rearrangement of the present station.

A press report states that the company has under consideration plans for the construction of a pier at Victoria, B.C., to cost about \$1,000,000. (Oct., pg. 387.)

Edmonton, Dunvegan & British Columbia Ry.—J. D. McArthur, President, is reported to have said in Winnipeg, Oct. 5, that there was not the slightest foundation for the report that negotiations were in progress with the C.P.R. for the sale of the E.D. & B.C.R. and its two allied lines. He had just completed a trip of inspection over the lines and found everything satisfactory. No plans had been definitely settled for construction in 1918.

At the Edmonton, Alta., City Council meeting, Oct. 9, a letter was read from W. R. Smith, the company's Chief Engineer, asking permission to lay tracks and operate trains between what is known on the old maps as Plante Ave., south as far as the intersection of the Canadian Northern Ry. tracks between old Stephen and Trethewey Aves., and on McKenzie Ave. between 121st St. and 105th St. The letter said: We are prepared to comply with the necessary procedure in applying to the Board of Railway Commissioners for approval. In applying for this I would point out to you that on 121st St. there are already existing tracks, and sufficient width has been

added to the street south of old Alberta Ave. to permit of another line of tracks down this street without any damage to property. I understand there are certain existing agreements with regard to McKenzie Ave. of long standing and we would be prepared to accept a narrow strip on the southern portion of the street, complying with the requirements of the Board of Railway Commissioners in the construction of the line." The matter was referred to the City Commissioners for consideration. This is the first definite move made by the company towards the location of its terminals in the centre of the city. (Oct., pg. 392.)

Essex Terminal Ry.—A press report states that a contract has been let to the Chick Construction Co., Windsor, Ont., for the extension of the line from Ojibway to near Amherstburg, where the Brunner Mond Co. is building a large charcoal plant. An earlier press report stated that the extension was to be seven miles in length along the first concession in Sandwich West to Amherstburg. (Sept., pg. 350.)

Grand Trunk Pacific Ry.—A press report states that the company is expending \$20,000 on bridge construction in the vicinity of Prince George, B.C. (Sept., pg. 350.)

Grand Trunk Ry.—W. D. Robb, Vice President in charge of rolling stock, etc., was in Brockville, Ont., Oct. 4, and is reported to have said that nothing would be done in regard to the proposal to remove the company's shops from Brockville to Prescott until next spring, at least, and that it was not all likely that anything would be done until after the war. (Oct., pg. 393.)

Great Northern Ry.—Traffic on the company's line into Vancouver was held up recently owing to the sinking of 350 ft. of track east of Ardley. There is a big sink hole at this place which has given considerable trouble since the line was built. A temporary line has been built so that traffic may be carried on and a large gang of men is endeavoring to fill the hole permanently. (Sept., pg. 350.)

Greater Winnipeg Water District.—At a meeting of the Greater Winnipeg Water District Commissioners recently the auditor reported that the expenditure upon construction to June 30 was \$7,682,335, of which \$1,601,928 had been expended upon railway construction, equipment and rolling stock.

Hudson Bay Ry.—We are officially advised that the state of construction on the closing down of work for the season was as follows: The grading of the entire line from Pas to Port Nelson was completed in September. Ballasting and train filling has been carried on to mile 332 from Pas, and the track is in good condition up to that point. The bridge over the second crossing of the Nelson River at Kettle Rapids, mileage 332, is in course of erection and is expected to be completed early in December. It is a continuous truss 1,000 ft. long, with 2 shore spans of 300 ft. each, and a river span of 400 ft. It is being erected on the cantilever method by the Canadian Bridge Co., Walkerville, Ont., from the designs of W. Chase Thompson, M.Can.Soc.C.E., Montreal. A temporary trestle has been erected over the Limestone River, mileage 350. No buildings were commenced at division yards during the season. The work remaining to be done consists of a trestle

bridge across the Kisematchisk River, mileage 395, and 92 miles of tracklaying, ballasting, etc.

It is reported that good progress has been made with the terminal work at Port Nelson. G. H. Roy, with a party of 70 men, reached Halifax, N.S., Oct. 5, from Port Nelson. The remainder of the men employed worked to the Kettle Rapids of the Nelson River and went out to Winnipeg by rail. (Oct., pg. 303.)

Intercolonial Ry.—Tenders are under consideration for building frame stations at Thorburn and Valley, N.S., a locomotive house at Thorburn and an ice house of 1,500 tons capacity at Mulgrave, N.S.

Owing to the extreme high tides in the Bay of Fundy and Petitcodiac River, on Oct. 1—the highest experienced since 1869—considerable portions of the roadbed were washed out, necessitating the suspension of traffic between Halifax and Moncton for some days. The damage was considerable between Moncton and Grindstone Island, 30 miles, and from Daniels Flat to Germantone Lake, 15 miles, the most serious damage being done between Aulac and Sackville, where half a mile of track was washed out, while other serious washouts occurred near Dorchester and Upper Dorchester. Temporary repairs were made to enable traffic to be resumed. (Oct., pg. 393.)

Kettle Valley Lines.—We are officially advised that the company has decided to build a branch line from Princeton to Copper Mountain, B.C., about 13 or 14 miles. The location is in charge of A. McCulloch, Chief Engineer, Penticton, B.C. This construction is in conjunction with a large mining proposition of the Canada Copper Corporation, which was reported, Oct. 15, to have placed an issue of \$2,000,000 of bonds in New York. This bond issue will provide for further development of the mining property and the building of a concentration plant. The Kootenay Power Co. is reported to be about to expend \$1,000,000 in extending its power lines to the mining plant. (Sept., 1916, pg. 364.)

Northern New Brunswick & Seaboard Ry.—See St. John & Quebec Ry.

Pacific Great Eastern Ry.—Following are extracts from the directors' report presented at the annual meeting in Victoria, B.C., recently: "You have been fortunate in obtaining a disinterested expert report upon the location and construction of the railway by two eminent engineers at the head of their profession in Canada, who, after a close inspection of the whole line, affirm that the location is the best that could have been secured; that the construction is of the highest standard desired, and that the work has been honestly and economically carried out. You will be gratified at this justification of the confidence reposed by your directors in the ability and integrity of your Chief Engineer. Paralyzed by the effects of the war and further embarrassed by the ill timed action of the B.C. Government in bringing suit against your sponsors and directors for their failure to complete this contract, of which the cataclysm of war is the cause, but one course is open, which is the policy being pursued, viz., to mark time until the advent of normal conditions and the settlement of all litigious disputes."

The bridge over the Capilano River, west of North Vancouver, was carried away by a flood, Oct. 1, for the fourteenth time since the railway was opened to

Dundarave, B.C. Temporary repairs have been made and traffic was resumed within a couple of days.

The Finance Minister and the Provincial Secretary for British Columbia spent several days early in October in a trip of inspection over the P.G.E.R. to Clinton and over a section of the partially constructed line thence to Prince George. The matter of future construction is under consideration by the B.C. Government.

In Nov., 1916, the P.G.E.R. placed a contract in the U.S. for 21,000 tons of steel rails. It was stated, Oct. 17, that the B.C. Government had decided to finance this contract, in order that the increase in value of the rails may accrue to the company and so increase the value of the assets which the government is claiming under its mortgage.

Quebec Bridge.—Work on the bridge had sufficiently progressed to permit the crossing of a work train, Oct. 17. The train consisted of a locomotive and two flat cars and the passengers included C. N. Monsarratt and R. Modjeski, of the Bridge Commission, and G. F. Porter, construction engineer for the contractors. It is expected that everything will be ready for the running of freight trains over the bridge by the middle of November, and that the official opening for regular traffic will take place next spring. (Oct., pg. 400.)

St. John & Quebec Ry.—In addition to providing for an extension of time for building the Gagetown-Westfield section of the line, the New Brunswick Legislature passed an act last session providing for the removal of the Northern New Brunswick & Seaboard Ry. tracks and their use on the Gagetown-Westfield section of the S.J. & Q.R. The government may pay for the rails in cash or make other arrangements for compensating the N.N.B. & S.R.

The N.N.B. & S.R. is a mineral carrying railway, built in 1911 by the Canada Iron Corporation from Nipisiguit Jet., on the Intercolonial Ry., to the company's iron mines, 16.9 miles. The mines and railway have not been operated for some two or three years. The present owner of the property is Canada Iron Foundries, Ltd. (Oct., pg. 394.)

Toronto, Hamilton & Buffalo Ry.—We are officially advised that the yard extension work projected at Hamilton is a 4-track addition, each track to accommodate 70 cars, at the present Kinnear yard, 1.75 miles east of Hamilton station. The company already owns part of the mountain face, and the clearing and grubbing performed on that piece of property started some opposition. A request was made to the city to sell a portion of the mountain face adjoining, which was necessary for the accommodation of the trackage, but the company was informed that owing to the opposition which had developed the request would in all probability be refused.

The company is applying to the Board of Railway Commissioners for an order to expropriate a piece of property on the mountain side to the east of Gage Ave., Hamilton belonging to the city. City officials state that the only object which the company could have for acquiring property in this vicinity is for the extension of the Kinnear yard.

In connection with this work the Hamilton City Council has protested on the ground that its being carried out would interfere with the Tye-Cauchon plan for dealing with the whole railway situation in Hamilton, which has been approved by the city council. The council desires to have the work near Gage Ave. suspended

until the Tye-Cauchon plan has been fully considered by all parties concerned. (Sept., pg. 351.)

Union Station for Victoria, B.C.—A press report states that plans are being prepared for the erection of a union station at the Kitsilano Indian Reserve, Victoria, for use by the C.P.R.'s subsidiary, the Esquimalt & Nanaimo Ry., and the Canadian Northern Ry., and that the estimated cost of the building is put at \$1,000,000.

United States Railroad War Board's Report on Traffic Conditions.

The U.S. Railroad War Board issued the following statement recently: Reports just compiled for the board indicate that the travelling public in general and the shippers in particular are giving the finest kind of co-operation to the railways in the handling of the increased traffic that the war has produced. What this co-operation means may be gleaned from these facts: Since May 1 the railways, aided by the loyalty and understanding of the public, have been able to reduce their passenger service by approximately 25,000,000 miles. This has released thousands of train crews and locomotives for use in the freight service and cleared thousands of miles of track, thereby facilitating the movement of coal, food products, and supplies needed by the government.

In addition to the foregoing saving of equipment and trackage, the shippers, big and small, have rallied so splendidly to the slogan, "Make one car do the work of two," that a saving of close to half a million freight cars has been accomplished. This saving of freight cars has enabled the railways to move approximately 25% more freight since war was declared than during the same period last year. Intensive loading and a general increase in the size of the "trade units" used by the various industries has rendered possible the saving of car space. Cotton, for instance, which was formerly moved in units of 50 bales, now moves only in units of 65 and 75. As there are 18,000,000 bales to be moved by rail each season, the increase in the trade unit in this one commodity alone has produced a saving of anywhere from 83,000 to 125,000 cars. Sugar, on which the carload minimum from the South was formerly only 24,000 lb. a car, now moves only on a 60,000 carload minimum. The producers of manufactured food and products, especially the canners, have also come to a realization of the value of intensive loading, and are now loading virtually all of their cars to capacity.

Coal, which has been loaded beyond capacity on most lines since the beginning of the war, is also moving freely now, although labor trouble in some parts of the country is tending to counteract the efforts of the railways to meet the abnormal demand for fuel. During the past month the supply of cars on the "lake coal" lines has been increased 25% and there has been some increase in the movement of bituminous coal to the lake ports, but it has not been proportionate to the increased supply of cars, as labor trouble has tended to decrease the mine production.

Although excellent results have been achieved to date through the co-operation of the shippers, the travelling public, and the railways it will be necessary for all concerned to exert renewed efforts, as the abnormal demands upon the railways in the movement of both troops and sup-

plies is constantly increasing, while the securing of new equipment is virtually impossible. From now on, 2,500 cars a day will be required by the government to move food and supplies to the men in training at the National Army, National Guard, and other encampments, while the demand of the allies for cars to carry export goods to the seaports will be practically doubled. All of this additional traffic must be moved by the railways, although they have only 3% more equipment than they had at this time last year.

Gross Railway Earnings June 1 to Sept 30.

	1917.	1916.	1915.
C.P.R.	\$107,168,000	\$97,753,000	\$67,081,000
C.N.R.	29,815,200	26,780,400	16,063,200

x Decrease.

Approximate earnings for September \$11,952,000, and for three weeks ended Oct. 21, \$9,604,000, against \$11,846,000 for September, and \$8,932,000 for three weeks ended Oct. 21, 1916.

Grand Trunk Railway Earnings.

Aggregate traffic receipts from Jan. 1 to Sept. 30:

	1917.	1916.	Increase.
G. T. R.	\$38,689,686	\$34,506,112	\$4,183,574
G. T. W. R.	7,158,848	7,013,803	145,045
D.G.H. & M.R.	2,493,513	2,456,612	6,901

Totals . . . \$48,342,047 \$44,006,527 \$4,335,520
Aggregate earnings for September, \$5,783,792, and for three weeks ended Oct. 21, \$3,908,859, against \$5,636,826 for September, and \$3,819,229 for three weeks ended Oct. 21, 1916.

Grand Trunk Pacific Ry. Earnings.

The approximate earnings for the Prairie Section, 916 miles, for September were \$538,545 against \$362,849 for Sept. 1916, and the aggregate earnings for three months ended Sept. 30, were \$1,515,374 against \$1,056,605 for same period 1916.

The Interstate Commerce Commission, on Oct. 22, ordered reopened the 15% rate advance case for eastern carriers, and fixed the first hearing for Nov. 5 at Washington.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

26558. Sept. 19. Authorizing Canadian Northern Ry. to build extension to spur for Western Coal Co., Fort Rouge, Man.

26559. Sept. 22.—Authorizing G.T.R. to take additional lands for additional trackage and terminal facilities at Fort Erie and Bridgeburg, Ont., and at Canadian approaches to International bridge.

26560. Sept. 24. Authorizing G.T.R. to operate over C.P.R. sidings to Reliance Moulding Co. and Frontene Floor and Wall Tile Co., Kingston, Ont.

26561. Sept. 24.—Authorizing G.T.R. to build spur for Davis Leather Co., Newmarket, Ont.

26562. Sept. 24.—Authorizing C.P.R. to build spur for Ford Motor Co. of Canada, Winnipeg.

26563. Sept. 20.—Ordering C.P.R. to build spur for George Webb, Toronto.

26564. Sept. 24. Ordering G.T.R., within 60 days, to install bell at crossing immediately west of Tillsonburg station, Ont.; 20% of cost to be paid out of railway grade crossing fund.

26565. Sept. 24. Ordering Algoma Eastern Ry. by June 1, 1918, to fence right of way on east side of track, mileage 51.5 to 52.5, Merritt Tp., Ont.

26566. Sept. 24. Extending to June, 1918, time within which City of Fort William, Ont., shall install half interlocking plants at crossing of Canadian Northern Ry. by Fort William Electric Ry. at Victoria Ave., and at Franklin St.; conductors to flag cars over crossings.

26567. Sept. 24. Authorizing New York Central Rd. to rebuild bridge 43A near Northfield Station, Ont.; and rescinding order 26163, May 29, 1918.

26568. Sept. 25. Authorizing Saskatchewan Government to build highway crossing over C.P.R. station grounds at Lafèche; C.P.R. to maintain crossing, within limits of right of way, and Village of Lafèche to close and convey to C.P.R. part of old road which is within limits of its right of way.

26569. Sept. 25. Authorizing Canadian Northern Ry. to build spur for Beaver Lumber Co., North Battleford, Sask.

26570. Sept. 24.—Authorizing C.P.R. to build spur for National Portland Cement Co., Bentinck Tp., Ont.

26571. Sept. 25.—Authorizing Quebec Ry. Light & Power Co., and C.P.R. to operate over crossing at St. Valier St., Quebec, Que., C.P.R. trains not to exceed 15 miles, and electric cars 10 miles an hour.

26572. Sept. 26. Approving Edmonton, Dunvegan and British Columbia Ry. plan of station to be built at Donnelly, Alta.

26573. Sept. 26.—Relieving G.T.R. from providing further protection at St. Remi St., Montreal.

26574. Sept. 27.—Approving plan and profile filed by Bowness Improvement Co., showing drainage of Bowness subway under C.P.R. in Secs. 34 and 35, Tp. 24, Range 2, west 5th meridian, Alta.

26575. Sept. 27. Authorizing G.T.R. to build spur for Standard Paving Co. Dumfries North Tp., Ont.

26576. Sept. 26.—Extending to Nov. 30, time within which Canadian Northern Ry. shall erect fourth class station at Fairmont, Sask., as required by order 26458.

26577. Sept. 26. Authorizing The Gap, no. 39, rural municipality, Sask., to make highway over Canadian Northern Ry. at mileage 24.5, on blind line between Secs. 15 and 22, Tp. 6, Range 21, west 2nd meridian.

26578. Sept. 26.—Ordering Canadian Northern Ry. to file proposed joint tariff on canned goods, in carloads, to become effective by Nov. 1; railway companies made parties to same to file concurrences by Nov. 1, and rescinding order 26168, May 31.

26579. Sept. 26.—Approving plan and specifications of work on Kaufman drain under G.T.R. in Harwich Tp., Ont.

26580. Sept. 27.—Ordering Edmonton, Dunvegan & British Columbia Ry. to fence right of way between mileage 235 and 240, by June 1, 1918.

26581. Sept. 27.—Amending order 22451, Aug. 27, 1914, re Erie & Ottawa Ry. (T., H. & B. R.) branch to Michigan Central Rd., in Moncton Tp., Ont.

26582. Sept. 27.—Amending order 26506, Sept. 7, re Esquimalt and Nanaimo Ry. spur for Foundation Co., on Songhees Indian Reserve, Victoria, B.C.

26583. Sept. 28. Relieving C.P.R. from providing further protection at highway west of Elfros station, Sask.

26584. Sept. 28.—Authorizing Dominion Government to make highway crossing over C.P.R. on line between Sec. 7, Tp. 26, Range 11, and Sec. 12, Tp. 26, Range 12, west 5th meridian, Alta.

26585. Oct. 1.—Authorizing C.P.R. to close station at Ypres, Ont.

26586. Oct. 1.—Amending order 26464, Aug. 21, 1914, re Calgary Power Co., Calgary, Alta.

26587. Oct. 1.—Ordering G. T. R. to restrict

speed of northbound trains over highway crossing at Port Colborne, Ont., to 10 miles an hour.

26588. Oct. 1. Extending for three months from date time within which Canadian Northern Ry. shall complete spur at North Battleford, Sask., as authorized by order 18549, Jan. 18, 1913.

26589. Sept. 29. Approving Edmonton, Dunvegan & British Columbia Ry. standard freight tariff, C.R.C. 62, effective Oct. 1.

26590. Oct. 2.—Ordering C.P.R. within 60 days to install bell at highway near Buckingham Jct. station, Que., movements over crossing on siding to be flagged by train crew; 20% of cost of installation to be paid out of railway grade crossing fund.

26591. Oct. 2.—Amending order 26423, Aug. 14, re whistling by Canadian Northern Ry. locomotives at Brighton, Ont.

26592. Oct. 2.—Ordering G.T.R. to erect freight shed at Beauharnois, Que., within 30 days.

26593. Sept. 27.—Authorizing The Gap rural municipality, no. 39, to make highway over Canadian Northern Ry. at Ceylon, Sask.

26594. Oct. 1.—Authorizing Canadian Northern Ry. to build branch for Sanatorium for Consumptives at Ninette, Man.

26595. Oct. 2.—Relieving Edmonton, Dunvegan & British Columbia Ry. from fencing right of way between mileage 10.7 and 10.8, Burnt River bridge, and from erecting fences, gates and cattle guards between mileage 8 and 10.7 and 10.8 and 29, relief given in latter case to cease as soon as any land on either side becomes settled or improved.

26596. Oct. 2. Authorizing Canadian Northern Ry. to build spur for Langstaff, Sebarg & Co. at Emo, Ont.

26597. Oct. 2. Dismissing complaint of O'Brien Bros., Chatham, Ont., that C.P.R. has erected a fence along its line at King St. East, without providing access to their property.

26598. Oct. 3. Extending for two months from date time within which C.P.R. shall erect standard 6 station at Enterprise, Ont.

26599. Oct. 2. Authorizing Canadian Northern Ry. to build overhead across Fairford St., Moose Jaw, Sask.

26600. Oct. 2.—Relieving C.P.R. from providing further protection at Keewatin St., Winnipeg.

26601. Oct. 3. Authorizing C.P.R. to build spur for Merritt Collieries, Ltd., Merritt, B.C., and approving clearances.

26602. Oct. 2. Relieving Edmonton, Dunvegan & British Columbia Ry. from erecting fences gates and cattle guards along certain portions of its right of way between mileage 130.8 and 262.2, and ordering it to fence right of way between mileage 159 and 161.8, 163.5 and 165, 192 to 194.8 and 234.7 to 240; work to be completed by June 30, 1918.

26603. Oct. 2. Ordering C.P.R. to erect station at Mud Lake, Ont., in accordance with order 26068, May 5, and stop trains on flag there.

26604. Oct. 3.—Extending to Oct. 1, 1918, time within which Mount Royal Tunnel & Terminal Co. (C.N.R.) may operate trains over connection with Jacques Cartier Union Ry. near Jacques Cartier Jct., Que., mileage 5.01 from Dorchester St.

26605. Oct. 3.—Relieving Edmonton, Dunvegan & British Columbia Ry. from fencing right of way along certain portions between mileage 262.2 and 357.3.

26606. Oct. 4.—Relieving G.T.R. from providing further protection at Sealy St., Casselman, Ont.

26607. Oct. 3.—Extending to Dec. 31 time within which G.T.R. shall complete widening of culvert near St. Gregoire station, Que., as required by order 26375.

26608. Oct. 4.—Authorizing G.T.R. to build spur for Fesserton Timber Co., Orillia, Ont.

26609. Oct. 5.—Relieving Lake Erie & Northern Ry. from providing further protection at Morell St., Brantford.

26610. Oct. 5.—Approving New York Central Rd. bylaw, Sept. 11, re tariffs of tolls for persons and property; and amending order 24833, Mar. 27, 1916.

26611. Oct. 5.—Approving Quebec Oriental Ry. standard freight mileage tariff, C.R.C. 28.

26612. Oct. 5.—Approving Michigan Central Rd. bylaw, Sept. 11, in respect of freight traffic and rescinding order 16183, Mar. 28, 1912.

26613. Oct. 5.—Relieving G.T.R. from providing further protection at Main St., Seaford, Ont.

26614. Oct. 6.—Ordering G.T.R. to appoint night and day watchmen at crossing of highway by joint section of C.P.R. and G.T.R. at Golf Links, or Dixie Road, mileage 9.85 from Toronto, pending completion of Toronto-Hamilton highway.

26615. Oct. 9.—Ordering American Express Co. to provide facilities for handling fish shipments from Dominion Ex. Co., Michigan Central Rd. station, St. Thomas, Ont.

26616. Oct. 9.—Relieving G.T.R. from providing further protection at highway at west end of Gore station, Que.

26617. Oct. 9.—Rescinding order 19405, May 29, 1913, which authorized C.P.R. to build spur for Arlington Shingle Co., Nanose District, Vancouver Island, B.C.

26618. Oct. 5.—Authorizing Saskatchewan Government, on behalf of rural municipality of Eye Hill, no. 382, to make highway over C.P.R. station grounds at Evesham, Sask.

26619. Oct. 9. Authorizing Palmerston Tp., Ont., to change location of crossing and divert road over C.P.R., near Snow Road, Ont., 20% of cost to be paid out of railway grade crossing fund; C.P.R. to move return fences, cattle guards, planking and crossing sign to new crossing and maintain them.

26620. Oct. 9.—Approving revised location of Canadian Northern Ontario Ry. Scarboro cut-off through York and Scarboro Tps., mileage 3.65 to 7.80 from Yonge St., connection with Ottawa line to be moved short distance east, so that switch will be entirely off road allowance.

26621. Oct. 9.—Relieving C.P.R. from providing further protection at highway 5 mile east of Yamachiche, Que.

26622. Oct. 9.—Authorizing Canadian Northern Ontario Ry. to build across Daves Road, by a subway, between York and Scarboro Tps., and rescinding order 20640, Oct. 22, 1913.

26623. Oct. 10.—Amending order 26454, Aug. 20, 1917, re bridge over Toronto, Hamilton & Buffalo Ry. at King St., Hamilton, Ont.

26624. Ordering Canadian Northern Ontario Ry. to build subway at Don Mills Road, Lot 1, Con. 3, York Tp., and authorizing it until further order to cross Don Mills Road at grade; and rescinding order 20642, Oct. 23, 1913.

26625. Oct. 10.—Ordering G.T.R. to build crossing between Cons. 11 and 12, near Stevensville, Ont., work to be done by Oct. 31.

26626. Oct. 10.—Amending order 18925, Mar. 27, 1913, re C.P.R. tracks under Canadian Northern Ontario Ry. in E. ¼ Lot 1, Con. 4, Scarboro Tp., Ont.

26627. Oct. 10.—Ordering C.P.R., pending re-establishment of daily mixed local service, to stop train 1 on flag at Minnitaki, Ont., and rescinding order 26311, July 12.

26628, 26629. Oct. 9.—Authorizing Canadian Northern Ontario Ry. to build across Eglinton Ave., York Tp., by trestle and rescinding order 20656, Oct. 22, 1913; also to build across highway between Lots 3 and 4, Con. 3, York Tp., and rescinding order 19518, June 9, 1913.

26630. Oct. 10.—Exempting C.P.R. from requirements of Railway Act re notice and consent of shareholders; and recommending to Governor in Council for sanction agreement between C.P.R. and Napierville Jct. Ry., Feb. 26, providing for use by Napierville Jct. Ry. of C.P.R. between Delson Jct. and Windsor St., Montreal, and facilities there.

26631. Oct. 11.—Authorizing C.P.R. to build spur at grade for Belgian Orchard Syndicate, across Elm St., Vernon, B.C.; south switch of through siding to be removed and placed so that Elm St. shall have full width of 60 ft. where it crosses C.P.R.

26632. Oct. 12. Amending order 26592, Oct. 2, re G.T.R. freight shed at Beauharnois, Que.

26633. Oct. 11.—Authorizing G.T.R. to operate its trains over C.P.R. sidings to William Rennie Co.'s premises, Chatham, Ont.

26634. Oct. 13.—Suspending, pending hearing by Board, following schedules: Supplements 45 and 46 to G.T.R. C.R.C. no. E-2374; Supplement 18 to C.N.R. C.R.C. no. E-189; Supplement 14 to C.P.R. C.R.C. no. 3280, items 152 and 153; Supplement 4 to M.C.R. C.R.C. no. 2675, item 155A; and T.H. & B. Tariff C.R.C. 1176, and ordering that schedules to be superseded by schedules herein set forth be and are hereby continued in force pending Board's decision.

26635. Oct. 12.—Authorizing C.P.R. to build spur for Whitmore Bros., Regina, Sask.

26636. Oct. 12.—Authorizing C.P.R. to build spur for Dryden Timber & Power Co., Dryden.

26637. Oct. 12.—Authorizing New York Central Rd. to rebuild bridge near St. Stanislas, Que.

26638. Oct. 12.—Relieving C.P.R. from providing further protection at Humber Summit crossing, near Woodbridge, Ont.

26639. Oct. 9.—Approving plan, July 22, 1916, showing changes in bridge over C.P.R. on Nelson St., Sudbury, Ont., and authorizing Sudbury-Copper Cliff Suburban Electric Ry. to extend its tracks across same; cost of maintaining bridge, less cost of maintenance of additional work in floor system, made necessary by S.C.S.E.R.Co. using bridge, to be paid by C.P.R.

26640. Oct. 13.—Approving clearances at unloading shed at Robin Hood Mills, Ltd., Moose Jaw, Sask.

26641. Oct. 12.—Approving agreement between Bell Telephone Co. and Monk Rural Telephone Co., Carleton County, Ont., dated Sept. 19.

26642. Oct. 16.—Ordering C.P.R. to file tariff reducing stop-over charge for milling western grain, ex-lake, in transit, to 1c per 100 lb., to become effective not later than Nov. 1.

26643. Oct. 15.—Approving agreement, Aug. 22, between Bell Telephone Co. and Dunnet Tp., Ont.

26644. Oct. 15.—Approving agreement between Bell Telephone Co. and Everett Telephone Co., Simcoe and Dufferin Counties, Ont., Oct. 15, 1915.

26645. Oct. 15. Authorizing Edmonton, Dunvegan & British Columbia Ry. to divert Grande Prairie Trail in s.w. ¼ Sec. 9 and n.w. ¼ Sec. 4, Tp. 76, Range 5, west 6th meridian, Alta.

26646. Oct. 15.—Authorizing C.P.R. to build at grade a second passing siding across D'Arcy St., Cobourg, Ont.

26647. Oct. 15. Authorizing C.P.R. to construct at grade passing siding across road allowance between Lot 10, Con. 1, Brighton Tp., and Lot 11, Con. 1, Cramahe Tp., Ont.

26648. Oct. 15. Relieving C.P.R. from providing further crossing protection at Bell's Road, Quebec, Que.

26649. Oct. 15. Relieving Michigan Central Rd. from maintaining night and day watchmen at first public crossing east of G.T.R. diamond east of Welland, Ont.

26650. Oct. 15. Ordering that all train movements over crossing by Kettle Valley Ry. of Winnipeg St., Penticton, B.C. in both directions, be limited to 4 miles an hour; all passenger trains backing in from South Penticton to Penticton, or vice versa, to be equipped with tail hose on rear of train, air to be coupled and working on all freight movements between these points.

26651. Oct. 16. Approving C.P.R. standard plan of double track tunnels on its Western Lines.

26652, 26653. Oct. 15. Approving Canadian Northern Ry. shelter to be built at Pointe Bleue, Que., and approving its station to be built at St. Felicien, Que.

26654. Oct. 16. Authorizing G.T.R. to build bridge over Saskatoon Ave., Campbellford, Ont.

26655. Oct. 11. Dismissing application of South Alberta Hay Growers, Ltd., Fincher Creek, Alta., for commodity rates on timothy seed, in carloads, for home consumption and export.

26656. Oct. 11. Relieving C.P.R. from providing further protection at crossing of Dundas St., Woodstock, Ont.

26657. Oct. 16. Ordering that Sherman Ave., Hamilton, Ont., be protected by day and night watchmen, appointed by G.T.R. City and G.T.R. each to pay half wages.

26658. Oct. 16. Authorizing C.P.R. to build diversion of Mill Spur and make temporary road diversions at Ayr Pit, mileage 67.6, Galt Subdivision, Ont.

26659. Oct. 16. Authorizing G.T.R. to build spur from Imperial Oil Co., Chatham, Ont.

26660. Oct. 15. Authorizing G.T.R. to operate over two spurs of Burlington Steel Co., Hamilton, Ont.; and approving clearances there.

26661. Oct. 18. Amending order 26228, June 20, re G.T.R. siding, in Cobourg, Ont., for Thompson MacDonald Co.

26662. Oct. 18. Disallowing Supplement 2 to Dominion Atlantic Ry. Tariff, C.R.C. 429.

26663. Oct. 18. Ordering that trees between east and west legs of Y and north of Church St., Brockville, Ont., be cut down; and that movement of Canadian Northern and Canadian Pacific trains over same be limited to 6 miles an hour.

26664. Oct. 18. Authorizing C.P.R. to build spur for Dominion Blank Book Co., Berthier, Que.

26665. Oct. 17. Ordering G.T.R. to stop train 189 on flag at Malton, Ont.

26666. Oct. 19. Authorizing C.P.R. to build spur for Andrew Jergens Co., Perth, Ont.

26667. Oct. 19. Authorizing C.P.R. to build extension to siding for Swift Canadian Co., St. Boniface, Man.

Japanese Railway Mission to America.

A special mission representing the Imperial Japanese Railways arrived on the United States Pacific coast about the middle of October to undertake a study of American transportation and industrial conditions, and proceeded east. The U.S. Secretary of Commerce arranged for the entertainment of the mission until it reached Washington, and designated a Japanese speaking representative of the Bureau of Foreign and Domestic Commerce to conduct the members personally on their trip across the country. Prominent railway officials volunteered to furnish every facility for a thorough study of their systems.

The object of the visit is to investigate the present transportation conditions in the U.S., to inspect the principal industrial plants and mines, to study the loading and unloading of cotton, and to observe the methods employed in the large railway sorting yards. The Imperial Japanese Railways are represented on the mission by Jiro Nakamura, Assistant Traffic Manager; Akio Kasama, Secretary and Purchasing Agent; Dr. Yasujiro Shima, Director of Machinery and Rolling Stock; and S. Kobayashi, Resident Engineer at New York.

The French Government is reported to have ordered a further 9,000 freight cars through the U.S. Government.

Motor Accidents at Level Crossings in Ontario.

The Board of Railway Commissioners has issued the following circular:

In view of the increasing number of accidents at level crossings in Ontario to persons travelling in motors, the board desires that a discussion should be had, in which the different motor associations, municipalities and railways interested should take part, and the best possible methods and protection in the interest of public safety be adopted. Without in any way limiting the discussion, the following questions should be considered:

The matter of the view from the highway of any approaching trains. Factors to be considered from the motorist's standpoint are the speed and braking efficiency of the motors, having regard to the fact that the motor must be stopped after the train is seen.

Whether or not there is any difficulty in seeing the standard railway crossing sign from motors, and whether additional post signs on the road would assist in obviating accidents, for example, warning posts placed at some distance from the crossing, or posts placed in the centre of the highway, about 50 feet from crossing?

Whether humps or hogs-backs should be placed on the road, so as to compel motorists to bring down the speed of their cars to a rate at which they may safely proceed?

Ought motors be brought to a stop before crossing?

Bells or wig-wag signals, which are of the greater benefit to motorists?

Can any change be made in railway regulations which, without injuring the efficiency of the public service, will promote safety?

Ought the regulation whistle signals to be given closer to the highway, or any change be made in the use of the signal or the bell?

Written submissions may be sent by mail to the board at Ottawa, and in addition the matter may be spoken to at any meeting of the board.

In connection with the foregoing circular it may be mentioned that the Vice Chairman of the Ontario Railway and Municipal Board, A. B. Ingram, suggested recently that that board's efforts to protect crossings on railways under provincial jurisdiction should be supplemented by the municipalities, which should erect warning boards on the highways, say, 300 ft. from each crossing, worded, "Beware. Railway Crossing, 300 Feet," or something similar.

J. K. McNeillie's New Position on The Delaware and Hudson.

Following are some particulars of the D. & H. Co.'s Susquehanna Division, of which J. K. McNeillie, formerly General Superintendent, Canadian Government Railways, Moncton, N.B., was appointed Superintendent recently: The main line extends from Binghamton, N.Y., on the south, to Mechanicville and Albany on the north, about 150 miles. There are two branches, viz., Cooperstown and Cherry Valley, each about 21 miles long. The main line is, with the exception of about 24 miles, double tracked and equipped throughout with automatic electric signals. For about 10 miles there is a third track for northbound traffic. There is under construction some additional third track for northbound traffic. There together with certain grade revisions, will

give a uniform low grade line where there is the greatest density of traffic.

Extensive terminals are located at Binghamton, Oneonta, Schenectady and Mechanicville. At Nineveh, about 24 miles from Binghamton, is the connection with the Pennsylvania Division, which extends from Nineveh to Wilkes-Barre (a connection with the Pennsylvania Rd.) Carbondale, etc., tapping the Pennsylvania anthracite coal mining region. In this latter territory are located some 42 breakers, and from these operations are loaded from 800 to 1200 cars a day of anthracite coal, which forms a considerable part of the loaded northbound traffic over this division. Bituminous coal, from the Pittsburg district, and other freight received at Wilkes-Barre and other points, also moves via this route. At Oneonta, a city of about 12,000 population, which is the headquarters of the division, there is a double hump yard, having a capacity of some 3,500 cars, through which freight is classified in both directions. A 52 stall locomotive house, efficient coal and ash handling facilities are provided. Locomotive and car repair shops are also located there. At Mechanicville is the connection with the Boston & Maine Rd. and the Delaware & Hudson Saratoga Division, over which Canadian freight moves north to connections at Rouses Point. Near Schenectady is a connection with the New York Central. At Binghamton is a connection with the Erie and the Delaware, Lackawanna & Western.

The density of traffic over the main line is said to be the greatest in the United States, with probably one or two exceptions. As will be seen from the above, freight collected from the anthracite coal region and from connections at Wilkes-Barre and Binghamton for New England points and the Canadian territory via Mechanicville and for Albany and vicinity is moved over this territory, requiring upward of 85 through freight trains daily and a movement of from 4,000 to 5,600 cars. Anthracite coal and ore represent a large part of the traffic, the balance being bituminous coal, merchandise and perishable freight and manufactured products, while there is a heavy traffic developed from the General Electric and American Locomotive Companies, located at Schenectady. The main line runs through a very productive dairy country, and a train of some 21 cars is required daily to ship the milk collected in this territory to New York City, this supply being a considerable factor in the daily requirements of the metropolis.

Central Ry. of Canada Suit.—In the Quebec High Court, Practice Division, Montreal, Oct. 18, Justice Bruneau gave judgment dismissing with costs the action of the Central Ry. of Canada against C. J. Wills and others. This was an action for damages arising out of an alleged breach of contract in connection with the building of a railway from Montreal to Georgian Bay. The parties have been engaged in legal proceedings over the contract ever since construction ceased in 1912. The big suit was carried to the Imperial Privy Council in 1914, and since then the suits for damages have been up before Quebec courts from time to time. It is said that the whole have now been disposed of.

The C.P.R. is reported to have approached the New Brunswick Government with a proposal that the government take over the company's demonstration farm at Fredericton for operation in connection with the Department of Agriculture.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway, Marine, Express, and Telegraph, also Railway and Canal Contractors' Interests.

Official Organ of various Canadian Transportation Associations.

Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors,
70 Bond Street, Toronto, Canada.

ACTON BURROWS, A. Can. Soc. C. E.
Managing Director and Editor-in Chief.

AUBREY ACTON BURROWS - Secretary and
Business Manager.

Associate Editors

JOHN KEIR AND DONALD F. KEIR

United States Business Representative,
A. FENTON WALKER, 143 Liberty St., New York

Member of
Canadian Press Association,
Associated Business Papers,
Audit Bureau of Circulation.

Authorized by the Postmaster General for Canada,
for transmission as second class matter.

Entered as second class matter, July 25, 1913, at the
Postoffice at Buffalo, N.Y., under the Act of Congress
of March 3, 1879.

SUBSCRIPTION PRICE, including postage any-
where, \$2 a year.

SINGLE COPIES, 20 cents each, including postage.

The best and safest way to remit is by express money
order. Where one cannot be obtained, a post office
money order, or bank draft, payable at par in Toronto,
may be sent. Cheques or drafts not payable at par in
Toronto cannot be accepted. Remittances should be
made payable to Canadian Railway and Marine World.

Subscribe for Canada's Victory War Loan.

Canadian Railway and Marine World urges its readers to subscribe for the Dominion War Loan Bonds now being offered, because:

It is absolutely necessary to provide funds to enable Canada to maintain its army at the front and to strengthen it in every possible way.

It is equally necessary to provide funds to be loaned to the British Government to purchase ships, munitions, produce, etc., in Canada, and thereby to keep Canadian industries active, provide a market for products, and stimulate traffic, in which our readers are vitally interested.

The bonds are absolutely the best investment that can be had. They are secured by the whole assets and credit of the country. They yield a most attractive rate of interest—a rate that would not have been dreamed of for government securities three years ago—and will always be saleable quickly and without any difficulty.

As evidence of our absolute confidence in offering this advice, it may be mentioned that Canadian Railway and Marine World's proprietors have invested to the full extent of their ability in the three Dominion War Loans offered previously and intend to do the same in regard to the present offering.

The Essex Terminal Ry.'s plans for an extension from the end of its present line at Ojibway, Ont., to Amherstburg, about 12 miles, having been approved by the Board of Railway Commissioners, the Chick Contracting Co., of Windsor, Ont., has been given a contract for grading. The extension will pass through Sandwich West and Anderdon, the present objective being to reach the Brunner-Mond Canada Ltd. to secure stone and other building material for construction of the Canadian Steel Corporation's plant at Ojibway. If the weather is favorable it is hoped to have track laid by the end of the year.

Locomotive Whistling, etc., at Hamilton.—The Hamilton City Council has been complaining of the ringing of bells and whistling by locomotives on the Toronto, Hamilton & Buffalo Ry., and claims that more noise is made than is necessary. The company claims that it is only obeying the Dominion regulations, and that if the city desires to prevent it a bylaw preventing whistling, etc., can be passed. In this event, it is pointed out, the city would be liable if any accident happened through the failure on the part of a locomotive man to whistle or ring the bell.

Special Freight Arrangements for Live Stock.—The Minister of Agriculture announced recently that arrangements had been made between his department and the railways to prevent depletion of Canadian breeding and feeding stock, insure the feeding of live stock in Canada, and secure the return of feeding and breeding stock to the farms. It comprises: A re-distribution policy, which will provide for the movement of stock from areas where feed is light to areas where feed is plentiful. Free freight policy in connection with the transportation of breeding cattle and breeding sheep. Fifty per cent. rebate of freight rate on carload shipments of feeding cattle from Winnipeg to country points in the Eastern Provinces. Free shipment of carloads of breeding sheep and lambs from Toronto and Montreal to the west.

Acquisition of the Canadian Northern Railway by the Dominion Government.

The act authorizing the Dominion Government to acquire the whole of the Canadian Northern Ry.'s capital stock which it does not already own, as passed at the Dominion Parliament's last session, and published in full in Canadian Railway and Marine World for October, provides for an agreement, as to the terms and conditions, to be entered into between the Government and the owners of the stock and for the price therefor being fixed by arbitration. At the time of writing (Oct. 26) we understand that the agreement has not been signed, but that it has been drafted and that its terms have been practically settled, with the possible exception of the maximum price to be paid. As a preliminary step towards the arbitration proceedings the company's books are being audited by chartered accountants appointed by the Government.

During the discussion of the bill in the House of Commons, the Finance Minister stated that Sir William Meredith, Chief Justice of Ontario, would represent the Government in the arbitration to fix the price. Press reports have mentioned F. H. Phippen, K.C., as likely to represent the company as arbitrator, but as he is its General Counsel, his appointment is not considered probable.

As soon as the stock has been transferred the Government may advance not exceeding \$25,000,000 to assist the company in paying indebtednesses, and the company will then probably be in a position to place orders for rolling stock, which is imperatively required, and to proceed with necessary works which have been delayed.

Unconfirmed press reports state that Hon. F. Cochrane, ex Minister of Railways, will be appointed chairman of the C.N.R. directorate, and Hon. G. P. Graham, another ex Minister of Railways, has been mentioned as a probable member of the board.

Port Arthur Harbor.—During this year the harbor at Port Arthur, Ont., has been dredged to a depth of 25 ft. below zero of the harbor gauge, which is 601.86 ft. above mean sea level. The main harbor north of the south entrance has been widened and dredged out to a line 150 ft. from the west side of the breakwater, involving the dredging of a triangular area 2,140 ft. long in the eastern part. The main harbor in front of the Canadian Northern Ry. coal wharf has been deepened over an area of 1,700 ft. extending out 250 ft. from the face of the wharf, the north limit of this area being 1,500 ft. distant from the Canadian Northern elevator B.

Three Rivers Shipyards, Ltd.—Some particulars about the incorporation of this company were given in Canadian Railway and Marine World for October, since which official information has been received. The shipyard site consists of 75 acres, on Notre Dame St., Three Rivers, Que., about a mile from the city hall. We are advised that it is being equipped, at a cost of about \$55,000, with the latest woodworking machinery for building wooden ships. As previously stated, the company has a contract to build two wooden steamships for the Imperial Munitions Board. T. M. Kirkwood, of Toronto, is President and General Manager, and W. T. Donnelly is Vice President and Consulting Engineer.

Gondola Cars with Cabs for French State Railways.

The 1,000 gondola cars with brakeman's cabs which the French State Railways ordered from Canadian Car & Foundry Co. have all been shipped and one of them is illustrated herewith. Their general dimensions are:

- Capacity 20 metric tons.
- Length over body and end sill 21 ft. 10⁵/₈ in.
- Length over buffers 27 ft. 8⁵/₈ in.
- Length, inside body 21 ft. 7⁵/₈ in.
- Width, inside 8 ft. 2⁷/₁₆ in.
- Height, from rail to top of floor 4 ft. 1⁵/₁₆ in.
- Height, from rail to top of side 8 ft. 10³/₈ in.
- Height, over cab 11 ft. 4¹/₂ in.
- Wheel base 11 ft. 9³/₄ in.

They have steel superstructure with wood lining, riveted to an all steel and iron underframe, resting on 2 axles, through the medium of two journal boxes with front cover. The draw bar hooks, screw couplings and safety chains are of open hearth steel, able to stand a pulling indicated as follows: Draw bar hooks and screw couplings, 55,000 kilograms; safety chains and hooks, 20,000 kilograms; safety chain eye bolts, 18,000 kilograms. The buffer volute and bearing spring are

Extension of Canadian Pacific Yards at Lambton and West Toronto.

Considerable progress has been made with the enlarging of the C.P.R. Lambton-West Toronto yards, briefly referred to in Canadian Railway and Marine World last issue. The work consists of lengthening and rearranging the tracks, which will greatly increase the capacity and facilitate the operation of the yards. The tracks will be long enough to hold the longest trains. The present neck at Runnymede Road crossing, which now causes delay and other troubles, will be removed.

The Lambton yard, located between Scarlett Road and Runnymede Road, is being divided into two parallel yards, with independent leads at both ends. The yard will be used entirely for receiving and dispatching trains. It will provide for double track movements and for the easiest possible access to and from the locomotive house for incoming and outgoing locomotives. The West Toronto yard, located between Runnymede Road and Keele St., is also being divided into two yards, with independent switching tracks

mede Road, for which some extra land was bought. A local freight and transfer yard and platform has been built west of Jane St. to take care of the transfer of freight which was formerly done in John St. yard. This improvement has resulted in a considerable saving in time and power. The construction of this transfer yard has necessitated the moving of Lambton station to Scarlett Road, a short distance west. Track scales will be located at the most convenient points.

The work in connection with the widening of Runnymede Road subway is being done by Archibald & Holmes, contractors, of Toronto. All the track work is being done by the C.P.R. forces.

The Lambton yard was fully described and illustrated in Canadian Railway and Marine World, Nov., 1913, pg. 532.

Oxyacetylene Welding for Track Repairs

Repairing of frogs and track crossings by building up the worn places by oxyacetylene welding is being practiced in side track repair work in the Chicago &

Gondola Car with Cab, for French State Railways

made of 3¹/₂ x 19/32 in. leaves; the end of each one of the leaves being grooved out so as to form a male and female part, and stop any displacement of the same. They have 41 11/32 in. diameter rolled steel wheels and axles with journals, size 140 x 250 millimetres. The wheels mounted on axle to standard American gauge, 4 ft. 8¹/₂ in. Oak, which is usually used on French State Railway cars, has been replaced in this case by yellow pine. The brakes are operated by a hand brake wheel from the inside of the cab, released by hand and applied by counterweights attached to the lever arm, which transmits power to the foundation brake gear. The counterweights are suspended from the brake mast nut, which in turn engages the brake mast. The mast has a special thread with approximately 5 in. pitch, which gives a quick brake application and is keyed to 2 ratchet wheels, which, by an arrangement of springs and levers, hold the brake in either release or applied position. Two brake shoes are applied to each wheel, and the cars are equipped with a special design of trussed brake beam. No air brakes are used and we understand that when freight trains are made up on the French State Railways every fourth or fifth car is equipped with a cab, in which a brakeman rides.

at each end. It will be used mostly for sorting cars for the Toronto terminals and may be called the "local yard."

The Lambton yard is being lengthened 750 ft. by acquiring extra land and diverting St. Clair Ave. to the north between Scarlett Road and Jane St. The two switching tracks at the west end of the yard are being extended westward. In order to extend the yard at the east end, it is necessary to widen the present subway at Runnymede Road about 80 ft. to the north. This extension is being built in reinforced concrete throughout. The bents consist of reinforced concrete posts and caps, on which are placed concrete slabs, spanning the four openings, two of which are for the roadways and two for the sidewalks. The concrete slabs are being constructed on the ground adjoining the subway, and are placed in position by a portable crane. The slabs, which are 4 ft. 7 in. wide, are being laid with 1/4 in. spaces. The joints are being filled with grout, and the entire floor will be made waterproof before the tracks are put on. When the present subway was built this extension was contemplated and the two abutments were built long enough for it.

The extension westward of the local yard is achieved by diverting Ethel Ave. to the north for 800 ft. west of Runny-

Northwestern Ry. The work is done by the section gangs and the success has been such that it is intended to provide an outfit for each roadmaster's division. The same outfits are used for cutting rails, boring bolt holes and welding pieces of angle-bar under the rail base to serve as anchors. Particulars of the work were given at the annual meeting of the Roadmasters' and Maintenance of Way Association recently by P. J. McAndrews, Roadmaster C. & N. W. R., Sterling, Ill. The welding and cutting have been confined to side track work as yet, but Mr. McAndrews considers that with proper care the process can be employed in main track repair work.

Pullman Company's Earnings.

The Pullman Co. reports for the year ended July 31, as follows:

	1917.	1916.
Gross income	\$49,184,559	\$43,761,465
Operating expenses	29,381,563	24,913,914
Depreciation	6,170,584	6,467,184
Balance	*\$13,632,412	\$12,380,367
Dividends	9,599,784	9,599,760

Surplus \$4,032,628 \$2,780,607
 *Equivalent to \$11.36 a share earned in the fiscal period on \$120,000,000 capital stock, compared with \$10.31 a share in 1915-1916.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Northern Ry.—H. T. HAZEN, M.Can.Soc.C.E., heretofore Chief Engineer, Toronto Suburban Ry., has been appointed Engineer, Maintenance of Way, Eastern Lines, C.N.R. Office, Toronto.

GEO. COLLINS, heretofore Special Representative, Toronto and Trenton, Ont., has been appointed Superintendent Branch Lines, Toronto District, Ontario Division, vice J. Irwin, on leave of absence. Office, Trenton, Ont.

W. M. JACKLIN, heretofore Superintendent, Maintenance of Way, has been appointed Superintendent of Track, Ontario Division, and his former position has been abolished. Office, Toronto.

J. R. MACKENZIE, heretofore Division Engineer, Rosedale, Toronto, has been appointed Assistant Engineer, Ontario Division, and will act as Assistant to H. T. Hazen, Engineer Maintenance of Way, Office, Toronto.

The positions of division engineer, Ontario Division, held heretofore by J. R. MACKENZIE, Toronto, and E. W. DELANO, Capreol, Ont., having been abolished, Mr. Delano has left the company's service.

The superintendents of the various districts of the Ontario Division have been given charge of maintenance of way. Supervisors of track, and supervisors of bridges and buildings, now report to the superintendent of their respective districts.

E. DAGG has been appointed ticket agent, Union Station, Winnipeg, vice B. G. Rutley, resigned.

C. H. WORBY, heretofore Sleeping and Dining Car Agent, Saskatoon, Sask., has been appointed Sleeping and Dining Car Agent, Winnipeg.

H. C. LaROCHE, heretofore dining car steward, has been appointed Sleeping and Dining Car Inspector, Winnipeg, vice F. Taylor, promoted.

H. MILNES, heretofore dining car steward, has been appointed Sleeping and Dining Car Inspector, Winnipeg.

H. COLEY, heretofore Sleeping and Dining Car Agent, Edmonton, Alta., has been appointed Sleeping and Dining Car Agent, Saskatoon, Sask., vice C. H. Worby transferred.

F. TAYLOR, heretofore Sleeping and Dining Car Inspector, has been appointed Sleeping and Dining Car Agent, Edmonton, Alta., vice H. Coley, transferred.

Canadian Pacific Ry.—C. O. McHUGH has been appointed Chief Dispatcher, Brownville Division, vice W. R. Howard, Office, Brownville Jct., Me.

J. G. SUTHERLAND, heretofore Car Service Agent, Calgary, Alta., has been appointed Inspector of Transportation, Western Lines, vice C. L. Leighty, who was appointed Superintendent of Telegraphs, Ontario District, Toronto, some time ago. Office, Winnipeg.

H. L. HORN, heretofore dispatcher, Moose Jaw, Sask., has been appointed Chief Dispatcher, Winnipeg, vice J. L. Able, who has been granted extended leave of absence.

J. J. McDONNELL, heretofore dispatcher, Lethbridge, Alta., has been appointed Chief Dispatcher, Saskatoon, Sask., vice J. H. Scott transferred.

J. H. SCOTT, heretofore Chief Dispatcher, Saskatoon, Sask., has been appointed

ed Car Service Agent, Calgary, Alta., vice J. G. Sutherland promoted.

C. BOARDMAN, heretofore Locomotive Foreman, Red Deer, Alta., has been appointed Locomotive Foreman, Strathcona, Alta., vice Jas. McGowan transferred.

—**JAMES MCGOWAN**, heretofore Locomotive Foreman, Strathcona, Alta., has been appointed Locomotive Foreman, Red Deer, Alta., vice C. Boardman, transferred.

Delaware & Hudson Co.—M. D. BOMHOWER, formerly General Foreman, Angus Shops, C.P.R., Montreal, has been appointed Division Car Foreman, Pennsylvania Division, D. & H. Co., reporting to the Master Car Builder. Office, Carbondale, Pa.

Grand Trunk Ry.—The following station agents have been appointed: Rouses Point, N.Y., W. W. Cooper; Cornwall Jct., Ont., C. F. Brydges; Smithfield, Ont., E. Harrington; Gelert, Ont., P. C. Brown; Holland Landing, Ont., G. W. D. Stevenson; Baden, Ont., W. Russell; Park Hill, Ont., W. Waugh; Longwood, Ont., R. T. Brand.

Grand Trunk Pacific Ry.—The following station agents have been appointed: Mawer, Sask., W. H. Thompson; Juniata, Sask., C. T. Bryant; Riceton, Sask., R. McCammond; Lewvan, Sask., J. H. Walker; Entwistle, Alta., C. W. Jaminette; Pocahontas, Alta., V. A. Scott; Mirror, Alta., G. W. Angus; Saltwell, Alta., L. D. Davis; Coalspur, Alta., D. L. Lyons; New Hazelton, B.C., J. F. Supon; Gisborne, B.C., G. E. Blundell.

Michigan Central Rd.—P. G. FINDLAY, heretofore Assistant to Manager, New York Central Fast Freight Lines, Chicago, Ill., has been appointed General Freight Agent, M.C.R., vice W. C. Rowley, resigned, to enter private business. Office, Detroit, Mich.

J. H. MEGLEMBRY, heretofore Division Freight Agent, Buffalo, N.Y., has been appointed Assistant General Freight Agent there, and his former position has been abolished. This is a new position.

W. C. LEWIS, heretofore Division Freight Agent, Bay City, Mich., has been appointed Assistant General Freight Agent there, and his former position has been abolished. This is a new position.

F. B. ROWLEY, heretofore Commercial Agent, Minneapolis, Minn., has been appointed Assistant General Freight Agent, Chicago, Ill., and the position of Division Freight Agent there, heretofore held by G. M. Weaver, who has resigned to enter private business, has been abolished.

New York Central Fast Freight Lines.—F. O. STAFFORD has been appointed Manager, vice Carl Howe, whose appointment as Traffic Manager, Michigan Central Rd., was announced in our last issue. Office, Chicago, Ill.

Reid Newfoundland Co.—R. G. REID, heretofore General Superintendent, has been appointed a Vice President. Office, St. John's, Nfld.

J. P. POWELL, heretofore Assistant General Superintendent, has been appointed General Superintendent, vice R. G. Reid promoted. Office, St. John's, Nfld.

Winnipeg Joint Terminals.—**JAMES CLARK**, heretofore Night Yardmaster, Canadian Northern Ry., Fort Rouge, Man., has been appointed General Yardmaster, Winnipeg Joint Terminals, vice W. McAuley, resigned.

Railway Rolling Stock Notes.

The G.T.R. has received a mikado type locomotive from Canadian Locomotive Co.

The Toronto, Hamilton & Buffalo Ry. has received 2 six-wheel switching locomotives from Canadian Locomotive Co.

The C.P.R. has received 485 steel underframe coal cars and a decapod locomotive from its Angus shops, Montreal, and a stock car and 4 vans from its Winnipeg shops.

The Russian Government is reported to be receiving quotations for the supply of 10,000 four-wheel freight cars. It is announced that the U.S. War Purchasing Board has permitted the Russian Government to place an order for 3,000 of such cars in the U.S.

Press reports state that the Russian Government is arranging to place additional orders for 1,500 locomotives in the United States, and that it is likely the order will be divided between the American Locomotive Co. and the Baldwin Locomotive Works.

Canadian Government Railways have received a ditcher from F. H. Hopkins & Co.; 69 refrigerator cars from Canadian Car & Foundry Co.; and the following second hand rolling stock from the General Equipment Co.: 2 locomotives, 141 coal cars, 30 tons capacity, and 23 box cars, 30 tons capacity.

The Eastern Car Co., since Sept. 14, has shipped 250 box cars, 20 tons capacity, for the Paris & Orleans Ry., leaving 100 yet to be shipped on an order for 2,000; 125 gondola cars for the French State Railways, leaving 675 to be shipped on an order for 1,000; and 100 box cars, 1,200 poods capacity, for the Russian Government, on an order for 3,000.

Railway Finance, Meetings, Etc.

Grand Trunk Dividends Passed.—The Secretary has issued the following notice: "The board has decided, in view of the great increase in working expenses, owing to war conditions, that it is inadvisable to declare any interim dividend on the 4 guaranteed and preference stocks. Notwithstanding the utmost exertions, the company has been unable up to the present to obtain the sanction of the Railway Commission to an increase in rates."

Pacific Great Eastern Ry.—The British Columbia Government has issued a writ against the officers and directors of the P.G.E.R., in which it is alleged that the members of the company are not legally entitled to hold the shares, that the directors are not legally qualified, and that all the proceedings taken at the recent annual meeting were illegal.

Temiscouata Ry.—Gross earnings for July \$24,965; operating expenses \$20,259; net earnings, \$4,706.

Timiskaming and Northern Ontario Ry.—Passenger traffic receipts for Aug., \$75,080.95; freight traffic, \$127,202.33; total, \$202,283.28, against \$83,798.80 passenger traffic; \$90,444.75 freight traffic; \$174,243.55 total, for Aug. 1916.

White Pass and Yukon Route.—Gross earnings from Jan. 1 to Sept. 14, \$1,557,125 against \$1,513,817 for same period 1916.

Outside Ticket Offices.—A press report stated recently that there was a movement on foot in railway circles to abolish the outside ticket offices in the smaller Canadian cities and towns. No confirmation of the report is obtainable. On the other hand, several passenger officials state that it is without foundation.

Travelling Engineers and Fuel and other War Problems.

The Travelling Engineers' Association will not hold its annual convention in the United States this year, owing to war conditions. Following are extracts from the President's circular announcing this.

While much has been done by the members of this association, I wish to remind you what can be done in the way of greater assistance to the Council of National Defence. The conservation of fuel is one of the most serious problems confronting the government and the railways today. Many railways have already organized departments for supervising the handling and performance of locomotives. With the cost of fuel as great as it is now, the most rigid economy should be practiced—and to this end locomotive men must be thoroughly trained—they must be shown how to get the most out of every pound of fuel fired. The only way to do this is by supervision. It will therefore be necessary for the travelling engineer to give the closest attention to firing methods and inspection of idle engines under steam, with a view of reducing to a minimum the consumption of coal. It is of great importance that locomotives be loaded to their full capacity. This will not only help to relieve the congestion, but more work will be obtained from available power, in other words, make the locomotives pull to the limit of their weight, for every possible pound of pull is needed in the war.

The modernizing of old locomotives will require a great deal more attention, with a view to bringing them to the maximum efficiency. In modernizing old locomotives we must equip them to take the place of new ones that cannot be built in time. We are now in a position where all locomotives and all men must do more than they have ever done before.

All members of this association should investigate labor saving appliances. On account of the shortage of labor, it will be necessary for all members to make a thorough study of devices to be placed on locomotives that will produce greater efficiency and economy.

Many new problems will arise in the handling of long troop trains and heating them by steam. The vastness of this undertaking is better understood if it is known that one field army, which consists of 80,000 men, requires 6,229 cars, comprising 366 trains, hauled by 366 locomotives, and yet this is only 4% of the new army to be moved.

A great many locomotive men and firemen who are of military age, have responded to the call of our country; many regiments composed of railway employes are now in France ready to take places where needed. This patriotic response to our nation's call has necessitated the promoting of senior firemen and the employment of a great many inexperienced men, who will have to be educated, and in all instances increased supervision will be necessary to bring them to the highest standard of efficiency. It is important that they understand what we want and why we want it. On account of the scarcity of fuel a poorer quality may have to be used, and these men must be taught how to use each scoop of coal so that every unit of heat possible will be generated. The travelling engineer, from his past experience as a locomotive man, can prove very valuable to the railways in co-operating with the various operating departments of the service. It is therefore up to us to take counsel together

and see if we cannot help reduce the cost of fuel and make more perfect the transportation chain.

As congestion may occur on some of the railways it may be necessary to transfer or interchange locomotives, the association should at this time give special attention to formulating plans for the interchange of these locomotives.

The majority of the members of this association are men who have passed the military age as now prescribed by the United States War Board, but knowing that all of us wish to have some part in the responsibilities assumed by our government, I urge upon you, if you have not already done so, to subscribe for one or more Liberty bonds and in this way do our bit, although we cannot go to Europe to do it.

It is the duty of all members to be loyal to the association regardless of the fact that it is necessary this year to postpone the convention. In this way only can we keep up the splendid reputation of the association. I therefore recommend that the reports of the committees contain the comments made by various members of this association and the annual report published as heretofore.

The work of the association has been very productive this year—the subjects are of unusual interest and I feel that a vote of thanks should be extended to the different committees to those who have in any way assisted them and to our most efficient secretary. In closing, may I use the words of the world famed Rip Van Winkle, "May we live long and prosper."

The Henderson Transfer and Lighterage Co., the incorporation of which was announced in our last issue, will operate chiefly in transferring grain between Fort William and Port Arthur, in connection with the Davidson and Smith Elevator Co., Port Arthur. The company has acquired the s.s. Robert L. Fryer of U. S. registry from R. J. Henderson, Winnipeg, who is President. This vessel is equipped for all kinds of wrecking and lighterage work, and was built at West Bay City, Mich., of oak, in 1888. The hull is built with diagonal strapping on the frames, wooden arches, steel boiler house, steam pump wells, etc., and her dimensions are: length 281 ft., breadth 41½ ft., depth 21½ ft.; tonnage, 1,810 gross, 1,451 register. She is equipped with triple expansion engines with cylinders 19, 32 and 50 ins. diam., by 40 ins. stroke; 850 i.h.p. at 88 r.p.m., and supplied with steam by 2 Scotch boilers 10 by 11 ft., at 150 lbs. J. R. Smith is General Manager of the company.

The s.s. George A. Graham was wrecked at South Shore, off Manitoulin Island, Lake Huron, Oct. 7, during a gale, and became a total loss. She was built at Chicago in 1891, and was originally named Marina. The hull was of steel, with double bottom for watertight ballast, steel boiler house, three watertight and two non watertight bulkheads, complete electric lighting plant, etc., and she was equipped with triple expansion engines, with cylinders 24, 38 and 61 ins. diam. by 42 ins. stroke, 1,200 i.h.p. at 75 r.p.m., supplied with steam by two Scotch boilers 14 by 12½ ft. at 125 lbs. Her dimensions were: length 292 ft., breadth 40 ft., depth 24½ ft.; tonnage 2409 gross, 1577 register. She was owned by the Montreal Transportation Co., having been recently acquired from the Canadian North West Steamship Co., Toronto, with that company's other steamships, Atikokan and Paipoonge and barge Thunder Bay.

Canadian Ticket Agents' Association Meeting.

The 31st annual meeting of the association was held at Montreal, Sept. 26. For the first time in its history, the association assembled for a one day purely business meeting, social features, always an attraction, being eliminated, and for this reason it was thought that there would be but a small attendance, but the members turned out in greater numbers than at Port Arthur last year. The Secretary-Treasurer's report showed that the association, both numerically and financially was prospering, 25 new members having joined during the year.

C. A. Cavins, G. P. and T. A., Chicago and Northwestern Lines, as accredited representative of the American Association of Passenger Traffic Officers, presented greetings from that association, congratulated the members on their work in the past, and encouraged them to continue their good efforts in the future. He gave many statistics showing the growing importance and advance of railway work and interests in the United States and Canada, and foretold of greater things to be. Short addresses were given by W. S. Cookson, General Passenger Agent, G. T. R., C. B. Foster, Asst. Passenger Traffic Manager, C.P.R., and W. H. Snell, General Passenger Agent, C.P.R., George Ham, of the C.P.R. headquarters staff, and others. All spoke in complimentary terms of the association's objects and the advantages of a yearly reunion for the purpose of an interchange of opinions and mutual acquaintance.

President Hare gave a resumé of the association's progress during the past twelve months, and impressing upon all the importance of increasing the membership. He strongly advocated courtesy as a winning factor in an agent's dealing with the public. Many matters of interest to the ticket seller were discussed. It was unanimously decided that all members on military service should be kept in good standing on the books until the end of the war.

The following were elected officers: President, E. R. Blow, C.P.R., Whitby, Ont.; 1st Vice President, H. F. Whittier, G.T.R., Trenton, Ont.; 2nd Vice President, J. Ransford, G.T.R., Clinton, Ont.; 3rd Vice President, J. A. McDonald, C.P.R., Valleyfield, Que.; Secretary-Treasurer, E. da la Hooke, G.T.R., London, Ont.; Auditors, B. Caswell, C.P.R., Smiths Falls, Ont.; Executive Committee, W. Jackson, C.P.R., Clinton, Ont., W. J. Moffatt, G.T. R., Toronto, A. M. Hare, G.T.R., Tillsonburg, Ont., F. W. Churchill, C.P.R., Collingwood, Ont., C. B. Janes, C.P.R., Orillia, Ont. The Honorary Counsel, J. H. Flock, K.C., London, Ont., and Honorary Physician, Dr. W. Shaw, Clinton, Ont., continue in office.

Australia's Transcontinental Railway was opened Oct. 22.

The World's Shipyards.—An inventory of the world's shipbuilding facilities completed recently by the Japanese Government's Shipping Affairs Bureau is said to show that there are 850 shipyards, of which 264 are equipped to build steel ships of 1,000 tons or more, while 416 are able to turn out vessels of less than 1,000 tons. They are: Britain, 236; British colonies, 58; Holland, 105; Germany, 51; Japan, 25; Italy, 18; France, 25; Austria-Hungary, 9; Spain, 14; Belgium, 7; America, 48; Norway, 24; Sweden, 17; Denmark, 9; Russia, 17; China, 5; other nations, 12.

Traffic Orders by Board of Railway Commissioners.

Pulp Rates to United States.

26547. Sept. 20.—Order 24915, April 22, 1916, suspending certain tariffs increasing rates on wood-pulp and sulphite pulp from stations in Canada to points in the United States. It is ordered that the said order be rescinded, subject to and upon the condition that the rates from Ottawa, Hull, Hawkesbury, and Buckingham to destinations in Central Freight Association territory included in the suspended tariffs, except Jackson, Battle Creek, Vicksburg, and Kalamazoo, Mich., be revised to the basis of 19 1-10c. to Chicago, in accordance with the established percentages thereof, all fractions of 1c in the rates, excepting the $\frac{1}{2}$ c, to be eliminated in accordance with the following rule: Under .25, drop; .25 to .74, $\frac{1}{2}$ cent; over .74, 1 cent. And it is also ordered that the rates from Ottawa, Hull, Hawkesbury, and Buckingham to Jackson, Battle Creek, Vicksburg, and Kalamazoo, be made 1c less than the rates from Grand Mere.

Fibre Board Cheese Box Rates.

26548. Sept. 19.—Re application of Canada Cheese Box Co., Ltd., for the same freight rates on fibreboard cheese boxes as apply on ordinary wooden cheese boxes. It is ordered that the rates and minimum weight to be charged by railway companies on fibreboard cheese boxes, in carloads, be those concurrently charged between the same points in Canada on wooden cheese boxes, in carloads; and that prompt effect be given this order by amendment of the Canadian Freight Classification, or by a commodity tariff of general application.

Commodity Rates on Canned Goods.

26572. Sept. 26. Re complaint of Dominion Cannery, Ltd., against withdrawal of joint commodity rates on canned goods from points on Canadian Northern Ry., south of Trenton, Ont., to points in Ontario west of Ottawa, Peterborough and Whitby, and the failure of the C. N. R. to comply with order 26168, May 31, 1917. It is ordered that the C.N.R. be required to publish and file its proposed joint tariff on canned goods, in carloads, the basis of which is contained in its submissions to the board, to become effective not later than Nov. 1; that the railway companies made parties to the said joint tariff file concurrences therein on or before Nov. 1, and that order 26168, May 31, 1917, be rescinded.

E. D. & B.C. Ry. Standard Freight Tariff.

26589. Sept. 27. Granting application of Edmonton, Dunvegan & British Columbia Ry. under Sec. 327 of the Railway Act, for approval of its Standard Freight Tariff, C.R.C. no. 62, effective Oct. 1, 1917.

Quebec Oriental Ry. Freight Tariff.

26611. Oct. 5. Granting application of Quebec Oriental Ry. under sec. 327 of the Railway Act, for approval of its Standard Freight Mileage Tariff, C.R.C. no. 28.

Minimum Weight Tariffs Suspended.

26634. Oct. 13. Re complaints of Canadian Manufacturers' Association and Toronto Board of Trade against proposal of railway companies, by schedules filed to become effective October 15, 1917 (Michigan Central Rd., Nov. 1), to increase aggregate minimum weight of less than carload shipments of fresh meat, dressed poultry, packing-house products, butter, and eggs, when loaded in refrigerator cars on private sidings, to 15,000 lb. per car. Upon reading the complaints filed, and in default of answers thereto by the carriers affected thereby, it is ordered

that the following schedules be suspended, pending hearing by the board, viz., supplements 45 and 46 to Grand Trunk Tariff, C.R.C. no. E-2374; supplement 18 to Canadian Northern Ry. Tariff, C.R.C., no. E-189; supplement 14 to Canadian Pacific Tariff, C.R.C., no. E-3280, items 152 and 153; supplement 4 to Michigan Central Tariff, C.R.C. no. 2675, item 155A; Toronto, Hamilton & Buffalo Tariff, C.R.C. no. 1176. And it is further ordered that the schedules to be superseded by the schedules herein set forth be continued in force pending the board's decision on the hearing to be had.

Milling in Transit Charge.

26612. Oct. 16. Re complaint of Dominion Millers' Association against milling-in-transit charge of 2c per 100 lb. made by Grand Trunk and the Canadian Pacific Railways on grain ex-lake. It is ordered that the C.P.R. be required to publish and file a tariff reducing the stop-over charge for milling western grain, ex-lake, in transit, to 1c per 100 lb.; the said tariff to be made effective not later than Nov. 1.

Commodity Rates on Timothy Seed.

26655. Oct. 11. Re application of South Alberta Hay Growers, Ltd., of Pincher Creek, Alta., for commodity rates on timothy seed, in carloads, for home consumption and for export. It is ordered that the application be refused.

Minimum Carload Weights for Apples.

26662. Oct. 18.—It appearing that the Dominion Atlantic Ry. has, unauthorized by the board, published and filed Supplement no. 2 to its Tariff C.R.C. 429, increasing minimum weight of apples, in carloads, from 24,000 lb. a car, as shown in Canadian Freight Classification 16, approved by the board, to 30,000 lb. a car, it is ordered that the said supplement be disallowed.

The Dominion Government Transportation Policy.

In a statement issued by the Premier, Sir Robt. Borden, on Oct. 18, announcing the new union government's policy it is stated that it will include "the development of transportation facilities; the co-operative management of the various railway systems, so as to secure economy in operation, to avoid unnecessary construction, and to secure the widest and most effective use of existing railway facilities; the encouragement and development of the shipbuilding industry, and the establishment of steamship lines upon both oceans and upon the Great Lakes; co-operation with the various provincial governments for the improvement of highways; and the investigation of the possibilities of air service for important national purposes."

In regard to the references to the establishment of steamship lines, in the statement above quoted, we are officially informed that the government's policy has not been fully determined and we are therefore unable to state whether government owned lines or subsidized lines are contemplated.

The Anglo-American Shipping Co., Ltd., has been incorporated under the Dominion Companies Act, with \$20,000 capital and office at Montreal, to build and operate steam and other vessels, and to conduct business as common carriers, shipping agents within and without Canada, and to conduct a general towing and wrecking business.

Telegraph, Telephone and Cable Matters.

The Great North Western Telegraph Co. has opened offices at Jonquiere, Que., Beamsville, Ont., and Dropmore, Man.; and has closed its offices at Marsouins, Que., and Sparrow Lake, Ont.

Jas. T. Troyer, heretofore in charge of the C.P.R. Telegraphs in the Toronto News office, has been appointed agent, C.P.R. Telegraphs at Guelph, Ont. Prior to his departure from Toronto, he was presented with a pipe by his associates.

The Pacific cable, operated by the Pacific Cable Board, made a profit during the past year, and therefore the usual contributions will not be required. In addition to Great Britain, Canada, Australia and New Zealand are responsible for shares in any deficiency arising from operation.

The Great North Western Telegraph Co.'s 36th annual meeting was held at Toronto recently. The board was re-elected for the current year as follows: Z. A. Lash, K.C., President; Adam Brown, Vice President; F. B. Hayes, Aemilius Jarvis, D. B. Hanna, R. P. Ormsby, Hon. F. Nicholls, directors. G. D. Perry is General Manager, A. C. McConnell, Secretary and Auditor, and D. E. Henry, Treasurer.

The Association of Railway Telegraph Superintendents will hold a special meeting, Nov. 22, at Chicago, Ill., to consider the conservation of telegraphing and telephoning on both commercial and railway wires; the shortage of operators, and plans for schools to teach operators, and the emergency use of wire facilities in the operation of railways to meet the war situation.

Among the Express Companies.

E. V. Clare has been appointed agent Canadian Ex. Co., Moose Jaw, Sask.

R. S. Hodgson has been appointed acting route agent, Dominion Ex. Co., Winnipeg, vice W. A. McDonald.

G. A. Howard has been appointed agent, Canadian Northern Ex. Co., Emerson, Man., vice H. J. Berry.

N. R. Weir has been appointed route agent, Dominion Ex. Co., Campbellton, N.B., vice K. Copeman promoted.

E. Calder has been appointed agent, Dominion Ex. Co., Charlottetown, P.E.I., vice L. C. Goodge, transferred.

C. L. Bowles, heretofore route agent, has been appointed Auditor of Agencies, Canadian Northern Ex. Co., Winnipeg.

L. C. Goodge, heretofore agent, Dominion Ex. Co., Charlottetown, P. E. I., has been appointed agent at St. John, N.B.

K. Copeman heretofore route agent, Campbellton, N.B., has been appointed acting agent, Dominion Ex. Co., Halifax, N.S.

The Board of Railway Commissioners has ordered the American Ex. Co. to provide facilities for handling fish shipments from the Dominion Ex. Co. at the Michigan Central Rd. station at St. Thomas, Ont., other than necessary checkers that may be supplied by the companies. The cost of service, other than checking, to be divided equally between the American and Dominion Ex. Cos., and payments to be made to the former by the latter, the Dominion Ex. Co. having the privilege of furnishing half of the help in lieu of payments.

Electric Railway Department

A New Trussed Rail Joint on the London Street Railway.

By C. B. King, Manager, London Street Railway.

That necessity is the mother of invention was again proved when we found it necessary to devise some kind of rail joint that could be used to repair tracks more permanently than any we had used previously. Quite a lot of the track had become worn at the joints, by reason of the joints working loose, allowing the ends of the rails to become bent down and badly pounded. It was also realized that some kind of joint was needed which would overcome the peening effect of the wheels causing the rails to arch up in the centre and which increased the bending down of the ends. Various kinds of

kind of joint that would hold the extreme ends of the rails rigid, and yet with some degree of independence of each other, to that the worn rail might be lifted more than the other.

With these conditions to meet various experiments were made which resulted in a joint shown in the accompanying illustrations. The essential feature of this joint is the special cast steel clip, which clamps the base of the running rail to the base of the inverted rail used as a truss. As these clips are drawn up, the slopes on the bases of the rail cause the truss rail to be raised. This motion is

of the clip, it is, however, drawn up as close as possible with the bolt. For an 80 lb. rail, or lighter, a $\frac{3}{4}$ in. bolt has been found most satisfactory, but with a rail having a thicker base, a $\frac{5}{8}$ in. or even a $\frac{1}{2}$ in. bolt may be used. When using a $\frac{3}{4}$ in. bolt the pillow block used is $\frac{3}{4}$ in. also, to make a level joint, as is most desirable in laying new rail; but when repairing old rail, one or more sheet steel shims are used, in addition to the pillow block, in order to lift the ends enough, so that when ground off the joint will be level. This is illustrated in the accompanying drawing showing where the posi-

Position of cupped and depressed joint with plates removed before lifting.

Position of cupped and worn joint after being lifted and made ready for grinding

Position of joint after grinding

Trussed Rail Joint, London Street Railway.

Old fish plates or angle bars must be changed from side to side or made smaller so as to permit the lifting of one rail as shown. Plates are needed in this joint to hold the rails in line only, so that common bar irons may be used as fish plates.

Insert, under pillow block casting, a steel shim, thick enough to raise the least worn rail so that

joints on the market had been tried but without success as they would loosen again in a very short time. It was found with all of those tried that the extreme ends of the rails would begin to loosen, as was shown by the green rust, soon found, for only an inch or so at the ends between the rail and the joint plates. This looseness would continue to grow away from the ends of the rails, even while the bolts were yet perfectly tight, until it reached the ends of the plates, when the bolts would begin to show signs of looseness, and then very shortly all the plates and bolts would become quite loose. This demonstrated that the rails needed some

when ground off the end will have a sharp corner.

Insert on top of pillow block casting, and under cupped rail only, a steel shim of proper thickness, so that when ground off the cup has disappeared.

To make a level joint, when no grinding is necessary, no steel shims are necessary.

transmitted to the ends of the running rails, through the cast iron pillow block which has been previously inserted between the truss rail and the ends of the running rails, thereby lifting the ends of the rails so as to take out the downward bends and to overcome the arching caused by the peening of the wheels. The extent of such lifting depends upon the thickness of the base of the rail, the thickness of the pillow block, and the extent to which the clips are drawn up. The size of the bolt may also influence this, so that these details must be adjusted for each joint, according to its worn condition. As it is desirable to make use of the full strength

Should the joint be inclined to rise above the level, break a pillow block, and insert one half outside the clips, at ends of truss rail, as shown by dotted lines.

In case of rail with a very thick base, a smaller diameter bolt, and a proportionately thinner pillow block, must be used.

tions of badly pounded rail are usually found; quite a distance below the original level. When the truss rail and pillow block with the necessary shims and clips are attached, the ends of the rail are bent upwards, so as to be slightly above the original level; just enough, however, so that, when this extra elevation is ground off, the cupping or other battering of the rail will have completely disappeared, as, or even better, than in new track. The truss rail used is scrap, equal in weight or heavier than the running rail, though it is not necessarily of the same section.

When the characteristics of this joint leaving the ends level, and just as good

were agreeable to making a grant divided proportionately among the municipalities to cover the deficit in the proceeds of five years, at the end of which time it was hoped some other solution of the difficulty could be found. London's representatives were non-committal, believing that a road which runs in competition with London's own line, the London & Port Stanley Ry., would never pay if operated as at present. Another meeting will be called in a few days, when President Wood's answer to the municipalities' proposal is received.

Toronto Civic Ry. Wages.—The Toronto City Council has adopted the Board of Control's recommendation that the following scale of wages, based on the finding of the board of conciliation in the recent Toronto Ry. strike, be paid to civic railway employes, as from June 16: Motormen, conductors and motor and truck repair men, first six months, to apply only to men employed after this date, 30c an hour; second six months, 32c; second year, 35c; third and subsequent years, 37c; shed men, foremen, 37c; operating shed men, men doing general shed work, 33c; shed men, men doing general shed work but not operating cars, 32c; car cleaners, 31c. Motormen and conductors engaged in train work on Sundays, 4c an hour platform time in excess of weekday rates. Emergency crews of motor and truck repair men to receive time and one-fifth.

Mainly About Electric Railway People.

C. C. Weldon has been appointed Superintendent, International Transit Co., Sault Ste. Marie, Ont., vice J. Summerhayes resigned.

D. W. Houston, Superintendent, Regina Municipal Ry., Regina, Sask., has been elected an associate member of the Canadian Society of Civil Engineers.

Geoffrey Porter, who has resigned from the position of Chief Electrical Engineer, British Columbia Ry., Vancouver, was presented recently with a mantel clock by the staff. It is his intention to take up private practice as advising and contracting engineer, but in the meantime he is visiting Japan, with a view to establishing connections there.

Owing to the resignation of G. Porter, Chief Electrical Engineer, British Colum-

bia, was born in Quebec, Que., and after leaving high school, was for some time in the Bell Telephone Co.'s service. He was subsequently Electrical Engineer for the Public Service Commission of the First District, New York, N.Y.; Vice President and General Manager, Michigan United Rys.; General Manager and Treasurer, Chicago and Milwaukee Rd.; Vice President and General Manager, San Francisco-Oakland Terminal Ry., and Vice President and General Manager, Georgia Power Co. He has also served for the General Electric Co. in the construction and operation of electric systems in Brazil, the Argentine Republic, Peru, Costa Rica and Mexico.

Wilford Phillips, whose retirement from the position of General Manager, Winnipeg Electric Ry., was announced in our last issue, has been elected a director of the company. Sir Augustus Nanton, Vice President, said recently: "Everybody connected with the company will regret Mr. Phillips' retirement. He remains in office at the board's request and will stay with the company in an advisory capacity. He came to Winnipeg about seventeen years ago from the Niagara Falls Park & River Ry., which he had managed with success, and to him is very largely due the past great successes of the Winnipeg Electric Ry. in all its branches. He extended the railway lines, completed its power plant, built substations, built a suburban line, extended its gas mains—in fact, the company's properties when he arrived were of a minor character and have all been developed under his management."

Edmonton and Regina Municipal Railway Deficits.

The Regina, Sask., Leader says: "The Edmonton municipal street railway is in a pretty bad way, according to the Bulletin, of that city. The system is carrying 25,000 passengers a day, and losing one cent on each passenger it carries. If the number of passengers per day could be increased to 35,000, it is estimated the railway would break even, but this is not regarded as possible while war conditions continue. The Bulletin says the unpleasant alternatives are, to raise the rates, to cut down expenditure by cutting down service, or to go on ignoring the sinking fund which should be put aside to meet the bonds. It urges the taking of definite steps to make the system a self-sustaining business proposition, declaring 'a city with millions of back taxes cannot afford to run chances on the indefinite continuance of a loss of \$250 a day on its street railway system.'

"While Regina's showing is bad enough, it is not as bad as Edmonton's. According to figures submitted to the city council recently and certified to by the auditors, Regina's street railway loss for the nine months ended Sept. 30 was \$48,958, or an average loss of about \$180 a day."

Transportation of Postmen in Cape Breton.—Following the Nova Scotia Board of Public Utilities' decision forbidding the Cape Breton Electric Co. to sell tickets for postmen at reduced rates, on the ground that it was contrary to the company's act of incorporation and the Public Utilities Act, the company ceased to accept such tickets on Aug. 27 and took over from the Sydney postmaster those he had on hand unused. The postmen are now paying regular fares, the same as any other passengers.

A. W. McLimont
General Manager, Winnipeg Electric Railway

bia Electric Ry., there has been some rearrangement of duties, as it is not the Company's intention to make an appointment to that position at present. W. M. Fraser, Electrical Superintendent, has been given full charge of the operating end of the business, and F. S. Easton, Hydro-Electric Engineer, has been given full charge of the power producing plants, both with offices at Vancouver.

Martin Milne Todd, whose appointment as President, Galt, Preston and Hespeler St. Ry., and Vice President, Lake Erie and Northern Ry., Galt, Ont., was announced in our last issue, and whose portrait appears in this issue, was born there, July 22, 1891. He graduated from McGill University with the degree of B.Sc. in May, 1915, and was from June 1 to Dec. 31, 1915, Assistant Electrical Engineer, Lake Erie and Northern Ry., Preston, Ont.; Jan. 1, 1916, to Aug. 31, 1917, Assistant Superintendent, Galt, Preston and Hespeler St. Ry., and Lake Erie and Northern Ry., Preston, Ont.

A. W. McLimont, whose appointment as General Manager, Winnipeg Electric Ry., Winnipeg, was announced in our last

Electric Railway Notes.

The Kingston, Portsmouth & Cataraqui Electric Ry. is employing some women conductors.

The Cornwall St. Ry., Light & Power Co., Cornwall, Ont., is said to be in the market for some cars.

The Vancouver Board of Trade is urging the British Columbia Government to appoint a public utilities commission.

The Ottawa Electric Ry. is reported to have carried 750,000 persons during the six days of the Central Canada Exhibition, 25,000 more than in 1916.

A board of conciliation is reported to have been appointed to arbitrate in a wages dispute between the International Transit Co., Sault Ste. Marie, and its employes.

The Montreal & Southern Counties Ry. has received one trailer car from Ottawa Car Manufacturing Co., completing the order for three, which were fully described and illustrated in our last issue.

The Niagara, St. Catharines & Toronto Ry. has, at the request of the Niagara Falls, Ont., City Council, put into effect nearside stops on its line in that city, between the Roman Catholic Church and Bridge St.

The Quebec Public Utilities Commission is hearing an application of the City of Montreal to compel the Montreal Tramways Co., the Montreal Public Service Corporation and other companies to bury all their lighting wires underground in District No. 4, Montreal.

Sir Lomer Gouin, Premier of Quebec, is reported to have stated recently that the commission appointed to draft a new franchise agreement for the Montreal Tramways Co. would probably complete its work before the legislature's next session.

F. Ford, K.C., has been appointed to represent the Edmonton Radial Ry., H. A. Mackie to represent the railway's employes, and Mr. Justice McCarthy has been chosen as chairman of the conciliation board to arbitrate between the railway and its employes on wages and other matters in dispute.

At the meeting of the Edmonton, Alta., City Commissioners, at which a new schedule for the Edmonton Radial Ry. was adopted, it was reported that during August the expenses were 6c per passenger and that in order to pay expenses at even a 5c fare the railway would have to carry 33,808 passengers a day.

The Moose Jaw, Sask., Electric Ry. is desirous of adopting one-man cars. The Saskatchewan Legislature is to be asked to amend one of the sections of the Railway Act, which requires that there shall be a motorman and a conductor in charge of each car. The Moose Jaw City Council will consider the matter of petitioning the legislature in support of the amendment.

The British Columbia Electric Ry. has resumed its technical classes in Vancouver for the instruction of its employes. The classes are in charge of J. G. Lester, a graduate of the Imperial College of Technology, London, Eng., who has acted as instructor since the company inaugurated the plan of providing a technical training for its employes.

The Calgary, Alta., City Council has adopted a resolution endorsing the operation of one-man cars on the Calgary Municipal Ry. by a majority of eight to one. This was in conformity with the recommendation of a special committee

which investigated the matter, the report of which appeared in Canadian Railway and Marine World for October, pg. 403.

The London Street Ry.'s 38 conductors planted with potatoes nine acres of land, the use of which was granted them by the company, and have secured a crop of about 800 bags. The men invested about \$7.50 each, besides their time, and have secured in addition to their own winter's supply of potatoes, a handsome return upon their investment.

The British Columbia Electric Ry. is reported to have under consideration the adoption of one-man cars on certain routes. The employes' representatives state that they will not discuss the matter until after the report of Adam Shortt on the transportation situation in Vancouver, Victoria and New Westminster has been received and considered.

The British Columbia Electric Ry.'s weekly sheet, the Buzzer, had an article recently on the abuse of transfers. It is pointed out that too many passengers on the city cars take the first car that comes along in the general direction in which they are going and demand a transfer, with the result that excessive use of transfers tends to delay the whole system as well as saddling a certain amount of needless expense upon the company. The wholesale demand for transfers, it is added, reduces the average fare for the city and suburban lines to about 3½c.

The Edmonton Radial Ry. put a new car schedule in operation Oct. 17. The important feature of the schedule is that a one-man car belt line will be operated, commencing at 111th Ave. and 95th St., travelling south on 95th St., west on Jasper Ave. to 101st St., then north and west on 107th Ave. to 124th St., then south and east on Jasper Ave. and north to 111th Ave., via 101st St. The service on this route will be operated by eight cars. One-man cars will be operated on the Highlands to Bonnie Doon line, and on the Calder-114th Ave. line. In announcing the new schedule the management asks the co-operation of the public to make the movement a success. Passengers are asked to have the exact amount of their fare ready when boarding cars and to ask for transfers only at point of intersection. The new schedule is estimated to save about \$90 a day in wages.

Quebec Ry. Light, Heat and Power Co's Annual Report.

The following are extracts from the report for the year ended June 30: The gross earnings from operation were \$1,832,031.93, compared with \$1,731,732.49 in 1915-16. Adding miscellaneous income of \$230,850.80, makes total revenue from all sources \$2,062,882.73, an increase of \$94,281.31. The operating and maintenance expenses were \$1,155,969.25 compared with \$1,029,750.96 in 1915-1916. The fixed charges and taxes were \$706,326.28, leaving a net surplus of \$200,587.20. After making provision for obsolete cars on Montmorency and City St. Ry. Divisions, discount account, etc., there remains a total at credit of surplus account, to date, of \$684,572.49.

The properties and plant of the company and its various subsidiary companies have been maintained in the same high state of efficiency as heretofore, as evidence of which there was expended dur-

ing the year on maintenance accounts \$226,366.07. During the year there was expended on capital account \$302,663.63.

It is with feelings of deep regret that your directors have to report the death on July 4, of H. G. Matthews, General Manager. They also regret to announce the death in Dec., 1916, of Hon. Robert MacKay, who had been a director of the company since its organization. At a meeting of the directors on July 18, W. J. Lynch, Treasurer and Comptroller, was appointed General Manager. The directors desire to express their appreciation of the efficient services rendered by the officials and staff.

The directors were re-elected, T. J. Donohue being added to the board, which is now composed as follows: President, Sir Rodolphe Forget; Vice President, L. C. Webster; other directors, C. Donohue, T. J. Donohue, P. Galibert, C. A. Lavigne, L. G. Morin, Arthur Picard, and L. J. Tarte. The other officers are W. J. Lynch, General Manager; Arthur Lemoine, Secretary; and R. A. Wilson, Treasurer.

Protection of Highway Crossings by Toronto Suburban Railway.

The Ontario Railway and Municipal Board had under consideration, recently, several complaints alleging danger at crossings of highways on the Toronto Suburban Ry.'s extension from Lambton to Guelph, Ont., and had the same inspected by its Vice Chairman, A. B. Ingram, and by its engineer, as a result of which it issued the following orders:

Level crossing on Dundas St., on hill above Lambton: Each eastbound car to slow down to not more than 5 miles an hour until past the crossing. A red light to be hung by the company over the centre of the highway to warn vehicles after dark. The light to be so hung that it can be seen by the motormen of eastbound cars, to warn them to slow down speed as directed.

Canning Ave. crossing, Islington, stop 8: Each car to come to a dead stop. Every eastbound car to be under complete control while crossing the highway. A red light to be suspended by the company at night so as to be seen by persons using the highway and by all motormen.

Crossing on Dundas St., at Islington, stop 9: Each car to come to a dead stop at this place, and each car to be under control when crossing the highway. A red light to be displayed as at stop 8.

Crossing on Centre Road, stop 7, near Hickey Farm: The bank at the northwest corner of the highway and railway right of way to be cut away and the trees removed to near the telegraph pole about 100 ft. north of the crossing, to the satisfaction of the board's engineer.

Dixie Crossing, stop 23: The speed of every car to be reduced when crossing the highway and every car to be under control.

Timber to be cut down on portions of s.w. ½ and n.w. ½, Lot 31, Concession 7, Nassagawaya Tp., and in n.e. ½, Lot 19, Concession 7, Esquesing Tp., so as to give a clearer view of the railway and prevent accidents.

Postmen's transportation in St. John, N.B.—The Post Office Department having refused to pay the bulk sum asked by the New Brunswick Power Co. for carrying postmen on its cars, the postmen in St. John are now travelling on tickets, paying the same rate of fare as ordinary passengers.

Marine Department

The Prince Edward Island Car Ferry and its Terminals.

The car ferry service between New Brunswick, on the mainland, and Prince Edward Island, was placed in operation, Oct. 16. This marks the completion of an important work in connection with the improvement of the communication with the Island province, a matter which has been the subject of continual agitation ever since the island entered Confedera-

tion. Even before that date there had been projects under consideration to make connection either by means of a tunnel or bridge. The latter project did not command any serious measure of support, but that for the boring of a tunnel is not

when Charlottetown was inaccessible on account of ice, they have run between Georgetown, P.E.I., and Pictou. When ice has prevented the steamships operating mails and some passengers have been conveyed in open boats over the ice and through the stretches of open water between Cape Traverse, P.E.I., and Cape Tormentine, N.B., the narrowest part of

Point, P.E.I., since named Port Borden, and Cape Tormentine, N.B. When this had been decided upon plans were prepared for car ferry terminals and contracts for the work were let in June, 1913, the Cape Tormentine work being let to A. T. Mackie, Toronto, and the Prince Edward Island work to the Halifax Dredging Co. Subsequently the latter work was taken

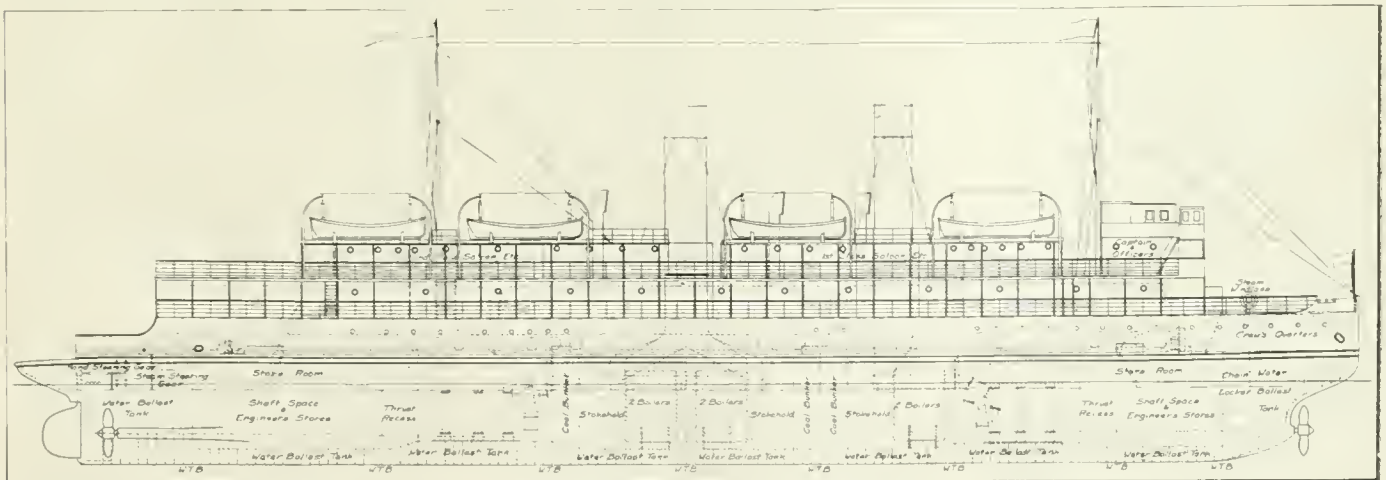

Car Ferry Steamship Prince Edward Island, Port Borden, P.E.I., to Cape Tormentine, N.B.

over by the Roger Miller Co. of Prince Edward Island, Ltd., of which Roger Miller, of Ingersoll, Ont., is President. The work done at Port Borden under the contract includes the construction of a pier 2,240 ft. long and 25 ft. wide on the

Northumberland Strait. From 1900 onward the matter was discussed almost annually in parliament, but it was not until the end of 1911 that definite steps were taken. In December of that year the Premier announced that the

Government had decided to construct a car ferry to be operated across the strait, and that the P.E.I. Ry. would be reconstructed as a standard gauge line, to permit of the interchange of traffic. In 1912 parliament voted \$400,000 to provide a car ferry, etc. After an investigation of the whole situation it was decided to operate the car ferry between Carleton

Car Ferry Steamship Prince Edward Island.

without its advocates even today. The principal means of communication between the island and the mainland during the summer is by means of steamships running between Summerside, P.E.I., and Point du Chene, N.B., and between Charlottetown, P.E.I., and Pictou, N.S. During the winter steamships have run between Charlottetown and Pictou, and

top inside the sea wall, at the outer side of which is the car ferry dock. This dock is composed of 9 concrete cribs, each 113 ft. long and weighing 2,500 tons, with 300 tons of steel in each for reinforcing. These cribs extend 22 ft. below low water mark and 13 ft. above. They rest on a foundation of rock, which had been levelled off to receive them. They were built

Government had decided to construct a car ferry to be operated across the strait, and that the P.E.I. Ry. would be reconstructed as a standard gauge line, to permit of the interchange of traffic. In 1912 parliament voted \$400,000 to provide a car ferry, etc. After an investigation of the whole situation it was decided to operate the car ferry between Carleton

at Point du Chene, N.B., of cellular construction, some containing 27 pockets, others 30. After being towed over and placed in position, they were filled with concrete, thus making a solid mass. The core of the remainder of the pier is of stone, known as "quarry run." The slopes are laid with heavy Wallace stones, not less than five tons each, built to fit in with one another. These stones were laid by means of a cable-way, being handled by an endless chain, between two towers, one on the pier and the other on the bank, about 1,500 ft. apart. The pier is of curving formation, and has a J termination, the hollow part of which forms a dock for the steamer. In order to prevent the boat from being damaged by coming into contact with the concrete, an automatic fender, designed by the Roger Miller Co., was built. This is composed of vertical piles, with their steel points driven into the rock. These piles are set in pairs, between them timbers are set lengthwise, and there are a number of other piles built in to strengthen the structure. There are 64 plungers altogether, fitting into a pipe and resting against clustered car springs. By means of these springs, the compression of the boat is taken up, and 100 tons of pressure

driven by three sets of triple expansion engines, driving two screws at the stern and the third driving another at the bow. A full description of the vessel and her machinery, with illustrations, was given in Canadian Railway and Marine World for November, 1914, pg. 518.

In order to provide direct connection with the Intercolonial Ry., the New Brunswick & Prince Edward Island Ry., extending from Sackville to Cape Tormentine, N.B., 38 miles, was acquired by the Dominion Government, under the authority of an act to acquire by lease or otherwise branch lines for the Intercolonial Ry. A considerable sum has been expended upon the line to bring it up to the standard necessary to carry the traffic. On Prince Edward Island, a short piece of both standard and narrow gauge line has been built between the car ferry slip and a point on the branch from Emerald Jct. The matter of rebuilding the P.E.I.R. as a standard gauge line is not expected to be taken up until the termination of the war. Meanwhile the standard gauge cars will be taken over on the car ferry, which can accommodate 6 passenger cars and 10 freight cars, and the freight will be transhipped to the narrow gauge cars at Port Borden. The

Pure Drinking Water for Great Lakes Vessels.

In March the Secretary of the Treasury for the U.S. issued a circular to owners, agents and masters of vessels operating on the Great Lakes, providing that on and after the opening of navigation in 1917, it would be necessary to furnish on all such vessels water for drinking or culinary purposes, which, if not obtained ashore, must be treated by an approved method, and if obtained ashore, must be from an approved source, and all the piping system on board such vessels must be so arranged that no connection can be made between the drinking water system and any other water system, and an approved sign, reading, "Do not drink this water," must be placed at every tap or other outlet not connected with the drinking water system.

In addition to these regulations applying to all U.S. vessels, they were also applicable to any Canadian vessels operating to any U.S. port. The matter was taken up by the Dominion Marine Association, through the Marine Department, which had a number of vessels examined and came to the conclusion that it would

Car Ferry Terminal, Port Borden, P.E.I.

will close the springs up a foot.

The cars are taken on and off the car ferry by means of a large steel transfer bridge or apron built by the Dominion Bridge Co., which has six large gantries with an apron girder suspended from the top. The apron is in three sections, the outer one of which rests on top of the steamship's stern. By means of counterweights, the structure is so balanced that it can be hoisted or lowered by a small steam engine to suit any condition of the tide.

The breakwater, also built by the Roger Miller Co., is situated to the eastward on a pier, and affords protection from the east winds. It is 585 ft. long and 110 ft. at the bottom, tapering to 18 ft. at the top. Before operations were started there was no harbor, and a new one had to be created. An area of 750,000 sq. ft. was dredged to a depth of 20 ft.

The work at Cape Tormentine consists of a landing slip, with apron, composed of 330 ft. of double row pile fender work, with protection work of 12 timber cribs of close faced cribbing. The old pier has been widened by the construction of additional cribs.

The car ferry was built from special designs by Armstrong, Whitworth & Co., Ltd., Newcastle-on-Tyne, Eng. The general dimensions are: Length, 300 ft. over fenders, 285 ft. between perpendiculars; breadth, 53 ft. 10 in. over fenders, moulded at deck, 52 ft.; depth, moulded, 24 ft.; mean draft when laden, 18 ft. She is

cars will also be reloaded at Port Borden. As the vessel has ample passenger accommodation, there will be no necessity for taking passenger cars across until the P.E.I.R. gauge is changed.

The report of the first day's operations of the car ferry is as follows: "The first trip was made from Cape Tormentine to Port Borden, where she arrived at 11.05 with 12 I.C.R. cars, 6 loaded and 6 empty (equivalent to 24 P.E.I.R. cars). She was docked in 8 minutes. Discharged and loaded in 25 minutes and left at 12.15 with 12 I.C.R. cars of potatoes. She returned at 2.45, bringing 10 I.C.R. cars. Discharged and loaded with 12 I.C.R. cars of potatoes (equivalent to 25 P.E.I.R. cars) and left again for Cape Tormentine."

H. H. Grady, Summerside, P.E.I., is reported to have been appointed transfer agent, and E. Crosby, of Cape Traverse, as station agent at Port Borden.

The Lake Carriers' Association has offered its fleet of bulk freight carriers for the training of inexperienced men for service for the U.S. merchant marine. It is provided that wages will be paid the men while training.

After-War Shipbuilding. — A British shipowning firm is reported to have placed a contract with one of the large shipbuilding companies in Great Britain, for the construction within a certain time of the close of the war, of a large steamship at a cost of £18 a ton deadweight.

be impossible to have the necessary alterations made in time for the opening of navigation. It was therefore arranged with the U.S. that the regulation be suspended so far as Canadian vessels were concerned, on the understanding that the changes be made and the regulations complied with by the opening of navigation in 1918. Steps are now being taken by the Canadian vessel owners to advise the Marine Department with reference to these regulations so that at the opening of navigation in 1918, they may comply with the U.S. requirements by providing the equipment on the same general lines as those adopted in the U.S., so that Canadian vessels entering U.S. ports will merely have to comply with the U.S. flag law.

British Seamen's Wages.—A London press cablegram, Oct. 9.—The Shipping Controller has decided to establish a standard wage for seamen, practically doubling the old rate. The preliminary decision fixes £11 for seaman on foreign going vessels, firemen receiving £11 10s. The rates of petty officers and stewards will be advanced in the same proportion. The rates of officers and engineers will also be reviewed immediately.

Lake Coal Shipments to U.S. ports during September were 3,413,932 tons, and to Canadian ports, 1,195,434 tons. About 3,000,000 tons were unloaded at Lake Superior ports and 926,063 at Lake Michigan ports.

Shipbuilding Activities Throughout Canada.

STEEL AND WOODEN STEAMSHIPS FOR BRITISH GOVERNMENT.

Engines for Wooden Steamships.—A contract is reported to have been awarded to Grant, Smith and Macdonnell Ltd., for the construction of a shed at Victoria, B.C., for housing and assembling the marine engine parts for the wooden steamships which are being built at various points in the Province for the Imperial Munitions Board. The shed is to be located on pier 2 and will be 703 x 200 ft., the walls being 22 ft. high under eaves and 29 ft. at the ridge, with an inside clearance of 16 ft. The building will be of wood, with complete arrangements for fire protection.

Foundation Co.—Planking operations were reported to be in progress at Victoria on hull no. 1, about the middle of October, and the steel keelsons were placed in two hulls. The ceilings of both vessels were well advanced and the stern and rudder posts in place and the counters in frame. Two other hulls are in frame and work is proceeding on the stem and stern post of hull no. 3. It is expected that the first hull will be launched in December.

Fraser Brace & Co., Montreal, are reported to have been awarded a contract by the Imperial Munitions Board, for the construction of four standard wooden steamships, at an approximate cost of \$1,000,000. The company will, it is said, build the hulls only, at its yard on the south bank of the Lachine Canal between Atwater and Cote St. Paul bridges. Keels are stated to have been laid for two of these vessels, and the keels for the other two are expected to be laid early in November.

William Lyall Shipbuilding Co.—Four steamships are reported to be under way at this company's yards at North Vancouver. The ceiling has been started on one of them, and the second is fully framed. The keels of the other two are bolted and ready for the frames. Two other keels will be laid as soon as the necessary lumber is available, and then work will proceed simultaneously on all six vessels.

The second steel steamship of the "War" series to be built in British Columbia, will probably be launched from J. Coughlan and Sons' yard at Vancouver, during November, and named War Champ.

Steel Steamships Ordered.—It was announced in Canadian Railway and Marine World for June that the Imperial Munitions Board had placed orders for the British Government, at various points between Montreal and Victoria, B.C., for building 26 steel steamships. Since then orders for 10 more have been placed, 4 of these during October. The tonnage of the steamships ordered runs from 1,800 tons to 8,800 tons dead weight capacity. Three steamships have already been delivered, leaving 33 to be delivered.

GENERAL SHIPBUILDING NOTES.

Bentley and Smith are reported to have reopened an old ship yard at Quaco, Nfld., and to have commenced wooden shipbuilding there.

Cameron-Genoa Mills Shipbuilders, Ltd.—Steel keelsons were placed in two wooden hulls during October, and considerable progress was made on hull no. 7. Hull no. 9 was in frame about the middle

of the month and the keel sticks were in course of preparation for hull no. 10, it being anticipated that the keel would be laid in November.

Canada West Coast Navigation Co.'s last vessel of the schooner type was launched from the Wallace Shipyards, North Vancouver, Sept. 29, and named Marie Bernard. She is the sixth vessel of this type built at these yards for the same company. Owing to the difficulty of getting the auxiliary engines, it is likely that her first voyage will be made under sail.

Canadian Allis-Chalmers Ltd., a subsidiary of Canadian General Electric Co., Ltd., Toronto, is re-opening the shipbuilding yard, on the Niagara River, near Bridgeburg, Ont., which was established in the early nineties by Canadian Shipbuilding Co., Ltd., another subsidiary, and which went into liquidation some ten years ago, since which the yard has not been operated. A Angstrom, who managed Canadian Shipbuilding Co., and who has been Naval Architect, Canadian Northern Ry., for some time past, has been appointed Manager of Canadian Allis-

Ltd., a company which was incorporated recently with the view of taking over a contract made by Lamond and Harrison, with the Dominion Government for the construction of an auxiliary power schooner, but which was eventually cancelled, will, it is reported, amalgamate with the Pacific Construction Co., which was announced a short time ago to be building two wooden steamships at Coquitlam, B.C., for the Imperial Munitions Board. Harrison and Lamond Shipbuilders Ltd. are also stated to have a similar contract, and in addition to be negotiating with the Dominion Government for a contract on a cost and percentage basis.

W. R. Huntley & Sons, Parrsboro, N.S., launched the schooner Annie B. Anderson, Oct. 2, for Anderson and Tyrer, Sherbrooke, N.S. She is 142 ft. long, 35½ ft. beam and 13 ft. depth of hold, and of 460 tons register. The builders have laid a keel for another schooner for C. T. White and Son, Sussex, N.B. She will be 175 ft. long, 39 ft. beam and 17 ft. in the hold, and of about 800 tons register.

Shipbuilding Throughout Canada.—It is stated that there are 74 vessels of 126,000 tons, under construction in Canadian shipyards and that of these, 25 are being built on the Atlantic coast; 30 on the Great Lakes, and 19 on the Pacific coast.

The Steamship *Tento* on the Ways at Toronto, just prior to launching, Oct. 22.

Chalmers' shipbuilding department, which has a contract for four Welland Canal size steamships for ocean service.

The **Collingwood Shipbuilding Co.** launched two steam trawlers at Collingwood, Ont., Oct. 1. They are a portion of an order for six placed by J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines, acting as Director of Naval Construction on behalf of the Naval Service Department. Orders have been placed at other yards for similar vessels, the Dominion Government having undertaken to have 36 of them built for service. They are of the regular North Sea trawler type. The dimensions are, length over all 135 ft., length between perpendiculars 125 ft., beam 23½ ft., depth 13½ ft. They are to be equipped with triple expansion engines, with cylinders 13¾, 21½ and 35 ins. diam., by 24 ins. stroke, of about 500 h.p., and steam will be furnished by one boiler 13½ x 10½ ft., at 180 lb. pressure. Accommodation is provided for a crew of 17. The Naval Service Department is supervising construction, and purchases the materials, including engines and other machinery, and supplies them to the builders. An illustrated description of similar vessels was given in Canadian Railway and Marine World for April.

Harrison and Lamond Shipbuilders,

The s.s. *Tento* Launched at Toronto.

The ocean going cargo s.s. *Tento*, built under Dominion Government license for Norwegian owners, but requisitioned for the British Government, was launched at the Polson Iron Works, Toronto, Oct. 22, being christened by Mrs. Refnes, wife of the Norwegian captain, who has been watching the construction. The vessel's principal dimensions are: Length over all, 261 ft.; length, b.p., 251 ft.; breadth moulded, 43½ ft.; depth moulded, 23 ft.; deadweight capacity, 2,500 tons; mean draught, 19½ ft.

The vessel is of the Frederickstad single deck type, built on the deep frame principle, with cellular double bottom all fore and aft, and peak tanks. There are 4 watertight bulkheads, 2 masts, and 6 steam winches, one at each mast and derrick. She is built of steel to class highest class Bureau Veritas for ocean service and will have steam and hand steering gear, electric light, evaporating outfit. The propelling machinery will consist of triple expansion engine, having cylinders 20½ and 33 and 54 in. x 36 in. stroke. She will have 2 Scotch marine type boilers, 14 ft. diam. by 12 ft. long, built for 180 lb. working pressure. She will be completed and delivered this autumn.

Wreck Commissioner's Investigations and Judgments.

Royal Transport-Korana Collision.

An investigation was held at Quebec, recently, into the cause of the collision between the steamships Royal Transport and Korana in Quebec harbor, June 11, resulting in the beaching of the former vessel. Capt. L. A. Demers, Dominion Wreck Commissioner, presided, and was assisted by Commander E. G. O. Elliott, R.N.R., and Capt. C. Keonig, as nautical assessors. The evidence showed that at the time of the collision, both vessels had pilots aboard, and in each case they were on the bridge with the master. The pilot of the Royal Transport, A. Lachance, was given the privilege of giving his evidence and of being examined in French, but he preferred being questioned in English. In the course of his evidence, the court considered it advisable that he be examined in French, but his examination proved impossible in French, and so inconsistent with his first statements, and as his words could not be given the meaning in the interpretation that they implied, an adjournment was made to permit of his direct examination in French. On the resumption, he was recalled and examined in French, but the court found that it was useless to make an analysis of his statements as they differed materially in cross examination, and the court became so exasperated that he was ordered to make a statement without interruption. The evidence of the pilot was such that the court wondered which of the four different statements could be accepted as plausible. He mistook the Korana's light for another, and when he found his mistake, he attempted to cross her bows, which is in violation of articles 19 and 25 of the rules of the road. The unintelligent manner in which he gave his evidence, with the discrepancies in various statements, led the court to doubt whether he sounded a two blast signal as he stated. He also attempted to lead the court to think that lights could not be seen at any distance, but this was disproved by Pilot Angers, of the orana, and other witnesses. Another point in dealing with Lachance's evidence astonished the court, which was his apparent gross ignorance of the chart. The plotting of the point of collision inside of Beaufort Flat, and again close to the breakwater, are irrefutable proofs of his ignorance of a subject of paramount importance to his occupation. With such limited knowledge, it is to be wondered at that he did not come to grief earlier.

Notwithstanding that there was a pilot aboard, the court felt that the master was responsible, and while having great sympathy with masters, under the conditions which they have to face at present, feared that a combination of *laissez faire* and confidence in the pilot sometimes causes a relaxation of that keen attention which must be the watchword of navigators. A serious collision occurred in a well lighted port, and sentiment must be put on one side. An indifferent lookout was kept on the Royal Transport, and had the pilot kept a proper lookout, he would have, in the transition from green to red on the orana, kept his course and shown his red to the Korana's red, as the latter was gradually going toward the centre of the channel on her course outward. The court, Commander Elliott dissenting, therefore found that the Royal Transport was solely to blame for the collision, and suspended the pilot, Arthur Lachance's, license for two years from

June 21, and ordered that before he is again allowed to pilot, at the expiration of his suspension, he be examined on chart work. The master of the Royal Transport, W. C. Davidson, had his certificate suspended for one month from June 21, and the master and officers of the Korana and all other officers were exonerated from all blame for the casualty.

Commander Elliott, in dissenting from the foregoing judgment, considered that both vessels were to blame, the Royal Transport being on her right side, and the Korana on her wrong side, and that an outgoing vessel, manoeuvring on the wrong side of the channel would be very bewildering to an incoming vessel. The collision was due to inefficient lookout on both vessels, accompanied by weather conditions, and partly by allowing custom to become law with the pilots, in keeping to the north side of the channel for changing pilots. This practice is strongly to be deprecated, as there is no reason why an outgoing vessel should do so. Regarding Pilot Lachance, he said: "This man is the result of a system which has granted licenses as fully qualified pilots on very elementary examinations . . . and I recommend that before being permitted to pilot again, he be examined before competent judges on a preliminary examination as to his capabilities, on account of the apparent lack of knowledge of anything beyond the rule of thumb." Commander Elliott also considered the pilot of the Korana should be censured for not keeping to his own side of the channel, and that the masters of the Royal Transport and orana should be censured for not keeping a better lookout on their respective vessels, especially in view of the weather conditions prevailing on the night of the casualty.

Keybell-A. E. Ames Collision.

As the result of an investigation at Montreal, into the collision between the Keystone Transportation Co.'s s.s. Keybell and Canadian Northern Steamships' s.s. A. E. Ames, west of Point Peter in Lake Ontario, June 29, the Dominion Wreck Commissioner, Capt. L. A. Demers, has rendered judgment, concurred in by Capts. C. Lapierre and F. Nash, acting as nautical assessors. After hearing and examining the evidence, the court finds that whilst the collision is trifling from the point of damages, which is not the court's concern, it cannot arrive at any other conclusion than that the s.s. Keybell, by violation of article 19 regarding speed and bearing of sounds, invited the collision, therefore the master, George Bunting, certificate 6714, is found in default and his certificate is suspended for one year from July 30, 1917, for what the court declares to be a gross, wilful violation of the rules of the road, in force on the Great Lakes. The master and officers of the s.s. A. E. Ames are exonerated from blame. The logs of each vessel were kept in an unsatisfactory manner, especially that of the s.s. Keybell. The s.s. A. E. Ames did not comply with article 34, but is exonerated by article 37. The masters of both vessels evaded the provisions of sec. 920 of the Canada Shipping Act, leaving each other in the fog, without making enquiries, and therefore, both are guilty of misdemeanor. While the court holds the master of the s.s. A. E. Ames is not to blame for the collision, he is found in default for not obeying sec.

920 of the Canada Shipping Act, and consequently is severely reprimanded, and had the collision been of a more serious nature, his certificate would have been dealt with. The reprimand also to the master of the s.s. Keybell.

Heathcote-Kelbergen Collision.

An enquiry into the cause of the collision between the s.s. Heathcote and the s.s. Kelbergen, off the Newfoundland coast, July 25, whereby the s.s. Heathcote was lost, was held at Quebec, Aug. 21, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. C. Lapierre and F. Nash as nautical assessors. The court finds that the evidence was contradictory in regard to locality, differing in respect to climatic conditions and range of visibility, but that the Kelbergen is mostly to blame for the disaster. From the first hearing of the Heathcote's fog signal, the Kelbergen's duty was plain, according to article 16, and no excuse can be found for the casualty. In view of this the certificate, no 033,236 of the master, John Samuel Ledone, is suspended for three months from August 3. For a violation of article 27, and for the observance of article 21, which did not apply in his case, the certificate, no. 024,009, of the master of the Heathcote, Andrew Dalrymple Muir, is suspended for one month from Aug. 3, and he is censured for not saving the ship's papers, log books, etc., during the time he was on board, prior to the vessel sinking, which the court considered ample. The first officer of the s.s. Kelbergen, George Gill, is severely censured for his indifference to the carrying out of his duties.

The court points out that the lenient sentence imposed on the master of the Kelbergen is due to the fact that he passed through a severe ordeal at an earlier part of the voyage, in combatting and evading an enemy submarine, and for this action, though not concerned in this casualty, the court praised his action in this respect, and owing to his bravery, the court regrets the suspension of the certificate, but the circumstances of the collision warrants it.

Stranding of s.s. Arigair.

At Halifax, N.S., before Capt. L. A. Demers, Dominion Wreck Commissioner, and Commander E. Wyatt, R.N.R., and Capt. C. Adam, as nautical assessors. The stranding occurred on Amherst Island, one of the Magdalen Islands, Aug. 28. The court states that the master of the Arigair, Capt. W. Mackintosh, made a very frank and straightforward statement, and did not try to hide any facts, but it felt in duty bound to censure him for not taking more soundings when certain distances had been run, and cautioned him that in future, when a distance has been run, it is a proper action to stop, sound and circle around, and that this is more necessary where an erratic current is known to exist.

Aranmore-Cyrene Collision.

At Charlottetown, P.E.I., Aug. 31, before Capt. L. A. Demers, Dominion Wreck Commissioner, and Capts. A. McLeod and J. Lumsdane, as nautical assessors. The casualty occurred in Pietou Narrows, at 27, and resulted in the sinking of the schooner Cyrene. The court, after reviewing the evidence, commented on the manly and straightforward statement of the master of the s.s. Aranmore, Capt. D.

M. MacDonald, but held him in default for daring and foolhardy navigation, bordering on carelessness, and suspended his certificate for nine months, from Sept. 1, 1917, to June 1, 1918. Regarding the schooner *Cyrene*, the master made a distinct breach of one of the rules of the road in changing her course when she should have kept, and the court found her partly to blame, but as the master has no certificate, he cannot be dealt with. The court added that the quartermaster of the s.s. *Aranmore* is unfit to be a member of the crew, declaring that if he did not see or hear anything when the casualty occurred, he is non compos mentis, and if he did hear and see what occurred, he should have given more satisfactory answers under examination.

Stranding of the s.s. *Frankmere*.

At Halifax, N.S., Sept. 11, before Capt. L. A. Demers, Dominion Wreck Commissioner, and Commander E. Wyatt, R.N.R., and Capt. A. Adams, as nautical assessors. The casualty occurred Aug. 8, on *Erion Island*, one of the *Magdalen Islands*, in the *Gulf of St. Lawrence*. The court found that there was a serious lack of judgment and prudence in navigation, for which, as there was an uncertificated officer in charge on the bridge at the time, the captain, D. T. Evans, must be held accountable. The court considered the straightforward statement made by him and the high reference made by his employers, and for these reasons did not deal with his certificate, but severely censured him and reprimanded him for injudicious navigation.

Celia-Katie D. Collision.

At Montreal, Aug. 18, before Capt. L. A. Demers, Dominion Wreck Commissioner, and Capts. F. Nash and C. Lapierre, as nautical assessors. The collision between the British s.s. *Celia* and the barge *Katie D.*, in tow of the steam tug *J. H. Hackett*, occurred Aug. 3, at *Isle a la Pierre*, in the *River St. Lawrence*. The court came to the conclusion that the s.s. *Celia* was alone to blame for the casualty through a wrong action and violation of local regulations. The vessel was in full charge of D. J. Perreault, pilot, whom the court found wanting in judgment and suspended his license for one month and ordered him to pay the costs of the investigation, and in addition fined him the maximum, \$40, for a violation of the local regulations governing the particular place where the casualty occurred. The master and officers of the *Celia* were exonerated from blame. The expenses of the investigation were \$160; the fine imposed, \$40, and the cost of French evidence, \$137; total to be paid by the pilot, \$337.

The *Stuart W.* Collision with Barges.

At Montreal, Sept. 25, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. F. Nash and C. Lapierre, as nautical assessors. The *Stuart W.*, which is owned by the *Stuart W. Co.*, a subsidiary Company of *Canada Shipping Co.*, Montreal, while down bound, July 20, collided with three barges in tow of the tug *Sin-Mac*, near *McCoy Island* in the *St. Lawrence River*. The court found that both vessels were to blame, the *Stuart W.* for breach of rules of the road 29, 37, and 38, and the *Sin-Mac* for rules 25, 29, 37 and 38. E. Tremblay, master of the *Stuart W.*, was reprimanded for maintaining speed when danger was possible, and for not availing himself of the privileges of rule 25. The

court found that the master of the *Sin-Mac* could not be held responsible for the casualty, as he was taking a well earned rest, leaving matters to the pilot. The breach of the rules therefore rests with the pilot, *Leduc*, who, as he possesses no license as such, was severely censured for his actions.

Stranding of s.s. *S. V. Harkness*.

At Montreal, Aug. 20, before Capt. L. A. Demers, Dominion Wreck Commissioner and Capts. F. Nash and C. Lapierre, as nautical assessors. The U.S. s.s. *S. V. Harkness*, built three months ago on the Pacific coast, while inward bound from *Puget Sound* with oil, stranded on *Red Island* in the *River St. Lawrence*, Aug. 23. She was in charge of pilot *Adjutor Lachance*, who, though notified to be present at the enquiry, failed to attend, sending a doctor's certificate as to his state of health. After hearing the evidence, the court decided that the pilot alone was to blame for an uncalled for casualty. Mental aberration was mentioned as an excuse for the mistakes made, but the court could not accept this alone, for at one time the pilot headed north right across the river, he maintained full speed through dense fog, and stopped the sounding of the vessel's whistle, on the indefensible ground that he would be unable to hear the fog signals. As the pilot's record was not above reproach, the court felt it its duty to cancel his license forthwith.

Atlantic Harbors and Canadian Export Trade.

In a discussion in the House of Commons recently on the estimates connected with harbor improvement work at *St. John, N.B.*, some interesting information was given in regard to a possible transfer of the shipment of merchandise, etc., for war purposes, from Canadian ports to *Portland, Me.* During the debate, it was stated that the U.S. authorities had been informed that if they would dredge out *Portland harbor* to a depth of 35 ft. for larger vessels, the Canadian Government would, during the year, avail itself of that harbor in connection with Canadian export trade. This matter was commented on by the British Ambassador at *Washington, D.C.*, in correspondence with a U.S. senator, and a question was asked in the Senate as to the Ambassador's interference in a U.S. internal matter. The Ambassador, in his letter, is reported to have stated that he was authorized by the Canadian Government to say that if the *Portland harbor* is deepened to 35 ft., the government will use it for a large part of the winter trade. The Minister of Public Works said that the dredging of *Portland harbor* was entirely a U.S. Government matter, and he was unaware that there was any proposal to adopt *Portland harbor* as against *St. John* and *Halifax*. *St. John harbor* is being dredged to a depth of 32 ft. at low tide, and if it is necessary to go deeper, provision will be made and an additional depth of 3 ft. obtained. The Minister said that when he was in *England* recently, a proposal was made, that in case of rush orders, it might be convenient that some of the trade should be shipped through other ports than *St. John* or *Halifax*, especially during the winter; he had registered a strong objection to such a proposal, and he had not heard of it since. The matter had not been brought to his department's attention in any other way.

Another Power Dam Proposal for the *St. Lawrence River*.

It was announced by *Montreal daily papers* recently that a project has been quietly set going during the past few months for the organization of a company having for its main object the construction of a dam at the *Coteau Rapids*, in the *St. Lawrence*, for the purpose of power development. The *Power Development Co., Ltd.*, was incorporated by Dominion letters patent in June, with a nominal capital stock of \$500,000, and it is stated that preliminary steps were taken with the utmost secrecy, and that the promoters expected by about Oct. 22 to apply to the Dominion Government for the necessary authority to build a dam, with a lock for vessels to pass through.

Various schemes have been brought forward during the last few years, covering proposals to dam the *St. Lawrence* at different points, but, so far, all such projects have been stopped, owing to the strong opposition of the marine interests, and the Dominion Government's dictum that the interests concerned with the navigation of the *St. Lawrence* are paramount.

The *Long Sault Power Development Co.*, a U.S. corporation, made a prolonged fight for permission to build a dam, without which its franchise was useless, and after strong Dominion representations, the U.S. authorities cancelled the franchise and finally disposed of the company's case.

The *Beauharnois Light, Heat & Power Co.* also planned to build a dam across the river, but has not been able to obtain the necessary permission. The matter was taken up by the Dominion Marine Association, which was assured by the Dominion Government that no steps will be taken in any such application until plans and proposals were submitted and the association permitted to make representations in the matter.

The present scheme provides for the construction of a power house, with a lock, and tail race embankment, about 200 ft. long, extending from the north shore a little west of *Coteau du Lac*, and a series of dams connecting the small islands to *Clarks Island*. The incorporators of the company are employees of a legal firm in *Montreal*, which acts for certain interests associated with other power proposals.

The Mayor of *Toronto*, on Oct. 11, telegraphed the Dominion Premier in relation to the matter, urging that no steps be taken to grant the required permission without giving *Ontario municipalities* an opportunity of voicing their objection to any proposal which, it was claimed, would interfere with other power development schemes of the *Hydro Electric Power Commission of Ontario*. The Premier telegraphed in reply that there was no application for such a scheme before the government.

Dominion Government Shipyard at Sorel, Que.—A press report states that the *Sorel shipyard*, one of the oldest ship-building plants in *Canada*, has been acquired by the Dominion Government, to which it has been under lease for several years. We are officially advised that no change has taken place in regard to the shipyard. The plant which has been in operation for many years is controlled by the Marine Department of the Dominion Government. The property was originally owned by the *McCarthy Estate* and some considerable time ago it was expropriated for Government use.

Reinforced Concrete for Steamship Hulls.

Some details were given in Canadian Railway and Marine World for October relative to the use of reinforced concrete for the hulls of steam driven and other vessels, and also of the vessel of this type under construction at Montreal. A series of organized movements are under way with the object of placing a number of these vessels in service so that actual tests may be made under various conditions.

It is announced that the U.S. Bureau of Standards at Washington, D.C., is preparing a 9 ft. model of a reinforced concrete ocean going steamship, at the request of the U.S. Emergency Fleet Corporation, to test the claims of engineers that a seaworthy vessel may be built of concrete, that it can be built cheaper than one of wood, and that it will weigh less than one of wood of the same tonnage.

It is also stated that the Standard Oil Co. has ordered a reinforced concrete vessel of about 5,000 tons to be built in San Francisco, and that this has been taken over by the U.S. Emergency Fleet Corporation for a series of tests under actual operation when completed.

The Torcrete Shipbuilding Co., mention of which was made in our last issue, is stated to be negotiating for a site in Detroit, Mich., for a yard for the construction of reinforced concrete vessels on a special principle, the concrete to be applied from the inside of the hull under air pressure.

Marine Slip, Docks, etc. at Ojibway.

The Canadian Steel Corporation, Ltd., Ojibway, Ont., has given a contract to the Great Lakes Dredging Co., Ltd., of Port Arthur, Ont., for the construction of a marine slip or harbor and unloading docks or wharves to provide for the unloading and storage of ore, limestone and coal. The marine slip or harbor will extend about 2,403 ft. inland from the harbor line, along the left bank of the Detroit

River. Its width, from face to face of the concrete walls, which will be 9 ft. high by 12 ft. wide, will be 400 ft. This will reduce to 202 ft. between walls, at a distance of 303 ft. from the harbor line. It will continue at the width of 202 ft. for a further distance of 2,100 ft. inland from this point. The depth will be 23 ft. measured from the mean water level of the Detroit River. All piles supporting concrete walls will be approximately 80 ft. in length and will be driven to rock. Ore and limestone will be unloaded and stored on one side of this slip and coal for by-product coke ovens and general plant use on the other side. The work does not include piling or concrete walls for support of bridges; neither does it include any unloading machinery.

Steamships Commandeered by U.S. Government.

The U. S. Shipping Board issued the following early in October: The U. S. Shipping Board hereby gives notice to all owners of ships registered and enrolled under the laws of the U. S. that the requisition of all American steamers described below and of which previous announcement has been made will become operative and effective on Oct. 15, at noon.

The ships affected by said requisition and included therein are: All cargo ships able to carry not less than 2,500 tons total dead weight, including bunkers, water and stores. All passenger steamers of not less than 2,500 tons gross register.

As to all steamers in or bound to American ports on Oct. 15, requisition becomes effective after discharge of inward cargo and ship is put in ordinary good condition. As to steamers which have started to load their outward cargo requisition becomes effective at noon on Oct. 15, and accounts as to hire and expenses will be adjusted from time steamer began to load. Steamers, trading to and from American ports, that have sailed on their voyage prior to Oct. 15, 1917, at noon, are to complete that voyage as promptly as possible and report for requisitioning. Steamers that are occupied

in trades between foreign ports shall be requisitioned as of Oct. 15, 1917, at noon, and accounts adjusted accordingly.

Owners whose steamers are operating in their regular trades are to continue the operation of their steamers for account of the government, as they have been doing for themselves, until they receive further instructions. Owners whose steamers are chartered to others will apply to the Shipping Board for instructions regarding the future employment of said steamers.

In reference to the foregoing notice it is said that the commandeering will apply to about 500 steamships.

The Port of Quebec and Ocean Shipping Facilities.

The Quebec Board of Trade, of which J. G. Scott, ex-General Manager, Quebec and Lake St. John Ry., is President, made a number of suggestions to the Dominion Government recently, in connection with the increasing of shipping facilities at Atlantic shipping ports. Among these suggestions are, the building of grain storage of 10,000,000 bush. at each of the ports of Quebec, Halifax and St. John, with steamship docks at Quebec and St. John, similar to those now under construction at Halifax. It is also suggested that the Dominion Government should control insurance rates of vessels using Canadian ports on the seaboard and in the St. Lawrence, so that they should, at all seasons of the year, be the same as those charged for vessels running to and from New York. It is claimed that the discrimination against Canadian ports by the underwriters is driving vessels from those ports, and though this control of the rates might cost the Government something, the result would justify any expenditure that might be necessary. The government is also asked to compel all government subsidized vessels to accept the same rates for ocean freights to and from Canadian ports as are current month to month at New York, and it is suggested that this might be regulated through the Board of Railway Commissioners.

The Board of Trade has also asked the government to build and operate, in connection with the government railways, not less than 10 large ocean freight steamships of from 1,000 to 15,000 tons capacity for a semi weekly service from Quebec in the summer, and from Halifax or St. John in the winter.

Forwarders Ltd. has been incorporated under the Dominion Companies Act, with \$250,000 capital and office at Ottawa, to build and operate steam and other vessels, and to carry on the business of common carriers within and without Canada, and of towing and wrecking; also to build and operate grain elevators, warehouses, and flour mills. The incorporators are, W. H. Dwyer, J. H. Hall, A. Blackburn, J. R. Osborne and S. R. Broadfoot, Ottawa. This is a reincorporation of a company of the same name, of which W. H. Dwyer is President, and which had its office first at Kingston and later at Ottawa. In Nov., 1909, it bought the s.s. Port Colborne, which was built in England for the lake trade and brought to Canada as a speculation. The steamships Port Dalhousie and W. H. Dwyer were subsequently purchased, and later all three of the company's vessels were operated between New Brunswick and Maine in the pulpwood trade, and later were transferred to Europe for service there, since when the company has operated no steamships.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during September

ARTICLES			CANADIAN CANAL	U. S. CANAL	TOTAL

The United States Government's Shipbuilding Work.

Rear Admiral Capps, Chairman of the United States Emergency Fleet Corporation, issued the following statement at the end of September, since which no further statement has been made public:

During the past two months the Emergency Fleet Corporation has awarded contracts for 118 wooden vessels of 3,500 tons dead weight capacity each to 27 different shipyards. There had previously been awarded contracts for 235 wooden vessels of similar type to the above, and for 58 vessels of composite construction, thereby making a total award to date of 411 wooden and composite vessels of an aggregate dead weight tonnage of 1,460,900. During the past two months the designs for machinery have been completed for the manufacture of engines, boilers and other articles of equipment for these vessels, for which the facilities available of machine shops and boiler works throughout the country have been availed of. Specifications have been prepared and negotiations outlined and initiated for the assembly and installation of machinery in wooden vessels, the most of which have been or are being constructed as "hulls only." Great difficulty has been experienced on the Atlantic coast in obtaining suitable lumber for these ships, and it is anticipated that there will be greater delay in their completion than was expected when this movement was begun, notwithstanding every possible effort on the part of the corporation and its contractors.

Since Aug. 1 there have been awarded contracts for 155 steel cargo vessels of 1,076,800 tons dead weight tonnage, distributed among 6 shipyards. The most important of these contracts are for vessels of the so called fabricated type, and special shipyards are being prepared for them. Contracts for the boilers and machinery and steel construction of these vessels have been placed, and the contractors are actively at work preparing sites for the assembling of these ships. The best efforts of the Emergency Fleet Corporation are devoted to expediting these great shipbuilding projects. Previous to Aug. 1, 70 steel cargo vessels of 587,000 tons total dead weight capacity had been contracted for. These vessels were distributed among 10 shipyards. Therefore at present the total number of steel vessels under construction for the U.S. is 225, with a total aggregate dead weight tonnage of 1,663,800.

By proclamation of Aug. 3, 1917, the Emergency Fleet Corporation, under authority delegated by the President, under the provisions of the emergency act, approved June 15, 1917, requisitioned all vessels under construction in the shipyards of the U.S. of 2,500 tons dead weight capacity and above. By this act the U.S. acquired a total number of 403 vessels, determined by the progress reports obtained from the various shipyards to be actually under construction; in many cases where keels had not actually been laid, engines, boilers, equipment and materials, all of which were also requisitioned, are in various stages of progress; and in comparatively few cases contracts existing for vessels not actually begun, which may or may not be proceeded with, as the merits of the case, compared with what is desirable construction, are considered. The total dead weight tonnage under construction thus acquired, and on which orders have been issued to proceed with the maximum expedition, exceeds 2,000,000 tons dead weight.

There are now under construction for

the Emergency Fleet Corporation as follows:

Type of vessel.	Number.	Total dead-weight tonnage.
Wood	353	1,253,900
Composite	58	207,000
Steel	225	1,663,800
Requisitioned	403	2,800,000
Grand total	1,039	5,924,700

In addition to the above Congress in a pending bill is authorizing the construction of additional vessels whose total dead weight capacity will be nearly 5,000,000 tons. Plans for the major portion of these additional vessels are in course of preparation and many of them will be of special types adapted to particular necessities of war, and while substantially cargo carriers, will have much greater speed than the cargo vessels now under construction.

The corporation has ascertained from the builders of requisitioned vessels their demands for structural steel, machinery, and various items of equipment, and is endeavoring to regulate the supply of items to provide for the individual needs of the shipbuilders in accordance with their programme of capacity, so far as the country's resources are available. And it is apparent that with the similar needs of the naval service and the War Department, with which the Emergency Fleet Corporation is working in harmonious co-operation, every mechanical resource of the U.S., with considerably increasing development, will be necessary for the realization of this programme and what must follow in continuation of it.

The Emergency Fleet Corporation has instituted an industrial service department, which, by co-operation with the Department of Labor, is undertaking to assist shipbuilders and others in the employment of suitable labor and to initiate an extensive system of vocational training with the purpose of adapting allied trades and unskilled labor for service in shipyards, and through co-operation with the Y.M.C.A. organization throughout the U.S. to give attention to the housing and personal affairs of the men recruited for shipbuilding work. The vast development of shipbuilding essential to this emergency necessitates an agency of this kind, because up to this time the thinning out of unskilled men in the older shipyards over a large territory is, in many instances, resulting in greatly decreased production. It has been estimated that 150,000 new men are necessary for full production.

With the passage of the pending bill, Congress will have authorized \$1,799,000,000 for the Shipping Board and the Emergency Fleet Corporation, and the actual appropriations made, including those in the pending bill, reach a total of \$1,085,000,000.

U. S. Government Merchant Fleet.—E. F. Carry, car manufacturer, Chicago, who is a member of the Shipbuilding Wage Adjustment Board, is reported to have been appointed Director of Operations for the United States Shipping Board. He will be directly in charge of the operation of the government's merchant fleet.

Marine Signals on Quebec Bridge.—Two white lights are being exhibited, one at the interior of each extremity of the central span, 760 ft. from each other, and 150 ft. above high water. Red lights are also shown from the cantilever arms, 1,300 ft. from each other, 88½ ft. above high tide.

Atlantic and Pacific Ocean Marine.

Frank Waterhouse & Co., Inc., carrying on business at Seattle, Wash., has been licensed to also carry on business in British Columbia, with office at Vancouver.

The Great Northern Steamships Co.'s steamships Great Northern and Northern Pacific, which were taken over by the U. S. Government recently, are in yards in Puget Sound for extensive alterations. It is announced that they are to be used as transports.

The s.s. Soukahras, which was built recently at a U.S. shipyard on the Great Lakes, is being cut in two for passage through the Welland Canal to a Canadian yard, where she will be rejoined, and, in all probability, sail for New York, and thence to France, under the ownership of the Oriental Navigation Co., of Nantes, France, and New York. She was originally ordered for a private firm, and was acquired by the Oriental Navigation Co. while on the stocks, as were also two other vessels under construction in Canadian shipyards. Her dimensions are, length 387 ft. over all, width, 43.9 ft. depth 28 ft.; 3,819 gross tons. At the time of writing it had not been announced whether this vessel would be taken over by the U. S. Government under the recent order taking over all vessels under construction in U. S. yards. The builder completes his contract when the vessel is delivered complete and ready for ocean service.

Maritime Provinces and Newfoundland.

An Ottawa press dispatch of Oct. 13 stated that the Public Works Department had intimated that tenders would be invited for the completion of the harbor works at St. John, N.B., the Norton Griffiths Co. having abandoned this contract. On Oct. 20, we were officially advised that no such decision had been arrived at.

Mathers & Co., Halifax, N.S., are reported to have bought the steam yacht Thomas B., which was purchased in the U.S. about a year ago by the Halifax Dredging Co. It is stated that all the deck cabins have been removed and that the vessel is to be used in the freight trade, probably between Canadian and U.S. ports. Under U. S. ownership she was named Cora.

Salvaging operations are proceeding on the Anchor-Donaldson Line s.s. Letitia, which was wrecked near Portuguese Cove in Halifax harbor, Aug. 1. A considerable portion of the machinery has been removed and the upper portion of the hull tightened up for the use of compressed air. It is said that a large rock which pierces the bottom, is to be blasted within the hull, and the hole filled with cement.

It is reported from New Brunswick that it is apparent that a halt has been called in the inflated prices being paid for schooners. An instance is given of the schooner Persis A. Colwell, 440 tons register, built in 1904, for which \$62,000 was paid in the summer, and which has been lying idle for several weeks owing to her owners not being able to turn her over at a profit, the price required being \$70,000. It is said that it is doubtful if she could be sold today for \$50,000. Possibly the regulation prohibiting the use of sailing vessels within the submarine zones may account for the decreased demand. However, there is plenty of room for utilizing sailing vessels to and from other ports. The schooner named has been chartered for a West Indies service.

Province of Quebec Marine.

Up to Aug. 31, 48,792,624 bush. of grain were exported through Montreal, 30,718,360 bush, passing through the Harbor Commissioners' elevators and the balance through the G.T.R. elevators.

Ontario and the Great Lakes.

The U.S. steamships Saxona and Pentecost Mitchell, which collided and sank in the St. Marys River, near Watson reef, May 13, have been raised.

The Ogilvie Flour Mills Co. has deposited plans of a dock it proposes to build in the Kaministikwia River at Fort William, in front of its present mill site, on the easterly side of Front St.

The Northern Navigation Co.'s s.s. Hamonic, while running to Windsor, Oct. 15, struck a hidden obstruction and broke her propeller. She was dry docked at Detroit, Oct. 16, for repairs.

The s.s. Western Star, owned by the Cadillac Steamship Co., Cleveland, Ohio, which went ashore on Robertson Rock in Georgian Bay, Sept. 24, 1915, has been salvaged by the Great Lakes Towing Co.

A press dispatch from Port Huron, Mich., October 17, stated that an oil burning ship named Ada, being one of the vessels built at Superior, Wis., for the U. S. Emergency Fleet Corporation, had passed down en route to New York.

The Ontario Car Ferry Co., operating two car ferries, Ontario No. 1 and Ontario No. 2, between Cobourg and Genesee dock, Rochester, N.Y., made the last trip of the season on regular schedule, Sept. 29. Since that date, trips are made only on an irregular schedule solely for freight traffic.

The Lehigh Valley Rd. has announced that owing to the commandeering by the U. S. Government of its lake vessels, its service in the merchandise package trade between Buffalo, N.Y., and Chicago, Ill., has been discontinued. Four steamships were operated in this service, and these have been taken over by the U.S. for Atlantic service.

The U. S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level for September as follows: Superior, 602.73; Michigan and Huron, 581.68; St. Clair, 576.23; Erie, 573.28, and Ontario, 246.93. Compared with the average September levels for the past ten years, Superior was 0.03 ft. above; Michigan and Huron 1.06 ft. above; Erie 0.94 ft. above, and Ontario 0.75 ft. above.

The s.s. Richard W., owned by Richard W. Ltd., Quebec, Que., and managed by the Canadian Shipping Co., which is controlled by the Canadian Import Co., Montreal, ran aground about four miles below Long Island, near Kingston, Oct. 14, while coal laden for Montreal. Her cargo had to be removed before she could be got off, when it was found that her shoe had been fractured. The s.s. Richard W. was formerly the s.s. Pueblo, and was at one time owned by the Canada Cement Transport Co., Ltd., Montreal.

A deputation of business men from towns and cities along the Lake Erie & Northern Ry. met at Port Dover, Oct. 16, to discuss with Dominion Government representatives, who were there looking over the harbor conditions, the need for further work and government aid for the betterment of harbor facilities there. It was pointed out that the docks have deteriorated owing to non-use, and the harbor has silted up. Parliament has voted \$6,000, but considerably more is required

to develop the harbor to its proper capacity.

The Montreal & Cornwall Navigation Co.'s s.s. St. Laurent was burned to the waters' edge while at her moorings in the Cornwall Canal, Oct. 19. She was built at St. Nicholas, Que., in 1880, and originally named Brothers. She was overhauled in 1900 at Montreal, and again at Sorel, Que., in 1909. She has been operated between Montreal and Cornwall for several years, and was used previously as a ferry at Montreal. Her dimensions are: Length, 127 ft.; breadth, 24.6 ft.; depth, 8.3 ft.; tonnage, 349 gross, 189 register, and she was equipped with engine of 43 n.h.p. driving paddle wheels.

The Valley Camp Coal Co.'s s.s. William S. Mack is reported to have been sold to the Sault Shipping Co., Sault Ste. Marie, Ont. The first named company is associated with the Great Lakes Transportation Co., of which Jas. Playfair is President and General Manager, and the Sault Shipping Co. is controlled by the Lake Superior Corporation. The s.s. William S. Mack was built at Lorain, Ohio, in 1901, on the channel system, with steel tank top, where no wood ceilings are fitted, three watertight and two non watertight bulkheads, steel boiler house, steam pump wells, electric light, etc., and the hull is divided into four compartments with hatches 24 ft. centres. Her dimensions are: Length, 346 ft.; breadth, 48 ft.; depth, 28 ft.; tonnage, 3,720 gross, 2,785 register, and she is equipped with triple expansion engines with cylinders 20, 33½ and 55 in. diam. by 40 in. stroke, 1,000 i.h.p. at 80 r.p.m., and supplied with steam by two Scotch boilers, 12 ft. 10 in. by 13 ft., at 175 lb.

A Washington, D.C., press dispatch of Oct. 5, said: "Enlargement of locks on the Welland Canal, to permit construction of bigger ships on the Great Lakes, for ocean service, is under consideration by American and Canadian government officials." The question of getting the larger vessels now operating on the Great Lakes, through to the ocean, where they could be used to great advantage, is without question engaging the attention of both governments. The Canadian Government as most people are aware, has under construction a ship canal, which, when completed, will be quite capable of taking the largest vessels through from the Great Lakes. This work is suspended, and will probably not be resumed until after the war. The question of enlarging the existing locks on the present canal, with other necessary work following would seem to be as large a job as completing the new canal now partially built. In the meantime certain vessels are being cut in two and towed through the canals to St. Lawrence ports where they are to be re-connected, and sent on to the coast.

British Columbia and Pacific Coast.

The Norwegian s.s. Niels Nielson, which struck a rock recently in Puget Sound, was taken to Esquimalt, Oct. 11, and placed in Yarrows' dock for bottom repairs.

A contract is reported to have been awarded recently for \$37,750, for salvaging the s.s. British Columbia, which sank at the docks at Hastings Mills, B.C., while loading cargo, at the end of August.

The C.P.R. and Grand Trunk Pacific Coast Steamship Co.'s steamships, operating along the British Columbia coast, have ceased supplying intoxicants on their vessels, following the passing of a prohibition law in the province.

The Union Steamship Co.'s s.s. Casiar, which was wrecked near Privett Island at the end of August, has, it is reported, been taken over by the owning company, from the underwriters. The estimate for repairing is about \$30,000, equal to the amount of the insurance.

A British Columbia court has decided that both the Canadian Pacific Ocean Services' s.s. Empress of Japan and the s.s. Belridge were to blame for a collision between them on Jan. 31, off Trial Island, during a snow storm. The liabilities connected with the collision are to be divided equally and each side pays its own costs.

The South Vancouver, B.C., council passed a resolution recently, in favor of submitting a bylaw to the ratepayers to exempt the shipbuilding site known as the Robson site, from taxation during actual shipbuilding operations, the total exemption not to exceed ten years, and the bylaw not to be submitted to the vote until the plant is built on the site.

At a recent meeting of representatives of the pilotage boards of Victoria, Vancouver, New Westminster and Nanaimo, to consider a number of proposed changes in the system of pilotage, it was proposed that the four districts be amalgamated, but it was decided not to do so, as the desired results could be achieved by amendments to the Canada Shipping Act giving the British Columbia authorities the same discretionary powers as possessed by those on the Atlantic coast.

The Union Steamship Co. has purchased the steamships Santa Maria and Selma from the All Red Line, Ltd., Vancouver, and will continue to operate them in the coast trade. Both vessels are of the private yacht type, and were brought from England a few years ago as a private venture, and a company incorporated under the title of All Red Line Ltd., for operating them in the coast service as far north as Powell River.

An order in council has been passed defining a permanent harbor head line beyond which wharves, piers, breakwaters and other similar structures shall not be built on the south shore of the Fraser River, opposite New Westminster, from Port Mann to the Government wing dam at Annieville bar. The head line was approved by the New Westminster Harbor Commissioners, and recommended by the Marine Department's Chief Engineer.

A deputation representing the Chamber of Commerce, Tacoma, Wash., waited on J. W. Troup, Manager, British Columbia Coast Service, C.P.R., at Victoria, recently, requesting that a direct steamship service be given to Tacoma, if possible, between Tacoma and Burrard Inlet, instead of between Tacoma and Victoria. It is stated that the three main points which guided the deputation in arguing their case for a direct service were, that it is usual for the C.P.R. to lay up one of its steamships at this time of the year, the impossibility of creating travel between Tacoma and British Columbia unless a first class steamship is put in service, and the fact that U.S. regulations do not permit of Canadian vessels calling at two consecutive ports in the U.S. The last mentioned difficulty may be removed shortly, as the U.S. Government is considering the modification of its regulations so as to permit Canadian vessels to engage in U.S. coasting service, except between Alaska ports.

The International Shipbuilding Corporation, Ltd., which was incorporated recently with head office at Montreal, has removed its head office to Newcastle, N.B.

Great Lakes Vessels for Ocean Service.

Following the lead given by several of the Dominion transportation companies operating on the Great Lakes the United States Emergency Fleet Corporation is arranging for all available U. S. vessels used in Great Lakes service to be transferred to salt water. On Oct. 12, thirteen steamships of 32,768 gross tons, had been ordered to proceed to dry docks, there to be cut in two to allow of passage through the Welland Canal. These vessels are all of the passenger and packet freight type, as the intention is to interfere with the bulk freight traffic as little as possible. Following are the names of the vessels, with the owning companies: Great Lakes Transit Corporation—Codorus, Mahoning, Northern King, Northern Light, Northern Queen, Northern Wave, North Wind; Lehigh Valley Transportation Co.—Bethlehem, Saranac, Seneca, Tuscarora; Crosby Transportation Co.—America; Chicago, Milwaukee and Racine Line—Minnesota.

Some of these vessels have already been, and the others will be, cut in two, at some U. S. port on the Great Lakes, and re-joined at a Canadian port on the St. Lawrence. The Dominion Government, through the Marine Department, is working with the U. S. Shipping Board in transferring the vessels, and it is announced that some of them will be re-joined at the Canadian Vickers yards at Maisonneuve, Montreal, and some at the Dominion Government dockyard at Sorel, Que., and negotiations are in progress with a view to ascertaining whether the dry dock at Quebec will be able to take care of a number of these vessels. It is also stated in a press dispatch from Buffalo, N.Y., that the U.S. Government has taken over the ship repair equipment of the Lake Shipbuilding Co., there, for transfer to Montreal, to assist in joining the vessels there, that a staff of 100 expert ship mechanics will accompany the plant to Montreal, and that the work will be under the general supervision of John Smith, marine surveyor, Cleveland, Ohio.

As announced in Canadian Railway and Marine World for October, arrangements have been made for the utilization of several of the steamships under the management of Canada Steamship Lines, Ltd., in ocean service. Three vessels owned by Canadian Northern Steamships Ltd., viz., A. E. Ames, Beaverton and H. M. Pellatt, and managed by Canada Steamship Lines, are practically ready for ocean service. The s.s. H. M. Pellatt was overhauled and strengthened at Kingston, Ont., and then proceeded to Oswego, N.Y., for coal for Montreal after which she proceeded to the coast. The s.s. A. E. Ames was at Kingston during October for general overhaul and preparation for similar service, and the s.s. Beaverton was handled at Buffalo, N.Y. The steamships Calgarian and Hamiltonian, owned by Canada Steamship Lines Ltd., are also being overhauled for ocean service, and it is stated that all five vessels will be cleared for the ocean before the close of the St. Lawrence season.

Of the three other steamships owned by Canadian Northern Steamships Ltd., which it was stated in our last issue would be transferred to ocean service, it is reported that a decision has been arrived at that in the case of the s.s. J. H. Plummer, the cost of the necessary alterations to fit her for ocean service was considered too great, and she has therefore not been taken. The steamships

Mapleton and Saskatoon have been running during the summer between Sydney and Montreal in the coal trade, and as soon as navigation on the St. Lawrence is closed for the winter, they will be placed in ocean service.

Imperial Oil Co's Tank Steamships.

The Imperial Oil Co.'s oil tank s.s. Reginolite was given her trial trip on Sept. 30 by the builders, the Collingwood Shipbuilding Co. The vessel, which is intended for ocean service exclusively, is 250 ft. long, 43 $\frac{3}{4}$ ft. broad and 25 ft. deep. Her length is divided into five cargo tanks and a longitudinal centreline bulkhead running the full length making 10 oil tanks in all. A fuel oil bunker is fitted immediately in front of the boiler room and

The Imperial Oil Co.'s Steamship Reginolite on her trial trip, Sept. 30, 1917.

a cofferdam separates this from the main cargo tanks.

The main propelling machinery consists of one set of triple expansion engines, having cylinders 18, 30 and 50 in. by 36 in. stroke, steam being supplied by 2 single-ended Scotch boilers, 13 $\frac{1}{2}$ ft. diam. by 11 ft. long, the steam pressure being 180 lb. working under natural draft. The oil pumping arrangement is of the most elaborate kind of design to handle the cargo in the most expeditious manner.

The trials, although carried out in stormy weather, were highly successful, the guaranteed speed being exceeded by 1 $\frac{1}{2}$ knots. This is the fourth oil tank steamer the Imperial Oil Co. has had built at Collingwood. The fifth vessel, the Talaralite, precisely similar to the Reginolite, was launched Oct. 18.

Mainly About Marine People.

R. S. Gourlay, one of the Toronto Harbor Commissioners, has been re-appointed for three years, by the Dominion Government.

F. H. Sheppard, M.P. for Nanaimo, B.C., in the last Parliament, has been appointed Inspector of Dredging in British Columbia.

M. Cussen, Assistant to Comptroller, Canada Steamship Lines, Ltd., Montreal, has also been appointed General Traffic Auditor, Northern Navigation Co.

W. J. Connors, of Buffalo, N.Y., will probably be put in charge of unloading U.S. transports and supply ships in

France and to supervise the work of three regiments of stevedores and longshoremen now about organized.

Michael P. Fennell, Jr., who has been appointed Secretary-Treasurer and Comptroller, Montreal Harbor Commission, Montreal, was born there, Mar. 13, 1885, and entered transportation service in 1902, after completing a course at McGill University. He was, from Jan. to Sept., 1902, secretary to Master Mechanic, G.T.R., Montreal; Sept., 1902, to Apr., 1903, secretary to Freight Traffic Manager, G.T.R., Montreal; Apr., 1903, to Jan., 1907, secretary and accountant, Engineering Department, Montreal Harbor Commission; Jan., 1907, to June, 1909, Assistant to President; June, 1909, to Sept. 24, 1917, Assistant Secretary-Treasurer. He is also Hon. Secretary-Treasurer of the Navy League of Canada; Hon. Secre-

tary of the British Sailors' Relief Fund, and Hon. Provincial Naval Recruiting Secretary.

Lights and Signals on the Great Lakes.

All Canadian lights and fog alarms on Lake Superior will be kept in operation until the close of navigation, with the exception of those at Caribou Island, Otter Island, Quebec Harbor, Michipicoten Island, Michipicoten Island east end, Gargantua, Michipicoten Harbor, Corbeil Point and Ile Parisienne, which may be closed Dec. 20; and those at Slate Island, Battle Island, Lamb Island, Shaganash, Point Porphyry, Thunder Cape, Welcome Island, Pie Island and Victoria Island, which will be closed after the last sailing to or from Port Arthur and Fort William.

All Canadian lights and fog alarms on Lake Huron, Georgian Bay, Lake St. Clair, Lake Erie, Lake Ontario and connecting waters, will be maintained in operation until the close of navigation, except the southeast shoal lightship on Lake Erie, which will be removed Dec. 12, and the Lonely Island light, Georgian Bay, which may be closed before the general close of navigation.

All gas buoys and other floating aids to navigation will be maintained in position as long as ice conditions will permit, and in cases where it is necessary to remove gas buoys before the close of navigation, the more important points will be marked by spars.

Canada is Now a Creditor Nation

Help Her to Maintain this Position
By Subscribing for Large Blocks of

Canada's Victory Bonds

It is for you, manufacturers and merchants, to give the lead to those whose daily lives you influence, by subscribing for a substantial block of Canada's Victory Bonds.

The simple fact is, Canada must have more money to carry on her part in the war and extend credit to Great Britain and our Allies.

This Canada must do if our industrial, commercial and agricultural activity is to be maintained.

Since Canada can no longer borrow abroad, the money must be secured here.

Fortunately the money is here. It only remains to get the hundreds of thousands of people with savings to realize what it means to Canada—to

them—to you—to insure the success of the Loan.

By subscribing for Canada's Victory Bonds yourself, and tactfully explaining their merits to your employees—you can insure the Bond issue becoming an overwhelming popular success. This Canada relies upon you and every other manufacturer and merchant to do.

So surely as Canada's Soldiers in the Front line trenches are fighting for Freedom, so in a lesser degree do they fight who lend their money to support Canada's Armies in the field.

Money fights to-day, and it is the bounden duty of every Canadian to back Canada's part in the war by buying Canada's Victory Bonds.

Decide now that your concern will take a big block of Canada's Victory Bonds and that your whole establishment will be organized in support of the Loan.

Issued by Canada's Victory Loan Committee
in co-operation with the Minister of Finance
of the Dominion of Canada.

Canadian Railway and Marine World

December, 1917.

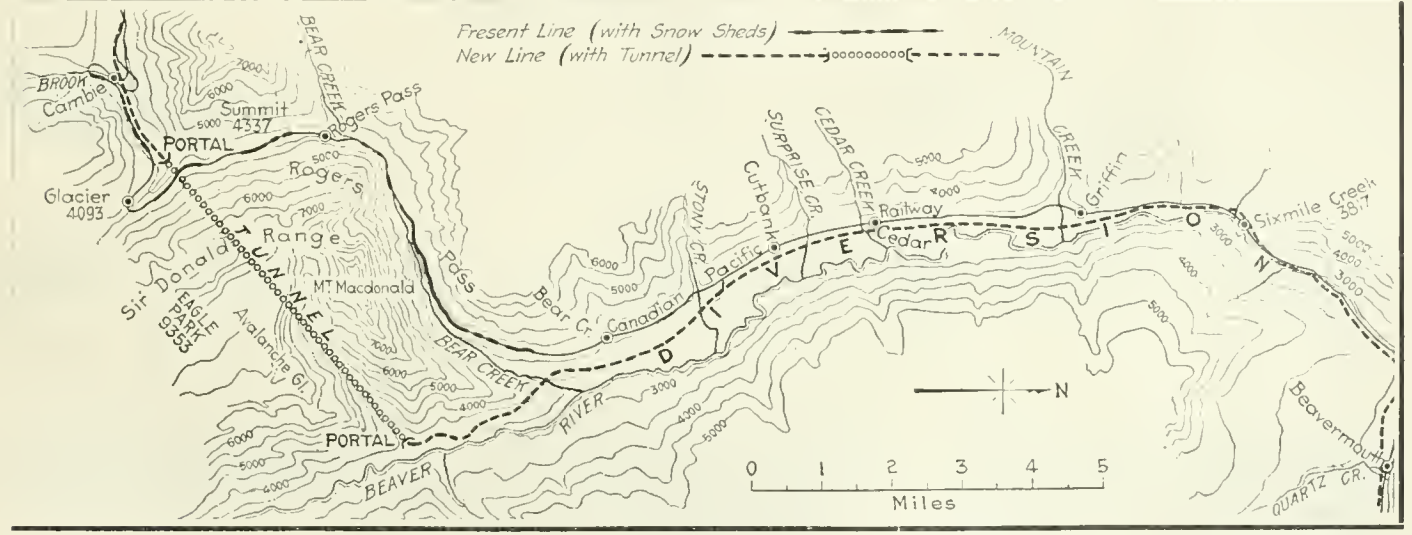

Salvaging the Canadian Pacific Railway's Old Line at Rogers Pass.

The five-mile Connaught tunnel, on the C.P.R. main line through the Selkirk Mountains in British Columbia, was opened for operation in Dec. 1916. Its use made possible the abandoning of the old main line over the Rogers Pass, with a consequent reduction in elevation of more than 500 ft. A large amount of curvature was also taken out and the distance considerably shortened. The old main line left the present line about three-quarters of a mile from the new tunnel's western portal, crossed the Illecillewaet River and Eagle Creek, followed the contour around the Cambie and Glacier loops, rising steadily on heavy grades through about two miles of snow sheds until the summit was reached at Rogers Pass. From Rogers Pass the line dropped to the east

to certain specified points on the line, was to be taken to Donald, B.C., in the Columbia River valley, as this was the nearest place having space enough available to store the amount of material which it was estimated was to be saved. The turning point of the work was the necessity of finishing it before the first snow fell, as there was every chance that if part of the line was left unprotected through the winter, with long stretches of snow shed taken out, slides would make it impossible to go in again in the spring of 1918 and bring out the rest of the line. Before work began, in fact, three small slides, one of them about 250 ft. long, were found to have already occurred and had to be cleared before the line could be used for work trains.

part to 3 and 4 in. planks and 12, 14 and 16 in. square timbers from 20 to 30 ft. long. The timber was delivered on flat cars at Donald, the cars being picked up daily at the various points where the derricks were working, by C.P.R. work trains operating over the hill until the track was broken, and afterward on the west slope, down over the Cambie loop and through the tunnel to Donald.

Final decision to salvage the line was made by the C.P.R. late in July, and the last few days of the month were spent in repairing and refurbishing outfit cars, arranging for board and commissary matters and getting equipment ready for the work. It was estimated that snow enough to shut down the work might be expected any time after Oct. 15, and that there

Old and New Lines, Canadian Pacific Railway, at Rogers Pass, B.C.

sharply, and from one mile east of Rogers Pass to Bear Creek ran through practically continuous snow sheds for three miles and joined the new main line just east of Stony Creek.

The abandoned line comprised some 20 miles of track and sidings; 25,000 lin. ft. of snow sheds, and a considerable amount of miscellaneous property, including water and oil lines, telegraph lines, tool houses, water tanks, station buildings and locomotive house equipment at Rogers Pass. Due to the abnormal conditions created by the war, the C.P.R. desired to salvage everything that would justify the expense of recovery. The general plan for the work was, first, the salvaging of snow sheds on each side of the summit, working down the hill both ways from Rogers Pass. The cribbing was to be left, as it was too firmly embedded in the side of the hill to be pulled loose without breaking, in addition to the probability that if taken out it would bring down the hill with it. Track was to be taken up, when the snow sheds were far enough ahead, so that the track gangs would not overtake the snow shed gangs. Miscellaneous structures were to be taken out as most convenient. All material, except such as might be loaded and sent direct

The question of equipment was of first importance, due to the need for rapid work. It quickly developed that practically all the equipment would have to be improvised, as no standard equipment was available in the way of locomotive cranes or other rigs that might be used for wrecking the sheds. It was therefore decided to rely principally on skid derricks, working on top of or alongside the sheds. Eight of these were built, together with a derrick car, which was put together in Vancouver and shipped to the work. Overhead cable ways were considered, but believed to be too slow, particularly as it soon developed that the cribbing would stand if the sheds were removed, so that there was no immediate danger of slides and no need of keeping equipment up out of the way. A track laying machine was also considered for taking up track, but it was thought there was not sufficient work to justify its use.

At the unloading and storage yard at Donald, a small, quick handling, movable derrick, of about 2 tons capacity, was installed, and one larger stationary derrick, with an 80 ft. boom. Two reciprocating steam saws, with boilers, were set up for working the salvaged timber into shape. The sizes of the timber ran for the most

were, therefore, not more than 75 working days which could be safely counted upon. By the first week in August camps had been established at Cambie, Donald and Rogers Pass, and work had begun on the snow sheds at several points on the west slope. Labor, although none too good, appeared plentiful, but it was difficult to get prompt deliveries on much needed equipment. By the second week in August, however, work was well under way on the sheds and some track and locomotive house material had been shipped from Rogers Pass yards. By the third week, 3,700 lin. ft. of snow shed were either partly or wholly wrecked, but it was becoming very difficult to hold labor, due to the higher rates that were being paid in the harvest fields. Men would ship to Rogers Pass, work for a few days and then drift on to the east. Instead of 300 or more men estimated as necessary for progress, the number dropped to 150, and several times to not more than 100. By the end of August, however, 6,500 lin. ft. of sheds were wholly or partially down, two miles of track were up and a considerable amount of miscellaneous material had been loaded. Work was pushed with the small force available and by mid September seven

derricks were at work, and all of the snow sheds on the west slope had been salvaged, except one shed above the old Glacier station, which, on examination, was found to be worthless, and was marked for burning. Meanwhile the labor situation was slowly improving, as the harvest season advanced and more men drifted westward. During the next two weeks this improvement was reflected by increased progress, and by Oct. 1, 16,000 ft. of snow sheds had been partly or wholly salvaged.

The main line track was broken at Rogers Pass on Sept. 18, and by the end of the month 11½ miles of track were up, and the west slope was practically clear of material. Outfits were then shipped promptly to the east slope, and every effort concentrated upon getting down the hill ahead of the snow. Derricks were placed as close together as they could be economically operated, and the track gangs followed immediately after the derricks. During the next week four miles of track were taken up, about half a mile of snow sheds were wrecked, and a large amount of piping and miscellaneous material were saved. Small portable

Birthdays of Transportation Men in December.

Many happy returns of the day to:—
E. T. Agate, M.Can.Soc.C.E., ex-Assistant Superintendent Lake Superior Division, Canadian Northern Ry., Capreol, Ont., now of Pittsford, N.Y., born there, Dec. 7, 1874.

A. G. Albertson, City Ticket Agent, C. P. R., San Francisco, Cal., born at Copenhagen, Denmark, Dec. 31, 1887.

J. H. Barber, M.Can.Soc.C.E., Engineer, double track, C.P.R., Toronto, born at Cobourg, Ont., Dec. 20, 1856.

N. E. Brooks, M.Can.Soc.C.E., ex-Engineer of Maintenance of Way, Western Lines, C.P.R., now at Sherbrooke, Que., born there, Dec. 25, 1866.

W. W. Butler, Vice President and Managing Director, Canadian Car and Foundry Co., Montreal, born at Danville, Ohio, Dec. 9, 1862.

J. M. Cameron, General Superintendent, Alberta District, C.P.R., Calgary, born at Lochabar, N.S., Dec. 18, 1867.

W. C. Casey, General Agent, Passenger Department, Canadian Pacific Ocean Services, Ltd., Winnipeg born at Mon-

Thornliebank, Scotland, Dec. 20, 1858.

R. W. D. Harris, Trainmaster, Moose Jaw Division, Saskatchewan District, C. P.R., Moose Jaw, born at Victoria, B.C., Dec. 12, 1879.

J. J. Hennigar, Agent, Great Lakes Transportation Co., Windsor, Ont., born at Topeka, Kan., Dec. 21, 1884.

A. J. Isbester, ex Assistant District Engineer, Port Arthur District, Canadian Northern Ry., Port Arthur, Ont., born at Ottawa, Dec. 18, 1879.

L. S. Landers, Assistant Engineer, Canadian Government Railways, Levis, Que., born at Farnham, Que., Dec. 15, 1888.

J. T. McGrath, ex-Superintendent of Motive Power and Equipment, Chicago and Alton Rd., Bloomington, Ill., born at Toronto, Dec. 6, 1869.

A. T. McKean, Division Freight Agent, C.P.R., Winnipeg, born at St. John, N.B., Dec. 18, 1886.

E. S. McMillan, Road Foreman of Locomotives, G.T.R., Montreal, born there, Dec. 14, 1880.

J. M. MacArthur, Superintendent, Ken-

Reclamation of Rogers Pass Line Material for Canadian Pacific Railway.

houses, salvaged previously, were set up at Glacier and Stony Creek. By Oct. 15, the date originally set as necessary to complete the work, 25,000 ft. of snow sheds, less 5,000 ft. marked for burning, had been salvaged; 18 out of 20 miles of track were up and all miscellaneous work done except a little grubbing and burning. Equipment was loaded during the next few days, camps struck and forces reduced. On Oct. 18, the first snow fell at the pass.

The work was done for the C.P.R. by Sydney E. Junkins & Co., of Vancouver, under the direction of J. G. Sullivan, Chief Engineer, Winnipeg, and H. Rindal, District Engineer, Vancouver.

The accompanying chart will give an idea of the general layout of the work. The bridges will be taken out by another contractor, probably during this year.

U. S. Shipment of Licensed Articles to Canada.—To facilitate shipment of certain commodities from the U. S. to Canada and Newfoundland, there has heretofore been issued through the U. S. customs service, a special license whereby goods have been permitted to leave without an individual license for each shipment, except in the case of commodities which it has been found necessary to conserve, and for the exportation of which individual licenses have been required as announced from time to time. Several additions have been made to the list, for which individual licenses will be required for each shipment, as from Oct. 20.

ton, N.B., Dec. 12, 1882.

G. W. Caye, General Purchasing Agent, G.T.R., Montreal, born at Malone, N.Y., Dec. 1, 1865.

G. C. Gahan, Assistant General Auditor, C.P.R., Montreal, born there Dec. 28, 1874.

W. H. Gardiner, City Freight Agent, C.P.R., and District Freight Agent, Esquimalt and Nanaimo Ry., Victoria, B.C., born there Dec. 6, 1859.

A. S. Goodeve, member Board of Railway Commissioners for Canada, born at Guelph, Ont., Dec. 15, 1860.

A. J. Gorrie, ex-Superintendent District 1, Transcontinental Division, Canadian Government Railways, Quebec, now with Algoma Steel Corporation, Sault Ste. Marie, Ont., born at Raith, Kirkcaldy, Scotland, Dec. 10, 1868.

W. H. Grant, General Tie and Timber Agent, and acting General Storekeeper, Eastern Lines, Canadian Northern Ry., Toronto, born at Acton, Ont., Dec. 8, 1858.

F. P. Gutelius, M.Can.Soc.C.E., Vice President and General Manager, Delaware & Hudson Co., Albany, N.Y., born at Millinburg, Pa., Dec. 21, 1864.

Jas. H. Hall, President, Western Transportation Co., Ltd., Ottawa, Ont., born at Hawkesbury, Ont., Dec. 20, 1863.

J. T. Hallisey, Superintendent, District 6, Intercolonial Division, Canadian Government Railways, Truro, N.S., born at Beaver Bank, N.S., Dec. 29, 1862.

D. B. Hanna, Third Vice President, Canadian Northern Ry., Toronto, born at

ora Division, Manitoba District, Kenora, Ont., born at Toronto, Dec. 8, 1885.

A. E. Macdonald, General Claims Agent, Canadian Northern Ry., Winnipeg, born at Woolwich, Eng., Dec. 11, 1870.

L. Macdonald, Division Freight Agent, G.T.R., Toronto, born at Montreal, Dec. 10, 1871.

A. D. MacTier, General Manager, Eastern Lines, C.P.R., Montreal, born at Blairgowrie, Scotland, Dec. 27, 1867.

J. C. O'Donnell, Superintendent, Divisions 2 and 3, Central District, Canadian Northern Ry., Winnipeg, born at Cobden, Ont., Dec. 17, 1879.

S. R. Payne, Manager, Ottawa Division, New York Central Rd., Ottawa, Ont., born at Jefferson, Ohio, Dec. 21, 1865.

Alfred Price, Assistant General Manager, Eastern Lines, C.P.R., Montreal, born at Toronto, Dec. 6, 1861.

W. J. Radford, Assistant to General Manager, Toronto Suburban Ry., Toronto, born at Boldre, Hants., Eng., Dec. 23, 1870.

G. D. Robinson, Export Freight Agent, C.P.R., Montreal, born at St. John, N.B., Dec. 7, 1877.

Sir Collingwood Schreiber, K.C.M.G., Hon. Mem. Can.Soc.C.E., General Consulting Engineer to Dominion Government, Ottawa, Ont., born at Bradwell, Essex, Eng., Dec. 14, 1831.

W. Tansley, Superintendent, Laurentian Division, Quebec District, Montreal, born at Shelburne, Ont., Dec. 27, 1872.

M. F. Tompkins, Division Freight Agent, Intercolonial Division Canadian

Government Railways, Halifax, N.S., born at Margaree, N.S., Dec. 6, 1878.

H. H. Vaughan, M.Can.Soc.C.E., Consulting Engineer, C.P.R., Montreal, Vice President, Dominion Bridge Co. and Vice President and Managing Director Domin-

ion Copper Products Co., born at Forest Hill, Essex, Eng., Dec. 26, 1868.

R. C. Vaughan, Assistant to Third Vice President, Canadian Northern Ry., Toronto, born there, Dec. 1, 1883.

A. P. Walker, M.Can.Soc.C.E., Assist-

ant Engineer, Ontario District, C.P.R., Toronto, born at West Hartlepool, Eng., Dec. 9, 1860.

E. H. Wood, Foreman, Michigan Central Rd., Kensington, Ill., born at St. John, N.B., Dec. 30, 1880.

Fuel Economy as Related to its use in Steam Boilers and Locomotives.

By S. H. Pudney, Fuel Inspector, Eastern Lines, Canadian Pacific Railway.

In the first two articles on this subject the losses of fuel during its combustion were shown by relating to various tests that have been made, also to actual practice in the use of fuel. There is no doubt that such losses do occur because it has been shown that by the use of certain devices a saving of even up to 25% has been made, and no saving could have been made if there was no loss before. Now the question arises, what can be done to overcome these losses and enable us to get the greatest possible efficiency from the fuel we use, and thereby not only save money but conserve our fuel and also reduce the car shortage. There never was

bed, takes up more carbon and at the surface has a large proportion of CO: A large proportion of the flame that is given off at the surface of the fuel bed is also unsaturated gas. The second process, or reaction, is the combination of the CO with oxygen to form CO² with an increase of 10,000 b.t.u.'s for every pound of carbon that undergoes such reaction, also the breaking down or reaction of the gases or flame into their individual elements to combine with oxygen, so that in this term they evidently mean that as nearly all these gases where this reaction has to take place are at the surface of the fuel bed, the best results can only be ob-

tion is correct and will eliminate smoke. No doubt many have seen a fireman take his coal scoop and open the fire door, then put his scoop in the fire door hole bottom up, turning it from side to side, deflecting the incoming air down over his fire. He does this so that he may be able to see the condition of his fire and can in this way see any banks or holes that may be forming in his fire box and remedy them at the next time of firing. He naturally considers that in doing this the air rushing in blows the smoke and gases away so that he can see his fire. But what really does occur is that the air, going in through the door, is being deflected down

Reclamation of Rogers Pass Line Material for Canadian Pacific Railway.

a time when the shortage of cars of the class that is used to carry coal was so serious, and very few of us realize what the effect of a saving of fuel would mean in this line. If a 10% saving was effected in the use of fuel on Canadian railways alone, it would mean that 18,000 cars could be released for one trip, or that about 2,000 cars could be released from this service altogether. This one item alone should make us go to greater lengths to get better efficiency, to say nothing of the six or seven millions of dollars that would be saved. To make this saving we have only to do, as was said before, viz., to follow out the rules that govern the perfect combustion of fuel.

There are a great many authorities on this subject and they all say the same thing as regards the better use of fuel. The University of Illinois, through Professors Parr and Olin, have made some important researches on the coking of fuel at low temperatures, and in a bulletin, in speaking of the combustion of coal, they quote Prof. Bone, who is recognized as one of the highest authorities on this subject, as follows: "Other conditions, such as accelerating the reaction by introducing the principle of surface combustion, may at some time be added to the mechanical and physical conditions now in vogue in the use of fuel."

In the burning of fuel there are two distinct processes. The first action, or process, is the burning of the fuel on the grates, which, in passing through the fuel

tained when some sort of surface combustion is carried out, or in other words, oxygen of the air must be administered to the gases independently of that which comes through the fuel bed.

Mr. Fox, a well known writer and specialist on black smoke in Chicago, says that air admitted through the fire door and allowed to pass over the surface of the fuel is the best remedy for smoke. An investigation was carried out by the United States Geological Survey, under the charge of D. T. Randell and H. H. Weeks, who, after making a considerable number of tests with different classes of boilers and furnaces, said that they found that air admitted through the fire door freely, at the time of firing and for a short period thereafter, was productive of a more perfect combustion of the gases and less smoke. These statements, made by men who had only one object in view, viz., to find out the truth, cannot be doubted. I have made some considerable experiments in this line myself and have found their statements to be correct.

Most locomotive men have had enough experience in this line to know the results. For instance, at terminal points and stations, the rule is invariably to open the fire door enough to consume the smoke. Of course, it is not possible to open a fire box door while the locomotive is running under load or trouble would soon occur, due to leaking flues. But there is one thing which a fireman does that proves to all who understand locomotive practice that the idea of surface combus-

tion is correct and will eliminate smoke. No doubt many have seen a fireman take his coal scoop and open the fire door, then put his scoop in the fire door hole bottom up, turning it from side to side, deflecting the incoming air down over his fire. He does this so that he may be able to see the condition of his fire and can in this way see any banks or holes that may be forming in his fire box and remedy them at the next time of firing. He naturally considers that in doing this the air rushing in blows the smoke and gases away so that he can see his fire. But what really does occur is that the air, going in through the door, is being deflected down

to the surface of the fuel and is performing the process of surface combustion, and the gases are all combining with oxygen at that point, so that combustion is complete. As the perfect combustion of fuel is without smoke or color at the spot where it is going on, he can see through the products of perfect combustion and note the condition of his fire. This proves again that surface combustion is the right remedy for smokeless and perfect combustion and the proper thing for fuel economy. The proper way to admit air in a locomotive fire box for surface combustion is so that it may have the best possible chance to mix with the gases that are being liberated from the fuel, and where they may have the longest possible travel before reaching the flues. This means that it must be admitted at the door. The air going in must be deflected down in such a manner that it will come in contact with the gases at the moment they are liberated from the surface of the fuel, because at moment they are practically in their nascent condition, and in that condition all chemical action, or reaction, is more rapid and complete. That this can be done in our locomotives has been demonstrated fully, and it is quite possible to so equip them that we should be able at a trifling expense to save at least 10% of the fuel used at present.

In the article I mentioned that I considered much better results could be obtained in the combustion of fuel and that this could be done with a larger exhaust

outlet than is at present in use, which in turn would give a greater working capacity to our locomotives. The exhaust outlet's function is to produce sufficient draft to consume enough fuel to raise the necessary steam sufficient to haul the train over the road. Under present conditions this draft, or air, has to be produced through the fuel bed, which offers a great resistance to the incoming air and consequently a greater force has to be exerted than would have to be if the resistance was less. If we consume the gases that are being wasted, both as smoke and CO, with air that is, or can be, let in through the door, when there is absolutely no resistance, we will get this extra efficiency without any effort on the part of our drafting appliance, and will release that much work from our exhaust outlet. Another feature is that if we increase the efficiency of our fuel 10% by this means, we shall not need to consume so much by that amount. This again reduces the amount of work needed to be performed by our exhaust outlet. Consequently if we can reduce the amount of work done under existing conditions, we can naturally increase the size of the exhaust in proportion. The back pressure exerted upon the cylinders, by a reduced exhaust outlet, is greater than most of us think of and any increase in size will make a more efficient working locomotive. Therefore, if surface combustion is carried out, and especially with the aid of the brick arch, there is no doubt that a permanent decrease of 10% to 15% in railway fuel bills would occur, and with the best feature of all, a permanent abolition of the black smoke nuisance.

Quebec Central Railway Company's Annual Report.

Following are extracts from the report for the year ended June 30:

Freight revenue	\$1,215,001.08
Passenger revenue	415,919.44
Mails	28,285.64
Express, miscellaneous, etc.	36,821.56
	\$1,726,027.72
Maintenance of way and structures ..	\$243,224.51
Maintenance of equipment	172,066.87
Traffic expenses	28,678.94
Transportation expenses	672,661.39
General expenses	59,926.06
Taxes	15,046.24
Expenses outside operations	15,797.03
	\$1,207,401.01
Balance carried to net revenue account	518,626.68
	\$1,726,027.72

To the \$518,626.68 transferred from revenue account to net revenue account was added \$15,427.18, making a total of \$534,053.86. Out of this was paid \$255,560.94 for interest on debenture stock and 3rd mortgage bonds, leaving \$276,492.92 to be transferred to surplus income account, which, added to \$85,132.23 balance from 1915-1916, made a total of \$361,625.15. From this was paid 5% interest on share capital, \$169,080.16, leaving a surplus of \$192,544.99.

The directors are: Sir George Bury, President; I. G. Ogden, Vice President; E. W. Beatty, Montreal; J. H. Walsh, General Manager, Sherbrooke, Que.; T. Lindley and C. D. Brassey, London, Eng. L. A. Carrier, Levis, represents the Quebec Government on the board.

Under an agreement dated Oct. 2, 1912, the company's property was leased to the C.P.R. for 999 years at a guaranteed rental based upon interest on the mortgage bonds, and 4% dividend on the outstanding stock for five years from July 1, 1912, and 5% after.

Special Tongs Prevent Rails from Seesawing While Being Handled.

The accompanying sketch shows some simple rail tongs which have been developed on the Atchison, Topeka & Santa Fe Ry., and which have given good service, according to W. Barnes, Supervisor of Work Equipment at Topeka, Kan.

The length of these tongs, 2 ft. 8 in. between grips, is found sufficient to prevent rails from seesawing while being handled by a crane. The main part of the tongs is made from $\frac{5}{8}$ x 3 in. soft

Tongs Hold Rails Steady in Handling.

steel, the jaws being hinged on a $\frac{3}{4}$ in. bolt with a 1 in. pipe spreader. Each half of the tongs is connected by a 2 ft. length of $\frac{5}{8}$ in. chain to a large ring, which is hooked to the hoisting line.

United States Taxes on Transportation Tickets Etc.

The United States Government started on Nov. 1 to levy a tax of 8% on the amount paid by passengers for transportation on railways or steamships and 10% on the amount paid for seats, berths and staterooms in parlor cars, sleeping cars, or on vessels. The tax does not apply on commutation tickets for trips less than 30 miles, nor on passage tickets where the fare is 35c or less. The tax applies on tickets sold in the United States to points in that country, Canada or Mexico, and is assessed upon the total amount paid for transportation to destination and not on the amount paid for passage within the United States only. The tax is collected by ticket agents, who are required under the law to decline to issue tickets to persons who refuse to pay the tax. This tax does not apply on tickets issued in Canada to points in the United States, only the Canadian tax of 5c up to 15c and 1% over that being collected on passage tickets, with tax of 10c per berth on sleeping car tickets, and 5c on parlor car fares.

A tax of 3% is levied on all amounts for carriage of milk, skim milk, buttermilk, pot cheese, cream, condensed milk and evaporated milk in baggage car service, also newspapers carried in baggage cars, wholly in the U. S., or from one point in the U. S. to another point in the U. S. through Canada or Mexico.

A tax of 8% is levied on amounts paid for excess baggage.

Lt. Col. Blair Ripley, M.Can.Soc.C.E., formerly Engineer of Track Elevation, C. P.R., North Toronto, now officer commanding, 1st Battalion, Canadian Railway Troops, in Belgium, writes: "I am always pleased to open Canadian Railway and Marine World when it reaches me. It keeps me in touch with things at home, in a matter of fact way, and is passed around to the boys, all of whom appreciate it."

Railway Bridge and Building Men's Convention.

The American Railway Bridge and Building Association's convention held at Chicago recently, was largely attended.

The placing of new plate girder spans with the minimum interruption to traffic was dealt with in a committee report presented by Lee Jutton, Division Engineer, Chicago & Northwestern Ry. Two general methods are practicable: Piecemeal removal of the old and construction of the new spans, or the replacing of an entire span at one operation. Mentioned in the discussion that followed was the erection of concrete slab spans alongside the old work, with ballast and track complete. In this way the track could be connected up as soon as the new span had been moved into place.

Paint for steel and other structures was covered in a report presented by C. Ettinger, Illinois Central Rd. For steel work, he considered that the primer or first coat should be a rust-inhibitive coating with lead base. Carbon paints may be applied over this, but should not be applied directly to the steel. The report pointed out the economy of using high class paint for structures of this kind.

Concrete as a protective coating for steel structures was presented in a paper by E. E. R. Tratman, Western Editor, Engineering News-Record.

The importance of good housing and feeding as a means of keeping men in the crews of the railway bridge and maintenance of way departments was the subject of a paper by F. E. Weise, chief clerk, Chicago, Milwaukee & St. Paul Ry., engineering department. There are many objections to the use of cars, which are generally old cars removed from their trucks and mounted on sills. Buildings of concrete or of stucco on wire mesh are used in a few cases. Some railways and construction companies are introducing portable sectional knock-down houses. Most of these are of wood, but sectional steel structures for similar purposes are available.

Another subject discussed in regard to labor was the introduction of differential rates of pay for employes; that is, paying higher rates to men having the greater skill or experience.

A considerable number of women are employed by the C.P.R. on its Western Lines. Clerical positions in the general offices, freight offices and yard offices, vacated by men, have been filled by women. It was thought that women could not be used to advantage in yard offices, owing to the possibility that they might have to listen to objectionable language on the part of some men. No difficulty whatever has been found in this respect, the women having invariably been treated with every courtesy and respect. A number of women are being employed at Winnipeg, as passenger car cleaners, and are giving complete satisfaction. At Regina nine women were employed cutting grass and weeds in the yards, for about two weeks, and gave good satisfaction, but the management is not convinced, however, that women can be successfully used as ordinary track maintainers.

The Canadian Society of Civil Engineers', Regina branch has petitioned the Saskatchewan Government to restrict the practice of civil engineering to members of the Society.

Draft Gears on Railway Rolling Stock.

By Louis E. Endsley, Professor, University of Pittsburg, Pa.

Draft gears have been much discussed by railway people for a great many years, and there are many phases of this subject. The attempt will be made in this paper to give a few points that appeal to me in regard to this subject. There are three things that draft gears may do in the handling of railway cars. These may be divided in general as follows: (1) Produce slack in starting trains. (2) Control slack in the movement of trains. (3) Reduce the impact force in the switching of cars. In all of these the principle involved is the same, viz., producing the same speed in two cars that may be coming together, or going apart, because of differences of speed. The draft gear, to be effective in doing this, must have a capacity that is relative to the difference in speed. What I mean by this is that for a difference of speed of, say, one mile an hour, a draft gear of small capacity will suffice, but if the difference in speed is four miles an hour, it will take a much larger draft gear, namely, 16

and should we want to get four times as much area as we had in ABC and still have the same travel, we will have to increase the pressure to 600,000 lb., and then the area of AGC will be four times ABC, or area AGC will equal AEF, and the capacity of these two gears will be the same. The 2 in. travel gear will have twice the final force that the one with the 4 in. travel will have. This final force is what a great many people have called the capacity of a draft gear. The comparison shown in fig 1 is ideal. I think it would be almost impossible to construct a draft gear that has a slope equal to line AG. But this figure was merely given to illustrate the advantage of long travel gears.

As I said before, if we have a draft gear that has a capacity equal to one fourth the difference of energy of two cars in impact, the cars will not receive a shock above the maximum force necessary to close the gear. That is, if a car is going four miles an hour and strikes

gy between the two cars coming together in impact, or the coupler or some other part of the car will have to do it. If the coupler is stronger than the other part of the underframe, the underframe will have to do it.

In order to illustrate what energy is necessary to be absorbed for different speeds of cars in switching service, table 1 is given. Column 1 of this table gives

Speed in miles per hour	Approximate energy in foot-pounds	Capacity of gear in foot-pounds to just close	Approx. height of drop of 9,000 lb. hammer to shear nine 19/32 rivets
1	5,000	1,250	4.7 in.
2	20,000	5,000	9.7 in.
3	45,000	11,250	18.0 in.
4	80,000	20,000	28.7 in.
5	125,000	31,250	44.7 in.
6	180,000	45,000	63.0 in.

the speed in miles per hour; column 2 gives the foot-pounds of energy in the moving car at the speed given in column

Fig. 1. Travel of draft gear.

times as large, to prevent a shock, for the energy of a moving body is proportional to the square of its velocity.

Draft gear capacity is the number of foot-pounds of work required to just close the draft gear, that is, it can be represented by an area, as shown in Fig. 1. The lower line of the chart in fig 1 represents the travel of the draft gear and the upper distance represents the force on the coupler until the draft gear closes and the horn strikes. This is the force on the draft gear. Now, if we assume a draft gear with a travel of 2 in., or from A to C in this figure, a final pressure of 150,000 lb., or from C to B and that the pressure necessary to close the gear under discussion was directly proportional to the movement, the line of action of the gear would be a straight line, and would be represented by AB. The capacity of the gear then would be represented by area ABC. If we wish to increase the capacity without increasing the travel of the line AB, we must increase the travel, and if we should increase the travel to double that shown in the shaded area, we would have four times as much capacity as we had before. That is, if AC equal half of AF, the area ABC is one fourth of AEF. If we wish to increase the capacity of the gear and not the travel, we will have to increase the slope of line AB to AD, in order to keep this pressure 300,000 lb. or below, and will only get an area represented by ADC, which is only twice that of ABC. The slope of the line AD is much greater than of the line AB,

Fig. 2.

a car standing still, it will produce in the standing car approximately half of the speed of the moving car, or, in other words, put into the standing car one fourth of the energy that was originally in the rolling car. The rolling car will retain approximately one fourth, and coast down with the second car, but half the energy is gone and it must be absorbed in the draft gear or some part of the underframe. Of course, some of this energy may be absorbed, due to the shifting of the load, but it must be destroyed in some manner. If it is not done in the draft gear, it is bound to be done on the underframe or the coupler.

This shifting of the load amounts to considerable, in some kinds of freight, such as coal and ore. If the load should shift 1 in., this would be equal to increasing the draft gear travel 1 in.; also, any give in the underframe would be equal to increasing the travel of the draft gear. There is considerable difference in the give of cars. Steel cars only give half as much as wooden cars below the elastic limit, assuming that both have the same ultimate strength. This is one thing that has been entering into wooden car construction. There has been considerable give in the bolt holes, between the draft timbers and sills. Thus the car itself has been absorbing the shock and there has not been as much need for a draft gear of a large capacity. But when we are now using all steel cars, with no give in the rivets, the draft gear must do all the work of absorbing the difference in ener-

Fig. 3.

1; column 3 gives the capacity of the draft gear that should be used in each car for the speed represented in column 1 for two cars weighing loaded 15,000 lb.; column 4 gives the height of drop that the 9,000 lb. hammer should fall before it shears off 19/32 in. rivets to have the capacity given in column 3. This column was obtained by multiplying the values in column 3 by 12 and dividing by 9,000 and adding 3. The first part of this deduction is to obtain the height of drop to close the draft gear. The 3 added at the end is the added height in inches that it will take to shear off the rivets after the full capacity of the draft gear has been taken up.

It will be seen that a very small capacity is necessary for one mile an hour, namely, a drop of 4.7 in. of the hammer, but a draft gear that is many times as large is required for a difference in speed of 6 miles an hour, or 63 in. This height should be the total fall of the hammer to just touch the dummy coupler used, plus the travel of the draft gear. That is, if the fall of the hammer was 15 in. before it started to close the gear, and the travel of the gear was 3 in., the total capacity of the gear would be represented by 18 in. I, personally, think that we should take care of four miles an hour switching speed in the draft gear design. If we should do this, that is, if the draft gear would just close under a speed of four miles an hour and never close under a speed of less than that, it is certain that the coupler or any part of the car would

never be damaged in an impact between two cars at a speed of four miles an hour. There is not a coupler on the market hut that will stand a greater impact force than the force necessary to close any draft gear on the market today. I have given some heights of drop that a 9,000 lb. hammer should fall before it shears off one or both lugs with nine rivets 19/32 in. in diameter. This method of testing draft gears was first used, I think, in Sept. 1908, by the Westinghouse Airbrake Co., but there 9/16 in. rivets were used. To my mind, this is the best method of determining the capacity of a draft gear. In this method of testing, the draft gear is mounted on two lugs, that are riveted to two short pieces of channels and held upright between posts. Each lug has nine rivets, each 19/32 in. in diameter, each lug carries half of the load, and the test is made by dropping the 9,000 lb. hammer from 1 in., 2 in., 3 in., and so on, until one lug is sheared off. This shearing of these rivets occurs at a pressure of about 275,000 lb. I say about 275,000 lb. for that is the average pressure that I obtained on several sets of lugs.

Now, when the 9,000 lb. hammer drops vertically on a draft gear that is supported on these two lugs that rest on a solid base with these same rivets in the lugs, they will not shear off until an approximate pressure of 275,000 lb. is reached, and in a good many tests with the same draft gear and different sets of lugs, the variation is never more than 1 in. That is, if a given gear shears off at a 16 in. drop, it might go 15 in. at another test, or if it shears off at 24 one time, it might go to 25 on another set of lugs. In other words, the variation is very small. I have conducted a test of a certain draft gear of a given make that sheared off three sets of lugs at exactly the same height, which means that this method of testing is bound to give very accurate comparison of the capacity of different draft gears.

Up to this time, in this paper, I have been talking of draft gear capacity and have not mentioned the absorbing capacity. I wish to distinguish between these two at this point. In the first part of this paper, I defined draft gear capacity as the foot-pound of work necessary to close the gear. The absorbing capacity is that which is not given back when the draft gear is released after being closed. This feature of a draft gear can be very easily obtained from the drop of the 9,000 lb. hammer by putting a recording pencil on the hammer and causing it to mark on a revolving drum. If the hammer falls 20 in., and rebounds, say 10 in., it is evident that the absorption has been half the capacity. This feature of the draft gear comes into play in the controlling of the slack of a long train in going up and down grades and in the starting and stopping of trains. If the slack should run in, and is not absorbed by the draft gear, it would run out under almost the same speed minus only that absorbed in the journal and rail.

This brings me to a point that I have often made, and that is, that we cannot expect a draft gear to last the life of the car, any more than we can expect a brake shoe to last the life of the car. They both are put on a car for the same purpose, viz., to stop it and if we expect to get any value from our brake shoes, we must expect wear. No one has discovered a metal that has any absorption of work by sliding on some other material that does not wear. Of course, some metal wears more than others under the same absorption. Some years ago I made some tests for the

M. C. B. A. brake shoe committee and I found some shoes with the same coefficient of friction that varied as much as 300% in the loss of weight in doing a given amount of work. Here is a very good field for the draft gear companies. In my brake shoe committee work, we found that the loss of metal decreased very fast, as the pressure increased and the coefficient of friction decreased as the pressure increased. If we want to increase the life of a brake shoe we must increase its area. Now we are putting two shoes on a wheel and getting a saving in both. There is the same field in draft gears. We should keep the pressure between the wearing surface as low as possible and this can be done by making it as large as possible. But in no case would it pay to put enough brake shoes on a car to last as long as the car, and I think the same can be said about the draft gear.

Another thing which may be of interest is the results of some tests which I have just made in regard to the centre line of draft. Some time ago the committee on car construction made some recommendations with regard to the centre line of draft. These recommendations, when applied to most cars, fixed the centre line of draft within 2 or 3 in. of the centre of the sill. In order to get some information on this subject six sets of channels were made up. A photographic reproduction of two of them after the tests are shown in figs 2 and 3. The channels were each 15 in. high and weighed 40 lb. per foot. The centre line of draft of one set was placed on the centre of the channel of 7½ in. from the edge, and this distance from the edge was decreased by 1¼ in. until 2½ in. was obtained. Two sets of channels, with the centre line of draft 6¼ in. from the edge, were made, one set of which did not have any tie plate. The results obtained are given in table 2.

Table 2—Maximum pressure obtained in impact test made on 15 inch 40 lb. channel with 15,000 pendulum hammer with different centre line of draft.

Distance from edge of channel.	Maximum pressure obtained before the channel failed.
7½ in.	1,155,000 lbs.
6¼ in.	1,125,000 lbs.
5 in.	960,000 lbs.
3¾ in.	723,000 lbs.
2½ in.	662,000 lbs.
6¼ in. without tie plate	744,000 lbs.

It is evident from this table that the centre line of draft should be for maximum strength within 2 in. of the centre line of the sills, and that the tie plates are of great value in strengthening the sills. By looking at fig 2 it will be seen that when the line of draft is on the centre, both upper and lower flanges are bending, while with the line of draft 3¾ in. from the edge, as shown in fig 3, nearly all of the bending is at a place in the edge of the channel closest to the line of draft. This is nothing extraordinary, for if you eccentrically load any two pieces of steel, the one close to the load is going to take most of the work and the ultimate strength of the system is reduced.

I have attempted in this paper to bring forward two or three very important things in the selection of draft gears and the design of freight cars. One of the most important things is, we will have to increase the travel of the draft gear above that thought sufficient some years ago when it was felt that 2 or 2¼ in. was as much travel as we should have. But I am ready today to say that we should have at least 4 in. of travel, or possibly more, in any draft gear. It is

evident from the first of my paper that this arrangement is going to allow us to materially increase the capacity of the draft gear when we design it under four or more inch travel.

Another thing that is of importance to railway men today is, how are they going to know what capacity of draft gear they are getting. I am confident that the best method for them to use is the rivet shearing test, as already described. Whether it be nine rivets 9/16, ten rivets of 9/16, or any other number of rivets, does not enter into the subject. What they should have is a set of lugs that will shear just above the force which is necessary to close the gear under test. I can conceive how a gear can be designed for a final pressure of 350,000 lb., then a test of rivets shearing off at 275,000 lb. would not be fair. But in any design of a lug, the lug should be made much stronger than the rivets, in order that the lugs will not bend down and the gear show a false capacity. I can see how a lug may be built and give false capacity of draft gear, but the lugs should be designed stronger than the rivets. I have not found a draft gear today but that will close before it shears off nine 19/32 in. rivets. There may be some, however, on the market.

One thing that is important in the design of a freight car is that the underframe of the car should be made stronger than the coupler. It has been the coupler in the past that has been saving the car after the draft gear went solid. Men who repair cars appreciate the large number of couplers that fail. I am wondering if when we put on the new M. C. B. coupler, it is not going to be the underframe of the car instead of the coupler that is going to fail when the draft gear goes solid. Especially is this true if we move the centre line of draft out from the centre of the sills or leave off the tie plate, as shown in the latter part of this paper, because then the pressure of only 662,000 lb. destroys the sills with the centre line of draft 2½ in. from edge of channel. The new coupler will stand this and more in compression, which means that it will not be the coupler, but the underframe, and if the underframe, it will cost considerably more to replace than the coupler. I assume that everybody here knows that a friction draft gear is superior to a spring gear, but I do not believe that all of you know how much this difference is. The highest capacity spring gear in use, made of two M. C. B. class G springs will fully protect your 100,000 lb. car and lading, at a switching speed of a little less than two miles an hour. There are friction draft gears in general use on thousands of cars that will protect this same car and lading at 4.5 miles an hour. Also, there are many gears on the market that will fall between these two extremes and each of these gears has a definite speed at which it will protect the car. But if you should attempt to switch your cars at four miles an hour while equipped with a spring draft gear, that only protects the car at a little less than two miles an hour, the coupler, underframe and lading are bound to suffer. Either the coupler or underframe will fall if this speed of switching is kept up, while, should this same car be equipped with the highest capacity gear, spoken of above, it could be switched at four miles an hour without any damage to underframe or coupler.

Unless we put a draft gear of sufficient capacity to keep it from going solid, the force is going to the strength of the weakest part. If this is the coupler it will be from 400,000 to 700,000 lb. on

most couplers in service, or if the car be equipped with the new M. C. B. coupler type D, this force will be from 600,000 to 1,000,000 lb. If it be the underframe that is weakest, and this may occur if the design is not correct, this pressure will be a little less than that given above for the strength of the coupler. But in any case, this force may be 600,000 lb. If the impact force and shock is 600,000 lb. and the weight of the car 150,000 lb., the end pressure per pound of car weight and lading will be 4 lb per pound of weight,

or will be equivalent to standing a car on end that has four times as much load in it as the car in question contained. This is what has been knocking out ends of cars, damaging roofs, side walls, and racking the car in general because of insufficient draft gear protection. If the travel and capacity of the draft gear is enough to keep this end force down to 300,000 lb. the force per pound of weight on the car and lading will only be 2 lb., which would result in practically no damage to the car.

More care must be given draft gear, in the manner of inspection and repairs, in order that it may do the work which it was put on for, and which it will do if kept in repair. It may mean new gears or parts of gears, and there will be some expense attached to this inspection and upkeep, but the saving in repairs to other parts of the car is bound to more than make up for this expense.

The foregoing paper was read before the Canadian Railway Club in Montreal, recently.

The Maintenance of Railway Turntables.

By G. C. Lightner, Formerly Assistant Engineer, Canadian Government Railways, Moncton, N.B.

The turntable is one of the most important and at the same time one of the most neglected of terminal facilities. When the table is in good working order locomotives are moved in and out of the locomotive house with ease. On the other hand, when the table works hard, or is put out of commission, movements are delayed; and one delay usually causes another, continuing from the terminal out on to the line, until altogether many hours are lost and considerable needless expense incurred. I say needless expense advisedly, for, as the old proverb has it, "An ounce of prevention is worth a pound of cure," and a very small portion of this amount, if well spent in advance, would prevent the loss both of time and money. The resident engineer and maintenance forces of the district are directly responsible for maintaining the table in good working order, but the locomotive house foreman must assist by observing its condition daily and immediately reporting any faults to the bridge and building master. Generally, so long as a table will turn at all, no attention is given it. Then when small defects, grown large, seriously interfere with efficient operation, it may prove an expensive matter to correct; whereas, if taken at the start, repairs could probably have been cheaply and quickly made. The maintenance department should not, however, depend on the locomotive house men for advice regarding a table, but should examine it periodically. The resident engineer ought to examine each table on his district in the spring and autumn; the bridge and building master and his foremen whenever they are in the vicinity.

The care and adjustment of a table may be divided into several headings: Centre bearing; elevation of tracks and clearances; levels and twists; foundations, drainage, etc.; steel; deck; snow, ice, etc.; tractor. The centre bearing consists of a set of conical rollers or balls, running in oil between two castings. If the table is jacked up, and the balls or rollers taken out, and thoroughly cleaned, and put back in fresh lubricant twice a year, and proper oil is added from time to time, the bearing should need no further attention. In a few of the older tables the balls are rather too small to successfully carry our present heavy locomotives. These centres are, however, being gradually changed to the roller type, and in the meantime they require more attention and some replacing of broken balls.

The most common fault with our turntables is improper adjustment of the elevation of tracks. A table will deflect when fully loaded from one half to three quarters of an inch at each end. The tracks leading to the table should all be at absolutely the same elevation all around the pit wall. The table should then be high

enough so that when balanced with load the rails on the table will be 1 in. to 1 1/4 in. above the rails on the pit walls at each end. The circle rail must be at the elevation to give exactly as much clearance under the end rollers as the rails on the table are higher than those on the pit walls, or from 1 in. to 1 1/4 in. That is, the difference in level between the circle rail and the rail on the pit wall must be exactly the same as the depth of the table end from top of rail to underside of end roller. This is important. If these dimensions match, the rail on the table wall will be flush on top with the rail on the pit wall when a locomotive is going on or off. If these dimensions do not agree, one rail will be higher than the other, which causes damage to the rails and makes possible a derailment.

Unfortunately frost will interfere with the most nicely adjusted table by heaving the pit walls. But when it does, do not adze down the circle rail ties as is usually done, for that only makes matters worse. It is very much easier to jack up the table a few inches (block under one end and jack up the other) and put a steel shim on the centre casting under the loading girder. Remember, when a pit wall heaves, it carries the track on top of the pit wall up as well as the circle rail, and their difference in elevation is not altered by the frost action. Lowering the circle rail does alter it and spoils the job. Shimming up the table restores the lost clearance under the end wheels and leaves the table in correct adjustment. If heaving is unequal, the table must be shimmed high enough to clear the circle rail at its highest points. Do not monkey with the ties with an adze. The effects of frost can be largely avoided by proper drainage. Often putting a porous filling of coarse cinders or gravel behind the circle wall with a good tile drain will reduce heaving very largely. The pit floor ought to be kept clean and smooth and the drain open to avoid collection of water in the pit.

Light tables sometimes develop a twist or warp. When this happens it can be readily detected even if slight, by noting the clearance under the end wheels, then turning the table exactly end for end and again noting the clearance. If the centre pier is exactly level, the difference in the clearances will be the amount of the twist. If the pier is not level, the difference will be due to both causes. Turn the table at right angles to its former position and repeat. A comparison of results in the four positions will give the amount of twist and the amount and direction of slope to the pier.

If the pier is not level the only remedy is to lift the table, centre and all, and dress the pier top. The twist can be then corrected by putting enough shims be-

tween the end roller boxes and the steel girders to make the bottom of all four corners level and the depth from top of rail on table to bottom of roller the same at both ends. This will throw the deck out of level, and that can be corrected by framing the deck ties properly. When these shims are once put in they must not be altered or removed except by proper authority, and that only when tests show that the amount of warp in the girders has altered.

The steel girders, floor system and bracing require frequent cleaning and painting. On too many of our tables the outside of the girders have been well painted and the less accessible parts inside allowed to become dirty and rusty. Whenever painting is done the cleaning and scraping of the steel must be especially thorough, on account of the large opportunity for the collection of wet dirt and refuse on the steel, and the many corners difficult to clean. Locomotive men can help on this point by not starting their injectors and by leaving all the valves closed while on the table, so as to avoid as far as possible dripping water on to the steelwork.

The deck of a turntable usually requires little or no care, except that when the end heights are not correct, the end ties get pounded to pieces quickly. A number of tables have a walk on the deck, consisting of one or two stout planks; some have the deck entirely covered with light boards. The latter is especially undesirable from a maintenance standpoint. When the deck is covered, the steel underneath is kept almost constantly wet and does not get a chance to dry out and inspection is rendered difficult. If any walk at all is on the table it should be away from the girders or stringers, so that the steel may be readily cleaned. However, the turntable is intended for use in turning locomotives and not as a footbridge across the pit, and if the area around the pit is kept clear and in shape, there is no necessity whatever for anyone walking across the table except to get to the centre for inspection and repairs. Any plank walk is therefore unnecessary, as well as detrimental to the table.

In winter snow and ice collect in the pits and interfere with operation. The duty of cleaning out the pit devolves on the trackmen, but the locomotive house force should give them assistance at all times. Generally in winter, when a table is reported as working hard, the trouble, if not due to heaving of foundations, is found to be caused by an accumulation of ice around the centre. In severe weather this should be watched and ice cleared out as fast as it forms, instead of allowing it to collect until it becomes a nuisance.

Where tables are operated by air mo-

tors, the care of the motor and accessories devolves on the locomotive house staff. They should periodically examine and overhaul all parts of it. If they allow a tractor to get out of repair so that they have to turn locomotives by man power it is their own fault. A tractor generally needs very little attention,

but like all machinery, requires care.

Where several departmental organizations are jointly responsible for anything, as in the case of turntables, they each frequently form the habit of waiting on the others to take action. If the locomotive house and maintenance forces will only form the habit of co-operation, the

turntables will all be kept in much better shape with much less work and will afford the minimum of inconvenience to all concerned. Get together!—Canadian Government Railways Employes Magazine.

The writer of the foregoing paper is now a lieutenant in the United States Expeditionary Force for overseas service.

Orders by Board of Railway Commissioners for Canada.

- Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.
- General order 207. Oct. 26.—Further amending general order 203, Aug. 11, re transportation of dangerous articles other than explosives.
- General order 208. Oct. 25.—Rescinding general order 173, Oct. 26, 1916, in so far as it rescinds general order 152, Nov. 2, 1915; and allowing tolls for use of refrigerator cars for carriage of vegetables, provided by said tariffs re-filed and as authorized by general order 152.
- General order 209. Nov. 13.—Approving Supplement 10 to Canadian Freight Classification 16, cancelling and superseding Supplements 1, 3, 4, 5, 6A, 7, 8, and 9, all previously approved.
- General order 210. Nov. 13.—Dismissing complaints of Winnipeg, Calgary, Regina and Saskatchewan Boards of Trade and Canadian Manufacturers' Association against tariffs, C.R.C. 3 and 4, effective Sept. 1, on behalf of railway companies providing increased all-rail freight rates from Eastern Canada to Port Arthur and west.
26668. Oct. 18.—Approving location of G.T.R. station at Lyster, Que.; work to be completed by Dec. 15.
26669. Oct. 22. Authorizing G.T.R. to use bridge 32 over Maitland River at Wingham, Ont.
26670. Oct. 19.—Ordering Edmonton, Dunvegan & British Columbia Ry. to complete station at Donnelly, Alta.; by Dec. 15.
26671. Oct. 22.—Disallowing tolls filed by Canadian Northern Ry., C.P.R., and Grand Trunk Pacific Ry. for switching freight on which they respectively have received, or are to receive, a line haul—the tolls being charged because switch movement exceeds 1,000 ft.
26672. Oct. 19.—Authorizing Halifax & South Western Ry. to build spur for Yarmouth Trading Co., Yarmouth, N.S.
26673. Oct. 25.—Authorizing C.P.R. to build connection and extension to spurs for City of Montreal at mileage 4.5, Lachute Subdivision, Montreal Terminals.
26674. Oct. 25.—Authorizing C.T.R. to build spur for British Forgings, Ltd., Toronto.
26675. Oct. 3.—Authorizing Grand Trunk Pacific Ry. to build highway crossing over its track at 2nd Ave. North, Regina, Sask.; and rescinding order 13830, May 22, 1911, authorizing crossing of 1st Ave. North.
26676. Oct. 25.—Authorizing Alberta Public Works Department to make highway over Edmonton, Dunvegan & British Columbia Ry. in Kinoo-sayo Indian Reserve 150 E.
26677. Oct. 25.—Approving agreement between Bell Telephone Co. and Acorn Rural Telephone Association, Renfrew County, Ont.
26678. Oct. 25.—Approving clearances at Ontario Malleable Iron Co. siding, Oshawa, Ont.
26679. Oct. 25.—Authorizing Central Vermont Ry. to rebuild bridge 16, across Richelieu River, between Chambly and Richelieu, Que.
26680. Oct. 26.—Extending to Nov. 15 time within which Canadian Northern Ry. shall erect station building at Mikado, Sask., as required by order 25762, Dec. 27, 1916.
26681. Oct. 25.—Authorizing Noisy River Telephone Co. to erect wires across G.T.R. in Lot 9, Con. 6, Nottawasaga Tp., Ont.
26682. Oct. 25.—Approving clearance of proposed extension of Laplante siding to A. E. Albert's potato shed at mileage 109 from Riviere du Loup, Que.
26683. Oct. 25.—Authorizing British Columbia Government to make highway over Grand Trunk Pacific Ry. at Ninth Ave., New Hazelton, B.C., at grade, maintenance of crossing to be paid by G.T.P.R.; and rescinding order 16770, June 13, 1912, authorizing another crossing.
26684. Oct. 26.—Authorizing C.P.R. to change location of station at Marysville, B.C., on condition that siding be built there when necessary.
26685. Oct. 26.—Dismissing application of residents of Chatfield, Man., for order directing Canadian Northern Ry. to change location of siding.
26686. Oct. 26.—Amending order 26595, Oct. 2, re right of way fencing by Edmonton, Dunvegan & British Columbia Ry.
26687. Oct. 27.—Ordering G.T.R. within 60 days to install automatic bell at first crossing west of Vars station, Ont., 20 per cent. of cost to be paid out of railway grade crossing fund; siding to be extended, and cars standing there to be kept back 150 ft. from crossing; all switching on siding to be flagged over crossing.
26688. Oct. 29.—Extending to Dec. 31, time within which Canadian Northern Ry. shall erect station at Birdview, Sask., as required by order 26348, July 20.
26689. Oct. 29.—Ordering Canadian Northern Ry. to fence its right of way in Lot 2, Con. 6, Glamorgan Tp., Ont.; work to be completed by Dec. 1, 1917.
26690. Oct. 29.—Authorizing C.P.R. to rebuild overhead bridge at King St., Brockville, Ont.
26691. Oct. 29.—Ordering Canadian Northern Ry. to appoint watchman at crossing of Marmora St., Trenton, Ont., until further order.
26692. Oct. 26. Amending order 26339, July 18, 1917, re C.P.R. repairs at Benalta, Alta.
26693. Oct. 29.—Authorizing Alberta Public Works Department to make highway over Edmonton, Dunvegan & British Columbia Ry. in Sec. 7, Tp. 78, Range 4, west 6th meridian, Alta.; cost to be paid by Spirit River rural municipality No. 829.
26694. Oct. 29. Ordering Niagara, St. Catharines & Toronto Ry. to install automatic electric block signals on curve between Winchester Ave. and Queenston St. bridge, St. Catharines, Ont.; the curves at Ball's Crossing and on trestle back of Front St. in Thorold, Ont., to be completed by Dec. 31.
26695. Oct. 29.—Authorizing C.P.R. to build spur for B. B. Rye Flour Mills, Ltd., Winnipeg.
26696. Oct. 30.—Suspending, until further order, part of Supplement 10, to Transcontinental Freight Bureau Tariff 25-C, C.R.C. 350, relating to perishable freight in heated cars from points in Oregon, Washington, Idaho and Montana to points in Western Canada.
26697. Oct. 31.—Approving Canadian Northern Ry. standard plans of 70 ft. through Howe truss, numbered 556-1; and 100 ft. deck Howe truss, dated Mar. 15.
26698. Oct. 31. Authorizing Canadian Northern Ry. to build spur for Imperial Oil Co., North Battleford, Sask.
26699. Oct. 31.—Relieving Canadian Northern Ry. from providing further protection at highway near milepost 74, between Tilney and Baildon, Sask.
26700. Nov. 2. Authorizing C.P.R. to build extension to spur for Randall, Gee & Mitchell, Calgary, Alta.
26701. Nov. 2.—Amending order 26574, Sept. 27, re subway under C.P.R. at Bowness, Alta.
26702. Nov. 2.—Authorizing Canadian Northern Ry. to build spur in Pas, Man., mileage 0 to 0.928, crossing Gordon Ave., lane in Block 26, Tenth St., and Halcrow Ave.
26703. Oct. 31.—Approving clearances of platform awning at American Can Co.'s plant in Montreal.
26704. Nov. 5.—Authorizing C.P.R. to remove rails of siding at Page, Man., and loading platform there; the shelter to remain and be treated as flag stop as in the past; and refusing application of ratepayers of Glenwood, Man., for order restraining C.P.R. from removing same.
26705. Nov. 5.—Authorizing Canadian Northern Ry. to build spur for Quaker Oats Co., Neepawa, Man.
26706. Nov. 5.—Authorizing C.P.R. to close, within limits of right of way, public roads between Secs. 13 and 14 and 14 and 15, Tp. 29, Range 7, w. 5 m., at mileage 58.8 and 59.9, C.P.R. Alberta Central Subdivision.
26707. Nov. 5.—Approving plan Feb. 26, showing changes and additions to interlocking plant installed at crossing of Michigan Central Rd. by London & Port Stanley Ry. at St. Thomas, Ont., and authorizing M.C.R. and L. & P. S. Ry. to operate trains over same without first stopping there.
26708. Nov. 5.—Authorizing C.P.R. to build two mining entries under Western Dominion Collieries spur and two mining entries under Manitoba & Saskatchewan Coal Co.'s spur, both on S.E. ¼ Sec. 19-2-6, w.2.M.
- 26709, 26710. Nov. 5.—Authorizing Hydro Elec. Power Commission of Ontario to build power development canal and construction railway under G.T.R. between Niagara Falls and Merritt and between Port Robinson and Suspension Bridge, Ont., subject to agreement of Aug. 4; and to divert railway temporarily, and also authorizing further canal and railway construction under Niagara, St. Catharines & Toronto Ry. in Lot 90, Stamford Tp., Ont., and to divert same temporarily.
26711. Nov. 5.—Authorizing G.T.R. to take certain lands to carry out order 25652, Nov. 20, 1916, by diverting its line through Campbellford, Ont., necessitated by building Trent Canal.
26712. Nov. 5.—Authorizing G.T.R. to take up siding to Canada Furniture Manufacturers, Ltd., Wiarton, Ont., and rescinding order 18022, Nov. 15, 1912.
26713. Nov. 5.—Authorizing Sudbury-Copper Cliff Suburban Electric Ry. to operate cars across C.P.R. bridge across Nelson St., Sudbury, Ont., as authorized by order 26639, Oct. 9.
26714. Nov. 6.—Authorizing C.P.R. to build spur for Jacques Perron, Campbell Tp., Que.
- 26715 to 26717. Nov. 5.—Approving Bell Telephone agreements with St. Maiprice and Champlain Telephone Co., Sept. 13; Doe Lake Telephone Co., Oct. 16; and Brougham and Gratton Telephone Co., Oct. 24.
26718. Nov. 7.—Suspending until further order proposed cancellation by Great Northern Ry. of Supplement 9 to C.R.C. 1249, of basing arbitrary of 2½¢ per 100 lb. to be added to rates from Cloverdale, B.C., to make through rates on lumber commodities from Sidney, B.C., to destinations in Western Canada via New Westminster, Hope, Fernie, or Nelson.
26719. Nov. 7.—Ordering Kettle Valley Ry. to enlarge freight shed end of station building at Rock Creek, B.C., 12 ft. so freight shed room will be 14 x 20 ft.; work to be completed by June 1, 1918.
26720. Nov. 8.—Approving G.T.R. standard plan 3, showing combination station building for freight and passenger business at Burgessville, Ont.
26721. Nov. 7.—Authorizing Canadian Northern Quebec Ry. to build track at Garneau Jct., joining Montreal-Quebec line with branch to Riviere a Pierre, Que.
26722. Nov. 7.—Authorizing C.P.R. to build spur for Hydro Electric Power Commission of Ontario, in Toronto.
26723. Nov. 7.—Authorizing G.T.R. to build siding and spur for Palmolive Co. of Canada, Ltd., Toronto.
26724. Nov. 7.—Authorizing Canadian Northern Ry. to build across and divert highway through n.w. ¼ Sec. 16, Tp. 25, Range 25, west 4th meridian, Alta.
26725. Nov. 7.—Authorizing Grand Trunk Pacific Ry. to close crossing at mileage 109.4 in Hudson's Bay Reserve; and in lieu to build highway across railway in south ½ Sec. 24, Tp. 48, Range 26, west 2nd meridian, at mileage 109.3, Prince Albert Branch, Sask.
26726. Nov. 10.—Relieving G.T.R. from providing further protection at Long Crossing, 2½ miles west of St. Marys Jct., Ont.
26727. Nov. 10.—Dismissing application of City of Hamilton, Ont., for order directing G.T.R. to restore passenger train service on its Northern & Northwestern Branch, between Hamilton, Burlington Beach and Burlington.
26728. Nov. 12.—Authorizing C.P.R. to build spur for Reliance Investment & Developing Co., Morden, Man.
26729. Nov. 12.—Relieving G.T.R. from providing further protection at Fourth Concession crossing, Ellice Tp., Ont.
26730. Nov. 12.—Authorizing Canadian Northern Ry. to remove agent at Mowat, Ont.
26731. Nov. 12.—Amending order 20846, Nov. 19, 1913, re express collection and delivery limits at Hamilton, Ont.
26732. Nov. 12.—Dismissing application of New Brunswick Potato Exchange, Ltd., for order requiring C.P.R. to furnish cars suitably equipped for carrying potatoes from New Brunswick to Ontario and Quebec; this order to be without prejudice to any application made to Board in event of improvements made not adequately taking care of the situation.
26733. Nov. 13.—Authorizing British Columbia Public Works Department to make highway over C.P.R. near Moyie.
26734. Nov. 12.—Amending order 24882, April 8th, 1916, re G.T.R. crossing protection at Coteau, Que.
26735. Nov. 13.—Extending, for two months from date, time within which C.P.R. shall complete spur for E. W. Gillett Co., Toronto, Ont.
26736. Nov. 14.—Authorizing C.P.R. to build extensions to wharf in Kaministikwia River, Fort William, Ont.
26737. Nov. 13.—Relieving Edmonton, Dunvegan & British Columbia Ry. from fencing certain portions of line between mileage 0 and 130.8, until any land on either side or in vicinity becomes settled or improved.
26738. Nov. 8.—Dismissing complaint of Bell Telephone Co.'s North Lancaster exchange subscribers that company has not provided telephone service in Lancaster Tp., Ont.

Double Tracking of C.P.R. between Leaside Junction and North Toronto.

The double tracking of the C. P. R. North Toronto Branch, between Leaside Jct. and North Toronto is well advanced, and every effort is being made to rush it to completion before severe weather sets in. The work consists of grading and grade reduction on two sides of the line, the laying of two miles of new second track, the extension of a number of concrete culverts, and the construction of two reinforced concrete trestles, one across the Toronto Belt Line Ry. ravine at mileage 0.9 from Leaside, and the other across the reservoir ravine, just east of Summerhill Ave., mileage 1.8 from Leaside.

The grading is completed, the new second track is laid over the greater part of the way, ballasting is in progress and the line will be ready for partial operation at an early date.

The new bridge which is being constructed over the Belt Line Ry. ravine is a double track structure, composed of five reinforced concrete towers of two bents each, supported on continuous concrete piers and carrying a total of 44 precast concrete track slabs in the deck, also 90 side walk slabs and 96 concrete handrail posts. This bridge is replacing a single track steel trestle, which has been cut apart and removed. During the construction of the new bridge, traffic is being carried over a temporary timber trestle. The concrete work on the new bridge is well advanced and, weather permitting, will be completed before the end of December. Seven of the ten piers are completed and excavating is in progress on the others. Excavating on the east abutment is also being carried forward. Forms are erected for two of the towers, and concreting is completed on one of them, and is in progress on the other, which is a little more than half completed. About a half a mile east of the bridge, ground was prepared on which the track slabs were cast. These slabs are completed and will be moved to the bridge site and erected in place on the completed towers. Forms for the sidewalk slabs and handrail posts are fabricated and assembled and the casting of them will be commenced at an early date.

The new bridge which is being constructed over the reservoir ravine at mileage 1.8 from Leaside, is a 3-track structure, with sidewalks along each side. The third track on this bridge will be used as a switching lead into North Toronto yard. This bridge like the one over the Toronto Belt Line Ry. ravine is composed of five reinforced concrete towers of two bents each, supported on continuous concrete piers, and carrying a total of 66 precast concrete track slabs in the deck, also 90 sidewalk slabs and 96 concrete handrail posts. This bridge also replaces a single track steel trestle, and during construction traffic is being carried over a temporary timber trestle. The old steel trestle has been cut apart and most of it has been removed. Nine of the 10 new concrete piers are now completed and the excavation for the last pier is completed ready to receive concrete. A large force of carpenters are rushing the form work on the towers, and forms are erected for two complete towers and partly erected for a third tower. The concreting of one tower is finished and is now in progress on the second tower, which is about 75% completed. The track slabs, sidewalk slabs and handrail posts are being cast

on prepared ground, just east of the bridge site. Fifty four track slabs and 40 sidewalk slabs, as well as a number of handrail posts have been completed. The concreting of these units was expected to be completed by the end of November. The contractors on this bridge expect to complete concreting before the New Year.

The contract for the construction of the bridge over the Toronto Belt Line Ry. ravine is being carried out by the Dominion Construction Co., of Toronto, which also erected the temporary trestle at this point. The contractor for the construction of the bridge over the reservoir ravine is Wells & Gray, Ltd., Toronto. The two steel trestles were removed by James Finley, structural contractor, Tweed, Ont. The erection of the temporary trestle over the reservoir ravine was done by C.P.R. forces.

The whole work is being done under the direction of J. M. R. Fairbairn, Assistant Chief Engineer, Eastern Lines; the bridges having been designed by P. B. Motley, Engineer of Bridges. J. H. Barber is Engineer in Charge on the work.

Canadian Society of Civil Engineers

The Canadian Society of Civil Engineers' Council has unanimously approved of a suggestion by the committee on society affairs, to change the name to the Engineering Institute of Canada, and a ballot of the members is being taken on the proposal.

The following members have been nominated for officers for 1918: For President, H. H. Vaughan; for vice presidents, H. E. T. Haultain, R. F. Hayward, J. G. G. Kerry, C. H. McLeod.

For councillors: District 1, Montreal and District, C. H. Bristol, Ernest Brown, J. McD. Robertson, O. Lefebvre. District 2, Maritime Provinces, W. A. Duff, D. H. McDougall. District 3, Quebec Province, N. E. Brooks, Hon. G. R. Smith. District 4, Eastern Ontario, John Murphy, Alex. Gray. District 5, Western Ontario, L. M. Arkley, Peter Gillespie. District 6, Prairie Provinces, G. D. Mackie, L. A. Thornton. District 7, British Columbia, A. E. Foreman, E. G. Matheson.

Electric Power Development Plans in British Columbia.—Some of the details of the West Kootenay Power Co.'s power development plans in connection with the opening up of mines in the Copper Mountain district, near Princeton, B.C., have been announced. The power line will be about 100 miles long, with branches to Penticton and Princeton. In addition to supplying the mines to be opened up at Copper Mountain, and the prospect of those at Camp McKinney being reopened, the company will supply power to the Kettle Valley Ry. shops at Penticton. Surveys for the power line are reported to be in progress under F. M. Kerby. The project is expected to cost about \$2,000,000. L. A. Campbell is General Manager of the West Kootenay Power Co., and J. J. Warren, President K. V. R., is said to be interested in the project of the Canada Copper Corporation which is opening up the mines at Copper Mountains. This latter point is to be given an outlet to the railway by the building of a branch of the K. V. R.

26739. Nov. 14.—Ordering Canadian Northern Quebec Ry. to establish non-agency station at St. Alexis and stop local passenger or mixed trains on flag to pick up or debark passengers; order effective forthwith and rescinding order 25792, Dec. 29, 1916, in so far as it authorized closing of station.

26740 to 26742. Nov. 15.—Ordering Canadian Northern Quebec Ry. to install gates at Darling, Davidson, and Chambly Sts., Montreal, to be operated by day and night watchmen; 20% of cost to be paid out of railway grade crossing fund; 30% of maintenance and operation to be paid by City of Montreal.

26743. Nov. 14.—Ordering Canadian Northern Pacific Ry. to fence its line from mileage 56 to 69, Kamloops Subdivision, B.C., by Dec. 31.

26744. Nov. 14.—Authorizing C.P.R. to build extension to spur for T. Eaton Co., Saskatoon, Sask.

26745. Nov. 14.—Authorizing Local Improvement District 190, Okotoks, Alta., to make highway over C.P.R. MacLeod branch, on boundary line between Secs. 6 and 7.

26746. Nov. 16.—Authorizing C.P.R. to build for Western Elevator Co., Winnipeg, crossing over tracks at Asquith, Sask.

Gross Railway Earnings January 1 to October 31.

	1917	1916	1915
C. P. R.	\$121,681,000	\$110,855,000	\$80,392,000
G. T. R.	55,152,459	52,700,341	41,568,485
C. N. R.	33,756,800	30,497,200	19,742,700
	\$210,590,259	\$194,052,541	\$141,703,185

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1916, from July 1, 1917:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease

Totals . . . \$54,189,580 \$49,670,728 \$4,518,852

Approximate earnings for October, \$5,844,525 and for three weeks ended Nov. 21, \$3,859,407, against \$5,660,321 and \$3,731,151 for same periods 1916.

Grand Trunk Pacific Ry. Earnings.

The approximate earnings of the Prairie Section, 916 miles, for October, were \$767,073 against \$566,016 for Oct. 1916, and the aggregate earnings for four months ended Oct. 31, were \$2,282,447 against \$1,622,621 for the same period 1916.

Organization and Work of Canadian Railway Association for National Defence.

Canadian Railway and Marine World for November contained full particulars of the organization of the association above mentioned, and of the membership of some of its committees. Towards the end of October, offices were opened at 263 St. James St., Montreal, in charge of W. M. Neal, heretofore acting Superintendent of Car Service, C.P.R., as General Secretary, who has a staff drafted from the various railways, and including C. P. Riddell, for a number of years in the G.T.R. Transportation Department, and latterly in charge of the General Superintendent of Transportation's office on that line.

The association's main work, just now, is to recover from the United States a large number of Canadian owned cars, or an equivalent number of cars of other ownerships, and progress is being made in that direction. Urgent representations have been made to the American Railway Association at Washington, as to the necessity for arranging immediately a general movement of empty cars from the U.S. into Canada to offset the heavily preponderating southbound loaded movement which has existed for several months past, and cars are now being received from the U. S. roads at a number of points. These cars are being loaded at once, those of U. S. ownerships being used generally for handling of pulp, pulpwood, paper, hay and other commodities which are offering in large volume for U. S. destinations. The car supply as regards purely Canadian traffic is steadily improving, as a result of the policy of Canadian railways to devote Canadian owned cars preferably to the handling of goods between Canadian points.

All Canadian lines are now interchanging cars freely among themselves, not only in loaded movement, but in delivery of empty cars from one line to another, regardless of routing or earnings, for instance, it having been brought to the association's notice that the movement of potatoes from Maritime Province stations served by the Canadian Government Railways was being delayed on account of shortage of suitable cars, arrangements were immediately made with another line to deliver some of the latter's specially constructed potato cars to the first mentioned road and the cars are now being used locally on the Canadian Government Railways, the loaning road deriving no freight revenue whatever from the movement. The association is working closely with the Dominion Food Controller's Department, and further arrangements for expediting the transportation of the potato crop will be made as it becomes necessary. Similar car distribution arrangements have been made in Western Canada, with a view to augmenting the deliveries of wheat to the head of the elakes, in order that the demands of the allied governments for movement of grain overseas may be met. Numerous other arrangements have been made at local points, so that, through close co-operation of the various roads, the shipping public is getting better service.

The success that will attend the efforts which the railways themselves are making will depend to a very great extent upon the degree of co-operation extended by their patrons. The public can render assistance in many ways, principal among which are: Loading cars to full capacity in every possible instance; releasing equipment promptly after arrival at destination; refraining from ordering

cars before they are actually needed, or ordering an unnecessarily large number of cars; and loading cars promptly after they are placed.

The existing waste of freight transportation facilities throughout the country is little realized by a large percentage of the shipping public. The principal factor in this waste is light loading. One Canadian road, owning a very large number of cars has an average car capacity of nearly 42 tons, but the average actual load per car is only 32 tons, and a great percentage of the traffic handled on this line is of such a nature as to permit cars to be loaded to full authorized carrying capacity. It is the association's purpose to reduce to the minimum the existing waste of car space, by pointing out to shippers and consignees the methods that may best be followed in loading various commodities to full capacity, and by keeping before them at all times the ways in which they can help the railways, and in so doing, help themselves. Bulletins on the subject of car loading are being prepared for issuance from time to time.

Meetings of passenger transportation committees, composed of operating and passenger traffic representatives of the railways in both Eastern and Western Canada have been held with a view to arranging generally a passenger train service that will fully meet the needs of the travelling public and at the same time permit of conservation of fuel and man power. It is anticipated that the result of the committees' deliberations will be of immense benefit, not only to the railways in discharging their duties to the public, by enabling them to cut off duplicate and unnecessary service, but to the country at large.

Canadian railways, co-operating with the public, have, since war was declared, effected a saving in passenger service equivalent to over 10,000,000 passenger train miles a year, and the work in which they are now engaged points to further reductions of about 2,250,000 passenger train miles a year. In undertaking their work the committee on passenger transportation feel that they will have the whole hearted sympathy and understanding of the travelling public, particularly as the results of their work will have a very great bearing on the conservation of fuel, with the importance of which the association has been impressed by the Dominion Fuel Controller and other Government representatives.

Personnel of Association's Organization.

The following is the organization effected up to date:

Special Committee on War and National Defence.—Lord Shaghnessy, President, Canadian Pacific; Sir Wm. Mackenzie, President, Canadian Northern; H. G. Kelley, President, Grand Trunk; A. H. Smith, President, New York Central.

Administrative Committee.—U. E. Gillen, Vice President, Grand Trunk, chairman; C. A. Hayes, General Manager, Eastern Lines, Canadian Govt. Rlys.; D. B. Hanna, Third Vice President, Canadian Northern; F. F. Backus, General Manager, Toronto, Hamilton & Buffalo; E. D. Borner, Vice President & General Manager, Michigan Central; J. H. Walsh, General Manager, Quebec Central; Sir George Bury, Vice President Canadian Pacific.

Western Sub-Committee of Administrative Committee.—F. P. Brady, General Manager, Western Lines, Canadian Govt. Rys.; W. P. Hinton, Vice President &

General Manager, Grand Trunk Pacific; Grant Hall, Vice President & General Manager, Western Lines, Canadian Pacific; M. H. MacLeod, General Manager, Western Lines, Canadian Northern.

All sub-committees in the West report to the Western Sub-Committee of Administrative Committee at Winnipeg, which, in turn, reports to the Administrative Committee at Montreal.

Maritime Provinces Sub-Committee of Administrative Committee and Maritime Provinces Sub-Committee on Car Service.—W. R. Devenish, Superintendent, Canadian Govt. Rys.; J. Bain, General Superintendent, Halifax & Southwestern; H. C. Grout, General Superintendent, Canadian Pacific.

Ontario Sub-Committee of Administrative Committee and Ontario Sub-Committee on Car Service.—D. Crombie, General Superintendent, Canadian Northern; H. E. Whittenberger, General Superintendent, Grand Trunk; J. T. Arundel, General Superintendent, Canadian Pacific.

The Maritime Provinces and Ontario Sub-Committees report to the Administrative Committee in Montreal.

Commission on Car Service: A. Hatton, General Superintendent Car Service, Canadian Pacific, Chairman; W. N. Rippey, Superintendent Car Service, Canadian Govt. Rys.; J. E. Duval, General Superintendent Transportation, Grand Trunk; W. A. Kingsland, General Superintendent, Canadian Northern; W. S. Moy, Car Accountant, Quebec Central; W. A. Griffin, Supt. Traffic, Timiskaming & Northern Ontario; A. E. Locke, Supt. Car Service, Toronto, Hamilton & Buffalo.

Western Sub-Committee on Car Service.—J. P. Driscoll, Supt. Car Service, Canadian Northern; T. P. White, Car Service Agent, Grand Trunk Pacific; E. D. Cotterell, Supt. Car Service, Canadian Pacific; P. B. Robb, Car Service Agent, Canadian Govt. Rys.; C. E. Dafoe, General Freight Agent, Midland Ry.

The Commission on Car Service will assume duties of sub-committee for lines in Quebec Province.

Committee on Passenger Transportation, Eastern Lines.—C. S. Sims, Resident Vice President, Delaware & Hudson Railroad, Chairman; G. T. Bell, Passenger Traffic Manager, Grand Trunk; J. E. Duval, General Superintendent Transportation, Grand Trunk; H. T. Malcolmson, Superintendent, Toronto, Hamilton & Buffalo; G. C. Martin, Gen. Freight & Pass. Agent, Toronto, Hamilton & Buffalo; H. H. Melanson, Passenger Traffic Manager, Canadian Govt. Rys. A. C. Barker, Asst. to General Supt. Canadian Govt. Rys.; A. Price, Asst. General Manager, Canadian Pacific; C. B. Foster, Asst. Pass. Traffic Mgr., Canadian Pacific; J. Balkwill, Superintendent, Michigan Central; L. W. Landman, General Passenger Agent, Michigan Central; D. Crombie, General Superintendent, Canadian Northern; R. L. Fairbairn, General Passenger Agent, Canadian Northern; J. T. Reid, Superintendent, Quebec Central; E. O. Grundy, General Passenger Agent, Quebec Central.

Committee on Passenger Transportation, Western Lines.—H. H. Brewer, General Superintendent, Grand Trunk Pacific; A. E. Rosevear, General Freight Agt., Grand Trunk Pacific; A. E. Warren, Asst. to General Manager, Canadian Northern; R. Creelman, General Passenger Agent, Canadian Northern; F. P. Brady, General Manager, Canadian Govt. Rys.; W. E. Duperow, General Passenger Agent,

Grand Trunk Pacific; D. C. Coleman, Asst. General Manager, Canadian Pacific; G. A. Walton, General Passenger Agent, Canadian Pacific.

Committee on Tariffs and Statistics.—Guy Tombs, Asst. Freight Traffic Mgr. Canadian Northern; H. E. Macdonnell, Asst. Freight Traffic Mgr. Canadian Pacific; R. J. Foreman, Asst. to Vice President, Grand Trunk; D. A. Story, Freight Traffic Manager, Canadian Govt. Rys.; G. C. Martin, Gen. Freight & Passenger Agent, Toronto, Hamilton & Buffalo; H. Clark, Gen. Freight Agent, Ottawa and New York; N. J. Ferguson, Gen. Freight Agent, Quebec, Montreal & Southern.

A committee on materials and supplies will be organized later.

Administrative Committee's Proceedings.

At a meeting in Montreal, Nov. 2, the relations of the Association with the Board of Railway Commissioners for Canada and the American Railway Association were discussed. The Canadian Association for National Defence will deal with the other bodies mentioned as circumstances may require. The railways having membership in the Canadian Association will deal direct with the Board of Railway Commissioners and the American Railway Association as heretofore, communicating with the Canadian Association with the object of having that association get in touch with the other two bodies mentioned as may be deemed necessary.

Reports from individual railways operating in Canada to the Board of Railway Commissioners as required by the latter will be made as heretofore. As regards reports to American Railway Association's committees principally the Commission on Car Service of that body, the General Secretary after consultation with the Commission on Car Service of the Canadian Association will communicate with the Washington Commission on Car Service as to the feasibility and agreement of latter to having all railways operated in Canada supply the necessary statistics to the Canadian Association, which will compile into one series of reports for all Canadian lines the data presently required from such Canadian lines by the Washington Commission on Car Service and forward all such statements to the latter body. If this suggestion is agreed to by the Washington Commission on Car Service it will relieve the railways of making duplicate reports, namely, one set for the Washington Commission on Car Service and one set for the Commission on Car Service of the Canadian Association.

The Canadian Association to take up at once with the Car Service Commission of American Railway Association the matters of present large volume of hay shipments from Canada to United States, suggesting that arrangements be made whereby hay in machine compressed bales be given preference in ordering and car supply in view of the fact that twice as much machine compressed hay can be placed in a car as that done up in the ordinary hand pressed bales, and that there is urgent necessity for taking advantage of every opportunity of conserving car supply.

The Commission on Car Service was instructed to communicate immediately with the American Railway Association committees at Washington, as to obtaining equalization of freight interchange as between Canada and the United States, on basis of equipment owned and the making of such arrangements as will ensure maintenance of equalization of such interchange.

As to the operating of excursion and other special trains, it was resolved that it is the sense of the association that special passenger trains be not run during the continuance of the war, except in case of extreme urgency.

It was resolved that sub-committees be appointed to handle matters affecting lines of railway in their respective territories—such sub-committees to report to the Administrative Committee, sub-committees in turn to appoint local committees as the former may consider necessary, which local committees shall report to the respective sub-committees. The personnel of the sub-committees appointed by the Commission on Car Service on Oct. 26 fill the Administrative Committee's requirements in this respect.

The Commission on Car Service will assume duties of sub-committee for lines operating in the Province of Quebec.

Committees to investigate the passenger service on railways in Canada to make recommendations for the elimination of unnecessary services, curtailment of services to meet actual needs of travelling public, are to be appointed at once and to be comprised of representatives of operating and passenger traffic departments of the lines principally interested. Each member of Administrative Committee is to forward to the General Secretary promptly names of representatives of his road to serve on such committees. It was suggested that a committee be appointed for lines operating east of Port Arthur and one for lines west of Port Arthur.

The Administrative Committee expressed its desire that the Commission on Car Service take in hand immediately the investigation of freight service on lines operating in Canada with a view to elimination of "fast" trains, handling of full train tonnage, handling of less than carload freight, bearing in mind the urgent necessity for conserving man power, motive power, and fuel, reports and recommendations to be made promptly to the Administrative Committee.

Commission on Car Service's Proceedings.

At a meeting on Nov. 3 in view of the heavy volume of overseas supplies now being handled and prospects of large increase in such tonnage to be handled during the ensuing winter season, it was considered necessary that the commission keep in close touch with the Director of Overseas Transport, or his representative, with a view to the making of arrangements whereby the maximum volume of supplies for the allies may be handled in the most efficient manner. The following resolution was adopted: "That request be made to the Director of Overseas Transport that he call upon this commission for any assistance that he may require in the transportation of overseas supplies and that he arrange for a representative of his department to attend meetings of this commission, of which he will be advised from time to time, with the object of effecting arrangements with a view to expediting movement of traffic, avoiding unnecessary accumulations and similar matters of interest to both bodies."

Having in mind the heavy deficiency in the supply of cars required for the movement of traffic in Canada, which is a direct result of the continued holding of Canadian owned cars in the car pool in effect in the United States and the growing loss of cars to such pool, the opinion of the commission is that pending return of a large number of cars from the U.S. to Canada and in order to avoid aggravation of present serious situation, the forwarding of Canadian owned cars to U.S. points should be discontinued. The following resolution was, therefore, adopted: "That Canadian owned box cars not to be loaded out of Canada beyond the tracks of the owner until the interchange is more equally balanced between Canada and the United States."

At a meeting of the Commission on Nov. 13 it was decided that before going further into the question of operation of freight trains and freight service generally, information be obtained as to present practices of various lines operating in Canada and the General Secretary was instructed to send circular letter to such lines asking them for complete report to be available for consideration at next meeting of commission, the principal points of enquiry to be as follows.

Are all freight trains, except live stock and perishable freight trains, required to handle tonnage equivalent to full haulage capacity of locomotive, if not, what reductions from 100% tonnage rating are allowed and in what circumstances?

What, if any, tonnage reduction allowed to trains handling live stock and how many cars of live stock required to be in train before such reduction permitted?

What, if any, stipulated speed for trains handling live stock?

What tonnage reduction, if any, allowed for trains handling perishables? How many cars of perishables per train required before such reduction permitted? What minimum speed stipulated, if any, for trains handling perishable freight?

What speed limit, if any in effect covering operation of dead or ordinary freight trains and what in the case of trains handling live stock or perishable freight?

What, if any, tonnage reduction, allowed way freight trains—1st, under agreement with trainmen or enginemen; 2nd, under other circumstances?

What is practice in regard to operation of "fast" or schedule freight trains? Are trains operated according to time table, regardless of tonnage? or is full tonnage insisted upon in every case, failing which, train set back or cancelled?

In handling of less than carload freight are sheds pulled daily for forwarding of cars on various routes, irrespective of amount of tonnage offering, or are lightly loaded cars set back to shed for completion of loading?

What figure is set as minimum weight of contents per car on l.c.l. freight before car allowed to go forward?

Are l.c.l. shipments accepted at sheds daily or only on certain days of week for various territories?

What is practice as regards picking up of less than carload shipments at way stations for movement to consolidation points? Is freight accepted and forwarded from way stations daily, or only on stipulated days of week? and is number of pickup cars for each subdivision or branch line regulated, or allowed to fluctuate according to daily conditions?

In order to provide for a uniform practice in the handling of requests for empty cars to be sent from United States to Canadian roads and thereby avoid possible confusion and misunderstanding, the following motion was passed: "That requests to the U. S. roads for empty cars be made by Canadian roads through the Canadian Railway Association for National Defence, instead of direct to the American Railway Association as in some cases heretofore, and that Canadian roads send to this association copies of their reports to the Washington Commission

on Car Service, giving particulars of empty cars received from U. S. lines and furtherance of such cars to connecting lines. All other empty cars received from American roads for return loading under other arrangements also to be reported to this association."

It is the desire of the Commission on Car Service that it be promptly advised of all arrangements made by or between Canadian roads for the general movement of empty cars from one line to another and the General Secretary was instructed to issue circular notice to all roads concerned accordingly.

The Commission on Car Service desires that in the case of complaints received by the association as to car shortage and similar matters and taken up with the roads concerned, such roads shall advise the association of the action taken by them in each case.

The Commission on Car Service requires that railways, members of this association, report to the association promptly any case of violation of instructions as outlined in circulars issued from time to time by the association, on matters coming within the jurisdiction of the commission.

It being thought probable that member lines not having officers included in the personnel of the Commission on Car Service would desire to personally present certain matters to the commission at its various meetings, the following motion was passed: "That general notice be sent to all members of the Canadian Railway Association for National Defence that at any time they wish to personally present matters to the attention of the Commission on Car Service, if they will so advise the General Secretary he will notify them of the next meeting of the commission, so that they may be present."

A suggestion was made that data be obtained from members of the association for the purpose of compiling information to be circulated amongst shippers and railways, as to standard loads, and that if such data be approved, the association communicate with railways, boards of trade, and similar organizations, with a view to insisting on such standards being observed wherever possible and thereby increase the available supply of cars very materially. The General Secretary requested to make the suggested enquiries forthwith and prepare the data as speedily as possible.

The question of loading cars to actual carrying capacity instead of stencilled capacity, or usual 10% in excess of stencilled capacity, was introduced by the chairman with the suggestion that Canadian lines undertake to adopt full capacity loading as the general practice in movement of traffic between Canadian points. After full discussion the following resolution was adopted: "That in the case of shipments between Canadian points, cars of 30 ton capacity, or under, will continue to be loaded when practicable to 10% in excess of stencilled capacity, that all cars of over 30 ton capacity to be loaded, when practicable, in accordance with their axle carrying capacity, and that in future when cars are stencilled, they shall be marked to show 'limit load' capacity instead of nominal capacity."

It was explained that under the proposed system the limit load for a 40 ton box car equipped with standard M.C.B. axles would be 132,000 lb., tare weight of car 38,000 lb., actual freight carrying capacity of car 94,000 lb., instead of 88,000 lb., as in present general practice.

The General Secretary was instructed to draft a form of circular to be issued by all roads operating in Canada containing instructions as to the above mentioned revised loading methods.

Committee on Passenger Transportation, Eastern Lines.

At a meeting on Nov. 13, C. S. Sims, Resident Vice President, Delaware and Hudson, was elected chairman.

After discussing the procedure to be followed by the Committee in discharging the duties assigned to it by the Administrative Committee, a working committee to analyze existing services in Eastern Canada, obtain suggestions and recommendations from the various railways and report thereon, was appointed as follows: H. H. Melanson, Passenger Traffic Manager, Canadian Govt. Rys.; R. L. Fairbairn, General Passenger Agent, Canadian Northern; Alfred Price, Assistant General Manager, Canadian Pacific; L. W. Landman, General Passenger Agent, Michigan Central; H. T. Malcolmson, General Superintendent, Toronto, Hamilton, and Buffalo; J. T. Reid, General Superintendent, Quebec Central; and J. E. Duval, General Superintendent Transportation, Grand Trunk.

In order to carry out the Administrative Committee's instructions to investigate the passenger service, and to make recommendations for elimination of unnecessary services and curtailment of services to meet the actual needs of the travelling public, the following subjects were suggested for consideration: Pooling competitive services and earnings. Increasing loading of sleeping cars and reduction in number of such cars per train, as practicable, railways to agree not to add extra sleepers to trains, until all berths in cars already allotted to train are sold. Elimination of club, observation and similar special cars. Reduction in speed of trains, especially local trains. Handling of express and delays to trains incident to heavy express traffic.

The General Secretary was instructed to ask all railways in Eastern Canada to submit immediately suggestions and information on the following points:

Total average daily regular passenger train mileage operated under existing working timetable, and similar figures for service in effect at this time last year.

Total average daily mixed train mileage operated under existing working timetable and similar figures for service in effect at this time last year.

Recommendation as to reduction or elimination of special services, such as club cars, observation cars and all other such services as might be termed unnecessary, giving specific information as to trains in which such cars now operated, points between which run and car mileage that would be saved by dispensing with such unnecessary services.

Explain practice as regards the supplying of extra sleeping cars, i.e., what percentage of lower and upper berths in regular cars required to be sold before additional cars requested or furnished.

What changes can be made in the way of converting straight passenger service to mixed service, i.e., where local passenger trains and freight trains being operated on certain branch lines, it might be possible to consolidate both services into a mixed service without seriously inconveniencing the travelling public, or to run mixed service three days a week and straight passenger service on the alternate days. It is felt that the public can be brought to see the importance of conserving rail transportation facilities by the adoption of a win-the-war policy of

eliminating unnecessary train service.

What, if any, passenger train reductions will be made effective Dec. 2. and what, if any, reductions effective Jan. 6, or on other than the dates mentioned? Reductions should be as great as possible, consistent with actual needs, so that the greatest degree of economy in fuel consumption and use of motive power and man power may be accomplished. Send list of proposed reductions showing points between which trains operated and mileage in each case, also class and frequency of service. If you cannot recommend reductions, give list of services on your line which might be dispensed with with least inconvenience, total of reductions recommended or suggested to be equal to at least 10% of present total average daily passenger and mixed train mileage.

The working committee met on Nov. 19, when statistics which had been prepared showing the existing passenger services and pointing to territories in which it appeared that reductions might be made without inconvenience to the public were read. After discussion of various competitive routes, such as Montreal-Quebec, Montreal-Ottawa, Montreal-Toronto, Ottawa-Toronto, etc., in which the two roads most interested are the Canadian Pacific and Grand Trunk, it was suggested by way of saving time, that those two lines jointly go over their respective services and prepare definite recommendations for presentation at next meeting. The replies of various member lines to the association's letter, calling for information, were placed before the meeting and the information embodied therein filed for further consideration and action.

In answer to enquiries as to reductions in service which will be made effective Dec. 2, 1917, and Jan. 6, the following replies were made: Effective, Dec. 2—nil; effective Jan. 6, as follows:

Canadian Pacific will reduce to about same basis as that of Jan. 1917.

Canadian Government Railways expect to make reductions similar to those effective Jan., 1917.

Grand Trunk will make approximately same reductions as were made in Jan., 1917.

Canadian Northern will make some reduction, but not in position to say definitely to what extent.

Toronto, Hamilton & Buffalo. No further reductions can be made.

Michigan Central. Reductions being made effective Nov. 25, equal to 8,640 passenger train miles a month. No further reductions contemplated at present.

St. Lawrence & Adirondack and Ottawa & New York do not anticipate making any further reduction, unless compelled to do so by shortage of fuel, owing to very serious inconvenience that would be caused public by interfering with present service.

Quebec, Montreal & Southern do not contemplate making any reduction, but mention the two trains which could be taken off causing least public inconvenience. If these two trains are taken off it would mean a reduction of 46% in the present passenger train mileage and a reduction of 28% in the total mileage of passenger and mixed trains, or 4,104 miles monthly—and would be a reduction of 53% as compared with Nov. 1916.

Maine Central. No further reduction recommended.

Algoma Central & Hudson Bay. Only one passenger train operated, no further reduction possible. This line has made

reduction of 60% in passenger service since 1913 and 84% reduction in mixed train service in same period.

Central Vermont. No further reduction can be made.

Quebec Central. Present conditions do not permit of any reduction being made, but if conditions change, will make such reductions as may be possible.

Western Sub-Committee on Car Service.

This sub-committee met in Winnipeg, Nov. 19, and elected J. P. Driscoll, Superintendent, Car Service, Canadian Northern, as chairman. The following local committees were recommended, subject to the sub-administrative committee's approval.

Committee 1, headquarters, Winnipeg, embracing territory from Port Arthur and Fort William to Manitoba's western boundary: R. C. Morgan, acting General Superintendent, Canadian Pacific; A. Wilcox, General Superintendent, Canadian Northern; H. H. Brewer, General Superintendent, Grand Trunk Pacific; W. A. Cowan, General Superintendent, Canadian Govt. Rys.; C. E. Dafoe, General Superintendent, Midland Railway; M. B. Murphy, Manager, Winnipeg Joint Terminals.

Committee 2, headquarters, Calgary, embracing Saskatchewan and Alberta; W. A. Brown, General Superintendent, Canadian Northern; J. M. Cameron, General Superintendent, Canadian Pacific; H. H. Brewer, General Superintendent, Grand Trunk Pacific.

Committee 3, headquarters, Vancouver, embracing British Columbia: D. R. Campbell, Assistant General Manager, Canadian Northern; W. A. Mather, Assistant General Superintendent, Canadian Pacific; H. McCall, General Superintendent, Grand Trunk Pacific.

It was decided to advise the local committees of their appointment, and in what matters they would report to the sub-committee, and that from time to time they will be advised of any special matters on which the sub-committee expects special investigation and report.

The question of the appointment of a secretary for the sub-committee was discussed as, no doubt, a large amount of statistics and correspondence will have to be handled; but the matter was left over for a future meeting.

It was decided that the sub-committee hold weekly meetings on Thursdays at 2.30 p.m.

Canada's Splendid Railway Service.

A statement issued from the Association's office, Nov. 22, says: "Certainly no reduction in freight and passenger rates are being looked for as the result of railway economies now being effected by the Canadian Railway Association for National Defence. Canada is today getting the best and cheapest railway service in the western world. In spite of the car shortage created by the abnormal balance south bound over north bound traffic, in spite of war requirements, higher labor charges, the necessity of importing coal for locomotives, and the low efficiency of the coal due to lower winter temperatures in Canada, there is a greater degree of efficiency reached in the operation of Canadian railways than anywhere else in the new world. Car shortage is being reduced day by day. The percentage of freight cars out of service for repairs in Canada is lower than the percentage on U.S. roads and the average cost to the Canadian traveller or shipper is less.

"For the year ended June 30, 1916, the charge for moving an average ton of

freight one mile in the United States was 0.716 of a cent. In Canada it was 0.653 of a cent. In the U. S. the average passenger mile cost the passenger 2.006c. In Canada it cost him 1.954c. At the same time the Canadian railways were hauling their coal from foreign mines and paying duty on it. They were getting less work from the same coal because of the lower winter temperatures in Canada. They paid more for labor and yet charged the public less for their services than any of the other roads on this continent."

In connection with the statement made at Washington that the U. S. railways have curtailed passenger service by over 20,000,000 passenger train miles per annum, the Canadian railways point to a reduction of over 10,000,000 passenger miles per annum in Canada, which, in view of the lower total mileage in the Dominion as compared to the U. S. is a vastly greater pro rata reduction.

Railway Finance, Meetings, Etc.

Atlantic, Quebec and Western Ry.—A supplemental mortgage dated June 30 has been filed with the Secretary of State, modifying the first mortgage trust deeds of June 26, 1905 and July 3, 1906. There are \$2,548,675 of the 1st mortgage debentures outstanding, covering the road in operation from Paspébiac, on the old Atlantic and Lake Superior Ry., to Gaspe, Que., 102¾ miles. Under the agreement adopted by the bondholders, interest payments will only be made in so far as they are earned.

Canadian Northern Ry.—An extension agreement dated Aug. 17, between the Canadian Northern Ry., the Mount Royal Tunnel and Terminal Co., the Canadian Northern Ontario Ry., the Canadian Northern Quebec Ry., and the Central Trust Co. of New York, as trustee and holders of the one year 5% secured gold notes of the C. N. R., issued under a trust agreement of Sept. 1, 1916, has been deposited with the Secretary of State, at Ottawa.

There has been deposited with the Secretary of State at Ottawa duplicate of an extension agreement dated Oct. 31, between the C.N.R. Co. and the Central Trust Co. of New York, as trustee and holders of one year 5% gold bonds issued under an agreement of Sept. 1, 1916.

Canadian Pacific Ry.—The directors have declared a dividend for the quarter ended Sept. 30, of 2½¢ on the common stock, being at the rate of 7% per annum from revenue and 3% per annum from special income account, payable Dec. 31 to shareholders of record Dec. 1.

Grand Trunk Ry.—An agreement of conditional sale, made between Blair and Co., and the G.T.R., and the Equitable Trust Co. of New York, respecting Series D equipment bonds, has been filed with the Secretary of State at Ottawa.

The Grand Trunk Ry. paid off its \$4,000,000 two year notes at 5%, Nov. 1, through Blair & Co., New York.

Grand Trunk Pacific Ry.—There has been deposited with the Secretary of State at Ottawa a mortgage agreement dated Oct. 18, between the company and the Crown, represented by the Minister of Finance, securing a loan to the company not exceeding \$7,500,000. This is the loan authorized by the Dominion Parliament at its recent session.

Guelph Junction Ry.—A dividend at the rate of 7½¢ for the quarter ended Sept. 30, was declared at a meeting of direc-

tors in Guelph, Ont., Nov. 23. This dividend will bring up the total received by the City Council, which owns nearly all the stock, for the year to \$43,350.

Ottawa and New York Ry.—There has been deposited with the Secretary of State at Ottawa, a discharge of mortgage dated April 1, 1899, made between the O. and N. Y. Ry., and the State Trust Co. of New York, for the purpose of securing \$500,000 bridge sec. 1, mortgage 4% gold bonds of the company.

Ottawa Terminals Ry.—The board of directors for the current year, elected at the recent annual meeting, is as follows: H. G. Kelley, President; U. E. Gillen, Vice President; Frank Scott, Secretary and Treasurer; W. H. Biggar, K.C., J. E. Dalrymple, H. R. Safford and R. S. Logan.

Temiscouata Ry.—The bondholders' committee in London, Eng., has been advised that owing to the decreased revenue during the past year, there is not sufficient net revenue to pay a dividend on the consolidated mortgage income bonds, and that the balance, after paying the prior lien bond interest and redemption fund, is being applied to strengthen the company's resources. Consequently, no dividend will be paid this year on the provisional certificates issued by the committee. For the previous year, 1% was paid on the certificates.

Timiskaming and Northern Ontario Ry.—Passenger earnings for September, \$65,253.67; freight earnings, \$122,299.62; total earnings, \$187,553.29 against \$66,762.03 passenger earnings; \$95,895.19 freight earnings; \$162,657.22 total earnings for Sept. 1916.

Appeal to G.T.R. Employees in United States.—H. G. Kelley, President, G.T.R., has issued the following circular to employees in the U.S.: In the interest of conserving the foodstuffs of the country by the elimination of waste, it is urgently requested that employees of the carriers engaged in the transportation of foodstuffs, exercise such care and diligence as will minimize the damage to this class of freight when in carrier's custody for transportation and lessen the economic loss. I appeal to all Grand Trunk employees, particularly those engaged in station, yard and train service, as a patriotic duty to the nation, to exercise such precaution in providing proper refrigeration, ventilation, protection from the weather, and care in loading, switch and train handling of carload and less than carload shipments of food products, as will eliminate waste. Observe the slogan "Efficient, maximum service," and in so doing you will render an enduring service to your country. The Nation is counting on you."

Coupler Repairs.—In a paragraph on this subject in Canadian Railway and Marine World for November, page 432, it was stated, in reference to an investigation undertaken recently by one of the larger railways in the U.S., that the expense of coupler repairs for 1916 was \$197 a car. The amount per car should have been given as \$1.97.

Winnipeg jitneymen whose licenses have been suspended for non-compliance with the bonding bylaw have made application to the city council's licensing committee for a refund of the license fee proportioned to the period of suspension. A report as to the number of licenses affected, with the amount involved, is being prepared for the committee's consideration.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and Great Waterways Ry.—Track is reported to have been laid to beyond mileage 274, about 18 miles from McMurray, Alta. A contractors' freight and passenger train service was put in operation from Lac la Biche, the terminating point of the permanent train service, Oct. 27. It is expected to have track laid to McMurray by the end of the year.

J. D. McArthur, President, is reported to have said in Winnipeg, Nov. 18, that steel had been laid to McMurray, on the Athabasca River, that the line would be finished up and a full train service put in operation next year, and that it is expected to arrange for a regular steam boat service from McMurray to the Arctic Ocean when financial conditions become easier.

The line starts from the Edmonton, Dunvegan and British Columbia Ry. at Carbondale, 143 miles from Edmonton, and runs northerly and easterly to McMurray, 290 miles. Track was laid to mileage 174.5 at the end of 1915, and was resumed in Dec. 1916, it being estimated that 40 miles additional had been laid to the end of that year. The point to which traffic is now being operated is on the river, and connection with McMurray is made by means of scows. (July, pg. 273.)

Alma and Jonquiere Ry.—The Quebec Legislature is being asked to extend the time within which the company may build its projected railway from LaBarre or St. Gedeon, on the Quebec and Lake St. John Ry., to Little Discharge, to Alma Island, and through Signai, La Barre, Kenogami and Jonquiere Tps. to Jonquiere station on the Q. and St. J. Ry. The company was incorporated originally in 1913, and in 1915 secured an extension of time to build its line. (Sept., 1915, pg. 351.)

Burrard Inlet Tunnel and Bridge Co.—With only one dissentient, and one representative not voting, it was decided at a meeting of shareholders held Oct. 25, to apply to the Dominion Parliament for a renewal of the company's charter. The company, which consists of the municipalities surrounding Burrard Inlet, Vancouver, has power to build a bridge across the Second Narrows of Burrard Inlet, and a tunnel in the same vicinity, with railway lines to connect with all railways in Vancouver. The company's charter powers expire in Feb. 1918. The shareholders felt that while there was very little prospect that the company would ever build the bridge, it possessed valuable assets in the shape of data collected by engineers, and plans, which would be entirely lost if the company went into voluntary liquidation. (Nov. pg. 433.)

Canadian Northern Ry.—A press report dated Nov. 12 stated that the track laid beyond Sanguedo, Alta., on the line heading from Peace River, was being finished up and got ready for traffic.

Application has been made to Vancouver City Council for a permit for the erection of train sheds at the False Creek station, now nearing completion. The estimated cost of the train sheds is \$170,000.

In connection with the False Creek reclamation works at Vancouver, the Supreme Court of Canada has given judgment in favor of Champion and White, in their suit against the city. The firm owns 300 ft. of water frontage on False Creek, and claimed that the construction of the sea wall by the C.N.R. under the agree-

ment with the corporation, would materially injure their property. The trial judge decided in favor of the plaintiffs, the B.C. Court of Appeal reversed the decision, and the original decision has now been affirmed by three out of five judges of the Supreme Court. It is expected that the case will be taken to the Imperial Privy Council. These proceedings are delaying the progress of the reclamation works.

The British Columbia Minister of Railways has sent a lengthened communication to the Dominion Government with regard to the obligations entered into between the B.C. Government and the Canadian Northern Pacific Ry., pointing out that the province must look to the Dominion Government to carry out the company's contractual obligations now that the company's affairs are being taken over. The letter concludes: "The province claims for a restoration to the trust funds of the amounts improperly paid over to the company for specific performance over the company's various undertakings and for a specific release in respect of its guarantee of the company's bonds.

We are officially advised that no arrangements have been entered into with regard to the building of a union station at Victoria, B.C., by the Canadian Northern Ry. and the Esquimalt & Nanaimo Ry. It is not likely that there will be any move made in regard to a new passenger station for Victoria until after the war. (Nov., pg. 433.)

Canadian Pacific Ry.—We are officially advised that the company has no present intention of building a new station at Lethbridge, Alta., as stated in a recent press report.

We are officially advised that neither the C. P. R. nor its subsidiary the Esquimalt & Nanaimo Ry., has in contemplation the building of a dock at Victoria, B.C., in connection with the Songhees Indian Reserve development plans, as stated in a recent press report. All the harbor development work at present in progress at Victoria is being carried on by the Dominion Public Works Department. (Nov., pg. 433.)

Cavalier County Ry.—A recent decision of the Board of Railway Commissioners granted the Cavalier County Ry. permission to construct a siding at Windygates, Man., the company to pay the costs. The Cavalier County Ry., we are advised, is a United States corporation, having its office at Langdon, N.D., and the following officers: President, G. Grimson; Secretary, R. Robertson, Stillwell, N.D.

Windygates is the terminus of the extension of the C.P.R. Snowflake branch, and is situated at the International Boundary between Manitoba and North Dakota. There are two branch lines in Cavalier County extending toward the boundary, one a Great Northern Ry. line, extends across the boundary to Morden, the title of the Manitoba end of the line being the Midland Ry. of Manitoba, and the second, a Northern Pacific branch, points rather more westerly than Windygates.

Central Canada Ry.—During the recent summer four piers of the substructure of the bridge across the Peace River have been completed, and three more are yet to be finished. These three piers are in deep water, work on them was started last winter and will be completed during the coming winter. All the other substructure work and the approaches have been completed. The east approach to the

bridge is 700 ft. long, running to 50 ft. high. This took 250,000 cubic yards of material for the fill, all of which was moved this year. Provision is made on both approaches for a 20 ft. highway in addition to the railway tracks. J. E. Young, of the Canadian Bridge Co., is reported to have arrived at the bridge site for the purpose of arranging for the erection of the superstructure which it is expected to have in position by the fall of 1918. (June, pg. 224.)

Dolly Varden Mines Ry.—The railway which the British Columbia Legislature has authorized the company to build will extend from the company's wharf at Arctic Arm to the Dolly Varden and Wolf claims in the Kitgault Valley of Northern British Columbia. A considerable amount of construction work is reported to have been done during the present season by R. B. McGinnis, Superintendent for the company, who was in Victoria, B.C., Nov. 14. He stated that work would be suspended before the end of December but would be resumed in April, and would be completed by the end of 1918. (June, pg. 224.)

Edmonton, Dunvegan & British Columbia Ry.—The Edmonton, Alta., City Council on Nov. 7, adopted the following report from a special committee which had under consideration the company's application respecting its entrance into the centre of the city: "That the E. D. & B. C. R. be granted the right to use 30 ft. of 121st St. adjoining the existing G.T.P. right of way, but with respect to Mackenzie Ave. (104th Avenue) the committee is of the opinion that the portion of the street not granted to the G.T.P.R. is too narrow to warrant any grant of that avenue. It is, however, recommended that until the G.T.P. is ready to use the north 40 ft. of Mackenzie Ave. the E. D. & B.C. Ry. be granted a license to use 15 ft. thereof." (Nov. pg. 433.)

Grand Trunk Pacific Ry.—The question of the completion of the company's hotel at Regina, Sask., was discussed at the meeting of the city council, Nov. 5. A deputation from the council subsequently waited upon one of the company's officers at Winnipeg, and the council was advised Nov. 15, that the company's architects had been instructed to prepare estimates for the completion of part of the building during 1918.

The projected spur line from the company's railway to the market place in Calgary, will not be built this year, according to a letter received by Commissioner Graves, Nov. 4. It is expected, however, that the council will consent to the postponement of construction until the spring.

Traffic on the G.T.P.R. main line was suspended for a couple of days by a land slide near Kwinitsa, 54 miles east of Prince Rupert, B.C., on Nov. 1. The line was buried 35 ft. deep with debris for a distance of over 100 yards. (Nov., pg. 433.)

The Grand Trunk Ry. is being asked to remove its siding on Bathurst St., London, Ont., between Waterloo and Wellington Sts., on the ground that it interferes with the operation of the London & Port Stanley Ry.

We are officially advised that the company has installed the absolute permississ block signalling system on its single track line between Shelburne, N.H., and Bethel, Me., 16 miles. The installation was done by the company's own forces, the material

being purchased from the General Railway Signal Co., Rochester, N.Y. The signals are bottom post, d.c. low voltage type 2A.

In connection with an application to the Windsor, Ont., City Council for the granting of patents for water lots at the foot of Brock St., provided that the property is used for a competitive ferry line, Alderman Howell explained that a number of people represented by C. Miller, barrister, Toronto, were working in conjunction with the G.T.R., with a view to erecting an hotel, and a new station with covered tracks on the land between Brock and Goyeau Sts., and that, in connection with the station and hotel, it was proposed to operate a ferry service from Brock St. to Brush St., Detroit, Mich., at which point the G.T.R. has a slip dock and a station. A motion to postpone action until plans of the proposed project were submitted resulted in a tie, six aldermen voting each way. The mayor gave a casting vote in favor of the postponement, stating that the promoters would not be deterred thereby. O. E. Fleming, K.C., Windsor, is said to be looking after the matter for the promoters. (Nov., pg. 433.)

Hydro Electric Power Commission of Ontario.—The Board of Railway Commissioners has ordered the G.T.R., the Michigan Central Rd., and the Niagara, St. Catharines and Toronto Ry. to execute their agreements with the commission, which have to do with the building of a power development canal and construction railway, crossing the railways named.

Intercolonial Ry.—Tenders are under consideration for the erection of an extension to the freight sheds at Halifax, N.S. (Nov. pg. 433.)

The Kettle Valley Ry. is making surveys for railway from Princeton South to Copper Mountain, approximately 14 miles, to reach a copper mine being developed by the Canada Copper Corporation, Ltd. The track will leave the main line in Princeton yard, cross the Similkameen River to the east side, and follow fairly close to the river, almost due south all the way. In addition to 14 miles of main track, there will be, probably, 2 miles of sidings and loading tracks at the mine and at the proposed concentrator. The main working tunnel at the mine is about 1,100 ft. higher than Princeton yard. The maximum gradients will be 2.2% from Princeton to the mine with all down grade in the other direction, or with the heavy traffic. The maximum curvature will be 14 degrees, or 410 ft. radius. It is the intention to build a standard gauge line on which heavy traffic may be handled, using 80-lb. and 85-lb. rails, good ties, and K.V.R. standard bridges and trestles. The location is not completed, but surveys so far show heavy work. For 4 miles on the south end, the material to be moved is nearly all solid rock; for the balance the material is mixed—solid rock, loose rock, hardpan, etc. Approximate estimates show the material to be moved in grading as 720,000 cubic yards, 40% of which will be solid rock. Tunnels in solid rock, 1,200 lin. ft. Timber in trestles, 2,000,000 ft. b.m. A bridge across the Similkameen River 250 ft. long, kind of bridge not yet decided upon. It is the intention to ask for tenders for the grading early in December, to get part of the work done during the winter, and have the line completed in about a year. A. McCulloch, Chief Engineer K. V. R., is in charge of surveys and will have charge of construction.

Pere Marquette Ry.—The President of the P. M. R., accompanied by a number of the company's officers, visited Sarnia, Ont., recently and inspected the company's property there. A deputation from the Sarnia City Council saw the officers in connection with the erection of the projected new railway station. (Sept., pg. 351.)

National Transcontinental Ry.—A press report states that negotiations are in progress between the Railways Department and the Quebec Ry., Light & Power Co., for the electrification of the government railway between Sillery Cove, and the terminal station at Champlain market, Quebec. (Oct., pg. 393.)

Quebec and Saguenay Ry.—A press report states that the completion of the line as far as Baie St. Paul, Que., was expected to be completed by Dec. 1, and that the rest of the line to Murray Bay will be ready for operation by next summer. (Nov., pg. 394.)

Northern New Brunswick and Seaboard Ry.—We are officially advised that while negotiations have taken place between the New Brunswick Government and the St. John and Quebec Ry. in connection with the act providing for the taking up of the rails on the N. N. B. and S. Ry. and relaying them on the St. J. and Q. Ry., it was decided not to remove the rails, and it is said that the St. J. and Q. Ry. will be able to obtain the rails required from another source. (Nov. pg. 433.)

Quebec and Atlantic Ry.—The Quebec Legislature is being asked to incorporate a company with this title to build a railway from Quebec City to Chicoutimi, thence to the provincial boundary near Cape St. Charles on the Labrador coast, with branch lines northerly and southerly from the main line, and to make connection in the City of Quebec with the National Transcontinental Ry. L. Cannon, Quebec, is solicitor for the applicants.

Standard Chemical, Iron and Lumber Co.—We are officially advised that this company is building a logging railway in connection with its factory at South River, Ont., to get out cordwood. The line is standard gauge, and is to be laid with 56 lb. steel rails. It is expected to complete seven miles of the line, with about a mile of sidings by the end of this year. The contractors are Chambers, McQuigge and McCaffrey. This line will be extended from time to time as the company's lumbering operations render it necessary. The company has bought a 50-ton climax geared locomotive and sixteen 34 ft. flat cars.

The company proposes to build a logging railway in connection with its plant at Donald, Haliburton County, during 1918.

St. John and Quebec Ry.—We are officially advised that track has been laid from Gagetown to Queenstown, N.B., 8.5 miles, on the Gagetown-Westfield extension, and that it is expected to have the remaining 29.3 miles of the extension completed in 1918. The Nova Scotia Construction Co., Sydney, N.S., has the contract. C. O. Foss, Fredericton, N.B., is Chief Engineer. (Nov., pg. 434.)

Timiskaming & Northern Ontario Ry.—We are officially advised that work is in progress on the revision of the line between mileage 63 and 66.5. This is a part of the line built to the original plans and specifications, and the revision is being made to bring the portion of the line up to the standard finally adopted. The revision is 35 miles long and will reduce the distance 866 ft.; North bound gradients from 1% to 0.4% and southbound

from 1% to level, number of curves 6, and maximum curvature from 7° to 3° and the total curvature by 309° 15'. The work is being done by the Port Arthur Construction Co., Toronto. (June, pg. 225.)

Toronto, Hamilton & Buffalo Ry.—We are officially advised that the plans for new yards at Bracebridge, Ont., which have been somewhat modified from those originally made, have not yet been filed with the Board of Railway Commissioners. Arrangements have been made, however, with the municipal authorities interested for the diversion of roads, building of railways, etc. The plans involve the diversion of the Michigan Central Rd.'s Niagara branch, the rearrangement of the Canadian Niagara Power Co. power line spans and the diversion of gas mains and telephone lines.

The question of the extension of the company's tracks at Kinnear yard in the southeastern part of Hamilton, came before the Board of Railway Commissioners, Oct. 22, and on subsequent days. One of the company's arguments in support of its plans was that it is going to spend \$600,000 upon the improvement of its yards at Bridgeburg, and that the extension of the Kinnear yards, by the acquisition of part of the park property, is essential for car working to make possible a 10-hour freight movement to Toronto.

Application is being made to the Board of Railway Commissioners for permission to build three spur lines crossing New York St., Brantford, Ont. (Nov. pg., 434.)

Toronto Terminals Ry. Co.—The progress made during the summer with the new union station at Toronto is such that it is expected that the whole of the outside work on the main building will be completed by the end of the year. Owing to difficulties of getting stone and other materials, partly due to the state of traffic on the railways, the delivery of material has not been as free as it might have been. As a consequence the progress on the interior work has not been what was expected. The offices and the platforms are not expected to be completed for another year. (Jan., pg. 19.)

War Features in Victory Loan Parade.—The principal features in the Victory Loan parade at Montreal, Nov. 19, were a British tank, and a section of a captured German submarine. These two exhibits were used previously through the courtesy of the British Government, in connection with the Liberty Loan campaign in New York City. The tank was taken to Montreal at the expense of Lord Shaughnessy, and the cost of carrying the submarine to Montreal was borne by Jas. Carruthers, President, Canada Steamship Lines. The submarine reached Montreal, via St. John, N.B., Nov. 16, and the work of transferring it from the waterfront to Victoria Square, where it was an exhibition, was looked after by J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines, and by the staff of Canadian Vickers, Ltd. The tank was subsequently conveyed to Toronto and was on exhibition in the Victory Loan parade on Nov. 21.

The Canadian Tie and Lumber Co., Ltd. has been incorporated under the Dominion Companies Act, with \$150,000 authorized capital and office at Toronto, to carry on a general tie and timber business, and to carry into effect an agreement between J. H. Durham, Louisville, Ky., and S. F. McCandless, Toronto, in connection with a contract made with the G.T.R.

Canadian Transportation Men, Engineers Etc., in the War.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We should be glad to be favored in this respect.

1st Battalion, Canadian Railway Troops.—Several weeks ago, the Commander in Chief, Sir Douglas Haig, called at this battalion's headquarters in Belgium, and as the officer commanding, Lt. Col. Blair Ripley, formerly Engineer of Track Elevation, C.P.R., North Toronto, was absent, Sir Douglas wrote him a letter of appreciation of the work the battalion had done since reaching the front.

Canadian Railway Troops and Engineers.—The Militia Department at Ottawa gave out, on Nov. 1, the composition of the Canadian Expeditionary Force in Belgium and France, including among others the following: Railway troops, 10 battalions; engineers, field companies, 12; base company, 1; army troops companies, 4; tunneling companies, 3; railway operating companies, broad gauge, 1; narrow gauge, 1; railway construction corps, 1; construction company, 1.

The New Brunswick Power Co. which owns and operates the St. John Ry., St. John, N.B., has sent the usual Christmas box to each of its employes at the front, together with a personal letter from the President, L. R. Ross. This is the third year this has been done, the number supplied having been originally 62, but owing to casualties, the number this year is only 33.

Railway Work in the British Offensive.—The official report on the recent operations in the Cambrai district of France says: "Much credit is due to the transportation service for the rapidity with which the concentration for the operations of the last few days was effected. Roads and railways, both broad gauge and light, have been developed, and, since the advance, have been extended in a manner which has contributed largely to the success of our preparations and subsequent operations."

The Timiskaming and Northern Ontario Railwaymen's Patriotic Association, up to July 31, contributed \$15,223.67 to the Red Cross and \$18,216.26 to the Canadian Patriotic Association. In addition to these amounts, \$13,660.91 has been donated to enlisted employes direct, and the T. & N. O. R. Commission has subscribed \$5,000 and \$10,000 to the Red Cross and Patriotic Associations respectively.

PERSONAL NOTES.

Lieut. J. M. Blake, Devon Regiment, killed in action in France, Oct. 4, was a grandson of Hon. John Ross, at one time Attorney General for Upper Canada, and from 1852 to 1862, one of the directors and the first President of the G.T.R.

Lieut. L. H. Biggar, son of W. H. Biggar, K.C., Vice President and General Counsel, Grand Trunk & Grand Trunk Pacific Railways, Montreal, was reported early in November as having been wounded. We were advised on Nov. 14 that he was not seriously injured, but was suffering from concussion, due presumably to a shell having exploded very near him. He cabled that he hoped to be all right again very soon. He is in the 42nd Bat-

talion, one of those sent over by the 5th Royal Highlanders of Montreal. He left Canada in Oct. 1916 and has been in France since April 1 last.

Major G. A. E. Bury, son of Sir George Bury, Vice President, Canadian Pacific Ry., arrived in Montreal, Oct. 28, on two months sick leave. He went overseas with the 26th Battalion as Captain and after being promoted to Major, was appointed Deputy Assistant Quartermaster General of the Canadian Training Division.

F. T. Caldwell, Division Superintendent of Telegraphs, Grand Trunk Pacific Ry. & G.T.P. Telegraph Co. (lines in Ontario, Manitoba and Saskatchewan) and Superintendent of Time Service, G.T.P.R., Winnipeg, has been granted extended leave of absence, consequent on entering military service with the U.S. Army Signal Corps, as Lieutenant.

Lieut. J. H. Cardew, M.C., who died of wounds in October, was educated at McGill University, Montreal, and held the degree of M.Sc. of the University. He was for some time Electrical Engineer of the Indian State Railways.

Lt. Col. E. E. Clarke, Assistant Director of Transport & Supplies at Militia Headquarters, Ottawa, is reported to have been appointed Director General of Supplies and Transportation, to succeed Brig. Gen. J. L. Biggar, who has been appointed acting Quartermaster General.

Lt. Col. J. J. Creelman, son of the late A. R. Creelman, General Counsel, C.P.R., has retired from his candidature to represent Montreal's St. Antoine Division in the House of Commons, and announces that he is ready to return to the front.

A son of H. J. Cowie, European Agent, Canada Steamship Lines, Liverpool, Eng., has been promoted to Captain and given the Military Cross for services performed at Lens on Aug. 14.

Provisional Lt. Col. J. S. Dennis, Calgary Battalion, Reserve Militia, Chief Commissioner of Colonization and Development, C.P.R., Montreal, has been granted from Sept. 20 temporary rank of Colonel in the Canadian Militia, while performing the duties of Officer Commanding the Western Division, British Canadian Recruiting Mission in the United States.

James Duff, formerly Superintendent of Townsites, Natural Resources Department, C.P.R., Calgary, who went overseas as Captain in the 239th Battalion, has been promoted to Major.

Major Kenneth Lock Duggan, B.Sc., who was reported killed in action recently, was a son of G. H. Duggan, M.Can.Soc. C.E., of the Dominion Bridge Co. He graduated in mechanical engineering from McGill University in 1914, and during summer vacations had been engaged in 1911 on irrigation works for C.P.R. Natural Resources Department in the neighborhood of Calgary, Alta.; in 1912 with Abitibi Pulp & Paper Co., and in 1913, in the Dominion Bridge Co.'s drafting office. At the time of enlisting, he was on the Montreal Harbor Commission's engineering staff. He went overseas with the 5th Mounted Rifles, C.E.F., was appointed a major in 1916, and was mentioned several times in Field Marshal Sir Douglas Haig's dispatches. His only brother was killed at Loos, about two years ago.

Lieut. S. M. Goodeve, of the Royal Flying Corps, son of A. S. Goodeve, one of the Board of Railway Commissioners at Ottawa, was killed in action during the

recent allied drive on Cambrai. Another son, Lieut. Arthur Goodeve, was killed near Courcellette in September, 1917.

Lieut. C. S. Hall, of Montreal, nephew of Grant Hall, Vice President & General Manager, Western Lines, C.P.R., is reported wounded and missing.

Lieut. J. J. Hanna, of the 3rd Tunneling Company, Canadian Engineers, now in France, and at one time in C.P.R. service, has been elected an associate member of the Canadian Society of Civil Engineers.

Lieut. J. J. Harold, reported wounded in the arm by gun shot, in action in France, is son of L. Harold, Superintendent Transportation, Eastern Lines, G. T. R., Montreal. He went overseas July, 1915, with the 5th Canadian Mounted Rifles, and was wounded at Ypres. He won his commission on the field. Prior to enlistment he was in his third year in arts at McGill University.

Lieut. Gerald Hiam, who was reported early in November as having been wounded, was District Passenger Agent, C.P.R., at Fort William, Ont., until the summer of 1915, when he went into the 73rd Battalion, Montreal, as a lieutenant, and then transferred to the 198th Battalion (Buffs) Toronto, as captain. In order to get overseas quickly he reverted to lieutenant, went to England in Sept., 1916, and to France in Oct., 1916, with the 14th Battalion (Royal Montreal) in which he was promoted to second in command of A Company. His brother, T. A. Hiam, formerly private secretary to Sir Donald Mann, is Captain and Adjutant of the 198th Battalion.

Lt. Col. Thos. C. Irving, Jr., D.S.O., of Toronto, was reported in the casualty list of Nov. 5, as having died of wounds. Subsequently it was learned that he was killed almost instantly by a bomb from a German aeroplane while sitting in his dugout at the divisional headquarters. He was born in Toronto in 1879 and took a civil engineering course at Toronto and McGill Universities. For some time he was on the Lake Superior Corporation's staff at Sault Ste. Marie, and in 1905 was one of the incorporators of the Standard Inspection Bureau of Canada, Ltd., Toronto, of which he was Sec.-Treas. until its absorption by Robert W. Hunt & Co., Ltd., in 1910, when he became Vice President of the latter company. In 1898 he received a commission in the 2nd Field Company, Canadian Engineers, Military District 2, becoming captain June 1, 1911. On the outbreak of war he went with his company to Valcartier Camp, Que., and proceeded to England with the 1st Canadian Expeditionary Force in Oct., 1914, being second in command of No. 2 Field Company under Major Lindsay. He went to Belgium in Feb., 1915, in command of the company, as Major Lindsay, owing to an accident, had to remain in England, and he continued in command through the operations at Fleurbaix and the second battle of Ypres, and until just before Festubert, when Major Lindsay again took command. After the company had moved up to Romarin, Major Lindsay was made a lieutenant colonel. Capt. Irving becoming Major and being given command of No. 2 Field Company, in which position he remained while the company was in the Messines district, and after it was moved back to the Ypres salient. In Oct., 1916, Lt. Col. Insketter, commanding the 4th Canadian Divisional Engineers having died from shrapnel wounds, Major Irving was appointed C.R.E. to

succeed him, was promoted to Lieutenant Colonel and was awarded the D.S.O.

Capt. B. L. Johnson, who is reported to have been awarded the Distinguished Service Order for services in submarine operations within the war zone, was associated with the Pacific coast marine service for several years. He was for some time in the service of the Union Steamship Co. of British Columbia, then with the Boscowitz Steamship Co., and was the first master of the Grand Trunk Pacific Steamship Co.'s s.s. Prince Rupert. Some time prior to the war he resigned that service in order to become a pilot at Vancouver, which position he held when he entered the navy.

Lt. Col. W. B. Kingsmill, of Saunders, Torrance & Kingsmill, solicitors, Michigan Central Rd., Toronto, who went overseas in command of the 123rd Battalion from Toronto, has been given the Colonial Auxiliary Force's Officers' Decoration.

Major A. C. Lewis, formerly Secretary, Toronto Harbor Commission, who was reported wounded, Sept. 1, was reported on Oct. 31 as being in a London hospital to undergo an operation. He was said to be also suffering from nervous trouble. He went overseas as second in command of the 216th Battalion.

Capt. Donald M. Mathieson, who has applied for transfer from associate member to member, Canadian Society of Civil Engineers, was born at St. Marys, Ont., Oct. 13, 1884, educated at Upper Canada College, Toronto, 1899 to 1902; graduated Royal Military College, Kingston, 1905, and at McGill University, Montreal, 1907, as B.Sc. (C.E.), since when his record has been as follows: Summers of 1902 to 1907 on C.P.R. and Grand Trunk Pacific Ry. construction; autumn of 1907 in charge of erection of steel of harbor sheds, Montreal, for Dominion Bridge Co.; spring of 1908, in designing office, Dominion Bridge Co.; 1908 to 1909 general contractor; 1909 organizing steel erection department for Peter Lyall & Sons; 1910-11 engineer in charge of installation, hydraulic mining plant, for Cache Creek Mining Co., in Alaska; 1912, general contractor, Vancouver; 1913-14 consulting engineer, Vernon, B.C.; entered Canadian army in 1914 in 2nd Field Co., Canadian Engineers, at Valcartier, Que., and proceeded to England and afterwards to France, where he was wounded, and invalided to Canada, in 1916, since when he has been on headquarters staff, Military District 2, Toronto, and is now officer commanding Spadina Military Hospital, Toronto.

Lt. Col. L. T. Martin, of the 7th Railway Battalion, now at the front, will be the union candidate for the representation of South Renfrew, Ont., in the Dominion Parliament. He is closely connected with M. J. O'Brien, railway contractor, etc., Renfrew, Ont.

Lieut. D. N. McIntyre, formerly Deputy Minister of Fisheries for British Columbia, reported killed at Passchendaele, Nov. 13, enlisted as a private, and was later given a commission in the British Columbia "Bantam" battalion, and went overseas early in the year. He was a nephew of D. M. McIntyre, K.C., Chairman, Ontario Railway and Municipal Board, and had served on the Montreal Star and the Victoria Colonist.

Second Lieut. G. W. Murrell, Royal Fusiliers, who has been awarded the Military Cross for bravery and devotion to duty during an enemy counter attack, was for several years prior to the war, in the Passenger Department, Allan Line Steamship Co., London, Eng. During the action in which he won the cross, he took up reinforcements, and though wounded in

three places, took command of the situation when all other officers were casualties, remaining at his post for 12 hours after the action.

Engineer Lieut. Commander Jno. Quine, Second Engineer of H.M.S. Princess Margaret, who has been awarded the Distinguished Service Order, was for a number of years in the British Columbia coastwise trade service, as engineer, on C.P.R. and Grand Trunk Pacific steamships. When war broke out he was Chief Engineer of the G.T.P. s.s. Prince Albert and immediately proceeded to England and offered himself for service. The Princess Margaret is one of the two steel passenger steamships built on the Clyde, for the C.P.R. British Columbia coast service, and was commandeered by the British Admiralty when war broke out, together with her sister ship, Princess Irene which had then just been completed. Shortly after being taken over, the Princess Irene was destroyed by an explosion in the River Thames.

Col. G. S. Rennie, C.A.M.C., formerly Chief Surgeon, Dominion Power & Transmission Co. and Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., is among those whose names have been brought to the notice of the Secretary of State for War for distinguished service rendered in connection with the war.

Lieut. J. B. Rose, who was reported wounded recently, then wounded and missing, and later a prisoner of war at Limburg, was, prior to the war, in the British Columbia Electric Ry. service at Vancouver. He was a captain in a British Columbia regiment, and reverted in rank to go to France.

Capt. Shaughnessy, only surviving son of Lord Shaughnessy, was stated in a London cablegram of Nov. 6 as about to return to Canada for family reasons.

W. H. Stewart, formerly Assistant Superintendent, C.P.R., Farnham, Que., and latterly Purchasing Agent, Imperial Munitions Board's Shipbuilding Department, Ottawa, has been transferred to the staff of the British War Mission at Washington, of which Sir Charles Gordon, of ton, of which Sir Charles Gordon is Vice Chairman.

Bombardier Francis Vivian Morton, who was killed in action in Belgium, Nov. 10, was son of J. D. Morton, Assistant Comptroller, Canadian Northern Ry., Toronto. He was born Dec. 11, 1895, and was a second year student at Toronto University when he enlisted, Mar. 18, 1915, with the first university unit, C.F.A. He left Canada for overseas Aug. 4, 1915, and arrived in France, Jan. 18, 1916.

Lieut. C. Wakeford, R.N.R., whose death by the sinking of H.M.S. Champagne, in the North Sea Oct. 9, was announced recently, was formerly an officer on the C.P.R. s.s. Empress of Ireland, and was on board when she was run down and sunk in the St. Lawrence River, May 29, 1914, when he was instrumental in saving a number of lives, including his father, who was a passenger on the vessel. He was in the naval service from the time war broke out, and was acting as Assistant Paymaster.

W. H. Watson, heretofore Assistant City Ticket Agent, Canadian Northern Ry., Regina, Sask., has enlisted for military service, and is now a sergeant, local headquarters staff, Military District 12, A. D. of S. & T.

Lieut. F. B. Webster, of the Royal Flying Corps, who died recently of wounds received while flying in the neighborhood of Ypres, France, was a native of New Zealand, and came to Canada about 12 years ago. For some time prior to en-

listing he was in the Dominion Government telegraph service in northern British Columbia.

The Victory Loan and Transportation Interests.

At the time of writing (Nov. 29) the subscription lists for the Dominion's Victory Loan of \$150,000,000 are still open, but the amount originally asked for has been very considerably oversubscribed. Those responsible for the huge publicity campaign, which probably eclipses anything in the way of advertising hitherto attempted on this continent, set themselves to obtain subscriptions for double that amount, and it seems altogether likely that the total subscriptions, when the lists close Dec. 1, will be at least \$300,000,000. The C.P.R. definitely took \$5,000,000 of the bonds, and Lord Shaughnessy stated that should the \$300,000,000 be reached, the company would take an additional \$5,000,000. The G.T.R. and Canadian Northern Ry., as well as several other of the larger companies completed arrangements whereby their employes were enabled to take up bonds by paying for them on the instalment plan, the companies to look after the payments as they become due, and the employes signing agreements permitting the deduction of such payments from their wages.

Among the transportation companies, and other companies and individuals associated with or interested in such companies, who subscribed to the loan, are: C.P.R., \$5,000,000, and possibly a further \$5,000,000; Canadian General Electric Co., \$3,155,000; Dominion Steel Corporation, \$3,000,000; Steel Co. of Canada, \$1,500,000; Canada Steamship Lines, Ltd., \$1,000,000; Great Lakes Transportation Co., \$365,000; R. W. Leonard, formerly chairman, National Transcontinental Ry. Commission, \$300,000; Sir Herbert Holt, director, C.P.R., \$270,000; Canadian Locomotive Co., \$250,000; Sir Augustus Nanton, director, C.P.R., \$250,000; Dominion Copper Products Co., \$250,000; Dominion Bridge Co., \$250,000; Bell Telephone Co., \$225,000; Canada Foundries & Forgings Co., \$200,000; James Carruthers, President, Canada Steamship Lines, Ltd., \$100,000; J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines, Ltd., \$100,000; Lord Shaughnessy, President, C.P.R., \$100,000; R. B. Angus, director, C.P.R., \$100,000; Mark Workman, President, Dominion Steel Corporation, \$100,000; Keystone Transportation Co., Montreal, \$100,000; R. M. Wolvin, President, Montreal Transportation Co., \$100,000; Northern Electric Co., Montreal, \$100,000; Lorne C. Webster, President, Canada Shipping Co., Montreal, \$100,000; Hon. F. L. Beique, director, C.P.R., \$70,000; Dominion Wire Rope Co., Montreal, \$50,000; W. G. Ross, President, Montreal Harbor Commission, \$50,000; Farquhar Robertson, member F. H. Hopkins & Co., Montreal, \$50,000; Canada Iron Foundries, Ltd., Montreal, \$50,000; Atlas Construction Co., Montreal, \$40,000; Revillon Freres, Montreal, \$40,000; E. W. Beatty, K.C., Vice President and General Counsel, C.P.R., \$30,000; Wm. Lyall, President, Wm. Lyall Shipbuilding Co., \$25,000; Shedden Forwarding Co., \$25,000; Hugh Paton, President, Shedden Forwarding Co., \$25,000.

Dearborn Chemical Co. of Canada Ltd., has appointed Taylor and Arnold, Ltd., of Montreal, Winnipeg and Vancouver, as its exclusive sales agents in Canada.

Mainly About Railway People Throughout Canada.

H. B. Voorhes has been appointed General Superintendent of Transportation, Baltimore & Ohio Rd., Baltimore, Md.

G. C. Jones, who was appointed Assistant to President, G.T.R. at Toronto, recently, has taken up house at Inglewold, Avenue Road Hill, Toronto.

F. W. Alexander, Engineer, Alberta District, C.P.R., Calgary, has been transferred from associate member to member Canadian Society of Civil Engineers.

W. Ord, who has been Boiler Shop Foreman, G.T.R., at Stratford, Ont., for some 20 years and who is a capital shot, spent his holidays deer shooting, in the Blind River District, recently.

A. E. Stevens, General Superintendent, Western District, Canadian Northern Ry., Moose Jaw, Sask., was called to Moncton, N.B., Nov. 16, on account of the death of his mother there.

Sir Edmund Osler, one of the C.P.R. directors, who has represented West Toronto in the House of Commons for many years, declined to be a candidate in the pending general elections.

H. J. Fuller, President, Canadian Fairbanks-Morse Co., has been appointed to represent the Imperial Munitions Board in New York, in connection with munitions and marine equipment contracts.

road, Rosedale, Toronto; Aug. 1916 to Apr. 1917, Assistant Superintendent, Toronto District, Ontario Division, same road, Trenton, Ont.; Apr. to Nov. 1, 1917, Assistant Superintendent, Toronto District, Ontario Division, same road, Toron-

John Andrew Heaman, B.Sc., A.M.Can. Soc.C.E., whose appointment as Assistant Chief Engineer, Grand Trunk Pacific Ry., Winnipeg, was announced in our last issue, was born at Memphis, Tenn., June 3, 1874, and was educated in public school and at Collegiate Institute London, Ont., and McGill University, graduating in 1902. He served as an articled pupil to Moore and Henry, engineers and surveyors, London, Ont., from 1893 to 1898, and holds diplomas as Dominion and Ontario Land Surveyor. He entered railway service in Apr. 1901, since when he has been, to Sept. 1901, instrument man, G.T.R., St. Catharines and Port Union, Ont.; Apr. to Nov. 1902, Resident Engineer, G.T.R., Oshawa, Ont.; Nov. 1902 to Nov. 1903, Assistant Resident Engineer, G.T.R., Toronto; Nov. 1903 to May 1905, Assistant Engineer in charge of location party east of Winnipeg, Grand Trunk Pacific Ry.; May 1905 to Nov. 1906, Division Engineer in charge of location and construction east of Winnipeg, National Transcontinental Ry.; Nov. 1906 to Oct. 1908, Assistant District Engineer, N.T.R., Ont.; Oct. 1908 to June 1910, Assistant District Engineer, G.T.P.R., Kenora, Ont., and Winnipeg; June 1910 to Apr. 1911, District Engineer, G.T.P.R., Winnipeg; Apr. 1911 to Mar. 1912, Office Engineer, G.T.P.R., Winnipeg; Mar. to Aug. 1912, Division Engineer, G.T.P.R., Jasper, Alta.; Aug. 1912 to Nov. 1, 1917, Assistant to Chief Engineer, G.T.P.R., Winnipeg.

Agreement for Acquisition of Canadian Northern Railway Stock.

The agreement between the Dominion Government and the holders of Canadian Northern Ry. capital stock has been signed and the following summary of its principal provisions has been given out:

The agreement provides for the naming of the arbitrators, one by the government, and one by the stockholders, the two so named to appoint a third. Should they fail to agree, the third arbitrator is to be appointed by the Chief Justice of the Exchequer Court. No arbitrator is named in the agreement, but the government arbitrator has already been selected, viz., Sir William Meredith, Chief Justice of Ontario, and it is said that Wallace Nesbitt, K.C., will represent the owners of the \$60,000 of stock.

The government already owns 400,000 shares of the stock. This represents 40% of the entire stock holdings and was taken by the government in 1914, on account of the guarantee of the company's bonds then given. The other 600,000 shares are now to become the property of the government and have, it is said, already been transferred. Their par value is \$60,000,000. The agreement fixes the maximum to be paid for these 600,000 shares at \$10,000,000. No greater sum therefore can be paid, no matter what their value may be found to be by the arbitrators. If the value is found to be less than \$10,000,000, then the less sum will be paid. It is said that Mackenzie, Mann & Co. Ltd., own approximately five-sixths of these shares. Consequently the maximum that can be paid to them will be something over \$8,000,000. As, however, these shares are pledged to their bankers as

part security for advances of various kinds, the monies doubtless will be paid to the bank.

The duty of the arbitrators is to take evidence such as may be offered on behalf of the government and of the stockholders. Both parties will be heard in the usual way as before all arbitrations. There has been no previous inquiry into the value of this stock, at which both parties have been heard. After the taking of evidence and the making of any further investigations which the arbitrators may deem useful, it will be for them to decide what the value of the stock really is. The agreement does not call upon the arbitrators to adopt any particular method. They may enquire what the stock could be sold for; they may ascertain the value of the assets and deduct the liabilities. They may take into consideration earning power. They are not restrained in any way but simply required to get at the fair value in the best way possible. It is further specifically provided that if the arbitrators should see fit to take into consideration the reproduction cost of the system, then they must not include therein the increase in value, due to the war, of labor, material, equipment, or of any property whatever. The shareholders will be required to disclose all liabilities of the company of every kind, to the arbitrators. Should, however, it be found later that liabilities exist that were not disclosed, or in excess of those disclosed, then a corresponding deduction will be made from any award given.

The arbitrators must commence work forthwith, and complete the taking of

evidence in such time as to announce their award before Mar. 1, 1918. Pending the award, it is provided that nothing but ordinary operating obligations shall be entailed, and no obligation shall be entered into, not to be completely executed within six months, except with the approval of the Minister of Railways. All costs connected with the arbitration are to be in the discretion of the arbitrators and to be taxed by an officer.

Prior to the Canadian Northern bill coming before the Senate last term, two

of the directors resigned, viz., Senator Frederic Nichols, who had been a director from the formation of the company, and Senator H. W. Richardson, who had been one of the government directors for the past year or so. Graham A. Bell, C.M.G., Assistant to the Minister of Railways and Financial Controller of the Railway Department, has been appointed a director to succeed Senator Richardson. The other director has not been appointed. It is stated, apparently with authority, that Hon. Frank Cochrane, ex Minister of

Railways, will be appointed chairman.

Sir Wilfred Laurier in his pre-election manifesto, issued recently, in referring to the matter, said: "The opposition asked that the report of the arbitration, whatever it be, should be laid before parliament for approval. Though this motion was rejected it is the right of the people to declare that the case should not have been finally closed by the action of a moribund parliament, but that the whole matter should be reported to and adjudicated upon by the new parliament."

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Government Railways.—F. W. ROBERTSON, heretofore District Passenger Agent, Halifax, N.S., has been appointed Superintendent, Sleeping and Dining Car Service, Eastern Lines, vice L. B. Archibald, retired. Office, Halifax, N.S.

E. CAMERON, heretofore Commissary Agent, Halifax, N.S., has been appointed Assistant Superintendent, Sleeping and Dining Car Service, Eastern Lines. Office, Halifax, N.S.

A. J. TINGLEY, heretofore Special Agent, has been appointed Chief of Railway Police. Office, Moncton, N.B.

Following is a list of Police Inspectors and their districts: T. W. Moore, District 1, Montreal to Mont Joli; O. B. Lawson, District 2, Mont Joli to Moncton; J. J. Dunphy, District 3, St. John to Truro; Wm. Tupper, District 4, Truro to Syrney; E. L. Cantin, District 5, Diamond to Pacific Jct.; E. W. Power, District 6, Truro to Halifax.

H. C. MACFARLANE has been appointed District Passenger Agent, Halifax, N.S., vice F. W. Robertson, transferred to Sleeping and Dining Car Department.

Canadian Northern Ry.—S. J. HUNGERFORD, heretofore Superintendent of Rolling Stock, Toronto, has been appointed General Manager, Eastern Lines, vice L. C. Fritch, who resigned some time ago, on his appointment as General Manager, Seaboard Air Line Ry., Norfolk, Va. Office, Toronto.

KELLEY, heretofore Superintendent, Lake Superior District, Ontario Division, Capreol, Ont., has been appointed Superintendent, Nipissing District, Ontario Division, comprising Ruel, Sudbury, North Bay and Pembroke Subdivisions, and Foley, Sudbury and Parry Sound Terminals. Office, Capreol, Ont.

G. A. HOAG, heretofore Assistant Superintendent, Toronto District, Ontario Division, Toronto, has been appointed Superintendent, Superior District, Ontario

Division, comprising Nipigon, Long Lake and Oba Subdivisions. Office, Hornepayne, Ont.

D. J. MACINTOSH, heretofore chief clerk and Assistant Freight Agent, has been appointed Grain Agent, Port Arthur, Ont.

J. M. GRIEVE, heretofore Assistant Superintendent, has been appointed Superintendent, Sleeping, Dining and Parlor Cars and News Service, Western Lines,

S. J. Hungerford
General Manager, Eastern Lines, Canadian Northern Railway.

vice O. C. Bishop, resigned. Office, Winnipeg.

H. B. WOLLEN has been appointed Assistant Superintendent, Sleeping, Dining and Parlor Cars and News Service, Western Lines, vice J. M. Grieve promoted. Office, Winnipeg.

C. H. WORBY, heretofore agent, has been appointed District Commissary Agent, Sleeping, Dining and Parlor Cars and News Service, Western Lines, Winnipeg.

G. A. CUNLIFFE, heretofore Superintendent, Division 3, Western District, Edmonton, Alta., has been appointed Superintendent, Division 4, Central District, vice I. L. Boomer transferred. Office, Brandon, Man.

W. L. LOOMIS has been appointed Road Foreman of Locomotives, Brandon, Man. This is a new position.

W. BLACK, heretofore Locomotive Foreman, Saskatoon, Sask., has been appointed Locomotive Foreman, Hudson Bay Jct., Sask., vice A. Clifton, transferred.

S. G. KATHAN, heretofore in Canadian Bank of Commerce service, has been appointed Assistant City Ticket Agent, C.N.R., Regina, Sask., vice W. H. Watson, enlisted for military service.

A. G. DeGUERRE has been appointed City Ticket Agent, Moose Jaw, Sask.

W. F. BROWN, heretofore Locomotive Foreman, Drumheller, Alta., has been appointed Night Locomotive Foreman, Saskatoon, Sask., vice W. Black, transferred.

F. J. MEYERS, heretofore Trainmaster, Division 3, Western District, North Battleford, Sask., has been appointed Trainmaster, Division 2, Western District. Office, North Battleford, Sask.

J. L. CAMERON, heretofore passenger conductor, Edmonton, Alta., has been appointed Trainmaster, Division 3, Western District, vice F. J. Meyers, transferred. Office, North Battleford, Sask.

J. IRWIN, heretofore Superintendent, Branch Lines, Toronto District, Trenton, Ont., has been appointed Superintendent, Division 3, Western District, vice G. A. Cunliffe transferred. Office, Edmonton, Alta.

A. CLIFTON, heretofore Locomotive Foreman, Hudson Bay Jct., Sask., has been appointed Locomotive Foreman, Drumheller, Alta., vice W. F. Brown, transferred.

J. O. CAMERON has been appointed Travelling Freight Agent, Vancouver, V.C., vice S. Patterson resigned.

Canadian Pacific Ry.—E. MOORE, of the Financial and Accounting Vice President's office, and from Oct. 1916, when the company set up its own insurance fund, in charge of all insurance matters, has been appointed Insurance Commissioner, in charge of all the company's fire and marine insurance. Office, Windsor St. Station, Montreal.

FRANK LEE, heretofore Principal Assistant Engineer, Western Lines, Winnipeg, has been appointed Engineer Maintenance of Way, Eastern Lines, vice A. C. Mackenzie transferred. Office, Montreal.

O. M. LAVOIE, heretofore Chief Dispatcher, Farnham Division, Quebec District, Farnham, Que., has been appointed acting Superintendent of Car Service, Eastern Lines, vice W. M. Neal, whose appointment as Secretary, Canadian Railway Association for National Defence, was announced in our last issue. Office, Montreal.

F. A. WINTERSON has been appointed Assistant Superintendent, Laurentian Division, Quebec District, vice V. A. Harshaw transferred. Office, Montreal.

R. W. SCOTT, heretofore Assistant Superintendent, Trenton Division, Ontario District, Trenton, has been ap-

pointed Assistant Superintendent, Montreal Terminals Division, Quebec District, vice R. G. Edwards transferred. Office, Montreal.

T. J. McDONAGH, heretofore Assistant Foreman, Freight Car Shop, has been appointed General Foreman, Wood Freight and Steel Car Shop, Angus shops, Montreal.

H. J. MAIN, heretofore Chief Dispatcher, Smiths Falls Division, Quebec District, Smiths Falls, Ont., has been appointed Assistant Superintendent of that division. Office, Smiths Falls, Ont.

H. C. TAYLOR has been appointed Chief Dispatcher, Smiths Falls Division, Quebec District, vice H. J. Main promoted. Office, Smiths Falls, Ont.

R. G. EDWARDS, heretofore Assistant Superintendent, Montreal Terminals Division, Quebec District, Montreal, has been appointed Assistant Superintendent, Trenton Division, Ontario District, vice T. H. Hamilton, acting Assistant Superintendent transferred. Office, Havelock, Ont.

T. H. HAMILTON, heretofore acting Assistant Superintendent Trenton Division, Ontario District, Havelock, Ont., has been appointed Assistant Superintendent, Trenton Division, Ontario District, vice R. W. Scott, transferred. Office, Trenton, Ont.

D. S. SCHOFIELD, heretofore storekeeper, Revelstoke, B.C., has been appointed storekeeper, Fort William, Ont.

A. C. MACKENZIE, heretofore Engineer Maintenance of Way, Eastern Lines, Montreal, has been appointed Engineer Maintenance of Way, Western Lines, vice Frank Lee transferred. Office, Winnipeg.

P. J. SIVERTSON, heretofore Car Foreman, Swift Current, Sask., has been appointed Car Foreman, North Transcona, Man., vice H. K. York, transferred.

H. K. YORK, heretofore Car Foreman, North Transcona, Man., has been appointed Car Foreman, Swift Current, Sask., vice P. J. Sivertson, transferred.

G. PRATT, heretofore Locomotive Foreman, Strathcona, Alta., has been appointed Locomotive Foreman, Medicine Hat, Alta.

G. F. ROSENGREN, heretofore Storekeeper, Lethbridge, Alta., has been appointed Foreman of Stores, Ogden, Alta., vice A. Clark transferred.

G. H. CARTER, heretofore Relieving Paymaster, Winnipeg, has been appointed Paymaster, Calgary, Alta., vice A. Maguire.

J. A. McGOWN, heretofore Back Shop Foreman, Kamloops, B.C., has been appointed Locomotive Foreman, Red Deer, Alta., vice C. A. Boardman transferred.

C. A. BOARDMAN, heretofore Locomotive Foreman, Red Deer, Alta., has been appointed Locomotive Foreman, Strathcona, Alta., vice G. Pratt transferred.

A. CLARK, heretofore Foreman of Stores, Ogden, Alta., has been appointed Storekeeper, Revelstoke, B.C., vice D. S. Schofield transferred.

J. H. TAYLOR, heretofore of the company's British Columbia Lake and River Service, Nelson, B.C., has been appointed Assistant to the Manager, British Columbia Coast Service, vice Lincoln Smith, resigned to enter private business. Office, Victoria, B.C.

Edmonton, Dunvegan and British Columbia Ry., Central Canada Ry., Alberta and Great Waterways Ry.—R. M. HALPENNY, Superintendent, having resigned, A. G. SUTHERLAND, heretofore Assistant Superintendent, E. D. & B.C. R. and C. C. R., has been appointed Superin-

tendent, E. D. & B.C. R. and C.C.R.; and R. CRAIG, heretofore Assistant Superintendent, A. & G. W. R., has been appointed Superintendent, A. & G. W. R. Offices, Edmonton, Alta.

R. LEE has been appointed Chief Dispatcher, Edmonton, Alta, vice G. Lomas, resigned.

Fredericton and Grand Lake Coal and Ry. Co., New Brunswick Coal and Ry. Co.

—V. A. HARSHAW, heretofore Assistant Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal, has been appointed Manager, vice A. Sherwood resigned. Office, Fredericton, N.B.

Grand Trunk Pacific Ry.—J. A. HEAMAN, heretofore Assistant to Chief Engineer, has been appointed Assistant Chief Engineer, vice H. A. Woods resigned, and his former position has been abolished. Office, Winnipeg.

C. B. MUTCHLER, Signal Engineer, has also been appointed Assistant to General Superintendent, Winnipeg, vice I. A. Macpherson promoted. Office, Winnipeg.

R. M. MACMILLAN, heretofore local manager, G.T.P. Telegraph Co., Edmonton, Alta., has been appointed acting Division Superintendent of Telegraphs, lines in Ontario, Manitoba and Saskatchewan, with jurisdiction over all matters pertaining to construction and maintenance of telegraph and telephone lines, and operation of railway and commercial telegraphs; and also acting Superintendent of Time Service, vice F. T. Caldwell, on extended leave of absence, for military service with the U. S. Army. Office, Winnipeg.

I. A. MACPHERSON, heretofore Assistant to General Superintendent, Winnipeg, Man., has been appointed Superintendent, with jurisdiction Winnipeg, Man. to Watrous, Sask., Melville - Canora Branch, and Regina Division, Sask., vice H. McCall, promoted. Office, Melville, Sask.

H. McCALL, heretofore Superintendent, Melville, Sask., has been appointed General Superintendent, lines west of, but not including Edmonton, Alta., vice W. C. C. Mehan, granted leave of absence. Office, Prince Rupert, B.C.

The following station agents have been appointed: Semans, Sask., R. M. Sutherland; Venn, Sask., R. R. Dillabough; Asquith, Sask., H. A. Meggs; Reford, Sask., W. W. Barr; Estlin, Sask., C. F. Thomas; Gray, Sask., R. F. Wall; Othton, Alta., C. Bradley.

Grand Trunk Western Ry. — G. W. DIXON, Chicago, Ill., has been elected a director, succeeding his father, the late Arthur Dixon.

Great Northern Ry.—A. H. HEBB, heretofore ticket clerk, Vancouver, B.C., has been appointed City Passenger Agent Victoria, B.C., vice H. H. Wallace, promoted.

H. H. WALLACE, heretofore City Passenger Agent, Victoria, B.C., has been appointed Assistant Agent, Great Falls, Mont.

Kettle Valley Ry.—E. N. WITTER has been appointed acting Master Mechanic, vice W. J. McLean resigned. Office, Penticton, B.C.

W. J. CALVIN has been appointed General Roadmaster, Penticton, B.C. This is a new position.

Michigan Central Rd.—W. C. DOUGLAS has been appointed Division Freight Agent, Detroit, Mich., vice F. J. Parker promoted.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—B. NEWHOUSE, heretofore Auditor of Traffic Accounts, has been appointed Assistant Comptroller, vice A. R.

Marshall resigned, and his former position has been abolished. Office, Minneapolis, Minn.

R. A. MUELLER has been appointed Freight Auditor, Minneapolis, Minn.

New Brunswick Coal & Ry. Co.—See Fredericton and Grand Lake Coal and Ry. Co.

New York Central Rd.—E. R. BISSELL, heretofore Superintendent, Toledo Division, Cleveland, Ohio, has been appointed Superintendent, Detroit Division, Detroit, Mich., vice F. F. Riefel, transferred.

E. THWAITES, heretofore Superintendent, Detroit Division, Detroit, Mich., has been appointed Superintendent, Toledo Division, Cleveland, Ohio, vice E. R. Bissell transferred.

F. F. RIEFEL, heretofore Superintendent, Detroit Division, Detroit, Mich., has been appointed Superintendent, Michigan Division, Toledo, Ohio, vice E. Thwaites transferred.

Roberval-Saguenay Ry.—J. A. VALLERAND, heretofore Auditor of Freight and Passenger Receipts, Quebec Ry., Light, Heat and Power Co., Quebec, Que., has been appointed Superintendent, and General Freight and Passenger Agent, reporting to the General Manager. Office, Chicoutimi, Que.

Union Pacific Rd.—E. ALEXANDER, City Ticket Agent, Chicago, Milwaukee & St. Paul Ry., Vancouver, B.C., is reported to have been appointed ticket agent, U. P. R., there.

Standard of Practice of Business Papers.

The publisher of a business paper should dedicate his best efforts to the cause of Business and Social Service, and to this end should pledge himself:

1. To consider, first, the interests of the subscriber.

2. To subscribe to and work for truth and honesty in all departments.

3. To eliminate, in so far as possible, his personal opinions from his news columns, but to be a leader of thought in his editorial columns, and to make his criticisms constructive.

4. To refuse to publish "puffs," free reading notices or paid "write-ups"; to keep his reading columns independent of advertising considerations, and to measure all news by this standard: "Is it real news?"

5. To decline any advertisement which has a tendency to mislead or which does not conform to business integrity.

6. To solicit subscriptions and advertising solely upon the merits of the publication.

7. To supply advertisers with full information regarding character and extent of circulation, including detailed circulation statements, subject to proper and authentic verification.

8. To co-operate with all organizations and individuals engaged in creative advertising work.

9. To avoid unfair competition.

10. To determine what is the highest and largest function of the field which he serves, and then to strive in every legitimate way to promote that function.

The papers subscribing to these standards are the publications of the Associated Business Papers, Inc., forming the Business Press Department of the Associated Advertising Clubs—nearly 100 in number—the cream of the technical and trade papers of Canada and the United States. Canadian Railway and Marine World is one of them.

Locomotive Design and Construction from a Maintenance Standpoint.

The paper on this subject, by W. H. Winterrowd, Assistant to Chief Mechanical Engineer, C.P.R., read before the Canadian Railway Club in Montreal recently, and published in Canadian Railway and Marine World of November, was discussed by a number of the club's members. The following are the most important parts of the discussion:

W. H. Sample, Superintendent of Motive Power, G.T.R.: The length of boiler tubes, which Mr. Winterrowd has mentioned, is a very important feature and presents a more modern idea than we have had in the past. It seems to me that with the object of getting more heating surface out of our boilers we have in the past made the tubes too long. I should like to ask Mr. Winterrowd's experience with the modern methods of taking care of tubing. I would also ask him about the welding in of tubes, which I notice he has not touched upon, and which is more or less of an experiment at present, and we have been reluctant about going into it too extensively, as there is a question whether it is going to be the proper method or not.

Also about dump grates—if he thinks this is the best way of handling fires, etc., in the big locomotive of today.

What is his opinion on the merits of Vanadium steel frames, and on the case-hardening of motion parts, pins, etc.? Another question which has been more or less under discussion at our Master Mechanics' meetings is the piston fit in the crosshead. On some of our power we have a method of fitting the rod with a shoulder.

I would also like to ask about the drifting valve and whether or not he considers it a necessity, from his experience with the C.P.R. superheater power.

Jas. Powell, Chief Draftsman, Motive Power Dept., G.T.R.: Mr. Winterrowd speaks of the locomotive house foreman feeling that some parts of the locomotive should have been designed differently. I think the designer would be only too glad to receive and consider suggestions from the locomotive foremen.

Mr. Winterrowd also speaks about the many failures due to the crowding of the flues, due to placing them too close to the heel of the flue sheet. In our own practice we are cutting out the top row of tubes and bringing them down three or four inches.

He speaks also of the radius of mud ring corners. We have experienced trouble with the very large corners and have come down to the medium corners. We also had trouble with the small corners. The medium corners give the best satisfaction.

So far as the dome and throttle arrangement is concerned, I am afraid Mr. Winterrowd will have trouble in making these so that the men will have convenient access to these parts.

I agree with him in regard to the valve gear being on the outside, and in making the frames so we can use solid bracing and repair the bracing when it breaks.

I would like to ask Mr. Winterrowd a question in regard to the weakening grooves cut in cylinder covers—whether he would make this applicable to all sizes of cylinders or only the large cylinders.

Piston valves are being reduced, and, as I understand it, will be materially reduced for the future.

I do not think Vanadium steel frames will give satisfaction for some time to come, although some of the other alloy

steels, which are more expensive, might do so.

Some kind of ashpan could be designed which would do away with the swing doors, as the latter are not properly looked after and break off. Some kind of ashpan could be designed that would do away with the swing doors entirely and yet give ample air space.

W. C. Hunter, ex-Manager, New Brunswick Coal and Ry. Co.: There is one point that Mr. Winterrowd did not include, and which, if he will excuse me for mentioning it, might have been added in connection with locomotive brake cylinders. I would have suggested that mention be made of the necessity for fastening them to the frame with proper sized bolts. I noticed a locomotive recently with 14 in. brake cylinders held to the frame with $\frac{3}{4}$ in. bolts. That did not look to me like a job that was going to stay very long. I do not think there is any other point I will raise, but will leave the discussion to those who are more actively engaged in locomotive work than I am at present.

B. C. Gesner, salesman and expert, Galena-Signal Oil Co.: Mr. Winterrowd has covered the subject so thoroughly that there is not much room for discussion, but there is one point that I think might possibly be improved upon a little, and that is in relation to the piping. He says that air brake and steam piping should drain properly and contain no traps in which water can accumulate. I think there might also be included the piping from the lubricator to the cylinders, because the water will accumulate and it would be better if the piping could be so arranged that there will be a gradual descent from the lubricator.

G. M. Wilson, Master Mechanic, Montreal Shops, G.T.R.: I would like Mr. Winterrowd to give us an expression on the merit of frames, vanadium as against carbon steel frames.

T. Arnold: President, Taylor & Arnold, Ltd., Montreal: The lubricator choke plugs should be placed in proper position and as near to the cylinders as possible. I should like to know the exact location which Mr. Winterrowd considers the best. This is considered by the lubricator companies as being a very vital question, and a great deal of trouble has been experienced in deciding on an exact location for these choke plugs. The maintenance of these plugs is one of the biggest propositions that the lubricator companies have.

W. H. Winterrowd: The first point Mr. Sample raised had reference to the length of boiler flues. We all know that short flues are easier to maintain than long ones. The proper length of flues has been a question of considerable investigation, and, in 1916, the American Master Mechanics' Association committee on the design and maintenance of locomotive boilers stated in their report that a proportion of flue length to diameter of 100 times the inside diameter seemed most satisfactory. The tendency today is toward short flues, even when this has to be accomplished by means of a combustion chamber. While the evaporative capacity of a boiler may be increased by the use of long flues, the rate of evaporation per square foot of flue surface becomes less the longer the flue. If one couples to this the fact that firebox heating surface has an evaporative value about five or six times greater than flue heating surface, it is not difficult to understand the present day ratios of firebox to flue heating

surface. Advantage is also taken of the higher temperature of flue gases, resulting from the shorter flues to obtain a higher degree of superheat.

I understand that the welding of flues to the back tube sheet is followed on a number of roads. The C.P.R. has not, at present a full set of flues welded to the back sheet. It has welded the large superheater flues, but has not welded other than in an experimental way, any of the small flues. I am unable to say just what results have been obtained in the way of decreased maintenance, resulting from welding full set of flues. Possibly someone present may have some information on the subject.

It would be interesting to know just what is required in the way of labor or special tools when renewing a full set of small flues, and also what steps are taken in the locomotive house to repair a defective weld to the flue sheet. I do know that considerable preparation is necessary prior to welding, one of the essential features being an absolutely clean flue sheet. If there is any oil or dirt on the sheet, the weld is not likely to be sound. I understand that some roads prepare the back sheet by sand blast, others with wire brushes. They all recognize the value of a clean flue sheet.

In connection with dump grates on large locomotives, it has been my experience that the quality of the coal is the governing feature rather than the size of the locomotive. Where coal is used that clinkers badly, a great deal of time can often be saved on the ash pit by means of dump grates. Does that answer your question, Mr. Sample?

W. H. Sample: The question is this: We have had at various times a good deal of discussion on the best location for the dump grate and whether or not it was wise to use it at all. After changing it to various locations, from the front to the back, and trying it in the centre, we always found we had a good many failures, and the only trouble we found without it was that which you speak of, when an inferior grade of coal is used it takes longer to clean the fires, but I do not believe we have as many tube failures as we had before. My object was to get the experience of someone else on this subject.

W. H. Winterrowd: On the C.P.R. there are not a great number of locomotives equipped with dump grates, but those which are equipped have the dump grate at the back and below the fire door. We have not had any trouble by these grates failing.

On the C.P.R. we have felt that particularly under our large power, where the frame stresses are high, that advantage could be obtained by the use of vanadium cast steel. We have obtained good results from these frames. In this connection, I would like to state that co-operation between the designer and the foundry is desirable. If frames are not designed so that they are free from final internal stresses, there is a possibility of failure.

The case hardening of motion parts is another thing that might have been mentioned in my paper. I tried to make it clear that owing to the large number of features comprising this subject, that those mentioned were but a small proportion of the total. It is our practice on the C.P.R. to case harden all motion parts.

I am really not in a position to say much about the drifting valve, as my ex-

perience with it is limited. I am pre-
suming that by drifting valve, you mean
a valve, which, when the throttle is closed,
admits a small amount of steam to the
cylinders. The C.P.R. has some of these
valves in service, but our experiments
have not gone far enough for me to say
anything definite regarding them.

Some roads prosser, others believe in
rolling the flues. On the C.P.R. most of
the flue expanding is done by the use of
the roller.

In regard to the fit of the piston in
the crosshead. Do you mean a filleted
shoulder or the bottoming of the piston
rod in the crosshead itself?

W. H. Sample: That is just the trouble.
The shoulder is often drawn up too tight
to the crosshead to keep the piston tight,
and the result is a poorly fitted piston
rod. It is a question if the shoulder
should be there and whether we should
not draw the piston up as far as it will
go without the key.

W. H. Winterrowd: I am inclined to
agree with you that if the shoulder is
omitted a better fit could be made and
easier inspection would be possible.

Mr. Powell raised the question regard-
ing weakening grooves in cylinder covers.
I believe that it is an advantage to apply
the weakening groove regardless of the
size of cylinder. My own experience has
been that the cylinder covers of the large
diameter cylinders fail oftener than those
of the small cylinder. I believe this is
due to the fact that our large locomotives
are today doing the majority of the heavy
work, and the smaller power is in branch
line service, where the work is lighter.
In any case, the weakening groove is
likely to save an entire cylinder. Any-
thing that will reduce the time and cost
of repairs is desirable, regardless of the
size of the locomotive.

Mr. Powell also mentioned the ash pan
with swinging doors. I do not want to
infer that I was recommending swing
doors, but where these swing doors do
exist, they can be so suspended that their
own weight will tend to keep them closed
and thus relieve the operating riggings
of a certain amount of strain.

Jas. Powell: I had reference to the side
doors without going to the opening under-
neath the foundation ring.

W. H. Winterrowd: I thought you were
referring to the bottom doors. On the
C.P.R. we do not use the side doors you
mention, except on very small ash pans,
where it is difficult to get proper air
space.

The point that was mentioned regard-
ing the proper fastening of brake cylin-
ders is a good one and might well have
been mentioned in the paper.

The question of traps in lubricator
pipes was also raised. This is another
point well taken, as it is extremely im-
portant that no traps exist in lubricator
pipes.

The lubricator manufacturers advise
that the choke plugs should be placed as
near as possible to the steam chest or cy-
linder, keeping as short as possible any
connection between the bottom of the
choke or steam chest and cylinder. I
have seen cases where choke plugs have
been located directly on top of the steam
chest, and in other cases have seen them
located not far below the centre line of
the smokebox. The question of main-
tenance is also important, as otherwise
they will not function properly and trou-
ble will result.

I believe that I have mentioned all of
the points that have been raised. There
is another question, however, that might
have been mentioned in my paper, and

that is the question of standards. It is
not difficult to appreciate the economy
that results from the use of standard
parts. It not only means that less stock
can be carried in stores, but also facili-
tates repairs. However, it might be well
to consider just how far it is advanta-
geous to carry out such a policy. Some-
times, where the type and size of loco-
motives may vary greatly, it may be more
advantageous to break away from an ex-
isting standard and create a new one.
The question of standardization is an
important one and should be given the
consideration that it merits.

W. H. Sample: In view of the extreme-
ly high cost of brass and copper today,
I would like a little information on wheth-
er any trial has been made of other met-
als, such as Hunt Spiller metal for cross-
head slippers, instead of brass. We have
this question up just now.

W. H. Winterrowd: On the C.P.R. we
used for a long time a brass slipper with
babbit inserts, but several years ago be-
gan to experiment with the cast iron slip-
per with babbit inserts. The cast iron
with the babbit inserts is practically our
standard today, and is giving excellent
service.

W. E. Barnes, District Master Mechan-
ic, I.R.C., Moncton, N.B.: During the past
year we have obtained a large number of
heavy locomotives, and have found that
while they are apparently well designed,
we can only get from three to six months'
wear from rod brasses.

W. H. Winterrowd: I am not prepared
to say just what mileage we are getting
from our rod bushes. The mileage will
vary with the type and size of locomotive,
the material from which the bushes are
made, kind of lubrication and the class
of service in which the locomotive is run-
ning. In general, the bearing pressure
per square inch should be as low as is
consistent with good practice. The main-
tenance of shoes and wedges may also
have a direct bearing on the life of rod
bushes.

W. E. Barnes: I think our lubrication
is all right, and we have men especially
assigned to maintenance work to keep
the wedges properly adjusted, but with
all that we have had excessive trouble
with rod brasses. They do not seem to
wear as well as the brasses on the smaller
power.

W. H. Winterrowd: If you have not
checked up the bearing pressures in
bushes, it might be well to check them
over.

G. M. Wilson: Coming back to the
crosshead slipper—I would ask whether
the slipper used on the C.P.R. is common
grey iron or gun metal.

W. H. Winterrowd: Common grey
iron.

Mr. MacNab: Has the C. P. R. ever
used bakelite?

W. H. Winterrowd: Bakelite is a com-
position used in the manufacture of some
switch bases and some switchboards. It
is a very dense and hard composition.
Some time ago we made some experi-
ments with it and we are preparing to
make some additional experiments.

W. E. Barnes: Has Mr. Winterrowd
made any experiments with Vanadium
steel rods. Some three years ago we
obtained a number of them and not one
has failed yet, while with the ordinary
rod we have had a number of failures.

W. H. Winterrowd: On the C.P.R. we
have used a number of vanadium steel
rods and they have given excellent ser-
vice. Today, however, the question of ob-
taining such steel is a very difficult mat-
ter and we have had to revert to the car-

bon steel rod where weight restrictions and other factors would permit.

Geo. Whiteley, Assistant Superintendent of Motive Power, C.P.R., Montreal: We had a little trouble with lubricators but we found it was our own fault, as we did not have the lubricator in the right place; also did not maintain the choke plugs. We found as soon as we got them down close to the steam chest and had them standing straight up, that they gave us no further trouble.

Godwin Shenton, Engineer, Taylor and Arnold, Ltd., Montreal: A hydrostatic lubricator at the most is only an oil regulator; that is, the lubricator itself feeds a definite amount of oil as regulated or set by the locomotive man, so that the question of locomotive lubrication largely depends upon the oil, or sometimes called "tallow pipes," and more, in fact, most important, the position and condition of the choke plugs. The choke plugs should be placed in an upright position, as close to the steam chest as possible, and be easy of access for inspection. It is most important that the hole in the choke plug should not be greater than 1/32 in. diam. This is of the greatest importance, and chokes should be inspected regularly and renewed as soon as excessive wear is noticed. Upon the choke plug depends the regular feeding of oil of a lubricator. Oil pipes must have a gradual and even downward slope to the steam chest. It is also essential to have the lubricator in a position in the cab where it can be easily seen and to a certain extent protected from the very severe winter weather.

The question of the amount of oil required for lubrication by a locomotive depends solely upon the work it is called upon to do, and no hard and fast rules can be laid down.

Suspension of Demurrage at Montreal. Early in November a press report stated that the Montreal Board of Trade had been advised that the Board of Railway Commissioners would issue an order immediately, giving export freight not covered by through bills of lading, the shipments of which is authorized by railway companies export permits, five days free time at Montreal, and a special demurrage toll of \$1 a car for each day thereafter. We are officially advised that no order has been issued, but it has been arranged that no car demurrage be charged, during the current season of navigation, on South African, Australian and New Zealand traffic not covered by through bills of lading. The board will go into the question before the next navigation season.

Prince Edward Island Car Ferry.—The car ferry service between Port Borden, P.E.I., and Cape Tormentine, N.B., which was started Oct. 15, is being operated for the carriage of freight only. The passenger service between Point du Chene, N.B., and Summerside, P.E.I., and between Pictou, N.S., and Charlottetown, P.E.I., is being continued for the season of navigation. Up to the date of writing the time table and conditions for the water service had not been announced. During the week ended Oct. 27, there were transferred to the mainland 174 cars of potatoes and brought in from the mainland 72 cars of mixed freight. (Nov. pg. 447.)

The C.P.R. observation cars, which were placed on the Austrian State Railways, in the Tyrol, in 1913, are said to be now in use as hospital cars in the Austrian service.

Freight and Passenger Traffic Notes.

The Canadian Northern Ry. opened a down town ticket office in Moose Jaw, Sask., Nov. 5, with A. G. deGuerre as city ticket agent.

The G. T. R. has transferred its General Agent, Passenger Department, in New York from 290 Broadway to 1270 Broadway, corner of 33rd St.

The Canadian Northern Ry. put in operation, Nov. 1, a daily train service, except Sundays, between Moose Jaw and Gravelbourg, Sask., 112 miles, replacing the previous mixed train service operated between Moose Jaw and Avonlea, and Avonlea and Gravelbourg.

The first export shipment of wheat from Vancouver B.C., to Europe via the Panama Canal was made recently. The 100,000 bushels were carried west from the prairie provinces to the Dominion Government elevator at Vancouver, from which it was transferred on shipboard on Nov. 8 and succeeding days.

The C.P.R. closed down on the receipt of freight for shipment via lake and rail route from eastern points as follows: Stations east of Megantic, Que., Nov. 22; stations east of Montreal to Quebec and Megantic, Nov. 26; and from stations Montreal and west to Windsor including branches, Nov. 30.

The Canadian Northern Ry. will have a daily passenger service between Toronto and Winnipeg during December, instead of the usual three days a week service. Train 1 will run daily from Toronto to Winnipeg, from Dec. 3 to Jan. 2; train 2 will run daily from Winnipeg to Toronto from Dec. 1 to Jan. 5.

Women are being engaged for ticket selling in city ticket offices of United States railways. One of the latest points where an appointment has been made is Durand, Mich., where F. N. Simpson, day ticket clerk, has been transferred to the position of night clerk, and has been succeeded as day clerk by his wife.

The Greater Winnipeg Water District railway time table was altered for the winter months, Nov. 16. The train leaves the old Canadian Northern Ry. station at St. Boniface, Man., at 8 a.m., Mondays, Wednesdays and Fridays, and leaves Waugh, for the return trip, at 7 a.m. Tuesdays, Thursdays and Saturdays.

The Board of Railway Commissioners has declined to make an order directing the G.T.R. to restore passenger service between Hamilton and Burlington across Burlington Beach. The line between these two points is a part of the old Hamilton and North Western Ry., and passenger traffic over it was dropped in 1901, owing largely to the opening up of the Hamilton Radial Ry.

The C. P. R. announces that the following time table has been received showing the current service between Yokohama, Japan, and Petrograd, Russia, via Vladivostok: Leave Yokohama via Japanese Ry., Monday 9.51 a.m., reach Maibara, Tuesday, 8.21 a.m., reach Tsuruga, Tuesday, 10.40 a.m.; leave Tsuruga via Russian Volunteer Fleet, Tuesday, 5 p.m., arrive Vladivostok, Thursday, 9 a.m.; leave Vladivostok, via Trans-Siberian Ry., Thursday, 10 p.m., arrive Harbin, Friday, 9.40 p.m., reaching Petrograd on the second Saturday at 9.55 p.m. Sleeping cars run between Yokohama and Trusuga, and there is also a sleeping car service on the Trans-Siberian Ry. Another route which may be followed is to leave Yokohama by Japanese Ry. at 9.08 a.m., Tuesday; arrive Shimonosaki, 9.38 a.m. on Wednesday; leave Shimonosaki by steam-rail 10.10 a.m. Wednesday, reach Chosan in

Korea, 9.40 p.m. Wednesday; leave Chosan by railway 10.30 p.m. Wednesday, arrive Antung, Thursday, 6.20 p.m.; leave Antung by South Manchuria Ry., 6.51 p.m., Thursday; arrive Changchun, 9.30 a.m. Friday, leave Changchun by Chinese Eastern Ry. 11.02 a.m. Friday, arrive at Harbin 5.30 p.m., where connection is made with the Trans-Siberian Ry. train first mentioned. Sleeping cars are operated between Yokohama and Shimonosaki and between Chosan and Changchun.

United States Army Engineers' Work in the War.

The U. S. Engineers railway section has undertaken to transport, install and put into operation overseas a complete railway equipment. The railway problem in the theatre of operations in France involves not only the organization, equipment, and military training of railway troops for the construction, maintenance, and operation of standard and narrow gauge roads necessary for the supply of the U. S. armies, but also the purchase, inspection, and shipment of immense quantities of railway equipment—rails, ties, locomotives, cars, shop tools, etc.—necessary for the development of adequate port facilities, construction of new lines and their successful operation. The estimate of the situation in France was confirmed by the French commission, headed by Marshall Joffre, and the means of meeting it have been carried on with intensity.

Trained officials in various departments of American railways were called upon for the officers, and experienced railway employes for the enlisted men, of the nine railway regiments, each of 33 officers and approximately 1,100 men.

The cost of materials ordered to date is approximately \$70,000,000, including some hundreds of locomotives, more than 100,000 tons of steel rails, more than 3,000 complete turnouts, 500,000 ties, 12,000 freight cars, 600 fill and ballast cars, 600 miles of telephone wire and apparatus, as well as vast quantities of construction and repair equipment.

Since the U. S. declared war its enlisted engineering forces have been expanded from 2,100 to 95,000 men.

St. Paul Belt Line.—Diversion of through freight traffic around the City of St. Paul, Minn., is to be effected by the Twin City Belt Ry. The purpose is to keep local terminals and the new union station line clear of this traffic. The new line will thus facilitate the handling of passenger traffic and through and local freight traffic and relieve the congestion at this very large railway centre. The company is controlled jointly by the Great Northern, Northern Pacific and Chicago, Burlington & Quincy Railways, and the line will serve a number of the railways centring at St. Paul.

New Freight Terminal at Chicago.—A large freight terminal is to be built at Chicago by the Chicago, Burlington and Quincy Rd., as part of the extensive revision of the railway terminal system consequent upon the construction of the new union station. It will be located near Canal St., between Harrison and Polk Sts.

A board of conciliation has been appointed to deal with disputes between the Canadian Northern Ry. and its Western Lines maintenance of way employes. The board consists of Chief Justice Mathers, chairman; John Haig, for the company, and D. Campbell, for the men, all of Winnipeg.

Traffic Orders by Board of Railway Commissioners.

Transportation of Dangerous Articles.

General order 207. Oct. 26. Re general order 203, Aug. 11, 1917, authorizing regulations for transportation by freight of dangerous articles other than explosives, as amended by general order 206, Sept. 7, 1917; and the Canadian Manufacturers' Association application for a further order amending general order 203. It is ordered that general order 203 be further amended by striking out all the portion of clause (1) following the words "be struck out" in the fourth line, to the end of the clause.

Refrigerator Car Rates for Vegetables.

General order 208. Oct. 25. Re general order 152, Nov. 2, 1915, authorizing a scale of tolls chargeable by railway companies for use of refrigerator cars for carriage of vegetables, in carload lots; and general order 173, Oct. 26, 1916, rescinding general order 152, and re applications of railway companies for renewal of tolls authorized by general order 152 by a refile of tariffs showing the said tolls; and the application of the Toronto Board of Trade that the railway companies be required to justify the said proposed tolls: It is ordered that general order 173 be rescinded in so far as it rescinds general order 152, and that the tolls for the use of refrigerator cars for the carriage of vegetables, provided by the said tariffs refiled and as authorized by general order 152, be allowed.

Canadian Freight Classification.

General order 209. Nov. 13. Re Supplement 10, consolidating and replacing previous supplements to Canadian Freight Classification 16. The railway companies having published and filed a consolidation of the various supplements to the Canadian Freight Classification, and its appearing to be beneficial to all parties, it is ordered that Supplement 10 to Canadian Freight Classification 16, cancelling and superseding supplements 1, 3, 4, 5, 6A, 7, 8, and 9, all of which were approved by the board, be approved.

All Rail Freight Rates from Eastern Canada to Western Points.

General order 210. Nov. 13. Re complaints of Winnipeg, Calgary, Regina, and Saskatoon Boards of Trade and Canadian Manufacturers' Association against tariffs C.R.C. 3 and 4, effective Sept. 1, 1917, filed on behalf of the railway companies by G. C. Ransom, agent, providing increased all rail freight rates from Eastern Canada to points west of and including Port Arthur; and applying for an order suspending the said tariffs: Upon hearing the applications at Calgary, Edmonton, Saskatoon, Regina, Winnipeg, and Fort William in October, the Boards of Trade of Calgary, Edmonton, Saskatoon, North Battleford, Regina, Moose Jaw, Winnipeg, and Fort William, the Canadian Pacific, Canadian Northern, Grand Trunk Pacific, and the Edmonton, Dunvegan & British Columbia Railway Companies, the Canadian Manufacturers' Association, the Calgary Board of Trade hardware section, the Retail Merchants' Association of Saskatchewan, the Saskatoon Wholesalers, the Province of Manitoba, and the Canadian Council of Agriculture being represented at the hearings, and upon the report of the Board's Chief Traffic Officer, it is ordered that the complaints be dismissed.

Switching Charged in Alberta and Saskatchewan.

26671. Oct. 22. Re complaints of Pre-

mier Coal Co., Alberta Block Coal Co. and Midland Collieries, against switching charges made by the Canadian Northern Ry. at Drumheller, Alta.: Upon hearing the complaint at Calgary, July 10, 1916, the Premier Coal Co. the Alberta Block Coal Co. and the Canadian Northern Ry. being represented at the hearing, and upon reading the further submissions filed; and it appearing that similar complaints from other parties at other points in Alberta and Saskatchewan have been made to the board, it is ordered that the tolls published and filed by the Canadian Northern, Canadian Pacific, and the Grand Trunk Pacific Railways for switching freight traffic on which the said companies, respectively, have received, or are to receive, a line haul—the said tolls being charged because the switch movement exceeds in distance 1,000 ft. be disallowed.

Protection of Perishable Freight by Artificial Heat.

26696. Oct. 30. Re complaints of General Brokerage Co., Regina Wholesalers' Association, Scott Fruit Co., Lloyd's Fruit Co., and the Boards of Trade of Edmonton, Saskatoon, and Weyburn, against clause 1, option 2, Supplement 10, to Transcontinental Freight Bureau Tariff, C.R.C. 350, providing that, owing to extremes in temperature, Canadian carriers will not guarantee protection of carload shipments of perishable freight in Western Canada by the use of artificial heat in transit, or while held on tracks. It is ordered that clauses 'h' and 'i', option 2, pg. 6, Supplement 10 to Transcontinental Freight Bureau Tariff 25-C, C.R.C. 350, relating to perishable freight in heated cars from points in Oregon, Washington, Idaho, and Montana to points in Western Canada, be suspended until further order.

Rates on Lumber from Sidney, B.C.

26718. Nov. 7. Re complaint of Board of Trade of Sidney, B.C., against increase by Great Northern Ry. of rates on lumber commodities from Sidney to destinations in Western Canada via New Westminster: It is ordered that the proposed cancellation by the Great Northern Ry. Company, by Supplement 9 to its tariff C.R.C. 1249, of the basing arbitrary of 2½c per 100 lb. to be added to its rates from Cloverdale, B.C., to make the through rates on lumber commodities from Sidney, to destinations in Western Canada via New Westminster, Hope, Fernie, or Nelson be suspended until further order.

Cars for Potatoes from New Brunswick.

26732. Nov. 13. Re application of New Brunswick Potato Exchange, under sec. 284 of the Railway Act, for an order requiring the C.P.R. to furnish cars suitably equipped for carrying potatoes from New Brunswick to Ontario and Quebec. Upon hearing the application at St. John, N.B., Nov. 9, 1916, in the presence of counsel for applicants and the C.P.R. and upon its appearing at the hearing that the railway company was remodelling its 79,000 series cars; and upon its further appearing that the railway company has converted insulated refrigerator cars into vegetable cars, making them available for the carriage of potatoes. It is ordered that the application be dismissed, this order to be without prejudice to any application made to the board in the event of the improvements made not adequately taking care of the situation.

Joint Rates to Edmonton, Dunvegan and British Columbia Ry. Territory.

26755. Nov. 17. Re application of the F. S. Newman Co., Ltd., of Winnipeg, for joint rates between the Canadian Pacific Grand Trunk Pacific, and Canadian Northern Railway, and stations on the Edmonton, Dunvegan and British Columbia Ry. Upon hearing the application at Winnipeg, Oct. 19, the applicant and the railway companies being represented at the hearing, it is ordered that the application be dismissed.

Railway Rolling Stock Notes.

The G.T.R. has received 6 Mikado locomotives, out of an order for 10, from Canadian Locomotive Co.

The Timiskaming & Northern Ontario Ry. is having superheater equipment applied to 8 of its 10-wheel locomotives by Canadian Locomotive Co.

The Eastern Car Co. has delivered, since Oct. 17, 300 box cars of 1,200 poods capacity, for the Russian Government, leaving 2,600 to be delivered on an order of 3,000.

The Northern New Brunswick and Seaboard Ry. has sold a locomotive and 60 ore cars, practically the whole of its rolling stock, to various concerns in Canada and the United States.

Canadian Government Railways have ordered 2,000 steel frame box cars of 40 tons capacity, from Canadian Car and Foundry Co.; and one 5 ton crane from General Equipment Co.

In order to move the grain crop along the Edmonton, Dunvegan & British Columbia Ry. a number of locomotives are said to have been taken from the Hudson Bay Railway under construction by the Dominion Government.

The C.P.R. has received the following additions to rolling stock from its Angus shops, since Oct. 17: 7 express refrigerator cars, 181 freight refrigerator cars, and 5 steel mail cars 60 ft. long; and from its Winnipeg shops, 2 vans.

Canadian Government Railways have received the following additions to rolling stock, since Oct. 17: 25 refrigerator cars from Canadian Car and Foundry Co.; 2 second hand locomotives, 69 second hand coal cars 30 tons capacity, 7 second hand coal cars 35 tons capacity, 6 second hand coal cars 40 tons capacity, and 9 second hand box cars 30 tons capacity, from General Equipment Co.; 1 second hand flat car from Maritime Bridge Co., 1 store car and 6 baggage cars from Hotchkiss Blue and Co.

Esquimalt & Nanaimo Ry. Land Claims.

—Judgment was given Nov. 1 in a British Columbia court in the action brought by the E. & N. R. to restrain Alexander McLellan and others from prospecting on lands in the Chemainus land district of Vancouver Island. The defendants were prospecting for minerals under the provisions of a crown grant, and the railway claimed that the land on which they were working had already been granted to it. The defendants contended that the action could not be maintained without the intervention of the Attorney General, but the judge in giving judgment for the railway company said that this had not been clearly shown. Looking at the merits of the case the judge said it would appear that the government gave a lease of lands to the defendants which it did not own, such lands having already been granted to the E. & N. R.

Dismantling Bridges on Old Rogers Pass Line, C.P.R.

In the article on salvaging the C.P.R.'s old line at Rogers Pass, on page 458 of this issue, it is stated that the bridges will be taken out by another contractor, probably during the year. Since that article was printed we have been officially advised that the Hamilton Bridge Co. has been given a contract for dismantling the bridges, all of which are deck plate girders. The mileages mentioned are those on the old and now abandoned line.

Mileage 89.65, first crossing Five Mile Creek (Loop Brook), three 80-ft. and one 30-ft. d.p.g.

Mileage 90, second crossing, Five Mile Creek (Loop Brook), six 90-ft. and one 60-ft. d.p.g.

Mileage 90.45, first crossing Illecillewaet River, two 60-ft. and one 100 ft. d.p.g.

Mileage 90.82, second crossing Illecillewaet River, two 50-ft. and one 80 ft. d.p.g.

Mileage 90.93, third crossing, Five Mile Creek (Loop Brook), one 80-ft. d.p.g.

Grain Inspection at Western Points.

The following figures, compiled by the Trade and Commerce Department's inspection branch, show the number of cars of grain inspected on railways at Winnipeg and other points on the Western Division, for October, and for two months ended Oct. 31, compared with the same period in 1916.

	Oct.	2 mths. to Oct. 31, '17	2 mths. to Oct. 31, '16
C.P.R., Calgary	20,172	29,856	27,122
C.N.R.	8,402	15,021	15,056
G.N.R., Duluth	213	409	410
G.T.P.R.	5,064	6,961	4,475
Totals	33,851	62,357	47,924

Railway Lands Patented.—Letters patent were issued during September in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta, and British Columbia as follows:

	Acres.
Canadian Northern Ry.	18,245
Edmonton, Dunvegan & British Columbia Ry.	349,74
Grand Trunk Pacific Ry.	9,74
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.	805,00
Total	1,182,725

The Electric Railway Investigation in British Columbia.

The report of Adam Shortt of Ottawa who was appointed, following the strike of British Columbia Electric Ry. employes in July, to make an investigation into the whole transportation situation in the territory served by the company, was made public Nov. 19. He states that in Victoria and Vancouver, and between Vancouver and New Westminster, jitney traffic should cease to operate on routes where the electric railway operates; recommends that there be no change of fares in the city areas but that transfers be not granted as between city and interurban cars; that one-man cars be operated as far as possible in all outlying districts; that the skip-stop system be worked on interurban lines, and that there be a higher speed limit in the city. The report also deals with the company's electric light and power franchises. The commissioner finally recommends that a Public Utilities Commission be created for the province.

Grain in Store at Terminal Elevators, Interior Terminal Elevators and at Public Elevators in the East.

Week ended Nov. 9,—	Wheat. bushels.	Oats. bushels.	Barley. bushels.	Flax. bushels.	Totals. bushels.

Quebec Railway, Light, Heat, and Power Co's Appointments.

The following appointments have been made, with offices at Quebec:

E. G. GLASSON has been appointed Auditor of Freight and Passenger Receipts.

J. A. FORGET has been appointed Freight Claim Agent.

All electrical apparatus on locomotives and cars is under the charge of P. QUINN of the City Division.

E. LAPLANTE has been appointed General Locomotive Foreman, in charge of the Montmorency Falls shops, and wherever locomotives and machinery are located.

E. PLAMONDON has been appointed General Car Foreman in charge of the Ste. Anne shops, including stores and material, and of car inspectors wherever located on the Montmorency Division.

London and Lake Erie Ry. and Transportation Co.'s Position.—We are advised that up to Nov. 21, nothing definite had resulted from the negotiations for the disposal of this railway, either in whole or in part to the municipalities through which it runs. A London, Ont., press report Nov. 22, says it is realized that it is next to a hopeless proposition to ask the ratepayers of the municipalities concerned to vote the money required to keep the line running, and that the selling of the rails and other materials might be the best way of disposing of the property, considering the present state of the metal market. (Nov., pg. 444.)

A bonding bylaw for jitneys in Winnipeg went into operation, Oct. 1. The jitney men finally decided to drop the mutual bonding scheme, which the city had approved on condition that a cash deposit of \$10,000 be maintained, in favor of a surety company's bond at \$130 a year. By Oct. 4 bonds had been taken out by 275 jitney men. It is expected that the bylaw will drive transients and inefficient out of business and bring about an improvement of the service.

The Levis County Ry. is reconstructing 800 ft. of track on Fraser Hill, Levis. It is in the market for 50 tons of 80 or 85 lb. steel rails with angle bars, G. C. R. drilling, for next year, in connection with paving to be done by the city.

Electric Railway Department

Engineers' Report on Proposed Hydro Electric Railway from Port Credit to St. Catharines.

Some months ago a committee of Hamilton citizens requested the Canadian Society of Civil Engineers' Toronto branch, to name a board of engineers to report on the Hydro Electric Power Commission of Ontario's proposal for building an electric railway from Port Credit to St. Catharines, towards the cost of which the City of Hamilton was asked to issue debentures for \$5,689,386. The board appointed consisted of five members of the Canadian Society of Civil Engineers, R. W. Leonard, St. Catharines; Sir John Kennedy, Consulting Engineer, Montreal Harbor Commission; W. F. Tye, Consulting Engineer; L. A. Herdt, Professor, Electrical Engineering, McGill University and W. J. Francis, of Montreal. Their report was submitted recently, accompanied by a letter signed by R. W. Leonard, as chairman, and W. J. Francis as secretary, as follows:

"On behalf of the board of engineers appointed by your committee to report upon the proposition of constructing and operating a hydro electric radial railway from Port Credit to St. Catharines, we take pleasure in enclosing herewith the report on the question. The board has been unanimous in its findings in regard to the specific features named in your letter of instructions, and in its conclusion.

"The estimates of capital cost, as given by the Hydro-Electric Power Commission, have been used by the board, in accordance with the letter of instructions, but the board does not endorse the estimates of capital cost in any way, as the Hydro-Electric Power Commission declined to give the information necessary whereby they could be checked.

"For your convenience we are here briefly stating the substance of the report. The first specific feature in the letter is the determination of the public necessity for the proposed Port Credit-St. Catharines line. Your board finds that no public necessity exists for the construction of the proposed line, because the particular district is thoroughly well provided with steam, electric and water transportation facilities; because the province of which the district forms a part is also amply provided with transportation facilities; and because the number of transportation companies already operating in the district makes it quite unnecessary to inaugurate a new and distinct system. This phase of the question is more particularly referred to in the report.

"Operating revenue, fixed charges and operating expenses and extension to the frontier. The second, third and fourth specific features in the letter refer to financial matters. A request is made for the estimated operating revenue based on the conditions in the territory to be served by the proposed lines; the estimated cost as stated by the commission, \$11,360,363; and an estimate of the cost of the construction of a proposed extension from St. Catharines to the Niagara frontier, coupled with an estimate of the earnings probable on through traffic obtainable at the frontier when such an extension shall have been made. Your board estimates that the financial state-

ment of the proposed line under local traffic conditions will be as follows:

"Revenue from operation, 59.6 miles, at \$6,000 a mile	\$357,600
"Operating expenses, 61% of \$357,600 ..	218,136

"Net operating revenue	\$139,464
------------------------------	-----------

Fixed charges:	
"Interest on \$11,360,363 (as given by Hydro-Electric Power Commission), at 5½%	\$624,820

"Yearly deficit, exclusive of taxes and sinking fund ..	\$485,356
---	-----------

"(Sinking fund is not chargeable during the first ten years.)

"Your board further estimates that the financial statement of the proposed line under all traffic conditions, will be as follows after 10 years:

"Revenue from operation, 59.6 miles, at \$16,000 a mile	\$953,600
"Operating expenses, 65 % of \$953,600 ..	619,840

"Net operating revenue	\$333,760
------------------------------	-----------

Fixed charges:	
"Interest on \$11,360,362 (as given by Hydro-Electric Power Commission), at 5½%	\$624,820

"Sinking fund, at 1%	113,604
	<hr/>
	\$738,424

"Yearly deficit, exclusive of taxes	\$404,664
---	-----------

"The cost of an extension to the frontier has been estimated at about \$2,280,000, arrived at from a consideration of the figures given by the commission for the line from Port Credit to St. Catharines. This phase of the question is more particularly referred to in the report.

"The letter of instructions makes the fifth specific feature perfectly general in its nature. It requests the submission of pertinent information developed in the study of the question. The effect of good roads on transportation questions generally is of great importance. Your board finds that it would be much more in the interest of Hamilton if good roads were seriously taken up, rather than the proposed Port Credit-St. Catharines line. The amount proposed to be expended on the proposed line would build at least 800 miles of good roads in the Hamilton district.

"The information regarding terminal facilities is so indeterminate that your board has not been able to satisfy itself regarding the obligation of the City of Hamilton in connection with the essential terminal expenditures and costs. The system of financing and apportionment of losses or profits, being entirely arbitrary, and not within the control of Hamilton, is sure to cause dissatisfaction.

"The proposed bylaw and agreement are vague and indefinite in many particulars. By them the city of Hamilton would become responsible for nearly \$6,000,000 and would start into the railway business from which it would have practically no opportunity to withdraw, and over the operation of which it would have no control. One of the parties to the agreement would have entire control, without any responsibility, financial or otherwise, while the other party would have no control, and would be, at the same time, responsible to the last dollar. The agreement would prevent Hamilton from entering into any arrangement with any transportation company without the consent of the Hydro Electric Power Commission. The

city could be required to give a free right of way over any corporation property. The apportionment of losses or profits has not been definitely stated. The question of assistance in operating the line under avoidable and uncontrollable circumstances is not fairly stated. The agreement would require the city to give the proposed railway practically exclusive interests. The renewal clause makes the agreement virtually a perpetual one. No audit is provided for. The agreement as a whole is indeterminate and obscure, although it is definitely stated that the municipalities shall bear all losses in operation, while the Hydro Electric Power Commission is definitely relieved from any and every responsibility, at the same time having the final and binding decision in all matters. Generally, Hamilton would be placing itself entirely in the hands of the commission over which, by the terms of the proposed agreement, it would have absolutely no control or authority. The board considers this a very important matter, as the city is called upon by the proposed agreement to guarantee over half the cost of the proposed line.

"Your board has reached the unanimous conclusion that it is not in the interest of Hamilton to enter into the proposed agreement. For a full discussion of the project we would respectfully refer you to the text of the report. On behalf of the board we desire to express our sincere appreciation of the many courtesies shown to the board and to its assistants, not only by yourself and the members of the citizens' committee, but also by very many others."

The full report states that the Hydro Electric Power Commission declined to furnish any information to the board of engineers, and that Sir William Hearst, Premier of Ontario, was unsuccessfully appealed to. In his reply, the Premier called attention to the fact that the commission objected to the personnel of the board of engineers, claiming that R. W. Leonard was not an electrical engineer, and that he had strongly expressed himself as being averse to the hydro radial scheme. The commission felt an injustice would be done the cause if data and material were handed over to a board of engineers nominally appointed by E. W. Oliver, Assistant Engineer, Canadian Northern Ry.; E. G. Hewson, Division Engineer, Grand Trunk Ry., and three other members of the executive of the Toronto branch. Later, in reply to a query of the engineers, Sir Adam Beck stated that the board might make an appointment with F. A. Gaby, Chief Engineer of the commission, to inspect the material referred to. This appointment was arranged, but Mr. Gaby declined to permit any inspection, and though numerous letters were written by the board of engineers, they got no satisfaction from the hydro authorities.

The American Electric Railway Association has appointed a war board, on lines similar to those adopted by the steam railways. The headquarters are in Washington, D.C., and the board will work in close connection with the Council of National Defence.

The Regina Municipal Railway's Operations.

By D. W. Houston, Superintendent.

The Regina Municipal Ry. has been in operation since July, 1911, a period of over six years. During this time the average daily car miles run has increased from 200 to 2,700, and the number of cars operated from 4 to 21. At present a service is given to all parts of the city, the general layout being radial, all lines running on Eleventh Ave., between Scarth and Broad Sts., and from this branching out into the different settled districts of the city. Four lines are being operated, as follows:

Broad and Dewdney (Red Line) serves Camp Exhibition, Grey Nuns' Hospital, Government House and the Mounted Police barracks in the west end, and the General Hospital, Normal School and St. Chad's Hospital in the southeast portion of the city.

Winnipeg and Thirteenth (Blue Line) serves all the portion of the city west of Albert St., between the C.P.R. tracks and Sixteenth Ave., and the northeast portion including the Imperial Oil Co. plant, also the C.P.R. station.

North Broad and Parliament Buildings (White Line) serves the Collegiate Institute, Regina College, G.T.P.R. station, Wascana Park and the Parliament Building in the south end, and the C.P.R. station and wholesale districts contiguous to Broad St. in the north end, including Simpson's warehouse.

Victoria and Fifth (Green-Red Line) serves the northwest portion of the city, including the street railway car barns and office and the G.T.P.R. shops; in the east end service is given to the Earl Grey Hospital, the Children's Home and all the portion of the city contiguous to Eleventh Ave., east of Broad St. and Eleventh Ave., east of Winnipeg St.

During August and September last the average number of passengers carried on each line daily was as follows: Red Line, 3,370; White Line, 2,004; Blue Line, 2,967; Green-Red Line, 3,144; total, 11,485. The average is considerably higher during the winter, but the proportion carried on the different lines is about the same. Taking the corner of Eleventh Ave. and Scarth St. as a centre, the traffic to and from points west of this is much greater than that to and from points east. On account of the large proportion of the city's population living within reasonable walking distance of this centre, there is considerable variation between summer and winter patronage. As in other cities, this is also affected by the largely increased use of automobiles.

Passenger revenue is slightly augmented by that derived from carrying policemen and postal carriers, the former at a flat charge of \$30 a man per year, and the latter at \$35 a man per year. There is also a certain amount of revenue derived from special cars and the sale of advertising spaces in the cars.

In addition to passenger service, the street railway operates a freight service. The main commodities handled are coal and garbage. Coal for the city power house is hauled in steam railway cars about 1 1/5 miles from the C.P.R. Arcola line. The track over which the coal cars are hauled is on Atkinson St. and is used exclusively for this purpose. Garbage is hauled in special steel dump cars from the city transfer station (just east of the car barns) to the city incinerator, a short distance west of the city limits on Wascana Creek. This material is gathered up

throughout the city by wagons and sorted and loaded at the transfer station.

The rolling stock consists of: 18 passenger cars, double truck; 16 passenger cars, single truck; 1 snow sweeper, double truck; 1 snow sweeper, single truck; 1 snow plough, single truck; 1 motor haulage car, double truck; 5 flat cars, single truck; 6 wood dump cars, single truck; 18 steel dump cars, single truck.

Report of Conciliation Board re Ottawa Electric Railway.

A board of conciliation and investigation was appointed by the Labor Minister recently in connection with differences between the Ottawa Electric Ry. Co. and its employes. Following are extracts from the report:

The matters in dispute were in relation to certain alleged violations by the company of provisions of the agreement entered into with the men on July 10. We found that there was no real difference between the company and the men. Misunderstandings had arisen, as a result of a failure to come together for complete discussion such as we were able to bring about, and as a result the misunderstandings have disappeared and mutual assurances have been given which are practically certain to result in harmonious operation in the future.

The principle was asserted that the men have the right to nominate the members of their grievance committee as they think proper, and this principle is to be recognized by the company. Certain minor difficulties were due to a failure in the past to recognize this principle, but we are satisfied the probability of a recurrence of similar difficulties is slight.

One objection of the men was based upon the fact that an employe had been dismissed without an opportunity being given to the grievance committee to consider his case. This again appeared to have been the result of a misunderstanding and the acting Superintendent has promised to reinstate this employe, in the hope that the difficulty will not occur again.

Another minor difficulty had arisen owing to the company's failure to supply seats for conductors in certain cars. This also appeared to have been an oversight and the company has promised to remedy it within a time satisfactory to the men.

The third minor difficulty was the failure of the company to supply boards in the pits in the sheds as provided by the agreement. It appears that this was because of an objection raised by the insurance underwriters, and the men have recognized the justness of the company's position in this regard and do not intend to press for compliance with that term of the agreement.

Certain instances were mentioned of changes in the shop rules without previous consultation with the grievance committee. These matters were explained to the men's satisfaction and on the board's recommendation care will be taken in the future not to give rise to similar complaints.

The International Transit Co.'s Car men at Sault Ste. Marie, Ont., went on strike for a few hours late in September, demanding an increase of 5c an hour, their wages then being a minimum of 27c an hour, with a maximum of 32 cents. A board of conciliation early in November recommended the following scale: 1st 6 months, 30c; 2nd 6 months, 31c; 2nd year, 32c; 3rd year, 33c; thereafter 35c.

A Vancouver Paper's Views on Street Railway Necessities.

The Vancouver Daily Sun published a long article recently on the development of street railways, from which the following is reproduced:

"Heavier cars, heavier tracks, more safety devices, more convenient service in rush hours, on holidays and on special occasions—all these have been drawing upon the enterprise and ingenuity of electric railway companies until it seemed as if the end had to come. . . . Together with this increase in the investment in better equipment has come a rise in the cost of operation, due to the increase in the cost of labor and materials. With the fixed 5c fare, street railways have been hit especially hard, and harder, they say, than the purveyor of any other commodity, who has been allowed to increase the price of his produce as the cost requires.

"Unfortunately for many street railways, franchises entered into 20 and 30 years ago did not make provision for changing conditions. Again, being a public institution, street railways have been put under further regulation by public service commissions. So that while on the one hand costs have been increasing, the street railways have had their fares fixed by someone else. A new spirit is springing up in the control of street railways, however, one that may be expected to overcome the difficulties of modern life and again send city transportation forward to meet the needs of the public. Commissions are realizing that it is in the public interest that street railways should have obstacles to their progress removed. In other words, while they have regulated them as regards fares and service for the public good, they have also co-operated with them to enable them to give service to the public. For instance, commissions have agreed throughout to the fundamental necessity from the public's point of view of allowing a company to make a fair return on the investment, because should it be prevented from doing so, the service the public would receive would inevitably deteriorate. They have even taken the same broad minded stand on the question of fares, which have been fixed by franchises. In some cases, street railways have themselves contracted to charge only a certain fare, but a few years later found that they could not maintain the service and pay a fair return on the investment. The commissions have taken the stand that a company cannot be expected to give service below cost, even if it were stipulated in the franchise, and have authorized increases in fares accordingly. The spirit of co-operation has taken the place of antagonism. City transportation is such a vital factor in modern life that it is realized that the shoulder of everyone should be at the wheel if the best results are to be obtained."

One-Man Cars for Saskatchewan.—T. H. McCauley, Superintendent Calgary Municipal Ry., while on his way east on business recently visited Regina, Sask., and gave information to the Saskatchewan Government, respecting the operation of one-man cars, supporting a delegation representing Regina, Saskatoon, and Moose Jaw city councils, which asked the government to bring in an amendment to the Railway Act, to authorize the operation of cars with one man in charge instead of two.

Electric Railway Notes.

The British Columbia Electric Ry. has made claims for exemption of twelve of its employes, under the Military Service Act.

The British Columbia Electric Ry. is said to be considering putting one-man cars in operation on some lines in Vancouver, New Westminster and Victoria.

The Edmonton, Alta., City Council, has let a contract to J. L. Tipp, for supplying 100 overcoats for the employes of the Edmonton Radial Ry. at \$30 each.

The Edmonton, Alta., City Council is reported to have placed an order in the U. S. for 80 new car wheels for Edmonton Radial Ry., at a cost of \$4,060.

The Niagara St. Catharines & Toronto Ry. has, at the Niagara Falls, Ont., City Council's request, put near sidestops into effect on its entire local line there.

The Edmonton, Alta., Radial Ry. has provided a waiting room and shelter for passengers on the low level route, at the north end of the low level bridge.

Toronto Works Commissioner has reported against allowing advertising on the outside of Toronto Civic Ry. cars, contending that the disfigurement of the cars would not be justified by the returns.

One-man cars are being operated on every one of the routes on the Calgary, Alta. Municipal Ry., the Ogden route being the last one upon which these cars were placed.

The British Columbia Electric Ry.'s total taxation for the current year for its entire system, including city, municipal and government taxes and percentages is \$249,056.24.

E. P. Coleman, General Manager, Hamilton St. Ry., is reported as having stated Nov. 9, that the company was considering the desirability of putting a number of p.a.y.e. cars in operation on certain of the city lines.

The Lake Erie and Northern Ry. was notified by the Galt, Ont., City Council recently that it would have to cease operating its cars on Water St., in that city, by Dec. 1, unless in the meantime an agreement as to terms was signed.

Nineteen persons were treated in hospitals and a number of others in an adjoining police station on Nov. 7, as the result of a Montreal Tramways Co. car leaving the rails at the corner of Seigneurs and Notre Dame Sts. and colliding with the Merchants Bank building.

The Kitchener, Ont., Railway Commission has notified its employes that starting from Jan. 1, 1918, an increase of 7½ cents an hour will be made in the pay of motor men and conductors, and that employes of one year standing and upward will be given a week holiday with pay each year.

The Calgary Municipal Ry. is having six cars specially fitted up for use as one-man cars during the rush hours only, and to run on certain routes between terminals without intermediate stops. The door in the rear is being closed, the entrance, as well as the exit, being via the front platform.

The Shawinigan Water and Power Co. is applying to the Quebec Legislature for confirmation of all issues of debenture stock heretofore made by the company, to amend and extend the company's borrowing powers, and its rights to issue bonds, debentures, or other securities, and for other purposes.

At a meeting of the Northside Ratepayers' Association at Regina, Sask., Nov. 2, the Regina Municipal Ry. management was criticized. Alderman England invited the critics to place their charges in writing and pointed out that if this was done a thorough investigation would be made.

The British Columbia Electric Ry. has decided to sell rather than give free use of street car fenders for advertising purposes. In the past, the company has been glad to offer this space freely for patriotic and charitable advertisements, but such have been the increases in the company's expenses that new sources of revenue had to be developed.

The Moose Jaw, Sask., City Council passed a resolution recently stating that no obstacle would be placed in the way of the operation of one-man cars on the Moose Jaw Electric Ry. so long as the company maintained an adequate service. The resolution was opposed by the labor member on the council.

The Ottawa Electric Ry. put the winter car schedule in operation on the Britannia line Nov. 12. A four minute schedule is given from the corner of Elgin and Spark Sts. to the McKellar townsite loop, with a two minute service during the rush hours; while a 10 minute service is given from the McKellar townsite to Britannia.

The hearing of the evidence and arguments in the difference between the Edmonton Radial Ry. and its employes by the Board of Conciliation, were brought to a sudden stop, Oct. 31, when the city obtained an injunction restraining the board from taking further proceedings. On Nov. 2, Justice McCarthy was appointed by the Minister of Labor as Royal Commissioner to act in the matter.

The electrolysis of water pipes in Winnipeg was again brought before the city board of control recently by the Superintendent of the Water Works, who reported that the measures now applied by the Winnipeg Electric Ry. are strictly limited to the districts supplied by their substations only, leaving four others to be dealt with, including the most important of all, namely, Mill St.

Sandwich, Windsor and Amherstburg Ry. employes were out on strike recently for nine hours because a non-union man, who, on the half-yearly distribution of runs, had selected a night run, desired a change to a day run and was refused by the Superintendent; he then went to the Manager, who directed the change to be made. The employes protested and subsequently went out. The mavor intervened, and the matter was adjusted.

The Edmonton, Alta., Municipal Ry. management is considering the question of the transportation of the fire brigade and policemen on the cars and has been getting information from other places. The Lethbridge, Alta., City Council gives municipal employes the privilege of buying 25 street car tickets for \$1; while in Calgary, the fire department pays the municipal railway \$250 a year for members of the fire brigade, and the railway department permits policemen in uniform to ride free, charging them the ordinary fare when out of uniform.

The Saskatchewan labor organizations' executive committee has under consideration the question of the position which should be taken in regard to the proposal to operate one-man cars on electric rail-

ways in the province. When the railway act was passed by the legislature the labor party secured the insertion of a clause providing that there should be a motorman and a conductor on each car. In order to permit the operation of one-man cars the legislature is being asked to repeal this clause. It is expected that the organizations will pass a resolution, of which notice has been given, protesting against repealing the clause.

Mainly About Electric Railway People.

Wilford Phillips was presented with a gold watch and chain, and Mrs. Phillips with a travelling bag, by Winnipeg Electric Ry. employes on his retirement from the position of General Manager.

A. W. McLimont, the new General Manager of the Winnipeg Electric Ry., has been elected an honorary member of its Old Timers' Association, which is composed of employes who have been in the company's service for 10 years or more.

W. S. Hart, heretofore Secretary-Treasurer, Three Rivers Traction Co., has been appointed Managing Director. James Wilson, heretofore Assistant Secretary-Treasurer, has been appointed Secretary-Treasurer.

A. E. B. Hill, of the British Columbia Electric Ry.'s Signalling Staff, was presented with a silver loving cup by the office staff at Vancouver, Nov. 9, on retiring after ten years service. The presentation was made by G. Kidd, General Manager.

Maurice McCormick, heretofore Assistant General Manager and Purchasing Agent, Bangor Ry. & Electric Co., Bangor, Me., has been appointed Assistant to General Manager, New Brunswick Power Co., St. John, N.B., which owns and operates the St. John Ry.

F. M. Black has resigned his position as a member of the Alberta Public Utilities Commission, on his appointment to a position under the Food Controller. The Alberta Government is reported to have decided to postpone indefinitely the filling of the vacancy.

W. Douse, heretofore of the Hydro Electric Power Commission of Ontario's purchasing office, has been appointed acting Purchasing Agent, Toronto & York Radial Ry., Toronto, G. K. Hyde, Purchasing Agent, having, on account of ill health, been granted six months leave of absence, which he will spend in the south.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver, B.C., visited Calgary, Alta., Oct. 25, in company with Inspector Rae, of the Department of Railways of British Columbia, to inspect the working of one-man cars on the Calgary Municipal Ry. They were on their way home from visiting a number of United States cities, where one-man cars are being operated.

J. T. Donohue, who was added to the Quebec Railway, Light, Heat and Power Co.'s board at the recent annual meeting is President of the Nairn Falls Power & Pulp Co., Murray Bay, Que. Before the erection of the Quebec bridge commenced he was President of the Eastern Steel Co. of Canada, which was sold to the contractors for that structure. He is also President of the Donohue Construction Co. of Quebec.

Mathew W. Kirkwood, whose appointment as General Manager, Galt, Preston and Hespeler St. Ry., and Lake Erie and Northern Ry., Galt, Ont., together with

his portrait, appeared in our last issue, was born at Cheltenham, Ont., June 8, 1877, and entered G. P. & H. S. R. service in Dec. 1894, since when he has been, to Sept., 1895, general helper in repair shops, Preston, Ont.; Sept. 1895 to Oct. 1907, Master Mechanic and Electrician in charge of rolling stock and equipment,

Preston, Ont.; Sept. 1895 to Oct. 1907, Superintendent and Master Mechanic, Preston, Ont. In addition to the last named position, he was from Feb. 1915, to Feb. 1916, Electrical Engineer, Lake Erie and Northern Ry., in charge of construction and equipment, and from Feb. 1916 to Sept. 1, 1917, Superintendent.

Electric Locomotives for Hydro Electric Power Commission of Ontario Construction Railway.

The Hydro Electric Power Commission of Ontario is having built twelve 50-electric locomotives for hauling trains on the construction railway which it is building in connection with its power development at Chippewa Creek, near Niagara Falls and which will have 600 volt, d.c. operation. Their general dimensions are as follows:

Length over end sills	35 ft.
Length over striking plate	36 ft.
Length of truck centres	19 ft.
Length of main cab	10 ft.
Length of auxiliary cab	9½ ft.
Width over side sills of locomotive ..	8 ft. 11 in.
Width over cab door posts	9 ft.
Width over all equipment hoods	5 ft. 3 in.
Height from rail to bottom of side sills	3 ft. 4 in.
Height from rail to top of floor	4 ft. 6¾ in.
Height from rail to top of cab	12 ft. 8¼ in.
Truck wheel base	7 ft.
Diameter of wheels	36 in.
Coupler height (M.C.B.)	34½ in.

The locomotives, which are designed for double end operation, for either switching or road service, upon completion, with entire electrical and air brake equipment will weigh approximately 72,000 lb., and the remaining weight of approximately 14 tons, will be made up by ballasting with slag, concrete, or cast iron slabs, securely fastened to sills.

The underframe is made up of members assembled as follows: Six longitudinal sills forming centre, intermediate and side sills of 12 in. I beams, extending from end sill to end sill and securely fastened to end sills with connection angles. End sills consist of 15 in. 33 lb. channels at each end of underframe extending straight for 15 in. on each side of centre line and dropping back 13 in. to corner of underframe. Flanges of end sill are coped out at corner of car, and web is bent around outside of side sill and projects back for sufficient distance to make a good connection. Cross members or separators, of which there are 5 per locomotive consist of 8 in. I beams, securely connected to longitudinal sills by double angle connections at each end, fastened on with ¾ in. rivets. Bolsters are built of 14 x 1 in. plates, extending entirely across car, and riveted to top and bottom of longitudinal sills, with an extra 14 x 1 in. plate extending across the bottom, from the intermediate sill on one side of centre sill to the intermediate sill on the other. Draft sills are 12 in. channels, securely riveted through their flanges to the bottom flanges of centre sills and braced side-ways by heavy forged bars and angle connections to the buffer blocks. Draft gear, is twin spring, and couplers are cast steel, 5 x 7 shank, with M.C.B. butt for keyed draft gear. The uncoupling device is of ordinary freight car type extending across the locomotive at a point just ahead of underframe corner and is let into wood floor flush. Flooring is 2¾ tongued and grooved long leaf yellow pine.

The cab is framed of angles, channels and bars with 1/16 in. steel sheathing, steel angle carlines and wood roof. It has two side doors and two end doors at

diagonal corners, with four drop windows in sides, and two in ends at diagonal corners. The motorman's seat is removable, with two sockets in floor, for driving from either end of locomotive. All control levers and handles are duplicated in diagonal corners, for reversible operation of locomotives. The hoods are framed of angles, channels and bars with 1/16 in. steel sheathing and 1/16 in. steel roofing. Each hood is equipped with one removable steel door, for access to equipment therein. The hood is narrow enough to allow a walkway all around outside of platform at each end, and platform is equipped with pipe railing, mounted on pipe stanchions, at the outside edge, with an inside hand rail around top of cab roof. All grab handles, steps and safety appliances are in accordance with requirements of Board of Railway Commissioners of Canada and Interstate Commerce Commission. At each side of cab, at side door posts, steps are provided for access to the roof and immediately over each side door on roof is mounted one grab handle.

There is one trolley base on each side of locomotive mounted on an extension platform built out from roof on locomotive. Each locomotive is equipped with one bell, one set of chime whistles and one electric head light. At each end of locomotive a large sand box is built into hood—equipped with Ohio Brass Co.'s air sanders and air hose of 2 in. steel pipe for leading right hand wheels on each truck. Trucks are arch bar type, 4 wheel, with 36 in. journals, M.C.B., and journal boxes with contained parts. Each truck bolster is built up of 2, 10 in. 40 lb. I beams, with a cast steel separator at the middle, and flat plate spacers at the outer ends. Transoms are 12 in. 30 lb. channels, mounted on cast steel brackets at arch bars which are riveted to the spring plank. Spring plank is a 13 in. rolled steel channel. Brake is of an equalizer type for inside motor, with double brake levers of ½ in. thick bars and single hangers of 1 in. thick bars. Brake shoes are cast steel of M.C.B. contour, with M.C.B. steel back brake shoes. Top arch bars are 5 x 1½ and bottom tie bar is 5 x 1½. Bottom arch bar extends out past centre of journal box 2 ft., to where it is joined by tie bar, the two forming a truss to support end frame, which is a 4 x 4 rolled steel angle.

Each locomotive is being equipped with Westinghouse air brake, 14 in. cylinders, with Independent reservoirs and two compressors. Extra compressor capacity is provided to supply air dumping mechanism on dump car. Parasite reservoirs and governors are provided and so arranged that when operated in trains, all governors in the train will cut in at the lowest setting pressure in the series.

The locomotives will be equipped with multiple unit control, six having General Electric control, with second-hand motors of G.E. 66 type. The other six locomotives will be equipped with Westinghouse

control and new Westinghouse motors, type 562-A. Each locomotive should develop at starting, a tractive effort of approximately 30,000 lb. on dry rails.

The air brake equipment for the 12 locomotives of the Westinghouse no. 14 EL type. The equipment for each locomotive includes two D-4-P 50 ft. Westinghouse motor-driven compressors, which have a combined capacity sufficient to supply the air for both braking and dumping purposes. The two compressors on each locomotive are started and stopped simultaneously by means of the Westinghouse governor synchronizing system, which also permits simultaneous operation of all compressors in cases where two or more locomotives are operating together. The brake valves are of the K-14-A type, having both the automatic and independent valves mounted in a common structure, with two operating handles readily accessible. The air gauges have illuminated dials for night operation. The air for operating the dump cars attached to these locomotives is taken from a separate parasite reservoir, the air pressure coming from the air brake reservoirs through a parasite governor which is installed to prevent the dumping apparatus from depleting the pressure available for braking below a safe predetermined minimum. An operating valve in the locomotive cab controls the admission of air to the dump line and thus operates the car dumping apparatus. The air equipment on each locomotive includes a clarion whistle.

The Canadian Westinghouse Co.'s contract covers the necessary electrical equipment for use with 6-ton locomotives, with 1,500 volt insulation and for 600 volt operation. Each equipment consists of four no. 562-D-5 railway motors with pinions and gear cases. The motors are rated at 100 h.p. (75 kw. 600 volt). The control equipment is of the unit switch type, each equipment consisting of 1 type 496-H main knife switch complete with two terminals; 1 type 265-D-25 switch group; 1 type 265-D-26 switch group; 1 type 284-L-4 reverser; 1 set of grid resistance; 2 type 494-B control and reset switches S-192486; 2 type 337-D-2 master controllers; 1 type 187-A control resistor S 171769-A; 2 type 651-A junction boxes; 2 type 448-D train line receptacles; 2 type 448-M train line receptacles; 2 type 364-A motor cutout switches; 1 type 449 train line jumper; 1 type 449-G-2 train line jumper.

The order for these locomotives was given by the Hydro Electric Power Commission of Ontario to the C. E. A. Carr Co., Toronto, which contracted to supply 12 locomotive bodies, with steel cabs, trucks, axles and wheels complete, and also to supply six of the locomotive equipments complete, each locomotive with motors, controllers, all wiring for motors, control, light and other circuits, also complete air brake equipment, as per G. E. Co. type l.p. locomotives, air brake equipment with two 25-ft. air compressors per locomotive and enough air tank capacity to furnish air to twelve 20-yard dump cars, or Westinghouse air brake equipment of similar type and capacity, in fact the six locomotives to be complete ready in every detail for operation, less overhead trolley operation mechanism. For the other six locomotives, for which the C. E. A. Carr Co. contracted to supply the bodies, steel cabs, trucks, axles and wheels, the Commission supplied the electrical and air brake equipment. The trucks, bodies and cabs for the whole 12 locomotives are being built by the National Steel Car Co., Hamilton, Ont.

Steel Tired Wheels on British Columbia Electric Railway.

By W. G. Murrin, Assistant General Manager, B. C. E. Ry.

Steel tired wheels have been in common use on European electric railways for some years, but on this continent, excepting on some interurban lines, this practice is almost unknown. The British Columbia Electric Ry., operating over 250 miles of track, of which 180 miles are interurban, has developed a practice of using on new equipments rolled-steel wheels which are afterwards made into centres and fitted with tires. This procedure has been found economical under local conditions and may be of interest to some other railways since the prices of both chilled iron and steel wheels are mounting skyward.

The large amount of interurban equipment on this railway, including 10 heavy locomotives, required suitable machinery in its repair shops, including a 42-in. wheel lathe. This no doubt facilitated

city cars ordered in 1910. The following year, government regulations forced the elimination of iron wheels from all interurban passenger equipments, owing to the danger from broken flanges, etc., and a number of cars were equipped with steel-tired wheels having cast iron centre of the Midvale bolted type. The noticeable reduction of the flat wheel nuisance which followed the use of steel resulted in extending its application to city cars, and consequently the shops were equipped with suitable machinery to care for them.

Then the price of steel wheels began to rise, and the economy of using tires suggested the idea of putting them on the steel wheels. For both city and interurban equipments, rolled steel wheels are selected of suitable dimensions so that at their final turning they can be made into centres. The English method of tire fast-

ening, by rolling the inside edge of the tire over that of the centre was adopted for the city wheels, and the Midvale bolted tire, now rapidly becoming standard, was selected for the interurban wheels. Experience so far has shown that the use of steel tires effects a saving over that of either solid steel or chilled iron wheels, even if the f.c.s. wheel is included. The amount of steel scrapped from a worn-out tire is considerably less than from a solid wheel, and a market for scrap tires can be found where the wheel centres cannot be disposed of. The life of a tire is about the same as that of a steel wheel and averages about four years, during which time four cast iron wheels would have to be installed. According to prices as at the end of 1916, the costs per thousand car-miles of city equipment, including shop costs and returns for scrap, etc., were for chilled iron f.c.s. wheels, 30c; rolled steel wheels, 25c, and for tires, 20c.

There is also a saving in time for cars in shop, as during the four years a car with iron wheels will be shopped 2 to 15 times for wheel grinding, rewheeling, etc., as compared with four to six times for turning or renewing tires. Iron wheels are scrapped mostly for slid flats, shelled

Lethbridge Municipal Railway Report.

Following are extracts from the commissioners' and auditors' reports for 1916 which have only been issued recently:

Revenue.	
Traffic	\$47,812.55
Advertising	574.50
Rental electric substation	720.00
Earnings, merry-go-round	487.34
Sale unclaimed personal property	45.15
Net deficit	27,924.89
\$77,564.43	
Expenditures.	
Operation and maintenance	\$37,657.15
Administration and miscellaneous	3,003.10
Merry-go-round operation	181.95
Merry-go-round depreciation	750.00
Debt interest	20,063.35
Sinking fund	9,903.14
Insurance	401.51
Taxes	5,604.23
\$77,564.43	

Worn steel wheels are made into centres and are equipped with tires. City and interurban wheels are shown in figs. 1 and 2 respectively.

the introduction of steel wheels on the city equipments, but other factors such as the distance of this property from wheel makers, and local climatic conditions which, particularly in Vancouver, cause unusually slippery rails during the wet season, contributed to the development of this practice, experience having indicated that slid flats are less prevalent with steel than with chilled iron wheels. Flats on the steel wheels, also, can be more easily remedied.

A brief history of the experiences which led to the adoption of steel tires will perhaps be of interest. In 1905 the standard wheels were 33-in. cast iron, single-web plate wheels being used for interurban equipment. A number of double truck city cars of the Narragansett convertible type were built and equipped with 30-in. wheels, but the smaller motor clearance on temporary ballasted tracks, and the apparent tendency of the smaller wheel to develop slid flats more rapidly than the others led to their being discarded. In 1909 two experimental sets of steel tired wheels of English manufacture were installed, one each on city and interurban cars, and the performance of these resulted in specifying 33-in. rolled steel wheels for 30 new

ening, by rolling the inside edge of the tire over that of the centre was adopted for the city wheels, and the Midvale bolted tire, now rapidly becoming standard, was selected for the interurban wheels.

Experience so far has shown that the use of steel tires effects a saving over that of either solid steel or chilled iron wheels, even if the f.c.s. wheel is included. The amount of steel scrapped from a worn-out tire is considerably less than from a solid wheel, and a market for scrap tires can be found where the wheel centres cannot be disposed of. The life of a tire is about the same as that of a steel wheel and averages about four years, during which time four cast iron wheels would have to be installed. According to prices as at the end of 1916, the costs per thousand car-miles of city equipment, including shop costs and returns for scrap, etc., were for chilled iron f.c.s. wheels, 30c; rolled steel wheels, 25c, and for tires, 20c.

There is also a saving in time for cars in shop, as during the four years a car with iron wheels will be shopped 2 to 15 times for wheel grinding, rewheeling, etc., as compared with four to six times for turning or renewing tires. Iron wheels are scrapped mostly for slid flats, shelled

Commissioner Graves in a report dated June 28, 1917, says: "Our street railway has shown very satisfactory returns considering everything. I have made a careful study of statistics published by other street railway systems, large and small, privately owned and otherwise, and I find our cost per car mile compares very favorably with any of them. Passengers carried per car mile is low with us, on account of population, but passengers carried per 100 of capita, is quite up to the average. I have made it a rule to keep the equipment fully repaired and in a good state of efficiency, which feature I note is being sadly neglected in some of our other cities. The ties which have been down for a number of years will require replacing and expenses on track maintenance will be heavy from now on."

"During the first five months of 1916 our Red Line obtained considerable additional traffic owing to soldiers at the fair grounds. This year to date shows a falling off of about \$25 a day on this line, in fact there was so little patronage for this car that it was considered advisable to reconstruct two small cars, so that they could be operated from either end and discontinued the park section during certain months and by shortening the run,

give a faster service for 6th Avenue points. These cars are ready, but the service to the park will require the through service up to the middle or end of September, when the change will be put into effect. However, in spite of the falling off on the Red Line, increases in wages, cost of materials, interest, sinking fund payments and taxes, the consumption of power has been reduced, and the traffic on other lines has increased so that I am reasonably confident that the system will not be more than \$1,000 to \$1,500 below 1916 in net results."

Electric Railway Projects, Construction, Betterments, Etc.

Brandon Municipal Ry.—We are officially advised that nothing further has been done in regard to the proposal to extend the line to Lake Percy, other than making an inspection of the route recently. It is not expected that anything will be done in the way of construction at present. T. Boden, Brandon, Man., is Superintendent. (Oct., pg. 407.)

British Columbia Electric Ry.—The Kitsilano bridge, owned by the C. P. R., and leased with the Lulu Island Ry. to the B. C. E. R. is claimed to be a menace to navigation. An agitation was launched by the British Columbia Tug Owners' Association, Nov. 2, with the view of having it removed.

An arrangement has been completed between the company and the North Vancouver city and district councils, for the extension of the company's tracks on to the ferry wharf at North Vancouver. The estimated cost of the work is \$4,000 towards which the two councils will ask the ratepayers to pass bylaws at the annual elections in January, providing \$2,500.

The Timberland Lumber Co., of New Westminster, B.C., is building a new mill on the south bank of the Fraser River, just west of the railway and highway bridge. It proposes to link up with the B. C. E. R. by a spur line at a cost of about \$30,000. It is reported that arrangements for building this spur have been completed, the lumber company to do all the work, and the B. C. E. R. to provide the rails and the wire for overhead work. (Nov. pg. 444.)

Guelph Radial Ry.—We are officially advised that a single end two car turnout is being put in on Carden St., Guelph, Ont. A. H. Foster, Ont., is Manager. (Nov., pg. 444.)

London St. Ry.—The Ontario Railway and Municipal Board has made an inspection of the company's lines in connection with the building of the Tecumseh St. line. (Oct. pg. 407.)

The Niagara, St. Catharines & Toronto Ry. has practically completed rereiling and rebonding its line at Niagara Falls, with 80 lb. rails, and 90 lb. girder rails in pavement. On the local line, from the Roman Catholic church to Montrose, about 4½ miles, 65 lb. rails have been laid instead of 56 lb. (Nov., pg. 444.)

Nipissing Central Ry.—We are officially advised that a 6-car siding has been built at Haileybury, Ont., for the Riordan Pulp and Paper Co., and that the reconstruction of the car barns at North Cobalt, which were partially destroyed by fire, Mar. 4, is about 80% completed.

Port Arthur Civic Ry.—We are officially advised that there are under construction two timber bridges over the McIn-

tyre River on the main line. The specifications were approved by the Ontario Railway and Municipal Board. The estimated cost is \$2,890. (Nov. pg. 444.)

Toronto and York Radial Ry.—We are officially advised that the object of the spur line proposed to be built to connect the company's track at Aurora, Ont., with the G. T. R., is to facilitate the delivery of cars to the factories there and thereby save the teaming which is now necessary from the west side of the town to the G.T.R. station. The proposed siding is located 1½ miles south of the town, at the point where Yonge St. crosses the G.T.R. and will be about 1,500 ft. long, single track. An inspection of the locality was made at the end of October by a Board of Railway Commissioners' engineer who suggested that all the parties interested should get together and reach an amicable agreement in regard to the matter. (Nov. pg. 444.)

Toronto Civic Ry.—We are officially advised that the extension to the Bloor Division from Quebec Ave. to Runnymede Road, in Ward Seven, has been completed. Tenders for the work were called in June, but no contract was let. Construction was started Sept. 28, and was carried out under the direction of D. W. Harvey, Superintendent. The extension consists of half a mile of single track, laid with 56 lb. steel rails, and ballasted with gravel. A car service was put in operation Nov. 5. (Nov. pg. 444.)

Fares on Electric Railways.—The question of increases in fares charged on electric street railways is occupying the attention of those concerned in practically every country where they are operated. This applies to railways operated by companies, as well as by municipalities. At a meeting of the Municipal Tramways Association of Great Britain recently, it developed that 16 municipal street railways were not able to turn the corner financially, while 20 others placed their profits at not more than sixpence per 100 passengers. Some others, to induce traffic, had lengthened the distance carried for a particular sum, and some had decreased fares, with success. This could be done in the larger cities where there are large aggregations of people, but in the smaller towns there seemed to be nothing but to carry the loss. It was held that the only true basis for fixing fares, is the cost of providing the service rendered, and all who avail themselves of the service to be required to pay on a uniform scale. This seems to be the true basis of fixing fares, and therefore is an argument in favor of the zone system. Under the present system in Canada, the long haul passenger is carried at a loss, and the short haul passenger is discouraged from travelling, owing to being penalized to make up the loss on the long haul passenger.

Sandwich, Windsor and Amherstburg Ry.—Consideration is being given in Windsor, Ont., to a plan for settling various questions at issue between the Sandwich, Windsor and Amherstburg Ry., and the city, and it is expected that a joint conference will be held to see if an agreement can be reached. The Ontario Railway and Municipal Board has advised that if an agreement cannot be arrived at, the council should state what it wants done and the board will then take action.

About 290 jitneys are being operated in Winnipeg under the new bylaw as against about 500 which were operating before the owners were compelled to take out bonds.

Toronto Suburban Railway's Highway Crossings.—Canadian Railway and Marine World for October gave particulars of several orders passed by the Ontario Railway and Municipal Board, respecting protection of highway crossings along the T.S.R.'s extension from Lambton to Guelph. Another order was passed Oct. 26, respecting the crossing of Hurontario St., near stop 37, and the Hickey Farm. This order rescinds the one passed Sept. 20 in regard to the same crossing, and requires that every car going in either direction shall come to an absolute dead stop at the shelter known as stop 37. Every car going westerly shall be under complete and absolute control, from the time when it is within 50 ft. of the east side of the highway, that is, that although the car shall come to an absolute dead stop at the shelter on the west side of the highway, in addition thereto, it shall be under such control before reaching the eastern side of the highway, that, in the event of a vehicle approaching the crossing, the motorman may be able to stop immediately, anywhere on the crossing, when necessary to avoid a collision.

Marine Department

Shipbuilding Activities Throughout Canada.

STEEL AND WOODEN SHIPBUILDING FOR BRITISH GOVERNMENT.

Canadian Allis-Chalmers, Ltd., as announced in our last issue, received a contract from the Imperial Munitions Board for the construction of four general cargo freight steamships of 3,500 tons each for the British Government. The vessels, which will be built at the company's shipyard on the Niagara River, near Bridgeburg, Ont., will be 261 ft. long overall, 42½ ft. breadth moulded, and 23 ft. depth moulded, of steel construction throughout, to class 100 A1 British Lloyd's Register. They will be of the usual bulk cargo type, but with special features adapting them for use during the present war time conditions, being provided with appliances to protect them against submarine attacks, in addition to being arranged with a view to evade visibility and identification. The steel will be furnished by the British Government through the Cunard Steamship Co. and it is expected that a considerable tonnage of this steel will be available for delivery this year, enabling the builders to start operations immediately. The propelling machinery will be built at the company's Davenport works, Toronto. The main engine will be of the triple expansion type, the size being 20, 33, and 54 x 40 in. stroke and of the surface condensing type. The two boilers will be 14 ft. diameter and 12 ft. long, for a working pressure of 180 lb. They will be fitted, for economical working, with heated draft. The coal bunkers will be located under the bridge deck and in the wings of the boiler space and will hold over 500 tons. There will be three cargo holds; nos. 1 and 2 holds to have one cargo hatch each, and no. 3 hold, abaft the engine room, will have two cargo hatches. Each cargo hatch will be served by two independent cargo derrick booms, each of five tons capacity, and each boom will have its independent cargo winch. The steam steering engine will be located on the upper deck, in a special house abaft of the engine casing. The life saving equipment will include two 26 ft. life boats and one 18 ft. working boat. The water ballast tanks, 3 ft. deep amidships, will extend the entire length from the collision bulkhead forward to the peak tank aft. The accommodations throughout the ship will be steam heated and the lighting throughout will be by electricity.

J. Coughlan & Sons, Vancouver, B.C.—Work was resumed at these yards. Oct. 29, after having been suspended since Oct. 3, owing to a strike of employes. The men recommenced work on the understanding that the shop be made a closed one, and pending the reports of the United States Wage Adjustment Board, which is investigating the general situation in the shipyards along the U.S. Pacific coast. Six steel steamships are on order at these yards for the Imperial Munitions Board, and it was anticipated that the first of them would have been launched in November.

The Foundation Co., Victoria, B.C.—Four of the five hulls under construction for the Imperial Munitions Board are reported to be in an advanced stage of construction.

Fraser Brace & Co., who, as mentioned in our last issue, have a contract from the Imperial Munitions Board for the construction of the hulls of four wooden steamships at Montreal, have acquired a site for a shipbuilding yard of approximately eight acres at Cote St. Paul, on the south side of the Lachine Canal. Keels for the first two vessels have been laid on the eastern bank of the slip, and these, when completed, will be launched in the usual manner. The other two keels will be laid in the bed of the slip, and when completed, the slip will be flooded from the canal, and thus, the erection of launching ways will be avoided. It is reported that an additional contract for four similar vessels is being negotiated. Machine shop, stores and office buildings are in course of erection, and it is expected to employ about 600 men on the present contract.

Fraser, Brace & Clark, Ltd., has been incorporated under the Dominion Companies Act, with \$500,000 authorized capital, and office at Montreal, to build, own and operate and deal in vessels of every description, and to carry on a general transportation business, also to build warehouses, wharves, docks, etc. As stated in our last issue, Fraser, Brace & Co. hold contracts from the Imperial Munitions Board for the construction of four wooden steamships, for which, it is reported the keels have been laid at the company's yard on the south bank of the Lachine Canal, between Atwater and Cote St. Paul bridges.

Grant & Horne, St. John, N.B., laid the keel of a wooden steamship for the Imperial Munitions Board, at their Courtenay Bay yard recently. It is of British Columbia fir, 250 ft. long.

The William Lyall Shipbuilding Co. expected to have the last of the keels of the six vessels which it is building at its North Vancouver yards, laid by the end of November. Construction work on four of the hulls is in an advanced state, but no date has been announced for the first launching.

The Victoria Machinery Depot, Victoria, has under contract from the Imperial Munitions Board, the construction of 12 boilers of the Howden water tube type for wooden steamships which the board is having built on the Pacific coast. It is expected that other similar orders will be placed shortly.

The s.s. War Dart was launched at the Port Arthur Shipbuilding Co.'s yards at Port Arthur, Ont., Nov. 3. It is expected that she will be completed and dispatched to the coast before navigation closes. She is the third vessel of this type launched by the company this year. Her dimensions are, length 261 ft., beam 43½ ft., depth 28 ft. 2 ins., with a gross tonnage of 2,406 tons and deadweight carrying capacity of 4,280.

The s.s. War Honour was launched at the Detroit Shipbuilding Co.'s yards at Wyandotte, Mich., Nov. 3. This is one of the series of vessels ordered for British interests, and which has since been taken over by the United States Shipping Board. Like other vessels built at lake shipyards, it is of full Welland Canal size, with a carrying capacity of about 3,000 tons. It was expected that she would be

complete and ready for sea about the end of November.

Ships' Carpenters engaged on wooden steamships for the Imperial Munitions Board, at the Cameron-Genoa mills and the Foundation Co.'s yards at Victoria, B.C., threatened to strike work toward the end of November unless they were granted an increase of 33 1-3% in their pay. The rate is \$4.50 a day and they want \$6. It was reported that the Imperial Munitions Board, which controls the rate of wages, had offered \$5 a day but was not disposed to grant the full increase asked, which it considered out of all proportion to the class of labor employed, a large part of which is unskilled.

The installation of the engines and equipment in the wooden hulls of the steamships being built in British Columbia for the Imperial Munitions Board, will be carried out in a large shed which is being built on pier 2 at Victoria. As announced in our last issue, the contract for building the shed has been awarded to Grant, Smith & Macdonnell, Ltd. The building will be 703 ft. long by 200 ft. wide, and the walls will be 22 ft. high under the eaves and 29 ft. at the ridge, with a 16 ft. clearance inside. It is stated that the shed will have the greatest floor space of any shed on the Pacific coast. The building will be entirely of wood, over 2,000,000 ft. of lumber being required for its erection. A most elaborate arrangement of hydrants and standpipes protection. Each 18 ft. section of the walls will form a sliding door, for easy will be installed to ensure efficient fire access to all parts of the building. The plans show a depressed railway track running from the shore end right through the centre of the shed, and surface tracks on the outside of the building at each side. Sufficient skylights and windows will be provided to supply adequate light during the daytime, and large electric lamps will be provided for night work. The most modern system of ventilation will be installed. It is expected that the building will be completed during, or by the end of January, and as each hull is launched, she will be brought round to the shed for her equipment. H. A. Bayfield, formerly Superintendent of Dredges for the Dominion Government on the Pacific coast, has been appointed in charge of the assembling of the equipment at the shed.

GENERAL SHIPBUILDING NOTES.

The Anglo-Newfoundland Development Co. is reported to be building two 350 ton sailing ships equipped with auxiliary power, at Botwood, Nfld.

Cameron-Genoa Mills Shipbuilders Ltd.—It is reported that negotiations are in progress with French interests, through H. W. Brown, General Manager, Canada West Coast Navigation Co., for the construction by this company, of six auxiliary powered schooners of the same type as those built recently for the Canada West Coast Navigation Co., and four wooden steamships, similar to those being built on the Pacific coast for the Imperial Munitions Board. Plans are said to have been prepared for laying out

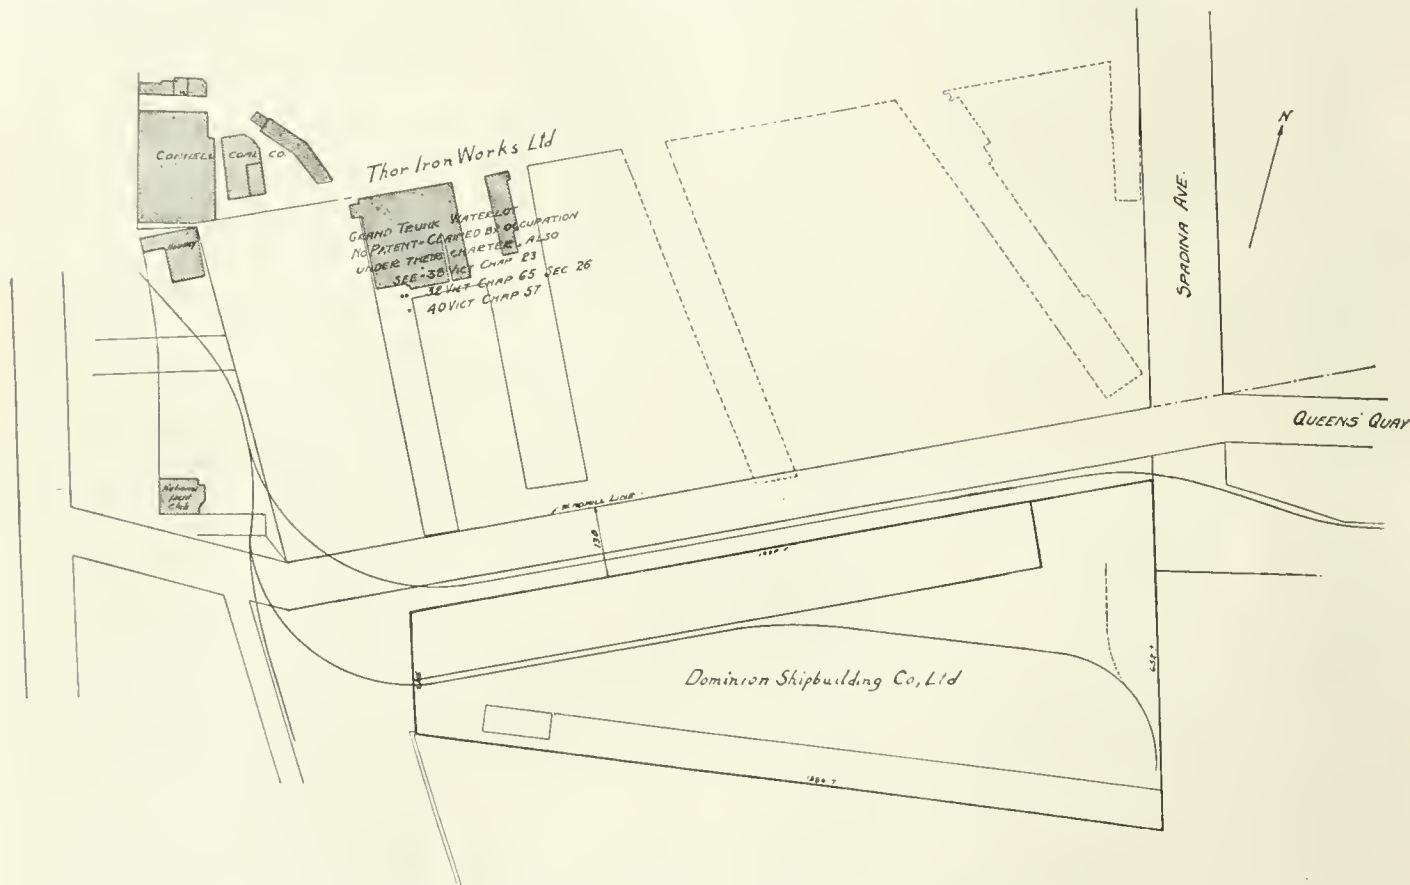

three additional building slips at the company's yards near Victoria, B.C.

Canada West Coast Navigation Co.'s last vessel of the schooner type, with auxiliary power, to be built at Victoria, B.C., by Cameron-Genoa Mills Shipbuilders, Ltd., was launched there, Nov. 23, and christened Beatrice Castle. She is reported to have been sold to U. S. interests, with which W. B. Castle, President, Zena Iron Works, Duluth, Minn., is closely concerned. It is reported that some difficulty is being experienced in obtaining delivery of Bolinder engines, and that one or two of the vessels launched recently have been dispatched on their voyages without auxiliary power. It is also stated that the engines for the vessel Joan Steedman are expected to arrive early in December, and that she is being held in port with the object of equipping her before she sails.

other purposes. The company's shipbuilding plant is to be laid out on a site to be provided by the Toronto Harbor Commission on reclaimed land situated due south of the Thor Iron Works' shipyard, near the foot of Bathurst St. This tract of land extends from the foot of Spadina Ave., westerly for 1,386 ft. and consists of 15.2 acres. The accompanying plan shows the position of the Thor shipyard, and also of the reclaimed tract of land. The Toronto Harbor Commission is carrying out the engineering work connected with the preparation of the site, and will also place the contracts for the construction and equipment of the plant, which will consist of five shipbuilding berths and the necessary shops. The company has orders for 11 steel steamships for undisclosed interests, and it is expected that the plant will be completed in the spring, ready for the employ-

some schooners at his yards shortly.

The International Shipbuilding Corporation, Ltd., Newcastle, N.B., incorporated recently under the Dominion Companies Act, with \$2,000,000 authorized capital, is building four-masted schooners of about 575 tons register, of the following dimensions: length of keel 155 ft., beam 37 ft., depth of hold 13 ft. The company is reported to be remodelling a lumber mill at Nordin N.B., on the Miramichi River, formerly owned by the Rosebank Lumber Co., and that machinery is being installed. We are advised that the company has closed no contracts for vessels, and is apparently building for the market for the time being. Among those principally interested are said to be A. E. McCurdy, Manager, Royal Bank; Jos. Ander, Manager of Canadian Gear Works, both of Newcastle; and F. MacNaught, Managing Director, Maritime Foundry &

Site of Dominion Shipbuilding Co.'s Ltd., Plant, Toronto Harbor.

J. Coughlan & Sons have deposited at the Public Works Department, Ottawa, Ont., a description of site and plans for a wharf and four launching ways, it is proposed to build on False Creek, Vancouver, B.C., in front of lots 1 to 8 inclusive, block 1, District Lot 200-A, Vancouver District.

The Davie Shipbuilding Co., Levis, Que. is reported to have received an order for six military barges, 130 ft. long, in addition to two already under construction there.

The Dominion Shipbuilding Co., Ltd., has been incorporated under the Ontario Companies Act, with \$1,000,000 authorized capital and office at 12 King St. East, Toronto, to carry on a general shipbuilding business, and in connection therewith to build and operate steam and other vessels, graving and other docks, wharves, engines, boilers, and all kinds of machinery, machine tools and plant, necessary for the construction of vessels and for

ment of 2,000 men. L. Dahlgren, who is connected with Thor Iron Works, Ltd., will be Vice President and General Manager, and A. C. McMaster, Secretary. Thor Iron Works, Ltd., will be continued as heretofore with L. Dahlgren, who has acquired about 70% of the stock, as President and General Manager. It is said that the principal interest in the company is held by Cristofer Hannevig Inc. of New York, and that the vessels said to have been ordered are for Norwegian interests.

The Foundation Co. is reported to have under consideration the building of six wooden steamships at its Victoria yards, for private interests. The company is also reported to have applied for a lease for two years of its present shipbuilding site, to become effective at the expiry of the present lease for a year, with the option of renewal month by month thereafter.

J. A. Gregory, Grand Bay, Nfld., will, it is reported, commence the building of

Machine Works, Chatham, N.B.

The Kent Shipbuilding Co., St. John, N.B., is reported to be interested in a proposal to establish a shipbuilding plant at Tufts Cove, near Dartmouth, N.S.

The McKean Shipbuilding Co., St. John, N.B., is reported to be interested in a shipbuilding plant at Liverpool, N.S., where it is preparing to commence the construction of wooden sailing ships, and later to undertake vessels of a heavier type, including steamships.

Midland Shipbuilding Co., Ltd., Midland, Ont., has taken over the business of Midland Drydock Co., Ltd., there.

Montreal Shipbuilders, Ltd., has been incorporated under the Dominion Companies Act, with \$300,000 authorized capital and office at Montreal, to own, operate, build and repair ships and vessels of every description, also wharves, docks, grain elevators, and other shipping facilities, and to carry on a general shipbuilding business.

The Newfoundland Shipbuilding Co.'s shipbuilding plant under construction at Harbor Grace, Nfld., was inspected by a number of government officials and others toward the end of October. The plant covers a space 850 ft. square, and includes ship yards, offices and stores and foundries. There are berths for the construction of five vessels of about 1,100 tons

chiefly interested in the company.

D. Pelley, South West River, Nfld., launched a 200 ton schooner at his yards there recently, and intends laying the keels of two similar vessels during the winter.

The Quebec Shipbuilding and Repair Co. launched a four masted, auxiliary powered schooner at its St. Laurent yards

The reinforced concrete steamship under construction for the Atlas Construction Co., was launched at the Montreal Dry Dock and Shipbuilding Co.'s yards at Montreal, during November. Some details of this vessel have been given in previous issues.

Rafuse Bros., Bridgewater, N.S., are reported to have purchased the shipbuild-

Car Ferry Steamship Prince Edward Island in her berth at Cape Tormentine, N.B.

This vessel and its terminals were fully described in Canadian Railway and Marine World for November, pg. 447.

Loading cars on to Car Ferry Steamship, Prince Edward Island.

each, and the berths are so arranged that they can easily be altered so as to build steel vessels of about 5,000 tons capacity. It is hoped to have the construction and equipment of the yards so far advanced by the end of the year, that vessel building will be commenced in January, after which, it is hoped to turn out one vessel a month. Orders are on hand for thirteen auxiliary powered schooners of varying tonnage. C. Hannevig of New York is

on the Isle of Orleans, Que., recently. It is stated to be the first wooden ship to be built in Quebec, since 1893. The dimensions are, length over all, 223 ft., breadth 42 ft., depth of hold 20 ft.; approximate register tonnage 1,350 tons; dead weight capacity, about 2,100 tons. The vessel was christened M. P. Connolly, and was towed to the Louise dock, Quebec, where finishing touches were made. It has been built for private owners.

ing yard and premises at Shelburne, N.S., from the late Joseph McGill's estate.

T. C. Rice, Weymouth, N.S., is reported to have laid the keel of a large schooner.

The St. John Shipbuilding Co. is reported to be negotiating for a site for a shipyard, adjacent to the Grant and Horne yards on Courtenay Bay, St. John, N.B. Thomas Nagle is Manager.

D. H. Saker & Co., St. John, N.B., have laid the keel of the first of a series of four masted, auxiliary powered schooners. Their dimensions will be, length, keel, 165 ft., length over all 185 ft., breadth 40 ft., depth of hold 18 ft.; dead-weight capacity, about 1,000 tons.

Upper Gagetown, N.B.—It is reported that there is a possibility of shipbuilding being undertaken on the bank of the St. John River at Upper Gagetown, N.B., if the necessary site can be secured at a reasonable price, and that the laying out the yards will be done during the winter.

Vancouver, B.C. It is reported that a company having local and Winnipeg interests is negotiating with the Dominion Government for a lease of a site, on the eastern extremity of Industrial Island, in Vancouver harbor, for the establishment of a shipbuilding plant. The capital stock of the company is stated to be \$500,000, and it is said that contracts are ready to be closed with French interests for at least five steamships of heavy tonnage.

The Clare Shipbuilding Co., Meteghan, N.S., launched a schooner of 350 register tons, 135 ft. long, early in November. The vessel was named Racewell, and it is reported that it has been sold to Newfoundland parties. The company is commencing operations on another similar vessel immediately.

The various steam and other vessels plying on Lake Winnipeg, were placed in their winter quarters during the early part of November, at Selkirk, with the exception of the Dominion Government steamship Bradbury, which was then on a trip in the Little Saskatchewan River with spawn for the fish hatcheries.

Collingwood Shipbuilding Co's Launchings in 1917.

Following are particulars of vessels launched by Collingwood Shipbuilding Co., Ltd., Collingwood, Ont., during 1917.

Cargo steamship Westmount, for Montreal Transportation Co., launched in May; length, 550 ft.; breadth, 58 ft.; depth, 31 ft.; gross tons, 7988; d.w. tons, 11,000; engines, 24-40-66 x 42; boilers, three, 13 x 11 ft.; speed, 12 knots; h.p. 2,400.

Oil tank steamship Reginolite, for Imperial Oil Co., launched June 21; length 250 ft.; breadth, 44 ft.; depth, 25 ft.; gross tons, 2,642.22; d.w. tons, 3,700; engines 18-30-50 x 36; boilers, two, 13½ x 11 ft.; speed 10.5 knots, h.p. 1,200.

Oil tank steamship Talaralite, for International Oil Co., launched in October; length, 250 ft.; breadth, 44 ft.; depth, 25 ft.; gross tons, 2,642.22; d.w. tons, 3,700; engines, 18-30-50 x 36; boilers, two, 13½ x 11 ft.; speed 10.5 knots; h.p. 1,200.

Deep sea trawlers, T.R. 7, 8, 9, 10, 11 and 12, for Naval Service Department; nos. 7 and 8, launched in September, no. 9 in October, no. 10 in November, nos. 11 and 12 in December; length, 125 ft.; breadth, 23½ ft.; depth, 13½ ft. gross tons, 288; engines, 12¾-21½-35 x 24, boiler, one, 13½ x 10½ ft.; speed, 10 knots, h.p., 500.

The above shows nine launchings, the gross tonnage being 15,000.44 and the total horse power 7,800.

Maritime Provinces and Newfoundland.

Losses of sailing vessels in the Newfoundland trade through storms, German raiders and submarines since the war started have been more than made up by building within the colony and purchase abroad. The Newfoundland sailing fleet now numbers 125 vessels, and 17 more are on the stocks, the total of 142 making the largest locally owned fleet in a generation. This is exclusive of boats used only in the island trade.

The s.s. Norse I, owned by C. Hannevig, New York, and of the Newfoundland Shipbuilding Co., Harbor Grace, Nfld., was wrecked on the Newfoundland coast in October, and was reported a total loss. She was built at Wedgeport this year and was a small vessel with a crew of ten, all of whom were saved. She was carrying equipment for use in the shipbuilding yards at Harbor Grace, all of which was lost.

The Boston and Yarmouth Steamship Co.'s s.s. Prince Arthur, running between Yarmouth, N.S., and Boston, Mass., has been requisitioned by the Admiralty. It is stated that the s.s. North Star will be operated on the route in her place. The s.s. Prince Arthur was built in Hull, Eng., in 1898, her dimensions being, length 290 ft.; breadth 38 ft.; depth 16.5 ft.; tonnage, 2,188 gross, 913 register, and she is screw driven by engine of 716 n.h.p.

Eastern Steamship Lines' s.s. Governor Cobb has been placed on the Boston-St. John route, instead of the s.s. Governor Dingley, which has been transferred to the Boston-Portland route. The service of three trips a week on the Boston-St. John route is being maintained by the steamships Calvin Austin and Governor Cobb, but the latter vessel will probably be transferred shortly to the Key West-Havana route.

Sales continue to be made of the various units of the dredging fleet which was

used by the Norton Griffiths Construction Co. in its operations in Courtenay Bay, St. John, N.B., under a Dominion Government contract. One of the self-propelling hoppers, no. 47, was sold recently to Foley Bros., Welch, Stewart and Fauquier, for \$50,000, for use in port development work at Halifax, N.S.; and it is stated that negotiations are proceeding with a U. S. firm for the sale of the balance of the hoppers. The dredge Don Frederico will also be sold shortly. Practically the whole of this fleet was owned in Southampton, Eng., and leased by the Norton Griffiths Construction Co.

Ontario and the Great Lakes.

The Pere Marquette Ry. is reported to have awarded a contract to the Gibb Dock Co., for the construction of a ferry slip at Sarnia.

The Collingwood Steamship Co., which operated its s.s. City of Meaford between Collingwood and Sault Ste. Marie, during the year, will probably place a second steamship on the route in 1918.

The Public Works Department received tenders to Nov. 26, for the construction of a temporary pile protection breakwater in the Port Arthur District of Thunder Bay and Rainy River.

Four small boats, known as submarine chasers, and a trawler, all built at northern lake ports, passed through the Welland Canal, early in November, on their way to the Atlantic.

Chas. Millar, K.C., Toronto, who was one of the promoters of the Kenilworth race track at Windsor, Ont., is said to be promoting a ferry service from Brock St., Windsor, to Brush St., Detroit.

The masts having been removed from the wrecked s.s. George A. Marsh, which sank between Pigeon and Amherst Islands in Lake Ontario, Aug. 8, it is not now a menace to navigation. The hull lies in 85 ft. of water.

The barge Abyssinia, 2,037 tons, owned by Hutchinson & Co., Cleveland, Ohio, ran ashore on the Tecumseh reef on the Ontario shore of Lake Erie, recently, was badly damaged, and abandoned as a total

loss. She carried a cargo of 15,000 bush. of wheat, and was valued at about \$200,000. No insurance was carried.

The Montreal Transportation Co.'s barge Ungava is reported to have been sold to French interests. She was built at Collingwood in 1906, her dimensions being: length 200 ft., breadth 41 ft., depth 17 ft.; tonnage, 1,226 net tons.

The Great Lakes Transit Corporation's s.s. Northern Light, which was cut in two for taking to the Atlantic coast by way of the Welland canal, was passing through Lake Ontario during a severe storm at the end of October, in two parts, when the cable holding them, gave way, and half of the vessel went ashore near Point Breeze. One of the crew of 12 was drowned.

The Chicago Navigation Co.'s s.s. J. S. Dunham was sunk in collision with the Pittsburg Steamship Co.'s s.s. Robert Fulton, Nov. 5, near Grassy Island light in the Detroit River. Notice was issued Nov. 10, requiring master of vessels to reduce speed to bare steerway, in passing, while the raising of the vessel is in progress.

The western entrance to the harbor at Toronto was closed early in November for the balance of the season, in connection with the dredging work being carried out by the Canadian Stewart Co. Traffic has to enter the harbor by the eastern entrance, and the western entrance will only be open for use on such days as weather conditions prevent the use of the eastern entrance.

The U. S. Lake Survey reports the levels of the Great Lakes for October, in feet above mean sea level, as follows: Superior, 602.67; Michigan and Huron, 581.36; St. Clair, 575.77; Erie, 572.81; Ontario, 246.68. Compared with the average October levels for the past ten years, Superior was 0.01 ft. below; Michigan and Huron 0.96 above; Erie 0.74 ft. above, and Ontario 0.88 ft. above.

The Midland Transportation Co.'s barge Aloha foundered during a storm on Lake Ontario recently, and sank off Nine Mile Point, west of Kingston. The master was drowned, but the remainder of the crew were saved. She was in tow of the steam

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during September

ARTICLES		CANADIAN CANAL	U. S. CANAL	TOTAL

tug C. W. Chamberlain, owned by the same company, with a cargo of coal from Erie, Pa. She was built at Mount Clemens, Mich., in 1888, her dimensions being, length 171.2 ft., breadth 32 ft., depth 12 ft.; tonnage, 517 register.

The wrecked s.s. Charles S. Price, which was lost in the great storm on Lake Huron, Nov. 9, 1913, is reported to have been sold by the underwriters to un-stated Canadian parties, for \$30,000, to be taken as she lies. The vessel was owned by the Mahoning Steamship Co., Cleveland, Ohio, and was discovered after the storm subsided, floating bottom upward. She subsequently sank, and several attempts were made to save her, but all were abandoned, the last being by the Great Lakes Towing and Wrecking Co., in 1916.

British Columbia and Pacific Coast.

The British Yukon Navigation Co.'s s.s. Nasutlin left Dawson for White Horse, Oct. 21, thus closing navigation for the winter on the Yukon River.

The North Vancouver City Council is petitioning the Dominion Government to undertake immediately, the construction of a dry dock on the north shore of Burrard Inlet, as a government work.

The s.s. British Columbia, which sank at her moorings at Vancouver, Aug. 24, was raised Oct. 29, after two months work, and taken to the New England Fish Co.'s dock, where she was pumped out.

The C.P.R. s.s. Princess Mary was hauled out on the ways at Victoria, during November, and overhauled and repaired, after her collision with the s.s. Henriette. Some plates were replaced and others faired, and some frames and beams were straightened.

The steamships Santa Maria and Selma, which, as stated in our last issue, have been purchased from All Red Line Ltd., Vancouver, by the Union Steamship Co. of British Columbia, have had their names changed to Chilco and Chasina, respectively.

The Pacific Steamship Co. has announced that, owing to the requisitioning of its steamships Governor and President, by the U. S. Government for Hawaiian service, the winter service between San Francisco and British Columbia ports will be given by the steamships Admiral Schley and Queen.

The s.s. Quadra, which was owned formerly by the Dominion Government and operated along the Pacific coast as a lighthouse tender, is now running between Britannia Beach and Tacoma, with Capt. M. Carter as master. The Quadra was sunk in collision with the s.s. Charmer at the entrance to Nanaimo harbor, and was sold where she sank. She has been thoroughly overhauled and refitted for the ore trade.

The Grand Trunk Pacific Coast Steamship Co. has purchased the steam tug Lorne, from Alex. McDermott of Victoria. The vessel has been lying idle in Eagle Harbor for over three years. It was owned by the Puget Sound Tug Boat Co., and was wrecked in Sept., 1914, while on the way from Seattle, Wash., to Vancouver, towing the coal barge America. The hull was considerably damaged, and is being repaired, the machinery being intact.

Pacific Coast Coal Mines, Ltd., has built an extension wharf at Boat Harbor, Vancouver Island. It lies in the same direc-

tion as the older wharf and is separated from it by about 62 ft. It is 392 x 48 ft., the north side being protected by dolphins and the south side is equipped with a travelling chute connected with a conveyor with movable tripper. There is a depth of 33 ft. of water at low tide at the outer end of the extension, and 30 ft. on the south side.

The auxiliary powered schooners Esquimalt and Mabel Brown, built recently at Victoria and North Vancouver respectively, for Canada West Coast Navigation Co., are reported to have been sold to French interests and transferred to France. The Esquimalt was the third vessel of this type built by Cameron-Genoa Mills Shipbuilders Ltd., and completed her maiden voyage to Australia with lumber recently. The Mabel Brown was the first of this type, and was built at Wallace Shipyards, North Vancouver. She has also been to Australia with lumber.

Yarrows Ltd., Esquimalt, are reported to have received an order for another stern wheel steamboat for use in shallow waters in Asia. The company has already received orders for four of these vessels, two of which have been delivered, the other two being now under way. The hulls only are built are Esquimalt, and shipped in knockdown shape. The machinery is supplied by the parent concern in Glasgow, Scotland, and shipped direct. The latest vessel, it is stated, is to be used as an oil carrier, and will be 185 ft. long by 37 ft. beam.

The Empress of Ireland-Storstad Collision.—The appeal of the C.P.R. as owner of the s.s. Empress of Ireland, which was sunk by the s.s. Storstad, in the St. Lawrence, near Father Point, May 29, 1914, is before the Supreme Court of Canada. The Admiralty Court judgment was to the effect that as the accident occurred in Canadian waters, the amount realized by the sale of the s.s. Storstad should be divided pro rata amongst those who claim for loss of life. On behalf of the C.P.R., it is contended that the accident occurred beyond the three mile limit, in open sea, and therefore the distribution must be pro rata amongst all claimants, as provided under the British Merchant Shipping Act, and that if that point is not upheld, the fact that the s.s. Empress of Ireland was registered in Great Britain, would bring her under that act.

Food Saving on Steamships.—Representatives of 33 of the most important steamship lines, members of the American Steamship Association, have pledged themselves to assist the U.S. Food Administration in every way in the conservation of food. At a recent conference in New York resolutions were passed promising their co-operation and appointing committees to assist in prosecuting a vigorous campaign of saving and substitution. The steamship lines represented at the conference purchase an aggregate of \$100,000,000 worth of food supplies each year.

The demand for shipping may be illustrated by the particulars of a recent transaction on the Atlantic coast. A sailing vessel, five years old, which originally cost \$30,000, was purchased for \$50,000 and chartered to carry 10,000 quintals of fish to the Mediterranean. The insurance on the vessel was 25%, and on the cargo 15%, and yet the vessel's freight on the outward voyage will pay for her and leave a profit of \$5,000.

Common Sense About Concrete Ships.

Thanks to widespread publicity, there is today a great deal of talk about the concrete ship, despite the fact that the rosy expectations are pretty far ahead of present knowledge. One highly experimental ship of large tonnage is on the ways at San Francisco, a small, motor driven vessel is being built at Montreal, and several small ships have been built in Scandinavian countries. These represent the efforts of thoughtful engineers and business men to solve the tremendous problem of adapting concrete to the wracking and sudden strains of a ship at sea. Quite soon they and the committees appointed to investigate the question will be able to report the progress, or the hopelessness, as the case may be, of the concrete ship. Until then the future will be veiled behind theory and experiment. For some time, however, there must be an orderly development in the size of ships experimented upon. There is no more relation between a concrete rowboat or launch and the 3,000 ton, 15 knot freighter demanded in the present shipping crisis than there is between a toy airplane and a giant Caproni. Step by step up through the scow, the barge and the small framed and formed hull must progress be made to the hoped-for large vessel for ocean travel. This is the normal course of all engineering design. On account of these necessary intermediate steps, it seems as though there is at the present time a bigger field of practical work in the concrete barge for coastwise, river or canal trade. Here the gap between present knowledge and desired results is not so great and the possibility of immediate use is much nearer. If improved design and construction make such vessels seaworthy and permanent, as many of the early ones were not, some of the most serious problems of the big ship will be solved and at the same time some very necessary bottoms supplied.—Engineering News-Record.

The Military Service Act and Vessel Employes.—The carrying out of the Military Service Act, is interfering to some extent with the manning of vessels, especially in the coastwise trade. So far as vessels on the Great Lakes are concerned, any effect it may have will not be felt until the reopening of navigation, and in the meantime the tribunals are exercising their discretion in granting short exemptions so that a minimum of inconvenience will be caused. Instructions have been issued by the government that eligible men belonging to class 1, and medically classified as A2, must not be permitted to sign ships' articles. This applies to all men who had attained the age of 20 on Oct. 12, and who were born after Jan. 1, 1883, and who are unmarried, or widowers without children.

Amy Turner Shipping Co., Ltd., has been incorporated under the British Columbia Companies Act, with \$60,000 authorized capital and office at Victoria, to acquire and operate the sailing ship Amy Turner, formerly owned by the Coastwise Steamship and Barge Co., together with all contracts and charters relating thereto, and with power to own and operate steam and other vessels of every description, and to carry on a general transportation business. The bark Amy Turner was built at Boston, Mass., in 1877, her dimensions being, length 174 ft., breadth 35.4 ft., depth 21.6 ft.; register tonnage 901.

United States Government Shipbuilding Etc.

The Emergency Fleet Corporation is reported to have placed a contract for thirty-six 3,500 ton ocean-going steamships with the American Shipbuilding Co. instead of with Robert Dollar. The construction of these boats will require about 1,165 tons of steel, or a total of near 42,000 tons of plates and shapes. They will be 261 ft. long and 42 ft. beam. The contract price is reported to be \$700,000 for each ship, or a total of \$25,200,000. Construction will be on the Great Lakes and deliveries will be made next July or August.

The U. S. Shipping Board has approved the building of twenty 4,000 ton "non-sinkable" ships by the French Government in the U. S. By so doing it has waived the rule that no foreign construction should be permitted at this time. The "non-sinkable" ship, developed by French experts, is said to have withstood torpedo attack in a test in which four shots were fired into the hull, and the only effect was to destroy the cargo immediately surrounding the point of attack.

The U. S. Shipping Board has agreed to charter to the Italian Government approximately 25 commandeered steel ships of an aggregate of 100,000 deadweight tons, to relieve Italy's shortage of shipping to transport urgently needed supplies. Great Britain has been supplying France and Italy with shipping to meet its emergency needs, but cannot continue to do so in view of increasing British shipping requirements.

A New York press report that an order had been given the Dominion Bridge Co., Montreal, for 50,000 tons of steel for use in building U. S. vessels has been confirmed by one of the company's officials, who is reported to have said: "The contract has been signed and prices are in every way satisfactory. Work on this contract will not keep the entire capacity of the Toronto and Montreal plants busy for ten months, as stated in the report from New York, although the plants will be kept busy for several months. Work on this order will in no way interfere with the contracts awarded recently and furthermore, the company is in a position to handle any new orders which are likely to be offering in the near future."

A readjustment of the organization of the Emergency Fleet Corporation went into effect on Nov. 12 by which several civilian engineers were given supervision of certain details of the federal shipbuilding construction programme. Charles Piez, President of the Ling-Belt Co., Chicago, has been appointed a vice president of the corporation, in charge of the actual construction of the new vessels. J. Heyworth, a Chicago contractor, has been placed in control of the wooden ship construction, and Chas. Day, of Day & Zimmerman, of Philadelphia, has gone to London to study the fabricated ship work in England and to apply the experience there to our problems. A. J. Meson, another Chicago engineer, has been detailed to field supervision of the various yards under the corporation's direction. A naval architect, Frank Kirby, of Detroit, has also joined the personnel.

A U. S. Shipping Board official is quoted as stating recently that, exclusive of about 2,500,000 tons of shipping under foreign contract which was commandeered on the stocks by the board and which will begin to come from the ways in ever-increasing numbers early in 1918, the contracts actually let, with the pro-

viso that the vessels shall be completed by Dec. 31, 1918, are as follows: Fifty-eight composite ships of 207,000 tons; 345 steel ships of 2,665,400 tons; 778 wooden ships of 1,330,900 tons. The total of new ships contracted for to be delivered by Jan. 1, 1919, is 4,203,300 tons. The 4,203,000 tons of new shipping actually contracted for and the 2,500,000 tons commandeered and now being rushed to completion, gives a grand total of 6,703,300 tons which will be assured before Jan. 1, 1919, if all interests co-operate in a patriotic endeavor to defeat Germany's most dangerous weapon, the submarine.

The U. S. Shipping Board has decided that from the ships completed or about to be completed in U. S. yards, that have been commandeered by the government 10 will be turned over to the French Government, for the transportation of supplies to France and that 10 additional ships outside of those under construction in U. S. yards will also be allotted to France for the same purpose. In selecting the 20 preference will be given to ships originally contracted for on the Great Lakes by French interests and by the Cunard Co.

The U. S. Shipping Board has instructed its Director of Operations to take charge on its behalf of all ships building for foreign account in U. S. yards, which were subject to commandeering order of the Fleet Corporation of Aug. 3, 1917 (except those heretofore ordered surrendered to their owners), as fast as the same are completed, and proceed to operate them on behalf of the Shipping Board, and that the same instructions be given as to all ships building for U. S. owners who decline to accept their ships on the terms offered by the Fleet Corporation and the board.

Chairman Hurley, of the U. S. Shipping Board, announced recently that work on the wooden ship programme is progressing as rapidly as possible. In an effort to develop and bring into action all the resources of the steel shipbuilding yards so as to get all the ships that will be available in the shortest possible time, the members of the Atlantic Coast Steel Shipbuilders' Association met in Washington recently to discuss a plan of action. The outstanding fact of the conference is that of co-operation on a plan for the early completion of ships which at the present time are so greatly needed. In addressing the meeting Mr. Hurley said: "This meeting has been called for the single purpose of establishing a new goal for our expectations. Between now and March 1 this country will turn out approximately 1,000,000 tons of ships, deadweight. In the whole of 1916 we turned out a little over 750,000. Thus we will achieve in four months far more than we achieved previously in twelve months. Conservatively stated, we have quadrupled our output. The new goal of our expectations is 10 times the production of 1916. Owing to the situation in Italy, Mr. Hurley announced, preference will be given the Italian Government in regard to relief ships and the work will be pushed in order that it may have them as soon as possible.

The s.s. Bellechasse has replaced the s.s. Champlain on the ferry service between Murray Bay and Riviere Ouelle, the latter being laid up at Quebec for overhaul and repair.

Wreck Commissioner's Investigations and Judgements.

Sinking of s.s. Albert Y. Gowen.

Investigation at Quebec, Oct. 26, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. Nash and C. Lapierre, as nautical assessors, into sinking of U.S. s.s. Albert Y. Gowen, while moored in the Louise Basin, Quebec, Aug. 28. The court found that the master, Eugene Fortin, was in default for gross negligence in supervision of property entrusted to his care, and suspended his certificate for six months from Oct. 31. The chief cause of the sinking appeared to be that the starboard shoulder, or bow, of the vessel, caught underneath one of the longitudinal or horizontal timbers extending from the face of the wharf with the rising tide, thus causing her to list until the water entered through the ports into the hold. The master did not remain on board himself, or provide proper watchmen, as he should have done.

Tunisie-Cabotia Collision.

Investigation held at Montreal, Oct. 30, into collision between Belgian relief ship Tunisie and Canada Shipping Co.'s s.s. Cabotia, near Windmill Point, Montreal, Oct. 28. Capt. L. A. Demers, Dominion Wreck Commissioner presided, and was assisted by Capt. F. Nash and C. Lapierre as nautical assessors. The court exonerated the master and officers of the s.s. Tunisie from all blame for the casualty, they having complied with the rules and regulations governing the case. The court considered the master of the s.s. Cabotia, Robert Laing, was needlessly daring and showed bad judgment and recklessness. He also violated the Port of Montreal bylaws in obstructing navigation. It therefore suspended his certificate for six months from Nov. 10.

Turning Vessels at Fort William.—An order in council has been passed cancelling sec. 15 and see 15a of the regulations governing Fort William, Ont., harbor, and substituting the following sec. 15: "Any steam vessel not exceeding 200 tons gross, or in the case of a package freighter, not exceeding 275 ft. in length, may turn in any part of the Kaministikwia River, under her own power; any vessel exceeding 200 tons gross, but not exceeding 260 ft. in length, or in the case of a package freighter not exceeding 330 ft. in length, may be turned with a tug in that section of the river lying between the bend above C.P.R. elevator D, and the westerly limit of the Grand Trunk Pacific Ry. wharf, and may also turn in that section of the river between C.P.R. slip 1 and elevator C, but in the latter place turning must not take place without the use of a tug, unless sanctioned by the harbor master. All other vessels must turn in the turning basin at the head of the McKellar channel."

Newfoundland's Shipping Increases.—The shipping losses sustained by Newfoundland through storms and the effects of war, including raiders, submarines and mines, have been more than made up by building within the colony, and purchases abroad. It is estimated that the colony has sufficient capacity of sailing vessels to take the entire catch of cod to foreign markets in native bottoms. This is exclusive of sailing vessels engaged in purely local trade.

The Plunkett Navigation Co., Ltd., has changed its head office from Cobourg, Ont., to 118 Board of Trade Bldg., Montreal.

Regulations Respecting Vessels' Lights.

An order in council has been passed adding paragraph 22A to the Defence of Canada Order, 1917, as follows:

The masters of all vessels shall comply with the following orders regarding ships' lights—

1. Anchor lights.—No electrically lit lanterns shall be employed by any vessel as anchor lights. The normal brilliancy of all other anchor lanterns shall be reduced by 50 .

2. Bow and steaming lights.—Vessels shall not use electrically lit lanterns as bow or steaming lights in the vicinity of any harbor.

3. Other lights.—No lights visible from outboard, either afloat, on deck or below, except those required by the Regulations for the Prevention of Collisions at Sea, and such as may be necessary for authorizing signalling purposes, shall be used on any vessel. This shall apply to all vessels whether under way or at anchor.

4. The above orders shall apply to all vessels of every description, other than H.M. ships, within the waters of the east coast of Canada and extending up the St. Lawrence as far as the port of Quebec.

5. Vessels carrying volatile oil, or spirits in bulk, shall exhibit, in lieu of oil lamps, electrically lit lanterns, not exceeding in brilliancy 50% of the brilliancy of the normal oil lamps.

British Government Control of Shipping.

From the commencement of the war the British Government has steadily been requisitioning vessels of all classes, and operating them in the national interest. The rate paid to the owners soon became very much lower than the freights earned by free ships, and British shipowners, therefore, were unable to rely on earning the same freights as their competitors. It therefore became necessary recently for the government to take complete control of British shipping in order to ensure the employment of every vessel in the manner and on the terms as to rate of freight, most consistent with the national interests.

With the exception of a few vessels engaged in distant waters on work of importance for British Dominions, and of vessels chartered to France and Italy, the British Government has requisitioned for hire at government rates, about 97% of the ocean going tramp steamships on the register of the United Kingdom. All British liners have been requisitioned and are being operated on government account, the owners receiving hire at government rates, and the profits derived from private freight carried at market rates go to the government and not to the shipowners. Every ocean going voyage of British steamships is directed by the government, which has regard only to the question of how to obtain essential imports from the nearest source, and disregards both the interests of the shipowner and the exporter. Many trades built up in distant waters and sustained by British industry, have had to be abandoned to neutral owners, who have gladly sought employment for their vessels in waters immune from war risk.

The coasting traffic of the United Kingdom has been under review for the purpose of withdrawing vessels which can be used for ocean going service, and of bringing about a limitation of rates wher-

ever possible. Vessel owners have placed all their organizations and resources at the government's disposal for running the requisitioned vessels, and have also agreed to pool their organizations, thus necessitating the closest co-operation between what may have been competitive interests before the war.

It should also be borne in mind that the officers and crews of merchant vessels have run, and are running extraordinary risks in the operation of their vessels. The areas round the British Isles have been singled out by the enemy for special attacks, but officers and crews have not made any difficulty about taking their vessels through the most dangerous routes.

Of necessity, British imports have been severely curtailed. Prior to the war the British imports averaged about 58,000,000 tons a year; in 1916 they fell to about 43,000,000 tons, and in 1917 they will be considerably less. Of the amount imported before the war, rather less than 25% consisted of food stuffs, while in 1916 nearly 70% of the imports consisted of food stuffs and munitions, the balance in each case being of an industry productive nature. In 1913 the British imports were valued at £769,000,000, of which about £94,000,000 were from countries with which we are now at war. In 1916, the imports were valued at £949,000,000, enemy countries of course now being eliminated. In 1913, the United Kingdom exported goods to the value of £525,000,000, and in 1916, £506,000,000, but, it is stated, that if the 1916 exports were valued on the same basis as those of 1913, the amount would be only £386,000,000.

Mainly About Marine People.

John Laxton has been re-appointed a member of the Toronto Harbor Commission for three years.

Capt. B. F. Hayes, R.N.R., commander of the White Star s.s. Olympic, has been created a Companion of the Order of St. Michael and St. George.

H. C. DeWolf, formerly with the Furness Steamship Lines, Halifax, N.S., has been appointed chief election clerk for the ensuing Dominion elections.

A. R. Tibbits, technical officer, St. Lawrence ship channel staff, is stated in an Ottawa press dispatch as about to be appointed Assistant Deputy Minister of Marine.

J. M. Pouliot, Secretary, Gaspe and Baie des Chaleurs Steamship Co., Quebec, Que., was drowned there Oct. 30, when he fell from the gangway running from the company's s.s. Gaspesien to the wharf.

John A. Westaway, who died at Amherstburg, Ont., Nov. 11, aged 80, was for about 40 years, Superintendent of Car Ferries at Windsor, Ont., for the G.T.R. and its predecessor the Great Western Ry.

Capt. J. J. Murchison, heretofore master of the car ferry steamship Prince Edward Island, has been appointed dock master and port superintendent at Port Borden, the Prince Edward Island terminal of the car ferry service.

Capt. Wm. McNeill, whose death at Glasgow, Scotland, was Nov. 21, was master of the Anchor-Donaldson Line s.s. Letitia. He had been master of various vessels owned by the Donaldson Line for about 24 years, and was well known at Canadian Atlantic ports.

Capt. John L. Read, who took the Canadian icebreaking steamships J. D. Hazen and Minto to Russia, after they were pur-

chased by the Russian Government, has been appointed to the car ferry Prince Edward Island, operating between Cape Tormentine, N.B., and Port Borden, P. E. I.

W. J. Stephens, a well known shipbuilder on the Pacific coast, has been appointed a Lloyd's surveyor for the port of Victoria, B.C. He has charge of the surveying of the nine wooden steamships under construction at the two yards at Victoria, and of any other vessels building there, which may seek Lloyd's registry.

J. French, of New York, Chief Surveyor for Lloyd's Register, for Canada and the United States, accompanied by H. A. Ruck-Kenne, M.I.C.E., Assistant to the Chief Engineer, Lloyd's Register, London, Eng., made a tour of the various shipbuilding yards in British Columbia recently.

Hon. J. D. Hazen, K.C., Minister of Marine and Fisheries, who retired from that position on the formation of the Union Government recently, has been appointed Chief Justice of the Appeal Division of the Supreme Court of New Brunswick, and Judge of the Chancery Division of that court and of the Admiralty Court.

Capt. G. C. McKeen, who died at Vancouver, B.C., Nov. 12, had been associated with the scow coasting trade for about 30 years, as a partner of McKeen and Wilson. He was a native of Cape Breton, N.S., where he built the s.s. Native, which he ran for several years. He was connected with the Shipmasters' Association of British Columbia, of which he was president for some time.

Lincoln Smith, whose resignation as Assistant to Manager, British Columbia Coast Steamships, C.P.R., Victoria, was reported in our last issue, was presented with a rosewood clock and two pieces of silver plate, by the department's officers and employes, Oct. 31. He has taken up the position of Managing Director, Peter McQuade & Sons, ships chandlers, Victoria.

Harry F. Bradley, who was appointed Assistant General Passenger Agent, Canadian Pacific Ocean Services, Ltd., Montreal, recently, was born at Waterville, Que., July 20, 1876, and entered transportation service in 1898, since when he has been, to 1906, in various positions in the Passenger Department, Montreal; 1905 to 1912, General Agent, Toronto; 1912 to July 15, 1917, Manager, Passenger Department, all with H. & A. Allan, General Agents, Allan Line Steamship Co.

George Hicks, who died in England recently, is mentioned in some marine papers, as the originator of the Manchester Ship Canal, connecting Manchester with tidewater in the River Mersey, at Eastham, near Liverpool. While giving him all the credit for whatever share he took in arousing public sentiment in the matter, it would be a mistake to state that he was the originator of the canal as it exists. The question of making the canal was publicly discussed in Manchester in 1841, long before Mr. Hicks was interested in matters of that kind. Nothing was, however, done in the matter until 1881, when he and Hamilton Fulton, C.E., laid a scheme for a canal before the Manchester Chamber of Commerce. This scheme provided for a very deep channel from tidewater to Manchester, to allow of the tide rising the whole way, and was rejected as not feasible, and nothing was done until the following year, when the plans of E. Leader Williams, later Sir Leader Williams, were accepted, and eventually carried out.

Transfer Restriction of British Ships.

Following similar regulations regarding the restriction of the transfer of British ships, put into force by the British Government, a Dominion order in council has been passed extending a previous order in council dated Mar. 9, 1915, so as to apply to mortgages, transfers of mortgages, etc., of ships, made after Aug. 10, 1916, of foreign controlled companies, to persons not qualified to own a British ship. A foreign controlled company is described as follows—where the majority of directors, or persons occupying the positions of directors, by whatever name called, are not British subjects; where the majority of voting power is in the hands of persons who are not British subjects, or who exercise their voting powers directly or indirectly on behalf of persons who are not British subjects; where the control is by any other means whatever, in the hands of persons who are not British subjects, or where the executive is a foreign controlled company, or where the majority of the executive are appointed by a foreign controlled company. A corporation shall not be deemed to be a British subject unless it is established in and subject to the laws of some part of His Majesty's Dominions, or some British Protectorate, with its principal place of business therein.

The Minister of Marine may require any person who is the owner or mortgagee of a British ship, or who applies to be registered as owner or mortgagee, to furnish such particulars as may be necessary to ascertain whether he is trustee for, or represents a foreign controlled company, and if he fails to supply such particulars, he shall be guilty of a misdemeanor. Where, after the passing of this order, the owner or mortgagee ceases to be a British subject or becomes a foreign controlled company, the ship, or the interest in the mortgages, shall be subject to forfeiture, unless the written permission of the Minister has been granted to permit the change.

The regulations are to be in effect during the continuance of the war and for three years thereafter.

U. S. Regulations Respecting Coasting Privileges.—The bill passed by the House of Representatives and Senate covering the changes in the U. S. coasting regulations, provides that during the war, and for 120 days thereafter, the U. S. Shipping Board may suspend the existing provisions and permit vessels of foreign registry, and foreign built vessels of U. S. registry, to engage in the coastwise trade of the U. S., provided that no such vessel shall so engage in the trade unless a permit issued by the Shipping Board, defining the scope of trade and the time of such employments shall have been obtained, and that such permits shall give preference to vessels of foreign registry leased or chartered by U. S. citizens or corporations, and that this act shall not apply to the coastwise trade with Alaska or between Alaskan ports. The U. S. Shipping Board has issued several permits for foreign registered and foreign built vessels to engage in the trade.

Ferro-Concrete Vessels.—During the last few months Lloyd's Register of Shipping Committee has approved plans for the construction in ferro-concrete of a number of non propelled barges, some designed to carry 500 tons deadweight, and also of a motor vessel. These vessels will be built in the United Kingdom and in

Norway, under the inspection of the society's surveyors, and are intended for the British and Scandinavian coastal trade. Plans of other ferro-concrete vessels of larger carrying capacity for certain sea trades are at present under consideration. One of the society's principal surveyors made a tour of inspection recently in Scandinavia, where, owing to circumstances arising from the war and other causes, the use of ferro-concrete for ship construction has so far been developed, and the report of his visit has placed the committee in possession of valuable data on the subject.

Surplus Stores on Ocean Steamships.—An employe of Canadian Pacific Ocean Services, Ltd., was convicted at Liverpool, Eng., recently, of stealing certain stores the property of his employers, and fined £3 or 21 days imprisonment. His defence was that he had saved the articles from his stores and he thought he was entitled to the surplus. A similar case was dealt with there some time ago, when in the course of the evidence it transpired that a custom had grown up of storekeepers, or stewards, taking to their homes, or otherwise disposing of, stores which they claimed had been saved from the allowances made for use on the voyage. It was clearly stated then that the stores were issued for use on the voyage, and if they were not used, the surplus belonged to the company.

Dominion Government Atlantic-Pacific Service.—The Manchester, Eng., Guardian, of recent date, states that "it is not improbable that the Canadian Government will, after the war, establish state cargo services both on the Atlantic and Pacific." The Dominion Government has already announced its intention of placing vessels in freight cargo service from the Pacific to the Atlantic coasts, via the Panama Canal, and proposed to place contracts for the building of two vessels for this purpose. These however are suspended for the present. As for state cargo services operating on the Atlantic and Pacific Oceans, there is no immediate prospect of the government engaging in transoceanic service.

Welland Canal Lock Gate Accident.—The Bay State Fishing Co.'s trawler Spray, a small vessel of about 96 tons, while passing through the Welland Canal, downbound, Nov. 5, collided with the heel path foot gate of lock 9, badly damaging the gate, which had to be replaced by a spare one. This occurred at 4.30 p.m., and navigation was resumed at midnight, the damage being estimated at \$1,000. The cause of the accident, as given, is that the vessel's engines went ahead when the master states his signal was to reverse. The report that damage was caused to lock gates on the canal, by the s.s. War Beaver, while on its way to the coast, as mentioned in press reports, is incorrect.

Manchester Liners, Ltd.—The report for the financial year completed recently shows a trading profit after allowing for depreciation and excess profits, taxes, of £174,177, in addition to £20,176 brought forward from the previous year. After paying debentures, interest, fees and preferred dividend of 5%, a dividend has been paid on the ordinary shares of 10% and a bonus of 15%, free of income tax. Of the balance, £100,000 is placed to reserve account, \$5,564 to debenture reserve account and £14,118 carried forward to the next year's accounts.

Limiting Shipbuilding Bounty.—The Newfoundland Government has announced its intention of introducing a bill at the next session of the Legislature, to

limit the class of vessels entitled to bounty under the Shipbuilding Bounty Law. Hereafter, it is intended that bounty will be payable on vessels not exceeding 120 tons gross measurement, and vessels exceeding 120 tons gross will not qualify for any bounty whatever. The existing regulations will apply to all vessels of which the keel had been laid at Oct. 19, but all vessels the keels of which were not laid at that date, are to come within the scope of the proposed new regulations.

The British Government has requisitioned four Swedish steamships which were in British ports, in order to protect British capital invested in the vessels, a German prize court having decided that notwithstanding that the vessels were sailing under a neutral flag, they were to be treated as British vessels. The owners are being compensated by the British Government. It is stated that other vessels in which British capital is invested, though operated under a neutral flag, will also be requisitioned on a similar basis.

Dominion Marine Corporation, Ltd., has been incorporated under the Dominion Companies Act, with \$1,500,000 authorized capital, and office at Montreal, to carry on the business of the transportation of passengers, mail and freight, by land and water, and to undertake towing, wrecking and salvage in all its branches, and in connection therewith to own and operate steam and other vessels of all kinds, wharves, docks, piers, warehouses, ship-building yards, etc.

"Without a Trace."—The British Civil Lord of the Admiralty announced in the House of Lords recently that in the three years ended Oct. 31, 122 vessels had been lost without leaving any trace. In normal times, the average of such losses was about 15 a year. As intercepted German messages have proved that instructions were given to sink as many vessels as possible, "without leaving a trace," it is presumed that these losses are almost entirely due to enemy attack.

U. S. Shipbuilders have launched recently four steel steamships of the "War" series" at Great Lakes ports. The War Banner, said to be the first trans-Atlantic freight steamship to be built in the U. S. for British register, at South Chicago, Ill.; the War Finch at Cleveland, Ohio; the War Beaver at Detroit, Mich.; and the War Signal at Superior, Wis.

The Transpacific Navigation Co., Ltd., has been incorporated under the British Columbia Companies Act, with \$100,000 authorized capital and office at Vancouver, to own and operate steam and other vessels of every description, and to carry on a general steamship owning and operating business.

The Hamburg - American Steamship Co.'s offices at New York, have been seized, together with all equipment and fixtures, and all other property of the company located on the premises, on behalf of the U. S. Government. It is said that the offices will be used by the U. S. War Trade Board.

Foreign Tugs in Canadian Waters.—An order in council has been passed authorizing the Minister of Customs to issue licenses permitting foreign tugs to be chartered for use in Canadian waters without payment of customs duties, during the war.

The Marine Navigation Co. of Canada, Ltd., has had its authorized capital stock increased by supplementary letters patent under the Dominion Companies Act, from \$50,000 to \$1,000,000.

Standardized Shipbuilding in Great Britain.

The commissioning of the first unit of the British Government's programme of standardized shipbuilding, and the launch by the King at Greenock recently of "a vessel of a new type, designed for merchant service," were events which, but for the restrictions imposed by the war, would have given occasion for wide discussion. In present circumstances, however, nothing can be said about the methods which are being adopted to render these vessels as immune as possible from being sunk by torpedoes or mines; but much may be said, that in no sense do they represent any radical departure from previous practice in naval architecture. They are ordinary cargo carriers, similar in general design to many that were built in previous years, capable of taking their place in the British mercantile marine after the war is over. But they embody in their fitting out many new ideas, each representing an effort to beat the enemy submarines by defensive or offensive methods, and all combining to make them more safe in this respect than any cargo vessels have been since the war began.

It is realized that safety is not to be found in any single specific, but in a combination of ideas each of which has either been proved valuable by experience or promises well in theory. In this respect the standard ships represent a bundle of compromises, while in the matter of hull designs they represent the elimination of variety, and the reduction of plans to a level of uniformity which should enable tonnage to be produced more rapidly than ever it has been produced in the past. The fact that hull designs have been standardized, and not revolutionized, is not a little significant. It shows that those responsible for the scheme have discarded the many suggestions for "unsinkable" ships and placed their confidence in that which experience had proved to be good, supplemented by all the expedients for increasing safety which could be adopted with hope of success, and without making each vessel other than a good seaworthy and efficient cargo carrier.

This is a point which must always be remembered when the merits of the scheme of standardized shipbuilding are considered. There have been very few rash experiments in British shipbuilding. An occasional freak boat has been constructed, but as a whole the history of British shipbuilding is a story of great restraint and scientific conservatism, of the development of theories to the point when their success is assured before they are put into actual practice, and of preliminary experiments so conclusive that there was no danger of failure when actual vessels were produced. It was largely this innate conservatism that prevented the adoption of revolutionary ideas in the standard ships. The Shipping Controller's advisory committee declined to rely on untested theories when the demands of the war were calling for the largest possible supply of efficient cargo tonnage, and they therefore decided that a large number of vessels of thoroughly dependable types should be built—types which would not only do a known amount of work after being commissioned, but with the construction of which all shipbuilders and marine engineers were familiar, and which could, therefore, be turned out rapidly once the standardized programme was fairly set going. The time was seen not to be one for experimenting with vessels the value of which was an unknown

quantity, and therefore all the proposals for revolutionary plans were turned down, and cargo steamers in three classes, propelled not by turbines or internal combustion engines, but by ordinary reciprocating engines, were ordered and are now being constructed at many of the shipyards in the United Kingdom. This is a remarkable illustration of that conservatism in methods to which reference has been made, and of that safe policy which looks like want of enterprise, but which so frequently proves wisest in the long run. It is a policy of safe progress, and its best justification is to be found in the story of British shipbuilding and marine engineering.

Now the idea of an unsinkable, or practically unsinkable, ship is being recommended, and the Admiralty and the Ministry of Shipping are being criticized because they decline to do more than express a favorable opinion on the plans put before them. Whatever the merits of these plans, their adoption would mean an interruption of the standardized programme. It is, in all probability, purely a matter of what may be called tactics. Now that the standard programme is fully under way the stage is presumably seen approaching when it will act as an effective setoff to the enemy submarine campaign; hence it is not considered wise to make another new beginning, especially with a scheme which is bound to be experimental in its early stages.

As to the unsinkable ship as such, it is an old will-o'-the-wisp, which many good men have followed, but which no one has yet caught. It would be quite possible to construct something which would continue to float for a very much longer time than anything at present in existence, and that in spite of very serious attacks by mines, submarines or gunfire. It might even float until it was wholly destroyed. But it would not be a ship, because it would be of little or no value as a ship. Take, for example, the question of internal subdivision. By means of extreme subdivision—many transverse and longitudinal bulkheads carried up to or above the main deck, and with no openings leading from one compartment to another—the buoyancy of a ship might be preserved after she had been attacked many times; but the amount of subdivision necessary to make her even relatively safe would make her useless as a ship. Numerous bulkheads without openings, the only communications between the compartments being by the top decks, would render her very difficult to work, while with many small compartments her cargo could not be handled expeditiously, and she would represent the very opposite of that clearhold type which is so efficient and economical, and toward which the designers of cargo steamers have been working for many years past.

Again, all forms of outside protection, such as screens after the fashion of the old time torpedo nets around warships, are open to the unanswerable objection that they would enormously reduce the speed and the steering and manoeuvring power of any vessel to which they were attached. The latest idea from America, that each transport crossing the Atlantic should carry along each of her sides, at some distance off, a wall of steel plates, so that she would be sailing all the time within these walls, is the torpedo net carried to its extreme limits, and it is open to the same objections, but to a much greater extent.

The simple fact is that a ship must be a ship first and foremost, and any alteration in design, or any protective device, which detracts from her value and efficiency as a ship is ruled out by that fact. The true line of progress is that on which we are moving—that of maintaining efficiency and also utilizing every plan which assists in defying the enemy without spoiling the ship as a ship.—Times, London, Eng., Engineering Supplement.

The United States Consul at Glasgow, Scotland, reported recently as follows: The first of the standardized ships built under the British Government's specifications has completed its final tests, and has been put into commission as a cargo carrier. In every respect the trial proved an unqualified success. It was of a most exhaustive and comprehensive nature, and the experts who were aboard were unanimous in their praise of the ship, which marks a new epoch in Great Britain's maritime history. A choppy sea and rain squalls prevailed during the trials, but these conditions served only to enhance the steadiness and seaworthiness of the craft.

The standardized vessel was designed with the idea of providing a good type of cargo carrier in the shortest possible time, with the minimum expenditure of material, having regard to war conditions which involve the question of speed. The keel was laid in Feb., 1917, and on Aug. 25, 1917, the first ship was fully loaded and ready to proceed on its maiden voyage.

In reality there are two types of standardized vessels of 8,000 tons deadweight carrying capacity. These are classified as A and B—single-deck and double-deck ships. The first one is of class A. It is said that the government intends also to construct two smaller types—class C, of 5,000 tons deadweight, and class D, of 3,000 tons. Other types are said to be under consideration. The machinery and engines, as well as the hull, are standardized, so that the first engine goes into the hull complete. Special attention has been devoted to the question of speed, with a view to attaining the maximum number of knots. Features of the general equipment are the very large hatchways, which make the ship as nearly self-trimming as possible. This greatly facilitates loading and discharging. In fact, the central idea is that such vessels not only should be built quickly, but also should be capable of being worked economically and speedily.

The accommodations provided for the crew have been given the closest attention, with the result that the provision made marks a big advance as compared with sailors' quarters in ordinary cargo steamers, and particularly those of the tramp class. The crew are berthed aft in the poop, instead of in the forecabin, as has been the general rule hitherto, and separate apartments are provided, each fitted with two berths. Messing quarters are entirely separated from the sleeping compartments, a smoking room is provided for general use, and there is steam heat in the men's quarters. There is also a bathroom for the crew.

Marine Navigation Co., Ltd., a Canadian company, is reported to have purchased the sailing vessel *Juteopolis* built at Dundee, Scotland, in 1891. She was owned by G. Windrum & Co., and is 2,652 net tons.

The Canadian Pacific Railway's Relations with Austria.

The statement made recently that C.P.R. observation cars were being used as hospital cars by the enemy in Austria, brings to mind the part played by the C. P. R. before the war, and which, looking at it in the light of later events, may be considered almost as skirmishing tactics preliminary to the declaration of war. For a number of years steamship traffic to and from the European continent, was practically controlled by the Germans, and this control was specially marked in the case of American tourist traffic to the German and Austrian baths and mountains. Almost the whole of the American traffic to the Austrian Tyrol passed through German hands to the detriment of the Austrians, and the Austrian State Railways suffered. In order to remedy this state of affairs, the Austrian Government entered into contracts with the C.P.R., first for the supply and operation of a number of specially constructed observation cars on the more picturesque sections of the State Railways through the Austrian Alps, and by arrangement with the Swiss Government, to Zurich. A special car was designed, following on the design adopted in this country, but modified in certain particulars to suit the requirements of continental railway operation, and several were built, to plans prepared by the C.P.R., at the Nesseldorf works in Austria. The arrangements for this were made by H. H. Vaughan, then Assistant to the Vice President, C.P.R., who visited Austria for the purpose. The service was first operated during the summer of 1912, between Zurich and Innsbruck, Vienna and Innsbruck, and Salzburg and Trieste, under the supervision of G. McL. Brown, European Manager, C.P.R., London, Eng.

It was felt later that Austria was not getting its fair share of the continental traffic going from America, owing to the alleged Hamburg - American Steamship Co.'s control of the North Atlantic Conference, which allocated certain percentages of the traffic to certain companies, and consequently to certain ports. The Austrian Government then arranged with the C.P.R. for the inauguration of a steamship service between Canada and Trieste, with a call at Naples, Italy. This service was commenced in March, 1913, the C.P.R. steamships Lake Champlain and Lake Erie being used, and renamed Ruthenia and Tyrolia. On the inauguration of the new service, it was announced from Berlin that the North Atlantic Conference would oppose it by placing a competitive service on the same route, and the Austro-Americana Line was formed to run between Canada and Trieste, calling at Patras, Greece and other Mediterranean ports.

At a meeting of the North Atlantic Conference, which was attended by G. McL. Brown, European Manager, C.P.R., it was demanded that the C.P.R. surrender its contract with the Austrian Government and pay a default, and naturally this was refused. Later the C.P.R. withdrew from the conference entirely, and as a consequence all agreements for the pooling of continental business came to an end. Immediately following the withdrawal of the C. P. R. from the conference, its Austrian agent was arrested and its Austrian offices were closed. There is not the slightest doubt that these actions were carried out at the instigation of the German authorities, acting through the Hamburg-American Steamship Co., with the intention of driving the C.P.R. out

of the continental business. The C. P. R. agent was subsequently released and certain of the offices opened, the business done being considerably restricted. Action was however maintained against S. Altman, Agent, C.P.R., for breaches of the emigration act, it being alleged that by degrees the country was being depleted of men of military age, and that the C.P.R. agent aided and abetted such men in evading the provisions of the emigration act. On this account the C.P.R. withdrew its steamship service between Canada and Austria, and placed the vessels on another route. G. McL. Brown, European Manager, C.P.R., spent a considerable time on the continent, during the various disputes with the North Atlantic Conference, and only closed up matters shortly before the outbreak of war in Aug. 1914. After war was declared between Great Britain and Austria, which was at a later date than the German break, all C.P.R. property in Austria was seized, and the local staff interned.

The Welland Ship Canal and the War.

The United States Shipping Board is reported to be considering an appeal to the Dominion Government to push to an early completion the construction of the Welland Ship Canal, on the ground that such construction would not only divert the great bulk of the Great Lakes tonnage to the coastwise trade during the winter when lake navigation is closed, but would make possible the utilization of the large shipbuilding facilities on the lakes without the necessity of cutting vessels in two in order to get them to the ocean.

In carrying out its policy of not expending money on large public works not immediately connected with war services, the Dominion Government suspended all work on the construction of the Welland Ship Canal, and dispersed the staffs on May 2 last. At the time, contracts were running for sections 1, 2, 3, and 5, and the work taken as a whole was rather over 50% completed; that on sec. 3, the heaviest on the whole route, not being in so forward a state as on the other sections. The contract called for completion of this section by April 1, 1917, but owing to labor and other difficulties, it was estimated that it was about 12 months behind time. The time for the completion of sec. 5 was fixed for April 1, 1918, so that the completion of all the heavy work on the construction of the canal might have been looked for during 1918, and possibly the completion of the whole of the canal as well, as the balance of the work is of a comparatively light nature. To do this, however, the work would have to be rushed from end to end with a full force of men, and undertaken as a war work of the utmost necessity. There is a large amount of alien labor in Canada, most of which is engaged on work of considerably less importance than this, and which could be transferred with little difficulty. Apart from this, if the work is allowed to stand for any great length of time, there is bound to be a serious deterioration and consequent loss, and even if it were taken up again at once, there would be some difficulty in reassembling plant and staffs, as in some cases, plant, which was of a more or less special character, was sold, or transferred to other points.

No doubt the cessation of the work was ordered in good faith, it never being contemplated that it would be required as a link of very great importance in connection with the carrying of the war to a successful conclusion. The fact, however,

remains that had the canal been complete and ready for service, it would have assumed an importance of such a nature, as a means, not only for the quick transfer of the larger lake vessels to the ocean, but also for the complete and beneficial utilization of the lake shipbuilding yards for the construction of larger and more useful vessels than is now possible there, owing to the delays necessary for the cutting of the larger vessels in two on the lakes and rejoining them on the St. Lawrence.

United States Government Rates for Requisitioned Steamships.

Following are particulars of the rates which the United States Shipping Board is paying for vessels which it has requisitioned for ocean service, under government form time charters:

Cargo Boats and Tankers.	
Over 10,000 tons d.w. capacity, \$5.75 per d.w. ton.	
8,001 to 10,000	6.00
6,001 to 8,000	6.25
4,001 to 6,000	6.50
3,001 to 4,000	6.75
2,500 to 3,000	7.00

Vessels of speed in excess of 11 knots are allowed 50c a ton dead-weight per month for each knot or part of a knot over 11 knots.

For passenger steamships the board adopted a two fold basis of classification, Class A consisting of steamships with a capacity of over 150 passengers, and Class B consisting of steamships with a capacity of from 75 to 150 passengers. Steamships falling in both classes are further classified according to speed. The rates for passenger steamships are as follows:

Class A.	
\$9.00 a ton gross register	
10 to 11 knots	9.50
12 "	10.00
13 "	10.50
14 "	11.00
15 "	11.50
Over 15 "	11.50
Class B.	
\$8.00 a ton gross register	
10 to 11 knots	8.50
12 "	9.00
13 "	9.50
14 "	10.00
15 "	10.50
Over 15 "	10.50

The foregoing rates became operative Oct. 15. The vessels embraced in the requisition, except in so far as actually required for government service, will be left in the hands of the present owners to be operated for government account, but subject at all times to such dispositions as the board may direct. A certain number of the requisitioned vessels which are required for the continuing and exclusive service of the navy and army, will be taken over on a bare ship basis. The rate of hire on this basis has been fixed by the board at \$4.15 per deadweight ton for cargo boats, and \$5.75 per ton gross for passenger steamships of 11 knots speed, with an additional allowance of 50c per ton for each knot in excess of 11 and up to 16. All the foregoing rates are tentative. The board will carefully examine the results of operation under the requisition rates, and from the results, as certified by expert examiners, will determine upon such revision as fair and equitable treatment of the owners of the requisitioned vessels may require. Revisions will be made, if reasons therefore are found to exist, at intervals of not more than 90 days. As to insurance, the government assumes the war risk, and in some instances, the marine risk as well. In cases, in which for any reason, it is more convenient for the government to assume the marine risk, the usual rate for such insurance will be deducted from the charter hire.

Telegraph, Telephone and Cable Matters.

A. E. Holmes has been appointed chief operator, Great North Western Telegraph Co., Winnipeg, vice A. D. Campbell, deceased.

J. O. Pilon, heretofore assistant to local manager, Grand Trunk Pacific Ry. Telegraphs, Edmonton, Alta., has been appointed local manager, there, vice R. M. Macmillan promoted.

Mrs. R. N. Young, wife of the Superintendent of Telegraphs, British Columbia District, C.P.R., sustained a broken leg, through being knocked down by an automobile in Vancouver, at the end of October.

The Association of Railway Telegraph Superintendents held a special meeting at Chicago, Ill., Nov. 22, to discuss various topics in which the members are interested. This meeting took the place of the usual annual convention which it was deemed desirable to postpone indefinitely.

The Great North Western Telegraph Co. has reopened its office at Restigouche, Que., and has closed its offices at Pointe au Pic and Valcartier Camp, Que.; Bath, Camp Borden, Camp Leaside, Paisley and Petawawa Camp, Ont., and Grand Beach, Man. The name of the office at Brockville Jct., Ont., has been changed to Forfar.

A. Mackenzie, Agent, C.P.R. Telegraphs, Guelph, Ont., who retired after 28 years with the company there, on account of ill health, commenced telegraph service in 1872 with the Montreal Telegraph Co. as a messenger, later becoming an operator with the same company and transferring to the C.P.R. Telegraphs in 1889. All his service has been in Guelph.

The Great North Western Telegraph Co. is reported to be employing girls as messengers at Calgary, Alta. It is stated that no girl is employed unless over school age, and their work is confined to the centre of the city, and to the day time. Only a few have been employed so far as an experiment, as it is said that latterly boy messengers have been very inattentive.

Some difference of opinion seems to have arisen as to the payment of war taxes on collect telegrams passing between Canada and the U. S. An enquiry directed to the local agent of the C. P. R. Telegraphs, Montreal, by a press representative brought the statement that when the tax was instituted in the U.S., the company communicated with Washington on the subject, and was informed that the tax on a collect message sent from the U. S. was collected from the sender before the message was dispatched. A representative of the Great North Western Telegraph Co. however stated that the U. S. war tax was being collected from recipients of collect messages and a monthly return made to the U.S. Government and that this course was being adopted on Canadian collect messages sent to the U.S. The Canadian tax is 1c and the U.S. tax is 5c.

R. M. Macmillan, heretofore local manager, Grand Trunk Pacific Ry. Telegraphs, Edmonton, Alta., has been appointed acting Division Superintendent, G.T.P.R. Telegraphs, Winnipeg, and acting Superintendent of Time Service, G.T.P.R. vice F. T. Caldwell, who has been granted extended leave of absence on his appointment as a lieutenant in the U.S. Army Signal Corps. He entered the Western Union Telegraph Co.'s service in 1904 as

a messenger, at Sydney, N.S., and after learning operating, he worked his way to the position of local manager in the east, and went west in 1911, entering C.P.R. Telegraphs service at Winnipeg. He transferred to the G.T.P.R. Telegraphs service in 1912, as night operator at Winnipeg, and was appointed local manager at Regina, Sask., when an office was established there. Later he occupied a similar position at Calgary, Alta., and from 1914, at Edmonton, Alta.

Among the Express Companies.

Express companies applied to the Interstate Commerce Commission on Nov. 15 for an increase of 10% in rates. The Adams, American, Southern, and Wells-Fargo companies, making the application in behalf of themselves and other express companies, set forth that they had suffered a net loss of \$39,848 as the result of increases in operating expenses and taxes during the first six months of this year.

The various express companies operating in Canada have announced that with a view to improving the working conditions of their employes, and to co-operate in the general movement to conserve the country's resources with respect to time and men, it has been decided to discontinue all pick-up and delivery of express shipments on Sundays, and not to contract to make calls or start deliveries after 5 p.m. on week days.

The Board of Railway Commissioners has extended the express collection and delivery limits for Hamilton, Ont., to include the area in the east end within a continuous line following the west side of Lottridge Inlet, Burlington, Ottawa, Barton, Frederick, Cannon and Ottawa Sts., Roxborough and Kensington Aves., Main St., and Cage Ave.; also Burlington St., from Ottawa St. to and including the Dominion Sheet Metal Co.'s premises. The matter was down for hearing on the application of the City of Hamilton, but the city and the companies, through the Express Traffic Association, had come to an agreement before the hearing, so that it only remained for the board to make an order amending the original order, as arranged between the parties.

The Dominion Ex. Co. was sued recently by Gold Seal Ltd., Calgary, Alta., for refusal to accept shipments of intoxicating liquors for export from Alberta to Saskatchewan and elsewhere, and for refusal to receive shipments in British Columbia, when consigned to plaintiffs' warehouse in Calgary. The express company contended that it is prohibited from doing so under the provisions of the Alberta Liquor Act, and the plaintiffs claimed that the act is ultra vires of the province as being an interference with trade and commerce, which is a matter within the exclusive jurisdiction of the Parliament of Canada. Judgment was given for the plaintiffs, it being stated that the act did not prevent a bona fide business being conducted in the matter of storage within the province for the legitimate supply to points within and without the province.

The Anglo-American Shipping Co., Ltd. the incorporation of which was announced in our last issue, has been formed to carry on the business of building and dealing in steam and other vessels, to act as shipping agents, insurance agents, etc. The officers are: S. Bick, President; G. H. Meehan, Vice President and Managing Director; J. I. Bennett, Treasurer. The office is at 11 St. Sacramento St., Montreal.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Northern Electric Co.—A. Dwight Smith, formerly Manager of the Company's branch at Ottawa, has been appointed Sales Manager, Montreal district.

General Railway Signal Co.—The G.T. R. is installing the A.P.B. automatic block signalling system on its line between Shelburne, N.H. and Bethel, Me. The work is being done by the company's own forces.

Metal Hose and Tubing Co., New York, which is represented in Canada by Lyman Tube and Supply Co., has issued a loose leaf illustrated catalogue of its new hose, "Triplexd," thoroughly explaining its construction.

Theodore Malm, who for the past six years has been electrical and mechanical engineer for various Mackenzie-Mann interests, including Toronto Ry., Toronto Power Co., Toronto Electric Light Co., Toronto & York Radial Ry., Toronto Suburban Ry., London Electric Co., Suburban Construction Co., Canadian Northern Ry., etc., has established two companies, viz., Railway & Power Engineering Corporation, Ltd., and Theo. Malm & Co., with offices at 202 C. P. R. Building, Toronto. Railway & Power Engineering Corporation will deal in railway, light and power equipment, and Theo. Malm & Co. will undertake surveys, plans and estimates for development of electric power, prepare plans, estimates and specifications and supervise work of electric, street and interurban railways and mining electrifications, also complete systems for generation, transmission and distribution of electrical energy for commercial purposes and industrial plants.

The Standard Underground Cable Co. of Canada, Ltd., Hamilton, Ont., has placed on the market a new style of outdoor (type d. o. a.) cable terminal which is known as the protected disconnection style. All the copper parts are covered by a porcelain hood, which permits the disconnection of the aerial extension wire even while the circuit is alive. The company states that all its outdoor (type d.o.a.) cable terminals are readily disconnected from the aerial conductor, either by means of a set screw, cap nut or turnbuckle stem. The stem of the new terminal is a modification of the regular cap nut stem and it is claimed that it has some additional advantages where frequent disconnection of the aerial circuit from the terminal is necessary. The new terminal, as well as the complete line of outdoor cable terminals, is fully described in the company's bulletin 700-2.

Refrigerator Heater and Ventilator Car Co., St. Paul, Minn., has received approvals of its Moore heater from the United States Bureau of Explosives and from the Underwriters' Laboratories. The report from the Bureau of Explosives' Chemical Laboratory says:

"A Moore heater car was examined at Newark, N.J., on Sept. 5. The heating system consists essentially of a small iron stove carried in a special compartment underneath the car. The stove is of cast

iron, and has a grate 10 in. in diameter. The fire door of stove works vertically in slots and cannot be jarred open. The compartment containing the stove asbestos is in turn lined with sheet metal. The products of combustion pass directly upward through an iron flue passing through the car floor through the car, and out through the roof, so that the flue gases from the stove do not enter the car. The stove and smoke flue are jacketed with sheet metal, and the space between the flue and jacket is used for warming the air passing into the car. Fresh air from the outside of car enters this space through an opening directly under the stove. Still another metal jacket surrounds the inner jacket. The space between these two jackets produces the air circulation by creating a draft from the air spaces under floor of car. This outer jacket is protected from damage by a heavy metal guard firmly attached to floor and side of car. There is a grating provided which is placed inside the stove at outlet to pipe, so as to prevent any possibility of hot coals doing any damage should the car be overturned. The fuel used in the stove is pea coal. From the construction and design of heating system and from fuel used it is believed that this heating system is not likely to be a source of ignition of car or contents. It is of course not anticipated that inflammable liquids will be shipped in this car when heater is in operation."

The Underwriters' Laboratories put the device to an exacting test. The Engineer of Gases and Oils report shows, in table 1, that they started with a uniform temperature of 11° C. and gradually forced the fire until the air directly above the hot air inlet into car reached 220° C. or 396° F. without danger of igniting the car. These tests were for the purpose of determining the safety of the device from an insurance standpoint. It was not a theoretical determination. It was an actual trial. In table 2 the conditions were much the same as shown in table 1, except the ventilator door was closed. Although the temperature above the hot air inlet to car was forced to 210° C. or 378° F. and the temperature in the heater box about the stove to 180° C. or 324° F., no danger of ignition of car was discovered. Table 3 shows a representative service test. Here again the heat was forced as high as possible, or to 227° C. or 409.6° F., with no resulting danger from fire.

Of course, these temperatures do not represent the ordinary temperatures of the heater or air in car during ordinary operations, but they represent the highest temperatures to which the heater can be forced, or which it can at any time or under any conditions attain, and all with the result that it is safe. The size of the car was reduced to magnify or increase the heat effect.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.

Canadian Railway Association for National Defence, W. M. Neal, General Secretary, 263 St. James St., Montreal.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Canadian Society of Civil Engineers—C. H. McLeod, 176 Mansfield St., Montreal.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Nova Scotia Society of Engineers—A. R. McCleave, Halifax, N.S.

Quebec Transportation Club—A. F. Dion, Quebec.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacramento Street, Montreal.

Ship Masters' Association of Canada—Capt. E. Wells, 45 St. John Street, Halifax, N.S.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Transportation Club of Vancouver—C. E. Blaney, 2337 Third Ave. West, Vancouver, B.C.

Twin Cities Local Freight Agents' Association—E. J. Travers, Fort William, Ont.

Winnipeg Traffic Club—James Gehrey, Bannatyne Avenue, Winnipeg, Man.

CANADIAN PACIFIC RAILWAY COMPANY.

Dividend Notice.

At a meeting of the Board of Directors held today a dividend of two and one-half per cent. on the Common Stock for the quarter ended 30th September, last, being at the rate of seven per cent. per annum from revenue and three per cent. per annum from Special Income Account, was declared payable on 31st December next, to shareholders of record at 1 p.m. on 1st December next.

By order of the Board,

ERNEST ALEXANDER,

Secretary.

Montreal, 12th November, 1917.

MARINE ENGINE ERECTOR:—
Wanted for Canadian Shop an experienced foreman to take charge of erecting 1500 H.P. marine engines. Apply Box 1834, Canadian Railway & Marine World.

NOTICE.

The General Railway Signal Company of the United States of America, the owner of the exclusive rights to Canadian patents No. 92323, No. 93127, No. 96256, and No. 97758, issued to Young and Townsend, and covering methods of signalling electrified railways, wishes to call the attention of all possible users of the devices and systems covered by such patents to the facts that it is prepared to sell and furnish, at short notice, all such devices and to install such systems upon any railway in the Dominion of Canada.

All inquiries regarding the above should be addressed to The General Railway Signal Company of Canada, Limited, Lachine, Province of Quebec, Canada.

FOR SALE

Four Second-Hand Locomotives In Good Condition.

One 2-6-0

Cylinder 20x26, Weight on Drivers 109000.

Two 4-6-0

Cylinder 19x26, Weight on Drivers 103500.

One 2-6-0

Cylinder 17x24, Weight on Drivers 125500.
