31/7/12

STEAM RAILWAY DEPARTMENT AND GENERAL MATTER.

A

Adams Express Co. 370
Alaska Ry. Construction 21, 393
Alberta and Great Waterways Ry. 19, 50, 100, 135, 193, 273, 470
Alberta Board of Public Utilities 8
Alberta-Hudson Bay Ry. 100, 224
Algoma Central and Hudson Bay Ry.—
Appointments 23, 63, 318, 397
Finance, meetings, etc. 8, 15, 312
Algoma Central Terminals, Ltd. 222
Algoma Eastern Ry.—Appointments 23, 63, 149
Finance, meetings, etc. 15
Rolling stock 62, 102, 141
Alma and Jonquiere Ry. 470
American Express Co. 441
American Railway Engineering Association 48
Appointments, Transportation 23, 63, 105, 149, 188, 235, 278, 318, 357, 397, 439, 476
Association of Railway Telegraph Superintendents 441
Athabasca Northern Ry. 19, 350
Athabasca Valley Ry. 50, 193, 224
Atlantic, Quebec and Western Ry.—
Appointments 318
Finance, meetings, etc. 101, 312, 392, 469

B

Baggage regulations, amendments to 93
Birthdays of transportation men 7, 42
85, 132, 172, 221, 259, 299, 341, 381, 421, 458
Board of Railway Commissioners—
Baggage regulations 93
Barbed wire along railways 302
Car supply information 264
Cars for coal in Western Canada 44
Customs arrangements for coal 131
Demurrage charges increased 14
Grain rates east of Fort William 397
Headlights, electric, for locomotives 345
Locomotive boiler inspection regulations 163
Motor accidents at level crossings 436
Newsprint rates 420
Noises on railways 12
Orders by, summaries of 8, 55, 109, 134, 181, 196, 229, 276, 304, 361, 386, 435, 464
Passenger train reduction 221
Per diem charges increased 9
Safety appliances on trains 365
Stencilling cars for bulk grain shipments 349
Traffic orders 24, 65, 99, 144, 237, 269, 306, 360, 402, 441, 481
Bonanza Coal and Coke Co. 100
Book reviews 186
Boston and Maine Rd. 60
British American Telephone and Telegraph Co. 82, 244
British Columbia and White River Ry. 100, 350
British Columbia Institute of Civil Engineers 12
Brown, A. C.—Halfax ocean terminals and connecting railway 169
Brule Lake Ry. 50, 193
Buckland, J. W.—Decapod locomotives, C.P.R. 91
Buffalo, Rochester and Pittsburg Ry. 105
Burrard Inlet Tunnel and Bridge Co. 393, 433, 470

C

Calgary and Fernie Ry. 50, 350
Canadian Express Co. 25, 82, 126, 167, 244, 338, 441
Canadian Freight Association 186
Canadian Government Railways, Appointments 23, 63, 105, 149, 188, 235, 278, 318, 397, 476
Board of Railway Commissioners' jurisdiction 362
Box cars 398
Capital and operating statistics 300, 314
Coal supply 61
Development 280, 307
Employes and national service 47
Halfax ocean terminals and connecting railway 169
Jacking stall for repairing steel cars 426
Locomotives (2-10-2) 83
Rolling stock 25, 62, 102, 176, 187, 188, 228, 279, 307, 347, 392, 439, 481
Snow ploughs 176
Canadian Northern Express Co. 25, 182, 120, 167, 266, 338, 441
Canadian Northern Ontario Ry. 104
Canadian Northern Pacific Ry.—Development 22, 64, 104, 195
Relationship with British Columbia 228
Taxation 346
Canadian Northern Quebec Ry. 22, 64, 195
Canadian Northern Ry.—Appointments 23, 63, 105, 149, 188, 235, 278, 318, 357, 397, 439, 476
Car building at Port Mann 88
Cutter for tube sheets 346
Development 22, 64, 104, 143, 195, 235, 274, 309, 353, 398, 433, 470
Earnings, 20, 65, 96, 136, 223, 316, 394, 434, 465
Electric locomotives, Mount Royal Tunnel 47
Finance, meetings, etc. 15, 60, 101, 222, 280, 392, 469
Government acquisition 147, 358, 399, 437, 476
Montreal station 257, 422
Mount Royal Tunnel, Electric substation 90

Report 66
Rolling stock 25, 62, 141, 228
Canadian Northern Saskatchewan Ry. 280
Canadian Northern Transfer Co. 23
Canadian Northern Western Ry. 101
Canadian Pacific Ry.—Appointments 23, 63, 105, 149, 188, 235, 278, 318, 357, 397, 439, 476
Automobile cars 139
Car, freight, conversion 384, 419
Car loading, Increase of 185
Cars, hospital 140
Colonization and development department 18
Connaught Tunnel ventilation 339
Contractors' suit 142
Development 25, 50, 167, 142, 182, 232, 271, 309, 359, 387, 433, 470
Die for bending car grab irons 264
Double tracking Lease to North Toronto 465
Double track mileage 134
Earnings 20, 65, 96, 136, 223, 316, 394, 434, 465
Finance, meetings, etc. 15, 280, 469
Floral Department work 103
Fuel Economy 355
German plot to destroy 432
Honor roll 6, 47, 96, 133, 174, 182, 222, 258, 274, 302, 351, 384, 424
Honors, military 317
Inspection trip 396, 428
Labor situation, enquiry into 13
Land settlement plans for soldiers 12
Locomotives, decapod 91, 260
Meeting 225
Nut reclaiming machine 187
Periscopes for interlocking towers 261
Pilots for locomotives 129
Piston rod remover 187
Report 190
Rogers Pass, dismantling bridges on old line 482
Rogers Pass, salvaging old line 467
Rogers Pass Tunnel suit 61
Rolling stock 25, 62, 102, 141, 187, 228, 279, 307, 347, 392, 439, 481
Scholarships 129
Securities for war purposes 184
Shares and enemy holders 12
Snow fighting equipment 130
Soldier pan, electrically heated 130
Telegraphs 39, 82, 338, 370, 441, 499
Track maintenance inspection trip 13
Track section prize competition 21, 456
Vancouver dock extension 107
Women workers 131
Yard extension at Lambton and West Toronto 438
Canadian Railway Association for National Defence 425, 466
Canadian Railway Troops' organization and work 366
Canadian Society of Civil Engineers 12, 59, 61, 65, 139, 232, 465
Canadian Ticket Agents' Association 61, 316, 440
Canadian Western Ry. 50, 350
Capilano Timber Co.'s railway 350
Caribou Barkerville and Willow River Ry. 50
Car demurrage, increased 14
Car charges, per diem 9
Car efficiency, ways of increasing 274
Car loading, necessity for full 421
Car, private, Sir John Eaton's 168
Car shortage and demurrage rates 272, 346
Cars for coal in Western Canada 44
Cars, gondola, for French State railways 438
Cars, railway passenger, painting and varnishing 43
Cars, stencilling for bulk grain shipments 349
Cascade Scenic Ry. 19, 100, 306, 393
Cavalier County Ry. 470
Central Canada Express Co. 167, 370
Central Canada Rd. & Power Co. 100, 135, 193
Central Canada Ry. 50, 135, 193, 224, 470
Central Canada Saskatchewan Ry. 50, 100, 135
Central Ry. of Canada 280, 362, 436
Central Vermont Ry.—Appointments 397
Finance, meetings, etc. 15
Chicago, Milwaukee and St. Paul Ry. 318, 397
Chicago and North Western Ry. 278
Chippawa, Queenston power development construction railway 193
Coal, railway, increased cost of 134
Coal storage experiments 432
Coal transportation question 267
Commercial Cable Co. 167
Cowan, A.—Train line maintenance 297
Crossings, Motor accidents at 436
Crowsnest and Tent Mountain Ry. 135, 193

D

Daylight Saving Act 274, 358
Delaware and Hudson Co.—Appointments 106, 236, 278, 318, 397, 439
Report 264
Demurrage regulations in United States 61
Detroit Grand Haven and Milwaukee Ry. 20, 65, 96, 136, 223, 316, 394, 434, 465
Diamond Coal Co. 60, 161
Discipline, theoretical and practical 5
Distances and gradients, Quebec to Winnipeg 421
Dolly Varden Mines Ry. 193, 224, 470
Dominion Atlantic Ry. 24

Dominion Express Co. 26, 82, 126, 167, 244, 338, 441, 499
Dominion Government Telegraphs 109
Dorian, C.—Little things in a railway office 382
Draft gears on rolling stock 461
Drayton, Sir Henry L.—Cost of railways in Eastern Canada and their earnings 196
Duluth, South Shore and Atlantic Ry. 24
Duluth, Winnipeg and Pacific Ry. 63

E

Earnings 20, 65, 96, 136, 316, 394, 434, 465
Eastern Canadian Passenger Association 61
Edmonton and South Western Ry. 50
Edmonton, Dunvegan and British Columbia Ry.—Appointments 477
Development 19, 60, 100, 393, 433, 470
Rolling stock 481
Electric railway traction, notes of heavy 1
Embankments, Use of trestles 341
Endsley, L. E., Draft gears 461
English Valley and Hudson Bay Ry. 366, 393
Esquimalt and Nanaimo Ry. 19, 100, 135, 193, 306, 350
Essex Terminal Ry. 19, 50, 100, 193, 350, 433
European and North American Ry. 383
Express Companies, Among the 26, 82, 126, 167, 244, 338, 370, 441, 499
Express delivery limits in Toronto 141, 185
Express Traffic Association of Canada 26, 167

F

Finance, meetings, etc. 15, 60, 101, 141, 222, 280, 312, 347, 392, 439, 469
Flagging rules for impassable track 277
Fort Frances and English River Ry. 193
Fredericton and Grand Lake Coal and Ry. Co. 477
Freight and passenger traffic notes 18, 60, 93, 139, 194, 230, 279, 319, 349, 394, 426, 480
Freight bills of lading, proposed changes 362
Freight handling, changes re l.c.l. 313
Freight rates, application to raise 177
Freight rates, increased, suspended 189
Freight rates, lake and rail in Eastern Canada 175
Freight rates, on newsprint paper 420
French railway earnings 18
Fuel and other war problems 440
Fuel consumption on railways 1915-1916 303
Fuel economy on steam boilers and locomotives 310, 344, 459

G

Gradients and distances, Quebec to Winnipeg 421
Grain elevator, Dominion Government, St. John, N.B. 13
Grain inspection at western points 482
Grain in store at terminal elevators 62, 162, 192, 268, 314, 360, 482
Grain rates east of Fort William 307
Grand Lake Ry. and Transportation Co. 19, 224
Grand Trunk Pacific Branch Lines Co. 350
Grand Trunk Pacific Ry., Annual meeting 425
Appointments 24, 64, 106, 188, 236, 278, 318, 357, 398, 439, 477
Assessment at Calgary 349
Development 50, 89, 135, 193, 224, 273, 306, 433, 470
Dominion Government control 358
Earnings 20, 65, 96, 136, 223, 316, 394, 434, 465
Finance, meetings, etc. 469
Rolling stock 392
Inspection trip 387, 430
Telegraphs 167, 499
Grand Trunk Ry.—Advice to employes 133
Appointments 24, 63, 106, 150, 188, 236, 278, 318, 357, 397, 439
Demurrage regulations at Portland, Me. 42
Development 19, 60, 89, 100, 136, 193, 224, 273, 350, 393, 433, 470
Earnings 20, 65, 96, 136, 223, 306, 394, 434, 465
Finance, meetings, etc. 439, 469
First aid competition 172
Locomotives 306
and London and Port Stanley Ry. 22
Passenger stations 420
Port Huron car shops 95
Rolling stock 25, 141, 279, 307, 347, 439, 481
Telegraphs 167
Track inspection trip 24
Watch inspectors meeting 56
Welding locomotive frame 186
Grand Trunk Western Ry.—Appointments 477
Earnings 20, 65, 96, 136, 223, 318, 394, 434, 465
Greater Winnipeg Water District Railway, Development 19, 22, 136, 224, 433
Rolling stock 228
Great Northern Ry.—Appointments 236, 477
Development 19, 50, 101, 136, 193, 224, 273, 306, 350, 433
Report 299
Vancouver terminals 41, 348
Great North Western Telegraph Co. 441, 499
39, 72, 82, 169, 167, 244, 338, 370, 441, 499
Grenville Harrington and Northern Ry. 19, 61, 193
Guelph Junction Ry. 16, 101, 141, 469

H	
Haanel, H. E.—Discipline, theoretical and practical	5
Halifax and South Western Ry.	106
Hamilton, Ont.—Report on railway entrance	342, 399, 424
Headlights, electric, ordered for locomotives	345
High River and Hudson Bay Ry.	20
Hudson Bay Railway, Dominion Government—	
Appointments	24
Bridge pier at Nelson, Man.	*14

Canadian Railway and Marine World

January, 1917.

Notes on Heavy Electric Railway Traction.

By J. A. Shaw, General Electrical Engineer, Canadian Pacific Railway.

The rapid replacement of all motive power by electrical on street railways and the mushroom like growth of light inter-urban electric railways in the more closely settled districts of this continent has aroused a general feeling that a similar revolution will occur with steam operated railways. Conditions, however, are radically different with the latter. In the case of the former, the ability to furnish speedy units for facilitating the passenger transportation has provided a more remunerative return. In the case of the majority of steam railways, the freight service furnishes the most profitable return, and due to its inherent greatest efficiency being in the moving of large units, the application of electric power is made more difficult. However, with the growth of the country, the main problem is now becoming how to make better use of existing track facilities, especially where there is difficulty in increasing trackage in main terminals. Therefore, due to the almost unlimited power possible to concentrate for propulsion with electrical power, train speeds may be increased with consequent greater frequency of movement, and the importance of an electrical solution in relieving traffic congestion has recently been demonstrated successfully in both passenger and freight service. This also in the face of rapid advances in steam motive power design.

In addition the electrical locomotive has already demonstrated a power economy of one half that of its steam opponent, as measured for equal power at the drawbar, and is now showing even a greater improvement from the new regenerative power feature. This advantage of making use of the energy otherwise lost in stopping a train is one of the first applied solutions of a problem that inventors have worked at for a century or so, with varying success, from the old plan of stopping horse cars by winding up a spring and then starting them by setting it loose, to the recent successful plan of building elevated stations on a hill of track.

While the electrification of steam roads is primarily a railway problem, there is a closely connected aspect of material interest to the country at large, viz., the result of the use of electric power by a railway will mean the availability of cheap power for light and manufacturing purposes in communities that could not otherwise have hoped for such advantages for years. The result of this must inevitably be to stimulate both trade and population, which will react favorably to the railway company as well as the district.

From the time of Sprague's first successful railway experiment at Richmond, Virginia, in 1888, it has been the chief ambition of the electric railway engineer to invade the broad field of heavy traction, for many years practically monopolized by the steam locomotive. Material progress in this direction has marked the intervening years, but only recently has

the electrification enthusiast reached the height of his ambition. The crowning achievement in the great struggle to supplant the steam locomotive has been attained in the complete electrification of the mountain divisions of the transcontinental lines of the Chicago, Milwaukee & St. Paul Ry. A brief review of some of the principal electrifications leading up to this great project may be of interest.

Baltimore & Ohio Rd.—The first undertaking of this kind which could be classed as heavy electric traction was the B. & O.R. Baltimore Terminal, which has been operated electrically since 1895. The electric zone lies entirely within the city limits and is a part of the so-called belt line extending from Camden on the west to Waverly interlocking tower on the east, 3.75 miles. There are eight tunnels in this zone, which together constitute 48% of the total distance. The longest of these tunnels is 7,300 ft. in length and extends from Camden station to Mt. Royal. Needless to say, the change to electric haulage was made to eliminate the smoke and dangerous gases in these tunnels. As a matter of fact, however, the ordinances governing the construction of certain of these tracks through the city required that they be operated electrically. The part of the zone through which trains are handled by electric locomotives is entirely up grade, averaging 0.9%, with a ruling grade of 1.5%. Trains are handled electrically only in the up grade direction, the locomotives returning light. Regular service was started with three locomotives, weighing 96 tons each, equipped with gearless motors. Four additional locomotives of the geared type were put in service in 1903, one in 1906, and 4 more in 1910 and 1912.

New York Central Rd.—The second steam road electrification and, perhaps, one of the most important in the United States, was the New York Central terminal, initial operations being started the latter part of 1906. The present electric zone includes 251 miles of track, equipped with under-running third rail, distributed over about 53 miles of route. All through passenger trains are handled by electric locomotives within the electric zone, the change being made at Harmon on the main line, about a mile south of Croton, and at North White Plains on the Harlem Division. Suburban passenger passenger traffic is handled by multiple unit trains. As on the Baltimore & Ohio electrification, 600 volts is used on the third rail, power being generated in duplicate steam turbine stations, one located at Port Morris, on Long Island Sound, and the other at Glenwood, near Yonkers, on the river front. Each plant contains four 5,000 k.w. Curtis steam turbine generating units delivering 25-cycle, 3-phase current at 11,000 volts. This current is distributed over an 11,000 volt transmission to 9 synchronous converter substations aggregating over 40,000 k.w. In some of the earlier substations storage

batteries are also used as a reserve and to take peak loads.

Operation was started with 35 115-ton electric locomotives of the gearless type, supplemented within a few years by 12 additional units of similar design. In 1913 and 1914, 16 additional locomotives of a new design were put in service. These machines are also equipped with gearless bipolar motors, but are constructed with 8 driving axles instead of 4, and the capacity is considerably greater than the original type. The last 6 locomotives, weighing 133 tons each, are probably the most powerful electric locomotives ever used in passenger service. They are capable of hauling 1,200-ton passenger trains on level track at nearly 60 m.p.h. These trains are also hauled at reduced speed up the 1.1% grades leaving the Grand Central terminal. On account of the gearless construction of the motors they operate at appreciably higher efficiency than geared designs. It has also been found that the maintenance is very low, averaging on the entire equipment during 8 years of service approximately 3½¢ per locomotive mile.

In order to take care of high speed express and local suburban service, multiple unit cars are employed on both the White Plains and the Harlem Division. Local service requires trains of from 2 to 11 cars, usually made up in the proportion of 2 motor cars to 1 trailer. Suburban express trains are made up of from 2 to 10 motor cars. These trains are capable of reaching a speed of over 50 m.p.h. and are very flexible in terminal operation, since they can be run in either directions with equal facility. There are now in service 192 motor cars and a number of trailers, each having a seating capacity of 64 passengers. These cars are equipped with type M Sprague G. E. control and 2 G.E.-69-200 h.p. motors. They are of all steel construction, 60 ft. long, and weigh approximately 57 tons completely equipped. Repair shops are maintained at Harmon and at North White Plains, where both locomotives and multiple unit cars are inspected and repaired. The electrical equipment in this terminal service has shown remarkable reliability, there being very few interruptions whatever to traffic from electrical causes. No interruptions whatever to traffic have occurred from power station troubles during eight years of operation.

New York, New Haven & Hartford Rd.—The well known installation which this railway carried out shortly after that of the New York Central now consists of a total mileage of 500, and includes 61 miles of 4-track and 5 miles of 6-track right of way. There are 100 passenger, freight and switching locomotives and 69 multiple unit cars in service, which relieved 150 steam locomotives. The power service was formerly supplied from a single power house, but is now supplemented by a purchased supply from one of the New York power companies at the easterly end of zone. Certain of the pas-

senger locomotives average 500 miles daily, and are in continuous service 24 hours daily for 30 days. In the case of switching locomotives, a large number are now used in the yards, 4 electric units having been found to displace 6 freight switchers, principally on account of the fact that the electric switchers can be used almost continually with no lay-over periods. The equipment on this railway was made more complicated than on any other electrified railway, due to the fact that apparatus was required to operate from alternating current on the main system and from direct current supply when within the New York terminal zone. Probably more information has been obtained in guiding electrical engineers on the design of electric railway equipment for heavy service through the work carried out on this railway than in any other similar project, and the electrical profession is under a heavy debt to the New Haven Company in this opportunity, as otherwise progress would have been greatly retarded without this undertaking.

West Shore Rd.—Shortly after the New York Central terminal electrification was completed, an electrification project was undertaken by the West Shore Rd., a subsidiary of the New York Central system. On account of the parallel trolley lines it became necessary for this road, operating between Utica and Syracuse, N.Y., to increase the capacity of the road and to develop a high speed passenger traffic over the portion of its tracks between these two cities. The electrified section of the road is double tracked throughout, and a third and fourth track are provided at some points to enable steam trains to pass the multiple unit trains. The distance between terminals is 44 miles, with a total mileage on a single track basis of 106 miles. Formerly, only 2 steam passenger trains were run daily in each direction and at night 2 trains of sleepers passed over the tracks. With these tracks electrified there are fast limited cars hourly from each terminal, local cars or trains once an hour from each terminal and also a fast freight service which is still hauled by steam locomotives.

The electrified division is equipped throughout with an under-running third rail similar to that used on the New York Central terminal electrification, current being fed from synchronous converter substations at 600 volts. Power is received by 4 substations from the Adirondack Electric Power Corporation at 60,000 volts. Each substation contains 2 synchronous converters of 300 k.w. capacity, each with reserve space for an additional unit. The rolling stock equipment includes 19 4-motor multiple unit cars, which are operated either singly or in trains as the traffic requires. With the third rail construction used this line has never been seriously handicapped by snow. Interruptions to the service from all causes have been practically negligible and the traffic of the system has shown a steady growth.

West Jersey & Seashore Rd.—One of the earlier railways to take advantage of electrification as a means of increasing facilities for handling passenger traffic was the West Jersey & Seashore Division of the Pennsylvania System, extending from Camden to Atlantic City, 65 miles, and a branch from Newfield to Millville, 10 miles. The contract for the entire equipment of this railway, including installation and the equipment, was placed in service in a little over five months, which is a remarkable record, considering the fact that included in this work were

the erection of a power station, 8 substations and the electrical equipment of over 150 miles of single track, the building of 71 miles of high tension transmission in duplicate and the equipment of 68 multiple unit cars. The line from Camden to Atlantic City is double tracked throughout and at points there are three tracks. With the exception of a short stretch of track near Camden, the entire road is equipped with an over-running third rail operating at 600 volts and taking power from the synchronous converter substations. Multiple unit equipment is operated in trains of from 3 to 10 cars without trailers. The express service between terminals operates on a headway of 15 minutes in each direction at speeds up to 60 m.p.h. Frequent local service is also provided for Camden, suburbs and on the branch line to Millville.

Electricity is generated in a steam turbine station at Westville, generating 6,600 volts, 3-phase, which is stepped up to 33,000 volts for transmission. At the substations this voltage is stepped down and delivered from the synchronous converters at 650 volts to the third rail. The power station equipment consists of 3-2,000 k.w. Curtis turbo-generators with the necessary auxiliary units. Each of the substations is equipped with 2 750-k.w. synchronous converters with space for an additional unit. The present rolling stock equipment consists of 109 motor cars, some of which are constructed for combination baggage and smoking cars, and others for mail cars. Each is equipped with 2 200 h.p. motors and type M automatic control. The standard passenger cars have a weight of about 45 tons and a seating capacity of 58 persons.

The operation of this electrified steam road has been most satisfactory in every way. The number of delays chargeable to electrical equipment has been less than 6% of the total number of train minutes detention, and the increase in traffic gained by the use of multiple unit cars instead of steam trains enabled the railroad to make a remarkable increase in the number of passengers carried, on account of the local service furnished to the smaller towns and the high speed express service between terminals.

Great Northern Ry.—One of the most unique electrifications in the country, and the only road to use 3-phase equipment, is the Cascade tunnel on the G.N.R., near the summit of the Cascade Mountains, Wash. This tunnel is 2.65 miles long and has a uniform grade of 1.7%. In the yards at each end are grades of 2.2%, on which all trains must be started. Under steam operation this tunnel had become the limiting feature of the road. Heavy freight trains, requiring from 2 to 4 of the heaviest locomotives, could not operate trains faster than from 7 to 8 miles an hour. In the tunnel operation was still more difficult. The smoke and steam coated the rails with damp, greasy soot, causing the wheels to slip, and the smoke and gases made operation positively dangerous to train crews.

The electrification involved about 4 miles of route with 6 miles of single track, including sidings. Power is generated in a 5,000 k.w. hydro electric plant at Leavenworth, transmitting 3-phase, 25-cycle current at 33,000 volts for about 30 miles. The contact system consists of double trolley construction carrying 3-phase, 6,600 volts a.c., using the rail and ground return for the third conductor. These overhead wires are spaced about 8 ft. apart in the tunnel and 5 ft. apart in the yards. Ordinary pole trolleys are

used for collecting the current.

There are 4 electric locomotives weighing 115 tons each, all of which is on the driving axles. Three-phase induction motors are connected by twin gears to each axle and the trucks are adequately equalized to take care of twisting strains. These motors are of the 3-phase induction type, wound for a primary voltage of 500, the rotors being equipped with wound secondaries brought out through collector rings. There are 13 steps in the resistance used in connection with the rotor, allowing for ample speed control. The average freight train hauled weighs approximately 2,000 tons, including both steam and electric locomotives. On down grades the induction motors automatically return power to the system when the train exceeds the normal speed of about 15.5 m.p.h. The Great Northern has the distinction of being the first railway electrification in America to use regenerative braking, this feature having been in very successful operation for more than six years. The Norfolk & Western has begun using the same principle recently, and the Chicago, Milwaukee & St. Paul has adopted direct current regeneration.

This installation was made in July, 1909, and since that time all traffic through the tunnel has been handled by the electric locomotives, with the exception of delays due to avalanches and snow slides, some of which have interrupted traffic for several days at a time. On March 1, 1910, an avalanche came down the mountain through the yards near the tunnel carrying all the cars of two trains, with 2 steam and 3 electric locomotives, down into the bottom of the canyon, from 200 to 400 ft. away. The electric locomotives were untouched for about three weeks during the task of clearing the line. They were then taken to the railway company's shops and put in operating condition. The average cost of repairs, including labor and materials on the 3 locomotives, was \$962 each, while the expense of similar repairs on the 2 steam locomotives was \$1,284 each.

The Grand Trunk Ry., in May, 1908, electrified the St. Clair Tunnel and replaced 4 steam locomotives of 100 tons with 6 66-ton electric units, which, as a rule, are used in sets of two. During the period that these electric units have been in service no failure has occurred in the main motors, and they have been available for service throughout 90% of the time. The average annual cost for the maintenance of the 4 steam locomotives was \$21,173, while that for the 6 electrical locomotives has been \$11,131. The average cost per car handled through the tunnel, a distance of approximately 5 miles, by steam locomotives, was 26c, against 17.2c by electrical locomotive, although the capacity of cars handled today is much greater than the capacity of those of 1907 and 1908. The cost of fuel for the steam locomotives was \$42,000 a year, whereas the average cost of fuel consumed for generating energy for the electric locomotives is \$17,000 a year. This difference in cost is partly due to the fact that slack coal is now used, whereas hard coal was used for the steam locomotives. Power is supplied from one plant, containing 2 1,500 h.p. turbo-generator sets, and stokers of boilers are so arranged that their operation is practically controlled automatically from the operation of locomotives on the main line.

Michigan Central Rd.—One of the most successful electrifications of a trunk line steam railroad is the section of the

M.C.R. operating under the Detroit River. The 2 track tunnel connecting the M.C.R. lines terminating at Windsor, Ont., and those in the United States terminating at Detroit, was completed in 1910, and since that time all trains have been hauled by electric locomotives through the tunnel, instead of being ferried across the river. Under the old method it required about 30 minutes to make the crossing and the facilities were very limited. With the tunnel trains pass through in less than 6 minutes, and the capacity of the tracks is limited only by the length of train which can be handled. The general scheme of electrification includes the purchase of 3-phase, 60-cycle energy at 4,400 volts from the Detroit Edison Co., and transformation in the company's substation to 650 volts d.c. At this voltage current is fed to the locomotives through an underrunning protected third rail reaching all of the electrified tracks.

The substation is located near the Detroit end of the tunnel, and contains 2 1,000 k.w. synchronous motor generator sets, with auxiliary equipment for excitation and for controlling a 312 cell storage battery (capacity 630 amps. for 8 hours, and momentary discharges up to 11,000 amps.). The control equipment is so arranged as to reduce the peak loads and thus obtain a practically constant load at unity power factor. The original equipment consisted of 6 electric locomotives designed for hauling both freight and passenger cars through the tunnel and also for switching service in the yards. Each is equipped with 4 railway motors and weighs 200,000 lbs., all of which is on driving axles. The service consists of hauling an 1,800-ton trailing train from one yard to the other, negotiating a 2nd grade when 2 locomotives are operated multiple unit. The second order of locomotives placed in service in 1914 consisted of 4 similar units, each weighing 240,000 lbs. The total electrified trackage now in operation is approximately 24 miles, including yards on both sides of the river and the two track tunnel.

Norfolk & Western Ry.—The electrification of 30 miles of this road was the solution of the problems to double the capacity of a hilly section with a tunnel. The limit in capacity by the use of the heaviest steam power had been reached, and continual delays were being met with through the severe starting difficulties on grades, the latter condition arising partially through necessary stops for coal or water. Twelve electric locomotives have displaced 33 Mallet locomotives, and have increased the average speed up the ruling 2.4th grade from 6 to 14 miles an hour. The principle of braking by regenerating power has proved a complete success on this railway. The fact that the speed on down grades is constant and inflexible prevents the possibility of surges in the train which would result in broken drawbars. The main electrical feature in this electrification was the application of the polyphase induction type of motor to locomotive axles, and the use of a converter on each locomotive, so as to permit operation by single phase alternating current, and thus permit of the advantages of a single trolley wire. Trains are operated with one locomotive hauling and a pusher on the heavier grades. The method of starting is for the locomotive man on the head locomotive to release brakes and let the slack run back. As soon as the locomotive man on the pusher feels the resulting blow, he applies power and holds the train until the front man gets under way. This method is due to the two men not being able to signal due to

curves and train length and works out very satisfactorily.

The Southern Pacific Co.'s suburban lines in the immediate vicinity of San Francisco were changed over from steam to electric operation in 1911. The electrified district includes the Oakland, Alameda & Berkeley Divisions, which carry the heavy suburban traffic from the ferries to the residential districts.

Power is generated for this system in an oil burning steam station located at Fruitvale, the generating units consisting of two 5,500 k.w. turbo-generator sets delivering 3-phase, 25-cycles. Power is transmitted at 13,200 volts to 2 outlying substations, the third being located in the power house. Each of the substations is equipped with two unit synchronous converter sets operating two in series for 1,200 volts. Each of these sets is of 1,500 k.w. capacity, there being in all 10 double units in the 3 substations.

The rolling stock equipment consists of 81 all steel multiple unit cars, each equipped with four 145 h.p. 630/1200-volt motors. Trains of from 2 to 12 cars, made up of motor cars and trailers, are operated, depending upon the demands of the traffic. The contact system is of a flexible type built for the use of pantograph trolleys.

The Pennsylvania Rd., in addition to the direct current third rail electrification of its New York entrance has electrified recently suburban lines operating out of the Philadelphia Broad St. station. This station, when completed in 1881, contained 8 tracks and handled 160 trains a day, with 18 trains in the rush hour. In 1910 tracks had been increased to 16 and trains to 574, with 53 in the rush hour. Electrification has given relief by reducing the train movements, averaging from 4 to 15 down to 2. This was achieved by the use of 93 motor cars. Up to the present, trains of these cars are only running on one division, but this will be increased shortly. It is found that, due to the higher rate of acceleration possible, these trains can be more quickly despatched, thus reducing running time considerably. Each car has 2/225 h.p. motors and an 8 car train is found to draw 6,800 h.p. when accelerating. The fluctuations in power demand for present service varies from 27,000 h.p. to zero, averaging 8,000 h.p. per hour during the rush period. The power demand in this service is, therefore, not only considerable, but very fluctuating. Power service is purchased from the Philadelphia Electric Co.

The Butte, Anaconda & Pacific Ry., which began electrical operation in 1913, is in many ways one of the most remarkable examples of electric train haulage in America. While previous examples of steam road electrification have been equipped for various reasons, either tunnel and terminal operation or for high speed suburban service, this road was electrified purely for reasons of economy. The results of this change over have amply justified the initial cost of the electrification, a comparison of operating results during the first 6 months of electrification showing a saving of an amount equal to 20% of the initial cost, not allowing any salvage for steam engines released.

The electrified tracks consist of 30 miles of route between the mines at Butte and the smelters at Anaconda and about 114 miles on a single track basis. Power is purchased from the Montana Power Co.'s system at 2,300 volts, 60 cycles, and is transformed by motor generator sets to 2,400 volts direct current for use on the trolley. There are two

substations, one at Butte and the other at Anaconda, both of these being installed in the power company's existing transformer stations. The initial rolling stock included 15 freight and 2 passenger locomotives and 8 additional locomotives have since been purchased to take care of the heavy increase in traffic.

The freight traffic consists largely of transfer of copper ore, and at present amounts to more than 6,000,000 tons a year. This material is handled in steel ore cars, having a capacity of about 50 tons each. The weight of train hauled over the main line, including a 0.3 grade, frequently reaches 5,000 tons trailing. Eight passenger trains a day are operated between Butte and Anaconda, each consisting of from 3 to 5 passenger and baggage cars. The overhead construction on this system is made especially flexible by the use of loop hangers which allow the contact wire to rise without lifting the weight of the messenger. There also may be other novel features in the switching yards and at street railway crossings.

The eminently successful operation of this initial 2,400 volt railway was largely influential in the Chicago, Milwaukee & St. Paul Ry.'s decision to electrify its mountain divisions at 3,000 volts direct current.

The Chicago, Milwaukee & St. Paul Ry. electrification differs from all previous projects of this kind in that the transcontinental lines involved embrace 4 complete locomotive divisions as operated by steam locomotives. None of the existing electrifications on trunk line railways, either in America or in Europe, have included more than one engine division. For this reason there has been no opportunity for interchange of spare locomotives and no possibility of materially reducing the number of spare steam locomotives required for the operation of the system.

The Missoula and Rocky Mountain divisions include 440 miles of route, embracing approximately 650 miles of single track lying between Harlowton, Montana, on the east, and Avery, Idaho, on the west. This road is one of the main transcontinental highways of the country and the divisions being electrified contain the most serious grades encountered on the C. M. & St. P. between Chicago and the coast. Under steam operation these 4 divisions required 103 steam locomotives of the heaviest types, and even with this number the schedule was maintained with difficulty. In the winter when temperatures range as low as 40 to 50 below zero, it is extremely difficult to keep steam locomotives in operation. It is no uncommon occurrence to find several locomotives stalled during cold weather, with fires drawn and water removed from the boiler, owing to the freezing of some of the piping which is exposed to the weather. Furthermore, it has been found that after hauling a train over a 112 mile division for about three days in succession it is necessary to put the locomotive into the shops for a day's overhauling.

The electrical equipment for this electrification includes 42 main line passenger and freight locomotives and 2 switchers, and experience with electric locomotives on the first two divisions seems to indicate that these locomotives will be amply sufficient to take care of the present traffic and normal increase within the next few years. In addition, it is probable that trains will be operated much more nearly on schedule time and with less damage to equipment owing to accidents. In the operation of the first division it

has been found that 1 electric is capable of easily replacing 3 steam locomotives and possibly 4, when other divisions are put in operation. The reasons for the much greater capacity of the electric locomotive per unit are: first, ability to operate a large per cent. of the 24 hours with minor inspections; and, second, ability to haul equivalent trains at approximately double the speed of the steam locomotives. Many other advantages may be mentioned which tend to increase the capability of the electric locomotive as compared with the steam. Not the least of these is the regenerative braking feature which relieves the brakes of a large portion of the wear and heating due to hauling heavy trains on severe grades.

The 440 miles of route involved in this electrification will be fed from 14 substations located at points averaging 33 miles apart, each station receiving power from the Montana Power Co.'s system at 100,000 volts and transforming to 2,300 volts for synchronous motor generator sets. These sets are of the three unit type, consisting of a synchronous motor and two 1,500 volt d.c. generators connected permanently in series to deliver 3,000 volts to the trolley. Each station contains either 2 or 3 of these sets, there being a total of 32 sets in the 14 substations. Two small generators, one on each end of the set, furnish exciting current for the main fields of the generators and for the revolving field of the motor. The substation equipment is so arranged that in case the regenerated power sent back by the locomotives exceeds that being used nearby, the motor generator sets will operate inverted and thus return excess energy to the transmission system and thence to other substations requiring power. Measuring instruments are arranged to credit the amount of this returned energy to the railway company. Each of the substations is in charge of 3 operators working on 8-hour shifts, and these men are at all times under the direction of the train and power dispatcher, who gives instructions for the operation of the station. Two model bungalows have been built by the railway company at each station for housing the operators.

As above mentioned, electric power is received at 100,000 volts, 60 cycles, from the Montana Power Co.'s transmission network, operating numerous hydro electric plants in various parts of the state. The largest of these stations are located at Great Falls and Thompson's Falls. In order to ensure power supply at all times there are several feeding-in points, and the railway company maintains a separate 100,000 volt transmission line the entire length of the electrification. One of the most completely equipped hydro electric plants on this system is the Volta plant, in the Great Falls of the Missouri River. This station at present contains four 10,000 k.w. vertical generators and two additional units are being installed. The available head at this point in the Missouri River is 155 ft., and the supply of water at all times is ample.

The main line locomotives, a number of which are now in service, have a total weight of 228 tons, with 224 tons on the driving axles. The cab consists of 2 similar sections extending practically the full length of the locomotive. The freight and passenger locomotives are similar in all respects, except that passenger locomotives are provided with a gear ratio permitting the operation of 800 ton trailing trains at approximately 60 m.p.h., and are furthermore equipped with oil-fired steam boilers for heating

the trailing cars. Each locomotive carries 8 430 h.p. motors, each geared to a driving axle with twin gears. These motors are designed to operate at 1,500 volts per commutator, 2 motors being permanently connected in series across the 3,000 volt circuit. The tractive effort available for starting trains is approximately 135,000 lbs. at 30% co-efficient of adhesion, and the continuous tractive effort of the freight locomotives is 71,000 lbs. In addition to the eight driving wheels, each half of the locomotive carries a 2-axle guiding truck which supports approximately 30 tons weight. The motors are ventilated by a forced draught from a blower, which is driven from the control motor generator set located in the locomotive cab.

The control equipment is the type arranged for multiple unit operation. This allows two locomotives to be operated from a single controller. The main control switches are located in steel compartments inside the cab, convenient for inspection and repairs. Current for operating contactors, lights and other auxiliary apparatus is taken from a 3,000/125 volt motor generator set, one of which is located in each half of the locomotive. Compressed air for the air brakes, whistles, pantagraph trolleys and other auxiliaries is supplied by a 3,000 volt, 2-stage air compressor having a piston displacement of 150 cu. ft. of free air a minute against a pressure of 135 lb. Current is collected from 2 pantagraphs, 1 located at each end of the locomotive.

One of the most distinctive features of this electrification is the regenerative braking on the locomotives, which permits the return of energy to the system on descending grades instead of checking the speed of the train by means of the air brakes. The amount of braking is directly under the locomotive man's control and the air brakes are relieved of practically all service except when bringing the train to a final stop. It should be understood that when braking a train by the regenerative method, there is no overheating as is the case with air brakes, and consequently there is a material reduction in the wear on brake shoes, tires and rails. In addition to this the air brakes will always be in good condition when required for emergency service and delays due to excessive wear will be greatly reduced. In actual practice it has been found that a large portion of the power regenerated by trains on descending grades is used up by other trains taking power on the level or on ascending grades. In some cases when there is no train available for absorbing the excess energy the power is taken up by one or more substations and returned to the transmission system connecting the several substations.

The overhead construction consists of two 4/0 trolley wires flexibly suspended from a steel catenary supported on wooden poles. Bracket construction is used wherever the track alignment will permit and cross span on the sharper curves and in the switching yards. The 2 wires are suspended side by side from the same catenary by independent loop hangers alternately connected to each trolley wire. This type of construction permits the collection of the very heavy currents by reason of the twin contact on the pantagraph with the 2 trolley wires, and also ensures sparkless collection under the extremes of either heavy current or more moderate current at high speeds. A 500,000 c.m. feeder parallels the track for about 80% of the 440 miles, being used on all grades up to and including 1%. On

heavier grades a 1,000,000 c.m. feeder is used. A 4/0 negative feeder or ground wire is carried on top of the poles.

During the early part of Dec., 1915, an interesting comparative exhibition was staged by the C. M. & St. P. R. to show prominent officials the comparative capabilities of steam and electric locomotives. The observation party was stationed at Janney substation, on the western slope of the Rocky Mountains, and about midway on the 1.66% ascending grade. The first train sent up the hill was hauled by one of the 282-ton electric locomotives, assisted by a similar unit acting as a pusher. The train consisted of 48 cars weighing approximately 3,000 tons trailing and negotiated the grade very easily at about 16 m.p.h. Following this was a second train hauled by 2 mikado type steam locomotives and one Mallet steam pusher. The steam train consisted of 37 cars, weighing about 2,200 tons, and difficulty was encountered in making the grade at a speed of from 9 to 10 m.p.h. Upon completion of the test, President Earling indicated his entire approval of the electrical equipment and gave instructions for putting it into regular service immediately.

It may be safely concluded that there are important economical and expedient reasons why the number of electrifications will continue to increase rapidly and especially in our own country with its numerous water powers, the ever increasing cost of coal and growth of population.

Wellsville & Buffalo Rd. Corporation.—

This railway, which runs between Buffalo and Wellsville, N.Y., which was operated as a portion of the Buffalo & Susquehanna Ry., and which was placed under separate management about the commencement of last year, is to be abandoned. The present intention is to discontinue the freight and passenger service, scrap the rolling stock, rails and equipment, and sell the right of way. It is stated that since its separate operation, it has been run at a loss of \$45,000. It was operated by receivers for a time, also at a loss, and it was proposed to electrify it in an effort to make it pay. The officers are:—C. A. Finnegan, President; T. Hofeller, Vice President; A. Weber, Vice President; F. C. Schumaker, Auditor and Car Accountant; E. Joyce, Treasurer; I. P. Spining, General Freight and Passenger Agent; C. T. Tewkesbury, General Agent, Traffic Department, and C. J. McDonald, Soliciting Freight Agent.

Passenger Meetings at Quebec. The Niagara Frontier Summer Rate Committee's rate representatives will meet Jan. 9 and 10, at 9 a.m. for compilation of fares, etc. The committee's annual meeting will be held Jan. 11 at 10.30 a.m. The International Water Lines Passenger Association will meet on Jan. 10 at 4 p.m. The Great Lakes & St. Lawrence River Rate Committee will meet on Jan. 11, immediately following the adjournment of the Niagara Frontier Summer Rate Committee meeting. All the meetings will be at the Chateau Frontenac.

The Roy Elevator-Milling Co., Ltd. has been incorporated under the Dominion Companies Act, with \$100,000 authorized capital, and office at Fort William, Ont., to build, own and operate a hospital and a mill elevator and to carry on a general grain handling business, and to own and operate steam and other vessels, and to carry on a general navigation business. M. C. King, O. Sabourin, F. P. Germain and C. M. Dickinson, Fort William, are the incorporators.

Discipline, Theoretical and Practical.

By H. E. Haanel, Trainmaster, C.P.R., Regina, Sask.

Your grandfather can remember when they beheaded people for pocket picking, horse stealing and over two hundred other offences against society. Now capital punishment is lawful for but one crime, and we may live to see it abolished altogether. Perhaps your grandfather can also remember when train employes, regardless of record, were dismissed from the service on the slightest provocation. It has since been realized that this was a prodigal waste of resources that take time and money to produce. Since "it costs five thousand dollars to make an engineer," for instance, is it not economically wiser to pursue, if possible, a process for his correction, reformation and education, than to discard him for uncertain raw material should he fail to measure up to requirements? Many men are swayed by a multitude of pernicious mental and physical influences and affections, and their normal conception of rational performance is intermittently distorted because of unfortunate, albeit remediable idiosyncracies and tendencies. But, as Fouillee expresses it, "Man is a machine that thinks and has ideas for springs. Each thought is a force. The thought of future punishment is a force as truly as any other idea, and is, per se, no less fatal or less powerful. It may counteract other forces in the mind of man. Hence punishment may be threatened and used as a means of efficacious influence upon action. The fear of punishment will tend to cause a man to avoid the act with which the idea of punishment is associated." Since any carelessness or negligence, however small, in the business of transporting passengers and freight is so pregnant with dire consequences, this salutary fear of punishment must, by some method, be constantly induced to keep the individual attuned to the exacting nature of his work. Hence the *raison d'être* of railway discipline.

Modern discipline is a growth. Fines that were imposed in the early days as punishments, and which were deducted from offenders' pay cheques, were superseded gradually by suspensions and consequent loss of pay for periods commensurate with the seriousness of the offence. One day Geo. R. Brown, General Superintendent of the Fall Brook Rd., began to think seriously about the hardship to innocent members of an offender's family through loss of income that resulted from such disciplinary methods. He was well aware of the regrettable moral lapses often accompanying periods of enforced idleness, and so it was that finally, from his efforts to obviate these objectionable features, the system of "Discipline by Record" was evolved. It is now often referred to as the "Brown System," and the demerit mark has received the familiar epithet of "Brownie," although meriting and demeriting are among certain modifications the system has since undergone. Each road employing this system of discipline has introduced some original variations applicable to its own peculiar requirements, but the essentials differ little. The accumulation of a stipulated number of demerit marks automatically causes dismissal. The number of demerits is doubled for the repetition of any offence, while the deletion of a set number of marks automatically occurs with the fulfilment of a certain continuous period of service free from discipline. In changing

from the old suspension system to the system of discipline by record, one of the southern roads gave the following as some of the leading objects of the change:—

"To avoid that incorrect and pernicious feeling on the part of the employe who has been actually suspended, and thus lost money in wages, that he has paid the company for the loss and trouble he has caused and can settle again in the same manner.

"To encourage and stimulate all employes to cooperate with the officers of the company in all matters tending to produce harmony, safety and efficiency, and thereby secure better service resulting both in profit and credit to the company and to its employes, as well as increased satisfaction to the public. Each employe can work with the knowledge that the excellence of his record, the prospect of his continued employment, his promotion and final success depend on his own good conduct and exertions. By both good and faithful work he can accumulate a stock of credits that will practically insure him against dismissal in case of some oversight or error that otherwise would deprive him of employment. The most efficient men will be encouraged, developed, benefited and retained, while those who prove to be unfit for the railway service, though dismissed, will feel they have been dealt with fairly and justly.

"To enable the employe to gain in purse, in self respect, in manliness, in interest in his work, in permanence of employment, in loyalty to the company, and in solicitude for its interests; by which the company expects to gain a man more contented, more intelligent, more courteous, more watchful and zealous for its interests, realizing that they are practically his own, thus securing a more harmonious, economical and efficient service in which the element of force is not predominant."

While such acts as disloyalty, dishonesty, desertion, intemperance, insubordination, wilful neglect, gross carelessness, immorality, etc., subject the offender to summary dismissal, dismissal is also the only possible recourse in cases of serious consequence regardless of the degree of error. A man is morally as much a murderer when he shoots to kill but misses, as when his shot hits and kills, but the law provides varying penalties according to the results. Similarly, consequences govern the punishment to a certain extent of the employe, and, although he is morally as culpable for laxity in flagging when nothing occurs as when the result is a collision, he is demerited in the first case, but in the second case is dismissed, not only because a strong deterrent example is imperative, but also because public opinion would not acquiesce in any half way measures being taken with wrong doing of direct public concern.

Rewards in recognition of meritorious acts have always been accepted as an efficient complement of punishment. Hume argues that "all laws being founded on rewards and punishments, it is supposed, as a fundamental principle, that these motives have a regular and uniform influence on the mind, and both produce the good and prevent the evil actions." When offenders were punished by fines, commendable acts were rewarded by monetary gifts. Now that the demerit mark is the punishment, the reward is the merit mark. To reward consistently requires hardly less care than to punish judiciously. Some consider it good procedure to recognize by merit marks mere acts of duty such as discovering broken arch bars, fallen brake beams, etc., on the employes' own train, as it tends to encourage a more assiduous examination. Unless the conferring of rewards is judiciously curtailed, however, the normal, healthy conception of reasonable service might easily become warped, and rewards would lose their effect. It must be borne in mind that the effectiveness of the de-

merit mark varies directly with the value placed upon the merit mark.

The influence of example is a force which is being turned to account with excellent results by some roads through the agency of the educational bulletin. Seneca taught that one of the principal expectations of punishment is "that it may render other men better," while Plato tells us that punishment is inflicted not only "in order that persons punished may not again commit the fault, but that his punishment may restrain from similar acts those persons who 'witness' the punishment." Bethune is more emphatic and asserts that "example is the most important end of all." The educational bulletin, issued periodically and posted where all can study it at leisure, describes offences committed and commendable acts recognized during the period, and generally the action taken is indicated. Care is exercised to avoid any references which might identify persons or localities. The educational value of these bulletins is, of course, wholly dependent upon the degree of intelligent understanding exercised in the presentation of details. No useful impression is made on one who reads, for instance, that punishment was inflicted for "contributory negligence resulting in damage to equipment." A few pertinent facts forcefully presented would, however, start wholesome thinking and discussion. I have at hand a number of educational bulletins from different parts of the continent, and the following might be considered a fair sample of their contents:—

"Conductor, 10 demerits, failure to take prompt action which would have avoided delay to traffic.

"Brakeman, dismissed, improper flagging.

"Conductor, 10 merits, promptness in insuring proper protection of his train.

"Brakeman, 5 merits, ejecting tramps from his train."

To my mind such curt and colorless details cannot awaken interest and create any useful impression. The educative material is wholly lacking. Why not try to drive the lessons home by an expose of the facts, and bulletin these cases somewhat as follows:—

A car in a westbound train was derailed at 6 a.m. The car ran up the main track far enough for trains to pass through siding, had not the frog been damaged. Conductor reported that auxiliary was needed, and it was ordered out. Instead of taking his locomotive and going forward to section house two miles distant, getting the section men and telling them what was required to make the siding ready for passing trains, he remained at the derailment. The auxiliary had orders to pick up the section men who were found surfacing the track about 8 a.m. When section men arrived at the derailment they had to return to the tool house for necessary material and tools to make the repairs. It was about five hours after the derailment before trains could pass. Had the conductor taken his locomotive and gone immediately for section men, the track could have been made ready in about one and a half hours. This was an exhibition of negligence or very poor judgment on the part of the conductor and he has been demerited.

A train stopped on main track in an obscure place on account of locomotive breaking down. Conductor at once directed flagman to go back to protect train, going forward himself to ascertain cause of trouble, after which he started to look after flagman, thinking he might not get back far enough. Although the flagman had at least five minutes start of conductor, he was overtaken about three telegraph poles from rear of train. Conductor passed flagman and succeeded in stopping a following train which could not have been stopped in time to avoid a rear collision if flagged at point where flagman was overtaken. The conductor is commended for his action and has received merit marks. The flagman has been dismissed.

A freight brakeman found two tramps in an empty car. Though they threatened to do him bodily harm and tempted him with money to let them ride, he ejected them. His conduct in this case has been rewarded with merit marks.

A freight train stopped at a station to do some way work. Head brakeman, unknown to locomotive man or fireman, was cutting off locomotive. He leaned over the drawheads, resting his body on them to reach angle cock on other side. Rear brakeman, not knowing what head brakeman was doing, gave back-up signal to cut train near rear. Locomotive slacked back and body of head brakeman was caught between deadwoods and he was almost instantly killed. Had he walked around the locomotive to get on proper side to turn the cock, or had he climbed over the drawheads, or even under them, as good practice required, he would not have been injured. This opportunity is taken to again impress on trainmen the danger of recklessness, carelessness or undue haste in doing their work. The company does not ask or expect you to take any unnecessary risks of life or limb in the performance of your duties. You are directed to take ample time to do your work safely.

I have placed the last case in my pattern bulletin to indicate that there are occurrences which teach valuable lessons, besides those in connection with which discipline is inflicted. The educational bulletin should only include such cases as are of distinct educational value, whereas the bulletins I have before me are little else than clerical statements of demerits distributed during the period, and as such have an effect more injurious than otherwise. Why show the number of credits and debits at all? Do not such details simply afford opportunity for unreasonable comparisons, suggesting discrimination, when we know that discipline is not something that can be done up in certain sized parcels and delivered to all alike, because of the endless variation of attendant circumstances and conditions? The successful disciplinarian spends much thought on the diagnosis of each case. He must, among other things, consider temperament and disposition, interpret impulses and analyze motives. He knows this medicine of discipline must be dispensed according to the individual needs. A conscientious man, with a sensitive disposition, will often lose heart and become sour and petulant if given an overdose. One of the supercilious, bombastic variety, always convinced of his own perpetual immunity from all disorders, goes into convulsions from the slightest dose, and stridently threatens revenge. Some never even begin to show signs of life until the pill box is nearly empty, while others, perfectly indifferent to their condition, are only mildly amused when told they have but an hour to live. The large majority, however, providing their cases have been properly diagnosed, respond to the tonic effect of the treatments prescribed, and by their exemplary efforts to avoid relapses, create a wholesome atmosphere in which the weak and backward find enthusiasm and vigor.

Even the cleverest disciplinarian might confound motives and attribute a certain result to a wholly irrelevant or non-existent cause. It is, of course, better that no discipline be given than to apply it without ample justification. The most elementary instinct of man is to oppose injustice, and the imposition of unwarranted punishment gnaws like a canker-worm and infects a whole organization. Snap decisions, "soak-it-to-him" predilections and other such slapstick curiosities are perhaps gone forever, but the scar they made is plainly visible in the present attitude of organized labor. It is now perfectly safe in the majority of cases, to leave the correction of his men to the head of the department, and the discipline he imposes, with the concurrence of his superintendent, is usually just. But, because of the inherent tendency of some officers to settle cases by personally bombarding the guilty ones with noisy invective, or because of a desire to insure impartiality, or, if you please, to avoid any element of personal spleen, some roads have instituted a court, of which

the superintendent is presiding judge and his official staff the the jury. At the weekly sittings the judge submits all cases that have arisen wherein the question of discipline is outstanding. Facts are weighed and details discussed, and the discipline that is finally given must be the result of an unanimous decision. This method fosters a spirit of confidence among the employes, and fosters, also, a more impressive sense of the gravity of misdeeds. Discipline given by such a body is unalterable. Too often that imposed by the individual is not, and nothing is more inimical to the efficiency of punishment, or more demoralizing in its effect upon the attitude of the men towards the officers, than for a committee of the men to establish the injustice of an officer's decision and compel the withdrawal of any discipline resulting from it.

In referring to the deterrent principle, Dr. McConnell says:—"It aims to punish, and through punishment to instruct, and through instruction to restrain." Only in so far as punishment points out more clearly and emphatically the narrow pathway of infallible procedure is it constructive. The idea should be to inculcate the wrongdoer directly, and by example all others in similar work, with a mental impulse which will thenceforth act as a positive deterrent under similar circumstances. A punishment that fails to create the distinct mental impression that will ever afterwards make the particular error concerned more real and serious, has, through insincerity or lack of severity, failed fundamentally. Of course, regardless of what the effect may be, each punishment brings the offender that much nearer to automatic dismissal, by reason of his accumulating record, but it must be remembered that to make it possible for a man to so perform that he can retain his position, is the highest concern of discipline. Any influence which will weaken or nullify the corrective effect of punishment should be strongly combatted, and yet such influences unfortunately emanate continually from some

of the very officers who apply the punishment. By sharp criticism, relentless pressure, and unfair comparisons, men are oftentimes provoked into taking chances and violating safety regulations in order to perform with the promptness and cheapness that meet the required standard of merit set by an over zealous officer. Under such conditions, punishment for exceeding the speed limit, for failing to clear superior trains by the full time margin, etc., is hardly likely to be received in the proper spirit. Safety first lectures and dictums are but sounding brass, and efficiency tests merest inconsistency to a man whose superior officers are not themselves, in precept and example, invariable and constant regarding the principles involved.

In its modern application, discipline, as has been suggested, is prospective rather than retrospective. In other words, its highest economical mission is to mould the future rather than requite the past. From the ethical standpoint, it is not a species of expiation or retaliation, but is inflicted solely to educate and constrain, and such education and constraint of the collectivity, as well as the individual, will be attained and profitable results accrue only—

1. If wrongdoing is sharply defined and invariably recognized as wrongdoing under any and all circumstances.
2. If discipline is justifiable, commensurate and inevitable.
3. If meritable acts are sufficiently elevated above those of plain duty—and
4. If the educative information is properly promulgated.

Saskatoon Stock Yards.—The Saskatoon, Sask., Board of Trade has completed arrangements with the railway companies entering the city to erect stock-yards there next spring. Provision is made that the city may acquire the yards whenever a bylaw is passed by the rate-payers and the sanction of the Provincial Local Government Board is obtained for that purpose.

The Canadian Pacific Railway's Roll of Honor.

LIST 15

Abbey, Samuel	Timekeeper	Kamloops	Wounded
Bedinfield, Sydney C.	Waiter	Vancouver	Killed in action
Betts, Thomas A.	Poiter	Pt. McNicoll	Killed in action
Booth, Arthur	Agent	Two Creeks	Wounded
Brown, Isaac G.	Machine helper	Winnipeg	Wounded
Chapman, Andrew G.	Stower	Winnipeg	Wounded
Charrel, Alexander R.	Clerk	Montreal	Killed in action
Cosgrove, James	Conductor	Calgary	Wounded
Daly, Joseph	Clerk	Montreal	Died of wounds
Donald, Ernest	Storeman	Angus	Wounded
Fisher, Harry	Night porter	Winnipeg	Wounded
Forsyth, William	Wiper	Brandon	Wounded
Fuller, Percy D.	Clerk	Montreal	Wounded
Luxton, Wesley	Machine apprentice	North Bay	Wounded
Macdonald, Kenneth M.	Watchman	Gimli	Suffering from shock
Mathison, Albert	Craneman	B.C. Dist.	Wounded
Morgan, Cyril W.	Brakeman	Moose Jaw	Wounded
Nash, Harry B.	Clerk	Victoria	Wounded
Parsons, William	Constable	Cranbrook	Wounded
Paterson, Wilfred	Timekeeper	Red Deer	Wounded
Smith, Cecil H.	Tool grinder	Ogden	Wounded
Smith, George	Constable	Calgary	Killed in action
Squires, William G.	Boilermaker's helper	Toronto	Killed in action
Stewart, James H.	Locomotive fireman	Moose Jaw	Wounded
Stone, Edward W.	Machinist's apprentice	Ogden	Wounded
Swanson, John	Locomotive fireman	Cranbrook	Suffering from shock
Thrower, Leonard	Yardman	Fort William	Wounded
Twist, John	Laborer	Finmark	Died of wounds
Wellspring, William	Locomotive fireman	Nelson	Wounded
Wilson, Frank R.	Yardman	Calgary	Died of wounds
Willins, Henry J.	Car repairer	Toronto	Killed in action

Gondola Cars for the Paris and Orleans Railway.

Fifteen hundred 20-metric ton, 4-wheel, high sided gondola cars, and 500 sets of steel work are being shipped from Montreal to France for the Paris and Orleans Ry. Their general dimensions are as follows:

Length over buffers	7,672 m.m.
" end sills	6,500 m.m.
Wheel base	3,050 m.m.
Length inside	6,420 m.m.
Width over all	2,808 m.m.
" inside	2,530 m.m.
" c. to c. of buffers	1,740 m.m.
Height of sides above floors	1,457 m.m.
Door opening	1,342 m.m.

They have a light structural steel underframe, steel side frame, and end frame with wood lining, being of the regular continental type. They rest on two axles, through the medium of laminated elliptic bearing springs, with link connection to brackets on side sills. The springs rest on malleable iron journal boxes, which are made in two pieces. The top and bottom parts are fastened together by two bolts, making the box oil tight. The inside of the box and also the surfaces of

side doors, having steel framing, and lined with wood. There is a hinged tarpaulin rod running full length of car, to support a tarpaulin cover when one is used. The brake arrangement is of the hand lever type, the brake being applied from the ground and operates on one wheel only. The manufacture of all fittings is required to be perfect in all respects. The sides, ends and doors were all built in jigs so as to ensure absolute interchangeability. This is essential on account of the difficulties in re-erecting the cars in France.

They have been built by Canadian Car and Foundry Co., Ltd.

Birthdays of Transportation Men in January.

Many happy returns of the day to:—

J. Abrams, Wharf Freight Agent, C.P.R., Vancouver, B.C., born at Manchester, Eng., Jan. 24, 1870.

A. Davidson, General Agent, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at St. Henri, Montreal, Jan. 29, 1885.

G. J. Desbarats, C.M.G., Deputy Minister of Naval Service, Ottawa, Ont., born at Quebec, Que., Jan. 27, 1861.

J. E. Everell, Superintendent, Montmorency Division, Quebec Ry., Light and Power Co., Quebec, and District Passenger Agent, Canadian Government Railways, Montreal, born at Cap Rouge, Que., Jan. 1, 1863.

Gordon Grant, Chief Engineer, National Transcontinental Ry., Ottawa, born at Dufftown, Scotland, Jan. 2, 1861.

G. F. Hichborn, formerly Agent, Great Eastern Fast Freight Line, New York, born at Boston, Mass., Jan. 13, 1875.

C. Hood, Local Freight Agent, C.P.R., Saskatoon, Sask., born at Edinburgh, Scotland, Jan. 20, 1864.

D. W. Houston, Superintendent, Regina Municipal Ry., Regina, Sask., born at Bathurst, N.B., Jan. 3, 1879.

Carl Howe, Manager, New York Central Fast Freight Lines, Chicago, Ill., born at Berrien Springs, Mich., Jan. 11, 1870.

H. J. Humphrey, Superintendent, Farnham Division, Quebec District, C.P.R., Farnham, born at Berrys Mills, N.B., Jan. 26, 1879.

W. C. Hunter, Assistant Superintendent Shell Shops, Nova Scotia Steel and Coal Co., New Glasgow, N.S., ex-Manager New Brunswick Coal and Ry. Co., born at St. John, N.B., Jan. 4, 1865.

H. G. Kelley, Vice President, G.T.R., Montreal, born at Philadelphia, Pa., Jan. 12, 1858.

John Macrae, Locomotive Foreman, C.P.R., North Bend, B.C., born at Springburn, Glasgow, Scotland, Jan. 30, 1879.

P. A. Macdonald, Manitoba Public Utilities Commissioner, Winnipeg, born at Gananoque, Ont., Jan. 6, 1857.

J. J. Nelligan, ex-Division Freight Agent, Canada Steamship Lines, Ltd., Montreal, now on active service with Canadian Expeditionary Force, born at Hamilton, Ont., Jan. 20, 1876.

G. Pepall, Assistant Foreign Freight Agent, G.T.R., and representing National Despatch-Great Eastern Line, Toronto, born at High Wycombe, Bucks., Eng., Jan. 15, 1849.

William Phillips, Canadian Representative, Cunard Steamship Co., Montreal, born at Toronto, Jan. 31, 1870.

W. Pratt, General Superintendent, Sleeping and Dining Cars and Hotels, Canadian Northern Ry., Winnipeg, born at Sibbertoft, Northamptonshire, Eng., Jan. 18, 1870.

John Pullen, President, Canadian Express Co., Montreal, born at Shepton Mallet, Eng., Jan. 23, 1863.

Ralph M. Reade, Superintendent, City and Quebec County Railways, Quebec Railway, Light & Power Co., Quebec, born at Llanelly, Wales, Jan. 1, 1868.

L. J. Rouleau, Travelling Freight Agent, G.T.R., and Agent, National Despatch-Great Eastern Line, Montreal, born there, Jan. 6, 1879.

B. G. F. Rutley, ticket agent, Canadian Northern Ry. and Grand Trunk Pacific Ry., Fort Garry Union Station, Winnipeg, born at Chatham, Ont., Jan. 25, 1879.

C. Senay, Assistant Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal, born at St. Cesaire, Que., Jan. 31, 1873.

A. F. Stewart, M.Can.Soc.C.E., Chief Engineer Eastern Lines, Canadian Northern Ry., Toronto, born at West Bay, N.S., Jan. 1864.

Gondola Car for the Paris and Orleans Railway.

the journal bearing are machined to gauge, in order that the brass will fit perfectly. The journal bearing is made of a composition of copper, tin, and zinc and has a hard white metal lining about $\frac{3}{8}$ in. thick, composed principally of tin and antimony. No journal wedge is used. An oiling pad of the European style is placed in the bottom of the box, to lubricate the journal.

The wheels are 10.5 m. m. in diameter, with cast steel centres and rolled steel tires secured by Gibson rings. The cars are equipped with forged steel drawhooks cast steel buffers with springs, forged screw couplings and safety chains. The screw couplings are made from high carbon steel, and are heat treated, so as to have a tensile strength of approximately 100,000 lb. per sq. in. A certain percentage of all drawhooks, couplings and safety chains are tested to destruction and must stand a specified load before failing. Test specimens are also cut from these forgings and pulled, in order to get the percentage of elongation of the steel in the finished forging.

Each car is equipped with four pairs of

W. U. Appleton, General Master Mechanic, Canadian Government Railways, Moncton, N.B., born there, Jan. 29, 1878.

R. Armstrong, Superintendent, Souris Division, Manitoba District, C.P.R., Souris, born at Kingston, Ont., Jan. 27, 1865.

F. X. Belanger, General Freight and Passenger Agent, Temiscouata Ry., Riviere du Loup, Que., born at Chlorydormes, Que., Jan. 20, 1876.

G. McL. Brown, European Manager, C.P.R., London, Eng., born at Hamilton, Ont., Jan. 20, 1866.

R. F. Chapman, dispatcher, C.P.R., Brandon, Man., born at Coal Branch, N.B., Jan. 21, 1874.

C. A. Cotterell, Superintendent, Lethbridge Division, Alberta District, C.P.R., Lethbridge, born at Enden, Eng., Jan. 18, 1877.

W. A. Cowan, A.M.Can.Soc.C.E., acting General Superintendent, Transcontinental Division, Canadian Government Railways, Cochrane, Ont., born at Galt, Ont., Jan. 22, 1877.

J. E. Dalrymple, Vice President, G.T.R., G.T.P.R., and Central Vermont Ry., Montreal, born there Jan. 1, 1869.

J. G. Sullivan, M.Can.Soc.C.E., Chief Engineer, Western Lines, C.P.R., Winni- neg, born at Bushnell's Basin, N.Y., Jan. 11, 1863.

Ross Thompson, ex-Chief Engineer and Managing Director, St. John and Quebec Ry., Fredericton, N.B., born at Newry, Ireland, Jan. 1, 1865.

T. H. White, Chief Engineer, Canadian Northern Pacific Ry., Vancouver, born at St. Thomas, Ont., Jan. 27, 1848.

A. Wilcox, General Superintendent, Central Division, Canadian Northern Ry., Winnipeg, born at Kincardine, Ont., Jan. 2, 1865.

Alberta Board of Public Utility Commissioners.

The board issued order 157, Nov. 4, approving Alberta & Great Waterways tariffs as follows:—

A. & G.W.Ry. no. 1, P.U.C. no. 1, Sup. 1 to A. & G.W.Ry. no. 1, Sup. 1 to A. & G.W.Ry., P.U.C. no. 1, Table of distances.

A. & G.W.Ry. no. 2, P.U.C. no. 2, Sup. 1 to A. & G.W.Ry. no. 2, Sup. 1 to A. & G.W.Ry., P.U.C. no. 2, Various commodities.

A. & G.W.Ry. no. 3, P.U.C. no. 3, Sup. 1 to A. & G.W.Ry. no. 3, Sup. 1 to A. & G.W.Ry., P.U.C. no. 3, Various commodities to Edmonton.

A. & G.W.Ry., no. 4, Distributing class rates.

A. & G.W.Ry. no. 5, P.U.C. no. 4, Class rates.

A. & G.W.Ry. no. 6, P.U.C. no. 5, Farm settlers' effects.

A. & G.W.Ry. no. 7, P.U.C. no. 6, Standard mileage freight tariff.

Sup. 1 to A. & G.W.Ry. no. 4, Distributing class rates.

Sup. 1 to A. & G.W.Ry. no. 6, C.R.C. 6, P.U.C. no. 6, Farm settlers' effects.

A. & G.W.Ry. no. 8, C.R.C. no. 7, P.U.C. no. 7, Rates, rules and regulations.

A. & G.W.Ry. no. 1, P.U.C. no. 1, Standard maximum passenger rates.

Order 158, issued Nov. 9, authorized the Canadian Northern Western Ry. Co. to build its Oliver-Battleford Branch across the highways at the points set out in the following plans:—Plan of right of way through Tp. 59, R. 15-14, w. 4th Meridian, mileage 75.83-88.76. Plan of right of way through Tp. 59, R. 13-12, w. 4th Meridian, mileage 88.76-101.37, subject to such terms and conditions as to protection, safety and convenience to the public as the board may deem it expedient to make.

The Algoma Central and Hudson Bay Railway's Finances.

What may be regarded as a favorable indication is the discharging of the receivers of the Algoma Central & Hudson Bay Ry. This does not mean that the railway is fully out of the woods, but it may be that it is a step in that direction. The railway made default of bond interest on Dec. 1, 1914, and shortly afterwards the Algoma Central Terminals de-

faulted. The latter's chief and only source of revenue was from the railway, which held its property under lease, the terms of which were that the railway should pay to the Terminals an amount sufficient to cover administration expenses, taxes and interest on its bonds. Incidentally, it may be mentioned, in view of the interest manifested in the United States in the Lake Superior Corporation stock, that that corporation guaranteed the bonds of the terminals and the railway companies. So far, the corporation has not been able to fulfil its undertaking. In Feb. 1915, receivers were appointed for the railway company by the Exchequer Court, and in May, 1915, for the terminals company. A question arose as to the rights respectively of the two companies, which were parties to the lease, respecting which an agreement was made between the bondholders of the two companies, and which was ratified by the Dominion Parliament at its last session. Under this arrangement a bondholders' committee was appointed, which now is in practical control. The revenues of both companies are paid to this committee, and they are distributed according to the agreement arrived at. The effect of the passing of the receivership will be that certain expenses will cease, and that the bondholders' committee will be freed from the formalities which a receivership necessarily imposed. Meanwhile, this arrangement does not in any way absolve the Lake Superior Corporation from its obligation as guarantor of the bonds referred to.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were drawn.

25645. Nov. 17.—Dismissing F. N. Tritte's application for order requiring C.P.R. to build a water gate at culvert about 3 miles west of Agassiz, B.C.

25646. Nov. 18.—Extending to Nov. 20 time for building transfer tracks between Canadian Northern Ry. and Grand Trunk Pacific Ry. at Yorkton, Sask.

25647. Nov. 20.—Authorizing York Tp. to extend Craydon Ave. easterly over G.T.R. and C.P.R. lands to easterly limit of C.P.R. lands.

25648. Nov. 17.—Authorizing C.P.R. to build branch line for Prairie City Oil Co., Moose Jaw, Sask.

25649. Nov. 20.—Relieving G.T.R. from further protection at first public crossing west of Dublin station, Ont.

25650. Nov. 18.—Ordering Canadian Northern Quebec Ry. to replace and maintain train service in effect last year leaving Huberdeau 5 a.m., arriving at Montfort Jet. 7.50 a.m., and leaving Montfort Jet. 5.30 p.m., arriving Huberdeau 7.15 p.m.

25651. Nov. 17.—Ordering G.T.R. to employ watchman at first public crossing west of Lansdowne, Ont.

25652. Nov. 20.—Approving deviation in G.T.R. through Campbellford, Ont., necessitated through construction of Trent Canal.

25653. Nov. 20.—Dismissing G. T. McKeough's application for order directing Chatham, Wallaceburg & Lake Erie Ry. to put in force, between Chatham and Cedar Springs, Ont., a business passenger rate not to exceed 25c for one round trip ticket. This order was published in full in our last issue.

25654. Nov. 21. Extending to May 31, 1917, time within which Canadian Northern Ry. shall build a shelter station and siding with cattle pen and loading chute at Twin Elm, Ont.

25655. Nov. 21.—Approving G.T.R. plan of London Road crossing, Thamesville, Ont., as built.

25656. Nov. 23.—Ordering G.T.R., C.P.R. and Canadian Northern Ry. to file not later than Nov. 27, to become effective Dec. 1, supplements to joint class freight tariffs, rates not to exceed those now in effect by more than 2c per 100 lbs. in the 1st class; the remaining classes of Canadian Freight Classification to be proportioned to the 1st class rates so increased in accordance with the standard

maximum mileage tariff. This order was published in full in our last issue.

25657. Nov. 22.—Authorizing Grand Trunk Pacific Branch Lines Co. to build a spur to mile 46.2 crossing First Ave., Sixth St. South and a lane in Battleford, Sask.

25658. Nov. 23.—Authorizing Wright Tp., Que., to build highway crossing over C.P.R. Gatineau Branch at road between lots 20 and 21, R. 6.

25659. Nov. 23.—Authorizing Canadian Northern Quebec Ry. to open for freight traffic its line through Arundel, Ponsoby and Amherst Tps., Argen- teuil and Ottawa counties, mileage 0 to 9.57.

25660. Nov. 25.—Authorizing Schomberg & Aurora Ry. to build spur for Sir Henry M. Pellatt along Con. 3, King Tp., Ont.

25661. Nov. 23.—Approving Michigan Central Rd. plan of changes in interlocking plant at crossing of G.T.R. at Campbellford, Ont.

25662. Nov. 24.—Approving agreement between Bell Telephone Co. and Canadian Explosives, Ltd., Nobel, Ont.

25663. Nov. 24.—Authorizing Esquimalt & Nainaimo Ry. to build spur for W. F. Clark Lumber Co., Victoria, B.C.

25664. Nov. 24.—Approving agreement between Bell Telephone Co. and Parkhill Rural Telephone Co., Middlesex county, Ont.

25665. Nov. 23.—Relieving C.P.R. from speed limit of 10 miles an hour at crossing of Aylmer Road, Hull, Que.

25666. Nov. 23.—Ordering Canadian Northern Ry. to grade road south of and parallel to its right of way between the road allowance and west end of station grounds, Alask, Sask.

25667. Nov. 27.—Ordering G.T.R., C.P.R. and Canadian Northern Ry. to file commodity rates on white lead, in carloads, from Montreal, of 2c per 100 lbs., over commodity rates which were being charged thereon when the application in the Eastern Rates Case was presented to the Board, but restricted to destinations where paints are manufactured, to become effective by Dec. 15.

25668. Nov. 25.—Approving Canadian Northern Ry. plans of standard farm crossings for its eastern lines.

25669. Nov. 27.—Authorizing Town of Welland, Ont., to build highway over G.T.R. at Hagar St.

25670. Nov. 27.—Approving agreement of City of Brantford, Ont., as owner of Brantford Municipal Ry. with Lake Erie & Northern Ry. for sale by the city of a portion of Grand Valley Ry.

25671. Nov. 28.—Authorizing C.P.R. to build spur for Hammond Cedar Co., Pert Hammond, B.C.

25672. Nov. 28.—Authorizing G.T.R. to build spur on part of lot 2509, St. Cunegonde Ward, Montreal.

25673. Nov. 28. Authorizing C.P.R. to open for

freight traffic its Stirling East Branch, Alta., from mileage 71.7 to 85.1.

25674. Nov. 28.—Authorizing Harris rural municipality to build highway crossing over Canadian Northern Ry. at Tessier, Sask.

25675. Nov. 27.—Approving G.T.R. stock and cattle pass standard plans.

25676. Nov. 27.—Ordering G.T.R. to flag all train movements over Sherman Ave. crossing Hamilton, Ont.

25677. Nov. 28.—Relieving G.T.R. from limitation of 10 miles an hour at first crossing west of Lakeview golf links station between Mimco and Port Credit, Ont.

25678. Nov. 28.—Relieving C.P.R. from providing further protection at crossing at mileage 84.9, Lachine Subdivision, Plaisance, Que.

25679. Nov. 28.—Relieving C.P.R. from providing further protection at crossing at mileage 15.79, Ste. Agathe Subdivision, St. Jerome, Que.

25680. Nov. 29.—Authorizing Town of St. Laurent, Que., to build highway crossing over G.T.R. at Grande Alle de Florence.

25681. Nov. 28.—Approving agreement between Bell Telephone Co. and Mallorytown Telephone Co., Leeds county, Ont., Nov. 20.

25682. Nov. 28.—Authorizing G.T.R. to build spur for International Nickel Co., Humberstone Tp., Ont.

25683. Nov. 27.—Authorizing Campbellford, Lake Ontario & Western Ry. and Canadian Northern Ry. to operate at crossing of C.N.O.R. by C.L.O. & W.Ry. spur at mileage 1.05, Trenton, Ont.

25684. Nov. 27.—Dismissing application of City of Chatham, Ont., for removal of telegraph and telephone poles and wires from the streets by C.P.R., Great North Western Telegraph Co. and Bell Telephone Co.

25685, 25686. Nov. 30.—Authorizing Canadian Northern Ontario Ry. to cross Wharf St. with its proposed connection between passing siding and spur to the rolling mills at Belleville, Ont. and authorizing it to connect the passing track with the spur to the rolling mills at Belleville, Ont.

25687. Nov. 28.—Approving proposed supplement 8 to Canadian Freight Classification 16, revising ratings of furs, hides, pelts and skins.

25688. Nov. 30.—Extending to June 1, 1917, time within which C.P.R. may divert highway at mile 15.45, Sagwa, N.B.

25689. Dec. 2.—Authorizing Hamilton St. Ry. to operate over crossings of Hamilton Radial Ry. and G.T.R., pending installation of interlocking plant.

25690. Dec. 1.—Authorizing C.P.R. to build two spurs for St. Maurice Paper Co. at Cap de la Madeleine, Que.

25691. Dec. 1.—Authorizing C.P.R. to build spur to existing siding of Gutta Percha & Rubber, Ltd., between Lansdowne and O'Hara Aves., Toronto.

25692. Dec. 1.—Ordering London & Port Stanley Ry. to install improved type of automatic bell at crossing at William St., St. Thomas, Ont.

25693. Nov. 30.—Ordering G.T.R. to reopen old farm crossing on Lot 5, R. 5, Ashton Tp., Que.

25694. Nov. 30.—Extending for 50 days from date time within which C.P.R. shall install gates at crossing of Main St., Farnham, Que.

25695. Dec. 4.—Authorizing Canadian Northern Ry. to remove station agent at Allans, Ont., caretaker to be appointed for accommodation of passengers and l.c.l. freight and express matter.

25696. Nov. 30.—Ordering Canadian Northern Ry. to build crossing over its tracks at Kelly St., Carillon, Que.

25697. Dec. 1.—Authorizing Essex Terminal Ry. to open for traffic its line through portion of Windsor and through Sandwich, Ont., to north side of Titcombe Road, Ojibway, Ont., mileage 3.25 to 8.58.

25698, 25699. Dec. 4.—Approving agreements between Bell Telephone Co. and Sandwich West Co-operative Telephone Association, Essex County, Ont., and East Middlesex Telephone Co., Middlesex, Oxford and Perth Counties, Ont.

25700. Dec. 5.—Relieving C.P.R. from further protection at highway crossing between Secs. 11 and 12, Tp. 10, R. 21, w.p.m., Man.

25701. Dec. 4.—Authorizing Canadian Northern Ry. to cross 12 highways in Norton municipality, no. 69, Sask.

25702. Dec. 6.—Extending to May 30, 1917, time within which G.T.R. may erect station building and spur for City of Toronto Water Works Department at John St. pumping station.

25703. Dec. 6.—Extending to May 31, 1917, time within which G.T.R. may erect station building at Eganville, Ont.

25704. Dec. 7.—Approving agreement between Bell Telephone Co. and Mississippi Telephone Co., Lanark County, Ont., Nov. 29.

25705. Dec. 4.—Extending to such further time as Board otherwise directs, the requirements of order 12723, Dec. 6, 1910, re Canadian Northern Ry. crossing of Hurdman's Road, Nepean Tp., Ont.

25706. Dec. 9.—Relieving G.T.R. from further protection at Town Line between Middleton and Wyndham Tps., Ont.

25707. Dec. 2.—Authorizing Canadian Northern Ontario Ry. to expropriate additional lands for connection with C.P.R. near Chaudiere Jet., Ont.

25708. Dec. 2.—Ordering Canadian Northern Ry. from Dec. 11 to run train which leaves Ottawa at 8 a.m. for Montreal, and train which leaves Montreal at 3.30 p.m. for Ottawa, up Huberdeau Branch after reaching Rinfret Jct. as far as St. Jerome and back again.

25709. Dec. 2.—Ordering Canadian Northern Quebec Ry. to provide additional train service between St. Jerome, Montfort Jct. and Joliette; effective Dec. 11.

25710. Dec. 12.—Authorizing C.P.R. to build spur on its MacTier Subdivision at mileage 52.8, from Ypres, Ont., to Borden Camp.

25711. Dec. 9.—Ordering C.P.R. to plank crossings from mileage 34, 34.4 36.7, and 36.9 on Yale Road, B.C., also the farm crossings at mileage 36 and 36.3.

25712. Dec. 11.—Approving plans and specifications of Hartnett Drain near G.T.R., Canboro Tp., Ont.

25713. Dec. 9.—Authorizing G.T.R. to build siding for Canada Stove & Foundry Co., St. Laurent, Que.

25714. Dec. 9.—Approving clearances at track shed of Lake of the Woods Milling Co., Medicine Hat, Alta., on C.P.R. undertaking to keep employees off sides of cars.

25715. Dec. 12.—Amending order 25702, Dec. 6, by changing the year from 1916 to 1917. This has already been done in our summary.

25716. Dec. 14.—Amending order 25706, Dec. 9, by changing word Counties to Townships. This has already been done in our summary.

25717. Dec. 13.—Authorizing C.P.R. to open for traffic portion of its Mountain Subdivision, B.C. from mileage 76.51 to 91.33, including Connaught Tunnel.

25718. Dec. 13.—Authorizing C.P.R. to build spur for Polson Iron Works, Toronto.

25719. Dec. 13.—Authorizing G.T.R. to build extension of siding for C. W. Sharp & Co., Toronto.

25720. Dec. 13.—Authorizing Grand Trunk Pacific Ry. to build highway crossing over diverted highway s.w. ¼ Sec. 6, Tp. 36, R. 14, w.3.m., Biggar, Sask.

25721. Dec. 15.—Authorizing Canadian Northern Ry. to remove station agent at Crosby, Ont., caretaker to be appointed for accommodation of passengers.

25722. Dec. 15.—Ordering C.P.R. to build highway crossing in Sec. 3, Tp. 8, R. 2, e.p.m., Man.

25723. Dec. 13.—Authorizing City of Winnipeg, Man., to build highway crossing over C.P.R. Pembina Branch at St. Matthews Ave.

25724. Dec. 15.—Authorizing Canadian Northern Saskatchewan Ry. to build transfer track with C.P.R. at Yorkton, Sask.

25725. Dec. 16.—Authorizing Grand Trunk Pacific Branch Lines Co. to cross 15 streets in Regina, Sask.

25726. Dec. 18.—Extending to June 18, 1917, time within which C.P.R. shall build extension to Boake Mfg. Co.'s siding, for Harry Webb Co., Toronto, as authorized by order 25116, June 28.

25727. Dec. 18.—Ordering Lake Erie & Northern Ry. to build cattle pass for R. P. Irving, South Dumfries Tp., Ont.

Steam Railway Track Laid in 1916.

A preliminary table of new track laid in 1916 by railways throughout Canada, made up from official replies to our annual circular, and from estimates made from information otherwise obtained, is given below. The principal tracklaying done was on the three lines in Alberta, running out from Edmonton, and being built by J. D. McArthur, viz.: the Edmonton, Dunvegan & British Columbia Ry., the Alberta & Great Waterways Ry., and the Central Canada Ry., the greater part of which was done early in the year.

The mileage on the railways marked with an asterisk (*) has been estimated, and is subject to revision.

	Miles.	Miles
*Alberta & Great Waterways Ry.—		
Mileage 174.5 to Fort McMurray, Alta., approximate mileage 300 ..		125.50
Canadian Northern Ry. System—		
Canadian Northern Quebec Ry., Arundel to Kaolin, Que.		9.00
*Canadian Northern Pacific Ry.—		
Victoria to Patricia Bay	13.72	
Victoria towards Alberni	1.00	
		14.72
		23.72
Canadian Pacific Ry.—		
*Camp Borden lines	3.75	
Pakowi to Manyberries, Alta.	10.40	
Stoney Creek to Cambie	10.50	
		24.65
*Central Canada Ry.—		
Heart River to Peace River Landing, Alta., M. 47.60 to M. 49.50 ..		1.90
*Edmonton, Dunvegan & B.C. Ry.—		
M. 336.9 to Spirit River, M. 357 ..	20.10	
Spirit River to Grande Prairie Settlement, Alta.	48.50	
		68.60
Grand Trunk Pacific Ry.—

Completion of Sumas Landing, Connor Line	1.13	
Connection between Kett's Valley Lines and Canadian Northern Pacific Ry. at Hope, B.C.	0.17	
		1.30
Total		382.98

Necessity for Increased Per Diem Charges for Cars.

The Board of Railway Commissioners has issued a statement dealing with car shortage, saying that the per diem rates and any system of fines which may be adopted ought to be sufficient to make it to the interest of receiving lines to return freight cars as called for by the Car Service Rules. The statement proceeds:—"Nothing short of this will produce a material improvement. The present movement of cars is so multifarious that it is impossible to provide for what would or would not be misuse for each particular movement without resulting in a situation so complicated and requiring so much accounting that it would probably defeat its own means. It must also be remembered that the use of cars in certain trades differs from that of others. For example, the G.T.R. does a large business in coal from the Niagara gateway to Ontario points. The car equipment used does not belong to the G.T.R., but either to the originating railway or to the coal mine operators themselves. These railways and mine operators, having special equipment which particularly suits their purposes, have in the past insisted on all commercial loadings being carried on their own equipment. To increase the per diem in this particular case would simply add to the cost of the movement without the slightest benefit. Without a large per diem charge the different carriers ought to be able to use at least a fair proportion of their own equipment. On the other hand, so far as the coal movement into Toronto is concerned, if the G.T.R. did not carry the cars with proper efficiency and speed the movement would be helped and congestion would be relieved if the G.T.R. was compelled to give a proper car service by a substantial fine."

The statement points out that while the cost of freight cars has advanced, the per diem charge of 45c has remained constant notwithstanding. The railways in the east and the west have placed embargoes on the traffic of other lines owing to the fact that the lines against whose business the embargoes have been placed have on their tracks a large quantity of cars belonging to the embargoing line. The direct result of such embargoes penalizes traffic and shippers for what is claimed to be misuse of cars by railways, the shippers being much more injured than the railways can possibly be. In this connection railways which are short of equipment can well afford to hold the cars of other railways, pay the per diem charge and make money. In effect, cars that have been interchanged have frequently been used by the receiving line practically as its own equipment, resulting in car shortage on lines which otherwise would have been able to properly look after their business.

United Yardmasters' Association.—A branch of this association has been formed in Alberta, with Calgary as its headquarters, and the following as officers for the current year:—President, D. A. Dart, C.P.R.; Vice President, G. H. Turner, C.N.R.; Secretary, T. Doherty, C.P.R.; Treasurer, A. E. Irvine, C.P.R., all of Calgary. The association was originally established in Duluth, Minn., and devotes its attention exclusively to efficiency studies in connection with yard and terminal work, labor and wages questions not being among the matters dealt with. There are between 70 and 80 men on the different railways in Alberta eligible for membership.

Obtaining Maximum Use of All Freight Cars.—The Southern Pacific Co. is utilizing open freight cars for carrying freight which is usually shipped in box cars in order to relieve the car shortage. These cars are fitted with tarpaulins, which are stencilled with the company's name and numbered consecutively. These are billed at forwarding stations with \$40 advance charges, and agents at destinations secure the tarpaulin and bill it back to the forwarding point. The St. Louis & San Francisco Rd. papers certain stock cars for shipping merchandise to western points.

Lord Shaughnessy Takes His Seat in the House of Lords.

Lord Shaughnessy, President, C.P.R., during his recent visit to England, took his seat in the House of Lords on Nov. 23, the ceremony being referred to by the Canadian Gazette as follows:—"The new

T. Shaughnessy; Sir Thos. Skinner, director, C.P.R.; G. McL. Brown, European Manager, C.P.R., and Mrs. Brown; Sir Montague and Lady Allan; Hugh A. and Mrs. Allan; H. Maitland Kersey, Managing Director, Canadian Pacific Ocean Services, Ltd.

"It is of sentimental interest to note that Lord Shaughnessy has the peg used

Canadian Railway Track for Military Railways in France.

In order to help in providing adequate railway facilities behind the fighting lines in France, the British Government has appealed to the Canadian Government to help in providing steel rails, and a memorandum issued at Ottawa, Dec. 18, says in part:—"The Imperial Government has asked the Dominion to help solve the difficulties of the French railway situation, both in the relief of port congestions and the movement of guns and munitions behind the lines. The transportation facilities in France have been inadequate to permit the allies to take full advantage of the material and supplies available, and it is felt that the war could be materially shortened and thousands of lives saved if sufficient additional railway facilities could be provided promptly. The British Government is doing what it can to supply the deficiency from England, and Canada was asked whether there was any possibility of securing rails and other track material from the Dominion to meet what is regarded by the British Minister of War as a vital need, and suggesting that if no other solution was possible certain already existing trackage might be taken up and sent forward. The call on the Dominion is for from 1,200 to 1,500 miles of railway trackage."

After canvassing the steel situation in Canada, the Railways Department authorized the immediate taking up of sufficient steel rails on unused sidings of the Canadian Government Railways in the east to lay 20 miles of track for shipment at once. It was reported, Dec. 20, that the taking up of this track had already been put in hand. In order to provide a further supply of rails, the department is said to have authorized the taking up of an additional 300 miles of track on the Government railways, consisting of duplicate tracks and sidings at points where the traffic demands are lightest. The Canadian Pacific, Canadian Northern, Grand Trunk Ry. and Grand Trunk Pacific Ry. have been invited to cooperate, and it was reported, Dec. 20, that arrangements would likely be made for taking up about 220 miles of track west of Edmonton, where the G.T.P.R. and the Canadian Northern Ry. parallel each other, and where the present traffic is not too heavy to be worked over one line.

The selection of the points at which track is to be taken up has been considerably facilitated by the work of the commission of enquiry which has been appointed since the Dominion Parliament's last session to investigate the whole Canadian railway situation. This commission had obtained much information as to parallel lines, etc., throughout the Dominion which could with advantage be eliminated, and this commission, the Board of Railway Commissioners and the Railways Department are working in harmony to give the greatest possible aid to the Imperial authorities in the matter. Local labor is being utilized, and where there are not sufficient men in any district to do the work, troops will be sent in to remove the track.

L. W. Hill, Chairman and President, Great Northern Ry., is reported to have stated that a conference of representatives of western railways in Chicago, recently tentative arrangements had been discussed for the control of about 48,000 miles of telegraph lines, but that nothing could be made public.

The Right Hon. Baron Shaughnessy, of Montreal, Canada, and Ashford, Ireland. In his robes on his introduction into the House of Lords.

peer, attired in his robes of scarlet and ermine, appeared with his sponsors, Lord MacDonnell and Lord Northcliffe, also robed, and accompanied by Black Rod and the gorgeously clad Garter King of Arms. The little procession advanced to the table, where the oath was taken and the roll signed by Lord Shaughnessy. Then the new peer was escorted to his seat, from which he rose thrice to make the obeisance to the Lord Chancellor. Subsequently he was escorted to the woolsack and introduced to the Lord Chancellor."

Among those present were:—Mrs. A.

by the late Lord Strathcona to hang his hat and coat on, this peg happening to be vacant."

A Land Grant Suit.—A British Columbia court has before it the action of Bagley against the British Columbia Southern Ry., one of the C.P.R. lines. The plaintiff bought from the company in 1911 some 2,560 acres of its subsidy grant lands, which he immediately subdivided and sold at a profit. He claims that he could not secure a title to the land from the company, thereby failing to realize his profit. He asks \$25,000 damages.

The Death of Lieutenant Bruce H. A. Burrows.

A few hours after Canadian Railway and Marine World for December had gone to press, on Nov. 29, our Managing Director, Acton Burrows, received a telegram from the Militia and Defence Department, Ottawa, stating that his younger son, Bruce Hosmer Acton Burrows, B.A.Sc., lieutenant, 12th Field Co., Canadian Engineers, had been killed in action in France. The following particulars were received subsequently by mail.

MAJOR C. T. TROTTER, of St. John's, Que., in command of the company, wrote: "In the field, Nov. 26.—It was with the deepest regret that I heard this morning of the death of your son. He went out last night in charge of a party which was to put in some barbed wire at a very important strategical point, but on the way in, a chance shot, dropping right in front of him, wounded him so severely that he lived but a very few moments. Mr. Henderson" (another lieutenant of the company), "who was with him at the time, did all in his power for him, but without avail. He passed away almost immediately, and it is certain that he was in no pain, because he was unconscious from the time he was hit."

"He will be a great loss to the company, for he was an excellent officer, very efficient and absolutely reliable. All the officers of the company, and, in fact, all ranks, will miss him very much indeed, for he was most popular with all. You have every reason to be proud of your son, sir, for he was one of the best officers I ever had anything to do with, and the work he has done since coming to France would be a credit to any man. I thought a great deal of him, and can appreciate your loss and sympathize with you in your grief."

J. BALFOUR THOM, of Montreal, another lieutenant in the same company, wrote on the same date, in part: "As I was probably Bruce's greatest friend in the company, I am writing to give you what details I can and to extend my deepest sympathy to you and his other relatives in your great loss. Since joining the Engineers in Ottawa, Bruce and I have been almost inseparable, always living together, and in that time I have grown to appreciate him more every day, and a better friend I shall never have. One learns more about a friend in a few nights out here than would be possible in years of civilian life, and Bruce and I have gone through some very tough nights here together. He was always absolutely himself, cool and collected, seeing that the work was properly done and also looking after his men. He was absolutely cool under fire, and it was probably this coolness and the great interest he showed in their welfare that made him so popular with the men of his section, and there was nothing they would not do for him, and do gladly."

"Last night he and another officer, Mr. Henderson, were taking a party of sappers to put up wire out in front, and although it was a ticklish bit of work we had no anxiety for them, as we had been out the night before and had found it fairly quiet. On the way into their work a high explosive shell fell just in front of them and one of the flying fragments struck Bruce, death following instantaneously. His body was brought out at once, and it was a great token of the respect in which the men held him that they volunteered to do this under shell fire. The funeral was held today at 4 p.m., being

attended by Major Irving, D.S.O., of Toronto, the C.R.E. of the division, Major Ward, the Adjutant, and all the officers of this company. The officers of the other two companies were unable to attend. The service was performed by Capt. McCaskell, Chaplain of the 73rd Battalion, and afterwards a wooden cross, painted white with black lettering, was erected. The sergeant especially asked me to extend his sympathy, and also our servant, Foulkes. I cannot express my own feelings more than by saying that I have lost my best friend, and who can say more, and although I shall miss him, yet I feel proud to think that he died as a man should, and it is a memory I shall always cherish."

CHARLES IVEY, of London, Ont., also a lieutenant in the same company, wrote

Bruce H. A. Burrows, B.A.Sc.,
Lieutenant, 12th Field Co., Canadian Engineers.
Killed in action Nov. 25, 1916.

from London, Eng., on Dec. 4, in part:—"I cannot tell you how cut up we all are over Bruce's loss, as we have all been together over a year now and have grown to be like a big family. It was especially hard, as it was our last night in before leaving the Somme, and Bruce had done such good work and had been so cool under fire. We laid him to rest in a little British cemetery about a mile from Albert, on the south side of the Albert-Baupeune Road. There have been a good many buried there, but none more regretted than Bruce. The whole company turned out, together with our headquarters staff, and after the service and he was laid to rest they filed by and saluted him. His men feel his loss keenly. We do indeed get attached to the men while more or less taking care of them, and I am sure there were a great number of them who found it hard to keep back the tears and a lump in the throat. It seems so hard that Bruce should be snatched away from us when just in the prime of life, and after doing such good work, too. He was always cool and considerate of

his men. When he was hit, he was going in ahead of them, to reconnoitre before they came up to work. He never asked them to do anything nor go anywhere that he would not undertake himself, and he had the universal respect of all."

The late B. H. A. Burrows was born in Winnipeg, June 30, 1893, and went to Toronto in 1895, when his father removed there from Winnipeg with his family. He was educated at the Toronto Model School, Harbord Collegiate Institute and Toronto University, taking the mechanical engineering course at the latter and graduating June 6, 1913, with the degree of B.A.Sc. During his university vacations he did practical mechanical work in the G.T.R. shops at Stratford, Ont. After graduating he was in charge of the Coleman Fare Box Co.'s factory at Tottenham, Ont., for a year and was afterwards in the Canadian Allis Chalmers, Ltd., works, Toronto.

On Sept. 15, 1915, he was gazetted a provisional lieutenant (supernumary), Canadian Engineers, and trained at Rockcliffe Camp, Ottawa. After passing a very satisfactory examination he was appointed a lieutenant in the 7th Field Company, Canadian Engineers. He left Ottawa on Mar. 9, 1916, when three companies of engineers started overseas. After a short stay Camp Bordon, in Hampshire, he took a two months course at the Royal Engineers College at Brightlingsea, Essex, where he passed another very successful examination. After that, with the exception of a short time spent at Christchurch, in Hampshire, where he instructed two engineers companies in pontooning, etc., he was at Bramshott Camp, Hampshire, until Aug. 11, 1916, when he went to France with the 4th Canadian Division, his company's designation being then changed to 12th Field Company, Canadian Engineers. He was at the front in Belgium until towards the end of September, when he was transferred to France and went to the front on the Somme.

He was a student of the Canadian Society of Civil Engineers and a member of Ionic Lodge, A.F. & A.M., Toronto. His surviving relatives, besides his father, are his elder brother, Aubrey Acton Burrows, Secretary and Business Manager, Acton Burrows, Limited, proprietors, Canadian Railway and Marine World; and two sisters, Miss Blair Acton Burrows, of Toronto, and Mrs. G. Grenville Hunter, of Hartford, Conn.

Glimpses of the Military Engineers' Work.

Lieut. Burrows was most enthusiastic about his work, and his letters from the front were always very cheerful and optimistic. For obvious reasons he spoke of his work only in general terms, but the following extracts from recent letters will give an idea of some of the military engineers' duties.

Aug. 30. "We are having two or three days' rain to warn us that winter is coming, although we are counting on another month of fine weather. The rain plays the deuce with the trenches, unless they are in first class shape, and when we came into this area really none of them could be said to be in that condition. I have been fighting the rain for a couple of days, and it is no easy task. I have never seen any rain to quite compare with what we are working in. After half an hour's rain the bottom of a trench has about a foot of 'pea soup' in it, and the only way to cope with it is to put what they call 'bath mats' in every trench. In this small job alone millions of feet of lumber are used, and the cost is appall-

ing. You can get no idea at all without seeing things."

Sept. 8. "I have a very big area to look after and it keeps me busy getting round it in day time, supervising my different jobs, and then at night I have to plan out future work and make out reports of what I have done, am doing and am going to do. The infantry are popularly supposed to do a lot of walking, but they are not in it with us at present. I average at least 10 miles a day over land, through communicating trenches and reconnoitring new parts of my area."

Sept. 13. "My men are an exceptionally fine lot, making good at nearly everything, and consequently making things much easier for me. I have a couple of hundred men working for me, besides my own sappers, and so I have quite a bit to do. My n.c.o.'s and most of my sappers are getting used to handling parties. The other day I showed one of my sappers about 100 yards of trench which I wanted dug, and which I had already laid out with tape. I got a party of 50 men, and he and his brother got the job done in two nights, and well done. My work is very varied at present. My chief jobs are fixing a couple of communication trenches, building some dugouts, a trench motor emplacement, and a tram line, quite a variety, isn't it?"

Sept. 22. "I have been lucky enough to be looking after the area held by the 72nd Battalion, which is about the finest that ever left Canada, and have got in a lot of good work. Although we have only been here about five weeks, we have earned a very favorable reputation as to the amount of work done. We were using such a lot of material that the Chief Engineer of our army wanted to know where it was going. He was promptly shown that it was right on the job."

Oct. 14. "I have had a couple of nights' work up in front, and have tonight off, unless some orders come. The first night we started off about 5 p.m. and got back about 5 next morning. Another lieutenant and I were working together that night, with a couple of sappers, and laid out a lot of work. We were wandering around above ground in behind our own front line, and things were much quieter than I expected. Last night we dug most of the work we laid out the night before. I had to meet parties totalling more than 1,000 men, so that you can see that an engineer subaltern has at times quite a bit of responsibility. I started at 4.45 p.m. on a bicycle with my sergeant, and met the parties and guided them up to the work over several miles of ploughed up country and remains of villages; worked until 3.30 a.m., came home and got to bed about 7, not a bad night's work."

Oct. 19. "Everything continues to go very satisfactorily, although it is pretty strenuous at times. I have had five nights in the line out of eight that we have been in this area. We start out about 5.30 in the afternoon and get back into bed on an average of twelve hours later. Our casualties have been very slight and we have got in some very good work. The chief trouble the engineers have is getting on to the work, as it is terribly difficult to find one's way about, and some companies have managed to lose a lot of their working parties and have had to go back without getting on to the work at all. However, we have not lost a party yet. You have no idea of the conditions of the country. The shelling has practically removed all landmarks, and at times we have to march over land by the compass. The country we are

working has had very heavy shelling from us and is now getting a second shelling from the Germans."

Nov. 17. "Thom" (another lieutenant) "and I have built ourselves a very nice new dugout, about 11 x 15 inside, with a good open fireplace, and now live in comfort, with hot water in the morning for shaving."

On Nov. 23, two days before he was killed, he wrote:—"We are just about at the end of our tour in the lively area and are due for a rest in one of the 'cushy' spots of the line. None of us will be sorry, as we have had a pretty strenuous time. I think leave will start for our division quite soon now."

C.P.R. Shares and Enemy Holders.

A correspondent of the London, Eng., daily press states that German holders of C.P.R. shares are shipping them to New York by submarine and selling them in the U.S. at a discount sufficient to recoup the purchasers for loss of dividend during the war. He urges that the British Government should induce the Dominion Government to declare that such sales will not be recognized, and that it is not too late to take such a step now, as the bulk of German holdings is still unsold. The C.P.R. has pointed out that the company's shares on the Montreal and New York registers do not come within the scope of the public trustee's activities, but that observing the Royal proclamation at the commencement of the war, the company has stopped transfer of shares to enemy names and the payment of dividends thereon. This leaves it open for alien enemies to transfer their shares to British subjects or to neutral aliens, and it is to be presumed that purchasers are fully aware of the risk attached to the purchase. Just prior to the war, about 15% of the 2,600,000 shares in the C.P.R. were held on the European continent, but not all in Germany or by enemy aliens.

The British Columbia Institute of Civil Engineers, which is in progress of organization, is, we are advised, intended to be a protective society, more of a union and less of a society. It is aimed to place the engineering profession in the province on an equally strong footing with the legal and medical professions, and to be strong enough to prevent municipal or provincial governments from importing United States and other outside engineers or employing inferior men to fill positions while capable engineers are available within the province. It is also aimed at having salaries and other remuneration fixed at rates in keeping with the character of the work and the responsibilities of the work. It is not, however, intended to have this a close corporation. At present about 50 men have enrolled as members, including civil engineers, land surveyors and architects. As soon as the Vancouver branch is fully organized, a provincial charter will be applied for. L. P. Macrae is Secretary Treasurer.

Railway Noises.—The Mayor of Brantford, Ont., was informed by the Board of Railway Commissioners recently that it was not a function of the board to advise as to the operation of civic bylaws affecting railways. The matter submitted to the board was in reference to the ringing of bells and making noises "calculated to disturb the inhabitants." The board suggests that the matter is one to be decided by the civil courts.

C.P.R. Land Settlement Plans for Soldiers.

The C.P.R. has announced a comprehensive scheme for the settlement of soldiers on the company's land in Western Canada. It is proposed to provide farms in various districts throughout the west for men producing evidence of having served in the Canadian units of the British Army or Navy during the present war, who are married, are physically fit, and are approved by an examining committee appointed by the company. Two kinds of farms are to be provided in each area, improved farms and assisted colonization farms. The improved farms will have on them a house, barn and fencing, a water supply, and 40 acres of land will be broken. The colonization farms will be ordinary wild lands, selected by the colonist, who will be aided by advances and directed in making of his improvements by the company. In each area there will be a central control farm conducted by the company, in charge of the superintendent of the colony. This farm will be used for demonstrations only, the maintenance of service animals, and to have on hand the larger and more expensive machinery which individual settlers would not be able to buy at any rate at the beginning. In the case of the colonization farms, the land will be sold on a 20 years contract, no payments being due during the first 2 years. The improved farms will be rent free for 3 years, when 6% will be added to the cost of the original improvements and 20 years will be given to pay for the same. No water rent will be charged for the first two years on irrigation lands. The area of an improved farm is to be 80 acres irrigation land, or 160 acres non-irrigation land; and of a colonization farm 320 acres. Live stock, implements and seed purchased with advances made by the company are to be secured by lien notes or mortgages. The use of the heavy machinery on the central farm may be had at fixed charges per day. The superintendent will advise all settlers as to work to be done, etc. One of the improved farm colonies is being prepared north of Coaldale, Alta., where 40 farms are being laid out.

Canadian Society of Civil Engineers.—The following nominations for 1917 have been made for submission to the membership:—President, J. S. Dennis, Assistant to President, C.P.R., Montreal; Vice Presidents, G. R. G. Conway, bondholders' representative, Mexican Light & Power Co., Mexico, and formerly Chief Engineer and Assistant General Manager British Columbia Electric Ry.; J. M. R. Fairbairn, Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal; J. G. Legrand, Bridge Engineer, Grand Trunk Pacific Ry., Winnipeg; C. N. Monsarratt, Chairman, Quebec Bridge Commission, Montreal; Councillors, District 1—J. Duchastel, F. H. Pitcher, R. A. Ross, J. C. Smith. District 2—H. Longley, C. M. Odell. District 3—A. R. Decary, S. S. Oliver. District 4—John Murphy, James White. District 5—G. A. McCarthy, E. W. Oliver. District 6—A. T. Fraser, W. Pearce. District 7—R. F. Hayward, J. H. Kennedy. Two vice presidents are to be elected and two councillors in District 1, and one each in the other districts.

New York Central Rd. Plans for a \$6,000,000 passenger station at Washington and Exchange Sts., Buffalo, N.Y., are reported to have been approved by the Terminal Commission.

Track Maintenance Inspection Trip on Eastern Lines, C.P.R.

The C.P.R. management takes a deep personal interest in the standardizing of track maintenance to a high point of efficiency on both main lines and branches, and a trip made last autumn, during which the photograph reproduced in the accompanying illustration was taken, is one of the many schemes which have been worked up with a view to having all our roadmasters work along the same lines and follow the best possible practice in carrying out their work. The party, which was in charge of Alfred Price, Assistant General Manager; A. C. Mackenzie, Engineer, Maintenance of Way, and E. Keough, Assistant Engineer, Maintenance of Way, assembled at Ottawa. A special observation car took the party from Ottawa to Montreal over the Montreal and Ottawa Subdivision's single

C.P.R. Enquiry into Labor Situation.

J. S. Dennis, Assistant to the President. C.P.R., Montreal, has issued the following circular:—

"Before the close of the war Canada should prepare for the return to civil employment of our returned soldiers and for the immigration of a large number of ex-soldiers from the disbanded armies of Europe. The larger number of these men will be looking for work, and unless some scheme is prepared in advance for their reception and assistance, serious congestion of unemployed in the larger centres will be sure to occur. To permit of the problem being intelligently dealt with, it is necessary to have available some reliable statistics as to the present labor situation, with an estimate of the openings for additional skilled and unskilled labor. The C.P.R. Co. desires to obtain this information as fully as possible,

trade, agricultural societies, steam and electric railway companies and the larger industrial concerns throughout Canada. It is the company's intention, after receiving replies, to compile the information in the form of graphic charts and maps which will show at what points congestion would seem most likely to occur by the influx of returned soldiers and others after the war, so that some means may be taken to avert such congestion and relieve the situation.

Government Elevator at St. John, N.B.—The contract for the construction of the Dominion Government grain elevator at St. John, N.B., has been awarded to the Fegles-Bellows Engineering Co., Fort William, Ont., and the contract for the concrete foundations to Engineers & Contractors, Ltd., St. John, N.B. This elevator will be the complement of the Dominion Government elevator at Transcona, Man., and will cost approximately

C.P.R. Track Maintenance Inspection Party at Farnham, Que.

The officials shown in this illustration are the following, reading from left to right. In each case, unless otherwise mentioned, they are roadmasters.
LOWER—W. B. Hall, White River Subdivision; F. W. Nicholls, Windsor Subd.; J. S. Richardson, Shogomoc Subd.; O. Kirkland, Montreal Terminals Subd.; J. C. Walsh, Newport and Orford Subd.; A. Price, Asst. Genl. Mgr.; A. C. Mackenzie, Engr. Maintenance Way; E. Keough, Asst. Engr. Maintenance Way; S. Lackey, Orangeville, Elora & Teeswater Subd.; L. Berger, Winchester Subd.; P. Chicoine, St. John, Matawamkeag, Shore Line Subd.; N. McLaughlin, Sherbrooke & Megantic Subd.; J. Hurson, Trois Rivieres West Subd.
MIDDLE ROW—T. J. Armstrong, Parry Sound Subdivision; C. Verner, Trois Rivieres East Subd.; C. Lampard, H. & G. & Listowel Subd.; T. Netterfield, MacTier & Coldwater Subd.; J. Goodman, Kingston & Godfrey Subd.; J. E. Steele, St. Marys, Port Burwell & St. Thomas Subd.; J. H. Guthrie, Moosehead & Mattawamkeag Subd.; J. R. Brennan, Montreal & Ottawa Subd.; J. H. Boyle, Quebec District; L. Bazinet, Acting Roadmaster, Drummondville, St. Guillaume & Stanbridge Subd.; L. Hebert, Nemegos Subd.; A. Seal, North Bay Subd.; Geo. Spicer, Oshawa, Subd.
UPPER ROW—M. Long, Belleville Subdivision; A. Frost, Peterboro Subd.; A. Mercier, Lachute Subd.; F. Belkja, Prescott Subd.; D. Wilson, Heron Bay Subd.; J. Coughlin, Nipigon Subd.; T. Landers, Adirondack Subd.; R. Shanks, Webbwood & Thessalon Subd.; W. Kelly, Cartier Subd.; J. Kelly, Chalk River Subd.; A. Purvis, General Superintendent, Ontario District; C. Donnelly, Acting Roadmaster, Havelock Subd.; P. Coakley, Galt Subd.; W. Code, Toronto Terminals Subd.; A. Mackenzie, Port McNicoll & Bobcaygeon Subd.; D. McMillan, Acting Roadmaster, Winchester Subd.; S. Jeffrey, Roadmaster, Maniwaki Subd.

track and the rock ballasted double track between Vaudreuil and Montreal. From Montreal the party went over the gravel ballasted double track to Farnham, and from there over one of the branch lines to Stanbridge, in this way giving the roadmasters a comprehensive idea as to the management's desire in the way of appearance and maintenance on different classes of track. On the return trip a few hours was spent at Farnham, and a demonstration given by the Assistant Engineer, Maintenance of Way, of an excellent method of curve lining by the string method developed by J. H. Sheahan, one of the roadmasters. The party then returned to Montreal and dispersed.

D. Morice, who retired recently from the position of Freight and Customs Agent, G.T.R., Niagara Falls, Ont., and who has removed to Stratford, Ont., in writing asking to have his address changed to the latter place, says: "I certainly cannot do without Canadian Railway and Marine World."

sible, so as to enable it to answer intelligently through its large number of offices in Canada, the United States and Europe, the questions which will be asked officials regarding openings for employment, and also to enable them to assist, as far as possible, in directing the movement of those seeking employment so as to prevent congestion and trouble. Attached to this letter is a blank form setting forth certain questions which we will be pleased if you will fill in and return. It is understood that the information will be treated as strictly confidential as regards individual firms."

The following information is asked:—Name of firm. Location. Province. Nature of business. Average number employed—men—women. Present labor shortage, if any—men—women. How do you obtain additional labor when required? If business continued normal, how many additional laborers do you estimate you could place at the end of the war, skilled—unskilled—women?

The circular has been sent to boards of

\$250,000. Its structure was designed by John S. Metcalf Co., Montreal.

Railway Lands Patented.—Letters patent were issued during November, in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary and Edmonton Ry.	1,276.00
Canadian Northern Ry.	642.00
Canadian Pacific Ry grants.45
Canadian Pacific Ry. roadbed and station grounds.	81.26
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	2,474.87
Winnipeg River Ry.	8.22
Total	4,482.80

Dynamiter Horn.—The hearing of the charge against Werner Horn for alleged acts in connection with the dynamiting of the C.P.R. international bridge at Vanceboro, Me., has been fixed by the U. S. courts to open Jan. 8. The present stage of the proceedings is Horn's appeal to the Supreme Court at Washington against the dismissal of his suit for a writ of habeas corpus.

Increased Demurrage Charges Authorized by Board of Railway Commissioners.

The Canadian Pacific, Grand Trunk, Michigan Central and Toronto, Hamilton & Buffalo Railway Companies on behalf of themselves and other railway companies in Canada applied to the Board of Railway Commissioners, on Dec. 20, for an order amending General Order 1, known as "The Canadian Car Service Rules," so as to provide that the demurrage charge for each 24 hours as provided in rule 1 be increased from \$1 to \$4, and also that the additional free time beyond 48 hours authorized by exception (a) to rule 2 be cancelled. The reasons were stated as follows:—That a shortage of cars exists at present and there is good reason to apprehend that this will increase, due to the heavy demands upon the companies' equipment and to the fact that cars are detained by shippers and consignees for unreasonably long periods when they should be released and put back into service. That the congestion of cars interferes seriously with the speedy conveyance of war munitions and thereby constitutes very serious danger. That the present charges provided under the Canadian Car Service Rules are so low as not to offer any inducement to shippers and consignees in their own interest to load and unload cars as speedily as possible, and it is the opinion of the applicant companies largely due to the neglect of shippers and consignees to do so that the car shortage does and will exist. That under the present scale of charges it often much cheaper for shippers and consignees to retain cars in their possession, using them as temporary warehouses, and for the purpose of distributing freight therefrom in small quantities, instead of providing proper warehouse facilities or utilizing public warehouses for storing freight. That such improper use of the companies' equipment is most pronounced and the consequent congestion most severe in large terminals. That the value of a freight car to a railway company under normal conditions is much greater than the daily amount which it is allowed to collect as demurrage, and such value becomes much greater in times such as the present, when the companies' facilities and equipment are taxed to their fullest capacity. Moreover, in large terminals, the track space actually occupied by a car is of very great value in itself, and consequently must and should be used to its maximum capacity, in the interests of all shippers and consignees, rather than that its use should be restricted by the improper detention of cars in the interests of one shipper or consignee. That this application is not made because the companies wish to collect increased demurrage charges, but solely with a view to compelling shippers and consignees to permit all available rolling stock to remain in active service continuously, or as nearly continuously as possible, and consequently to facilitate the expeditious handling of freight generally.

The Board's Judgment.

The application was heard by the Board in Toronto, Dec. 11 and 12, and, on Dec. 23, the Chief Railway Commissioner, Sir Henry Drayton, gave the following judgment:—At the Board's request, the many shippers and shipping associations represented at the hearing met the railways in an effort to arrive at an agreement. On the following day the shippers' associations, with the exception of the Toronto Retail Coal Dealers' Association and the Lumbermen's Asso-

ciations, reported that they had arrived at an agreement with the railways, as a result of which the present application was abandoned, that the free time of 48 hours should be allowed after cars had been spotted for unloading and that at the expiration of this free time the charge should be \$1 for the 1st day's default, \$1 for the 2nd, \$3 for the 3rd, and \$5 for the 4th and each succeeding day; computation of the free unloading time of 48 hours to be from 7 a.m. of the day following the day on which placement, actual or constructive, had been effected. In order to give effect to the arrangement, the following changes must be made:—

Rules 1, 2, 5 and 15 of the Canadian Car Service Rules are suspended in their entirety from Jan. 1 to Apr. 30, 1917, both inclusive, and the following rules bearing the same numbers are submitted. Rule 11 is also suspended for the same period.

Rule 1.—When cars are held under load, or awaiting loads, beyond the free time allowed by rule 2, for any reason for which the consignee or shipper is responsible, the following tolls for each day of 24 hours, or any part thereof, shall be charged to, and paid by, the shipper, consignee or other party responsible therefor, in addition to all other tolls paid, or payable, in respect of the goods carried, or to be carried, in or on each such car, viz.: For the 1st day \$1, for the 2nd day \$1, for the 3rd day \$3, for the 4th and each succeeding day \$5.

Rule 2.—(a) After notice of arrival of a car at its destination, or in the outside break-up or sorting yard, if such be used for the purpose, all consignees shall be allowed 24 hours within which to pay the tolls or charges (if any), to give order for special placing or delivery if such orders be necessary, and for customs entry of freight in bond. If more than 24 hours be used for these purposes, the excess time shall be deducted from the succeeding unloading period, except as provided in rule 15. (b) Forty-eight hours free time shall be allowed for loading or unloading all commodities, computed from 7 a.m. of the day following the day on which the actual or constructive (see rule 13) placement has been effected, provided that any portion of such placement day may be utilized by the shipper or consignee, in addition to the said 48 hours, without charge. Exceptions:—(a) Five days free time shall be allowed at Montreal and at tide-water ports for unloading lumber and hay for export. (b) In the portion of Canada in which the Canada Grain Act prescribes a specified time for loading grain the said act shall apply. (c) If the destination is not a port of entry, 48 hours shall be allowed for clearance of customs at the outside port of entry.

Rule 6.—If wet or inclement weather, according to local conditions, renders loading or unloading impracticable during business hours, or exposes the goods to damage, the time allowance shall be extended so as to give the full free time of suitable weather. But if the parties neglect or fail to avail themselves of the herein authorized free time of suitable weather, they shall not be allowed additional free time by reason of such neglect.

Rule 15.—If after arrival at destination a car is reconsigned under switching arrangements, the original consignee alone shall have 24 hours in which to give order for placing or delivery, and he shall

pay the tolls prescribed in rule 1 for all time in excess of the 24 hours, so that the final free time allowed by rule 2 (b) shall still remain to the party who accepts delivery.

Both the Toronto Retail Coal Dealers' Association and the lumber shippers objected to the settlement arrived at, insisting in each case that 3 days free time should be allowed for unloading. The settlement arrived at has since been taken up with the boards of trade in the west and the western section of the Canadian Manufacturers' Association. The boards of trade of Winnipeg, Saskatoon, Calgary, Regina, Edmonton, Lethbridge, Vancouver and Fort William concur in the arrangements made, some of the boards suggesting that the demurrage rates should be even higher, in order that rolling stock may be kept constantly in service, as is urgently required. The Board is of the view that notwithstanding the objections raised by the protesting associations, the settlement arrived at must be adopted.

In so far as coal is concerned, it will be that large cars of coal unloaded by hand cannot be released under certain conditions within 48 hours; but as a matter of fact, under the settlement arrived at, in most instances, more than 48 hours will be available, as free time does not commence until 7 a.m. of the day after the car has been spotted, and apart from this, the settlement after all only imposes upon the local coal dealers without proper facilities a penalty of \$1 for the 3rd day, or about 2c. a ton. The coal situation at present is one of peculiar difficulty, the traders complaining of lack of deliveries, and of embargoes against the movement of coal into Canada placed by U.S. carriers who object to the free use of their cars in Canada for a longer time than consignees are allowed in their own territory. It must be borne in mind that all of the coal delivered in Toronto—which is the only place to protest—originates in U.S. mines, and is hauled to a very large extent in U.S. cars. A much larger proportion of the coal brought into Toronto is unloaded mechanically than is unloaded by hand, but in any event, in the public interest, the settlement must be given effect to and the movement of coal facilitated, even if local Toronto dealers are penalized an extra 2c. a ton for the 3rd day coal cars may be held.

In so far as the lumber situation is concerned, it will be that certain lumber merchants will be unable to unload within 48 hours. The admission, however, of a protesting shipper, Mr. Rutherford, of Montreal, that with 2 teams and 4 men a large car can be unloaded in 8 hours, robs the protests of much force which they otherwise might have. It is quite true that this unloading is predicated upon a proper yard, and proper facilities, and easy access to the tracks. It is also quite true that some consignees have not these facilities, and have not lumber yards conveniently placed. However, the absence of these facilities cannot be made a justification at present for a refusal to put into effect regulations accepted by a majority of Canadian shippers and calculated to assist traffic conditions at a time of great emergency. The whole issue is merely as to whether the lumber merchant shall have, or shall not have, an extra day. If he does not get the 3rd day he is merely charged \$1, which amounts to a small sum per thousand feet.

The settlement after all is only temporary. It was agreed to by the shippers, not because the railways were entitled to any increased demurrage not because the railways were not themselves in large part responsible for delays in transportation owing to lack of motive power and cars, but because it was felt that the increased demurrage fee was the only practical way in which a real public emergency resulting from shortage of cars could be in some degree relieved. The reciprocal "per diem" allowance, so called, which is paid one railway company by another for the use of its cars while on the tracks of the paying company has been increased by agreement amongst the railway companies, from 45c. to 75c. a day per car, with the proposal of a further increase if necessary to attain the object in view. In addition to this per diem allowance, the railway companies have agreed that the company having possession of the car shall pay a penalty of \$5 a car if it moves it in a direction away from the lines of its owner when available for the return movements. This \$5 charge is made in cases where the company having possession of the car notifies the owning company of the diverted movement. If the car is so moved and the owning company is not notified, the penalty is \$10.

The agreement arrived at between the shippers and the railways was that increased tolls should go into effect on Dec. 20, but owing to the fact that the matter has had to be delayed by the Board in order to obtain the views of the western shippers, the increased tolls will go into effect on Jan. 1, 1917. They must cease on the close of business of Apr. 30, 1917. It should also be understood that this increase is not a retroactive increase. On Jan. 1, when the new schedule comes into effect, there will undoubtedly be many cars which have been held for an undue time by consignees; the tolls now prescribed will only apply to defaults taking place on and after Jan. 1. In like manner the tolls on cars already subject to demurrage on Apr. 30, when the higher tolls cease, will be reduced on May 1 to the old basis.

A further question arises as to the calculation of demurrage on the new scale at Cartier and other points where stop-over privileges are allowed. The present scale, based on the present demurrage plus the track storage chargeable at these detention points is as follows:—

24 hours	Demurrage.	Track Storage.	Total.
24
28	\$1	..	\$1
72	2	..	2
96	3	\$1	4
120	4	2	6
144	5	4	9
168	6	6	12

The railways ask that the following schedule be adopted:—

24 hours	Demurrage.	Track Storage.	Total.
24	\$1	..	\$1
48	\$1	..	\$1
72	2	..	2
96	5	\$1	6
120	10	2	12
144	15	4	19
168	20	6	26

The railways urge in support of their application the fact that a rate higher than the rate which they ask has been allowed by the Interstate Commerce Commission, as follows:—

24 hours	Demurrage.	Track Storage.	Total.
24
48	\$1	..	\$1
72	3	..	3
96	6	\$1	7
120	11	2	13
144	16	4	20
168	21	6	27

Full consideration has been given the different schedules and the measure of traffic, and the Board is of opinion that the proper charge during the period of increased tolls, including both demurrage and track storage should be as follows:—

24 hours
48	..	\$1
72	..	2
96	..	5
120	..	10
144	..	15
168	..	20

Subject to a further increase of \$5 for each successive 24 hours.

General order 174 was passed Dec. 23, putting the new demurrage rules into effect in accordance with the judgment, which was concurred in by the Assistant Chief Commissioner, D'Arcy Scott, and Commissioner McLean.

Railway Finance, Meetings, Etc.

Algoma Central & Hudson Bay Ry.—There has been deposited with the Secretary of State at Ottawa, a supplemental trust deed, dated Oct. 31, 1916, between the company and the United States Mortgage & Trust Co. and the Lake Superior Corporation, affecting the terms of a mortgage and deed of trust, dated July 1, 1910, and also a supplemental agreement, dated Mar. 14, 1916, and a second mortgage supplemental agreement, dated Oct. 31, 1916, between the same parties, affecting the terms of a mortgage and deed of trust, dated Aug. 14, 1914.

Algoma Eastern Ry.—There has been deposited with the Secretary of State at Ottawa an agreement, dated Nov. 8, 1916, between the company and the Lake Superior Corporation relative to the purchase of rolling stock.

Canadian Pacific Ry.—It is reported that the German submarine vessel, Deutschland, on her recent trip to New London, Conn., brought over a considerable number of certificates of C.P.R. stock owned in the German Empire, which have been placed upon the New York market for sale.

Canadian Northern Ry.—Lazard Bros. & Co., London, Eng., are prepared to purchase £75,000 of C.N.R. 4th first mortgage land grant bonds at 93, a brokerage of 1/2% being paid to authorized agents. The offer is liable to be withdrawn at any time without notice.

Central Vermont-Southern New England Rd.—Attachments have been filed in the Registry of Deeds of Hampton County, Mass., by John Marsch, of Chicago, Ill., amounting to \$6,000,000. One of the attachments is against the Southern New England Rd., and the other against the S.N.E. Rd., the Central Vermont Ry., and the G.T.R. Mr. Marsch was the contractor for building the S.N.E. Rd. from Palmer, Mass., to Providence, R.I., on which work was suspended. The S.N.E. Rd. is owned by the Central Vermont Ry., which in turn is controlled by the G.T.R.

Guelph Junction Ry.—The income available for dividend for the quarter ended Sept. 30, 1916, was \$11,260.50, equal to 6 3/4% upon the capital of \$170,000. The total amount paid to the City of Guelph, Ont., which owns the line, for the year ended Sept. 30, was \$41,012.50.

Kaslo and Slocan Ry.—The Dominion Parliament is being asked to declare this railway to be a work for the general advantage of Canada, to change the head office from Field, B.C., to Montreal, and to authorize it to enter into agreements with the C. P. R.

Lotbiniere and Megantic Ry.—The hearing was started before the Court of Exchequer at Ottawa, Dec. 15, in the proceedings to fix the value of this railway, which was purchased by the Dominion Government under the terms of the act, to take over the Quebec and Saguenay Ry. and other lines. The price fixed for the line was \$310,000, subject to the Court of Exchequer's valuation. The principal question before the court is the company's claim for \$35,000 for the charter rights of the Quebec Eastern Ry. for which a route was surveyed to include the L. & M. R.

Pere Marquette Rd.—The plan for the reorganization of the P.M.R. is under consideration by the Michigan State Railroad Commission. It provides for the issuance of new securities amounting to \$90,000,000 which with securities which the road is said to own will bring the capitalization of the new company up to \$105,000,000, and it is claimed that after the various indebtednesses, which are nearly all of long standing, have been wiped off, there will be a cash balance of \$16,000,000. The company owns or controls the Lake Erie & Detroit River Ry. in Canada and leases running rights over the Michigan Central Rd. lines in Canada from St. Thomas to the Niagara frontier.

Spokane International Ry.—Referring to the reported purchase of this railway in our last issue, D. C. Corbin, President, is reported to have said that it has been acquired by the C.P.R. and the latter's subsidiary, the Minneapolis, Saint Paul & Sault Ste. Marie Ry. jointly from him and his associates. The bonded indebtedness of the line with the Coeur d'Alene and Pen d'Oreille branches is \$4,744,000, and the outstanding debt is \$4,200,000.

Temisconata Ry.—Gross earnings for September, \$16,588; operating expenses, \$15,365; net earnings, \$1,223. Aggregate net earnings for three months ended Sept. 30, \$11,725.

Wellington Colliery Ry.—The British Columbia Minister of Railways has consented to the increase of the company's capital from \$50,000 to \$500,000 by the issue of 450,000 new shares of \$1 each, and has defined the company's borrowing powers at \$500,000 and approved the issue of debentures and other securities covering the company's line, which is 21 miles long.

A general meeting of shareholders was called to be held in Victoria, Dec. 15, to authorize the directors to issue bonds or other securities for \$500,000, secured by mortgage upon the whole or any part of the company's undertaking, franchises, etc., and to authorize the directors to carry out the terms of an agreement made between the Canadian Collieries (Dunsmuir), Ltd., and the company, dated June 12, 1916. This agreement conveys to the Wellington Colliery Ry. Co. certain properties consisting of the right of way of the railway, the railway constructed thereon, and the railway equipment and rolling stock at a price fixed by valuation, and the issuance to the Canadian Collieries (Dunsmuir), Ltd., the \$500,000 of bonds or other securities to be issued and sufficient paid up shares of the company's stock in payment for the same. H. Browning is Secretary of the W.C.R. Co.

White Pass & Yukon Ry.—The accounts for the year ended June 30, show a loss of £14,107, after charging interest on debenture stock and debentures payable in income debenture stock. This increases the debit balance on profit and loss account to £24,675. For the previous year there was a loss of £26,182.

Mainly About Railway People Throughout Canada.

G. McLaren Brown, European Manager, C.P.R., arrived in Canada, Dec. 9, from England, on a business trip.

Corporal R. R. Hutchison, who has received the Military Medal for bravery on the field, is a son of Dr. J. A. Hutchison, Chief Medical Officer, G.T.R., Montreal.

N. P. Dalziel, formerly of Mackenzie, Mann & Co.'s engineering staff, Toronto, and now with the Imperial Munitions Board, Ottawa, has gone to England on official business.

L. E. Silcox, formerly Division Engineer on the Dominion Government Railway to Hudson Bay, and stationed at Kettle Rapids, Man., is now with the Canadian Engineers on active service.

W. M. Acworth, who was appointed a member of the board to enquire into the Canadian railway situation, in place of Sir George Paish, arrived in Canada, Dec. 9, to consult with the other members of the board.

A. J. Gayfer, until recently Division Engineer, Canadian Northern Ry., Hornepayne, Ont., is at present serving in the No. 2 Construction Battalion as a Captain, and is stationed at Edmonton, Alta., preparatory to going overseas.

Jas. Dunsmuir, director, C.P.R., has given \$7,500 to Canadian Red Cross Society's Victoria City and District Branch to cover the cost of an operating theatre in the hospital which the society is presenting to France.

Lieutenant Arthur Dean, 10th Royal Lancashire Fusiliers, who has been killed in action, had been in G.T.R. service for about 10 years, serving in the Freight Department at Glasgow, Liverpool and London, respectively.

Lieut. R. C. Young, formerly Superintendent, Canadian Northern Transfer Co., Montreal, has been appointed acting Quartermaster, First Reinforcing Company, 5th Royal Highlanders of Canada, and is on active service.

George Bury, Vice President, C.P.R., arrived in England, Dec. 21, to see his son, Major G. A. E. Bury, Deputy Assistant Quartermaster General of the Training Division, C.E.F. He was accompanied by Mrs. and Miss Bury.

G. F. P. West, heretofore Assistant Superintendent of the Line, London & Southwestern Ry., England, has been appointed Superintendent of the Line, succeeding Henry Holmes, M.V.O., who has retired after many years service.

Miss Myra Goodeve, daughter of A. S. Goodeve, member of the Board of Railway Commissioners for Canada, has been decorated with the Royal Red Cross by the King, in recognition of her nursing work in France, the Dardanelles and Salonika.

Roy Smith, secretary to the General Manager, Canadian Government Railways, Moncton, N.B., has his shoulder blade broken recently, when the horse attached to the vehicle in which he was driving to business, bolted and threw him out.

George Bury, Vice President, C.P.R., has been made a Knight of Grace of the Order of St. John of Jerusalem; and A. D. MacTier, General Manager, Eastern Lines, C.P.R., and W. D. Robb, Superintendent of Motive Power, G.T.R., have been made esquires of the same order.

W. H. Moore, Secretary, Canadian Northern Ry., has appealed against an

assessment of \$13,500 on income in Toronto, on the ground that while he has a house there, it belongs to his wife, and that he lives on his farm in Pickering Tp. the greater portion of the year.

Mrs. Sinclair, wife of Angus Sinclair, railways contractor, Toronto, who died there recently, left an estate of \$24,730. As she had not made a will one third the estate goes to her husband, the remainder being equally divided between six sons and daughters.

Robert Home Smith, who has been elected President, Algoma Central & Hudson Bay Ry., was born at Stratford, Ont., July 12, 1878. He is also President of the Mexico North Western Ry., and a member of the Toronto Harbor Commission. He is located in Toronto.

W. D. Davidson, whose appointment as Superintendent, Detroit Division, West-

E. W. Delano
Division Engineer, Lake Superior Division,
Canadian Northern Railway.

ern Lines, G.T.R., Detroit, Mich., was announced in our last issue, was presented with a travelling bag and equipment, and a leather upholstered chair, at the end of November, on leaving London, Ont., where he had been Superintendent.

Sir C. Rivers Wilson, K.C.M.G., formerly President, G.T.R., who died about a year ago, left the material for a book, "Chapters From My Official Life," which has been edited by Eva MacAllister, and published recently. The chapter dealing with the G.T.R. is of special interest to Canadian readers.

A. Rankin, a railway contractor, who built some sections of the Canadian Northern Ry. and the Grand Trunk Pacific Ry. in the west, returned to Vancouver, B.C., recently, after having spent some months in studying railway conditions in Russia with a view to acquainting himself with the opportunities for new construction.

C. Forrester, whose appointment as Superintendent, London Division, Ontario

Lines, G.T.R., London, Ont., was mentioned in our last issue, was presented with a club bag and a silver framed address, and Mrs. Forrester was presented with a travelling companion, by the Stratford Division staff, Dec. 2, on leaving for London.

Lord Shaughnessy is mentioned as a possible member of a commission to administer the City of Montreal's affairs. The Quebec Legislature has decided that such a commission cannot be appointed until a referendum is taken in September to settle the question as to whether the board of control system shall be abolished or not.

F. P. Brady, General Superintendent, Transcontinental Division, Canadian Government Railways, Cochrane, Ont., who is on leave of absence through illness, underwent an operation at Rochester, Minn., Dec. 2, for intestinal trouble, which proved entirely successful. At the time of writing he is still in Rochester, but is expected to return to his home in Winnipeg early in the New Year.

Wm. Iball, who was appointed Chief Engineer of Power House, Canadian Government Railways, Transcona, Man., recently, to succeed T. Turner, deceased, who was on nactive service in the Canadian Expeditionary Force for about two years and having been wounded returned to Canada in November. He was formerly Assistant to Chief Engineer, Power House, Transcona.

George C. Cahan, who has been appointed Assistant General Auditor, C.P.R., Montreal, was born there, Dec. 28, 1874, and entered C.P.R. service in April, 1890, since when he has been, to Oct., 1891, junior clerk, Auditor of Freight and Telegraph Receipts' office; Oct., 1891, to Aug., 1896, junior clerk, Auditor of Disbursements' office; Aug., 1896, to Dec. 1, 1916, clerk, bookkeeper and chief clerk, successively, in Comptroller's and General Auditor's offices, all at Montreal.

J. B. Lambkin, who was in the Passenger Department, Canadian Government Railways, for several years, and latterly had been in charge of the transportation of enemy aliens under the internment regulations, has been appointed transportation officer under the Military Hospitals Commission, to superintend the arrival of wounded Canadian soldiers, and to make arrangements for their removal to their various destinations.

Horace McEwen, whose retirement from active service, after 41 years and 8 months service with the Prince Edward Island Ry., was announced in our last issue, was born at St. Peters, P.E.I., Apr. 27, 1852, and entered P.E.I.R. service May 14, 1875, since when he was, to Dec., 1891, station master, Mount Stewart; Dec. 20, 1891, to Feb. 1, 1892, assistant dispatcher, Charlottetown; Feb. 1, 1892, to Apr. 30, 1912, dispatcher, Charlottetown; May 1, 1912, to Nov. 1, 1916, Superintendent, Charlottetown.

C. R. Needs, of Galt, Ont., formerly a resident engineer on the Canadian Northern Ry., and latterly a munitions inspector, is reported to have enlisted in the Canadian Aviation Corps and to have left for England. He was employed by Mackenzie, Mann & Co., Ltd., on construction as follows:—Oct. 24, 1910, to Apr. 1, 1911, draughtsman; April 2, 1911, to May 1, 1911, rodman; May 2, 1911, to June 22, 1911, instrument man; June 23, 1911, to Aug. 14, 1911, rodman; Aug. 15, 1911, to Nov. 21, 1913, Resident Engineer.

C. Norman Ham, who has been appointed Secretary, Express Traffic Association of Canada, Montreal, was born at Winnipeg, Oct. 21, 1884, and entered transportation service in Feb., 1902, since when he has been, to Apr., 1902, clerk, General Baggage Department, C.P.R., Montreal; May 1, 1902, to Oct. 1, 1904, stenographer, General Freight Department, Intercolonial Ry., Montreal; Oct. 3, 1904, to Oct. 30, 1908, statistical clerk, Traffic Department, Board of Railway Commissioners, Ottawa; May 1, 1904, to Apr. 30, 1910, percentage clerk, Freight Tariff Bureau, C.P.R., Montreal; May 1, 1910, to Nov. 30, 1916, chief clerk, Traffic Department, Dominion Express Co., and Western Express Co., Toronto.

M. K. McQuarrie, who has been appointed Engineer, Dominion Atlantic Ry., Kentville, N.S., was born at Sault Ste. Marie, Ont., Aug. 17, 1884, and entered railway service in 1905, as transit man in the Resident Engineer's office, C.P.R., Vancouver, B.C. He graduated from the School of Practical Science, University of Toronto, in 1907, since when he has been, to 1909, transit man on Nicola-Penticton survey, and in charge of revised location of a portion of the Esquimalt & Nanaimo Ry.'s Nanaimo-Alberni extension; 1909 to Dec. 31, 1910, Assistant Engineer, C.P.R., Vancouver, B.C.; Dec. 31, 1910, to Dec. 4, 1916, Resident Engineer, Revelstoke Division, British Columbia District, C.P.R., Revelstoke.

Julius Pearson Mader, who has been appointed General Freight and Passenger Agent, Algoma Eastern Ry., Sudbury, Ont., was born at Newmarket, Ont., and entered railway service in Sept., 1906, since when he has been, to Apr., 1909, clerk, G.T.R., Newmarket, Ont.; Apr. to Nov., 1909, clerk and car checker, G.T.R., Collingwood, Ont.; Nov., 1909, to July, 1910, Local Freight Office, G.T.R., North Bay, Ont.; July, 1910, to Mar., 1912, chief clerk to Division Freight Agent, C.P.R., North Bay, Ont.; Mar., 1912, to Jan., 1913, clerk, Freight Tariff Bureau, C.P.R., Montreal; Jan. to Dec., 1913, chief clerk to General Freight and Passenger Agent, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont.; Dec., 1913, to Dec., 1916, General Agent, A.C. & H.B.R. and Algoma Eastern Ry., Sudbury, Ont.

Thomas Francis Rahilly, who has been appointed Comptroller, Algoma Eastern Ry., Sudbury, Ont., was born at Diorite, Mich., Oct. 6, 1892, and entered railway service June 22, 1908, since when he has been, to July 20, 1908, section hand, Chicago & North Western Ry., Michigamme, Mich.; July 23, 1908, to May 11, 1913, freight clerk, Duluth, South Shore & Atlantic Ry., St. Ignace, Mich.; May 12 to Aug. 27, 1913, clerk in Audit Office, same road, Marquette, Mich.; Aug. 28 to Nov. 2, 1913, chief clerk to Yardmaster, Sault Terminals, same road, Sault Ste. Marie, Ont.; Nov. 3, 1913, to Nov. 30, 1914, clerk in Comptroller's Office, Algoma Central & Hudson Bay Ry. and Algoma Eastern Ry., Sault Ste. Marie, Ont.; Dec. 1, 1914, to Apr. 15, 1916, Travelling Auditor, same companies; Apr. 15 to Dec. 1, 1916, Trainmaster, A.C. & H.B.R., Sault Ste. Marie, Ont.

Hon. Robert Mackay, who died at Montreal, Dec. 21, aged 77, was connected with several transportation and allied companies. Among them were:—Montreal, Light, Heat & Power Co., Quebec Ry., Light, Heat & Power Co., Dominion Iron & Steel Co., Dominion Coal Co., Dominion Transport Co., St. Maurice Construction Co., Shedden Forwarding Co., Western Coal & Coke Co., Port Hood-

Richmond Coal & Ry. Co., Canada Cement Co., Canadian Pacific Ry., Bank of Montreal, Bell Telephone Co., Lake of the Woods Milling Co., Pacific Pass Coal Fields Co., Shawinigan Water & Power Co., etc. He was Chairman, Montreal Harbor Commissioners, from 1886 to 1907; President, Montreal Board of Trade, 1900-01. He was made a Senator in 1901.

J. A. DeWolfe, who has been appointed Trainmaster, Portage Division, Manitoba District, C.P.R., Winnipeg, was born at Woodstock, Ont., Aug. 31, 1884, and entered railway service July 10, 1899, since when he has been, to Apr. 16, 1900, stenographer to Locomotive Foreman, G.T.R., London, Ont.; Apr. 17, 1900, to May 12, 1903, not in railway service; May 13 to June 23, 1903, clerk to Car Foreman, C.P.R., Toronto; June 23, 1903, to May 22, 1905, clerk in Trainmaster and Superintendent's offices, C.P.R., London, Ont., and Toronto; May 22, 1905, to May 7, 1907, clerk to Manager of Construction,

Robert Kerr.

C.P.R., Toronto; May 7, 1907, to June 21, 1909, Secretary to General Manager, C.P.R., Montreal; June 23 to Aug. 24, 1909, assistant chief clerk, Second Vice President's office, C.P.R., Winnipeg; Aug. 24, 1909, to Dec. 31, 1914, chief clerk, Engineering Department, Western Lines, C.P.R., Winnipeg; Dec. 31, 1914, to Oct. 31, 1916, chief clerk to Vice President and General Manager, Western Lines, C.P.R., Winnipeg.

J. Mitchell Silliman, who has been appointed Resident Engineer, London Division, Ontario District, C.P.R., London, was born at Easton, Pa., Sept. 8, 1885, and graduated from Lafayette College, Easton, Pa., with the degree of C.E., in June, 1907, since when he has been, to Aug., 1907, leveller right of way survey, Atlantic Division, C.P.R.; Aug. to Dec., 1907, transit man, District 2, Atlantic Division, C.P.R.; Jan. to Apr., 1908, rodman, reconnaissance surveys, Lake Superior Division, C.P.R.; May, 1908, to Oct., 1909, transit man, District 1, Atlantic Division, C.P.R.; Nov., 1909, to Mar., 1910, transit man, District 1, Lake Superior Division,

C.P.R.; Mar., 1910, to Mar., 1911, transit man, District 3, Lake Superior Division, C.P.R.; Mar., 1911, to Sept., 1912, Resident Engineer, Construction Department, Guelph Jct.-Hamilton Line, C.P.R.; Sept., 1912, to Mar., 1915, Resident Engineer in charge of construction, Forsyth St. Branch, C.P.R., Montreal; Mar. to Dec., 1915, District Engineer of Construction in charge of Lake Erie & Northern Ry., Brantford, Ont.; Jan. 1 to Nov. 28, 1916, Resident Engineer, Laurentian Division, Quebec District, C.P.R., Montreal.

James Russell, who was appointed Vice President and General Manager, Minneapolis & St. Louis Rd., Minneapolis, Minn., recently, was born Feb., 1865, and commenced railway work in 1879 with the G.T.R., being employed as agent and operator until 1882 and in 1883 he worked as operator for the Chicago, St. Paul, Minneapolis & Omaha Rd., the Kansas Pacific Rd., and the Atchison, Topoka & Santa Fe Ry. From 1883 to 1887, he was operator and dispatcher, Canada Southern Ry. and Michigan Central Rd., and subsequently was dispatcher, chief dispatcher and Superintendent, successively, St. Paul, Minneapolis & Manitoba Ry., and Great Northern Ry. In 1903 he was appointed Superintendent, Missouri Pacific Rd., and in 1907 transferred in the same capacity to the Chicago, Burlington & Quincy Rd. From 1908 to Jan. 1, 1914, he was General Superintendent, Spokane, Portland & Seattle Rd., and from an. 1 to Apr. 1, 1914, was General Superintendent, Great Northern Ry., and then went to the Denver & Rio Grande Rd. as Assistant to the Vice President. Later on he became General Manager, which position he resigned to take up his present appointment.

Robert Kerr, formerly Passenger Traffic Manager, C.P.R., died at Toronto, Dec. 9. He was a son of Capt. Robert Kerr, a well known lake captain on the old Royal Mail and other lines, and who is still remembered in Toronto as commanding the Admiral, Gore, Burlington and Maple Leaf. He was born at Toronto, Aug. 23, 1845, and was educated at Upper Canada College, graduating in 1856. He served for a time in the regular U.S. army, Battery A, 2nd U.S. Artillery. He returned to Toronto in 1861, and was a member of No. 3 Company, Queen's Own Rifles. He entered railway service in 1866, since when he was, to 1879, warehouse clerk, etc., Northern Ry. of Canada; 1879, Through Freight Agent, same road; 1879 to 1884, General Freight and Passenger Agent, Northern & Northwestern Ry.; June 1, 1884, to Jan. 1, 1896, General Freight and Passenger Agent, Western and Pacific Divisions, C.P.R., Winnipeg; Jan. 1, 1896, to June, 1899, Traffic Manager, Lines West of Lake Superior, C.P.R.; June, 1899, to Sept., 1910, when he retired on superannuation, Passenger Traffic Manager, Montreal. The funeral took place at Toronto, Dec. 11, and was attended by a number of representatives of the C.P.R. and other transportation companies. The pall bearers were:—C. E. E. Ussher, Passenger Traffic Manager, C.P.R., Montreal; W. G. Annable, General Passenger Agent, Atlantic Service, Canadian Pacific Ocean Services, Ltd., Montreal; Wm. Davidson, Manager of Marlatt & Armstrong Co., Ltd., leather merchants, Montreal; David Henderson, barrister; P. d'Eyncourt Strickland, and W. Cecil Lee, Toronto.

Walter Reginald Baker, C.V.O., Secretary of the C.P.R. Co., and Assistant to the President, who has, at his own request, been relieved of his duties and placed on the retired list, and whose port-

rait appears in this issue, was born at York, Eng., May 25, 1852. From Nov., 1865, to Oct., 1872, he was with the Allan Line Steamship Co.; Nov., 1872, to Oct., 1873, Local Freight and Passenger Agent, Canada Central Ry., Ottawa; May, 1874, to July, 1877, Private Secretary and Comptroller to the Earl of Dufferin, Governor General; July, 1877, to Feb., 1881, Assistant Secretary, Treasury Board, Ottawa; Feb., 20, 1881, to Jan., 1882, Local Treasurer and Assistant to General Superintendent, Western Division, C.P.R., Winnipeg; Jan., 1882, to June, 1883, Purchasing Agent, Western Division, and Assistant to General Manager, C.P.R., Winnipeg; June, 1883, to Aug. 31, 1892, General Superintendent, Manitoba & Northwestern Ry., Portage la Prairie and Winnipeg; Sept. 1, 1892, to May, 1900, General Manager, Manitoba & Northwestern Ry., Winnipeg; May, 1900, to June, 1901, Executive Agent, C.P.R., Winnipeg; June, 1901, to Aug. 31, 1905, Assistant to Vice President, C.P.R., Montreal; Sept. 1, 1905, to Feb., 1908, Assistant to President, C.P.R., Montreal; Mar. 1, 1908, to Dec. 31, 1916, Assistant to President and Secretary to Company, C.P.R., Montreal. On leaving Winnipeg for Montreal in 1901 he was presented with a solid silver service by the business community "in recognition of the integrity, unfailing courtesy and great ability displayed by him as an official and as a public-spirited citizen." He had charge of the royal trains over the C.P.R. lines during the several visits of the Prince and Princess of Wales (now King George and Queen Mary), Prince Arthur of Connaught and Prince Fushimi, and of several tours of the Duke and Duchess of Connaught from 1912 to 1916, and was presented with handsome testimonials from each of these personages, as well as from the late King Edward VII., in acknowledgment of his and the company's services and attentions to the illustrious visitors. He was decorated with the 3rd class of the Order of the Sacred Treasurer by the Emperor of Japan, 1906; appointed an Esquire of the Order of St. John of Jerusalem, 1910; appointed Commander of the Royal Victorian Order, June, 1911. Married Jane Helen Cruice, daughter of the late R. W. Cruice, Ottawa, 1875 (deceased May, 1902); secondly, Belle Drysdale Paton, daughter of the late Andrew Paton, Sherbrooke, Que., Oct., 1907 (deceased June, 1908); thirdly, Elsa Dicke, Vienna, Austria, Dec., 1909. He is a member of the following clubs:—Mount Royal, Royal Montreal Golf, Montreal Jockey, Rideau, Ottawa Country, and Manitoba. He expects to go to England at an early date for a short visit and will probably, with Mrs. Baker, leave in March for Japan and China.

Grand Trunk Pacific Ry. Suit.—An action has been brought in a Manitoba Superior Court involving the Grand Trunk Pacific Ry., the G. T. P. Development Co., and the Transcontinental Townsite Co., and affecting the purchase of townsites and right of way for the G.T.P.Ry. branch lines in Saskatchewan and Alberta, and the obtaining of an area of land from the Dominion Government. The claims made amount to \$761,174.22, and there is a counterclaim of \$2,025,000.

T. McHattie, who resigned his position as Master Mechanic, Eastern Lines, G.T.R., Montreal, recently, on account of ill health, in remitting his current subscription, writes,—"The Railway and Marine World is always received with much pleasure, for the splendid information which it contains from month to month."

Freight and Passenger Traffic Notes.

The Pacific Steamship Co. has reduced the round trip fares between Victoria, B.C., and San Francisco, Cal., to \$32.50.

The C. P. R. on Dec. 10 put on a standard sleeping car between Montreal and Grand Mere, Que., leaving Montreal at 11.55 p.m. daily, and Grand Mere, at 7 p.m. weekdays, and 4.30 p.m. Sundays.

The Pacific Steamship Co., in order to relieve the freight situation in the Pacific coast, has increased its service by putting on two freight steamships on the run between Seattle, Wash., Victoria, B.C., and Californian ports.

On the Dominion Government Ry. to Hudson Bay a weekly train service with sleeping car accommodation is being operated from Pas, Man., to the end of track at Kettle Rapids, 332 miles, within 93 miles of the terminus at Port Nelson, on Hudson Bay.

Walter R. Baker, C.V.O.

The Canadian Northern Ry. has made some alterations in the dining car tariff on its trains. Club breakfasts will be served at 25c, 50c, 65c and 80c; luncheons at 50c, 70c, 80c, and \$1, and dinners at 50c, 75c, 85c, and \$1. An a la carte service is also given.

The C. P. R. proposes to feature Vancouver and the Pacific Northwest as a holiday resort both for summer and winter visitors. The tourist possibilities of this district were explained to the C.P.R. officials at the recent conference at Winnipeg by H. Cuthbert, Industrial and Publicity Commissioner, Victoria, B.C., and Secretary of the North Pacific Tourist Association.

The White Pass & Yukon Ry. has announced that for next season the fares for all round trip tourist trips will be raised as follows: To Atlin and return, from \$100 to \$110; to Dawson and return, from \$160 to \$170; to Fort Yukon and return, from \$200 to \$215; to Fairbanks and return, from \$250 to \$255. The excursion known as the Grand Tour, which includes a trip down the Yukon

and to St. Michael and Nome, will cost \$305, against \$300 this year.

The Pacific Great Eastern Ry. is carrying considerable quantities of produce, timber, etc., from points between Squamish and Clinton into Vancouver, B.C. Freight is carried to Squamish by train and thence by steamship to Vancouver. A recent statement is that during the summer and autumn of 1916 the traffic to Squamish for shipment covered 4,500 live stock, 100 cars of potatoes, 300 cars of hay, about 50 cars of beans, and numerous cars of timber for piles and other construction purposes.

Decision was given recently in a Montreal Court in the action of Dacosse against the G. T. R., dismissing the suit, which was to recover \$397 value of goods lost in transit between Montreal and Winnipeg. The plaintiff shipped some furniture by the G. T. R. from Montreal to Winnipeg, packing some articles valued at the amount claimed in the furniture. He claimed that during transit the goods had been lost or stolen. The defence was that the company has not been advised of goods having been packed in the furniture, and that they had been lost on one of the other lines over which they were routed.

The development of the Peace River country consequent upon the coming of a railway is shown by the fact there was shipped in from Edmonton, Alta., over the Edmonton, Dunvegan & British Columbia Ry. during the first year 40,000 tons of freight and that there was shipped out about 1,000,000 bush. of grain. In previous years, when the only means of shipment was by the Canadian Northern Ry. to Athabasca Landing, and thence by water and overland routes to Groward, Peace River Landing and other points, the average shipments inwards amounted to about 1,500 tons, and practically nothing but furs came out.

Victoria business men asked Esquimalt and Nanaimo Ry. officials recently to put on an evening freight train to Nanaimo, stating that the present day service unfairly handicaps shippers. H. E. Beasley, General Superintendent, informed the representatives of the Board of Trade, who brought the matter before him, that the traffic would not justify the putting on of an evening train, but arrangements had been made so that Nanaimo merchants could get their bills of lading at 8 a.m., so that they might get their freight delivered earlier than at present. During October, he stated, the amounts collected for freight carried on the present train averaged \$93.26 a day, of which the Nanaimo freight only averaged \$18.32 a day.

French Railway Earnings.—Recent reports concerning the state of French railways, which are being operated under government control, show that the earnings for August were \$26,037,732 against \$23,397,353 in Aug., 1915, and \$15,086,539 for Aug., 1914. The line with which these figures are concerned are the French State Railways, the Western Ry. of France, the Paris, Lyons & Mediterranean Ry., and the Paris & Orleans Ry. The Northern Ry. of France and the Eastern Ry. of France are chiefly in the territory which is, for the present, in German occupation.

The C. P. R. Colonization and Development Department has for its object the assisting of settlement on the land, and looking into the labor situation in the territory served by its lines. It is in charge of J. S. Dennis, Assistant to the President, and Wm. Pearce is Statistician.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Alberta & Great Waterways Ry.—Tracklaying was expected to be completed into Fort McMurray, Alta., Dec. 31. Track was laid up to that date from Carbondale, the junction point with the Edmonton, Dunvegan & British Columbia Ry., to mileage 174.5, and at the end of June, 1916, had been laid to mileage 203. All the steel necessary to lay the track into Fort McMurray, at approximately mileage 300, had been delivered in November, when all the company's available forces were set to work in an endeavor to get it laid by the end of the year. (July, 1916, pg. 281.)

Athabasca Northern Ry.—The Dominion Parliament is being asked to declare the company's corporate powers to be in full power and effect, and to extend the time fixed for the building of the projected railway. The company was incorporated in 1905 to build a railway from Edmonton, paralleling the North Saskatchewan River to Tp. 59, R. 19, W. of 5th Meridian, thence north easterly past Smoky Lake to Lac la Biche, and thence northerly to the Athabasca River at the junction with the Clearwater River (Jan. 1915, pg. 10.)

Cascade Scenic Ry.—We are officially advised that it is expected to start construction in the spring. The line will start from near the C.P.R. station at Banff, Alta., and will run along the valley of Forty Mile Creek to the base of Cascade Mountain, there ascending the direct slope of the mountain. Its length will be 2.5 miles. The rise from the base to the summit of the mountain is 5,290 ft., and as the slope distance is a little over 11,000 ft., the angle of elevation is practically 30 degrees and the gradient 50%. The section directly ascending the mountain will consist of 4 tangents of about 2,600 ft. each. The operating devices will be at the upper end of each of these tangents. The line will be a double track one, the rails being laid in concrete at certain points, and it will be operated by a system of balanced cars. T. R. Deacon, Winnipeg, is principally interested. (Dec., 1914, pg. 424.)

Application is being made to the Dominion Parliament to incorporate a company with this title to operate a scenic or funicular railway at Banff, Alta., or elsewhere in Canada as may be permitted. The railways to be run on rails or aerial cable or otherwise as may be desired and to be operated by steam, electricity, gasoline, water power or by such other means as may be most convenient or expedient. The company's office is to be at Winnipeg. Noran, Anderson & Guy, of Winnipeg, are solicitors for applicants.

Dominion Government Ry. to Hudson Bay.—The suspension of work on this railway from Pas to Port Nelson, Man., is merely the ordinary suspension for the winter months. Certain bridge work at Kettle Rapids will be gone on with during the winter. The nature and extent of the work for next year will not be decided upon until the spring, but it is generally anticipated that the line will be completed during the year.

Nothing definite has been decided, we are officially advised, as to the various terminal buildings to be erected at Pas.

It is reported that the dock for ocean going steamships at Port Nelson has been completed. It is 3,000 ft. from the shore line, with which it is connected by a steel trestle over which trains will be run. Considerable progress was made with the

other harbor works during the past year. (Dec., 1916, pg. 484.)

Edmonton, Dunvegan & British Columbia Ry.—Ballasting and other work on the section from McLennan to Spirit River and on the branch from Spirit River to Grande Prairie is reported to have been finally completed.

The grading from Spirit River to Pouce Coupee, 54 miles, is reported completed. No track has been laid, but it is expected to begin this work early in the spring.

The line as originally projected was to effect a junction with the Pacific Great Eastern Ry. at the Alberta-British Columbia boundary. This P.G.E.R. is not yet completed to Fort George, there being a gap between Dundarave and Squamish at the western end of the line, and between Clinton and Fort George. Preliminary surveys have been made for the line between Fort George and the Alberta-British Columbia boundary. J. A. McArthur, President of the E.D. & B.C.R., was in Victoria Dec. 1, conferring with the B.C. Government on railway matters, and it is reported that some agreement may be reached under which the routing of the projected connection between the E.D. & B.C.R. with the P.G.E.R. will be worked out from Alberta rather than from Fort George, and that the E.D. & B.C.R. will be the constructing line. (Nov., 1915, pg. 447.)

Esquimalt & Nanaimo Ry.—The Victoria City Council has decided to eliminate the E. & N.R. from the negotiation in connection with the Johnson St. bridge matter. A general traffic bridge will be built by the British Columbia Government at the joint cost of the province and the city. (Dec., 1916, pg. 484.)

Essex Terminal Ry.—The Board of Railway Commissioners has authorized the opening for traffic of the company's line through a portion of Windsor, Ont., and through Sandwich to the north side of Titcombe Road., Ojibway, mileage 3.25 to 8.58. This piece of line was built in 1915, but was not approved by the board for traffic until quite recently.

We are officially advised that the company may arrange to build an additional 2 miles of main line track during this year. (June, 1916, pg. 222.)

Grand Lake Ry. & Transportation Co.—The Quebec Legislature has incorporated a company with this title to build tramways to connect Christopherson Lake, on Bell River, and Lake Lamy, with navigable water on the Ottawa River and to operate steam and other vessels in connection therewith. (Nov., 1916, pg. 447.)

Grand Trunk Ry.—A large amount of work has been done in the vicinity of the Victoria Jubilee bridge, Montreal, in retaining land for yard purposes. It has been going on for many years, and is a slow process, but when completed will give some much needed space for additional freight tracks.

Negotiations are still in progress between the City of Brantford, Ont., and the Board of Railway Commissioners as to the cost of the subway under the G. T. R., on St. Paul's Ave.

The new station erected at Port Colborne, Ont., is a brick structure over 100 ft. long, laid out in the most modern manner. New freight sheds and offices have also been erected and are in use. The yard facilities have been considerably improved.

A new classification yard has been practically completed at Pontiac, Mich., with a capacity of 456 cars. A new steel bridge on concrete abutments is also being erected to carry a double track. In connection with this new yard work there will be laid 2.08 miles of new second track.

The company is laying 7 miles of new second track easterly from Milwaukee Jct., with a new receiving, departure, and classification yard, with a capacity of 2,040 cars. All the grading is practically completed and track has been laid to accommodate 600 cars.

Railway and Marine World for Oct. 1916, gave on page 400 some particulars of the new G. T. R. shops being built at Port Huron, Mich., to replace those burned in the winter of 1914-15. The buildings will cover a total area of 55 acres, a considerable area being devoted to the trackage necessary and are estimated to cost \$700,000. Power for the operation and lighting of the plant in the various buildings will be supplied by six 150 h.p. boilers, serving double turbo steam generating units of 300 k.w. (Dec., 1916, pg. 484.)

Greater Winnipeg Water District.—Tenders are under consideration for the purchase of steel rails up to 60 lb. to the yard, sufficient to lay about 10 miles of track.

The Greater Winnipeg Water District Commission, which has built a steam railway along the aqueduct right of way from Transcona to Indian Bay, Shoal Lake, Man., is reported to be contemplating building an electric railway from Provencher Bridge, via St. Boniface, Notre Dame and Mission Road, to Transcona.

Another statement is reported to have been made to the effect that the Greater Winnipeg Water District Commission was considering a project to build an electric railway from Provencher bridge through St. Boniface to Transcona. (Oct., 1915, p. 404.)

Grenville, Harrington & Northern Ry.—The Quebec Legislature has under consideration the incorporation of a company with this title to build a railway from Grenville to Harrington East, and northerly in Argenteuil County.

Great Northern Ry.—Application is being made to the Dominion Parliament by the Vancouver, Victoria & Eastern Ry. & Navigation Co., a British Columbia subsidiary of the G.N.R., for an act confirming an agreement with the Canadian Northern Pacific Ry. for the joint use of the V.V. & E.R. & N. Co.'s tracks between New Westminster and Vancouver, and for the ratification of a second agreement with the same company for the joint use of the C.N.P.R. tracks between Hope and Sumas Landing, B.C.

The line which the V.V. & E.R. & N. Co. put in operation recently between Sumas Landing and Connor, B.C., is 9.32 miles long. Of this 8.19 miles was built in 1912-13, and the remaining 1.13 miles was completed in 1916.

Plans have been filed with the Vancouver City Council for the proposed freight sheds at False Creek. These show buildings of brick and timber construction with a 2 storey office building 40x100 ft. facing on Port Lane. A cold storage plant will be located at one end of the shed. The total estimated cost of the buildings is said to be about \$125,000.

It was expected that the station build-

ing being erected on the False Creek flats, Vancouver, by the G. N. R. for joint use with the Northern Pacific Ry., would be completed Dec. 31. The entire building was reported on Nov. 30 to be 85% completed. Track laying in the station and yard has been in progress since that date. There will be in all 9 miles of tracks; 7 lines being laid in the station out of 11 proposed to be laid; 6 freight house tracks, 1 industry track, and 11 car tracks. We were officially advised Dec. 13, that the plastering of the station was being gone on with, and that the brick work of the G. N. R. freight shed was well under way while the foundations for the Northern Pacific Ry. freight shed had been completed. The power house has also been completed. These freight sheds, local reports state, are each 600 x 50 ft., including a 2 story brick office building.

We are also officially advised that plans are being prepared for a 15 stall locomotive house, a machine shop and boiler house 50 x 160 ft., store house 30 x 73 ft., and an oil house 20 x 36 ft. F. L. Townley, Vancouver, is the architect. The grading and filling of the yard space on the company's area of the flats is expected to be completed by April. The transfer of the various departments of the company's business from the present offices to the new building will be made during January. (Dec. 1916, pg. 484.)

High River & Hudson Bay Ry.—A press report states that capital has been secured in England for starting upon this projected railway. Surveys have been made within the last two or three years, and the Department of Railways approved part of the route in the vicinity of High River in 1915. The company was originally incorporated in 1910, and it has secured extensions of time for construction from time to time from the Alberta Legislature. The line as originally projected was to run from the western boundary of Alberta at the Elk and Sheep River passes, thence down Sheep River to Black Diamond and into Calgary. From Calgary it was to run east to High River, Vulcan, Bow City, and thence to the eastern boundary of the Province in Township 23. The company has also secured incorporation from the Dominion Parliament as the High River, Saskatchewan & Hudson Bay Ry. Co., with power to build not only in Alberta, but in Saskatchewan and on to Hudson Bay. (June, 1916, pg. 222.)

Interprovincial & James Bay Ry.—The Dominion Parliament is being asked to extend the time for the building of this projected railway from the C.P.R. branch line from Mattawa, now terminating at Lumsden's Mills, Que., to or towards the Des Quinze River. Pringle, Thompson, Burgess & Cote, Ottawa, are solicitors for applicants.

The Quebec, Montreal & Southern Ry. has, we are officially advised, built a new locomotive house at St. Lambert, Que., to replace the one destroyed by fire at Longueuil. The new house is a two stall one, 70 ft. deep, 27 ft. across the front and 54 ft. at the back. It is of frame construction, and was expected to be completed by Dec. 25. (Nov., 1916, pg. 447.)

Michigan Central Rd.—During 1916 the company laid a number of new sidings and passing tracks on its Canadian lines. (Aug., 1916, pg. 317.)

The Minneapolis, St. Paul & Sault Ste. Marie Ry. Sunbrose branch at present terminates at Whitetail, Mont., and a press report states that it is proposed to extend it to Havre early in the spring. President Pennington was through the district recently and local reports state

that it is proposed to build a line from Havre northerly to connect with the C.P.R. Wayburn-Lethbridge line, either at Pakowki or Foremost, Alta. The company now has a line connecting at Emerson, Man., and another connecting at Portal, Sask.

Ontario Niagara Connecting Bridge Co.—A press report states that the bridge proposed to be built by this company across the Niagara River near Niagara Falls, Ont., will be of steel on concrete abutments, and will provide accommodation for steam and electric railways, general vehicle traffic and for foot passengers. The estimated cost is \$1,000,000. (May, 1916, pg. 182.)

Pacific Great Eastern Ry.—In connection with the harbor improvement scheme for Vancouver, which includes the building of a railway to encompass Burrard Inlet, it is reported that it is proposed to acquire the P.G.E.R. line along the north shore as far west as opposite the First Narrows, the price to be paid to be the cost to the railway company.

The North Vancouver City Council is consulting with the Vancouver City Council with a view to taking concerted action to form a plan to compel the P.G.E.R. to complete the construction of the line from North Vancouver to Squamish at an early date. The line has been built from North Vancouver to Dundarave a few miles out and local trains are being operated over it.

We are officially advised that 16½ miles of track was laid during 1916, northerly from Clinton, B.C. The company has on hand sufficient steel to take care of its immediate tracklaying requirements, and has contracted for delivery during the summer of 1917 of 19,500 tons of 60 and 70 lb. steel rails with the necessary angle bars, bolts and spikes for the continuance of tracklaying northerly to Prince George, where a junction will be effected with the Grand Trunk Pacific Ry.

The company has no branch lines under construction or projected at present. (Dec., 1916, pg. 484.)

Pacific, Peace River & Athabasca Ry.—A Vancouver press report states that development work is about to be started on a large coal area in the Groundhog River district of northern British Columbia, and that in the spring the construction of a railway from the coal area down the Naas River valley to Nasoga Bay, about 50 miles north of Prince Rupert, will be started. Lord Rhondda is the principal promoter. This projected line would appear to be a part of the P.P.R. & A.R. project, which is represented in Vancouver by C. K. Law. (May, 1916, pg. 183.)

Pere Marquette Rd.—The company owning the sit selected for the new station in Sarnia, Ont., for the P.M.R. has refused to sell, and preparations are being made for expropriation proceedings. The plans for the building are ready, and the Sarnia St. Ry. has extended its line to the site. (Oct., 1916, pg. 401.)

Port Arthur, Ont.—An agreement has been signed between the Port Arthur, Ont., City Council and James Richardson & Sons, Ltd., respecting the building of an elevator there. The city is to secure a right of way from the wagon works for a spur track to the elevator, and to grant permission to the Canadian Northern Ry. and the C.P.R. to lay tracks to serve this and any other industry that may locate along the spur.

Quebec & Saguenay Ry.—It is reported that the work being done towards the completion of this railway is being carried out by the company, under the super-

vision of Gordon Grant, Chief Engineer, National Transcontinental Ry. This is being done, it is stated, in order that the company may be enabled to give a clear title to the Dominion Government. (Dec., 1916, pg. 484.)

Roberval-Saguenay Ry.—We are officially advised that the only construction in view is the electrification of the yards at Port Alfred, near Bagotville, Que. They are situated on the Ha Ha Bay Ry., which has been incorporated with the R.-S.R. (Apr., 1916, p. 139.)

Toronto Terminals Ry. Co.—The Toronto City Architect, on Dec. 9, granted a permit for the erection of the new union station on Front St. The permit is for the main building and east wing between Bay and York Sts., the estimated cost being \$2,800,000. The total estimated cost of the completed building is \$3,400,000. This is the largest permit ever issued in Toronto.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, compared with those of 1915-16, from July 1, 1916:

	Gross		Net	
	Earnings	Expenses	Earnings	Increase
July	\$3,834,200	\$2,636,800	\$1,197,400	\$ 711,000
Aug.	3,684,900	2,612,900	1,072,000	614,300
Sept.	3,187,900	2,455,200	732,600	177,300
Oct.	3,716,800	2,496,500	1,220,300	36,700
	\$14,423,800	\$10,201,500	\$4,222,300	\$1,111,300
Incr	\$4,043,000	\$2,981,700	\$1,111,300

Approximate earnings for Nov., \$3,722,300, and for two weeks to Dec. 14, \$1,810,500, against \$3,535,400 and \$1,654,100 for same periods respectively in 1914.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1915-16, from July 1, 1916:

	Gross		Net	
	Earnings	Expenses	Earnings	Increase
July	\$12,247,440.39	\$8,230,348.66	\$4,017,091.73	\$1,216,688.61
Aug.	13,570,467.31	7,802,680.46	5,467,786.85	2,025,472.13
Sept.	12,134,159.96	7,004,400.80	5,129,759.16	384,458.52
Oct.	13,237,086.36	7,562,346.99	5,674,739.37	904,694.78
	\$50,899,154.02	\$30,599,776.91	\$20,289,377.11	\$2,721,924.48
Incr.	\$10,475,947.14	\$7,754,022.66	\$2,721,924.48

Grand Trunk Railway Earnings.

Following are the earnings and expenses for the G.T.R., including the Canada Atlantic Ry., the G.T.W.R. and D.H.G. & M.R., for October, compared with those for October, 1915:—

	Grand Trunk Railway.	
	1916.	1915.
Earnings	\$4,618,000	\$3,591,305
Expenses	3,270,000	2,527,500
Net earnings	\$1,348,000	\$1,063,805
	Grand Trunk Western Railway.	
Earnings	\$ 767,300	\$ 781,944
Expenses	650,300	562,392
Net earnings	\$ 117,000	\$ 219,552
	Detroit, Grand Haven & Milwaukee Ry.	
Earnings	\$ 275,000	\$ 293,442
Expenses	295,650	212,887
Net earnings	\$ 20,650*	\$ 80,555

*Deficit.
Approximate earnings for November, \$5,343,653, and for two weeks ended Dec. 14, \$2,355,174, against \$4,190,871 and \$2,035,759, for same periods respectively in 1915.

Grand Trunk Pacific Railway Earnings.

The approximate earnings for the Prairie Section, 916 miles, for Oct., were \$566,503, against \$973,581; and from July 1 to Oct. 31, \$1,643,008, against \$1,858,557 for same period 1915, and for three weeks ended Nov. 21, \$375,719, against \$591,472 for same period 1915.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Express, Telegraph, and Railway and Canal
Contractors' Interests.

W. H. HEWITT, 70 Bond Street, Toronto

United States Business Representative,
A. FENTON WALKER, 143 Liberty St., New York

Authorized by the Postmaster General for Canada,
for transmission as second class matter.

Entered as second class matter, July 25, 1913, at the
Postoffice at Buffalo, N. Y., under the Act of Congress
of March 3, 1879.

SUBSCRIPTION PRICE, including postage any-
where, \$2 a year.

SINGLE COPIES, 20 cents each, including postage.

The best and safest way to remit is by express money
order. Where one cannot be obtained, a post office
money order, or bank draft, payable at par in Toronto,
may be sent. Cheques or drafts not payable at par in
Toronto cannot be accepted. Remittances should be
made payable to Canadian Railway and Marine World.

Northern Colonization Ry.—The Que-
bec Legislature has ratified an exchange
of lands with the company. This meas-
ure affects the lands originally granted by
the Province as a subsidy in aid of the
building of the railway, which is now part
of the C.P.R. system.

Track Section Prize Competition on Eastern Lines, Canadian Pacific Railway.

For the past four years an annual track
section prize competition has been carried
out on the Eastern Lines, C.P.R., which
has aroused a healthy spirit of rivalry
and keen competition among the officers
and section forces of the different divi-
sions and districts. Sixty-two prizes are
awarded in the competition, as follows:—
A General Manager's prize to the fore-
man having done the best season's work
on Eastern Lines. Four General Superin-
tendent's prizes, to the foreman on each
district who has done the best season's
work, exclusive of the winner of the Gen-
eral Manager's prize. Fourteen Division
Superintendent's prizes, to the foreman
on each division who has done the best
season's work, exclusive of winners of
higher prizes. Forty-three Roadmaster's
prizes, to the foreman on each Roadmas-
ter's territory who has done the best sea-
son's work, exclusive of winners of higher
prizes.

Under this system no man can win
more than one prize, and all foremen
have an equal chance, as the quality of
the work done throughout the season is
the deciding factor, and not the actual
physical condition of the section at the
end of the season. The basis on which
the sections are judged is entirely effi-
ciency, and careful consideration is given
throughout the season to the condition of,
and work done on, ditches, gauge, spiking,
line, surface, bolts, rail wear, so far as it
can be controlled by the section forces,
switches, sidings, right of way and sta-
tion grounds, track signs, cattle guards
and fences. The amount of work done
and the hours of labor put in, both by
regular force and extra gang, are also
carefully considered, and the foreman ac-
complishing the best work with the least
amount of labor—the physical condition
of the section, as to grades, alignment,
drainage, and character of roadbed being
taken into consideration—wins the first
prize.

The number of hours of regular labor
and the number of hours of extra labor
on the section are figured against the
number of ties renewed, tie plates install-
ed or changed, rails changed over on
curves and ditching done, etc. The
amount of track handled, right of way,
spikes and bolts is fairly uniform on all
sections, so that the condition with re-
spect to these items at the end of the sea-
son is usually a criterion of the amount
and quality of the work done thereon
throughout the season. Where special
conditions affect such work they are taken
into consideration. Some idea of the care
exercised in judging a foreman's work
can be formed by following the work in
connection with the selection of a prize
section. Toward the end of the season,
on each of the 43 roadmaster's territories,
a section is picked out as the most deserv-
ing in point of work done during the sea-
son with the material and labor available.
These are carefully inspected by the Su-
perintendent and Resident Engineer, who
select the best one on each district for in-
spection by the General Superintendent
and Division Engineer. All divisions of
a district are covered by these two offi-
cers, and the section selected which they
consider eligible for the General Man-
ager's prize. The judging for the Gen-
eral Manager's prize is done personally
by the General Manager, the Engineer,
Maintenance of Way, the Assistant En-

gineer, Maintenance of Way, and district
officers.

The winner of the General Manager's
prize for 1916 is Foreman Allan King,
Section 8, Shogomoc Subdivision, a
branch line on the New Brunswick Dis-
trict. The winners of the General Superin-
tendents' prizes are as follows:—New
Brunswick District, Foreman O'Maillet,
Section 15, Moosehead Subdivision. Que-
bec District, Foreman O. Tremblay, Sec-
tion 7, Drummondville Subdivision. On-
tario District, Foreman J. McMinn, Sec-
tion 10, MacTier Subdivision. Algoma
District, Foreman A. Raiche, Section 13,
Cartier Subdivision.

Alaska Railway Construction Progress.

The United States Interior Department
reports the following progress in the
construction of the new government rail-
ways in Alaska up to Oct. 1:—During the
present year, grading has been completed
on the 38 mi. branch to the Matanuska
coal field from Matanuska Jct., a point
36 mi. northeasterly from Anchorage
Jct., a point on Cook Inlet, where con-
struction began a year ago, and rails are
being laid. It is anticipated that the
branch will be completed before the end
of the open season. At Moose Creek, a
point on the branch line, about 12 mi.
from Matanuska Jct., a coal mine has
been opened, and coal is being taken out
for the use of the railway and the town
of Anchorage. Clearing and grading are
under way on other portions of the line,
particularly at points northward from
Matanuska Jct., southerly from Anchor-
age toward Turnagain Arm of Cook In-
let and in the vicinity of Talkeetna (the
junction of the Talkeetna and Susitna
River about 100 mi. north of Anchorage).

The heaviest work to be encountered
on the line is the hard rock cliffs along
Turnagain Arm. Blasting and excava-
tion for line here will be actively pur-
sued during the winter. The Alaska
Northern Ry., extending from Seward to
Kern Creek, 71 mi., is being rehabilitated
through and put into condition to haul
construction material for the work along
Turnagain Arm between Kern Creek and
Anchorage. Clearing and grading are
under way on the northern end of the
main line in the vicinity of the crossing
of the Tanana River at Nenana—the aim
being to connect the Fairbanks mining
region with the Nenana coal fields (a
distance of 110 mi.) as early as possible.
By the end of the present working sea-
son it is anticipated that at least 85 mi.
of new construction will have been com-
pleted.

A recent press dispatch from Seward,
Alaska, says:—Delays in construction
will prevent the completion of the gov-
ernment railways between Seward and
Fairbanks before 1920 or 1921, instead
of 1918 as contemplated, Capt. F. Mears,
of the Alaska Railroad Commission, said
here to-day before departing for Wash-
ington, D.C., where he will make his re-
port. The tracks along the Turnagain
arm, between Seward and Anchorage will
probably not be completed before 1918
instead of 1917. Rough weather and
difficulties in obtaining supplies are re-
sponsible for the delay. (Oct., 1916, pg:
400.)

Canadian Northern Railway Construction, Betterments, Etc.

Montreal Tunnel and Terminal Co.—Work has been started on the "cut" for the erection of the Canadian Northern Ry. station in Montreal. This cut will extend from Cathcart St. on the north to Lagauchetiere St. on the south, and from Mansfield St. on the west to St. Monique St. on the east. The work is being gone on with on Dorchester St., between Mansfield and St. Monique Sts., tramway service being temporarily suspended. The cut at this point will be 170 ft. wide and 50 ft. deep, which will be covered with a steel trestle bridge, with a concrete deck on which a double track car line will be laid.

Canadian Northern Quebec Ry.—The Board of Railway Commissioners has authorized the opening for freight traffic of the line through Arundel, Ponsonby, and Amherst townships, Argenteuil and Ottawa counties, Que., mileage 0 to 9.57. This is the recently complete line from Arundel to Kaolin.

Toronto-Hamilton-Niagara line.—A route map has been filed with the Railways Department at Ottawa for a line from Toronto to Hamilton and thence to Thorold, Ont. The object is to secure a right of way for the line as between Bronte and Thorold, 44 miles. The Board of Railway Commissioners' approval has been given for sections of the route, between Toronto and Bronte, on the plans for the actual location of the line. The plans filed show a route along the Toronto and Niagara Co.'s power line.

Canadian Northern Ry.—A press report states that the company proposes to build a new station in Fort William, Ont., early in the summer. Two sites are said to be under consideration.

Canadian Northern Pacific Ry.—There has been deposited with the Public Works Department at Ottawa plan and description of the site and elevation of a proposed railway bridge across the South Thompson River at Kamloops.

The British Columbia Minister of Railways has approved of the company's plans for a temporary frame trestle over the British Columbia Electric Ry. at station 157+94, mileage 2.7, the plan having been approved by the B. C. E. R.

Vancouver Terminals.—Sir William Mackenzie, President, and M. H. MacLeod, General Manager and Chief Engineer, arrived in Vancouver, Dec. 12, to deal with a number of matters affecting the company's interests. They met the Mayor and city council to discuss the erection of the sea wall, the hotel, and other matters connected with the development of the False Creek terminals project. The company desires to secure an extension of time for carrying out the sea wall work, but the council wants it to be gone on with and completed within the time originally specified. Sir William is reported to have stated that the work would be resumed as soon as he had an opportunity of verifying certain matters. So far as the hotel site was concerned, Sir William stated that under present circumstances it would not be wise to go on with the erection of a large new hotel in the city. The company would prefer to build on its own property or on property near the same ground acquired from the city. The company would put up a better building on its own site than the one called for by the agreement. The terms of the

agreement would be carried out, but he thought there was a just ground for granting an extension of time.

Sir William Mackenzie and Mr. MacLeod met the New Westminster City Council, Dec. 14, to discuss matters affecting the company's interests in that city. In the course of an interview he is reported to have said the new car shops at Port Mann would be opened about Feb. 1.

Lines on Vancouver Island.—D. O. Lewis, District Engineer, in charge of construction of lines on Vancouver Island, is reported as stating, Nov. 30, that the line from Patricia Bay to Victoria was ready, and traffic could be operated over it at any time.

Sir William Mackenzie and General Manager MacLeod, were in Victoria, Dec. 12, and made a trip of inspection over the line. Sir William said the line would be opened for traffic as early as possible; the electric motor car which would be used on the line would not be taken over from Port Mann until the ferry slip at Patricia Bay was finished. The line for through traffic from the mainland would be opened after the arrival of the car ferry from Quebec, but whether the Victoria-Patricia Bay line would be opened before that time would depend upon what local traffic could be obtained. (Dec. 1916, pg. 490.)

Greater Winnipeg Water District Railway Construction.

W. G. Chace, M.Can.Soc.C.E., read a paper on the aqueduct for the Greater Winnipeg Water District before the Canadian Society of Civil Engineers recently. The water supply is to be obtained from Indian Bay, Shoal Lake, a branch of Lake of the Woods. The distance being about 97 miles. The right of way, 300 feet wide (except for the easterly 12 miles which is 500 ft. wide) was cleared by contract in the winter and early spring of 1914. A standard gauge railway was constructed 40 ft. from the south boundary of the right of way during 1914 at a total cost of \$1,325,000. The construction of the railway presented no unusual difficulties, and was carried out with such dispatch that trains were operating over the whole of it in Jan. 1915. The equipment consists of four 60-ton moval locos, twenty-five 16-yard dump steel cars (now under contract), 20 flat cars, 10 box cars, 3 cabooses and 2 passenger cars. Additional equipment is being purchased.

The road, which is operated by the Greater Winnipeg Water District Commissioners, is connected with the Paddington transfer yard, meeting there all the railways running into Winnipeg, so that contractors' shipments can be made direct to their camps without reloading. Railway headquarters have been established at Deacon, where the operating staff is located, and where a machine shop, forge shop, and locomotive shed have been erected. A station building containing offices for the operating department and for one of the division engineers has also been erected at this point, as well as a cement shed, pumping plant, coal dock, oil house, camp buildings and electric light plant. Nine sidings and five 12,000-gallon water tanks have been located at nearly equi-distant

points along the line. A telephone line has also been erected from end to end of the right of way, which is used both for train dispatching and for communication between the division engineers and headquarters at Winnipeg. A circuit for use of one of the contractors has also been erected on the District's poles.

The London and Port Stanley Railway and the G.T.R.

In the London & Port Stanley Ry.'s early days an agreement was made with the then Great Western Ry under which the L. & P.S.R. was to have the use of the G.W.R. station at London, Ont., and that the G.W.R. agents should sell tickets and check L. & P.S.R. passengers' baggage in the same way as for G.W.R. passengers. The agreement was carried out by the G.W.R. and its successor, the G.T.R., until the electrification of the L. & P.S.R. The London Railway Commission, which now operates the L. & P.S.R., under the new order of things, has applied to the Board of Railway Commissioners for an order directing the G.T.R. to carry out the original agreement, which is dated April 25, 1870. The commissioners reserved judgment, after refusing the G.T.R. counsel's application to have the matter settled in the courts, on the ground that the commission has no jurisdiction over an agreement affecting the working of two railway companies.

Grain Inspection at Western Points.

The following figures, compiled by the Department of Trade and Commerce, show the number of cars of grain inspected on railways at Winnipeg and other points on the Western Division, for November, and for three months ended Nov. 30, compared with those inspected for three months ended Nov. 30, 1915.

	3 months 3 months

Mail Transportation on U.S. Railways.

—The U.S. Postmaster General's annual report, issued recently, says,—“For many years the department has brought to the attention of Congress the necessity for a change in the basis of compensating railways for carrying the mails, asserting that the then existing basis of pay according to weight was inequitable and unjust, resulting in cases of both overpayment and underpayment to certain railways, and which in the aggregate resulted in the payment by the Government of an excessive sum for this service. The department will, on Jan. 1, file with the Interstate Commerce Commission its comprehensive plan of service, which will embody a recommendation looking to a reduction of the rates but at the same time assure to the railways a just and adequate compensation for the service performed.” As a matter of fact, they have repeatedly shown that the compensation has been wholly inadequate.

F. W. Peters, General Superintendent, C.P.R., Vancouver, B.C., received a letter recently from Portland, Ore., asking for forgiveness of a man who stole a ride on a C.P.R. train some years ago. The writer did not enclose the price of the ride.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Central and Hudson Bay Ry.—Following the termination of the receivership, the following appointments have been made:

R. HOME SMITH, Toronto, has been appointed President;

G. A. MONTGOMERY, heretofore General Superintendent, has been appointed Vice President and General Manager. Office, Sault Ste. Marie, Ont.;

R. S. McCORMICK, Chief Engineer, has also been appointed Superintendent, vice G. A. Montgomery, promoted. Office, Sault Ste. Marie, Ont.;

A. SENIOR has been appointed Trainmaster, Sault Ste. Marie, Ont., vice T. F. Rahilly, resigned.

None of the above mentioned officials has jurisdiction on the Algoma Eastern Ry., which has been placed under separate management.

Following is a list of other officials, all with offices at Sault Ste. Marie, Ont., except where otherwise stated: Secretary, A. TAYLOR, Toronto; Comptroller and Treasurer, I. L. GODFREY; Assistant Comptroller and Treasurer, E. B. BARBER; General Freight and Passenger Agent, H. J. HERROLD; Purchasing Agent and Chief Storekeeper, F. W. ACHESON; Master Mechanic, T. FRASER; Locomotive Foreman, H. D. BARLOW; Car Foreman, C. ROSE; Roadmaster, O. AUBIN; Roadmaster, D. A. McINNIS, Franz, Ont.

Algoma Eastern Ry.—Following the termination of the Algoma Central and Hudson Bay Ry. receivership the man-which was formerly under A. C. & H. B. R. officials, has been separated, there being no physical connection between the two roads. The following appointments have been made:—President, W. C. FRANZ, Sault Ste. Marie, Ont.; Vice President, J. FRATER TAYLOR, Sault Ste. Marie, Ont.; Secretary, A. TAYLOR, Toronto; Treasurer, E. W. SHELL, Sault Ste. Marie, Ont.; Comptroller T. F. RAHILLY, heretofore Trainmaster, A. C. & H. B. R., Sault Ste. Marie, Ont., Sudbury, Ont.; General Manager, D. F. THOMAS, heretofore Superintendent, Trans St. Marys Traction Co., Sault Ste. Marie, Ont., Sudbury, Ont.; Superintendent, A. J. DONEGAN, Sudbury, Ont.; J. P. MADER, General Agent, Sudbury, Ont.

Canadian Government Railways.—W. B. JOHNSON has been appointed Master Mechanic, District 6, Intercolonial Division. Office, Truro, N.S.

Canadian Northern Ry.—WM. PHILIPS, Freight Traffic Manager, Eastern Lines, Toronto, has resigned to enter the Cunard Steamship Co.'s service.

V. NICHOLSON, heretofore chief clerk to City Agent, Kingston, Ont., has been appointed City Ticket and Express Agent, Belleville, Ont.

C. E. JONES has been appointed Supervisor of Fuel, Eastern Lines, in charge of distribution and accounting of all fuel, for locomotives, shops, stations, water stations and all other purposes. All reports on fuel consumption are sent direct to him and he reports to the General Manager. Office, Toronto.

R. R. COOPER, heretofore ticket clerk, Union Station, Toronto, has been appointed Ticket Agent there, vice A. R. Burk, who has enlisted with the 255th

Battalion, Queen's Own Rifles, for overseas service.

W. M. HOOD, heretofore Travelling Freight and Passenger Agent, North Bay, Ont., has been appointed District Freight and Passenger Agent, Sudbury, Ont.

W. J. COUGHLIN has been appointed Assistant Supervisor of Bridges and Buildings, between Port Arthur and Hornepayne, Ont.

B. L. RUNKLE has been appointed Track Supervisor, with jurisdiction from Longue Lac to Fire River, Ont. Office, Hornepayne, Ont.

P. VICKS has been appointed Track Supervisor, with jurisdiction from Fire River to Capreol, Ont., vice J. Quinlan, transferred. Office, Foleyat, Ont.

J. QUINLAN, heretofore Track Supervisor, Fire River to Capreol, Foleyat, Ont., has been appointed Track Supervisor, with jurisdiction from Port Arthur to Longue Lac, Ont., vice W. M. Jaeklin, appointed Inspector of Maintenance of Way, Toronto, as announced in our last issue. Office, Port Arthur, Ont.

J. A. ROSS has been appointed station ticket agent, Saskatoon, Sask., vice W. E. Presscott, resigned.

Canadian Northern Transfer Co.—D. H. MURRAY has been appointed acting Superintendent, vice R. A. C. Young on active service. Office, Montreal.

Canadian Pacific Ry.—E. ALEXANDER, heretofore one of the two assistant secretaries of the company, has been appointed Secretary, vice W. R. Baker, C.V.O., who, at his own request, has been relieved of his duties and placed on the retired list. Office, Montreal.

G. W. CURTIS, Industrial Agent, Eastern Lines, Montreal, having enlisted in the Royal Flying Corps, any communications or actions in connection with the company's industrial work are being attended to by H. P. TIMMERMAN, Industrial Commissioner, or by one of the traffic or operating officials immediately in touch with the situation.

K. D. JOSEPH, heretofore acting Assistant Superintendent, Bruce Division, Ontario District, Toronto, has been appointed Trainmaster, McAdam, N.B. This is a new position occasioned by winter traffic to the seaboard.

G. C. GAHAN, heretofore chief clerk, General Auditor's Office, has been appointed Assistant General Auditor, Montreal.

F. BENDER has been appointed acting Engineer of Tests, Angus Shops, Montreal, vice G. St. G. Sproule, loaned to the Imperial Munitions Board.

M. KELLY, heretofore Resident Engineer, Toronto Terminals, has been appointed Resident Engineer, Farnham Division, Quebec District, vice D. A. Wallace, resigned. Office, Farnham, Que.

J. H. REEDER, heretofore Resident Engineer, Schreiber Division, Algoma District, Schreiber, Ont., has been appointed Resident Engineer, Smiths Falls Division, Quebec District, vice T. B. Ballantyne, transferred. Office, Smiths Falls, Ont.

E. A. CAMPBELL, heretofore Freight Agent, Ottawa, Ont., has been appointed Assistant Superintendent, Smiths Falls Division, Quebec District. Office, Smiths Falls, Ont.

F. P. TINKER has been appointed District Freight Agent, Ottawa, Ont., vice G. P. Ruickbie, transferred.

W. COULTER, heretofore Assistant Superintendent, Smiths Falls Division,

Quebec District, Smiths Falls, Ont., has been appointed Freight Agent, Ottawa, Ont.

L. G. ROGERS, heretofore Assistant Superintendent, Trenton Division, Ontario District, Trenton, has been appointed Yardmaster there.

D. O. WOOD, General Freight Agent for Ontario, Allan Line Steamship Co., Toronto, has also been appointed Assistant Export and Import Agent, C.P.R., vice W. C. Duncan, loaned to the acting Director of Overseas Transport for the balance of the war. Office, C.P.R. Building, Toronto.

J. A. TOBIN, heretofore Assistant Superintendent, London Division, Ontario District, London, has been appointed Assistant Superintendent, Bruce Division, Ontario District, vice K. D. Joseph, transferred. Office, Toronto.

F. S. ROSSETER, heretofore Resident Engineer, London, Ont., has been appointed Assistant Superintendent, London Division, Ontario District, vice J. A. Tobin, transferred. Office, London, Ont.

J. M. SILLIMAN, heretofore Resident Engineer, Laurentian Division, Quebec District, Montreal, has been appointed Resident Engineer, London Division, Ontario District, vice F. S. Rosseter, transferred. Office, London.

T. B. BALLANTYNE, heretofore Resident Engineer, Smiths Falls Division, Quebec District, Smiths Falls, Ont., has been appointed Resident Engineer, Schreiber Division, Algoma District, vice J. H. Reeder, transferred. Office, Schreiber, Ont.

J. A. DeWOLFE, heretofore chief clerk to Vice President and General Manager, Western Lines, Winnipeg, has been appointed Trainmaster, Portage Division, Manitoba District. Office, Winnipeg.

A. J. SHULMAN, heretofore Travelling Passenger Agent, Edmonton, Alta., has been appointed Travelling Passenger Agent, Alberta District. Office, Calgary.

E. OFFICER, heretofore Travelling Passenger Agent, Southern Alberta, has been appointed chief clerk to District Passenger Agent, Calgary, Alta., vice V. A. Bowes, who has taken out a commission for active service.

W. J. McLEAN, heretofore Road Foreman of Locomotives, Medicine Hat Division, Alberta District, Medicine Hat, has been appointed Trainmaster, Medicine Hat Division, Alberta District, vice A. A. Smith. Office, Medicine Hat.

J. L. JAMIESON, heretofore locomotive man, Medicine Hat, Alta., has been appointed Foreman of Locomotives, Medicine Hat Division, Alberta District, Medicine Hat, vice W. J. McLean, transferred.

E. TASKER, heretofore Car Foreman, Crowsnest, B.C., has been appointed Car Foreman, Field, B.C., vice M. J. Jordan, transferred to Vancouver, B.C., as car repairer.

F. W. ADAMS, heretofore boiler maker, Lethbridge, Alta., has been appointed Foreman Boilermaker, Revelstoke, B.C., vice S. Blower, transferred.

A. E. CHESTERMAN, heretofore car repairer, has been appointed Car Foreman, Crowsnest, B.C., vice E. Tasker, transferred.

W. S. STEWART, heretofore ticket clerk, City Ticket Office, Victoria, B.C., is reported to have been appointed ticket agent, Hotel Vancouver, Vancouver, B.C.

Cunard Steamship Co.—WM. PHILIPS, heretofore Freight Traffic Manager, Eastern Lines, Canadian Northern

Ry., Toronto, has been appointed Canadian Representative, Cunard Steamship Co. Office, Montreal.

Dominion Atlantic Ry.—W. K. McQUARRIE, heretofore Resident Engineer, Revelstoke Division, British Columbia District, C.P.R., Revelstoke, B.C., has been appointed Engineer, D.A.R., vice G. C. Hare, resigned. Office, Kentville, N.S.

Duluth, South Shore & Atlantic Ry.—W. J. ELLISON, heretofore acting Treasurer, has been appointed Treasurer. Office, Marquette, Mich.

Grand Trunk Ry.—P. J. PHELAN has been appointed Supervisor of Bridges and Buildings, Montreal Division, vice W. J. Tyers, transferred. Office, Montreal.

W. J. TYERS, heretofore Supervisor of Bridges and Buildings, Montreal Division, has been appointed Supervisor of Bridges and Buildings, Belleville Division, vice J. McMahon, deceased. Office, Belleville, Ont.

The following station agents have been appointed:—Bromptonville, Que., P. J. Bernard; Danville, Que., L. D. Cormier; Strathmore, Que., T. W. Brown; St. Polycarpe Jet., Que., A. C. Ritza; Lorneville Jet., Ont., W. R. Dickson; Woodville, Ont., W. Oliver; Collingwood, Ont., R. W. Thom; Longwood, Ont., H. G. Simmons; Marshville, Ont., G. F. Haynes; Hespeler, Ont., N. A. Walford; Walkerton, Ont., J. F. Clancy; Cargill, Ont., W. Russell.

Grand Trunk Pacific Ry.—A. H. MULCAHEY has been appointed Assistant Purchasing Agent, Winnipeg.

The following station agents have been appointed:—Pope, Man., F. D. Livingstone; Zelma, Sask., J. W. McGhee; Lewvan, Sask., J. H. Walker; Edgerton, Alta., G. L. Jordan; Viking, Alta., J. L. Dodds; Bruce, Alta., R. L. Summer; Calgary, Alta., J. J. Lucas; Giscome, B.C., C. W. Jaminette.

Hudson Bay Railway.—A. V. FRANKLIN, of the Manitoba Comptroller's office, Winnipeg, has been appointed acting Auditor, H.B.R., vice W. J. Logan, appointed Assistant to the Comptroller General for Manitoba. Office, Pas, Man.

Kettle Valley Ry.—A. A. SMITH, heretofore Trainmaster, C.P.R., Medicine Hat, Alta., has been appointed Assistant Superintendent, K.V.R. Office, Penticton, B.C.

Michigan Central Rd.—D. W. DONAHUE, heretofore Superintendent, Detroit Division, Detroit, Mich., has been appointed Superintendent, Northern Division, Bay City, Mich.

R. B. TURNEY has been appointed Superintendent, Detroit Division, Detroit, Mich., vice D. W. Donahue, transferred.

Minneapolis, St. Paul & Sault Ste. Marie Ry.—R. G. NORRIS has been appointed Travelling Passenger Agent, Kansas City, Mo., vice K. A. Cook, promoted.

Oshawa Ry.—J. J. CALLAHAN has been appointed Superintendent, vice D. A. Vallean. Office, Oshawa, Ont.

Pennsylvania Rd.—S. T. STACKPOLE, heretofore Canadian Freight Agent, Toronto, has been appointed Representative, Foreign Freight Department, New York, devoting his entire time to the work of that department.

EDWARD PLUMMER, heretofore in the Toronto Office, has been appointed Canadian Freight Agent, vice S. T. Stackpole, promoted. Office, Toronto.

Railway Electrification was the subject of an address to the American Institute of Electrical Engineers, Toronto section, on Dec. 15, by G. H. Gill, Assistant Engineer, Railway and Traction Department, General Electric Co.

Traffic Orders by Board of Railway Commissioners.

Rates on White Lead and Paint.

25667. Nov. 27. Re Montreal Board of Trade complaint against advances made in rates on paints, dry or in oil, and on khite or red lead, in carloads, from Montreal. Upon consideration of the evidence presented in the Eastern Rates Case relating to these commodities, and its appearing that the rates on white lead were not disposed of in the judgment in that case, and upon the reading of what is filed in support of the present application, and the report of the Board's Chief Traffic Officer, it is ordered that the Grand Trunk, Canadian Pacific and Canadian Northern Railways be ordered to publish and file commodity rates on dry white lead, in carloads, from Montreal, of 2c. per 100 lb. over the commodity rates which were being charged thereon when the application in the Eastern Rates Case was presented to the Board, but restricted to destinations where paints are manufactured; the said rates to become effective not later than Dec. 15, 1916; and it is further ordered that the application with

railway and the C.P.R. in the n.w. ¼ sec. 36 and the n.e. ¼ sec. 35, Tp. 25, R. 4, west 2nd m., at Yorkton, Sask. Upon reading what is filed in support of the application and on behalf of the C.P.R., and upon the report and recommendation of the Board's Assistant Chief Engineer, it is ordered that the application be granted, the question of the cost of the transfer track to be reserved for further consideration by the Board.

Grand Trunk Railway Track Inspection Trip.

The official inspection trip over G.T.R. lines, referred to in previous issues, was completed on Oct. 23, and we have been officially advised recently the names of the section foremen who received the highest general average and honorable mention on each supervisor's territory, as follows:—

Eastern Lines—GROUP 1.—J. S. Burnett, B. Little, O. Arsenault, A. Dufour, M. Peters, F. Serviss, A. Woods. GROUP 2.—F. W. Skeates, H. Le Page, J. Manley, F. Buchey. GROUP 3.—F. Therrien, W.

Box Car, Duluth, Winnipeg and Pacific Railway

The above illustration shows one of the 750 box cars which the Canadian Northern Ry. has had built in the U. S. recently for its subsidiary, the D. W. & P. Ry. They were fully described in Canadian Railway and Marine World for November, 1916, pg. 438.

regard to the rates on paints be dismissed.

Rates on Furs, Hides, Pelts and Skins.

25687. Re application of Canadian Freight Association, on behalf of the railway companies subject to the Board's jurisdiction under sec. 321 of the Railway Act, for approval of proposed Supplement 8 to Canadian Freight Classification 16, revising the ratings on furs, hides, pelts and skins. Notice of the proposed revised ratings having been given in the Canada Gazette as required by sec. 321 of the Railway Act, and to the business organizations enumerated in General Order 153, and the proposed changes having been agreed to by the parties interested therein; upon the consideration of what has been filed, and upon the recommendation of the Board's Chief Traffic Officer, it is ordered that the proposed Supplement as amended and revised and resubmitted for approval by the Canadian Freight Association's Chairman, by his letter dated Nov. 15, 1916, be approved.

Transfer Track at Yorkton.

25724. Dec. 15. Re application of the Canadian Northern Saskatchewan Ry. Company (Wroxton Westerly Branch), under secs. 227 and 237 of the Railway Act, for approval of proposed transfer track between the applicant company's

Cooke, J. Bell, W. Woodward, H. Colwell, J. McKenney, C. Frebel.

Ontario Lines.—GROUP 1.—A. McKellar, J. Eyre, J. Thompson, D. Dargie, E. Dybal, J. Moore, J. Ballard, W. Kirchen, J. Peltier. GROUP 2.—H. Hildenbrandt, W. Waldruff, H. Melway, J. Kavanagh, J. Massinger, I. Vandenburg, A. Bidwell, F. Fukajewski, C. Bullock. GROUP 3.—C. Martin, R. H. Kearns, R. Stonehouse, J. Townsend, E. Stephenson, R. Hill, J. McFarland.

Western Lines.—GROUP 1.—J. Hubbard, C. F. Hanicke, B. Long, W. Smith, B. Wedel. GROUP 2.—J. Cooney, W. Johnston, C. Wendt, J. Coughlin, A. Wet-skniski. GROUP 3.—G. Boehl.

Skilled Railway Employes for Overseas Service.—T. L. Scott, of Mugrave, N.S., has been authorized to raise No. 1 Section, Skilled Railway Employes, for railway operations in France. The unit will consist of one captain, two lieutenants and 268 other men. It will be recruited throughout Canada and will be finally mobilized in Montreal, Mr. Scott being appointed Captain.

The Geographic Board announces that the name of Carleton Point, P.E.I., has been changed to Borden Point, and that the new car ferry terminal site there has been named Port Borden.

Canadian Pacific Railway Construction, Betterments, Etc.

New Brunswick District.—The new shops at McAdam Jct., N.B., are expected to be completed and ready for occupation by Jan. 31. Only some minor fittings are required in the stores building, the blacksmiths' shop, and the coaling plant; and the power house is ready for the installation of the boilers and machinery.

Northern Colonization Ry.—The Dominion Parliament is being asked to extend the time for the construction of the extension of this railway now terminating at Mont Laurier, Que., westerly to Lake Timiskaming, where it would effect a junction with the C.P.R. branch from Mattewar to Timiskaming and Kippewa Lakes, and the Interprovincial and James Bay Ry.

Manitoba District.—D. C. Coleman, Assistant General Manager, Western Lines, who was in Port Arthur, Ont., Dec. 1, on an inspection trip, is reported to have said in the course of an interview that while the company had immense interests at Fort William, which it was its duty to conserve and protect, it should be understood that it would endeavor to do so without injury to Port Arthur's special interests. The company received a great deal of traffic from Port Arthur, and it would be folly on its part to jeopardise it. These observations were made by him on account of some feeling having developed in Port Arthur that the C.P.R. was in opposition to some plans being worked out for the extension of the harbor facilities of the city easterly.

The question of the supply of water to the C.P.R. from the Greater Winnipeg Water District's plant now under construction, is reported to be again under consideration. The C.P.R. has paid over \$40,000 towards the expense of this work, out of \$200,000 promised. The company pays no direct taxes towards the construction of the aqueduct, and in July, 1916, it was notified by the Winnipeg City Council that as it did not pay taxes it could not be supplied with the water.

Alberta District.—The Board of Railway Commissioners has authorized the opening for traffic of the extension of the line easterly from Sterling, Alta., between mileage 71.7 and 85.1. Track has just been laid to the latter point, at the Manyberries settlement.

We are officially advised that S. E. Jenkins & Co. have secured the contract for the new pier at Granville St., Vancouver. The dimensions of the pier with some description of the work to be done were given in Canadian Railway and Marine World for October on page 403. S. S. Jenkins has been in Vancouver recently arranging for starting the work, which is to be pushed as fast as possible.

A Chicago press report stated on Dec. 5 that the C.P.R. was preparing to spend between \$10,000,000 and \$15,000,000 upon grain elevators and additional terminal facilities at Vancouver. The company has just let a contract for the erection of a new pier at Vancouver, and has plans prepared for further development of its ocean terminals at Vancouver, for carrying on as the extension of its business demands, but it is scarcely likely that they include a grain elevator, as the one built by the Dominion Government has not yet had a bushel of grain stored in it. (Dec. 1916, pg. 492.)

British Columbia District.—While some trains have been operated through the Connaught Tunnel at Rogers Pass, the

company announced recently that it would not be opened for regular traffic until Dec. 31, or later." The distance from Calgary, Alta., to the tunnel's Bear Creek portal is 216.84 miles, and from the Glacier portal to Vancouver is 419.56 miles; the tunnel itself is about 5 miles long. The mileage to Vancouver from various points by the old route and by the tunnel are:—

	Old Route.	Tunnel Route.
Toronto	2,720	2,715.50
Montreal	2,895	2,890.10
Winnipeg	1,483	1,478.50
Calgary	646	641.40

G. A. Mountain, Chief Engineer Board of Railway Commissioners, inspected the tunnel Dec. 7, and the Board has authorized its opening for traffic.

Railway Rolling Stock Notes.

The C.P.R. has received 423 box cars from its Angus shops, Montreal.

The G.T.R. is reported to be ordering material and specialties for repairing 480 box cars in its own shops.

Orders are reported to have been received from France, by the Baldwin Locomotive Works, for 100 heavy type locomotives.

A cable dispatch from England states that the British War Office has placed an order with the Canadian Locomotive Co. for 40 consolidation locomotives.

The C.P.R. has ordered 432 freight refrigerator cars from its Angus shops, Montreal, and has cancelled the order placed there for 74 steel underframe box cars, 40 ton capacity, which was mentioned in our November issue.

The Canadian Northern Ry. has received a further 400 box cars, nos. 30,300 to 31,098 inclusive, from Haskell & Barker Car Co.; 1 rotary snow plough from American Locomotive Co.; 2 electric locomotives from General Electric Co., and 1 from Canadian General Electric Co., for Mount Royal Tunnel service.

It is reported from Russia that the decapod (2-10-0) locomotives shipped from this continent recently, and some of which were made by the Canadian Locomotive Co., have created records there for haulage capacity. One of these locomotives, operating over the Nikolaief Division of the Southern Ry., is stated to have hauled a load of 4,424 tons, on an experimental trip. The length of the train was 2,800 ft.

The Russian Government, which was mentioned in our last issue as having placed orders for decapod (2-10-0) locomotives as follows:—Canadian Locomotive Co., 20; American Locomotive Co., 40, and Baldwin Locomotive Works, 40, is now reported to have increased the orders, with the Canadian Locomotive Co., by 21; and with the American Locomotive Co. and the Baldwin Locomotive Works, by 66 each, making a total of 253 altogether.

Canadian Government Railways have received 7 mikado locomotives from Canadian Locomotive Co. 1 rotary snow plough and 10 Santa Fe (2-10-2) locomotives from the American Locomotive Co. Particulars of the mikado locomotives were given in a previous issue. Following are some details of the Santa Fe locomotives:—

Weight in working order, engine	324,000 lbs.
Weight in working order, engine and tender	514,000 lbs.
Weight on drivers	260,000 lbs.
Cylinders	26 by 32 ins.
Boiler pressure	200 lbs.
Water capacity	8,300 imp. gals.

Among the Express Companies.

P. E. Matthews, Springside, Sask., has been appointed agent, Dominion Ex. Co., Viscount, Sask.

G. L. Shearer has been appointed acting agent, Canadian Ex. Co., Prince George, B.C., vice M. E. McLeod.

The Canadian Ex. Co. has opened offices at Lawson, Quinton and Riverhurst, Sask.; Mountain Park, Alta., and Giscome, B.C.

V. Nicholson, City Ticket Agent, Canadian Northern Ry., Belleville, Ont., has also been appointed agent, Canadian Northern Express Co. there.

The Canadian Northern Ex. Co. has moved its accounting department from Winnipeg to Toronto, in charge of J. A. Hill, with office at 39 Wellington St. East.

The Canadian Northern Ex. Co. has opened offices at Bristol, Que.; Vista, Man.; and Brule, Forestburg and Meeting Creek, Alta., and has closed its offices at East Selkirk and Oakland, Man., and Errington, Alta.

The Express Traffic Association of Canada has removed its offices from the Dominion Express Building, King and Simcoe Sts., Toronto, to Canadian Express Building, 95 McGill St., Montreal. As stated in our last issue, C. N. Ham has been appointed Secretary.

The United States Ex. Co. has made a third distribution of assets, amounting to \$8 a share, the total amount paid since the commencement of liquidation being \$48 a share. All the securities have now been disposed of, and it is anticipated that some of the real estate will be offered for sale shortly. The building at 2 Rector St., New York, is valued at \$3,500,000, and when this has been sold a further dividend will be paid.

The Good Cheer Club, an organization of Dominion Ex. Co.'s employes in Winnipeg, is looking after the welfare of the 36 employes who have gone to the front from Winnipeg. Since March, a wrist watch has been given to each man enlisting, and 160 parcels have been sent overseas. In addition to this, arrangements have been made with a catering firm in London, Eng., to see that any of the company's employes who may be wounded and in hospital are well looked after.

Canadian Ex. Co.'s earnings, expenses, etc., for August and for two months ended Aug. 31, 1916, compared with those for same periods, 1915, are as follows:—

	Aug. 1916	Aug. 1915
Mileage lines covered	12,049.93	10,238.13
Transportation charges	\$380,452	\$325,941
Express privileges, Dr.	220,090	170,060
Operations other than transportation	6,067	5,370
Total operating revenue	166,429	161,250
Operating expenses	163,043	133,942
Net operating revenue	3,385	27,307
Uncollectible revenue from transportation	10	13
Express taxes	4,700	4,200
Operating income	1,325	23,094
	July 1 to	July 1 to
	Aug. 31, 1916	Aug. 31, 1915
Transportation charges	763,265	633,615
Express privileges, Dr.	410,191	327,182
Operations other than transportation	11,719	10,632
Total operating revenue	364,794	316,966
Operating expenses	321,456	270,763
Net operating revenue	43,337	36,202
Uncollectible revenue from transportation	55	10
Express taxes	9,400	8,400
Operating income	33,881	37,789

C.P.R. Ontario Employes have contributed \$500 to the Toronto and York County Patriotic Fund, making their 15th contribution, with a total of \$11,589 since Sept., 1915.

Electric Railway Department

Proposed Hydro Electric Radial Railways in the Niagara Peninsula.

A number of municipalities concerned in the proposed construction of radial railways between Port Credit and St. Catharines, and between Welland and Bridgeburg, will be asked to vote, on Jan. 1, 1917, to authorize the councils to enter into agreements with the Hydro Electric Power Commission of Ontario for the construction and operation of such lines.

The Port Credit-St. Catharines line is intended to connect with the proposed hydro radial line between Toronto and London, already authorized, at Port Credit, and the municipalities interested are,—Toronto, Trafalgar, Nelson, East Flamboro, West Flamboro, Barton Saltfleet, North Grimsby, Clinton, Louth and Grantham townships; Grimsby and Beamsville villages; Oakville and Burlington towns, and Hamilton and St. Catharines cities. The total mileage from Port Credit to St. Catharines is 59.57. The route proposed is as follows,—

Port Credit-Hamilton section: From a point approximately one mile west of Port Credit on the projected Toronto-London line it is proposed to parallel the Grand Trunk Railway to near Clarkson, thence southwesterly across the Toronto-Hamilton highway to Con. 3, thence through same to Oakville, where Oakville Creek will be crossed near Sheddon Ave. From Oakville the line will strike straight for the Hamilton Radial Ry. crossing of Bronte Creek, from which it is proposed to parallel the Hamilton Radial Ry. to Burlington. Through Burlington the line will cross the town in the neighborhood of Wellington Ave., and thence direct to a crossing of the old Desjardins Canal at Valley Inn;

Hamilton City section: Through Hamilton it is proposed to parallel the G.T.R. main line on the west side between the railway and the highway. Through Harvey Park and Dundurn Park the line will be south of and as close to the G.T.R. as possible, and will continue easterly, crossing Barton St. near Greig St., and keeping on the south side of Barton St. to the corner of Tiffany St., where it will cross Barton St. and continue northeasterly across Bay, Park, Murray and McNab Sts. and James St. between Murray and Stuart Sts., thence in the same general direction across Hughson, Mary, Catharine, Ferguson and Wellington Sts., at which latter point it will turn and follow south of Ferire St., across Victoria and Emerald Sts. to a point just north of the T.H. & B.R. spur, which it will parallel on the north side to Sherman Ave., thence it bears northeasterly to the south side of the Hamilton and Northwestern Ry., which it will parallel to the city limits;

Hamilton-St. Catharines section: From Kenilworth Ave., Hamilton, just south of the Hamilton and Northwestern Ry., the line will turn and bear southeasterly to midway between the G.T.R. Stoney Creek station and the village, thence to about ¼ mile north of Fruitland and at about the same distance north of the Hamilton stone road as far as Winona, from which it will parallel the G.T.R. on the south side through Grimsby and as far east as the Grimsby and Clinton township line, from which it will bear southeasterly to Beamsville, just north of the Hamilton stone road, and thence parallel the same

to Jordan. From Jordan to the town line between Louth and Grantham it is proposed to follow in the neighborhood of the road allowance between concessions 6 and 7 of Grantham Tp. to where it crosses the G.T.R., thence southeasterly to near Victoria and Permilla Sts. and along Permilla St. to the west end of the new bridge over the old Welland Canal.

Following is an estimate of the cost of construction, equipment and operation, with estimated operating revenue,—

Capital Cost:	
Right-of-way, track construction, and buildings	\$8,935,363
Sub-station, car shops, and rolling stock	2,425,000
	\$11,360,363
Annual Operating Revenue:	
Passenger revenue	\$760,000
Freight revenue	545,000
Miscellaneous revenue	57,000
	\$1,362,000
Annual Charges:	
Operating expenses	\$570,289
Maintenance expenses	152,193
	\$722,482
Total operating and maintenance expenses	\$722,482
Interest charges	568,018
	\$1,290,500

The class of construction covered by the estimates is based upon a single track line of 80 lb. rails on private right of way for practically the entire distance. The line will be double tracked through Hamilton, with practically no level highway crossings, thus allowing high speed right through the city. By connecting with the Toronto-London line at Port Credit it will be possible to utilize the high speed entrance of that line to the large radial terminal to be provided in the centre of Toronto. The Toronto entrance will have no level highway crossings between the centre of the city and New Toronto, and will utilize a steel viaduct along the harbor front, a tunnel under the exhibition grounds, an open cut through South Parkdale, and an elevated embankment from Sunnyside to the Humber River. Ample allowance is said to have been made to cover a very high class of construction, and 80 lb. steel rails, concrete culverts, steel bridges and other similar structures are designed to carry, in an economical manner, the heaviest types of freight cars now in use on steam railways. Proper station facilities, freight sheds and team tracks have been provided for in the various municipalities, and especially in Hamilton, where provision is made for a passenger terminal of sufficient size to accommodate the other lines which are proposed for that district.

The 1,500 volt direct current system of power has been estimated upon, with 4 substations located at various points between Port Credit and St. Catharines. This voltage and substation spacing will ensure ample power supply to heavy freight trains. The following equipment has been estimated upon,—

30 3-compartment, all steel, passenger motor cars.
6 suburban passenger motor cars.
15 passenger trailer cars.
4 express motor cars.
2 motor work cars.
10 60-ton steel locomotives.
350 freight cars.

The furnishings of the passenger cars will be of a high standard, and approximately 500 h.p. in motor capacity on each car will allow high speed even when a trailer is hauled.

It is anticipated to give practically hourly service between Toronto and St. Catharines, with a suburban service for a few miles both east and north of Hamilton. Limited cars, making few stops between termini, will be run at certain hours to take care of through business, and these cars should, it is claimed, make practically the same running time between Toronto and St. Catharines as is now in effect on the G.T.R. Local cars will, of course, be run in addition to the limited trains, and these will stop at approximately one mile intervals. The 10 locomotives provided for in the estimates will be used to haul heavy freight trains, and it is anticipated that from 3 to 6 round trips a day will be required to handle the freight business which has been estimated. In addition to this, express cars will also be used to handle light package, milk and freight business. These cars can make frequent stops along the line and collect milk cans, farm produce, etc., at points convenient to the residents of the different sections.

Following are the municipalities to vote on the project, with the total amount of debentures to be issued by each for deposit with the commission under the agreements,—

Toronto Township	\$243,087
Trafalgar Township	538,735
Nelson Township	374,812
East Flamboro Township	266,626
West Flamboro Township	66,669
Barton Township	284,484
Saltfleet Township	1,002,296
North Grimsby Township	424,077
Clinton Township	473,746
Louth Township	563,595
Grantham Township	128,280
Grimsby Village	101,817
Beamsville Village	51,469
Oakville Town	203,098
Burlington Town	144,536
Hamilton City	5,869,286
St. Catharines City	623,750

Total \$11,360,363

The Proposed Welland-Bridgeburg line, via Humberstone, Port Colborne and Fort Erie, concerns Crowland, Humberstone and Bertie townships; Humberstone, Port Colborne and Fort Erie villages, and Welland and Bridgeburg towns. The route proposed is as follows,—From East Main St., Welland, southward over South Main St. to east of the Welland Canal at the Michigan Central Rd. bridge, thence along the east bank of the canal through Humberstone and Port Colborne. From Port Colborne eastward, midway between the G.T.R. and Lake Erie, as far as a point south of Sherks, thence southeasterly to the northern limits of Crystal Beach, thence to the south side of the G.T.R. a short distance east of Ridgeway, thence following the G.T.R. on the south side past Crescent Beach and Erie Beach, thence parallel to the old Huron & Erie right of way to Fort Erie. From Fort Erie northward along Niagara St. as far as the north boundary of Fort Erie, thence along the north side of the Erie & Niagara Ry., thence northward across the G.T.R. and M.C.R. to Central Ave., Bridgeburg.

Following is an estimate of the cost of construction, equipment and operation, with estimated operating revenue,—

Capital Cost:	
Right-of-way, track construction, and buildings	\$1,566,216
Sub-stations, car shops and rolling stock	642,500

\$2,208,716

Annual Operating Revenue:	
Passenger revenue	\$176,490
Freight revenue	149,850
Miscellaneous revenue	6,660
	<hr/>
	\$333,000
Annual Charges:	
Operating expenses	\$160,214
Maintenance expenses	44,351
	<hr/>
Operating and maintenance charges	\$204,565
Interest charges	110,435
	<hr/>
	\$315,000

Humberstone Village	66,194
Port Colborne Village	141,297
Fort Erie Village	128,007
Welland Town	166,926
Bridgeburg Town	90,422
	<hr/>
Total	\$2,208,717

Answers to Questions on Electric Railway Topics.

Following are answers by Canadian electric railway officials to questions sent to the American Electric Railway Association's question box:—

Cost of Carbon Brushes.—What is the cost of carbon brushes for various types of motors, on a 1,000 car mile basis?

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.—I have no information on comparative cost of brushes for different types of equipment, but careful tests show an average of approximately 1c per motor per 1,000 car miles. This is with high grade brushes and slotted commutators. Note—42½% duty on carbon products.

Headway of Cars on Joint Tracks.—(a) Where two or more lines unite as they approach the business district, and operate for a considerable distance over the same track, do you attempt to make an even headway between the cars of these different lines on such joint track, or do you let them run independently of each other, regardless of the resultant headway? (b) Suppose you have two lines uniting as above with eight cars on each line, the best headway the first line can maintain is 8 minutes, while the second line can maintain a 7½ minute headway, would you put the second line on an 8 minute headway, giving it a layover each trip, in order to have a 4 minute headway on joint track, or would you hold each line to its best schedule, disregarding the service on joint track?

A. Gaboury, Superintendent, Montreal Tramways Co.—(a) Yes, as much as possible, except on a street which is a neck through which several lines pass and where the headway is already very close, in which case we aim to keep an even headway between two of the passing lines which run to districts closely related. (b) Would consider it good policy to allow layover and maintain even 4 minute headway. This would not only encourage local short haul traffic, but would help general loading.

Time Points in Operating.—(a) Do you maintain time points along your line; (b) if so, how far apart are they; (c) in establishing time points, what basis do you use in determining the amount of time to be used between them; (d) do you require a rigid observance of time points; (e) how do you determine if they are being observed, and what means do you employ to force observance?

A. Gaboury, Superintendent, Montreal Tramways Co.—(a) Yes. (b) Approximately 5 minutes apart in centre of city and 10 minutes in outer parts of city. (c) Running time is computed to agree with civic regulations and headway of line and time between time points is established arbitrarily and then corrected by observation of actual running of the cars. (d) Yes. Running time between points is changed frequently to suit changing conditions of traffic, temperature and rail, and the service demands that cars pass time points on time so as to provide correct headway where needed. If on a 3 minute headway one car passes a time point one minute ahead of time, he leaves part of his load to the car following, which will likely be put late

through heavy loading, thus backing him up on the car following him and taking part of his load, result being that first and third cars are practically empty and second car is packed with consequent discomfort and dissatisfaction to our patrons. (e) By our inspectors or roadmasters, who check the cars on the lines in their districts.

Disciplining for Minor Accidents, etc.—Do you apply the same disciplinary methods to new as to old trainmen when they are responsible for minor accidents or breach of rules, or do you have a stated period, during which such infractions are considered cause for further instruction, rather than penalty?

A. Gaboury, Superintendent, Montreal Tramways Co.—Trainmen for the first 90 days of service are considered as being still attached to the training school, and for all minor infractions of the rules are sent there for further advice or instruction. For a serious offence they are disciplined in the regular way.

Automobile Accident Reports.—Have any member companies made it a practice to have conductors report the license numbers of automobiles whose drivers are reckless, or who are responsible for near accidents, with the idea of reporting them to the owners, to automobile clubs, or to the police; if so, what results have been obtained?

A. Gaboury, Superintendent, Montreal Tramways Co.—We have been doing this for some years, and have obtained very excellent results. On receipt of report from our car men or inspectors, whether for a near accident, reckless or wilful delay by drivers of autos or vehicles, we take up the matter with the owner by letter, and if necessary, send one of our staff to interview. In nearly all cases we have found owners ready to meet us more than half way, and have found that this helped not only in reducing accidents but in engendering a better feeling on the road.

One-Man Electric Cars in Moncton, N.B.

The Moncton Tramways, Electricity & Gas Co. started, Nov. 27, to operate one-man p.a.y.e cars. They are old style, single truck, with short platforms, longitudinal seats, double sliding doors in bulk heads, stationary steps and doors on both sides of vestibules. The left hand side of each vestibule has been closed up permanently, the step having been taken off on that side, and folding doors have been installed on the right hand side of each vestibule. A Coleman no. 4 stationary fare box has been installed at the right side of the sliding doors on a standard made of 1 in. pipe. The Coleman Fare Box Co. made brackets to fasten on this standard and the fare box rests on the brackets, and can be transferred from one end of the car to the other, as the company has to operate from both ends at present, having no loops. International two dial registers for tickets and cash have also been installed. A rod runs through the car on both sides, to which connection is made with the register with connecting arms and a lever handle in each vestibule for operating the registers. On reaching the end of the line the motorman takes the fare box to the opposite end of the car, locks the back door and is ready to go ahead again. The company has had one of the cars on its suburban line equipped with this arrangement for some time and reports it as working nicely.

The class of construction covered by the estimates is based upon a single track line of 80 lb. rails on private right of way for practically the entire distance. Ample allowance is said to have been made to cover a very high class of construction, and 80 lb. steel rails, concrete culverts, steel bridges and other similar structures are designed to carry, in an economical manner, the heaviest types of freight cars now in use on steam railways. Proper station facilities, freight sheds and team tracks have been provided for in the various municipalities. The 1,500 volt direct current system of power supply has been estimated upon, with 2 permanent substations located between Welland and Bridgeburg, and 1 portable substation, which can be located at various points along the line as required by the traffic. By using the 1,500 volt system and 2 permanent substations ample power supply will be provided for moving heavy freight trains. The following equipment has been estimated upon,—

- 9 3 compartment, all steel, passenger motor cars.
- 12 passenger trail cars
- 4 motor express cars.
- 50 freight cars.

The furnishings of the passenger cars will be of a high standard, and approximately 500 h.p. in motor capacity on each car will allow high speed even when a trailer is hauled. The freight traffic is intended to be transported by motor express cars, as it was felt that this type would be best suited to the particular local conditions existing between Welland and Bridgeburg. However, if it is found, when the line is actually placed in operation, that 50 or 60 ton steel locomotives would take care of the business in a more economical way, there would be ample allowance in the estimates to provide for the slightly higher cost.

It is anticipated to give practically hourly service between Welland and Bridgeburg. Limited cars, making few stops between termini, will probably be run at certain hours to take care of through business, and the running time of these cars between Welland and Bridgeburg should, it is claimed, be much below that now in effect on the G.T.R. Local cars will be run in addition to the limited trains and these will stop at approximately one mile intervals. The 4 motor express cars provided for in the estimates will be used to handle from 10 to 15 freight cars, and it is anticipated that from 2 to 3 round trips a day will be required to handle the freight business. These express cars would also be used with the passenger cars mentioned above, or with rented cars, to carry excursions to Crystal Beach or other points, and in addition would frequently be used to handle light package, freight and milk business. Frequent stops will be made along the line to collect farm produce, and these points can be made convenient to the residents of the different sections.

Following are municipalities concerned in the proposal, with the amounts of debentures to be issued by each, for deposit with the commission.—

Crowland Tp.	\$203,449
Humberstone Tp.	629,755
Bertie Tp.	782,666

Regina Municipal Railway Earnings, Etc.

Following are the earnings, expenses, etc., for November, compared with those for Nov., 1915, and also the totals for 11 months ended Nov. 30:—

	11 months to		
	Nov. 1916.	Nov. 1915.	Nov. 30, '16.
Total revenue	\$19,366.88	\$16,982.62	\$189,065.84
Expenditure	14,933.31	14,659.93	171,508.81
Net earnings	4,403.57	1,322.69	17,557.03
Fixed charges	8,022.96	8,466.61	89,335.90
Deficit	3,619.39	6,364.94	71,778.87
Average exp. per car mile without power	13.32c	14.53c	15.12c
Average exp. per car mile with power	18.62c	19.59c	20.31c
Cost per k.w.h.	1.41c	2.02c	1.69c
Cost per car mile	5.29c	5.04c	5.19c
Platform wages per car hour	71.43c	73.14c	72.08c
Expenses less fixed charges percentage of earnings			77.23%
Expenses with fixed charges percentage of earnings			118.72%

The Montreal Tramways Co's Franchise.

The Montreal Board of Control has appointed B. J. Arnold, Chicago, Ill., to advise it as to electric railway matters in connection with the investigations now in progress with respect to granting the company a new franchise. This appointment was approved by the City Council, Dec. 8, and \$10,000 was voted to cover the cost of Mr. Arnold's investigation and report.

Public interest in the tramway negotiations was given a new turn recently when a petition was presented in a Quebec court asking for the holding of a judicial enquiry into the administration of civic affairs generally and particularly with matters connected with negotiations with the Montreal Tramways Co. as to its franchise. The court directed Justice McDougall to hold the enquiry, and Dec. 11 was fixed for its opening. The city opposed the holding of the enquiry, and on Dec. 13, asked the court to issue a writ of prohibition to prevent Justice McDougall from proceeding with his investigation. Justice McDougall has ordered the city to pay into court \$2,000 on account of the expenses of the court, and has adjourned his investigation pending the result of the hearing of the city's application.

As a result of representations made to the Quebec Government, the Quebec Legislature passed an amendment to the City of Montreal's act and affecting the tramways franchise. The addition to the act is as follows:— (1) A commission composed of Senators J. P. B. Casgrain, of Montreal, and C. Beaubien, of Outremont, and J. Cockburn, of Montreal, is created to prepare a contract between the city and the Montreal Tramways Co., as provided for by sections 14 and 15 of chapter 77 of the acts of 1911, and for this purpose it has the power and rights which the act confers upon the city. The contract prepared by the commission will come in force after having been signed by the commission or the majority of its members, the day it is signed by the President and the Secretary of the Montreal Tramways Co., duly authorized by the directors of the company, and will bind the company and the city for 36 years from the time of its coming into force, except for changes and modifications which may be made from time to time by the mutual consent of the city and the said company. Counting from the same date, this contract will annul and replace

all other contracts between the city and the company for similar purposes relative to the same territory. At the expiration of the 36 years and at the expiration of each period of 5 years subsequent, the city will have the right, upon giving six months notice to the company in the 12 months which immediately precede the expiration of the 36 years as well as similar notice of 6 months and the same conditions at the end of each 5 years subsequently, to appropriate the company's lines as well as the real estate, material and cars belonging thereto, and necessary to the running of the tracks, by paying the value as fixed by arbitrators and 10% more for good will. The arbitrators will be named one by the city, one by the company, and a third by a judge of the Superior Court for the district of Montreal. The expenses incurred by the commission in the exercise of its functions, as well as the salary of the commissioners, secretary, experts, and all other persons it may employ, will, when they become due, be determined and approved by the Lieutenant Governor in council, and paid half by the city and half by the company.

Toronto Railway Company Increases Wages.

Although the agreement between the Toronto Ry. and its employes, in regard to wages, does not expire until June 16 next, the management announced, Dec. 21, that it had decided to increase wages of conductors, motormen, shedmen and repair men 2½c an hour, and car washers 1½c an hour, the increase to date from Nov. 1. The new rates are as follows:—

Conductors and motormen, 1st year, 26c; 2nd year, 28c; 3rd year, 30c.

Shed foremen, 30c; operating shedmen, i.e., men who operate cars and do general shed work, 27c; shedmen doing general shed work, but not operating cars, 26c; car washers, 25c.

Motor and truck repair men, 1st year, 26c; 2nd year, 28c; 3rd year, 30c.

In announcing the increases, the General Manager, R. J. Fleming, made the following statement:—"For some months the management has noted the steady increase in the cost of living contrasted with the prices of last year, when the wage agreement was made, and since October last has had under advisement the question of wages paid by the company under that agreement. Two courses were open to the company: one, to adhere to the agreement and allow the present wages to obtain until the expiry of the agreement in June, 1917; the other, to deal with the wages this year in the same manner as if the agreement had expired. After due consideration the directors chose the latter course, and decided to grant such a liberal increase in wages as they felt certain should effectually obviate any agitation for a further increase at the expiry of the agreement.

"Employes will remember that the company's rates of fares are permanently fixed, thus placing it in an entirely different position financially to a manufacturing or other concern, which can add an increase in wages to the price of its product, so that the increase is really paid by the purchasers, the public. This company cannot charge its passengers an extra fare to cover additional costs of operating due to increase in wages or increased costs of other commodities that are necessary to the running of the road. Thus the burden is one-sided, the benefits going to the public and the employes

only. The increase will date from Nov. 1, 1916, thus giving the employes the additional advantage of enjoying it during the unexpired term. Employes in other departments who have not had an increase in wages since the agreement was signed will be dealt with upon their merits. In taking this action the company has been influenced solely by the change in living conditions and the additional burdens upon the employes as a result of the war."

London and Port Stanley Railway Finances.

Canadian Railway and Marine World for December contained general particulars of the L. & P.S. Ry. operating results of the year ended June 30, showing a surplus of \$18,474.14 after paying taxes, interest, rental, sinking fund and patriotic contributions. Following are fuller details,—

EARNINGS	
Passenger	\$114,869.62
Baggage	570.23
Parlor, sleeping and special car	43.00
Mail	1,039.60
Express	1,630.74
Milk	20.40
Freight	130,897.24
Switching	18,583.24
Miscellaneous transportation	138.00
Storage	37.33
Demurrage	1,265.00
Rent of tracks and facilities	6,386.65
Rent of building and other property	2,570.20
Miscellaneous	3,007.17

Gross earnings \$281,058.32

EXPENSES	
Maintenance of way and structures	\$12,573.03
Maintenance of equipment	14,138.76
Transportation	109,491.20
General and miscellaneous	39,898.89

Total operating \$180,619.88
Fixed charges 76,524.72

Total expenses \$267,144.60
Red Cross donation \$1,300.00
Sinking fund for 1916 4,139.58

\$262,584.18

The expenditure on construction account during the year was as follows,—

Engineering and superintendence	\$ 25,480.54
Right of way	2,306.37
Other land used in electric railway operations	8,000.35
Grading	30,689.16
Ballast	20,948.49
Ties	41,826.29
Rails, rail fastenings and joints	127,041.13
Special work	8,847.93
Track and roadway labor	36,474.60
Paving	507.89
Roadway, machinery and tools	3,811.24
Bridges, trestles and culverts	19,018.16
Crossings, fences and signs	16,484.85
Signals and interlocking apparatus	2,576.33
Telephone and telegraph lines	8,029.82
Poles and fixtures	72,332.83
Distribution system	126,281.70
General office buildings	413.57
Shops and car houses	23,682.39
Stations, miscellaneous buildings and structures	25,133.40
Wharves and docks	53.07
Park and resort property	8,088.42
Cost of road purchased	10,000.00
Reconstruction of road purchased	46.66
Other expenditures, way and structures	134.05
Passenger and combination cars	102,012.68
Freight, express and mail cars	8,326.90
Service equipment	4,293.26
Electric equipment of cars	66,799.22
Locomotives	80,049.43
Shop equipment	4,904.65
Furniture	4,225.48
Miscellaneous equipment	56.76
Substation equipment	1,188.17
Law expenditures	845.06
Interest	13464.63
Insurance	1,257.87
Miscellaneous	3,932.07

\$908,562.12

The Montreal Tramways Co. has discontinued its service on Dorchester St., Montreal, during the construction of certain work on the Canadian Northern Ry. terminals.

Moose Jaw Electric Ry. Employes' Wages.

Canadian Railway and Marine World for December contained the report on this matter by a Board of Conciliation and Investigation appointed by the Minister of Labor under the Industrial Disputes Act. As then stated, the company refused to accept the award, and the men subsequently accepted the offer as made by the company in July, 1916, fixing conductors' and motormen's wages per hour as follows:—1st 6 months, 26c; 2nd 6 months, 26½c; after 1st year, 28½c; after 2nd year, 31c. Motormen having two years experience on other roads and whose ability is satisfactory to the Superintendent will be paid 27c from the commencement of employment. Five cents extra an hour will be paid for May 24, July 1, Civic Holiday, Labor Day, Good Friday, Thanksgiving Day, Christmas Day and New Year Day. The other principal terms of the agreement are as follows:—Uniforms will be supplied by company. Cost of first uniform and overcoat to be borne half by company and half by employe. Should employe leave within 12 months he must pay full cost of uniform. Subsequent uniforms will be supplied by company one per year free; subsequent overcoats will be supplied by company, to remain company's property, and to be returned to company upon employe leaving if so requested. Stools will be provided for motormen, their use being restricted in certain districts. Violation of rules governing them will entail dismissal and a total of five violations will mean discontinuance of stool privileges.

The company reserves the right to terminate employment of any employe for violation of rules and regulations. For minor offences warning will be given, for more serious offences suspension or dismissal. The following will be treated as serious offences:—Acts or words of disloyalty to the Empire; acts or words tending to bring the company's officials or any employe into disrepute or dishonor, or tending to disrupt the harmony of the employes or the system; drinking when in uniform or drinking when on cars or within three hours of going on duty; destruction of property, accidents through carelessness or neglect, missing fares, carrying people free, using stools on portion of route not allowed, violating explicit instructions as to manner of fare collection or violation of any rules now in force or which may hereafter be in force. Employes may be disciplined, suspended or dismissed without notice at the Superintendent's discretion. The employes' committee shall consist of 3 employes chosen by the Superintendent and satisfactory to the employes. Any employe disciplined or dismissed may have his case taken up by the committee with the company.

Fifteen minutes will be allowed men taking car from barn and 15 minutes for returning car to barn at night. This time is allowed so that crew taking car out will inspect it, seeing that bells, lights, brakes, sanders, etc., are in working order, and that car is supplied with trolley, pickup, sand, coal and proper destination boards. Fires must be lit only after pulling car from barn. On returning car to barn, anything amiss with equipment or repairs to be made must be reported in trouble book. Dampers in stove must be closed, check draft opened and check in pipe closed. Fires to be regulated so that on cars returning to barn fires will be low. Spare men reporting for duty

and not obtaining a run will be allowed one hour. When men making regular runs fail to report at specified time the run will automatically revert to spare man in order of seniority.

Order of seniority will be recognized by length of time in one position. An employe desiring to change from conductor to motorman, or vice versa, will lose his seniority and start at foot of list but retain rate of pay. If the change is made at the company's request, seniority will be lost as to position changed to, but if at any time the employe is changed back, or voluntarily wishes to change back, the original seniority in the original position will be retained, and service put in in new position at company's request will count as service in original position.

The British Columbia Electric Ry. and the Jitney Traffic.

After considerable discussion and hearing the views of representatives of the British Columbia Electric Ry., and of the jitney men, the Vancouver, B.C. City Council, on Dec. 8, passed part of a new set of regulations affecting jitney traffic in the city. The regulations are made much more drastic than those formerly in operating, and it was proposed to raise the license fee from \$25 to \$50 for 5 seat cars and from \$50 to \$100 for 7 seat cars, with an increase in the drivers' licenses from \$2 to \$3 a month. Subsequently the regulations were completed and it was hoped to have the bylaw finally passed by Dec. 31, so that the licenses for 1917 could be issued under it.

The jitney men, on Dec. 13, asked the council to postpone the coming into operation of the new regulations. In the course of the discussion, J. A. Kerr, President of the Jitney League, is reported to have said that the league had not attempted to interfere or in any way retaliate against the British Columbia Electric Ry. in that company's legitimate transportation business, but that should the company persist in its efforts to have the jitney league put out of business, then its members would seriously consider finding ways and means of making the company live up to its own rules and regulations.

In connection with this statement, W. G. Murrin, Assistant General Manager, B.C.E.R., is reported to have said in an interview, Dec. 14:—"It is grossly incorrect, as stated by the jitney men, that my company is trying to 'put the jitney out of business.' We are asking solely for regulations on a par with those we operate under and as a matter of fact those proposed are not nearly so exacting as ours are. We did not come forward to the city council with our requests until the council invited us. I believe that the public will view this matter in the right light and insist on regulations which will protect their own rights and not those of the jitney operators only. The B.C.E.R. operates under very strict regulations, which have for their purpose the obtaining of a transportation service which fills the needs of the public, which safeguards the lives of the public, and caters to the general welfare of the community. We are asking no more than that the regulations we operate under or their equivalent be placed on the jitney. If this jitney league is permitted to run as it likes, it cannot be said to fill the position of a transportation system on which the city can depend. It is obviously unfair for one means of transportation to be saddle with obligations and its competitor not, and

that this condition cannot continue will be clear to every impartial person. The B.C.E.R. is required to give transfers and to run regular services of cars in the rush as well as the slack hours, on week days, Sundays and holidays and at many times that it does not pay to run cars. It pays more than 5% of its gross earnings to the city, whereas the jitney pays less than 1%, and a great deal of this is eaten up by the extra expenses placed upon the city. The company pays heavy bridge rentals and maintains its own tracks at a cost of \$40,000 a year. We must carry city officials and firemen and policemen on our cars free. The jitney has no such obligations. If the jitneys are allowed to compete with an established transportation system on an unfair basis, taking the smooth without the rough, and carrying few of the burdens the street railway must carry, there can be only one result. A severe blow will be dealt to capital which may invest in Vancouver at some future date. The jitney men are asking the city council for protection. It is the street railway, having been promised protection in the form of a franchise, that is entitled to first consideration."

Electric Railway Track Laid in 1916.

Below is a preliminary table showing track laid on electric railways in Canada during 1916. It is not published as a complete one, owing to the fact that some of the companies have not yet replied to the circular sent, but it is believed to be approximately correct. The * mark indicates that the figures given are estimated:—

	Miles.
Brantford and Hamilton Ry.—	
Market St. to Water St., Brantford..	0.25
Calgary Municipal Ry.—	
17th Ave. and 28th St. W. to Sarcee	3.00
Military Camp	0.50
4th Ave. and Centre St. to Sunnyside	—3.50
*Edmonton Redial Ry. or Edmonton Interurban Ry.—	
Connection between two lines near G. T. Pacific Ry	1.00
Hamilton St. Ry.—	
Kenilworth Ave. and Burlington St. to Barton St.	0.50
*London and Port Stanley Ry.—	
Richmond St. to Ridout St., London...	1.00
London St. Ry.—	
Egerton St. to West St.	0.41
Quebec Ry., Light and Power Co.—	
C.P.R. Cross'g to St. Charles Cemetery	0.50
5th St. to 4th St.	1.25
3rd Ave. to Abattoirs	0.25
	—2.00
Regina Municipal Ry.—	
C.P.R. Arcola line to 16th Ave.	0.72
4th Ave. to Standard Ave. and Winnipeg St.	0.58
	—1.30
Sarnia St. Ry.—	
St. Clair and Christina Sts. to Clifford and King Streets	0.50
*Saskatoon Municipal Ry.—	
On 25th St. Bridge	0.23
Three Rivers Traction Co.—	
Cap. de la Madeleine extension	3.06
Toronto Civic Ry.—	
St. Clair Ave. to C.P.R. tracks on Lansdowne Ave., double track	0.61
Toronto Ry.—	
New entrance to Exhibition	1.91
Yonge St. gap	0.14
Woodlawn Ave. extension	0.01
	—2.09
	16.45

The London St. Ry., in addition to the new line above mentioned laid 2,000 ft. of second track on Dundas St. from the exhibition grounds to the G.T.R. inter-switching track.

The Sandwich, Windsor & Amherstburg Ry. laid 2,200 ft. of entirely new double track line on London St. West, Windsor, replacing a single track line; this, however, does not increase the company's track mileage.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford & Hamilton Ry.—We are officially advised that track has been laid on the extension from Market St. to connect with joint station with the Lake Erie & Northern Ry. on Water St., Brantford, Ont., 0.25 of a mile. (Dec., 1916, pg. 502.)

British Columbia Electric Ry.—The North Vancouver, B.C., City Council has under consideration a plan for securing a connection between the B.C.E.R. and the Pacific Great Eastern Ry., under which the B.C.E.R. would be the distributing agency in the city. The only difficulty in the way of the project is the transportation of heavily loaded cars on some of the streets where there are steep gradients. (Dec., 1916, pg. 502.)

Edmonton Radial Ry.—A press report states that the acting City Engineer of Edmonton, Alta., and the Traffic Manager of the E. R. Ry. are investigating the advisability of constructing a belt line in the centre of the city at a cost of \$40,000. (Dec., 1916, pg. 502.)

Hamilton St. Ry.—The new Kenilworth St. line was opened for traffic Dec. 19. G. Waller, General Superintendent of Buildings, is reported to have stated that until early in the new year cars would be operated on the new line between 7 and 8 a.m., and between 4 and 6.30 p.m. Early in the new year a regular belt line service will be put in operation, thus forming a third belt line in the city. (July, 1916, pg. 295.)

The London St. Ry. has, we are officially advised, completed track laying on Dundas St., London, Ont., from Quebec St. to the G.T.R. interswitch track, the work including the paving of the tracks. An extension of 2,000 ft. from Egerton St. to West St., which was opened for traffic Dec. 1, is not to be paved. (Nov., 1916, pg. 460.)

London & Port Stanley Ry.—We are officially advised that the London Railway Commission is considering the construction of 600 ft. of retaining wall at Port Stanley, Ont., to protect the right of way in front of the station from the encroachments of Kettle Creek. The estimated cost of the work is \$6,500.

The 65 ft. addition to the shops at London, with a one story addition for an office section, is expected to be completed early in January. A bath house costing \$25,000 at Port Stanley is under consideration. (Nov., 1916, pg. 460.)

The Quebec Ry., Light & Power Co. expected to have track laid by Dec. 31 on the following extensions.—C.P.R. crossing, St. Vallee St. to St. Charles Cemetery, 0.50 mile; 5th Ave., along 3rd Ave. to 18th St., along that street to 1st Ave. and down that avenue to 4th St., 1.25 miles; 3rd Ave. and 18th St., along 18th St. to 4th Ave. and up that avenue to Abattoir, 0.25 mile. The work has been done by the company's own forces.

We are also officially advised that the company has under consideration a project for building a line from 3rd Ave. and 5th St. along Beaufort Road to the city limits, 1.50 miles. (Nov., 1916, pg. 461.)

Regina Municipal Ry.—We are officially advised that during 1916 the following additional lines have been laid.—From the C.P.R. Arrico line, from Atkinson St. to 16th Ave., 0.72 of a mile; and from Scott St., from 4th Ave. to Standard Ave., and along that avenue to Winnipeg St., 0.58 of a mile, a total of 1.3 miles. (July, 1916, pg. 295.)

The Sandwich, Windsor & Amherstburg Ry. is, we are officially advised, putting up a building in Windsor, Ont., to be used for freight and express purposes.

We are officially advised that the new building to be erected on London St. West, Windsor, adjoining the power plant and car barns, will be 26 x 100 ft., 2 stories high in front. The basement will be fitted up for lavatory purposes; on the ground floor there will be the Superintendent's office and an office for the freight and express department, the top floor, about 26 ft. square, will be used as an assembly room for motormen and conductors. The main part of the one story rear of the building will be used for receiving and delivering freight and express. In the rear of this will be a store room for the track department. Under the rear of the building will be the overhead department, with room to run automobiles or trucks under the building from the rear. This will also be used as a stockroom for the overhead department. Each of the different parts of the building behind the freight office will be about the same dimensions, about 25 x 25 ft. The building will be of brick and will be finished as soon as the weather permits. (Oct., 1916, pg. 425.)

The Sarnia St. Ry., we are officially advised, laid in 1916 an additional half mile of track from the corner of St. Clair and Christian Sts. to the corner of Clifford and King Sts., Sarnia, Ont. (Aug., 1916, pg. 338.)

The St. John Ry. is demolishing the buildings on a wharf at St. John, N.B., purchased recently from W. B. Tennant. It is reported that a deep water berth will be made at the face of the wharf and a coal handling plant located on the wharf for the company's purposes. (Nov., 1916, pg. 461.)

Sudbury-Copper Cliff Suburban Electric Ry.—We are officially advised that the company has under consideration a proposal to build an extension to Murray Mine, about 4 miles west of Sudbury, Ont., but a definite decision has not been reached. The company is also contemplating the erection of a new car barn. (Dec., 1916, pg. 503.)

Three Rivers Traction Co.—We are officially advised that of the total of 7.01 miles of track there were laid during 1916, 3.06 miles, constituting the line to Cap de la Madeleine, Que. The extension was opened for traffic Nov. 21, when a 20 minute schedule, was put in operation. (Dec., 1916, pg. 500.)

Toronto and York Radial Ry.—We are officially advised that while plans for a terminal station at North Toronto are under consideration, they have not been finally approved. It is the company's intention to put in during the winter should weather conditions permit, 2 temporary tracks from Yonge St. to take care of the long distance passenger traffic.

Toronto Civic Ry.—We are officially advised that the addition to the car barns on St. Clair Ave. is 42 ft. 7 in. x 198 ft., and is almost an exact duplicate of the present barn. It has been erected parallel to the original barn, the windows in the south wall of which have been bricked up and form a fire wall between the two buildings. Each barn has 3 tracks, with accommodation for 3 cars on each track. There are pits under all the tracks in the new structure. The cost of the

work is approximately \$25,000, which includes a few alterations to the old barn and the addition to and extension to the old heating plant. The addition in general is of steel framework with the walls faced on the outside with red brick. (Dec., 1916, pg. 460.)

Toronto Suburban Ry.—The changing of the gauge from 4 ft. 10 $\frac{3}{4}$ in. to 4 ft. 8 $\frac{1}{2}$ in. has been completed on all the old portions of the system between Lambton and Bathurst St., Toronto, the Crescent section and the branch to Weston and Woodbridge. The cars have also been changed to the new gauge by substituting new axles and wheels.

Progress is being made with the stringing of the wire and other finishing up work on the new standard gauge line built from Lambton to Guelph, which it is hoped to have opened for traffic early in the spring, if not before. (Dec., 1916, pg. 460.)

Transcona, Man.—A press report states that negotiations are practically completed with the Transcona Town Council, under which a 25-year franchise is to be granted for the building of an electric railway from Transcona to Winnipeg. The line, it is stated, is to be completed by Sept., 1917. Winnipeg men are said to be interested.

It was reported in our December issue that the Winnipeg Electric Ry. was negotiating with the Transcona Town Council in reference to the building of this railway. We are advised that no negotiations have taken place directly between the Winnipeg Electric Ry. and the Transcona Town Council with respect to the matter. There have been negotiations of which the company is cognizant about the matter, but nothing definite has yet been settled.

Employment of Women on British Columbia Electric Ry.—W. G. Murrin, Assistant General Manager, speaking at a meeting of the Manufacturers' Association in Vancouver, B.C., recently on the question of the employment of women in connection with the war situation, stated that the company had met with some difficulty at first in getting men to fill vacant places, but experienced no trouble at present. The company, however, had an agreement with its men, which, while it did not specifically state that men only should be employed, still, no doubt, if a fair interpretation was given, inferred that men would be given the preference. Otherwise the company had no objection to the employment of women. Anything that added to the resources of the Empire should be considered and the male labor absolutely necessary for munition work should be given consideration. Duplication of labor should also be avoided, and in this connection, and he hoped that his remarks would be taken in the right spirit, there was a duplication of labor in transportation facilities in Vancouver that was not necessary at the present time.

Extra Fares in Detroit.—The U. S. Supreme Court at Washington, D.C., decided, Dec. 11, that the Detroit United Ry. may charge extra fares for transporting street railway passengers beyond the old city limits in the towns of Greenfields, Grosse Point, and Fairview, Mich., annexed to the city, and it was also held that the company need not sell reduced rate tickets during workmen's hours in the annexed territory.

Quebec Railway, Light & Power Co's Employes' Wages, Etc.

The Board of Conciliation and Investigation appointed by the Minister of Labor, under the Industrial Disputes Act, on the application of the Q. R. L. & P. Co.'s conductors and motormen, presented a unanimous report Dec. 6 recommending that the men receive from Dec. 1, 1916, an increase of 2½c an hour, making the new scale of pay per hour as follows: 1st year 21c, 2nd year 22c, after two years 24c, after 7 years 26c, the agreement to be for 3 years, from Dec. 1, 1916. The other principal provisions of the agreement are as follows: Overtime after the regular day's work, and all special work which they may be called upon to perform after the distribution of the regular work, to be paid 2c an hour extra. An employe relieved from work before the regular hour, by a company's official, to be paid for time he is supposed to make, except in cases of serious misconduct justifying his immediate suspension or dismissal. No employe to be required to work more than 10 hours a day without necessity. Every employe to be entitled to at least 2 hours rest after working 6 consecutive hours. Employes to be entitled to rest on Sundays, each in turn, except in cases of necessity. An hour is to be allowed every spare man who reports regularly at the time of changing crews on any day and who has not secured any work. Twelve hours work a week is assured to all employes who thus report.

For labor conventions in Canada, funerals of co-employes, Labor Day and national holiday, leave of absence shall be given 3 conductors and 3 motormen, provided request is made in advance and men found to relieve them. Leave of absence for conventions not to exceed 8 days.

All conductors and motormen to be entitled to 2 uniform caps each year free of charge, 1 for summer and 1 for winter. First and second year men to pay half of cost of summer and winter uniforms. After second year uniforms to be paid for by company. Winter overcoats supplied in future to come down 6 in. below knee. Men not to be obliged to return uniforms supplied them free, when they leave the service. Detailed statement to be given any employe from whom part of wages is being held to pay for uniform.

Cars to have heaters, protecting frames for motormen, and on the sides of open cars, eaves to protect conductors against water falling from roof. Open cars to be only in service between May 15 and Oct. 1. Motorman's vestibule to be enclosed, heated in winter and supplied with curtain to prevent reflection. Conductors and motormen to be required to make only urgent and temporary repairs to brakes, sand boxes, motors, and trolleys. Cars to be supplied with bell from forepart to back of car for signals from motorman to conductor. Suitable and clean waiting room, properly lighted, ventilated and heated, to be provided for employes.

Reprimands to employes before public to be avoided as much as possible. An employe suspended or dismissed, on an unfounded complaint, and reinstated, to be paid full wages for all time lost. No employe to be dismissed on a complaint, or suspended, before being heard. Employes to be received by General Manager, to appeal from Superintendent's decisions, or to state any other dispute, after giving notice to the Superinten-

dent. Employes to be free to belong to National Brotherhood of Street Railway Employes. At meetings of employes called by company's officers, communications and instructions to be given in both English and French. No employe shall be forced to accept a promotion. Actions taken in connection with the 1916 strike shall be abandoned and no further action taken in connection with it.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.—

	Oct. 1916	Oct. 1915	Oct. 31, '16	Oct. 31, '15
Gross	669,610.73	619,707.73	958,869.9	719,129.8
Expenses	480,126	480,051	1,908,787	1,928,630
Net earnings	93,418	68,775	293,803	146,167

The percentage paid to the City of Vancouver for Nov., 1916, was \$3,893.71 against \$3,323.14 for Nov., 1915. Passengers carried on the city and suburban lines were 2,231,699 against 2,269,543 in Nov., 1915.

Cape Breton Electric Company:

	Oct. 1916	Oct. 1916	12 mths to Oct. 31, '16	12 mths to Oct. 31, '15
Gross	\$36,466.20	\$34,152.20	\$387,757.87	\$347,773.12
Exp's	18,204.89	16,891.18	227,251.19	205,636.89
Net	18,261.31	17,261.02	160,506.68	142,136.23

Regina Municipal Ry.—In the report presented to the annual meeting of rate-payers recently by the city officials of Regina, Sask., the following references were made to the municipal railway:—"Operating expenses are slightly higher than for last year's period, but are some \$35,000 less than in 1914. There is a surplus in operation of \$13,000 compared with a deficit of \$12,500 last year. The receipts show an increase of 23%, mostly accounted for by the greater passenger earnings, as the freight business has fallen off somewhat. The net improvement over last year's period in the street railway statement reduces the deficit \$36,500, which reduction will be greater when the last two months of the year are accounted for. For the corresponding 10 months period of 1915 and 1916, the total passengers carried, the total car mileage, and receipts per car mile were: 2,908,339 and 3,756,645; 777,776 and 764,358; 16.15c and 21.07c respectively."

Alderman Barr, in discussing the matter, said: "The most difficult utility with which your city has to contend is the street railway, and when your council has changed a deficit of some \$13,000 into a surplus of \$13,000 there is some reason to believe that we shall ultimately solve even this difficult problem. It is only fair to state in connection with last year that about \$10,000 of the deficit referred to was incurred on account of the very difficult winter and heavy snowstorms which kept the tracks continually tied up and had to be removed at no small expense."

The financial statement presented covered the 10 months ended Oct. 31, 1916. The net loss for 1915 after paying fixed charges, was \$68,159.48 and the total revenue for the 10 months was \$169,728.96. The operating expenses were \$166,576.50, and the fixed charges \$81,312.94.

Saskatoon Municipal Ry.—The Saskatoon, Sask., Phoenix says:—"The street railway was completed in the latter part of 1912 and commenced operation in the early part of 1913. The total track mileage on a single track basis is 16½ miles, and the average number of cars operating is 12. The original fares were 6 tickets for 25c, but they were altered in 1915 to a straight 5c fare. The alteration has

undoubtedly meant an increase in revenue rather than a decrease in the number of passengers carried. The operating expenses have been reduced from \$137,334.11 in 1913 to \$106,982.26 in 1915, a reduction of \$30,395.85, or 22%. In spite of the reduction in operating costs, however, the loss increased from \$19,664.83 in 1913 to \$30,973.92 in 1915, due to the falling off in revenue the first six months of the latter year. The revenue during 1916, however, has so greatly increased that the railway is now being operated at a profit."

Toronto Railway:—

	City	percentage	1915	percentage

Trolley Express Service.—Business interests in and around Buffalo, N.Y., have for the past two years enjoyed a trolley express service on the International Ry. lines and it has become one of the factors in the general prosperity of that community. The idea of an express service on the electric line was conceived by the Chamber of Commerce and accepted by the railway company. Immediately a package express service was inaugurated between Buffalo, Lockport and Olcott, and by arrangement with the Lockport & Rochester Ry., to Rochester. The business done has doubled during the past year. It has been found cheaper to use this service for deliveries in the Tonawandas and other points between Buffalo and Lockport than to use delivery trucks, which had been the practice of many lines of business. Another feature of the service, affecting shippers along the line outside of Buffalo, is that during the period of navigation on the lakes they can make shipments to Cleveland and Detroit.

Toronto Ry. Overcrowding Case.—The Toronto Ry.'s appeal against the Supreme Court of Canada's decision, confirming a conviction for overcrowding on its cars, came before the Imperial Privy Council, Dec. 19. An objection was made to the appeal on behalf of the respondents, on the ground that the Judicial Committee of the Privy Council was not competent to entertain an appeal in reference to a criminal or quasi criminal matter. After some discussion it was arranged that the Attorneys General of Great Britain and Canada be communicated with as to their intention to be heard on the question of jurisdiction or to decide not to proceed further with the case, and the matter was adjourned sine die.

H. R. Mallison, of Montreal, who is connected with the Halifax Electric Tramway Co., addressed the Commercial Club at Halifax, N.S., recently, on "Some general ideas of how the H.R.T. Co. can and will benefit Halifax today and in the future."

Electric Railway Notes.

The Dominion Power & Transmission Co., Hamilton, Ont., has ordered a snow sweeper from Preston Car & Coach Co.

The Lake Erie & Northern and the Hamilton and Brantford Ry. joint station at Brantford, Ont., was opened for business Dec. 16.

The Three Rivers Traction Co. has received a combination freight car and snow plough from the Ottawa Car Manufacturing Co.

The Saskatoon, Sask., City Council decided, Dec. 13, to provide a shelter for convenience of street car passengers at the corner of Seventh Ave. and Princess St. at a cost of \$150.

The Vancouver City Council is considering the acquiring of sites for the erection of power plants, so as to be in a position to have its own electric power when the British Columbia Electric Ry.'s franchise expires.

The Board of Railway Commissioners has approved of the agreement of the City of Brantford, Ont., as owner of the Brantford Municipal Ry., with the Lake Erie & Northern Ry., for the sale by the city of a portion of the Grand Valley Ry.

The Quebec Ry., Light & Power Co. is building 2 additional double truck, single end, p.a.y.e. cars, 40 ft. long over all, to be numbered 654 and 655, at its Ste. Anne de Beaupre shops. This makes 6 cars of this type built at the company's shops.

Alderman R. G. Duncan, of Fort William, Ont., speaking at a meeting at Port Arthur, Dec. 15, is reported to have said that it costs 6c to furnish a street car ride between Port Arthur and Fort William, in which both cities are interested, and for which only a 5c fare is charged.

The British Columbia Electric Ry. Social Club's annual gathering was held recently, W. G. Murrin, Assistant General Manager of the company and President of the club, being in the chair. The speakers included G. Kidd, General Manager; A. T. Goward, Local Manager, Victoria; G. Porter, Chief Electrical Engineer, and V. Laureson, Permanent Counsel.

Controller Cote, of Montreal, has been fined \$1,000 for contempt of court in connection with the disregarding by the Board of Control of an injunction to restrain it from considering what is known as the Hebert proposal for a new franchise for the Montreal Tramways Co. This is the third fine inflicted, the other fines of a similar amount being upon Mayor Martin and ex-Controller Hebert.

On a motion to commit R. J. Fleming, General Manager, Toronto Ry., to jail for contempt, in not complying with the court's order to furnish certain information to the City of Toronto, Justice Middleton, at Toronto, Dec. 18, postponed judgment for three months, to enable the parties concerned to get together with a view to agreeing as to the information required and the best means of obtaining it.

A plan is under the consideration of the Port Arthur, Ont., Utilities Commission for the installation of a clock at the corner of Arthur and Cumberland Sts., on which there will be a dial showing the time of arrival at that point of cars travelling in all directions. As the clock will register the time and at the same time show when the next car is due, it is believed that the installation would be of great benefit.

The City of Vancouver, B.C., in order to safeguard the public at bridges in

which there is a draw or swing span, has decided to adopt special protective devices. The Granville St. bridge is to be provided with them at once, and it is expected that the Connaught St. swing span over the Main St. bascule bridges will be equipped later. These devices are in addition to those already provided by the British Columbia Electric Ry.

It is reported that Montreal ratepayers will vote in September next as to whether the present system of city government, consisting of a mayor, board of control and aldermen, shall be abolished or not, and replaced by a commission, Lord Shaughnessy, Sir Alexander Lacoste and Senator Beaubien being spoken of as probable commissioners. It is also stated that a special subcommission consisting of Senators Beaubien and Casgrain, and F. J. Cockburn, of the Bank of Montreal, will arrange a new franchise for the Montreal Tramways Co.

Mainly About Electric Railway People.

W. Perrin, Superintendent, Metropolitan Division, Toronto & York Radial Ry., Toronto, has resigned.

L. P. McClelland has been appointed acting Superintendent, Metropolitan Division, Toronto & York Radial Ry., vice W. Perrin, resigned.

Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry., is endeavoring to enlist 1,200 men for the 255th Queen's Own Battalion, Toronto, which he has been authorized to raise.

J. J. Callahan, formerly Manager of Operation, London & Port Stanley Ry., London, Ont., has been appointed Superintendent, Oshawa Ry., Deseronto, Ont., vice D. A. Valteau, resigned.

C. W. Mott, heretofore Chief Dispatcher, Metropolitan Division, Toronto & York Radial Ry., has been appointed Superintendent of all the company's lines. Office, Toronto. This is a new position.

George Lowery, heretofore dispatcher, Metropolitan Division, Toronto & York Radial Ry., has been appointed Chief Dispatcher of that division, succeeding C. W. Mott, promoted to be Superintendent. Office, Toronto.

A. K. Bunnell, City Treasurer of Brantford, Ont., and a former member of the Brantford Railway Commission, lectured on municipal finance to the Epworth League of Colborne St. Methodist Church, Brantford, recently.

Sir Geo. White, who died at Bristol, Eng., Nov. 23, was largely interested in electric railways. The firm of which he was head manufactured electric railway cars, and was the first in England to manufacture aeroplanes.

A memorial tablet to the late Major N. C. Pilcher, General Manager of the Sherbrooke Ry & Power Co., and formerly Manager of the Port Arthur & Fort William, Ont., electric railway, who was killed on active service, was unveiled in St. Peter's Church, Sherbrooke, Que., recently.

C. B. Hare, police magistrate for Grantham, Port Dalhousie and Merritton, Ont., who died at St. Catharines, Ont., Dec. 13, aged 63, was also the Dominion Power & Transmission Co.'s special agent in the St. Catharines district, his duties mainly consisting of the general supervision of the company's real estate there.

J. W. Sutherland, who died in Hamilton, Ont., Nov. 29, aged 64, was a director

of the Dominion Power and Transmission Co. He was one of the founders of the old company which developed power at Decew Falls, acting as Superintendent and Paymaster. Prior to taking an interest in electrical matters he was in the G.T.R. service at Midland and Niagara Falls.

Albert E. Pickering, who was appointed Manager, International Transit Co., Sault Ste. Marie, Ont., recently, was born at Brampton, Ont., Feb. 16, 1883, and from 1904 to 1914 was successively operator and lineman, Assistant Engineer, Superintendent, and Manager, Tagona Water & Light Co., and Lake Superior Power Co., later, the Algoma Steel Corporation's water power department; and from 1914 to 1916, Manager, City Water & Light Department, Sault Ste. Marie, Ont., formerly the Tagona Water & Light Co.

William George Murrin, who has been appointed Assistant General Manager, British Columbia Electric Ry., Vancouver, was born at Greenwich, Eng., Aug. 27, 1875, and prior to entering electric railway service in Jan., 1899, was, from 1891 to 1893, a student at the Finsbury Technical College, London, Eng., and from 1893, in the City of London Lighting Co.'s shops and stations. From Jan., 1899, to 1901, he was shift engineer, Middlesbrough & Stockton Tramway Co., Stockton, Eng.; 1901 to 1904, Superintendent of Power, London United Tramways Co., London, Eng.; 1904 to Mar., 1913, Works Manager and Electrical Engineer, same company; Mar., 1913, to Mar. 30, 1914, Mechanical Superintendent, British Columbia Electric Ry.; Mar. 30, 1914, to Nov. 30, 1916, General Superintendent, same company.

Quebec and Saguenay Ry.—Under the terms of the Dominion Act of Parliament providing for the purchase of the Quebec and Saguenay Ry., from the Quebec Ry., Light and Power Co., the price to be paid is to be fixed by the Exchequer Court. The matter came before the court recently, when, after statements had been made, Judge Cassels gave his decision on certain points. Counsel for the railway and the Government were asked to get together and agree upon as many points to be decided as possible.

Wood Block Paving.—The Moose Jaw, Sask., City Commissioners, in their report for the 10 months to Oct. 31, say that the use of wood block paving on the streets is not as satisfactory as in eastern cities, and "this is especially the case where attempts have been made to use wood blocks between street car tracks." The question of what type of street paving is to be adopted to overcome the admitted defects of wood block paving is being considered by the City Engineer.

W. P. Cook, Chairman, Public Utility Commission, Port Arthur, Ont., and M. M. Inglis, Manager, Port Arthur Civic Ry., who attended the American Electric Railway Association's annual convention at Atlantic City recently, presented a report upon improvements in machinery, etc., in connection with the operation of street railways and their adaptability to Port Arthur's needs, at a meeting of the Port Arthur Public Utilities Commission recently.

Hydro Electric Power Commission of Ontario.—In connection with the acquiring of lands in the Niagara peninsula for the new power development, it is reported that a railway line will be built for construction purposes along the route of the proposed canal.

Marine Department

Canadian Shipbuilding for Neutral Countries.

As indicated in a recent speech by the Minister of Marine, published in our last issue, permission has been given to 7 shipbuilding firms throughout Canada, for the construction and export of 21 steel steamships for foreign neutral countries, chiefly for Norway. As such construction and export was forbidden, special permission has to be granted in each case and orders in council have been passed, the following being a copy of the one issued to the Nova Scotia Steel and Coal Co., all being in identical terms, except for the date, name, and the number of vessels to be built.

"The committee of the Privy Council have had before them a report, dated Oct. 31, 1916, from the Minister of Marine and Fisheries, submitting that he has had under consideration an application on behalf of the Nova Scotia Steel and Coal Co., New Glasgow, N.S., for permission to export to Norway on completion two steel steamers, which they are about to construct in their shipyard at New Glasgow, for certain neutral owners who propose to place these ships under Norwegian registry. The Minister states that the applicants are prepared to give an assurance that such ships will not engage during the war in enemy trade, and that no demand on Great Britain for labor, material or machinery will be made in connection with the construction. The Minister recommends that authority be granted the Nova Scotia Steel and Coal Co., New Glasgow, N.S., to export the two steamers referred to in this present application, to Norway for Norwegian register in the name of neutral owners. The committee concur in the foregoing recommendation and submit the same for approval."

Following is a list of the firms to whom permission has been granted, with the dates of the orders in council, and the number of vessels allowed under the permit:—

Sept. 19—Polson Iron Works, Ltd., Toronto	2
Sept. 19—Thor Iron Works, Ltd., Toronto	2
Sept. 28—Canadian Vickers Ltd., Montreal	2
Nov. 3—J. Coughlan & Sons, Vancouver	1
Nov. 3—Western Dry Dock and Shipbuilding Co., Port Arthur, Ont.	3
Nov. 3—Wallace Shipyards, Ltd., Vancouver	4
Nov. 14—J. Coughlan & Sons, Vancouver	2
Nov. 15—Nova Scotia Steel and Coal Co., New Glasgow	2
Nov. 15—Polson Iron Works Ltd., Toronto	2

The foregoing list only covers 20 vessels, but it is understood that the Nova Scotia Steel & Coal Co. is building three vessels for export and not two as indicated above.

All of the vessels mentioned in this list are for Norwegian registry, with the exception of the two being built by Thor Iron Works, Ltd., Toronto, which are for export to the United States. As mentioned in another column certain of these contracts are being offered for sale in London, Eng., on behalf of the Norwe-

gian interests concerned and in the case of sales being made, it is to be presumed that there will be a profit on the transactions for the principals, as well as a commission for the agents in the matter.

The Montreal Transportation Company Changes Ownership.

The Montreal Transportation Co.'s property and assets have been acquired by L. L. Henderson, heretofore Managing Director, and his associates. The only changes in the directorate at present, are the resignation of the President, Bartlett McLennan, the election of L. L. Henderson as President and Managing Director, and the election of A. A. Wight, Managing Director, St. Lawrence and Chicago Steam Navigation Co., Toronto, as Vice President and Treasurer. The other directors are Farquhar Robertson, A. Kingman, A. G. Thomson, H. A. Calvin, and A. E. Ogilvie.

The Montreal Transportation Co. was originally incorporated with an authorized capital of \$300,000, and in 1903 obtained a new charter with an authorized capital of \$1,000,000, with authority to make advances on goods stored, and to hold shares in other companies, which was an addition to the original business which was confined to transporting grain and general freight. The actual paid up capital stock of the company was \$913,300, represented by a property in Kingston, Ont., its fleet of vessels and floating elevators, and the entire capital stock of the Prescott Terminal Co., Ltd., nominally \$500,000. The company owns the following vessels: Steamships—Advance, Glenmount, India, Kinmount, Rosemount, Simla, Stormount, Windsor; Tugs—Bartlett, D. G. Thomson, Emerson, Glide, H. F. Bronson, M. P. Hall, Mary; Lake barges—Augustus, Burma, Dunmore, Hamilton, Hiawatha, Kingston, Lapwing, Melrose, Muskoka, Quebec, Selkirk, Thrush, Ungava, Valencia, Winnipeg; and a number of river barges and floating elevators.

Transfer of Vessels from the Canadian Register.

During the year ended Mar. 31, 1916, there were transferred from the Canadian register, 32 vessels of a total tonnage of 25,834 tons. Of these, 15 were transferred to foreign registers, 14 to the U. S., and 1 to Russia, and 27 vessels, representing 20,964 tons, were transferred to British registry outside Canada. The principal changes were the transfer of 21 vessels, 7,183 tons, to British registers in Newfoundland and Barbadoes..

The Deputy Minister of Marine in his annual report says it is generally understood that a large proportion of these transfers was made with the sole purpose in view of securing immunity from some of the provisions of the Canada Shipping Act, in which it is provided that no ship registered in Canada, over 150 tons, shall go to sea from any port in Canada on any voyage not being a coasting voyage, unless the master and first mate, or only mate, possesses valid certificates, and that no sailing ship over 150 tons, and no steamship registered in Canada, shall go from any port in Canada on any coasting

voyage, or be licensed or allowed to ply on any Canadian water, unless the master possesses a valid certificate. In Newfoundland and Barbadoes there is no legislation of this nature, with the result that vessels registered there may engage in trade from any Canadian port without being obliged to secure the services of certificated masters and mates. It does not appear reasonable that vessels on the Canadian register and their owners should be thus discriminated against, and it is submitted that the matter should engage the attention of Parliament at its next session. It may be pointed out in further reference to this matter that while steamships registered in Canada engaged in foreign coasting and inland trade, are obliged to carry certificated masters, steamships registered in the United Kingdom may engage in all these trades without any obligation to employ certificated masters. Both the Merchant Shipping Act and the Canada Shipping Act appear to be defective in this respect. The former provides that every British foreign going ship when going to sea from any port in the United Kingdom, shall be provided with officers duly certificated. When, however, that ship reaches a Canadian port and undertakes to clear for a foreign, coasting, or inland voyage, it is under no obligation to employ certificated officers. In the revision and consolidation of the Canada Shipping Act, the result of which has been embodied in a bill which was introduced into Parliament in the 1914-15 session, provision was made to overcome this difficulty and remove what is in reality a discrimination against steamships on the Canadian register. Owing to the time of Parliament being so much occupied with matters relating to the war during the past two years, it has not been deemed inexpedient to take up the bill so far, but it is hoped to deal with the matter at the next session.

Coal Deliveries to Coasting Vessels on the Atlantic Coast.

A commission, consisting of W. E. Tupper, Inspector of Subsidized Steamship Services, of the Trade and Commerce Department; A. R. Tibbits, Officer in Charge of Harbor Commissions, Marine and Fisheries Department, and J. F. McDonald, Collector of Customs, New Glasgow, N.S., has been appointed under the provisions of part 1 of the Inquiries Act, to enquire into and report upon the conditions regarding deliveries of coal cargoes to coasting vessels in the Maritime Provinces. This action was taken at the instance of the Prince Edward Island Legislature, which complained that captains and owners of coasting vessels suffered hardship in having their vessels laid up during the winter, and to further hardship and financial loss owing to the long delays, often extending to several weeks, at coal delivering ports. It is pointed out that the greater part of the coal used in the province is imported in sailing vessels, and owing to the many shallow water harbors, must continue to be carried in vessels of shallow draught, and that by preventing these delays, the building of coasting vessels could be profitably undertaken and an industry established that would be of benefit to the whole province.

Stranding of the s.s. Samuel Marshall.

An investigation was held recently by the Dominion Wreck Commissioner, Capt. L. A. Demers, at Quebec, assisted by Capt. C. Koenig and T. Gough, as nautical assessors, into the causes of the stranding of the Central Canada Coal Co.'s s.s. Samuel Marshall near Lark Reef at the entrance to the Saguenay River, Sept. 8. The judgment set out that the absolute trust and the possible misinterpretation of the duties and responsibilities of a pilot, caused two men, the master, W. A. Tulloch, and the mate, C. Ross, especially the master, to forget their duties to a most regrettable extent. When the vessel left Little Saguenay wharf, the master saw to her unmooring and headed her down the river. Although according to the system followed on the vessel, his watch was until midnight, he left the bridge and retired to his room between 10.30 and midnight, and went to sleep, without issuing instructions of any kind, leaving everything to the pilot; even the lookout was not sent to his post. If the pilot's version is true, that he sounded the fog whistle, it failed to bring the master on deck to his duty. It was only when the shock of grounding was felt, that he was awakened and proceeded to the bridge. The mate also went to sleep without advising someone to call him, basing himself on the tacit understanding that the watchman would do that without request. It was also considered by him as understood that the watchman or lookout man was to keep his lookout on the fore-castle head, and such was not done on this occasion. While the court finds much to blame in the mate's conduct, there is an extenuating reason for leniency in his case, and causes his excuse that had he been called he would have been at his post, to be accepted. The master's conduct in leaving the bridge without giving orders of any kind, is astonishing. It is true that both he and the mate had been working all day, and there being no second officer, the mate had to be about constantly to see to the cargo and prepare the vessel for her trip. The master was also undoubtedly busy with the cargo, getting ship's paper in order, and many other details to which a master is in duty bound to attend. The situation being known that there was one officer short, and being satisfied that the vessel was to leave at a certain time during the night, it seems to the court that if either the master or the mate felt some rest was needed before sailing, some means could have been devised to secure that rest before the vessel sailed, but such was not thought of, the idea predominating, no doubt, that there was a pilot on board, and through a mistaken interpretation of responsibilities, a happy-go-lucky method was adopted; perhaps such is general, but only discovered when a casualty occurs.

The court, composed as it is, of members who have had a vast and varied experience in shipping matters, each member having been in command, realizes that in these momentous times crews cannot be selected as one would wish, and owners have found difficulty in obtaining sufficient men to run their vessels, and those found are generally deficient in qualifications and experience. These conditions apply to foreign as well as inland navigation. The wheelman and watchmen examined are young fellows who have not had sufficient training to understand their duties unless a superior officer

is present, to guide, advise and instruct them. It was known by the master and mate, or should have been, that there was no light on the compass on the bridge. In view of the circumstances prevailing, of shortage and indifferent crews, it behoves the master and his official subordinates to redouble their vigilance and prudence and face conditions as they are found in a manly fashion. Weighing all details together, the court, without showing any undue severity, should deal at least with the certificate of the master, but in doing so, the intention to bring about a realization on the part of the masters and officers of their duties, would be nullified by the fact that the navigation season is nearly at an end, and a suspension of certificate would be fruitless. The court therefore exercises the other power it possesses, and condemns the master to pay two-thirds of the expenses of the investigation, and the mate the other third, the total being \$123.70. In addition, both master and mate are severely reprimanded for their indifference. The court found the pilot, E. Langlois, in default for failing to acquaint himself with the so-called telegraph to the engine room, for not having insisted on the presence at his side of the responsible officer of the vessel, and for not making some attempt to supervise the courses he was giving, and the work of the wheelman. His excuse that he thought some one in the wheelhouse was responsible for this, cannot be accepted. Owing to the circumstances already mentioned for not dealing with the master's certificate, the court fined the pilot \$100, to be paid by Dec. 27, and cautioned him that should he come before the court again and be found in default, his license will be dealt with.

Hawking Canadian Shipbuilding Contracts.

The following letter which appeared in a recent issue of the Journal of Commerce, Liverpool, Eng., from Donald Macleod and Co., London, Eng., will, no doubt, be read with considerable interest by Canadian shipbuilders and others concerned in the welfare of the shipbuilding trade on this side of the ocean.

"We have the following contracts for new steamers for sale building in British yards (Canada) for Norwegian account, viz:—Three 8,800 tonners, Robert Dollar type, one delivery end July-early August, one October, and one November, building by Wallace Shipbuilding Co., Vancouver, and we can sell them at \$145 a ton for the first steamer and \$140 for the two later. Also two 7,000 tonners building by Vickers, Montreal, delivery end of 1917, for which we will try \$135 a ton, all net to us.

"May we put on record here it seems to us absolutely disgraceful that it is possible for British colonial yards to take contracts to build ships for neutral countries when it is impossible for British owners to get reasonable deliveries from our home yards, and when we need every ship we can possibly secure in the near future to be under British control, and if the above is an example of how Britain is preparing for 'The War After the War,' the result can only be disastrous.

"British owners can still secure these contracts, but now only after the Norwegian holders have taken their profit. Surely this is a criminal loss of foresight on the part of our Government, who give no encouragement to British owners to

build ships abroad at prices required by builders, otherwise we could long since have secured a large fleet of up-to-date merchant vessels recently built and now building both in America and Japan, all of which have been secured by neutral countries."

It is not Canadian Railway and Marine World's intention to comment on the ethics of these particular transactions. Similar deals are probably taking place frequently, so we merely accept the information and note the prices quoted as evidence of abnormal times.

The correspondents quoted characterise it as "absolutely disgraceful" that Canada should take contracts to build vessels for neutral countries when it is impossible for British owners to get reasonable deliveries from their home yards. Surely this reason is very illogical. If it is impossible for British owners to obtain deliveries from home yards, and Canadian yards are open to accept contracts, one would think that British owners would flood Canadian yards with orders for new vessels. The Minister of Marine in a recent speech stated that there were plants splendidly equipped for the construction of steel steamships at New Glasgow, N.S.; Montreal, Que.; Kingston, Toronto, Collingwood and Port Arthur, Ont., and Vancouver, B.C., and that orders in council had been passed allowing these plants to build and export to foreign neutral countries, 21 steel steamships of varying tonnage. There is therefore sufficient evidence of the capacity and capabilities of the yards on this side to build vessels of a type especially suitable for ocean service under war conditions. Will British owners in search of new tonnage take advantage of the opportunity of building new tonnage within the Empire? Or will they, as is done in the letter quoted above shelter themselves under the complaint that "surely this is a criminal loss of foresight on the part of our Government, who give no encouragement to British owners to build ships abroad at prices required by the builders." There is no criminal loss, or lack, of foresight in the matter, except possibly on the part of the owners, who have not taken full advantage of the facilities offered. It is not a Government matter, and in the face of the figures quoted, viz., \$135 to \$145 a ton, the reference to "prices required by the builders" is superfluous.

In answer to a question in the British House of Commons, Nov. 30, it was stated that the British Government would communicate with the Dominion Government on the question as to whether it was in the national interest that the Dominion shipbuilding yards should build ships for neutrals, when it was so difficult for British shipowners to get deliveries.

Floating Dry Dock for Vancouver.—It is reported that arrangements have been completed for building a floating dry dock of double section, 18,000 tons capacity, by Vancouver Dry Docks, Ltd., the incorporation of which was mentioned in our last issue. C. Meek, of Vancouver, is stated to be the chief organizer of the project, and reports state that \$2,000,000 of bonds have been sold to Breed, Elliott & Harrison, Cincinnati, Ohio. The scheme covers also the building and operating of a complete shipbuilding and repair plant. Contracts for construction and machinery are reported to have been let, and it is hoped to have the plant in operation within a year. It is the intention to apply to the Dominion Government for aid under the act granting aid for the construction of dry docks.

Dominion Government Steamship Service between Pacific and Atlantic Coasts.

Announcement has been made by the Minister of Customs that the Dominion Government will inaugurate a steamship service between Pacific and Atlantic coast ports in Canada, via the Panama Canal, and that contracts have been authorized for the construction of two steamships, tenders for which will be called for shortly by the Department of Railways and Canals. It has been found impossible to charter suitable vessels for the purpose, and so the decision was reached to have them built, and it is said that they will be built in British Columbia. One of the chief difficulties in connection with such construction appears to be the labor shortage, but it is stated that men will be obtained from Europe, and mostly from shipbuilding yards in Scotland, but owing to the condition of affairs in Great Britain, it is not to be taken as certain that men will be obtained from Scotch yards. The establishment of this service will give an opening for the shipment of grain from Vancouver, where the Dominion Government has erected a large grain elevator. It was also reported recently the C.P.R. was contemplating the erection of a large grain elevator at Vancouver, but it is not likely that this will be done, at any rate, not in the immediate future. It is claimed that manufacturing concerns in Ontario and Quebec will be greatly assisted by the service in having the choice of a rail or water route.

Stranding of the s.s. Hungerford.

At the recent enquiry into the causes of the stranding of the British s.s. Hungerford, off Champlain, in the St. Lawrence River, Nov. 19, 1916, held by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. Nash and C. Lapiere, as nautical assessors, judgment was rendered as follows,—The court having carefully considered the evidence, finds that some serious contradictory statements were made with regard to weather conditions, and the wheelsman's evidence in reference to an order given by the pilot, J. M. Labranche, would tend to throw a different light on the pilot's action if the court entertained the evidence seriously. By examination of the engineer's log it is noticed that various orders with respect to speed were given from the bridge, which prevented accurate estimation of distances, and the passing flurries of snow, and the smoke, made the pilot's task more difficult. Yet the court is of opinion that the grounding, which is fortunately of no gravity, could have been prevented had there been a guide for the wheelsman to steer by. The extinguishing of lights in the compass binnacle may facilitate the work of the pilot, providing there are objects visible by which the vessel may be steered, but it is an impossibility to keep a vessel on any given course without some leading objects in view, hence the need of a compass as a guide when fog, mist or smoke overtakes a vessel. In this case, neither pilot nor wheelsman had any knowledge of the direction of the vessel's heading during these snow flurries. In view of the fact that the Champlain lights were seen, also gas buoy 17C, shortly before the stranding, the court cannot overlook the casualty, but the circumstances attending it are such that it will be treated as a minor offence. The court condemns

the pilot to pay the cost of the investigation and warns him to be more cautious. The third officer's evidence shows that he reported to the master, R. A. Seabrook, in his room. The court has always maintained that in narrow stretches, and in uncertain or foggy weather, the master should be at his post on the bridge, notwithstanding the presence of the pilot, and he is censured for failing to meet the obligations of his position.

Some suggestions were made to the court with regard to placing a gas buoy where this casualty occurred, and it is said that an application was made last winter with that object in view. The court is not, at this stage, willing to admit the necessity of another buoy, but suggests that the one now in position be shifted to where the spar buoy 15C is at present, as it is a point of the bank advancing towards the channel and more prominent, and being at a turn, the placing of buoy 17C at that spot, or in that locality, would be more effective. Regarding the smoke which the pulp mills emit in the vicinity of Three Rivers, and of which other pilots have complained, the court thinks that, in the interests of navigation, all industries placed on the banks of the St. Lawrence should have their boilers fitted with smoke consumers. There are enough fogs and mists and other elements making navigation hazardous at times, without having to submit to avoidable conditions.

Stranding of the s.s. Haulwen.

An investigation into the cause of the stranding of the British s.s. Haulwen, on Aug. 12, 1916, near Point Citrouille, in the River St. Lawrence, was held recently before Capt. L. A. Demers, Dominion Wreck Commissioner, with Capt. F. Nash and C. Lapiere as nautical assessors. Following is a summary of the judgment,—This case resolves itself into the uncorroborated evidence of the pilot, F. X. Minard, the master and wheelsman on the vessel at the time of the casualty having been replaced, and a new crew, new logs, etc., having been installed on board. The chief officer and chief engineer are the only two members of the crew at the time of the accident. Purely

on the evidence of the pilot, the court finds that he committed an error of judgment, due to lack of forethought. It was purely a question of seamanship, with which every pilot is expected to be acquainted, the error of judgment concerning the manoeuvring of the vessel in bringing the vessel to anchor. As the accident happened in August, and on account of the absence of the principal witnesses, the court is inclined to view the matter leniently, and fines the pilot \$50 and condemns him to pay the costs of the investigation, and warns him that as this is his second offence, should he appear again, his license will be jeopardized.

Damage by s.s. Twickenham at Sydney, N.S.

The Dominion Wreck Commissioner, Capt. L. A. Demers, assisted by Capt. A. L. Mulcahy and Jas. Hayes, as nautical assessors, enquired recently into the causes of the damage to the Dominion Coat Co.'s chutes at Sydney, N.S., on Oct. 11, and gave the following judgment. No evidence beyond that of the master, R. Craggs, was taken. This was straightforward and to the point, and in acknowledging his failure to assume the responsibility which devolved on him, he simplified the enquiry. The court finds that the master should have issued order to unmoor his vessel, and when once clear from the wharf, handed over the responsibilities of navigating to the pilot. It must not be lost sight of that the pilot is the adviser of the master as to local conditions, and the master himself is solely responsible for the property committed to his care. Mooring and unmooring a vessel are duties pertaining to seamanship and are not altogether within the scope of a pilot's duty, and hence the court must find the master in default, but in doing so, wishes to emphasize the fact that the action of the master in not foreseeing the effect of hauling the vessel stem first, in the face of a strong wind pressing the vessel against the wharf, is but an error of judgment, and he is therefore cautioned to be more careful in future, and reminded that he is at all times the responsible party.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during November, 1916.

ARTICLES		CANADIAN CANAL	U. S. CANAL	TOTAL
Copper	Eastbound	Short tons	21,281	21,281
Grain		Bushels	8,320,376	15,240,821

Change of Collingwood Shipbuilding Co. Ownership.

H. B. Smith, Owen Sound, Ont.; J. W. Norcross, Montreal; and R. M. Wolvin, Winnipeg, have bought all the assets and undertakings of Collingwood Shipbuilding Co., Ltd. The outstanding capital of the company, which is an Ontario one, is \$1,300,000. A new company, with the same name, will be incorporated under Dominion charter, with a capital of \$2,600,000. H. B. Smith will be President, and Messrs. Norcross and Wolvin Vice Presidents. The old company's shareholders will receive \$1,950,000 of 6% 10 year bonds and \$650,000 paid up stock of the new company at the rate of \$150 in bonds and \$50 in stock for each share of the old company. Included in the purchase is 96% of the outstanding capital of the Kingston Shipbuilding Co., Ltd. J. S. Leitch, Manager, and S. H. Lindsay, Secretary Treasurer, of the old company will receive similar appointments in the new one. The company's stock is firmly held, and there will be no public issue.

The old company owned two dry docks, machine shops and a quantity of land at Collingwood, as well as 96% of the Kingston Shipbuilding Co.'s shares. The directors, according to the last return available, were:—Alex. McDougall, Superior, Wis., President; Thomas Long, Toronto, Vice President; S. H. Lindsay, Secretary-Treasurer; H. B. Smith, S. Dymont, M. P. Byrnes and P. M. Campbell, the last mentioned director having died since. The business was originally established in 1889, under Ontario charter, as Shipbuilding, Dry Dock & Wrecking Co. of Collingwood, Ltd., its name being subsequently changed to the Collingwood Shipbuilding Co., Ltd.

Grounding of s.s. W. B. Morley.

An investigation was held recently into the causes which led to the damage sustained by the s.s. W. B. Morley, whilst in charge of the pilot, G. Perreault, when being swung in the neighborhood of Plum Island, in the St. Lawrence, June 17. Following is a summary of the judgment delivered by Capt. L. A. Demers, Dominion Wreck Commissioner, and concurred in by Capt. C. Koenig and L. R. Demers, as nautical assessors.—The court had contradictory evidence from each of the four witnesses called with regard to the anchoring of the vessel. The casualty having occurred on June 1, it may be expected that the actual happenings were not memorized, and hence the court concludes, that in the absence of any log books, the evidence, though contradictory in the extreme, is not due to any intention to mislead or mystify the court, but rather to forgetfulness. The pilot's action is the only point for the court to discuss. If it was the intention to anchor when fog came on, the pilot should have stopped the vessel, keeping her in the course and letting go his starboard anchor, and the tide of 1½ miles at that place would have swung the vessel gently either one side or the other, or else have canted the head of the vessel slightly to starboard, which would have answered the purpose and assured the pilot and master that the vessel would swing as desired. Instead of this, the vessel was caused to leave midchannel on a starboard helm, and, after a short interval, to evolute under a hard to port helm, and whilst swinging to the starboard side, her heel struck shoals, injuring the keel and rudder, and then she was allowed to

come head to tide before the anchor was let go. From this there is no other conclusion than that the pilot showed lack of judgment in carrying out the evolution. His conduct is not serious enough to cause his license to be dealt with, especially in view of the fact that this is his first trouble in 20 years, but he is condemned to pay the cost of the enquiry, and is cautioned to be more logical and to use better judgment in future. The costs of the investigation are as follows.—Travelling expenses of Wreck Commissioner and stenographer \$70, French stenographer \$18.75, assessors' fees \$20, total \$108.75.

The court deprecates the system which prevails on many lake boats. There is a lack of discipline. It is evident that there was no lookout as required by the Board of Trade and the Rules of the Road, that soundings taken and given were incorrect, whether through lack of care or knowledge the court was unable to ascertain, as the second mate, who was detailed to take soundings, has left the vessel, and his evidence was not available, but in view of the conditions existing and the scarcity of labor, the court feels inclined to view the matter leniently. Though the lack of lookout did not contribute to the casualty, it is nevertheless a breach of the regulations. If some discipline had been observed, there would have been no necessity for the master to relieve the man at the wheel so that he might help the second officer to take soundings, unless the casting of the lead was continuous, and lengthy experience has taught the court that two men are not required. Owing to the investigation being delayed so long, due to no particular fault, and causing incomplete evidence, the court only reprimands the master, H. Larosie, for not maintaining better discipline, and cautions him that though a pilot is on board, it is up to the master, and to him only, to observe the Rules of the Road.

Regulations Regarding Vessels' Lights on East Coast.

Vice Admiral C. E. Kingsmill, who signs as Competent Naval Authority, issued the following notice, dated Nov. 24.—“By virtue of the authority conferred upon me by orders in council of Sept. 12, 1914, and Mar. 25, 1915, the following orders regarding ships' lights on the East Coast of Canada are hereby made to come into force forthwith,—

1. Anchor lights—No electrically lit lanterns shall be employed as anchor lights. The normal brilliancy of all other anchor lanterns shall be reduced by 50%.

2. Bow and steaming lights—Vessels are not to use electrically lit lanterns as bow or steaming lights in the vicinity of the harbor.

3. Other lights—No lights, either aloft, on deck or below, except those required by the Regulations for the Prevention of Collisions at Sea, and such as may be necessary for authorized signalling purposes, shall be permitted to be visible from outboard. This shall apply to all vessels whether under way or at anchor.

4. The above orders shall apply to vessels of every description, other than H.M. ships, within the waters of Canada on the East Coast, and extending up the St. Lawrence River as far as the Port of Quebec.

Masters of ships not complying with these orders render themselves liable to a penalty not exceeding \$5,000 or imprisonment not exceeding 5 years, or to both fine and imprisonment.

Stranding of the Japanese s.s. Shintsu Maru.

Judgment was delivered recently, at Victoria, B.C., by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, and which was concurred in by Capt. S. W. Bucknam and C. Clarke as assessors, in the matter of the stranding of the Japanese s.s. Shintsu Maru, near Point Roberts in the Gulf of Georgia, Sept. 22. Following is a summary: After studying the evidence, which was fairly satisfactory throughout, the court can come to no other opinion than that the sole blame for the stranding must be imputed to the pilot, H. R. Jones, belonging to the Vancouver Pilotage District, and that no blame can be attached to any members of the crew. In the court's opinion there is no doubt that the night, though dark, was clear, and that there was no fog nor any signs of it at the time, though it was probably misty over Point Roberts. The evidence of the master and crew of the vessel, the log book, as well as the log book of the Fraser River light vessel, clearly substantiate this, as also does the fact that the light of the Sand Heads gas buoy, 4 miles to the north of the stranding, was clearly visible. The court is therefore confident that the accident was due to two causes, the first being that the pilot set the vessel on much too fine a course to be safe, after rounding East point, and the second, that he made no allowance for easterly deviation, due to retained magnetism, which from his long experience he should have suspected to exist, after the vessel had been steering east from Japanese ports for several days. In addition to these two causes there is every probability that the tide, small as it was on that night, had a tendency to set the vessel over toward Roberts Bank.

Owing to the fact that the pilot has already been suspended for three months by the Vancouver Pilotage Authority, for the stranding, the court refrains from dealing with him in any manner, and makes no comment other than that in its opinion, the Vancouver Pilotage Authority dealt with him most leniently, especially in view of the fact that this is the second serious accident to large ocean going vessels under his charge within three months. The Court regrets that the pilot took up the somewhat defiant attitude he did in refusing to appear and give evidence, until forced to do so, thus causing not only considerable delay and inconvenience, but also unnecessary expense. The court being of opinion that public money is certainly not for the purpose of being needlessly wasted, more especially at the present time, therefore orders under Sec. 794, part 10, cap. 113 of the Canada Shipping Act, that the pilot pay all costs for the two extra and unnecessary days which the court was forced to sit, such costs being \$70. This will not only be a lesson to him, but a deterrent to others who might in future cases feel inclined to take up a similar attitude. The court wished to place on record the appreciation of the courtesy, characteristic of their nation, shown by the Japanese master, officers and crew of the s.s. Shintsu Maru, in coming over voluntarily from a U. S. port, knowing that they could not be compelled to, to give evidence when requested to do so, and also to convey its thanks to the British Consul at Seattle, Wash., and to Frank Waterhouse & Co., agents for the vessel, for the interest they took and the help they gave in the matter.

Atlantic and Pacific Ocean Marine.

It was announced from London, Eng., in the early part of December, that war risk insurance in London had been advanced from 5% to 10% for trans-Atlantic and Cape of Good Hope trade, on the report that a German commerce raider was at large in the Atlantic Ocean.

The steamships Blaamyra and Thorjerd, which were mentioned in our last issue as having left Port Arthur, where they were built, for the Atlantic Coast, are owned by Hans Hensen, Christiania, Norway, and will be operated between North and South America in the general trade until the end of the war.

Cable reports from London, Eng., Dec. 15, state that rumors were current on the Stock Exchange to the effect that the Cunard Steamship Co. was taking over the C.P.R. Atlantic steamships, and that the C.P.R. was taking over the Union Steamship Co. of British Columbia, thus confining its steamship service to the Pacific. In referring to this report, G. M. Bosworth, Vice President, C.P.R., is reported to have stated that it was entirely unfounded.

The Marine Navigation Co. is operating the steamships Nigaristan and North Cambria between Halifax, N.S., and France, and also controls a number of sailing vessels, 8 in all, 3 of which have auxiliary power. These latter are engaged in the lumber trade. The s.s. Cardiff is to be added for the Canada-France service when she is released by the British Government. The company is reported to have under construction in England 2 steamships to be named William Wallace and Robert Bruce, respectively 7,500 tons and 8,400 tons, and one steamship the Dominion, under construction in Holland, for U.S. trade.

A steamship is under construction at the Wallace Ship Yards, North Vancouver, for the Kishimoto Kissen Kabuskiks Kaisha, of Japan, for service on the Pacific Ocean. The vessel will be a steel cargo steamship, with capacity for 4,500 tons dead weight, driven by single screw, and built to Lloyd's A1 classification, under special survey. She will be built with a straight stern, with 2 masts, machinery placed amidships, and will be of the bridge deck type. The propelling machinery will consist of triple expansion engine, with cylinders, 24, 38 and 62 in. diam. by 42 in. stroke, supplied with steam by 2 single end Scotch boilers, 14½ by 10¾ ft., at 160 lbs., and fitted with tubes giving 4,268 sq. ft. of heating surface.

Tide Tables for the Eastern and the Pacific Coasts for 1917 have been issued by the Naval Service Department's Tidal and Current Survey. These are issued free on application to the department.

Welland Ship Canal Construction.—With the close of the construction season for the winter, work has been suspended on the Welland Ship Canal, with the exception of a few small matters which will be cleared up very early in January. It is not the Government's intention to proceed further with the work until the close of the war. This decision has been reached owing to the shortage of labor and the difficulties experienced in obtaining adequate supplies as required. The work done on the four contracts under way is of such a nature that it will not deteriorate in the interval, and after the war the remaining contracts will be awarded and the whole pushed through with all speed.

Maritime Provinces and Newfoundland.

Pickford & Black have been appointed Lloyd's agents at Halifax, N.S. They have been acting in that capacity since the resignation of the position by S. Cunard & Co.

A fire in the Marine Navigation Co.'s office in the Pickford & Black Building, Halifax, N.S., Dec. 3, did considerable damage to the property and to the workshop and store where Pickford & Black conducted their stevedoring business.

A steamship is reported to be under construction at Wedgeport, Yarmouth, N.S., by Capt. H. T. Leblanc for freight service. It is stated that she will be launched in the spring, and that she is being built on the same lines as those used on the Great Lakes, with machinery aft and a clear cargo space amidships.

The Boston & Yarmouth Steamship Co., which is operated in connection with the Dominion Atlantic Ry., placed an additional vessel in service between Yarmouth and Boston, Dec. 15. The steamships Prince Arthur and Boston are now giving the service, the latter vessel making an additional two trips a week in the freight service only.

The Dominion Government is offering for sale, its s.s. Ostrea, which has been attached to the Department of Naval Service for some time, in connection with oyster culture. She is being replaced by another vessel, bearing the same name, which was described and illustrated in our last issue. The purchaser of the old vessel will be required to change her name.

A channel 200 ft. wide has been dredged from deep water to 175 ft. inside the lighthouse on the Government pier at Digby, N.S. The depth of the channel is generally 20 ft. or more, but there is a spot outside the lighthouse which is only 16 ft. From 1,800 ft. north of the lighthouse a channel 120 ft. wide has been dredged for 700 ft. towards Sproule's wharf, and inside this channel a cut 20 ft. wide has been made approximately to low water mark for a further 780 ft.

The s.s. Hampstead, which operates during the summer between St. John and Fredericton, N.B., was destroyed by fire at St. John, where she was berthed for the winter, Dec. 9. It is stated that some person boarded the vessel and started a fire in one of the stoves. She was built at Hampton, N.B., in 1893, and was screw driven by engine of 20 n.h.p. Her dimensions were, length 94 ft., breadth 17.7 ft., depth 7 ft.; tonnage, 235 gross, 159 register.

Reference was made in our last issue to New York reports to the effect that the Canada Atlantic & Plant Steamship Co. intended to discontinue business and to sell its steamships Evangeline and Halifax. We are advised that such statements are premature. The service between Charlottetown and Hawkesbury is always withdrawn during the winter, and the service between Halifax and Boston is altogether dependent on freight conditions. It is not likely that the vessels will be running during January. Neither of the two vessels has been sold.

The Dominion Government s.s. Grilse, which was purchased in the U.S. for the Government by J. K. L. Ross, and was reported to have sunk at sea with all hands, Dec. 13, landed at Shelburne, N.S., Dec. 14, in a damaged condition, due to excessively bad weather, and reported the loss of 6 of her crew. She was built

in Scotland on the lines of a torpedo boat destroyer, and after purchase by the Government was fitted with torpedo tubes and utilized in war service on the Atlantic Coast. She sailed from Halifax Dec. 11 for Bermuda, and reported on Dec. 12 by wireless that she was returning to Shelburne for shelter. Later a wireless message was received that she was in a sinking condition and required immediate assistance. Nothing more was heard of her until she arrived in port.

The Bathurst Lumber Co. had under consideration recently a proposal to start a shipbuilding yard at Bathurst, N.B., and A. McLean, the General Manager, is reported to have made a statement that there is at present an acute scarcity of labor, and any new venture would necessarily be handicapped on this account. Apart from this, such a business would require careful nursing for some time, and his company could not undertake to go into the business except under some system of Government subsidy. This, he believed, would occupy the Government's attention in the course of the next session, and if such a system of subsidies was started, the company would immediately start shipbuilding. They would undertake the construction of sailing vessels of from 500 to 1,000 tons, equipped with auxiliary power.

Ontario and the Great Lakes.

The Sault Ste. Marie canals and locks were closed Dec. 21, for the winter.

The Kingston Shipping Co., Ltd., Kingston, Ont., has surrendered its charter, which has been cancelled.

The Western Dry Dock & Shipbuilding Co., Port Arthur, is reported to have closed contracts for the construction of 8 steel steamships, 6 for ocean service, and 2 for the Great Lakes.

Mention was made in our last issue of the sale of the motor ship Fordonian and the s.s. Algonquin to United States interests, and it is now stated that they were sold to the American Star Steamship Corporation, New York.

The master of the U. S. s.s. Morrill has reported the discovery of a wreck with one mast, 6 ft. above water, about 9 miles from the southeast shoal lightship in Lake Erie. It is supposed to be the wreck of the s.s. Marshall Butters, lost Oct. 20. The least depth over the hull is 6¼ fathoms.

During the past navigation season, 226 vessels with grain arrived at Port McNicoll, and 106 trips were made by C.P.R. vessels with passengers and freight. The elevator there handled nearly 44,000,000 bush. of grain, and 282,433 tons of flour and feed eastbound, and 69,100 tons of package westward, passed through the sheds.

A retrial of an action for damages against the Lake Simcoe Navigation Co. by J. C. Praelan, a bridge tender on the Trent Valley Canal, for injuries sustained when the s.s. Otonabee struck a bridge, took place at Whitby, Dec. 15, and the claimant was awarded \$1,800 and costs. In the first trial he was awarded \$2,000, and an appeal by the company resulted in an order for retrial.

The United States Lake Survey reports the levels of the Great Lakes in feet above mean sea level for November, as follows,—Superior, 603.50; Michigan and Huron, 580.64; Erie, 571.70, and Ontario, 245.65. As compared with the average November levels of the past ten years, Superior was 1.07 ft. above; Michigan and

Huron, 0.49 ft. above; Erie, 0.06 ft. below, and Ontario, 0.13 ft. above.

Canada Steamship Lines' s.s. Waheonah, which has been engaged in ocean service latterly, has been sold to a British firm for \$46,000. She was built at Port Glasgow, Scotland, in 1903, and is of steel, with 4 watertight bulkheads, with triple expansion engines with cylinders 12, 28 and 47 in. diam. by 33 in. stroke, 750 i.h.p. Her dimensions are,—Length 230 ft. 4 in., breadth, 37 ft. 1 in., depth 24 ft.; tonnage, 1,554 gross; 996 register.

Navigation on the Great Lakes closed, officially, Dec. 1, when ordinary marine insurance expired, but as customary, certain insurance was extended for 12 days, and general navigation was suspended Dec. 12, for the winter. Several vessels continued operations beyond that date. The losses for the year were comparatively small, and the underwriters are reported to have had a profitable season.

The demand for ocean tonnage amongst Great Lakes shipping is reported from Cleveland, Ohio, to be continuing strong. Further orders have been placed there recently for new tonnage of Welland Canal size for ocean service, for delivery in the early autumn. It is stated that builders will be unable to take all the orders offering, owing to the uncertainty of obtaining materials in reasonable time. It is also stated that a number of lake vessels have been sold and are being taken to the Atlantic Coast.

J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines, Ltd., who returned recently from Great Britain, is reported to have stated that negotiations had been completed for the chartering of 15 steamships for ocean service for 1917. During the past year, 18 of the company's steamships were engaged in this trade under charter, and it is expected that eventually the number of vessels so engaged for 1917 will be the same. The rates obtained are considerably higher than those paid in 1916.

The Board of Grain Commissioners has issued a statement showing that during the past year a record was created in the shipping of grain cargoes for Port Arthur and Fort William, both in number and quantity. In 195 Canadian, and 565 U. S. vessels, 253,969,599 bush. of all kinds of grain were carried east. This was an increase of 341 cargoes and 52,200,000 bush. over 1915, and was more than double the amount shipped in 1914. In 1914, U. S. vessels carried only one-third of the grain shipped from the head of the lakes, but in 1916, Canadian vessels carried only 13,000,000 bush. more than U.S. vessels.

Reports are current in Montreal that Canada Steamship Lines Ltd. has secured control of the Montreal Coal and Dock Co., that it may in the near future get control of the Montreal Transportation Co., and that it is negotiating for the control of an important Ontario shipping company. Canada Steamship Lines' officials are reported to have stated that while the Montreal Coal and Dock Co.'s property has been secured, there is no ground for the report regarding the Montreal Transportation Co. So far as the Ontario shipping concern is concerned we may say that negotiations were in progress some time ago for acquiring a very successful shipping company, but the matter was dropped for a time.

The Timiskaming Navigation Co.'s property, including four steamboats, the Jubilee, Meteor, Silverland and Temiskaming, and wharf and dock accommoda-

tion at Haileybury, was reported recently to have been sold to P. Gibbons, but we are officially advised that no sale has as yet been concluded. An order for the winding up of the company was made in Toronto, Sept. 25, 1914, and Jas. Hardy, Toronto, was appointed liquidator. Since then the property has been operated by P. Gibbons, under lease from the liquidator. Several propositions are under consideration, but at the time of writing, no offer for taking over the property has been accepted.

Lt. Col. W. P. Anderson, Chief Engineer, Marine Department, was at Midland, Dec. 14 and 15, for the purpose of noting ice conditions there, and if necessary organizing a service to keep the harbor clear so as to enable all vessels still out to enter. On arrival he found that practically all the vessels were already in port. The bay was covered with solid ice from 2 to 3 in. thick, but as the Dominion Government s.s. Simcoe had just gone out and the tug Pratt had crossed from Midland to Port McNicoll a couple of times, vessels were experiencing no difficulty in making port. Some moving of the vessels was necessary to enable them to come in succession under the elevator legs for discharging, but this was work to be done by the vessel owners.

The Sault Shipping Co., Ltd. has purchased the s.s. Valcartier from Lake Commerce, Ltd., Toronto, and it is announced that on the reopening of navigation it will be operated under the management of the Algoma Steel Corporation, Sault Ste. Marie, Ont. The s.s. Valcartier, formerly William Henry Mack, was built under special survey at Cleveland, Ohio, in 1903, and is constructed on the channel system, with steel tank top, three watertight and two non-watertight bulkheads, steel boiler house, steam pump wells, and complete electric installation. The hold is divided into 4 compartments, with hatches spaced 24 ft. centres. She is equipped with triple expansion engines, 20, 33½ and 55 in. diam., by 40 in. stroke, 1,170 i.h.p. at 85 r.p.m., and is supplied with steam from 2 Scotch boilers 12 ft. 10½ ins. by 13 ft. at 175 lbs. Her dimensions are,—length 354 ft., breadth 48 ft., depth 28 ft.; tonnage, 3,748 gross, 2,250 register.

Obstruction in Lake Superior.—The United States Lake Survey is in receipt of a report made by Capt. Samuel Hill, of the St. Lawrence & Chicago Steam Navigation Co.'s s.s. J. H. G. Hagarty, concerning an obstruction encountered by his vessel in Lake Superior on the evening of Nov. 4. The vessel, bound down from Fort William, had proceeded about 38 miles on a course 121° (SE. x E. ¼ E.—true) taken from a point 1 mile south of Passage Island, when she came in contact with some obscure obstacle, breaking off three flanges of her wheel, no other part of the vessel appearing to have been hit. As there was no metallic sound attending the striking, it is assumed that the obstruction was of wooden formation. The damage sustained by the vessel indicates that the obstacle, if still in the locality reported, is a dangerous menace on the direct course from Passage Island to Whitefish Point, and mariners are cautioned accordingly.

The Turn of Tidal Streams in Relation to the Time of the Tide is the title of a paper read by W. Bell Dawson, Superintendent, Tidal and Current Survey, before the Royal Society of Canada in May, 1916, and an abstract of which has been issued in booklet form.

Manitoba, Saskatchewan and Alberta.

Plans have been filed with the Public Works Department at Ottawa, and at Winnipeg, by Brown & Rutherford, Winnipeg, for the construction of a wharf or dock on the Red River at Winnipeg. The site covers lots 25 and 26 in St. John Parish, from the intersection of the northerly limit of Sutherland Ave. with the easterly limit of Buchanan St., 597.5 ft. to the northwesterly limit of the proposed dock lines, and thence easterly for 315 ft. and southerly along the north limit of Higgins Ave. to 50 ft. from the northwestern limit of land taken for the right of way of the Manitoba Southwestern Colonization Ry., and thence southwesterly to the southwestern limit of Sutherland Ave.

British Columbia and Pacific Coast.

Yarrows, Ltd., Victoria, B.C. are reported to have received an order for a stern wheel, shallow draught steamboat, similar to the one built there recently, for operation in Indian waters.

The Canadian Robert Dollar Co., Ltd., has acquired about 40 acres on the north shore of Burrard Inlet, where, it is reported, a sawmill and docks are to be erected.

The Canada West Coast Navigation Co.'s auxiliary vessels Geraldine Wolvin and Mabel Brown, will, as soon as they are out of the builders' hands, be chartered to the Canadian Trading Co., for loading lumber in March or April, at Vancouver, for Sydney, Australia, at 120 shillings, and for Melbourne, Australia, at 130 shillings.

The Dominion Government s.s. Quadra, which was used until recently as a light-house tender on the Pacific Coast, has been sold to the Howe Sound Mining Co., and will be utilized for carrying ore to the company's smelter at Tacoma, Wash. The Quadra was sunk in Nanaimo harbor, Feb. 26, 1916, in collision with the C.P.R. s.s. Charmer, and was raised and practically rebuilt to suit the ore trade.

A steamship company is being organized in Prince Rupert to operate vessels in the Southeastern Alaska trade. It is stated that the company will work as an independent concern, but will handle freight to and from the Grand Trunk Pacific Ry., and is reported to have made contracts for the carriage of a large quantity of fish from the canneries, and to have arranged for the chartering of one vessel.

The White Pass & Yukon Ry. is reported to be building 2 stern wheel steamships for service on Taku Arm and the Atlin Lake to replace the steamships Gleaner and Scotia. The two latter vessels have been run ever since the company has operated between Carcross and Golden Gate, and the growth of the tourist traffic has made the improvement of the boat service a necessity. The company is also reported to be considering the building of 2 additional steamships, at an approximate cost of \$200,000, for the tourist business between Whitehorse and Atlin.

It was anticipated that the breakwater at Victoria would be practically completed by the end of December. The work at Ogden Point was commenced in 1913. The breakwater consists of three arms, the first running out from the shore being 550 ft. long, the middle or main arm being 1,500 ft. and the extreme arm, 700 ft.

About 550 ft. of the parapet is still to be finished, but it is expected that this will be done early in January. The contractors are Sir John Jackson (Canada) Ltd. Work is progressing on the Government piers. All the crib caissons have been sunk, with the exception of one, which is built and awaiting a favorable opportunity for placing it. The concrete superstructure is practically completed on one side of the pier next the breakwater, and it is estimated that about 30% of the whole work is done. The contractors are Grant, Smith and McDonnell Ltd.

The master of the s.s. Cheakamus has reported to the Marine Department the existence of an uncharted shoal in the west end of Cordero channel, between Lyall Island and Grismond Point. The shoal extends about one cable in a 48 deg. direction from Lyall Island, and the depth on the shoal varies from 8 to 20 ft. The formation is rocky and it is marked by kelp in the summer. There is a good channel with 10 fathoms and no bottom on the mainland side of mid-channel.

With reference to a report that the Amalgamated Engineering & Dry Dock Co. had negotiated a loan in the U.S. which would enable it to carry out its schemes for the construction of a dry dock and shipbuilding plant on the north shore of Burrard Inlet, Vancouver, H. Stevens, M.P., is reported to have stated that he was not surprised to learn that such a loan had been effected, but he was doubtful with the increased cost of materials whether the plans and the contract could be proceeded with without some revision. Press reports stated that C. J. V. Spratt, of Victoria, holds a Dominion subsidy of a 4½% interest guarantee on an investment of \$5,500,000. We are officially advised that no subsidy agreement has as yet been entered in to with the Amalgamated Engineering & Dry Dock Co. for the construction of a dry dock and shipbuilding plant at North Vancouver.

Loss of Steam Tug Chambly.—The Wreck Commissioner, Capt. L. A. Demers, assisted by Capt. C. Lapierre and Faubert, enquired into the causes of the sinking of the Marine Department's steam tug Chambly, at Cap a la Roche in the St. Lawrence River, on Oct. 4, and found that there was no negligence or carelessness, but that the cause of the disaster was bad judgment, and held the master, Capt. Robideau and the second master, Capt. Laroche, jointly responsible, and condemned them to each pay half the cost of the investigation, a total of \$95.97. One of the assessors, Capt. Faubert, dissented from the judgment, and considered that no blame could be attached to the crew, as owing to the swiftness of the current they could not foresee the result.

Shipbuilding in the United States.—Figures issued by the U. S. Commerce Department show that the shipbuilding industry in that country is reaching proportions comparable with those of the industry in the British Isles. On Sept. 30 last, there were ordered and under construction in U. S. shipyards 417 steel vessels, aggregating 1,454,000 gross tons. There were at the same time under construction in the United Kingdom 469 vessels of the same class, aggregating 1,789,000 gross tons.

Clara Shipping Co., Ltd., has been incorporated under the Nova Scotia Companies Act, with \$45,000 capital, to own and operate schooners and ships and carry on a general carrying business.

Mainly About Marine People.

H. H. Drake has been appointed shipping master for the port of Halifax, N.S.

Mr. Justice F. E. Hodgins, of the Appellate Division of the Supreme Court of Canada, and latterly acting Deputy Judge in Admiralty, has been appointed Local Judge for the Toronto Admiralty District of the Exchequer Court.

Major B. R. Hepburn, M.P., formerly of the Ontario & Quebec Navigation Co., Picton, Ont., has been appointed temporary Lieutenant Colonel, while engaged as Assistant Director of Timber Operations in Great Britain.

Mrs. Katherine F. Foote, who died at Fergus, Ont., Dec. 6, aged 101 years, 6 months and 14 days, was mother of Capt. R. D. Foote, master of the Northern Navigation Co.'s s.s. Noronic, and Commodore of the fleet. Capt. J. B. Foote, of the Toronto Vessel Insurance Agency, and A. Foote, who has been superintending dredging operations in connection with the Welland Canal, are grandsons.

T. A. Sparks, of the firm of Funch, Edye & Co., New York, has been appointed General Agent Cunard Steamship Co., for the United States, at New York, vice C. P. Sumner resigned. In addition to U. S. territory, he has jurisdiction over any business that may be done in Canada via New York or Boston. We are advised that the business of Funch, Edye & Co. is being taken over by the Cunard Steamship Co., The Robert W. Reford Co., Montreal and Toronto, are the General Agents for Canada, of the Cunard Line, on appointment from Liverpool, Eng.

Steel Steamships for Norway.—Mention was made in our last issue that seven vessels had been ordered in Vancouver for Norwegian interests, and that the builders had been granted permission by the Dominion Government to build them for export for foreign registry. Three of them are being built by J. Coughlan and Sons, and 4 by Wallace Shipyards, Ltd. They will all be of approximately the same type. The three first mentioned will be 8,800 tons dead weight capacity, length 423 ft., beam 54 ft., moulded depth 29¼ ft. They will be engaged for a speed of about 10½ knots when fully loaded. Delivery is to be made during the next 12 to 15 months.

The Long Sault Development Co.'s Project for the construction of a dam across the St. Lawrence in connection with its power development scheme, has been finally quashed, the U. S. Supreme Court having dismissed the company's appeal against the ruling of the New York courts annulling its franchise. This matter has been before the courts for several years, and has been persistently fought at every stage by the Dominion Marine Association and the Shipping Federation of Canada, on the ground that it would interfere considerably with the safe navigation of the St. Lawrence River.

Rumored Control of British Shipping.—Reports from London, Eng., indicate that with the change in the British Government, a policy will be adopted whereby all British shipping will be brought under the Government's direct control in a somewhat similar manner to that adopted with the railways there in the early stages of the war.

The Provincial Steamship Co., Ltd, has been incorporated under the Nova Scotia Companies Act, with \$20,000 capital, to own and operate steam and other vessels, and to assist wrecked and stranded vessels.

The Storstad-Huftero-Jason Collision.

The Dominion Wreck Commissioner delivered judgment recently in the matter of the collision between the steamships Storstad, Huftero and Jason, which is summarized as follows:—The court, having carefully weighed the evidence which was contradictory on many points, finds that the master of the Storstad, Capt. Anderson, gave the proper signals up to the time of the collision appearing imminent, then his duty, according to articles 27 and 29, was to reverse his engine and sound three blasts, that is when both vessels were two or three ships lengths from each other, which he failed to do. With respect to the Huftero collision that is the only point in which he failed; but regarding the damage to the Jason the court holds that he is responsible, as the order full speed ahead after a full speed astern order was unwarrantable. The court wishes to point out that there was an improper and indifferent lookout kept on this vessel, though it did not contribute to either collision. The court finds that the master of the Huftero, Peter Dessington, wilfully by his actions brought about this collision between his vessel and the Storstad and force the latter into such a position that the court must also find him partly responsible for the collision between the Storstad and the Jason. The court finds him in default for having an improper lookout and for deliberately violating articles 19, 22, 23, 25 and 29 of the Rules of the Road. With respect to the pilot of the Huftero the court has determined that after he counselled the master to port and his timely suggestions were rejected, he acted wisely in relinquishing his responsibilities as pilot, and leaving the master to act for himself and therefore the court exonerates the pilot from all blame.

Telegraph, Telephone and Cable Matters.

The C.P.R. telegraph offices in Lethbridge, Alta., have been moved to 5th St. South, the new building there having been completed early in December.

J. McMillan, Manager of Telegraphs, C.P.R., returned to Montreal, Dec. 8, after completing the usual periodical trip of inspection over the lines through the west.

The Great North Western Telegraph Co., has opened offices at Paisley and St. David's, Ont., and Forestburg and Meeting Creek, Alta., and has closed its offices at Beaumarie and Muskoka Wharf, Ont., and Greenbush, Sask.

The Great North Western Telegraph Co. at Christmas gave all employees who had been in the service for not less than a year, bonuses as follows: Those receiving less than \$1,200 a year, 7% of the annual wage, and those receiving between \$1,200 and \$2,000 per annum, 6% of the annual wage.

E. Cameron, agent, Great North Western Telegraph Co., Brantford, Ont., has been retired, after 61 years in telegraph service. He was born in Scotland in 1841, and came to London, Ont., in 1849. He commenced his telegraph service in 1855 with the Montreal Telegraph Co. as a messenger, and later was an operator at London, Ont. He had been in charge of the Brantford office since 1868.

The Board of Railway Commissioners has dismissed the application of the City of Chatham, Ont., for the removal of tele-

graph and telephone poles and wires from the streets, by the C.P.R., the Great North Western Telegraph Co., and the Bell Telephone Co. The application also asked that if the G.N.W.T.Co. desired to maintain its wires on King and William Sts., that they be placed in underground conduits, and the poles on the streets removed within 6 months, and that it remove its poles on Queen and Fourth Sts., which also carry Bell Telephone Co.'s wires.

Norman W. Bethune, who died at Ottawa, Ont., Dec. 7, aged 88, was a nephew of the late Commodore Kitson, of St. Paul, Minn., well known as a steamboat owner and railway builder in the early days of railway construction in the Canadian Northwest. He commenced to learn telegraphy in 1847, and was one of the first Morse operators in America. He was for a time in the Montreal Telegraph Co.'s service, and occupied the position of manager. He had lived in Ottawa since 1866, and was manager of the Great North Western Telegraph Co. office there for some years, until his retirement a few years ago.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Pratt & Letchworth Co., Ltd., Brantford, Ont. D. P. Lamoreux has been appointed General Manager.

W. F. Angus, Vice President and Managing Director, Canadian Steel Foundries, Ltd., Montreal, has resigned to become a Vice President of the Dominion Bridge Co., Ltd., of which he has been a director for some time. He remains as a director of Canadian Car & Foundry Co., Ltd., and Canadian Steel Foundries, Ltd.

The Canadian Fairbanks Morse Co., Ltd., has appointed F. W. Evans Manager of its Toronto House, 26 Front St.

West. He has had a number of years experience with the company, particularly in its machine tool department, and has been acting Manager in Toronto for the past year.

Right of Way for the Union Jack.—The rules and regulations governing the port of Halifax, N.S., have been amended by adding the following,—When any of His Majesty's ships, whether British or Canadian, or other vessels in charge of His Majesty's officers, about to pass in or out of the harbor, hoists the Union Jack at the foremast head, all other of H. M. ships, whether British or Canadian, present in port shall hoist the pilot jack as a general warning, and the pilot jack will also be hoisted on the flagstaff at the dockyard for the same purpose, and all other vessels of every description under way in the harbor shall keep out of the way of the vessel flying the Union Jack, provided always that the said vessel shall be navigated with due care and at moderate speed, and that she shall be, so far as practicable, kept on the side of the fairway which lies on her starboard side.

Great Northern Railway Terminals in Vancouver.

In connection with the erection of its terminals at Vancouver, B.C., the Vancouver, Victoria & Eastern Ry., a subsidiary of the Great Northern Ry., U.S.A., has filled in the whole of the area from the southern boundary of the property, which it purchased from the city, to the shore line on the north side of False Creek. This area was previously part of the bed of False Creek. The average depth of the fill required to bring the property up to the approximate level of Main St. was about 12 ft. The company also owns considerable property on the south side of False Creek.

The Passenger Station, which is about completed, is L shaped, the main front facing west. It is about 375 ft. east of Main St. As the whole property is a fill, the building is supported on a pile foundation, cluster piles being driven and cut off below the line of perpetual satura-

entrances. There are two principal entrances to the main waiting room from the west, directly opposite to which are two entrances leading to a glass covered concourse, running the full length of the building, which in turn leads to 11 tracks, the platforms being covered by umbrella roofs, 700 ft. long. Off the main waiting room in the south wing are located the smoking room, which has access to the concourse, women's retiring room and lavatories. Provision is also made in the south wing for an immigrants' room and lavatories, but having no connection with the main waiting room. A corridor, 12 ft. wide, runs down the centre of the north wing to a carriage entrance. Off the waiting room in the north wing is the parcels and news office and station master's validating and information offices. Off the corridor leading to the carriage entrance are an exhibition room, a room for sta-

Northern one being next the passenger station and the Northern Pacific farther over. They are both 50 x 600 ft. long, set back 15 ft. from Park Lane, providing a small parking strip in front of the buildings. The Great Northern freight shed is separated from the passenger station at the narrowest point by a 60 ft. driveway. Between the two sheds there are six tracks, and on the north side of the Northern Pacific shed there will be a 60 ft. driveway, and then will come the team tracks. The westerly 66 ft. of both sheds, adjoining Park Lane, are two stories high, containing the office portion, the remainder being simply a one story shed, cut in the middle by a fire wall, the easterly half for bonded goods and the westerly half for free goods. Customs accommodation is also provided in both sheds. The foundations for the freight sheds are similar to the passenger station, above

Passenger Station at Vancouver for Great Northern and Northern Pacific Railways' Joint Use.

tion. Upon these concrete piers were poured, which support reinforced concrete beams, which in turn carry the exterior walls, columns and floors. The skeleton of the building is reinforced concrete, hollow tile, and concrete floors and roof. The exterior has a granite base, carrying up and around all exterior doors terracotta surbase, and red brick above, with terra-cotta trimmings and cornice.

The centre portion, 45 ft. high, and ap-main waiting room, 60 x 100 ft., which runs the full height. Flanked on either side are two wings, about 56 x 65 ft., two stories high. The upper floors of the wings will be used by the Great Northern and Northern Pacific Railways for offices.

The main waiting room will be panelled in Alaska marble, 7 ft. high, and will have marble and terrazzo floors and ornamental plaster ceiling. Provision has been made in the plastering of the end walls for placing oil paintings showing the Glacier and Yellowstone National Parks. The lighting fixtures are of special design, and will be executed in plaster. Alcoves off the main waiting room will be fitted with seats and tables for the public. The ticket office is in the centre of the east wall, opposite the two main

tion officials and a checking lobby which is connected direct to the baggage room.

The leg of the L, or baggage room wing, is a one story building containing the baggage room, bonded baggage, Canadian and United States customs, trainmen's room, lavatory, mail room, Great Northern and Northern Express. The leg of the L is about 228 ft. long by 42 ft.

It is the intention to lay out the ground in front of the passenger station in an attractive manner. The station will be reached by two driveways from Main St., and the remaining portion, not taken up by drives and walks, will be laid out with lawn and trees.

A hundred and fifty feet east of the baggage room wing, and in a direct line, is the power house, 50 ft. x 42 ft., with a brick stack at the east end 90 ft. high. The power house will supply heat to the different buildings through an underground reinforced concrete tunnel, steam to the passenger cars at the stub tracks, and to the passenger car yards. In connection there is a transformer room and a motor driven air compressor. Provision is made in the boiler house for three 125 h.p. return tubular boilers.

There are two freight sheds, the Great

grade a granite base, brick with terracotta trimmings, wooden floors.

Locomotive House.—At the east end of the yard there will be a 15 stall locomotive house, with a machine shop and boiler house in connection. The depth of the locomotive house will be 92 ft., and the machine shop and boiler house will be 50 x 160 ft. The foundations will be similar to the passenger station with brick and wood construction above grade. In close proximity to the locomotive house will be an oil house, 20 x 36 ft., and a store house, 30 x 73 ft., of similar construction to the machine shop, etc.

In connection with the passenger car yards there will be built a commissary building, 100 x 40 ft.; an oil house, 20 x 20 ft.; car repairers' building, 30 x 20 ft.; car foreman's building, 20 x 12 ft.; car cleaners' building, 16 x 20 ft.; carpet cleaning building, 16 x 20 ft., and a coal house, 40 x 20 ft.

Under the direction of A. H. Hogeland, Chief Engineer, G.N.R., the buildings were designed by Fred. L. Townley, architect, Vancouver, in whose office all the drawings were made and under whose supervision the buildings have been erected.

Grand Trunk Railway Demurrage Regulations at Portland.

The Interstate Commerce Commission gave the following judgment recently in a case against the G.T.R.:—Complainants are the National League of Commission Merchants of the United States, a corporation, with its principal office at New York, N.Y., and certain produce dealers of Boston, Mass., members of the complainant named. They allege that defendant's demurrage regulations governing carload shipments of apples and vegetables awaiting transshipment at Portland, Me., are unreasonable and unjustly discriminatory as compared with the demurrage regulations of the Maine Central Rd. governing such shipments at the same port. The evidence adduced relates only to regulations governing shipments of apples. Reparation is asked for demurrage charges collected at Portland on certain shipments of apples in 1914 and 1915. The shipments described in the complaint originated at points in Maine, either on defendant's line or on the Maine Central Rd., and were delivered by defendant. Demurrage charges were collected at Portland in accordance with the following tariff rules:—"Cars containing freight for transshipment to vessel will be allowed such free time at the port as may be provided in the tariffs of carriers."

The tariff containing this rule provided 48 hours (2 days) free time, exclusive of Sundays and legal holidays, for unloading all commodities at Portland. Complainants contend that these tariff provisions are incomplete and unjustly discriminatory because the Maine Central Rd.'s tariff, applicable at Portland, contains the following rule:—"Demurrage on transshipped traffic: Ten days free time (including Sundays and legal holidays) will be allowed for unloading carload shipments forwarded by water, where there are no through rates, viz.: Apples * * * for transshipment to vessels at Portland, Me. * * *"

Regular line trans-Atlantic steamers do not dock at the Maine Central piers at Portland. That is done only by occasional vessels specially chartered. Complainants therefore are compelled as a rule to use the G.T.R. facilities to effect transshipment of their apples. The mere fact that defendant's demurrage regulations at Portland are different from those of the Maine Central Rd. does not establish unlawful discrimination. An allowance of more than 10 days free time was insisted upon by complainants at the hearing. They urge that this free time is necessary, as the steamships frequently are unable on account of weather conditions to arrive on scheduled time. The average detention at Portland on the shipments was approximately 7 days, exclusive of Sundays and legal holidays; the minimum time was 3 days and the maximum 39 days. Complainants showed that 30 days free time applied at Boston, New York, Philadelphia, and Baltimore, on shipments of apples awaiting transshipment, and, in general, on all freight for export. Since the hearing the free time allowance at the points named applicable on shipments for export moving on local bills of lading to the respective ports has been materially reduced. The circumstances and conditions obtaining at Portland are not shown to be similar to those obtaining at the larger eastern ports, nor is it disclosed what would be a reasonable free time allowance at Portland. No evidence was adduced to show why any of

the shipments in issue were detained beyond the free time, except the general statements that tentative bookings were sometimes cancelled and weather conditions sometimes delayed the steamships.

We find that the demurrage regulations in issue are not shown to be or to have been unreasonable or unduly prejudicial. At the hearing complainants sought to enlarge the scope of the complaint by in-

jecting an issue of undue prejudice predicated on defendant's practice of imposing no demurrage charges at Portland on shipments of apples from Canadian points for export, while contemporaneously exacting such charges at Portland on shipments from points in Maine. This issue was not raised by the pleadings and will not be considered. An order will be entered dismissing the complaint.

Birthdays of Transportation Men in February.

Many happy returns of the day to:—

B. H. Bennett, General Agent, Chicago & North Western Ry., Toronto, born at Cobourg, Ont., Feb. 6, 1858.

F. L. C. Bond, Division Engineer, Eastern Lines, G.T.R., Montreal, born there Feb. 21, 1877.

T. Britt, General Fuel Agent, C.P.R., Montreal, born there Feb. 3, 1871.

G. E. Bunting, General Western Freight Agent, Allan Line Steamships, and Manager, Allan & Co., Chicago, Ill., born at Toronto, Feb. 8, 1873.

J. S. Byrom, General Superintendent, Sleeping, Dining and Parlor Cars, and News Service, Eastern Lines, C.P.R., Montreal, born at Jersey City, N.Y., Feb. 10, 1872.

J. J. Callahan, Superintendent, Oshawa Ry., Oshawa, Ont., born at New Glasgow, Que., Feb. 25, 1875.

H. R. Charlton, General Advertising Agent, G.T.R. and G.T.P.R., Montreal, born at St. Johns, Que., Feb. 9, 1866.

R. Colclough, Superintendent, District 1, Transcontinental Division, Canadian Government Railways, Quebec, Que., born at Bic, Que., Feb. 24, 1871.

F. W. Cooper, A.M.Can.Soc.C.E., ex-Superintendent, Schreiber Division, Algoma District, C.P.R., now Manager, Track Specialty Department, W. W. Butler Co., Montreal, born at London, Ont., Feb. 16, 1880.

R. Crawford, Northwest Agent, Northern Navigation Co., Winnipeg, Man., born at Kingston, Ont., Feb. 21, 1870.

A. J. Donegan, Superintendent, Algoma Eastern Ry., Sudbury, Ont., born at Perth, Ont., Feb. 17, 1872.

R. W. Drew, Division Freight Agent, Saskatchewan District, C.P.R., Regina, born at Kingston, Ont., Feb. 17, 1874.

E. A. Evans, M.Can.Soc.C.E., ex-General Manager and Chief Engineer, Quebec Ry., Light & Power Co., Quebec, born at Kensington, London, England, Feb. 26, 1855.

Goodwin Ford, General Superintendent, Western Lines, Dominion Express Co., Winnipeg, born at Bordentown, N.J., Feb. 23, 1859.

J. C. Holden, A.M.Can.Soc.C.E., Division Engineer, C.P.R., Winnipeg, born at St. John, N.B., Feb., 1876.

T. C. Hudson, Division Master Mechanic, Quebec Grand Division, Canadian Northern Ry., Joliette, Que., born at Brockville, Ont., Feb. 20, 1873.

H. Hulatt, Manager of Telegraphs, G.T.R. and G.T.P.R., Montreal, born in London, England, Feb. 15, 1883.

C. Gardner Johnson, Lloyd's Agent for British Columbia, Vancouver, B.C., born at Dunblane, Scotland, Feb. 8, 1857.

F. C. Johnson, Night Locomotive Foreman, C.P.R., North Transcona, Man., born at Montreal, Feb. 26, 1885.

John McCraw, General Agent, Central Vermont Ry., New London, Conn., born at Craigvale, Ont., Feb. 6, 1868.

G. L. McCrea, Local Freight Agent, C.P.R., Vancouver, B.C., born at Springtown, Ont., Feb. 9, 1876.

T. McNabb, ex-Master Mechanic, Alberta Ry. & Irrigation Co., now of Picture Butte, Alta., born in Scotland, Feb. 16, 1849.

J. K. McNellie, General Superintendent, Canadian Government Railways, Moncton, N.B., born at Toronto, Feb. 23, 1874.

D. C. Macdonald, Assistant General Claims Agent, C.P.R., Winnipeg, born at Elmsdale, N.S., Feb. 9, 1874.

C. S. Maharg, Superintendent, Brandon Division, Manitoba District, C.P.R., Brandon, born in Dufferin County, Ont., Feb. 4, 1867.

V. J. Melsted, ex-Engineer of Water Service, Western Lines, C.P.R., Winnipeg, born at Gardar, N.D., Feb. 20, 1887.

G. A. Montgomery, Vice President and General Manager, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont., born at Bradford, Ont., Feb. 11, 1871.

A. Z. Mullins, Commercial Agent, G.T.R., Grand Rapids, Mich., born at Appin, Ont., Feb. 14, 1862.

M. G. Murphy, General Agent, Passenger Department, C.P.R., Detroit, Mich., born at Halifax, N.S., Feb. 26, 1878.

J. E. Proctor, District Passenger Agent, C.P.R., Regina, Sask., born at Sarnia, Ont., Feb. 17, 1878.

C. T. Ridalls, Car Foreman, C.P.R., London, Ont., born at St. Heliers, Jersey, Channel Islands, Feb. 8, 1864.

J. E. Robitaille, Treasurer, Roberval-Saguenay Ry., Chicoutimi, Que., born at Quebec, Feb. 17, 1870.

A. E. Rosevear, General Freight Agent, G.T.P.R. and Grand Trunk Pacific Coast Steamship Co., Winnipeg, born at Montreal, Feb. 20, 1863.

J. G. Scott, ex-General Manager, Quebec & Lake St. John Ry., Quebec, born there Feb. 13, 1847.

J. J. Scully, General Superintendent, Algoma District, C.P.R., North Bay, Ont., born at Montreal, Feb. 3, 1872.

G. Spencer, Chief Operating Officer, Board of Railway Commissioners, Ottawa, born in London, Eng., Feb. 21, 1865.

R. H. Sperling, Advisor to the Board, British Columbia Electric Ry., London, Eng., born there, Feb. 9, 1876.

H. E. Suckling, Treasurer, C.P.R., Montreal, born at Gibraltar, Feb. 27, 1851.

Hugh Sutherland, Executive Agent, Canadian Northern Ry., Winnipeg, Man., born at New London, P.E.I., Feb. 22, 1845.

F. L. Wanklyn, M.Can.Soc.C.E., General Executive Assistant, C.P.R., Montreal, born at Buenos Ayres, Feb. 25, 1860.

J. R. Watson, Assistant Superintendent, Sleeping, Dining and Parlor Cars, and News Service, Eastern Lines, C.P.R., Montreal, born at Morpeth, Eng., Feb. 8, 1873.

John L. Weller, M.Can.Soc.C.E., Engineer in Charge, Welland Ship Canal, St. Catharines, Ont., born at Cobourg, Ont., Feb. 13, 1862.

A. Williams, Superintendent, Brownville Division, New Brunswick District, C.P.R., Brownville Jct., Me., born at Mono Road, Ont., Feb. 22, 1872.

Railway Passenger Car Painting and Varnishing.

By Thomas Marshall, Foreman Painter, Canadian Pacific Railway, Montreal.

The history of paints and varnishes dates back to the dark ages. Even the old Egyptian mummies were wrapped in canvas and sealed with specially prepared gums or varnishes to protect them from the atmosphere; and just as today paints and varnishes are used to protect wood and metal surfaces, they also perform two functions, protecting from weather and beautifying the article they are applied to. In dealing with paints and varnishes, it would be folly on my part to undertake to go into the questions fully, as there can be a great many papers written on the subject, with no end of discussion in connection with them. For instance, there is the chemical end, which treats of the manufacturing of chemical colors and the analysis of the various kinds of paints and varnishes. Then there is the manufacturing grinding and toning of the colors, and, last, but not least, the application of them and the many ways in which they are used and the various articles they are used on. So I will only try to give some idea of how they are used in connection with passenger car painting, and even then it will only be in a very limited way, as it would otherwise take up altogether too much time.

I have had a number of years of experience in the application and use of paints and varnishes, and each day I find something entirely new or different in the working qualities and application of them, as there are so many new methods and conditions changing as time rolls on. The average person seems to have but a vague idea of the trouble experienced in connection with the painting and finishing of any article, as the majority of people think paint is only paint and anyone can apply it. Many are not familiar with the ordinary trade names, as was the case of a hardware clerk, when a painter went into a hardware store and asked him if he had any drop black ground in Japan, and after looking over his stock, he said: "Well, we have not any ground in Japan, but we have some ground in Montreal by the Canadian Paint Co." It may be true that anyone can apply paint or varnish, but the point is to have it applied so as to give a satisfactory finish both in appearance and wear. When I say a satisfactory finish they are big words, as there are so many different opinions as to what constitutes a finish. I will venture to say that if you were to ask the average manufacturer of autos, carriages, or railway cars, etc., whose product requires a high grade finish, what part of the factory caused him the greatest trouble and annoyance, he will invariably say the painting and finishing. It is a well known fact that paints and varnishes are very much like the human system, they are affected by the weather conditions, such as heat, cold, dampness, drafts, etc., and our climate during our shopping season is subject to changes and extreme conditions, any one of which may cause endless trouble to the painter.

Paints and varnishes are used very extensively on practically every article you can think of, from the steamship that plies the ocean, the railway train that covers the land, down to the bed you sleep on. Of course, they are used in some lines of manufacture more than in others. For instance, the electric manufacturers use them in quantities for insulating and impregnating of coils, armatures, transformers, tapes, and wires, and the carri-

age manufacturers in various ways for the finishing of their product. The railways use them for all their equipment and for various other purposes. My experience has taught me that each manufacturer has a special way of treating his particular goods, therefore it would be poor policy to employ the same methods to finish a carriage as you would a house, and you can readily understand why there is such a great variety of classes of painting.

Now that steel is becoming more extensively used two different systems of exterior car painting are necessary, one for the wood car and one for the steel; this principally applies to the preparation of the foundation and priming of first coats. One of the most essential principles in the finishing of wood cars is to see that the wood is properly seasoned, kiln dried and painted on the under side with a good oil paint, as the least particle of dampness will cause more or less trouble. After this has been done, the succeeding coats are simply a question of skill, the main point is to see that each coat is properly treated, until the car is finally completed. In the case of a steel car it is necessary to see that all grease smut and rust is sandblasted off the surface of the steel before applying the primer. After this is done, it is carried to completion in very much the same manner as the wood car, except that, if the steel is smooth, it does not require the same number of coats of paint, as the absorption is not as great as in the case of wood.

As every part of a coach is finished by various processes we will start with the top or roof. Before the application of a new canvas roof, it should be covered on the under side with a specially prepared canvas paint. This should be composed of raw oil, zinc, oxide, carbon black and dryers. The canvas should be applied while the undercoating is wet and allowed to dry on the car. The outside of the roof is handled in the same manner. The roof should have at least three coats, allowing 24 hours between each coat. When the exterior of the car has been prepared for painting, and after the priming coat has been applied, it is followed up with three or more coats of surfacer, which is very finely ground in Japan or varnish. The car is then decorated, after which two or more coats of wearing or finishing varnish are applied. The theory of the best experts is, that you must keep each coat, from the priming to the finishing varnish, as elastic as possible, so as to ensure durability, because elasticity means durability. This is especially true in painting steel coaches, as the metal contracts and expands according to weather conditions. The trucks and underframing of a car should be thoroughly cleaned and free from rust and grease, before the priming coat, after which the underframing is painted to prevent deterioration, the trucks are given one coat of enamel and one coat of finishing varnish. This constitutes in a very rough way the regular treatment of the exterior of a coach.

The interior finishing of a car varies, as there are many different kinds of wood used and each is usually treated according to its own peculiar nature. For instance, a different method is followed for maple than for oak, but the general method applies to all, such as the staining, filling and varnishing, rubbing and polish-

ing. Some very interesting discussions can be had on the question of using a flat varnish for interior finish. Personally, I have had splendid results from the use of a varnish of this kind. Its wearing qualities are the same as high grade finishing varnishes and much time is saved by eliminating rubbing and polishing.

As the methods employed in car painting have changed considerably in the past 20 years, a comparison at that time with the present will no doubt prove interesting. Twenty years ago all passenger equipment was constructed of wood and the exterior painting was handled as follows: The 1st coat was known as the primer coat, which consumed four or five days in drying. This was composed of 75% white lead, 25% of pure raw linseed oil, and was prepared in paint shop. The 2nd coat was called oil lead coat, and dried in 24 hours, composed of 60% white lead, 15% raw linseed oil, 5% lamp black, 20% Japan dryers. The 3rd coat, known as flat lead coat, dried in 24 hours, and was composed of 75% white lead, 20% Japan dryer, 5% lamp black. We then glazed and puttied on this coat. Oil putty was used for nail holes only, and glaze used on sunken, uneven and bruised parts. This glaze was made from 75% white lead, 20% Japan dryers, 5% lamp black. This coat was then roughly sandpapered, after which followed four coats of rough stuff, applying two coats a day, the rough stuff was made from renofillers or mineral compositions mixed with oil, to give the best wearing qualities. Japan dryers were used for drying, and rubbing varnish was used as the fourth ingredient, which furnished a good rubbing surface. The next operation was known as the guide coat, made from 75% yellow ochre, 15% Japan dryers, 18% of benzine as a reducer. This coat dried in two hours. The next operation was the rubbing. This was done with black pumice stone and water, time allowed for rubbing from 12 to 18 hours, after which the car was sandpapered with very fine paper and allowed to dry for 24 hours. This constituted the preparing of the car for the color and varnish.

The 4th coat of color was ground in Japan and thinned with turpentine, with a small proportion of rubbing varnish, allowing 24 hours to dry. The 2nd coat was the same as the 1st coat. For the 3rd coat the color used was the same shade as used on the two first coats and mixed with rubbing varnish. For the 4th coat, the same color mixed with rubbing varnish, more varnish than color. This color and varnish body was then rubbed with pumice stone and water, thoroughly drenched off with clean water and wiped with a chamois. Car was then lettered and decorated and finished with one or two coats of wearing body varnish. This practice of painting kept a car in shops from 20 to 24 days. This gives a fair idea of the system practiced in previous years.

The practice, in vogue at present for exterior painting, both wood and steel, is about the same, except that a different mixture is used for the priming coat. The primer for wood should have more oil. The primer for steel should have more varnish. The following is the number of coats and time consumed in drying: First operation is known as the priming coat and dries in 48 hours. Second operation is known as surfacer or rough stuff and

dries in 24 hours. Third operation, same as second, except on the top of this coat, all nail holes are puttied with oil putty, all uneven parts and bruises are glazed with a glazing putty, allowing 24 hours to dry. Fourth operation: same method as the second, allowing 24 hours to dry. Fifth operation: The car is now ready for rubbing or sandpapering. It has been proven that as smooth a surface and much quicker results can now be obtained with sandpapering, instead of the old practice of rubbing with rubbing block and water, this is due to the use of more refined oils and quicker drying long oil varnishes and to the paint being ground much finer. Sixth operation: One coat of color, consisting of color ground in Japan, thinned with turpentine and a small proportion of varnish, allowing anywhere from 6 to 12 hours to dry. Seventh operation: same as sixth. Eighth operation, lettering and decorating. Ninth operation, a coat of railway body finishing varnish, allowing 48 hours to dry. This coat

fine sandpaper and then letter and decorate. Fifth operation: One coat of wearing body varnish, allowing 48 hours to dry. Sixth operation, same as fifth.

Cars finished this way must be shopped at shorter intervals than painted cars, and this is not due entirely to the cracking or perishing of the varnish. For instance, when a car is painted, all joints especially those around battens and sills are sealed with paint, which prevents water getting to the under side of sheathing, causing what is known as water-logged sheathing. With varnish alone this could not be accomplished, and when only putty is used it finally shrinks and falls out, allowing water and dampness to penetrate the sheathing. Cars finished in this manner, after having been in service 12 months, and sometimes less, have to be shopped again for varnishing. When the car has been thoroughly cleaned, it is often found necessary to remove sheathing, on account of having become water-logged, due to insufficient protec-

Cars for Coal Transportation in Western Canada.

The Board of Railway Commissioners passed general order 176, Dec. 26, as follows:—Re car shortage in the west for coal transportation, and the complaint of the Cardiff and Drumheller collieries complaining of the refusal of the Canadian Northern and the Grand Trunk Pacific Railways to supply cars for loading coal destined to points on other lines of railway. Upon investigating the complaints and the coal situation generally in the west, and the reports of the Board's Chief Operating Officer, it is ordered that all companies subject to the board's jurisdiction be required and directed, according to their respective powers and to the full extent that cars are available for the purpose, to supply cars for the movement of coal as and when required, not only to points on the originating line of railway, but also to points on other lines of rail-

Bridge Pier at Port Nelson, Man.

This pier, consisting of a number of stone filled, cribwork piers and a series of steel spans, extends from the shore at the Hudson Bay Ry. terminus at Port Nelson to a handmade island, also of stone filled cribwork, which will be used as the loading and unloading berth for ocean steamships, as the water is not deep enough to allow them to approach nearer to shore. The photograph was taken in September, 1916. The above mentioned work was described as follows by D. W. McLachlan, Engineer in Charge, in a report to the Railways Department, May 6, 1915. "It has been found a most difficult matter to decide the design and form of the harbor works in the Nelson estuary, but after close observation and study it has been decided to build a cigar-shaped island near the natural channel of the estuary, and from this island to the end of the present works construct a bridge on piers, which, though unusually large, can be safely protected from ice action by the liberal use of riprap."

is the preserver for all paint underneath and should be of a good quality to insure durability. Tenth operation, second coat of railway body finishing varnish. This practice keeps car in shop from 16 to 18 days. Cars painted in this manner, after having been in service 12 to 15 months, are again shopped for varnishing. After the car has been thoroughly cleaned it is touched up, cut in with one coat of color, and is then given two coats of varnish.

In finishing of natural wood cars the operations are as follows: Before a sheathing is applied it is soaked in a vat of oil. First operation, one coat of paint, which is known as wood surface, composed of long oils and is very penetrating, allowing 48 hours to dry. Second operation: Sandpaper lightly, after which the car is dusted off and filled with a filler composed of silex whitening and oil and thinned with turpentine applied with a brush and wiped off with excelsior and waste, allowing 24 hours to dry. Third operation: One coat of wearing body varnish, allowing 48 hours to dry. Fourth operation: Sandpaper lightly with a very

tion from rain and dampness. When car is again ready for service it does not present a good appearance, due to contrast in color of old and new sheathing. From five to six years is about the average life of the exterior finish of a car finished in natural wood, while a painted car should run from six to nine years before the exterior finish has to be renewed. The expense of scraping and complete renewal of the exterior finish of a natural wood car is much greater than of a painted car.

The foregoing paper was read before the Canadian Railway Club in Montreal recently.

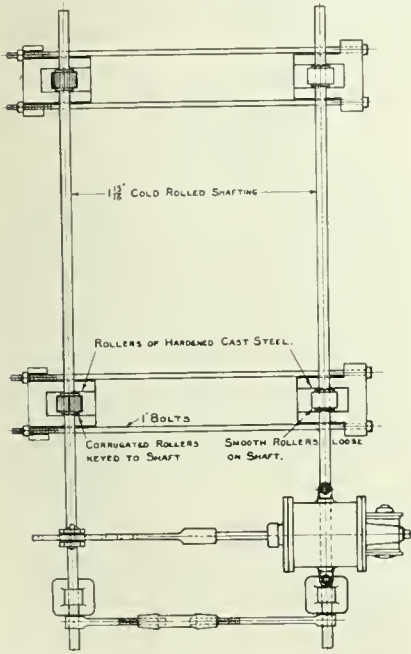

Curtailement of Railway Service in Great Britain.—It was announced in the British Parliament recently that commencing with Jan., 1917, the railway service would be curtailed, and fares increased 50%, to enable rolling stock to be released for war purposes. The new regulations will not apply to workmen's tickets, nor to commutation tickets for distances not exceeding 40 miles.

way. For all movements requiring transportation over more than one line, the company that enjoys the longer portion of the haul shall supply the cars, and in case such company is unable to supply the cars, then the other company, although only obtaining earnings for the movement over the shorter portion of the haul involved, shall supply the cars; but in such case shall be entitled to be paid by the company enjoying the longer haul a per diem charge of \$1.25 for each and every car so supplied, instead of the usual per diem charge and any increases thereof that may be made less than the said sum of \$1.25, the said charge to run from the time such cars leave until they are returned to the owning company's line. And it is further ordered that railway companies without sufficient equipment forthwith make the necessary changes in flat or live stock cars in order to provide for the present emergency and to enable them the better to carry out the provisions of this order. This order to be effective from Oct. 1 to Mar. 31 in each year.

Railway Mechanical Methods and Devices.

Ratchet Valve Setting Machine, Canadian Pacific Railway.

After a locomotive has undergone general repairs there is necessity for the resetting and testing of the valves, for lap and lead, and so forth. This may be accomplished by coupling the locomotive to a live locomotive and noting the position of the points while the locomotive is being moved along the rails by the live locomotive. As this method is detrimental to the progress of any other work on locomotive which it may be desired to do at the same time, the advantages of the arrangement shown in the accom-

SPEED AND STROKE REGULATED BY THROTTLING THE EXHAUST BY VALVE.

Ratchet Valve Setting Machine.

panying illustration will at once become apparent.

The shafts being placed across the rails, one on each side of the main driving wheel, the shoes (or bearing castings) and other attachments are then put in place as shown. The shafts are then drawn together by means of the four bolts and the turnbuckle, thus lifting the driving wheel a slight distance from the rails. The air pump is then connected to the ratchet. The machine has four rollers, two engaging the wheels on the ratchet shaft, the other two being idlers. The two engaging rollers are corrugated so that they bite on the wheel. These rollers are keyed to the shaft. The air pump drives the ratchet which revolves the shaft on which the keyed rollers are mounted, the speed of the air pump being regulated by the valve on exhaust pipe. By this method the drivers can be placed in any desired position, and as

valves are usually marked before being taken down they can be replaced and adjusted without disturbing any other portion of the work. We are indebted to W. J. Brown, Foreman, tool room, C.P.R., Ogden, Alta., for the foregoing information and the drawing.

Shim Gate for Foundry Use.

Wrench for Uncoupling Steam Hose in Canadian Pacific Yards.

The dangerous practice of uncoupling steam hose on passenger cars with the hands is done away with by the use of a simple wrench, illustrated herewith, which is in use in the C.P.R. yards at Vancouver, B.C. The wrench is made of flat iron, $1\frac{1}{4} \times \frac{1}{2}$ in. and is 25 in. long over all. In use, the coupler is gripped

Shim Gate for Foundry Use, Canadian Northern Railway.

In every foundry difficulty is experienced in preventing slag from getting into the casting, and very often castings

are lost in consequence. The accompanying illustration shows the core box for a metal strainer which is used in the Winnipeg shops, Canadian Northern Ry. This mould forms a core $\frac{3}{4}$ in. thick, which is perforated with sixteen $\frac{5}{16}$ in. holes slightly tapered. The core is put into the sprue hole before the metal is poured and strains the metal, floating all slag to the top. Since this method has been used, not a casting has been lost in the shop through slag. The method is very sim-

Wrench for Uncoupling Steam Hose.

by the wrench, which is merely pressed on the coupler, thus forcing it apart. We are indebted to C. E. Gibbs, Foreman passenger car yard, Vancouver, for the foregoing information.

Notes on Heavy Electric Railway Traction.—The article on this subject, by J. A. Shaw, General Electrical Engineer, C.P.R., published in Canadian Railway and Marine World for January, was a reproduction of a paper read before the Canadian Railway Club in December. Owing to an oversight this fact was not mentioned.

ple, and a stock of core plugs can be kept on hand for different sizes of sprue holes. We are indebted for this information to L. Davidson, Foreman of Foundry, Winnipeg shops, C.N.R., who saw the device at a foundrymen's convention in the United States in 1915 and decided to try it. He says it is the best shim gate he knows of.

The C.P.R. Chateau Frontenac Hotel, Quebec, will be operated on the European plan from May 1. The minimum rates for rooms will be \$2 without bath, and \$3 with bath.

Thermit Welding on Canadian Pacific Railway.

The Thermit welding process applied to locomotive repair work has resulted in greatly lessening the cost of repairing broken frames, etc., and greatly reducing the time necessary to do the job, compared with the old method of welding in the blacksmith forge. The increasing weight of locomotives and the consequent in-

necessary, the amount of wax used being 9½ lb. The mould box was then placed in position, being 3 ft. 4 in. deep, 15 in. wide, and 3 ft. long, the length of the box being placed crosswise to the frame, the bottom of the box being about 5 in. below the frame. The moulding material, consisting of ground firebrick, fireclay, and moulding sand, was rammed in tightly, the pre-heating gate, pouring gate and riser patterns, which are made of wood, being placed in position as the

knocking upward a small plug at the bottom of the crucible. The molten steel, at a temperature of 5,000 deg. Fahrenheit, ran down the pouring gate and filled up the space formed by the wax, any excess metal coming up through the space left by the riser pattern. The jack used to expand the frame was removed 2½ hours later, to provide for contraction. The job was left at this stage until the following morning. The mould box was then removed and the weld was found to be a success in every respect. The steel left in the riser and pouring gate was cut off by the acetylene flame. The parts of the locomotive which had been removed were placed in position and the locomotive was again ready for service.

We are indebted for the foregoing information to H. Cattell, leading blacksmith, who did the work under the supervision of F. C. Martin, Blacksmith Foreman, C.P.R., Vancouver, who has charge of the Thermit welding shop.

Thermit Weld at Vancouver Shops, C.P.R.

crease in the size of the framework has rendered it almost impossible to weld them by the old method. The value of Thermit in cases of this kind is exemplified by a weld recently made on C.P.R. locomotive 3826 in the Vancouver shops. The frame was broken 2½ in. from the cylinder casting, the fracture being 28 in. long, with an average thickness of 5½ in.

First the parts adjacent to the fracture

work progressed. The wooden patterns were then carefully withdrawn. A stout piece of twine, previously embedded in the wax leading from the pre-heating gate to the riser was then withdrawn. The hole formed by the twine provides ventilation, which facilitates the melting of the wax. The crucible was then placed in position with a charge of 275 lb. of Thermit. The gasoline pre-heating torch

Welding Superheater Header, Grand Trunk Railway.

The accompanying illustrations show a superheater header before and after welding at the G.T.R. shops, Point St. Charles, Montreal. The crack was chamfered out and the surrounding metal cleaned. A charcoal fire was then built around the end to be welded, as it was not necessary to preheat the whole header. When the broken part was a cherry heat it was welded. The fire was then built up again and covered with ashes. When the casting was removed, the surrounding bridges were intact. The cost of making this weld was as follows:—

	Labor	Material.
1 man cutting out crack, 45 min. @ 40c an hr.	30c	
1 man welding, 1 hr.	40c	
1 man preparing fire, etc., 30 min.	20c

were removed and 1 in. holes were drilled through the frame in line with the fracture, leaving a space about 1 in. inside. The opening was then widened by means of a jack to allow for contraction. The frame was then well cleaned of all grease for a short distance each side of the fracture. Beeswax, softened in hot water to the consistency of glaziers' putty, was then pressed into the opening, filling it entirely, also around the outside to provide reinforcement to the extent thought

was then applied to the pre-heating gate, which took 6½ hours to melt out the wax and bring the frame to good red heat. A small quantity of ignition powder was then added to the Thermit charge and the pre-heating gate plugged with an iron core, backed up by a quantity of moulding material. A white hot poker was then applied to the ignition powder, which started the ebullition of the Thermit. This was allowed to continue for from 30 to 40 seconds, when the crucible was tapped by

We are indebted to W. D. Robb, Superintendent of Motive Power, G.T.R. for the above information and the photographs.

The Greater Winnipeg Water District put a new time schedule in operation on its railway Jan. 1. Eastbound trains leave the old Canadian Northern in St. Boniface Monday, Wednesday and Fridays at 8 a.m., instead of 7 a.m. and the westbound train leaves Waugh Tuesdays, Thursdays and Saturdays at 6 a.m.

Electric Locomotives for Mount Royal Tunnel.

The Canadian Northern Ry. has received 3 electric locomotives of the 6 ordered for its electrified zone, extending from the terminal station in Montreal through the Mount Royal tunnel to Cartierville. Following are the general dimensions:—

Length inside knuckles	37 ft. 4 in.
Length over cab	31 ft. 0 in.
Overall height, pantograph down . .	15 ft. 6 in.
Height over cab	12 ft. 10 in.
Overall width	10 ft. 0 in.
Total wheel base	26 ft. 0 in.
Rigid wheel base	8 ft. 8 in.
Total weight, all on drivers	83 tons
Wheel diameter	46 in.
Tractive effort at 30% tractive coefficient	49,800 lb.
Tractive effort at 30-hour rating . .	20,300 lb.
Tractive effort at continuous rating .	14,500 lb.

They are for 2,400 volt d.c. operation, and have 4 axles with all the weight of the locomotive upon the driving wheels. The motors are nose-supported in the in the usual way and geared to the axle by twin gears. The running gear consists of two 4-wheel trucks, articulated together by a heavy hinge. The equalization of the trucks is accomplished by a semi-elliptic leaf spring over each journal box, connected through spring hangers to the frame and to the equalizer bars. The equivalent of a 3-point suspension is thus obtained through the side equalization of one of the trucks and both side and cross equalization of the other truck. The friction draft gear is mounted in the end frame casting of the truck. The cab, which is of the box type, is divided into 3 compartments, the centre one for the apparatus and the 2 end ones for the operator. Each operator's compartment is supplied with controller, control switches, ammeter, air brake and pantograph control, air gauges, 2,400 volt cab heater, bell rope and control for the whistle and sanders, thus providing the locomotive with complete double end control.

The motor equipment consists of 4 CGE-229A commutating pole motors, wound for 1,200 volts and insulated for 2,400 volts, two of them being permanently connected in series for operating on the 2,400 volt trolley circuit. The one-hour rating of each motor is 315 h.p. at 1,200 volts. The motors are designed for forced ventilation, which is obtained by a blower in the locomotive cab. Either pair of motors may be cut out, in case of emergency, by a special handle on the change-over switch. The locomotives are geared for a free running speed on tangent level track of approximately 45 m.p.h., and are operated as 2 speed machines with 10 points in series and 9 points in series-parallel. The master controller used is of the non-automatic type and has two handles, one regulating the applied voltage at the motors and the other for controlling the direction of rotation of the motors. The rheostats which form the external motor resistance are placed near the roof of the cab and provided with ample natural ventilation. The master controller and contactor energizing circuits are designed for 125 volts. Each contactor is easily accessible without any disturbance to adjacent contactors. A special electro-pneumatic change-over switch is used for making the transition between series and series parallel connection of the pairs of motors. The 125 volt current for operating the contactors and for lighting the cab and headlights is obtained from a motor-generator set, the motor of which has two 1,200 volt windings and two 1,200 volt commutators

in series for operation on 2,400 volts. This set is mounted in the centre cab and also drives the blower for providing forced ventilation to the main motors.

Fuses of the copper ribbon type, placed in fuse boxes, provide protection for each individual circuit, as well as the main circuit from the trolley. These fuse boxes are all arranged to blow into a common chamber, designed to take care of the arc. In addition to the fuse on the main circuit, a main switch is also provided. This is of the knife blade type, being opened and closed by a handle placed in a position for easy operation in case of emergency, or when it might be necessary to open the circuit while carrying current. This main switch blows into the chamber provided for the fuses, and has a powerful magnetic blowout.

The trolleys are of the slider pantograph type, pneumatically operated and mounted on insulated bases. Two pantographs are used per locomotive. A hand pump is provided in case a locomotive has been standing for some time and has no air supply. A speedometer, similar to the type largely used on automobiles, but especially designed for locomotives, is located in each operating cab. These are connected to the driving wheels of the locomotive by flexible shafts and gearing. A combined straight and automatic air brake equipment is provided on each locomotive, including a 2,400 volt motor driven air compressor, the set consisting of two 1,200 volt motors, operating in series on 2,400 volts and direct connected to an air compressor having a displacement of 100 cu. ft. of free air a minute. The approximate total weight of each locomotive is 83 tons. They are being supplied by Canadian General Electric Co., 2 of them having been built at that company's Peterborough, Ont., works and 4 at the General Electric Co.'s works, Erie, Pa., one having been delivered from the former place and two from the latter.

Canadian Government Railway Employees and National Service.

Early in January the following circular was addressed to all C.G.R. officers and employes, with the approval of the Minister of Railways:—"To assist the National Service, first, in taking an inventory of the man-power of the nation by having the cards which are being distributed properly filled in; and, second, to assist the National Service in the work undertaken, the management desires that all officers and employes within the age limits referred to on the card fill in their answers promptly and correctly and return same to the Director General of National Service, Ottawa.

"With reference to questions 23 and 24, the management will undertake to give leave of absence in cases where such is desirable, and will undertake through the Provident Fund Board to protect the standing of such officers and employes as 'employes' within the meaning of the Provident Fund Act during the leave of absence period."

E. J. Chamberlin, President, G.T.R. and G.T.P.R., telegraphed the following message to every station on the system Dec. 31:—"In thanking all officers and employes of the company on behalf of myself and the board of directors for their loyal and efficient service during the year just closing, I desire to extend to each and every one my best wishes for the health and happiness of themselves and families during the ensuing year, and to solicit the co-operation of every employe in making the G.T.R. and its service to the public during 1917 superior to any railway on the continent."

Travellers Shop on Trains.—The Canadian Northern Ry. has established on its trains between Toronto and the Pacific Coast, a travellers' shop, in charge of the observation car porter, the stock containing a wide range of articles, from shoe laces and collar buttons to smelling salts and bon-bons.

The Canadian Pacific Railway's Honor Roll No. 16.

Averill, William	Wheel borer	West Toronto	Killed in action
Bennett, Charles W.	Porter	Regina	Suffering from shock
Bigland, Richard K.	Cook	Montreal	Died of wounds
Blundell, William D.	Clerk	Montreal	Killed in action
Brightman, Reginald G.	Ticket Clerk	Fort William	Wounded

Wark, Arthur Goodwin	Brakeman	Kenora	Wounded
Wilkinson, Jesse	Painter and varnisher	Angus	Wounded
Wills, Sydney Charles	Car cleaner	Glen Yard	Wounded
Wright, Harry	Waiter	Montreal	Wounded

Reduction of Passenger Train Service to Relieve Freight Congestion.

The following judgment was given Jan. 8, by the Chief Railway Commissioner, Sir Henry Drayton, and concurred in by the Assistant Chief Commissioner, D'Arcy Scott, and Commissioners McLean and Goodeve: The matter of traffic congestion has been anxiously considered for some time past. In so far as the fact of congestion is concerned, there is no room for doubt. Coal and coke shipments have been delayed to a serious and in some instances, to an alarming extent; the proper supply of raw materials to munition factories has been interrupted, and the movement of grain from the northwest, which is much required not only by the grain producing territory in the west but as well by the consuming eastern centres, to say nothing at all of the overseas demands which must be met, has been interfered with. The grain movement from the west has been limited to some extent by the movement into and out of the eastern territory and storage facilities therein, and has also in no small measure been injuriously affected by a shortage of box cars and by a shortage of men, and to a lesser extent of locomotive power.

The causes of congestion are not altogether a railway failure, but include an irregular loading movement overseas, resulting in an uncertainty in the railway movement and consequent congestion of traffic of itself in excess of the traffic ordinarily offered on Canadian lines. Over and above all this, the situation is rendered the more acute by reason of the fact that, owing to the financial and traffic conditions obtaining in 1914, and for a portion of 1915, the railway companies had not ordered equipment, which has now become necessary, and later were unable to get it, speaking generally, except at largely increased prices on deliveries at an early date. Again, over and above all this, the congestion became more marked, in the first instance, on the lines in United States territory, with the result that traffic which otherwise would have been routed on U. S. lines was routed via Canadian lines and offered in large quantities before protective embargoes went into force. The result is a traffic congestion at all points at the border, both on the Canadian and U. S. sides, and at a large number of the divisional points and at all large terminals.

The imperative duty of the Board is to see, in the first instance, that this country fails in no regard in supplying materials necessary in the prosecution of the war. This, of course, means that the transportation required by the Imperial Munitions Board, from the different factories producing munitions or materials required by the Empire and its allies, must be properly and efficiently supplied. It also means that the full movement of grain and flour required both by Great Britain and by the allied nations be fully and completely maintained. In like manner, it is the duty of the Board to see that the freight movement of the necessities of life for our own people, and raw material required for our export trade, on which depends so much in the matter of exchange and the financial standing of the country, is now allowed to suffer. The Board has done everything possible to expedite the movement of these commodities, with the equipment and competent men now available for freight service. No more can at the moment be done in this direction, the railways are using every man available and every locomotive fit to use owned by the

companies or which they have been able to rent for this purpose.

The question now that the Board has to decide is as to whether the movement already referred to as being so necessary should continue to suffer, or whether, on the other hand, locomotives and men now used in passenger business ought to be released and put into freight service. In my opinion, there is no room for doubt as to what ought to be done. Convenience and comfort on the one hand must be sacrificed to necessity on the other. The companies have been advised that the freight movement must be increased and the passenger movement curtailed to the full extent that that movement can be curtailed and the necessary communication between different districts maintained. Circulars 138 and 139 issued by the Board, requiring 10 days notice to the Board and to the public of changes in passenger service will be suspended until further order. It is necessary that this should be done, in view of the direction to the railway companies to forthwith cut off all unnecessary passenger movement and to increase the facilities of the freight service.

It is quite true that not all of the passenger locomotives can be effectively used in freight service, but many of them can, however; and, apart from the question of locomotives, the crews will become available, and the supply of railway men, competent and efficient, directly increased in the proportion that the passenger service is reduced. Over and above all this, in the public interest, in view of the coal shortage existing, the large quantity of coal consumed in passenger service ought to be curtailed as much as possible. More effective service can be given in the companies' mechanical and locomotive shops, and the freight equipment be better maintained and made more efficient than it is today, with a reduced passenger service. There will also be more room in the yards and a more free and expeditious movement of freight trains will become possible.

In my view, the Board cannot well at the present moment order the companies to remove any specific trains. The details of the different passenger movements are much more familiar to the companies than they are to the Board, and in the reductions that must be made the companies will have to see that every section of the country at least has the necessary passenger movement both in and out, although this may mean the carrying on of some trains not of themselves remunerative and the cancellation of trains which may be remunerative to the companies. The chief congestion is to be found at the frontier and on the section between Hamilton and Toronto. Three companies are directly interested in the passenger movement there—the Grand Trunk, Canadian Pacific, and Toronto, Hamilton & Buffalo Railways. The territory is one requiring, undoubtedly, a good passenger service. Probably each and every company will be able to show that every train operated in this district is operated at a profit. It is, however, absolutely necessary that at this, the most congested point, the companies must lose their passenger revenue and the public be inconvenienced, until the present emergency is past. There are now 40 trains operated daily over the territory, that is, 20 into and 20 out of Toronto. In view of these circumstances, a radical cut in this service must immediately go into

effect. This district must be supplied with coal and raw material, not only owing to its own necessities, but also owing to the fact that in it are situated a large number of munition factories now in danger of being closed. In my view, direction ought to be given immediately that out of these 40 trains, 16 must be cancelled, the companies to select out of the total those trains which can be cancelled with the least possible public inconvenience. The mere factor of company revenue cannot be made a controlling factor. After a careful review of the situation, I am further of the opinion that the Canadian Pacific ought to and can rearrange its service so that a saving can be made of some 26 locomotives and crews, the Grand Trunk 35, and the Canadian Northern 12.

The reductions which are now proposed in the passenger service, entailing as they do a considerable loss of passenger revenue, in some cases, to the companies, and inconvenience to the general public, are merely tentative. As and when the congestion from which the country is now suffering, and which probably will continue to a greater or less degree until the opening of navigation, is removed, the service must be restored. All companies must use all suitable equipment and men released from the passenger service for the transportation of freight.

Particulars of the reductions and changes in passenger train service which have been made in consequence of the foregoing judgment are given on a later page of this issue.

Track Elevation at Spokane, Wash., by the Northern Pacific Ry. will extend for 2 miles through the city. The tracks will be raised 12 to 16 ft., and carried on solid fill between concrete retaining walls, with about 20 bridges over the streets. The passenger station is involved in the change. There are 12 to 15 tracks at some parts of the line, and the width of the roadbed will be from 85 to 225 ft. The work will be done without interrupting traffic, which amounts to about 40 regular trains daily. The plan is to build the north wall and then a trestle along the north side from which a fill will be made wide enough for two main tracks. Traffic will then be diverted to these tracks, and the filling continued to the south wall.

American Railway Engineering Association.—The following have been nominated for officers for the ensuing year: J. G. Sullivan, Chief Engineer, Western Lines, C.P.R. for President; Earl Stimson, Engineer, Maintenance of Way, Baltimore & Ohio Rd., for Vice President; G. H. Bremner for Treasurer; and E. H. Fritch for Secretary. Ten members have been named for the nominating committee, from which five are to be selected. Among them is J. R. W. Ambrose, Chief Engineer, Toronto Terminals Ry. Co. The elections take place in March.

Reduced Railway Service in Great Britain.—With the New Year some 400 passenger trains disappeared from the British railway time tables. Many of the remaining trains run more slowly and with a larger number of stops. Long distance non-stop expresses are now as rare as they were 30 years ago. The London Daily News says that, so far, as comfort and speed are concerned, the clock has been put back a quarter of a century. Fares have been advanced 50%.

W. F. Tye on Canada's Railway Problem and Its Solution.

W. F. Tye, M.Can.Soc.C.E., consulting engineer, Montreal, formerly Chief Engineer, C.P.R., read a paper on the above mentioned subject before the Canadian Society of Civil Engineers in Montreal, Jan. 17. He dealt exhaustively with the location, cost of construction and results of operation of the Canadian Pacific, Grand Trunk, Intercolonial, Canadian Northern, National Transcontinental and Grand Trunk Pacific, and gave the following as his conclusions and as recommendations:

The National Transcontinental, the Grand Trunk Pacific and the Canadian Northern railways are unable to earn their operating expenses and their fixed charges. Canada has built, and is operating, the first of these roads, and Canada and the various provinces have guaranteed the principal and interest of most of the bonds of the other two. As the roads are unable to earn their fixed charges, these must, of necessity, be paid by the country. The failure of these roads is due to the duplication of lines by all the railways, encouraged and bonussed by the government; to the excessive cost of the Grand Trunk Pacific and National Transcontinental Railways; to the failure of the Grand Trunk Pacific to provide itself with an adequate system of feeders in the west, and to the construction, by the Canadian Northern, of the long and unproductive stretches of road across British Columbia and Northern Ontario, without feeders, terminals, etc.

If the Canadian Northern, the Grand Trunk Pacific and National Transcontinental be maintained in two separate systems, it will cost at least \$400,000,000 to build the necessary branch line feeders and terminals, to provide them with adequate rolling stock, and put them in proper physical condition to compete with the Canadian Pacific. It will be necessary that the Grand Trunk Pacific build 5,000 to 6,000 miles of feeders in the west. It will be necessary that the Canadian Northern build 2,000 to 3,000 miles of feeders in the east, and terminals, costing many millions, in Montreal, Toronto, Ottawa, Quebec and Vancouver.

Canada has already sufficient railway mileage for years to come. The additional mileage necessary for these roads could only be had by duplicating existing lines. Such duplication of lines would only add to the burden to be borne by Canada in the way of subsidies, guarantees, etc., without doing the country any good. Canada has sufficient railway mileage and traffic for two good transcontinental systems, the Canadian Pacific and another, but not enough for three.

A consolidation of the Grand Trunk, the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways would give a well balanced system. The Grand Trunk has an excellent system in the east, with terminals in all large and important centres; the Canadian Northern has not. Each is strong where the other is weak. Combining them must, of necessity, be the most economical and efficient way of handling the situation. Such a combination would not require more than \$100,000,000 to provide it with sufficient rolling stock, and to put it in proper physical condition to compete with the Canadian Pacific. The saving in capital cost would be at least \$300,000,000 and, at present rates of interest, the saving in fixed charges at least \$15,000,000

a year.

The National Transcontinental cost \$100,000 a mile to build. The parallel Canadian Northern cost less than \$50,000 a mile, and is, in every way, as efficient an instrument of transportation. The Quebec Bridge, with approaches, will cost \$40,000,000, and will not be necessary for many long years to come. The National Transcontinental, including the Quebec Bridge, has cost Canada at least \$100,000,000 more to build than it would have cost the Canadian Pacific to build as efficient a road.

Including operating expenses and fixed charges, it costs the Canadian Pacific about \$70 to do \$100 worth of business. Including operating expenses and interest on cost, it costs the Intercolonial and the other Canadian Government roads from \$200 to \$220 to do \$100 worth of business.

Canada should follow the wise example set by Sir John Macdonald, when dealing with the Canadian Pacific in 1879-80, and form a new private corporation, with sufficient power and the necessary safeguards, to take over and consolidate the Grand Trunk, Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways, and develop another Canadian Pacific, rather than to have the Government take them over and develop another and a vaster and more expensive Intercolonial. Conditions for the formation of such a company are much more favorable than they were in 1880, as Western Canada had not then been proved, as it since has been, to be capable of supporting a large and prosperous population. Such a combination would start with gross earnings of at least \$100,000,000 a year, with a probable average increase of 8% a year, and probable net earnings of from \$25,000,000 to \$30,000,000 a year, and a net revenue from other sources of about \$2,800,000. Its fixed charges at consolidation would be about \$35,000,000, and it would be under the necessity of spending in the first five to seven years at least \$100,000,000 to provide rolling stock and to put its properties in good physical condition. Deficits for some time to come would be inevitable owing to the heavy fixed charges, amounting to about \$35,000,000, as compared with \$10,300,000 a year for the Canadian Pacific. As these high fixed charges are caused by the excessive cost of government construction, and by duplication of lines, bonussed and guaranteed by the government, Canada must pay them. The fixed charges would be at least \$15,000,000 less with one private system than with two, and very much less with private than with government management. With such a combination as has been outlined the series of deficits should not last more than five to ten years, after which the road should be very successful.

In order to control its policy and to share in its certain prosperity, Canada should have an interest in the new company. The Dominion Government should furnish 40% of the money required, own 40% of the stock, and appoint 40 of the directorate, but take no part in the actual management. This would give all the advantage of government control without any of the manifest disadvantages of government management. Once this combination was successful, Canada should once and for all abandon the vic-

ious policy of bonussing railway construction, either by gifts of money or land, or by the still more vicious policy of guaranteeing the bonds of railway companies of which it has no direct control.

Passenger Rate Meetings at Quebec.

The usual January passenger association meetings were held this year at Quebec, on Jan. 9, 10, and 11. The usual routine business was transacted by the Niagara Frontier Summer Rate Committee and the Great Lakes and St. Lawrence River Rate Committee, the rate clerks meeting first and preparing schedules for submission to the committee meetings. G. C. Wells, Assistant to Passenger Traffic Manager, C.P.R., was elected chairman, Niagara Falls Summer Rate Committee; and J. F. Condon, G.P.A., Great Lakes Transit Co., Buffalo, N.Y. was elected chairman, Great Lakes and St. Lawrence River Rate Committee; James Morrison, A.G.P.A., Canadian Northern Ry., Montreal, being permanent secretary of both committees. G. C. Howard, A.G. P.A., New York Central Rd., retiring President, Niagara Frontier Summer Rate Committee, was presented with a gavel, the wood in which was taken from a hat rack used at one time by Commodore Vanderbilt in his private office in the old Grand Central Station, New York.

The International Water Lines Passenger Association dealt with the following subjects, which had been referred by the American Association of Passenger Traffic Officers: Telegraphic code applicable for use in passenger traffic department; association ticket paper; revised interline ticket; printing of folders and economical distribution of same; economy in operation of city ticket offices; definition of division terms; practical maps in Official Guide, and folders clearly distinguishing the line or system from its connections. Most of the lines on the Great Lakes gave notice of raising their rates from 10 to 15%, but the Canada Steamship Lines, Ltd., announced that it would not advance rates on the St. Lawrence-Saguenay route. The following officers were elected: President, E. W. Holton, G.P.A., Northern Navigation Co., Sarnia, Ont.; Vice President, M. J. Powers, G.P.A., Champlain Transportation Co., Albany, N.Y.; Secretary-Treasurer, M. R. Nelson, Northern Steamship Co., Buffalo, N.Y. The retiring President, F. B. Hibbard, G.P.A., Hudson River Day Line, New York, was presented with a gavel, the wood in which was taken from the wreck of the schooner Royal Savage, Benedict Arnold's flag ship, which was sunk at the south end of Valcour Island, Lake Champlain, Oct. 11, 1776.

The Quebec Ry., Light & Power Co. gave the officials attending the meeting a trip to St. Anne de Beaupre and a luncheon at the Kent House, Montmorency Falls. The next meetings of the three associations will be held at Buffalo, N.Y., in January, 1918.

Railway Lands Patented.—Letters patent were issued during Dec., 1916, respecting Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acres.
Alberta & Great Waterways Ry	5.85
Calgary & Edmonton Ry.	1,428.00
Canadian Northern Ry.	3,238.58
Canadian Pacific Ry.	3.80
Grand Trunk Pacific Ry.	7.74
Grand Trunk Pacific Branch Lines Co.	36.37
Manitoba & South Eastern Ry.	614.93
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.	1,731.22
Winnipeg River Ry.	46.47
Total	7,212.96

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Alberta & Great Waterways Ry.—Tracklaying on the extension to McMurray was reported to be in progress during January, only 45 miles having been laid out of the 125.5 which it was hoped to have laid by the end of 1916. J. D. McArthur, President, is reported to have stated that unless some unforeseen obstacle occurred rails will be laid to Fort McMurray by Mar. 31. Ballasting of the newly laid mileage will be fully completed this year, and the station and other buildings will be erected.

We are officially advised that the company's Egg Lake branch starts at Dewar, mileage 101.4, and runs southeasterly to the provincial boundary, about 80 miles. A preliminary survey has been made for the entire distance and a location survey has been completed to mileage 50. Up to the end of 1916 grading had been completed for 11 miles and track had been laid thereon. (Jan., pg. 19.)

Athabasca Valley Ry.—The Alberta Legislature is being asked to extend the time for the building of this projected railway from near Independence, on the Edmonton, Dunvegan & British Columbia Ry., to Fort Assiniboine, Alta. J. D. McArthur, President, E.D. & B.C.R. and its associated lines, the Alberta & Great Waterways Ry. and the Central Canada Ry., is primarily interested. (Oct., 1914, pg. 468.)

Brule Lake Ry.—The Alberta Legislature is being asked to extend the time for the building of this projected railway from mileage 994 on the G. T. Pacific Ry., near the east shore of Brule Lake, southeasterly through Secs. 26 and 24, Tp. 49, Range 27, west of 5th Meridian, thence north easterly through Secs. 19, 20 and 29, Tp. 49, Range 26, west of 5th Meridian. (May, 1915, pg. 170.)

Calgary & Fernie Ry.—The Dominion Parliament is being asked to extend the time for the building of this projected railway between Calgary, Alta., and Fernie, B.C. Hough, Campbell & Ferguson, Winnipeg, are solicitors for applicants. (May, 1915, pg. 170.)

Canadian Pacific Ry.—The gap between Altawan, the western end of track on the Weyburn-Lethbridge line, and Manyberries, the eastern end of track from Sterling, Alta., is a little over 20 miles. It is expected that construction will be gone on with this year so as to have the line completed through.

A press report states that the yards at Raymond, Alta., are to be enlarged, and that work will be started early in the spring.

In our last issue it was stated that a contract for the extension of Pier D, at the foot of Grenville St., Vancouver, had been let to S. E. Jenkins & Co. The firm is Sydney E. Junkins & Co. A contract is reported to have been let to Vancouver Creosoting Co. for the piles required for the extension of this pier. The estimated cost of the piles required is put at \$150,000. A large number of them will be 130 ft. long. (Jan., pg. 25.)

Canadian Western Ry.—The Dominion Parliament is being asked to extend the time for the building of this projected railway from the International Boundary through Pincher Creek and Cowley and along the Old Man River to Livingstone Mountain, and thence to Calgary, Alta., with a branch to Michel, B.C. Hough, Campbell & Ferguson, Winnipeg, are solicitors for applicants. (May, 1915, pg. 170.)

Caribou, Barkerville & Willow River Ry.—The Dominion Parliament is being asked to extend the time for building this projected railway from near Eagle Lake, on the G. T. Pacific Ry., and along the watershed of the Willow River to the Caribou Road at Barkerville, B.C.; a line from Barkerville to the junction of the Clearwater and North Thompson Rivers; and from 17 miles from the northerly terminus easterly to Bear River, 20 miles, and to increase its capital stock from \$1,000,000 to \$10,000,000. Pringle & Guthrie, Ottawa, are solicitors for applicants.

In Apr., 1915, the Minister of Railways approved of route map of the railway from Barkerville towards Willow River, 170 miles. (May, 1915, pg. 170.)

Central Canada Saskatchewan Ry.—The Saskatchewan Legislature is being asked to incorporate a company with this title to build a railway from Tps. 61, 62 or 63 on the western boundary of the Province easterly to Tp. 61 or 62, Range 8 or 9, w. 3rd meridian, thence southerly and easterly to Prince Albert. Anderson, Bagshaw, McNiven & Fraser, Regina, Sask., are solicitors for applicants. (See Central Canada Ry., Feb., 1915, pg. 106.)

Central Canada Ry.—The Alberta Legislature is being asked to authorize the company to build the following additional lines: An extension of the line authorized by chap. 46, 1913, from Tp. 81, Range 4, west of 6th Meridian, westerly to the western boundary of the Province; to extend the same line northerly to the northern boundary of the Province, approximately parallel with Hay River; a branch line from Tp. 74, Range 17, west of 5th Meridian, near High Prairie, southerly to Snipe Lake, thence westerly to 6th Meridian; and a line from near Edmonton to Calgary. The line authorized to be built in 1913 was to start from Tp. 74 or 75, Range 18 or 19, west of 5th Meridian, to Peace River Landing, thence to Tp. 86, Range 4, west of 6th Meridian, with a branch from Peace River Landing northerly to the Brule River, near Tp. 94, Range 22, west of 5th Meridian. (May, 1916, pg. 106.)

Edmonton & Southwestern Ry.—An Edmonton, Alta., press report states that a contract has been let for making the preliminary location surveys for this railway and that the work will be started forthwith. The railway is projected in connection with a power development proposition at Blue Rapids, on the Saskatchewan River. The railway will have an approximate length of 70 miles along the power line. (May, 1916, pg. 183.)

Edmonton, Dunvegan & British Columbia Ry.—J. D. McArthur, President, is reported to have stated recently that during this year the work to be done will include the completion of the ballasting of the last 17 miles of the main line to Spirit River; the completion of the ballasting on the Grand Prairie Branch, and the completion of the line from Spirit River to Pouce Coupe. The rails for this extension have been purchased in the U.S. and will be laid as early in the spring as weather conditions warrant. This line will be ballasted and put in operation early in the autumn.

Tenders are under consideration for the erection of a steel bridge across the Peace River. It will have a total length of 1,600 ft., and will be 80 ft. above high water mark. The substructure will consist of 5 piers in deep water, 4 in shallow water, with concrete approaches, which

will require about 10,000 cu. yds. of concrete. The superstructure will consist of 7 200 ft. deck truss spans and 1 225 ft. through span, with girder approaches on either side. As soon as the bridge is completed, construction will probably be started on the extension of the line towards the Waterhole district.

A survey is reported to have been made for a line from Busby, mileage 34.7 from Edmonton, on the E.D. & B.C.R., to Fort Assiniboine, about 70 miles. (Jan., pg. 19.)

Essex Terminal Ry.—The Dominion Parliament is being asked to authorize the building of a branch line from the existing line near Ojibway to Pelton, Ont., seven miles. J. H. Coburn, Walkerville, Ont., is Secretary. (Jan., pg. 19.)

The Grand Trunk Ry., on Jan. 10, took out a permit for the reconstruction of its freight sheds at the Ferguson Ave. yards, Hamilton, Ont., which were practically destroyed by fire, Jan. 7. The work is estimated to cost \$30,000. The property destroyed included the greater part of the freight sheds, the freight offices on Barton St., a number of empty and loaded box cars, together with a large quantity of package freight, the total loss being estimated at approximately \$100,000. (Jan., pg. 19.)

The Grand Trunk Pacific Ry. Co. is asking the Dominion Parliament to extend the time within which it may build branch lines generally. This covers branch lines mentioned in chap. 99 of the statutes of 1906; an additional line authorized by chap. 86 of the statutes of 1909; nine further branch lines authorized by chap. 103 of the statutes of 1910, and 12 additional lines authorized by chap. 83 of the statutes of 1911.

A second application asks the Dominion Parliament to extend the time for the completion of the following branch lines: From Tp. 22, Range 6, west of 2nd Meridian, to Yorkton and on to Hudson Bay, in the vicinity of Fort Churchill; from between longitude 105 and 107 to Prince Albert, Sask.; from between the east limit of Range 11 and the west limit of Range 16, west of 3rd Meridian, southwestwardly and westerly to the vicinity of Calgary, or to a point on another line authorized to be built to Calgary; from a point on the last mentioned line between Range 20 and the west limit of Range 28, west of 3rd Meridian, easterly and southeasterly to Moose Jaw, Sask.; from Tps. 41, 42 or 43 on the line from Oban to Battleford, Sask., northwesterly and northerly to the main line between Arland and Wainwright, Sask. The first of these lines has been built and is in operation from Melville through Yorkton to Canora, 56 miles; the second is in operation from Young to St. Louis, 89 miles, and the grading is completed and ready for track laying into Prince Albert, 24.26 miles; the third is in operation from Biggar to Loverna, 105 miles; no work has been done on the fourth, while on the fifth a train service is being operated from Oban through Battleford to Carruthers, 104 miles. (Nov., 1916, pg. 447.)

Great Northern Ry.—Considerable progress has been made with the long cut from the Burnaby border through the North Road to the G.N.R. tracks on Brunette Creek. The cutting is about 1,400 ft. long, and averages 50 ft. in depth, and will be wide enough to permit of the laying of a double track to conform with the rest of the line into Vancouver. Two 16

car trains are run daily between the cutting to the False Creek terminals, where the material taken out is used for filling. The cut is expected to be completed in April, when a concrete and steel bridge will be erected across the North Road. The contractors are A. Guthrie & Co., Vancouver.

The Vancouver City Council has issued a permit for the erection of the proposed freight sheds on the False Creek terminal site, the work to be carried out by Grant Smith & MacDonnell, under the supervision of F. L. Townley, the company's architect. (Jan., pg. 19.)

Grenville, Harrington & Northern Ry.—The Quebec Legislature has incorporated a company with this title to build a railway from Grenville along the valley of the Rouge River, to Harrington East, thence northerly in Argenteuil County. (Jan., pg. 19.)

Kenora & English River Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a line from the National Transcontinental Ry. west of Superior Jct., Kenora District, Ont., northerly and westerly, crossing the English River west of Lac Seul, northerly and westerly through Patricia District and westerly and southerly to Winnipeg. Denton, Grover & Field, Toronto, are solicitors for applicants.

Lynn Creek, B.C.—The North Vancouver, B.C., City Council has before it questions concerning development along Lynn Creek Valley from which it draws its water supply. M. P. Cotton claims to have the right to remove timber from the valley, and desires to build a logging railway along the shore of the creek to enable him to get out the logs and to aid in the development of a zinc mine. North Vancouver is interested in the conservation of its water supply, and Mr. Cotton in the development of his property. The matter is still under discussion.

Pacific Great Eastern Ry.—The British Columbia Government on Jan. 8 authorized the issue of a treasury note for \$500,000 to carry on construction work on the line. This will, it is estimated, pay for material used and the actual cost of labor employed until the end of March. The work to be done under this order in council will consist of the continuance of track laying from Clinton towards Prince George and the finishing up of the grading between those two points. This work will be done entirely under the supervision of the government engineers.

Since the new B.C. Government took office the company appears to have been given very considerable attention. An order in council was passed, Jan. 8, authorizing the employment of accountants to make an audit of the company's books as the basis of a thorough consideration of the whole situation of the province's relationship to the company. It is expected that the Premier will make a statement as to the future of the company soon after the Legislature meets in February. (Jan., pg. 20.)

Prince Edward Island Car Ferry.—We are officially advised that the car ferry terminal pier, etc., at Port Borden, P.E.I., is not yet fully completed. The railway track connection with the P.E.I.R. has been completed, the track having been laid from the yard, where it had been laid in 1914, for a further distance of a mile on to the pier. (Dec., 1916, pg. 484.)

Quebec Bridge.—It was reported, Jan. 15, that such progress has been made with the manufacture of the steel for the suspension member of the Quebec Bridge.

that the contractors expect to have it ready for placing in position in September. The member is being built on the same plan as was the span which collapsed in Sept., 1916, and it will be floated into position on practically the same lines as that span was. (Nov., 1916, pg. 446.)

The Roberval - Saguenay Ry.'s main line runs from Ha Ha Jct., on the Quebec & Lake St. John Ry., to Bagotville, 20 miles, with a branch from Laterriere Jct. to Lake Kenogami, 12 miles, and a second branch from Labrosse Jct. to Chicoutimi Ouest, 3.4 miles, a total of 35.4 miles. The last mentioned branch is being operated by electricity, and it is proposed to electrify the company's yards at Port Alfred. The uncompleted portion of the main line has been surveyed from Ha Ha Jct., through the townships north and west of Lake St. John, to Roberval. The company's rolling stock consists of 2 electric locomotives, 4 passenger cars, 10 box cars, 168 flat cars and 2 cabooses. (Jan., pg. 20.)

St. John & Quebec Ry.—Chief Justice McKeown has before him in the New Brunswick Supreme Court, arbitration proceedings in the case of A. R. Gould and associates against the Provinces of New Brunswick, arising out of the expropriation by the Province of the St. John & Quebec Ry., under the provisions of a statute of 1915. The plaintiffs at that time owned all the company's capital stock, and had expended about \$4,500,000 upon the construction of 120.3 miles of railway from Centreville to Gagetown, N.B. The amount of the claim, \$334,200, is based on a percentage of the cost of the line built and on the estimated value of the stock taken over and now vested in the Provincial Government.

Toronto, Hamilton & Buffalo Ry.—The Dominion Parliament is being asked to ratify an agreement making traffic arrangements for a period of 50 years between the T.H. & B.R. and the Hamilton & Dundas St. Ry., under sec. 364 of the Railway Act; to extend the time for the completion of its projected railway from Port Maitland to Port Colborne; to empower it to build a line from Welland to Port Colborne, Ont.; to enable it to enter into agreements under sec. 364 of the Railway Act with the Michigan Central Rd., the Canada Southern Ry. and the Grand Trunk Ry., or any of them, for a term exceeding 21 years, and to authorize the company to hold stock in any navigation or steamboat company. (July, 1916, pg. 282.)

The Toronto City Council went through the annual farce of appointing directors to certain practically non-existent railway companies at its first meeting for the year, Jan. 8. Ald. Ryding was appointed to the Credit Valley Ry. Co.; Ald. Risk to the Toronto, Grey and Bruce Ry. Co.; Ald. Nesbitt to the Ontario & Quebec Ry. Co., and Ald. Archibald to the Northern Division of the G.T.R. These companies are now absorbed into the larger railway systems, but for a variety of reasons the corporate entities have been maintained. The directors have no duties, and as one of them complained, they are practically ignored. The city claims to be entitled to a representation on the boards of these companies, on account of subsidies granted by it.

Without Prejudice. — "A Vancouver court is asked to decide whether a grain elevator is a building or an engineering work. The storage elevators at Vancouver and Calgary are monumental blunders."—(Exchange.)

Demurrage Regulations in United States.

We have been asked to publish the amended demurrage regulations passed by the Interstate Commerce Commission, Nov. 29. They are as follows:

It appearing that on Nov. 15 and 29, 1916, the commission ordered a hearing concerning the propriety of the increases and the lawfulness of the rates, charges, regulations and practices for demurrage stated in the schedules, contained in tariffs designated in said orders, and pending such hearing and decision, the operation of the schedules contained in said designated tariffs was suspended until Mar. 31, 1917; and good reason appearing therefor, it is ordered, that carriers parties to said schedules be authorized to cancel forthwith all of said schedules suspended by said orders in Investigation and Suspension Docket 966, upon notice to this commission and to the general public by not less than three days filing and posting in the manner prescribed in sec. 6 of the Act to Regulate Commerce;

It is further ordered that said carriers parties to said schedules be authorized to file new schedules making no change in the present effective form of the weather rule or average agreement, providing for 2 days free time exclusive of Sundays or legal holidays, and the following rates of demurrage after expiration of free time: \$1 for the 1st day; \$2 for the 2nd day; \$3 for the 3rd day, and \$5 for the 4th and each succeeding day; provided track storage charges shall remain in effect as at present, except where the demurrage rate is \$3 per day or more; provided further, that these provisions be embodied in tariffs fixed to expire by limitation on May 1, 1917; and provided further, that the carriers' demurrage schedules suspended by and designated in orders of Nov. 15 and 29, 1916, are contemporaneously cancelled, upon notice to this commission and to the general public by not less than three days filing and posting in the manner prescribed in sec. 6 of the Act to Regulate Commerce.

Eastern Canadian Passenger Association.

At a meeting in Montreal, Jan. 3, the following were elected for the current year:

Chairman—E. O. Grundy.
Executive Committee—J. F. Pierce, chairman; R. L. Fairbairn, W. H. Snell, W. S. Cookson.

Rules Committee—C. W. Johnston, chairman; W. Maughan, R. L. Fairbairn, J. W. Hanley, G. C. Martin, A. L. Miller, L. W. Landman, H. H. Melanson, F. T. Grant.

General Baggage Agents' Committee—J. O. Apps, chairman; G. C. Allen, R. L. Fairbairn, C. C. Bonter, J. E. Quick, H. P. Deaving, W. M. Skinner, A. E. Plumer.
Secretary—G. H. Webster.

Canadian Ticket Agents' Association.—At an executive meeting at Toronto, Jan. 25, it was decided to hold the next annual meeting at Montreal, Sept. 25, 26 and 27. W. H. C. Mackay, City Ticket Agent, C.P.R., St. John, N.B., was elected a member of the executive committee, vice W. McIlroy, resigned on account of a change in his position rendering him ineligible.

The Quebec Legislature has ratified a grant of public lands to the Northern Colonization Ry., a C.P.R. subsidiary.

Mainly About Railway People Throughout Canada.

John Henderson, Roadmaster, G.T.R., Belleville, Ont., died there suddenly from paralysis, Jan. 14.

J. S. Dennis, Assistant to President, C.P.R., addressed the New York Credit Men's Association recently, on Canada after the war.

R. S. Claar, heretofore Assistant Engineer, Duluth, South Shore & Atlantic Ry. and Mineral Range Rd., has succeeded J. E. Bebb as office engineer.

T. D. Dugan, chief clerk, Car Accountant's department, G.T.R., Montreal, died there, Jan. 4, from peritonitis. He had been in G.T.R. service 34 years.

Mrs. G. R. R. Cockburn, who died in Toronto, Jan. 8, was the mother of Lady Tait, wife of Sir Thomas Tait, President, Fredericton & Grand Lake Ry. & Coal Co.

H. A. Woods, Assistant Chief Engineer, Grand Trunk Pacific Ry., Winnipeg, has been granted leave of absence for three months. It is reported that on his return he will resign.

G. C. Martin, General Freight and Passenger Agent, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., has been elected President of the Hamilton Board of Trade.

F. H. Phippen, K.C., General Counsel, Canadian Northern Ry., left Toronto Jan. 9, for California, accompanied by Mrs. Phippen and son, who will stay there for some time.

J. E. Burgess, assistant chief clerk in the office of Vice President and General Manager, Western Lines, C.P.R., Winnipeg, died there, Jan. 10, from Bright's disease, aged 26.

J. T. Arundel, General Superintendent, Ontario Division, C.P.R., who is on leave of absence on account of ill health, left Toronto Jan. 7, for Cuba, intending to spend some weeks there.

Lord Shaughnessy, President, C.P.R. telegraphed the company's officials and employes on Dec. 30: "My very best wishes for the new year. May it bring peace on the terms of Britain and her allies."

Frederic Nicholls, who has been appointed to the Senate, is a director of the Canadian Northern Ry., and Toronto Ry., and President, Canadian General Electric Co., and Canadian Allis Chalmers Co., Toronto.

George Mercer, formerly General Foreman, Duluth, South Shore & Atlantic Ry. and Mineral Range Rd., has been appointed Superintendent of Bridges and Buildings for those companies. Office, Marquette, Mich.

L. B. Archibald, Superintendent, Sleeping, Dining and Parlor Cars Department, Canadian Government Railways, Halifax, N.S., who had been on leave of absence through illness, for three months, returned to duty Jan. 1.

Capt. A. T. Shaughnessy, son of Lord Shaughnessy, who was killed at the front some months ago, had a seat on the Montreal Stock Exchange, as one of C. Meredith & Co.'s floor members. It was sold recently for \$22,000.

Peter T. Shelby, a retired official of the Great Northern Ry. who served under Gen. J. F. Casement, contractor for the construction of a large part of the Union Pacific Rd., in the late sixties, died in Cleveland, Ohio, recently.

J. N. deStein, M.Can.Soc.C.E., Resident Engineer, Grand Trunk Pacific Ry., Regina, Sask., read a paper before the Canadian Society of Civil Engineers, Regina Branch, Jan. 4, on the railway from its conception to its completion.

Sir William D. Reid, President, Reid Newfoundland Co., who is said to have been interested in the Daily Mail, Montreal, is defendant in a personal suit by B. A. MacNab, ex editor of that paper, on an alleged claim for \$20,700.

In commenting on the recent visit of George Bury, Vice President of the C.P.R. to England, one of the London dailies stated recently, "He is considered both in Canada and the U.S. to be one of the greatest transport experts in the world."

Lord Shaughnessy, who was mentioned recently in a Chicago press dispatch, as likely to become a member of the British

official car flew round and struck him on the forehead with considerable force, necessitating a stitching of the wound.

L. V. Druce, Commercial Agent, Grand Trunk Pacific Ry., Vancouver, was presented with a purse of money by a number of friends and members of the Vancouver Transportation Club recently, on leaving for Edmonton, Alta., where he has been appointed Division Freight Agent.

Thos. J. Wall, General Agent, Passenger Department, C.P.R., Chicago, and his staff, sent out a unique Christmas and New Year greeting card in the shape of the company's trade mark, surmounted by the Canadian beaver and containing several views on the company's railway and steamship lines.

J. L. Englehart, Chairman, Timiskaming & Northern Ontario Ry. Commission, Toronto; W. I. Gear, Vice President, Robert Reford Co., steamship agents, Montreal; and P. J. Myler, Vice President, Canadian Westinghouse Co., Hamilton, Ont., have been re-elected directors of the Bank of Toronto.

W. W. Sloan, of the Secretary's Department, Canadian Northern Ry., Toronto, is President, and F. C. Annessley, private secretary to Sir William Mackenzie, is a director, of the Murray-Mogridge Mining Co., Ltd., of which Hon. Lt. Gen. Sir Sam Hughes is President, and which offered 100,000 shares for sale recently.

B. F. Runkle, whose appointment as Track Supervisor, Canadian Northern Ry. Hornepayne, Ont., was announced in our last issue, has been in C.N.R. service for the past four years, as section foreman and gang foreman on the construction of the line from Port Arthur, Ont., easterly. He was formerly employed on railway construction in Wisconsin.

G. H. Dawson, Surveyor General of British Columbia since 1911, has resigned to attend to his private affairs. Born in Quebec, about 50 years ago, he went to the Pacific Coast in 1889, after being in the C.P.R.'s Engineering Department, on the Quebec Division, for some three years. Latterly he has been acting as western representative, Imperial Munitions Board.

W. J. Underwood, formerly General Manager, Chicago, Milwaukee & St. Paul Ry., and brother of F. D. Underwood, President, Erie Rd., died Jan. 3, aged 65. He entered the company's service as a brakeman, in Oct. 1872, becoming successively conductor, Division Superintendent, Assistant General Superintendent, General Superintendent, Assistant General Manager and General Manager.

Thomas Fawcett, who has been appointed General Storekeeper, Western Lines, C.P.R., Winnipeg, entered C.P.R. service in 1905 as clerk in the Vice President's office, Winnipeg. Later he was successively, chief clerk, Paymaster's office; chief clerk, Local Treasurer's office; Paymaster, Calgary, Alta., and from 1911 to Nov. 30, 1915, General Fuel Agent, Winnipeg, and from Nov. 30, 1915, to the date of his present appointment, Assistant General Storekeeper, Western Lines, Winnipeg.

P. J. M. Woslyng, formerly Roadmaster, Aldersyde Branch, C.P.R., died at Lethbridge, Alta., Jan. 8, after an illness lasting over a year. He was born in Sweden in 1873, and came to Canada at the age of 18, and entered C.P.R. service, being engaged on construction and mainten-

G. A. Montgomery,
Vice President and General Manager, Algoma
Central & Hudson Bay Railway.

Cabinet, or to be asked to settle the Irish problem, has stated that such rumors are the creation of a newspaper imagination.

G. McL. Brown, European Manager, C.P.R., who has been visiting Canada for a few weeks, accompanied by Mrs. Brown, has returned to London, Eng. Both Mr. and Mrs. Brown addressed a number of meetings on war topics whilst in Canada.

P. B. Robb, chief clerk, Car Service Department, Canadian Government Railways, Moncton, N.B., was presented with a travelling bag and an address on leaving Moncton, Jan. 11, for Winnipeg, where he has been transferred to the same department.

Gideon Robertson, of Welland, Ont., who has been appointed to the Senate, is head of the Order of Railway Telegraphers. He took a prominent part at Winnipeg recently in bringing about an agreement between the C.P.R. and several branches of its employes.

H. E. Whittenberger, General Superintendent, Ontario Lines, G.T.R., Toronto, met with a painful accident recently when the brake lever on the rear of his

ance. He later transferred to the Alberta Ry. & Irrigation Co., and was in that service for two years, until the company was taken over by the C.P.R.

L. V. Druce, who has been appointed Division Freight Agent, Grand Trunk Pacific Ry., Edmonton, Alta., was born at London, Eng., Oct. 20, 1873, and entered railway service in Aug., 1896, at Los Angeles, Cal., and was, from Mar. 1897 to Aug. 1904, Agent, Seattle, Wash.; Aug. 1904 to May 23, 1910, Commercial Agent, Seattle, Wash.; May 23, 1910 to Dec. 21, 1916, Commercial Agent, G.T.R., G.T.P.R. and G.T.P. Coast Steamship Co., Vancouver, B.C.

Thomas Turner, who died at Niagara Falls, Ont., Jan. 4, aged 91, came to Canada in 1854, the year of the opening of the Great Western Ry. from Hamilton to Niagara Falls. He was in that company's service, and transferred to the G.T.R. when it took over the Great Western, and occupied various positions throughout Ontario. He was yard foreman at Niagara Falls for many years, and roadmaster between Delhi and Fort Erie, until he was superannuated about 20 years ago.

Robt. Kerr, who was Passenger Traffic Manager, C.P.R., when he retired Sep. 10, 1910, and who died at Toronto, Dec. 9, 1916, left an estate of \$21,720, of which \$10,220 was life insurance, \$2,750 household goods and personal effects, \$2,250 stock of Great West Life Assurance Co., and \$6,500, his house on Madison Ave., Toronto. To his son, Frederick C., he left the gold watch given him by the citizens of Winnipeg, and to his widow, a life interest in the residue of the estate, which at her death passes to their three daughters.

William Burton Johnson, whose appointment as Master Mechanic, District 6, Intercolonial Division, Canadian Government Railways, Truro, N.S., was announced in our last issue, and whose portrait appears in this issue, was born there, Oct. 8, 1872, and entered the Intercolonial Ry. service in 1888, since when he has been, to 1890, messenger, Traffic Department, Truro, N.S., 1890 to 1900, fireman; 1900 to 1913, locomotive man; 1913, standard rule instructor, St. John, N.B., and Halifax, N.S.; 1914 to Dec. 1916, locomotive man, Dartmouth, N.S.

George C. Gahan (not Cahan as mentioned in our last issue), who has been appointed Assistant General Auditor, C.P.R., Montreal, was born there, Dec. 28, 1874, and entered C.P.R. service in April, 1890, since when he has been, to Oct. 1891, junior clerk, Auditor of Freight and Telegraph Receipts' office; Oct. 1891 to Aug. 1896, junior clerk, Auditor of Disbursements' office; Aug. 1896 to Dec. 1, 1916, clerk, bookkeeper and chief clerk, successively, in Comptroller's and General Auditor's offices, all in Montreal.

L. J. Rouleau, who has been appointed Commercial Agent, G.T.R., Quebec, Que., was born at Montreal, Jan. 6, 1879, and entered G.T.R. service, Apr. 1, 1899, since when he has been, to Mar., 1903, clerk and timekeeper, Local Freight Department, Montreal; Mar., 1903, to Nov., 1905, claims investigator, Freight Claims Department, Montreal; Nov., 1905, to Apr., 1907, rate clerk, Division Freight Office, Montreal; Apr., 1907, to Apr., 1909, Soliciting Freight Agent, Montreal; Apr., 1909, to Dec. 30, 1916, Travelling Freight Agent, G.T.R., and Agent, National Dispatch-Great Eastern Line, Montreal.

J. Russell Brent, who was appointed Night Chief Dispatcher, G.T.R., London, Ont., recently, was born at Strathroy,

Ont., Aug. 16, 1889, and entered G.T.R. service Aug. 16, 1906, since when he has been, to June 1, 1907, operator at various stations; June 1, 1907, to June 14, 1908, operator, Komoka, Ont.; June 14, 1908, to June 1, 1909, operator, Burlington Jct., Ont.; July 1, 1909, to Aug. 30, 1910, day operator, Sarnia Tunnel; Aug. 30, 1910, to Feb. 1, 1913, relay operator, London, Ont.; Feb. 1 to Dec. 1, 1913, relieving dispatcher, London, Ont.; Dec. 1, 1913, to Nov. 15, 1916, dispatcher, London, Ont.

Leon Spoor Landers, who has been appointed Assistant Engineer, Canadian Government Railways, Levis, Que., was born at Farnham, Que., Dec. 15, 1888, and entered railway service in May, 1910, since when he has been, to Feb., 1911, rod man, C.P.R., Farnham, Que.; Feb., 1911, to Mar., 1912, draughtsman, Resident Engineer's office, Eastern Division, C.P.R., Montreal; Mar., 1912, to Oct., 1913, transit man, C.P.R.; Oct., 1913, to May, 1915, transit man, District 4, Intercolonial Ry., New Glasgow, N.S.; May, 1915, to Jan.,

private secretary to the Superintendent, Southern Division, G.T.R., Hamilton, Ont.; remaining in that position until the abolition of the company's general offices there, early in 1893. On Mar. 1, 1893 he entered C.P.R. service as secretary to the President (Sir William Van Horne), and on Sir William's retirement from the Presidency in 1899, he remained in the same capacity with Sir Thomas Shaughnessy, until July 1908, when he was appointed Assistant Treasurer, and in Aug. 1912, was appointed Assistant Secretary.

Walter R. Eastman, who has been appointed New England Passenger Agent, G.T.R., Boston, Mass., was born at Hartland, Vt., Apr. 15, 1875, and entered Central Vermont Ry. service, Nov. 19, 1899, since when he has been, to Feb. 1900, transfer foreman yard clerk, Brattleboro, Vt.; Feb. to Mar., 1900, clerk, Montville, Conn.; Mar., 1900, to Jan., 1901, billing clerk, White River Jct., Vt.; Jan. to Apr., 1901, billing clerk, Burlington, Vt.; Apr., 1901, to Apr., 1903, ticket clerk, St. Albans, Vt.; Apr., 1903, to May, 1906, Travelling Passenger Agent, St. Albans, Vt.; May, 1906, to Jan. 1, 1917, chief clerk, General Passenger Agent, St. Albans, Vt.

John D. McAuley, who has been appointed Commercial Agent, Grand Trunk Pacific Ry., and G. T. P. Coast Steamship Co., Prince Rupert, B.C., was born in Plantaganet, Ont., June 11, 1884, and entered railway service Oct. 1904, since when he has been, to Dec. 1908, in Local Freight Department, G.T.R., Montreal; Dec. 1908 to June 1911, in Freight Claims Department, G.T.R., Montreal; June 1911 to Sept. 1913, in Foreign Freight Department, G.T.R., Montreal; Sept., 1913, to Sept. 1914, City Freight Agent, Grand Trunk Pacific Ry., Vancouver, B.C.; Sept. 1914 to Mar. 1, 1916, City Freight Agent, G.T.P.R., Regina, Sask.; Mar. 1 to Dec. 21, 1916, Travelling Freight and Passenger Agent, G.T.P.R. and G.T.P.C.S. Co., Juneau, Alaska.

George N. Goad, who has been appointed Terminal Trainmaster, Toronto Terminals, Canadian Northern Ry., was born in Toronto, Nov. 26, 1884, and entered railway service in Sept., 1901, since when he has been, to July, 1902, junior clerk, Division Freight Agent's office, G.T.R., Toronto; July, 1902, to Sept., 1904, stenographer, same office; Sept., 1904, to Dec., 1905, chief clerk, Canadian Freight Agent's office, Lehigh Valley Rd., Toronto; Dec., 1905, to Mar., 1907, stenographer, Third Vice President's office, Canadian Northern Ry., Toronto; Mar., 1907, to Aug. 31, 1915, chief clerk to Superintendent and General Superintendent, C.N.R., Toronto; Sept. 1 to Dec. 31, 1915, chief clerk to General Manager, Eastern Lines, C.N.R., Toronto; Dec. 31, 1915, to Jan. 10, 1917, Inspector of Transportation, Eastern Lines, C.N.R., Toronto.

System, and Grand Trunk Pacific Coast Steamship Co., Prince Rupert, B.C.; July 15, 1913 to Sept. 30, 1916, Commercial Agent, G. T. P. R., Regina, Sask.; Sept. 30 to Dec. 21,

E. Alexander,
Secretary, Canadian Pacific Railway Company.

1917, Resident Engineer, District 4, Intercolonial Division, Canadian Government Railways, Truro, N.S.

David Frazer Thomas, whose appointment as General Manager, Algoma Eastern Ry., Sudbury, Ont., was announced in our last issue, was born in Halton County, Ont., Apr. 20, 1867, and commenced his railway career in 1886, since when he has been, to 1887, section man, Port Huron and North Western Ry., 1887 to 1891, learning electrical business with Westinghouse Co.; 1891 to 1897, on U. S. engineering staff on construction of Poe locks, Sault Ste. Marie Canals; 1897 to 1903, on engineering staff, Michigan Lake Superior Power Co., Sault Ste. Marie, Mich.; 1903 to Dec. 1, 1916, Superintendent, Trans St. Marys Traction Co., and International Transit Co., ferry and street railway, Sault Ste. Marie, Mich.

Ernest Alexander, who has been appointed Secretary, C.P.R. Co., Montreal, and whose portrait appears in this issue, was born in Yorkshire, Eng., Dec. 8, 1862, and commenced railway work in 1882 as

1916, Division Freight Agent, G.T.P.R., Edmonton, Alta.

William Bedford Harper, who has been appointed Resident Engineer, Laurentian Division, Quebec District, C.P.R., Montreal, was born at Baie Verte, N.B., Aug. 15, 1882, educated at Queen's University, Kingston, Ont., and entered railway service in 1903, since when he has been, to 1906, rod man, leveller and transit man, Nova Scotia Ry., and Cape Breton Ry., at Halifax, New Glasgow and Sydney, N.S.; June, 1906, to May, 1908, transit man on location and preliminary surveys, and Resident Engineer on construction, Canadian Northern Ry., Parry Sound, Ont.; June, 1908, to June, 1911, Resident Engineer on construction, National Transcontinental Ry., Nipigon, Ont.; June, 1911, to Ap., 1915, Assistant Engineer, double track and bridge construction, C.P.R., Montreal; Apr., 1915, to Dec., 1916, Assistant Engineer in charge of construction, Quebec Terminals, C.P.R., Quebec, Que.

William Mitchell Hood, whose appointment as District Freight and Passenger Agent, Canadian Northern Ry., Sudbury, Ont., was announced in our last issue, was born at Harrow, Ont., Nov. 25, 1865, and entered railway service, Nov. 1, 1892, since when he has been, to Mar., 1900, station agent, Lake Erie & Detroit River Ry., McGregor, Ont.; Apr. to Aug., 1900, Soliciting Freight and Passenger Agent, same road, Cleveland, Ohio; Sept., 1900, to Nov., 1901, Travelling Freight and Passenger Agent, same road, Walkerville, Ont.; Dec., 1901, to Aug., 1905, Local Freight Agent, Pere Marquette Rd., Sarnia, Ont.; Sept., 1915, to Feb., 1911, Local Freight Agent, same road, Chatham, Ont.; Mar., 1911, to Feb., 1913, Travelling Passenger Agent, same road, London, Ont.; Mar., 1913, to Jan., 1915, Travelling Passenger Agent, Canadian Northern Ry., Toronto; Feb. to Nov., 1915, City Freight and Passenger Agent, same road, Oshawa, Ont.; Dec., 1915, to Dec., 1916, Travelling Freight and Passenger Agent, same road, North Bay, Ont.

Albert Davidson, who has been appointed Commercial Agent, Grand Trunk Pacific Ry., and G.T.P. Coast Steamship Co., Vancouver, B.C., was born at St. Henri, Montreal, Jan. 29, 1885, and entered railway service, Aug. 22, 1899, since when he has been, to Nov., 20, 1901, clerk, Foreign Freight Department, C.P.R., Montreal; Nov. 20, 1901, to Mar. 16, 1903, clerk, Vice President's office (Traffic), C.P.R., Montreal; Mar. 16, 1903, to Aug. 15, 1904, stenographer, General Freight Department, C.P.R., Vancouver, B.C.; Aug. 15, 1904, to Mar. 23, 1905, secretary to Assistant Freight Traffic Manager, C.P.R., Winnipeg; Mar. 23, 1905, to Apr. 1, 1909, tracing, claims, rate and steamship clerk, General Freight Office, C.P.R., Vancouver, B.C.; April 1 to Oct. 1, 1909, chief clerk to Assistant General Freight Agent, C.P.R., Vancouver, B.C.; Oct. 1, 1909, to June 1, 1910, Travelling Freight Agent, Steamship Lines, C.P.R., Vancouver, B.C.; June 1, 1910, to July 15, 1913, City Freight Agent, G.T.R., G. T. Pacific Ry. and G. T. Pacific Steamship Co., Vancouver, B.C.; July 15, 1913, to Dec. 21, 1916, General Agent, G. T. R. System, and Commercial Agent, G.T.P.R., and G.T.P. C.S. Co., successively.

A. B. Calder, who has been appointed Assistant General Passenger Agent, C. P. R., Montreal, and whose portrait appears in this issue, was born at London, Ont., Aug. 24, 1867, and from 1882 to 1887 was engaged in various capacities on C.P.R. construction west of Brandon, Man. He entered C.P.R. service in 1887, since when

he has been, to 1889, in Passenger Department, Winnipeg; 1889 to Oct. 1893, ticket clerk, Tacoma, Wash.; Oct. 1893 to July, 1895, Travelling Passenger Agent, Tacoma, Wash.; July 1895 to Dec. 1897, Travelling Passenger Agent, San Francisco, Cal.; Dec. 1897 to Nov. 1904, Travelling Passenger Agent, Tacoma, Wash.; July 1895 to Dec. 1897, Travelling Passenger Agent, San Francisco, Cal.; Dec. 1897 to Nov. 1904, Travelling Passenger Agent, Seattle and Tacoma, Wash.; Nov. 1904 to Nov. 1910, General Agent, Passenger Department, Seattle, Wash.; Nov. 1910, to Sept. 1911, General Agent, Passenger Department, Chicago, Ill.; Sept. 1, 1911 to Jan. 1916, associated with his father in a general ticket agency at Winnipeg.

R. S. McCormick, M.Can.Soc.C.E., who has been appointed General Superintendent and Chief Engineer, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont., was born at Quaker City, Guernsey Co., Ohio, June 22, 1873, and entered Flint & Pere Marquette Ry. service at Saginaw, Mich., in 1890, since when he has been, to Oct., 1894, chainman, rodman and general assistant to the Chief Engineer, consecutively, F. & P.M.R., Saginaw, Mich.; Oct., 1894, to May, 1897, assistant and draughtsman, Division Engineer's office, G.T.R., Battle Creek, Mich.; May 1897 to Feb. 1900 Assistant Engineer Maintenance of Way, G.T.R., Detroit, Mich.; Feb. 1900 to April 1903 locating engineer Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont.; April 1903 to Jan. 1904, Assistant Engineer Maintenance of Way, Pere Marquette Rd., Saginaw, Mich.; June to Aug. 1906, engineer on barge canal construction, Rochester, N.Y.; Oct. 1906 to June 1909, Assistant Engineer in charge of construction of 50 miles G.T.P.R. Lake Superior branch and Locating Engineer G.T.P.R. Regina north branch; July 1909 to May 1, 1910, Division Engineer in charge of surveys Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont., May 1, 1910 to Nov. 1916, Chief Engineer, Algoma Central and Hudson Bay Ry. and Algoma Eastern Ry., Sault Ste. Marie, Ont.

G. A. Montgomery, whose appointment as Vice President and General Manager, Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont., was announced in our last issue, was born at Bradford, Ont., Feb. 11, 1871, and entered railway service, Sept. 1, 1886, since when he has been, to Sept. 1887, assistant to agent, Northern Ry., Newmarket, Ont.; Sept. 1887 to March 1889, agent, G.T.R., Powassan, Ont.; March 1889 to March 1890, freight clerk, C.P.R., North Bay, Ont.; March 1890 to June 1893, chief clerk, freight department, C.P.R., Sudbury, Ont. June to Aug. 31, 1893, relieving agent, C.P.R., Lake Superior Division; Aug. 31, 1893 to June 1900, chief clerk to Superintendent, District 1, Lake Superior Division, C.P.R., North Bay, Ont.; June 1900 to Aug. 28, 1902, chief clerk to General Superintendent, Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont.; Aug. 28, 1902 to Aug. 15, 1910, Superintendent, Algoma Eastern Ry., Sudbury, Ont.; Aug. 15, 1910, to Mar. 1, 1911, Superintendent, Algoma Central and Hudson Bay Ry., Michipicoten Harbor, Ont.; Mar. 1, 1911, to Oct. 15, 1913, Superintendent, same road, Sault Ste. Marie, Ont.; Oct. 15, 1913, to the date of his present appointment, General Superintendent, same road, and Algoma Eastern Ry., Sault Ste. Marie, Ont.; Sept. to Nov., 1916, acting General Manager for the Receivers, A. C. & H. B. R., and acting General Manager.

John Stoughton Dennis, who has been elected President of the Canadian Society of Civil Engineers for the current year, was born at Toronto in 1856, the son of the late Lt. Col. J. S. Dennis, who was the first Surveyor General of Canada, and subsequently the first Deputy Minister of the Interior. He was educated at the Toronto and Kingston Grammar Schools, and Upper Canada College, Toronto, and graduated from the old military school at Kingston, Ont., before the establishment of the Royal Military College there. He served articles as a Dominion land surveyor with the late Lindsay Russell, Assistant Surveyor General, and was appointed Dominion topographical surveyor in 1877. From 1872 to 1879, he was engaged on survey work for the Dominion Government in Manitoba and the North West Territories, and from 1879 to 1882, was engineer and surveyor for the Hudson's Bay Co., and laid out what is now the southern part of the city of Winnipeg, constructing the first trunk sewer there. In 1882 he became a member of Vaughan, Dennis and Co., consulting engineers, Winnipeg, and in 1885 entered Dominion Government service as Inspector of Surveys, becoming Chief Inspector in 1892. In 1896 he entered the Northwest Territories Government service and in 1899 was appointed Deputy Minister of Public Works, Northwest Territories. He entered C.P.R. service in 1902, as Superintendent of Irrigation and Chief Engineer of Irrigation Works, then being carried out in Alberta. He was subsequently appointed Land Commissioner for British Columbia, and in 1904, Assistant to the Second Vice President. In 1910 he was appointed Manager of Irrigation, and Assistant to the President, C.P.R., at Calgary, Alta., and was removed to Montreal, Nov. 1, 1916. After graduating from the military school, he served for a short time as lieutenant of the Governor General Foot Guards at Ottawa, and in 1885, commanded, as captain, the Intelligence Scout Corps attached to General Middleton's column, during the Riel rebellion, being mentioned in dispatches for service at the battle of Batoche. He was later transferred to the reserve of officers with the brevet rank of major, and in 1916 was appointed lieutenant colonel commanding the Calgary battalion of the reserve militia. He joined the Canadian Society of Civil Engineers as a member, Nov. 21, 1901, was a councillor for 1906 and 1911, and was Vice President in 1907. He is a past President of the American Society of Irrigation Engineers.

The Grain Growers' Grain Co., Ltd., is applying to the Dominion Parliament for authority to change its name to United Grain Growers, Ltd., or to empower it to adopt the name by by-law; to enable meetings to be held elsewhere than at the head office at Winnipeg; to increase the capital stock to \$5,000,000; to enable shareholders to hold 100 shares each; to extinguish the right of proxy voting, and to enable the company by by-law to form shareholders in groups and to provide for representation at meetings of the company of such groups by delegates.

Increase in Cartage Rates.—The carriers contemplate making some changes in their cartage rates east of Port Arthur on Mar. 1. Car load lots will not be affected, but it is proposed, among other things, to advance the minimum charge of "smalls" from 20c to 23c, which will include shipments up to 575 lb. The proposed changes will have to be approved by the Board of Railway Commissioners before becoming effective.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were drawn.

General order 174, suspending Canadian Car Service Rules 1, 2, 6 and 15 from Jan. 1, to Apr. 30, 1917, and substituting others. These were published in full in our last issue.

General order 175, Dec. 26, 1916.—Prescribing charges for demurrage and track storage on grain and lumber held in transit at Cartier, Ont., etc. from Jan. 1 to Apr. 30, 1917. This order is given in full on another page.

General order 176, Dec. 26, 1916.—Re car supply for coal traffic. This order is given in full on another page.

General order 177, Jan. 10, 1917.—Ordering that tariff of freight rates from points in U.S. to points in Canada include or be supplemented by rule to the effect that said rates, unless specifically indicated as being competitive, will apply to intermediate points in Canada not enumerated in said tariffs, and that railway companies arrange accordingly. This order is given in full on another page.

25728, 25729, Dec. 11.—Recommending to Governor in Council for sanction agreements between Vancouver, Victoria & Eastern Ry. & Navigation Co. and Canadian Northern Pacific Ry. for joint use of V.V. & E. Ry. & N.Co.'s tracks between New Westminster and Vancouver and C.N.P.R. tracks between Hope and Sumas Landing, B.C.

25730, Dec. 18.—Extending to Feb. 15, 1917, time for construction by C.P.R. of siding for Dominion Sugar Co., Chatham, Ont., as authorized by order 24704, Feb. 1, 1916.

25731, Dec. 19.—Dismissing J. A. Kammerer's complaint against refusal of C.P.R. to place car for him on private siding.

25732, Dec. 19.—Authorizing C.P.R. and Canadian Northern Ontario Ry. to operate over connection with C.N.O.R. near Current River, Ont.

25734, Dec. 20.—Authorizing Algoma Central & Hudson Bay Ry. to operate over crossing of Canadian Northern Ontario Ry. at mileage 80.54, Port Arthur to Sudbury Branch.

25735, Dec. 18.—Approving agreement between Bell Telephone Co. and South McNaughton Telephone Co., Renfrew County, Ont.

25736, Dec. 19.—Authorizing C.P.R. to build spur for Thompson & Norris Co. of Canada, Montreal.

25737, Dec. 20.—Approving Moncton & Buctouche Ry. standard freight mileage tariff, C.R.C. 23.

25638, Dec. 22.—Relieving G.T.R. from speed limitation of 10 miles an hour over crossing at St. Hilaire, Que.

25739, Dec. 20.—Authorizing G.T.R. to build siding for Tudhope Carriage Co., Orillia, Ont.

25740, Dec. 21.—Extending to Jan. 31, 1917, time for installation by G.T.R. of gates at Bronson Ave., Ottawa, Ont.

25741, Dec. 21.—Ordering C.P.R. to stop train 51, on flag, at Langenburg, Sask., on Sundays.

25742, Dec. 21.—Ordering G.T.R. to repair fence on south side of Sunnyside Bridge, Toronto, one third of cost to be paid by the city.

25743, Dec. 21.—Authorizing G.T.R. to build two spurs and to extend existing siding for Willys-Overland, Ltd., Toronto.

25744, Dec. 20.—Authorizing G.T.R. to build spur for British American Oil Co., Toronto.

25745, Dec. 22.—Authorizing Edmonton, Dunvegan & British Columbia Ry. to build spur to Cambrian collieries and to cross road between n.e. ¼ and n.w. ¼, Sec. 9, Tp. 55, R. 24, w.4m., Alta.

25746, Dec. 21.—Authorizing Canadian Northern Ry. to build spur to coal mine in n.w.¼, Sec. 14, Tp. 49, R. 18, w.4m., at Dodds, Alta.

25747, Dec. 22.—Authorizing G.T.R. to build extension to spur for W. H. Banfield & Sons, Toronto.

25748m, Dec. 22.—Authorizing C.P.R. to build spur for Energete Explosives Co., Horton Tp., Ont.

25749, Dec. 21.—Amending Bell Telephone Co.'s tariff, C.R.R. 2537, re rates for Toronto Island rate area (Summer service).

25750, Dec. 22.—Authorizing C.P.R. to use bridge 35.8, Brandon Subdivision, Manitoba District.

25751, Nov. 29.—Ordering C.P.R. to build pedestrian subway under its tracks in Virden, Man., from station platform opposite Wellington St., to north of track.

25752, Dec. 22.—Authorizing Mathias Range Aqueduct Co. to lay water pipe under Quebec & Lake St. John Ry. in Chicoutimi, Que. Subsequently suspended. See or 25759.

25753, Dec. 22.—Ordering G.T.R. and C.P.R. to install gates operated by day and night watchman at Church St., Welland, Ont.

25754, Dec. 27.—Postponing, pending decision of Supreme Court, upon questions to be submitted

and until further order the effective date of Great North Western Telegraph Co.'s tariff C.R.C. 47, effective Jan. 1, 1917. See another page in this issue under Telegraph, Telephone and Cable Matters.

25753, Dec. 26.—Dismissing application of Harry Horne Co., Toronto, for same specific classification for health salts as provided in Canadian Freight Classification for Epsom salts.

25756, Dec. 26.—Authorizing G.T.R. to build spur on Lachine Canal reserve, Montreal, and to operate over proposed C.P.R. track to be laid on lots 3412-9-8-7-6-6, Montreal Parish.

25757, Dec. 26.—Authorizing C.P.R. to build a spur for Dominion Flour Mills, Ltd., on Lachine Canal North Bank Branch in lot 3412-9-8-7-6-5, Montreal Parish.

25758, Dec. 22.—Authorizing Town of Sudbury, Ont., to build highway under Canadian Northern Ontario Ry. to connect Leslie and Murray Sts.

25759, Dec. 26.—Authorizing Canadian Northern Ontario Ry. to cross side road between lots 6 and 7, Gloucester Tp., Ont.

25760, Dec. 27.—Authorizing North American Collieries, Ltd. (Lethbridge Colliery), to extend its main west entries, comprising 3 tunnels 8 x 6 ft., across C.P.R. right of way, about 600 ft. below the surface in n.w. ¼ Sec. 16 and s.w. ¼ Sec. 21, Tp. 9, R. 22, w.4m.

25761, Dec. 28.—Ordering C.P.R. to file supplement to its tariff C.R.C. no. W-2214, continuing rate on forest products for distances over 500 miles.

25762, Dec. 27.—Ordering Canadian Northern Ry. to erect standard third class station at Mikado, Sask.

25763, Dec. 22.—Authorizing Canadian Northern Ry. to close and divert traffic on the east and west road allowance in n.e. ¼, Sec. 11, Tp. 8, R. 19, w.2m.

25764, Dec. 30.—Authorizing Toronto, Hamilton & Buffalo Ry. and Lake Erie & Northern Ry., pending construction of permanent interchange track authorized by order 25570, Oct. 27, to interchange cars on temporary connecting track, Brantford, Ont.

25765, Dec. 27.—Ordering C.P.R. to maintain crossing on south boundary of Lot 12, Con. 10, Markham Tp., Ont., for joint use of Mrs. H. Hagerman and A. Bradley, and for future owners of either or both properties.

25766, Dec. 28.—Extending to Feb. 28, 1917, time for installation by C.P.R. of electric bell at crossing of road allowance between Lot 22, Con. 1, and Lot 22, Broken Front Concession, Darlington Tp., Ont.

25767, Dec. 28.—Authorizing Canadian Northern Ontario Ry. to build spur for Pointe Anne Quarries, Ltd., at mileage 126 from Toronto, in Thurlow Tp., Ont.

25768, Dec. 28.—Authorizing Canadian Northern Quebec Ry. Co. to build spur for Hepburn Bros., at mileage 174.04, Longue Pointe Parish, Montreal.

25769, Dec. 29.—Authorizing C.P.R. to cross Icelandic River Road at Arbog, Man.

25770, Dec. 27.—Authorizing Grand Trunk Pacific Ry. to build spur from its main line in n.w. ¼ Sec. 18, Tp. 40, R. 22, w.3m., at Unity, Sask.

25771, Dec. 28.—Approving C.P.R. plan of proposed overhead crossing at London St., Windsor, Ont.

25772, Jan. 3, 1917.—Authorizing A. D. McCormack, Castor, Alta., to build tunnel under Calgary & Edmonton Ry., Lacombe Branch, top of tunnel to be at least 30 ft. below track level.

25773, Dec. 28, 1916.—Authorizing C.P.R. to build second track across road allowance between Secs. 5 and 6, Tp. 12, R. 5, w.4m, Alta.

25774, Dec. 28.—Authorizing C.P.R. and G.T.R. to operate over interlocking plant at spur to Dominion Sugar Co., Chatbam, Ont.

25775, Dec. 28.—Dismissing City of Ottawa's application for order directing G.T.R. to build highway crossing over its track at Spadina Ave.

25776, Jan. 3, 1917.—Authorizing C.P.R. to build four sidings for Canadian Nitro-Products, Ltd., York Tp., Ont.

25777, Jan. 5.—Extending to May 31 time for construction by C.P.R. of siding and loading platform facilities at mileage 2, Moose Jaw North Westerly Branch, Sask.

25778, Jan. 4.—Authorizing Canadian Northern Quebec Ry. to build spur for International Mfg. Co., Longue Pointe Parish, Montreal.

25779, Jan. 4.—Amending order 25763, Dec. 22, 1916, re closing of road allowance by Canadian Northern Ry. between Secs. 11 and 14 and Secs. 11 and 12, Tp. 8, R. 19, w.2m.

25780, Jan. 3.—Approving agreement between Bell Telephone Co. and Falls Line Telephone Co., Durham County, Ont., Dec. 13, 1916.

25781, Jan. 3.—Approving location and plans of ferry dock shelter to be erected by G.T.R. for passengers using car ferry at Cobourg, Ont.

25782, Jan. 5.—Authorizing Niagara, St. Catharines & Toronto Ry. to build deck plate girder span to replace existing structure across Ormond St., Thorold, Ont.

25783, Jan. 3.—Approving Algoma Eastern Ry. bylaw authorizing J. P. Mader, General Agent, to prepare and issue tariffs of tolls.

25784, Jan. 4.—Authorizing Canadian Northern

Quebec Ry. to build spur for Laurentide Co., Grand Mere, Que.

25785, Jan. 5.—Ordering C.P.R. to erect station at Evesham, Sask.

25786, Jan. 8.—Ordering C.P.R. to install improved type of automatic bell at Duke St. crossing, Guelph, Ont.

25787, Jan. 8.—Amending order 25593, Nov. 2, 1916, re crossing of Michigan Central Rd. by Niagara, Welland & Lake Erie Ry. by a subway and providing that the cost be paid, \$6,500 by applicant, and the balance by Niagara, Welland & Lake Erie Ry.

25788, Jan. 5.—Approving G.T.R. plan of platform between tracks and station at Preston, Ont., and removal of switch stands.

25789, Jan. 8.—Ordering C.P.R. to provide automatic bell at crossing at Campbellville station, Ont.

25790, Jan. 8.—Authorizing G.T.R. to build two sidings for Roger Miller & Sons on the west side of Hanna Ave., Toronto.

25791, Jan. 8.—Ordering that Michigan Central Rd. crossing of third public highway west of Brookfield, Ont., be closed and traffic diverted over new roadway.

25792, Dec. 29, 1916.—Ordering Canadian Northern Quebec Ry. to establish non-agency station at St. Alexis, on its Rawdon Branch, and to close non-agency station, St. Alexis, on its Joliette & Hawkesbury line, traffic there to be taken care of at Rawdon Jct.

25793, Jan. 9.—Authorizing Hamilton St. Ry., G.T.R. and Hamilton Radial Ry. to operate over Kenilworth Ave., Barton Tp., Ont., without first stopping cars and trains.

25794, Jan. 9.—Authorizing G.T.R. to build branch line for Terminal Warehouse, Registered, St. Anns Ward, Montreal.

25795, Jan. 19.—Approving plans and specifications of work to be done under Michigan Central Rd. in connection with Kingsmill drain, Yarmouth Tp., Ont.

25796, Jan. 9.—Extending to Mar. 9, time within which C.P.R. may install bells authorized by order 25184, July 24, 1916, at Crawford's highway crossings, between Westfield and Hilldale, N.B.

25797, Jan. 10.—Approving agreement between Bell Telephone Co. and Hay Tp., Ont., Dec. 19, 1916.

25798, Jan. 11.—Dismissing application of Shingle Agency of British Columbia for authority to include with shipments of shingles requisite quantity of zinc clad nails, nails to be charged same rate as shingles.

25799, Jan. 12. Suspending order 25752, Dec. 22, 1916, which authorized Mathias Range Aqueduct Co. to lay water pipe under Canadian Northern Quebec Ry. at Chicoutimi, Que., pending disposition of action by C.N.Q.R. to restrain the construction.

25800, Jan. 12.—Amending order 25796, Jan. 9, re installation of electric bells at crossings between Westfield and Hilldale, N.B.

25801, Jan. 16.—Extending to May 31 time within which work under order 19087, Apr. 16, 1913, approving location of Lake Erie and Northern Ry. Lorne Bridge, Brantford, to Main St., Galt, Ont., may be completed.

25802, Jan. 17.—Extending to June 1, time within which Lake Erie and Northern Ry. may operate over interlocking plant at station 7-23, Brantford, Ont., where it crosses G.T.R.

25803, Jan. 17.—Authorizing Canton Bois municipality, Que., to change location of crossing and divert St. Anne's Rapids Route, highway about 80 ft. westerly, at mileage 36.81, Canadian Northern Ry. Garneau-Riviere a Pierre branch.

25804, Jan. 17.—Extending to June 1, time within which Lake Erie and Northern Ry. may operate over crossing of Toronto, Hamilton and Buffalo Ry., in Brantford, Ont., pending installation of interlocking plant.

25805, Jan. 12.—Ordering Canadian Northern Ry. to stop its morning train due at Ottawa at 7:30 and shown on new timetable to arrive at 7:45; and train leaving Ottawa at 1:10 p.m., on flag at Merivale, Ont., also to erect flag station and establish facilities for loading and unloading livestock and other carload freight there.

25806, Jan. 17.—Approving plans and specifications of covered drain to be built by Sandwich East Tp., under Essex Terminal Ry., in Ford City, Ont.

25807, Jan. 18.—Authorizing New York Central Rd. to build bridge 6-A, near Hawthorne station, Ont.

25808, Jan. 18.—Authorizing Canadian Northern Ry. to build spur for Gillespie Elevator and Flour Mill Co., St. Albert, Alta.

25809, Jan. 19.—Ordering C.P.R. to provide station at Kreuzberg, Man., by Oct. 1.

25810, Jan. 19.—Authorizing G.T.R. to rebuild bridge 289 over Nottawasaga River, Essa Tp., Ont.

25811, Jan. 19.—Authorizing C.P.R. to build spur for J. A. Gendron, Drummondville Parish, Que.

25812, Jan. 19.—Ordering Canadian Northern Ry. to appoint station agent at Arran, Sask., by Mar. 1.

25813, Jan. 20.—Authorizing Montreal Tunnel and Terminal Co. to build tunnel cross sections as

shown on standard plans on file with Board, also approving clearances through the tunnel.
 25814. Jan. 23.—Authorizing G.T.R. to rebuild bridge 210 across Little East River, near Novar, Ont.
 25815. Jan. 23.—Approving agreement between Bell Telephone Co. and Back Line Telephone Co., Dufferin County, Ont., Dec. 16, 1914.
 25816. Jan. 22.—Relieving C.P.R. from providing further protection at crossing 150 yds., south of Spencerville station, Ont.
 25817 to 25819. Jan. 23.—Approving Bell Telephone Co. agreement with Dereham Telephone Co. in Oxford and Elgin Counties, Ont., Jan. 5; Medonte Tp., Ont., Dec. 14, 1916; and Norfolk & Tillsonburg Telephone Co., Jan. 5.
 25820. Jan. 22.—Relieving Canadian Northern Ry. from further protection of crossing near mileage 428, Battleford Subdivision, Sask.

Grand Trunk Railway Watch Inspectors' Meeting.

On Jan. 1, 1916, a change was made in the supervision of time service matters on the G.T.R., H. Hulatt, Manager of Telegraphs, assuming jurisdiction over them, succeeding Prof. C. H. McLeod, resigned. Mr. Hulatt, who had previously been Superintendent of Time Service, G. T. Pacific Ry., issued revised time service regulations on the G.T.R., effective May 8, 1916, they conforming very largely to those he had previously put into effect on the G. T. Pacific. A feature of the system is that the onus of reporting men delinquent is taken off the shoulders of inspectors, and the compilation of all reports and records centralized in one office.

With a view to increasing the efficiency of this branch of the railway service, a meeting of G.T.R. official watch inspectors was held in Montreal, Jan. 18 and 19, which was attended, with but few exceptions, by all inspectors, some 70 being present. The meeting was very successful, and proved of interest and value to those attending. Mr. Hulatt, in opening the proceedings, emphasized the fact that his great aim was to secure a thoroughly efficient service, thereby ensuring greater protection to the company's employes and patrons, and that this could only be attained by the heartiest co-operation between the inspectors and himself, honest and fair treatment of the employes by the inspectors, and the importance of ensuring that only first class work be done in connection with the

cleaning and repairing of watches. He drew attention to the fact that in the official list of watches approved for service on the road, employes were given a selection of practically 100 different grades, made by standard well known manufacturers, and that neither he nor the G.T.R. was in any way interested as to what particular make of watch an inspector favored or pushed, provided it was one of the makes or grades scheduled in the official list, which complied in every respect with similar lists in force on all important roads in Canada and the United States. Numerous interesting subjects were discussed, among others, the matter of standard loaners, equitable prices to charge for cleaning and repairing watches, deduction order, etc. In connection with the preparing of reports, etc., W. E. Bell, chief clerk, and Miss Doyle, assistant in charge of Time Service Records Bureau, discussed with the inspectors the various forms and the proper preparation of same, with a view to securing the maximum accuracy.

The inspectors were the guests of the G.T.R. at luncheon on Jan. 18, when D. E. Galloway, Assistant to President, and C. R. Moore, Assistant to Vice President, in charge of Transportation, addressed the inspectors, stating that their work was appreciated by the management and had its hearty support.

At the close of the meeting, R. Hemsley of Montreal, one of the inspectors, presented to Miss Doyle, on behalf of the inspectors, a solid gold wrist watch, showing their appreciation for the preparation of reports, etc., and J. Striker, of Buffalo, thanked Mr. Hulatt for having called the convention, stating that it had established a personal relationship between the inspectors and the chief, which they all valued, and which would undoubtedly result in a very much more efficient service, and that as a mark of their appreciation they had forwarded to Mrs. Hulatt a bouquet of roses. Mr. Hulatt, in thanking those present for their kindness to Miss Doyle, and also for the compliment paid to Mrs. Hulatt, expressed the pleasure it had been to meet all the inspectors, and said that all being well, a similar meeting at some other point on the system would be held next year.

Steam Railway Track Laid in 1916.

We have not been able to obtain any official information as to track laid on the three McArthur lines in Alberta. The total figures given in our January issue are amended below by omitting from the total the C.P.R. line to Camp Borden, Ont., 3.75 miles, and the G.T.R. line to Camp Borden, 4.21 miles, these lines being regarded as spur lines and not as permanent additions to mileage. We are officially advised that the estimate made of 2.75 miles of railway to the Intercolonial Ry.'s Halifax ocean terminals covered only construction track, it being proposed to lay permanent track during this year. There is also an alteration in the estimated figures given in the January table for the Alberta & Great Waterways Ry. It was expected when that table was prepared that track would reach McMurray by Dec. 31, but a statement by J. D. McArthur, President, reported recently, was that 80 miles of track still had to be laid before McMurray was reached. The table corrected as above stated follows:

	Miles.	Miles
*Alberta & Great Waterways Ry.—		
Mileage 174.5 towards McMurray		
Alta	40.00

Total	285.94	

Track was laid during the year in seven Provinces, Alberta showing the largest mileage. Following is a comparison of new mileage with 1915 and 1914:

	1916.	1915.	1914.
Alberta	120.90	299.60	513.12
Manitoba	91.00	87.91	300.16
British Columbia	23.39	212.20	679.26
Quebec	19.00	16.00	82.51
Saskatchewan	5.66	107.12	216.97
Ontario	5.00	1.00	200.01
Prince Edward Island	1.00	...	2.50
Nova Scotia	57.91	500.15
New Brunswick	2.14	29.99
	285.94	753.88	2,493.66

On Section 8, Shogomoc Subdivision, New Brunswick District, Canadian Pacific Railway.

The foreman of this section, Allan King, was awarded the General Manager's prize, in the track section competition on Eastern Lines, C.P.R., full particulars of which were given in Canadian Railway and Marine World for January, pg. 2.

The Canadian Northern Patriotic Association has been organized by C.N.R. employes to assist the Patriotic Fund.

Canadian Transportation Men, Engineer, Etc. in the War.

Railway and Forestry Battalion.—London, Eng., press dispatch, Jan. 7. "In connection with the combing out process now proceeding in the Canadian forces in England and at the base two labor battalions, two railway construction battalions and two forestry battalions have already been formed from men graded for permanent base duty."

The Engineers' Importance.—Capt. D. M. Mathieson, M.C., of the Canadian Engineers, who returned from France in December, in lecturing in Toronto recently, referred to the tremendous importance of the Canadian Engineers' work in that country. No work of importance, he said, could be carried on without their co-operation. So much responsibility, in fact, is placed on this branch of the service that an engineer subaltern in France is on a par with an infantry colonel, as far as power goes. The sappers are called upon to direct from 50 to 100 men and approximate to the position of a railway construction foreman in this country.

Canadians to Build Military Railways.—Ottawa press dispatch, Jan. 12. "Canada has been given complete charge of the whole of the allied railway construction on the western front. Lt. Col. J. W. Stewart, of Vancouver, is in command of this important work. In preparation for the spring offensive, Canadians are building hundreds of miles of road in France and Flanders. In connection with this work four new companies have been authorized in western Canada, one in each of the four western provinces. The Manitoba company will be commanded by Major Lanigan, son of W. B. Lanigan, Assistant Freight Manager, C.P.R., Winnipeg. The Saskatchewan company will be commanded by Major George Robinson, M.C. Capt. Geo. Gardiner and Capt. Fitzsimons will jointly raise the Alberta company, and the British Columbia company will be recruited by Major Marsh, contractor, New Westminster.

"The two new railway construction battalions recently authorized, 256th and 257th, will look after recruiting for eastern Canada. In addition, the 143rd Bantam Battalion of British Columbia and the 228th Overseas Battalion have been converted into railway construction corps, and will leave for overseas soon. It is understood also that a number of battalions have been created from the Canadian forces in England for this work. Altogether there probably will be 10,000 Canadians engaged soon on this important and vital operation."

Canadian Government Railways Help.—F. P. Gutelius, General Manager, issued the following circular, Jan. 15: "These railways are sending 300 miles of rails and 1,200 switches to the front to be used in the construction of a railway and the necessary terminals for the handling of supplies, munitions and men between the seaboard and the war zone. This railway is being built by and under the supervision of the Canadian Railway Construction Corps, and sufficient locomotives and cars are being sent from this side to equip same. The Army Council have asked for the assistance of the Dominion Government in manning this new military road in France, and the Canadian Government Railways are asked to supply 20 full crews, each crew to be composed of 1 engineer, 1 fireman, 1 conductor and 2 brakemen. In order that each superintendent's district may be represented I am asking the officers on each district to

arrange for the recruiting of 2 crews. These men, of course, will be volunteers between the ages of 21 and 45. They will enlist as soldiers and undergo a brief period of military training, with the understanding that their employment will be the railway work above outlined, and with the further understanding that they will receive wages made up of military pay equal to their present pay, determined on the basis of 100 miles or 10 hours for each day that they are in military service; also that their seniority, Provident Fund and Insurance Association standing on these railways be maintained during their leave of absence on this most important work in which the road employes on these railways can render so great assistance to the Empire, and who will, I hope, form a body of men of which all employes on these railways will be justly proud."

127th Battalion.—Lce. Corp. Shadwell, of the 127th Battalion (York Rangers), writing from Camp Bordon, Hampshire, England, to the Telegram, says the battalion has made a good name for itself while training, since arriving in England on Aug. 30 last. It is no longer an infantry battalion, but a light railway engineering battalion. On Oct. 11, some 250 men were drafted to No. 1 Construction Battalion, France, and some have since been killed or wounded. After several moves the 127th reached Camp Bordon, and is now equipped with everything for transport and construction work, including 200 mules, trucks, cars, wagons and railway tools, ready to go anywhere.

143rd Railways Construction Battalion, C.E.F.—The 143rd Overseas Battalion, C.E.F. (Bantams), with headquarters at Victoria, B.C., was converted into a railway construction battalion on Jan. 7. It is commanded by Lt. Col. A. B. Powley, and will have a strength of about 1,000, all ranks.

The 228th Battalion, which was raised as a forestry battalion, has been changed to a railway construction one. It will be composed of about 1,000 men of all ranks. Its headquarters for the present are at Toronto, the commanding officer being Lt. Col. A. Earchman, who has already seen service at the front, and who was formerly engaged in construction on the Hudson Bay Railway. Several of his officers are engineers, and the men have been largely recruited from the railway employes and mining men of the North Bay and Sudbury district and along the National Transcontinental Railway.

The 239th Battalion Overseas Railway Construction Corps, under command of Lt. Col. J. W. Stewart, of Foley, Welch & Stewart, railway contractors, Vancouver, was officially reported on Dec. 28 as having arrived safely in England.

The 256th Railway Construction Battalion will be composed of about 1,000 men of all ranks. The commanding officer is Lt. Col. Walter McConnell, 43 Indian Road, Toronto. Four companies will be raised in Halifax, N.S., Montreal, Toronto and St. Catharines, Ont. The Montreal company will be commanded by F. L. C. Bond, B.A.Sc., A.M.Can.Soc.C.E., Division Engineer, G.T.R., Montreal.

The 257th Railway Construction Battalion, C.E.F., which will consist of about 1,150 officers and men, has its headquarters at 405 Wellington St., Ottawa, and is being raised by Lt. Col. T. L. Martin, of O'Brien & Martin, railway contractors, Renfrew, Ont. Among the other officers

are Major A. D. Watts, A.M.Can.Soc.C.E., Toronto; Major Leslie Thompson, railway contractor; Major C. F. Harrington, M.Can.Soc.C.E., Ottawa; Major Bob Heron, a Timiskaming lumberman, who has specialized in railway bridge building; and Adjutant W. G. Fellows, of the N.C.G.A., Quebec.

No. 1 Section, Skilled Railway Employes, is being organized to operate 300 miles of double track railway which is now completed in the northern part of France. A. H. Kendall, heretofore Master Mechanic, C.P.R., has been appointed Captain, and T. A. Ross has been appointed Captain, Paymaster and Acting Adjutant. The headquarters are at Guy St. Barracks, Montreal. The unit will be made up entirely of skilled railway employes. The staff will consist of: Captain, officer commanding; Captain, Paymaster; Adjutant; two lieutenants, one of which will have the qualification of a railway divisional superintendent, and the other the qualification of a divisional master mechanic. There are many applicants for the two lieutenantcies from most reliable railway officials, and the appointments will be posted later, as the greatest care must be exercised in the choice, as competence in railway operation being the qualification required. The non-commissioned officers will be appointed after mobilization in barracks, the promotions being awarded in accordance with efficiency. The unit is to be recruited from all the Canadian railways, and it is expected that as only the most efficient will be accepted, the unit should give a good account of itself. The immediate requirements are: 96 locomotive men, 96 locomotive firemen, 54 locomotive mechanics, 4 experienced yardmasters, 16 experienced blockmen and stationmasters. A special working pay will be given in addition to the regular military pay of from 60 cents to \$1 a day. Separation allowance will also be given to those entitled to it, the minimum being \$20 a month. As this is a non-combatant unit, it is an opportunity for those to serve who wish to be engaged at their own vocation with a limited amount of military training. The uniforms will be identical with those of the infantry regiments, and the military drill order will be modified to meet only the requirements and to keep the men in good physical condition. It is expected that after this section is recruited three additional sections will be recruited, so as to make a complete battalion.

Capt. H. W. Palmer will recruit a company in St. Catharines, Ont., for one of the new railway construction battalions.

Lieut. A. J. Motyer, B.A.Sc., who has been killed in action, was a Rhodes scholar, and was formerly with Canadian Westinghouse Co.

Capt. T. A. Hiam, formerly private secretary to Sir Donald Mann, Vice President, Canadian Northern Ry., is adjutant of the 198th Battalion (Buffs), which is now at Toronto, and has been warned for overseas service.

Capt. the Hon. W. J. Shaughnessy, only surviving son of Lord Shaughnessy, is Adjutant of the Duchess of Connaught's Own Irish Canadian Rangers of Montreal, now touring in Ireland, preparatory to going to France.

Brevet Col. G. P. Murphy, Canadian Army Service Corps, Vice President, Ottawa Transportation Co., Ottawa, Ont., who has a staff appointment in England,

has been created a Companion of the Order of St. Michael and St. George.

Major and Brevet Lt. Col. Temporary Brigadier, D. S. MacInnes, D.S.O., Royal Engineers, who has been created a Companion of the Order of St. Michael and St. George, is a brother of W. R. MacInnes, Freight Traffic Manager, C.P.R.

J. W. Kennedy, chief clerk, Vice President's office, C.P.R., Montreal, has left for overseas service. He will be attached to the staff of Lt. Col. C. W. P. Ramsey, Canadian Overseas Railway Construction Corps, as lieutenant.

Capt. R. F. Morkill, Signal Engineer, G.T.R., Montreal, who is on leave of absence for military service and is commanding the 209th Field Company, 34th Division, Royal Engineers, has been promoted to Major for services in the field.

Lieut. Guy Dunstan, attached to the 11th Border Regiment, who had been missing since July, 1916, was officially reported, early in January, to have been killed in action. He was son of Kenneth Dunstan, Manager, Bell Telephone Co., Toronto.

Lieut. H. A. Yates, son of G. W. Yates, Secretary to the Minister of Railways, who has been with the Mechanical Transport at Camp Niagara and Camp Borden, and latterly at Exhibition Camp, Toronto, has transferred to the Royal Naval Air Service and gone overseas.

Lt. Col. G. S. Cantlie, formerly General Superintendent, Car Service, C.P.R., who was given leave of absence on Jan. 8, 1915, to accompany his regiment, the 5th Regiment, Royal Highlanders of Canada, overseas, and who has been made a member of the Distinguished Service Order, is at present in Montreal, having been wounded in the arm.

Lt. Col. T. L. Martin, who is raising the 257th Railway Construction Battalion, with headquarters at Ottawa, is a member of the firm of O'Brien & Martin, Renfrew, Ont. Starting as a rodman on the Timiskaming & Northern Ontario Ry., he became Resident Engineer, and then went into contracting, his firm having had large contracts on the National Transcontinental Ry. and also on the Quebec & Saguenay Ry.

Major G. A. E. Bury, Deputy Assistant Quartermaster General of the Training Division, C.E.F., son of George Bury, Vice President, C.P.R., has transferred from Brighton to Witley Camp, Surrey, Eng.

A London, Eng., press dispatch of Dec. 29 says Major J. B. Harstone, D.S.O., general list; Lieut. J. G. Fordham, general list, and Major C. L. Hervey, Canadian Engineer, have reported for duty with the Canadian railway troops organization.

Major A. D. Watts, who is second in command of the 257th Railway Construction Battalion, now being raised, with headquarters in Ottawa, is an honor graduate of the Royal Military College, Kingston, Ont., and an Associate Member, Canadian Society of Civil Engineers. Among other engineering work, he was engaged on the Brantford & Hamilton Ry. construction, was with the Hydro Electric Power Commission of Ontario, and was also engaged on a number of power developments.

Lieut. L. W. Klingner, who has been given the Military Cross "for showing great courage when in charge of a working party under heavy fire," is a Torontonian, 29 years old, and a science graduate of Toronto University, 1907. He was for some time in the C.P.R. Construction Department, particularly in the Smiths Falls district. He received his commis-

sion in the Canadian Engineers in Jan., 1915, went overseas in Feb., 1916, and to France in July, 1916, with the 10th Field Company.

Lt. Col. J. J. Creelman, of the Field Artillery, Canadian Expeditionary Force, who has been made a member of the Distinguished Service Order, and also of the Russian Order of St. George, is a son of the late A. R. Creelman, K.C., at one time General Counsel, C.P.R., and a director of that company. He is a partner in the firm of Casgrain, Mitchell, Holt, McDougall, Creelman & Stairs, advocates, barristers, etc., Montreal. He is said to be the youngest artillery brigade commander in the service, being only 35.

Sapper W. H. G. Firkins, whose next of kin are at Worcester, Eng., and who was reported in the Jan. 22 casualty list from Ottawa as having been wounded, was one of the party of the 12th Field Company, Canadian Engineers, which went out on the night of Nov. 25, under Lieut. Bruce H. A. Burrows, of Toronto, to put up barbed wire at what the officer commanding subsequently wrote of as "a very important strategical point." On the way into the work Lieut. Burrows, who was going ahead of his men to reconnoitre, was killed by a high explosive shell, but none of the others was injured.

G. P. MacLaren, A.M.Can.Soc.C.E., who has been transferred from No. 2 Construction Battalion to the 256th Railway Construction Battalion, with the rank of Major, was associated with railway construction work under Mackenzie, Mann & Co. in Nova Scotia, Quebec and Ontario for 17 years. On the completion of the Canadian Northern Ry. between Pembroke and Sudbury, Ont., he was appointed Division Engineer, Mackenzie, Mann & Co., North Bay, Ont., and from Sept., 1915, until the organization of No. 2 Construction Battalion recently, he was Division Engineer, Toronto District, C.N.R., Toronto. He was a captain in No. 2 Construction Battalion.

Lieut. C. S. L. Hertzberg, A.M.Can.Soc.C.E., of James, Loudon & Hertzberg, engineers, Toronto, who is in the Canadian Engineers at the front, has been given the Military Cross, for digging trenches under heavy fire and establishing a strong point on an exposed flank. He is a son of A. L. Hertzberg, M.Can.Soc.C.E., Division Engineer, C.P.R., Toronto. His two brothers, Major H. F. H. Hertzberg, Jr. M. Can.Soc.C.E., and Lieut. O. P. Hertzberg, are also at the front. The former received a similar decoration about a year ago. The latter, who enlisted as a private, and was promoted to lieutenant, was wounded, and returned home on leave last summer, being transferred subsequently to another unit.

Major W. G. Tyrrell, of the Royal Engineers, son of Dr. J. D. Tyrrell, Toronto, has been mentioned in dispatches for gallantry during the engagement which completely routed the Turkish Third Division on its march towards the Suez Canal. After graduating at the Royal Military College, Kingston, Ont., he was appointed a second lieutenant in the Royal Engineers. He was subsequently loaned to Canada, and after five years service here, returned to England in 1913. When war broke out he went to France, and after spending some months there, was given a staff appointment in England, subsequently being sent to Egypt, where he built about 100 miles of railway at a rate of over a mile a day.

Lieut. H. G. Pepall, who has returned to Toronto, suffering from wounds, is a son of Geo. Pepall, Assistant Foreign

Freight Agent, G.T.R., and representative of the National Despatch-Great Eastern Line. He went overseas in June, 1915, with a draft from the 37th Regiment. After arriving in England, he was sent to the Military School at Hythe, and after passing the examinations there, was made Machine Gun Instructor of the Canadian Machine Gun School at Shorncliffe. He went to France in January, 1916, and was appointed Machine Gun Officer of the 15th Battalion, 48th Highlanders, which position he filled until June, 1916, when he was placed in charge of No. 4 Company and recommended for a captaincy. Unfortunately he was wounded by shrapnel before he was gazetted, the elbow of his left arm being shattered, as well as his left leg. His leg is improving, but his arm will be practically useless.

Major C. T. Trotter, officer commanding 12th Field Company, Canadian Engineers, now forming part of the 4th Canadian Division in France, who has been mentioned in dispatches recently by Field Marshal Sir Douglas Haig, graduated at the Royal Military College, Kingston, in 1907, with honors, and after a two years science course at McGill University, Montreal, graduated there with the degree of B.A.Sc. He was then appointed Electrical Engineer, Militia Department, Ottawa, where he joined the 4th Company, Canadian Engineers, as a lieutenant. In 1912 he was employed by Standard Clay Products, Ltd., of St. Johns, Que., of which his father, W. C. Trotter, Major (reserve of officers), Canadian Artillery, is President and General Manager, to design a sewer pipe factory for the company at New Glasgow, N.S. On the outbreak of war he volunteered and was sent to Halifax, N.S., where, as a lieutenant, he constructed some defence works. In Nov., 1914, he was appointed Captain, 4th Field Company, Canadian Engineers, and went to England in April, 1915, and to Flanders in Sept., 1915, with the 2nd Canadian Division. He was on the Ypres salient until July, 1916, when he was appointed a Major and given command of the 12th Field Company, Canadian Engineers, 4th Canadian Division, proceeding with them to Belgium in Aug., 1916, and afterwards being transferred with them to France. Bruce H. A. Burrows, of Toronto, who was killed in action, Nov. 25, was a lieutenant in this company. Major C. T. Trotter's brother, Major Harold L. Trotter, is in command of the 11th Field Company, Canadian Engineers, 4th Canadian Division.

Manitoba's Railway Report.—The railway report presented to the Manitoba Legislature, Jan. 16, by the Premier showed that the total mileage of railways in the province at Dec. 31, 1916, was 4,672.52. During 1916 the government paid to the Canadian Northern Ry., out of the proceeds in the hands of the Provincial Treasurer of certain stock issues guaranteed by the province, \$183,430 on account of the completion of the line from Grand Marais to Victoria Beach, 14.11 miles. The report also stated that interest on all the C.N.R. debenture and stock issue securities was met by the company, the province not being called upon to liquidate any portion of the guarantee C.N.R. stock and bonds for \$25,502,873.33 are guaranteed by the province.

The Brotherhood of Railroad Trainmen, Western Lines, C.P.R., elected its officers, Jan. 12, for the next biennial period, as follows: Chairman, E. H. Cooke, Moose Jaw, Sask.; Vice Chairman, W. G. Baker, Moose Jaw; Secretary, Jas. McLaughlin, Calgary, Alta.

Canadian Northern Railway Officials' Tribute to William Phillips.

On the eve of leaving the C.N.R.'s service recently, to enter that of the Cunard Steamship Co., William Phillips, Freight Traffic Manager, Eastern Lines, C.N.R., was entertained at dinner at the Albany Club, Toronto, by a number of the company's other prominent officials, the function being a spontaneous and enthusiastic tribute to his colleagues' esteem of him.

D. B. Hanna, Third Vice President, who presided, presented Mr. Phillips, on behalf of his associates, with a splendid cabinet of silver and paid a striking tribute to his many fine qualities, and to the splendid service he had given to the C. N. R. He traced in a most interesting manner the remarkable expansion of the system in the past 20 years, dwelling upon the various epoch marking events in its history and the evolution of the present system of over 8,000 miles. Mr. Phillips, in replying, expressed his deep regret at leaving the company, and the officials with whom he had worked for so many years.

W. H. Moore, Secretary of the Company, spoke of the high esteem in which Mr. Phillips is held by all the officers, and said that it was the earnest hope of every one present that the time would come when he would be again connected with the company.

F. H. Phippen, K.C., Chief Counsel of the company, alluded to the advantageous alliance that had been consummated between the C.N.R. and the Cunard Co. as the result of negotiations carried on by Mr. Phillips in England, and said it was a splendid tribute to Mr. Phillips' integrity and ability that the Cunard directors had sought his services to represent them in Canada, and that it was a good augury for the relations between the two companies.

Among other speakers were G. H. Shaw, General Traffic Manager, C. Price Green, Scott Griffin and Noel Marshall.

Mr. Hanna's health was proposed by Mr. Moore, who alluded with feeling to the remarkable loyalty and affection felt by all the officers for the veteran Third Vice President, who had so successfully directed the company's destinies and operations since its inception, and expressed the hope that he would live for many years to enjoy the well-earned fruits of his labors.

The committee in charge of the arrangements for the dinner were: R. C. Vaughan, Assistant to Third Vice President; L. W. Mitchell, Treasurer and Purchasing Agent; E. W. Oliver, Assistant Engineer; and T. J. McCabe, Registrar and Transfer Agent. F. J. Buller, Paymaster, contributed to the musical programme.

Wm. Phillips was born in Toronto Jan. 31, 1870, and entered transportation service Apr., 1886, since when he has been, to Mar. 31, 1896, in G.T.R. offices, Toronto; Apr. 1, 1896, to Feb. 28, 1902, Northwest Agent, Northwest Transportation Co., Winnipeg; for a portion of this time he was also General Agent, Chicago Great Western Ry., and from Apr. 1, 1900, also Northwest Agent, Northern Navigation Co.; Mar. 1, 1902, to May, 1911, General Eastern Agent, C.N.R., Toronto; in Nov., 1906, he was also appointed General Freight and Passenger Agent, Canadian Northern Ontario Ry., and in Apr., 1910, also acting Traffic Manager, Canadian Northern Steamships, Ltd., and in Apr., 1911, this last position was

changed to General Freight and Passenger Agent, Canadian Northern Steamships, Ltd.; May, 1911, to May, 1912, he was General Freight Agent, Canadian Northern Ontario Ry., Central Ontario Ry., Bay of Quinte Ry., Irondale, Bancroft & Ottawa Ry., and Niagara, St. Catharines & Toronto Ry. and Navigation Cos., and also General Freight and Passenger Agent, Canadian Northern Steamships, Ltd.; May, 1912, to Nov., 1914; European Traffic Manager, C.N.R., London, Eng., Nov., 1914, to Sept., 1916, when the Canadian Northern Steamships, Ltd. was absorbed by the Cunard Steamship

William Phillips

Canadian Northern Railway, now Canadian
Representative, Cunard Steamship Co.

Co., European Railway and Steamship Manager, C.N.R., and Canadian Northern Steamships, Ltd.; Dec. 1 to Dec. 31, 1916, Freight Traffic Manager, lines east of Port Arthur, C.N.R., Toronto.

Canadian Society of Civil Engineers, Saskatchewan Branch.—It has been felt for some time by members of the society in Saskatchewan that a closer co-operation is necessary, also a centre for the members of easier access to them than the headquarters of the society at Montreal. With the unanimous consent of all members in the province, it is suggested to extend the scope of the Regina Branch to include all members of the engineering profession in Saskatchewan and change the name to Saskatchewan Branch. An organization meeting at Regina recently elected L. A. Thornton as chairman and J. N. deStein as secretary, and L. A. Thornton and H. S. Carpenter, of Regina; G. D. Mackie, Moose Jaw; C. J. Yorath, Saskatoon, and R. W. Ross, Melville, were elected a nominating and organizing committee. They will convene in the very near future, when the organization and the outlines of the general policy of the branch will be decided upon, after sanction of the society's council in Montreal has been obtained.

The Death of Thomas Malcolm.

Thos. Malcolm, of Campbellton, N.B., who died at his brother in law's house at Bathurst, N.B., Jan. 10, was well known as a railway contractor, etc., throughout Canada. He was born in Campbellton in 1854, and during the construction of the Intercolonial Ry. through that district, he joined the construction crew as water boy, working up to time-keeper. When that section was completed he joined the engineering staff, under the late W. D. Barclay, and acted as chain man, working practically all along the line from Halifax to Riviere du Loup. Then he went to the Black Hills, Nevada, and engaged in mining contracting. From there he went to Winnipeg, where he met the late Duncan Ross and formed the Malcolm and Ross partnership. They got a subcontract for timber construction on the C.P.R., and on completing it took a subcontract for bridge work on section B, Canadian Pacific Ry. from Manning Macdonald & Co., who had a contract from the Dominion Government for building the section between Hawk Lake and Rat Portage, Ont. On the completion of this work, Malcolm & Ross removed to Ottawa, and later took a contract for railway construction in the Muskoka district of Ontario, and afterwards did some city work in Ottawa. Subsequently they visited Panama, with the intention of taking a contract but decided not to do so.

Their next work was building between 75 and 100 miles of the Temiscouata Ry., and after that they built some sections of the Bangor & Aroostook Rd. in Maine. While engaged in the latter work they conceived the idea of building a line across northern New Brunswick, from Campbellton to St. Leonard, with a bridge across the St. John River to Van Buren, Me., to connect with the Bangor & Aroostook Rd., and secured a charter for the Restigouche & Western Ry. Co. Mr. Ross died soon afterwards, but Mr. Malcolm went on with the construction, and after surmounting many difficulties he succeeded, in 1910, in completing the line, the name of which had in the meantime been changed to International Ry. of New Brunswick. Since July 31, 1914, it has been operated as an Intercolonial Ry. branch, the Dominion Government paying rental based on interest on an agreed price at which it may be taken over within the next three years.

Mr. Malcolm was a remarkably rugged man and enjoyed excellent health until some two years ago. In Dec., 1915, he underwent a serious operation in New York and never recovered his health. He was able to be up for about two months last summer but had practically been confined to bed since September last. He married Miss Babin, of Edmundston, N.B., who survives him, as also do their daughter, Mrs. Roland Moffatt and three sons, two of whom are lieutenants in the C.E.F., one being overseas and the other at home from the front on sick leave. The attendance at the funeral testified to the deep affection in which Mr. Malcolm was held. A large number of Campbellton citizens went to Bathurst by special train and returned by it with the body to Campbellton, where the burial took place.

The C.P.R. has removed its Liverpool Eng., offices from the Royal Liver Building to 6 Water St., the offices hitherto occupied being transferred by Canadian Pacific Ocean Services, Ltd.

The Western Canada Railway Club, with headquarters at Winnipeg, has ceased to exist.

Freight and Passenger Traffic Notes.

The C.P.R. is operating its transcontinental traffic through the Connaught tunnel at Rogers Pass, B.C., instead of via Glacier, as formerly.

It is expected that the freight congestion on the railways will be so relieved that the normal passenger traffic will be restored after May 1.

The G. T. Pacific Coast Steamship Co.'s s.s. Prince Rupert, during 1916 on the Skagway run, travelled 50,418 miles and carried 8,600 passengers.

The C.P.R. opened an up-town ticket office in the Hotel Vancouver, Vancouver, Jan. 2, W. S. Stewart, formerly of Victoria, being placed in charge.

J. P. Mader, General Freight and Passenger Agent, Algoma Eastern Ry., has been authorized to prepare and issue tariffs for all the company's traffic on its railways and in its vessels.

A deputation from Quebec waited on Lord Shaughnessy at Montreal, Jan. 10, asking that the Chateau Frontenac be enlarged, claiming that the present accommodation is inadequate. Consideration was promised.

A Quebec Superior Court gave a verdict, Jan. 9, for \$107.75 in favor of H. McAvoy against the G.T.R. for the loss of a travelling bag and contents which had been checked in the company's parcel office, Montreal.

The C.P.R. is providing through its dining car department a train basket lunch service, which is operated in connection with its dining cars, and enables passengers who do not desire a regular meal to obtain a light one with tea or coffee.

The Moncton & Buctouche Ry.'s Standard Freight Mileage Tariff C.R.C. no. 23 has been approved by the Board of Railway Commissioners, subject to the condition that the 5th class rate for the 11-15 mile group be reduced from 7 to 6c per 100 lb.

Certain interests in Hamilton, Ont., are agitating in favor of an application being made to the Board of Railway Commissioners for an order directing that the C.P.R. and the G.T.R. make their tickets between Toronto and Hamilton interchangeable. The proposal, however, does not meet with the Hamilton Board of Trade's approval.

The G.T.R. has issued for its agents adhesive tags which are being placed on all letters sent to shippers of freight. They have printed on them: "Important! Business requires all concerned to keep cars moving. Help us to help you. Kindly load or unload cars immediately regardless of free time limit. This will help our car supply and help you. Let's help each other."

The Northern Pacific Ry. has issued a circular to shippers in Vancouver, B.C., to the effect that cars will be withheld from firms which do not load them to capacity. The N.P.R. says that with the co-operation of shippers in regard to the full loading of cars it would be possible for it to show an increase of 10% in one month in the average loading of cars now employed.

The Canadian Northern Pacific Ry. is making use of its car barges, operated on the Fraser River and adjacent waters, for the collection and distribution of freight at any point where traffic may be found. It is reported that a considerable business is being developed, and that it can be economically conducted. Factories having water front facilities are thereby given connection with the Canadian

Northern lines although they may be miles away.

A joint circular has been issued by transportation lines in Eastern Canada directing railway and steamship agents to carefully observe the regulations as to the issue of half fare tickets for children, between 5 and 12 years of age, and instructing conductors and pursers to collect half fares for children apparently over years for whom no tickets are presented, and full fares for children apparently over 12 for whom half fare tickets are presented.

The Canadian Northern Ry. during 1916 carried 189,427 tons of coal from the Northern Alberta coal fields against 111,236 tons in 1915, and about 200,000 tons from the Drumbeller collieries in Southern Alberta, against less than 100,000 tons in 1915. The total output of all the Alberta coal fields for 1916 was reported at Ottawa to be 4,400,000 tons, of which the fields tributary to Edmonton produced 904,493 tons, and the Brazeau and Jasper Park collieries 223,678 tons.

Navigation between Point du Chene, N.B., and Summerside, P.E.I., was suspended for the season, Dec. 30, in consequence of which a new train schedule was put in operation on the Intercolonial Ry.'s Point du Chene branch, Jan. 1. Trains leave Moncton at 10.25 a.m., 6.15 and 10 p.m., and Point du Chene, 5.55 and 7.35 a.m., 1.05 and 3.30 p.m. Commencing Jan. 11, all railway traffic for Prince Edward Island was diverted to Pictou, N.S., to be transferred to Georgetown by steamship leaving Mondays, Wednesdays, and Fridays at 7 a.m., and returning from Georgetown, Tuesdays, Thursdays and Saturdays at the same hour.

Railway Finance, Meetings, Etc.

Boston and Maine Rd.—A U. S. Federal Court, sitting at Boston, Mass., Jan. 6, after a hearing extending several weeks, dismissed the minority stockholders suit subject to the final determination of a point of law, against the appointment of a receiver for the company.

A Boston, Mass., dispatch, Jan. 8, says: A bill to repeal the Legislative Act of 1915, authorizing the reorganization of the Boston & Maine Rd. has been filed by Representative Frost, of Somerville, who announced that later he would present a bill to authorize the State to purchase the majority holding of B. & M. Rd. common stock, owned by the New York, New Haven & Hartford Rd., but now administered by Federal trustees."

Canadian Northern Ry.—There has been deposited with the Secretary of State at Ottawa duplicate of trust agreement, dated Jan. 10, between the company and the Central Trust Co., New York, as trustee, securing an issue of 6% gold notes.

Diamond Coal Co.—A meeting of the debenture holders will be held in Calgary, Alta., Feb. 5, to consider and ratify an option given by the liquidator on the company's property and assets or otherwise to arrange for the disposal of the property. The company owns a 6 mile railway from its collieries at Diamond City to a junction with the C.P.R. at Kipp, which was built in 1909, and to which was added some mileage of sidings in 1912-13.

Timiskaming and Northern Ontario Ry.—Passenger earnings, Nov., 1916, \$55,039.83, against \$46,142.17 for Nov., 1915. Freight earnings, Nov., 1916, \$105,798.07, against \$99,897.65 for Nov., 1915.

White Pass & Yukon Route.—Gross earnings from Jan. 1 to Nov. 14, 1916, \$1,825,302, against \$1,454,989 for same period, 1915.

Reduction of Passenger Train Service to Relieve Freight Congestion.

To carry into effect the Board of Railway Commissioners' order, which appears on pg. 48 of this issue, the principal railways made sweeping temporary reductions in their passenger train service east of the Detroit and St. Clair Rivers and Lake Superior on Jan. 14, as follows:

The C.P.R. cancelled 60 trains on its Eastern lines, viz: Farnham Division, 7; Laurentian Division, 7; Ottawa and Smiths Falls Divisions, 15; Smiths Falls and Sudbury Divisions, 2; Bruce and Sudbury Divisions, 2; Smiths Falls and Trenton Divisions, 8; Toronto, Hamilton and Buffalo service, 9; London Division, 10. On the Smiths Falls and Trenton Divisions 2 new trains have been put on, making a net reduction of 58.

The G.T.R. cancelled 61 trains, viz.: Portland-Montreal, 6; Levis-Richmond, 2; Montreal-Toronto, 4; Ottawa-Pembroke-Madawaska, 2; Montreal-Ottawa, 2; Co-teau Junction-Valleyfield-Swanton, 2; Toronto-Hamilton-Suspension Bridge-London, 10; London-Port Huron, 1; London-Windsor-Detroit, 2; Hamilton-Jarvis-Port Dover-Port Rowan-St. Thomas, 2; Stratford-Port Huron, 6; Stratford-Goderich, 2; Hamilton-Harrisburg-Guelph-Palmerston, 5; Palmerston-Durham, 1; Stratford-Port Dover, 2; London-Wingham, 2; Hamilton-Allandale, 2; Toronto-North Bay, 2; Allandale-Meaford, 2; Allandale-Midland-Penetang, 4.

The Canadian Northern cancelled 29 trains on its Eastern Lines, viz.: La Tuque Subdivision, 2; Batiscan & Chicoutimi, 6; Montford Subdivision, 2; Joliette Subdivision, 6; Laurentian Subdivision, 2; Hawkesbury Subdivision, 2; Brockville Subdivision, 2; Pictou Subdivision, 1; Maynooth Subdivision, 2; Muskoka Division, 2; Orillia Subdivision, 2. The two trains cancelled on Orillia Subdivision leave it without any passenger service.

The Intercolonial, while not under the Board of Railway Commissioners' jurisdiction, has also made considerable reductions. The two daily through trains each way between Halifax and Montreal, the Ocean Limited and Maritime Express, are being continued but the running times have been lengthened, so as to enable them to handle more local business. On Jan. 25, 14 trains were cancelled, viz.: Halifax and Truro, 2; Point Du Chene and Moncton, 2; St. John and Moncton, 2; Newcastle and Campbellton, 2; Campbellton and Levis, 2; St. Leonard Jct. and Montreal, 2; Levis and Montreal, 2. It is said that this will make a total saving of approximately 20,000 miles a month, or 19% of the present I.R.C. traffic.

Car Shortage Situation in United States.—Washington, D.C., press dispatch, Jan. 20: "Drastic regulations designed to relieve the shortage in coal cars and help bring about a lowering of present high prices of coal were prescribed today by the Interstate Commerce Commission. The regulations require return to original ownership of all coal cars as fast as unloaded, and give the railways 10 days to devise methods for relieving the shortage in other types of cars. The commission's order also requires the railways to apply the same regulations to refrigerator, heated, ventilated and insulated cars."

Canadian Government Railways' Coal Supply.

An order in council was passed at Ottawa, Jan. 14, authorizing the Canadian Government Railways to expend \$300,000 additional on coal. This has been made necessary owing to the increased traffic on the Intercolonial and the decreased output from the Nova Scotia and New Brunswick mines, from which the railway's coal is usually obtained. The regular storage piles at the railway depots have been depleted to the extent of 14,500 tons, and 150 cars of commercial coal have been requisitioned to make up the shortage. The contracts for coal with the Canadian colliery owners amounted to about 1,000,000 tons, the prices running from \$3.40 to \$3.65 a ton. The government advised the mine owners that it was prepared to meet them in the way of an increased price if the output would be augmented, but with it all the railway management was faced with an apparent shortage in the coal supply of about 50,000 tons up to Mar. 31. The management decided that it would not be right to confiscate any further coal in transit for commercial purposes, and that in order to provide the necessary fuel for the locomotives coal would be purchased in the U.S. It is anticipated that this coal will cost about \$10 a ton delivered.

Grain Inspection at Western Points.

The following figures compiled by the Trade and Commerce Department show the number of cars of grain inspected on railways at Winnipeg and other points on the Western Division, for Dec., 1916, and for the four months ended Dec. 31, compared with those inspected for the four months ended Dec. 31, 1915:

	Dec. 1916.	4 months to Dec. 31, 1916.	4 months to Dec. 31, 1915.

George Bury's Movements.

George Bury, Vice President, C.P.R., who, as stated in Canadian Railway and Marine World for January, arrived in Liverpool, Eng., Dec. 21, went from there to London, where he was met by his son, Major G. A. E. Bury, Deputy Assistant Quartermaster General of the Training Division, C.E.F. He went over to France for a few days, visited the Somme front and reached St. John, N.B., on the s.s. Scandinavian, Jan. 13, and Montreal, Jan. 15. He was accompanied to England by Mrs. and Miss Bury, who returned with him. On Jan. 17, he inspected the C.P.R. Montreal-Toronto line from Montreal to Smiths Falls, and left Montreal again on Jan. 23 for New York, en route to England on business.

An Ottawa press dispatch of Jan. 29 said that Mr. Bury had "been appointed to go to Russia and take charge of the entire railway system supplying the Czar's troops with food and munitions."

A Montreal press dispatch of the same date said that C.P.R. officials there stated that Mr. Bury had gone to England on the company's shipping business.

Lord Shaughnessy issued the following statement in Montreal, Jan. 30: "As the C.P.R. is handling large quantities of Russian freight via Vancouver and Vladivostok, it was thought desirable that an

official of the company should visit Russia with a view to acquiring such geographical and other information as might be of service in dealing with transportation problems, and Vice President Bury decided to go himself."

The Rogers Pass Tunnel Suit.

Judgment was given at Vancouver, B.C., June 30, 1916, fixing the damages to be paid to McIlwee & Sons, Denver, Col., in the action brought by them against Foley, Welch & Stewart for breach of contract in connection with the boring of the Rogers Pass tunnel on the C.P.R. The amount of damages awarded was \$576,155.98. On July 12 the defendants were granted leave to appeal against the amount of the damages on condition that \$600,000 be deposited in court to cover damages and costs. An accepted cheque was afterwards paid into court. The plaintiffs, however, were not satisfied with this, and initiated proceedings garnishing the C.P.R. in order to attach funds due on account of the tunnel construction and payable to Foley, Welch & Stewart. This firm secured a decision in the British Columbia Supreme Court setting aside the garnishee order, and the matter was taken to the Court of Appeal by McIlwee & Sons. On Jan. 4, the latter court, with one judge dissenting, reversed the Supreme Court's decision and upholding the garnishee. Pending the hearing of the appeal against the amount of damages, McIlwee & Sons are secured by the deposit in court of the accepted cheque for \$600,000 and the garnishee order preventing the C.P.R. paying out money in its hands due to Foley, Welch & Stewart on account of the tunnel construction.

Sir William Van Horne's Will.—Sir Wm. Van Horne, K.C.M.G., who died in Montreal Sept. 11, 1915, left the following specific bequests: To his widow, Lady Van Horne, his house on Sherbrooke St. West, Montreal, with his very valuable art collection and an annuity of \$30,000 a year. To his daughter, Miss Adeline Van Horne, his summer house and estate, Covenhoven, St. Andrews, N.B. To his grandson, W. C. T. Van Horne, \$200,000, which is placed with the Royal Trust Co. until the boy becomes 21 years of age. The residue of the estate is left, one third each, to Lady Van Horne, Miss Van Horne, and his son, R. B. Van Horne. The will was probated in Winnipeg recently, the Winnipeg estate including 3,000 shares Winnipeg Electric Ry., valued at \$350,000, and 3,955 acres of farm land at East Selkirk, valued at \$98,893.50, the buildings being valued at \$20,000 and the live stock at \$25,015.

Canadian Society of Civil Engineers.—At the concluding of the society's annual meetings at Montreal, Jan. 24, the following officers were declared elected for the current year: President, J. S. Dennis, Montreal; Vice Presidents, J. M. R. Fairbairn and C. N. Monsarratt, Montreal; other members of the council, A. R. Decary, Quebec; J. H. Kennedy, Vancouver; H. Longley, St. John; G. A. McCarthy, Toronto; W. Pearce, Calgary; R. A. Ross and J. C. Smith, Montreal; and Jas. White, Ottawa.

Railway Enquiry Commission.—The Prime Minister stated in the House of Commons, Jan. 23, that the report of the commission, of which A. H. Smith, President, New York Central Rd., is Chairman, would not be ready for some weeks, possibly not before March.

Railway Rolling Stock Notes.

The Italian Government is reported to be enquiring for prices for 4,000 freight cars for the state railways.

The C.P.R. has received 399 box cars from its Angus shops, making a total of 870 of this type recently received.

The Canadian Northern Ry. has received 600 box cars, nos. 30300 to 31498, from Haskell & Barker Car. Co.

The Algoma Eastern Ry. is reported to be contemplating the purchase of a number of steel hopper or gondola cars.

Canadian Government Railways have ordered 50 wood flat cars to be built at the Moncton shops, N.B., and have pur-

chased two 100 ton wrecking cranes from F. H. Hopkins & Co.

son, N.J., and Dunkirk, N.Y. works.

in the Electric Railway Department on another page.

The Imperial Munitions Board, Ottawa, has ordered for the British Government, 17,000 chilled tread cast iron double plate

son, N.J., and Dunkirk, N.Y. works.

Canadian Government Railways have converted 10 sleeping cars into hospital cars for the transportation of wounded and invalid soldiers from the seaboard to their destinations. Five of these cars have been provided with wide side doors, and the door at one end widened, and the other five have been arranged with widened end doors only. Those with the side doors are numbered even numbers from 3800 to 3808, and those with the end entrances only, the odd numbers from 3801 to 3809. The cars with the side doors are equipped with 8 standard hospital beds, and those with the end doors have 13 beds. The cars will be operated in pairs, or one side door car to at least two or three of the others. The drawing rooms

Hospital Car, Canadian Government Railways.

chased two 100 ton wrecking cranes from F. H. Hopkins & Co.

The French Government is reported to be enquiring for prices on about 20,000 freight cars, and to have placed an order with Eastern Car Co. for 3,000 of this lot.

The British Government is reported to have ordered 125 freight locomotives at an approximate cost of \$2,750,000, to be delivered during 1917, from Baldwin Locomotive Works.

The French Government is reported to have ordered 100 consolidation locomotives from American Locomotive Co. for the government railways, for delivery in Jan. and Feb., 1918.

Canadian Government Railways, between Dec. 15 and Jan. 15, received 9 mikado locomotives from Canadian Locomotive Co.; and 30 steel frame box cars, 50 tons capacity, from Canadian Car & Foundry Co.

The French Government is reported to be making enquiries for prices for building of about 20,000 freight cars, and it is stated to be probable that some large orders will be placed in Canada and the U. S. shortly.

The C.P.R. has ordered 65 steel under-frame box cars, 40 tons capacity, making a total of 310 now on order; 1 automobile furniture car, 40 tons capacity; 1 freight refrigerator car, 30 tons capacity, and 1 stores supply car, to be built at its Angus shops.

The C.P.R. is contemplating adding a number of Pacific type locomotives to its rolling stock, for which plans, etc., are being tentatively prepared, and the Engineering Department is working on the question of bridge stresses in connection therewith.

The British Government has ordered through the Imperial Munitions Board, from the Canadian Locomotive Co., 40 consolidation locomotives. They are for the use of the Ministry of Munitions, and will be used in the transport of men and munitions to the seat of war.

The fire at the Preston Car & Coach Co.'s works, Preston, Ont., recently, destroyed 3 sleeping cars under construction for Canadian Government Railways, and 1 gas electric car, as well as several electric railway cars which are mentioned

car wheels. The order has been divided as follows: Canadian Car & Foundry Co., Ltd., 9,000; Canadian Iron Foundries, Ltd., 4,000; Dominion Wheel & Foundries, Ltd., 4,000.

We are advised that while the rotary snow plough and 10 Sante Fe (2-10-2) locomotives, mentioned in our last issue, were ordered from the Montreal Locomotive Works, they were, owing to the exigencies of the occasion, built by the American Locomotive Co., at its Patter-

and all but one lower berth have been removed, and the beds placed longitudinally on each side, with 18 ins. between each bed, and sufficient aisle space for the passage of military stretchers. The bed accommodation is, 1 lower and 13 upper berths and 13 beds, in five of the cars; and 1 lower, 11 upper berths and beds, not including the stateroom, in the other five cars. The illustration on this page shows the layout of one lot of the cars.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Central & Hudson Bay Ry.—R. S. McCORMICK, heretofore Chief Engineer, A.C. & H.B.R., and Algoma Eastern Ry., has been appointed General Superintendent and Chief Engineer, A.C. & H.B.R. Office, Sault Ste. Marie, Ont.

W. C. PAUL has been appointed Assistant Trainmaster. Office, Steelton, Ont.

Algoma Eastern Ry.—A. L. SMITH, heretofore Superintendent, London Division, Ontario District, C.P.R., London, Ont., is reported to have been appointed President and General Manager, A. E. R. Office, Sudbury, Ont.

J. A. DeFORGE has been appointed Purchasing Agent. Office, Sudbury, Ont.

Canadian Government Railways.—W. N. INGRAM, heretofore Master Mechanic, District 5, Intercolonial Division, Edmundston, N.B., has been appointed Master Mechanic, District 4, Intercolonial Division, vice H. D. McKenzie, transferred. Office, Stellarton, N.S.

H. D. McKENZIE, heretofore Master Mechanic, District 4, Intercolonial Division, Stellarton, N.S., has been appointed Master Mechanic, District 5, Intercolonial Division, vice W. N. Ingram, transferred. Office, Edmundston, N.B.

T. W. McBEATH, heretofore locomotive man, Moncton, N.B., is reported to have been appointed Road Foreman of Locomotives, District 5, Intercolonial Division, with headquarters at Edmundston, N.B.

C. W. McMANUS, heretofore conductor, Sunny Brae, N.S., is reported to have been appointed Trainmaster, District 1, Transcontinental Division. Office, Napadogan, N.B.

L. S. LANDERS, heretofore Resident Engineer, District 3, Intercolonial Division, Truro, N.S., has been appointed Assistant Engineer, Levis, Que.

P. B. ROBB, heretofore chief clerk, Car Service Department, N.B., is reported to have been appointed chief clerk, same department, Winnipeg, vice A. P. Gorbell, promoted.

Canadian Northern Ry.—A. T. SMITH, heretofore chief clerk to General Freight and Passenger Agent, Halifax & Southwestern Ry., Halifax, N.S., has been appointed Travelling Freight and Passenger Agent, C.N.R., which includes the H. & S.W.R. Headquarters, Halifax, N.S.

WM. PHILLIPS, Freight Traffic Manager, Eastern Lines, having resigned to enter Cunard Steamship Co.'s service, as announced in our last issue, the duties pertaining to that position are, for the present, being performed by G. H. SHAW, General Traffic Manager, Toronto.

G. N. GOAD, heretofore Inspector of Transportation, Eastern Lines, Toronto, has been appointed Terminal Trainmaster, Toronto Terminals, including Todmorden, with jurisdiction over operations in yard, freight house and team tracks.

J. F. HARVEY has been appointed acting Manager, Prince Arthur Hotel, Port Arthur, Ont., vice A. S. McLean, promoted.

A. S. McLEAN, heretofore Manager, Prince Arthur Hotel, C.N.R., Port Arthur, Ont., has been appointed Assistant General Superintendent of Hotels, Sleeping, Dining and Parlor Car, Hotel and News Department. Office, Winnipeg.

J. T. WHITLAW has been appointed

station agent, Calgary, Alta., vice O. A. Thomas.

A. R. McDOUGALL has been appointed Commercial Agent, C.N.R. and Duluth & Winnipeg & Pacific Ry., Minneapolis, Minn., vice C. A. Skog, promoted.

A. B. Calder,
Assistant General Passenger Agent, Canadian
Pacific Railway.

W. B. Johnson,
Master Mechanic, District 6, Intercolonial Division,
Canadian Government Railways.

C. A. SKOG, heretofore Commercial Agent, Minneapolis, Minn., has been appointed District Freight and Passenger Agent, C.N.R. and Duluth, Winnipeg &

Pacific Ry., Duluth, Minn., vice J. H. McKinnon, transferred to Operating Department.

Canadian Pacific Ry.—A. B. CALDER, formerly General Agent, Passenger Department, C.P.R., Chicago, Ill., and latterly conducting a general ticket agency in Winnipeg with his father, has been appointed Assistant General Passenger Agent, C.P.R., Montreal. He will especially attend to United States business and offices.

A. E. GRIGGS, Bridge and Building Master, Brownville Division, New Brunswick District, has had his office moved from McAdam Jct., N.B., to Brownville Jct., Me.

W. B. HARPER has been appointed Resident Engineer, Laurentian Subdivision, Quebec District, vice J. M. Silliman, whose appointment as Resident Engineer, London, Ont., was announced in our last issue. Office, Montreal.

J. K. SAVAGE, heretofore Superintendent, Regina Division, Saskatchewan District, Regina, has been appointed Superintendent, Smiths Falls Division, Quebec District, vice M. A. Fullington. Office, Smiths Falls, Ont.

C. GRIBBINS has been appointed Division Master Mechanic, Smiths Falls Division, Quebec District, vice F. Ronaldson, promoted. Office, Smiths Falls, Ont.

F. RONALDSON, heretofore District Master Mechanic, Farnham Division, Quebec District, Farnham, Que., has been appointed Master Mechanic, Ontario District, vice A. H. Kendall, enlisted for overseas service as captain in the battalion of skilled railway employes now recruiting. Office, Toronto.

W. TANSLEY, Assistant Superintendent, is appointed acting Superintendent, London Division, Ontario District, vice A. L. Smith resigned. Office, London, Ont.

T. FAWCETT, heretofore Assistant General Storekeeper, Western Lines, Winnipeg, has been appointed General Storekeeper, Western Lines, vice L. O. Genest, deceased. Office, Winnipeg.

A. E. HARSHAW, heretofore Chief patcher, North Bend, B.C., has been appointed Chief Dispatcher, Lethbridge, Alta., vice C. W. Fisher.

W. L. CODINGTON, heretofore Resident Engineer, Medicine Hat, Alta., has been appointed Resident Engineer, Revelstoke, B.C.

F. W. ADAMS, heretofore boiler maker, Lethbridge, Alta., is reported to have been appointed Foreman Boiler Maker, Revelstoke, B.C., vice S. Blower, transferred.

K. A. R. DOUGLAS, heretofore Chief Dispatcher, Souris, Man., has been appointed Chief Dispatcher, North Bend, B.C., vice A. E. Harshaw, transferred.

Duluth, Winnipeg & Pacific Ry.—J. H. McKINNON, heretofore District Freight and Passenger Agent, C.N.R. and Duluth, Winnipeg & Pacific Ry., Duluth, Minn., has been appointed Superintendent, D.W. & P.R. Office, Virginia, Minn.

Grand Trunk Ry.—L. J. ROULEAU, heretofore chief clerk, Division Freight Agent's office, Montreal, has been appointed Commercial Agent, Quebec, Que.

H. R. McLENNAN, heretofore Chief Dispatcher, London, Ont., has been appointed Trainmaster, Districts 20 and 21, London Division, Ontario Lines, vice R. H. Fish, promoted. Office, Brantford, Ont.

C. KELSO has been appointed acting Master Mechanic, Stratford, Ont., during the absence of R. PATTERSON, who has

been loaned to the Imperial Munitions Board, for the remainder of the war, and placed in charge of the General Car and Machinery Co.'s plant at Montmagny, Que.

W. M. DOHERTY, heretofore Night Chief Dispatcher, London, Ont., has been appointed Chief Dispatcher, Brantford, Ont., vice A. F. Sharpe, transferred.

A. F. SHARPE, heretofore Chief Dispatcher, Brantford, Ont., has been appointed Chief Dispatcher, London, Ont., vice H. R. McLennan, promoted.

J. R. BRENT has been appointed Night Chief Dispatcher, London, Ont., vice W. M. Doherty, promoted.

J. CALDWELL, heretofore Superintendent, Detroit Division, Western Lines, Detroit, Mich., has been appointed Agent at Chicago, Ill.

W. R. EASTMAN, chief clerk to General Passenger Agent, Central Vermont Ry., St. Albans, Vt., has been appointed New England Passenger Agent, G.T.R., Boston, Mass., vice E. H. Boynton, retired.

The following station agents have been appointed: Strathmore, Que., D. Rousse; Sutton, Ont., R. G. Winters; Craigvale, Ont., C. J. Alliston; Wilno, Ont., G. C. McFarlane.

Grand Trunk Pacific Ry.—W. J. STURGESS, heretofore Storekeeper, Transcona, Man., has been appointed acting Assistant Purchasing Agent, vice A. H. Mulcahey, loaned to the Imperial Munitions Board. Office, Winnipeg.

W. G. WHITELEY has been appointed acting Storekeeper, Transcona, Man., vice W. J. Sturgess, promoted.

L. V. DRUCE, heretofore Commercial Agent, Vancouver, B.C., has been appointed Division Freight Agent, Edmonton, Alta., vice A. E. McMaster, resigned.

A. DAVIDSON, heretofore Commercial Agent, Prince Rupert, B.C., has been appointed Commercial Agent with jurisdiction in B.C. territory, Rivers Inlet and south, including Vancouver, Victoria and Vancouver Island, reporting to Assistant General Freight and Passenger Agent at Prince Rupert, vice L. V. Druce, promoted. Office, Vancouver, B.C.

J. D. McAULEY, heretofore Travelling Freight and Passenger Agent, Juneau, Alaska, has been appointed Commercial Agent with jurisdiction in territory north of Rivers Inlet, including Queen Charlotte Islands, reporting to Assistant General Freight and Passenger Agent, Prince Rupert, vice A. Davidson, transferred. Office, Prince Rupert, B. C.

The following station agents have been appointed: Pembina Highway, Man., R. R. Tully; Watrous, Sask., H. McCreddie; Ruthilda, Sas., J. H. Gamble; Edgerton, Alta., M. O. Knudson.

Pennsylvania Rd.—C. B. BRODIE, heretofore Canadian Passenger Agent, Toronto, has been appointed District Passenger Solicitor, Newark, N.J., vice C. E. McCullough.

J. E. LITTLE, heretofore Passenger Solicitor, New York, has been appointed Canadian Passenger Agent, vice C. B. Brodie, promoted. Office, 56 King St. West, Toronto.

The Timiskaming & Northern Ontario Railwaymen's Patriotic Association's subscriptions to the Canadian Red Cross and Canadian Patriotic Funds, to Oct. 31, 1916, including \$9,651.95 paid direct to enlisted employes, were \$41,961.83. These amounts are exclusive of personal subscriptions by the commission and employes, and also of the monthly subscription to the 50,000 club by the Toronto staff.

Canadian Northern Railway Construction, Betterments, Etc.

Canadian Northern Quebec Ry.—The Dominion Parliament is being asked to extend the time for the completion of the projected branch lines from Rawdon to the National Transcontinental Ry., with a branch line from Rawdon to Joliette; and a line from St. Jerome to St. Eustache, Que.

Mount Royal Tunnel and Terminal Co.—The Dominion Parliament is being asked to extend the time within which the company may complete its railways and station building in Montreal.

A contract has been let to Norcross Bros., of Montreal, for the erection of the temporary station building on Lagache-tiere and St. Monique Streets. The excavation of the larger area on which the permanent station will be erected will be done by Angus Sinclair, of Toronto. This latter contract involves the removal of some 280,000 cubic yards of material.

Canadian Northern Ry.—The ratepayers of Fort William, Ont., decided Jan. 1, by a vote of 409 to 362 in favor of the Vickers St. site for the proposed station for the C. N. R.

A press report states that the company has let contracts to lumbermen along its line between Port Arthur, Ont., and Warroad, Minn., for the supply of 1,300,000 ties and 200,000 posts and poles.

No new track was laid on C. N. R. lines in Manitoba, Saskatchewan or Alberta during 1916.

The company, it is reported, proposes to locate a stockyard near the government elevator at Saskatoon, Sask., at a cost of \$30,000.

Canadian Northern Pacific Ry.—In connection with the building of the branch line from Kamloops the company acquired 90 acres of land in the Kelowna district. Through this area the right of way has been located, and the company claims that the whole 90 acres is thereby exempted from taxation. The town claims that at the most only six acres of this land is exempt, and desires to collect taxes on the balance. Judgment has been reserved in the Court of Appeals, which is being asked to reverse the decision of the lower court that the whole area is exempt.

The C. N. P. Ry. at present obtains an entrance into Vancouver over Great Northern Ry. tracks and to make use of these passes over the New Westminster bridge, owned by the province. The company was reported Jan. 5 to have paid up arrears of rental for the use of this bridge, and to be ready to sign an agreement with the government as to the future rental to be paid.

The installing of machinery in the car shops at Port Mann is reported to be well forward and it is expected that the shops will be ready for the construction of cars March 31.

An agreement is reported to have been reached between the company and the New Westminster City Council under which, in return for certain concessions, the company will remove certain tracks of the C.P.R. and of the British Columbia Electric Ry. to C. N. P. R. property. The total cost of the work is estimated at \$100,000. The principal concession granted the company is the right to use Front St. for railway purposes, and the removal of the tracks is necessary in order that the city may extend Columbia St. through to 12th St. without having to carry it across the tracks.

The time within which Champion and White, who claimed certain riparian rights on part of the False Creek area, Vancouver, could appeal against the decision debaring them from further objection to the reclamation works having expired without notification of further proceedings being taken, it is expected that much more rapid progress will be made with the work than heretofore. The particular work with which these proceedings interfered was the building of the sea wall. A large quantity of concrete piling for this is already on the spot.

It was reported Jan. 5 that construction on the Vancouver station building would be started by Jan. 31.

Lines on Vancouver Island.—Good progress is reported to have been made with the construction of the car ferry slip at Patricia Bay, Vancouver Island. As soon as this is completed, which will probably be by April 1, a regular car ferry service will be maintained with the mainland.

The line from Patricia Bay into Victoria is being ballasted and got ready for traffic. The only piece of construction on the line unfinished is the bascule bridge at Selkirk Water, which is being built by the Canadian Bridge Co., Walkerville, Ont.

The grading of the Barkley Sound line is practically completed to mile 106, and the steel for this line is now being delivered at Port Mann. It will not be taken over until the ferry service is put in operation at Patricia Bay. The steel for the bridges necessary on the line will also be taken by the same route. It is reported that this 106 miles will be completed this year. (Jan., pg. 22.)

International Railway of New Brunswick.

The following press dispatch was sent from St. John, N.B., Jan. 12: "The Dominion Government organ here says the Government has acquired the International Ry., which runs from Campbellton to St. Leonards, N.B., and the Maine border. It hints at the purchase price being between \$2,000,000 and \$3,000,000.

We are officially advised that negotiations for the purchase of this railway were on when war broke out. It was then decided to enter into an agreement to purchase the line at any time within a five year period. In the meantime, the Dominion Government is paying rental on the road based on the price agreed upon, and it has been operated as a branch of the Intercolonial Division, Canadian Government Railways, since July 31, 1914. The promoter and builder of the line, Thos. Malcolm, of Campbellton, N.B., died recently.

Utilizing Abandoned I.R.C. Right of Way.—At a meeting of the Dorchester, N.B., County Council, Jan. 18, a letter from the Assistant to the General Manager, Canadian Government Railways, was read stating that the C.G.R. would lease to the Parish of Moncton, "the portion of the abandoned right of way of the Intercolonial Ry. from Moncton to Berrys Mills, which will be properly described in the lease, for two years, and thereafter during the pleasure of the management, at a nominal rental of \$1 a year. The parish to maintain the roadway."

Traffic Orders by Board of Railway Commissioners.

Storage and Demurrage at Sarnia, Capreol, and North Bay.

General Order 175. Dec. 26, 1916. The track storage and demurrage and general order 174, Dec. 23, 1916, prescribing tolls at all points in Canada from Jan. to April 30, 1917, both inclusive. It is ordered that the following charges for demurrage and track storage apply upon grain and lumber held in transit at Cartier, Sarnia, Capreol, and North Bay, from Jan. 1 to April 30, 1917, both inclusive: 24 hours, free; 48 hours, \$1; 72 hours, \$2; 96 hours, \$5; 120 hours, \$10; 144 hours, \$15; 168 hours, \$20; subject to an increase of \$5 for each addition 24 hours or part thereof. It is further ordered that order 24436, Nov. 11, 1915, as amended by order 25285, Aug. 18, 1916, be suspended from Jan. 1 to April 30, 1917, both inclusive.

Moncton & Buctouche Ry. Tariff.

25737. Dec. 20, 1916. Re application of Moncton & Buctouche Ry. under sec. 327 of the Railway Act, for approval of its Standard Freight Mileage Tariff, C. R.C. 23. It is ordered that the said tariff be approved subject to the condition that the 5th class rate for the 11-15 mile group be reduced from 7 to 6c per 100 lbs.

Classification of Health Salts.

25755. Dec. 26, 1916. Re application of Harry Horne Co., Toronto, for the same specific classification for health salts as provided in the Canadian Freight Classification for Epsom salts. Upon hearing the application at Toronto, Oct. 5, 1916, in the presence of the Chairman of the Canadian Freight Association for the railway companies, the applicant company being represented, and upon the report of the Board's Chief Traffic Officer, it is ordered that the application be refused.

Mileage Rates on Forest Products.

25761. Re complaint of Mountain Lumber Manufacturers' Association, of Nelson, B.C., against proposed cancellation by C.P.R. of mileage rates on forest products for distances over 500 miles, effective Jan. 1, 1917. Upon its appearing that the said rates for distances over 500 miles, as now in effect in C. P. Tariff, C.R.C. no. W-2055, are being used by the complainant and others; and that their cancellation will injuriously affect the complainant's business, it is ordered that the C.P.R. publish and file a supplement to its Tariff C.R.C. no. W-2214, containing the rates on forest products for distances over 500 miles, as published in rate column no. 7 of its Tariff C.R.C. no. W-2055; such supplement to become effective Jan. 1, 1917.

Freight Interchange at Brantford.

25764. Re order 25570, Oct. 27, 1916, authorizing construction of an interchange track between the Lake Erie & Northern Ry. and the Toronto, Hamilton & Buffalo and Grand Trunk Railways, at Brantford, Ont., and the application of the Dominion Steel Products Co., for an order directing the Toronto, Hamilton & Buffalo and Lake Erie & Northern Railways to interchange cars on the temporary track connecting the said railways where they cross each other in Brantford. Upon reading what has been filed in support of the application and on behalf of the railway companies interested; and the report and recommendation of the Board's Assistant Chief Engineer, it is ordered that the Toronto, Hamilton & Buffalo and the Lake Erie & Northern

Railways be required, pending the construction and completion of the permanent interchange track authorized under order 25570, to interchange cars on the temporary track connecting their railways, where they cross each other in Brantford.

Rates on Zinc Clad Nails.

25798. Jan. 11.—The application of Shingle Agency of British Columbia for authority to include with shipments of shingles from B.C. the requisite quantity of zinc clad nails, the nails to be charged the same rates as the shingles. Upon hearing the application at Vancouver, June 26, 1916, the applicant and the Canadian Pacific and Canadian Northern Railways being represented, and upon the Chief Traffic Officer's report and recommendation, and reading the further written submissions filed, it is ordered that the application be refused.

Freight Rates From United States.

General order 177. Jan. 10.—Re question of way tariffs of freight rates from points in the United States to points in Canada should not bear a notation to the effect that unless specifically indicated as being competitive, they will automatically apply to intermediate points in Canada not mentioned in the tariff, notwithstanding Interstate Commerce Commission rule 77 (a) of circular 18-A. Upon hearing the matter at Ottawa, Dec. 19, 1916, the Canadian Pacific, Grand Trunk, and Ottawa & New York Railways, the Michigan Central Railroad, the Toronto Board of Trade, and the Canadian Manufacturers' Association being represented, the representatives of the railway companies consenting, it is ordered that tariffs of freight rates from points in the U.S. to points in Canada include, or be supplemented by, a rule to the effect that the said rates, unless specifically indicated as being competitive, will apply to intermediate points in Canada not enumerated in the said tariffs, and that railway companies arrange accordingly.

Passenger Rates, Chicago to San Francisco.—The Interstate Commerce Commission decided at Washington recently, in the case of the Public Service Commission of the State of Washington vs. Alabama & Vicksburg Ry. et al, that all-year excursion passenger fares and summer tourist excursion passenger fares from Chicago to San Francisco, applicable in either direction by way of Seattle, Wash., or Portland, Ore., were unduly prejudicial, to the extent that they exceeded the corresponding fares contemporaneously in effect from Chicago to San Francisco, applicable in either direction via New Orleans, La., or El Paso, Texas. The decision really means a reduction of rates from Chicago, St. Louis, etc., to San Francisco, of approximately from \$17.50 to \$20. An order in accordance with the decision was issued to become effective Feb. 15, but, a rehearing having been asked, the effective date has been postponed to Apr. 2.

Canadian Society of Civil Engineers, Toronto Branch.—At the annual meeting on Jan. 11, the following officers were elected for the current year: Chairman, E. W. Oliver; Secretary Treasurer, L. M. Arkley; Executive Committee—H. G. Acres, A. H. Harkness, T. T. Black and E. G. Hewson. The retiring Chairman, G. A. McCarthy, also acts as a member of the Executive Committee.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, compared with those of 1915-16, from July 1, 1916:

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$3,834,200	\$2,636,800	\$1,197,400	\$ 711,000
Aug.	3,684,900	2,612,900	1,072,000	614,300
Sept.	3,187,900	2,455,200	732,600	177,300
Oct.	3,716,800	2,495,500	1,220,300	336,700
Nov.	3,722,300	2,472,300	1,250,000	35,600
	\$18,146,100	\$12,673,800	\$4,322,400	\$1,149,900
Incr	\$4,230,100	\$3,080,200	\$1,149,900	
x Decrease				

Approximate earnings for Dec., \$545,400, and for three weeks ended Jan. 21, \$1,901,000, against \$3,235,600, and \$1,514,400, for same periods, 1915 and 1916.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1915-16, from July 1, 1916:

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$12,247,440.39	\$8,230,348.66	\$4,017,091.73	\$1,216,688.61
Aug.	13,570,467.31	7,802,680.46	5,467,786.85	2,025,472.13
Sept.	12,134,159.96	7,004,400.80	5,129,759.16	384,458.62
Oct.	13,237,086.36	7,562,346.99	5,674,739.37	890,694.78
Nov.	13,401,943.90	7,837,983.76	5,563,960.14	790,452.89
	\$64,291,097.92	\$38,437,760.67	\$25,853,337.25	\$1,931,471.59
Incr.	\$10,526,607.53	\$8,595,135.94	\$1,931,471.59	
x Decrease				

Approximate earnings for three weeks ended Jan. 21, \$6,870,000, against \$5,647,000 for same period, 1916.

Grand Trunk Railway Earnings.

Following are the earnings and expenses for the G.T.R., including the Canada Atlantic Ry., the G.T.W.R. and D.G.H. & M.R., for November:

Grand Trunk Railway.		
Earnings	\$4,317,200
Expenses	3,272,000
Net earnings	\$1,045,200
Grand Trunk Western Railway.		
Earnings	\$ 759,600
Expenses	692,900
Net earnings	\$ 66,700
Detroit, Grand Haven & Milwaukee Railway.		
Earnings	\$ 266,800
Expenses	261,300
Net earnings	5,500

Approximate earnings for Dec., \$5,280,245, and for three weeks ended Jan. 21, \$3,112,728, against \$4,819,124, and \$2,797,917, for same periods, 1915 and 1916.

Traffic Receipts of the System.

Aggregate from Jan. 1 to Dec. 31:			
	1916.	1915.	Increase.
G.T.R.	\$47,286,799	\$39,820,694	\$8,006,105
G.T.W.R.	9,191,107	7,876,264	1,314,843
D.G.H. & M.R.	3,823,992	2,884,912	399,080
Totals	\$60,301,898	\$50,581,870	\$9,720,028

Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section, 916 miles, for Nov. were \$652,145, against \$848,169 for Nov., 1915; \$698,136 for Dec., against \$744,584 for Dec., 1915. The aggregate earnings from July 1 to Dec. 31 were \$2,903,289, against \$3,451,310 for same period, 1915.

Demurrage Decision.—The Interstate Commerce Commission has refused to sanction a proposed rule of the New York, New Haven & Hartford Rd. and affiliated lines providing that, when cars are held in transit short of billed destination, or on storage tracks at destination, because of the failure of consignees to unload within the free time cars placed for delivery, the published demurrage charges will apply on the cars so held and no additional free time will be allowed after final placement.

Canadian Northern Railway's Report for Year Ended June 30, 1916.

The following report has been issued over the signature of Sir Wm. Mackenzie, President: The results of operations for the fiscal year were as follows:

Gross Earnings:	
Passenger traffic	\$ 6,128,470.76
Freight traffic	26,560,213.12
Express, mail, telegraph, interest and profits from elevators and other subsidiary companies, investments, etc.	2,787,591.18
	\$35,476,275.06
Working expenses (including taxes, etc.)	26,102,744.52
Net earnings	\$9,373,530.54
Deduct fixed charges	9,621,657.70
Net loss or deficit	\$248,127.16

The system had under operation an average of 8,048 miles in 1916, compared with an average of 7,269 miles in 1914-15, an increase of 779 miles, or 10.72%.

The Total Operating Revenues were \$35,476,275.06, an increase of \$9,564,168.76, or 36.91% over 1914-15. The increases in revenue were derived as follows: Passenger traffic, \$717,246.39, or 13.25%; freight traffic, \$8,352,412.60, or 45.87%; mails, \$12,877.97, or 6.05%; express, \$195,064.70, or 30.27%; and miscellaneous traffic, \$286,567.10, or 19.96%. While a portion of these increased earnings is due to an increased mileage, a substantial improvement has been made in the system's business. This is indicated by the fact that earnings per mile of road for the year were \$4,408.08, compared with \$3,564.74 for the previous year, an increase of 23.66%.

The system's new mileage on the Pacific Coast and the Northern Ontario Divisions have not yet come into full earning power, as operation on them was only commenced in the late autumn of 1915. It will be realized that time is required for the creation of industries to develop the natural resources of these newly opened-up sections of the country. The system is fortunate in the possession of vast timber, mineral, and agricultural traffic resources on these new lines; and the business from them must be eventually profitable. When the lines were surveyed, the traffic from the development of these resources was foreseen, and it is pleasant to be able to report that actual operations are proving these expectations well founded. The British Columbia section, from the commencement, produced each month substantial increases in revenue, and, before the close of the fiscal year, yielded most encouraging revenues. Much of the business offering is from the Pacific Coast to points inland, but a commencement has been made in the marketing of the excellent timber tributary to the line, and in the cultivation of the rich lands in the valleys through which the railway traverses the mountain country. There is a considerable acreage of land suitable for intensive farming along the company's railway, and its products will find a ready market on the Pacific Coast. The excellent showing made by the mileage in British Columbia, after only seven months of operation, may be well considered an outstanding feature in the year's operations. The colonization of Northern Ontario has been retarded by the war; but, peculiarly enough, there is a compensating feature in the inordinate demand for paper and its consequent startling increase in costs. The spruce balsam, and jack-pine woods, suitable for making pulp, and of which there is an abundance tributary to the company's lines, are finding an immediate market

demand. The Ontario Government has offered for sale a large acreage of wood; and the company, having 2,000,000 acres of land, mostly covered with pulpwood, is undertaking their development. Arrangements are being made for the establishment of pulp and paper mills in the districts and, in the meantime, large shipments of pulpwood will be made to mills already under operation in the older sections of the country. Mills for the sawing of merchantable timber are also being erected along the company's lines.

A large part of the increase in freight revenue originated from grain traffic. The system carried 131,978,809 bush. of grain in 1916, compared with 58,575,520 bush. in 1915, an increase of 125.31%. Inasmuch as many of the security holders invested their funds in the company's undertakings, believing that the heart of the Empire would some day need to draw heavily upon the wheatfields of the Canadian West, it is with pride that the directors present these figures, illustrating the extent to which the prairies have been opened up, made productive, and the produce marketable by the company's railways. There were probably few who thought that the crucial necessity would come so soon; but, having come, it must be considered fortunate that the Canadian Northern System and the country tributary to it were sufficiently developed to take an important part in supplying the Empire's food requirements. To the preponderance of grain traffic—this commodity being carried at a low rate—is due the decrease in the revenue per ton per mile from 00.831c. to 00.679c. or 18.29%. It is interesting to note, however, that the average distance a ton of freight was hauled, increased from 204.08 miles to 288.46 miles, or 41.35%, with, of course, a marked advantage in operating results.

The passenger train earnings per train mile increased from 87.409c. to 93.379c., or 6.83%. The system's passenger and freight earnings, during the year, were affected by the lack of two important terminals which are under construction, but were not completed in time to take care of transcontinental business. It is expected that the tunnel under Mount Royal and a station for the system's business in the heart of Montreal, will be ready for operation in the spring of 1917. The Vancouver terminal is under construction and, it is expected, will be available for the system's business in the summer of 1917. The station at Toronto, which the system will occupy with the C.P.R., has been completed.

The system has also been handicapped by not having a line from Toronto to the Niagara peninsula, connecting with the railway systems of the United States converging at the Niagara frontier. When this line is constructed, it will give the system the further advantage of rail connection with its electric subsidiary line, the Niagara, St. Catharines and Toronto Ry., now serving the important manufacturing district of the Peninsula. Delays in the completion of these undertakings, without which neither a satisfactory transcontinental business nor an entirely successful eastern passenger and fast freight business can be possible, have occurred, as a result of disturbed conditions of finance resulting from the war; and the directors would emphasize the fact that revenues for the year have been obtained notwithstanding the lack of these much-needed facilities.

The Operating Expenses were \$26,102,-

744.52, compared with \$19,288,514.42 for 1915, an increase of 35.33%. A portion of this increase is due to the operation of a greater mileage and to the expenses incidental to taking over new lines which were operated for only a portion of the year. But, with the heavier traffic, the system was naturally compelled to expend a relatively larger amount in operation, spending for this purpose \$3,243.38 a mile compared with \$2,653.57 the previous year. The system is paying a wage schedule well up to the level of the highest standard. The labor situation in the newer sections of the country has been particularly difficult to meet, but with increasing settlement may be expected to improve. The weather conditions in the winter period covered by the report were unprecedentedly bad in Northern Ontario and Western Canada, where the system has a large mileage under operation. British Columbia was subjected to a lower temperature and a greater fall of snow than in any time in the previous 20 years. These conditions added substantially to the expense in the cost of operation. The working expenses for the year were 74.73% of the operating revenue, a reduction of 1.93 from the previous year. Including revenue from all sources the ratio of working expenses, including taxes, was 73.58%, compared with 74.44% for the previous year.

Land Department: During the year, according to government returns, only 51,243 immigrants came into Canada. Immigration on a large scale is not to be expected until after the declaration of peace; and, in the meantime, sales of western lands are naturally limited. During the year there were sold of the system's lands, 19,443 acres, at an average of \$16.37 an acre, or an aggregate of \$318,248.32. The previous year's sale price averaged \$15.53 an acre. There were cancelled, by mutual arrangement, agreements for the sale of 4,850 acres; so that the net acreage of land available for sale has been decreased by 14,593 acres, leaving 843,127 acres in the prairie provinces available for sale. Land grant bonds of the issue of 1909 amounting to \$272,533 were retired, leaving outstanding in respect of this issue \$2,217,740.

Car Trust Obligations: No car trust obligations were created, and \$3,628,000 were paid in respect of obligations made in previous years.

Ocean Steamship Services: An agreement of great importance in the development of the system's freight and passenger traffic, was made during the year with the Cunard Steamship Co. Under its terms the Cunard Co. has taken over the Atlantic steamships controlled by the C.N.R., and a close working alliance is in effect between the two companies, the various Canadian services of the Cunard line and the Canadian Northern having become, in effect, a single transportation unit between Europe and Canada. Steamship services on the Pacific Ocean are also in contemplation. The arrangement was not completed in time to be of benefit to last year's earnings, but will from now on become of benefit and, after the conclusion of the war, must result in giving to both parties a very substantial and remunerative business.

General Remarks: Since the new lines through Northern Ontario and British Columbia, making the system transcontinental, have been brought under operation during the year under review, your directors deem it advisable to state the salient

facts in connection with these lines and to refer to the position the system will henceforth occupy in relation to the traffic of the country. The construction of the new lines involved a greater expenditure than was first contemplated. During the years of construction your directors became impressed with the increasing weight of train loads, which necessitated the older established railways in Canada and the U.S. spending huge sums of money in line revision, and decided that it would be true economy to build these important sections of the system's main line to a standard that would forever obviate the necessity of revisions for grade improvement. As a result, your railway now crosses the summit of the Rocky Mountains by means of 7/10 of 1% grades confined within one division; and these are the heaviest gradients opposing a downhill traffic—the direction of the heaviest haul—between the waters of the Pacific at Vancouver and the waters of the Atlantic at Montreal. Nowhere else on the Pacific Coast Divisions and nowhere on the new lines in Northern Ontario, are grades in excess of 5/10 of 1%. The possession of these favorable grades has given the system an all important advantage in the economy of operation, particularly in carrying the two commodities offering in largest volume, viz., lumber from the Pacific slope of the Rocky Mountains to the prairies and eastern points, and grain from the prairie provinces to Eastern Canada and Atlantic ports. The main line from Quebec to Vancouver is superior to any line crossing the American continent in points of grades and curvatures favoring traffic. Although the transcontinental line has been in operation for only a few months, its superior economies have established the fact that the road must assume a commanding position when traffic has grown to dimensions making general the use of heavy trainloads.

In this connection it becomes necessary to examine the locations of the lines from the point of traffic opportunities, this being of not less importance than the physical condition. The system's railways occupy an enviable position in the prairie provinces, in which the first mileage was constructed. Assuming the population of villages and towns having 1,000 inhabitants and over to be urban, the system's railways serve 90% of the urban population of Alberta, and 97% of the urban population of Saskatchewan and Manitoba. In British Columbia the system has lines serving 78% of the urban population. In Ontario and Quebec, the provinces from which manufactured products are mainly derived for Canadian consumption, the system will have access to cities and towns with 70% of the factory output of these two provinces, when the 40 miles of railway to Hamilton, for which right of way and terminal properties have been secured, is in operation. Further than this, the system's railways are now serving 75% of the aggregate population of the cities and towns of all Canada having 5,000 inhabitants and over. It is only to be expected that the system will not come into full earning power immediately. The initial years of transcontinental operation are involving terminal improvements, increases in equipment, changes in organization, and the building up of traffic connections. For some time past your directors have had plans prepared for these matters, which it was hoped to put into effect so soon as the lines between Quebec and Vancouver were completed; but, as a result of the disturbed conditions of finance, this was

found to be impossible. It is hoped, however, that during 1917 substantial progress will be made and, as the plans are carried into effect, the beneficial results will become apparent in the earnings of the system.

The prospects for grain tonnage for the coming year are not as good as they were last year, as will be seen by the following statement of the grain yields for the three prairie provinces, compiled by our Grain Information Bureau: and, although complete returns are not yet available—threshing still being under way—they may be regarded as approximately correct. The yields are as follows: Wheat, 170,500,000 bush.; oats, 280,000,000 bush.; barley, 44,500,000 bush.; flax, 6,700,000 bush.; total, 501,700,000 bush. According to these figures, the 1916 crop will be less than the 1915 crop, by about 250,000,000 bushels; but it is necessary to remember in this connection, that there remained over from the 1915 crop, in the territory tributary to the system's lines, 38,000,000 bush. of grain, which in all probability will be marketed this year. The prices realized by farmers for the 1916 crop, and the unmarketed part of the 1915 crop, are much better than they were a year ago; and the statement which is made to the system's management by an official of the Alberta Department of Agriculture that "the net result this year will increase the farmers' income by several million dollars," is indicative of the generally strong financial position of grain growers along C.N.R. lines in middle Canada. While the proceeds derived by farmers from the 1915 crop were largely required to liquidate past obligations, the returns from the 1916 crop are largely available for the purchases of live stock, machinery, building material, and general merchandise. Fortunately, the system, having its lines directly connected up with the grain country of Western Canada, the industrial centres of Eastern Canada, and the seaports of the Atlantic and Pacific, is in the position to make up the shortage in grain tonnage by a tonnage in general commodities which will be carried at more remunerative rates. The present situation emphasizes the fact that the railway is not as dependent upon grain crop movements as in the past; and, in becoming transcontinental, has acquired a highly diversified traffic.

The following statement of the comparative gross traffic earnings for the four months succeeding the fiscal year under review, is submitted as evidence of this contention:

	1916.	1915.	Increase.
July	\$3,834,200	\$1,961,700	\$1,872,500
August	3,684,900	1,983,600	1,701,300
September	3,187,900	2,757,000	430,900
October	3,716,800	3,678,500	38,300
Totals	\$14,423,800	\$10,380,800	\$4,043,000

In Oct., 1915, there was a heavy grain movement, and it is pleasing to note that the traffic in other commodities has more than offset the lighter grain movement this year. General trade prospects for the next fiscal year are good. For the 12 months ended Sept. 30, 1916, the total export and import trade of Canada was \$803,000,000 in excess of the corresponding period the previous year; and, fortunately for the country, the balance of trade is on the right side, exports having exceeded imports by \$367,000,000. The exports for this period were \$534,000,000 in excess of the exports for the same period the previous year. Statistics gauging the extent of domestic trade are not available, but if railway tonnage be a measuring gauge—and it is usually accepted as such—the general domestic

trade of the country is substantially better than it was a year ago.

There is, naturally, keen speculation as to the future of Canada after the war, and this is increased by the patent fact that a large measure of the country's present prosperity is due to productions for war purposes. While your directors hesitate to express their views on this matter, they feel assured that the industrial disarrangement through peace will be less serious and of shorter duration than the disarrangement which occurred in 1914 as a result of the war. It must not be forgotten that Canada is essentially a country of the future. Her stock of natural resources remains largely intact. Her vast known mineral wealth is only in the initial stages of development. Her timber resources can be valued in the hundreds of millions of dollars, and will become even more valuable during the world's reconstruction days. Her agricultural resources, which have been the country's mainstay, are still capable of vast development, only one quarter of the surveyed, arable land being under occupation, and less than one eighth of it under annual cultivation. The knowledge of these things must serve to create a spirit of optimism in Canada's future; and a realization that a large portion of these timber, mineral, and agrarian undeveloped resources, now made accessible through the system's new lines, has convinced your directors that the system is capable of an immeasurable expansion in earning power. These things are set forth because your directors believe there is need for a better understanding of the extent to which the system is prepared to enter into the transportation services of Canada, and in partial explanation of the belief they firmly hold that the ultimate prosperity of the C.N.R. system is measurable only by the prosperity of Canada.

New Directors: During the year three new members were added to the directorate: W. K. George, of Toronto, Vice President, Sterling Bank of Canada; W. J. Christie, a prominent business man of Winnipeg, and H. W. Richardson, head of James Richardson & Sons, grain merchants, Kingston, Ont.

Steel Rails Duty.—In reference to statements which have been made in various papers as to the suspension of duty on steel rails imported into Canada, we are officially informed that no general order in council has been passed suspending the duty. Several of the railways wanted to make contracts for their requirements for the upkeep of their tracks and Canadian steel mills were unable to take these contracts, owing to having large orders for munitions. The railway companies were therefore compelled to look to the United States for their supply at a largely advanced price. Some of the companies applied for a refund of duty, and in each case a refund of duty will be granted on rails so imported during a certain period, with the exception of the war tax of 7½%, which will have to be paid by the railways. It was found absolutely necessary for the government to take action along these lines in order to enable the railways to keep up their maintenance and facilitate traffic during the war.

G.T.R. Taxes in Michigan.—The Michigan State Legislature is considering an amendment to the constitution to permit the state to own and control railways, with a view, it is said, of dealing with a claim against the G.T.R. for taxes dating back to 1834, when the Detroit & Pontiac Ry., now a part of the G.T.R. system, was built.

Electric Railway Department

The Montreal Tramways Co's Car Service.

There has been some complaint of late with respect to the Montreal Tramway Co.'s service. A statement in regard to the matter was made recently by J. E. Hutcheson, General Manager, in the course of which he said that the cause was due to the insufficiency of power. The company, a year ago, took steps to provide for an additional 17,000 h.p., which was expected to have been ready to be turned on during Nov., 1916. The contractors for boilers, engines and generators were unable to make deliveries and it is not expected that the additional plant will be ready for operation before March.

F. W. Hibbard, Chairman of the Quebec Public Utilities Commission, made the following statement Jan. 16: "The defects in the Montreal Tramways Co.'s service have been under investigation by the commission. The partial failure in service is due simply to lack of power. The source of the company's supply is almost entirely hydraulic, and the winter conditions have seriously affected this. The company is making every possible effort to overcome the shortage and install an auxiliary steam plant. As to the responsibility for such a plant not having been installed before, there is not sufficient data to express a definite opinion. The chairman of the commission has taken charge of the matter himself, and has called for traffic reports and other details with a view to determining this question. It is fair to say, however, that if the company's contractors had kept their engagements it would have ample power today. A full report will be submitted later."

Another Electric Railway Proposed for London.

In connection with the cutting down of service on the G.T.R. London, Huron & Bruce line from two trains to one each way every day, under the plan approved by the Board of Railway Commissioners for the relief of freight congestion, a proposal has been made in London, Ont., for the electrification of the line under municipal auspices. The line was originally projected as a municipal enterprise, about the same time as the London & Port Stanley Ry., but was handed over to the G.T.R., the city financing it to the extent of \$75,000. P. Pocock, Vice Chairman of the London Railway Commission, is reported to have said in an interview Jan. 15: "If we could have the Board of Railway Commissioners or some other competent body fix the value of the line and the G.T.R. interest in it as a basis upon which the people could take it over, the scheme could be carried out to advantage. Having acquired it at a fair price, we might then approach all of the municipalities concerned to have them join with us in electrifying the line and placing it on a thoroughly modern basis, on the high standards set by the London & Port Stanley Ry. By working out an equitable plan in that manner, and having the bonds guaranteed there would be no particular burden on any one. The people have shown what they can do by electrification on the L. & P.S.R. When a frequent and fast service is provided, shipping and travel is encouraged, and

the people are given access to the different points along the line and an outlet is provided for the merchandise of the city and the products of the rural parts. Moreover, the line could be made a unit in the provincial hydro electric radial scheme, and in my opinion would bring added prosperity and great benefits to all."

Nova Scotia Tramways and Power Co., Limited.

All arrangements were completed and the documents filed, Jan. 12, transferring the Halifax Electric Tramway Co.'s property, franchises and assets to the Nova Scotia Tramways & Power Co. This transfer terminates the contest which has been carried on for nearly three years by the Halifax City Council in the N. S. Legislature and elsewhere to prevent the sale of the local company. The N.S.T. & P.Co. has a capitalization of \$5,000,000, equally divided between preferred and common stock, and has power to issue \$10,000,000 of bonds. The officers and directors are: President, E. A. Robert, Montreal; Vice President, O. E. Smith, Halifax; other directors: W. G. Ross, F. H. Wilson, J. W. McConnell, Montreal; H. H. Smith, W. H. Covert, K.C., H. R. Mallison, Halifax, and P. J. McIntosh, New York.

Halifax Electric Tramway Co. shareholders have received notification that on a valuation of \$203.50 a share they can exchange their stock for N.S.T. & P. Co.'s stock on the basis of 75 for the new company's preferred and 40 for the new company's common stock. Of the 14,000 shares, it is stated that all but 2,500 are owned by the controlling interest. The N.S.T. & P.Co. has issued \$2,250,000 of bonds, \$1,500,000 of preferred stock and \$2,500,000 of common stock, part of which is being offered on the New York and Boston markets through Stone & Webster, Lee, Higginson & Co., and Potter, Choate & Webster. The bonds, which bear interest at 5% and are redeemable in 1946, are being offered at 95½; and 6% cumulative preference stock is being offered at par with a bonus of three shares of common stock for every 10 shares of preferred stock. Data furnished by President Robert, in a letter to the underwriters, show a new high record of earnings in the 12 months to Oct. 31, 1916, when gross earnings were \$759,513 and net from operation \$342,897. After allowing for fixed charges the company's surplus before dividends is given as \$230,397, against \$90,000 required for dividends on the \$1,500,000 preferred stock. This would leave a surplus of \$140,397 for the new common, equal to earnings at the rate of 5.6%.

In addition to the Halifax Tramway Co. properties, the company has taken over the Gaspereaux hydro electric proposition, originally owned by the Nova Scotia Light & Power Co., and it is said that the survey work on this hydro electric development will be placed in hand at once. The new company proposes to engage additional experts to thoroughly study the tramway, light and power requirements of the district and to inaugurate such improvements as may be found necessary to meet every demand and provide for ample future development. The Gaspereaux plant will, it is estimated, develop 12,500 h.p.

In connection with the improvement of the existing plant it is reported that a section of the new boiler equipment being installed at the power house is now in operation, as well as the new 4,000 h.p. turbine, and it is expected that a new and modern switchboard will be completed and placed in service in February. The new gas plant is rapidly approaching completion and will be in operation by the end of February. Extensive construction of gas mains is being proceeded with during the winter, and practically all streets in the newer sections of the city will be laid with gas mains by the spring.

Signal Installation on Toronto Civic Railway.

The City of Toronto has had a signal installation made at the grade crossing of the Toronto Civic Ry. and the Toronto Suburban Ry. at Lansdowne Ave. and Davenport Road. Both roads are electrically operated from overhead trolley. The Toronto Civic Ry. at that point is a newly constructed double track line, and approaches from the north on a down grade the Toronto Suburban Ry.'s single track crossing. The signal system was designed to protect southbound movements on the down grade on the Toronto Civic Ry. and movements in either direction on the single track Toronto Suburban Ry., the principal features of which are as follows:—

Two low voltage d.c. operated model 2-A upper quadrant, semaphore indication signals are located on the Toronto Suburban Ry., one on each side of the crossing, and distant 80 ft. from it, governing movements over the diamond. One low voltage signal of the same type governs movements on the Toronto Civic Ry. southbound down grade track, located 270 ft. from the diamond, and adjacent to a derail mechanically operated from a style D dwarf machine. All signals stand normally clear in the 90° upper quadrant position and operate in two positions only, from horizontal to 90°. An electric lock is provided on the derail lever, preventing the closing of the Toronto Civic Ry. derail when a movement is being made over the crossing on the Toronto Suburban Ry. Single pole double throw switches are installed at each signal on the Toronto Suburban Ry., controlling the semaphore on the Toronto Civic Ry. and electric lock on derail lever. Three normally open trolley contactors were used, two on the Toronto Suburban Ry., located 20 ft. ahead of the semaphores, and one on the Toronto Civic Ry., 100 ft. beyond the crossing, the function of all being to automatically restore the system to normal condition, that is, all signals clear and derail unlocked after the passage of cars over the diamond. Model 9 d.c. 1,000 ohms relays are used to control the position of signals on both roads, operated as stick relays, and are normally energized through the stick contact, keeping all signals clear and derail lever unlocked.

The operation of the system is as follows:—The conductor of a southbound Toronto Civic Ry. car, finding the semaphore at the derail clear, closes the derail point by means of the style D dwarf machine, and in so doing breaks the control of signals on the Toronto Suburban Ry., placing them in the stop position. The car then proceeds across the dia-

mond, and upon passing under the trolley contactor beyond the crossing automatically closes the control circuit for signals on the Toronto Suburban Ry., thereby again clearing these signals and restoring the system to normal.

When making a move over the crossing on the Toronto Suburban Ry., the conductor, finding the semaphore clear, throws over the single pole double throw knife switch located at the signal, thereby placing the Toronto Civic Ry. signal in the stop position and preventing the operation of derail on that railway. Upon passing under the trolley contactor on the opposite side of the crossing the control circuit for the Toronto Civic Ry. semaphore and lock is momentarily closed, picking up the control relay which will then hold up through its own point from a constant source of power. The semaphore on the Toronto Civic Ry. again clears and the derail lever may be operated to close the derail for a movement over the crossing.

For a movement in the opposite direction on the Toronto Suburban Ry., the same procedure is gone into through the contactor on the far side of the crossing serving to automatically restore the signal on the Toronto Civic Ry. to the clear position and unlock the derail.

Power for restoring all control relays is obtained from the trolley wire through the contactors and a suitable resistance to lower the trolley potential to that required for the relays. Twenty-one cells of 400 a.h. caustic soda type battery are used to supply power for the operation of signals and holding all control relays in the energized position.

The installation was made by the General Railway Signal Co. of Canada, Ltd., Lachine, Que.

The Toronto City Council and Electric Railways in the City.

The Toronto City Council is applying to the Ontario Legislature for an act which, among other things, affects the city's relationships with the Toronto Ry., the Toronto & York Radial Ry. and the Toronto Suburban Ry. The following powers are asked: To require the Toronto Ry. to build and place in operation during 1917 100 new cars and an additional 100 during 1918, and in default of so doing to pay a fine of \$100 a day for every car less than the said numbers.

To authorize the city to acquire by expropriation or otherwise the portion of the Toronto & York Radial Ry. within the city limits on Yonge St., together with all real and personal property, and all franchises connected therewith; to construct a double line of railway upon Yonge St. from the T. & Y.R.R. southern terminus to the city's northern limits; to borrow money to enable the city to finance the purchase and construction, and to authorize the city to grant running rights over the line to the T. & Y.R.R.

Cleaning old ballast is done by the Kansas City Railways by means of a portable rotary screen made out of an old concrete mixer by substituting a revolving screen for the mixing trough and blades. The screen is 6 ft. long and tapers from 18 in. diameter at the motor end to about 3 ft. at the discharge end. The same gasoline engine that formerly drove the mixer now furnishes motive power for the screen. The machine is mounted on a portable steel-wheeled truck. In view of the present high cost of ballast rock, this device is a money saver.

British Columbia Electric Railway's Annual Report.

Following is the director's report for the year ended June 30, 1916:

The following charges have been made against revenue account for the year:—

Provision for renewals maintenance	£102,236	19	0
Provision for income tax	10,000	0	0
Addition to capital amortization fund	2,655	13	4
	<u>£114,892</u>	<u>12</u>	<u>4</u>

The net revenue for the year, after making the above deductions, amounts to

	£134,964	2	9
To which is added:			
Balance brought forward from last year	6,666	13	5
Amount transferred from reserve fund	70,000	0	0
	<u>£211,630</u>	<u>16</u>	<u>2</u>

And deducted:

Interest on debenture and debenture stock for year to June 30, 1916	£132,771	2	11
Dividends already paid on 5% cumulative preference stock for year to June 30, 1916	72,000	0	0
	<u>204,771</u>	<u>2</u>	<u>11</u>

Leaving, to carry forward to next account, a balance of

	£6,859	13	3
--	--------	----	---

REVENUE ACCOUNT, YEAR ENDED JUNE 30, 1916.

Total income	£258,206	10	4
Registration fees	195	8	10
	<u>£258,401</u>	<u>19</u>	<u>2</u>
Renewals maintenance	£102,236	19	0
Directors' fees	998	0	0
Special remuneration of Assistant to Chairman	1,367	0	0
Office rent and salaries, printing and stationery, advertising, general, legal, travelling, audit and agency expenses	5,306	1	1
Income tax provision	10,000	0	0
Trustees' fees	874	3	0
Capital amortization fund	2,655	13	4
Balance	134,964	2	9
	<u>£258,401</u>	<u>19</u>	<u>2</u>

Balance	£134,964	2	9
Balance from last year	6,666	13	6
Transfer from reserve fund	70,000	0	0
	<u>£211,630</u>	<u>16</u>	<u>2</u>

Interest on 4½% 1st mortgage debentures	£9,715	9	2
Interest on 4½% (Vancouver Power) debentures	4,568	10	0
Interest on 4½% perpetual consolidated debenture stock	118,497	3	9
Balance carried to balance sheet	78,859	13	3
	<u>£211,630</u>	<u>16</u>	<u>2</u>

EXPENDITURE ON APPROPRIATIONS ON CAPITAL ACCOUNT, YEAR ENDED, JUNE 30, 1916.

Rolling stock	Credit	\$ 4,925.07
Track extensions		24,811.31
Lighting and power extensions		38,892.68
Steam plant	Credit	4,265.98
Lands and buildings and bridges	Credit	4,974.38
Electrical machinery	Credit	11,477.39
Extending light and power system		13,905.05
North Vancouver, rolling stock, meters, transformers, and initial installations	Credit	476.92
Sundries		8,206.70
Railway feeders		503.12
Automobiles		6,652.05
		<u>\$65,850.17</u>

In order to make the above dividend payments it has been necessary to transfer £70,000 from the reserve fund. The most determined efforts have again been made by the board and management to curtail expenditure in every direction. Operating and all other expenses have been rigidly controlled. The capital expenditure of the railway and subsidiary companies during the year was \$134,900, compared with \$875,558 in the previous year. The General Manager reports that the property has been well maintained, and none of the economies effected have in any way impaired the efficiency, safety or general upkeep of the plant.

The reduction in the population, the reduced spending capacity of the citizens, the continuance of the unfair competition of jitney cars, together with the greatly increased cost of all supplies, are responsible for the decrease in the revenue. About 35,000 soldiers have left British Columbia for overseas service, of whom probably 25,000 have left the territory served by the company, and a further large number of people more or less directly or indirectly dependent on them have also left. It can safely be estimated that, as compared with 1914, the population served by the company has decreased by 30%. The railway business also continues to suffer severely from the competition of jitney cars. Since Jan. 1, 1916, this competition has been less acute than in the previous year, but it is estimated that these cars are still depriving the company of earnings amounting to approximately \$350,000 a year. The various public services furnished by the company, including the railway service, have been fully and efficiently maintained, but with no improvement in the jitney situation in prospect, the necessity of curtailing the car services has become urgent.

The earnings from freight show an encouraging increase during the year, and this class of traffic promises to become an increasingly profitable part of the company's business. The company's financial position remains satisfactory. In spite of the present adverse situation there are indications of an improvement in commercial and industrial conditions in British Columbia, and with these the company's prosperity is closely bound up. The net earnings for the first four months of the current year show an encouraging increase of over £30,000, and the directors are not without hope that the profits of the current year will be sufficient to cover the debenture interest, and also the dividend on the 5% cumulative preference stock, without further trespassing on the reserve fund. The directors think that the company's financial position justifies the payment of the dividend on this stock for the current year, and a resolution will be submitted to the stockholders approving of this payment being made, and authorizing the directors to draw upon the reserve fund, if necessary, for that purpose. The directors are unable to hold out any hope of the payment of a dividend on the preferred ordinary or deferred ordinary stocks for the current year.

R. H. Sperling, having been granted a commission in the army, has retired from the board, to the great regret of his colleagues. He has accepted the position of adviser to the board, and thus the advantage of his knowledge of the company's affairs, gained as General Manager and in other executive positions, will still be available. Sir W. M. Aitken, M.P., and John Davidson have accepted seats on the board. A resolution will be submitted to the stockholders to increase the number of directors to nine, and, if approved, Sir Wm. Mackenzie, who, on the invitation of the directors, has expressed his willingness to accept a seat on the board, will be elected. He is President of the Toronto Ry., the Toronto Power Co., the Winnipeg Electric Ry., and other large public utility enterprises in Canada, and the directors are desirous of securing for the company the advantage of his wide experience. G. P. Norton and H. G. Brown, who are due to retire at the annual general meeting, and Sir W. M. Aitken, and John Davidson, who retire in accordance

with the articles of association, offer themselves for re-election. The directors desire to express their appreciation of the very valuable services rendered during a most trying year by the General Manager and other responsible officers, and also of the hearty co-operation of the whole staff.

Three Rivers Traction Co's Bonus for Motormen.

The Three Rivers Traction Co., which operates a line in and around Three Rivers, Que., has had in force for some little time a bonus system for motormen which is working very satisfactorily. The management has favored us with the following information in regard to it: "Prior to the bonus system being inaugurated, there was an alarming frequency of accidents to pedestrians and teams, and to our equipment, so much so, that the insurance company carrying the risk threatened to cancel it. We then decided that we would try the effect of a monthly bonus to our motormen for good operation, and we said to them that we would give a bonus of \$2.50 a month to each motorman who would show, at the end of each month, that there was no well founded cause for complaint against his treatment of the public, or in his operation of the cars and care of the company's property. The effect of this offering has been very marked, and there was almost a cessation of accidents. The improvement thus started has now been continued about three months. I am satisfied that the offer of the bonus did it. We are very strict in considering a man's record for the month, before allowing the bonus. If he is at fault in any way, he loses it, so that it cannot be considered a regular perquisite. The men know they are obliged to earn it."

Port Arthur Civic Ry.—In a review of the Port Arthur, Ont., public utilities for 1916, the News-Chronicle says the number of employes on the Port Arthur Civic Ry. is 55, who were paid during the year \$52,645.20. The revenue from the railway was \$105,901.73. Excellent cars for one-man operation have been provided by remodelling single truck cars, and the article goes on to state: "Every effort possible is being made to conserve the rolling stock, which is now believed to be in better condition than that belonging to any other road in the Dominion. Previously many of the cars and equipment were left exposed to the elements during the year when not in use. To eliminate this condition two metallic sheds were erected at a cost of \$3,300, and now all are stored under shelter. In order to prevent wear and tear on the cars and to give the public a ride from which jars and bumps are absent, the roadbed on the main line from McVicar St. to Bay St., along Cumberland St., is being repaired. During last summer about \$3,000 was spent in this work, which has been completed from McVicar St. to Arthur St. This sum, however, has provided the material necessary for the completion of the work."

Quebec Ry., Light & Power Co.'s Traffic.—A Quebec press report says that 7,396,331 passengers were carried on the company's city lines in the month ended Dec. 31, against 6,566,621 in the same period of 1915. On the Montmorency Division 1,200,214 passengers were carried in the six months ended Dec. 31, against 1,043,803 in the same period of 1915.

Mainly About Electric Railway People.

D. M. Mawhinney, formerly with the Winnipeg, Selkirk & Lake Winnipeg Ry., is reported to have been appointed Engineer for Rockwood Municipality, Man., with office at Stonewall.

C. W. Hartman has been voted \$250 by the Brantford, Ont., City Council in addi-

G. Gordon Gale, M. Can. Soc. C. E.
Vice President and General Manager, Hull Electric Company.

W. G. Murrin
Assistant General Manager, British Columbia Electric Railway.

tion to the \$250 he is paid as a member of the Brantford Municipal Railway Commission, for services as Manager.

F. W. Whitridge, President, Third Avenue Ry., New York, who was also a rail-

way lawyer and writer on political economy, died there recently, aged 64, following an operation for appendicitis.

Ralph M. Reade, Superintendent, City and Quebec County Lines, Quebec Ry., Light & Power Co., contributed a spirited poem, "Make the British Spirit Tell," to a Quebec daily paper recently.

I. L. Matthews was re-elected a member of the Public Utilities Commission at Port Arthur, Ont., Jan. 1, and **M. C. Campbell** was elected to succeed **W. P. Cooke**, who was Chairman of the Commission from its inception.

J. T. Kemp, General Superintendent, Sherbrooke Ry. & Power Co., having resigned, **P. C. Chisholm** has been appointed Power Superintendent, and **F. X. Couture** has been appointed Railway Superintendent, with offices at Sherbrooke, Que.

William H. Dinsmore has been appointed Traffic Superintendent, British Columbia Electric Ry. From Nov. 1, 1909, to Nov., 1915, he was Inspector; Nov., 1915, to Mar., 1916, Chief Inspector, and since Mar., 1916, acting Traffic Superintendent.

A. D. MacTier, General Manager, Eastern Lines, C.P.R., has been elected President, Hull Electric Co., succeeding **W. R. Baker**, who resigned from the directorate on retiring from the C.P.R. service, in which he was Secretary of the latter company and Assistant to the President.

R. H. Sperling, formerly General Manager, British Columbia Electric Ry., at Vancouver, and latterly Assistant Chairman, and a director, in London, Eng., has resigned those positions on taking a commission in the British army, and has been appointed one of the advisers to the directors.

F. C. Chisholm, Superintendent, Southern Division, Southern Canada Power Co., St. Johns, Que., was presented with a gold watch and chain recently by a number of his friends there, on leaving St. Johns for Sherbrooke, where he has been appointed Power Superintendent, Sherbrooke Ry. & Power Co.

Mrs. M. B. Jones, widow of the late Capt. J. T. Jones, President, Niagara Gorge Rd., Niagara Falls, N.Y., Gulf and Ship Island Rd., and the Gulfport and Mississippi Coast Traction Co., Gulfport, Miss., has been elected President of the second company, and will probably have charge of the operation of the third one mentioned.

G. Gordon Gale, M. Can. Soc. C. E., heretofore General Manager and Chief Engineer, Hull Electric Co., has been appointed Vice President and General Manager, succeeding **E. W. Beatty**, K.C., Vice President and General Counsel, C.P.R., who, however, remains a director. Mr. Gale will continue to attend to the engineering work. He was, prior to 1907, Assistant Engineer, Canadian Rubber Co.'s electrical plant; from 1907 to Nov. 1908, Superintendent, Power, Hull Electric Co.; Nov. 1908 to same company; 1909 to June 1914, General Superintendent, same company. He is a graduate of McGill University, an associate member of the Institute of Electrical Engineers, and a member of the Canadian Society of Civil Engineers.

Sir Albert H. Stanley, who was appointed President of the Board of Trade and a member of the British Cabinet recently, in the reconstruction of the British Government, has since been elected a member of Parliament for Ashton under Lyne, Eng., and, following the usual custom, has resigned all directorships held by him. He was born in England, and entered the service of the Detroit (Mich.)

City Ry. in the horse car days. In 1902 he was appointed Assistant General Manager of the railway department of the Public Service Corporation of New Jersey, in 1903 was appointed Manager, and in Jan., 1907, General Manager. He resigned in that year, on his appointment as General Manager of the Underground Electric Railways, London, Eng. He was Managing Director, London Underground Electric Railways, London United Tramways, Metropolitan District Ry., and the London General Omnibus Co.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:

	Jan. 1 to Nov. 1916	Nov. 1915	Nov. 31, '16	Jan. 1 to Nov. 31, '15
Gross	\$604,576	\$562,782	\$2,807,146	\$2,636,479
Expenses	495,039	475,643	2,403,806	2,407,173
Net	109,537	84,139	403,340	229,306

Cape Breton Electric Co.:

	Nov. 1916	Nov. 1915	12 months to Nov. 30, 1916	12 months to Nov. 30, 1915
Earnings	\$34,904.09	\$33,011.80	\$389,650.16	\$350,740.33
Exp.	19,083.26	17,789.98	228,544.47	205,579.75
Net	15,820.83	15,221.82	161,105.69	145,160.58

Detroit United Ry.—Shareholders have been notified that at the annual meeting to be held in Detroit, Mich., Feb. 6, they will be asked to authorize the increase of the capital from \$12,500,000 to \$25,000,000. The object is to raise funds for the general improvement and betterment of existing lines and for the building of a number of extensions. The company owns the Sandwich, Windsor & Amherstburg Ry. in Canada.

Edmonton Radial Ry.—In a recent interview, Commissioner Harrison, who has charge of this line for the Edmonton, Alta., City Council, is reported to have said: "It would be well if the public, just for once, would look upon the railway in the light of a private enterprise, and see how it worked out. Take November, for instance, the street railway, working as a private company, could have paid 4% on its capital investment and still had a little to spare. The capital investment is \$3,000,725.76, and the yearly interest at 4% would amount to \$120,029.13, meaning a monthly charge of \$10,002.42. Other monthly charges would be as follows: Maintenance, \$3,607; operation, \$16,747.65; power charges, \$8,004; depreciation, \$2,154.44; total, \$40,516.38. Deducting this amount from the November receipts leaves \$379.77 to the good, and makes an excellent showing and example of the working of the utility, supposing that it was in private hands and not municipally owned, which forces the placing aside of payments into the sinking fund."

Guelph Radial Ry.—A dividend at the rate of 4½%, totalling \$7,680.39, for 1916, has been paid.

Hamilton St. Ry. earnings for 1916 were the greatest in its history, \$706,739, against \$569,694 for 1915. The city's percentage for 1916 was \$56,543, against \$45,576 in 1915.

Kitchener & Waterloo St. Ry.—V. S. McIntyre, Superintendent, reported to the Kitchener, Ont., Light Commission, Jan. 11, that during Dec., 1916, the passengers carried numbered 119,035, the largest number carried in the same month since the council took over the line. The net profit for Dec., 1916, was \$993.

Montreal Tramways Co.—An issue of \$2,000,000 first and refunding 5% gold mortgage bonds has been placed on the market at 96½ and interest. The amount

of bonds outstanding at the time of the last annual statement was \$13,335,000. Capital expenditure amounting to about \$1,000,000 had been incurred up to June 30, which this issue will cover, and it will also provide for capital expenditure incurred since that date.

Montreal Tramways Co.:

	Dec. 1916	Dec. 1915
Gross earnings	\$615,448	\$541,162
Operating expenses, taxes, etc.	376,123	319,041
Net earnings	\$239,325	\$222,121

Saskatoon Municipal Ry.—The following figures have been reported to the Saskatoon City Council for the week ended Jan. 6, 1917, and for the corresponding week in 1916:

	1917.	1916.
Receipts	\$4,042.35	\$3,709.30
Average receipts	577.48	529.60
Number passengers	82,090	73,690
Number passengers daily	11,727	10,526
Receipts to date	\$3,730.70	\$2,905.45
Average number of cars daily	14 2-7	
Average per car	\$40.42	\$42.15

Toronto Railway:—

	1915	City percentage	1916	City percentage
Jan.	\$473,784	\$68,847	\$471,226	\$70,486
Feb.	470,704	70,614	440,313	66,047
Mar.	518,555	97,237	488,468	93,141
Apr.	496,172	99,234	467,701	93,540
May	500,516	100,103	468,953	93,790
June	467,085	93,417	450,582	90,116

	\$5,822,905	\$910,090	\$5,610,296	\$867,654

The total receipts in 1914 were \$6,052,512, and the city percentage was \$955,740. The receipts for 1914 included \$18,000 from post office arrears from Apr., 1913, to Sept., 1914, the city percentage being increased \$1,800 from this source.

Toronto Ry., Toronto & York Radial Ry., and allied companies:

	Nov. 1916	Nov. 1915	Nov. 31, '16	Nov. 31, '15
Gross	\$911,829	\$851,113	\$9,825,053	\$8,793,719
Expenses	474,520	397,383	5,032,010	4,391,382
Net	437,309	453,730	4,793,043	4,402,337

Winnipeg Electric Ry.:

	Nov. 1916	Nov. 1915	Jan. 1 to Nov. 31, '16	Jan. 1 to Nov. 31, '15
Gross	\$282,899	\$323,025	\$3,023,170	\$3,122,620
Expenses	181,267	188,067	1,946,412	2,136,092
Net	101,632	134,958	1,076,758	1,086,528

The railway earnings for the year ended Dec. 31, 1916, were \$2,075,343, the percentage to which the city is entitled under its agreement being \$10,767.

Sherbrooke Ry. & Power Co.'s Absorption.—It is rumored in Montreal that the Sherbrooke Ry. & Power Co. is about to be absorbed by the Southern Canada Power Co., which is building a transmission line from Windsor Mills to Sherbrooke, Que., and with power purchased from the Shawinigan Co., it will be able to provide a much greater supply of power in the Sherbrooke district, where it is much needed. C. J. McCuaig is President of both the Southern Canada Power Co. and the Sherbrooke Ry. & Power Co. W. C. Hawkins, Vice President and Managing Director, Dominion Power & Transmission Co., Hamilton, Ont., was added to the Southern Canada Power Co.'s board recently.

Guelph Radial Ry.—The Guelph City Council is asking the Ontario Legislature to dissolve the present elective board of directors of the G.R.R., and to declare the council to be elected Jan. 1, 1918, and its successors to be directors of the company.

Quebec Ry., Light & Power Co.—We are officially advised that the company contemplates building an extension from 3rd Ave. and 5th St., along Beauport Road to the city limits, 1.5 miles. H. G. Matthews, Quebec, is General Manager.

Electric Railway Track Laid in 1916.

The statistics of electric railway track laid during 1916, published in our January issue, only require correction in one instance, viz., that of the Edmonton Radial Ry., upon which no new work was done. We have been officially advised that the E.R.R. rents from the Edmonton Interurban Ry 1.13 miles of the track the latter has laid from St. Albert to 124th St. and 18th Ave., paying therefor 8% a year on the cost. The E.R.R. decided to extend its line on Brandon Ave east and west, the idea being to reach Elm Park, a distance of 3,000 ft., but the work has not yet been started. At Brandon St., the E.I.R. line runs straight north, and the proposed extension of the E.R.R. is to run parallel with the G.T.P.R., with the intention of reaching the latter's locomotive house and machine shops, as well as to serve the people of Elm Park.

While the London & Port Stanley Ry. laid a short piece of line on Bathurst St., between Richmond and Ridout Sts., London, Ont., as it will not be connected with the main line east of Richmond St. until the spring, the company does not include it in its mileage.

The Saskatoon Municipal Ry. laid track on the 25th St. bridge, but it is not yet connected with the city system.

Following are revised figures:

	Miles.
Brantford & Hamilton Ry. —	
Market St. to Water St., Brantford....	0.25
Calgary Municipal Ry. —	
17th Ave. and 28th St. W. to Sarcee	
Military Camp	3.00
4th Ave. and Centre St. to Sunnyside	0.50
Hamilton St. Ry. —	
Kenilworth Ave. and Burlington St. to Barton St.	0.50
London St. Ry. —	
Egerton St. to West St.	0.41
Quebec Ry., Light & Power Co. —	
C.P.R. Cross'g to St. Charles Cemetery	0.50
5th St. to 4th St.	1.25
3rd Ave. to Abattoirs	0.25
	2.00
Regina Municipal Ry. —	
C.P.R. Arcoia line to 16th Ave.	0.72
4th Ave. to Standard Ave. and Winnipeg St.	0.58
	1.30
Sarnia St. Ry. —	
St. Clair and Christina Sts. to Clifford and King Sts.	0.50
Saskatoon Municipal Ry. —	
On 25th St. Bridge	0.23
Three Rivers Traction Co. —	
Cap de la Madeleine extension	3.06
Toronto Civic Ry. —	
St. Clair Ave. to C.P.R. tracks on Lansdowne Ave., double track	0.61
Toronto Ry. —	
New entrance to Exhibition	1.91
Yonge St. gap	0.14
Woodlawn Ave. extension	0.04
	2.09
	14.45

The London St. Ry., in addition to the new line above mentioned, laid 2,000 ft. of second track on Dundas St. from the exhibition grounds to the G.T.R. inter-switching track.

The Sandwich, Windsor & Amherstburg Ry. laid 2,200 ft. of entirely new double track line on London St. West, Windsor, replacing a single track line; this, however, does not increase the company's track mileage.

Toronto Ry. Car Barn Destroyed.—A fire broke out in the Toronto Ry. car barn, alongside the Don River, on King St. East, Dec. 28, when the sheds and about 150 cars were destroyed. It is stated that the fire was caused by an overheated stove in a trailer car. No official figures are obtainable as to the full extent of the damage, but unofficial estimates give the value of the cars and sheds with contents, anywhere between \$500,000 and \$1,000,000.

Combination Snow Plough and Freight Car for Three Rivers.

The Three Rivers Traction Co., Three Rivers, Que., has added a combination snow plough and freight car to its equipment. The general dimensions, etc., are as follows:

Length of body	28 ft.
Length over end sills	29 ft.
Length over all, about	38 ft.
Width of body	8 1/2 ft.
Width over all, about	9 1/2 ft.
Weight completely equipped for winter operations	46,000 lbs.

The body is built of wood on a composite underframe, having centre sills of 10 in. channel. The nose plough is built of steel plates and angles, and is made removable. It is raised and lowered by levers operated by a double acting air cylinder inside the car body. The small steel side wings are operated by a hand wheel inside the car body, being held out by a ratchet wheel and a special wooden dog as a safety device. The side wing plough, which is mounted on the right hand side of the car body, is operated by a hand

Vancouver's New Jitney Regulations.

After considerable discussion at several meetings of the Vancouver City Council, the bylaw as to the operation of jitneys in the city was amended in a number of details and finally passed Jan. 6. The original bylaw was passed early in 1914, and was amended June, 1915. The following are the important amendments finally assented to: Jitney licenses, without which no auto can operate as such, are increased from \$25 to \$30 for all 5-passenger cars. Jitney drivers' licenses are increased from \$2 a year to \$5. Applicants for jitney driver's license must give, in addition to their qualifications and description, three recommendations as to their character; two from ratepayers and one from the police. No applicant must be under 21 years of age. Jitney drivers must pass a medical examination as to their physical fitness, eyesight, etc., and also a mechanical examination as to their knowledge of their car, and their ability to drive. Jitney drivers

tain it in use. Jitney drivers, when securing their license, shall designate the fixed route on which they intend to operate and shall receive a permit from the license inspector to operate on such of the following routes as they select: No. 1—Grandview, from Twelfth Ave. east to Alma Road West, via Commercial Drive, Venables, Vernon, Hastings, Granville and Fourth Ave. No. 2—Fairview belt line as at present. No. 3—Twenty-fifth Ave. to English Bay, via Main, Hastings, Granville, Robson, Denman and Davie Sts. No. 4—Hastings Park to English Bay, via Hastings, Granville, Davie, Denman and Robson Sts. All jitneys must complete their routes, either one way or the other, but a driver shall have the privilege of taking a short cut to the terminal point, providing he proceeds in the same general direction.

The amendments were not very heartily received by the jitney men, and several meetings were held to discuss their effect upon the traffic and the action which the British Columbia Electric Ry. had taken in bringing about the amendment was criticized. The jitney men, however, on Jan. 12, decided to take up their licenses, select their routes and co-operate with the city authorities in carrying out the bylaw.

Cars for Sandwich, Windsor and Amherstburg Railway.

The S.W. & A.R., Windsor, Ont., is adding to its rolling stock 2 cars with the following general dimensions:

Length over bumpers	43 ft. 7 3/4 in.
Length over dashers	42 ft. 7 3/4 in.
Length over body	30 ft. 10 3/4 in.
Length of rear platform	5 ft. 7 in.
Length of front platform	6 ft. 2 in.
Width front door opening between posts	24 in.
Width rear door opening between posts	3 ft. 6 in.
Width over side sill plate	8 ft. 2 in.
Width, extreme	8 ft. 4 in.
Height bottom of sill to top of roof	8 ft. 5 in.
Height rail to bottom of sill	2 ft. 9 3/4 in.
Length of cross seats	35 in.
Width of aisle	23 1/2 in.
Seating capacity	46

They will be of the single end type and standard steel frame construction, with resistant post construction, the bodies to have plain arch roof and double trucks of 51-E-1 type, with 33 in. diameter wheels. The seats will be standard, sanitary type; upholstery in rattan; 3 illuminated type of signs in each car, one in front right hand vestibule sash, in upper part, and one at each side of body and arranged in an upper sash; hand brake at front end, operated with 17 in. diameter horizontal brake wheel placed on right hand side of front platform; headlining of 1/4 in. thickness full length of car body lengthwise, and from advertising moulding to advertising moulding crosswise; safety tread at front and rear steps. On all side windows, in connection with sash arrangement, the wire mesh screen will be attached to bottom rail of sash, and this screen will automatically close opening when sash is raised. At rear end of car signal lamps will be installed. The front end will be equipped with Trolley Supply Co.'s arch head light.

The Great North Western Telegraph Co. has opened offices at Grand Beach and Victoria Beach, Man.; Brule and Lanfine, Alta., and Chu Chua, B.C., and has closed its offices at Abenakis Springs Hotel, Capucins, Dunham and Little Metis Light-house, Que.; Portland, Ont.; Oakland, Man.; Errington and Rosebud, Alta.; and Louis Creek, B.C.

Combination Snow Plough and Freight Car, Three Rivers Traction Co.

wheel from inside of car body, and is moved in and out by a heavy steel clad ram operated by rack and pinion, and held out with a special hardwood safety dog. The car is mounted on no. 76-E-1 trucks, and equipped with a Westinghouse double end 101-B-2 quadruple motor equipment, with K-6 controllers, also a Westinghouse double end A.M.M. air brake equipment, with an extra reservoir for the plough equipment. There is a folding seat for the motorman, also track sanders, foot gongs, whistles, poling sockets, arm rest, and other small equipment. The underframe is built specially strong, to allow the car to be used to do shunting if required, when not in use as a snow plough. The accompanying illustration shows the car equipped for winter operation. It was built by Ottawa Car Manufacturing Co., Ltd.

The Brantford Municipal Railway Commission, which manages the Brantford, Ont., Municipal Ry., is composed for 1917 as follows: W. R. Turnbull, Chairman; C. H. Hartman and F. J. Calbeak, John Creasor is Secretary.

Two men were committed for trial at Toronto, Jan. 10, for attempting to secure transportation by fraud on Toronto Ry. cars. The conductor, in collecting fares, thought that two tickets placed in the fare box looked rather flimsy and found that one ticket had been split and an attempt made to pass it as two tickets.

must submit their cars at all times for examination by a jitney inspector to be appointed by the city, who shall be a mechanical expert in automobile matters. Every auto owner who hires any auto driver must report to the license inspector every month particulars of the drivers in his employ and give the reasons for the dismissal of any drivers in the interim. All jitneys operated between sunset and sunrise must, during such time, have the tonneau of the car adequately illuminated as long as the top of the car is up. Lighting is not imperative when the top is down. All 5-passenger jitneys must not carry more than 6 passengers, exclusive of the driver. All 7-passenger jitneys must not carry more than 8 passengers, exclusive of the driver. All jitneys of greater seating capacity than 7 passengers must not carry in excess of 50% additional passengers at any time. No jitney will be allowed to carry more than one passenger on the front seat, exclusive of the driver. (This regulation is not understood to apply to a child in arms.) All jitneys, and autos too, when the safety zones are re-established on car-line streets, must stop not closer than 75 ft. from the corner of any intersecting street on a car line and not closer than 10 ft. from the end of any safety zone. The city will furnish new route signs to all licensed jitneys, but any jitney possessing an illuminated sign approved by the license inspector, may be allowed to re-

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—We are officially advised that while there is under contemplation the building of an extension of between two and three miles, it is very doubtful if it will be done this year. The principal reason for this is the difficulty of securing rails.

Edmonton Radial Ry.—Superintendent Moir laid an estimate before the Edmonton, Alta., Public Utilities Commission. Jan. 10, for a projected extension of the Bonnie Doon car line to 95th Ave., as follows: Ties, \$375; 6,000 ft. of 60 lb. rails, \$3,000; 30 poles and brackets, \$150; grading, labor and ballast, \$650; spikes, bolts and bonding, \$300; total, \$4,475. If the extension should be built another car would have to be purchased to give the same service as at present. Consideration was postponed until the estimates for the year are made up. (Jan., pg. 30.)

Guelph Radial Ry.—We are officially advised that the company has recently completed the placing of gas-welded bonds on a mile of track. Orders have been placed for 6,000 ft. of 80 lb., 7 in. high Lorrain section 335 steel rails for early delivery. This will be used to relay 3,000 ft. of track on Ogilvie St. A. H. Foster is Manager. (Oct., 1916, pg. 425.)

The Greater Winnipeg Waterways District Commission has under consideration a project for building an electric railway to Transcona, Man., but we are officially advised that no decision has been reached upon the matter. (Jan., pg. 19.)

Hamilton St. Ry.—The Kenilworth Ave. loop line was put into regular operation Jan. 1. The King St. West cars run along Burlington St. to Kenilworth Ave., thence along that avenue to Barton St. and back. (Jan., pg. 30.)

Hull Electric Co.—We are officially advised that the only work contemplated for 1917 is the laying of 8,660 ft. of second track and the building of a 4,800 ft. loop line. A press report credited the company recently with having decided on building two miles of new line. (Dec., 1916, pg. 503.)

London & Port Stanley Ry.—We are officially advised that while a small length of track was laid between Richmond and Ridout Sts. on Bathurst St., London, Ont., in 1916, it has not been connected up with the main line east of Richmond St. The work is expected to be finished early in the spring. (Jan., pg. 30.)

Peterborough.—The Peterborough City Council is applying to the Ontario Legislature for power to declare the Peterborough Radial Ry. a public utility in the event of the city acquiring the property and franchises; to authorize the borrowing of money to pay for the same and to give the Public Utilities Commission power to take over and operate the railway. (Oct., 1916, pg. 421.)

Quebec Ry., Light & Power Co.—Track laying on the Limoilou extension is reported to be completed and a temporary service was started Jan. 8. The cars run up 3rd Ave. and 18th St. to Charlesburg Road and connect with the Stadacona line. (Jan., pg. 30.)

St. John Ry.—It is generally understood that the company has purchased the Victoria wharves and maritime warehouses at St. John, N.B., which they have hitherto held under a long unexpired lease. The company is tearing down certain of the Worden buildings thereon,

owing to them being in a dangerous condition. It has not been announced what use will be made of the property. (Jan., pg. 30.)

Toronto Civic Ry.—The new car line on Lansdowne Ave., 0.61 mile long, was placed in operation Jan. 16. Two cars are being operated on it, giving a six minute service. The line extends from the St. Clair Ave. line south to the C.P.R. track.

The city now operates five lines, having a total length of practically 20 miles, as follows: Gerrard St., Danforth Ave., St. Clair Ave., Bloor St. and Lansdowne Ave.

Toronto Ry.—It is expected that the company will start the Pape Ave. line about April 1. This line is to be built by direction of the Ontario Railway and Municipal Board from Gerrard St., northerly along Carlaw Ave. to Guelph Ave., easterly along Guelph Ave. to Pape Ave., and northerly along Pape Ave. to Danforth Ave. A Y is to be put in at the intersection of Pape and Hazlewood Aves. The line is to be completed and ready for operation July 1. (Apr., 1916, pg. 155.)

Toronto Suburban Ry.—The Ontario Legislature is being asked to extend the time for the completion of the Lambton-Guelph line now under construction, and of the extensions authorized to be built under the company's various acts.

Toronto Suburban Ry.—The Toronto City Council is applying to the Ontario Legislature for authority to enter into an agreement with the company for an alternative route in substitution for the one on Davenport Road easterly from Bathurst St., as covered by the agreement of Sept. 4, 1899. The time originally set for the construction of this section of the line by the company, expired Jan. 1, and prior to that date the company was proceeding with the construction, as first planned. Certain residents along the route objected to the construction of the line, and waited on the city council, suggesting another route on Bridgman St. and also that while the matter was under consideration, the council should grant the company a further extension of time to July 1. This was agreed to, and at the council's request the company suspended operations on the construction of the extension.

Transcona Electric Ry.—Application is being made to the Manitoba Legislature for the incorporation of a company with this title to build a railway from Winnipeg to Transcona and throughout the Town of Transcona. Moran, Anderson & Guy, Winnipeg, are solicitors for the applicants. G. Anderson, K.C., a member of the firm, is Counsel for the Winnipeg Electric Ry. Local reports state that it is expected to start construction work early in May and to have the line in operation by the autumn. The plans are said to be prepared and all ready for proceeding with the work. It is further stated that an hourly service will be given between 6 a.m. and midnight, but that it has not been decided whether the cars will run into St. Boniface only, or right through to Winnipeg. (Jan., pg. 30.)

The Sherbrooke Ry & Power Co., Sherbrooke, Que., may, according to a press report, suspend its electric railway service, wholly or partially, for a time, to release power for pressing needs of munition manufacturers.

Ontario Hydro Electric Radial Railway Bylaws.

Voting took place, Jan. 1, in the municipalities concerned in the proposed construction of radial electric railways by the Hydro Electric Power Commission of Ontario, between Port Credit and St. Catharines, and between Welland and Bridgeburg. The first named line, which it is proposed to build, is intended to connect at Port Credit with the proposed through line from Toronto to London, and to run through Hamilton to St. Catharines and eventually to Niagara Falls. Of the 16 municipalities voting on the bylaws to authorize the commission to proceed with the construction, 13 voted in favor, and in three, Hamilton City, Nelson Township and Saltfleet Township, the bylaw was defeated. The voting in Hamilton was 3,192 for and 3,626 against; in Nelson Tp., 90 for, and 101 against; and in Saltfleet Tp., 104 for, and 241 against. The estimated cost of the construction of the first named line is \$11,360,363, and of the second, \$2,208,717. It is expected that arrangements will be made for the resubmission of the bylaw to the ratepayers in Hamilton, Nelson Tp. and Saltfleet Tp. at an early date, but it is said that no actual move towards construction will be made until after the war.

Following is a record of the voting in the various municipalities for the respective bylaws.

Port Credit-St. Catharines Line.		
	For.	Against.
Toronto Tp.	237	125
Trafalgar Tp.	138	43
Nelson Tp.	90	101
East Flamboro Tp.	144	117
Barton Tp.	416	374
Saltfleet Tp.	104	241
North Grimsby Tp.	194	140
Clinton Tp.	150	69
Louth Tp.	298	7
Grantham Tp.	382	95
Grimsby Village	159	69
Beamsville Village	165	23
Oakville	268	37
Burlington	250	123
Hamilton	3,192	3,626
St. Catharines	1,049	375
Totals	7,236	6,545
Welland-Bridgeburg Line.		
Crowland Tp.	191	80
Humberstone Tp.	328	91
Bertie Tp.	538	114
Humberstone Village	146	4
Port Colborne	216	3
Fort Erie	78	8
Welland	452	85
Bridgeburg	148	7
Totals	2,097	392

The St. Catharines City Council, in view of the adverse vote in Hamilton, has requested the Hydro Electric Power Commission to advise whether the proposed railway could be constructed from Port Credit via Burlington Beach to St. Catharines, thus avoiding passing through Hamilton, and as to what saving in the cost of construction and operation would be effected by adopting such route; also as to the saving of time and reduction of rates.

Fares in Port Arthur.—The Port Arthur, Ont., Public Utilities Commission devoted some time, on Jan. 9, to the consideration of fares on the Port Arthur Civic Ry., which have been causing some controversy of late. Chairman A. E. Wideman and Commissioner Rapsey were appointed a committee to investigate the whole matter in conjunction with the manager of the railway. It was pointed out that the passengers carried daily averaged one half of the population, and it was stated that while the average fare received was 3.22 cents, it cost 7.62 cents to carry each passenger.

Electric Railway Notes.

The Montreal Tramways Co. has ordered 25 motor cars and 25 trailer cars to be built in Philadelphia.

The Montreal and Southern Counties Ry. has ordered 3 motor and 3 trailer cars from Ottawa Car Manufacturing Co.

The Port Arthur, Ont., Public Utilities Commission has declined to grant the Salvation Army certain free advertising privileges on the electric railway cars.

The Guelph Radial Ry., owned and operated by the city of Guelph, Ont., has advanced its conductors' and motormen's wages 1c an hour, making them as follows: 1st year, 22c; 2nd year, 23c; 3rd year, 24c.

The British Columbia Electric Ry. announces that as the result of the experiment tried during last summer clear glass will be substituted for the opaque glass at present in use on front windows of its cars.

The Vancouver City Council is applying to the British Columbia Legislature for power, among other things, to enable it to make a distinction between taxi-cabs and jitneys as to license fees, and to enable it to operate motor busses.

The recent fire at the Preston Car & Coach Co.'s works, Preston, Ont., destroyed among other rolling stock: 2 suburban electric cars for Toronto Suburban Ry., 2 suburban electric cars for Niagara, St. Catharines & Toronto Ry., and 1 gas electric car.

The Saskatoon, Sask., City Council has under consideration a suggestion by Commissioner Yorath that the city, owing to the largely increasing cost and the inability of manufacturers to fill orders on short notice, undertake the building of cars for the Saskatoon Municipal Ry.

One of the first acts of the Nova Scotia Tramways & Power Co.'s directors on taking over the Halifax Electric Tramway Co.'s property, Jan. 10, was to authorize a 10% increase of wages of conductors and motormen, to date from Jan. 1. The wage agreement with the men had until May 1 to run.

The Hamilton St. Ry. reported recently that it was several men short of the number necessary to maintain a normal street car service. In addition to the shortage of young men going into the service, the company is losing men who have been with it several years, who are going to other and at present better paid lines of work.

The Lake Erie & Northern Ry., on Jan. 22, put a new time table into effect, under which the first northbound train leaves Brantford at 7.47, instead of 8 a.m., and the first southbound train at 7.50. There is no other alteration of the northbound trains, but all southbound trains except the first leave Brantford at 15 minutes before the hour, instead of on the hour as previously.

The Edmonton, Alta., City Council had soldiers' wives and children transported free on the Edmonton Radial Ry. for a Christmas entertainment. Eight special cars were in operation for five hours on the service at cost of about \$120. Superintendent Moir has asked the Commissioners whether the E.R.Ry. is to be charged with this or whether it is to be paid out of some other city fund.

The Quebec Ry., Light & Power Co. has put in operation a reduced fare on its line from Sillery into Quebec. The straight fare will be 7c, but 15 tickets will be issued for \$1, and there will be the

usual transfer privileges. The old fare was 5c from Sillery to Maple Ave., and city rates inside the limits, making the total fare a little over 9c, where city tickets were used and 10c otherwise.

The British Columbia Electric Ry. has erected two electrically illuminated maps, each 5 x 10 ft., at the approach to its interurban station on Carroll St., Vancouver, showing in colored lights the various lines operated by the company. One map shows the lines between Vancouver and Steveston and Chilliwack, with the New Westminster connections, and the other shows the city lines with outside connections.

City Commissioner Harrison reported to the Edmonton, Alta., Board of Trade recently that an effort had been made to manufacture brake shoes for street cars at the city foundries, but it had been found that they were either too hard, so that they made unreasonable wear of the car wheels, or that they were too soft. The Board of Trade proposes to have another test made to introduce the manufacture into the city.

The Mayor of Vancouver, in the course of his inaugural address to the City Council on Jan. 15, said: "As the agreement with the B. C. Electric Co. expires at an early date, it is imperative that this year's council formulate a definite policy in this connection, the preliminary steps having been taken by last year's council, in the acquirement of certain options on power sites and by applying for the necessary legislation."

The Hamilton & Dundas St. Ry. has entered into an agreement with the Toronto, Hamilton & Buffalo Ry. for making a connection between the two companies' lines between Hamilton and Dundas, and for the operation of the T.H. & B.R. over the H. & D. St. Ry. tracks into Dundas, for freight purposes only. The agreement is to run for 50 years, and because it is for that period and not for one of less than 21 years, it is necessary to have it ratified by act of parliament.

The Edmonton, Alta., City Council has authorized application to be made to the Alberta Legislature for power to pass a bylaw to regulate the jitney traffic in the city. The city's Public Utilities Commission desires to have the jitney traffic restricted to streets upon which the Edmonton Radial Ry. does not operate, and as a basis of framing a bylaw the regulations at present in force in Calgary, Alta., were on Jan. 13, recommended for adoption.

The Montreal & Southern Counties Ry. has ordered 3 motor and 3 trailer passenger cars from the Ottawa Car Manufacturing Co. They will be 55 ft. long over buffers, and 8 ft. 1½ in. wide, equipped with lavatory accommodation, water coolers, hot air forced draught heaters, etc. The electrical equipment will be Westinghouse 306 interpole motors with H. L. multiple control, and the air brake will be Westinghouse AMM type. The governors on all cars will be operated through a master governor on the leading car of each train.

Port Arthur Civic Railway is managed by the Port Arthur Public Utilities Commission, which is composed of: A. E. Wideman, chairman; I. L. Matthews, G. H. Rapsey, M. C. Campbell and Mayor Cowan. At the civic elections in January, I. L. Matthews was re-elected a member of the commission, and M. C. Campbell was elected to succeed W. P. Cooke, who was chairman of the commission from its inception in January, 1915.

United States Electric Railway Earnings, Etc.

The American Electric Railway Association has prepared the following comparison of statistics for the years ended June 30, 1915 and 1916:

		Increase over 1915, 1916.	per cent.
Operating revenue	\$208,641,000	3.47	
Transportation revenue	202,822,000	3.54	
Other ry. operating revenue	5,813,000	.87	
Operating expenses	126,352,000	2.40	
Net earnings	82,289,000	5.15	

Reduction of Speed on Galt, Preston & Hespeler St. Ry.—The Ontario Railway and Municipal Board, as a result of a visit paid to Kitchener by Vice Chairman A. B. Ingram, passed the following order, Jan. 2, re accident in the city of Kitchener on Galt, Preston & Hespeler St. Ry. and Preston & Kitchener St. Ry. Co.'s line, resulting in the death of Jas. Gancie on Nov. 18, 1916: "Upon consideration of the company's report and of the finding of the coroner's jury, and the board having investigated the facts in connection with the accident, and having inspected the railway in Kitchener and its operation, the board orders that no car of the said companies be operated at a speed exceeding 15 miles an hour between the southerly limit of the city of Kitchener and the point where the companies' line connects with the Kitchener & Waterloo Ry. Co.'s line."

The Ottawa Electric Ry. Bulletin, Christmas number, was a considerably enlarged issue, containing among other matter a Christmas greeting from the President, T. Ahearn; portraits and biographies of "Pioneers of the Electric Railway Industry in Canada," viz., T. Ahearn, W. Y. Soper and J. D. Fraser, who are the company's President, Vice President and Secretary-Treasurer respectively; a historical sketch of the company, an illustration of one of its first sweepers in 1891; portraits and biographies of old timers of 1891, "still in the service and going strong," and portraits of the company's contingent in the 207th Battalion, C.E.F., besides a lot of other interesting matter.

Overcrowding on Toronto Ry. Cars is again occupying the attention of the city council. The Medical Officer of Health was instructed to proceed against the company for endangering the public health by overcrowding its cars, and he instructed his staff to obtain evidence to enable a prosecution to be undertaken, after which a charge was laid and the case remanded by the police magistrate. The question of overcrowding has been before various relays of city councils in Toronto for many years, and some hope is still entertained that some day a bright idea on the subject may enter the minds of those in authority, which, when put into practice, would cause overcrowding to cease.

The Toronto Ry. was sued recently by M. J. Quinn, Manager, National Equipment Co., Toronto, for \$5,000 for alleged injury to his reputation and expense incurred, respecting a charge in the local police court of disorderly conduct, he having advised some women who were injured when alighting from a street car not to give their names to the conductor. He claims that some years ago, while acting for the Ontario Railway and Municipal Board, he reported adversely on certain fenders used on the company's cars, and that since that time he has been a marked man. The jury awarded him \$528.25 damages.

Marine Department

The Dominion Wreck Commissioner and the St. Lawrence Pilots.

At the conclusion of an investigation at Montreal, recently, the Dominion Wreck Commissioner, Capt. L. A. Demers, made the following statement: The court at this juncture wishes to comment favorably on the work of pilots, both of the Montreal and Quebec Districts, in connection with last season's work, which has been free from serious accidents, and advises them that there must be no relaxation in fulfilling their responsibilities. The season is not yet ended. The reputation of the St. Lawrence route must be without a stigma. Masters of vessels look to the pilots as their advisers, and practically pin their faith on them, hence it devolves on pilots to execute all prudence and prevent damage and delays, which are as important almost, even if no damage is sustained by the vessels. This court has a mandate to fulfill, and it is to penalize those who are found to be lacking in performing their duties in a practical common sense manner. The St. Lawrence is well buoyed, lighted and equipped, and there is nothing wanted which modern ingenuity, with a view to facilitating navigation, could devise. The pilotage is efficient, and sober and intelligent men form the association. Yet with all this, there must not be a moment of forgetfulness or inattention found in the pilots' actions. Varying climatic conditions must be expected and met with foresight, judgment and proper action. The court is deeply imbued with the idea that there must be no cause for reflection to be made on the administration and composition of the men engaged in bringing vessels to our ports, and trusts that henceforth pilots will be thoroughly awake to their responsibilities.

Long Sault Development Co's Project.

Canadian Railway and Marine World for January referred to the final quashing of this project, the United States Supreme Court having dismissed the company's appeal against the New York courts' annulment of its franchise, and mention was made of the fact that the project had been persistently fought at every stage by the Dominion Marine Association and the Shipping Federation of Canada, on the ground that it would interfere considerably with the safe navigation of the St. Lawrence River. The Dominion Marine Association, particularly, performed very important work in this connection, kept in close touch with what was going on, and lost no opportunity to protest against the proposals as occasion required. Latterly it was not necessary for the association to move in the matter, as it was relying upon no progress whatever being made without the assent of the Canadian Government and the International Joint Commission.

Our attention has been called to the fact that the Dominion Conservation Commission also took a very active part in opposing the project from the commission's inception in January, 1910. In 1913 the commission published a report of nearly 400 pages, including all available data respecting the company and its project, and subsequently assisted the State

of New York at every stage of its fight with the company. When the case was heard by the U. S. Supreme Court in April, 1916, the Conservation Commission had a shorthand reporter present and procured a stenographic report. When the court ordered a rehearing, the commission had the only record of the arguments and furnished the State of New York with a copy. The order for a rehearing was totally unexpected, and the State of New York would have been much inconvenienced had a report of arguments by counsel been unavailable.

Lake and Rail Rates Over Canada Atlantic Transit Co's Line.

The Interstate Commerce Commission gave the following decision at Washington, Dec. 11:

At the close of navigation on the Great Lakes for the season of 1915 the operation of the lake and rail rates on cotton and cotton linters, named in a tariff of the Chicago, Rock Island & Pacific Ry. Co., and therein made applicable in connection with all the lake lines, was superseded, for the closed season, by a supplement in due form properly filed. On Mar. 17, 1916, another supplement to the same tariff was filed to take effect on three days notice under the authority of rule 12 (b) of Tariff Circular 18-A relating to the restoration of rail and water rates so temporarily withdrawn. While on its face this supplement cancelled the previous one of Nov. 30, 1915, specific provision was made for the restoration of the rates only in connection with the Lehigh Valley Transportation Co. It did not purport to cancel the rates theretofore applicable over the other lake lines named in the tariff; and under the commission's rules the cancellation of the other routes could legally be effected only upon 30 days notice. Although the railway company subsequently was granted permission, on one day notice, to restore the rates theretofore applied in connection with the Canada Atlantic Transportation Co., that course was not followed, because of a disagreement between the two companies respecting divisions. Finally another supplement was filed, to become effective on May 15, 1916, in which the Rock Island Ry. sought to eliminate the transit company from participation in its tariffs. The effectiveness of this supplement, upon the protest of the latter company, was suspended under an order by this commission.

The respondent contends that the lake and rail rates, having been suspended in the fall of 1915 and not having been restored in the spring of 1916, the only result that could have been effected by the supplement of May 15 was the elimination of a tariff anomaly, the tariff itself naming the transit company as a party to the lake and rail rates while the two prior supplements thereto indicate that the rates do not apply in connection with that line. This is not a correct view of the effect of the tariff situation disclosed on the record before us. As the supplement of Mar. 17 did not make specific provision for the cancellation of the route in connection with the transit company, and could do so only upon 30 days notice, its effect was to restore the rates formerly applicable in connection with that route. It follows, therefore, that the supplement

proposing to eliminate the Canada Atlantic Transit Co., if permitted to have become effective, would have cancelled the rates then in effect in connection with that line. As no reason has been offered of record for this course other than the failure of the railway company and the transit company to agree upon the divisions, we find that it has not been justified as required by law, and the respondent and its receiver will therefore be required to cancel the supplement in so far as it proposes to cancel the application of the respondent's lake and rail rates over the route in question.

The commission ordered that the Chicago, Rock Island and Pacific Ry. and its receiver be required to cancel said schedules, on or before Feb. 12, 1917, in so far as they propose the elimination of representation by the Canada Atlantic Co. in Chicago, Rock Island & Pacific Ry. tariff I.C.C. no. C-9896.

The Dominion Wreck Commissioner and His Critics.

The stranding of the British s.s. Middleham Castle on Matane Reef, Que., July 27, was a comparatively small affair, and the enquiry into the causes leading to it, held at Montreal, Aug. 3, by Capt. L. A. Demers, Dominion Wreck Commissioner, was not marked by anything noteworthy, either in the way of evidence or final judgment. It was held that the master, Capt. Kelly, had been guilty of reckless navigation in unknown waters, but owing to the general circumstances surrounding the case, he was merely reprimanded. Apparently the master was quite satisfied, and from reports was pleased that he had been dealt with so leniently. No sooner, however, had he returned to England, and apparently made complaint to the Mercantile Marine Service Association, than there was a perfect whirlwind of vituperation, either by the association or by the Liverpool Journal of Commerce on the association's behalf, directed at the Wreck Commissioner's report, his method of dealing with cases in general, and the St. Lawrence route and everything connected with it. For such a trivial case, as the one mentioned, the expenditure of printer's ink alone is an extravagance. While the case was being brought into so much prominence in the Liverpool paper, the association communicated with the Dominion Minister of Marine, and a reply was sent by the Deputy Minister, to which was attached a copy of a report on the case by the Wreck Commissioner, and at the same time a copy was sent to the Journal of Commerce, in answer to the criticism in the paper, as mentioned above. Following is a copy of the Wreck Commissioner's report to the Deputy Minister:—

"Referring to the criticism which has been made by the Journal of Commerce, and to the letter which has been written to the Minister of Marine, by the secretary of the Mercantile Marine Service Association, re Middleham Castle, I may say I do not think the criticisms are justified or based on facts. My condemnation of the action of the master of this vessel was to the effect that his sailing within three quarters of a mile of a coast absolutely unknown to him was a subject for censure; secondly, that provision or steps had not been taken at Syd-

ney to procure a proper chart of the St. Lawrence River. Even admitting the U.S. chart which he had to be a good and acknowledged chart, it was plainly marked on it that there is a buoy at the end of Matane wharf and a bell buoy outside. The weather was hazy, but the master said he could see some distance ahead, and if proper attention had been paid and a good lookout kept, which was necessary under the circumstances, he would have been able to distinguish between a bell buoy and an ordinary can buoy, which is placed at the end of the wharf for the guidance of local craft going in and out of that place. Notwithstanding the fact that he grounded his vessel there, and he saw some influences were driving her in towards the shore, he followed the same procedure after floating his ship, and passed inside of Cock Point buoy, a place where even our smallest coasting vessels do not like to navigate. In my judgment in this case I did not make any reference to the second occurrence, but had his ship come to grief inside of Cock Point buoy and the land I would have dealt with his certificate. It will all go to show that the navigation of this vessel was not carried on according to the proper rules, or with the necessary prudence which is required in the St. Lawrence. Further, the evidence of the mate of this vessel, who holds an extra master's certificate, shows that he stated that had he been master he would have sailed his vessel farther away from the land, and also that he noticed there was an influence drawing them in towards the shore. If anyone navigating a vessel cares to take the trouble to enquire and to read the sailing directions, he will find that there is a current running there which throws objects from the north shore to the south. In view of the above facts I think that the judgment, which was purely and simply a reprimand, cannot be considered as anything but lenient under the circumstances, and all the criticism which has been made as unfounded. It had been repeated to me that the master, Kelly, after receiving the reprimand, stated that he was agreeably surprised to have such a light penalty inflicted upon him. With respect to the charts, I may say I have only to refer to the report from the Transport Officer at Sydney, Capt. Pascoe, who states that no application for charts was made to him by Capt. Kelley, and that he has copies on hand which he has heretofore furnished to transports."

This letter was duly published in the paper mentioned, and the following day a letter was published in the same paper, from Thos. Scott, Secretary of the association, as follows:

"Your issue of yesterday contains a copy of a communication addressed to me by the Canadian Minister of Marine, in which Capt. Demers replies to certain criticisms directed by this association against his judgment on the stranding of the s.s. Middleham Castle. The statements of the Wreck Commissioner in his endeavor to sustain his severe censure of the master, had, last Tuesday afternoon, the very patient consideration of my council, who, at the same time, heard the reply of the master to the defence put forward by Capt. Demers. The meeting was quite satisfied, from the evidence before them, that in no way can Capt. Demers' language at the close of the enquiry be justified.

"In forwarding this correspondence to you for publication, this association feels that such a proceeding is not only premature, but indecorous. My council have a

very full answer to each of the Wreck Commissioner's contentions, and it would have been more in keeping with the traditions of a Government department if Mr. Johnson had refrained from publicity until the case had arrived at an indisputable conclusion."

It is stated in this last letter that the council of the association was quite satisfied from the evidence before them, and the master's defence, that in no way can Capt. Demers' language at the close of the enquiry be justified.

Surely the proper place for the master to make his defence is at the enquiry itself, and with all due respect to the council of the association, we may say that we fail to see that the members are capable of forming any opinion on the merits of the case without actual personal knowledge of the scene of the casualty, which is possessed by the court which dealt with the case. The language used by Capt. Demers at the conclusion of the enquiry was, as he states, in the nature of a reprimand, and could in no way be classed as exceptionally severe, seeing the carelessness of navigation, as shown by the master's own evidence. The last paragraph of Mr. Scott's letter questioning the decorum of the Deputy Minister in sending the report to the press would, perhaps, have been written with better grace had the hands of the association been entirely clean in the matter. Would it not be correct to presume that the original criticism appearing in the Journal of Commerce, which caused the Deputy Minister to send the report to that paper for publication, was supplied from the association's office?

Canada Steamship Lines, Ltd., Finances.—A general meeting of holders of debenture stock and bonds of the company was called to be held at Montreal, Jan. 30, to consider and pass resolutions, to make an agreement with the Montreal Trust Co. with the object of securing the redemption of Richelieu & Ontario Navigation Co.'s outstanding bonds and the ultimate discharge of the mortgage securing same; and to amend the provisions of the trust deeds of Oct. 8, 1913, and Feb. 11, 1914, securing the 5% consolidated first mortgage debenture stock and bonds of C. S. L., Ltd., by providing that any stock or bonds purchased by the trustees may, in lieu of being kept alive, be surrendered on terms that the company shall not reissue any in place thereof, and that the stock or bonds so surrendered shall continue to be taken into computation for limiting the amount which the company is entitled to issue.

St. John, N.B., Harbor Improvements Discontinued.—Work on the harbor improvements at St. John, N.B., covered by contracts awarded to the Norton Griffiths Construction Co., has been discontinued, and no decision has been arrived at in regard to its continuation. These contracts covered the construction of 4,600 ft. of breakwater, which is practically completed; 9,900 lineal ft. of quay walls, on which no work has been done; a dreadnought dry dock, 1,000 ft. long, the excavation for which has been made, and the reclamation of large tracts of land. A considerable portion of the dredging work has been done in the harbor basin and channel. It is stated that the labor problem is one of the contributing causes of the abandonment of the contract. Col. Norton Griffiths, M.P. of England, who is chiefly concerned, has given up all contracting work of this nature, and is devoting himself entirely to work connected with the war.

Steamship Construction at Port Arthur.

The Port Arthur Shipbuilding Co. has received orders for 6 additional salt water steamships of the Norwegian type, similar to the steamships Blaamyra and Thorjerd, turned out from the company's yards recently. They will be of the following dimensions: Length over all, 261 ft.; length between perpendiculars, 251 ft.; breadth moulded, 43 ft.; depth moulded, 28 ft. 2 in.; carrying capacity, about 3,000 gross tons.

They will be of the single deck type, with poop, bridge and forecastle, steel deckhouse on bridge deck and chart room on top of deckhouse, with navigating bridge. They are being built on the transverse system of construction with two cargo holds and two hatches in each hold. No. 1 hold will extend from collision bulkhead to boiler room bulkhead, and no. 2 hold from engine room bulkhead to after peak bulkhead. The propelling machinery will be located amidships. The double bottom will be 3 ft. deep, extending from collision bulkhead to after peak bulkhead, divided by transverse water or oil tight floors into a number of compartments. Part of the double bottom will be utilized for fuel oil, the remainder of the fuel to be carried in wing tanks, which can also be used for coal. The officers and crew will be berthed amidships on bridge deck, where also will be the mess rooms, galley, pantry, lavatories, etc. The firemen and sailors will have their quarters aft on main deck.

The two main boilers will be of the Scotch marine type, single ended, and arranged abreast. They will be 14 ft. 8 in. diam. by 11 ft. long and will have a combined grate area of 126 sq. ft. Each boiler will have 3 corrugated furnaces, of the suspension type, 42 in. inside diam., and will be fitted for natural draught.

The propelling machinery will consist of triple expansion engine with surface condensers, built-in type, 3 cylinders each, working each on a separate crank placed at an angle of 120 degrees. The slide motion will be of the Stephenson link type. Cylinders 20, 33 and 54 in., with a stroke of 40 in. The average working horse power will be 1,200, maximum 1,300. The high pressure cylinder will have piston valve, the low and intermediate will have double ported slide valves with relief frames, and the low pressure one will have a Lovekin assistant cylinder. The high pressure cylinder will be supplied with a loose bushing of hard cast iron. All cylinders will have relief valves, top and bottom, discharging into the atmosphere. The turning gear will consist of a single cylinder engine, driving through worm gearing, a shaft mounted on sliding cast steel worm. The propeller will be of cast iron, solid section, with four blades. The air pump will be bolted to the back column of the engine.

The steam steering gear will be placed on the main deck in the engine room. There will also be a hand steering gear aft, and 8 x 6 in. steam windlass fitted with hand attachment and friction brakes. All anchors will be of the stockless type, of size in accordance with Lloyd's requirements. To facilitate the handling of the cargo there will be six 7 x 12 in. reversible steam winches, and 6 derrick booms to lift 4 tons each.

The vessels will be fitted throughout with electric light. One 7½ k.w. generator will be fitted in engine room. All wires, with the exception of those in cabins, will be enclosed in conduit, with outlets terminating in watertight fixtures.

Valetta-Sol Bakken Collision.

Following is a summary of the judgment by Capt. L. A. Demers, Dominion Wreck Commissioner, concurred in by Commander E. Wyatt, R.N.R., and Capt. R. Jones, as nautical assessors, re the collision of the steamships Valetta and Sol Bakken, near Cape Dogs, in the River St. Lawrence, Oct. 4, 1916.—The court finds that both vessels were to blame, each having violated articles 21, 27 and 29. The evidence was very contradictory, and the court came to this decision on the fact that neither vessel, when collision was imminent, took the action provided for in the articles mentioned. The chief officer of the Sol Bakken was remiss in his duty in not complying with the rules of the road, but as he is a foreigner he cannot be dealt with. The master of the Sol Bakken is exonerated from blame. The pilot, Arthur Paquet, committed a grave breach of discipline in leaving his post, and owing to the fact that he has been, and is now, serving as an officer in the Canadian Army, his license will not be dealt with, but he is fined the maximum amount of \$400, and is to defray the expenses of his travels to Halifax and return to his home.

The master of the Valetta is exonerated from blame. The second officer, D. Gillies, for leaving the bridge at a crucial moment and failing to comply with article 21 (note), is severely criticized and reprimanded. Owing to the conditions existing, and the presence of a pilot near him, his certificate will not be dealt with. The pilot, Ernest Bernier, knowing that his vessel was sheering, is found at fault for the casualty, and is fined \$300, and is to defray his own expenses.

Collingwood Shipbuilding Co., Ltd.—Some details of the change of ownership of this company were given in our last issue, when it was stated that a new company would be incorporated. This has now been done, the Collingwood Shipbuilding Co., Ltd., having been incorporated under the Dominion Companies Act, with capital stock of \$2,600,000, and office at Collingwood, Ont. It is authorized to build, sell, own, charter and operate steam and other vessels, wrecking outfits, wharves, docks, piers, dry docks, telegraph and telephone lines on its own lands, wireless telegraph outfits for its own use, steamship and railway terminals and other transportation and storage facilities; to carry into effect an agreement between H. B. Smith, J. W. Norcross and R. M. Wolvin, named the vendors, and W. S. Morlock as trustee, whereby the vendors, as promoters of the company agree to sell the undertaking known as Collingwood Shipbuilding Co., Ltd., incorporated under the Ontario Companies Act, by which they will make a profit in shares of the company.

The Lake Carriers' Association's annual meeting was held at Detroit, Mich., Jan. 18. The report states that 73 lives and 14 vessels were lost last year on the Great Lakes. The ore movements were 64,734,198 tons, against 49,070,478 for 1913, the previous highest year. The grain shipments for the year were 363,999,156 bush., a decrease of 22,166,896 bush. from 1915. The average rate per bush. during 1916 was 4½¢, compared with 2¼¢ for the year previous. Seventy-one vessels were sold, totalling 683,770 tons, and 59 vessels were reported as under construction for delivery during the current year. W. Livingstone was re-elected President and Chairman of the Executive Committee.

Atlantic and Pacific Ocean Marine.

The name of the s.s. Prospective, owned by the Dominion Public Works Department, and registered at Vancouver, B.C., has been changed to Point Hope.

The Cunard Steamship Co. is reported to have two steamships under construction in Great Britain, for service on the Pacific Ocean between Vancouver and the Orient.

Manchester Liners' s.s. Manchester Inventor, which left St. John, N.B., early in January, has been sunk by an enemy submarine. She was of 4,247 tons, and has been operated for some time between Manchester, Eng., and Montreal and St. John.

The Newfoundland schooner Harry Adams, from St. John's to the Mediterranean with fish, is reported to have been torpedoed by the enemy in the Bay of Biscay. The crew were placed in an open boat, and eventually landed at Ferrol, Spain.

The France & Canada Steamship Co. is reported to have chartered the s.s. Newton from the New England Coal & Coke Co., Boston, Mass., at approximately \$100,000 monthly. She will be operated on the company's route between North America and St. Nazaire, France.

The Osaka Shosen Kaisha, operating between Japan and Puget Sound ports and San Francisco, has announced that in future Victoria, B.C., will be the only Canadian port of call, instead of Victoria and Vancouver as hitherto. If sufficient inducement offers, and time permits, occasional calls may be made at Vancouver.

The International Mercantile Marine Co.'s earnings for December are reported as nearly \$5,000,000, or about \$500,000 more than the best previous estimate. The trend is still upward, and it is expected that later months may exceed the record monthly earnings of \$6,700,000 in 1916.

The France-Canada Steamship Co.'s s.s. Arrino, which left this side recently with cargo for St. Nazaire, France, is reported to have rammed a German submarine while it was engaged in laying mines outside of St. Nazaire harbor. The submarine was disabled in the ramming, and was subsequently destroyed by a French patrol boat.

The Portuguese s.s. Tras Os Montes has been chartered for Canada Steamship Lines' service between New York and Bermuda, and was placed in service on that route toward the end of January. She is the largest vessel ever run on these trips, and has four large observation decks, parlor rooms and all other up to date accommodation. Her dimensions are, length 462 ft., beam 57.6 ft., depth 36 ft.

The yacht Florence, owned by Sir John C. Eaton, Toronto, and latterly operated as a patrol and scout vessel by the Dominion Naval Service Department, is reported sold to the French Trading Co. of Martinique, for commercial purposes. She was built at Elizabeth, N.J., in 1903, and is screw driven by engine of 65 n.h.p. Her dimensions are, length 144 ft., breadth 22.6 ft., depth 9.6 ft.; tonnage, 237 gross, 123 register.

The Hamburg-American Line, which is to a large extent controlled by the German Government, announced, toward the end of December, that it was open to make arrangements for shipping freight from the U. S. to Hamburg, upon the resumption of peace, or such earlier time as

the obstacles to a resumption of traffic may be removed. The announcement is a little previous, as there appears to be no possibility of an immediate peace, and the obstacles to a general resumption of German shipping are still in existence.

The s.s. Thorjerd, which recently left Port Arthur, where she was built, for New York, to take up coasting service, arrived at her destination early in January, in a battered condition, due to heavy storms, after passing from the Gulf of St. Lawrence. She ran out of fuel, and it is stated that on her arrival the pilot house was the only woodwork left in her construction, everything else having been used for fuel. She eventually had to be towed into port.

A number of British and allied steamships, trading across the Atlantic Ocean, are reported to have been sunk or taken to neutral ports as prizes, by a German raider, or raiders, running loose in the Southern Atlantic. Details are naturally lacking, but amongst those mentioned, the most intimately concerned with Canada is the C.P.R. s.s. Mount Temple. She was built at Newcastle upon Tyne, Eng., in 1901, of steel, with twin screws, triple expansion engines, electric light, submarine signalling and wireless telegraph equipments, etc. Her dimension were, length 485 ft., breadth 59 ft., depth 30.4 ft.; registered tonnage, 8,790.

Regarding the reports about the Cunard Steamship Co.'s possible arrangements for the extension of its services on the Atlantic and Pacific Oceans, the following paragraph is taken from the Canadian Northern Ry. report for the year ended June 30, 1916: An agreement of great importance in the development of the system's freight and passenger traffic was made during the year with the Cunard Steamship Co. Under its terms the Cunard Co. has taken over the Atlantic steamships controlled by the C.N.R. and a close working alliance is in effect between the two companies, the various Canadian services of the Cunard Line and the C.N.R. having become, in effect, a single transportation unit between Europe and Canada. Steamship services on the Pacific Ocean are also in contemplation."

Port Maitland Harbor.—The Public Works Department has dredged a channel 328 ft. wide, from deep water in Lake Erie to the entrance between the breakwater piers at Port Maitland, the west edge of the channel being in line with the west breakwater pier. From the inner entrance to the piers, a 300 ft. channel has also been dredged upstream to the car ferry slip, opposite which a turning basin has been dredged 650 ft. wide. From this point the existing channel of Grand River has been deepened and widened, near the east shore, to an average width of 100 ft., for 2,200 ft. All the dredging has been done to a depth of 21 ft. below the datum line, or deeper, the datum line being 571.8 ft. above mean sea level.

Lake and Rail Rates Cancellation Forbidden.—The Interstate Commerce Commission has decided at Washington, D.C., that the proposed cancellation of joint rail, lake and rail class and commodity rates from points in the east to points south and west of the Great Lakes, now maintained by various railways, in connection with two steamship lines operating on the lakes, the Cleveland & Buffalo Transit Co. and the Detroit & Cleveland Navigation Co., is not justified.

Maritime Provinces and Newfoundland.

Pickford & Black, Halifax, N.S., are reported to have chartered the Norwegian s.s. Amanda for service between Halifax and Jamaica.

The harbor of St. John's, Nfld., is again open to navigation, and the lights in St. John's harbor, at Cape St. Francis, Cape Spear, Bay Bulls, Ferryland Head and Fort Amherst, are re-exhibited.

Vessels larger than fishing boats are warned against attempting to enter Little Glace Bay harbor, on the east coast of Cape Breton, N.S., on account of the depth of the channel having been reduced to 5 or 6 ft., owing to ballast having been washed from the piers at the entrance during a recent storm.

The Eastern Steamship Corporation's property has been sold under foreclosure proceedings, for \$3,366,000, the purchaser assuming all liabilities. The properties covered by the transaction include wharves and warehouses at St. John, N.B., and in Maine, Massachusetts and New York, and a number of steamships. An interest in the Boston & Yarmouth Steamship Co., consisting of 6,700 shares, valued at \$335,000, was also included in the sale. A steamship service was operated between St. John and Boston by the steamships Calvin Austin, Governor Cobb, Governor Dingley and North Star.

Province of Quebec Marine.

The Quebec Board of Trade is conducting a campaign among British shipbuilders, pointing out the advantages as a location for shipbuilding plants.

During 1916, between April 24 and Dec. 15, 3,265,022 tons of cargo passed through the Lachine Canal, against 3,265,294 for the previous year. The canal was open for business 236 days in each year, and the cargo tonnage is practically the same in each case.

The Assistant Deputy Minister of Marine advised the Quebec Board of Trade recently that the North Channel, below Quebec, which had been dredged to a greater depth than 25 ft. at low tide, would not be open for navigation for ocean steamships next season, as there are a great many points sticking up which will have to be cleaned up. An elevator dredge is under construction, and when this is ready for service about the middle of the season, it will be placed at work dredging to a minimum depth of 35 ft. at low tide, which the Department desires to have before opening the channel to navigation.

The Shipmasters' Association, at its annual meeting at Vancouver, B.C., Jan. 5, discussed the question of "double-headed" certificates held by some masters. This has been up for discussion on several occasions, but the association has taken no definite action. The members claim that it is unfair that U. S. shipmasters, in addition to having U. S. papers, can obtain Canadian papers by showing that they have sailed during three years in Canadian waters, while the U. S. authorities do not extend similar privilege to Canadian shipmasters. The discussion was adjourned to a future meeting.

The name of the s.s. Cora, which has been purchased in the U. S., and placed on the Canadian register, has been changed to Thomas B.

Ontario and the Great Lakes.

The Governor General in Council has approved amended regulations for the ferry across the Niagara River between Fort Erie, Ont., and Buffalo, N.Y.

The Toronto Harbor Commission reported to the city council recently, that up to the end of Nov. 1916, \$1,014,411 had been spent on harbor improvements, \$119,828 being spent in November. The total appropriation to that date was \$2,693,896.

The Collingwood Shipbuilding Co., Ltd., Collingwood, Ont., has the following repair work on hand: s.s. J. A. McKee, side damage; s.s. Alberta, machinery overhauling; s.s. Glen Lyon, bottom damage; s.s. Iroquois, bottom damage; s.s. Imperial, collision damage.

The ferry steambot Bigelow, operating between Brockville, Ont., and Morris-town, N.Y., crossed the St. Lawrence between these points Jan. 10, the river being free from ice. On Jan. 11 the river was frozen over and pedestrians were able to cross without difficulty.

The Grain Growers' Export Co. failed in its action at Toronto, Jan. 24, against Canada Steamship Lines, Ltd., to recover \$18,376.75 for the destruction of 10,501

bush. of wheat, which was loaded into a vessel which it was alleged was not tight, staunch and strong or fit to carry such cargo.

The U. S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level for December as follows: Superior, 603.16; Michigan and Huron, 580.56; Erie, 571.56; Ontario, 245.37. As compared with the average December levels for the past 10 years, Superior was 0.94 ft. above; Michigan and Huron, 0.55 ft. above; Erie, 0.11 ft. above, and Ontario, 0.02 ft. below.

Canada Steamship Lines, Ltd., has purchased the machinery of the s.s. Fred Pabst from the Reid Wrecking Co., Sarnia. The machinery is to be removed and installed in a new wooden hull which the company will build at its shipyards at Sorel, Que. The vessel was built in 1890, and has dimensions, 287 ft. keel by 42 ft. beam, 2,430 tons gross, 1,929 tons register. She is equipped with triple expansion engines with cylinders 21, 33½ and 57 in. diam. by 42 in. stroke, supplied with steam by 2 Scotch boilers 13 by 10½ ft.

The United States Circuit Court of Appeals on Jan. 2 affirmed the ruling of the lower court which issued an injunction restraining the Great Lakes and St. Law-

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during December, 1916.

ARTICLES		CANADIAN CANAL	U. S. CANAL	TOTAL
Copper	Eastbound	Short tons 3,882	122,161	126,043

The Canadian canal was opened April 18 and closed Dec. 18, 1916; season 245 days.

The U.S. canal was opened April 20 and closed Dec. 19, 1916, season 244 days.

rence Transportation Co. from selling of its steamships, claimed by the Scranton Coal Co. as being used by it for coal transportation. The situation is rather an interesting one, as the vessels were sold some time ago, delivery has been made, and one of them, at least, has been sunk by the enemy. When the injunction was granted, the vessels were at Montreal, and had been sold to French parties.

British Columbia and Pacific Coast.

The Harbor Shipping Co. is reported to have chartered the sealing steamship Eva Marie for general freight in the Gulf of Georgia and Puget Sound.

The Governor General in Council has approved the Vancouver Harbor Commission's bylaw 114, providing that the salary of the Superintendent of the Government wharf at Salisbury Drive be \$150 a month, from Dec. 1, 1916.

It is reported that the C.P.R. will withdraw its s.s. Otter from the Gulf Islands run, Feb. 1, and that the Dominion Government has been notified that the company will not seek a renewal of the mail contract. It is claimed that the service is not remunerative.

The ferry boat Langley Fort has discontinued calling at Langley on its way to New Westminster, owing to the dredging required to be done there. It is stated that much of the traffic which usually went by the ferry is now being taken by the Canadian Northern Ry.

The Dominion Government wharf at Vancouver was opened for business, Jan. 1. The main structure has been finished for some time, but the buildings and railway tracks were only completed during December. The approximate cost of the wharf and buildings is \$2,500,000.

The Alaska Steamship Co.'s s.s. Stanley Dollar, which ran aground at Galiano Island, near Helen Point, Jan. 12, was released by the C.P.R. steam tug Nitinat on the following day. The Stanley Dollar was bought recently by the Alaska Steamship Co. from the Robert Dollar Steamship Co.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert was dry docked at Esquimalt during January for some bottom repairs, after touching ground when on the northern route some months ago. Machinery repairs were also undertaken, and she was generally overhauled and painted.

The Imperial Oil Co.'s s.s. Imperoyal was docked at North Vancouver during January for general overhaul and repairs. She was, until recently in service on the Great Lakes, and some time ago went to Mexico, passed through the Panama Canal, ran down the coast to Peru and later went to Prince Rupert.

The Ship Esquimalt Co., Ltd., has been incorporated under the British Columbia Companies Act, with \$200,000 capital, and office at Vancouver, to enter into an agreement with Cameron-Genoa Shipbuilders, Ltd., for the construction by the latter, and purchase by the former, of the schooner Esquimalt, now on the stocks at Victoria, and to carry on a general trading and commission business.

It was expected in Vancouver that the Dominion Government would, during January, award contracts in British Columbia for the construction of two wooden vessels with auxiliary motive power, similar in type to those now under construction in the Province for the Canada West Navigation Co., of which some details have

already been published. It is intended that these vessels will be used on a route between the Canadian coasts on the Pacific and Atlantic Oceans, via the Panama Canal.

Marine Engineers Wage Scale on Great Lakes.

The National Association of Marine Engineers of Canada has issued a card to steamship owners giving the following minimum wage scale and classifications for steamships operating on the Great Lakes District, which was adopted by the Association's Great Lakes Executive Committee at the annual meeting in Toronto, on Janu. 4, representing Port Arthur, Sault Ste. Marie, Collingwood, Owen Sound, Midland, Toronto and Kingston councils, and approved by the National Executive Committee. The contents are as follows:

"This card to be effective during the season of 1917, or until revised or amended by the Lake Executive Committee. This classification and schedule does not apply to certain ferry steamers, where special arrangements may be necessary, or to superintending engineers. All reference to tonnage to be construed as gross tons. In reference to employment, transportation, board, etc., 1916 conditions to prevail.

Passenger Steamers.

Class 1. All passenger steamers of 3,500 tons or over: chief engineer, \$1,800 per season; second engineer, \$125 a month.

Class 2. All passenger steamers of 1,250 tons and under 3,500 tons: chief engineer, \$1,600 per season; second engineer, \$110 a month.

Class 3. All lake passenger steamers under 1,250 tons and all passenger steamers confined to river, service requiring second class engineer: chief engineer, \$1,400 per season; second engineer, \$90 a month.

Class 4. All passenger steamers from 45 n.h.p. to 25 n.h.p.; chief engineer, \$120 a month; second engineer, \$80 a month.

Class 5. All passenger steamers under 25 n.h.p.; chief engineer, \$100 a month.

Freight Steamers.

Class 1. All freight steamers, 6,000 tons and over: chief engineer, \$1,800 per season; second engineer, \$125 a month.

Class 2. All freight steamers of 3,000 tons and under 6,000 tons: chief engineer, \$1,600 per season; second engineer, \$110 a month.

Class 3. All water bottom freight steamers under 3,000 tons, requiring second class engineer: chief engineer, \$1,400 per season; second engineer, \$100 a month.

Class 4. All freight steamers not included in classes 1, 2 and 3, and requiring second class engineers: chief engineer, \$135 a month; second engineer, \$90 a month.

Class 5. All freight steamers, 250 tons and over, and requiring third class engineers: chief engineer, \$110 a month; second engineer, \$90 a month.

Tug Steamers.

Class 1. All tug steamers requiring second class engineers: chief engineer \$135 a month; second engineer, \$100 a month.

Class 2. All tug steamers from 75 n.h.p. to 30 n.h.p.: chief engineer, \$125 a month; second engineer, \$95 a month.

Class 3. All tug steamers under 30 n.h.p., requiring licensed engineers: chief engineer, \$110 a month; second engineer, \$85 a month.

Shallow Draught Vessel Building in British Columbia.

It was announced in our last issue that Yarrows Ltd., Victoria, B.C., had received an order for a stern wheel, shallow draught steamboat, similar to one supplied by them recently for Indian waters. This type of vessel is in great demand for operation in countries where there are shallow rivers and swampy regions where it is difficult to navigate.

The hull is of light weight steel, with steel main deck and holds for cargo. The upper deck, which is of wood, is for the cabins and passenger accommodation, with dining room and other conveniences, and above this is a galvanized roofing to protect the cabins, etc. The aim is to have strength combined with lightness, so as to obtain the least possible draught when afloat. The hull is strengthened by 6 king posts of H section steel, 3 on each side of the vessel, braced together with diagonal trussing of 3 in. double angle steel bars, also a longitudinal bulkhead in the centre of the vessel, running from forward to aft, with deck stringers under the main deck. There are 8 transverse bulkheads, making the hull into water tight compartments, so that in the event of one compartment being punctured, the remaining ones will keep the vessel afloat. The vessel draws 18 ins., and when loaded with 100 tons, approximately 36 ins. In building the vessel, the system adopted is that the plates, angles, machinery, etc., aer made of such weight as may conveniently be handled and packed in cases or crates, so that the different parts may be transported easily to places difficult of access, and assembled where required, each piece being marked to its place. The rivetting is all done cold.

The Esquimalt Graving Dock Committee, an organization, with J. W. Phillips as Secretary, formed to promote the establishment of a dry dock at Esquimalt, is petitioning the Dominion Government and urging that the proposed dock be commenced and completed with all possible speed. It is pointed out that when British Columbia entered the Dominion, the latter government undertook to use its influence to secure the continued maintenance of a naval station at Esquimalt, and it was also provided that the Dominion Government guarantee interest for 10 years from the completion of certain works, at the rate of 5% per annum, on an amount not exceeding £100,000, as might be required for the construction of a first class dock. The present dry dock, which was completed about 1881, is no longer capable of handling the modern steamships, and the vessels which would otherwise have been repaired at Esquimalt, have had to go to the U. S. The Dominion Government, in 1914, selected Lang's Cove as the site for an up to date dry dock, and considerable adjacent property was purchased for erecting workshops, but since then, nothing has been done in the matter.

Port Arthur Shipbuilding Co., Ltd., has been incorporated under the Ontario Companies Act, with \$2,500,000 capital and head office at Port Arthur, to carry out an agreement with the Western Dry Dock and Shipbuilding Co., Ltd., whereby the latter agrees to sell to the former, its undertaking, plant, etc. The company is empowered to carry on a general shipbuilding business, and to own and operate steam and other vessels, and to own shares in any other business similar to its own.

Mainly About Marine People.

D. J. McKinnon, Sydney, N.S., has been appointed harbor master of the port, vice A. McQuarrie, resigned.

W. G. Ross, Chairman, Montreal Harbor Commissioners, has been appointed Director of Naval Recruiting for Quebec Province.

Sir Montagu Allan, formerly of the Allan Line Steamship Co., Montreal, has taken a house in Park Lane, London, Eng., for the winter.

Capt. E. Kinney has resigned as master of the Boston and Yarmouth Steamship Co.'s s.s. Prince George, on receiving an appointment under the Dominion Government on the Pacific Coast.

Capt. A. Simms, heretofore master of the Eastern Steamship Corporation's s.s. Boston, has been appointed master of the Boston and Yarmouth Steamship Co.'s s.s. Prince George, vice Capt. E. Kinney resigned.

Alexander Cox, master of the Canadian Northern Ry. barge no. 1, operating between Port Mann and Vancouver Island, was drowned at Port Mann, Jan. 1. It is supposed that he missed his footing when returning to his vessel in the dark.

H. W. Richardson, who has been appointed to the Senate, is head of the firm of James Richardson & Sons, grain dealers, Kingston, and is Vice President, Great Lakes Transportation Co., Midland, Ont., and one of the Dominion Government directors of the Canadian Northern Ry.

Capt. J. E. McDonald, formerly in the Dominion Government service as mate of the s.s. Quadra, and Capt. Dickson, master of the Union Steamship Co.'s s.s. Camosun, have joined an inland water transport unit, recruited in British Columbia, and were expected to leave Canada during January, for Mesopotamia.

Capt. William Babb, who died at Goderich, Ont., aged 77, commenced his seafaring career as a midshipman in the Royal Navy, and after obtaining his papers as a first class gunner, put in several years in service round the British coast and in the Mediterranean Sea, on H.M.S. Marlborough, under Lieut. Fisher, now Rear Admiral Fisher, R.N. He came to Canada in 1860 on the H.M.S. Cherub and was engaged in patrolling the Detroit River guarding against Fenian raiders, and went with that vessel on patrolling service in the West Indies, and transferred to the H.M.S. Revenge in 1870. He settled in Goderich in 1870, and served on the s.s. Prince Albert during the Fenian raid of that year as gun instructor.

Herbert Newbold McMaster, who has been appointed Marine Superintendent, Montreal Transportation Co., Kingston, Ont., was born at Deseronto, Ont., Aug. 6, 1876, and commenced his navigation career in the spring of 1890, since when he served in various capacities, to the autumn of 1897, on Frank McMaster's fore and aft schooners, Picton, and Anandale, and on the Standard Oil Co.'s s.s. Vanallen; 1898, mate, s.s. Resolute, Deseronto Navigation Co.; 1900 and 1901, mate, s.s. Advance, Mathews Steamship Co.; 1902 and 1903, mate, Frank McMaster's schooner, Emerald; 1903, mate, s.s. Fairmount, Montreal Transportation Co.; 1904, mate, s.s. Iroquois, St. Lawrence and Chicago Steam Navigation Co.; 1905 and 1906, master, s.s. Golspie, R. O. & A. B. Mackay; 1906, master, s.s. Edmonston, Mathews Steamship Co.; 1907 to 1912, master, various steamships, Mont-

real Transportation Co.; Jan. 1, 1913 to Dec. 31, 1916, Assistant Marine Superintendent, Montreal Transportation Co., Kingston, Ont., and for the last two years at New York, superintending the movement and repair of the company's vessels engaged in Atlantic service, calling at ports between Halifax, Newport News and the West Indies. In the early stage of his career he was a ship's carpenter, and during the winter was engaged at the Deseronto shipyards.

J. C. Gore, Superintendent, British Columbia Lake & River Service, C.P.R., died suddenly at Nelson, Jan. 18. He had been laid up for a few days with grippe, but had been at his office on the day of his death. He was seized with an attack of coughing, and died from heart failure. He went to British Columbia from the Willamette River in 1891, and was appointed captain for the Columbia & Kootenay Steam Navigation Co., then operating steamboats on the Okanagan, Arrow, Kootenay and Slocan Lakes, and was master of the steamboat Nakusp. When the C.P.R. acquired that company in 1896 he entered C.P.R. service, and in 1901, when the C.P.R. acquired the Canadian Pacific Navigation Co., he was appointed as Superintendent of the Lake and River Service.

The Outlook for Lake Shipping.—The Canadian Bank of Commerce monthly commercial letter for January says: "There is little doubt that there will be for some years to come abundant employment for a larger tonnage on the Great Lakes than is at present in service. British registered steel tonnage on the lakes is now 218,019 tons, compared with 286,121 tons at the close of the 1915 season. The tonnage of new vessels added to the lake service during 1916 was 12,218 tons, and that of vessels purchased from the U.S. and added to British registry was 15,349 tons. The decline is due to the transfer to ocean service of 50 vessels, aggregating 95,669 tons. This decline in tonnage is serious in view of the expanding volume of lake traffic, and under the circumstances it is reasonable to assume that Canadian shipbuilders have before them a period of unusual activity. A large proportion of the total lake freight traffic consists of iron ore and the carriage charges per ton at present are \$1.25 compared with the normal rate of 50c, a marked indication of the general increase in the cost of transportation."

Vessels Turning in the River at Fort William.—About the middle of 1916 an order in council was passed requiring all vessels desiring to turn when in the river

at Fort William, to go into one of the turning basins for the purpose. The Dominion Marine Association, at the time, protested against the order, on the ground that it would work unnecessary hardship on canal sized vessels, without corresponding advantage. The Marine Department took the matter under consideration, but decided that for the time being, the regulation would have to stand. The association has further considered the matter, and it has been decided to ask for the exemption of canal size vessels, in two sections of the Kaministikwia River, subject to such proper supervision as the department may require. It was also decided to point out that turning basins should be above, rather than below bridges, where possible, particularly where a long stretch of frequented water is below the bridge, and vessels are required to pass the bridge to make a turn. The practice of mooring or laying up vessels along the shores of the turning basins is also being protested against.

Chicago Drainage Canal and Great Lakes Levels.—The Dominion Marine Association has again had under consideration the withdrawal of water from the Great Lakes, for use through the Chicago Drainage Canal, and has decided to bring the matter before the Shipping Federation of Canada and the Lake Carriers' Association, with a view to joint action, either by way of appeal to the respective governments or by joint application to the International Joint Waterways Commission.

Grain Shortages and Overages in Cargoes.—The Dominion Marine Association had under discussion recently the regulations regarding the outruns of grain cargoes and the adjustment or shortages and averages, and an interim report on the subject by a special committee appointed by the Grain Commission to consider a scheme for adjustment which would be satisfactory to all parties.

Load Line Restrictions on Vessels to Australia.—The Dominion Government is negotiating with the Australian Government for a modification of the load line restrictions imposed on Canadian vessels trading with Australia. The matter is being handled by the Marine Department, and it is expected that the discrimination which exists under the present regulations will be done away with.

British Shipbuilding.—It is announced from London, Eng., that the Government has issued instructions to several shipyards where high class passenger vessels are under construction, that such work must cease and the labor be diverted to the construction of plain cargo vessels.

Shipments of Grain from Fort William and Port Arthur.

Following are comparative statistics, supplied by the Board of Grain Commissioners, showing the total bushels of each kind of grain shipped from Fort William and Port Arthur in Canadian and United States vessels during 1913, 1914, 1915 and 1916:

	1916—	Wheat.	Oats.	Barley.	Flax.	Totals.
895 Canadian vessels	97,288,766	44,015,292	6,235,464	1,715,590	149,255,112	
565 United States vessels	84,397,225	13,805,947	2,651,818	3,859,396	104,714,386	
1,460 cargoes	181,685,991	57,821,239	8,887,283	5,574,987	253,969,498	
1915—						
687 Canadian vessels	68,537,524	23,057,013	2,718,499	967,830	95,280,866	
452 United States vessels	98,827,699	4,174,796	2,074,004	1,436,547	106,513,046	
1,139 cargoes	167,365,223	27,231,810	4,792,504	2,404,378	201,792,912	
1914—						
751 Canadian vessels	64,881,194	22,473,825	4,026,586	1,793,747	93,175,352	
138 United States vessels	22,886,876	3,490,995	1,069,595	5,777,907	33,224,473	
889 cargoes	87,768,070	25,963,920	5,096,182	7,571,655	126,399,825	
1913—						
Canadian vessels	63,556,912	26,936,057	6,755,942	9,385,685	106,634,596	
United States vessels	68,241,075	13,844,653	4,840,076	9,680,376	96,606,180	
Totals	131,797,987	40,780,711	11,596,019	19,066,061	203,240,776	

Regulations Respecting to Order Bills of Lading.

The British Colonial Secretary has called attention to the regulations respecting the use of manifests and bills of lading made out to order during the war and has requested that a notice similar to that issued in Great Britain may be issued in Canada. The notice mentioned calls the attention of shippers, shipowners and the trading community generally to the fact that in time of war the practice of shipping goods with bills of lading made out to order, which was made illegal by sec. 4 of the Customs War Power Act, 1915, in the case of goods shipped from the United Kingdom under license, is very undesirable in respect of any goods, exported from any part of the British Empire. Shippers not requiring licenses are therefore advised not to make out bills of lading to order, but only to a named consignee or to a bank or financial house of high standing, with the remark in the margin, "Notify John Smith," or the name of the person or firm for whom the goods are ultimately designed. Goods shipped to Holland should be consigned to the Netherlands Overseas Trust. It is essential during the war that, in the case of all goods shipped, whether by license or not, British ships should have on board throughout the voyage a full manifest of cargo and all bills of lading, or certified copies. Unless these requirements are complied with, there will be a risk that the ships will be stopped and diverted by His Majesty's ships or war vessels of the allied nations, in order to permit of full examination of the cargo, and the ascertainment of its destination. In the case of British ships that will touch at ports in countries contiguous to enemy territory, compliance with these requirements is of special importance and serious delay may result to ship and cargo in such cases if all ship's papers are not on board and in order.

Stranding of the s.s. Iroquois.

The Dominion Wreck Commissioner, Capt. L. A. Demers, assisted by Capts. J.

B. Foote and Jas. McMaugh, held an enquiry at Toronto, Jan. 12, into the causes of the stranding of Canada Steamship Lines' s.s. Iroquois at Hare Island shoal, St. Lawrence River, Nov. 27. The Canadian Lake Protective Association was represented by Francis King, M.A., Counsel, Dominion Marine Association. The court found that the evidence of the master, Capt. Hudson, was straightforward, but indicated a lack of ambition to acquire further knowledge of the work he was likely to be called on to perform, which is surprising in a young member of the profession, and borders on indifference. The court expressed the opinion that when a sailing master is engaged, the master should be instructed to the effect that he, the master, is still the responsible officer. In other cases, the court had urged that masters should show more loyalty to their owners by acquiring all the knowledge possible of conditions existing in the waters strange to them. The court characterized the evidence of T. R. Desjardins, the sailing master, as a tissue of contradictory statements, and doubted whether he clearly understood the import of questions addressed to him. In leaving the navigation of the vessel, without being relieved by a competent officer, he showed lack of a proper sense of responsibility. His navigation was indifferently done, and, as he considered himself legally the master of the vessel, his conduct cannot be condoned, and there is no justification for his carelessness. The court therefore suspended his certificate 6049 for nine months, from Jan. 20 to Oct. 20.

Great Britain and Shipbuilding in Canada.

Reports from New York state that in connection with the shortage of tonnage and the lack of activity in merchant shipbuilding in the United Kingdom, negotiations are in progress between the British and Canadian Governments, whereby it is hoped to draw upon Canadian shipyards to assist in the rehabilitation of the British mercantile marine. It is also stated that British shipowners under present conditions cannot afford to pay the high

prices asked for new foreign built tonnage, and have urged some arrangement with the colonies and dominions which would make possible the acquisition of ships at lower prices than those generally quoted, and that the action of Canadian shipbuilders in accepting contracts from Norwegians and others has aroused considerable adverse criticism.

Canadian Railway and Marine World for January contained some remarks on this matter, and commented on the fact that some of the Norwegian contracts were being hawked about England, at prices ranging from \$135 to \$145 a ton, which is, undoubtedly, somewhat higher than is asked by shipbuilders in Canada. There are numerous yards in the Dominion quite capable of turning out vessels entirely suitable for ocean freight service, in fact several vessels now engaged in ocean service were built in Canadian yards, and it remains for the purchaser in Great Britain to make greater use of the facilities offered on this side, now that British yards are so fully occupied with other matters of a more important nature.

Wooden Shipbuilding in British Columbia.

Canadian Railway and Marine World has already published considerable information regarding the type of vessel now under construction in British Columbia shipyards for the Canada West Coast Navigation Co. These vessels, six of which are being built by Wallace Shipyards, Ltd., North Vancouver, and three by Cameron-Genoa Mills Shipbuilders Ltd., Victoria, will be of the following dimensions: Length over all, 260 ft.; length of keels, 225 ft.; beam, 44 ft.; depth of hold, 20 ft. The carrying capacity of each vessel will be from 1,500,000 to 1,750,000 ft. of lumber. In order to handle the greater lengths of stock timber, bow and stern ports are provided, and the cargo will be shipped and discharged by 4 regulation winches supplied with steam by a 6 x 11 ft. Scotch boiler at 130 lbs.

Each vessel will be equipped with two 2-cylinder Bolinder semi-Diesel engines of 160 h.p., working at 225 r.p.m. and turning a 3-bladed propeller. If operated

List of Steam Vessels Registered in and During October and November, 1916.

continuously and under full load without canvas, 12 barrels of oil would be consumed in 24 hours, maintaining a speed of 7 knots an hour. Greater speed can of course be made with a spread of canvas in addition. Storage will be provided for 8,000 barrels of oil, and for 5,000 gallons of fresh water. The advantages of auxiliary power in lumber schooners are many, and it is claimed, justify the cost of installation. The saving in towage, and of time in the calm areas, and the greater speed obtainable, are factors in increasing the vessel's earning power and general utility. The speed obtained will compare favorably with many steamships used for coasting purposes, and the advantages to be considered, include saving of space, fuel economy and reduction of engine room labor. The engines of this type require about half the space taken by engines and boilers of similar power, and also weigh about half. The fuel cost will average about 25c an hour, and three men will be employed in the engine room. It is claimed that vessels of this type will pay for themselves in half the time in which a steel vessel will take to work out her cost. They will follow the latest and best practice of the builders of United States schooners designed primarily for the lumber trade, and will be of very heavy construction, the plans have been approved by Lloyd's Register of Shipping and they are to be given the highest rating, A.1 for 13 years. This, we are advised, is the first time that Lloyd's have classed any vessel of this type on the Pacific coast. The vessels will be provided with two large hatches and four cargo winches of the latest type designed for rapid handling of cargo. Vessels of this type carry approximately 50% of their cargo on deck, and they are designed chiefly for the off shore lumber trade. The cost of these vessels complete will be about \$175,000. They were designed by J. H. Price, who designed and built the vessel City of Portland, a large auxiliary motor ship, at St. Helens, Ore., which attracted a great deal of attention in marine circles.

The Mabel Brown and Geraldine Wolvin are the two first vessels to be launched, and they have been chartered to the Canadian Trading Co., for loading lumber in March or April, at Vancouver, for Sydney, Australia, at 120 shillings, and for Melbourne, Australia, at 130 shillings.

Among the Express Companies.

C. N. Spooner, heretofore route agent, Dominion Ex. Co., Moose Jaw, Sask., has been appointed route agent at Winnipeg.

The Canadian Ex. Co. has opened offices at Kent Jct. and Lac Baker, N.B.; Murray Bay, Que., and Canfield Jct., Ont.

E. F. McDonald has been appointed agent, Canadian Northern Ex. Co., Trenton, Ont., vice E. B. Connelly, enlisted for overseas service.

Wm. Cunningham Scott, who died recently, was the Canadian Express Co.'s agent at the city of Quebec for many years. He started work with the old British & Canadian Express Co., at Quebec, in 1853. Up to that time the express business had been carried by stage coach, and as Quebec City was then without rail facilities his first duties were to attend to shipments sent out by stage. During the succeeding years, the G.T.R. built into Point Levis, opposite Quebec. He had many reminiscences of the difficulties encountered in ferrying produce across the St. Lawrence River, in scows, for transshipment by rail. The British & Cana-

dian Express Co. eventually became part of the Canadian Express Co.'s system and he continued as agent at Quebec. Six years ago, after nearly half a century of service, he retired from active work.

Telegraph, Telephone and Cable Matters.

Chas. Cassils, Montreal, has been elected Vice President, Bell Telephone Co. of Canada, succeeding Hon. Robert Mackay, deceased.

W. J. Kane, heretofore Inspector of Telegraphs, C.P.R., Brandon, Man., has been appointed Night Chief Operator, C.P.R. Telegraphs, Winnipeg.

The Dominion Public Works Department has had set apart, for a telegraph site, about an acre of Dominion lands, in the n.e. ¼ of sec. 30, Tp. 70, R. 19, w. 4 m.

William Cross, who died at Caledonia Springs, Ont., recently, was engaged in the construction of the first telegraph line to be erected between Ottawa and Montreal.

M. J. Bayley, assistant chief operator, C.P.R. Telegraphs, Toronto, died there, Jan. 7, from pneumonia, after a short illness, aged 45. He had been in C.P.R. service for about 25 years.

A. E. Holmes, heretofore chief operator, Great North Western Telegraph Co., Saskatoon, Sask., has been appointed assistant chief operator at Winnipeg, vice A. D. Campbell, promoted.

A. D. Campbell, heretofore assistant chief operator, has been appointed chief operator, Great North Western Telegraph Co., Winnipeg, vice B. S. Round, who has left the company's service.

W. Rutherford, heretofore Traffic Chief, C.P.R. Telegraphs, Winnipeg, has been appointed Inspector of Telegraphs, C.P.R., Brandon, Man., vice W. J. Kane, who was appointed to that position during last summer on the enlistment of F. E. Camp for active service.

Hon. F. Nicholls, President, Canadian General Electric Co., and Canadian Allis Chalmers Co., and a director, Canadian Northern Ry., and Toronto Ry., has been elected a director of the Great North Western Telegraph Co., in place of the late Hon. J. K. Kerr.

The Great North Western Telegraph Co.'s office fixtures, switchboards, instruments, etc., at St. Catharines, Beamsville, Jordan, Merriton and Niagara Falls, Ont., were destroyed by fire Jan. 12, owing to a high tension wire falling across the telegraph line near Grimsby.

Application is being made to the Dominion Parliament for the incorporation of the British American Telephone & Telegraph Co., to erect and operate telephone and telegraph lines, wireless telegraph stations, etc., in Canada and elsewhere. Pringle & Guthrie, Ottawa, are solicitors for applicants.

A. A. Rogers, heretofore night chief operator, has been appointed chief operator, Great North Western Telegraph Co., Saskatoon, Sask., vice A. E. Holmes, transferred; F. F. Yerex, heretofore all night chief operator, has been appointed night chief operator, vice A. A. Rogers; and R. W. Pearsall has been appointed

The Board of Railway Commissioners has issued order 25754, Dec. 27, 1916, respecting the Great North Western Telegraph Co.'s tariff C.R.C. 47, increasing the rate on words in excess of 10 words in messages between the company's offices in Ontario, Quebec and New Brunswick.

The question having arisen as to the company's power to increase rates in view of the limitation imposed by the act consolidating and amending the acts relating to the Montreal Telegraph Co., and the Board having at the company's request submitted the question for the opinion of the Supreme Court of Canada, it is ordered that pending the Supreme Court's decision, and until further order, the effective date of the proposed tariff is postponed. This application was specially brought to the Board's attention by the Great North Western Telegraph Co., for a settlement of the question as to whether the present rate of 25c for 10 words and 1c for each additional word, in the provinces named, is permanently fixed by statute, or not. The question came up when the Board recently made a general enquiry into telegraph rates, and the company claims that a certain act fixing these rates never came into force and effect.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Coleman Fare Box Co., Ltd., is removing its plant from Tottenham, Ont., where the business was founded, to Toronto, where it has leased premises at 1191 Bathurst St. The head office will remain at 70 Bond St., Toronto.

Wall Calendars for 1917 have been received from J. Bertram & Sons Co., Ltd, machine tools, Dundas, Ont.; W. W. Butler Co., Ltd., railway, marine and mining supplies, Montreal; Pratt & Whitney Co. of Canada, Ltd., small tools, Dundas, Ont.; Taylor & Arnold, Ltd., railway and contractors' supplies, Montreal.

Electric Service Supplies Co., Philadelphia, Pa., which is represented in Canada by Lyman Tube & Supply Co., Ltd., has issued a catalogue of golden glow headlights, searchlights and projectors, 52 pgs., containing illustrated descriptions of these articles and particularly dealing with marine searchlights for vessels and harbor service.

Lyman Tube & Supply Co. Ltd., to supplement its service from its Montreal and Toronto stocks of steam and electric railway supplies, tubing, metals and mechanical equipment, has established a purchasing office at 2606 Equitable Building, New York, N.Y., under K. E. Gury's management, to locate and secure promptly from existing, but closely held, stocks, materials and equipment on which manufacturers will not promise early delivery.

Canadian Westinghouse Co., Ltd., has been authorized to increase its capital stock from \$5,000,000 to \$10,000,000, in 50,000 shares of \$100 each. The company will issue \$1,250,000 of new stock at par to shareholders of record Feb. 1 in the proportion of one share for every four shares held on that date. The directors, out of the profits accumulated since the company's inception 12 years ago, have declared a dividend of 25%, payable Mar. 1, to shareholders of record Feb. 1. This dividend will be used in payment of stock subscriptions. In effect the company's cash dividend is thus a stock dividend, since the cash bonus will pay for the new stock.

Canadian Railway and Marine World

March, 1917.

2-10-2 Locomotives for Intercolonial Railway.

The Intercolonial Division, Canadian Government Railways, has received recently ten 2-10-2 type locomotives, one of which is illustrated herewith.

As train loads outgrow the capacity of the mikado type, the 2-10-2 type becomes its logical successor in the same way as the mikado type succeeded the consolidation. The 2-10-2 type has formerly been handicapped by its long rigid wheel base. The application of lateral motion driving axles and boxes to the first pair of drivers was made for the purpose of reducing the rigid wheel base to that which is in common use on locomotives of smaller capacity and at the same time securing the advantages of the 10 coupled wheel arrangement, with the resulting increased capacity of the locomotive.

axle with a bolting flange. This is provided for the attachment of a finger, to guide the brake beam, and ensure that the brake heads register properly with tires on no. 1 driver.

The rod connections between the first and second drivers are arranged with a ball knuckle joint ahead of the pin on no. 2 driver, which allows for lateral deflection of the side rods. The crank pin and rod bearing at no. 1 driver consist of an ordinary design of cylindrical crank pin, on which is placed a hard bronze bushing, the interior being bored cylindrical and the outside turned to a spherical surface. Encasing this bushing are two half pieces of hard steel, which are held in place in a rod end with a wedge, in the same manner as two ordinary half brasses. The bush-

as guiding the engine in concerned, therefore, the arrangement is very similar to a 4-wheel truck application with the rear wheel of the truck acting as a driving wheel.

The resistance of the lateral motion box is proportioned with the idea of providing enough initial resistance so that for any ordinary road service on tangent track or road curves, the first driver will remain in normal position and deflect only when passing through turnouts and yard curves. The operation of the device in service has clearly demonstrated the correctness of the design in this particular. A close inspection of the locomotives in operation discloses the fact that the lateral motion first driver very rarely deflects when they are upon the road. When

2—10—2 Locomotive, Intercolonial Division, Canadian Government Railways.

The lateral box arrangement consists of two independent driving boxes, whose transverse lateral centres are about on a line with the inside of the main engine frames. These two driving boxes are held in a fixed relation to each other by a bridge or spacing member, which engages the inner flanges of the boxes. The weight which is transmitted through this bridge member is applied to the boxes on their transverse centres. The lugs on the spacing member, which engage the inner flanges of the boxes, are for the sole purpose of maintaining the proper spacing of the boxes, and do not transfer any vertical load. The driving springs are in about the normal position, and are carried upon a cross member, which has a vertical movement only between the engine frames, a wearing shoe being placed upon the inner side of the main frames to prevent side motion. Between this cross member and the bridge or spacing member above mentioned, are interposed 2 inverted rockers, designed so that a lateral force equal to 20% of the vertical weight transmitted is required to deflect them from their normal position. When the boxes are deflected by a side movement of the first pair of driving wheels from their normal centre position, the boxes and the bridge casting are moved laterally in reference to the member carrying the springs. This movement deflects the inverted rockers, which offer a definite resistance against the motion. The spring and equalizer work is not shifted from its normal position when the boxes are deflected laterally. One side of the bridge member is carried down below the driving

ing can revolve either on the crank pin or within the two steel halves. When the rod is deflected from the normal position, the spherical bushing allows the parts to rotate sidewise around the centre of the front crank pin; at the same time the bushing can revolve on the cylindrical portion of the pin. Several oil holes are provided through the bronze bushing, which ensure lubrication of both the spherical and cylindrical surfaces of the bushing.

The operation of the lateral motion axle should be considered in connection with the engine truck. The driving springs of the first and second axles are equalized in the usual manner to the engine truck; therefore, the weight upon the engine truck centre pin and the lateral motion boxes on the first axle is divided in proportion to the arms of the front equalizer. The engine truck on this engine is of the inverted rocker type, having a resistance of 50% against the initial movement, and, as stated, the resistance of the lateral device at the first driver is 20%. These resistances are so chosen in relation to the weight coming upon each centering device that the lateral resultants at the engine truck and the first driver are just about the same in amount. It will thus be seen that in effect, the engine truck and the first driver act in practically the same way as a 4-wheel engine truck, in guiding the front of the locomotive, except that the lateral resistance is applied in the plane of each wheel, instead of being applied midway between the wheels and divided between them as in the case of a 4-wheel truck. As far

the locomotive passes through sharp turnouts or is operating around yards, the lateral motion driver will deflect, thus preventing the cramping of the driving wheel base in the curve and excess pressure upon the driving wheel flanges.

The action of the rockers provides a limit to the lateral pressure which can be placed upon the first driving wheel flange. When this lateral resistance exceeds 20% of the weight carried upon the lateral motion rockers, the boxes will deflect, the excess lateral pressure being then transferred to the second driver, thus dividing the work of guiding the engine through curves between the truck, first and second drivers, instead of truck and first driver only as in the ordinary 10-coupled arrangement.

Driving boxes for locomotives have generally been designed only for the weight which they are required to support, so that the size has been in direct proportion to the load borne by each journal and driving wheel. This method has been satisfactory so far as the weights are concerned, but unsatisfactory for horizontal forces, resulting in too rapid wear. This is especially true of large locomotives built in recent years, in which it has been necessary to increase, on account of their dimensions, the transverse spacing from centre to centre of cylinders. At the same time the distance apart of the frame centres has been actually decreasing, on account of the necessity of longer bearings and maintaining frames in the centre of the bearings.

The standard gauge of 4 ft. 8½ in. imposes certain limitations on locomotive

construction. Among them is the distance between hubs of driving wheels, and because of this gauge limitation, 55 in. is probably the standard distance between driving wheel hubs at present. Therefore, with driving boxes of increased length in recent high powered locomotives, it has been necessary to decrease the distance between frame centres. This decrease, in combination with the wide cylinder centres, has caused the horizontal forces to increase in greater proportion than the load borne on the journals, so that while the vertical pressure per square inch of bearing surface, due to weight, has been maintained at a fairly constant figure by increasing the diameter and length of the present boxes, yet the bearing pressure due to the horizontal forces has increased in much greater proportion, so that the pressures per square inch due to these horizontal forces have produced excessive wear on the driving boxes, permitting lost motion to accumulate very rapidly, causing a knock and pound which requires the renewal of the driving box bearings after much less mileage than heretofore.

In order that the driving boxes may wear uniformly, and the journals wear cylindrical and not conical, it is absolutely necessary that the vertical and horizontal forces be applied at the centre of the bearing. The frame centres, therefore, must be made of such spacing transversely so as to coincide with the centre of the boxes. This, however, has the disadvantage of largely increasing the pressures due to the horizontal forces of the driving box. The normal piston thrust is very largely increased by the greater lever ratio produced on account of the narrow frame centres and wide cylinder centres, the ratio being roughly 2 to 1. This force is still further increased at certain positions of cranks, because of the reaction of the opposite side increasing the normal piston thrust.

The wear of the driving boxes and the pedestal shoes and wedges, with the relatively small bearing surface usually obtained, has been very rapid, and for this reason some efforts have been made to increase this width and to provide more wearing surface by making the legs of the pedestals wider than the body of the frame. The disadvantage of this is that no increase in the length of the box is possible without resorting to lop-sided construction, which experience has shown results in uneven wear of the bearing and conical wear on the journal.

In the long main driving box, the normal width of the frame is increased by bolting on additional pieces for supplementary or auxiliary pedestals on the inside. These may be in the form of separate pieces or combined so as to form a cross brace and at the same time make the additional pedestal for the frame on the opposite side. They are preferably united together at the top and bottom by a cap secured with bolts. The shoes and wedges are increased in width equal to the amount the supplementary pedestals are wide. It is more convenient to retain the spring rigging in its normal central position in the middle of the frame, and for this reason a combination spring saddle has been devised, extending transversely across the engine, by which the spring load is transferred equally to the centre of the box. This arrangement of overhanging integral spring saddle for 2 boxes on one axle can be made in a variety of forms, but the basic principle consists in a rigid member, extending across the engine frames, provided with spring seats on its upper portion for the driving

springs, and with means for transferring the load to the centre of the driving box, either by the use of an integral casting having the feet extending down, or by making this in two or more pieces and having the rigid overhanging beams separate and merely bearing on the portion forming the feet.

The idea in this application is the broad principle of a driving box of increased length (probably 50 to 66½%) unequally spaced in relation to the frame and spring rigging, but provided with means for transferring the spring supported load equally to all portions of the driving box and arranged with pedestals of increased width for the shoes and wedges, the frames being retained at about their normal transverse centres.

The increase in the size of locomotives during the past few years has introduced a number of new conditions and problems which the designer has been called upon to consider and for which it has been necessary for him to provide solution. These problems extend to almost all parts of the locomotive, and range from comparatively simple provisions to take care of the increased stresses and loads, to more complex problems resulting from the combination of new factors. One of these problems is the provision of suitable trucks. Many of the conditions of service have changed in the past few years. Limiting clearances have been increased in some extent and the permissible length over all has almost doubled. Very considerable increases in wheel loads have been allowed. Appliances have been devised to develop greatly increased horse power. But the degree of maximum curvature which the locomotive must be designed to pass has, except in rare instances, remained unchanged. Main line curvature has been decreased, but, for the most part, locomotives for all classes of service must be designed to pass certain maximum curves, such as turnouts and crossovers, and this at once imposes limitations and problems in the design of the trucks.

These conditions have led to the development of a lateral motion bolster device, known as the Woodard truck, which, it is claimed, will meet these exacting requirements more fully than the 3 point link suspension which heretofore has been almost universally used. In principle it provides a constant resistance, regardless of the lateral displacement of a bolster, instead of a low initial resistance increasing with the lateral displacement, as is obtained with the 3 point suspension links. Variations, such as high initial resistance, with a constant resistance following a predetermined bolster movement, can be obtained by slight modification of the surfaces in contact. The swing bolster bears directly on the heart shaped rockers, which are connected to it by links to ensure their remaining in the proper position. Service results with this truck are said to show a marked reduction in the flange wear on leading drivers, a steady action while running on straight track, an absence of jerking motion on curves and withal a better riding locomotive under all track conditions.

The Foulder main rod back end deserves special mention. With this solid end, 4 bolts have been eliminated, the stub has been shortened, and a saving in weight was obtained which also saves in the counterbalance. Only one pattern is required for the bearings, as the same brass is used front and back of pin, the taper being on the two adjustable wedges. The heavy wedge, immediately in front of the bearing, extending to the full depth

of the rod opening, and being of greater depth than the bearing itself, provides a fine support for the brass and prevents it from cocking or becoming distorted. Other features of this solid end are its simplicity and the time saved in taking it off the engine, and there are no bolts to renew or holes to reream.

An interesting feature is the combination of the Gaines combustion chamber and the Security brick arch. With this arrangement it is claimed that a very complete deflection of the gases is secured, whereby better combustion is obtained and the back end of the firebox more fully utilized, with a resulting increase in the generation of steam. This arrangement, it is claimed, also gives an increased firebox volume and also tends to improve combustion. In addition, all the usual disadvantages of a shallow throat sheet are eliminated. This combustion chamber, it is claimed, also allows the added advantage of a short tube length and large diameter of boiler. A short tube length not only gives greater evaporative value per square foot of heating surface, but also reduces back pressure, and consequently increases the power of the engine. A large diameter, combined with short tube length, gives a large volume of water where the evaporative value is highest. This large volume of water is ready to flash into steam and therefore increases the reserve supply of steam.

These engines have a short distance from the rear wheel to the draw bar. This not only makes them ride easier on curves, but it also reduces the friction between flange of wheel and rail, which increases the draw bar pull.

These locomotives were built by the American Locomotive Co. at its Brooks works, Dunkirk, N.Y. Their general dimensions are as follows:

Cylinder, type, piston valve, diam. 26 in., stroke 32 in.
 Tractive power, simple, 64500.
 Factor of adhesion, simple, 3.96.
 Wheel base, driving 20½ ft., rigid 15 ft., total 37 ft. 10 in.
 Wheel base total, engine and tender, 70 ft. 2¾ in.
 Weight in working order, 320,000 lb., on drivers, 256,000 lb.
 Weight on trailer 31,000 lb., on engine truck 33,000 lb.
 Weight engine and tender 512,200 lb.
 Boiler type, extended wagon top, c.d. first ring 79-9/16 in.
 Boiler, working pressure, 200 lb.
 Firebox, type, wide; length, 144¾ in., width 84¾ in.
 Firebox, thickness of crown ¾ in., tube ½ in., side ¾ in., back ¾ in.
 Firebox, water space, front 5½ in., sides 5 in., back 5 in.
 Firebox, depth (top of grate to centre of lowest tube) 14 in.
 Crown staying, radial.
 Tubes, material, charcoal iron, no. 270, diam. 2 in.
 Flues, material, cold drawn seamless steel, no. 43, diam. 5¾ in.
 Tube, length, 17 ft. spacing 13/16 in.
 Heating surface, tubes and flues, 3,413 sq. ft.
 Heating surface, firebox, 245 sq. ft.
 Heating surface, arch tubes, 41 sq. ft.
 Heating surface, total, 3,699 sq. ft.
 Superheater surface, 850 sq. ft.
 Grate area, 66.7 sq. ft.
 Wheels, driv. diam., outside tire, 57 in., centre diam., 50 in.
 Wheels, driv., material, cast steel.
 Wheels, engine truck, diam., 31 in., kind, cast iron spoke.
 Wheels, trailing truck, diam., 31 in., kind, cast iron spoke.
 Wheels, tender truck, diam., 34 in., kind, cast iron spoke.
 Axles, driv. journals, main, 11½ x 22 in., front, 10 x 20 in., other, 10 x 12 in.
 Axles, engine truck journals, 7 x 12 in.
 Axles, trailing truck journals, 7 x 12 in.
 Axles, tender truck journals, 6 x 11 in.
 Boxes, driving, cast steel.
 Brake, driver, American.
 Brake, tender, Westinghouse, air signal, Westinghouse.
 Brake, pump, 1 8¼ in. C.C., reservoir, 1 18½ x 120 in., 1 22½ x 72 in., 1 26½ x 42 in.

Engine truck, Woodard.
Trailing truck, Woodard.
Exhaust pipe, single, nozzles, 5¼ in., 5½ in., 6 in.
Grate, style, rocking.
Piston rod diam., 4½ in., piston packing, snap rings.
Smoke stack, diam., 17 in., top above rail 15 ft. 2 5/16 in.
Whistle, top above rail, 15 ft. 2½ in.
Tender frame, channel.
Tank, style, water bottom.
Tank, capacity, 10,000 gal.
Tank, capacity, fuel, 17 tons.
Valves, type, 14 in., piston travel, 6½ in., steam lap 1 1/16 in.
Valves, setting, lead, ½ in.

Wireless Telegraph Communication With Trains.

In connection with the elaborate tests which have been conducted by some railways in America and the progress made in the development of wireless telegraphy in so far as communication with running trains is concerned, it is claimed that the first experiment made by any railway in America, and probably the world, to demonstrate the possibility of wireless communication with a fast running train was on the G.T.R. on Oct. 13, 1902. The experiment was made under the direction of E. Rutherford, F.R.S.C. (now Sir Ernest), and H. T. Barnes, F.R.S.C., then both of the MacDonald Physical Laboratory of McGill University, Montreal.

The following account of the experiment is taken from Mr. Barnes' report: "During the passage of the special train on the G.T.R. between Toronto and Montreal, bearing the American Association of General Passenger and Ticket Agents from Chicago to Portland, it was demonstrated that communication could be maintained between a station and a fast moving train by means of electric waves. No attempt was made to cover distances comparable in size to those attained by Marconi and others, but with comparatively simple laboratory apparatus it was possible to keep the train in touch with the station for from 8 to 10 miles. St. Dominique was selected as the transmitting station, where two large metal plate vibrators 10 x 12 ft., connected with an induction coil of the usual pattern, were situated. On the train the waves were received by collecting wires connected to a coherer of nickel and silver powder. The relay operated electric bells in three cars. The collecting wires were run through the guides for the train signal cord, and extended on both sides of the coherer for about a car length. To obtain the maximum effect it would have been better to have had a long vertical wire, but since such was impossible, the horizontal wire was used. Although these were placed inside the steel frame cars, strong and definite signals were obtained over the distance named. Another difficulty militated against obtaining the maximum sensitiveness, as, owing to the natural vibration of the train resulting from its great speed, it was impossible to have the relay adjusted to its most sensitive point. In spite of these difficulties, the distance to which signals could be sent to the train was eminently satisfactory, and with more refined apparatus greater distances could without doubt be obtained. The success of this form of wireless telegraphy, of which this was but a pioneer experiment, opens up yet another method of providing for the safety of the traveling public.

The Paris, Lyons & Mediterranean Ry. is reported to have ordered 100 locomotives from the Baldwin Locomotive Works.

Birthdays of Transportation Men in March.

Many happy returns of the day to:—
W. G. Annable, General Passenger Agent, Canadian Pacific Ocean Services, Ltd., Montreal, born at Ottawa, Mar. 3, 1875.

John Archibald, Locomotive Foreman, C.P.R., Coquitlam, B.C., born at Edinburgh, Scotland, Mar. 13, 1872.

Jas. Balkwill, Division Superintendent, Canadian Division, Michigan Central Rd., St. Thomas, Ont., born in Southwold Tp., Ont., Mar. 8, 1870.

George Bury, Vice President, C.P.R., Montreal, born there, Mar. 6, 1866.

Allan Cameron, Superintendent, Land Branch, Department of Natural Resources, C.P.R., Calgary, Alta., born near Owen Sound, Ont., Mar. 14, 1864.

H. S. Carmichael, Passenger and Freight Manager, Canadian Pacific Ocean Services, Ltd., London, Eng., born at Glasgow, Scotland, Mar. 7, 1874.

F. G. J. Comeau, District Freight Agent, C.P.R., Halifax, N.S., born at Meteghan River, N.S., Mar. 10, 1859.

W. A. Cooper, Manager, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Montreal, born there, Mar. 22, 1871.

A. E. Cox, General Storekeeper, Canadian Northern Ry., Winnipeg, born at Huddersfield, Eng., Mar. 12, 1863.

Hon. N. Curry, President, Canadian Car & Foundry Co., Montreal, born in King's County, N.S., Mar. 26, 1851.

C. T. Delamere, acting Engineer of Construction, Eastern Lines, C.P.R., Montreal, born at Brainerd, Minn., Mar. 18, 1881.

H. G. Dring, General Passenger Agent, C.P.R., London, Eng., born at Easton, Northamptonshire, Eng., Mar. 8, 1881.

Patrick Dubee, Secretary-Treasurer, Montreal Tramways Co., Montreal, born there, Mar. 4, 1876.

Frederick Elliott, President, Victoria Navigation Co., Ltd., Thurso, Que., born at Montreal, Mar. 8, 1858.

W. R. Fitzmaurice, Superintendent, District 2, Intercolonial Division, Canadian Government Railways, Campbellton, N.B., born at Bedford, N.S., Mar. 19, 1870.

C. Forrester, Superintendent, London Division, Ontario Lines, G.T.R., London, born at Wanstead, Ont., Mar. 5, 1876.

Jas. D. Fraser, Director and Secretary Treasurer, Ottawa Electric Ry., Ottawa, Ont., and President, Canadian Electric Railway Association, born at St. Andrews, Que., Mar. 26, 1851.

R. A. Gamble, General Yardmaster, Winnipeg Terminals, C.P.R., born at Dublin, Ireland, Mar. 1, 1876.

E. P. Goodwin, ex-Inspecting Engineer, National Transcontinental Ry., Baie Verte, N.B., born there, Mar. 17, 1865.

J. Halstead, Division Freight Agent, C.P.R., Calgary, Alta., born at Bracebridge, Ont., Mar. 2, 1877.

R. M. Hannaford, M.Can.Soc.C.E., Assistant Chief Engineer, Montreal Tramways Co., Montreal, born there, Mar. 22, 1865.

C. A. Hayes, General Traffic Manager, Canadian Government Railways, Moreton, N.B., born at West Springfield, Mass., Mar. 10, 1865.

H. T. Hazen, M.Can.Soc.C.E., Chief Engineer, Toronto Suburban Ry., Toronto, born at Truro, N.S., Mar. 14, 1870.

Joseph Hobson, M.Can.Soc.C.E., Consulting Engineer, G.T.R., Hamilton, Ont., born at Guelph, Ont., Mar., 1834.

J. I. Hobson, Treasurer, Canada Steamship Lines, Ltd., Montreal, born at Guelph, Ont., Mar. 30, 1872.

N. J. Holden, President, The Holden Co., Ltd., Montreal, born at Nobleton, Ont., Mar. 22, 1866.

A. R. Holtby, Master of Bridges and Buildings, Mountain Division, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at Rawdon, Que., Mar. 23, 1859.

Frank Lee, M.Can.Soc.C.E., Principal Assistant Engineer, C.P.R., Winnipeg, born at Chicago, Ill., Mar. 7, 1873.

R. W. Long, Division Freight Agent, G.T.R., Hamilton, Ont., born at Appin, Ont., Mar. 20, 1873.

J. M. McKay, Superintendent, Saskatoon Division, Saskatchewan District, C.P.R., Saskatoon, born at Tiverton, Ont., Mar. 13, 1868.

Owen McKay, M.Can.Soc.C.E., Chief Engineer, Essex Terminal Ry., Walkerville, Ont., born in Ross Tp., Renfrew Co., Ont., Mar. 13, 1848.

Col. H. H. McLean, K.C., M.P., President, St. John Ry., St. John, N.B., born at Fredericton, N.B., Mar. 22, 1855.

M. Magiff, Superintendent of Car Service and Telegraphs, Central Vermont Ry., St. Albans, Vt., born at Planks Point, N.Y., Mar. 24, 1852.

Sir Donald D. Mann, Vice President, Mackenzie, Mann & Co., Ltd., and Vice President, Canadian Northern Ry., Toronto, born at Acton, Ont., Mar. 23, 1853.

H. H. Melanson, General Passenger Agent, Canadian Government Railways, Moncton, N.B., born at Scadouc, N.B., Mar. 9, 1872.

T. Milne, Locomotive Foreman, C.P.R., Windsor, Ont., born at Arbroath, Scotland, Mar. 3, 1856.

J. V. Murphy, General Agent, C.P.R., Portland, Ore., born at Bowmanville, Ont., Mar. 5, 1885.

Peter Paton, Purchasing Agent, Canada Steamship Lines, Ltd., Montreal, born at New Lovell, Ont., Mar. 13, 1869.

F. W. Peters, General Superintendent, British Columbia District, C.P.R., Vancouver, born at St. John, N.B., Mar. 25, 1860.

J. W. Pugsley, Secretary, Department of Railways and Canals, Ottawa, Ont., born at Amherst, N.S., Mar. 12, 1861.

C. J. Smith, Manager and Secretary, Montreal Warehousing Co., Montreal, born at Hamilton, Ont., Mar. 10, 1862.

W. Y. Soper, Vice President, Ottawa Electric Ry. Co., Ottawa, Ont., born at Oldtown, Me., Mar. 9, 1854.

E. F. L. Sturdee, General Agent, Passenger Department, C.P.R., Boston, Mass., born at St. John, N.B., Mar. 29, 1876.

A. A. Tisdale, Assistant to Vice President and General Manager, and Purchasing Agent, Grand Trunk Pacific Ry., Winnipeg, born at Mount Vernon, Ont., Mar. 8, 1874.

G. W. Vaux, General Agent, Passenger Department, Union Pacific Rd., Chicago, born at Montreal, Mar. 21, 1866.

A. D. Watt, District Locomotive Foreman, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at St. Louis, Que., Mar. 5, 1874.

A. T. Weldon, Assistant General Freight Agent, Canadian Government Railways, Moncton, N.B., born at Dorchester, N.B., Mar. 6, 1876.

D. O. Wood, Assistant Export and Import Agent, C.P.R., Toronto, born at Kleinburg, Ont., Mar. 16, 1864.

R. Wright, Division Agent, Ontario Lines, G.T.R., Toronto, born at London, Ont., Mar. 15, 1885.

H. K. York, Car Foreman, C.P.R., North Transcona, Man., born at Victoria Corner, Carleton Co., N.B., Mar. 20, 1881.

Railway Mechanical Methods and Devices.

Machining Bell, Stand and Hanger.

An interesting set of jigs for machining the component parts of a locomotive bell and supporting frame is in use in the G.T.R. shops at Stratford, Ont. The jig for machining the bell is shown in Fig. 1. It consists of a shank, a, carrying a casting, b, the outer face of which conforms closely to that of the interior of the bell at its larger end. To the oppo-

Fig. 1. Jig for Turning Locomotive Bells.

performed by swinging the bell between the two jig centres in the lathe.

The bell hanger, which is shown in fig. 2, is first centred, and the journals at either end turned down to size. It is then placed in the jig shown, the turned journals resting on the supports, a and b. The hanger shown has not had the journals turned, and has only been placed in the jig to show the operation. The base of the jig, c, is recessed to receive the

and a facing reamer forced down on top, to face off the other face of the boss, completing the bell hanger machining.

The bell frame is first taken to the planer, and the faces for the bearing caps planed and the bolt holes drilled. The caps, similarly planed, are bolted in place, and the frame removed to the jig shown in fig. 4, which is used in the drill press. The frame shown in the jig has not had the caps applied and is only placed in

Fig. 2. First Drilling Operation in Bell Hanger Boss.

site end of the shank, a, there is a small stem, c, the whole jig revolving on centres in a and c. A collar, d, makes a sliding fit on a, and is forced along the latter by the nut, e, a short stretch of the shank, a, being threaded to receive it. The left side of the collar, d, fits into the recessed body of b, and is tapered,

hanger boss, which is rough cored. The casting is held in place by two clips, d and e, each of which have two wing nuts.

For boring the cored hole, a tapered reamer of the form shown is used at the top of which there is a facing cutter. The reamer is forced down through the cored hole, and seemingly performs the

position to show the operation. The jig consists of box shaped castings finished on the top and bottom faces, and with bosses on the inside so located as to fit the frame as shown, the frame being clamped in place by a clamp plate and two bolts. In both top and bottom finished faces there is a hole, somewhat larger than that of the hole for the bearing, but in line with the latter. A drill bushing fits in either of these holes. In the upper hole the drill bushing is dropped and the upper hole drilled. The bushing is then removed and the whole jig turned upside down, the bushing placed in the other hole and drilling operation repeated.

Fig. 3. Final Operation on Bell Hanger Boss.

Fig. 4. Drilling Bearings in Bell Frame.

four pins, f, in body, b, bearing radially against this taper.

The hole for the suspending bolt for the bell is first drilled, and this jig is slipped inside, the spindle, c, passing through the bolt hole. The collar, g, bears up against the inner top of the bell, and the whole is clamped by a nut on the end of the spindle, c. The collar, d, is forced to the left of the nut, e, forcing out the pins, f, against the inner face of the bell, securing it solidly for turning, which is

work satisfactorily without initial drilling out to remove the sand and rough skin. The centre of the base, c, is drilled larger than the reamer, to let the latter pass down to the proper depth.

The hanger is then removed to the jig shown in fig. 3, and placed thereon the other way up. This jig consists of a base with a vertical pin, the upper end of which is turned to the taper reamed out in the last operation. This holds the hanger true to the machined surfaces,

Babbiting Driving Wheel Faces.

A handy device was evolved in the G.T.P.R. shops at Prince Rupert, B.C., some little time ago by G. Carpenter, who was the Locomotive Foreman there, for the babbiting of the faces of driving wheels, and thus avoiding the necessity of placing them in a lathe for turning up, which makes the arrangement of particular use in small shops and roundhouses where a lathe of sufficient capacity is not always on hand. A circular disc about 15 in. diam., made of $\frac{5}{8}$ in. boiler plate, turned to $\frac{1}{2}$ in. on one side so that the turned face is perfectly true, is divided into two parts to fit around the axle. The two parts are bolted together with two plates of the same material, 3 x 5 in., which are fastened solid to one half of the disc, so that it is held rigid. The disc has a circular groove $\frac{3}{16}$ in. deep and $\frac{5}{8}$ in. wide cut in the finished face about an inch from the outside edge, into which may be fitted split rings of different thicknesses according to the amount of metal desired on the wheel. The rings differ in thickness by $\frac{1}{4}$ in., and the more metal it is

desired to mould on to the wheel, the thicker the ring to be fitted into the groove. The disc is attached to the wheel by clamps around the spokes and drawn up tight to the face, when the babbit is poured through a lipped hole 1/2 in. diam. at the top.

Welding Fire Hole Door Frame.

The accompanying illustrations from photographs show a pneumatic fire door frame before and after the welding at G.T.R. shops, Point St. Charles, Montreal. The edges of the broken parts were first chamfered to an angle of 45 degrees, as

shown in the accompanying sketch, the metal adjacent to them was cleaned, and then set up in a position to weld. The whole frame was then preheated in a charcoal fire until it assumed a cherry red heat all over; it was then ready to weld.

Fire Door Frame Before Welding.

Fire Door Frame After Welding.

which was done by two operators, one man on each side of the frame. As soon as the welding was finished, the casting was covered, with charcoal ashes, and allowed to cool as slowly as possible, as when cooled off this way the casting does not shrink and is easily machined. The cost of making this weld was as follows:

1 man chipping and setting up; 1 hr.	40c	\$0.44
2 men welding; 40 mins. at 40c. an hr.	54c	1.58
72 cu. ft. acetylene gas at \$2.75 per 450 cu. ft.		.44
90 cu. ft. oxygen gas at \$1.75 per 100 cu. ft.		1.58
Iron, flux and charcoal		.65
	94c	\$2.67
		.94
Total		\$3.61

Rack for Holding Triple Valves.

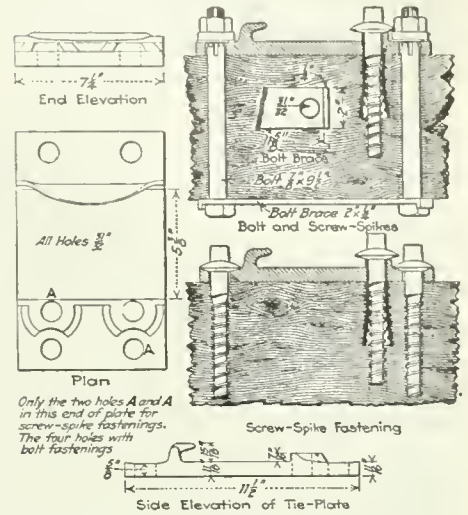

As an instance of the value of matter published in Canadian Railway and Marine World, under "Railway Mechanical Methods and Devices," may be mentioned an article in the October issue describing a rack for holding triple valves built in the C.P.R. passenger car shop, air

brake department, at Vancouver, which was furnished by T. Spence, General Car Foreman there. This attracted the attention of N. Marple, General Car Foreman, Michigan Central Rd., St. Thomas, Ont., who advises us that as a result of the publication of the article a similar rack has been built in the St. Thomas shops.

Experimental Rail Fastenings.

The use of hooked tie plates with screw spike and through bolt fastenings is being tried on the Delaware, Lackawanna & Western Rd. as a development in track for heavy traffic. The two types of construction are laid on certain test pieces of track, and are shown in the accompanying drawing. The tie plate has a shoulder on each side of the rail seat, and one of these shoulders is formed as a hook or lip to engage the edge of the rail base. The plate is laid with this hook on the inner or gauge side of the rail. With spike fastenings, each plate is held to the tie by screw spikes, and the rail is held by one drive spike 1-x6 in. on the outer side. With bolt fastenings, each plate is secured to the tie by two 7/8 in. through bolts (at diagonally opposite corners), the heads being beneath the tie and prevented from turning by means of a channel shaped washer or brace which engages both bolts. The rail is held on the inner side by the hook of the tie plate and on

and prior to the design of this bolted construction the engineering department had gone into the matter carefully, spraying the fittings with oil once or more per year if necessary in order to prevent any trouble from corrosion. On the test loca-

Experimental Track with Hooked Tie Plates and Bolt and Screw-Spike Fastenings.

tion of the new fastenings, all bolts have been greased and the bolt holes filled with grease. The bolts are fitted with special nut locks, each of which represents a compression of 2,000 lb., making a total compression of 8,000 lb. on the tie plate, and thereby reducing the mechanical wear that takes place when tie plates are loose on the ties. It is believed that fastenings of this type will be adopted on heavy permanent track construction.

The hook shoulder tie plate with screw spike rail fastenings has not developed any great amount of noise due to contact between the rail and hook. The tie plates fit the rail base very tightly, but there is no wedging of the rail under the hook. Even where there is a loose fit between the tie plate and base of rail there is no apparent rattling or noise.

American Wood Preservers' Association.—Following are the officers for the current year, elected at the recent annual convention at New York: John Foley, Pennsylvania Rd., Philadelphia, Pa., President; M. K. Trumbull, Kansas City, Mo., First Vice President; J. B. Card, Chicago, Ill., Second Vice President; F. J. Angier, Baltimore and Ohio Rd., Baltimore, Md., Secretary-Treasurer; V. K. Hendricks, C. M. Taylor, members of the executive committee. It was decided to hold the next meeting in Chicago.

Passenger Shelters at Double Track Stations.—The Board of Railway Commissioners has before it for consideration the matter of requiring railway companies to provide a shelter opposite a passenger station at busy points where trains may be going in opposite directions on different tracks at the same time, and has asked the railway companies to submit their views. The matter was brought to the board's attention by a resident of Perth, Ont., where there are six passenger trains each way daily.

House of Commons Committees.—The following have been elected chairmen of the committees named: Railways, R. Blain, M.P. for Peel, Ont.; Marine and Fisheries, C. Jameson, M.P. for Digby, N.S.; Forests and Waterways, G. Brabazon, M.P. for Pontiac, Que.

the outer side by the head of a screw spike. This screw spike is held in the tie by means of a Tenax split sleeve. Bolt fastenings for rails and rail chairs have been used for many years in Europe, and this present design of through bolt fastenings for tie plates has been developed by A. J. Neafie, Principal Assistant Engineer of the railway, who has great hopes for its use in permanent construction. He believes that as railways are now using treated ties and expensive tie plates under heavy traffic, especially on curves, they can well afford to go into the question of bolted fastenings. This should be an ideal construction also for subways and tunnels, where it is difficult to apply new material in maintenance work. The modern construction consists of treated materials, heavy tie plates, screw spikes, etc., which material should have a minimum life of at least 14 years, according to Mr. Neafie's estimate. He considers that the question of applying bolts is not a serious one, and they need be applied only in new work and renewals.

One serious condition in track is that of corrosion of rails and metal fastenings,

Cross-Ties Bought by Railways in 1915.

This information is based on reports received from 44 steam railways and 27 electric railways purchasing ties in 1915.

A total of 7,592,530 cross-ties was purchased valued at \$3,329,029. Of this

more than 66%, or 11,811,116, as compared with 1914.

The number of cross-ties imported in 1915 was 1,219,594 valued at \$749,407. About half of these were composed of

place of white cedar.

The average price paid for cross-ties in 1915 showed a slight decrease as compared with 1914. The average prices in the accompanying tables are based on the cost at the point of purchase, and may or may not include long haul transportation charges. Only in the cases of those woods which are used in large quantities can value given be taken to represent the relative value of the wood.

The electric railways paid an average of 52c each for their ties, compared with 44c by the steam railways. The electric railways purchased 2.5% of the total in 1915, compared with 1.1% in 1914.

The foregoing is from a bulletin prepared by the Interior Department's Forestry Branch, for copy of which we are indebted to R. H. Campbell, Director of Forestry.

Canadian Northern Car Building at Port Mann.

In connection with the C.N.R. shops at Port Mann, B.C., it was decided recently to fit up the main building, which was erected a few years ago, for the construction of wooden frame cars. The lumber from which such cars are usually built is generally obtained from the adjacent territory, and as the freight tonnage from the coast eastward considerably exceeds that going west, the movement of the necessary iron parts from eastern points to Port Mann, involves little or no expense. The construction of cars at the coast also reduces the empty car movement westward by providing for the excess east bound tonnage. Following is a list of the tools ordered, to which, it is possible, that certain additions may be necessary, after the plant is in operation in order to balance the output of various parts. At present the idea is to build as many cars as the machine equipment will produce the parts for:—

Iron working machinery: 1 double head centre drive axle lathe, 1 bulldozer, 1 bulldozer oil furnace, 1 6-spindle multiple drill, 1 36 in. upright drill, belt driven, 1 2 in. forging machine, belt driven, 1 forging machine furnace, 2 triple head screwing machines, belt driven, 1 combined punch and shears, 1 Beaudry hammer, belt driven, 1 no. 9 blower, belt driven.

Wood working machinery: 1 butting saw, 1 mortise and boring machine, 1 horizontal tenon machine, 1 vertical tenon machine, 1 automatic gaining machine, 1 4-spindle boring machine, 1 band saw, tilting table, 1 large rip saw, 1 small rip saw, 1 universal saw, 1 6 x 14 sticker, 1 hand jointer, 1 automatic knife grinder, 1 automatic rip and circular saw grinder.

Dominion Government Elevator at Port Arthur.—Contracts are reported to have been awarded to Barnett McQueen Co., for the foundations, revetment work, pile driving and docks, for the Dominion Government grain elevator of 2,000,000 bush. capacity, on the water front at Port Arthur. It is stated that preliminary work, which will cost about \$300,000, will be started immediately, and that the superstructure will be taken in hand early in the summer.

Canadian Transfer Co., Ltd.—The board for the current year, elected at the recent annual meeting of shareholders, is as follows: C. Cassils, Hugh Paton, G. R. Starke, Sir H. Montagu Allan and F. W. Morson. F. M. McRobie is General Manager and Secretary.

total 318,991 were treated with preservative to withstand decay. This is about 5% of the total, compared with 7% in 1914 and 10% in 1913. The cross-ties purchased in 1915 show a decrease of

kinds of wood which are not abundant in Canada, such as oak, hard pine, chestnut, sycamore and gum. Jack pine still heads the list in quantity cut, a place it has held since 1911, when it took the

Grand Trunk Railway Betterments, Etc.

Port Colborne Station, etc.—A new passenger station is being built at Port Colborne, Ont., at the intersection of the Buffalo-Goderich and the Port Colborne-Port Dalhousie lines. The front of the building facing the former as being the more important line of travel. The foundation is of concrete, the elevations are finished in matt faced brick of a moss green color, and the roof covered with grey asbestos shingles. The exterior is dominated by a turret, with a fleche roof placed at the angle of the building over the operator's room and ticket office, so as to command good views along both main lines which cross there at right angles. The eaves of the roof overhang about 6 ft. to provide shelter from the weather. The interior comprises a large general waiting room, 36 x 25 ft., with terazzo floor, the ticket windows being in the northeast corner. Large double doors give ingress and egress from and to brick paved platforms alongside the tracks on the north and east sides. Immediately off the west end of the general waiting room are separate waiting rooms for men and women, each 18½ x 12 ft., with lavatory accommodations. The space immediately to the west of the small waiting rooms is

troit Terminals, the total estimated expenditure being \$824,359.

At Pontiac, Mich., a new classification yard, with capacity for 456 cars, is practically completed. A new second track of 2.8 miles is also being built in the city. This includes the erection of standard double track steel bridges, with concrete abutments and piers, over Lawrence St., Clinton River and Pike St., also a three track standard bridge with concrete abutments and piers over Orchard Lake Ave. All masonry and track work is completed, and the steel work is expected to be completed at an early date.

A new combination passenger and freight station has been built at Kingsbury, Ind.

Dominion Government War Savings Certificates.

The new war savings certificates which have been created by the Dominion Government to encourage thrift and economy, and to give everyone an opportunity to assist in financing the war expenditure, are on sale at every bank and money order post office in Canada. The \$25 certificate sells for \$21.50, the \$50 one for \$43, and the \$100 one for \$86. As an investment the certificates offer many at-

Grand Trunk Pacific Railway Betterments in 1916.

The Grand Trunk Pacific Ry. during 1916 centred its betterment work along its main and branch lines. We are officially advised that 2.88 miles of new track were laid, viz., an extension to Riverhurst, Sask., on the branch running westerly from Moose Jaw, and a large amount of general work was done.

In addition to pulling up 68.9 track miles of fencing at points between mileage 882.2 and 1656.5, the following works were completed on the main line: New storehouse with spur track at Melville, Sask.; 1,000 ft. spur for freight at mileage 389, Sask.; pumping plant at Watrous, Sask., rebuilt; 1,280 ft. track laid to elevator at Wooster, Sask.; elevator track laid at Birtze, Sask.; 444 ft. extension laid to elevator track at Egerton, Alta.; new pumphouse erected at Wainwright, Alta.; 1,502 ft. elevator track laid at Jarow, Alta.; partition in locomotive house, addition to ice house, a new oil house and an office for employment agent erected at Edmonton, Alta.; loading platform at Duffield, Alta.; pipe line laid for water supply from Nechaco River to Prince George, B.C.; new water supply provided at Bednesti, B.C.; passenger station erected at Nichol, B.C.; loading platform erected and stock yard provided at Vanderhoof, B.C.; passenger station erected at Fort Fraser, B.C.; passenger shelter erected, spur track laid and driveway provided at Skeena Crossing, B.C.; extension to ice house built at Prince Rupert, B. C.

As previously stated, the branch line from Moose Jaw westerly was extended into Riverhurst, Sask., 2.88 miles, where a yard was laid out and the following buildings erected: passenger station, bunk house, freight shed and coaling platform.

On the Prince Albert Branch, which leaves the main line at Young, Sask., the roadbed between mileage 87.5 and Prince Albert, mileage 111.5, was repaired and prepared for track laying. A station building and freight house are being built in Prince Albert. A loading platform has been built at mileage 9.2 from Young; the loading platform at Meacham has been extended; a coal and oil house has been built at Totzke; and at St. Louis, near the present track end, an elevator track has been laid.

On the Biggar-Calgary Branch, at Lydden, mileage 13.4, a passenger station has been built and the loading platform extended; and at Loverna, mileage 104.5, the elevator track has been extended 198 ft.

On the Cutknife Branch a stock yard has been built at Carruthers, Sask., mileage 46.5.

On the Calgary Branch stock yards have been built at Ferintosh, mileage 46.6 from Tofield, and at Delburne, mileage 92.5. At Calgary interchange billing office, storehouse, car inspector's office and scale track have been built.

On the Alberta Coal Branch a commercial spur track, 1,035 ft. long, has been built at mileage 40.

Suggested Aerial Route in Canada.—It is reported that a company may be organized shortly with a capital of \$50,000, to operate an aerial service between the main land and Prince Edward Island.

The Madrid, Saragossa & Alicante Ry. and the Northern Ry. of Spain are stated to be negotiating in the U.S. for freight cars, the former for 600 gondola cars, and the latter for 1,500 hopper cars.

Cross Ties Bought by Railways in 1915.—See page 88.

allotted to the handling of baggage and express business, the respective sizes being 25 x 17 ft. and 26 x 25 ft. The entire building is 101 x 27 ft., and will be equipped with heating system and lighted throughout by electricity.

The new freight shed is 30 x 144 ft., and is constructed of heavy timber according to G.T.R. standard plans.

Western Lines.—At Detroit, Mich., during last year the company authorized 38,440 sq. yds. of brick paving on concrete foundation, of which about 25,000 yds. are completed, on team ways adjoining team tracks and freight houses.

A second track is being built on the 27th District, from Milwaukee Jct. to Royal Oak, Mich., 9.19 miles. The work is completed except through the limits of an interlocking plant where the G.T.R. crosses the Detroit Terminal Rd.

A new second track is being built easterly for 7 miles from Milwaukee Jct. The track work is completed and two interlocking plants with other signal work are under construction. Near the easterly end of the second track there is under construction a new receiving, departure and classification yard, which will have a total capacity of 2,040 cars. The grading is practically completed and track work to the extent of 600 cars has been completed.

The above mentioned improvements form part of the company's plans for the extension and improvement of the De-

tractive features, chief of which are the absolute security and the excellent interest return. For every \$21.50 lent to the government now, \$25 will be returned at the end of three years. There are other features which are especially interesting to small investors. The certificates may be surrendered at any time, if the buyer should need his money; each certificate is registered at Ottawa in the buyer's name and, if lost or stolen, is therefore valueless to anyone else. While they are excellent from an investment standpoint, the certificates should appeal strongly to Canadians, because they offer to those who must serve at home a splendid opportunity for a most important patriotic service. The person who honestly saves to the extent of his ability and places his savings at the government's disposal by purchasing these certificates, may feel that he is having a direct share in feeding, equipping and munitioning Canadian soldiers, who are so nobly doing their part.

Western Dominion Ry.—The Dominion Parliament is being asked to extend the time for the construction of this projected railway from near Cardston, Alta., via Pincher Creek, to the C.P.R. Crowsnest Branch at Lundbreck, thence northerly to Calgary and Edmonton, Alta, and Fort St. John, B.C., with a branch from Pincher Creek to the Old Man River. J. O. Carss, Ottawa, is solicitor for applicants. (Apr., 1915, pg. 137.)

Electric Substation for Mount Royal Tunnel.

The Canadian Northern Ry. will have finished at an early date a substation at the Mount Royal tunnel's west portal, near the top of the 0.6% grade, for supplying power to the locomotives for operation on the electrified zone, extending from the terminal station in Montreal to Cartierville. The building is 88 x 70 ft. x 34 ft. high, and consists of a machinery section and a switching and auxiliary section. The machinery room contains two 1,500 k.w. synchronous motor generator sets, with the foundation for a third set, and 3 exciter sets with space for a fourth. It also contains the switchboard. A 25 ton travelling crane is provided in this room to handle the heaviest pieces of machinery. Under this room there is a basement, where rheostats are located beneath the switchboard, and where there are also storage and locker rooms. The switching and auxiliary section is divided from the machinery section by a heavy fire wall. Underneath half of this is a basement containing rooms for oil storage and for the furnace which will heat the building. This section is divided into a busbar room, oil switch room, lightning arrester room, power transformer room, battery room and feeder entry room. Fire walls and doors fully guard against the possibility of any fire spreading. The machinery room has a glazed brick dado extending 10 ft. above the floor. Above this the room is lined with a light cream colored brick. Ample windows are provided for light and ventilation. Revolving ventilators are located in the roof over the machinery. The exterior of the building is finished with a dark red tapestry brick, with parapet, cornice and other trimming of moulded concrete imitating dressed sandstone. Three-phase 60-cycle 11,000-volt power will be delivered at the substation by the Montreal Light, Heat & Power Co., which distributes electric power from 6 water power stations, aggregating 170,000 h.p. All of these are connected to a central distributing station, which is only a short distance from the east end of the tunnel in Montreal. Two sets of cables, one set a spare, will be installed from the central distributing station through the tunnel in ducts and underground all the way to the substation. In addition to these underground lines, an overhead transmission line will connect the power company's Montana St. transformer station, just north of Mount Royal, with the substation. The switches on these incoming lines will be so arranged that the 11,000-volt busbars can be quickly changed from one to the other. Besides the water power generating stations the power company has 2 steam generating stations with a total output of 32,000 h.p. These act as a reserve only, and are connected to the central distributing station by underground feeders. Continuity of power supply is thus amply provided for.

The alternating current power will be converted into 2,400-volt direct current power for the trolley circuits by 1,500-k.w. motor-generator sets. Two of these sets are being installed at present, one of them being a spare. There will be space provided in the station for a third motor-generator set, which will be installed when the load increases beyond the capacity of one set. Each of these sets consist of two 750-k.w., compound wound, commutating pole generators wound for 1,200 volts, insulated for 2,400 volts, and direct connected to an 11,000-

volt synchronous motor operating at a speed of 600 r.p.m. These generators are permanently connected in series. The shunt fields are separately excited. The pole face winding, series and commutating filed windings are all connected on the ground side of the generators, so that the armatures are only parts subjected to the full potential of 2,400 volts. Separately exciting the shunt fields would ordinarily be objectionable, for the reason that if the commutator should arc over, due to a short circuit on the line, the generator voltage would tend to hold up and maintain the arc. To overcome this objectionable feature, a limiting resistance is placed in series with each of the shunt fields. This resistance is cut into the circuit by means of a contactor, operated by current coils excited from the 125-volt bus, and connected in series with the auxiliary switch attached to the main direct-current circuit breaker. When this circuit-breaker opens the auxiliary switch will also be opened, thereby allowing the contactor to open and cut in the additional resistance, thus reducing the voltage of the generators. A speed limit device is also used. The contacts of this device are connected in series with the trip coil of the circuit breaker. In case of about 15% over speed, or more, a revolving weight due to centrifugal force will open the switch, thus killing the low voltage release coil of the circuit breaker and causing it to open. These sets will have a continuous capacity of 1,500 k.w. each and an overload capacity of 200% for 5 minutes.

There will be three motor-generator exciter sets, each consisting of a 50-k.w. 125-volt generator of the commutating

pole type, direct connected to a 550-volt 1,200 r.p.m. induction motor. Normally one excited will furnish exciting current to the fields of the synchronous motors, and another the current to excite 4 generators, the third exciter being a spare. Two banks of transformers, one a spare, each consisting of three 100-k.w. 60-cycle 11,000/550-volt single-phase transformers will be installed to furnish low voltage alternating current for operating the exciters and various motors. Other small transformers will step down from 550 volts to 110 volts for lighting the station. Emergency lighting will be taken care of by means of a storage battery, which will also furnish current for operating the oil switches in case of a complete shut down, when current from the exciter will not be available.

The switchboard is composed of 32 panels of natural black slate. These will control various outgoing circuits for signals, tunnel lighting and miscellaneous power, as well as the substation machinery. Nine of these panels comprise the 2,400-volt direct current board. The 2,400-volt circuit breakers and lever switches are mounted on panels, back of and above the main switchboard. They are operated by means of insulated handles on the front of the main board so as to eliminate any possibility of the operator coming in contact with the 2,400-volt circuit. The breakers are enclosed between fireproof barriers. They are equipped with powerful magnetic blow-outs to extinguish the arc, and are provided with a resetting device operated from the front of the board. The field switches are mounted back of the panels, with their operating handles on the front of the main board. The complete electrical equipment is being supplied by Canadian General Electric Co., Ltd.

Decapod Locomotives, Canadian Pacific Railway.

By J. W. Buckland, Chief Draughtsman, Angus Shops, Montreal.

The question of economic and efficient locomotives is one which claims the attention of motive power officials and railway executives probably more at present than at any time in the history of rail-roading, and what is desired is an engine with maximum tractive effort that can be got over its division with the least possible delay. With this end in view it is imperative that a locomotive should be as simple as possible, both to operate and

track, and the resistance due to weight applied to incline planes, provides guiding power when the locomotive is entering a curve.

With the application of the above to a pair of driving wheels it is necessary to provide flexibility to the side rods, in order to eliminate any undue strain to crack pins and rods. The design of flexible side rod connection is illustrated by fig. 2, from which it will be noted that it

Weight on drivers	220,000 lb.

Decapod Locomotive, Canadian Pacific Railway.

repair, and that its details should be made as fool proof as possible.

The subject of this article is the Decapod type of locomotives rebuilt recently at Angus shops, Montreal, from Mallet 0660 type, which had been until recently working on hill service in the Rockies. It was necessary, owing to demand of large power of this kind, to convert these locomotives with the least possible delay, and 30 days from the time the order was given, sketches were completed and work was under way in the

is a universal joint in its entirety, the crank pin being one axis of movement, and the brass, being turned on a vertical axis, provides for side sway of the rod. With this arrangement of joint, it is possible to provide a perfect lubrication to the crank pin and it is also simple to machine and maintain in the locomotive house. The arrangement of driving wheel and side rods described above can be applied to any locomotive, with minimum outlay, where trouble is experienced due to flanges cutting.

shops. The first locomotive was turned out in another 20 days.

In a design of locomotive such as a decapod, with long driving wheel base it is necessary to introduce flexibility in order to insure proper tracking and minimize flange wear. For this reason the leading driving wheels on this locomotive were arranged to give 1 in. side play between shoes and driving box flange. See fig. 1. Incline planes have been applied over the leading driving wheels, in order to centre them when running on straight

Another important feature of this design of locomotive, "which of necessity has long overhang beyond trailing driving wheel," is the location of the drawbar pin on the engine. It will be noted from the general arrangement in fig. 2, that this pin is located as close to rear driver as possible. This was done to reduce to a minimum the flange pressure of rear wheels when backing into curves.

Toronto Union Station Construction Progress.

Sufficient progress has been made on the new Toronto union station, being built on the Front St. site by the Toronto Terminals Ry. Co. to enable a definite

building is well advanced. The floors are all completed in the west wing, and the outside walls in the west wing are completed to the second story. The stone for the remaining portion of the walls is practically all cut and on the site, so that when spring opens, it will be possible to proceed at a rapid rate with getting it into position as the conditions of the labor market will allow. The work at present being gone on with is largely in the interior, but there is a shortage of labor, and progress is being made to it not as rapid as it otherwise would be.

The total quantity of concrete poured in the foundation work to the end of January was 4,511 cu. yds. In addition to this a large quantity of concrete has been used in other parts of the building. The total weight of steel to be used is approximately 5,000 tons, of which 4,601 tons had been erected to Jan. 30. In connection with the putting in of the stone, some interesting work will be the getting into position of the larger pieces, the largest of which, a part of the frieze, weighs 27 tons.

The carrying out of the work is in charge of R. W. Ambrose, Chief Engineer, Toronto Terminals Co.; H. K. Ferguson, representing the architects, Ross & Macdonald, and H. G. Jones, Montreal, with whom is associated J. M. Lyle, Toronto. W. T. Griffiths, represents the contractors, the Lyall Construction Co., Montreal.

C.P.R. Ontario District employes have made their 17th contribution, \$500, to the Toronto and York County Patriotic Fund Association. The total contributed since Sept., 1915, is \$12,850.

Agricultural Course Trains.—The C.P.R. put on a special train, starting from Medicine Hat, Jan. 29, and arriving at Loughheed, Alta., Feb. 24, visiting Ret-

Fig. 1—Decapod Locomotive, C.P.R. Arrangement of Leading Driving Wheels.

Heating surface, firebox180 sq. ft.
 Heating surface, total, including superheater 3076 sq. ft.
 Superheating surface506 sq. ft.
 Grate area59 sq. ft.
 Smoke stack diameter16½ sq. ft.

TENDER.

Wheels, diameter36 in.
 Journals, diameter and length5½ x 10
 Water, capacity7,000 gals.
 Coal capacity10 tons

The tender is equipped with 45 degree coal space, which eliminates the necessity of fireman having to shovel coal ahead on tender. In converting the tender from 5,000 to 7,000 gall. capacity, the tank was lengthened 6 ft. at the back portion and the frame was spliced at the front end, the splice being made to extend beyond the bolster of the leading truck, and the draft gear fastening at the rear was not touched.

The engine is equipped with two sand-boxes, to insure proper gravitation of sand to desired points. Flange lubricators are applied to front and rear driver. The engine is also equipped with straight line Walschaert valve gear and self centering valve stem guide. The link is supported at each side with bearings on mill plate supports, which also support reversing crank arms. The crosshead arm has been eliminated and the union link is connected to the collar, which is welded to the crosshead as per fig. 3, thereby making the wrist pin fit independently of union link bearing.

The specialties include:—Casey-Cavin reverse gear; McCord force feed lubricator; Franklin butterfly type 8 fire door; Security brick arch.

Indian Railways Curtail Service.—A Delhi press dispatch says that among the new war measures adopted by the Indian Government is the severe curtailment of railway services.

A Bill Consolidating the Railway Act was read a second time in the House of Commons recently, and referred to a special committee.

idea to be obtained of its general size and form, and to gauge its effect upon the district. A complete description of the building, with perspective, main floor and other plans were given in Canadian

Fig. 3—Decapod Locomotive, C.P.R. Crosshead, Wrist Pin Bearing Bush.

Railway and Marine World for June, 1914.

The foundation work, including the tunnels, spaces for mechanical equipment, etc., is fully completed. The steel framework in both wings is completed, and that for the central portion of the

law, Travers, Black Falls, Stettler and Veteran, for the purpose of providing short courses in agriculture in those districts. During March and April the Canadian Northern will operate a special train for similar purposes over its Alberta lines.

Freight and Passenger Traffic Notes.

The G.T.R. put into effect, Feb. 11, a further reduction of its passenger train service in order to facilitate freight traffic.

The G.T.R. has restored the Hamilton-Allandale mail train, leaving Hamilton at 6.40 a.m., which was cut off in the general reduction of passenger train service in January.

It is reported that the C.P.R. will open its Banff Springs Hotel earlier than usual this year, and that it is not unlikely it will be kept open in future during the entire year.

The Minneapolis, St. Paul & Sault Ste. Marie Ry. will, according to a press report, run a through train service between Duluth, Minn., and Winnipeg, Man., via Bernidji, Man.

The Pere Marquette Rd. has cancelled temporarily two trains between Sarnia and Blenheim, Ont. The only trains on that section of line now running are one reaching Sarnia at 11.45 a.m., and one leaving Sarnia at 4.05 p.m.

R. Creelman, General Passenger Agent, Canadian Northern Ry., Winnipeg, B.C., Feb. 12, that the company proposed to open passenger agencies in Seattle, Wash., and other cities along the Pacific coast, with a view of directing United States tourist traffic towards British Columbia points.

The Minister of Railways stated in the House of Commons recently that he would look into the withdrawal of trains to and from St. John, N.B., making a direct connection with the I.R.C. Maritime Express at Moncton. There was such a connection until the recent reduction of trains and it is claimed that the present schedule is causing great inconvenience to travellers.

The G.T.R. Passenger Department claims that the upper berth in sleeping cars is winning popularity in an increasingly large measure with the travelling public. The points claimed in favor of the upper berth are: extra privacy, superior ventilation, less noise on account of the greater distance from the wheels and rails, and the fact that the cost is 20% less than that of a lower berth.

The C.P.R. announces that, from June 19 to Sept. 7, inclusive, special steamship expresses will leave Winnipeg 21.45 Tuesdays and Fridays, arriving at Fort William 10.00 next day, and will leave Fort William 8.30 Mondays and Fridays, arriving at Winnipeg 21.00 the same evening, thus connecting with the steamships Keewatin and Assiniboia to and from Port McNicoll. Prior to June 19, and after Sept. 7, passengers will use regular trains.

Niagara Frontier Lines. — The Public Service Commission for the Second District of the State of New York has under consideration an application to revoke a certificate of convenience and necessity granted to the Frontier Electric Ry. A U. S. publication says: "The case developed into a struggle between the Pennsylvania Rd. and the Delaware, Lackawanna & Western Rd. on the one hand, and the Erie Rd. on the other, for the business of the rich industrial territory at Niagara Falls and possibly future connections with the proposed extension of the Canadian Northern Ry. from Toronto. The Pennsylvania Rd. representatives informed the commissioners that it certainly was to be a local freight line

with the possibility of later making part of a through freight line to Canada. The chairman of the commission said the commission had never entered into any enquiry as to the necessity of another freight line, and one of the other commissioners said: 'Irrespective of this controversy over business between the railways, I do not permit these railways to extend a new freight trunk line to the Canadian border without full notice to the people of the territory.' The commission decided not to dispose of the matter as between the companies until it was satisfied of the necessity for a new trunk freight line."

Pay of Enlisted C.G.R. Employees.—The Minister of Railways stated in the House of Commons recently the government was aware that F. P. Gutelius, General Manager, Canadian Government Railways, had issued a circular, Oct. 30, 1914, promising all officials and employees of those railways who enlisted or who would enlist in the active militia for overseas service their full salary or pay while in the military service, and that the government had approved and authorized the promise. Salary or wages will be paid to those having enlisted prior to Nov. 1, 1915, in accordance with circular 16, dated Oct. 30, 1914, and to those who enlisted subsequent to Nov. 1, 1915, salary or wages will be paid in accordance with circular 26, dated Nov. 8, 1915.

C.N.R. Taxes in Winnipeg. — The Supreme Court of Canada has thrown out both appeals in the case of the City of Winnipeg against the Canadian Northern Ry. The case arose out of the city levying taxes for \$140 in 1914, which the company refused to pay, and the city purported to sell the land for taxes. To prevent the title being issued the C.N.R. paid the taxes under protest. In Dec. 1915, Judge Macdonald held in a Manitoba court that the city was acting ultra vires in assessing the land for local improvements. An appeal to the Manitoba Court of Appeal resulted in a decision that the company was liable for local improvements but was exempt from a levy for a special survey. Both parties took the case to the Supreme Court, which has decided to uphold the decision of the Manitoba Court of Appeal.

Protection to Workmen, while engaged under or about cars on regular repair tracks.—The Board of Railway Commissioners issued the following circular to railways recently:—It is the Board's opinion that in addition to the blue flag by day, and the blue light by night, displayed as required by rule 26 of the General Train and Interlocking Rules, further protection should be adopted, by having all switches leading to regular repair tracks locked with special locks, and the keys carried by the foreman in charge of the car repair work, or other responsible party, whose duty it should be to see that employes are warned and are clear from cars before any switching movement is made on such track, and to see that switches are relocked after switching movement is completed.

Exclusive Use of Sleeping Car Drawing Rooms.—The Interstate Commerce Commission has decided, in the case of Carter vs. Minneapolis, St. Paul & Sault Ste. Marie Ry., that it was not unreasonable for the railway to require a passenger, desiring the exclusive use of a sleeping car drawing room from St. Paul to Chicago, to purchase two railway tickets. This followed the decision in the case of the Nevada Railroad Commission vs. Southern Pacific Co.

Amendments to Baggage Regulations.

The Board of Railway Commissioners for Canada passed general order 179, Jan. 29, as follows:—General order 151, Nov. 8, 1915, prescribing regulations governing baggage car traffic, for the observance of every railway company within the legislative authority of the Dominion Parliament, other than government railways; and the application of M. J. Gorman, K.C., of Ottawa, for an order amending Rule 26 (d) of the said regulations. Upon reading what is filed in support of the application and on behalf of the Eastern Canadian Passenger Association; and upon the report of the Chief Traffic Officer of the Board, it is ordered that the said Rule 26, sub-section (d) be amended by adding after the word "the," the 7th word in the 2nd line, and before the word "carrier," the 8th word, the following words, "originating or terminating"; and by striking out the words "at destination," which are respectively the 9th and 10th words of the 2nd line of the sub-section: the railway companies to publish order in The Canada Gazette.

General order 181 was passed Feb. 3 as follows:—Re general order 179, Jan. 29, amending Rule 26, sub-section (d) of Regulations Governing Baggage Car Traffic, as prescribed by general order 151, Nov. 8, 1915. Upon reading what is filed on behalf of the Eastern Canadian Passenger Association, it is ordered that general order 179 be amended by adding after the word "sub-section," in the 7th line of the operative part of the order, the words, "and by striking out the word 'thereat,' the 4th word in the 3rd line of the said sub-section, and substituting therefor the words 'at destination.'"

S. D. Hogan, Contractor, is suing the Northern Construction Co. and Mackenzie, Mann & Co., Ltd., for \$115,898.29 for work done and materials supplied on a section of the Canadian Northern Ry. near Yellowhead Pass. The point in dispute is the cost of removing earth and rock which, during the construction of the C.N.R., fell on the Grand Trunk Pacific right of way, which was extra work. The case will be tried before a jury of an Alberta court.

Engineers' Club of Toronto.—The report for 1916 shows a total membership of 550, of whom 400 are resident in Toronto. The officers for the current year are: President, E. L. Cousins, Chief Engineer, and Manager Toronto Harbor Commission; First Vice President, L. V. Rorke; Second Vice President, G. W. Power, Canadian Stewart Co.; Third Vice President, J. R. W. Ambrose, Chief Engineer, Toronto Terminals Co.

Railways Enquiry.—The estimates submitted to the House of Commons recently contain an item of \$120,000 to provide for an enquiry and a report on the railway situation of Canada, which is being made by the commission, of which A. H. Smith, President, New York Central Rd., is Chairman. One-quarter of the sum was voted by the House of Commons, Feb. 1.

Members of the Western Canadian Live Stock Union, B.C., and of the United Farmers of Alberta, met the traffic officials of the C.P.R. Western Lines at Winnipeg, Feb. 3, to discuss rates to summer pastures, etc.

The Missouri Pacific Ry. was sold by auction at St. Louis, Mo., Feb. 21, for \$16,151,000 to R. H. Nielson and J. W. Holmes, representing a reorganization committee.

Canadian Transportation Men, Engineers, Etc. in the War.

The Dominion Power & Transmission Co., of Hamilton, Ont., has had 126 employes enlist for overseas service.

The C.P.R. Has Given six Red Cross cars to the Canadian Military Hospitals Commission, to be used for wounded and invalided soldiers.

Private H. Howard, of the King's Liverpool Regiment, killed in action, was engaged in the Freight Department, G.T.R., Liverpool, Eng., from July, 1914.

Corporal R. C. Murrow, who has been awarded the military medal for a deed of great gallantry, was, for four years prior to enlisting, in the Passenger Department, C.P.R., Liverpool, Eng.

Gunner John Callaghan, of Montreal, who has been wounded in the face, hands and thigh, is 30 years old and has been overseas for two years. He was employed in the Montreal Tramways Co.'s shops at Youville, Montreal, before enlistment.

Lt. Col. B. R. Hepburn, M.P., of Picton, Ont., formerly President, Ontario & Quebec Navigation Co., who is second in command of one of the Canadian forestry battalions overseas, was one of a party of members of the Canadian House of Commons which visited the British Grand Fleet recently.

Lieut. A. E. Spendlove, formerly Manager, Lake Shippers Clearance Association, Winnipeg, has returned on leave. While in charge of a machine gun section on the Somme last September, he was severely wounded, and was in a hospital for some time, during which he was given the Military Cross.

Hector K. Morrison, Jr. Can.Soc.C.E., was was Resident Engineer, Canadian Northern Ry., Pembroke, Ont., and went overseas in the Canadian Engineer, from which he was transferred to the Royal Engineers Railway Corps, as lieutenant, has returned to Toronto recently, on a short leave of absence. He is a son in law of H. K. Wicksteed, M.Can.Soc.C.E., Chief Engineer of Surveys, Mackenzie, Mann & Co., Ltd.

Lt. Col. G. S. Cantlie, formerly General Superintendent of Car Service, C.P.R., who really gave up those duties in Oct., 1914, although he was not officially given leave of absence until Jan. 8, 1915, has been connected with the 5th Regiment, Royal Highlanders of Canada, for a number of years, having risen to the lieutenant-colonelcy. He sailed from Montreal June 10, 1915, with the 42nd Battalion, C.E.F., Royal Highlanders of Canada. He was slightly wounded in the arm Sept. 15, 1916, but did not have to give up duty. He is at present in Montreal on a short leave of absence.

Gerald Hiam was District Passenger Agent, C.P.R., at Fort William, Ont., until the summer of 1915, when he went into the 73rd Battalion, Montreal, as a lieutenant, and then transferred to the 198th Battalion (Bufs), Toronto, as captain. In order to get overseas quickly he reverted to lieutenant, went to England in Sept., 1916, and to France in Oct., 1916, with the 14th Battalion (Royal Montreal), in which he has now been promoted to second in command of A. Company. His brother, F. A. Hiam, formerly private secretary to Sir Donald Mann, is Captain and Adjutant of the 198th Battalion.

Lieutenant James McNaught, 2nd Battalion, 18th Royal Scots, who was killed in action recently, was born at Walkerton, Scotland, Apr. 23, 1883, and was

educated for the legal profession, qualifying as a solicitor in Edinburgh. He came to Canada in 1906, and on Apr. 23, 1906, entered the C.P.R. legal service at Montreal as assistant to Solicitor. He was appointed Assistant Solicitor, Jan. 1, 1912, and Solicitor, Aug. 1, 1914. In the early part of 1915, he undertook a course of military training with the McGill Battalion, and on Nov. 17, 1915, he left Montreal for Scotland, where he joined the 18th Royal Scots as a private. He continued his training until June, 1916, when he was selected for an officer's course, qualified in October, and was drafted to the Somme front early in December. He was killed Jan. 7.

Albert Henry Kendall, who was announced in our last issue as having been appointed Captain, No. 1 Section, Skilled Railway Employes, was born at Aspatria, Cumberland, Eng., Apr. 4., 1878, and

A. H. Kendall,
formerly Master Mechanic, Ontario District, C. P. R., Toronto, now Captain, No. 1 Section, Skilled Railway Employes.

served his apprenticeship with the Canada Atlantic Ry. at Ottawa. From June, 1901, to Mar., 1902, he was machinist, C.P.R., Revelstoke, B.C.; Mar., 1902, to Jan., 1903, Locomotive Foreman, C.P.R., Nakusp, B.C.; Jan. to Dec., 1903, General Foreman, C.P.R., Revelstoke, B.C.; Dec., 1903, to Dec., 1904, Locomotive Foreman, G.T.R., London, Ont.; Dec., 1904, to Dec., 1913, leading hand, General Erecting Foreman, Angus shops, C.P.R., Montreal; Dec., 1913, to Apr., 1915, General Foreman, C.P.R., North Bay, Ont.; Apr., 1915, to Aug., 1916, Assistant Works Manager, Locomotive Department, Angus shops, C.P.R., Montreal; Aug., 1916, to Jan., 1917, Master Mechanic, Ontario District, C.P.R., Toronto.

E. W. DuVal, who is taking an officer's training course at Regina, Sask., with a view to active service overseas, was born at Toledo, Ohio, June 5, 1885, and entered railway service, July 1, 1902, since when he has been, to June 1, 1905, in

Superintendent's office, Canadian Northern Ry., Winnipeg, and at Port Arthur, Ont.; June 1, 1905, to Jan. 2, 1911, successively, secretary to General Superintendent, Central Division, C.P.R., Winnipeg; chief clerk to Superintendent, District 2, Central Division, C.P.R., Winnipeg; assistant chief clerk to General Superintendent, Central Division, C.P.R., Winnipeg; chief clerk to General Superintendent, Western Division, C.P.R., Calgary, Alta.; chief clerk to Assistant General Manager, and, later, to General Manager, Western Lines, C.P.R., Winnipeg; Trainmaster, C.P.R. Terminals, Calgary, Alta.; Jan. 2, 1911, to Apr. 6, 1912, Superintendent, District 1, Saskatchewan Division, C.P.R., Moose Jaw; Apr. 6, 1912, to May, 1913, Superintendent, District 4, Manitoba Division, C.P.R., Souris; May, 1913, to Feb., 1917, Superintendent, Saskatoon Division, Saskatchewan District, C.P.R., Saskatoon.

Major Edmond H. Drury, M.Can.Soc. C.E., Assistant Director General of Engineering Service, Militia Department, attached to the headquarters staff, died suddenly in his apartments at Ottawa, Feb. 1, aged 66. He was born at St. John, N.B., and graduated with honors at the Royal Military College, Kingston, Ont., specializing in civil engineering. He was on the staff of the late Jas. Ross on C.P.R. construction in the British Columbia mountains in the early eighties. He was engaged on the construction of the C.P.R. short line to St. John, N.B., and later on had charge of the first survey for a Dominion Government railway to Hudson Bay. He was also engaged on the construction of the Cuba Rd. for the late Sir William Van Horne, and subsequently. He was at one time Resident Engineer for the Mexican Light & Power Co., at Mexico City, and subsequently had charge of the Dominion Government surveys for the Hudson Bay Ry. Afterwards he became Chief Engineer for the Chilean Rd. at Antofagasta, but illness compelled him to go to England for treatment, and it is said that he never fully recovered. On the outbreak of war he offered his services to the Dominion Government and became Assistant Director General of Engineering Services.

C.P.R. Hotel Rates.—As stated in Canadian Railway and Marine World recently, the Hotel Palliser, Calgary, started operating on the European plan on Jan. 1, and the Chateau Frontenac, Quebec, will adopt the same plan on May 1. During the coming summer, Banff Springs Hotel and Chateau Lake Louise will also be operated exclusively on the European plan, the rates for rooms being \$2 a day and upwards.

George Bury in Russia.—A London, Eng., cablegram of Feb. 12 said:—Messages from Petrograd announce that receptions were given to the allies' delegates under Lord Milner at Moscow. One of the members of the party is George Bury, the Canadian Pacific Railway Vice President, who is advising the Russian Government on railway matters.

The Roberval-Saguenay Ry. advised the Quebec Public Utilities Commission recently that it intended suspending, temporarily, the train service on the Larterriere Branch, owing to shortage of coal, but it was ordered to continue the service unless it could show a more satisfactory reason for its discontinuance.

Grand Trunk Railway Car Shops at Port Huron.

The car shops which the G.T.R. is erecting at Port Huron, Mich., to replace those destroyed by fire are located on a site acquired in 1915 by the citizens from the Port Huron Engine & Thresher Co., which had erected a new plant on another site. The site has two frontages, one on Griswold St., and the other on Twenty-eighth St. The layout shows nine blocks of buildings laid out round the power house, which is located in the centre of the block. Following is a list of the buildings with their dimensions:— Large passenger car shop, 304 x 135 ft.; small passenger car shop, 238 x 135 ft. to which will be joined up a cabinet shop, 250 x 73 ft. These two buildings will be served by a transfer table 60 ft. wide. The office, 63 x 59 ft., will be combined with the store building, 153 x 59 ft. The other buildings are: Paint shop, 50 x 25 ft.; power house, 96½ x 70 ft.; wood mill, 210 x 90 ft.; dry lumber store, 146 x 46 ft.; dry kilns, 80 x 41 ft.; machine shop and blacksmith shop, each 300 x 75 ft., but combined in one building; freight car shop, divided into two parts, each 361 x 79 ft.

Starting from the Twenty-eighth St. frontage, the buildings will be in the following order:—

The Office and Store Building will be 216 x 59 ft. The front of the office section, 63 x 59 ft., will be set back 55 ft. from Twenty-eighth St. A fireproof wall will separate the office from the store-room, which will be 153 x 59 ft. The construction will be concrete foundations, with brick walls and steel windows, and heavy wood frame and tar and gravel roof. There will be an office for the store keeper in the store section, and the office section will be divided internally with hollow terra cotta walls, and the outer

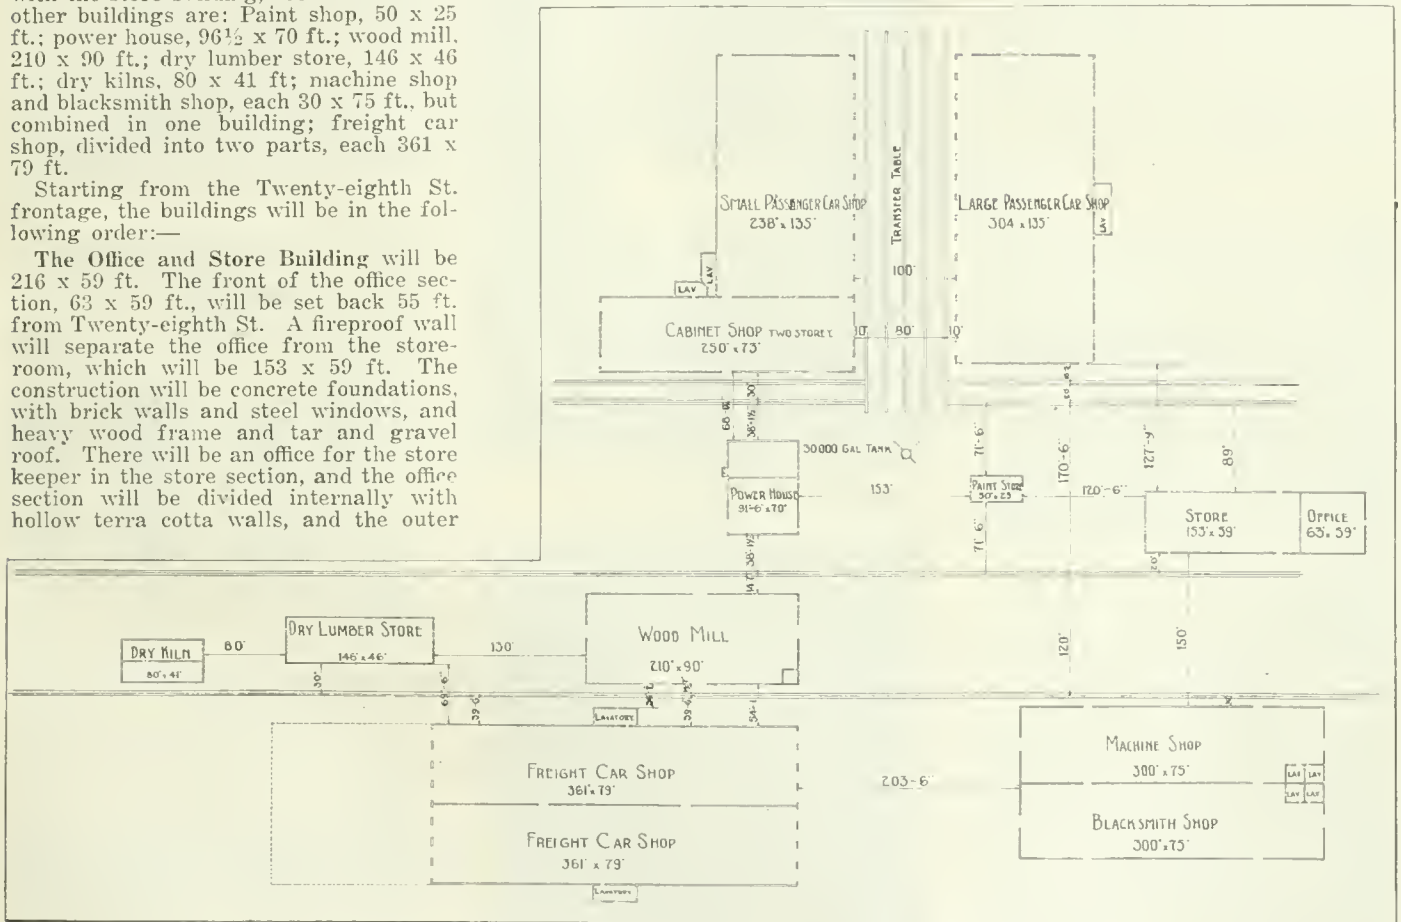

ft., by a fireproof wall. These shops, in which steel and wood cars will be built, are planned for the material to enter at one end and the finished cars to leave at the other. The construction will be concrete foundation; brick walls; with steel windows; interior posts and roof; roof to be covered with 4-ply roofing felt, tar and gravel. The monitors, which will run from end to end of the building, are to be of wood with similar roofing material.

The Wood Mill, 210 x 90 ft., will be midway between the freight car shop and the power house. It will be entirely wood framed on a concrete foundation. The wood framing will be of a substantial type, and the walls will be formed with 2 in. of concrete, reinforced with expanded metal, thus making a perman-

of regulation, and provision will also be made for the introduction of steam as required. The walls will be insulated by air cavity and also the roof, so that even temperature may be maintained.

The Paint House, 50 x 25 ft., will be about midway between the store building and the power house. It is to be of fireproof construction throughout, concrete foundations, brick walls, concrete floor, reinforced concrete roof, slab-covered, with 4-ply roofing material, tar and gravel, steel sashes and wood door.

The Power House, 91½ x 80 ft., will be about 150 ft. to the rear. Between the power house and the paint shop will be a 30,000 gall. tank. This will be of wood, erected on a steel trestle 50 ft. high. This power house will be built on concrete

Grand Trunk Railway Car Shops at Port Huron.

walls will be lined inside with the same material, all surfaces of walls and ceilings being plastered and painted.

Machine and Blacksmith Shops.—The block in which these shops will be situated lies next, and will be 95 ft. from the Twenty-eighth St. frontage. It will be 300 x 150 ft., and will be divided into two parts lengthwise, each being 300 x 75 ft. The foundations are to be concrete, with brick walls, wood interior posts and roof, steel window sashes and wood doors; roof to be covered with 4-ply roofing felt, with tar and gravel; monitors to be wood with similar roofing. The partition wall between the two shops will be of fireproof construction.

Freight Car Shops.—Just over 200 ft. to the rear of the machine and blacksmith shops will be the double freight car shop. It is to be 361 x 158 ft., and will be divided into two parts, each 361 x 79

ent finish which will be fireproof. The roof will be tar and gravel. All windows will have steel sash.

The Dry Lumber Store will be an old wood building, 146 x 46 ft., removed from the Thresher Co.'s plant, and adapted to the railway requirements.

The Dry Kiln will be 80 ft. behind the dry lumber store. It will be a specially designed building 80 x 41 ft., in two sections, with sliding doors at each end, thus enabling a car load of timber to enter at one end and be removed when dried at the other, no delay or inconvenience being occasioned through having to remove one car to get at or remove another, and each section will be separate from the other and capable of being used independently. The heat will be supplied by steam pipes located below rail level, and a special system of air ducts will provide ample air changes, which will be capable

foundations, brick walls, wood roof on steel trusses, brick window sashes and wood doors. The roofing material will be similar to that of the car shops.

The Power Plant will consist of 6 return tubular boilers totalling 900 boiler h.p. The boiler pressure will be 150 lbs. per sq. in., and 4 of the boilers will be fitted with superheat, giving 150 degrees of superheat when coal is used, and 200 degrees when wood refuse is used. The boilers will be adapted for hand firing, as this arrangement would appear to be best, on account of the large amount of refuse, varied in character, which will be burned.

Other units for developing power for lighting and operating will be: Two impulse turbo-generators of 300 k.w. each, to be used for generating 3-phase electrical energy at 440 volts, the usual low power factor being raised to a high figure

by the use of a synchronous motor-generator, supplying the necessary direct current power. Two air compressors of 1,500 cu. ft. capacity, of the cross compound type, specially adapted for use with superheated steam. The superheat of the air compressors may be controlled by proportioning their supply of wet steam. Boiler feed and vacuum pumps and open type feed water heater of 1,000 h.p. capacity will also be installed. The boilers will be provided with a steel stack 150 ft. above grade and 6½ ft. diameter.

The heating requirements for the shops will be considerable, due to the large amount of special work in the nature of painting and varnishing, and altogether about 50,000 sq. ft. of radiation will be necessary. This will be supplied by exhaust steam from the power house, in cast iron radiators of the wall type. Coal will be directly delivered to bunkers inside the power house, by hopper cars, discharging through a steel trestle.

The Passenger Car Shops are so planned that each car under construction or repair will occupy one bay of either build-

ing, with a liberal allowance between the cars for working. These two buildings will be parallel to one another, with a space of 100 ft. between occupied by a transfer table which will serve both. The construction will be of concrete foundations, brick walls with steel windows. The roofs are designed with monitors, which will run across the length of the building and so light and ventilate each individual bay. The large shop, which will be 325 ft. from the Twenty-eighth St. frontage, and 295½ ft. from the Griswold St. frontage, will be 304 x 135 ft. The smaller shop will be 238 x 135 ft.

The Cabinet Shop, 250 x 73 ft., will be at the end of the smaller car shop and facing the power house. It will be 2 stories, and of similar construction to the passenger car shops.

Sanitary accommodation and lockers will be provided in each building, for a full complement of workmen. Ample storage spaces for steel, wheels, lumber, etc., have been allowed for, and the layout generally has been planned with special attention to economical working.

The Railway Traffic Congestion in Ontario and Quebec.

The Premier submitted in the House of Commons on Feb. 7 a memorandum from the Chief Railway Commissioner, Sir Henry Drayton, which was referred to the Board of Railway Commissioners' judgment of Jan 8, published in Canadian Railway and Marine World for February, said:—The following statement gives the number of trains cancelled, locomotives released, crews released, and reduction of train mileage daily and weekly, with the resultant approximate coal saving on the Canadian Pacific, Grand Trunk, and Canadian Northern Railways:

	C.P.R.	G.T.R.	C.N.R.
Trains cancelled	59	57	18
Locomotives released	24	28	12
Crews released	27	19	15
Train miles reduced daily	3,611	3,409	1,924
Train miles reduced weekly	25,280	23,866	11,544
Approximate coal saving in tons per week	1,204	1,137	577

The above statistics, as reported by the railway companies, are confirmed by present time tables and the observations of the Board's operating department. All the equipment available has been put in freight service, but the freight service has not enjoyed the full benefit of the additions, owing to the fact that the companies have been running for some time at high pressure, with locomotives so busy that they were not being repaired as and when they should, with the result that a comparatively large number of locomotives are now under repair.

The weather conditions have been such that the anticipated movement has not been obtained. Effective steps were taken to increase the supply of coal, coke, and raw materials for munition works by the car ferries over Lake Erie. The sudden piling up of ice entirely prevented this movement. For the first time in some 30 years even passenger ferries at Detroit were either unable to run or were impeded in their work, and for some time the car ferries running between Windsor and Detroit had to cease operation.

Coincident with the reduction of passenger service, weather conditions became and have continued bad and transportation rendered difficult. These difficulties have been the more acute owing to the shortage of labor. The different yards at terminal and transfer points were

blocked with snow. The snow was not removed while in a soft condition, as the railways claim owing to a shortage of men, and the work of cleaning up the yards at once became both expensive and difficult. At Messina Springs, for example, the G.T.R. reported on Feb. 6 that they could get only a limited number of men to dig out coal cars, urgently required in Ottawa, although they were paying wages as high as \$4 a day in view of the emergency.

The effect of weather conditions may be illustrated by the investigation held by the Board with reference to the service between Quebec and Chicoutimi. Weather conditions were, comparatively speaking, favorable for the period Jan. 1 to 13, both days inclusive. During that period the line under observation carried 538 passenger cars, 1,626 freight cars, and 25 snow ploughs, or a total of 2,189 cars. In making this total haul, 2,074 tons of coal were consumed. During the second period under observation, Jan. 14 to 24, both inclusive, there were moved over the line, 290 passenger cars, 1,620 freight cars, and 33 snow ploughs,—total 1,943 cars. In making this movement, and for an 11 day period as against 13 days in the first instance, no less than 2,626 tons of coal were consumed. As a result, it would seem that, during the second period, with 2 days less operation, 552 tons of coal were burned in excess of that consumed in the former period, although 246 less cars were carried.

The conditions today leave very much to be desired. The movement is not what it ought to be. Beyond all question it would have been a great deal worse had the passenger service not been reduced. The approximate amount of coal saved by reducing the service is 2,918 tons a week. These figures are not based upon extraordinary conditions, but upon ordinary operating conditions. If it had been at all possible to have maintained the old passenger service and carry on freight business, which I very much doubt, a much larger amount than this tonnage would have been required.

With the coal shortage common both to United States and Canadian points, differing only in degree at different centres, and with the railways, disappointed

in their own coal movement, commanding coal for the purpose of keeping their trains running, if the result of the decreased passenger service has merely enabled munition works and coal dealers to obtain the coal formerly consumed in the passenger service, rendering unnecessary, as the reduction does, conscription of coal at least to that extent, on this ground alone the reduction of passenger service, in my view, was entirely justified. The reduction, however, has done more than this. It has enabled the railways, even under the present trying conditions, to continue the coal movement, to continue hauling a sufficient quantity of grain to be turned into flour for the overseas forces, and to continue the service to the munition plants, with the result that, although impeded, these most necessary activities have been carried on.

Objections have naturally been made to the reduced service, but I think I may say that wherever those members of the public who are complaining have learned the traffic conditions obtaining in the country, the necessity of keeping up the movement of food and munitions to the front and the supplying of coal and feed corn and other necessities to our own people, the reductions and all consequent inconveniences have been cheerfully accepted.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, compared with those of 1915-16, from July 1, 1916:

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$3,834,200	\$2,636,800	\$1,197,400	\$ 711,000
Aug.	3,684,900	2,612,900	1,072,000	614,300
Sept.	3,187,900	2,455,300	732,600	*177,300
Oct.	3,716,800	2,496,500	1,220,300	*36,700
Nov.	3,722,300	2,472,300	1,250,000	38,600
Dec.	3,485,400	2,661,600	823,800	*378,300
	\$21,631,500	\$15,335,400	\$6,296,100	\$ 771,600
Inc.	\$4,279,900	\$3,508,300	\$ 771,600

Approximate earnings for Jan., \$2,832,600, and for two weeks ended Feb. 14, \$1,095,600 against \$2,086,800, and \$882,500 for same periods in 1916 respectively.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1915-16, from July 1, 1916:

	Gross Earnings	Expenses	Net Earnings	Increase

Murphy, who has been appointed Manager, Winnipeg Joint Terminals, Canadian Northern, Canadian Government and Grand Trunk Pacific Railways, was born at Napa, Cal., Sept. 11, 1866, and entered railway service, Jan. 24, 1889, since when he has been, to Jan., 1895, successively, operator, agent, brakeman, conductor, yardmaster, dispatcher, chief dispatcher, and connected with the construction department in charge of construction of the Nantaskett Branch, Union Pacific Rd.; Jan., 1895, to Mar., 1898, county clerk, Carbon County, Wyo.; and subsequently enrolling and engrossing clerk in charge of compilation of session laws of fourth Legislature of Wyoming; Mar. to July, 1898, dispatcher, Union Pacific Rd.; July to Nov., 1898, in charge of locomotive performance statistics, Chicago, St. Paul, Minneapolis & Omaha Ry., Itasca, Wis.; Nov., 1898, to Jan. 16, 1899, operator and dispatcher, Eastern Minnesota Ry., West Superior, Wis.; Jan. 16, 1899, to July 31, 1900, dispatcher and Chief Dispatcher, Northern Pacific Ry., Staples, Minn.,

and Glendive, Mont.; July 31, to Nov., 1900, Chief Dispatcher, Union Pacific Rd., Green River, Wyo.; Nov., 1900, to Jan., 1903, Chief Dispatcher, Denver & 1903, Rio Grande Rd., Minturn, Col.; Jan. 1903, to Sept. 30, 1906, Chief Dispatcher and Trainmaster, El Paso & Northeastern Rd., Alamogordo, New Mexico; Sept. 20, 1906, to Jan. 1, 1910, Trainmaster, Mexican Central Ry., Chihuahua, Mexico; Jan. 1 to Apr., 1910, General Yardmaster, Omaha, South Omaha and Council Bluffs terminals, Chicago & Great

Western Ry.; May 1, 1910, to Feb. 27, 1911, Trainmaster, District 2, Central Division, Canadian Northern Ry., Winnipeg; and during Aug. and Sept., 1910, acting Superintendent, C.N.R., Winnipeg; Feb. 27 to Nov., 1911, Superintendent, Duluth, Winnipeg & Pacific Ry., Virginia, Minn.; Nov., 1911 to Sept., 1915, Superintendent, District 2, Central Division, Canadian Northern Ry., Winnipeg; Sept., 1915, to Jan., 1917, Superintendent, District 4, Western Division, same road, Calgary, Alta.

Traffic Orders by Board of Railway Commissioners.

Interchange Track at Calgary.

25837, Jan. 29. Re order 24191, Sept. 17, 1915, directing the C.P.R. to give up possession of the land necessary to enable the Grand Pacific Ry. to build interchange track and make connection with C.P.R. track near the Globe elevator, Calgary, Alta., as shown on plan approved by order 24085, Aug. 19, 1915; and the application of the G.T.R. for an order apportioning the cost of the maintenance of the interchange track: It is ordered that the cost of maintaining the said change track, constructed under orders 24085 and 24191, be borne and paid by the G.T.P.R. Co.

Freight Rate on Feldspar.

25846, Feb. 2. Re complaint of A. E. Hanna, M.P., of Perth, Ont., against rate quoted by C.P.R. on feldspar from Maberly or Mud Lake to East Liverpool, Ohio: It is ordered that the rate to be charged by the C.P.R. on feldspar, in carloads of the minimum weight of 25 net tons, from Maberly, Ont., to East Liverpool, Ohio, be \$3.04 per net ton; and that the schedule to give effect to this order be published and filed not later than Feb. 10.

Minimum Weight for Logs.

25847. Re complaints of Hay & Co., of Woodstock, Ont., and of J. H. Still Manufacturing Co. of St. Thomas, Ont., that they are unable to load a 36-ft. flat car with logs to a minimum of 50,000 lbs.: It is ordered that the complaints be dismissed.

Shingle Rates from British Columbia.

25852. Re application of Shingle Agency of British Columbia, on behalf of shingle manufacturers of British Columbia for an order requiring railway companies to furnish a milling and sorting-in-transit rate: Upon hearing the application at Vancouver, June 26, 1916, the applicants and the Canadian Pacific, Canadian Northern and Great Northern Railway Companies being represented, it is ordered that the application be refused.

Timber Rates from Midland.

25861. Re application of Allegheny Lumber Co. of Pittsburg, Pa., for an order directing the G.T.R. to put into effect a through rate of freight on lumber from Midland, Ont., to Cleveland, Ohio, and to authorize reparation to the same basis on past ships. Upon hearing the application at Toronto, Oct. 5, 1916, the G.T.R. being represented, no one appearing for the applicant, and what was alleged; and upon reading what has been filed in support of the application and on behalf of the G.T.R., and the report of the Chief Traffic Officer of the Board, and its appearing that the rate from Midland to Cleveland, complained of, is unjustly discriminatory against Midland and in favor of Penetang, Ont., it is ordered that the application for a refund be dismissed, that the G.T.R. desist from charging a

greater rate on lumber, in carloads, from Midland to Cleveland, Ohio, than it publishes and charges to the same point from Penetang.

Rates on Canned Goods and Hardware.

25872, Feb. 20. Re application of Vancouver and Victoria Boards of Trade, Dominion Canners, Limited, Glasco, Limited, Oakville, Ont., and the City of Victoria, for an order postponing the proposed increase in the commodity freight rates on canned goods and hardware from Eastern Canada to points on the Pacific coast of British Columbia, as set out in Supplement 3 to Canadian Freight Association Westbound Tariff 1, effective Feb. 12, 1917. Upon reading what is filed in support of the applications and on behalf of the Canadian Freight Association, it is ordered that the application be refused.

Revised Express Classification.

General Order 180, Jan. 30. Re application of Express Traffic Association of Canada, on behalf of the express companies subject to the Board's jurisdiction, for approval of revised Supplement 10 to Express Classification for Canada, C.R.C. 3 (first submitted as no. 8); also including therein Supplement 11 (first submitted as no. 10), omitting the proposed conditions of carriage relating to carload waggon service and pick-up and delivery service, and Supplement 12 (first submitted as no. 11), omitting items relating to cigars, cigarettes and tobacco. Upon its appearing that objections to certain of the proposed changes in rules and ratings were, by consent of the parties represented at the hearings in Winnipeg, June 12, 1916, Saskatoon, June 14, 1916, and Edmonton, June 15, 1916, left to be settled between the interested parties in Eastern Canada, and those affected by the proposed changes, as they now appear in the said revised Supplement 10, having notified the Board of their consent thereto, it is ordered that the said revised Supplement, submitted to the Board by C. N. Ham, Secretary, Express Traffic Association of Canada, with his letter of Jan. 16, 1917, attached hereto and marked A, be approved.

Excursion Rates Prohibited. — The Chief Railway Commissioner for Canada, Sir Henry Drayton, wrote the Canadian Northern, Canadian Pacific and Grand Trunk Railways recently as follows: "I am writing to remind you of the fact that, during the period of congestion and reduced passenger service, it was clearly understood and directions given that no excursion or reduced rates were to be put into effect. On the other hand, passenger traffic was to be discouraged instead of encouraged, so that the freight congestion might be relieved. I assume that your company is not contemplating any reduced or excursion rates whatever either now or prior to April 30."

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Alberta & Great Waterways Ry.—A press report, dated Jan. 30, stated that the track laying going ahead reached mileage 231, or 59 miles from McMurray, Alta. It was expected to complete the track laying to that point before the end of the winter. (Feb., p. 50.)

Alberta-Hudson Bay Ry.—The High River and Hudson Bay Ry. is applying to the Alberta Legislature to change its name to the Alberta-Hudson Bay Ry., to extend the time for the building of its projected railway from High River to the Alberta-Saskatchewan boundary, and for authority to build the following extensions or branches: From near Black Diamond, in Tp. 20, Range 2, west 4th Meridian, southerly to Lundbreck, or Cowley or the Crows Nest Southern Ry., thence to the Alberta-British Columbia boundary at the South Kootenay or Kishenchna Pass; from Lundbreck or Cowley southerly to the International Boundary near Waterton Lakes; from Lundbreck or Cowley southeasterly to Pincher Creek, Cardston and Coutts, thence easterly through Tps. 1, 2 and 3 to the Alberta-Saskatchewan boundary; from Cardston to Lethbridge; from Tps. 1 or 2, between Ranges 3 and 10, to Medicine Hat, thence northerly to Tp. 17 or 18 in Ranges 1, 2, 3 or 4, west of the fourth meridian. Power is also asked to increase the capital stock to \$8,000,000. F. Crandell, Calgary, is General Manager. (See High River & Hudson Bay Ry.)

British Columbia & White River Ry.—The Dominion Parliament is being asked to extend the time for construction for this projected railway from Bear Creek, where it is to cross the International Boundary between Alaska and British Columbia, to the Chilkat River, thence northwesterly to the Alsete River, through the Shakwak valley to Lake Kluane, along the Donjek valley to the White River, thence to the International Boundary between the Yukon Territory and Alaska between the 62nd and the 64th parallels of latitude. The provisional directors named in the act of incorporation, passed 1911, are: C. M. Marpole, G. E. MacDonald, Angus McDonnell, Jas. Ironside, Vancouver, B.C., and J. Rosene, Seattle, Wash. (May, 1915, pg. 170.)

Bonanza Coal & Coke Co.—The Alberta Legislature is being asked to incorporate a company with this title with power, among other things, to build a railway from Crowsnest station on the C.P.R., through the south half of Section 13, Tp. 7, Range 6, west of the 5th Meridian. Mackay, McDonald & Co., Edmonton, Alta., are solicitors for applicants.

Cascade Scenic Ry.—The provisional directors named in the bill before the Dominion Parliament for the incorporation of a company with this title are: T. R. Deacon, E. J. Burleigh, J. A. McCullough, E. Anderson, Winnipeg. The offices are to be at Winnipeg, and the capital is fixed at \$250,000. The company is formed for the purpose of acquiring from T. R. Deacon the rights granted him by the Dominion Government of a conditional license for the occupation of lands for right of way, station and rest house on Cascade Mountain, at Banff, Alta.; to build the railway and to operate the same. (Jan., pg. 19.)

The Central Canada Rd. & Power Co. is asking the Manitoba Legislature to extend the time within which it may build its projected electric railway from the northern or eastern boundary of Winni-

peg to Selkirk, and from either Winnipeg or Selkirk to points on the Winnipeg River, and to Lake Winnipeg via Selkirk or otherwise by a route outside the city of Winnipeg. This was the line as laid out by chap. 56 of the statutes of 1905, which also gave the company power to acquire running rights over other companies' lines. In 1911 the act was amended by authorizing the company to build a railway from Winnipeg to St. Boniface northeasterly to the Winnipeg River in Tps. 17, 18 or 19, thence to the northern boundary of the province, with branch lines to Lake Winnipeg, subject to the approval of the Lieut.-Governor in council. The provisional directors named in the original act are: J. D. McArthur, Jas. Tees, J. S. Gray, W. A. Ducker, H. E. Carstens, W. W. McLeod, I. Pitblado, G. C. Mills, A. N. McPherson, Winnipeg.

The bill now before the Manitoba Legislature asks for the confirmation of the powers conferred by the original and the amending acts, and for the extension of time for the construction of the railway authorized by the amending act of 1911. It would seem therefore that the power to build the electric railway has lapsed, and that the company seeks only power to extend the time for building the steam railway except for the provisions of sec. 3 of the bill, which says:—"The corporate existence of and all the powers and privileges granted to the company by its act of incorporation, 4-5 Edward VII, chap. 56, and by the act amending the same, 1 George V, chap. 80, are hereby re-enacted, and the same are hereby declared, notwithstanding anything contained in the said act of incorporation and amendment, or in The Manitoba Railway Act, to be in full force and effect." The second reading of the bill was debated in the Legislature, after a division, Feb. 8. (April, 1911, pg. 365.)

Central Canada Saskatchewan Ry.—The Saskatchewan Legislature is being asked to incorporate a company with this title to build a railway from the western boundary of the province in Tps. 61, 62 or 63 easterly to Tps. 61 or 62, Range 8 west of the 3rd Meridian, thence southeasterly to Prince Albert, and any extension of the said line, or other lines as the company may be authorized to build, as may be designated by the Lieutenant Governor in council. The capital of the company is fixed at \$1,000,000, with bonding powers for \$20,000 a mile; its office is to be at Regina, and the provisional directors are: J. D. McArthur, W. P. McDougall, D. W. Campbell, R. A. Hazelwood and J. K. McLennan. This company is an offshoot of the Central Canada Ry., which is being built in Alberta, by the same interests, which company is applying to the Alberta Legislature for power to build a line to the Alberta-Saskatchewan boundary. (Feb., pg. 50.)

Dominion Government Railway to Hudson Bay.—\$3,000,000 has been placed in the Dominion estimates for expenditure during the current year on the construction of the railway, now building from Pas to Port Nelson, the terminals and a grain elevator. Of that sum \$750,000 was voted on account Feb. 1 by the House of Commons.

R. McArthur, one of the contractors on the line, is reported to have said, Jan. 30, that the railway will be completed this year. There is about 9 miles of grading to be completed, about 90 miles of track yet to lay, and 2 single span bridges to be built in addition to the one under con-

struction at Kettle Rapids on the Nelson River. (Jan., pg. 19.)

Edmonton, Dunvegan & British Columbia Ry.—The material for the big bridge at Peace River is being hauled in and work is reported to be in progress on the river banks, getting ready for starting work on putting in the substructure. It is reported that arrangements have been completed between the company and the government for the provision of facilities for general traffic over the bridges. An announcement of the terms upon which this will be done will be made when the government's railway legislation is brought down. (Feb., pg. 50.)

Esquimalt & Nanaimo Ry.—The City of Victoria, B.C., is applying to the Board of Railway Commissioners for vehicular rights over the E. & N.R. bridge, in connection with what is known as the new Johnson St. bridge, and the Attorney General of the province has consented to intervene in order that a question of public right may be settled. The bridge was originally built in 1887, and it is claimed that it was then understood that the public were to have vehicular rights over it. These rights do not seem to have been exercised, or the circumstances under which they were to have been exercised do not appear to have arisen. With the opening up of the Songhees Indian reserve for railway and public purposes, a new condition arose, and the Johnson St. bridge was planned as a general traffic and railway bridge. The adjustment of matters as to the bridge has been under discussion between the city council and the C.P.R., which owns the E. & N.R., for nearly a couple of years. (Jan., pg. 19.)

Essex Terminal Ry.—We are officially advised that it is not thought probable there will be any work done on the proposed extension from Ojibway to Pelton, Ont., this year, but the matter is not yet finally settled. The extension into Ojibway, completed in 1916, has been passed by the Board of Railway Commissioners for operation. (Feb., pg. 50.)

Grand Trunk Ry.—A press report states that construction on the Southern New England Ry., a subsidiary of the Central Vermont Ry., itself a subsidiary of the G.T.R., will be resumed at an early date, and that the line from Palmer, Mass., to Providence, R.I., will be completed.

A suggestion has been made in Hamilton, Ont., that the company should abolish its cross town line, on Ferguson Ave., or build a subway on King St.

The Brantford, Ont., City Council has passed a resolution directing its Railway Committee to make formal application to the Board of Railway Commissioners for the construction of a subway under the tracks at St. Paul's Ave.

A press report states that the company will instal a mechanical interlocking plant at Frazier, Mich., to consist of a 20-lever frame interlocking machine, having 4 levers for 4 home signals, 2 levers for 2 dwarf signals, 5 levers for 6 derails, and 4 levers for 4 facing point locks. The layout will include 2 one-arm, two-position, lower quadrant mechanical signals, 2 two-arm, two-position upper quadrant mechanical home signals, 2 one-arm, two-position, mechanical dwarf signals, and 2 one-arm, three-position, distant signals. Four disc and 2 semaphore type indicators will be installed in the tower. (Feb., pg. 50.)

Great Northern Ry.—It is expected that the new station at the False Creek flats, Vancouver, will be completed and ready for occupancy in May.

The locomotive house under construction will have accommodation for 10 locomotives, and the building is so arranged that accommodation for an additional locomotive can be added. In connection with this building a repair shop is being built. (Feb., pg. 50.)

Intercolonial Ry.—The Minister of Railways stated in the House of Commons recently that \$96,360.26 had been expended since Jan. 1, 1915, for improving grades and alignment, and \$677,791.08 had been expended for building heavier bridges and culverts and strengthening the old ones.

The Minister of Railways stated in the House of Commons, Feb. 1, that the elimination of level crossings at Trenton, N.S., had been given consideration and a sum had been placed in the estimates for the year to provide funds for the building of a subway north of the Eastern Car Co.'s works there.

Tenders are under consideration for putting in the substructure of a new bridge across the Gaspereaux River, N.B. (Dec., 1916, pg. 484.)

Kitsault River.—Application has been made to the B. C. Government by L. W. Patmure, et al, Prince Rupert, for permission to build a narrow gauge line in the Alice Arm district, from the coast about 18 miles up the valley of the Kitsault River, to the Dolly Varden claims. The applicants desire to lay the line along a roadway which they had built. The government is favorable to the building of the line, which will carry ore and freight, but not passengers, and has authorized an investigation, and if this is favorable to the project, will grant the necessary permission.

Maine Central Rd.—Application has been made to the Maine Legislature to authorize the company to build a branch line from near Bancroft, on the European & North American Ry., which the M.C.R. leases, northerly and northeasterly through Haynesville, Weston and Orient, Aroostook County, to the easterly boundary of the state, and to connect there with a line to be built by the Dominion Government. A U.S. press report states that the Canadian Government Railways has been looking for a route for a connection with New England points, and has made tentative surveys.

Michigan Central Rd.—We are officially advised that the company has a force of men engaged at Niagara Falls, Ont., making surveys, plans and production tests in the vicinity of the cantilever bridge across Niagara River. When the preliminary work and estimates are completed the company will determine what will be done, either in the way of strengthening or rebuilding the present bridge, or the construction of an entirely new one. A press report states that the rebuilding of the bridge had been started and that the work would be completed in eight months. (Jan., pg. 20.)

Minneapolis, St. Paul & Sault Ste. Marie Ry.—A press report says the company has under consideration tenders for the building of an extension from the termination of the present line at White-tail, Sheridan County, Mont., to the International Boundary, opposite Coutts, Alta., 200 miles, the line to cut across Montana about 10 miles south of the International Boundary line and pass about 17 miles north of Havre, a divisional

point on the Great Northern Ry. The report is that the line will connect up with the C.P.R. Weyburn-Lethbridge line at Pakowki, or Fremont, Alta. (Jan., pg. 20.)

National Transcontinental Ry.—The Minister of Railways stated in the House of Commons recently that the cost of clearing the line and removing stones falling into cuts between Hervey Jct. and Fitzpatrick, from Apr. 1 to Dec. 1, 1916, was \$819.83; and for the same work for the same period between Fitzpatrick and Parent, \$12,131.83. Nothing was paid for similar work during the same period between Parent and Doucet. (Sept., 1916, pg. 364.)

North Vancouver, B.C.—The ratepayers are being asked to vote on a bylaw granting the Capitans Timber Co. the right to build a logging railway over certain of the streets in the municipality.

Northern Pacific Ry.—Arrangements are reported to have been made for building a freight shed, 200 x 50 ft., on a site adjoining the Great Northern Ry. wharf at New Westminster, B.C. The building will, it is said, be of frame, sheeted with corrugated galvanized iron, and roofed felt, tar and gravel. The estimated cost is reported at \$11,500, and it is said a contract will be let at an early date and that the work will be completed within two months thereafter.

Pacific Great Eastern Ry.—P. A. McIntyre, of the Provincial Engineering Department, has been appointed engineer on behalf of the British Columbia Government to supervise and certify the expenditures made by the company out of the loan of \$6,000,000 authorized at the Legislature's last sitting. Payment of \$74,145 for work done on the line during Nov., 1916, was authorized at a meeting of the executive council, Jan. 20.

Residents of North Vancouver are urging the Government to take steps to see that the section of the line from the present end of track out of North Vancouver, to Squamish, is built so as to be completed by the time the other section of the line to Fort George is finished. A train service is being operated from Squamish to Clinton and track is being laid from Clinton towards Fort George. (Feb., pg. 51.)

Peace River to Fort Vermillion, Alta.—A press report states that an engineering party, under G. Murray, is in the field making surveys for a railway from Peace River to Fort Vermillion, and that the preliminary surveys for the line show a route northwesterly from Peace River to the big plateau, thence northerly to Battle River. There are several charters in existence under which such a line might be built, notably the Central Canada Ry., the Athabasca & Fort Vermillion Ry., and the Pacific, Peace River & Eastern Ry., but the report gives no indication as to which, if any, of them is interested.

St. Martins Ry.—The Board of Railway Commissioners has ordered the company to repair 10 bridges on the line, the work to be commenced by Apr. 1, and to be completed within 60 days thereafter. This line runs from Hampton, N.B., where connection is made with the Canadian Government Railways, Intercolonial Division, to St. Martins, 30 miles.

St. John & Quebec Ry.—A press report states that a contract has been let to the Nova Scotia Construction Co. for a section of this railway under construction from St. John to Andover, N.B., between Centreville, the present northerly

terminus, and Andover, 26 miles. (Feb., pg. 51.)

Saskatchewan.—Replying to questions in the Saskatchewan Legislature, Feb. 7, the Premier said that "The government had no assurance that any of the railway companies will proceed with new construction work this year. It is likely a short mileage of rails will be laid where grade already exists, and it is possible some new grading will be undertaken during the forthcoming summer season."

Toronto Industrial Sidings.—Track laying is reported practically completed upon the industrial spur line being built in the Ashbridge Bay district by the Toronto Harbor Commissioners. It is 1.50 miles long and at present extends to the new steel plant site.

Railway Finance, Meetings, Etc.

Canadian Northern Western Ry.—Lazard Bros. & Co., London, Eng., announced recently that they would buy £200,000 of C.N.W.R. 4½% (Alberta) guaranteed 1st mortgage debenture stock, 1942, at 30½.

Canadian Northern Ry.—There has been filed with the Secretary of State at Ottawa a satisfaction of trust agreement, date Jan. 16, 1916, made between the C.N.R.Co. and the Central Trust Co. of New York, as trustee, securing an issue of 5% gold notes of the C.N.R.

New York Central Rd.—There has been deposited with the Secretary of State at Ottawa an agreement, dated Jan. 1, entered into between John Carstensen, A. T. Hardin and E. T. Rossiter, vendors, the Guaranty Trust Co., New York, and the N.Y.C.R., and a lease pursuant thereto, dated Jan. 20, Guaranty Trust Co., trustee, to the N.Y.C.R.

Atlantic, Quebec & Western Ry.—There has been deposited with the Secretary of State at Ottawa duplicate of an agreement dated at London, Eng., Dec. 20, 1916, between the company and E. B. Read and F. H. Jones, providing for the appointment of the latter as trustee for the bondholders under the trust deed of June 26, 1905, and all deeds supplemental to the same, in succession to the late G. Elliott.

Diamond Coal Co.—The Alberta Supreme Court has signed an order granting to the Trusts and Guarantee Co., provisional liquidators, the right to execute an option in favor of H. V. Hudson, Winnipeg, Man., upon the company's property and franchises. The price fixed in the option is \$500,000. The company's property includes a 6 mile railway from Kipp, Alta., on the C.P.R., to Diamond City, and several miles of mine sidings.

Guelph Jct. Ry.—The statement for 1916 shows receipts from all sources of \$42,961.20, an increase of \$846 over the previous year. Four quarterly dividends of 6¼, 5%, 5½ and 6¾%, totalling 24½%, were paid during the year, which absorbed \$41,012. The taxes were \$800, and \$1,000 was contributed to the Patriotic Fund. The receipts for the current quarter show considerable increase as compared with the same period last year. The line is owned by the City of Guelph, Ont., and is operated under agreement by the C.P.R. The board of management for the current year consists of: J. W. Lyon, President; Mayor Newstead, Vice President; A. H. MacDonald, Secretary; J. M. Taylor, H. C. Westby and D. H. Barlow, directors. T. F. Savage, heretofore in C.P.R. service, has been engaged as special agent, G.J.R., effective Mar. 1.

Railway Rolling Stock Notes.

The C.P.R. has ordered 75 automobile furniture cars to be built at its Angus shops, Montreal.

Canadian Government Railways have received 9 mikado locomotives from Canadian Locomotive Co.

The French Government is reported to have increased a recent order for 3,000 freight cars in the United States to 5,000.

The Eastern Car Co. has delivered 600 box cars and 100 coal cars to the Paris & Orleans Ry., completing the order of 2,000 cars. Descriptions of them have appeared in previous issues.

Canadian Car & Foundry Co. is reported to be figuring on an order for 44,000 steel cars for the French Government. It is said they will cost about \$3,000 each.

Canadian Government Railways have received 118 box cars, 50 tons capacity, 1 steel snow plough, from Canadian Car & Foundry Co., and 10 mikado (2-8-2) locomotives from Canadian Locomotive Co.

The Midi Ry. of France is reported to have ordered 40 consolidation locomotives from American Locomotive Co. It is said they will be 161,000 lbs. total weight in working order, with 56 in. driving wheels and 23 by 26 in. cylinders.

The C.P.R. is reported to have offered to convert six of its standard sleeping cars into hospital cars on similar lines to those recently converted by Canadian Government Railways for the Military Hospitals Commission, for the transportation of wounded soldiers from the seaboard to their destinations.

With reference to the report that the Algoma Eastern Ry. was in the market for a number of steel hopper or gondola cars, mentioned in our last issue, we are officially advised that the type of car to be ordered has not been settled, and that until a decision has been reached as to a different method of handling ore than has obtained hitherto, they will not be ordered.

The Russian Government has ordered from the Eastern Car Co. 3,000 box cars of 1,200 poods capacity (approximately 43,200 lbs.). Of these 600 will have air brake and hand brake operated from the platform at one end of the car, and 2,400 will have air brake, but no hand brake or platform. Following are the chief details:

Length inside 22 ft. 9 ins.
Width inside 9 ft.
Height inside 7 ft. 8½ ins.
Gauge of track 5 ft.
Axles 2-5½ ins. by 10 ins.
Journal boxes arranged for pedestals 5½ ins. by 10 ins.
Journal bearings and wedges M.C.B.
Wheels Chilled cast iron
Brake beams and shoes M.C.B.
Screw couplings, books and buffers Russian standard
Door fixtures Top hump type
Air brake, Russian Westinghouse type 8 by 12 ins.
Roof, Russian type—Galvanized iron, 22 s gauge

The Minister of Railways stated in the House of Commons, Feb. 7, that rolling stock was being moved from the Intercolonial Ry. to the National Transcontinental Ry. and returned as traffic required. At the time of replying, there were 32 Intercolonial locomotives on the N.T.R. between Moncton and Winnipeg, and 4 N.T.R. locomotives on the I.R.C. The I.R.C. had sold 74 locomotives to the N.T.R. The N.T.R. east of Levis is equipped with 11 I.R.C. passenger cars. All passenger cars west of Quebec are owned by the N.T.R. There are 1,510

I.R.C. freight cars on the N.T.R. between Moncton and Winnipeg, and 1,085 N.T.R. freight cars on the I.R.C. The I.R.C. has sold 33 passenger cars and 174 freight cars to the N.T.R.

The chief details of the 40 consolidation locomotives, which the British Government has ordered through the Imperial Munitions Board, from Canadian Locomotive Co., for service in France, as mentioned in our last issue, are as follows:

Weight in working order on drivers... 151,550 lbs.
Weight in working order, total 166,000 lbs.
Wheel base of engine, rigid 15 ft. 3 ins.
Wheel base of engine, total 23 ft. 6 ins.
Wheel base, engine and tender 54 ft. 4 ins.
Heating surface, firebox 162 sq. ft.
Heating surface, tubes 1960 sq. ft.
Heating surface, total 2,122 sq. ft.
Driving wheels, dia. 56 ins.
Driving wheel centres...Main, cast steel; others, cast iron
Driving journals, dia. and length...Main 8½, others 8 by 12 ins.
Cylinders, dia. and stroke 21 by 28 ins.
Boiler, type Straight top radial stay
Boiler pressure 200 lbs.
Tubes, no. and dia. 269-2 ins.
Tubes, length 14 ft.
Injectors Locomotive type
Safety valves Locomotive pop
Brakes . Westinghouse American with European couplings
Packing Metallic
Weight of tender loaded 121,000 lbs.
Tank capacity 5,000 Imp. gals.
Coal capacity 10 tons
Tank, type U shape
Truck, type 4 wheel arch bar
Truck wheel, dia. 33 ins.
Truck wheel, type Steel tired, cast steel centres
Journal, dia. and length 5¼ by 10 ins.
Brake beam Steel trussed type

Canadian Government Railways have ordered 20 mikado (2-8-2) locomotives from Canadian Locomotive Co. They will be similar to the 30 ordered in May, 1916, which have been delivered. Following are the chief details:

Weight on drivers, in working order... 213,500 lbs.
Weight in working order, total 283,000 lbs.
Wheel base, rigid 16 ft. 3 ins.
Wheel base, total 35 ft. 1 in.
Wheel base, engine and tender 68 ft.
Heating surface, firebox 242 sq. ft.
Heating surface, tubes 3,398 sq. ft.
Heating surface, total 3,640 sq. ft.
Grate area 56.6 sq. ft.
Driving wheels, diam. 63 ins.
Driving wheel centres Cast steel
Driving journals Main, 11 x 20 ins.; others 10 x 12 ins.
Cylinders, dia. and stroke 27 by 30 ins.
Boiler, type Extended wagon top, radial stay
Boiler pressure 180 lbs.
Tubes, no. and dia. 240 2 ins.; 32 5¾ ins.
Tubes, length 20 ft.
Brakes Westinghouse American
Superheater Locomotive Superheater Co., Type A
Rear frame Crad'e type
Trailing truck Radial type with side bearings
Cab Steel with vestibule
Weight of tender loaded 166,000 lbs.
Tank capacity 9,000 U.S. gals.
Tank, type Water bottom with vestibule connection
Coal capacity 12 tons
Truck, type Pedestal, equalized
Truck wheels, dia. 34 ins.
Wheel, type Steel tired, retaining ring, cast steel centres
Journals M.C.B. 6 by 11 ins.
Brake beam High speed with M.C.B. heads

The Persian Gulf & Mesopotamia Development Co. is asking prices, etc., for delivery in instalments between Sept., 1917, and 1921, for the following rolling stock and equipment: 313 passenger locomotives, 863 freight locomotives, 78 locomotives for mixed service, 4 saloon and state cars, 85 reserved carriages, 11 dining cars, 75 first class cars, 145 composite first and second class cars, 152 composite first, second and third class cars, 45 other cars, 57 second class cars, 126 intermediate class cars, 221 composite, intermediate and third class cars, 50 0third class cars, without brakes, 653 third class ambulance cars, 17 third class

ambulance cars with brakes, 80 third class and postal cars, 318 passenger brake vans, 19 brake vans with postal compartment, 4 postal vans, 54 car brakes, 150 horse boxes, 44 baggage vans, 164 miscellaneous cars, 18 stores vans, 12,282 covered freight cars, 2,578 high sided freight cars, 553 low side freight cars, 8 cattle cars, 12 platform cars, 64 powder cars, 242 timber cars, 267 bolster trucks, 240 ballast cars, 399 brake vans (all uses), 92 oil tanks, 79 water tanks, 35 gas holders, 68 cranes, 232,000 tons of 65 lb. steel rail, 4,000,000 creosoted pine ties. The line for which this equipment is required is being surveyed from Bagdad southeasterly, and the equipment is for use in India westerly to meet the line from Bagdad.

The Quebec and Saguenay Railway Purchase.

The Minister of Railways stated in the House of Commons Jan. 31 that an agreement had been entered into on July 25, 1916, pursuant to chap. 22, statutes of 1916, between the Government and the Quebec & Saguenay Ry. Co., and it had already been laid on the table. The price to be paid for the railway is to be fixed by the Court of Exchequer in accordance with the terms of the statute. The railway is being completed by the company under the conditions set out by order in council.

The Hon. R. Lemieux, M.P. for Rouville, asked in the House of Commons, Feb. 5, whether in view of the Exchequer Court's judgment, given a few days previously, the government intended to implement the legislation of 1915 concerning the Q. & S.R. The Minister of Railways replied in the affirmative.

It was reported from Ottawa Feb. 7 that shortly after the reassembling of Parliament in April the government will introduce a bill supplementary to chap. 22 of 1916 respecting the purchase of the railway. It is stated that the measure will make it clear that the subsidies paid by the Dominion Government will be deducted from the purchase price, and that the basis of purchase will be definitely outlined in connection with certain issues which have been raised on the judgment given in the Court of Exchequer recently.

A Railway's Liability for Accident on a Privilege Pass.—The C.P.R. appealed recently against the Supreme Court judgment affirming a Court of King's Bench decision in connection with the death of a stockman through accident on the C.P.R., while he was travelling on a reduced fare ticket, with cattle. Lord Haldane held that the man had, by signing a railway pass at reduced rates, bound himself to renounce what would otherwise have been his rights, and thus relieved the railway company effectually from all liability for damages; and also that the C.P.R. did enough to discharge the obligation to enable the man to know what he signed the pass for. The appeal was upheld, the judgment of the Canadian courts reversed, and the action dismissed.

National Transcontinental Ry. Yard at Fitzpatrick.—The Minister of Railways stated in the House of Commons recently that the land for the railway yard at Fitzpatrick, Que., was expropriated from the Quebec & Lake St. John Ry., and that the price agreed to be paid is \$100 an acre. The yard was located at Fitzpatrick, instead of La Tuque, on account of the grade.

**Change in Rules for Inspection, Etc.
of Locomotive Boilers.**

The Board of Railway Commissioners passed general order 178, Jan. 23, as follows:—The Rules and Instruction for Inspection and Testing of Locomotive Boilers and their Appurtenances, as set out in general order 78, July 14, 1911, and Circular 140, Jan. 22, 1915, and re the C.P.R.'s application for an extension of time for the external inspection of locomotive boilers. Upon reading what is filed in support of the application, and the report of the Chief Operating Officer of the Board; and it appearing desirable to consolidate the supplemental regulations in the above mentioned matter issued since the issue of general order 78, it is ordered that, in the case of locomotives which are out of service in good condition for one or more full months, the times for making the following inspections and tests, namely, (a) removal of flues and interior inspection of boiler, (b) removal of lagging and exterior inspection of boiler, (c) hydrostatic test, and (d) removal of caps and inspection of flexible staybolts, as provided by paragraphs 5, 11, 12 and 18 of general order 78, may be extended by the railway companies, without making application therefor, for a number of months equivalent to the number of continuous months during which any such locomotive shall be out of service; provided that such inspections and tests shall in no case be performed less frequently than as herein-after set forth:

(a) Removal of flues and inspection of interior of boiler once at least in every 48 consecutive months. (b) Removal of jacket and lagging and inspection of exterior of boiler once at least in every 60 consecutive months. (c) Hydrostatic tests once at least in every 24 consecutive months. (d) Removal of caps and inspection of flexible staybolts once at least in every 30 consecutive months. And it is further ordered that the time during which any such locomotive is out of service be properly covered by "out of service" reports and a notation made on the back of inspection reports and cab cards showing the months out of service on account of which time has been extended, that no extension of time be permitted for any period less than a full month, and that if a locomotive be out of service when any of the above inspections and tests become due, such inspection and test need not be performed until just prior to the time when such locomotive shall be returned to service.

A New Russian Line.—A press report says that M. Albert, of Prince Rupert, B.C., had arranged the financing in Vancouver and western cities for the building of a large mileage of railways in Russia for the government. He left for Vladivostock, Siberia, at the end of January. In an interview before he left, he is reported to have said that 700,000,000 ft. of timber would be required for ties, bridges and other work on the lines, all of which would be secured in Russian territory. This report should not be taken seriously unless confirmed.

Coal for Canadian Government Railways.—The Minister of Railways stated in the House of Commons recently that 553,856 tons of coal had been purchased in the United States for the Canadian Government Railways during the current financial year. The price per ton varied from \$2.51 for slack coal, delivered at Fort William, Ont., to \$10.23 a ton, delivered at Halifax, N.S.

C.P.R. Floral Department's Work.

The C. P. R.'s Floral Committee has issued a circular to station agents, section foremen and others concerned as follows:—"With the object of establishing permanent gardens throughout the system, it has been decided to supply perennial plants on request. These flowering plants remain alive in the ground through severe winters, and most of them bloom early in spring. As these plants do not flower much the first year after planting, the company will also furnish annual seeds this spring as usual. Directions for planting will accompany each shipment and the stock should be planted immediately it is received. At many points gardens do not exist, and it is suggested that a piece of ground be prepared and planted this spring. A plot 30 to 40 ft. long, and 4 to 5 ft. wide, is nearly always available. Many agents already have flower beds immediately adjoining stations, and section foremen have them on each side of the path from section houses to track, while others have very nice beds alongside section and tool houses. The earth for planting should be deeply spaded, and, if soil is sandy or poor, well rotted manure should be dug in. In addition to the plants mentioned, a perennial native hop for planting around outdoor closets can be supplied. Six of these should be enough for any one place. As perennial plants are now to be used, it will no longer be necessary to provide bulbs for fall planting, with possible exceptions. Bulbs that are in the ground at present should be dug up after the plants have died, sorted over, and the good ones used in the fall of 1917 and possibly 1918, by which time the perennials should have made a good display. Bulbs that are kept over for future planting should be packed in paper bags and kept in a dry cool place. Please state your requirements on the perforated leaflet attached, and send as quickly as possible to your superintendent.

"PERENNIAL PLANTS.—A suitable collection for the average garden should include approximately five of each of the following plants:—Achillea, Campanula, Sweet William, Larkspur, Columbine, Icelandic Poppy, Pinks or Dianthus, Gailardia, Bleeding Heart, Peony, Phlox, Golden Glow, Native Hop.

"ANNUAL SEEDS.—Standard packet containing Sweet Peas, Nasturtiums, Zinnias, Mignonette and Candy Tuft."

The sheet containing the list of plants gives the colors, height and other characteristics.

G.T.R. Taxation in Michigan. An amendment to the constitution of the State of Michigan has been introduced into the Legislature to permit it to own and operate railways. The reason for this is said to be a question of taxes between the government and the G.T.R. The dispute is said to date back to 1834, when the Detroit & Pontiac Ry., now part of the G.T.R., was built. The capital stock of the company was \$2,500,000, on which the annual tax of \$25,000 has been paid. The capital stock has never been increased, while the basis of taxation for other railways is valuation.

C.N.R. and G.T.P.R. Audits.—To provide for the making of a continuous audit of the revenues and expenditures of the Canadian Northern and Grand Trunk Pacific Railways, \$10,000 has been placed in the Dominion estimates for the current year. A vote of one-quarter of this amount was agreed to in the House of Commons, Feb. 1.

Canadian Northern Railway Construction, Betterments, Etc.

Mount Royal Tunnel & Terminal Co.—

Work is reported to have been started upon the temporary station at Lagouchere St., Montreal, by Norcross Bros., who expect to have it ready for occupation within six months.

Toronto-Hamilton-Niagara Line.—Sir Wm. Mackenzie is reported as stating that construction work will be started at an early date on the line from Toronto, via Hamilton to Niagara Falls, Ont. Sir Donald Mann is also reported as saying that financial arrangements have been completed ready for an immediate commencement of construction following official approval of the route plans.

Canadian Northern Ontario Ry.—The residents of Norway Bay, near Ottawa, have asked the Board of Railway Commissioners to settle the question of the location of a station there. Three sites have been suggested, each of which is strongly advocated by special interests.

Port Arthur Entrance.—The question of the C.N.R. entrance into Port Arthur, Ont., from the east, is being discussed. L. C. Fritch, General Manager, Eastern Lines, having met the city council recently to see if a settlement can be reached. At present the company connects with its Western Lines over C.P.R. tracks.

Canadian Northern Ry.—A contract is reported to have been let for building a new locomotive house at Rainy River, Ont.

The Alberta Minister of Railways reports that during 1916 the branch line from Oliver towards St. Paul de Metis was graded for 100 miles, and 8 miles of steel had been laid up to Dec. 31. The C.N.R. advised Canadian Railway and Marine World in January that no new track had been laid on its Western Lines during that year. A press report from Edmonton, Jan. 30, said 4 miles of steel had been laid out of Oliver towards St. Paul de Metis up to Jan. 27. The first break in the track laying on the line will occur at the crossing of Sturgeon River, mileage 17.06 from Oliver, where a bridge 200 ft. long will have to be erected. The central span will be of steel, 57 ft. long and 55 ft. above high water mark, the approaches being of trestle work. It is expected the bridge will take about six weeks to put up. It is the largest bridge structure on the hundred miles of line, which is expected to be completed this season.

Canadian Northern Pacific Ry.—All the machinery for the company's car plant at Port Mann, was reported to have been delivered Feb. 6, and rapid progress was being made with its installation. It is expected that the plant will be ready for operation by Mar. 31.

The British Columbia Minister of Railways stated Feb. 1 that the company would shortly operate a train service on the Steveston Branch, which starts from the B. C. Electric Ry., about two miles from New Westminster, or C.N.P.R. mileage 5.41 from New Westminster bridge, and runs to Steveston, about 12 miles. To connect this line with the rest of the C.N.P.R. involves the building of a bridge across the North Arm of the Fraser River. The line has never been operated. M. H. MacLeod, General Manager and Chief Engineer, inspected it Jan. 30, and made arrangements for putting it in order, and for the operation of one train a day each way.

Plans for the location of the company's tracks through New Westminster have been officially approved by the company's officers, and were sent to the Mayor, Feb. 5. The plans have to be approved by the C.P.R., and the work to be done to carry them out includes the moving of the C.P.R. tracks and locomotive house at Columbia St. The B. C. Electric Ry. is also interested, as its tracks are to be moved to a new location. The C.N.P.R. station will be located on the site of the old Royal City Hotel.

R. B. Pratt, architect for the C.N.R. terminal station on the False Creek flats, Vancouver, is reported as stating that good progress has been made with the piling for the foundation of the station, a start has been made with the concrete work, and a considerable quantity of cut stone for the base course has been delivered. Under the agreement with the city, the building has to be completed by the end of the year.

There appear to be considerable differences between the company and the Vancouver City Council as to the progress being made on the False Creek reclamation and other works, and a good deal of speculation as to whether they will be carried out on time or not. On a recent visit to the city, M. H. MacLeod, General Manager and Chief Engineer, is reported to have said: "I do not mind criticism, but I do dislike unfair criticism. We have 300 men working steadily; the other day by actual count there were 281, and another gang was subsequently put on. I sometimes wonder if the members of the city council realize just what work we are doing, and if they give us credit for what we are really trying to do. We ought to know our business, and I want to tell you that we have made a contract with all the contractors working for us that the various works be completed on time, according to our agreement. There need be no fear that the freight terminals will not be finished by June nor the station by Jan. 1. We are just as anxious as anyone else to live up to our agreement and are straining every effort to do so. I sometimes wonder if the people who appear so anxious to criticize the company ever get right down to it and see what work we are really doing in Vancouver. It means more to us than anyone else to have all the work here completed on contract time and we hope to be able to accomplish this despite the many adverse conditions that have confronted us."

At a meeting of the City Council, held Jan. 31, the following resolution was passed:—"That the City Solicitor, with the assistance of the City Engineer and the chairman of the railways and bridges committee, be instructed to prepare and present a petition to the Minister of Railways of British Columbia, requesting that the City of Vancouver be given an opportunity to lay before the Lieutenant-Governor-in-council, in accordance with clause 41 of the agreement, its various complaints as regards the conduct of the C.N.R. in connection with the agreement existing between the company and the city; the petition to clearly point out that the city's main object is to obviate the possibility of any further delay in commencing the various works included in the agreement, and to guarantee the completion of said works on or before the date set out in the agreement."

Vancouver Island.—The subway on Burnside Ave., Victoria, on the line to Patricia Bay, is well advanced to completion. When this is finished it will be possible to operate the line into Victoria, and enable material to be brought in for track laying and general construction purposes on the line to Alberni. The company has 10 miles of track laying on the mainland for this purpose, but it has no more in sight. The roadbed is completed from near Victoria to within a few miles of Alberni, about 136.5 miles. (Feb., pg. 64.)

City Bridges and Subways.

Following are extracts from the Toronto City Commissioner of Works' interim report for the 11 months ended Nov. 30, 1916:

Mount Pleasant Road Bridge.—The construction of a 3 span reinforced concrete bridge over the old belt line, G.T.R., was begun in Mar., 1916, by C. J. Townsend, contractor. The piers and abutments are nearly complete and the substructure portion of the wooden trestle forming a part of the north approach is complete with the exception of 2 bents.

Strachan Ave. Bridge, over C.P.R.—The contract for the construction of the concrete abutments awarded in 1915 to Roderick Campbell was cancelled and a new contract was awarded to C. J. Townsend in May, 1916. Work was begun on May 20, 1916, and 980 cu. yds. of concrete have been placed in the south abutment and 109 in the north abutment.

Ashdale Ave. Subway.—Complete plans and specification have been prepared for the construction of a pedestrian subway under the G.T.R. on the line of Ashdale Ave. This subway is intended to provide a means of communication between Monarch Park and the area located north and south of the G.T.R. right of way.

Free Transportation for Legislators.—The Revised Statutes of Canada, chap. 37, sec. 343, provides that railway companies shall furnish free transportation upon any of their trains for members of the Senate and House of Commons, with their baggage, and also for the Board of Railway Commissioners and such of the board's officers and staff as the board may determine, with their baggage and equipment, and shall also, when required, haul free of charge any car provided for the board's use. G. E. McCraney, M.P. for Saskatoon, introduced recently in the House of Commons a bill providing that similar free transportation shall be given to the members of the executive councils of the various provinces, and, within the provinces in which they reside respectively, to members of the legislative councils and legislative assemblies.

Canadian Society of Civil Engineers, Saskatchewan Branch.—Following the organization meetings mentioned in our last issue, this branch of the Canadian Society of Civil Engineers has been formed at Regina, to include all members of the society residing in the province. Nominations for the various offices have been made, for submission to letter ballot, as follows: L. A. Thornton, Regina, Chairman; G. D. Mackie, Moose Jaw, Vice Chairman; H. S. Carpenter, E. G. Montgomery, Regina; T. C. McNabb, Moose Jaw; Prof. A. R. Greig, C. J. Yorath, Saskatoon, executive committee; and J. N. deStein, Regina, Secretary Treasurer.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Buffalo, Rochester & Pittsburg Ry.—P. A. BOLOPUE, heretofore chief clerk, local freight agent's office, Pittsburg, Pa., has been appointed Canadian Agent, in charge of Freight and Passenger Departments. Office, Toronto.

Canada Steamship Lines, Ltd.—H. J. DICK, heretofore accountant, has been appointed acting General Agent, Kingston, Ont., vice E. E. Horsey, resigned.

Canadian Government Railways.—R. H. SMITH, Resident Engineer, Halifax Ocean Terminals, Halifax, N.S., has had his jurisdiction extended to include District 3, Intercolonial Division, L. S. LANDERS, heretofore Resident Engineer, District 3, having been appointed Assistant Engineer, Levis, Que., as announced in our last issue.

R. MONTGOMERIE, heretofore transit man, Halifax Ocean Terminals, Halifax, N.S., has been appointed Resident Engineer, District 4, Intercolonial Division, New Glasgow, N.S., vice A. H. Jones, promoted.

JOHN GALLIVAN, heretofore locomotive man, Stellarton, N.S., has been appointed travelling fireman, District 4, Intercolonial Division. Headquarters, Stellarton, N.S. This is a new position.

A. H. JONES, heretofore Resident Engineer, District 4, Intercolonial Division, New Glasgow, N.S., has been appointed Assistant Engineer, Moncton, N.B.

J. E. LONG, Safety Engineer, has also assumed the duties of Secretary, C.G.R. Centre, St. John Ambulance Association, vice W. C. Paver, who has been relieved of the duties of that office on account of ill health. Office, Moncton, N.B.

W. H. TOUT has been appointed First Aid Instructor and Safety Inspector, lines east of Campbellton and Edmundston, N.B. Headquarters, Moncton, N.B.

T. W. McBEATH, heretofore locomotive man, Moncton, N.B., has been appointed travelling fireman, District 3, Intercolonial Division. Headquarters, Moncton, N.B. This is a new position.

A. R. MACGOWAN, A.M.Can.Soc.C.E., heretofore Principal Assistant Engineer, Moncton, N.B., has been appointed Superintendent, District 5, Intercolonial Division, vice H. B. Fleming, assigned to other duties. Office, Edmundston, N.B.

H. B. FLEMING, heretofore Superintendent, District 5, Intercolonial Division, Edmundston, N.B., has been appointed Chief Dispatcher there.

JOHN FRASER, heretofore charge hand, Sydney, N.S., has been appointed Locomotive Foreman, Edmundston, N.B., vice C. White, transferred.

C. WHITE, heretofore Locomotive Foreman, Edmundston, N.B., has been appointed Locomotive Foreman, Napadogan, N.B., vice W. C. Williams, who has been given work as a stationary boiler fireman.

P. P. BEGIN has been appointed First Aid Instructor and Safety Inspector, lines from Campbellton, N.B., to Montreal, and from Edmundston, N.B., to O'Brien Que. Headquarters, Riviere du Loup, Que.

H. A. IRVING, heretofore acting Trainmaster, District 3, Transcontinental Division, Graham, Ont., has been appointed Trainmaster, Cochrane, Ont.

H. MITCHINSON has been appointed First Aid Instructor and Safety Inspector, lines from O'Brien, Que., to Winnipeg, and from Superior Jet. to Fort William, Ont. Headquarters, Transcona, Man.

Canadian Northern Ry.—A. J. HILLS, formerly General Superintendent, Eastern Lines, and latterly attached to the Third Vice President's office, has been appointed Assistant to the Executive. Office, Toronto.

GUY TOMBS, heretofore General Freight Agent, Lines east of Port Arthur, Ont., Montreal, has been appointed Assistant Freight Traffic Manager, Lines east of Port Arthur. Office, Montreal.

Guy Tombs,

Assistant Freight Traffic Manager, Lines east of Port Arthur, Ont., Canadian Northern Railway.

JAMES ORR, heretofore Assistant to the General Traffic Manager, Toronto, has been appointed General Freight Agent, Lines east of Port Arthur, Ont., vice Guy Tombs, promoted. Office, Montreal.

In anticipation of the industrial reorganization and development which will follow the conclusion of peace, and in view of the great number of industrial opportunities on the company's system, its operations in that regard have been extended by the creation of a Department of Resources. D. F. COYLE, heretofore Secretary to R. J. Mackenzie, of Mackenzie, Mann & Co., Ltd., at Winnipeg, has been appointed administrator of this work, with the title of Industrial Commissioner. As the aim of the department is to locate industries and to develop natural resources along the company's lines, it is confidently expected that the municipal authorities will cooperate with him in his work. Office, Winnipeg.

E. LANGHAM, heretofore Purchasing Agent, Lines West of Port Arthur, Winnipeg, has been appointed General Purchasing Agent for the system, and the position hitherto held by him, and that

of Purchasing Agent, Eastern Lines, Toronto, hitherto held by L. W. MITCHELL, have been abolished, Mr. Mitchell retaining his other position as Treasurer. Office, Toronto.

P. MOONEY, heretofore Division Freight and Passenger Agent, Halifax & Southwestern Ry., Halifax, N.S., has been appointed Assistant General Freight Agent, Lines east of Port Arthur, Ont. Office, Toronto.

R. J. KELLY, heretofore Trainmaster, Hornepayne, Ont., has been appointed Trainmaster, Capreol, Ont.

J. B. SMITH, heretofore Trainmaster, Capreol, Ont., has been appointed Trainmaster, Hornepayne, Ont., vice R. J. Kelly, transferred.

M. B. HELSTON, heretofore Superintendent, Duluth, Winnipeg & Pacific Ry., Virginia, Minn., has been appointed Superintendent, District 4, Western Division, Quebec District, Farnham. ed Manager, Winnipeg Joint Terminals. Office, Calgary, Alta.

A. AVERY, heretofore station agent, Arcola, Sask., has been appointed Livestock Agent, Winnipeg, vice J. T. Whitlaw, whose appointment as station agent, Calgary, Alta., was announced in our last issue.

O. A. THOMAS, heretofore Station Ticket Agent, Calgary, Alta., has been appointed Local Freight Agent, Calgary, Alta.

A. R. McDUGALL, heretofore ticket clerk, Calgary, Alta., has been appointed Station Ticket Agent there, vice O. A. Thomas, transferred.

J. S. DONALD has been appointed Travelling Agent, New York, vice J. L. Lounsbury, resigned.

Canadian Pacific Ry.—ALLAN PURVIS, General Superintendent, Quebec District, Montreal, having resumed duty, after having been temporarily acting as General Superintendent, Ontario District, Toronto, J. H. BOYLE, who was acting in his absence, has resumed his duties as Superintendent, Farnham Division, Quebec District, Farnham.

H. J. HUMPHREY, heretofore Superintendent, Farnham Division, Quebec District, Farnham, has been appointed acting Superintendent, Laurentian Division, Quebec District, vice R. McKillop, who has enlisted for overseas service. Office, Montreal.

G. BOWLER, heretofore Night Yardmaster, Sortin Yard, has been appointed Trainmaster, Montreal Terminal Division, Quebec District.

J. WOODMAN, heretofore Superintendent, Winnipeg Terminal Division, Manitoba District, has been appointed Superintendent, Montreal Terminals Division, Quebec District, vice C. J. Kavanagh, transferred. Office, Outremont, Quebec.

J. T. ARUNDEL, General Superintendent, Ontario District, Toronto, having resumed duty after leave of absence due to illness, ALLAN PURVIS, General Superintendent, Quebec District, who was acting in his absence, has resumed his duties at Montreal.

T. H. HAMILTON, heretofore Master Mechanic, Trenton Division, Ontario District, Trenton, has been appointed Assistant Superintendent, Trenton Division, Ontario District, vice E. J. Melrose, transferred. Office, Havelock.

A. H. BINNS has been appointed acting Master Mechanic, Trenton Division,

Ontario District, vice T. H. Hamilton, transferred temporarily. Office, Trenton.

W. GARLAND, heretofore Yardmaster, Montreal, has been appointed Assistant Superintendent, Toronto Terminals Division, Ontario District, in charge of day operation. Office, Toronto.

J. MILES, heretofore Yardmaster, Toronto, has been appointed Assistant Superintendent, Toronto Terminal Division, Ontario District, in charge of night operation. Office, Toronto.

E. J. MELROSE, heretofore Assistant Superintendent, Trenton Division, Ontario District, Trenton, has been appointed acting Assistant Superintendent, London Division, Ontario District, vice W. Tansley, whose appointment as acting Superintendent of that division was announced in our last issue.

J. L. JAMIESON, heretofore Road Foreman of Locomotives, Medicine Hat, Alta., has been appointed Trainmaster, Kenora Division, Manitoba District, vice R. W. D. Harris, transferred. Office, Ignace, Ont.

A. F. HAWKINS has been appointed Superintendent, Fort William Terminal Division, Manitoba District, vice R. C. Morgan, transferred. Office, Fort William, Ont.

R. C. MORGAN, heretofore Superintendent, Fort William Terminal Division, Manitoba District, Fort William, Ont., has been appointed Superintendent, Winnipeg Terminal Division, Manitoba District.

J. H. CHOWN, heretofore Trainmaster, Moose Jaw Division, Saskatchewan District, Moose Jaw, has been appointed Superintendent, Regina Division, Saskatchewan District, vice J. K. Savage, whose appointment as Superintendent, Smiths Falls Division, Quebec District, Smiths Falls, Ont., was announced in our last issue. Office, Regina.

J. M. McKAY, heretofore Superintendent, Revelstoke Division, British Columbia District, Revelstoke, has been appointed Superintendent, Saskatoon Division, Saskatchewan District, vice E. W. DuVal, who is taking an officer's training course for overseas service.

R. W. D. HARRIS, heretofore Trainmaster, Kenora Division, Manitoba District, Ignace, Ont., has been appointed Trainmaster, Moose Jaw Division, Saskatchewan District, vice J. H. Chown, promoted. Office, Moose Jaw.

D. J. ENGLAND, heretofore Trainmaster, Calgary, Alta., has been appointed Terminal Trainmaster, Moose Jaw, vice A. F. Hawkins, promoted.

M. E. COLLINS, heretofore accountant, Lethbridge, Alta., has been appointed chief clerk to Superintendent, Lethbridge Division, Alberta District, Lethbridge.

E. GIBBONS, heretofore at Calgary, Alta., has been appointed accountant, Lethbridge, Alta., vice M. E. Collins promoted.

G. PRATT, heretofore Locomotive Foreman, Strathcona, Alta., has been appointed Locomotive Foreman, Medicine Hat, Alta., vice J. Perry assigned to other duties.

J. McGOWAN, heretofore Locomotive Foreman, Rogers Pass, B.C., has been appointed Locomotive Foreman, Strathcona, Alta., vice G. Pratt transferred. The position of Locomotive Foreman at Rogers Pass has been abolished, owing to the placing in operation of the Connaught Tunnel.

T. C. McNAB, heretofore Division Engineer, Saskatchewan District, Moose

Jaw, has been appointed Superintendent, Revelstoke Division, British Columbia District, vice J. M. McKay, transferred. Office, Revelstoke.

G. DELACHEROIS, heretofore Resident Engineer, Regina, Sask., has been appointed Roadmaster, Shuswap East and Okanagan Subdivisions, British Columbia District. Office, Revelstoke.

DOUGLAS BROWN, heretofore master of the s.s. Princess Mary, British Columbia Coast Service, C.P.R., has been appointed Superintendent, British Columbia Lake and River Service, vice J. C. Gore, deceased. Office, Neison, B.C.

J. D. MUIR, heretofore Locomotive Foreman, Winnipeg, has been appointed General Foreman, Locomotive Shops, Vancouver, B.C., vice G. H. Reed superannuated.

A. R. KENYON, heretofore excursion and rate clerk, Boston and Maine Rd., Boston, Mass., has been appointed Travelling Passenger Agent, Boston District, C.P.R. Office, 332 Washington St., Boston, Mass.

W. E. ELLIS, heretofore ticket clerk, New York Central Rd., New York, has been appointed Travelling Passenger Agent, C.P.R., in New York territory, vice E. G. Chesbrough promoted. Office, New York.

E. G. CHESBROUGH, heretofore Travelling Passenger Agent, New York, has been appointed General Agent, Passenger Department, Atlanta, Ga. Office, Healy Building.

Delaware and Hudson Co.—J. T. LOREE has been appointed General Manager. Office, Albany, N.Y.

The position of Assistant General Superintendent of Transportation having been abolished, J. A. McGREW has resumed his former position as Superintendent, Saratoga and Champlain Divisions, Albany, N.Y.

M. F. LEAMY, heretofore acting Superintendent, Saratoga and Champlain Divisions, has resumed his former duties as Trainmaster, Saratoga Division, and F. R. GRIFFIN, heretofore acting Trainmaster, has resumed his former duties as Assistant Trainmaster, Saratoga Division.

Grand Trunk Ry.—J. E. DUVAL, heretofore General Superintendent of Car Service, has been appointed General Superintendent of Transportation. Office, Montreal. This is a new position.

G. HICKEY, heretofore Foreman, Boiler Shop, Toronto, has been appointed General Foreman there, vice E. Logan, resigned.

J. T. DEWSBURY has been appointed acting Locomotive Foreman, Niagara Falls, Ont., vice W. H. Wensley, on leave of absence through illness.

C. KELSO, heretofore Contract Inspector, Motive Power Department, Stratford, Ont., has been appointed Master Mechanic, Stratford Shops, vice R. Patterson resigned. Office, Stratford, Ont.

JOHN B. LIVINGSTON, heretofore Chief Clerk, Motive Power Department, Battle Creek, Mich., has been appointed Storekeeper, Western Lines, vice J. R. Crowell deceased. Office, Battle Creek, Mich.

Grand Trunk Pacific Ry.—The position of Travelling Freight and Passenger Agent at Juneau, Alaska, hitherto held by J. D. McAULEY, now Commercial Agent, Prince Rupert, B.C., has been abolished.

Halifax and South Western Ry.—HUGH DUNBRACK has been appointed City Passenger Agent, Halifax, N.S., vice A. Hector.

W. A. CUNNINGHAM has been appointed Division Freight and Passenger Agent, vice P. Mooney, transferred to C. N. R. service. Office, 123 Hollis St., Halifax, N.S.

Pere Marquette Rd.—G. B. BIRD has been appointed Auditor of Disbursements, vice H. G. Meyers, assigned to other duties. Office, Detroit, Mich.

W. L. KELLOG, heretofore Superintendent of Motive Power, Missouri, Kansas and Texas Rd., Dennison, Tex., has been appointed Superintendent of Motive Power, P.M.R., vice J. J. Walters, resigned to enter another company's service. Office, Detroit, Mich.

Reid Newfoundland Co.—J. P. POWELL, heretofore chief of the Engineering Department, has been appointed Assistant General Superintendent. Office, St. John's, Nfld.

Wabash Ry.—T. J. JONES, heretofore Superintendent Transportation, has been appointed General Superintendent in charge of station, yard and train service, St. Louis, Mo.

M. B. CASEY has been appointed Superintendent Transportation, vice T. J. Jones, promoted. He reports to the General Manager, and has charge of all matters pertaining to freight and passenger car handling and movements, including per diem, demurrage, passenger and freight train schedules, and makes and distributes to the proper officers, morning reports relating to train movements, yard and car situations. Office, St. Louis, Mo.

Winnipeg Joint Terminals.—M. B. MURPHY, heretofore Superintendent, District 4, Western Division, Canadian Northern Ry., Calgary, Alta., has been appointed Manager, Winnipeg Joint Terminals, C.N.R., Canadian Government Railways, and Grand Trunk Pacific Ry. Railways, and Grand Trunk Pacific Ry., vice R. J. Hunt, resigned.

Engineers' Residences on National Transcontinental Ry.—The Minister of Railways stated in the House of Commons recently that the average cost of each set of civil engineer's residences, during the construction of the N.T.R., between La Tuque and Parent, was \$1,450.

A conference of city managers of the Grand Trunk Pacific Telegraph Co. was held at Edmonton, Alta., Feb. 12 and 13, at which many matters pertaining to increasing efficiency of the service were discussed. Those present were: H. Hulatt, Manager of Telegraphs, Montreal; W. J. Rooney, Division Superintendent of Telegraphs, Edmonton; F. T. Caldwell, Division Superintendent of Telegraphs, Winnipeg; S. Hutchinson, Circuit Manager, Winnipeg; S. Robertson, Electrical Engineer, Edmonton; E. H. Hiscock, Electrical Engineer, Winnipeg; R. M. MacMillan, City Manager, Edmonton; R. M. Hicks, City Manager, Winnipeg; Geo. Jackson, City Manager, Regina; J. E. Grace, City Manager, Saskatoon; Geo. Moore, City Manager, Calgary; G. B. Brien, City Manager, Prince Rupert; J. E. Lalonde, City Manager, Prince George; C. A. Radford, Chief Operator, Edmonton; J. O. Pilon, accountant, Edmonton; N. B. Walton, Superintendent, Operating Department, G.T.P.R., and L. V. Druce, Division Freight Agent, G. T. P. R., were present as guests and addressed the meeting. On the first evening the officials attended a theatre as guests of Division Superintendent Rooney and the following evening they were entertained at dinner by H. Hulatt, Manager of Telegraphs.

Extension of C.P.R. Dock Facilities at Vancouver.

The steady growth of coastwise and trans-Pacific freight and passenger traffic has made necessary an increase in the C.P.R. dock facilities at Vancouver.

In accordance with a carefully considered plan to meet the needs of the present traffic and to provide for a development which will serve the interests of the port to the best advantage, an extension to Pier D, at the foot of Granville St., has been undertaken.

The present Pier D was built in 1913, and is approximately 400 ft. long and 150 ft. wide. The proposed extension will carry the pier to the harbor line, and will be approximately 600 ft. long on the east side, 500 ft. long on the west side, and about 160 ft. wide. The dimensions of the completed pier will therefore be about 950 ft. long by 160 ft. wide.

A fill has been made on the site of the extension, aggregating about 250,000 cu. yds. of material. This has been obtained from dredging in and around the harbor. It was made necessary by the extreme depths of mud and water.

The substructure of the pier will be built of creosoted wooden piles, treated by the boiling process, under strict specifications, to assure sound piles and uniform depth of penetration, 15 lbs. creosote to the cu. ft. to be used. The piling will be long and heavy, involving about 3,000 piles, some of which may run to 125 ft. long. These will be furnished by the Vancouver Creosoting Co., whose new plant at North Vancouver was started about Jan. 1. The creosoted piles are assembled at that plant, sorted and towed to a receiving boom located conveniently to the work. The boom will store approximately 200 piles.

Pile driving will be done by steam hammer. A subcontract for the driving has been given to S. Doe, of Victoria. Owing to the pile lengths the driver leads will be approximately 125 ft. high, making the driver one of the largest, if not the largest, in the world.

The caps, bracing, stringers and flooring of the pier will be creosoted lumber, furnished by local mills and creosoted by the Dominion Creosoting Co., Vancouver. The decking will be a 2 x 4 laminated structure, surfaced with a flooring of Australian hardwood.

A one-story shed will be built on the new portion, connecting with the shed on the existing pier. The shed construction will be wooden frame, with wooden roof trusses and a built up roof laid on laminated roof timbers. The trusses will be spaced 20 ft. on centres, with columns dividing the pier into 2 side bays, each 27 ft. wide, and 2 centre bays, 36 and 46 ft. wide respectively. The sides will be provided with sliding doors, those on the east side being continuous.

A depressed railway track will be continued down the centre of the pier to about 100 ft. from the end and another track will be laid along the outside edge of the east side of the pier. This will necessitate adding approximately 10 ft. to the width of the present structure.

Elevators will be installed for the rapid handling of freight, and an oil line for the fuel supply of some of the steamships.

An electrically driven car-haul will be put in to move cars while on the pier and so dispense with steam locomotive operation and its attendant fire risks. To minimize further the fire hazard, a fire protection system will be installed, as also

such power and light circuits as may be needed.

An outside promenade will be built on both sides of the roof, for the handling of passenger traffic to and from the end of the pier.

The contractors for the construction of the pier are Sydney E. Junkins & Co., of Vancouver. The work is being done under the direction of J. G. Sullivan, Chief Engineer, and Frank Lee, Principal Assistant Engineer, Western Lines, C.P.R., and H. Rindal, Division Engineer, C.P.R., Vancouver.

Canadian Pacific Railway Construction, Betterments, Etc.

Eastern Lines.—A contract is reported to have been let to the Deakin Construction Co., Montreal, for the erection of an employes building at St. Andrews, N.B., to be of frame and stucco construction, 32 x 125 ft., 2 stories high, and estimated to cost \$25,000.

Plans for building a second track from Summerhill Ave., Toronto, to Leaside Jct., were laid before the York Tp. Council, Feb. 5, by A. McMurchy, Solicitor, and A. L. Hertzberg, District Engineer. The council asked that a safety device be provided at the crossing of the Todmorden Road. The building of this line will give the company a double track line from West Toronto to Leaside Jct.

Western Lines.—We are officially advised that the principal works to be undertaken during this year, and for which expenditures have been approved, include the following:—20 new stations—one of these, at Field, B.C., is to be specially designed; 2 new section houses; 41 new stock yards; new systems of water supply at Reeder and Neudorf, Man.; Holdfast, Rufus, Sinis and Springside, Sask.; and new dams at Govanlock and Fastend, Sask.; new grain loading platforms at several points and extensions to many existing platforms; new coaling plants at Brandon, Man., and Calgary, Alta.; new ice houses at Revelstoke and Okanagan Landing, B.C.; a new outward freight shed at Regina, Sask.; the freight sheds at Swift Current, Cabri and Prussia, Sask., are to be extended; a new building is to be erected at Regina, Sask., for the Dominion Express Co.; several existing waterpipe lines are to be relaid; about 27 miles of new woven wire fencing is to be placed; some tree planting is to be done on the Swift Current, Maple Creek and Brooks Divisions; systems of automatic signals for the convenience of operators are to be installed at Fort William terminals, Brandon yard, Kemray, and at the Connaught tunnel. At Vancouver some dredging work is to be carried on, a rubble wall erected and the work of extending pier D is to be completed.

On the Western Lines generally a large number of wooden culverts are to be replaced with reinforced concrete culvert pipe; several wooden trestles are to be filled, the waterways to be provided with concrete pipes or other permanent structures; wooden trestle near Minnedosa is to be replaced by a reinforced concrete trestle. An extensive concrete retaining wall is to be built east of Kenora, to hold the main track embankment. A Howe truss bridge on the Kimberly subdivision is to be replaced with steel spans on concrete piers; ten tunnels on the Shuswap subdivision are to be provided with concrete portals and one of them is to be partially lined with concrete. A very large amount of ballasting, ditching, re-supporting, etc., is to be done on the pres-

ent main tracks, many new tie plates and rail anchors are to be installed; a number of new side tracks and passing track extensions are to be laid.

No new lines are to be put under construction, but the line from Vantage to Assiniboia, which will give a through connection from Assiniboia to Moose Jaw, is to be completed.

Application has been made to the Western Lines management to take up the construction of building a semi-circular branch line from Govanlock to either Kincaid or Averock, on the Weyburn-Lethbridge line. It is not likely that anything will be done about this line this year, in view of the statement made by Grant Hall, Vice President and General Manager, Western Lines, quoted elsewhere, or of the reported statement of J. M. Cameron, General Superintendent, Alberta District, that the company had great difficulty in getting sufficient rails for its ordinary maintenance work.

Tenders were invited recently to be put in by Mar. 1 by J. M. Cameron, General Superintendent, Calgary, Alta., for the following works: Seven no. 4 section houses, to be built at Navarre, Superb, Fusiliar, Compeer, Kirremuir, Fincastle and Pakawki; six A 2 station buildings with 50 ft. freight sheds to be built at Major, Piopot, Halton, Leonard, Enchant and Jenner; drilling 8 in. well at Conrad, approximately 500 ft. deep; drilling 10 in. well at Burdette, approximately 300 ft. deep; excavation and backfilling for waterpipe lines as follows—Taber, 2½ miles; Dunmore, 1½ miles; Granum 1½ miles, and Suffield, 3 miles.

Rails, Etc. from Canadian Railways for France.

In connection with the removal of rails from Canadian railways a return has been submitted to Parliament of the correspondence with the Imperial Government on the matter, together with copies of orders in council made in connection therewith, and of action taken thereon. The Minister of Railways, when the return was asked for in the House of Commons, said the first request that came from the British Government for rails was for about 1,080 miles, and it was thought then that the Canadian Government should do anything in its power to help the Imperial Government during the war. The intention in regard to the western part of Canada was to take rails up from stretches where the Grand Trunk Pacific and the Canadian Northern railways ran parallel to each other. It would certainly have been no hardship to take these rails up. When, owing to the difficulty of securing transportation overseas, the request was cut down to 300 miles, the government decided to take the rails up at divisional points on the National Transcontinental Ry. and that has been done.

On another occasion the Minister informed a questioner in the House of Commons that the weight of the rails being taken up, including fastenings, turnouts, etc., was approximately 45,000 gross tons.

The Alberta Board of Public Utilities report for 1916 states that it has under its jurisdiction the section of the Alberta & Great Waterways Ry. from Carbondale to Lac La Biche, 174 miles; and the Central Canada Ry., from McLennan to Peace River, 48 miles.

Sir John C. Eaton's New Private Car.

The private car Eatonia, which was used by Sir John C. Eaton, President of The T. Eaton Co., Ltd. departmental store owners, Toronto, for several years, but which was practically destroyed by fire in the Toronto railway yards some months ago, has been replaced by a new car of the same name, which is of the most modern type of steel construction. It is 78½ ft. long and weighs 87 tons, the trucks weighing 27 tons and the body 36 tons. The framing consists of a self-supporting centre sill and side construction, so built as to give a square elevation with continuous steel sash rest. The 1¼ in. thick composition floor material rests on 0.031 in. thick pressed steel flooring riveted to the main framework. The bolsters are of built up construction, formed from rolled sections and pressed shapes with centre bearings of cast steel. Westinghouse friction draft gear and double LN-1612 equipment is provided, the trucks being of 10½ ft. wheel base, cast steel frame single shoe type, with 36 in. diam. rolled steel wheels, and axles, having 5½ in. diam. 10 in. long journals.

As shown by the accompanying floor plan, it has accommodation for 12 occupants. The dining room seats 10 persons and the observation room 9. The rooms are in the following order, commencing

Individual control is obtained for each room for the vapor system of piping only, it being impracticable to extend the plan to the hot water circulating system. Twenty ventilators are located in the upper deck. The lighting system includes the latest type 30-volt, body hung, 3 kilowatt axle device, with 2 ampere hour meter controls and 32 cells of 350 ampere hour type EP-15 Manchester positive plate, box negative batteries connected in parallel. The auxiliary lighting system consists of a double set of compressed gas tanks.

Some of the special features worthy of note are: The dressing tables in staterooms are fitted with bevelled edge plate glass. A speed recorder is installed in the observation room with a duplex air gauge adjoining. A child's small brass bed is located in the stateroom nearest the dining room and so located that when not in use it will slide under the larger bed in the room. Arrangement is made in the floor of the dining room, at table leg, for socket, so that the table can be wired for candelabra or such lights as it may be desired to use. The car is wired for telephones, with roll of wire for connection at stations, one telephone being placed in the observation room and another being an extension of the observa-

Plan of Sir John C. Eaton's Private Car.

tion room telephone, located in the dining room, so that servants can answer calls without traversing the whole length of the car, but still the message can be received in the observation room. Vacuum cleaner with necessary receptacles is installed.

The interior finish of the kitchen end of the car is of steel, white enamelled in the kitchen and pantry, but painted and grained quarter sawed oak in the passageways and servants' quarters. That in the vestibules is steel, painted body color. The observation room, dining room and main passageway finish consists of native walnut of natural finish, and the staterooms and compartments are finished in Cuban mahogany, the general lavatory and bathroom all being white enamelled. The observation room chairs and sofa are upholstered in velour. For the staterooms and compartments, tapestry is employed, except that the chairs in the staterooms are covered with printed linen. Blue leather is employed as a covering for the dining room chairs, and machine buffed leather for the servants' quarters. The kitchen floor covering is of sheet copper; the passageways, general lavatory and bathroom of 5 16 in. thick rubber tiling, carpet being used for the remainder of the car.

The windows are double, in two parts, throughout the car, except the high windows, which are single. Wooden blinds are provided in the kitchen, the remainder of the car having roller curtains of silk pantasote, supplemented by inner curtains of Holland material.

The heating system throughout consists of the Chicago Car Heating Co.'s standard vapor equipment, in conjunction with a 4-coil steel hot water circulation heater.

number on any monthly pay roll was 578. In Dec., 1916, there were 90 on the pay roll.

Railway Constuction in Alberta in 1916.

The Alberta Railways Department report states that during 1916 there were 143 miles of new railways built in the province, making a total of 919 miles of new railways built within the past three years. The three McArthur lines were responsible for 129 miles of these new lines, their separate figures being: Alberta & Great Waterways Ry., 48 miles; Central Canada Ry., 1 mile, and Edmonton, Dunvegan and British Columbia Ry., 80 miles; while the C.P.R. built 11 miles, and the Canadian Northern Ry., 3 miles.

The length of railways in the province at Dec. 31, 1916, was: C.P.R., 1,920 miles; Canadian Northern, 1,250; Grand Trunk Pacific, 707; Edmonton, Dunvegan & British Columbia, 417; Alberta & Great Waterways, 49; total, 4,566 miles.

Ties for National Transcontinental Ry.

—The Minister of Railways stated in the House of Commons recently that 93,121 ties were bought from the Rat Portage Lumber Co., Kenora, Ont., in 1907, as follows: 25% 1st class, delivered at St. Boniface, 80c.; 25% 2nd class, delivered at St. Boniface, 70c.; 25% 1st class, delivered at Rennie station, 78c.; 25% 1st class, delivered at Rennie station, 68c.

Enquiries About Hudson Bay Ry.

In answer to enquiries in the Senate recently, by Senator Casgrain, Sir James Lougheed gave the following information respecting the Hudson Bay Ry.: The total amount expended to Dec. 1, 1916, was \$17,557,100.42, viz.: on the railway itself, \$12,103,603.43, and on the Port Nelson terminals, including the port, wharves and excavation of channel, \$5,453,496.99. The estimated cost of the railway when completed is \$16,000,000, of the terminals \$10,000,000, and of the grain elevators \$1,000,000.

About 413 miles of the railway have been graded from Pas, Man., ready for track. Eleven miles remain to be graded. Rails have been laid for 332 miles from Pas.

The channel at Port Nelson, from turning basin at docks, to deep water of natural channel, will be about ¾ of a mile long, beyond which some improvements will be made at isolated points in the natural channel for a further distance of 1¼ miles. The depth of water at low tide in the excavated channel will be 20 ft., and the width of that channel will be 500 ft. No separate estimate of cost of dredging in the port and channel, when completed, has been made. The number of men employed on Government works at Port Nelson last summer varied from week to week. The maximum

During the 1916 navigation season two steamships, Durlay Chine and Sheba, were employed by the Government to transport men, materials and supplies to Port Nelson. Both vessels are owned by the Government, and the cost of operating them on the Hudson Bay route during 1916 was \$31,355. There is no coal on sale at Port Nelson. The cost of each cargo varies with the class of vessel used to transport it.

Kettle Valley Ry. Suit.—The case of Grant, Smith & Co. against the Kettle Valley Ry. is set down for hearing at the current sittings of the British Columbia Supreme Court. The claim is for \$699,608.99 and interest from Oct. 21, 1914. The plaintiffs were the contractors for building the company's line from Penticton to Hydraulic Summit. The amount of the construction accounts totalled \$3,084,585.60, of which the company paid \$2,384,976.61, leaving unpaid the amount claimed.

Railway Lands Patented.—Letters patent were issued during January, in respect of railway lands in Manitoba, Saskatchewan, Alberta & British Columbia, as follows:—

	Acres.
Calgary & Edmonton Ry.	5,040.00
Canadian Northern Ry.	320.00
Edmonton, Dunvegan & British Columbia Ry.	211.88
Grand Trunk Pacific Branch Lines Co. ...	6.24
Manitoba & Southeastern Ry.	295.32
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.	4,060,588
	<hr/> 9,934,028

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates of orders, immediately following the numbers are those on which they were drawn.

General order 178, Jan. 27.—Consolidating supplementary regulations issued since general order 78 with respect to inspection and testing of locomotive boilers and their appurtenances.

General order 179, Jan. 29.—Ordering that rule 26, sub. sec. (d) of Regulations Governing Baggage Car Traffic be amended by adding after word, "the," seventh word in second line, and after word "carrier," eighth word, following words, "originating or terminating"; and by striking out words, "at destination," which are respectively ninth and tenth words of second line of sub. sec.

General order 180, Jan. 30.—Approving revised Supplement 10 to Express Classification for Canada C.R.C. 3, submitted by C. N. Ham. Sec., Express Traffic Association of Canada.

General order 181, Feb. 3.—Amending general order 179, Jan. 29, by adding after word "sub-section," in seventh line of operative part, words, "and by striking out word 'thereat,' the fourth word in third line of said sub-section, and substituting therefor words, "at destination."

25821, Jan. 23.—Approving C.P.R. clearances of cross section of chane frame on Mowat Ave., Toronto.

25822, Jan. 16.—Ordering that service furnished by G.T.R. during the summer by trains 70 and 75, between St. Johns and Iberville, Que., be continued during winter.

25823, Jan. 23.—Ordering Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to build farm crossing for J. A. Harris and C. A. S. Atwood, of Grand Forks, B.C.

25824, Jan. 22.—Ordering Canadian Northern Ry. to appoint station agent at Englefield, Sask., by Mar. 1.

25825, Jan. 21.—Amending order 25812, Jan. 19, re Canadian Northern Ry. station agent at Aaron, Sask.

25826 to 25828, Jan. 24.—Approving Bell Telephone Co., agreements with Falkirk Telephone Co., Jan. 9; Tay Tp., Ont., Dec. 14, 1916; and Harvey Tp., Ont., Jan. 8.

25829, Jan. 26.—Amending order 15751, Dec. 14, 1911, re G.T.R. crossing just east of Grimshy Beach station, Ont.

25830, Jan. 25.—Authorizing Canadian Northern Ry. to build bridge over Valley River near Grandview, Sask.

25831, Jan. 31.—Authorizing C.P.R. to build spur for Ellison Milling and Elevator Co., Lethbridge, Alta.

25832, Jan. 26.—Authorizing G.T.R. to rebuild bridge 112 across Sauble River, Ont.

25833, Jan. 25.—Authorizing New York Central Rd. to rebuild bridge 16A, north of Pana, Ont.

25834, Jan. 27.—Authorizing G.T.R. to use bridge 61, carrying its track across C.P.R. sidings and roadway near Arrnprior, Ont.

25835, Jan. 27.—Authorizing C.P.R. to build spur for the Saskatchewan Coal, Brick & Power Co., Shand, Sask.

25836, Jan. 29.—Ordering G.T.R. to provide suitable access for vehicles to station at Sturgeon St., Omamee, Ont.

25837, Jan. 29.—Ordering that cost of maintaining interchange track near Globe elevator, Calgary, Alta., built under orders 24085 and 24191, Aug. 19 and Sept. 17, 1915, be paid by Grand Trunk Pacific Ry.

25838, Jan. 26.—Amending order 5666, Nov. 10, 1908, providing that 20% of cost of installing gates at crossing of Thames St., Ingersoll, Ont., be paid out of railway grade crossing fund.

25839, Jan. 30.—Approving Y between Canadian Northern Ry. and Qu'Appelle, Long Lake & Saskatchewan Rd., and Steamboat Co.'s track in Hudson's Bay Co.'s reserve, Prince Albert, Sask.

25840, Jan. 31.—Ordering that all C.P.R. train movements over crossing of Hamilton St., Regina, Sask., be flagged.

25841, Jan. 30.—Approving plan showing proposed new location and clearances of car roof testing sprinkler at Angus shops, Montreal, subject to C.P.R. undertaking to keep employees off tops and sides of cars while operating there.

25842, Jan. 31.—Authorizing C.P.R. to rebuild bridges 24.1 and 24.2 over Otonabee River, at Peterborough, Ont.

25843, Jan. 31.—Authorizing C.P.R. to make connection 297 ft. long with Canadian Northern Ontario Ry. in Lot 7, Con. 2, Nipigon Tp., Ont.

25844, Jan. 20.—Extending to June 1, time within which Michigan Central Rd. may complete road diversion, etc., west of Brookfield, Ont., as authorized by order 25791, Jan. 3.

25845, Feb. 1.—Authorizing Canadian Northern Ry. to build bridge across Whitesand River,

in s.w. ¼ Sec. 28-30-3, w. 2 m., Sask.

25846, Feb. 2.—Ordering that rate charged by C.P.R. on feldspar, in car loads of minimum weight of 25 net tons, from Maberly, Ont., to East Liverpool, Ohio, be \$3.04 per net ton; schedule to give effect to this order to be published by Feb. 10.

25847, Feb. 3.—Dismissing complaints of Hay & Co., Woodstock, Ont., and J. H. Still Co. St. Thomas, Ont., that they are unable to load 36 ft. flat car with logs to minimum of 50,000 lbs.

25848, Feb. 3.—Authorizing Canadian Northern Ry. to cross and divert highway between Sec. 15-27-1 and Sec. 2-28-4, w.4 m., Alta.

25849, Feb. 2.—Authorizing C.P.R. to build spur 550 ft. long for Curtis's & Harvey (Canada) Ltd., in Lot 6, Rigaud Parish, Que.

25850, Jan. 30.—Authorizing International Nickel Co. of Canada, to lay conduit under G.T.R. at Erie St., or Fort Erie St., Port Colborne, Ont., and under Canada Furnace Co.'s works at Erie St.

25851, Jan. 30.—Amending order 25258, Aug. 11, 1916, to provide that G.T.R. freight shed authorized to be built at Mimico be located at New Toronto, approximately 1 mile west of approved location at Mimico; and that G.T.R. be at liberty to amend plan of layout at Mimico by eliminating facilities for L.C.I. freight, as shown on plan.

25852, Feb. 2.—Dismissing application of The Shingle Agency of British Columbia, on behalf of shingle manufacturers, for an order requiring railway companies to furnish a milling-and-sorting-in-transit rate.

25853, Jan. 31.—Relieving Canadian Northern Ry. from providing further protection at highway one mile east of Lampman station, Sask.

25854, Feb. 2.—Ordering that 20% of cost of installing gates at crossing of Church St., Weston, Ont., by G.T.R. and C.P.R. be paid out of railway grade crossing fund; apportioning one-third of cost of operation and maintenance, and amending order 25703, Dec. 22, 1916.

25855, Jan. 31.—Extending for 30 days from Jan. 31 time within which C.P.R. may install gates at crossing of Main St., Farnham, Que.

25856, Jan. 29.—Approving Canadian Northern Quebec Ry. plan showing station to be erected at St. Alexis, Que.

25857, Feb. 8.—Authorizing Edmonton, Dunvegan and British Columbia Ry. to build highway crossing in n.w. ¼ Sec. 12, Tp. 62, R. 27, w.4 m., Alta., and to close road allowance on north boundary.

25858, Oct. 30, 1916.—Relieving C.P.R. from providing further protection at first public crossing east of Yamachiche station, Que.

25859, Feb. 6.—Approving agreement between Bell Telephone Co. and Cavan Rural Telephone Co., Durham County, Ont., Jan. 26.

25860, Feb. 13.—Authorizing G.T.R. to build spur and to extend existing siding for Montreal Water Works Department.

25861, Feb. 10.—Dismissing application of Alleghany Lumber Co., Pittsburg, Pa., for order directing G.T.R. to put into effect through rate on lumber from Midland, Ont., to Cleveland, Ohio, and to cease from charging a greater rate on lumber, in carloads between these points than it charges to Cleveland from Penetang, Ont.

25862, Feb. 12.—Approving Canadian Northern Quebec Ry. revised location from Lot 1017, St. Theophilus Parish to Lot 87, St. Flore Parish, 3516.3 ft., and to rebuild bridge over St. Maurice River at mileage 81.12.

25863, Feb. 14.—Authorizing C.P.R. to build two spurs for Canadian Aeroplanes, Ltd., Toronto.

25864, Feb. 21.—Approving agreement between Bell Telephone Co. and Beekwith & Montague Rural Telephone Co., Sept. 8, 1915.

25865, Feb. 14.—Ordering St. Martins Ry., running from Hampton to St. Martins, N.B., 30 miles, to make repairs to 10 bridges on its line; to be commenced by Apr. 1, and completed within 60 days.

25866, Feb. 15.—Relieving C.P.R. from providing further protection at highway crossing near Amazon station, Sask.

25867, Feb. 14.—Relieving G.T.R. from providing further protection at Bridge St., Richmond, Que.

25868, Feb. 14.—Authorizing Alberta Public Works Department to make highway crossing over C.P.R., in s.w. ¼ Sec. 28-2-16, w.4 m.

25869, Feb. 15.—Authorizing C.P.R. to remove station agent at Nevis, Alta., caretaker to be appointed.

25870, Feb. 15.—Authorizing Montreal & Southern Counties Ry. to operate signals on its track across Victoria Jubilee Bridge, Montreal.

25871, Feb. 15.—Authorizing C.P.R. to build spur for Fraser, Ltd., Fredericton, N.B.

25872, Feb. 13.—Dismissing complaints of Vancouver and Victoria Boards of Trade, Dominion Cannery, Ltd., Glasco, Ltd., Oakville, Ont., and City of Victoria against proposed increase in rates on canned goods and hardware to points on Pacific Coast, as set out in Supplement 3 to Canadian Freight Association Westbound Tariff, no. 1, effective Feb. 12.

Telegraph, Telephone and Cable Matters.

The Dominion Government has extended its telegraph system on Vancouver Island, from Fisherman's Bay to Shushartie Bay.

The Marconi Wireless Telegraph Co. has declared a dividend, payable Feb. 1, on its cumulative participating preference shares at 7%, being 1s. 4.80d. per share, less income tax at 4s. 6d. in the pound sterling, net amount 1s. 2d. per share.

Recruiting officers have been warned not to enlist telegraph operators unless they are released by the companies by which they are employed, as the number of operators who have enlisted is likely to cause a serious handicap to efficient work by the companies.

The Governor in council has established certain orders and regulations regarding cable, radio-telegraph, telegraph and telephone companies, under the War Measures Act, providing that the Minister of Militia may take over such companies' offices, plant, etc., for use on His Majesty's service, as he may deem fit, and may assume entire or partial control of the transmission of all messages.

The Great North Western Telegraph Co. has opened offices at Norwood and Ruel, Ont., Forgan, Sask., and Hope and Port Kells, B.C.; and has closed its offices at Cape Rosier and Perthuis, Que.; Kashbaw and Muskoka Lakes, Ont.; Dropmore, Man., and Claybanks, Sask. Names of offices have been changed as follows: Chaudiere Curve, Que., to Charney; Deux Rivieres, Que., to St. Stanislas station; and Joly Siding, Que., to River Henry.

The Dominion Government estimates for the year 1917-18 provide for expenditure on telegraph and telephone lines and wireless telegraphy, as follows: repoling and general repairs to Cape Breton telegraph system, \$4,600; half cost of construction of telegraph lines jointly owned by Anglo-American Telegraph Co. and Dominion Government, in Prince Edward Island, \$17,000 (revote); repairs in Quebec, \$3,000; renewal of poles on Moose Jaw-Wood Mountain Line, Sask., \$5,000 (revote); offices and dwellings at Grande Prairie and Dunvegan, on Peace River Line, Alta., \$6,525 (revote); repairs and improvements to office buildings in Saskatchewan and Alberta, \$2,350; general repairs and improvements to main line telegraph and telephone lines in British Columbia, \$22,400; to provide for build-and-maintenance of wireless telegraph stations, \$295,000.

At the Maritime Telegraph & Telephone Co.'s annual meeting at Halifax, N.S., recently, the report showed that there was an increase of 1,479 subscribers for telephone service, and a satisfactory increase in the net profits. After payment of all charges and 6% dividend on the preferred and common stocks, there was a surplus of \$10,995, making, with the balance brought forward from the previous year, \$19,035. S. M. Brookfield, President, stated that the Public Utilities Commission's recent award had reduced the company's valuation of its property from \$3,121,533 to \$2,571,219, thus making the valuation \$764,000 less than the capital. The commission is now working on a new schedule of rate, and if this be so arranged as to enable 8% on the valuation amount to be earned, the 6% dividend would be maintained, but if only 7% could be earned, then not more than 3% would be available for common stock.

Electric Railway Department

British Columbia Electric Railway Co's Vancouver Car Barn.

Although the final completion of the structure as designed has been postponed on account of war conditions, the two-storey reinforced concrete car barn for the British Columbia Electric Ry. Co., Vancouver, will be unusual in the fact that car storage is provided on two levels, to which access is obtained by two entrances at opposite ends of the building. The elevations of the street tracks differ by about 20 ft. in the total distance of nearly 400 ft. between streets, and a counterfort retaining wall is used to provide the necessary resistance to earth pressure on one side and one end of the structure.

placed in 5 aisles of 2 tracks each. In the northwest corner the sand room, oil storage room and elevators are located, with a storeroom and general storage space below on the north side of the building, with jib cranes located as shown.

The design of the first floor track supports was made to accommodate either a 55 ft. interurban car weighing 82,000 lb. on 4 axles spaced 6.5, 25.5 and 6.5 ft. apart, or a 43 ft. line car weighing 73,000 lb. on 4 axles spaced 6, 23 and 6 ft. apart. The second floor design will accommodate the double end city car, over 42 ft. long, weighing 47,500 lb. on 4 axles spaced 4.5, 13.6 and 4.5 ft. apart. On the

columns of steel composed of two 9 in. or 10 in. channels with two 12 in. plates, protected on the outside by 4 in. of concrete and filled with concrete to prevent corrosion on the inside. This concrete, a 1:2:4 gravel mix, was poured with the beams and slab of the second floor, with brackets. The south part of the building was constructed first, up to the 13 in. fire wall, allowing the use of the storage yard on the south of the old barn until the first part of the new building could be used.

The retaining walls, of the reinforced concrete counterfort type, with counterforts spaced about 8 ft. apart, were con-

Plan of Vancouver Car Barn, British Columbia Electric Railway.

To save space and reduce the column spacing to a minimum, relatively slender built-up steel columns of the box type were used up to the second floor beams of reinforced concrete, using concrete fireproofing cast with the latter. Track pits under all cars on the first floor were provided by supporting the rails and concrete slab platforms on reinforced concrete piers. The new barn is located just south of a one-storey timber frame barn which was in operation, and it was required that the construction should proceed without encroaching on the existing yard on the south more than was absolutely necessary. This was accomplished by constructing the new concrete structure in two parts, the southern portion, including the fire wall which divides the building, being completed first.

The accompanying plan and part section show that the new concrete building will be 350 x 130 ft., and about 40 ft. high on Main St., and 20 ft. high on Quebec St. The difference in level of these streets at the ends of the building suggested the idea of doubling the storage space by making the barn of two-storey construction, running the cars to be stored on the upper level halfway around the block through Thirteenth Ave. on the north. This required a special design to support the heavy car loading on the second floor. Reinforced concrete beams and slab were used, as indicated on the cross-sections herewith, with the beams placed under the rails in all cases except at the north side, where a turnout beyond the lunchroom, elevator and foreman's room in the northwest corner is necessary to locate the north, or tenth, track.

By spacing the tracks 11 ft. 8½ in. on centres and using steel core columns for the first floor, it is seen that the property width just accommodates 10 tracks,

spaces between cars the regular specified live load of 75 lb. per square foot was provided for. The working unit stresses in steel and concrete complied with the building law. The concrete protected steel columns were designed without considering the concrete to carry any of the load.

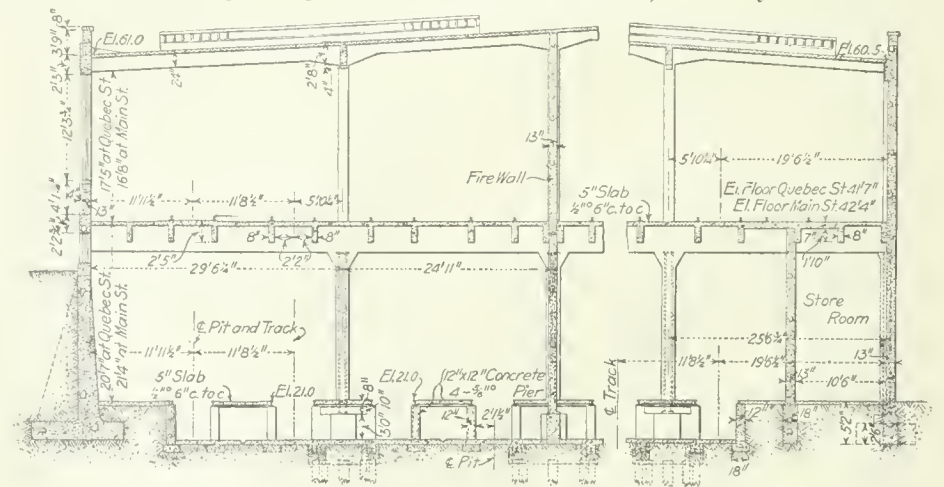

The first floor tracks and slabs are carried on 12 x 12 in. piers, spaced about 7

Details of Wall Construction, Vancouver Car Barn, British Columbia Electric Railway.

structed on the south and west, the height of the west wall decreasing with the grade of Fourteenth Ave., and surmounted by a wall containing windows as soon as the grade permitted sufficient clearance. The building is sprinkled by the dry pipe system. When completed, a 35,000 gal. water tank will be placed on the roof, supported on a steel tower over a bay near the centre of the building. The construction and design were carried out by Westinghouse Church Kerr & Co.

Toronto Street Cars.—The first street car in Toronto, drawn by horses, is said

Section Elevation of Vancouver Car Barn, British Columbia Electric Railway.

ft. apart, and 4½ ft. high, in order to give free access to the running gear of any car at any time. The steel rails, 7¼ in. deep, act as beams between the piers. The main piers supporting the interior columns are of concrete about 8 ft. square, reinforced by ¾ in. rods, and capping the 10 timber piles used to increase the bearing power of the foundation soil.

The second floor is supported by box

to have been used in 1861, and the first electric car in 1891. The horse drawn cars did not disappear until 1893.

The Ottawa Electric Ry. issues 20 trip cards for the use of school children, which have to be signed for and by the children, and presented for punching to the conductor on each trip. Application has been made to the company to issue tickets as in Toronto, Montreal and other places in place of the cards.

Overcrowding on Toronto Railway Cars.

For several years past the City of Toronto has been attempting to deal with the overcrowding on the Toronto Ry. cars, but without achieving anything in the way of relief. The situation can certainly be described as unsatisfactory, but in the apportionment of the blame the city council and the public must bear their due share. The city has on several occasions proceeded against the company for maintaining a common nuisance, and has secured a conviction, which is at present under appeal to the Imperial Privy Council. Apart from this appeal on technicalities, the fact remains that the city has the right to proceed against the maintenance of a common nuisance, and this involves the duty of making and enforcing efficient regulations to prevent a public utility from deteriorating into a public nuisance. In not making bylaws defining overcrowding, fixing the number of passengers each car may carry, and enforcing such bylaws against the company and the public alike, the city has failed in its duty.

Just prior to the outbreak of war a comprehensive report was made on traffic conditions in the city, the gist of which was that traffic conditions could be improved by a considerable extension of track, additional cars, rerouting of cars, and passenger control, and certain recommendations along these lines were made. On account of the financial condition generally, it was decided to postpone any action on the report until normal conditions prevailed. The city, however, appears to think that the overcrowding condition can be eliminated simply by the addition of cars. This alone would not prevent overcrowding, but would possibly add to the trouble in another way. If the number of cars on any given route were multiplied by ten, passengers would still force their way on a car already loaded beyond capacity, unless prevented. The public requires to be educated in the matter, but it never will be so long as this subject is treated as a joke by the local press and as campaign material by would-be civic legislators. It is generally accepted that more lines are required and it follows that more cars are needed to operate on those lines, but in view of war conditions, it was not considered expedient to involve either the company or the public in any heavy expenditure. Therefore, in order to deal with overcrowding, there remained the possible rerouting of cars and the control of passengers. Practically nothing has been done in the first case, and nothing at all in the second. It is correct to say that there is overcrowding amounting to nuisance on certain routes, and also that there are other cars and routes operated far below capacity. This is a matter which might be taken up by the city and the company in a sympathetic manner, and by cooperation there is no doubt some means could be evolved whereby the nuisance could, to a very great extent, be alleviated. Neither side seems, however, to be able to approach the subject in the condition of mind to ensure success. The control of the passengers is, without doubt, the chief thing to consider in dealing with the overcrowding evil. The present system of collecting fares should be abolished and an up to date pay as you enter system should be installed, as it has been on the Toronto Civic Ry. cars, where the discomforts of overcrowding are considerably minimized by passengers depositing their fares as they enter the cars and not being jostled by the conductor having to force his way

through a crowded car to collect the fares. Each car could be marked with the number of passengers to be carried, and the number to be allowed over seating capacity, and the cars could be so constructed that it would be comparatively easy to control the number of passengers getting on, and when the limit under bylaw was reached, the car could be closed in such a way that no other passengers could get on. Other cities with greater population than Toronto have grappled with, and successfully overcome, this trouble. There was a little difficulty at first in enforcing the rules, but well within a month the lesson had been learnt, and overcrowding ceased to exist, except in a few special cases, where a small fine generally had a salutary effect. The onus of keeping the number of passengers within the limit allowed by the bylaw would be placed on the conductor primarily, and the general responsibility for oversight on the company's inspectors. The number of fares missed by the conductor on an overcrowded car, must, in the course of a year or so, amount to the cost of a car, and to a certain extent, the knowledge that one can ride free on a car, because the conductor cannot collect the fare, causes a large number of persons to ride short distances who would otherwise walk.

The city is again making application to the Ontario Railway and Municipal Board for an order to compel the Toronto Ry. to place an additional 200 cars in service. Evidence was given on behalf of the company showing the difficulty there was in obtaining material for the construction of cars, also the difficulty of obtaining labor, both for building and operating cars, and this evidence was attempted to be refuted by witnesses on behalf of the city. At the time of writing the board had come to no decision.

The Mayor announced, Feb. 13, that he had instructed that an indictment be prepared for the forthcoming March assizes against the Toronto Ry. for maintaining a common nuisance by overcrowding its cars, and if he failed to get it past the grand jury he would proceed by other methods. Similar indictments, with resultant conviction and appeal, have now occurred at intervals during the past six or seven years. The company's franchise will expire by effluxion of time early in 1921, so it is quite conceivable that the Toronto Ry. overcrowding case will still be before some court or other at that date.

Regina Municipal Railway Earnings.

Following are the earnings, expenses, etc., for Dec., 1916, compared with those for Dec., 1915; and the totals for 12 months ended Dec. 31, 1916:

	Dec. 1916	Dec. 1915	12 months to Dec. 31 '16
Total revenue	\$23,724.35	\$19,336.88	\$212,790.19
Expenditure	19,850.87	14,933.31	191,359.68
Net earnings	3,873.48	4,403.57	21,430.51
Fixed charges	8,239.64	8,022.96	97,575.54
Deficit	4,366.16	3,619.39	76,155.03
Aver. exp. per car mile without power	19.45c	13.32c	15.47c
Aver. exp. per car mile with power	25.22c	18.62c	20.72c
Cost per k.w.h.	1.41c	2.02c	1.67c
Cost per car mile	5.91c	5.03c	5.25c
Platform wages per car hour.	72.40c	73.76c	72.10c
Expenses less fixed charges percentage of earnings			83.67%
Expenses with fixed charges percentage of earnings			118.40%

Nova Scotia Tramways and Power Co. Ltd., Prospectus.

Following are extracts from a prospectus of \$2,250,000 of 1st mortgage gold bonds issued recently: The company was incorporated by the Nova Scotia Legislature in 1914, with authority, among other special powers, to purchase the Halifax Electric Tramway Co.'s properties and franchises, comprising all street railways, commercial electric light and power and gas properties in Halifax, and to acquire water powers, lands, etc., on the Gaspereaux River, 55 miles from Halifax, capable of a hydro-electric development of approximately 12,000 h.p. The capitalization is:

	Authorized	Outstanding
1st mortgage 5% gold bonds (this issue)	\$10,000,000	\$2,250,000
Preferred stock, 6% cumulative	2,500,000	1,500,000
Common stock	3,500,000	2,500,000

The proceeds of the sale of the stocks and bonds now outstanding as above will provide for the acquisition of the Halifax Electric Tramway Co.'s properties, and the water power rights, lands, etc., on the Gaspereaux River, also adequate working capital. The Nova Scotia Board of Commissioners of Public Utilities has approved the issue of \$3,000,000 of bonds, \$2,500,000 of preferred stock, and \$2,500,000 of common stock for these specific purposes and for the construction of a hydro electric plant, utilizing the Gaspereaux lands. The bonds and stocks now outstanding are a part of the issue thus approved.

The N. S. Board of Commissioners of Public Utilities, in 1916, decided that the fair and reasonable value of the properties of the Halifax Electric Tramways Co., as of June 15, 1915, was \$3,450,000, and of the Gaspereaux lands, etc., \$300,000, a total of \$3,750,000, on which these \$2,250,000 bonds are a first mortgage. Since June, 1915, substantial additions and improvements have been made to the company's property, including a 4,000 h.p. increase in power station capacity and an entirely new gas plant to replace the old one. The company's net earnings increased from \$245,525 in 1906 to \$342,897 for the 12 months ended Oct. 31, 1916. Net earnings for 1915 were nearly three times, and in each of the last six years were more than double, the \$112,500 interest on these bonds. Net earnings, 12 months to Oct. 31, 1916, were more than three times these interest charges. Both gross and net earnings have shown increases each year for the last ten fiscal years.

The company operates under franchises which, in the counsels' opinion, are without limit of time. The physical property of the Halifax Electric Tramway includes a street railway system, with 21.2 miles of track, the greater part of which is double track. There are 62 passenger cars, the necessary car barns, a central power house, with 7,300 h.p. capacity, including a new 4,000 h.p. turbo generator now being installed, a lighting and power distribution system, a modern gas plant, with about 42 miles of pipe in the distributing system, etc.

The Sherbrooke Ry & Power Co., which it was reported recently might temporarily suspend its electric railway service, wholly or partially, in order to release power for pressing needs of munition manufacturers, has announced that as an additional source of power has been brought into Sherbrooke, it has been found unnecessary to further consider such suspension.

Toronto Civic and Other Street Railway Matters.

Following are extracts from an interim report by the Toronto Commissioner of Works, R. C. Harris, for the 11 months ended Nov. 30, 1916:

Eastern Entrance to Exhibition.—The construction of an eastern entrance to the Canadian National Exhibition Grounds via Bathurst St. and Garrison Common was authorized by Council May 1, 1916, and commenced on May 2. As a whole the work to be done consisted of the reconstruction of the Bathurst St. bridge over the G.T.R. and C.P.R., including the raising of the north approaches to same on Bathurst and Front Sts., and the construction of a wooden trestle forming the south approach, together with a reconstruction of the roadway leading to Queen's Wharf; the construction of wooden trestles along the north parapet of the Old Fort and over the C.P.R. track leading to Queen's Wharf; and the construction of a double track street railway from the intersection of Bathurst and Front Sts. to the eastern entrance gates of the exhibition grounds. By reason of an agreement with the G.T.R., that company wrecked the old Bathurst St. bridge, erected the steel work, roadway slab and easterly half of the north abutment of the new bridge, and constructed the Bathurst-Front Sts. approach to same. All of the other bridge construction work was performed by city forces on a day labor basis. The street railway track construction work consisted of the grading, ballasting and laying of track materials upon a length equivalent to 10,100 lin. ft. of single track, and of the erection of trolley poles, transmission cables, trolley wires and other overhead work necessary to place the line in a condition ready to operate. In the track construction 6 in. gravel ballast; 6 in. x 8 in. x 8 ft. cedar ties; and 60 lb. A.S.C.E. section rails were used. The overhead construction consists of two 500,000 c.m. copper cables and 2-0 hard drawn round copper trolley wires. The latter work is of the open construction type throughout.

Yonge St. Subway was paved with granite sets and completed on Sept. 25. Street cars commenced running through it on Oct. 4.

Civic Railway Construction.—During 1916 there has been considerable extension work on the Civic Ry. Contracts have been awarded for 13 double truck cars required to strengthen the service on Danforth and St. Clair Aves. Contracts have also been awarded for one single truck car for the Bloor St. service.

At the opening of 1916 sidewalks on Lansdowne Ave. from the top of the hill north of Davenport Road to St. Clair Ave. had been moved to a new location for a 42 ft. pavement. This year all track, overhead and pavement work has been completed, except for a short portion just north of Davenport Road, which is being delayed by order of council.

A large amount of feeder cable was strung on the Eastern Division, being made necessary by a rearrangement of sub-stations by the Hydro Electric.

We have under construction a 9 car capacity addition to the St. Clair Ave. barn, the present barn also having capacity for 9 cars. It is expected that the new barn will be occupied about Jan. 1, 1917.

Traffic has increased on the Civic Ry.

Comparing the first 10 months of 1916 with the same period of 1915, Gerrard St. has increased 6.5%, Danforth Ave. 11.8%, St. Clair Ave. 11.0%, Bloor St. 50%, from Mar. to Oct., inclusive, and the entire system, 13.1%. We are now carrying per day about 38,000 revenue passengers, and 1,370 soldiers, who ride free. No additional rolling stock was added during 1916, and the present equipment is working to its full capacity. There have been no serious accidents during 1916.

Street Railway Matters.—Much useful data on street railway traffic has been secured under this appropriation, as well as a small amount of data on vehicular and pedestrian traffic. Most of the work has consisted in securing information relative to overcrowding on the Toronto Ry. Co.'s routes.

Montreal Tramways Commission.

The commission named in the act passed by the Quebec Legislature last session to draw up a new franchise between the City of Montreal and the Montreal Tramways Co., consisted of Senator J. P. B. Casgrain, Montreal; Senator C. Baubien, Outremont, and F. J. Cockburn, of the Bank of Montreal. The latter resigned subsequently, as his engagements did not permit him to act, and the vacancy has been filled by the appointment of A. W. Stevenson, accountant, Montreal.

The commission were duly sworn in on Feb. 9, and subsequently elected Senator Casgrain as Chairman, and appointed R. Beaudry as Secretary. They have opened an office at 92 Notre Dame St., and have applied to the Board of Control for an appropriation of \$5,000 to cover present expenditure, which was authorized Feb. 14.

The commissioners have announced that they will begin at once to study the whole of the conditions surrounding the present franchises, and the city's needs. They have also issued the following statement: "After a preliminary survey of the material already available and in possession of the city officials, the commissioners intend calling upon the public bodies, and the citizens at large, for information and suggestions. They are desirous that all possible light and help should be secured. In order to make the proposed franchise a fair and advantageous one for the city, present and future."

Jitney Traffic Notes.

It was reported that 160 jitney men had taken out licenses under the new by-law in Vancouver, B.C., up to Jan. 30.

The Edmonton, Alta., City Council, which operates the Edmonton Radial Ry., is considering the question of turning the city ambulance into a jitney car and operating it on a section of Athabasca Ave., on which an electric car is being operated at a loss. It is also suggested that the city might operate a jitney car to the stock yards.

The Quebec Court of Review, sitting at Montreal, Feb. 9, confirmed a judgment of the Supreme Court of May 20, 1913, dismissing the petition of W. G. M. Shepherd, a ratepayer, who asked the court to set aside as illegal a franchise granted by the Montreal City Council to the Canadian Autobus Co., Aug. 22, 1912. The matter had been decided in the same way in another action, which had been carried to the Imperial Privy Council.

The jitney drivers of the Blue Funnel Line have protested against the new jitney regulations put in operation by the New Westminster, B.C., City Council, and propose to carry the matter to court. The principal objection is the license fee for interurban jitneys, which has been raised to \$50. In addition to this fee the jitney men say they have to pay a fee in every municipality through which they pass.

The Vancouver Jitney League has submitted to the Vancouver City Council a proposed new bylaw to amend the one passed recently. J. O. Kerr, President of the league, says the jitney men want a bylaw that they can live up to, and that the short experience with the bylaw passed recently shows that in regard to routing and some other matters it could be improved, of course, from the jitney men's standpoint.

The Edmonton, Alta., City Council is asking the Alberta Legislature to pass an act giving it, among other things, power "for prohibiting or licensing and regulating motor vehicles carrying passengers and used or plying for hire within the municipality, defining the routes or limits within which the same may operate, and compelling the owners or operators thereof to furnish bonds or other securities in such amount as the council may require as security for the payment of damages sustained by personal injury or otherwise through the operation or driving of such vehicles."

Kitchener and Waterloo Street Railway Report.

The Kitchener, Ont., Light Commissioner's report for the calendar year 1916 contains the following information about the street railway department.

	1916	1915
Receipts	\$55,261.47	\$48,628.03
Operating expenses	19,474.01	22,305.83
Maintenance and repairs	7,308.09	5,409.24
Debt interest	8,059.04	7,851.60
General expenses	7,413.46	6,334.76
Total operating expenses	42,245.60	41,901.43
Gross profits	13,006.87	6,726.60
No. of passengers carried	1,236,650.	1,059,480

Transportation of Postmen in Regina. As stated in Canadian Railway and Marine World some little time ago, the Regina Municipal Ry. management refused to continue carrying postmen for the Post Office Department at the ridiculously low rate of \$25 a man per year and asked for \$50 per man, which the department refused to pay, and as a consequence the postmen have since been travelling on tickets. The matter came before the city council recently, when one of the aldermen moved that the department's offer of \$35 a man per year be accepted. The vote resulted in a tie, which under the rules defeated the motion.

Hydro Electric Radial Railway By-laws.—Referring to the figures given in our last issue regarding the voting of the various municipalities concerned in the proposed hydro electric radial railway from Port Credit to St. Catharines, Ont., we have since been supplied with the official figures, and find that there are slight discrepancies in those previously given. In Clinton Tp., the figures were: 219 for, and 29 against; Louth Tp., 275 for, 7 against, thus making the total vote, 7,282 for, and 5,515 against, instead of 7,236 for, and 5,545 against, as previously mentioned.

Electric Railway Projects, Construction, Betterments, Etc.

Lake Erie & Northern Ry.—The value of the land taken for railway purposes by the company at Jubilee Terrace, Brantford, Ont., in 1913, has been fixed by the arbitrators at \$2,000. (Nov., 1916, pg. 460.)

Moncton, Tramways, Electricity & Gas Co.—The Mayor of Moncton, N.B., in his inaugural address to the city council, Feb. 2, said the changing of the route of the street railway was an important matter which would have to be dealt with during the year and would require careful consideration. (Oct., 1916, pg. 425.)

Ontario Hydro Electric Railways.—Chief Engineer Gaby of Hydro Electric Power Commission of Ontario has completed estimates for electric railways through the various municipalities tapped by the St. Catharines and Niagara Falls, the St. Catharines and Welland, and the Hamilton and Port Dover hydro radial lines. These will be considered at a meeting of the representatives of these municipalities at a meeting to be held in Hamilton at an early date.

Timiskaming & Northern Ontario Ry.—Speaking at the Empire Club, Toronto, Feb. 8, J. L. Englehart, Chairman, T. & N.O.R. Commission, is reported to have said the commission was preparing to electrify the line, as it was believed electricity was to be the future motive power in the province. With this object in mind the commissioners had made during the past two years a complete re-survey of the line and had its new plans completed. The T. & N.O.R. operates the Nipissing Central Ry., an electric railway between Cobalt and Liskeard, part of which is on T. & N.O.R. right of way.

Toronto Civic Ry.—The Toronto City Council is reported to have in contemplation the construction of a line from the northern city limits down Dufferin St. to the exhibition grounds. (Feb., pg. 73.)

Transcona, Man.—An informal proposal for the building of an electric railway into Transcona was discussed recently between representatives of the Transcona Town Council and the Greater Winnipeg Water District Commission. An agreement which had been under consideration by certain private interests was laid before the commission and discussed. It provided for the building of a line from Provencher Ave., St. Boniface, to the corner of Oxford and King Sts., Transcona, by Sept. 1, and for the operation of one round trip an hour. The cost such a line, including equipment, was estimated by the commission at \$125,000. The commissioners expressed the view that an exclusive franchise for 10 years should be given, with the option of an extension for 30 years.

At a meeting of the commission, Jan. 27, a letter was read from J. G. Harvey, the commission's solicitor, in which he said the first question to be decided was whether the commission intended to construct and operate a permanent line from Deacon to St. Boniface. Following is a summary of the letter: "The district can expropriate upon and along any streets or public highways for its right of way. Expropriation must be followed by compensation. For the pipe line, Mr. Harvey suggests little compensation would be asked, while for the construction of a railway greater amounts might be asked. He recommends that an arrangement be entered into with the City of St. Boniface and the permanent use of its streets for

the pipe line and even the temporary use of its streets by the railway. He suggests four estimates to be obtained from the Chief Engineer, viz.: as to the extra cost to the district of constructing a permanent steam railway from Deacon to the point in St. Boniface where it is to end; as to the extra cost to the district of constructing a permanent railway (not including the extra cost of right of way) from Deacon to the said point, such railway, either steam or electric, to be operated; the cost of building and equipping the proposed railway line in Transcona, including cars, and the cost of right of way. And in this regard the difference in cost of right of way for a permanent railway as compared with a temporary one."

The Greater Winnipeg Water District Commission owns a railway from St. Boniface to Shoal Lake, which connects with the Canadian Northern Ry. near St. Boniface. The commission, it was reported, paid \$12,400 for running rights and transfers during the previous year. If the line were to be permanently operated and to be of use to the settlers going in, it would be necessary for the commission to have its own terminals in St. Boniface. Chief Engineer Chace said he would have estimates prepared showing the approximate cost of a steam and an electric railway from Deacon to St. Boniface.

We have been officially advised that nothing in the way of definite action has yet been taken about the Transcona proposition. (See Greater Winnipeg Water District and Transcona Electric Ry., Feb., pg. 73.)

The Windsor, Essex & Lake Shore Rapid Ry. proposes to do a small amount of track paving in Windsor, Ont., during this year. A. Eastman is Vice President and General Manager, Kingsville, Ont. (Oct., 1916, pg. 425.)

Sale of the St. John Railway.

The following circular was issued to St. John Ry. shareholders, Feb. 3, by H. M. Hopper, Secretary: "We have received an offer from the New Brunswick Investment Co., Ltd., of \$1,300,000 for all of the company's property, assets and franchises, and in addition \$10 a share for each share of the company's stock transferred to the New Brunswick Investment Co., making \$140 a share net to the shareholders. The New Brunswick Investment Co. agrees to assume all of the St. John Ry. Co.'s indebtedness and liabilities. Payment to be made by the New Brunswick Investment Co. in full on transfer of the property on or before Feb. 28, 1917, or so soon thereafter as matters in connection with the St. John Ry. Co.'s mortgages can be arranged, as to which the parties making the offer anticipate no delay. Payment of the additional \$10 for the stock will be made when the certificates are delivered to the New Brunswick Investment Co. in transferable form. Your directors have satisfied themselves as to the ability of the offerers to complete the transaction, and are of opinion the offer should be accepted by the shareholders. As it is essential, under the legislation affecting the company, that at least two-thirds of the shareholders, at a special meeting called for the purpose, shall vote in favor of the transfer, we hope you will sign and return forthwith the enclosed

proxy if you are unable personally to be at the meeting. We enclose notice calling a special meeting of shareholders for Feb. 15 to consider this offer and to decide whether it should be accepted or not."

The shareholders decided at the meeting to accept the offer and the transfer of the property is being made accordingly.

Electric Railway Notes.

The Hamilton, Ont., City Council has appointed a special street railway committee, which is inviting citizens to make complaints against the service now being given by the Hamilton St. Ry.

The Port Arthur and Fort William, Ont., Utilities Commissions have arranged to hold a joint meeting to discuss fares on the sections of the two municipal electric railways connecting the two cities.

We are advised that the report to the effect that a company is being formed to operate a line of omnibuses for passenger and freight between St. Thomas, Aylmer and Port Burwell, Ont., is incorrect.

The Edmonton, Alta., City Council is having manufactured in the city, steps for its electric railway cars. A question whether some patent rights are being infringed has been raised, and Commissioner Harrison is ordering an investigation.

The Ottawa Electric Ry. has ordered 3 double truck semi steel cars, 33 ft. body, 45 ft. over all, equipped with Westinghouse 101-B-2 motors, 27-F-E-1 trucks, S.M.E. air brakes, etc., from Ottawa Car Manufacturing Co. They will be duplicates of the company's class 600 cars.

The London, Ont., Railway Commission has decided to purchase a freight motor car for operation on the London & Port Stanley Ry., in order to handle the increased freight traffic. The cost of the car is given as \$23,500. The city has been asked to issue \$25,000 new debentures, as a number of other matters on the railway demand attention, and several expenditures have been undertaken for the current year, to be paid out of revenue.

Mention was made in our last issue of a report that the Saskatoon, Sask., City Council had under consideration the building of electric cars for its street railway, owing to increasing cost, and to the inability of manufacturers to fill orders on short notice. We have since been advised that such a suggestion had been made to the city council, but that it is not likely that it will be considered until after the war.

The Ontario Railway and Municipal Board has ordered the City of Toronto to pay the whole cost of placing and maintaining the diamond and crossing at the intersection of the Toronto Civic Ry. and the Toronto Suburban Ry. at the junction of Lansdowne Ave. and Davenport Road, and that the cost and maintenance of the protective appliances be divided equally between the city and the company.

The Brantford, Ont., Railway Commission informed the local Trades and Labor Council recently that only policemen and firemen in uniform and the city hall janitor are carried free on the municipal railway. Books of tickets are issued free, as has been the custom for years, to the Victorian Order of Nurses, and books of tickets are sold to the different city boards for their employes at reduced rates. These latter books are issued in the names of particular persons.

Mainly About Electric Railway People.

A. H. Dennis has been appointed chairman of the civic committee in charge of the operation of the Fort William, Ont., Electric Ry.

F. X. Couture, heretofore Superintendent of Transportation, has been appointed Superintendent, Railway Department, Sherbrooke Ry. & Power Co., Sherbrooke, Que.

E. A. Robert, President, Montreal Tramways Co., has been elected a director of the Western Assurance Co. and the British American Assurance Co., Toronto.

Chas. Johnstone, heretofore acting Manager, Sherbrooke Ry. & Power Co., Sherbrooke, Que., has been appointed Comptroller. Office, 330 Coristine Bldg., Montreal.

T. Ahearn, President, and J. D. Fraser, Secretary-Treasurer, Ottawa Electric Ry., left Ottawa Feb. 20, via New York and New Orleans, for southern California, expecting to be away about five weeks.

F. A. Chisholm, heretofore Superintendent, St. Johns Electric Light Co. Division, Southern Canada Power Co., St. Johns, Que., has been appointed Superintendent Light and Power Department, Sherbrooke Ry. & Power Co., Sherbrooke, Que.

Thos. Ahearn, President, Ottawa Electric Ry., and Ottawa Car Manufacturing Co., has been elected a director of the Merchants Bank of Canada. He is also a director of the Bell Telephone Co. and Canadian Westinghouse Co., as well as of several other companies.

Martin N. Todd, President, Galt, Preston & Hespeler St. Ry., and General Manager, Lake Erie & Northern Ry., who has not been in good health for some time, left Galt, Ont., on Jan. 29, for the south, his intention being to go to the Isle of Pines, and to be away for two or three months.

Sir W. M. Aitken, Bart. who was elected a director, British Columbia Electric Ry., at the recent annual meeting of shareholders in London, Eng., has been created a Baron of the United Kingdom, with the title of Baron Beaverbrook, of Beaverbrook, N.B., Canada, and of Cherkley, Surrey, Eng.

C. G. Newton, formerly agent, London & Lake Erie Ry. & Transportation Co., St. Thomas, Ont., has been appointed Accountant at London, Ont., which position was occupied by L. Tait, who was also Secretary-Treasurer, prior to his appointment as Secretary-Treasurer, London St. Ry. The L. & L. E. R. & T. Co.'s directors will probably appoint a Secretary-Treasurer at their next meeting.

William Henry Dinsmore, whose appointment as Traffic Superintendent, British Columbia Electric Ry., Vancouver, was announced in our last issue, was born at Meaford, Ont., Apr. 14, 1877, and entered B.C.E.R. service, Feb. 1, 1901, since when he has been, to Oct. 31, 1909, conductor; Nov. 1, 1909, to Oct. 31, 1915, Inspector; Nov. 1, 1915, to Feb. 29, 1916, Chief Inspector; Mar. 1 to Dec. 1, 1916, acting Traffic Superintendent, City Lines, Vancouver, B.C.

Leonard Tait, heretofore Secretary-Treasurer, London & Lake Erie Ry. & Transportation Co., has been appointed Secretary-Treasurer, London St. Ry., vice G. C. Holding, who has resigned, in order to devote his time to his private affairs. He commenced railway service in 1899,

with the Michigan Central Rd., at London, and has also served with the G.T.R. and C.P.R., and returned to the M.C.R. in Feb. 1905 as chief clerk to Freight and Passenger Agent, London. He was appointed Soliciting Passenger Agent, New York Central Rd., Toronto, and in Nov., 1912, he was appointed accountant, London & Lake Erie Ry. & Transportation Co., and later, Secretary-Treasurer of the company.

Lewis Clark Haskell, Secretary-Treasurer Southern Power Co., who has also been appointed Secretary-Treasurer, Sherbrooke Ry. & Power Co., Montreal, was born in Pennsylvania, Jan. 2, 1883, and graduated with the degree of B.A., from Colgate University, in June, 1905. From 1905 to 1908, he was Assistant Manager, Haskell Lumber Co., and Salmon River Ry., Fassett, Que.; 1900 to 1911, Secretary-Treasurer and Manager, Labrador Electric Co., Murray Bay, Que.; 1912 to 1913, Secretary-Treasurer, South Shore Power & Paper Co., Montreal; 1913 was appointed Secretary-Treasurer, Southern Canada Power Co., Montreal, which company has taken over the Sherbrooke Ry. & Power Co.

W. C. Franz, who has been elected President of the Trans-St. Marys Traction Co., of Sault Ste. Marie, to succeed the late T. J. Kennedy, was born at Bucyrus, Ohio, Mar. 14, 1871. In 1889 he entered the Toledo & Ohio Central Ry.'s service, remaining until 1901, when he went with the Hocking Valley Ry. in West Virginia, serving as Trainmaster and Superintendent. From 1906 to 1908 he engaged in railway construction work and coal development in West Virginia, and on Sept. 1, 1908, was made General Manager of the Lake Superior Corporation, succeeding to the Vice Presidency in 1913. He is also Vice President of the Algoma Steel Corporation, Ltd.; President of the Cannelton Coal & Coke Co. and the Lake Superior Coal Co.

Hon. James Leitch, K.C., Judge of the Supreme Court of Ontario, who died at Toronto, Feb. 7, after a prolonged illness, was born at South Branch, Stormont, Ont., June 2, 1850, and was educated at Williamstown and Cornwall, Ont. He became a barrister in 1876, and was created a Q.C. in 1889, practising his profession in Cornwall. He was reeve of Cornwall in 1884, mayor 1885-86, member of the High School Board there since 1887; life governor and a director, Cornwall General Hospital; and was also, for some time, President, Stormont Electric Light & Power Co., and Cornwall Gas Co. On the formation of the Ontario Railway and Municipal Board in 1906, he was appointed Chairman, and held that position until 1912, when he was appointed to the bench.

James B. Woodvatt, who has been appointed General Manager, Southern Canada Power Co., Montreal, which owns the Sherbrooke Ry. & Power Co., operating the street railway, and other utilities in Sherbrooke, Que., was born at Brantford, Ont., July 2, 1886. He was, from Apr. to July, 1905, chain man, Niagara & Welland Power Co.; July to Sept., 1905, topographer, Toronto & Hamilton Ry.; Apr. 1906 to Dec. 1908, apprentice, Canadian Westinghouse Co., Hamilton, Ont.; Dec. 1908 to June 1909, investigating ice conditions, Gulf of St. Lawrence, Dominion Government; June 1910 to June 1910, sales engineer, Allis-Chalmers-Bullock, Ltd., Montreal; June 1910 to July 1913, Super-

intendent of Power, Sherbrooke Ry. & Power Co., Sherbrooke, Que.; July 1913 to Oct. 1916, General Superintendent, Southern Canada Power Co., Montreal.

Electric Railway Finance, Meetings, Etc.

Cape Breton Electric Co.:

	Dec. 1916	Dec. 1915	Jan. 1 to Dec. 31, 1916.	Jan. 1 to Dec. 31, 1915.
Gross	\$40,284.39	\$36,267.87	\$393,666.68	\$357,214.07
Exp.	22,346.19	19,625.69	231,264.97	206,427.82
Net	17,938.20	16,642.18	162,401.71	150,786.25

Hamilton St. Ry.—The City Treasurer reported recently on the financial relations between the city and the company as follows:—

Total receipts, 1915	\$569,694.15
Total receipts, 1916	706,789.14

Increase	\$137,094.99
City's share, 1915	\$45,575.53
City's share, 1916	\$56,543.13

Increase	\$10,967.60
----------	-------------

The city's share in 1916 was \$4,772 more than the highest previous year, viz., 1913.

Kitchener & Waterloo St. Ry.—The annual report of the operations for 1916, presented to the Kitchener, Ont., Light Commission, Feb. 7, showed net profits of \$3,606.47. Of this 25% is paid to the town of Waterloo, in return for running rights.

It was also reported that the net profits for Jan., 1916, were \$330.53, against \$252.97 for Jan., 1916.

London & Port Stanley Ry.—The London Railway Commission announces that the gross railway earnings from July 1 to Dec. 31, 1916, were \$178,211, and total expenses \$146,321, leaving a net operating profit of \$31,890. There was an increase of \$5,300 in the operating expenses over the same period, 1915, of \$10,000 in the total expense, and of \$39,000 in the gross earnings. The net earnings were \$27,500 more for the 1916 period than for the 1915 one, which was the first under the Commission's operation.

Port Arthur Civic Ry.—Traffic statistics for January:

	1916.	1917.
Revenue	\$6,797.20	\$8,104.00
Military tickets	6,854.00	4,375.00
Ordinary tickets	8,607.00	7,504.00
Workmen's tickets	27,747.00	50,612.00
School children	4,446.00	8,292.00
City officials	1,652.00	2,079.00
Cash fares	102,687.00	114,541.00
Total passengers	152,754	188,071
Transfers issued	15,386	18,976

Toronto Ry.—Earnings for Jan., \$510,052.52; city percentage, \$76,507.88. From figures compiled by one of the Toronto newspapers, it appears that since the commencement of the company's franchise, early in 1891, \$72,917,572.31 were received in fares, and \$9,249,213.13 paid to the city as percentage on earnings. The receipts for the first year of operation were \$291,765.17, not much more than half of the receipts for Jan. 1917, the city percentage being \$23,017.08.

The Sherbrooke Ry. & Power Co. has been taken over by the Southern Canada Power Co., Ltd., but maintains its corporate capacity as heretofore. Following are the officers:—F. W. Teele, President; J. B. Woodvatt, General Manager; L. C. Haskell, Secretary-Treasurer; Chas. Johnstone, Comptroller, all with offices at 330 Coristine Bldg., Montreal; F. A. Chisholm, Superintendent, Light and Power Department, and F. X. Couture, Superintendent, Railway Department, with offices at Sherbrooke, Que.

Dominion Power and Transmission Co's Annual Meeting.

The report presented at the annual meeting in Hamilton, Ont., recently, showed that the gross business during 1916 equalled that of 1913, the best year preceding the war, and the indications for 1917 are that the business will eclipse all former years. The net results of 1916 were not proportionately so good, owing to the increased price of materials and commodities. The restrictions under which the subsidiary companies operate does not permit of an advance in rates to customers, corresponding with the increased cost of operation.

The gross earnings were \$2,693,211.93, which left a surplus of \$710,348.29 after all expenditures. Profit and loss account had a balance of \$536,060.67, after placing \$250,000 additional to the credit of the regular reserve account. The reserve for maintenance and renewal has been increased by \$111,079.02.

The officers for the current year, who were re-elected, are: President, J. R. Moodie; Vice President, C. A. Birge; Treasurer, Jas. Dixon; Managing Director and Secretary, W. C. Hawkins; General Manager, E. P. Coleman.

Toronto Railway Co's Annual Meeting.

Following are extracts from the report for the year 1916, presented at the annual meeting, Feb., over the signature of the President, Sir Wm. Mackenzie:—

A summary of the year's operations is attached, and when one takes into consideration existing conditions owing to the continuance of the war, it is certainly very gratifying.

Gross earnings	\$5,973,161.27
Charges for operating, maintenance, etc.	3,350,657.87
Net earnings	\$2,622,503.40
From which net earnings there was deducted \$2,227,958.29, distributed as follows:—	
Dividends	\$958,826.40
Bond interest, etc.	156,122.14
Payments to city:	
Percentage on earnings....	\$909,881.10
Pavement charges	98,418.40
General taxes.	104,710.25
	1,113,009.76
	\$2,227,958.29

The increase in the gross passenger earnings is gratifying. The total for 1916 was \$5,881,505.28, against \$5,611,296.60 for 1915. The charges against earnings for operation, maintenance, etc., were \$3,350,657.87, the percentage of operating cost being 57% of the passenger earnings. Payments made to the City of Toronto throughout the year amounted to \$1,113,009.75, an increase of \$48,937.53 over 1915.

The shareholders, at a special general meeting on May 29, 1916, authorized an increase in the capital stock of \$3,000,000 by the creation of 30,000 shares, but no action was taken by the directors as to the disposition of such shares.

On Dec. 28, 1916, a fire occurred in the car barns at St. Lawrence and King Sts., completely destroying the buildings and contents, including 168 cars.

The sixth drawing of the company's currency and sterling bonds, under the terms of the mortgage deed dated Sept. 1, 1892, took place on June 21. Under said terms the company draws annually during the last 10 years of its franchise 5% of the amount of bonds issued, thus

reducing during the 10 years mentioned, the outstanding bonds to 50% of the original issue, and all bonds so drawn are to be redeemed on or after Aug. 31 following the date of drawing, from which date no interest is payable on bonds so drawn. There has been drawn to date a total of \$1,365,086.65.

Careful attention has been paid to the maintenance of the plant, rolling stock, equipment and other properties.

The directors declared, out of the accumulated surplus earnings, 4 quarterly dividends.

INCOME ACCOUNT.	
Gross earnings	\$5,973,161.27
Operating, maintenance, etc.	3,350,657.87
Interest on bonds, etc....	156,122.14
Percentage on earnings..	909,881.10
Pavements, taxes	215,707.45
	4,632,368.56
	\$1,340,792.71

PROFIT AND LOSS ACCOUNT.	
Balance from 1915	\$5,026,907.37
Surplus earnings, after payment of all expenses, interest, taxes, etc....	1,340,792.71
	\$6,367,700.08
Dividends, 4 of 3 per cent. each, on the paid up capital	\$ 958,826.40
Balance from 1915	\$5,026,907.37
Surplus carried forward.	381,966.31
	\$5,408,873.68
	\$6,367,700.08

COMPARATIVE STATEMENT.		
	1916.	1915.
Gross income	\$5,973,161.27	\$5,694,136.43
Operating, maintenance charges, etc.	3,350,657.87	3,250,611.95
Net earnings	2,622,503.40	2,443,524.48
Passengers carried	149,529,754	142,061,258
Transfers	61,342,763	62,398,638
Percentage of charges, etc., to passenger earnings	57.	57.9

Prior to the annual meeting, a considerable canvass for proxies was conducted in Montreal by a shareholder there, H. A. Hutchins, K.C. On the morning of the meeting, a Montreal delegation called upon the Mayor of Toronto, with a view to sounding him as to the possibility of a new franchise on the expiry of the present one in 1921.

At the meeting of shareholders, which was attended by a considerable representation of Montreal holders of stock, some criticism was aimed at the report, concerning the subsidiary companies, and also of an issue of \$3,000,000 of new stock, which was authorized in May, 1916. The President stated that the stock mentioned had not been issued, and that under present circumstances it would not be issued, as it would be practically impossible to get it subscribed. As to the subsidiaries, it was claimed that there was nothing in the annual statement to show what the assets were, and that the books were not open to inspection. After some explanation by the President, the report was adopted.

The board for the current year consists of: Sir William Mackenzie, President; Senator F. Nicholls, Vice President; Sir Henry M. Pellatt and E. R. Wood, Toronto; Sir Rodolphe Forget, G. H. Smithers, Montreal; and F. W. Ross, Quebec. There is now one more director than last year, G. H. Smithers and F. W. Ross, being the new ones, James Gunn, not being re-elected.

The Winnipeg Electric Ry. Co's annual meeting, which was to have been held Feb. 14, and which was postponed to Feb. 21, owing to the absence of the President, Sir Wm. Mackenzie, was further postponed, as he had not got back to Winnipeg from the Pacific coast.

London, Ont., Street Ry. employes are organizing a labor union, with a view of taking action on the application made recently for increased wages.

Toronto's Requests for Electric Railway Legislation.

Amongst the several matters in regard to which the Toronto City Council is applying to the Ontario Legislature, are the following:—

Toronto Suburban Ry.—That notwithstanding any agreement, statute, order or decision of any court, board or committee to the contrary, the company shall from time to time maintain a pavement upon the portion of Davenport Road within the city limits occupied by the company's lines and tracks, of a character and quality similar to that constructed and maintained from time to time by the city upon the remaining portion of the road.

To enable the city to enter into an agreement with the company for an alternative route in substitution for the route on Davenport Road easterly from Bathurst St., along any available highway or upon a private right of way, or upon such other way as may be provided, to the northerly city limits, and upon the consummation of such agreement, the company's franchise upon the portion of Davenport Road referred to shall cease. To declare forfeited and cancelled the company's franchise upon all streets south of Dundas St., in Ward 7.

Toronto & York Radial Ry.—To authorize the city by bylaw to enter upon, expropriate and acquire the portion of the T. & Y. R. R. (Metropolitan Division), upon Yonge St., within the city limits, and all the real and personal property used in connection with it, and necessary for its operation, including all franchises, rights and privileges, which it now has or may enjoy, respecting the construction, maintenance and operation of a railway within the city limits upon that street, upon paying such compensation therefor as may be agreed upon between the company and the city, and in the event of disagreement, by the Ontario Railway and Municipal Board. To build and operate a double line of railway on Yonge St. from the T. & Y. R. R. southern terminus to the northern city limits, and to grant running rights over it to the T. & Y. R. R. on terms to be mutually agreed upon.

Toronto Ry.—To require the company to build and place in operation 100 new cars during 1917, and 100 additional cars during 1918, and in default of doing so, the company to pay to the city a penalty of \$100 a day for each car less than the said numbers.

Toronto Civic Ry.—To authorize the city council to pass bylaws, without submitting them to the ratepayers' vote, for the issue of consolidated loan debentures to the extent of \$1,498,864.33, for the following purposes, amongst others:—To cover overdrafts and complete work on civic car lines, \$140,000. Balance of purchase of cars, \$17,000. Amount already expended and required to complete Bloor St. line, \$125,000.

Vancouver Transportation Club.—The following are the officers for the current year: President, C. E. Lang, Northern Pacific Ry.; First Vice President, V. D. Power, British Columbia Electric Ry.; Second Vice President, J. W. Nutt, Allan Steamship Co.; Third Vice President, A. Whitwall, Great Northern Ry.; Secretary, D. Alexander, Chicago, Milwaukee & St. Paul Ry.; Treasurer, Jas. Napier, Allan Steamship Co.; Directors, Messrs. Jenney, Faulds, P. Whitelock, Faar, Nace, Daniels and Foster.

The London Street Railway Co's Annual Meetings.

Following are extracts from the annual report for the year 1916:—

Earnings—	1916.	1915.
Passenger	\$420,704.92	\$393,299.00
Miscellaneous	5,609.85	5,559.00
Gross earnings	\$426,314.77	\$398,858.00
Expenses—		
Maintenance way and structures	\$ 33,845.55	\$ 35,619.41
Maintenance, equipment	50,131.88	29,046.60
Transportation, power	37,994.08	38,465.25
Transportation, car service	138,653.55	131,308.94
Total operating expenses	\$292,400.95	\$275,212.04
Net earnings	\$133,913.82	\$123,645.96
Interest on bonds	\$ 32,138.29	\$ 32,769.63
Interest on overdraft	41.70	23.50
Taxes	8,123.06
Total deductions	\$ 40,303.05	\$ 32,793.13
Net income	\$ 93,610.77	\$ 90,852.83

During the year \$55,831.82 was expended in construction and equipment as follows:—Track and roadway construction, \$54,965.18; electric line, \$683.01; building and fixtures, \$43.75; fare boxes, \$56.15; new trucks, \$40.90; miscellaneous equipment, \$42.83; total, \$55,831.82; credit by scrap sold, \$3,566.22. Net expenditure, \$52,265.60.

Even though approximately 3,000 citizens have gone with the overseas forces, the company's business has continued to increase substantially. Several battalions were brought to London for training; so that approximately 12,000 men were in camp during May and June. This made extra car service necessary and caused abnormal earnings for those two months; after which a very large percentage of the troops were moved away to Camp Borden for more extensive field training. Forty-three of the company's employes have joined the Canadian Expeditionary Force.

Owing to the extensive improvements proposed by the city for street paving last year and which would require the rebuilding of several miles of tracks, it was found necessary to use a portion of the company's surplus for this purpose rather than for the usual interim dividend in July. Considerable of the street work planned by the city last year could not be completed on account of the shortage of labor, and so remains to be included in next year's programme. This, together with the required annual redemption of \$35,000 bonds and the abnormal costs of supplies and labor, without the ability to increase the prices charged for transportation, makes the coming year's operation rather more difficult.

During the past season the city paved Dundas St., from the exhibition grounds eastward to Ashland Ave., 0.64 mile. The track was renewed with 80 lb. T rail, on concrete foundation and with brick paving. The double tracks to the exhibition were extended 0.33 mile to the G.T.R. crossing. The Hamilton road was paved from Adelaide St. to Egerton St., 0.84 mile. Some new 80 lb. T rail was used in this section and all the tracks relaid with concrete and brick paving. An extension of the single track on the Hamilton road from Egerton to West St., 0.42 mile, was made with 80 lb. T rail and placed in operation on Dec. 1. The above additions to the trackage, together with the doubling of the curve at Mamelon St., amount to an extension of 0.83 mile, making the total mileage now 36.02.

Owing to the presence in the city of such a large number of soldiers during the early part of the summer, it was impossible to spare the cars for remodel-

ling purposes to such extent as had been anticipated, but all necessary repairs and painting were continued as rapidly as possible.

Hydro electric power has continued to give us satisfaction, even though interruptions have been somewhat more numerous and of longer duration than last year. As the Power Commission is making improvements to avoid such delays it is expected the service will be considerably improved in the future.

No serious litigation is pending against the company and as our relations with the public are most gratifying a good year is looked for.

PROFIT AND LOSS ACCOUNT.

Surplus, Dec. 31, 1915	\$109,976.48
Net income for year	93,610.77
	\$203,587.25
Dividends, 6 per cent.	\$ 33,860.40
Directors' fees	1,000.00
Surplus, Dec. 31, 1916	168,726.85
	\$203,587.25

Expenses per cent. of earnings, 68.60. Passengers carried, 11,518,428. Car earnings per revenue passenger, 3.67c. Transfers, 1,792,579. Total passengers, 13,311,006. Car earnings per passenger, 3.08c. Car mileage, 1,938,492. Gross earnings, per car mile, 21.99c. Operating expenses per car mile, 15.08c. Net earnings, per car mile, 6.91c. Miles of track, 36,080. Gross earnings per mile of track, \$11,835.46.

The report was adopted at the annual meeting at London, Ont., Feb. 7, when C. Currie, Akron, Ohio, was elected a director, and subsequently was elected President in place of E. W. Moore, Cleveland, Ohio, who resigned as director and President. The following are the directors for the current year: C. Currie, Akron, Ohio, President; T. H. Smallman, London, Ont., Vice President; C. B. King, Manager, W. M. Spencer, S. H. Ivey, London, Ont.; P. W. D. Broderick, Toronto, and Sir Herbert S. Holt, Montreal. G. C. Holding, Secretary-Treasurer, resigned in order to devote his time to private affairs, and the Manager, C. B. King, was appointed temporarily to succeed him. Subsequently L. Tait, theretofore Secretary-Treasurer, London & Lake Erie Ry. & Transportation Co., was appointed Secretary-Treasurer.

Answers to Questions on Electric Railway Topics.

Following are replies by W. R. McRae, Master Mechanic, Toronto Ry., to questions sent to the American Electric Railway Association's question box:—

Trolley Shoes vs. Trolley Wheels.—What experience have member companies had in the use of trolley shoes in place of trolley wheels? Do the advantages overcome the objections, especially the increased wear upon the trolley wire?

On many occasions during the early days of electric traction we used sliding trolley contacts, instead of wheels, and saw no undue wear of trolley wire. I doubt that there will be more wear on wire by using trolley shoes as designed now, especially in view of the superior quality of the trolley wire now in use.

What advantages have member companies experienced by equipping their cars with small extinguishers? Where they are used? What method is pursued to prevent theft?

All motor cars on this system are equipped with fire extinguishers. Have found them very useful in putting out or checking fires due to overheated resistance and controller fires. They are car-

ried in vestibule directly behind motor-man, are easily detached and are checked the same as balance of removable equipment. We have had no loss of extinguishers due to theft.

Welding Steel Tools.—Is the welding of high speed steel bits to machinery steel shanks for wheel turning tools practical, and if so, what is the best method to employ?

We use high speed steel bits welded to machine steel shanks for ordinary lathe work, but not on wheel lathe. The tool steel bit is tapered to mat with the V in shank, and oxy-acetylene welded.

Boring Air Compressor Cylinders.—What method is employed by member companies in boring out air compressor cylinders on a mill for boring wheels, or in a lathe?

We bore them on a lathe and grind to finish.

The Street Railway Situation in Halifax.

A meeting of the City Board of Control was held, Feb. 1, which citizens were invited to attend and offer suggestions for the betterment of the street railway service. H. R. Mallison, Secretary-Treasurer, Nova Scotia Tramways & Power Co., and J. A. DeYoung, Assistant Secretary, Halifax Tramway Co., were present, but very few citizens turned up to voice their complaints. The chief cause of any trouble that may have arisen in the service appears to be in regard to overcrowding of certain cars during rush hours. Mr. Mallison stated that crowding could be avoided if the public did not all wish to get on the same car. The company is supplying a 3 minute service, the best that can be given on single track curves and with present trackage facilities. It is almost impossible to get additional cars. The company is seeking them, and has estimates under consideration, as well as studies of trackage for them. Labor is scarce and material not only high in price, but it is exceedingly difficult to obtain deliveries. Replying to a suggestion by one of the controllers that the cars be equipped with air brakes, he stated that the brakes at present in use had been thoroughly gone into by the Public Utilities Commission and deemed by it to be the best for the service.

British Columbia Electric Ry.'s Office Employees' Association.—The B.C.E. Ry.'s office staff has organized with the following officers: Honorary President, Geo. Kidd; President, A. E. Chamberlin; Vice President, E. Rogers; Secretary, P. Lewis; Treasurer, J. V. Armstrong. There are about 400 persons in the 18 departments eligible for membership, and it was stated that about 300 had signified their intention to join. The association is formed to look after the mutual welfare of the company and the office employes. It is the purpose of the members to work together in their own and the company's interest, as they believe they will be able to further their ends by working in a body. Social gatherings may be held from time to time during the year. A schedule of meetings has been made out and a great deal of work planned for the near future.

The Sandwich, Windsor & Amherst-burge Ry. is having the 2 double truck cars, which are being built at Cleveland, Ohio, and which were described in our last issue, equipped with air brakes. Similar equipment will be placed on 6 double truck cars which are now in operation.

Marine Department

Canadian Lake Protective Association's Annual Report and Meeting.

The following report, signed by W. E. Burke, chairman of the committee, and Francis King, counsel for the association, was presented at the annual meeting in Toronto, Feb. 15:

The year 1916 presents a good record for the vessels enrolled in this association and trading in the waters over which the association exercises any jurisdiction. The casualties reported are few in number and in most of the cases the damages are slight and the accidents of an almost insignificant character. A few exceptional cases, notably one or two hereafter mentioned, show claims on underwriters of considerable extent, but their number is so limited that the season may be said to present a very low record, not only in the number of casualties, but also in the amount of damages resulting. Furthermore, it is noteworthy that with the exception of a few cases which are still the subject of enquiry, the casualties have all occurred under such circumstances that no master has been censured and only one has been criticized. The committee therefore extends to the members of the association and to the masters of the enrolled vessels congratulations upon the success which appears to be attending the efforts of all parties to reduce controllable losses.

An appendix to this report contains an analysis of the casualty records for the season. The number of ships at sea accounts to a large extent for the extremely small list, but careful navigation, with fair depths of water, must constitute the chief reasons for the marked reduction in the number of reported accidents. As the year progressed a doubt arose whether masters were fulfilling their obligations and filing reports faithfully, but careful investigation was made and available lists were checked, with the result that your committee was satisfied that all casualties of which it should take cognizance were being reported as they occurred, and that the records correctly represented the small number and extent of avoidable disasters.

The outstanding feature of the list is the complete absence of total losses. The collisions are only 10 in number, and, with one exception, all of a minor character with but slight loss, 6 of the 10 occurring at docks in harbors, 2 in the Welland Canal, 1 in ice, the boats in these cases being at slow speed and the damages being almost negligible. The tenth case was more serious: the Midland Prince and the Imperial collided in Lake Superior with substantial hull damages and much resulting delay and loss of use. Full particulars of the casualty have been withheld by owners, as litigation must settle the liabilities, and in the meantime your committee has therefore not been able to take any action. Another serious collision between the W. Grant Morden and the Nottingham occurred in Lake Superior on July 27, with serious results. The W. Grant Morden (a new ship) is owned by a member of this association, but is

not enrolled, and no report being filed, the collision is not included in the appendix. This case is also the subject of litigation. Groundings and strandings are again classified together and are 12 in number. Of these, 7 occurred under circumstances which appear to exonerate the navigators completely, and only 5 called for investigation. In one of these the Ionic ran on the north end of Caribou Island on Apr. 24, before lights were lit, and the committee informed the master that in their opinion he had shown poor judgment

A. A. Wright,
Vice President and Treasurer, Montreal Transportation Company, Ltd., and President, Dominion Marine Association.

in shaping a course for Whitefish Point from a point where he, apparently in error, thought himself off the west end of Michipicoten Island, without using greater caution until he had ascertained his position with certainty. In another, the Keybell ran on Morgans Point, 4 miles west of Port Colborne, in fog, and the committee, notwithstanding the master's excuses as to a faulty compass, has asked for explanations as to the failure to use the lead. His explanations are filed and await further action. In the third case, the Masaba ran on Grassy Shoal, northeast of Victoria Island, Lake Superior, in a fog, and the master has been asked to explain his use of the inner passage and the time at which thick weather set in. Explanations are also filed in this case. In the fourth, the Saskatoon ran over Jackass Shoal upbound in the St. Lawrence River, at a time when the gas buoy was misplaced and not burning. The committee made enquiry as to the notice, if any, regarding this buoy on the canal bulletin boards, and found that a notice posted in due time at Cornwall was read and reported by the engineer of the ship to the effect merely

that the light was out. As the master admits seeing the buoy, the question arising is important both in regard to his conduct and to the usefulness of the new bulletin boards, and the committee has asked for an explanation. The fifth and last case is that of the Iroquois, which grounded off Salmon Point in the Lower St. Lawrence in charge of a sailing master who had gone to his room at the time of the accident, leaving only a wheelsman and a watchman on watch. In this case a wreck investigation has been asked by your committee and has recently been held. This investigation produced another example of the doubts in the minds of many masters as to the respective duties and responsibilities of master and pilot on the St. Lawrence. Masters do not appear to realize yet that they retain responsibility and are bound to intervene in cases where it is apparent that the pilot is in doubt or making a manifest error. The difficulty is even greater where, as in the case in question, the lake master turned the ship over to a so-called "sailing master" at Quebec. The Wreck Commissioner, in the finding he has just handed out, expresses strong views on this point and reprimands the lake master for his apparent lack of interest. The certificate of the "sailing master" is suspended for nine months. A suggestion has now been made that present day trade conditions require the extension of the limits for an inland waters certificate so as to include points as far down as the Island of Anticosti.

There were 6 collisions with docks or bridges and 2 with lock walls important enough to require report. Three of the remaining 4 cases were minor accidents to machinery or gear, and the last case is one of fire resulting apparently from careless use of matches and tobacco. This case led your committee to issue a bulletin prohibiting smoking in the sleeping quarters of the crew. But in none of these cases did it appear that the officers of the ship could be blamed in any way, and making due allowance for the peculiar difficulties attendant upon each case in the circumstances reported, your committee passed each of these casualties without further action.

There were no collisions with lock gates. On more than one occasion during the season lock gates were broken, and with considerable attendant damage, but in no case did the accident result from the action of a steamer enrolled in this association. Doubtless the experience of masters and the work of this association in this respect has led to the exercise of greater caution in bringing ships into position in the locks. Nevertheless conditions remain unsatisfactory and the situation is one of some insecurity. An accident from this cause with tremendous resultant damage is possible at any time in any one of a great number of locks in the Dominion canals, and another year's record may show boats of this association involved in these cases even without

clear fault on the part of the navigator.

The report of the committee for 1915 referred to the effort made to secure the installation of safety devices on all locks to prevent gates from getting out of mitre or giving way under pressure, and during the past year your committee has renewed these requests for action, enlisting as well the support of the Dominion Marine Association. After correspondence on the subject a small delegation waited upon the Deputy Minister of Railways and Canals and later submitted its representations in writing. The department admits the correctness of the statements made, and claims to have already equipped the more dangerous locks with the Gowan safety device. On the Welland Canal the department is disinclined to recommend any further expenditure for this purpose on account of the present building of the new Welland Ship Canal.

Your committee also pressed upon the attention of the same department the request for an improved and uniform system of lighting to indicate the position (open or closed) of lock gates, and for guards to prevent collision with lock entrance walls. The delegation from the Dominion Marine Association above mentioned also discussed these items with the Deputy Minister and placed the requests in writing. With reference to the lighting system the department has raised some objection to the method proposed in the report of your committee for 1915, and has determined simply to maintain the existing departmental regulation. Nevertheless it was admitted that investigation proved that lock masters were not carrying out instructions in this respect and were in some cases adopting plans of their own making. The department has therefore issued strict instructions requiring absolute and uniform compliance with the existing regulation above referred to. As to the desired protection for lock entrances the position taken is similar to that with reference to the other safety appliances mentioned. The department claims to have protected the St. Lawrence locks well and will not advise expenditure on the Welland at present.

In several cases casualty reports filed have called attention to the need of improvement in channels and establishment of additional or better aids to navigation, and whenever it appeared advisable your committee has taken steps to bring the question raised to the attention of the proper department at Ottawa or before the Lighthouse Board. Telegraphic reports to the association's office at Kingston have led to the prompt replacement or relighting of misplaced or unlighted buoys. Positions of stake buoys have been corrected. Light keepers and fog horn operators have been warned. Obstructions in channels have been removed; and it may be said in general terms that no opportunity has been lost to make good use of all suggestions received from the men who navigate the ships enrolled in the association.

The co-operation of the Lake Carriers' Association and the Great Lakes Protective Association was sought as occasion required, and your committee gave due consideration to occasional recommendations of these associations. Bulletin 2 of 1916, published your committee's adoption of the recommendation of the Great Lakes Protective Association that no vessel should attempt to pass another in the shallow and narrow channels between the lower end of Port Huron Middle Ground and Corsica Shoals Lightship, and between the upper end of Russell Island and the lower end of St. Clair Canal.

The plans worked out in 1915 to bring the upper St. Lawrence pilots under the jurisdiction of the Dominion Wreck Commissioner proved somewhat unsuccessful at first, as pilots boarding a ship at Kingston or Montreal did not consider themselves bound to comply with the understanding that they should sign the ship's articles. This difficulty was met by a resolution early in the season that these pilots should sign an agreement offering their services for the boats enrolled and agreeing to sign articles on first boarding ships. An agreement was prepared, duplicates were placed at Montreal and at Kingston, and pilots were invited by public notice in the newspapers of both cities, to sign the offer and undertaking. An interview with a delegation of pilots explained the situation, and the agreement being satisfactorily signed at an early date no trouble has since been experienced. The agreement with signatures is given in an appendix. As already stated, no occasion has arisen this year

The Dominion Marine Association Expresses Its Appreciation.

The following is an extract from the Dominion Marine Association's executive committee's annual report, presented at the annual meeting in Toronto, Feb. 15, 1917, over the signatures of the President, W. E. Burre Assistant Manager, Canada Steamship Lines, Ltd., and the Counsel, Francis King, M.A., of Kingston, Ont., and which was unanimously adopted:

"Canadian Railway and Marine World.

"The proprietor of this publication having formally offered the use of its columns for such items of news as the association would care to publish, your committee gratefully accepted the offer and adopted the following resolution:

"That in view of the thorough manner in which Canadian Railway and Marine World covers the marine field throughout Canada, the care which exercises to secure accuracy, and the thoroughness with which it covers the Dominion Marine Association's disposal, it is hereby appointed the association's official organ."

for criticism or censure in the case of any of these men.

In accordance with the resolution of the committee of 1915, casualty reports have been required only with reference to voyages within the limits covered by certificates issued to masters for inland waters, and therefore no record has been attempted of casualties or losses in the Gulf or on the Atlantic Coast or further at sea. Notwithstanding this, members of the association, in accordance with a resolution of your committee, have continued the enrollment of their ships, irrespective of their present trade routes, as their return to lake waters may be expected, and all the ships are thus equally interested in the improvement of navigation conditions. A list of ships enrolled, showing those still in lake trade and those at sea or laid up in ocean ports, is set out as an appendix to this report.

The Dominion Wreck Commissioner did not hold a sitting during 1916 to investigate a casualty affecting any one of the vessels enrolled in the association. One case, held over from 1915 pending correspondence, that of the s.s. Meaford, which stranded east of Detour, was ulti-

mately dropped, for lack of available evidence, as the crew was scattered, some members being overseas. The only other case in which an investigation was asked, that of the Iroquois at Salmon Point, St. Lawrence, occurred late in November, and the investigation was not held until Jan. 12. A decision has just been rendered and is reported above.

Insurance rates on the lakes for 1916 remained as in 1915. The standard on steel hulls carrying to the foot of Lake Erie for a period of one year, with a navigation season from April 15 at midnight to Nov. 30 at midnight was 3½%. The usual extra ½% for the season was charged for navigation not east of Kingston, with a further ½% for navigation not east of Montreal, an additional fraction being charged for navigation as far as Cape Breton. The sailing season could be extended to midnight Dec. 12 on payment of an additional 1%, and a boat could make a one way trip after Nov. 30 at the following fractional charges: Sailing up to midnight Dec. 5, ½%; sailing up to midnight Dec. 8, ¾%; sailing up to midnight Dec. 12, 1%; or make a one way trip on one lake sailing up to Dec. 12 at ¼%. The policies also permitted navigation from April 1 to April 15 at pro rata of the season rate. Some of the United States policies on Canadian boats contained an additional clause to the effect that a vessel on a voyage at midnight Nov. 30 and sailing again after arrival should pay a pro rata season rate in addition to the special premium provided for the late or extended navigation. The proposals of the association in 1915 for removal of the deductible average clause from all policies and for additional proportionate lay-up rebates met with approval in all quarters among vessel owners and brokers, but up to the present underwriters do not appear to have determined to make either of the desired alterations.

The various bulletins of 1916 have been sent regularly to all masters of enrolled steamers on the lakes, to all members of the association, and to brokers and underwriters. Circular letters have been issued from time to time, and correspondence has been carried on with individual members, with masters, and with the authorities at Ottawa and in local centres as occasion arose. Owners and masters are again asked to make full use of the association's services for the purposes for which it was organized, and to assist its officers as much as possible in making its records complete and its work thoroughly effective.

Agreement With Pilots.—The agreement with St. Lawrence River pilots between Kingston and Montreal, referred to in the foregoing report, is addressed to the Canadian Lake Protective Association and its members and reads as follows:

"As the Dominion Wreck Commissioner has declared that he has no authority upon a wreck investigation to deal with pilots between Kingston and Montreal who are not officers of the ship in question, it has become necessary that pilots in the waters named should on coming on board the steamer sign the ship's articles as 'mate and pilot.' Accordingly, the undersigned mariners, who hold certificates good upon the waters mentioned, hereby offer to serve as pilots in these waters upon any boats enrolled in the Canadian Lake Protective Association and to comply with the above requirement, and each of the undersigned hereby undertakes and agrees with the said association and with its members that immediately upon joining any steamer he will sign the ship's

articles, on request, as 'mate and pilot' for the trip."

Analysis of Accidents Reported, 1916

Groundings and strandings	12

Fire	1
Total	33

The report was unanimously adopted.

The chairman suggested the desirability of having the Dominion Marine Association undertake the Canadian Lake Protective Association's work. After discussion, it was agreed that the Canadian Lake Protective Association, being now a recognized body, and having membership comprising only a section of the Dominion Marine Association, should be continued as a separate organization, but it was suggested that it might have the same executive committee as the Dominion Marine Association, without any change in the constitution, so it was decided that the Canadian Lake Protective Association's committee for 1917 consist of the Dominion Marine Association's executive committee, whose names are given in the report of the latter association's annual meeting on this page.

The German "Blockade" of Europe.—In connection with what the German authorities have declared to be a submarine blockade of Great Britain and the allied countries, which is merely an unrestricted submarine and mine campaign against all vessels, whether belonging to neutral countries or not, they have announced that they will allow the United States to run one steamship a week to Great Britain under certain guarantees. They also stipulate that such vessels must be painted with white and red vertical stripes about 10 ft. wide, and must carry a large flag of red and white checked material on each mast, with the U. S. flag at the stern. A daily paper points out that the C.P.R. house flag, which is flown from all C.P.R. vessels, is checkered red and white, so that in reality the Germans have ordered the use of the C.P.R. flag on such vessels as they will permit to sail. It may be added that the Canadian Pacific Ocean Services, Ltd., house flag, while checkered red and white, has in the centre the letters C.P.O.S.

Dominion Marine Association's Annual Meeting.

The annual meeting was held at Toronto, Feb. 15, the chairman, W. E. Burke, Assistant Manager, Canada Steamship Lines, Ltd., presiding. The executive committee presented a comprehensive report over the signature of the President, and of the Counsel, Francis King. It showed that the steam tonnage enrolled in the association in 1916 was 166,997 net registered tons, against 210,000 in 1915. The barge or sailing tonnage was 29,469 net registered tons, against 32,075 in 1915, a total of 196,466 tons, against 242,075 the previous year. This decrease follows conditions due to the war which have continued to attract tonnage into ocean trade. Members of the association have continued the enrolment of the ships they own, irrespective of their location, but a great number of sales have been made and many losses at sea have occurred and therefore a fair comparison with the tonnage of previous years is not possible. The association has at least temporarily lost the tonnage of one member company, the manager of which resigned his seat on the executive committee during the election of officers at the annual meeting in 1916.

The report dealt in full detail with the past year's work, including the following subjects: Legislation, coasting voyage defined, pilots in Quebec district, masters and engineers for boats with internal combustion engines. The Business Profits War Act, 1916. United States Seamen's Act, Mr. 4, 1915. U. S. Rivers and Harbors Bill. International Joint Commission. Board of Grain Commissioners for Canada. Rules of the road. St. Lawrence River pilots and ship's articles, Kingston to Montreal. Montreal pilotage bylaws. Restrictions upon trading to foreign ports. Chicago drainage canal, withdrawal of water from Lake Michigan. Pollution of international waters. Shipping offices, registers for seamen. Deckloads, loadlines and bulkheads. Power development. Unlicensed small craft. Grain cargoes, Canadian regulations regarding outturns; Buffalo Grain Clearance Corporation; trimming arrangements; extended powers of Grain Commission under order in council of Mar. 22, 1916, and enquiries resulting; overtime work and minimum loading speed of elevators. Canals: safety devices on gates, guards at lock entrances. Navigation of the Kaministikwia River. Harbor and channel improvements. Aids to navigation. Canadian Railway and Marine World. General business, membership and tonnage. The report was unanimously adopted.

Special consideration was given to the Grain Commission's enquiry as to the regulations governing the adjustment of discrepancies in outturns of grain cargoes, and the meeting confirmed the executive committee's action in approving of force during 1916.

Report was made of the Lake Carriers' Association's action in appointing a committee to confer regarding the Buffalo Clearance Corporation, and the President and Vice President for 1917, with the association's Counsel, were appointed a committee for the same purpose, with power to agree, on behalf of the association, upon any proposed plans.

The following were appointed as a committee on aids to navigation: A. A. Wright, A. E. Mathews, W. J. Bassett, Toronto; W. J. McCormack, Sault Ste. Marie; J. F. Sowards and H. N. McMas-

ter, Kingston, and they were empowered to elect a chairman.

The four vacancies on the executive committee, occurring by the expiration of the terms of office of H. W. Cowan, Montreal; C. B. Harris and A. A. Wright, Toronto, and W. J. McCormack, Sault Ste. Marie, were filled by the re-election of Messrs. Harris, Wright and McCormack and by the election of J. T. Mathews, Toronto, to succeed Mr. Cowan, who declined re-election. John Waller, Montreal, was also elected a member of the executive, to succeed Jas. Playfair, Midland, Ont., who had withdrawn from the association's membership. The executive committee for 1917 is now constituted as follows: A. A. Wright, Toronto, President; J. T. Mathews, Toronto, First Vice President; A. E. Mathews, Toronto, Second Vice President; W. E. Burke, G. E. Fair, C. B. Harris, W. L. Reed, J. F. Stewart, Toronto; L. Henderson, John Waller, Montreal; D. Murphy, Ottawa; W. J. McCormack, Sault Ste. Marie.

Government Vessel Building in Canada.

—In response to questions in the House of Commons, Feb. 7, the following information was given respecting vessel building by the Dominion Government since Sept. 1, 1911: Five tugs, or tenders, were built by the Government for the Public Works Department's service and five were built for the same department by private builders. Three others were built but not registered, and one is under construction. Two motor launches were built for the Naval Service Department, but not registered, and five tugs or tenders were built for the Railways and Canals Department, one by the Government and four by private builders. Nine steamships and dredges were built by private firms for the Marine Department, and one dredge is under construction. The Government has also built 35 miscellaneous vessels for various departmental services.

The Storstad-Empress of Ireland Collision.—In connection with the distribution amongst various claimants of the amount realized by the sale of the s.s. Storstad, after sinking the C.P.R. s.s. Empress of Ireland, in the St. Lawrence River, off Father Point, May 29, 1914, a question has arisen in an appeal by the C.P.R., as to whether the vessel sank within Canadian coastal waters or on the high seas. If it is decided that the disaster occurred within coastal waters, the distribution to claimants will be governed by the Canada Shipping Act, and if decided otherwise, the Merchant Shipping Act (British) will apply. In either case, the C.P.R., claiming \$2,500,000, will get nothing, the amount realized by the sale of the Storstad being \$175,000, which will not even meet the prior claims and expenses.

Steamship Depreciation Schedule.—The Dominion Marine Association has adopted the following schedule of rates of depreciation for use in returns under the Business Profits War Tax Act, 1916, the percentages named being per year on the original cost of the new vessel, including only structural additions: Steel built steam lake freighters, 3%; steel built barges, 5%; composite steamers and barges, 5%; wooden steam freighters, 7½%; wooden barges, including schooners, 10%; passenger boats (wooden or steel), 7½%; steel tugs, 5%; wooden tugs, 7½%.

Mail Subsidies and Steamship Subventions for 1917-1918.

The estimates for the fiscal year 1917-18, submitted to the House of Commons recently, contain the following items for steamship service:

ATLANTIC OCEAN.

Between Annapolis and London or Hull, Eng. or both	\$ 5,000.00
Canadian Atlantic ports and Australia and New Zealand	140,000.00
Ocean and mail service, Canada and Great Britain	1,000,000.00
Canada and Cuba	25,000.00
Canada and Newfoundland	70,000.00
Canada and West Indies or South America or both	340,666.66
Canada and South Africa	146,000.00
Halifax, St. John's, Nfld., and Liverpool, Eng.	20,000.00
Montreal, Quebec and Manchester, Eng., during summer, and St. John, Halifax and Manchester during winter ..	35,000.00
Winter service between St. John, N.B., Dublin and Belfast, Ireland	7,500.00
Winter service between St. John, N.B., and Glasgow, Scotland	15,000.00
Winter service between St. John, N.B., Halifax and London, Eng.	15,000.00
St. John, Halifax and London, Eng.	25,000.00

PACIFIC OCEAN.

Between Canada and Australia or New Zealand or both	180,509.00
Canada, China and Japan	253,333.34
Prince Rupert and Queen Charlotte Islands, B.C.	16,000.00
Victoria and San Francisco	3,000.00
Victoria, Vancouver way ports and Skagway	12,500.00
Victoria and west coast Vancouver Island	5,000.00
Vancouver and northern ports of British Columbia	16,800.00

LOCAL SERVICES.

Between Baddeck and Iona, N.S.	5,825.00
Charlottetown, Victoria and Holiday's Wharf, N.B.	2,500.00
Froude's Point and Lockeport, N.S. ...	600.00
From opening to closing of navigation in 1917, between Gaspé Basin and Dalhousie or Campbellton, N.S.	15,000.00
Grand Manan and mainland	10,000.00
Halifax, Canso and Gysboro, N.S.	5,000.00
Halifax and Newfoundland via Cape Breton ports	10,000.00
Halifax, Mahone Bay, Tancook Island and La Have River ports	4,000.00
Halifax and Spry Bay and ports in Cape Breton	4,000.00
Halifax, South Cape Breton and Bras d'Or Lake ports	6,000.00
Halifax and West Coast Cape Breton, calling at way ports	4,000.00
Halifax and Sherbrooke	2,000.00
From opening to closing of navigation between Kenora and Fort Frances, Ont.	8,000.00
From opening to closing of navigation, between mainland and Magdalen Islands	18,000.00
Mulgrave and Canso, N.S.	6,500.00
Mulgrave and Gysboro, N.S., calling at intermediate ports	5,500.00
Newcastle, Neguac and Escuminac, calling at all intermediate points on Miramichi River and Miramichi Bay Pelee Island and mainland, Ont.	2,500.00
Petit de Grat and Intercolonial Ry. terminus at Mulgrave, N.S.	8,000.00
Petitcodiac River between Moncton and way ports, and west coast of Cumberland County, N.B.	7,000.00
Pictou and Montague, calling at Murray Harbor and Georgetown, P. E. I.	2,500.00
Pictou, New Glasgow, Antigonish County ports and Mulgrave, N.S. ...	6,000.00
From opening to closing of navigation in 1917, between Pictou, Mulgrave and Cheticamp, N.S.	1,000.00
From opening to closing of navigation in 1917 (between Port Mulgrave, St. Peter's, Irish Cove and Marble Mountain and other ports on the Bras d'Or Lakes, N.S.)	7,500.00
Prince Edward Island, Cape Breton and Newfoundland	6,500.00
During 1917, between Quebec and Harrington, calling at ports and places along northern shore of River St. Lawrence between such terminals ..	20,000.00
Quebec and Gaspé Basin, touching at intermediate ports	28,000.00
Quebec and ports on north shore of Isle of Orleans	8,500.00
Rivière du Loup, Tadoussac and other North Shore ports	4,500.00
Winter service between Rivière du Loup, Tadoussac and other St. Lawrence ports	6,000.00
.....	8,000.00

Winter service between St. Catharines Bay and Tadoussac, Que.	3,500.00
St. John and ports in Cumberland Basin, N.B.	3,000.00
St. John and St. Andrew, N.B., calling at intermediate points	4,000.00
St. John and Bridgetown, N.S.	2,500.00
St. John and Digby, N.S.	20,000.00
St. John, Digby, Annapolis and Granville, viz., along the west coast of Annapolis Basin, N.S.	2,000.00
St. John, N.B., and ports on Bay of Fundy and Minas Basin, and Margareville, N.S.	8,000.00
St. John, Westport and Yarmouth and other way ports	10,000.00
During 1917, between St. Stephen, N.B., Ste. Croix River points, Deer Island, Campobello and the inner islands, Passamaquoddy Bay and L'Etete or Park Bay	6,000.00
During 1917, between Sydney and Bay St. Lawrence, calling at way ports	6,000.00
During 1917, between Sydney and Whycocomagh	3,000.00
Sydney, N.S., around east coast of Cape Breton to Hastings and return to Sydney via Bras d'Or Lakes.	5,500.00
Expenses in connection with supervision of subsidized steamship services	3,000.00
	\$2,630,734.00

AUTHORIZED BY STATUTE.

Canada, China and Japan	\$ 121,666.66
Canada and France	200,000.00
	\$ 321,666.66

St. John Harbor Improvement Contract Litigation.

A petition was filed in the Superior Court at Montreal, Feb. 2, for an interlocutory injunction to prevent the proposed transfer of certain property, valued at about \$1,000,000, from the Norton Griffiths Construction Co., to W. H. Brown, New York. The petitioner, J. H. Craven, Larchmont, N.Y., claims that if the transfer is made, his interest in the property and belongings will be prejudiced and he will suffer loss.

The Norton Griffiths Construction Co. was given a contract by the Dominion Government on Mar. 25, 1912, for the construction of harbor works and improvements at Courtenay Bay, St. John, N.B., and it is claimed that, on July 20, 1912, an agreement was entered into by the company, the petitioner and J. A. Bulyea, St. John, N.B., providing that the company should receive 51% of the total net profits on the contract, over and above 15% of the total prime cost of the construction works, and that the petitioner and J. A. Bulyea were entitled to 24½% each. The company, it is claimed, undertook to render an audited accounting of the works and all expenditures every three months as the contract proceeded and to make a final report showing the net profits to be distributed when the contract was completed. The work was continued up to Dec. 22, 1916, when the contract was abandoned. During the progress of the work considerable assets were accumulated in machinery, dredges and other materials, lands were acquired on Courtenay Bay, and it is alleged that the company is negotiating with the Dominion Government and W. H. Brown, acting for himself and other parties, for the sale and transfer of these properties.

Masters' and Mates' Examinations.—

The following certificates have been granted: W. C. Jordon, Collingwood, Ont., master, passenger steamship, coasting; J. Preston, Midland, Ont., master, inland waters; Jas. Gunn, Owen Sound, Ont., mate, passenger steamship, inland waters; J. A. Lethbridge, Owen Sound, Ont., mate, passenger steamship, inland waters.

The s.s. Fernfield's Stranding Recalled.

The Liverpool Journal of Commerce, in commenting recently on the stranding of the British s.s. Fernfield on Battery Point shoal, Louisburg, N.S., says: "At the subsequent enquiry held before Capt. Demers, the Canadian Wreck Commissioner, it was proved, through the able defence of solicitors who acted in the service of the Mercantile Marine Service Association, that the log books had been properly kept and supervised, and as a result of their able defence, the certificate of the master was not dealt with, and he himself was exonerated from all blame, a happy result, which has given much gratification to the council of the Mercantile Marine Association, who are constantly pointing out the dangers and difficulties attendant on navigation in these waters."

The court's judgment in this enquiry was summarized in Canadian Railway and Marine World, at the time, as follows: "From the evidence adduced the court found that from the time the vessel left St. John, N.B., on July 1, until it reached Louisburg light, the master exercised all the necessary and proper precautions in navigating, but in that neighborhood, under the weather conditions existing, he omitted to include in his calculations the possible influence of wind on his starboard, in heading for the light on the wharf, and also that in turning around close to the buoy, a mistake was made. It therefore found that he erred in judgment, but not in a culpable manner, and therefore did not deal with his certificate, nor reprimand him, but cautioned him to be more careful in the future, in entering harbors with which he is not well acquainted. The logs were examined and found properly kept and supervised."

The Liverpool paper's criticism might have passed without comment from this side, regardless of its inaccuracy, but for the matter contained in the last few lines. This would convey that the "dangers and difficulties" were more responsible for the casualty than the error of judgment on the part of the master, and would be liable to give other masters the impression that they may continue the careless and slipshod methods of navigation, which the Wreck Commissioner's courts, for several years past, have been condemning. The master was not exonerated from all blame in the casualty under notice. It was found that he erred in judgment, but not in a culpable manner and was cautioned to be more careful in future.

Lights on Bridges Over Navigable Waters.—

An order in council has been passed providing that no plan and description of a fixed bridge over navigable waters (not a canal) submitted to the Public Works Department for approval shall be approved unless they indicate a fixed white light on each side of every channel to be navigated through the fixed bridge, such lights, of an intensity to be approved by the Marine Department, to be maintained by the owner of the bridge during every night from sundown to sunrise during the entire navigation season.

Sufficiently Obvious.— A Petrograd press dispatch states: "In an explosion on an icebreaker . . . persons have been killed and . . . injured." Local press comment states that the number of casualties has evidently been struck out by the censor.

Marine Votes for 1917-1918.

The estimates for the fiscal year 1917-18, submitted to the House of Commons, include the following items for works connected with navigation:

CHARGEABLE TO CAPITAL ACCOUNT.		Revotes.
Welland Ship Canal	\$ 200,000	\$ 200,000
Trent Canal	600,000	350,000
	\$ 800,000	\$ 550,000
Harbors and Rivers—		
St. John harbor improvements	\$1,000,000	
Lauzon dry dock	1,000,000	\$ 250,000
River St. Charles improvements	700,000	200,000
Toronto harbor improvements	1,000,000	
Port Arthur and Fort William harbor	750,000	500,000
Victoria harbor improvements	1,000,000	
	\$5,450,000	\$ 950,000
CHARGEABLE TO INCOME ACCOUNT.		
Canals—		
Chambly	\$ 1,700	
St. Annes lock	1,500	
St. Peters	45,000	\$ 45,000
Soulanges	1,000	
Trent	25,000	
Welland	30,000	
	\$ 104,200	\$ 45,000
Canal surveys and inspections		
	25,000	\$ 5,000
Harbors and Rivers—		
Nova Scotia	285,300	181,900
Prince Edward Island	26,900	
New Brunswick	150,950	8,600
Maritime Provinces generally		
	5,000	
Quebec	438,020	145,100
Ontario	333,850	161,700
Manitoba	19,000	800
Saskatchewan and Alberta	20,000	
British Columbia	136,850	5,400
General	40,000	
Dredging	1,705,000	67,000
	\$3,120,870	\$ 570,500
Authorized by statute—		
Collingwood dry dock No. 1	\$ 15,000.00	
Collingwood dry dock No. 2	9,208.96	
Montreal floating dock	105,000.00	
	\$129,208.96	
Naval service	\$2,270,400.00	
Ocean and river service	1,444,500.00	
Marine Department	888,550.00	
Lighthouse and coast service	2,201,900.00	
Scientific institutions	399,293.00	
Marine hospitals	78,000.00	
Steamboat inspection	79,749.00	

Harbor Improvement Scheme at Vancouver.

Canadian Railway and Marine World for Sept., 1916, contained an outline of the harbor improvement scheme for Vancouver, as suggested by the Harbor Commissioners. This scheme involved the purchase of the Kitsilano Indian reserve, 80 acres, for \$700,000; property at Port Moody, 88 acres, \$500,000; the Heaps property on Burrard Inlet, 16 3/4 acres, \$650,000; right of way for a harbor terminal railway from the Kitsilano Indian reserve to the Heaps property, \$1,552,861; a portion of the Pacific Great Eastern Ry. right of way, \$516,627, and wharf property and warehouses owned by the Great Northern Ry. and the waterfront property immediately east of the G.N.R. property, \$1,890,000. The approximate total cost of the properties to be acquired is \$5,769,128. This scheme has met with considerable opposition, especially from the Vancouver City Council. A report on the whole situation has been prepared by F. L. Fellowes, City Engineer, and is now before the civic railways and bridges committee. It is a general outline of the work of improvement carried out in the past, what is now under way, and also deals with the Harbor Commissioners' proposals. Included in the report is also the out-

line of a new plant for an additional reclaimed area in False Creek, near the bridge at Main St., increasing the waterfront by 31 acres for industrial sites, which, it is claimed, would be carried out at a cost of \$10,000 an acre, and open up a main artery through False Creek, and allow the use of present bascule bridge on Main St. to span the new waterway. The Harbor Commissioners' scheme for a harbor terminal railway is endorsed. This line it is proposed to operate by electricity, and to make connections with switching facilities, with all the railways entering Vancouver. In connection with this railway, it is planned to do away with all level crossings on Main St., obviate the necessity of participating in the cost of erection of overhead viaducts at Union, Harris, Keefer and Pender Sts.; remove the British Columbia Electric Ry. tracks from Hastings St.; route all B.C.E.R. interurban traffic over the Commissioners' tracks; eliminate the C.P.R. tracks across Pender, Hastings and Cordova Sts. to the main line at Columbia Ave.; abandon the proposed tunnel scheme; remove the C.P.R., B.C.E.R. and Great Northern Ry. from Front St., and by arrangement with the G.N.R., to secure the removal of the G.N.R. tracks over Main St. and substitute the right to operate over the Commissioners' tracks to the G.N.R. terminal at Pender St., the two systems connecting at the head of False Creek. The estimated cost of this proposal is \$418,700, exclusive of bridges and rails, and \$756,260 inclusive of bridges and rails. The report also estimates that the whole acreage, 31.74 acres, should yield in normal times an average of \$20,000 an acre, or a total of \$664,400.

It is shown, in a comparison of the charges at Vancouver, with those of ports in other parts of the world, that Vancouver is the lowest.

Canadian Icebreaker in Russia.—The ice breaking steamship which was built by Canadian Vickers, Ltd., Montreal, last year, for the Dominion Government, and which was, immediately on completion, sold to the Russian Government, has arrived at her destination, and is being used in the White Sea. She crossed the ocean in charge of Capt. Reid, who had previously taken over the Dominion Government icebreaker Minto for the same service. Reports state that the voyage was accomplished in safety, and that the Russian Government officials are delighted with the vessel, which is said to be the most powerful icebreaker in the world. She was originally named J. D. Hazen and has been renamed Mikula. It is reported that Capt. Reid has been appointed to the chief command of all the Russian icebreakers operating in the White Sea.

Vessels Turning in the River at Fort William.—An order in council has been passed amending sec. 15 of the special regulations for the government of the harbor at Fort William, Ont., by providing that steam vessels exceeding 260 ft. long may be turned with a tug in that section of the Kaministikwia River lying between the bend above C.P.R. elevator D and the westerly limit of the Grand Trunk Pacific Ry. rail dock, and that steam vessels of such tonnage and length may be turned also in that section of the river between C.P.R. slip 1 and elevator C, but the turning of such vessels in the latter portion of the river shall not take place without the use of a tug, unless sanctioned by the harbor master.

Quebec Harbor Improvements.

The Quebec Harbor Advances Act, 1917, which has been passed by Parliament, provides that the Government may advance from time to time, to the Quebec Harbor Commissioners, \$1,500,000, to carry on the construction of such terminal facilities as are necessary properly to equip the port. During the construction, the interest payable on the debentures deposited with the Finance Minister, in respect of these terminal facilities, are to be deemed as money required to enable the commission to complete the work, and payable out of the present advance. The time limit for the construction outlined is to be fixed by the Governor in council. Detailed plans and specifications of the work to be done and on which the advances are to be made, must be satisfactory to the Minister of Marine, and approved by the Governor in council. Advances will be made monthly on application, which must be accompanied by statements showing the total expenditure for the month the advance is intended to cover, and the commission is to deposit with the Finance Minister debentures equal in par value to the advance made. The debentures are to be repayable in 25 years and to bear interest at 3 1/2% a year, payable half yearly.

The Minister of Marine stated in the House of Commons, Feb. 4, that the \$1,500,000 provided in the estimates for 1917-18 as an advance to the Quebec Harbor Commission, was necessary to enable it to complete the work started in 1913, and for which the Government had already advanced \$500,000. Since the harbor development scheme was undertaken, the revenue of the port has advanced from \$126,000 in 1913 to \$288,000 in 1916. Of this amount to be advanced, it is expected that \$700,000 will be spent during the current year, and the balance within about two years. The addition to the grain elevator and the completion of the conveyor system for the elevators will cost about \$800,000.

Dominion Government Vessel Replacement and Upkeep.

In the estimates submitted to the House of Commons for the fiscal year, 1917-18, provision is made regarding vessels, as follows:

Lighthouse and Coast Service.—For rebuilding s.s. Scout, \$12,000; new vessel to replace s.s. Maisonneuve, \$12,000 (additional to \$25,000 voted for current year); pilotage and maintenance and repairs to s.s. Eureka, \$56,300.

St. Lawrence Ship Channel.—To provide for construction and completion of dredging plant for St. Lawrence River from Montreal to Father Point, \$216,550 (additional to \$452,715 voted for current year).

Ocean and River Service.—To provide for the construction of two steamships to replace s.s. Quadra, \$150,000; maintenance and repairs to steamships and icebreakers, \$1,180,000.

Tidal Service.—Maintenance of tidal stations and surveying steamships, \$35,000.

Fisheries Protection.—To provide new vessels, \$100,000; repairs and maintenance of fisheries protection steamships, \$375,000; maintenance and upkeep of ships, Naval College, etc., \$1,000,000.

Customs Department.—To provide for maintenance and upkeep of revenue cruisers and preventive service, \$100,000.

Licensing Canadian Vessels for Ocean Service.

The daily press throughout the Dominion, during February, published the following "information": "The situation caused by the German submarine blockade is being given consideration, as far as sailings of vessels of Canadian register are concerned, by a ship's licensing committee appointed by the government to control Canadian steamship transportation. The committee is composed of A. Johnston, Deputy Minister of Marine; F. C. T. O'Hara, Deputy Minister of Trade and Commerce; J. McDougald, Commissioner of Customs, and G. J. Desbarats, Deputy Minister of Naval Service."

It might be inferred from this that recent events had caused the Government to put into force some new regulations regarding Canadian vessels in ocean service, but this is not the case. The order in council, framing the regulations and authorizing the appointment of a committee to issue the necessary licenses, is dated Mar. 11, 1916, and it was published in Canadian Railway and Marine World for May, 1916. No other orders in council in connection with this matter, and no further regulations, have been passed since that date.

At the time the regulations became effective, Apr. 1, the Licensing Committee issued a circular to steamship owners and charterers, pointing out that the sole object to be attained was the conservation of Canadian registered vessels for British and allied needs. There is no desire to interfere with established service, unless it is absolutely essential, nor is there any intention to interfere, all things being equal, with charters which were in existence prior to Mar. 11, 1916. The committee favors voyages to and from Canadian and other British and allied ports, and everything possible is being done to facilitate the issuing of licenses. Licenses are also issued for inter-neutral voyages, only when it is conclusively shown that the cargo is being carried to, or is ultimately destined for British or allied ports. The committee's desire is to facilitate shipping, to avoid unnecessary ballast voyages, and as far as possible to regulate voyages to congested ports.

Increase in Vessel Prices.—From a list of vessels sold during the last quarter of 1916, prepared by Lloyd's, it is seen that there have been some extraordinary increases in prices paid for vessels, as compared with normal times. The s.s. Kaifuku Maru, built in 1892, was sold in 1907 for \$43,798, and was resold recently for \$729,975. The s.s. Hercules, built in 1903 at a cost of \$210,000, and sold in 1904 for \$161,250, has been resold for \$1,300,000. The s.s. Gozan Maru, built in 1898, and sold in 1913 for \$122,500, has been resold for \$875,000. An old vessel, the s.s. Mizoulis, built in 1893, sold in 1905 for \$75,000, in 1907 for \$77,500, was resold in 1916 for \$592,500.

Shipbuilding in Great Britain.—It is reported that the Controller of Shipping in Great Britain has decided on a type of freight steamship to be built in yards there during the war. This will, it is stated, be single deck, about 9,000 tons dead weight, about 400 ft. long, and all vessels will be built on the same design and to the same specifications. It is also stated that contracts have been awarded for 36 such vessels, and that other orders will be placed as soon as arrangements can be made.

The Whereabouts of Canadian Lake Steamships.

The following list made up at the close of navigation, 1916, shows the enrolled vessels owned by the Canadian Lake Protective Association members, and the waters on which the vessels were then engaged:

Trading on the Great Lakes: J. Frater Taylor, W. C. Franz, Agawa, Thos. J. Drummond, Emperor, Midland Prince, Midland, King, Martian, Sarnian, Hadlington, Hamiltonian, Doric, Ionic, Bickerdike, City of Hamilton, City of Ottawa, Calgarian, A. E. Ames, Beaverton, Mapleton, J. H. Plummer, H. M. Pellatt, Saskatoon, Paipoonge, Geo. A. Graham, Atikokan, Thunder Bay, Collingwood, Edmonton, Yorkton, Masaba, Ungava, J. H. G. Hagarty, E. B. Osler, W. D. Matthews, Iroquois, Mariska, Keywest, Keyport, Keybell, Keynor, Arabian.

Trading to Gulf or Lower St. Lawrence or coasting on the Atlantic but still entering Canadian waters: Easton, Steelton, *Glenmount, *Kinmount.

At sea: A. E. McKinstry, Acadian, C. A. Jaques, Canadian, Dundee, Fordonian, Glenellah, D. A. Gordon, Kenora, Neepawah, Renvoyle, Rosedale, Strathcona, Tagona, Wahcondah, Winona, *Rosemount, Port Colborne, W. H. Dwyer, Keyvive.

*Those marked with an asterisk have been sold since the close of navigation. It is understood that at least one other sale has taken place, but no return has been filed.

Riviere du Loup-Tadoussac Ferry.—The Minister of Trade and Commerce stated in the House of Commons recently that this ferry service was discontinued April 30, 1916. Tenders were called for, but only two were received. The subsidy asked for in one was too high, and the other tenderer was unable to put a boat on the route for the winter of 1916-17. The House of Commons subsequently adopted a motion by C. A. Gauvreau, M.P. for Temiscouata, for a copy of all correspondence, notes, memoranda, and other documents, addressed to the Ministers of Marine and of Trade and Commerce, or to their departments, concerning the ferry between Riviere du Loup, Tadoussac, St. Siméon, St. Catherine and Escoumains, from Jan., 1912, to Dec., 1916, and respecting the contracts with the Trans-St. Laurent Co., the Quebec & Levis Ferry Co., and also regarding the steamboats Mahone, Pilot and Queen.

Canada Steamship Lines' Finances.—At a meeting of directors at Montreal, Feb. 1, a dividend of 7% on the \$12,500,000 preference stock was declared, payable Mar. 1 to shareholders of record Feb. 15. This payment reduces the accumulated dividend arrears to 5¼%, which, it is expected, will be cleared off during this year. The net earnings from operation for 1917 are estimated at \$1,000,000, against \$1,732,057 for 1915. The balance, after interest, depreciation, etc., estimated, has been deducted, shows \$2,500,000, or 20% on the preference stock. The annual meeting of shareholders has been called for Mar. 7.

B. C. Shipyards, Ltd., has been incorporated under the British Columbia Companies Act, with \$100,000 authorized capital, and office at Vancouver, to build, own and operate dry docks, marine railways, steam, sailing and other powered vessels of all descriptions, and to carry on a general shipbuilding and navigation business.

Marine Engineers and Their Pay.

The following is taken from the Quebec Chronicle of Feb. 1:—

"Marine Engineers Want More Pay."

"In view of the increase cost of living it has been decided by the National Association of Marine Engineers of Canada to apply for an increase of 25 p.c. on the salary paid in 1916. For this purpose a circular letter has been sent to all the companies asking them to grant the Engineer's request. This is the first application of the kind made by the Association. Many companies have already given an answer to the Association concerning the matter, and it is expected that the remainder will send a favorable reply soon.

"It will be to the general public interest if this question is settled before the opening of navigation. It would be unfortunate if navigation is paralyzed at a period when there is the greatest need of all our resources. The movement is a most serious one and it is hoped that all interested parties will give a favorable answer and so avoid terrible results.—Advt."

It is plain from this that marine engineers desire an increase in their wages, and it also seems plain that the National Association of Marine Engineers of Canada is going to see that they get it, or, according to the notice, there will be terrible results. It will be noticed that the item quoted above bears the contraction "Advt." at the end. This means that it is an advertisement, and is paid for as such. It is usual for advertisements to be placed by some interested parties, in this case, presumably the association mentioned.

Is this method to be adopted as a general thing in future whenever the question of readjustment of wages comes up for settlement? The wording of the whole thing is unfortunate, and it is an open question whether the threats, so thinly veiled, do not.. bring it within the law.

The circular referred to in the notice, with the rates of pay desired for the forthcoming season, was reproduced in Canadian Railway and Marine World for Feb., pg. 79.

The William Nottingham-W. Grant Morden Collision.—The U. S. local inspectors held an enquiry recently into the cause of the collision between the Great Lakes Steamship Co.'s s.s. William Nottingham and Canada Steamship Lines' s.s. W. Grant Morden on Lake Superior, July 27, 1916. They found that the second officer of the William Nottingham, C. F. Bowen, was guilty of negligence, and violated rule 26 of the Pilot Rules for the Great Lakes, and state that while they are convinced that the licensed officer in charge of the W. Grant Morden was seriously at fault, and was to some extent responsible for the collision, as he was navigating at an immoderate speed and failed to comply with the same rule, that does not free the Nottingham's second officer from penalty. They therefore suspended his license as a first class pilot of steam vessels for five months from Dec. 5, 1916.

Steamship Examinations at Halifax.—It is announced that arrangements are being made for the continuation of the examination of neutral steamships, bound for trans-Atlantic ports, at Halifax, N.S., instead of Kirkwall, Scotland, or Falmouth, England, as hitherto. The first steamship to be so examined was the Danish s.s. Frederiek VIII, which is conveying the German Ambassador to the United States, and his staff, back to Germany, under safe conduct guarantees by the British. For the present, it is stated that these examinations will only apply to eastbound traffic, but that it is expected that they will be extended to westbound traffic shortly.

Atlantic and Pacific Ocean Marine.

The Ulster Steamship Co.'s s.s. *Innis-hoven Head* is reported as sunk by the enemy, while bound from Belfast, Ireland, to St. John, N.B. She had been on the Canadian route for a number of years and was built at Belfast in 1886.

Lord Furness, who is visiting the American continent, is reported to have stated that Furness, Withy & Co. had lost 31 steamships during the war, but that it was building two vessels to replace each one lost, so that at the end of the war its facilities would be more than doubled.

Shipping companies have announced a general increase in Atlantic passenger rates, both eastbound and westbound. First class rates have been increased by \$10, second class \$5, and third class \$2.50. Passenger rates on U. S. lines have also been increased \$15, \$5 and \$3.75 for each class respectively.

The creation of an Atlantic ocean port at Galway, Ireland, to deal with North American trade, was the subject of a resolution at a recent meeting of the Dublin City Council. This matter has been before the public for several years, in connection with a proposed all red route round the world.

Reports from Japan state that the British Government has purchased 17 steamships under construction at Kobe, Japan, for service between China and Japan and Puget Sound ports. The price mentioned is \$2,000,000. Of these vessels, one is stated to be 12,000 tons, two others 10,300 tons each, and the balance 9,000 tons each.

A body washed ashore near Ilfracombe, Devonshire, Eng., has been identified, by papers carried in the clothing as E. S. Gage, third officer of the s.s. *Rappahannock*, owned by Furness, Withy & Co., which sailed from Halifax in Oct., 1916, for London, Eng., and is presumed to have been torpedoed by the enemy, without warning.

The C.P.R. s.s. *Empress of Asia* was cleared recently from the dry dock at Hong Kong, China, where she has had her annual overhauling and painting. She was to be followed in the dock by the s.s. *Empress of Russia*, and then by the s.s. *Empress of Japan*. Each of the vessels spends about 28 days in the annual overhaul.

The British Admiralty Court awarded the owners of the Danish s.s. *Norma* \$11,250 recently for salvage services to the s.s. *Rosedale*, owned by the Canada Steamship Lines, Ltd. The claim was contested, as it was claimed that the *Rosedale* broke away while being towed, but the Elder Brethren of Trinity House decided that the *Norma* rendered important service.

The White Star s.s. *Laurentic* was reported sunk by an enemy torpedo or by striking a mine towards the end of January, near the coast of Ireland. She was built at Belfast, Ireland, in 1908, and with her sister vessel, *Megantic*, was placed on the Canadian service. On the outbreak of war, she was requisitioned by the British Government, and was used as a transport, taking some of the first contingent of the Canadian Expeditionary Force to England. She was later engaged in war service in the Far East, and returned recently to British waters.

It is reported that J. S. Dennis, M.Can.Soc.C.E., Assistant to President, C.P.R., has announced that the C.P.R., as agent for the Russian Government, is arranging for a steamship service between Russia and Canada after the war, the

Canadian port to be St. John, N.B. Prior to the war, the Russian Volunteer Fleet was operating a line of steamships between Siberian ports and Vancouver, the C.P.R. acting as agent. If this is continued after the war, a round the world service between Canada and Russia on the Atlantic, and between Russia and Canada on the Pacific, would be operated.

The former Great Northern Pacific Steamship Co.'s s.s. *Minnesota* is reported sold to the International Mercantile Marine Co., for \$2,750,000. While on her way to Great Britain, from Seattle, Wash., about a year ago, her boilers were disabled, while off the Mexican coast, and she was towed back to San Francisco, where repairs costing about \$160,000 were made, and where she has been berthed ever since. She was built at New London, Conn., in 1904, and is 20,718 tons gross, 13,324 tons register, with dead weight capacity of 17,000 tons. Her dimensions are: length 622 ft., breadth 73.5 ft., depth 41.5 ft.

Maritime Provinces and Newfoundland.

The s.s. *Sagona*, operating between North Sydney, N.S., and Port aux Basques, Nfld., ran ashore during bad weather, near Louisburg, N.S., Feb. 21.

The harbor revenue for St. John, N.B., for January was \$20,776.99, compared with \$15,909.59 for Jan. 1916. The sailings in January numbered 48 against 33 for Jan. 1916.

The Home Steamship Co., Ltd., Halifax, N.S., has, at its own request, had its certificate of registration revoked. It was incorporated under the Nova Scotia Companies Act, Oct. 1, 1912, and operated the s.s. *Eskasoni*.

The winter service between Pictou, N.S., and Georgetown, P.E.I., is being performed tri-weekly by the car ferry steamship *Prince Edward Island*, leaving Pictou Tuesday, Thursday and Saturday at 7 a.m., and returning from Georgetown Monday, Wednesday and Friday at the same hour. Commencing Jan. 30, an ice-boat mail service was operated between Cane Tormentine, N.B., and Point Borden, P.E.I., leaving the former place Monday, Wednesday and Friday at 3.40 p.m., and the latter place Tuesday, Thursday and Saturday at 4.10 p.m.

The Minister of Public Works announced, Feb. 9, that the contract with the Norton Griffiths Construction Co., for harbor improvements and other works at Courtenay Bay, St. John, N.B., had been cancelled, and that a new contract was being prepared, for which tenders would be invited immediately, and the work carried on as expeditiously as possible. He stated that every effort had been made to secure a completion of the contract by the original successful tenderers, but the necessities of the case would not permit of further delay.

The Newfoundland sealing fleet, which commences operations about the middle of March, will be the smallest on record. The vessels of the modern type which have been engaged in the service for the past few years, are now employed elsewhere, so for this season the sealers revert to the older, wooden type of vessel. Owners have announced that they will engage no unmarried men between 20 and 30, who have not offered their services to the naval or military authorities, or can establish that they remain at home to permit other members of their families to go to the front.

Province of Quebec Marine.

The name of the s.s. *O. S. Paul*, no. 126851, owned by the Tourville Lumber Mills Co., Montreal has been changed to *Tourville*.

The Dominion Government s.s. *Montcalm* sailed from Quebec recently, with supplies, etc., for north shore points, Seven Islands, and possibly Ellis Bay, Anticosti Island. Owing to the exceptionally heavy ice in the Gulf this year, it is not anticipated that Ellis Bay will be reached, even if the attempt be made.

The British Yukon Navigation Co., operating as the River Division of the White Pass and Yukon Route, is building two vessels to replace the steamboats *Gleaner* and *Scotia*, which, owing to the increase of the tourist business into Atlin, are now unable to handle it. The vessel for the Taku Arm will be driven by a stern wheel propeller, and will be 165 ft. long, 35 ft. beam, and will have capacity for berthing 70 passengers. She will sail from Caribou, on the Rail Division of the White Pass and Yukon Route, and run to Taku, where passengers and freight will be transported over the Portage, a small tram line about two miles long, and thence taken by the Lake Atlin boat to points on Lake Atlin. The second vessel, for Lake Atlin, is designed for sightseeing, and will be 87 ft. long, 18 ft. beam, and will have no berthing accommodation. These vessels are being built at Victoria, and will be removed in sections by steamship to Caribou, whence they will be hauled over the ice to Atlin. Press reports state that the cost of them will be about \$200,000, but we are officially advised that this is very much exaggerated. We are also advised that press reports that the company is building two additional steamships to operate between White Horse and Atlin is very wide of the mark, as there is no water transportation between the points named.

Georgian Bay Canal Commission.—The Minister of Public Works stated in the House of Commons recently that the Georgian Bay Canal Commission is composed of W. Sanford Evans, F. S. Meighen and E. Gohier. Its cost to Dec. 31, 1916, was \$46,164.06. It cannot conclude its labors until conditions are such that full public hearings can with propriety be held, and the public mind is free to give this important subject the necessary attention. The special preliminary investigation now being carried on will be continued only as long as in the Government's judgment the results justify the expenditure. It is expected that a second interim report will be submitted before the close of the present parliamentary session, containing further studies of the movement of agricultural products, while certain detailed investigations of traffic between Canada and Europe are already well advanced.

Notice has been issued that cables addressed to soldiers in France are being improperly sent to the War Office, London, Eng., thereby causing some annoyance and delay. All cables intended for soldiers of the Canadian Expeditionary Force, in France, should be addressed to France, and in addition to the regimental number, name, unit, etc., should bear the words, Canadian, France. There may, however, still be some little delay, as the cables, in the final stages of delivery, are not necessarily sent by wire. This does not apply to cables sent at the special non-minimum week end letter rate, such messages being sent from the War Office, London, Eng., by mail.

Ontario and the Great Lakes.

The Lake Erie Fishermen's Association, affiliated with the Canadian Fishermen's Association, has agreed to petition the Dominion Government to place two substantial patrol boats to guard the fisheries in Lake Erie, in place of the two small vessels now there.

A press report from Chatham, Feb. 12, states that Public Works Department engineers have commenced taking soundings in the River Thames from Chatham to the lighthouse, and that a report is being prepared in connection with the proposal to dredge a 14 ft. channel from Chatham to Lake St. Clair.

A press dispatch from Cleveland, Ohio, states that options have been taken by unknown Canadian interests on eight package freight steamships of U.S. register, and if the U.S. Shipping Board approves, sales will be closed at an early date. If the vessels are taken through the Welland Canal, they will have to be cut to pass the locks.

The Toronto, Hamilton & Buffalo Navigation Co. hopes to resume its ferry service between Port Maitland, Ont., and Ashtabula, Ohio, early in March. It was intended that the service would be suspended about the middle of February, but, owing to unprecedented accumulation of ice in Lake Erie, it was necessary to suspend it towards the end of January.

The U. S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level, for January, as follows: Superior, 602.78; Michigan and Huron, 580.48; Erie, 571.68; Ontario, 245.26. Compared with the average January levels for the past ten years, Superior was 0.82 ft. above; Michigan and Huron, 0.64 ft. below; Erie, 0.06 ft. below, and Ontario, 0.20 ft. below.

The Lake Simcoe Navigation Co., Ltd., at the end of January, assigned to J. F. Lawson, chartered accountant, Toronto. The company owned and operated two steamboats, named *Modello* and *Otonabee*, on Lake Simcoe, and had its head office at 84 King St. East, Toronto. It was incorporated in 1912, and had a paid up capital of \$25,000. The officers and directors were: Herbert Waddington, President; R. J. Law, Secretary Treasurer; F. E. Dalton, W. S. Simpson and F. C. L. Jones, directors.

The Dominion Public Works Department's estimates for the fiscal year 1917-18, contain an item of \$35,641.50, to pay the Western Dry Dock and Shipbuilding Co., Port Arthur, a portion of the fourth payment of subsidy due on the completion of works as per agreement, notwithstanding that the works are not completed. The agreement mentioned provides for payment out of the consolidated revenue fund of \$37,741.50 a year for 20 years, being at the rate of 3% of the cost of the dry dock, which is given in the agreement as \$1,258,050. The property has now passed to the Port Arthur Shipbuilding Co., Ltd.

The s.s. *Keenora*, owned by the Rat Portage Lumber Co., Kenora, Ont., and formerly owned by the Rainy River Navigation Co., Fort William, Ont., has been sold to Alex. Mackenzie, for a Winnipeg syndicate. It is stated that it is the owners' intention to operate the vessel in a passenger and freight service on the Red River and Lake Winnipeg, and that she will be dismantled and taken to Winnipeg, where she will be reassembled and placed in service on the reopening of navigation. She was built at Kenora, Ont., in 1897,

and is screw driven by engine of 38 n.h.p. Her dimensions are: length 119.9 ft.; breadth 28 ft.; depth 8.3 ft.; tonnage, 486 gross, 269 register.

The C.P.R. Great Lakes service will be performed this year by the steamships *Assiniboia* and *Keewatin* on the Port McNicoll route, and by the s.s. *Manitoba* on the Owen Sound route. The *Manitoba* will leave Owen Sound on Thursdays, commencing with the reopening of navigation, connecting with the train leaving Union Station, Toronto, at 5.25 p.m.; arrive at Fort William on Saturdays and Port Arthur on Sundays, and return to Owen Sound on Tuesdays, connecting with the train due at North Toronto at 8.10 p.m. On the Port McNicoll route, the service will commence June 2, and the vessels will leave Port McNicoll and Fort William on Wednesdays and Saturdays, and arrive at Fort William and Port McNicoll on Fridays and Mondays.

The Toronto Board of Control had before it recently a proposal of the Mayor that the city should keep the bay clear of ice during the winter months and assist in the maintenance of a steamship service for coal. He stated that he had had an interview with J. W. Norcross, Vice President and General Manager, and W. E. Burke, Assistant Manager, Canada Steamship Lines, Ltd., on the previous day, and a tentative arrangement had been made by which it was proposed to break up the ice in the bay and prepare a channel to the eastern entrance, so that vessels may be operated between Toronto and other lake ports to bring in coal. He also stated that if the city entered into an agreement for 10 years, to take coal, the company would build vessels capable of carrying 10,000 tons of coal.

An injunction has been obtained in an Ontario court by F. H. Clergue against the Lake Superior Dry Dock and Construction Co., restraining it until Mar. 15, from executing or recording any mortgage, lien, charge or encumbrance against any or all its property, and restraining individual members of the company from acting as directors and from dealing with the assets. The Lake Superior Dry Dock & Construction Co., Ltd., was formed in 1914 to take over an agreement between F. H. Clergue and Sault Ste. Marie City Council, and to build a dry dock at Sault Ste. Marie. In the agreement it was provided that work was to be commenced by Apr. 1, 1914, and the whole was to be complete and ready for operation by Apr. 1, 1916. The city voted a bonus of \$20,000 a year for 20 years, gave a fixed assessment of \$750,000 for school taxes for 20 years, and \$500,000 for general taxes for 15 years, and the work was to be done to the Dominion Public Works Department's satisfaction, so as to earn the government subsidy of 3% per annum for 20 years on an expenditure of \$1,330,026.76.

In connection with the congestion of freight at the Niagara border, and the consequent dislocation of the coal service in Ontario generally, the Mayor of Toronto announced recently that to relieve the situation he would arrange immediately for the breaking up of the ice in Toronto Bay, and the opening of a channel between the coal docks and the eastern entrance to the bay, to enable coal to be brought in at once by steamship. Canada Steamship Lines, Ltd., announced that it had vessels ready for the traffic immediately the ice was cleared, and would run coal from Charlotte with two or three steamships if required. The coal situation, which had become acute in the early part of February, was relieved

to some extent by the railways by the third week in the month. About this time, it was announced that one party had instructed another party, who in turn had held a conference with a third party as to certain requirements, after which the second party was to report to a commission, when it was possible a course of action would be decided upon. In the meantime the ice remains in the bay, and the steamships remain at their docks.

British Columbia and Pacific Coast.

The Vancouver Board of Trade is urging the city to provide a fire boat for the protection of shipping, etc., along the water front, where it is calmed fire protection is inadequate.

The Victoria City Council passed resolutions recently regarding the early construction of necessary facilities at the ocean docks and for the starting of work on the proposed dry dock at Esquimalt.

The C.P.R. is operating the s.s. *Princess Beatrice* on a new route from Vancouver to Powell River, Ocean Falls, Swanson Bay and intermediate points, on a weekly service to Swanson Bay, and fortnightly to Surf Inlet.

The C.P.R. has arranged with the Dominion Government, to maintain the Gulf Islands service with the s.s. *Otter*, pending the preparation of a new mail contract. The service was to have been discontinued Feb. 1.

The name of the steamboat *Kezia*, no. 133696, owned by Mackenzie & Pipe, Victoria, has been changed to *Lornet*. She is a small vessel of 39 register tons, and was built at Ballard, Wash., in 1901, and formerly named *Challenge*.

Press reports state that a syndicate interested in the building of wooden and steel vessels for the Norwegian trade, is negotiating for the purchase of the shipyard established at Coquitlam, B.C., at the junction of the Pitt and Fraser Rivers.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. *Prince John* was driven ashore, towards the end of January, at Rocky Point, in the Wrangell Narrows, and was later beached at Finger Point. She was eventually refloated and taken to Victoria for examination.

The C.P.R. announces that its British Columbia Coast Service will give 17 round trip sailings on the Alaska route during the forthcoming season. The s.s. *Princess Charlotte* will make three round trips, the s.s. *Princess Alice* seven, and the s.s. *Princess Sophia* seven.

The breakwater at Ogden Point, Victoria, was completed at the end of January. The work was commenced in 1913, the contractors being Sir John Jackson (Canada), Ltd. Tenders are to be received for the construction of a lighthouse at the end of the breakwater.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. *Prince John*, which stranded in Wrangell Narrows towards the end of January, was overhauled and repaired at North Vancouver, during February. Some 15 plates were replaced, the crank shaft drawn, and a new propeller placed.

The Vancouver Island Towing Co.'s steam tug *Pilot* is reported to have foundered with all hands, while engaged in salvaging the s.s. *Sesostris* off the Guatemalan coast. The tug left Salina Cruz Feb. 1 and has not since been heard of. She was built at Chemainus, B.C., in 1898, and was screw driven by engine of 90 n.h.p. Her dimensions were, length

127 ft., breadth 24.8 ft., depth 12 ft.; tonnage 279 gross, 148 register.

On another page are details of the Dominion Government's estimates for the current year, which are connected with navigation. Provision is made for the construction of two vessels for the Pacific Coast service, to replace the s.s. *Quadra*. We are advised that this matter is in abeyance for the present.

The first of the new type of lumber schooners with auxiliary power, under construction for Canada West Navigation Co. by Wallace Shipyards, Ltd., North Vancouver, was launched Jan. 27, and named *Mabel Brown*. Considerable details of this, and her sister vessels, have been given in previous issues.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. *Prince George* is to be withdrawn from service Mar. 1, for a general overhaul. The s.s. *Prince Rupert*, which has been overhauled recently, replaces the *Prince George*, sailing from Prince Rupert, Mar. 2. The s.s. *Prince John* resumes the Alaska and Queen Charlotte Islands service, sailing from Prince Rupert Mar. 7, leaving Vancouver Mar. 3, to take up that route.

The Public Works Department has deepened the basin on each side of the Canadian Collieries' coaling wharf at Union Bay, Haynes Sound, on the east coast of Vancouver Island. On the west side there is an irregular basin 80 ft. wide at the outer end of the wharf tapering to a point 300 ft. inside the head, having a depth of 30 ft. or over. On the northeast side depths of 30 ft. extend 340 ft. inside the head, except for a strip 15 ft. wide immediately alongside the wharf.

Some little jealousy appears to exist on the part of Victoria, owing to the fact that the vessels being built there for the Canada West Coast Navigation Co. are being registered at Vancouver, and have the name of Vancouver placed on their sterns. It is customary to have the vessels registered at their home port, and to have the name of the home port placed on the vessel's sterns, but it sometimes happens that the vessel is registered at the port where she is built. The matter is one entirely for the owners.

With regard to the shallow draught steamboat, under construction at Yarrow's yards, Esquimalt, some details of which were given in our last issue, it was reported that early in February the construction had reached an advanced stage, all the shell plating having been completed, with the exception of the bow end and the bilge. It was expected that the assembling of the hull would be completed by the end of the month, or early in March, when it will be knocked down, packed in sections and shipped to Burma. The machinery is supplied by the parent firm in Great Britain, and shipped direct, and the whole assembled where the vessel is to be utilized.

The Prince Rupert Board of Trade communicated recently with E. J. Chamberlin, President, Grand Trunk Pacific Ry., expressing dissatisfaction that the company's steamships were being overhauled and repaired at other yards than the company's own at Prince Rupert, and also that the company's headquarters at the coast are at Vancouver instead of Prince Rupert. Mr. Chamberlin stated in reply that in the recent repair of the s.s. *Prince Rupert* it was necessary that the vessel be repaired at Victoria, as the plates required were in stock there, but arrangements are being made that the company's vessels will be repaired at

Prince Rupert in future, when such a course is practicable and the dry dock facilities are not in demand for government work. The question of moving the headquarters to Prince Rupert had been under consideration, but up to the present it had not been found practicable to make the change.

Mainly About Marine People.

H. McLaughlin has been appointed shipping master for the port of Montreal, vice R. S. White.

Mrs. C. J. Smith, wife of the master of Canada Steamship Lines' s.s. *Cayuga*, died at Toronto Feb. 19.

Jas. Carruthers, President, Canada Steamship Lines, Ltd., has subscribed £40,000 to the British War Loan in England.

H. J. Dick, accountant, has been appointed acting General Agent, Canada Steamship Lines, Ltd., Kingston, Ont., vice E. E. Horsey, resigned.

A. E. Mathews, Vice President, Mathews Steamship Co., Toronto, and Vice President, Dominion Marine Association, has gone to California for a holiday.

Lord Furness, Chairman, Furness, Withy & Co., arrived in New York at the end of January, and visited Canada. He is also associated with Canada Steamship Lines, Ltd.

Jas. Playfair, President and Managing Director, Great Lakes Transportation Co., Midland, Ont., who was operated on in Montreal some little time ago for appendicitis, has gone to California.

Capt. H. R. Mouck, who died at Port Colborne, Ont., Feb. 14, aged 89, had sailed on vessels of almost every type on the Great Lakes, during the past 70 years. He retired from active service several years ago.

Capt. David Warwick, of Froomfield, Ont., master of the s.s. *David Mills*, engaged in the lumber trade between Cleveland and Duluth, died suddenly at Marysville, Mich., after walking across the St. Clair River on the ice.

Capt. E. D. Anderson, who died at Detroit, Mich., Feb. 19, aged 79, was formerly commodore of the C.P.R. Great Lakes service. He retired from active service about nine years ago, on reaching the age limit fixed by the company's pension rules.

Peter Baldwin, who died at East Orange, N.J., Feb. 12, aged 78, was, some years ago, a well-known shipbuilder at Quebec, owning what was then known as the Baldwin shipyard. For several years subsequent to leaving Quebec, he represented the Quebec Steamship Co. in New York.

T. Ashley Sparks, whose appointment as General Agent for the U.S. Cunard Steamship Co., New York, was announced in a recent issue, has joined the board of directors of that company. He is also President, Funch Edye & Co., New York, which has recently become closely associated with the Cunard Co.

Capt. R. G. Bassett, master of the Bassett Steamship Co.'s s.s. *Mariska*, died at Toronto, at the home of his father, Capt. W. J. Bassett, Feb. 17, aged 33. He was born at Collingwood, Ont., and had been associated with navigation for some years, having formerly been in command of the Western Steamship Co.'s s.s. *J. A. McKee*.

One of our Canadian contemporaries says: "Wm. Phillips has been appointed

by the Canada Steamship Line as their representative in the office of the Robt. Reford Co., Montreal, general agents for Canada." This will be "news" to the Canada Steamship Lines management and to Mr. Phillips, who, as previously stated in Canadian Railway and Marine World, has been appointed Canadian Representative, Cunard Steamship Co.

Capt. Edward Martin, Superintendent of the Halifax Dockyards, who has been created a Companion of the Order of St. Michael and St. George, entered the Royal Navy in 1873, and has served on Admiralty stations in various parts of the world. He came to Canada in 1910, when the Dominion inaugurated a Naval Service Department, and has since been senior naval officer in charge of the dockyard and the Royal Naval College.

J. F. Condon, who has been appointed General Passenger Agent, Great Lakes Transit Corporation, Buffalo, N.Y., was City Passenger and Ticket Agent, Erie Rd., there, for the past eight years, and in addition to those duties, had charge of the Cleveland & Buffalo Transit Co.'s Buffalo office, and acted as agent for the various trans-Atlantic steamship lines. He commenced his transportation service as ticket clerk, Lehigh Valley Rd., Buffalo, N.Y., about 15 years ago.

Regulations Respecting His Majesty's Vessels.—The order in council, dated Nov. 15, 1916, amending the regulations for the government of the port of Halifax, N.S., respecting rules to be observed when His Majesty's ships leave the harbor, has been cancelled, and the regulations are amended by providing that such vessels when leaving the port shall hoist the letter O (International Code) at the foremast head, instead of the Union Jack.

Atlantic Mail Service Subsidies.—The Minister of Trade and Commerce stated in the House of Commons recently that the following subsidies were paid in 1916 for trans-Atlantic mail service: Canadian Pacific Ocean Services, Ltd., winter service at \$11,863.63 per round trip, \$159,090.82; summer service, at \$5,291 per round trip, \$100,529; a total for this company of \$259,619.82; White Star-Dominion Line, half trip, \$2,645.50. The subsidy claim for December quarter had not then been received.

Triangle Island.—The Marine Department has completed a short line of railway from Howes Harbor to the lighthouse on Triangle Island, B.C., 2.5 miles. The ties and other lumber required were secured locally, and the steel rails were part of those used during the construction on the Sooke waterworks project. A gasoline propelled car is used on the line, which was built mainly for the purpose of the transfer of stores and supplies to the lighthouse.

Proposed Dam on the St. Clair River.—The International Joint Waterways Commission has before it an application to build a submerged dam across the St. Clair River, to raise the level of Lake Huron. Opposition to the scheme is made by the Dominion Government, and all those interested in the maintenance of the levels on Lakes Erie and Ontario and the St. Lawrence River.

Toronto Water Borne Traffic.—The Minister of Customs stated in the House of Commons recently that for the year ended Mar. 31, 1916, 2,771 vessels, of a total of 1,636,620 tons register, arrived at Toronto, and 2,722 vessels departed, of a total of 1,366,723 tons register. There is no customs record of the tonnage of freight carried by these vessels.

Among the Express Companies.

W. F. Crichton has been appointed agent, Dominion Ex. Co., West Toronto, Ont., vice T. Townsend, deceased.

H. M. Watson has been appointed cashier, Dominion Ex. Co., Moose Jaw, Sask., vice G. A. Brown, promoted.

G. E. Bellrose has been appointed Traffic Supervisor, Canadian Northern Ex. Co., Winnipeg.

W. W. Williamson, General Auditor, Canadian Ex. Co., Montreal, has been elected grand master of the Grand Lodge of Quebec, A.F. & A.M.

A. E. Yuill, heretofore agent, Estevan, Sask., has been appointed agent, Dominion Ex. Co., Brandon, Man., vice D. H. Taylor, transferred.

G. A. Brown, heretofore cashier, Moose Jaw, Sask., has been appointed agent, Dominion Ex. Co., Estevan, Sask., vice A. E. Yuill, transferred.

The Dominion Ex. Co. has opened offices at York, P.E.I., and Metis Beach, Que., and has closed its offices at Aldershot and Musquodoboit, N.S., and Plourde, Que.

The Wells, Fargo Co. has concluded arrangements with the London Railway Commission to establish an office at London, Ont., and to operate an express service over the London & Port Stanley Ry.

The Board of Railway Commissioners has approved revised Supplement 10 to Express Classification for Canada, C.R.C. 3, submitted to the board by C. N. Ham, Secretary, Express Traffic Association of Canada, Jan. 16.

Canadian Northern Ex. Co. employees at Winnipeg have formed an association for instruction and entertainment. Monthly meetings will be held, when an address will be delivered by one of the officials, on a subject connected with express work, which will be followed by a social evening.

The Minister of Railways, in replying to questions in the House of Commons, Feb. 7, stated that the Canadian Ex. Co. operates its service over the National Transcontinental Ry. from Quebec to Winnipeg. On account of the war, it was thought advisable to make a temporary arrangement with the Canadian Ex. Co. for the service.

The Dominion Ex. Co. was fined \$150 and costs at Edmonton, Alta., Jan. 30, for carrying intoxicating liquor between Saskatoon, Sask., and Edmonton, Alta. In making a conviction, the magistrate stated that the accused had failed to prove that it had good reason for believing that the liquor brought from Saskatchewan into Alberta would only be dealt with in a lawful manner.

Wm. Thos. Anderson, Assistant Treasurer, Canadian Express Co., died at Montreal, Feb. 12, after 42 years service. He was born at Iroquois, Ont., in 1853, entered the C. E. Co.'s service in 1875 as junior clerk in the Money Department, later becoming the head of same. In 1891 he was appointed Auditor, Money Order Department, and in 1899, Assistant Treasurer, which position he held until his death.

Jas. H. Sonne, who has been appointed acting Assistant Treasurer, Canadian Express Co., Montreal, vice W. T. Anderson, deceased, was born in Dunedin, New Zealand, in 1869. He entered the C. E. Co.'s service in 1887 as junior clerk. In 1890 he was transferred to the Money Department, later having charge of same; was appointed Cashier at Montreal office in 1912, and acting Assistant Treasurer on Feb. 1, 1917.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Preston Car & Coach Co.—Preston, Ont., ratepayers are being asked to vote on a bylaw to lend this company \$75,000 to rebuild the car plant destroyed by fire recently.

The Independent Pneumatic Tool Co., Thor Building, Chicago, Ill., has ready for distribution a 4 pg. folder illustrating and describing in detail the Thor line of portable electric drills and grinders, which consists of eight different sizes of electric drills, with capacities ranging from ¼ to 2 in., and a portable electric grinder with wheel ¾ x 4 in.

Locomotive Superheater Co., 30 Church St., New York, N.Y., has issued bulletin 2 on fire tube marine superheaters, giving a list of 69 vessels fitted with its fire tube superheaters and entering United States ports, the object being to give ship owners and engineers an opportunity to inspect the vessels and to obtain at first hand reliable information as to the results which are being obtained.

The Electric Railways Improvement Co., Cleveland, Ohio, has developed a light portable outfit for electric welding rail bonds, which consists of an electric furnace, weighing 65 lbs., and a rheostat, weighing 200 lbs. By means of these two pieces of apparatus, current may be taken from the trolley and utilized in welding the copper rail bond to the rail. It is claimed that when the weld is completed, the copper of the bond and the steel of the rail are so intimately and

firmly united that there is no chance for a depreciation of the electrical contact thus made. The electric furnace measures about 6 x 8 x 8 in. and when in operation is supported by a yoke resting on the top of the rail. The final adjustment for position is accomplished by means of 2 hand wheels, which give the operator complete control of the position of the furnace. The heat is transmitted to the bond by an incandescent piece of graphite pressing against it. No flame or arc strikes either the bond or the rail. Likewise there is no arc exposed to the eye, thereby doing away with the blinding effect of intense light. The rheostat measures about 15 x 20 x 24 in. and is equipped with switches and circuit breaker. By means of it, the electric furnace can be used with a line voltage of anywhere from 150 to 600 volts. It is equipped with handles, making it handy for two men to carry. The furnace may be placed on the top of the rheostat while moving from one rail joint to the next, thus making an easily portable outfit. The whole outfit may, if desired, be mounted on a 4-wheeled lorry for pushing along the track. The power consumption of the welder is claimed to be from 1 to 1½ k.w. hours per 4/0 bond. It is claimed by the manufacturers that it will put electric welded bonds within the reach of the smaller electric railways, will also be in certain demand by the larger roads, for use where traffic or other conditions forbid the use of a larger and more complicated apparatus.

Reynolds Timber Shipping and Insurance Agency, Ltd., has been incorporated under the Dominion Companies Act, with \$40,000 capital, and office at Vancouver, B.C., to carry on a general produce, manufacturing, shipping and warehouse business, and in connection therewith to own and operate steam and other vessels, wharves, docks, etc., and to act as financial, insurance, commercial and vessel agents.

April, 1917.

The Engineers' Work at the Front in the War.

[The following article, compiled from information obtained from Canadian Engineers' officers, who have been at the front in Belgium and France, some of them having gone over with the Canadian Expeditionary Force's first contingent, will undoubtedly prove of considerable interest to a large number of Canadian Railway and Marine World readers, as many of the Canadian Engineers—officers, non-commissioned officers and sappers—were engaged previously in railway construction, maintenance, and mechanical and electrical work.—Editor.]

One of the trench descriptions of an engineer is: "One who always does his best; always finds still more work for the infantry to do; and often thinks he can make water run up hill." This no doubt originated from the perspective the infantry and other combatant units get of the engineers' work. They realize that most of the engineers' work is for their protection and their comfort, and they therefore have a kindly feeling towards him, and concede that he is one who always does his best. This kindly feeling is tempered somewhat, however, by a feeling of exasperation, because the infantry are so often called upon to supply working parties to carry on various forms of engineering work. As is well known, engineering work in France is carried on by working parties drawn from the infantry, the pioneers and other units, each sapper (a private in the engineers) laying out, supervising, and helping the work of a working party of from 50 to 150 men. It therefore appears to the infantry as if the engineers were always finding still more work for them to do.

Men in the trenches are always conscious of water, mud or slush, depending upon the season of the year. The engineers always try to sight the trenches so as to get natural drainage to the front or rear, that is through the parapet, or through the paradoss, but this is not always possible. Sometimes the enemy objects, and makes certain positions so unhealthy that the engineers are forced to compromise in the position for the trench. At other times the nature of the ground along the ideal sighting for the trench is such that it is impossible to dig. For instance, the Somme battle fields have been ploughed up repeatedly by shell fire, and the ground is a mixture of mud, remains of wire entanglements, corrugated iron, steel beams, shells and other materials destroyed by our own or the enemy shell fire. Therefore a trench is often sighted, by necessity, where drainage is very difficult, and no wonder the infantry sometimes think the engineer counts on the water running up hill.

As in other branches of the service, the methods of carrying on engineers' work in France have been materially altered since the opening months of the war, first by the settling down to trench warfare, and second by the immense amount of engineer work necessitated by the style of warfare. In the original British Expeditionary Force the Royal Engineers were divided into two classes: 1st, Divi-

sional engineers, under which was allotted for each division 2 field companies, and 1 signal company. 2nd, Engineer units on lines of communication, comprising fortress companies, works company, railway company, signal companies, and printing company.

The works company was split up into sections, one being at each base. Assisted by French civilian labor contractors and by working parties from any infantry available, they erected base camps and looked after all work in connection with them, such as water supply, drainage, lighting, sanitary arrangements, road making, etc. They had to provide store accommodation for the large quantity of supplies and ordnance stores as they arrived. At present the function of these works companies is the maintenance and upkeep of all the base camps, and the work is very similar to the works department of any large city, with all luxuries eliminated. The fortress companies did not come into active use until the operations on the Aisne, and from that time their work was essentially connected with that of the field companies. In the Royal Engineers, army troop companies have taken the place of these fortress companies and are at the disposal of the chief engineers of the different corps, and their work is to assist the field companies in the construction of defensive lines.

Late in Aug. 1914, in the retreat from Mons, the field companies of Royal Engineers played the prescribed role of engineers in battle. They assisted the infantry in the preparation of defensive positions, and put special positions into a state of defence. They were kept very busy, collecting tools, such as spades, shovels, etc., from the neighboring districts. One test of a good engineer is his ability to "rustle" engineer materials and tools. Eight sections of field companies, each consisting of one subaltern, 20 sappers and a tool cart, were ordered to demolish the bridges over the Mons canal. Some of these were successfully demolished, while the Germans had possession of the others before the engineer section arrived.

Later on in the British advance, after the German defeat almost at the gates of Paris, the Royal Engineer field companies work changed, and they were engaged on engineer reconnaissance of roads, river crossings, demolished bridges, etc.; and at the River Aisne, five permanent bridges which had been demolished were at once made passable for infantry in single file and later repaired to take mechanical transport. Some idea of the work and material involved can be gathered from the fact that to make a satisfactory approach to one of the bridges over the Aisne, a road, about 200 yards long, had to be made. This necessitated collecting brushwood for the construction of over 2,000 fascines, their transport to the site of the bridge, and the collection of all available road metal in the neighborhood.

In his book, *The British Campaign in France and Flanders*, Sir Arthur Conan

Doyle pays a marked tribute to the Royal Engineers as follows:—"The more one considers the operations of the line of the Aisne, with the battle which followed it, the more one is impressed by the extraordinary difficulty of the task, the swift debonair way in which it was tackled, and the pushful audacity of the various commanders in gaining a foothold upon the farther side. Consider that upon Sept. 12, 1914, the army was faced by a deep, broad, unfordable river, with only one practicable bridge in 15 miles opposite them. They had a formidable enemy, armed with powerful artillery, standing on the defensive upon a line of uplands commanding every crossing and approach, while the valley was so broad that ordinary guns upon the corresponding uplands could have no effect, and good positions lower down were hard to find. There was the problem. And yet upon Sept. 14 the bulk of the army was across and had established itself in positions from which it could never afterwards be driven. All arms must have worked well to bring about such a result, but what can be said of the Royal Engineers, who built under heavy fire, in that brief space, nine bridges, some of them capable of taking heavy traffic, while they restored five of the bridges which the enemy had destroyed! Sept. 13 should be recorded in their annals as a marvelous example of personal self sacrifice and technical efficiency."

After this the campaign settled down to trench warfare, which the Canadian army had to handle when it arrived on the scene, and the Canadian Engineers have had experience only with trench warfare. There are now four Canadian divisions in France. The Canadian Engineer organization for this army is made up as follows: The Chief Engineer, Canadian corps, is a Brigadier-General. He has under him the four colonels in command of the four units of divisional engineers, each consisting of one divisional engineer headquarters, and three field companies. He also has directly under him all corps troop companies, and independent engineer officers attached to his staff, who do the miscellaneous engineer work required behind the general headquarters lines. Corps troop companies and the engineer officers attached to the Chief Engineer's staff, look after the installation of water supplies for all units billeted behind general headquarters lines; look after the construction of g. h. q. lines, construction of strong points between g.h.q. lines and subsidiary lines; special railway construction immediately behind g.h.q. lines for the use of the artillery; construction of all roads in the corps area up to the g.h.q. lines, and all main roads from there forward to the most advanced point of motor transport; also construction of artillery route roads, both highway and railway, for supplying the heavy artillery with ammunition.

The C. R. E., or colonel of divisional engineers, has at his command divisional engineer headquarters, three field companies, the ordering of the work of one pioneer battalion and one tunnel com-

pany. He usually attaches one field company to each infantry brigade to aid them in carrying out the work in their area. The work in their area consists of the maintenance of the front line; communications to the support line; the support line; communications to the subsidiary line; and all strong points between the subsidiary line and the support line. In some instances they are given the maintenance of the subsidiary line to look after. The working parties for this work are supplied by the brigade in the line and are directed by the field company attached to the brigade, and in addition, this field company looks after the construction of all new lines in front of the subsidiary line, which may or may not be built by working parties supplied by the brigade; the construction of the subsidiary line, which is usually constructed by the troops supplied by the division; the construction of strong points immediately behind the subsidiary line by working parties supplied by the division; the digging of wells in the brigade's billeting area; the construction of roads in the brigade area which are not main roads looked after by corps, and the construction of huts for billeting reserve battalions of brigade; construction of routes for the use of working parties in dry weather; and all the innumerable drainage schemes required in the rear brigade area, also the construction of light railways in the brigade area. At the same time, a considerable portion of the personnel of this company may be working under the C. R. E. for construction of such things as divisional bath houses, Y. M. C. A. recreation huts, etc.

The C. R. E. usually splits up his pioneer battalion by keeping one company to work directly under his own orders, and attaching each of the other three companies to a brigade, to work under the orders of the respective field companies. The tunnelling company works directly under the C. R. E.'s orders, and is supplied with material and working parties by the field company in whose brigade area the tunnelling company may be operating. The C. R. E., for the construction and maintenance of the works looked after by him, also gets working parties from corps troops, such as battalions in corps reserve, dismounted cavalry, and any other units that may be at the disposal of corps and lent to division.

Some of the best engineers in Canada prior to the war are now in France with the Canadian Engineers. It is claimed that at least 40% of the men in the ranks of the Canadian Engineer companies attached to the first Canadian contingent were graduates of engineering colleges; and practically all were high class men. The result was that the Canadian Engineers made a name for themselves in France; and they obtained a status in the army worthy of the corps.

As was the Royal Engineers, the working party idea was developed in the Canadian army, because of the immense amount of engineering work necessary; and the sapper in the Canadian Engineer field companies became in reality a foreman of working parties, carrying on the various forms of engineering work at the front, of which trench construction and trench consolidation constituted a very important part. Some of the Canadian Engineer officers have developed the "task" idea, in connection with working parties, to the decided advantage of the work to be done, and the men in the working party. Returned sappers have told of the effectiveness of having a specified amount of work to be done by each member of a working party, with instruc-

tions that the working party goes "home" when work is completed. Usually a working party with a "task," will finish an equal or greater amount of work, and be in billets and asleep, while a working party without set tasks for each would still be on the job.

As has been before stated, the obtaining of engineering equipment and materials has always been one of the big problems of the engineers. When an army is on the march, the engineer field companies are dependent upon the districts through which they pass for materials, with the exception of course of certain materials, equipment and tools carried by each field company. In trench warfare there is nothing left but mud, and all materials for trench construction, splinter proof construction, bomb proofs, etc., is brought up from the rear, first by motor or horse transport, and then by carrying parties to the point where the work is being done. This has led to the establishment of engineer parks in the rear, where all forms of standard engineering material are made up, including frames for splinter proofs, bomb proofs, trench revetting, etc., and forms of wire entanglement, etc. All kinds of tradesmen and mechanics are needed in these parks for the manufacture of these standard forms and materials, and the work is carried on by working parties of sappers' mates, the work being supervised by sappers from engineer companies. There are also hutting parties, consisting of carpenters, drawn from other units, attached to engineer companies, who construct, under sappers' direction, the huts which form the infantry's reserve billets. Brigade wiring parties, consisting of volunteers from the infantry, attached to engineer companies, are taken back and live at the engineer billets, and are trained to do wire entanglement work; and when proficient put out the wire under their own officers, but directed by the engineers.

An idea of the status of the Canadian Engineers in France can be had from the fact that no one in the Canadian army can get one stick of material unless it is sanctioned by the engineers, that is the Canadian Engineers are called upon to pass judgment upon any and all construction work, and this absolute control of material by the engineers gives them a status with all troops in France. The general staff does not make a move without efficient engineer advice. This is true all the way down. The captain of an engineer company is continually consulting with the brigadier-general of the brigade as to the work that it is possible to carry out with the men and material available. The engineer subaltern is present at the conferences, composed of the brigadier-general, the engineer major or captain, and the four colonels of the brigade, at which decisions are made as to the programme of work for the next relief. The engineer subaltern, with his section of sappers, usually looks after all construction work in one battalion front; so that he, after having been present at the brigade conference, settles all minor details about the work in that sector, with the colonel of the battalion in charge of the sector. He then has the working parties turned over to his sappers. An engineer n.c.o. will have charge of four or five working parties, and each party will be in charge of a sapper.

When the Canadians moved into the Ypres salient in April, 1915, they took over trenches from the French Iron Division, which were anything but what they had been taught to expect trenches would be. There were little sections of disconnected trench forming this front,

which were made by throwing up a little dirt against the backs of hedges and were not even bullet proof. There was no daylight communication between these sections and no daylight communication to the rear. The problem that confronted the Canadians was whether it would be better to make a proper front line first, or to develop communications to the rear, and strong subsidiary line defences. They decided, on the advice of the engineers, that the first thing required was to make the front line fightable. To do this the engineers jumped in and kept large working parties working night and day on the construction of a properly traversed front line.

In one section of this front, held alternately by the 7th and 8th battalions, there was a particularly bad piece of trench, enfiladed by German artillery fire, which connected the line to a very important little knoll. One engineer subaltern impressed on the colonels of these relieving battalions that that piece of line should be immediately put in good shape. He urged on them almost day and night to get the maximum number of men available working on this piece of line. It was a disagreeable piece to work in, because the French had believed in the theory of making no move during the daylight hours, and they had buried their dead side by side in the bottom of this trench, and covered them about a foot deep with earth. To improve the trench it was necessary to dig through these bodies and construct a heavy parapet and put in large traverses. The work was extremely disagreeable for the infantry working parties, who would only be there for a six hour stretch, but it was still more disagreeable for the engineers, who were there all the time. In a few nights this section of trench was completed, and none too soon, as the big German gas attack was then launched. This piece of trench held, and one of the colonels, now a major-general, after the second battle of Ypres, told this engineer officer that his obstinacy in insisting on getting the large working parties, and keeping the infantry at it day and night, in getting that section of trench completed, had saved practically a company of the battalion from annihilation. That engineer officer, in dealing with these large working parties, could not have been successful in the accomplishment of this work, if he had not been backed up by a very high class of sappers on whom he could depend individually to handle from 50 to 100 men efficiently and well, under most trying conditions. This is an example of where the high class of personnel among sappers may mean the difference between holding a line and failing to hold it.

Electrification of the Lehigh Valley Rd. is said to be under consideration, and engineers are reported to be making surveys and investigations preparatory to rendering a report upon the project. The L.V.R. carries a very heavy coal traffic from the anthracite region to tidewater, and all trains have to climb over a high summit in passing west from Wilkes-Barre. It is stated that the plans for electrification comprehend the entire main line from Jersey City to Wilkes-Barre.

American Association of Dining Car Superintendents.—E. W. Smith, Superintendent, Dining and Parlor Car Service, G.T.R., Toronto, and S. Wertheim, Superintendent, Sleeping, Dining and Parlor Cars, District 2, C.P.R., Toronto, have been elected chairman and secretary, respectively, of the association's Canadian territorial committee.

Standard Steel Pilot for Canadian Pacific Locomotives.

The accompanying illustrations show a standard steel pilot applied to a C.P.R. Pacific type passenger locomotive, which

missioners, also copy of order in council Oct. 21, 1916, appointing W. M. Acworth, in place of Sir George Paish resigned. The return also contained a copy of a memorandum issued by the Prime Minister in Sept., 1916, making public a letter written him by Sir Henry Drayton on

commission. All of the documents mentioned were published in Canadian Railway and Marine World from time to time. The return did not contain any information as to the commissioners' remuneration or the names of the persons employed by them and the remuneration paid such persons.

Pilot on Pacific Type Passenger Locomotive, C.P.R.

is simple, but strong and inexpensive to manufacture and apply, giving a very neat, substantial appearance. The bars are made of old boiler tubes, which are put through a set of rollers and rolled into triangular shape, so that they resemble the ordinary slat used with a wooden pilot. The rolling is done cold. The bars are flattened and bent at each end to the proper angle to suit their location in the pilot. They are fastened to the pilot frame and nosing by 1/2 in. rivets. The nosing is made of 3 in. x 3 in. x 5/16 in. angle, and the frame of flat steel bars.

Commission of Enquiry Into Railway Situation.

On motion of Sir Wilfred Laurier, the House of Commons, on Jan. 31, ordered a return of copies of all correspondence respecting the appointment of a commission to investigate the financial and economic condition of Canadian railways, showing the names of the commissioners and the rate of their remuneration, along with the names of the secretaries and engineers appointed by them or by the commission, and the rate of their remuneration.

On Feb. 6 the Minister of Railways presented to the House, a return containing a copy of order in council of July 13, 1916, appointing A. H. Smith, Sir Henry Drayton and Sir George Paish, as com-

Details of Pilot on Pacific Type Passenger Locomotive, C.P.R.

Sept. 19, 1916, and also a letter from the Canadian Society of Civil Engineers council, written on Sept. 7, protesting against the employment of aliens by the

available. Applications for certificates entitling eligible persons to enter the competition should be addressed to C. H. Buell, Staff Registrar and Secretary,

Pension Department, Montreal. Copies of the annual calendar containing the conditions of admission and announcement of courses may be obtained upon application to the Registrar, McGill University, Montreal.

Electrically Heated Solder Pan in C.P.R. Shops.

The pan shown in the accompanying illustration is used at the C.P.R. shops at Fort William, Ont., and Vancouver, B.C., for soldering end rings and bars on rotors for induction motors when they are being rewound. The heating plate is made of 1/8 in. iron, 27 in. in diameter, covered with a sheet of 1/4 in. asbestos of the same diameter. The asbestos is fastened to the iron plate by porcelain cleats, which are bolted to the plate with flat head stove bolts. The heating element is a coil containing 110 ft. of no. 18 nichrome wire, connected on a 250 volt circuit using 12 amperes. The coil is formed on 1/4 in. pipe.

Fig. 1 shows the method of placing the

FIGURE 1.

The Proposed Toronto Water Front Viaduct.

W. H. Breithaupt, M.Inst.C.E., M.Can. Soc.C.E., wrote the Toronto Globe recently, as follows: You revert to the main harbor front railway and street grades separation question, now a question of venerable age. Incidentally you again, indirectly, imply doubt of the honesty of motive of the railways, a distrust if one may suggest, that has all along been a deterrent to arriving at a mutually advantageous solution.

Many reasons can be advanced why the adopted solution of this question of foremost importance may not be the best one. The railways occupy a comparatively narrow strip of ground along or near the water front. Directly back of it is the higher ground of the city, with Front St. the paralleling street, all along higher than the railways, and from Yonge St. westward very materially higher. This natural advantage in difference of elevation, which could be enhanced by sinking railway tracks somewhat, is such that

FIGURE 2.

enormous cost of railway properties in Canada, a cost very much greater than necessary, even for the existing mileage, is becoming more and more evident. For this cost the people must pay, whether indirectly in taxes or directly in charges for use. Why should useless cost be forced in any detail? Is not a submission of this vital grade separation problem to absolute engineering solution, on the best authority available, without hamper of possible preconceived notion of Board of Trade, Harbor Board, city, railways or any other body, of what the solution should be, still in order?

New Zealand Government Railways Unsatisfactory.

Sydney Smith has written from Rotoro, N.Z., to the Financial Post, as follows: "If you want a convincing argument against state ownership of railways investigate the Australian and New Zealand railways. I have travelled in the five continents and have never experienced a

FIGURE 3.

Electrically Heated Solder Pan in Canadian Pacific Railway Shops.

cleats and laying the coil to make the heating element. Fig. 2 shows an iron pipe stand, on which the heater and pan rest. It is made of 3/4 in. iron pipe and measurements are arranged so that the centre cross is placed about 4 in. off the centre, allowing plenty of room for movement of the rotor shaft while being soldered.

The solder pan, fig. 3, is 28 in. in diameter, made of 1/8 in. iron plate, flanged at the outside to a height of 1 1/2 in. The centre is cut out, flanged up to a suitable height, and threaded for a piece of 8 in. iron pipe, which forms an inside flange 1 1/2 in. high. The pan is nearly filled with solder, and can be heated to the required temperature in about 15 or 20 minutes. The rotor to be soldered is suspended with a chain block, and lowered end down into the molten metal. When well heated, and the loose solder brushed off, it is reversed, and the opposite end treated in the same manner. By this method rotors can be soldered in 30 minutes, including the heating of metal, whereas from 18 to 24 hours were required to accomplish the same purpose with gasoline torch and soldering iron. We are indebted for this information to J. McLaughlin, formerly Resident Electrician, C.P.R., Fort William, now Electrician, C.P.R., Vancouver.

with rational clearance, bridges could cross the railways to the water front at all important, if not at practically all, streets. The adopted plan ignores this advantage. Relief, together with immediate use of the new station, which by the track elevation plan is not in sight for the next four years at least, could be had at once.

I hesitate to criticize the adopted plan, but it is gravely to be doubted whether the proposed new 230 ft. right of way for railway embankment, across the present harbor front from Yonge St. east, will be required, what with development of railway facilities, Yonge St. passenger station, etc., north, and with certain future use, though barred for the present by construction cost, of electric traction with its enlarged facility of work on given trackage. Other lake cities, such as Cleveland and Chicago, sink their lake front tracks as much as practicable; here we propose to make them unduly conspicuous, on earth embankments. It may be argued that the cases of these cities are different. They are, somewhat. No two cases are wholly alike.

The right solution of any problem, engineering or other, is arrived at only by giving due weight to all conditions that have bearing on it. For one thing, the

worse rail service than in New Zealand or a more costly service to travel or freight on; freights and passages are of the highest, the service is of the worst, and the employes the most casual. The express between the capital city, Wellington, and the largest city, Auckland, averages just over 20 miles an hour, the trains are filthy, and porters are practically unobtainable. When one thinks of your magnificent C.P.R. and all that it has done for Canada's service, one is impelled to write and call "cave" before you change. You will never improve it under state ownership and are fairly certain to destroy its efficiency.

The Institution of Civil Engineers' Council has invited any of the Canadian Society of Civil Engineers' members, who may be visiting England, to use the Institution's library and reading rooms in London, as well as attend its meetings. A letter of introduction from the Canadian Society of Civil Engineers will be necessary.

In France all express trains, with the exception of postal and long-distance trains, are ordered discontinued, as one of the steps taken to facilitate transport connected with national defence and commercial traffic.

C.P.R. Snow Fighting Equipment at Fort William.

The accompanying illustrations show how snow was handled in Fort William terminals during the past winter.

Fig. 1 shows snow plough and spreader, which means a plough on both ends, and no time is lost in ploughing in either direction, or winging.

Fig. 2 shows a champion ice cutter, which clears out all the ice from between the rails, no matter how hard it may be. It is operated by air.

Fig. 3 shows a train removing the snow from between the tracks in the terminals.

Fig. 4 shows the big lift bridge over

customs at the frontier, to its destination in Canada, if the destination be a customs port or outport, and if not, then to the customs port or outport nearest to but short of its destination, for customs clearance thereat, instead of at the frontier; the carriage from the frontier to the interior point of clearance to be in bond under customs manifest prepared by the railway company and signed by a customs officer.

Women Workers at Angus Shops, Canadian Pacific Railway.

In 1915 women workers were introduced into the C.P.R. Angus shops, Montreal,

their lunch can with them, and these they may prepare in the lunch can room which accommodates 200. Soup and bread are provided by the company at cost. Attached to the lunch can room is a rest room, and near the rest room is a first aid room where accidents are treated. Seventeen of the women workers hold certificates of proficiency in first aid work and their services are very valuable when accidents occur.

Men for Railway Work.—As one of the practical results of the National Service Commission's action in having cards filled up and signed throughout Canada, it may be mentioned that the Chief Railway

Fig. 2. Air Operated Ice Cutter.

the Kaministikwia River, where over 1500 cars of snow were dumped during the winter.

Fig. 5 shows cyclone snow blower for cleaning out loose or soft snow from the switches and leads. This is an invention of D. McIntyre, the Roadmaster of the Terminals. It is an ordinary fan attached to motor car, and having swinging spout so that it can be swung to either side of the track. Mr. McIntyre hopes to improve on this, so as to affect a big saving next winter.

and 200 are now engaged. They have been organized and work under the supervision of Mrs. J. W. Bell, wife of the superintendent of the Windsor St. Station. Each woman has a locker in which she places her overalls and cap. At the outset it was difficult to induce some of the women to take kindly to the garments which tradition had marked out as male preserves, but after a little while every woman found these working dresses were more convenient than skirts. The overalls have three distinct recom-

Commissioner, in view of the fact that the transportation situation is somewhat unsatisfactory owing to a shortage of men, applied recently to the National Service Board, for a list of experienced men not working at their trades. As a result the names of from 500 to 600 such men were supplied him, and he transmitted them to railway companies requiring such assistance. The men had all expressed their willingness, in the interest of national service, to undertake any duty in Canada which might be neces-

Customs Arrangements to Facilitate Coal Movements.

The Board of Railway Commissioners passed general order 182, Feb. 16, as follows:—Upon its being represented to the board that the movement of bituminous coal from the United States to Canada is delayed at the frontier for custom clearance, and that such delay can be obviated by the coal being entered for duty at interior ports of entry or outports; and upon reading what has been filed by the Commissioner of Customs stating that no objection exists to such obviation, although the coal may be billed for customs clearing at the frontier, it is ordered that railway companies be permitted to forward bituminous coal from the United States, billed for clearance of

mendations: they are tidy, sanitary, and safe, allowing their wearers to move amongst the machines without danger of being drawn into machinery clutches.

The women work on the piece system, and they are paid at the same rate as the men. They work among the men with the harmony that prevails in offices where there are male and female clerks. In the Angus shops the woman are to be found sweeping, coach washing, coach painting, working on drills, at lathes, at various kinds of machinery, filing and drilling in the brass shops, brass polishing, operating nut-tapping machines, cleaning dynamos in the electrical department, assisting in the steamfitting centre, and making mattresses and pillows. No woman is asked to do heavy work.

The women take the provisions for

sary, having regard to conditions created by the war.

The Engineers in the War.—Capt. D. M. Mathieson, of the Canadian Engineers, who went overseas with the first contingent mobilized at Valcartier, Que., in 1914, and who spent 17 months in Belgium and France, principally in the Ypres region, addressed the Canadian Society of Civil Engineers, Toronto Branch, on Mar. 9, giving a most interesting description of the Canadian Engineers' organization and of their work at the front, dealing particularly with trench construction as well as with the other multitudinous duties.

Alleged Embezzlement.—A. E. D. Stewart, ticket agent, Chicago, Milwaukee & St. Paul Ry., Vancouver, B.C., was committed for trial recently on charges of theft of \$2,698.96.

New Rail Joint of Grip Type.

A rail joint now in experimental use is so designed that the splice bars transmit the pressure or load upon the rail head directly to the junction of the web and base of the rail. The bars have a vise-like grip on the rails at this point, instead of a wedging fit between the head and base of the rails. In this way they prevent relative movement of the two rail ends, both laterally and vertically. The object is to hold the rail ends in exact line and level, and thus to prevent battering and wear of the top and side of the rail heads, as well as to prevent wear of the contact surfaces of the splice bars and rail heads. At the same time the joint is flexible enough to conform to the wave motion of the track.

The splice bars are 24 in. long, with 4 bolts, the alternate bolts having their heads on opposite sides of the rail. The end portions are of fishplate sections, with the lower edge fitted to the fillet of the rail. The middle portion of the bar has a wide flange that fits closely upon the rail base, and a special feature of the design is that this flange has a rib that hooks under the edge of the rail base. Thus the bars cannot oscillate or rock upon their bearings at the rail fillet. Wear upon the top surface of the bar and the bottom of its flange can be taken up by tightening the bolts. This rotates the bars on their bearings, drawing the upper

New Grip Rail Joint.

end inward and the flange upward, so as to maintain the two rails in proper level and line.

One of these joints is in use on 100 lb. rails near the end of a subway, where there is considerable wave motion in the track and where the traffic amounts to about 100 trains daily, with heavy equipment. During six months service the bolts have not required tightening and the joint did not become low, so that no tamping or raising was necessary. The joint is the invention of A. L. Clapp, Roadmaster of the Chicago & Northwestern Ry., Chicago.

A third new railway station at Buffalo, N.Y., is presaged in the approval by the Terminal Commission of plans for a new passenger and freight terminal for the New York Central Lines. The Lehigh Valley is already in its new station and the Lackawanna's new station is fast approaching completion. All three of these stations are within an area of four blocks, the New York Central being immediately alongside the Lehigh Valley. This new station will be on the site of the old, that is, extending along Exchange St. from Washington to Michigan St., and will have full passenger and freight accommodations.

Mount Chamberlin.—The Geographic Board of Canada has named a splendid peak in the Rocky Mountains "Mount Chamberlin," in honor of E. J. Chamberlin, President of the Grand Trunk and Grand Trunk Pacific Railways. The peak is at the southerly end of a massive mountain range in the Grand Fork amphitheatre, and is surpassed only by its near neighbor, Mount Robson.

Birthdays of Transportation Men in April.

Many happy returns of the day to:—
 F. G. Adams, Commercial Agent, G. T. R., and Division Freight Agent, Grand Trunk Pacific Ry., Winnipeg, born at St. John's, Nfld., Apr. 6, 1878.
 W. H. Ardley, Comptroller, G.T.R., Grand Trunk Pacific Ry., Montreal, born at London, Eng., Apr. 24, 1858.
 Jas. Black, Freight Claim Agent, C.P.R., Vancouver, B.C., born near Seaforth, Ont., Apr. 19, 1858.
 C. G. Bowker, General Superintendent Eastern Lines, G.T.R., Montreal, born at Medford, N.J., Apr. 21, 1871.
 G. C. Briggs, Supervisor of Buildings, Eastern Lines, Canadian Northern Ry., Toronto, born at Cockermouth, Eng., Apr. 23, 1886.
 A. V. Collins, Canada Steamship Lines, Ltd., Toronto, born at Island Pond, Vt., Apr. 21, 1868.
 R. J. Collins, Chief Dispatcher, Edmonton Division, Alberta District, C.P.R., Edmonton, born at Winnipeg, Apr. 30, 1883.
 Sir Henry L. Drayton, K.C., Chief Railway Commissioner for Canada, Ottawa, Ont., born at Kingston, Ont., Apr. 27, 1869.
 W. A. Duff, M.Can.Soc.C.E., Assistant Chief Engineer, Canadian Government Railways, Moncton, N.B., born at Hamilton, Ont., Apr. 20, 1877.
 A. E. Edmonds, General Agent, C.P.R., Detroit, Mich., born at Woodstock, Ont., Apr. 8, 1866.
 A. Gaboury, Superintendent, Montreal Tramways Co., Montreal, born there, Apr. 6, 1875.
 B. C. Gesner, Moncton, N.B., formerly Air Brake Inspector, I.R.C., now Eastern Sales Agent, Galena Signal Oil Co., born at Cornwallis, N.S., April 23, 1859.
 J. Murray Gibbon, General Publicity Agent, C.P.R., Montreal, born at Udevelva, Ceylon, Apr. 12, 1875.
 V. A. Harshaw, Assistant Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal, born at Mono, Ont., Apr. 26, 1865.
 J. M. Horn, Assistant General Freight Agent, Canadian Northern Ry., Winnipeg, born at Allanton Mills, Lanarkshire, Scotland, Apr. 12, 1880.
 J. H. Johnston, Superintendent of Bridges and Buildings, Eastern Lines, G.T.R., Montreal, born at Uxbridge, Ont., Apr. 22, 1866.
 G. W. Lee, Commissioner, Timiskaming & Northern Ontario Ry., North Bay, Ont., born at Renfrew, Ont., Apr. 15, 1871.
 J. D. McMillan, acting Superintendent, Belleville Division, Ontario Lines, G.T.R., Belleville, born in Eldon Tp., Ont., Apr. 5, 1858.
 J. A. Macgregor, Superintendent, Edmonton Division, Alberta District, C.P.R., Edmonton, born at Dufftown, Scotland, Apr. 5, 1873.
 B. R. Marsales, District Freight Agent, Canadian Northern Ry., Calgary, Alta., born at Guelph, Ont., Apr. 13, 1887.
 J. H. Mills, Master Mechanic, Algoma District, C.P.R., North Bay, Ont., born at Sherbrooke, Que., Apr. 23, 1865.
 P. Mooney, General Freight and Passenger Agent, Halifax & South Western Ry., Halifax, N.S., born at St. Catharines, Que., Apr. 19, 1871.
 Paul J. Myler, President, Canadian Westinghouse Co., Ltd., Hamilton, Ont., born at Pittsburg, Pa., Apr. 24, 1869.
 F. L. Nason, General Agent, Passenger Department, C.P.R., San Francisco, Cal., born at Newton, N.H., Apr. 16, 1880.

G. D. Perry, General Manager, Great North Western Telegraph Co., Toronto, born at Whitby, Ont., Apr. 19, 1858.

R. A. Pyne, Superintendent of Motive Power and Car Department, Eastern Lines, C.P.R., Montreal, born at Toronto, Apr. 10, 1874.

R. S. Richardson, Superintendent, District 3, Transcontinental Division, Canadian Government Railways, Fort William, Ont., born at Napanee, Ont., April 9, 1865.

F. Rioux, Assistant to President, Reid Newfoundland Co., St. John's, Nfld., born at Trois Pistoles, Que., April 18, 1867, now on active service.

W. A. Ritchie, District Superintendent, Pullman Co., Montreal, born at Edinburgh, Scotland, Apr. 13, 1854.

E. W. Smith, Superintendent, Dining and Parlor Car Service, G.T.R., Toronto, born at North Bridge, Mass., Apr. 21, 1869.

D. F. Thomas, General Manager, Algoma Eastern Ry., Sudbury, Ont., born in Halton County, Ont., Apr. 20, 1867.

W. S. Tilston, Chief of Montreal Board of Trade Transportation Bureau, born at Manchester, Eng., Apr. 14, 1877.

C. H. Towle, Assistant Superintendent, Brownville Division, New Brunswick District, C.P.R., Brownville, Jct., Me., born at Enfield, Me., Apr. 13, 1878.

E. D. Toye, ex-Storekeeper, Ontario Division, Canadian Northern Ry., Trenton, born at Dalston, Ont., Apr. 27, 1891, now on active service.

E. M. Wood, Deputy Municipal and Railway Commissioner for Manitoba, born at Brantford, Ont., Apr. 20, 1853.

W. Woollatt, Vice President and General Manager, Essex Terminal Ry., Walkerville, Ont., born at Weedon, Hertfordshire, Eng., Apr. 2, 1855.

Repairs Etc. Ordered on St. Martins Railway.

The Board of Railway Commissioners passed Order 25865, Feb. 14, as follows: Upon the report and recommendation of the Board's Assistant Chief Engineer, concurred in by its Chief Engineer, it is ordered that the St. Martins Ry. repair the bridges on its line as follows: McCracken Brook—Decayed stringers to be replaced. Robinson Road—Requires new caps and some new stringers. One bent is not perpendicular and should be braced, and one mud sill should be straightened up. Nodwell bridge—Requires new guard rail. Moonlight trestle—Decayed stringers, posts and mud sills to be replaced. Titus Mill bridge—Some new caps and mud sills required. Titus Mill bridge no. 2—Decayed stringers to be replaced. German Brook—New steel span to be constructed, or present wooden truss to be repaired. Hanford Brook—New steel span to be constructed, or present wooden truss to be repaired. Porter Brook—New steel span to be constructed, or present wooden truss to be repaired. High Bridge—Floor beams to be replaced and bent in north approach to be repaired.

And it is further ordered that the company reconstruct its roadbed where it runs along the hillside just north of Upham station, where the embankment has been washed away; and erect road crossing signs at highway crossings. The work herein required to be done is to be commenced by April 1, 1917, and completed within 60 days thereafter.

Ladder Dredge for Clearing Snow.

A ladder dredge for excavating snow on the Chilean Trans-Andean Ry. has been designed by W. T. Lucy, of the road's engineering staff. This railway is already equipped with a rotary snow plough built by the American Locomotive Co., but Mr. Lucy states that in deep cuts when the snow is filled to a greater depth than 15 ft., the plough does not work well, as snow has to be shoveled off by hand from the top of the cut. More serious trouble is experienced when a deep cut is filled with snow by an avalanche, as pieces of rock are often brought down with the snow and cause much damage when struck by the rapidly moving blades of the rotary excavator. Mr. Lucy has therefore designed a snow clearing machine consisting of two parallel ladders carrying endless chains of buckets of the pattern usually employed for excavating stiff clay. The snow excavated by these buckets is discharged into a hopper, from which it is discharged by gravity upon a centrifugal ejector which throws it either to the right or left of the track as required. The approximate weight of the machine is about 60 tons. The Chilean Trans-Andean Ry. has not yet been financially able to purchase the machine, but intends to try it as soon as circumstances permit.

Advice to G.T.R. Employees.

E. J. Chamberlin, President G.T.R. and G. T. Pacific Ry., has issued a card as follows: "I desire to bring to the attention of G.T.R. employes the following verses by E. A. Guest, published in the Detroit Free Press. I trust you will study same carefully and that they may prove an inspiration to each of you, with consequent beneficial results to the company which employs you."

Not His Job.

"I'm not supposed to do that," said he
When an extra task he chanced to see;
"That's not my job, and it's not my care,
So I'll pass it by and leave it there."
And the boss who gave him his weekly pay
Lost more than his wages on him that day.

"I'm not supposed to do that," he said,
"That duty belongs to Jim or Fred."
So a little task that was in his way
That he could have handled without delay
Was left unfinished; the way was paved
For a heavy loss he could have saved.

And time went on and he kept his place
But he never altered his easy pace,
And folks remarked on how well he knew
The line of the task he was hired to do;
For never once was he known to turn
His hands to things not of his concern.

But there in his foolish rut he stayed
And for all he did he was fairly paid,
But he was never worth a dollar or more
Than he got for his toil when the week was o'er;
For he knew too well when his work was through
And he'd done all he was hired to do.

If you want to grow in this world, young man,
You must do every day all the work you can;
If you find a task, though it's not your bit,
And it should be done, take care of it;
And you'll never conquer or rise if you
Do only the things you're supposed to do.

Saskatchewan Engineers' Organization.—The Canadian Society of Civil Engineers, Saskatchewan Branch, has appointed L. A. Thornton, J. N. de Stein, of Regina, and J. D. Mackie of Moose Jaw, as a committee to consider matters in connection with the proposed provincial legislation as to the engineering profession. A paper on "Some Aspects of Indian Engineering" was read at a meeting on Mar. 8, by G. W. Montgomery.

The Canadian Pacific Railway's Honor Roll No. 18.

Alexander, George B.	Laborer	Calgary	Wounded
Allingham, J. R. E.	Brakeman	Medicine Hat	Presumed dead
Armstrong, Arthur P.	Brakeman	Cranbrook	Presumed dead
Bailey, Arthur	Clerk	Outremont	Wounded
Beggs, J. P.	Switchman	Glen Yard	Wounded
Bell, Gerald Joseph	Clerk	Winnipeg	Wounded
Bennet, John George	Nut tapper	Winnipeg	Wounded
Bibby, Lawrence	Wiper	Calgary	Wounded
Biddlecombe, G. A.	Constable	Vancouver	Wounded
Bishop, Gilbert	Clerk	Montreal	Wounded
Blois, George	Locomotive man	Regina	Presumed dead
Bowden, Chris. J.	Checker	New Westminster	Presumed dead
Brown, John A.	Trainman	Regina	Suffering from shock
Buckle, Thos. W.	Locomotive fireman	Brandon	Died of wounds
Campbell, George	Fireman	B. C. Coast Strs.	Killed in action
Chaffey, Joseph	Waiter	Montreal	Died of wounds
Chapman, George	Checker	Vancouver	Wounded
Clark, Charles B.	Clerk	Angus	Died of wounds
Colley, Vincent	Locomotive fireman	Minnedosa	Killed in action
Copping, Ernest N.	Instrumentman	Weyburn	Wounded
Corbin, Harold J.	Steamfitter	McAdam Jet.	Killed in action
Cornwall, Chas. W.	Buffer	Angus	Presumed dead
Cregg, Joseph	Tinsmith	West Toronto	Wounded
Crouch, Jack	Porter	Port McNicoll	Died of wounds
Cumine, Butler P.	Night watchman	Glacier House	Presumed dead

Westwood, William	Chef	Montreal	Believed killed
Wood, W. J.	Waiter	B. C. Coast Strs.	Presumed dead
Woodward, Frederick	Car repairer	Cranbrook	Killed in action

Increase in Cost of Railway Coal.

The coal bill of Canadian railways will show an increase of over \$8,000,000 this year. The railway coal contracts are mostly made to cover a twelve month period from April to April each year, and the railway purchasing officers are now making their agreements with the mines. "Just what the actual increase will be cannot be determined for a few weeks," said one purchasing agent in Montreal recently, "but indications are that the increase in the price of railway coal will range from 75 to 150% over last year's prices. The fuel bill of the railways is already an enormous one, and the new additions to the price will prove a heavy strain on the revenues of the roads. The Canadian lines carry an added burden in the form of a 7½% duty on the coal imported. This tax is under the War Revenue Act of 1915, and is computed on the value of the coal. With the doubling up in the price of fuel during the next twelve months, this taxation will also be increased to a very large figure. A very large proportion of the coal used on Canadian railways must be brought from the United States. The cause of the increased price lies in the abnormal demand for all classes of steam coal, due to the great industrial activity prevailing. Plants which previously ran 12 hours a day are now operating for the full 24 hours, and fuel demands have increased proportionately. Just what the future holds in the way of ever increasing costs of operation for railways cannot be accurately gauged, but the increase in

the price of coal finds a parallel in nearly all other staples used by the lines. That the situation is very serious, railway executives fully realize, especially as they are selling transportation service at rates fixed long before these increases were thought probable or possible."

Canadian Pacific Railway Double Track Mileage.

The following table shows the double track actually in operation by the C.P.R.

Quebec District.		Miles.	Miles.
Montreal (Windsor St.)—Smiths Falls yard	129.20		
Montreal West—Brookport	44.79		
Montreal West—Mile End	7.11		
Montreal (Place Viger)—Ste. Therese	20.11		
Montreal Terminals (additional mileage)	3.90		
		205.11	
Ontario District.			
Smiths Falls—Clen Tay	14.83		
Agincourt—Leaside	7.58		
Don—Parliament St.	0.78		
Toronto—Guelph Jct.	39.10		
Toronto (Bathurst St. Jct.)—Hamilton	39.10		
North Toronto line	3.93		
London Terminals	0.62		
		105.95	
Algoma District.			
Romford—Sudbury	6.80		
Azilda—Genever	30.20		
Roberts—Woman River	25.90		
Nemegos—Esher	25.50		
Healy—Bolkow	19.10		
Depew—King	27.10		
Heron Bay Peninsula	8.40		
Selim—Pays Plat	13.70		
Cavers—Gurney	11.00		
Fire Hill—Rugby	4.20		
Navilus—Port Arthur	8.10		
		180.00	

Manitoba District.	
Port Arthur—Winnipeg	426.30
Winnipeg Terminals	23.20
Winnipeg—Virden	179.30
Whitewood—Broadview	14.30
	643.00
Saskatchewan District.	
Broadview—Grenfell	16.00
Indian Head—Swift Current	194.20
	210.20
Alberta District.	
Swift Current—Java	6.00
Calgary Terminals	6.20
	12.20
British Columbia District.	
Connaught—Glacier	5.80
Revelstoke—Taft	24.20
Pritchard—Kamloops	24.10
Kamloops—Tranquille	8.70
Ruby Creek—Vancouver	81.10
	143.90

The 39.10 miles between Bathurst St. Jct., Toronto & Hamilton, is G.T.R., over which the C.P.R. has running rights.

The total of 1,500.36 miles is very much greater than the double track mileage of any other line in Canada; in fact it exceeds that of all the other Canadian railways put together. Alternative routes are also in operation between the points named below and they are practically equivalent to double track. The mileage of the shortest route between the two points is shown in each case.

	Miles.
Ontario District—Gley Tay to Agincourt via Peterboro.	181.70
Manitoba District—Virden and McAuley	36.50
Alberta District—Java and Bassano	230.20
Gleichen and Shepard	41.00
	489.40

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were drawn.

General order 182, Feb. 16.—Re forwarding of bituminous coal from United States billed for clearance at Frontier. This order is given in full on another page.

General order 183, Feb. 24.—Re filing of express companies tariffs. This order is given in full on another page.

25873, Feb. 19.—Ordering Vancouver, Victoria & Eastern Ry. & Navigation Co. to build farm crossing for R. C. Johnston, Bridesville, B.C., at his cost; work to be completed within 30 days.

25874, Feb. 16.—Authorizing C.P.R. to build spurs for Credit River Works, Ltd., Toronto Tp., Ont.

25875, Feb. 17.—Approving plans showing freight sheds to be erected by Northern Pacific and B. C. Ry. Co. at New Westminster, B.C.

25876, Feb. 20. Authorizing Canadian Northern Ry. to occupy C.P.R. land, being part of s.e. ¼ Sec. 32-16-26, w. 2 m. Sask.; if parties fail to agree as to compensation, same to be determined by arbitration clauses of Railway Act.

25877, Feb. 16.—Approving agreement between Bell Telephone Co. and Graham Private Telephone Line, Ltd., Terrebonne County, Que.

25878, Feb. 16.—Authorizing Canadian Northern Ry. to remove Celtic Brick Co.'s spur near Prince Albert, Sask.

25879, Feb. 19.—Approving agreement between Bell Telephone Co. and Saugeen Rural Telephone Co., Bruce County, Ont.

25880, Feb. 20. Ordering C.P.R. to build farm crossing for R. J. Jary, Winnipeg, Man., at his cost; work to be completed by May 1.

25881, Feb. 19.—Ordering that half interlocking plant installed at crossing of G.T.R. Lachine Wharf Branch, by Montreal Park & Island Ry. (Montreal Tramways Co.), at Notre Dame St., Lachine, Que., be operated between 6.30 a.m. and 6 p.m. by signalman, appointed and paid by M. T. Co.; and, until traffic shall demand night and day signalmen, any G.T.R. movement after 6 p.m. to be flagged over crossing by G.T.R. crew.

25882, Feb. 22. Ordering Canadian Northern Ry. to enlarge station at Birch Hills, Sask., and

relocate same at east end of yard, on south side of tracks; to be completed by Sept. 1.

25883, Feb. 22.—Authorizing Provincial Bank of Canada, St. Eustache, Que., to repay C.P.R. \$1,250 deposited to the Board's credit with accrued interest.

25884, Feb. 22.—Ordering C.P.R. and Grand Trunk Pacific Ry. to interchange traffic on existing government elevator track at Moose Jaw, Sask., pending location of permanent transfer tracks, and in meanwhile operation under order 25485, Sept. 30, 1916, is suspended.

25885, Feb. 23.—Requiring Grand Trunk Pacific Ry. to appoint station agent at Delburne, Alta., by Feb. 28.

25886, Feb. 23.—Amending order 25848, Feb. 3, re Canadian Northern Ry. highway diversion between Sec. 15-27-4 and Sec. 2-28-4, w. 4 m., Alta.

25887, Feb. 24.—Ordering Canadian Northern Quebec Ry. to build boom about 1,200 ft. long on Rouge River, Arundel Tp., Que., according to plan filed; to be completed by Apr. 1.

25888, Feb. 24. Approving revised location of C.P.R. shelter at Emery, Ont.

25889, Feb. 19.—Ordering G.T.R. to appoint watchman at crossing just east of Amigari station, Ont., between 7 a.m. and 7 p.m., daily, watchman to see all cars are kept back 100 ft. from each side of crossing; G.T.R. to be relieved from speed limitation of 10 miles an hour at crossing.

25890, Feb. 22.—Authorizing G.T.R. to rebuild bridge 290 over Pine River, Essa Tp., Ont.

25891, Feb. 15.—Approving agreement between Bell Telephone Co. and East Luther Telephone Co., Dufferin County, Ont., Feb. 6.

25892, Feb. 26.—Authorizing C.P.R. and Sudbury-Copper Cliff Suburban Electric Ry. to operate over crossing in Sudbury, Ont., without first stopping; speed over crossing limited to 10 miles an hour.

25894, Feb. 22.—Rescinding order 24968, May 6, 1916, re rates on pig lead, spelter and antimony. This order is given in full on another page.

25895, Feb. 26. Ordering C.P.R. to build standard A-2 station at Major, Sask., by July 1.

25896, Feb. 26.—Relieving C.P.R. from providing further protection at crossing between Secs. 11 and 14-17-9, w. 2 m., Sask.

25897, Feb. 22.—Rescinding order 25082, June 17, 1916, re rates on copper commodities from Spelter, Grand Forks and Greenwood, B.C., to Eastern Canada. This order is given in full on another page.

25893, Feb. 26.—Authorizing Mount Royal Tunnel & Terminal Co. (C.N.R.) to build its railway, temporarily, for not exceeding 5 years from date,

across Cote de Liesse Road, St. Laurent Parish, Que., and reserving right to parties concerned to apply to board for variation of order on a changed state of facts.

25898, Feb. 26.—Extending, for 30 days from date, time within which C.P.R. shall install bell at crossing between Lot 22, Con. 1, and Lot 22, Broken Front Con., Darlington Tp., Ont.

25899, Feb. 26.—Authorizing C.P.R. to rebuild bridge 75.6 over Dutch Creek, Kootenay Central Subdivision, B.C.

25900, 25901, Feb. 26.—Authorizing Canadian Northern Ontario Ry. to build bridges across Gordon Creek at mileage 110.7 and 110.9 north from Parry Sound.

25902, Feb. 26.—Authorizing C.P.R. to make highway diversion along southern boundary of right of way in n.e. ¼ Sec. 9-10-10, w.2 m. in lieu of road allowance on eastern boundary; diversion to cross tracks at grade; C.P.R. to close diverted portion within right of way limits.

25903, Feb. 26. Approving Essex Terminal Ry. Standard Tariff C.R.C. 361, and rescinding order 10016, Mar. 30, 1910, approving its Standard Freight Tariff C.R.C. 37.

25904, Feb. 26.—Re clause in C.P.R. schedules respecting existing milling-in-transit arrangement at Montreal with respect to destinations on Canadian Government Railways. This order is given in full on another page.

25905, Feb. 26.—Ordering Canadian Northern Ry. to build station at Norway Bay, Que., by May 1.

25906, Feb. 28. Amending order 15090, Oct. 11, 1911, authorizing construction of subway at Birch Ave., Hamilton, Ont., under Toronto, Hamilton & Buffalo Ry. spur; to provide that cost of maintaining subway be paid by city.

25907, Feb. 27.—Amending order 25558, Oct. 20, 1916, re crossings of highway by G.T.R. and C.P.R. at Dorval, Que.

25908, Feb. 28.—Authorizing Michigan Central Rd. to operate interlocking plant at crossing of G.T.R., at Canfield, Ont.

25909, Feb. 28.—Authorizing Toronto, Hamilton & Buffalo Ry. to operate its car ferry dock and slip on Grand River at Port Maitland, Ont.

25910, Mar. 2.—Authorizing Alberta Public Works Department to extend Newlands St., Lougheed, across C.P.R.

25911, Mar. 2. Approving stress sheet, Dec. 15, 1916, showing details of superstructure between bents 12 and 15 over C.P.R., at Moose Jaw, Sask., authorized by order 20376, Sept. 20, 1913.

25912, Mar. 1. Ordering Bell Telephone Co. to remove and relocate its poles on Main St., Richmond, Que.

25913. Mar. 2.—Amending order 25905, Jan. 12, requiring Canadian Northern Ontario Ry. to erect shelter at Merivale, Ont.

25914. Mar. 2.—Authorizing Alberta Public Works Department to build highway crossing over C.P.R. between Secs. 28 and 33-43-11, w. 4 m.

25915. Mar. 2.—Authorizing Canadian Northern Ry. to build transfer track under Moose Jaw Electric Ry. at Fourth Ave.

25916 to 25921. Mar. 5.—Authorizing British Columbia Public Works Department to build highway crossings over C.P.R. at mileages 32.62, 28.64, 29.42 west of Revelstoke; 4.46 south of Revelstoke; 37.61 and 43.38 west of Revelstoke.

25922. Mar. 5.—Authorizing C.P.R. to divert road allowance on southerly boundary of Sec. 27-20-6, w. 2 m., Sask.; to carry diversion across its Neudorf Subdivision, at grade, at mileage 113.8, and to close diverted portion within the right of way limits.

25923. Mar. 5.—Authorizing Canadian Northern Ry. to build bridge across Wilson River at mileage 186.7, Kamsack Subdivision, Man.

25924 to 25926. Mar. 6.—Approving Bell Telephone Co.'s agreements with Silver Creek Telephone Association, Bruce County, Ont., July 20, 1915; Snake River Telephone Association, Renfrew County, Ont., Aug. 25, 1915; and Metcalfe Rural Telephone Co., Carleton County, Ont., Feb. 23, 1917; and rescinding order 12254, Nov. 11, 1910, approving agreement dated Jan. 19, 1910.

25927. Mar. 5.—Authorizing Toronto, Hamilton & Buffalo Ry. to build spur in Hamilton, Ont., from its belt line, near Primrose Ave., northerly across Primrose Ave., two alleys, and Chipman Holton Knitting Co.'s lands, to point marked "earth bumping post, 5+70."

25928. Mar. 6.—Approving plan showing layout of proposed interlocking plant to be installed where Trent Valley Canal crosses Canadian Northern Ontario Ry. near Washago.

25929. Mar. 7.—Authorizing C.P.R. to build spur for Mond Nickel Co., at mileage 25.1, in Lot 2, Con. 2, Drury Tp., Ont.

25930. Feb. 7.—Authorizing C.P.R. to build diversion at grade across tracks in lieu of existing road allowance on eastern boundary of s.e. ¼ Sec. 28-16-25, w. 2 m., Sask.; and to close diverted portion within right of way limits.

25931. Mar. 9.—Authorizing Canadian Northern Quebec Ry. to build spur for International Manufacturing Co., Ltd., Longue Pointe Parish, Montreal.

25932. Mar. 10.—Ordering that crossing of Canadian Northern Ry. and C.P.R. at Bay Bridge Road, Belleville, Ont., be protected by gates operated by day and night watchmen; cost to be divided equally between companies.

25933. Mar. 12.—Approving plans, Nov. 1, 1916,

showing electrification of Mount Royal Tunnel & Terminal Co.'s railway and crossings of Jacques Cartier Union Ry. and Cartierville Road, excepting portion south of Cathcart to Lagachetiere St., Montreal.

25934. Mar. 9.—Directing that cost of supplies for cabin and watchmen at crossing of Main St., Hamilton, Ont., under order 24328, Oct. 16, 1915, be divided equally between City of Hamilton, G.T.R. and Hamilton, Grimsby & Beamsville Electric Ry.

25935. Mar. 12.—Authorizing Canadian Northern Ry. to build additional siding for Edwin Crabtree & Sons, Crabtree, Que., to be completed within three months from date.

25936. Mar. 12.—Authorizing G.T.R. to build spur for Canadian Steel Foundries, Ltd., Montreal.

25937. Mar. 13.—Authorizing C.P.R. and Jacques Cartier Union Ry. to operate trains, over crossing at Ballantyne, Montreal, without first stopping.

25938. Mar. 13.—Authorizing G.T.R. to build spur for Grasselli Chemical Co., Hamilton, Ont.

25939. Mar. 14.—Approving plan, Feb. 13, showing location of G.T.R. passenger station adjoining Church St., Mimico, Ont., authorized under order 25851, Jan. 30.

25940. Mar. 17.—Extending for three months from date time within which G.T.R. shall complete spur for International Harvester Co. of Canada, Hamilton, Ont., authorized under order 24801, Mar. 14, 1916.

25941 to 25943. Mar. 16.—Approving Bell Telephone Co.'s agreements with South Diagonal Telephone Association, Grey County, Ont., June 5, 1915; Upper Admaston Telephone Co., Renfrew County, Ont., Feb. 22, 1917; Udney Telephone Co., Ontario County, Ont., Mar. 3, 1917.

25944. Mar. 16.—Approving Canadian Northern Ry. Supplement 1 to Tariff C.R.C. no. W-1283, providing for maximum passenger fare of 4c. a mile on line west of Tannis, Alta.

25945. Mar. 19.—Ordering Niagara, St. Catharines & Toronto Ry. Co. to proceed forthwith with such alterations or additions to its rails and electrical connections thereof as will result in preventing further injury to underground metal pipes of Niagara Falls Corporation, Ont., and Provincial Natural Gas & Fuel Co.; work to be completed within three months.

25946. Mar. 20.—Authorizing Canadian Northern Quebec Ry. to build spurs for Imperial Oil Co., Ltd., in Pointe aux Trembles Parish, Que.; to cross Montreal Terminal Ry., C.N.Q.R., and Montreal Tramways Co.'s tracks on Notre Dame St.; and to remove cross-over tracks shown in red on plan; protection at crossings to be approved by Board's Chief Engineer.

25947. Mar. 19.—Authorizing Canadian Northern Ry. to build across Sixth Ave., Moose Jaw,

Sask., and rebuild bridge there.

25948. Mar. 19. Ordering Edmonton, Dunvegan & British Columbia Ry. to appoint caretaker at Tomkin's Crossing, Alta., to see that station is kept for accommodation of passengers and package and perishable freight, and for delivery of shipments between 8 a.m. and 6 p.m.

25949. Mar. 13.—Ordering Grand Trunk Pacific Ry. to erect shelter at Keppel, Sask., not to be below Board's standard 1-A; to provide for heating same, and the necessary flagging equipment.

25950. Mar. 19. Dismissing C.P.R. application for order apportioning cost of signals to be provided on its Winnipeg Beach Subdivision, Man.

25951. Mar. 19.—Dismissing dispute between Grand Trunk Pacific Ry. and Canadian Northern Ry. regarding reparation claimed by G.T.P.R. on account of C.N.R. interswitching to Canada Cement Co.'s spur, Winnipeg.

25952. Mar. 21.—Authorizing North American Collieries, Ltd., to build two mine entries under Grand Trunk Pacific Ry. in Sec. 19-53-7, w.5m., Alta.

25953. Mar. 21.—Authorizing Canadian Northern Ry. to build across road allowance between Secs. 28 and 33-4-12, w.p.m., Man.

25954. Mar. 22.—Establishing delivery limits for Dominion Express Co. in Trail, B.C. This is given fully under "Among the Express Companies" on another page.

25955. Mar. 21.—Authorizing Canadian Northern Ry. to build spur for Woodward Elevator Co., Portage la Prairie, Man.

25956. Mar. 22.—Authorizing C.P.R., Canadian Northern Ry. and Grand Trunk Pacific Ry. to charge \$3 a car for lining cars for flaxseed in bulk, subject to conditions in order 23894, June 22, 1915.

25957, 25958. Mar. 22.—Relieving C.P.R. from providing further protection at highways near Kent Bridge and Merrickville, Ont.

25959. Mar. 22.—Requiring Boston & Maine Rd. to install bell at Comstock Bridge crossing, near Lennoxville, Que.

25960. Mar. 23.—Approving agreement between Bell Telephone Co. and Flos Tp., Ont., Feb. 13, 1917.

25961. Mar. 22.—Ordering Edmonton, Dunvegan & British Columbia Ry. to build siding and station facilities to take care of l.c.l. freight and express matter, and shelter for passengers, at west switch of branch connection in Sec. 16-78-5, w.6m., Alta.; work to be completed by July 15; station not to be below standard 1-B.

25962. Mar. 24. Amending order 25949, Mar. 13, substituting Mead for Keppel.

General order 184. Mar. 22.—Amending order 8850, Dec. 10, 1909, re supply of car doors by railway companies.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Alberta & Great Waterways Ry.—R. Douglas, Inspecting Engineer of the Alberta Railways Department, returned to Edmonton, Mar. 5, from an inspection of construction on the line. He is reported to have said that steel is laid to mile 240, within 50 miles of McMurray, and that the intervening mileage is expected to be laid by the middle of April. Tracklaying was commenced on Dec. 17, at mileage 202, but was held up from time to time by snow and other bad weather conditions. It was expected to have the track laid to Clearwater River, mileage 274, before the end of March, which would open traffic to McMurray by scows. The whole of the bridge work has been completed. Freight is being carried by the railway to mileage 233 and is teamed thence to McMurray. (Mar., pg. 100.)

Central Canada Rd. & Power Co.—A committee of the Manitoba Legislature, which has been considering the bill asked for by this company, has struck out all the sections and clauses granting power franchises, and the bill simply becomes one for the incorporation of a company to build a railway. The title will probably be altered to the Central Ry, Manitoba Co., so as to make it conform to the other J. D. McArthur charters in Saskatchewan and Alberta. The intention of the company is said to be to start at Selkirk or St. Boniface this spring and build to Winnipeg River. Next year the road may be pushed on to the mines at Rice Lake, as the charter will call for completion of at least 100 miles in two years. Within five years the entire line

to Hudson Bay, 400 miles, must be built. A section is being added to give the Manitoba Government power to purchase the entire undertaking at any time for the then fair value as a going concern. (Mar., pg. 100.)

Central Canada Ry.—Application is being made to the Minister of Public Works, under the Navigable Waters Protection Act, for approval of site of and plans for a bridge across the Peace River in front of Lot 4, Block 1, River Lot 8, of the Peace River Settlement at Peace River, Alta.

W. R. Smith, Chief Engineer, is reported to have said, Mar. 12, that rapid progress is being made with the work of putting in the substructure for this bridge. The caisson for pier 8 was successfully launched through the ice, Feb. 24; and those for piers 6 and 7 are nearly ready for launching. Gangs are working night and day at the bridge site. (Feb., pg. 50.)

Central Canada Saskatchewan Ry. — The Saskatchewan Legislature has incorporated a company with this title to build from the western boundary of the province to Prince Albert, and such other lines as may be designated by the government. This is part of the McArthur lines now under construction in Alberta, which it is proposed to connect with points in Saskatchewan, and, according to press reports, with Winnipeg. (Mar., pg., 100.)

Crows Nest & Tent Mountain Ry.—The Alberta Legislature is being asked to incorporate a company with this title to

build a railway from Crowsnest, on the C.P.R. line, west of Macleod, southerly through Tps. 8 and 7, west of the 5th Meridian, to and across the s. ½ of Section 63, Tp. 7, Range 6, about six miles. The office is to be at Tent Mountain, Alta.; the capital is fixed at \$50,000, and bonds are to be issued for \$20,000 a mile. The provisional directors are: J. C. McDonald, L. McDonald and W. G. Atkinson, Edmonton, Alta.

Esquimalt & Nanaimo Ry. — H. S. Beasley, General Superintendent, Victoria, B.C., is reported to have said in an interview recently that from \$125,000 to \$150,000 will be spent on the line for betterments this year, including the building of a permanent steel structure to replace a wooden trestle put in when the line was constructed in 1910-11 to the west coast. A good deal of the money will be expended on the Alberni Branch.

Plans are reported to have been filed at Ottawa for a swing bridge across the inner harbor at Victoria, B.C., to carry tracks into the Store St. station. The structure proposed to be erected is the steel bridge formerly carrying the C.P.R. across the Red River at Winnipeg, and now stored at Coquitlam. (Mar., pg. 100.)

Grand Trunk Pacific Ry.—The Board of Railway Commissioners, on Mar. 14, gave a decision as to the location of the station at Prince George, B.C. The matter has been at issue since 1912 between the company and rival real estate agents, who each claimed to have the "only and original location."

The Minister of Public Works is being asked to approve of site of and plan for a lumber mill and other works to be erected in front of Waterfront Block I, Prince Rupert Harbor, B.C. (Feb., pg. 51.)

Grand Trunk Ry.—We are officially advised that plans for the proposed freight sheds at Mimico, Ont., are before the Board of Railway Commissioners. (Mar., pg. 50.)

Great Northern Ry.—F. L. Townley, architect in charge of the erection of the terminal station and other buildings on False Creek, Vancouver, B.C., is reported to have stated that 90% of the work on the station proper was completed, and it was expected to have it completed by Mar. 30. Work has been started on the locomotive house and other buildings. A car yard is being laid out about a quarter of a mile east of the passenger station. It will contain 4 tracks, each 1,500 ft. long, and will be piped for steam, compressed air, water and air brake testing lines, and provision will also be made for battery charging. (Mar., pg. 101.)

Greater Winnipeg Water District.—It is reported by the auditors that up to Dec. 31, 1916, out of \$6,180,799.94 expended for all purposes, \$1,595,666.23 was expended upon the commission's railway and its equipment.

The commission has adopted a recommendation of Chief Engineer Chace for the pipe line route between Deacon and the Red River. This is an air line route direct from Deacon to the Dawson Road, just east of the St. Boniface municipal yards. In connection with it, Mr. Chace reported that where considered solely as a pipe line route or from the standpoint of providing in addition a route for a permanent railway entrance to St. Boniface, this route is the cheapest and most satisfactory. A 100 ft. right of way will be provided the entire distance. (Jan., pg. 19.)

The Michigan Central Rd.'s station at Charing Cross, Ont., was totally destroyed by fire, Mar. 9. Arrangements are being made for rebuilding. (Mar., pg. 101.)

Montreal Central Terminal Co.—The Dominion Parliament is being asked to extend the time within which the company may build its terminal station, with railways, tunnels, and bridge connections in and around Montreal. F. E. Came, Montreal, is Secretary. (June, 1916, pg. 281.)

Pacific Great Eastern Ry.—Information as to the legislative investigation into the company's affairs is given on another page of this issue.

Construction work on the line is reported suspended for the present at least. (Mar., pg. 101.)

Prince Edward Island Ry. Car Ferry.—A press report from Charlottetown, P.E.I., states that it is expected that the car ferry service between Port Borden, P.E.I., and Cape Tormentine, N.B., will be inaugurated in August. (Feb., pg. 51.)

Saskatchewan & Hudson Bay Ry.—The Saskatchewan Legislature has incorporated a company with this title to build a railway commencing in Tp. 17 or 18, Range 30, West of the 3rd meridian, easterly through Tps. 16, 17 and 18 to Range 22 in either of these townships, thence northeasterly to Cabri, thence northerly and easterly to a point in either Tps. 27, 28, 29 or 30, in Ranges 11, 12, 13 or 14, thence northeasterly to Saskatoon. The capital is fixed at \$100,000; and power is asked to issue bonds for \$30,000 a mile. The office is to be in Regina.

The provisional directors named are: H. Keeble, Haverhill, Sask.; L. L. Dawson, Regina, and F. Crandall, Calgary, Alta.

From the association of F. Crandall, it would appear that this railway is being incorporated to build the Saskatchewan section of a railway project covered by the charters of the Calgary & Fernie Ry. and the High River, Saskatchewan & Hudson Bay Ry., and extending from Fernie, B.C., to Fort Churchill, on Hudson Bay. (See Alberta-Hudson Bay Ry., Mar., pg. 101.)

St. John & Quebec Ry.—We are officially advised that a contract has been let to the Nova Scotia Construction Co. for building the section of this railway from the present northerly terminus at Centreville, N.B., to a connection with the C.P.R. at Andover, about 26 miles. Construction work will be started early in the spring.

F. W. Summer, President, St. J. & Q.R., is reported as stating, Mar. 10, that the Nova Scotia Construction Co. would start work on the new section of the line from Centreville to Andover as soon as weather conditions permit.

T. Cozollino, President of the N. S. Construction Co., is reported to have said, Mar. 10, that satisfactory progress had been made with construction on the southern section of the line from Georgetown to Westfield during the winter. A good deal of the heavier part of the work, including a considerable amount of bridge work, has been done. (Mar., pg. 101.)

St. Maurice Construction Co., Ltd.—The Shawinigan Water & Power Co.'s annual report for 1916 has the following reference to one of its subsidiaries: "During the past year the St. Maurice Construction Co., Ltd., a subsidiary of your company, has continued the construction on the La Loutre storage dam, and steady progress is reported on this work. During the early part of the year the work consisted in building 20 miles of railway, the organization of the river transportation system and the construction of the cofferdams in the east channel of the river. The concrete has now been placed in the east channel and work is proceeding on the west, or main channel. The work is up to schedule and should be completed at the end of 1917."

We are officially advised that the railway parallels the St. Maurice River for 20 miles, beginning at Chaudiere Falls, on the river bank, 30 miles above Weymontachine, or Weymont station, on the National Transcontinental Ry. The line is standard gauge. It is operated by locomotive burning fuel oil. There are four contractors' locomotives, 18 flat cars, two box cars and 24 dump cars. The contractors and engineers were the St. Maurice Construction Co., Ltd., with Fraser, Bryce & Co., Ltd., Montreal, as supervising engineers. The maximum grade is 3½%, and the maximum curvature 18 deg.

River transportation operates between Weymont, or as a matter of fact, from Sanmaur, which is the name of a station opened for the St. Maurice Construction Co.'s operations, two miles from Weymont, to the point on the river where the railway begins. The outfit consists of about 20 scows, with capacities of between 12 and 30 tons each. These are towed by gasoline and steam tow boats. At one point in the river it is so swift that an alligator boat is used to pull the scows up. The towing is in two divisions above and below this swift water. The railway and river systems are used only

for the St. Maurice Construction Co.'s operations and business incidental to the construction of the dam.

We are further officially advised that it is impossible to state what will be the future of this railway, whether it will be taken up on the completion of the dam, or whether it will be made a permanent work and extended.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, compared with those of 1915-16, from July 1, 1916:

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$3,834,200	\$2,636,800	\$1,197,400	\$ 711,000
Aug.	3,681,900	2,612,900	1,072,000	614,300
Sept.	3,187,900	2,455,300	732,600	x177,300
Oct.	3,716,800	2,496,500	1,220,300	x36,700
Nov.	3,722,800	2,472,300	1,250,000	38,600
Dec.	3,485,400	2,661,600	823,800	x378,300
Jan.	2,832,600	2,350,500	482,100	226,700
Feb.	2,358,600	2,250,400	108,200	x21,200
	\$26,822,700	\$19,936,300	\$6,886,400	\$ 977,100
Incr	\$5,295,100	\$4,318,000	\$ 977,100

Approximate earnings for three weeks ended Mar. 21, \$2,126,400, against \$1,627,200 for same period, 1916.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1915-16, from July 1, 1916:

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$12,247,440.39	\$8,230,348.66	\$4,017,091.73	\$1,216,688.61

Inc. \$11,817,283.34 \$10,225,634.35 \$1,591,648.99

Approximate earnings for Feb., \$8,832,000, and for three weeks ended Mar. 21, \$7,760,000 against \$8,546,000 and \$6,737,000 for same periods, 1916.

Grand Trunk Railway Earnings.

The aggregate traffic receipts of the system from Jan. 1 to Feb. 28, are:

	1917	1916	Increase	Decrease
G.T.R.	\$6,825,821	\$6,437,336	\$388,485
G.T.W.R.	1,272,560	1,383,708	\$111,148
D.G.H.&M.R.	437,852	474,762	36,910

\$8,536,233 \$8,295,806 \$240,427

Approximate earnings for three weeks ended Mar. 21, \$3,186,666, against \$2,916,801 for same period, 1916.

Grand Trunk Pacific Ry. Earnings.

The approximate earnings of the Prairie Section, 916 miles, for January were \$330,108; for Feb., \$295,512; total, \$625,620, against \$314,344 for Jan.; \$277,619 for Feb., and \$591,963, total, for same periods, 1916.

Arthur R. Mosher was detained by the Montreal police, Mar. 24, charged with having written a libellous letter concerning R. P. Neil, President of the International Brotherhood of Stationmen and Railway Employees, to Chief of Police Campeau. Mosher gave bonds for \$1,000 for his appearance in court, Mar. 26, but did not appear. On Mar. 27 Mosher's bail of \$1,000, which was ordered confiscated the previous day, was restored, when he showed that he had attended at the wrong court room.

Frederick Broughton's Pictures—A collection of oil and water color paintings, formerly the property of the late Frederick Broughton, who was General Manager of the Great Western Ry. of Canada in the seventies, were sold by auction in Toronto recently.

The Chilled Iron Car Wheel.

By G. W. Lyndon, President, Association of Manufacturers of Chilled Car Wheels.

Following are the principal portions of a paper read before the Canadian Railway Club in Montreal recently:

The method of manufacturing chilled iron car wheels has not been materially changed and the pattern introduced in 1850 by Washburn is the same in outline practically as that in use today. Nevertheless the wheel manufacturers in the face of restriction in weight and flange dimensions, and through improved foundry processes have been successful in maintaining the chilled iron wheel up to a high standard. A 33 in. 525 lb. chilled iron wheel of the Washburn type became standard soon after 1850 for 10-ton freight cars and also for passenger cars. Cars of this capacity remained standard for about 30 years. As late as 1875 there were only occasional cars having a capacity as high as 12 tons. The heaviest capacity passenger cars weighed 18 tons. Sleeping and drawing room cars of 12 sections weighed 30 tons. The operation of railways then was very different from what it is now. Interchange of traffic as we now know it did not exist. An official of a great railway charged another with running freight trains as fast as 12 miles an hour. "The wear and tear is something terrible," said he. "It is pounding the track to pieces. Every ton of freight handled at that speed is carried at a loss. The reduction of speed to 8 miles an hour will lessen the cost more than \$1,000 a day."

Such were the ideas of the foremost men in charge of transportation in the days of iron rails, hand brakes, link and pin couplers, fragile cars, etc. Under such conditions of light wheel loads, small flange pressures, slow speeds, low annual mileage, the wheels would last the entire life of the car. Wheel mileage obtained under such circumstances is sometimes erroneously used to indicate the superior service of wheels manufactured at that time. The ton mileage, which is the true basis for comparison, was extremely low as compared with wheel performance at the present time. The introduction of the air brake, the automatic safety coupler, heavy steel rails, more rigid cars and interchange of traffic have permitted an era of rapid transit of heavy capacity freight cars with time schedules almost equal to that of express trains. Daily runs averaging 30 miles an hour, including stops, with an occasional burst of speed as high as 50 to 60 miles an hour, to maintain the high average, is not uncommon.

The 30-ton car introduced in 1885 was the heaviest capacity car on any railway during 1893. It was strongly argued at that time that the wheel load of 11,000 lb. which was required under cars of 30 tons capacity was the maximum that could be carried on a 33-in. diameter wheel, because the area contact between the wheel and the rail being so small, any greater load would cause a permanent injury to both wheel and rail, by reason of the fact that the elastic limit in the metal would be exceeded, resulting in dents in the rail and flat spots in the wheel tread. Not only was 11,000 lb. a wheel considered the maximum wheel load, but there was a good deal of doubt expressed by the foremost engineers as to whether this load was not in excess of good practice. The introduction of the 30-ton car was very rapid on all rail-

ways. A chilled iron wheel weighing 600 lb. was used under cars of this capacity and was recommended as standard in 1904 by the M. C. B. Association. It was later modified and increased to 625 lb. in 1909, upon the recommendation of the Wheel Manufacturers' Association.

Notwithstanding the doubt expressed regarding the maximum wheel load, cars of 40 tons capacity were soon tried and found to be satisfactory and almost immediately thereafter the 50-ton car was developed for the coal carrying trade, and found to be so satisfactory that cars of lighter capacity ceased to be built for this service. The 700 lb. wheel was used under 50-ton cars and recommended as standard in 1904 by the M. C. B. Association, but afterwards, upon the recommendation of the Manufacturers' Association, was modified to 725 lb., and made standard in 1909. It will be noticed that in 1904 the first wheel made standard for the 50-ton cars weighed 700 lbs. In 1909 the manufacturers succeeded in getting the weight increased 25 lb. During the time intervening a new wheel of the rolled steel type was introduced, and notwithstanding the alleged superiority of metal, the steel wheel substituted for the 700 lb. chilled iron wheel weighed a minimum of 750 lb. The present indications are that the 50-ton car is likely to be superseded in the very near future by the 70-ton car for carrying such commodities as coal, iron ore, etc. Cars of 70 tons capacity have already proved successful from every standpoint and are being made in comparatively large numbers.

The marvellous increase since 1875 in the capacity of cars and the tremendous tonnage hauled has called for an increase in the weight of the car structure from 18,000 to 65,000 lb., or a 260% increase; an increase in the weight of rail from 50 to 125 lb., or 150%; in the axle from 350 to 1,070 lb., or 200% increase; the weight of the wheel from 525 to 725 lb., or 38% increase. The percentage of increase in the wheel is much less than for any other part of the car, and while the carrying capacity has increased from 10 to 70 tons, or 600%, the weight of the heaviest M. C. B. standard wheel has increased only 38%. This is a wonderful record for the performance of the wheel under adverse conditions, when it is considered that not only has the carrying capacity been increased but the speeds at which trains are operated have increased 600%.

The ton miles per annum made by the present 70-ton car is approximately 20 times that of the 6-ton car, which indicates the greater service given by the present wheel than was secured from any wheel during the pioneer days. It also plainly shows that the mere comparison of mileage is of no value whatever unless the load carried is taken into consideration.

While the chilled iron wheel has always met increased requirements by reason of the rapid increase in the capacity of the cars, there is one part of the wheel that has received scant consideration, and that is the flange. During all the remarkable railway development, one dimension in track structure has remained constant. The space between the running rail and guard rail has remained fixed at $1\frac{3}{4}$ in. The chilled iron wheel manufacturers have been trying for years to secure a stronger flange and

have demonstrated the fact that three-sixteenths of an inch can be added to the thickness of the present M. C. B. flange, compensation for the increase made in mounting each wheel $\frac{3}{32}$ of an inch closer to the rail and still maintain the M. C. B. standard throat to back of flange dimension of 4 ft. 6 $\frac{29}{64}$ in. This ensures that the relation of the back of the flange to guard rail remains the same as at present and no change in track clearance is required. There can, therefore, be no objection from a track standpoint of making a liberal increase in the present flange thickness, and the manufacturers have received the approval of their plan from a special committee appointed for the purpose of investigation through the American Railway Engineering Association.

Under the 10-ton car, whose weight was about equal to its capacity, the load carried per wheel was approximately 5,000 lb., which would require about 4,000 lb. flange pressure to change the direction of the truck in engaging curves. Under the 70-ton car the load per wheel has increased to 25,000 lb., which requires almost 20,000 lb. flange pressure to change the direction of the truck, therefore, the flange thrust has increased 400% on account of the increased load, which is further augmented by the high speed of modern freight trains. Under present conditions of operation, considering the increased load and speed, the thrust on the flange, including impact, is at least 10 times greater than under the old 10-ton car, and it must be apparent that the increased duty has not been provided for.

The University of Illinois, under the direction of the consulting engineer for the Association of Manufacturers of Chilled Car Wheels, has been conducting a series of tests for the purpose of ascertaining the stresses to which the wheel is subjected in pressing the wheel on to the axle, and service conditions, with the following results: 1. When a wheel is pressed on an axle a compressive stress is developed radially and a tensile stress circumferentially. These stresses are of large proportion and extend all the way from the hub to the tread. 2. The plate must carry the load which produces a combination of stresses resulting in a wheel slightly elliptical. 3. On descending grades the heat generated by the brake shoe, which is a factor of load, grade and speed, causes a tensile stress in a radial direction in opposition to the compressive stress which was developed while pressing the wheel on the axle. 4. The heavy flange thrust causes a bending action in the plate, which intensifies the tensile stress developed by the heat in the front plate, and the compressive stress in the back plate developed while pressing on the axle. The ratio between these stresses developed in the 70-ton car as compared to the 10-ton car is much greater than that indicated by the mere increase in carrying capacity. The heaviest stress developed is probably that caused by the sudden rise in the temperature of the tread of the wheel from brake shoe application on descending grades. If we assume that trains are now operated at double the velocity they were 40 years ago and the load in the wheels five times as great, there will be 10 times the heat generated per unit of time on the

tread of the present wheel as compared to the wheel under the 10-ton car. Also the flange thrust being from 5 to 10 times greater indicates that we have 10 times the force to contend with than we formerly had.

The information obtained would indicate that in order to design a wheel that will fit a given condition of service, it requires a thorough understanding of the intensity of the stress in each part of the wheel and the relation of the stresses to service conditions. The manufacturers' association believes that due to the general conditions existing at the present time, and considering the safety factor of operation, three designs of wheels of 675, 750 and 850 lb. (with 3/16 in. increase in flange), respectively, for 30, 50 and 70-ton cars, would in a great measure solve present troubles and the recommendations are: 675 lb. wheels for cars having a maximum gross load of 112,000 lb.; 750 lb. wheels for cars having a maximum gross load of 161,000 lb.; 850 lb. wheels for cars having a maximum gross load of 210,000 lb.

No railway material sold today is so necessary for operation and comprehends so low an initial investment to the railways as the chilled iron wheel. The 8,000,000 tons of chilled iron wheels running today possess a higher relative market value when worn out, based upon their first cost, than is usual with other commodities purchased by the railroads. Hundreds of thousands of chilled iron wheels have been sold at a differential of \$10 a ton, which represents the difference between the original selling price and the scrap value of the old worn out wheels, and this \$10 a ton differential represents the cost of reconvertng the old wheel into a new one plus the necessary labor, plus the price of the new material and the profit of the manufacturers. Special wheels are purchased by many railways at a higher differential than \$10 a ton, and some foundries, located in remote parts of the country, far from raw materials, such as coke and pig iron, must receive a higher price. About 30% of all wheels sold are removed by foreign lines and the price paid for these removals is fixed by the printed interchange rules of the M. C. B. Association, as follows:

	Chilled Iron.	Steel.
New value, each	\$9.00	\$19.50
Scrap value, each	4.75	4.50
Net cost	\$4.25	\$15.00
Cost of removing from and replacing in tracks, per pair, \$2.25 each	1.12	1.12
Cost under car, each	\$5.37	\$16.12
Cost of two turnings	3.25
Total cost of wheel service, each	\$5.37	\$19.37

The total cost for wheel service for other types of wheels is about four times that of the chilled iron wheel and upon this basis of comparison any substitute must yield four times the mileage or time service in order to equalize the cost. As the master car builders fix the price of removals on the 30% of equipment on foreign roads, it must follow that the same relative basis of cost applies on the 70% of removals on a road's own lines. Chilled iron wheels sold at a differential of \$10 a ton, make the net cost of the three M. C. B. standards as follows:

625 lb. M. C. B. wheel for 30-ton cars,	\$3.12
675 lb. M. C. B. wheel for 40-ton cars,	\$3.37
725 lb. M. C. B. wheel for 50-ton cars,	\$3.62

The maximum cost of the 625 lb. M. C. B. wheel, guaranteed for 6 years, is 52c a year; that of the 675 lb. wheel, guaranteed for 5 years, is 67c a year; and that of the 725 lb. wheel, guaranteed for 4 years, is 90c a year. Any wheel that is

sold for \$20 will cost the railways, in interest charges alone, (at 5% per annum) more than the renewal charges of the chilled iron wheel, because while the guaranteed net cost to the railways is based upon six, five and four years service, respectively, the actual service is often twice as much.

Transportation Conference at Ottawa.

On Mar. 6, Sir Geo. E. Foster, Minister of Trade and Commerce, wrote a number of leading railway and steamship officials as follows: "The problem of transport for the current year is a very serious and complex one for the whole of this continent, and is by no means any less pressing and important for Canada. There is a great quantity of western grain to be moved from the interior and the head of the lakes and across the Atlantic, which should be cleared out before the next crop ripens. The St. Lawrence and our Canadian ports should, under all the circumstances, be able to command a large portion of this traffic, and the ocean tonnage to be provided by the allied governments for carrying munitions, war supplies and foodstuffs should be made to help in this direction. United action and thorough co-operation on the part of all our transport agencies would contribute greatly to the end desired, and it has been suggested that a conference of these various agencies would be advisable and helpful. Acting on that suggestion, I have invited them to meet in Ottawa on Mar. 19 for an interchange of views on the above mentioned subject. I would be glad, therefore, if you would kindly send a representative of your company to attend this meeting, the object of which will be generally to exchange views and consider what steps can be taken to ensure the greatest possible movement of grain and other commodities from Canadian ports, and to facilitate and speed up this movement."

In response to the invitation, a number of prominent officials of the Canadian Pacific, Grand Trunk, Canadian Northern, Canadian Government and other steam railways, of the Canada Steamship Lines, Ltd., and other steamship companies, and of the St. John, N.B., Quebec and Montreal harbor authorities, attended at Ottawa and were received by the Ministers of Trade and Commerce, of Customs, and of Railways. As the Ministers had to leave to attend a memorial service for the Duchess of Connaught, the meeting was turned over to Sir Henry Drayton, Chief Railway Commissioner, who took the chair, and there was considerable discussion but no definite conclusions were arrived at and no committees were appointed.

The Minister of Trade and Commerce states that the representatives present were asked to work along the following lines: To see that the grain remaining in the northwest is brought down to the head of the lakes speedily. This duty rests upon the railways and they state that they are quite able to accomplish it with speed and efficiency. The next step is between the Great Lakes and Montreal, and the information is that Canadian lake shippers have tonnage sufficient and will find no difficulty in moving the grain from Fort William to the bay ports and Montreal, if the railways will co-operate across Ontario with dispatch and efficiency and prevent delays at the bay ports and transfer elevators. The railways chiefly interested in that operation

are the Canadian Pacific and Grand Trunk, and these two companies are asked to make such arrangements as will quickly lift from the bay port elevators the grain which is brought down across the lakes and run it into Montreal and possibly Quebec. There is not very much prospect of a large portion of grain being taken down from Port Colborne to the St. Lawrence, owing to the scarcity of canal boats, but whatever can will be done in this direction. The facilities at Montreal are first class and steps are being taken for such co-operation as will ensure a large output from that port, quite as much, it is thought, as transport across the ocean can be obtained for carrying away. Greater difficulty will be experienced in reference to the coal supply, and investigation is being made as to how the output of the Nova Scotia mines and the transportation system of the St. Lawrence can best be facilitated. This latter is a very hard proposition at the present time.

Ontario Railway and Municipal Board Act Amendments.

The Ontario Legislature has before it a bill amending the Ontario Railway and Municipal Board Act. The amendments provide for giving the board jurisdiction over all incline railways in the province; provides that the Chairman shall receive a salary of \$7,000 a year, the Vice Chairman \$4,500 a year, and the Secretary \$2,800 a year; the increased salaries of the Chairman and Secretary to date from Oct. 31, 1916.

A new section, to be numbered 38a, is added, providing for a penalty not exceeding \$1,000 in addition "to any other penalty provided in this or any other act" for contravention of the board's orders and in default of payment there is an alternative of imprisonment for not exceeding 30 days. Subsection 2 declares that each successive day during which such act or omission continues is a separate offence; subsection 3 deals with the manner of imposing the penalties, and subsection 4 provides that sheriffs and other police officers shall assist in enforcing the board's orders.

Canadian Society of Civil Engineers Secretaryship.—Prof. C. H. McLeod, who has been Secretary for nearly 30 years, having resigned, has been succeeded by Fraser S. Keith, B.A.Sc., A.M.Can.Soc. C.E., who was born at Smiths Falls, Ont., June 8, 1878. After an apprenticeship in the hardware business, he entered the Faculty of Applied Science, McGill University, Montreal, in 1899, spent his summer holidays at machine shop work, electric power plant operation, etc., and graduated with honors in electrical engineering in 1903, his summer thesis winning the Can.Soc.C.E.'s mechanical section's prize. In 1904 he was senior electrical demonstrator at McGill University, and in 1905 he went into technical newspaper editorial work. In 1908 he went to Vancouver and engaged in manufacturing concrete materials and in concrete construction. He returned to Montreal in 1915, since when, until his recent appointment, he was again engaged in technical newspaper work.

Faculty of Applied Science, Toronto University.—It is officially announced that 765 men have enlisted for overseas service, including 16 members of the staff. Seventy-five have been wounded, 45 killed and 38 have received military honors.

**Double Deck Automobile Cars,
Canadian Pacific Railway.**

The accompanying illustrations show the first of a series of automobile cars, built at the company's Angus shops, Montreal, and which are said to be the first double deck automobile cars built or

Freight and Passenger Traffic Notes.

The G.T.R. announces that Acton West station, on its Toronto-Guelph line, has been renamed Acton, to conform to the post office name.

The Great Northern Ry. was reported, Mar. 14, to be arranging to operate a

The Canadian Northern Ry. is operating two freight trains a day from Vancouver to eastern points, while the west-bound requires only one. Each of the three trains comprises 15 cars.

In order to aid in securing labor for farmers in the west, Canadian railways put in operation, Mar. 1, a 1c a mile rate from all points on the United States border in Canada and west of Ontario.

Owing to the necessity of relieving the freight situation, Canadian railways, upon the suggestion of the Board of Railway Commissioners, will not grant any reduced fares nor operate any special trains for the Easter holiday traffic.

M. McD. Duff, Manager, C.P.R. Great Lakes Steamships, has completed a tour of the C.P.R. system in connection with a general plan to promote travel during the navigation season by the rail and lake route rather than by the all rail route.

The G.T.R. has issued a new form of commutation ticket. Instead of a strip of detachable coupons for 10 trips, or a book for the 55 trips, the new ticket has a series of numbers printed along the side, one of which the conductor will punch out on each trip.

The Department of Railways has authorized the fitting up of a car for the exhibition of moving pictures dealing with the grave dangers of taking unnecessary chances in the performance of railway work. The car will travel over the Canadian Government Railways and lectures will be given as part of the safety first campaign.

Double deck Automobile Car, C.P.R.

owned in Canada. Their principal dimensions, etc., are as follows:

Height at eaves	14 ft. 1 in.
Width at eaves	9 ft. 9 in.
Inside length	40 ft. 6 in.
Inside width	8 ft. 7 in.
Inside height	9 ft. 6 in.
Inside space	3,300 cu. ft.
Capacity	80,000 lb.
Tare	44,900 lb.

through train service between Vancouver and Nelson, B.C., via Hope and Oroville, Wash.

The G.T.R. has issued a booklet, "Ottawa, Canada's Seat of Government," for circulation in the United States and elsewhere for the promoting of tourist traffic to that city.

The Canadian Northern Ry. started operating a train service over its Lulu Island Branch, Mar. 7. One train a day

Canadian Society of Civil Engineers.—Members in British Columbia discussed

Double Deck Automobile Car, Canadian Pacific Railway

with members of the provincial government recently matters affecting the status of civil engineers. R. W. McIntyre, past Chairman of the Victoria branch, and D. O. Lewis, District Engineer, Canadian Northern Ry., presented the case for the engineers, and the Premier promised to give the matter consideration.

is being operated each way between Steveston and Queensboro, B.C.

From a comparatively small catch a few years ago the shipments of halibut from Prince Rupert, B.C., over the Grand Trunk Pacific Ry. to Canadian and United States points have grown to about 15,000,000 lb. a year.

The Premier of Saskatchewan, on Mar. 13, promised to consider the question of the appointment of a traffic expert, which was urged by a deputation representing the boards of trade of the province. He stated it might be sufficient to secure one expert to look after the interests of Manitoba, Saskatchewan and Alberta.

C.P.R. trains on the Prescott Subdivision now leave from and arrive at Central station, instead of Broad St. station. Ottawa passengers arriving at either of these stations, and being ticketed through to points necessitating their going to the other station, are given street car transfer between Central and Broad St. stations and their baggage is transferred free.

C. E. McPherson, Assistant Passenger Traffic Manager, Western Lines, C.P.R., Winnipeg, visited San Francisco and Los Angeles recently, to arrange accommodation for meeting the large number of United States tourists visiting California, who will return over C.P.R. lines from Seattle and Vancouver, crossing the Canadian Rockies and the western prairies to Winnipeg, thence to their homes in Chicago, New York, Boston and other eastern points.

C.P.R. Prescott Subdivision trains now leave from and arrive at Central Station, Ottawa, instead of Broad St. Station. Passengers between points reached through Ottawa Broad St. Station and points on or reached via the Prescott Subdivision are directed by conductor to the ticket office at Ottawa station on ar-

not move any special or extra passenger train, and we have also considerably curtailed our regular passenger train service."

The Ocean Limited, running between Moncton, N.B., and Montreal, has been withdrawn, the last train running Mar. 4. This step has been taken to facilitate the movement of freight. In consequence of this the following other changes of trains has been made on the Intercolonial Ry.: "Trains Nos. 199 and 200 run between Halifax and Moncton daily except Sunday. The Maritime Express runs through between Halifax and Montreal daily. In order to make close connections from Sydney with Maritime Express (westbound), train 6 leaves Sydney and intermediate stations to Truro one hour earlier than heretofore. Trains 41 and 42 are restored to schedule Mar. 5. The following branch line trains connect with nos. 199 and 200 trains are discontinued: 207, Loggieville to Newcastle; 208, Newcastle to Loggieville; 225, Dalhousie to Dalhousie Jct.; 226, Dalhousie Jct. to Dalhousie."

Increased Freight Rates in U. S. Asked. Washington press dispatch, Mar.

Canadian Pacific Railway Hospital Cars for Military Service.

The C.P.R. is remodelling eight tourist cars for the Military Hospitals Commission's service in removing wounded and invalid soldiers from the seaboard to their destinations. Four of these cars will be composite, including kitchen and accommodation for medical officer and nurses, and four will be straight ward cars. The cars will be run in pairs, one composite and one ward car. Patients for the ward cars will be taken on and off through the side door entrance of the composite car, and to facilitate this movement, the end doors have been increased to 3½ ft. wide at one end of each car only. The cars have six-wheel trucks, steel platforms and double sash, and are in general conformity with the standard construction of first class tourist cars. The illustration on this page shows plan views of the ward and composite cars respectively. The ward cars have accommodation for 14 patients, and composite cars are arranged with six cots in addition to quarters for medical officers and nurses. The accommodation for the nurses is equivalent to that of a drawing room on a stan-

Hospital Cars, Canadian Pacific Railway, for Military Service.

rival and are furnished with street car transfers between the Central and Broad St. stations and their baggage is transferred free of charge.

The G.T.R. has filed with the Board of Railway Commissioners its answer to the application of the City of Hamilton for an order directing the company to restore the passenger service between Hamilton and Burlington Beach. The company claims there is no contractual obligation to give this service, and that inasmuch as trains have not been operated over it for years, it would be unreasonable to expect the G.T.R. to provide a regular train service. The Hamilton Radial Ry. is able to provide for all the traffic except some occasional traffic during the summer.

Sunday school and other organizations which have been in the habit of promoting railway excursions during the summer have been notified that all negotiations for the running of special picnic trains have been withdrawn. The circular says: "As you are doubtless aware, all railways in Canada have been requested by the Board of Railway Commissioners to take every possible means of conserving motive power to facilitate freight train movements. At present, in conformity with the board's request, we can-

27.—A petition to be permitted to increase freight rates on a percentage plan was filed by a committee of railway presidents with the Interstate Commerce Commission today. The formal petition was filed on behalf of all the railways operating east of the Mississippi River and north of the Ohio and Potomac Rivers. A telegram was also filed, signed by 20 presidents of western railways, setting forth that they concurred in the petition, and stating that the western roads would file a similar petition at once. It is expected that the railways in the southeast will also file separate and similar petitions. The railways want the new tariff effective within 30 days.

The American Railway Engineering Association had a most successful annual convention at Chicago, Mar. 20 to 22. The following officers were elected for the current year: President, J. G. Sullivan, Chief Engineer, Western Lines, C.P.R.; First Vice President, C. A. Morse, Chief Engineer and Chairman Valuation Committee, Chicago, Rock Island & Pacific Ry.; Second Vice President, Earl Stinson, Engineer Maintenance of Way, Baltimore & Ohio Rd.; Secretary, E. H. Fritch; Treasurer, G. H. Bremner, District Engineer, Interstate Commerce Commission.

dard sleeping car, and is upholstered in leather. The kitchen accommodation is of the same type as is provided on the standard tourist sleeping car. The medical officers' quarters are arranged in a compartment with upper and lower berths and there is a small dispensary to each car so arranged. The ward cars consist of one large room the length of a standard sleeper, with lavatories at each end. The floors are covered with linoleum and the aisles are carpeted. The composite cars have two side entrances in addition to the usual one, these being utilized for the reception of patients, and the entrances are so arranged that heavy curtains can be drawn closely in bad weather, affording ample protection to patients already in the cars. The cars are lettered on the outside with the words Military Hospital, with a large red cross in the centre.

Loss by Forest Fires on Timiskaming & Northern Ontario Ry.—In connection with the forest fires in Northern Ontario about July 29, 1916, it is announced that the loss sustained by the T. & N.O.R. Commission was \$112,261.25, in addition to 109 freight cars, 94 of these being foreign and 15 T. & N.O.R. The insurance recoverable is \$61,336.97.

Railway Rolling Stock Notes.

The Canadian Northern Ry. has received a snow plough, no. 7338, from its Winnipeg shops.

The C.P.R. has received 89 box cars and 1 automobile furniture car from its Angus shops, Montreal.

The Dominion Steel Foundry Co. has received 1 Columbia (2-4-2) switching locomotive from Canadian Locomotive Co.

The Algoma Eastern Ry. purchased recently 1 ten wheel, and 4 consolidation locomotives from Chicago Great Western Ry.

The Timiskaming & Northern Ontario Ry. will be in the market shortly for a small number of box cars, details for which are under consideration.

The Dominion Government is reported to have purchased 13 locomotives, which were used by contractors on the Welland Ship Canal, for shipment to France for war purposes.

The Canadian Car & Foundry Co. has completed delivery of an order for 1,500 high sided gondola cars, and 500 sets of steel work for same, for the Paris & Orleans Ry., France. Details of these have been given in previous issues.

Recent advices announced that the Algoma Eastern Ry. was contemplating buying some steel ore cars of a special type, but we are now officially advised that the management does not contemplate purchasing any steel cars.

The C.P.R. has ordered the following additions to rolling stock to be built at its Angus shops, Montreal: 6 freight refrigerator cars, 36 steel underframe box cars, 40 tons capacity, 1 automobile furniture car, 7 vans and 2 steel underframe flat cars, 40 tons capacity.

The Toronto, Hamilton & Buffalo Ry. has ordered 4 six wheel switching locomotives from Canadian Locomotive Co. Following are the chief details:

Weight in working order, drivers	166,000 lbs.
Wheel base, rigid	11 1/4 ft.
Wheel base, engine and tender	45 ft. 4 1/2 ins.
Heating surface, firebox and arch tubes	142 sq. ft.
Heating surface, tubes	1879 sq. ft.
Heating surface, total	2021 sq. ft.
Driving wheels, diar.	51 ins.
Driving wheel centres	Cast steel
Driving journals	9 by 12 ins.
Cylinders, diar. and stroke	21 by 28 ins.
Boiler, type	Radial stayed
Boiler pressure	180 lbs.
Tubes, no. and diar.	165-2 ins.; 22-5 1/2 ins.
Tubes, length	16 ft.
Brakes	Westinghouse American
Packing	King metallic
Superheater	Locomotive Superheater Co.'s Type A
Fire door	Franklin butterfly type
Brick arch	American Arch Co.
Valve Motion	Walschaerts
Reverse gear	Casey-Cavin power type
Weight of tender, loaded	110,000 lbs.
Water capacity	5,500 galls.
Coal capacity	8 tons
Tank, type	U shape, steel coal gate
Truck, type	Arch bar
Wheels	Solid steel 33 ins.
Journals	5 by 9 ins.
Brake beams	Buffalo
Axle boxes	McCord

The Russian Government has ordered from the Canadian Car & Foundry Co. 2,000 four-wheeled box cars, 5 ft. gauge, each of 1,200 poods (approximately 43,200 lbs.) capacity. Of these, 1,600 will have cabs, and 400 will be without cabs. The design of these cars is after the style of the regular continental type, with buffers, screw couplings and semi-elliptic bearing springs, resting on journal boxes and connected by means of brackets through shackles to the side sills. The wheels are to be of chilled cast iron, 39 3/4 in. diar, on the tread line. They will be

equipped with air and hand brakes, with four brake beams to each car. The Russian Government has 3,000 similar cars on order with the Eastern Car Co., mention of which was made in our last issue. Following are the chief details:

Length over buffers, without cab	26 ft. 10 1/2 ins.
Length over buffers, with cab	28 ft. 10 3/4 ins.
Length over end sill, without cab	22 ft. 11 3/4 ins.
Length over end sill, with cab	24 ft. 11 5/16 ins.
Wheel centres, without cab	12 ft. 9 7/8 ins.
Wheel centres, with cab	13 ft. 1 1/2 ins.
Height of buffer	3 ft. 4 3/4 ins. from rail
Screw coupling centre	3 ft. 4 3/4 ins. from rail
Height over all	12 ft. 5 5/16 ins.
Extreme width	9 ft. 8 ins.
Height inside	7 ft. 8 1/2 ins.
Width inside	9 ft.
Length inside	22 ft. 9 ins.
Width over roof	9 ft. 8 ins.

Following are chief details of the 10 Mikado (2-8-2) locomotives, which the G.T.R. has ordered from Canadian Locomotive Co., and of 5 similar locomotives ordered from the American Locomotive Co.:

Weight in working order on drivers	205,000 lbs.
Weight in working order, total	276,000 lbs.
Wheel base of engine, rigid	16 ft. 6 ins.
Wheel base of engine, total	35 ft. 1 in.
Wheel base, engine and tender	67 ft. 7 3/4 ins.
Heating surface, firebox and arch tubes	235 sq. ft.
Heating surface, tubes	3,413 sq. ft.
Heating surface, total	3,648 sq. ft.
Driving wheels, diar.	63 ins.
Driving wheel centres	Cast steel
Driving journals, diar. and length Main 11 by 20, others 10 by 12 ins.
Cylinders, diar. and stroke	27 by 30 ins.
Boiler, type	Radial stayed
Boiler pressure	175 lbs.
Tubes, no. and diar.	228-2 ins.; 32-5 3/8 ins.
Tubes, length	20 ft.
Brakes	Westinghouse American
Packing	King Metallic
Superheater	Locomotive Superheater Co.'s Type A
Fire door	Franklin butterfly type
Brick arch	American Arch Co.
Reverse gear	Casey-Cavin power type
Weight of tender loaded	166,000 lbs.
Water capacity	7,500 galls.
Coal capacity	12 tons
Tank, type	Hopper bottom
Truck, type	Pedestal with equalizer
Wheel, diar.	Solid steel, 33 ins.
Journals	6 by 11 ins.
Brake beam	Buffalo
Axle boxes	McCord

Railway Finance, Meetings, Etc.

Guelph Jct. Ry.—The Guelph, Ont., City Auditor reported to the City Council, Mar. 1, that the profits from the G.J.R. for 1916 were \$40,147.58, or \$4,387.50 in excess of the estimate.

Pere Marquette Rd.—The rights resting in the junior security holders of this railway were sold under orders of the court in the receivership proceedings, Mar. 16, for \$10,300,000 to Cox & Phillips, New York, trustees for the reorganization managers. The rights are covered by the consolidated and refunding mortgages of the line. The property of the company includes the Lake Erie & Detroit River Ry. in Canada, together with a contract with the Michigan Central Rd. for running rights from St. Thomas, Ont., to Buffalo, N.Y.

Timiskaming & Northern Ontario Ry.—Passenger earnings for Jan., \$44,958.79; freight earnings, \$101,717.52; total earnings, \$146,676.31, against \$35,015.60, passenger earnings; \$111,096.65, freight earnings; \$146,112.25, total earnings, for Jan., 1916.

In his budget speech in the Ontario Legislature recently the Provincial Treasurer said: "We have got \$1,000,000 from the T. & N.O.R., of which \$528,000 is net profit, and \$400,000 profit and loss account."

Investigation into Pacific Great Eastern Railway Affairs.

The British Columbia Legislature has appointed a special committee to investigate all matters connected with the financing of this company from its inception in 1912. The Premier, in moving the resolution, Mar. 12, traced the whole course of the legislation affecting the company's incorporation, the guaranteeing of its bonds and the payments made by the government to the company from time to time. He is reported to have said: "We put auditors on the company's accounts and they report that the company received \$5,704,000 more than it was entitled to. . . . Chief Engineer Gamble has reported to me that to complete the road from North Vancouver to Fort George there is required in addition to the amount paid out, and the amount of the loan paid over, approximately \$10,779,000."

The Premier laid before the legislature, Mar. 12, the report of the auditors, Price, Waterhouse & Co., on the financial relations between the government and the company to which he had referred in his speech, Mar. 10. The report shows that the total securities guaranteed by the province amounted to \$20,160,000, equal to \$42,000 a mile. The purchase price of the old Howe Sound & Northern Ry., extending from Squamish towards Pemberton Meadows, was \$193,068.62. After a very lengthy examination of the accounts, the auditors, in conclusion, state that the company received from the government \$5,704,316.50 more than it was entitled to, according to the auditors' interpretation of the acts as confirmed by the Attorney General's Department.

The special committee met Mar 15, and organized with J. W. deB. Ferris, of Vancouver, as chairman. Among the counsel engaged are: S. S. Taylor, K.C., for the government; H. A. Maclean, K.C., for the company, and E. P. Davis, for P. Welch, the general contractor.

Toronto Express Delivery and Collection Limits.

In the recent application of Toronto for an extension of the free collection and delivery area for express companies, D'Arcy Scott, Assistant Chief Commissioner, Board of Railway Commissioners, delivered judgment, Mar. 27, extending the free area to include the sections south of St. Clair Ave., known as Wychwood and Bracondale, on both sides of the streets. Beyond that a pick up and delivery system for a toll, to be arranged from time to time, is established. This latter zone should be at any place within half a mile from the nearest free zone limit, except the southern limit, which is bounded by the water front, beyond which there should be no delivery, even for a toll. The minimum charge for picking up and delivering one or more parcels in one consignment aggregating not over 100 lbs., to be 15 cents; over 100 lbs. and not exceeding 200 lbs., 25 cents, and so on, adding 10 cents for each additional 100 lbs. or fraction thereof. Persons outside the free area, not desiring to have parcels delivered to notify the companies, otherwise the companies may exercise their powers under the Railway Act for the collection of tolls. The companies shall not be bound to deliver parcels beyond the free zone unless the through-fares are reasonably passable for express wagons. An order will be issued on these lines effective May 1.

Canadian Pacific Ry. Construction, Betterments, Etc.

Eastern Lines.—The appropriations for the year provide for 445 miles of ballasting, the putting in of 1,517,790 new ties, the provision of 175,000 rail anchors, and the replacing of 400,000 tie plates.

New Brunswick District.—The appropriations for the year provide for: Six stall locomotive house extension, new cinder pit, 40,000 gal. tank and standpipe at Bay Shore, St. John; 60,000 gal. tank, standpipe, etc., at Jackson; and 40,000 gal. tank with standpipes at Hobe.

Algonquin Hotel, St. Andrews, N.B.—portion of the fourth story is being remodelled to provide 16 additional guest rooms, with 10 bathrooms and 2 private lavatories. A new dormitory building, 126 x 30 ft., for the hotel servants is under construction directly opposite the power house. It is to be finished in stucco and half timber, with a covered verandah, 68 x 10 ft., facing the street. The building will contain a common or lounge room, 16 x 28 ft., on the ground floor, 31 cubicles, each accommodating 2 men; eight rooms for married couples and superior staff, with a separate entrance at one end, and baths and lavatories on each floor. The building will accommodate 78 people, and will cost \$24,000.

Quebec District.—The appropriations for the year provide for new outbound freight shed, repairs to inbound freight shed, new platforms and other work at Sherbrooke; 2-track coaling plant, sand house, etc., and cinder pit at Farnham; electric interlocker at Montreal West; umbrella roof at Place Viger, Montreal; extension to locomotive house and other work at Glen yard; extension to block signals at St. Therese; umbrella roof, additional trackwork and other work at Quebec station; completion of diversion at Meath, Ont.; 7-stall extension to locomotive house, 200 ton coaling plant, sand house, ash pit, 65,000 gal. tank and some additional track at Smiths Falls.

Ontario District.—The appropriations for the year provide for: Automatic signals at Glen Tay and Agincourt; new freight shed at Belleville; new superstructure bridge, 107.2, McTier Subdivision; rearrangement of West Toronto and Lambton freight yards; extension to freight shed at West Toronto; additional office accommodation over present station at London; rebuilding London St. bridge, Windsor.

A press report states that C.P.R. engineers have made surveys and are making tests at the crossing of the macadamized road in Galt, with a view to building a subway under the railway tracks.

We are officially advised that all plans for building of a second track between North Toronto and Leaside have been filed, both with the city and the county authorities, and that application has been made to the Board of Railway Commissioners for their approval.

Western Lines.—The appropriations for the year provide for a large amount of ballasting and ditching; the supply of 375,576 tie plates, 313,600 rail anchors and 1,688,788 ties.

Manitoba District.—The appropriations for the year provide for extension of yards, including additional tracks to locomotive house, new sand and ash pit at Ignace, Ont.; new coaling plant and ash pit at Brandon, Man.

Tenders are under consideration for the construction of a small stream tunnel

near Keewatin, Ont., and for the construction of 6 section houses and 4 frame stations at various points on the Manitoba Division.

Saskatchewan District.—The appropriations for the year provide for new express building, including extension to freight shed, at Regina.

Tenders are under consideration for six no. 4 section houses; nine A2 stations; extending a freight shed by 192 ft.; deepening reservoir approximately 250 x 700 ft., and for a diversion of Frenchman's River in three places.

British Columbia District.—The appropriations for this year provide for: Automatic signals at Glacier; new ice house and extension of yards at Okanagan; extension of Pier D., dredging and masonry walls, Vancouver. This work is already in progress, the pile driving being well advanced. The pier will be doubled in length and will be made 15 ft. wider, and when completed will berth five large vessels. As soon as Pier D. is finished preparations will be made for starting Pier B. The growth of the fruit traffic has necessitated the building of a new ice house of 3,500 tons capacity at Okanagan. The work to be done on the division will also include some small terminal extensions at Smelter and a new station at Field.

The walls of the general waiting room at the C. P. R., Vancouver station, have been beautified by a completed series of mural paintings of the most striking mountain views to be seen from the line between Calgary and the coast. They are the work of Mrs. A. Langford, and taken in order from the north-west corner westward, are: Mount Stephen and Kicking Horse River, as seen from Field; Lake Louise, as seen from Chateau Lake Louise; the Falls at Banff; Mount Temple, as seen from the main line near Lake Louise; Banff, under the light of an evening sky; Mount Agnes and the other lakes in the clouds; the creek leading to Moraine Lake in the Valley of the Ten Peaks; the Beehive, as seen from the Lake Louise station trail; the Gap; the Three Sisters; Mount Wapta with Summit Lake; Castle Mountain; The Crow's nest; the Lions, from Vancouver Golf Links; Cathedral Mountain; Mount Regis,

Aerial Service for Prince Edward Island.—A Charlottetown press dispatch says that a branch of the Aerial League's Canadian Division has been organized there, with F. W. Hyndman as President, and that a committee was appointed to promote the organization of an aeroplane company to manufacture machines and conduct an aerial service between the Island and the mainland, so as to provide constant daily communication in winter as well as summer.

Railway Lands Patented.—Letters patent were issued during February, respecting Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acres.
Calgary & Edmonton Ry.	2,716.54
Canadian Northern Alberta Ry.	14.70
Canadian Northern Ry.	160.00
Canadian Pacific Ry. grants	8.51
Canadian Pacific Ry. roadbed and station grounds	6.80
Edmonton, Dunvegan & British Columbia Ry.	24.70
Grand Trunk Pacific Ry.	7.62
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.	9,436.44
Total	12,375.51

Contractors' Suit Respecting C.P.R. Yard Construction.

John Marsch, contractor, Chicago, Ill., has entered suit in a British Columbia court against Foley Bros., Foley, Welch & Stewart, and the C.P.R. to recover \$285,627 for work done, etc. The plaintiff was a sub-contractor for the laying out of a freight clearing yard between the Kenora and the Lac du Bonnet subdivisions of the C.P.R., for which the Foley firms had the general contract, the work done including the Transcona yards. The contract was entered into May, 1912, provision being made for certain unit prices and for payment of 90% of the sum earned in cash month by month. It was agreed that the general contractor was to complete and deliver 28 miles of completed track and one of the humps, requiring 850,000 cu. yds. of train fill to be removed, by Sept. 1, 1912. Foley, Welch & Stewart also agreed in certain letters to pay all charges to the C.P.R. for pilot services. Work to the extent of \$562,586 was admitted as being satisfactorily done, including the removal of 2,061,080 yards of train fill for \$474,048 and the laying of over 95 miles of track. Altogether Marsch received \$573,387 from Foley, Welch & Stewart, but the latter firm disputes liability for payment of additional charges for work done amounting to \$285,627. Only a portion of this claim is made against the C.P.R., and then only because it was a consenting party to the contract between Foley, Welch & Stewart and Marsch. It is charged that in making up the final certificate, the C.P.R.'s Chief Engineer failed to exercise independent judgment and was prevented from doing so by the various defendants, and that the certificate was issued in collusion with them.

Grain Inspection at Western Points.

The following figures compiled by the Department of Trade and Commerce, show the number of cars of grain inspected on railways at Winnipeg and other points on the Western Division, for February, and for six months ended Feb. 28, compared with those inspected for six months ended Feb. 29, 1916.

	6 months to		6 months to	
	Feb. 1917.	Feb. 1917.	Feb. 1917.	Feb. 1916.
C.P.R.	4,199	75,856	115,070	
C.P.R., Calgary	976	4,654	3,285	
C.N.R.	3,098	39,482	58,695	
G.N.R., Duluth	533	1,404	3,116	
G.T.P.R.	739	14,823	29,471	
Totals	9,545	136,219	209,637	

Workmen's Compensation on Timiskaming & Northern Ontario Ry.—During 1916, 75 claims were registered on the books and submitted to the Workmen's Compensation Board for adjustment. Of these, 38 were passed and paid, 26 were disallowed and 11 were kept in abeyance. The 38 claims paid amounted to \$3,476.15, an average of \$91.48. The insurance cost for the year, based on premium paid in 1915, would amount to \$17,224.10, or an average premium of \$454.27, to protect an average award of \$91.48.

The Institution of Civil Engineers Council has invited any of the Canadian Society of Civil Engineers members, who may be visiting England, to use the Institution's library and reading rooms in London, as well as attend its meetings. A letter of introduction from the Canadian Society of Civil Engineers will be necessary.

Canadian Northern Railway Construction, Betterments, Etc.

Mount Royal Tunnel & Terminal Co.—The Board of Railway Commissioners has authorized the company to build its railway temporarily, for not exceeding five years, from Feb. 26, 1917, across Cote de Liesse Road, between St. Laurent Parish and Mount Royal.

It is reported that a single track has been laid through the tunnel in order to take in material for the building of the temporary station and other work which is now in progress. When the station building is finished, which it is expected will be by the autumn, a second track will, it is said, be laid to care for the traffic. Buildings are being torn down now for the erection of the temporary station, which will be placed in the block bounded by Cathcart, St. Monique, La-gauchetiere and Mansfield Sts. The entrance to the temporary station will be on Lagauchetiere St., and the building will be used as an express building when the whole scheme has been completed. When the work has been entirely finished the station premises will extend from Lagauchetiere to Cathcart Sts., and will, it is said, be roofed over in such a way that it will be possible to erect houses on the roof. It will be much like the subway stations in New York.

Western Lines.—M. H. MacLeod, General Manager and Chief Engineer, is reported to have stated that as soon as the weather conditions are favorable work will be started on the erection of the new station at Fort William, Ont. The new building, which will be erected a little to the north of the present station, will be similar to the Port Arthur one, and its probable cost is reported at about \$50,000.

We are officially advised that there is no foundation for a recent press report that the company is about to build a new locomotive house at Rainy River, Ont.

The Board of Railway Commissioners is being asked to approve plan of the proposed new main freight line, general layout, of new subway on Water St., and approach to Red River bridge at Winnipeg. The City of Winnipeg is interested as it has expended \$80,000 in putting in the substructure for a new bridge at Provencher Ave. The matter was discussed at a meeting of the council's works and property committee, Mar. 14, when it was said there is now just enough room for the city's street to run under the C.N.R. approach and reach the bridge at an altitude which renders it reasonably secure from floods. If the C.N.R. is allowed to cross the street further east, either the grade on to the bridge from the subway will be so steep that it will render the bridge valueless as far as Winnipeg is concerned, or the two first spans will be so low that high water will flood it and might easily carry the spans out. There appears to be only one other solution—the raising of the C.N.R. bridge approach.

A press report states that the plans for the electrification of the company's line to Victoria Beach will not be carried out this year. It is said they provide for connecting up the line with the Winnipeg Electric Ry. in East Kildonan.

M. H. MacLeod, General Manager and Chief Engineer, on his return to Winnipeg from Toronto, Mar. 19, is reported to have said the question of building new lines in the west was not brought up

when the estimates for the year's work were under consideration. There is little likelihood of any new construction being started this year. Some improvements will be made at Grand Beach to meet public demands.

We have been advised that the grading on the line from Oliver to St. Paul de Metis, Alta., which is being built under guarantee of bonds by the Alberta Government, has been completed for 100 miles. Track has been laid for about 18 miles to the first crossing of the Saskatchewan River, and it is expected to lay track on the balance of the 100 miles graded this year if the rails can be secured. This line is being built under the charter of the Canadian Northern Western Ry., which was declared to be a work for the general advantage of Canada, from Mar. 1. As projected the line will be continued easterly to the Alberta-Saskatchewan boundary line, where it will be connected with a line now under construction northerly and westerly from North Battleford, Sask.

Another C.N.W.R. branch line is under construction from Onoway, for which the Government has guaranteed the bonds for \$20,000 a mile for 100 miles. The Premier stated recently in the Alberta Legislature, that in 1913 grading was done on 73.9 miles of this line and steel laid on 32.3 miles; in 1914, a considerable amount of bridge work was done, and in 1915 an additional 1.53 miles of track were laid, the line being in operation to Sangudo, near the end of steel.

C. L. Hall, contractor's engineer in charge of the foundation work for the C.N.R. station on the False Creek flats, Vancouver, is reported to have said that over 2,000 of the 2,500 piles have been driven and two-thirds of the concrete mass has been placed on the top of the piles. The piles are being driven in groups, averaging about 35 in a group; each group is enclosed in a wooden caisson, as the water level in False Creek is almost up to the ground flood. The next step in the preparation of the foundation is the excavation around the piles and inside the caisson. Then the piles are cut off to the proper height and concrete is spread over the top, this concrete forming the base on which the columns of the building will rest.

The company's contract with the City of Vancouver calls for the completion of the terminal station, the sea wall, terminal trackage, tunnel under Mount Pleasant and a 250-room hotel by Feb. 5, 1918. The Mayor is reported to have said, Mar. 1, that the declaration of the C. N. Pacific Ry. to be a work for the general advantage of Canada does not affect this agreement, and would not interfere with the city's action in endeavoring to have pressure brought to bear upon the company to fulfil its agreements. Sir William Mackenzie, on his recent visit to Victoria, had made a suggestion as to an extension of time for the completion of the work, but the council, said the mayor, were not inclined at present to grant any.

The clearing of the track on the Lulu Island Branch has been completed and a train service has been started, connection being made with the British Columbia Electric Ry. at Ewen Ave.

On his recent visit to Victoria, Sir William Mackenzie is reported to have applied to the Provincial Government for

an increase of subsidy on account of the uncompleted mileage of authorized lines on Vancouver Island. The legislature authorized the guaranteeing of bonds for \$35,000 a mile for 250 miles of railway on the island; in addition to this the legislature also guaranteed bonds in respect of the construction of 145 miles of branch lines on the mainland, upon which construction has not yet been started.

The complete operation of the line from Patricia Bay to Victoria is expected at an early date, and it is also expected to lay track from Victoria to Alberni this year if rails can be obtained.

For the terminals in Victoria plans have been filed showing a 26½ acre area on the Songhees Indian reserve, and it is reported that the company has been advised to submit an offer to the government for the purchase of this site.

A. Angstrom, naval architect, was at Patricia Bay recently inspecting the car ferry terminals, now nearly completed, in connection with the preparation of plans for the building of another car ferry. (Mar., pg. 104.)

New England Lake and Rail Case.

The Interstate Commerce Commission gave a decision, Feb. 12, re Tariff I.C.C. 146, issued by C. J. Pierce, Manager, National Despatch-Great Eastern Line, Boston, Mass., to become effective July 15, 1916, which proposed to increase certain rates, rail lake and rail, and rail and lake, via the G.T.R. and the Northwestern Steamship Co., formerly known as the Port Huron & Duluth Steamship Co., from certain points in New York and New England to Duluth and St. Paul, Minn., and points taking the same or related rates. The order is as follows:

By order dated July 11, 1916, the commission entered upon a hearing concerning the propriety of the increases and the lawfulness of the rates, charges, regulations, practices stated in Agent C. J. Pierce's tariff I.C.C. 146, and on Oct. 19, 1916, ordered that the operation of said schedules be suspended until May 12, 1917.

A full investigation of the matters and things involved has been had, and the commission order that the carriers respondent herein be required to cancel said tariff on or before May 11, 1917, in so far as it proposes new rates on granite from stations on the Central Vermont Ry. and Montpelier & Wells River Rd. to points taking Duluth or St. Paul rates; that the carriers respondent herein be required to cancel said tariff on or before May 11, 1917, in so far as it proposes increased rates on ammunition and cart-ridges, and that the orders heretofore entered in this proceeding suspending the operation of said tariff, except in so far as it proposes rates which the carriers respondent are hereby directed to cancel, be vacated and set aside as of May 11, 1917, and that this proceeding be discontinued.

Maximum Length of Trains.—The Board of Railway Commissioners has decided that under existing conditions it would not be justified in fixing a maximum length for freight trains. The commission on its own motion took up the question and heard the views of the railways and railway employees. Commissioner McLean, in giving judgment, holds that during the war the expeditious movement of freight should be the first consideration. When the war is over the question of regulating the length of trains will be taken up again.

Traffic Orders by Board of Railway Commissioners.

Pig Lead, Spelter and Antimony Rates.

25894. Feb. 22. Re complaint of Consolidated Mining & Smelting Co. of Smelter, B.C., against increase by C.P.R. of rate on pig lead, spelter and antimony, from Smelter to eastern points; and order 24968, May 6, 1916, suspending item 20A on page 2 of Supplement 13 to C.P.R. Tariff C.R.C. no. W. 2110. Upon the report and recommendation of the Chief Traffic Officer of the board, no objection to the rescission of order 24968 having been filed by the applicant, and rates being now provided in Tariff C.R.C. no. W. 2190, it is order that order 24968 be rescinded.

Rates on Copper Commodities.

25897. Feb. 22. Re application of Consolidated Mining & Smelting Co. of Smelter, B.C., for suspension of proposed cancellation of rates on copper commodities to points in eastern Canada; and order 25082, June 17, 1916, suspending the proposed cancellation. Upon the report and recommendation of the Chief Traffic Officer of the board, no objection having been filed by the applicant company to the suspension order being lifted, and rates being now provided in C.P.R. Tariff C.R.C. no. W. 2190, it is ordered that order 25082, suspending proposed cancellation of rates on copper commodities from Smelter, Grand Forks and Greenwood, B.C., to points in Eastern Canada, as shown in C.P.R. Tariff C.R.C. no. W. 2147, effective June 15, 1916, and requiring the C.P.R. to continue in force the rates on the said commodities to points in Eastern Canada as contained in its Tariff C.R.C. no. W. 2056, until further order, be rescinded.

Essex Terminal Railway Tariffs.

25903. Re application of Essex Terminal Ry., under sec. 327 of the Railway Act, for approval of its Standard Freight Tariff C.R.C. no. 361, cancelling Standard Tariff C.R.C. no. 37, approved by order 10016, Mar. 30, 1910. Upon the report and recommendation of the Chief Traffic Officer of the board, it is ordered that the company's Standard Tariff C. R. C. no. 361 be approved; and it is further ordered that order 10016, approving the company's Standard Freight Tariff C. R. C. 37, be rescinded.

Milling in Transit Arrangements at Montreal.

25904. Feb. 26. Re application of Montreal Board of Trade Transportation Bureau, on behalf of Dominion Flour Mills, Ogilvie Flour Mills, and St. Lawrence Flour Mills, for an order disallowing the portion of C.P.R. Supplement 33 to Tariff C.R.C. no. E. 1196, Supplement 6 to C.R.C. no. E. 3120, Supplement 1 to C.R.C. no. E. 3137, and Supplement 1 to C.R.C. no. E. 3214, cancelling milling-in-transit arrangements on grain milled at Montreal and reshipped to points on Canadian Government Railways, also to Halifax, N.S., for export: It is ordered as follows, pending judgment on the application, that the clause in the following C.P.R. schedules purporting to cancel on and after Mar. 3, the existing milling-in-transit arrangement at Montreal, with respect to destinations on the Canadian Government Railways, be suspended, viz.: Supplement 6 to C.R.C. no. E. 3120 and Supplement 33 to C.R.C. no. E. 1186; and that, commencing Mar. 10, there be added to the company's Tariff C.R.C. no. E. 3261, rates to Halifax, that with respect to the rates to St. John, N.B., therein shown, shall preserve the pre-ex-

isting relationship; and it is further ordered that Supplement 1 to company's Tariff C.R.C. no. E. 3137 and Supplement 1 to C.R.C. no. E. 3214, be suspended until and including Mar. 9.

Canadian Northern Passenger Tariff.

25944. Mar. 16. Approving application of Canadian Northern Ry. Co., under sec. 331 of the Railway Act, for approval of Supplement 1 to its Tariff C.R.C. no. W-1283, providing for a maximum passenger fare of 4c a mile west of Tannis, Alta.

Switching Dispute at Winnipeg.

25951. Mar. 19. Re dispute between Grand Trunk Pacific and Canadian Northern Railways regarding reparation claimed by G.T.P.R. on account of Canadian Northern interswitching to Canada Cement Co.'s spur, Winnipeg. Upon hearing the matter at Winnipeg, Mar. 16, in the presence of counsel for the railway companies, it is ordered that the same be dismissed.

Lining Cars for Flax Seed.

25956. Mar. 22. Re order 23894, June 22, 1915, disallowing conditions with respect to shipment of flax seed in bulk, effective Oct. 12, 1914; and the C.P.R. application for leave to charge \$3 a car for lining cars for the carriage of flax seed. Upon hearing the matter at Winnipeg, Mar. 16, the Northwest Grain Dealers' Association and the Canadian Pacific, Canadian Northern, and Grand Trunk Pacific Railways being represented, and upon reading the protest filed by the Northwest Grain Dealers' Association against the said charge, it is ordered that the said railway companies be authorized to charge \$3 a car for lining cars for carriage of flax seed in bulk, subject to conditions set out in order 23894.

Filing of Express Tariffs.

General order 183, Feb. 24. Re general order 14 (order 5117), July 30, 1908, and the application of the Express Traffic Association of Canada for an order providing that the same arrangement be accorded to the express companies: Upon reading what is filed by the Express Traffic Association of Canada, on behalf of express companies, and the report and recommendation of the Chief Traffic Officer of the Board, it is ordered that the arrangement whereby certain tariffs of freight or passenger tolls may be filed with the board by agents, other than officials of the companies, acting jointly for two or more railway companies, subject to the legislative authority of the Dominion Parliament, provided that the said joint agents be duly authorized to act for the several companies by power of attorney, as set forth in the said general order 14, be extended to express companies subject to the Board's jurisdiction.

Allowance for Grain Doors.

General order 184, Mar. 22. Re application of D. D. Campbell, of Winnipeg, for an order increasing the allowance for grain doors supplied by shippers to \$1.50 for the lower door, and 75c for the upper part; also that the bill therefor, when agent, be accepted by him and credited on account of freight charges. Upon hearing the application at Winnipeg, Mar. 16, the Northwest Grain Growers' Association and the Canadian Pacific, Canadian Northern, and Grand Trunk Pacific Railways being represented, the applicant appearing in person, it is or-

dered that order 8860, Dec. 10, 1909, requiring that where shippers upon railways are compelled to furnish car doors to enable cars to be used for traffic, allowance therefor to such shippers be made upon the following basis: At and west of Fort William, lower car door, \$1; upper car door, 50c; east of Fort William, upper or lower car door, each, 50c; be amended to provide that the allowance for grain doors be increased from \$1 to \$1.50 for the lower door and from 50c to 75c for the upper door, in all \$4.50 a car, the said allowance to be made at and west of Port Arthur, Ont.

Canadian Northern Ry. Lake and Rail Rates.

The Assistant Chief Commissioner, D'Arcy Scott, gave the following judgment, Feb. 26, Commissioner McLean concurring: J. P. H. Stevenson, customs broker, Toronto, complains that while the C.N.R. has lake and rail rates from Orono and Yarker, noncompetitive points on the C.N.R. east of Toronto via lake boats from Toronto Port Arthur thence C.N.R. to western points, the company's Eastern Lines lake and rail tariff C.R.C. no. E 771, does not show any rates from Toronto, the point where the lake movement begins. The clause of the Railway Act known as the long and short haul clause is subsec. 3 of sec. 326, which reads in part as follows: "And greater tolls shall not be charged therein (in a special freight tariff) for a shorter than a longer distance over the same line in the same direction, if such shorter distance is included in the longer."

The tariff in question shows arbitraries from Port Arthur to the principal points west, to be added to the rates to Port Arthur in order to arrive at the through rates. The arbitraries are the local tariff rates of the C.N.R. Western Lines. The C.N.R. (Western Lines) is therefore a party to through lake and rail rates from Toronto, the other party being the steamship company, and this being so, under the clause of the Railway Act above quoted, which in my opinion applies in this case, the through rates from Toronto cannot be greater than the through rates from Orono, Yarker, and other C.N.R. points east via Toronto. It may be noted also that the tariff itself is a publication of the C.N.R. (Eastern Lines) and is filed with the board by that company.

Steam Railway Track Laid in 1916.—

In an article on this subject appearing in Canadian Railway and Marine World for Feb., pg. 56, estimates of the track laid in 1916 were used in reference to the Alberta & Great Waterways Ry., the Central Canada Ry., and the Edmonton, Dunvegan & British Columbia Ry., crediting them with having laid 110.50 miles of new track, viz.: 40 miles, 1.96 miles and 68.60 miles respectively. We have now been officially advised of the exact new trackage laid, which is as follows: Alberta & Great Waterways Ry., mileage 174.20 to 202.12 in the direction of McMurray, 27.92 miles. Central Canada Ry., to Peace River Crossing, 1 mile, and an industrial spur of 0.63 of a mile. Edmonton, Dunvegan & British Columbia Ry., Spirit River to Grande Prairie (Grande Prairie Branch), 50.2 miles; main line mileage 334.7 to 356.9, or 22.2 miles; total 72.6 miles. This makes a total of new main and branch line track of 101.32 miles and 0.63 of a mile of a spur track. This reduces the total mileage of new track laid in Canada in 1916 from 285.94 miles to 276.76 miles.

Mainly About Railway People Throughout Canada.

Mrs. Webster, wife of James Webster, President and General Manager, Caraqueet Ry., died at her home in Toronto, Mar. 20.

David Pottinger, I. S. O., who was General Manager of the Intercolonial Ry. for many years, is visiting Toronto, accompanied by Mrs. Pottinger.

M. J. MacAndrew, Road Foreman of Locomotives, Michigan Central Rd., St. Thomas, Ont., died suddenly, while on duty, at Victoria Park, Ont., Mar. 19.

Lord Shaghnessy was announced to address the Royal Colonial Institute in England on April 3, on Canada, but circumstances have made it impossible for him to go overseas at present.

F. Ronaldson, Master Mechanic, Ontario District, C.P.R., Toronto, had an arm broken and a shoulder injured, when a portion of a C.P.R. eastbound train left the rails near Belleville, Ont., Mar. 6.

Sir John Kennedy, Consulting Engineer, Montreal Harbor Commission, and Hiram A. Calvin, formerly a Kingston, Ont., ship owner, have been elected fellows of the Royal Colonial Institute.

W. Woollatt, Vice President and General Manager, Essex Terminal Ry., Walkerville, Ont., has been appointed a member of the Provincial Resources Committee, constituted under the Ontario Legislature's authority.

Sir Henry Drayton, Chief Commissioner, Board of Railway Commissioners, has been elected President of the Ottawa Vacant Lots Association, and has given \$500 to be distributed by the association in prizes.

T. F. Savage, who has been appointed Special Agent, Guelph Jct. Ry., Guelph, Ont., was for 47 years with the Great Western Ry., the G.T.R. and C.P.R., and retired under the C.P.R. pension rules, Jan. 1. He will look after the solicitation of traffic in Guelph and points west to Goderich.

Alexander Avery, whose appointment as Livestock Agent, Canadian Northern Ry., Winnipeg, was announced in our last issue, was born at Sharbot Lake, Ont., May 30, 1880, and from May 1902 to Oct. 16, 1916, was station agent at various points, latterly for the C.N.R. at Arcola, Sask.

H. A. Woods, Assistant Chief Engineer, Grand Trunk Pacific Ry., Winnipeg, who, as mentioned in Canadian Railway and Marine World for February, was granted leave of absence for three months, and who, it was reported, would resign on the expiration of his leave, is at Mountain Lakes, N.J., with his family.

George Bury, Vice President, C.P.R., who left Montreal on Jan. 23 for England, whence he accompanied Lord Milner on a mission to Russia, was still in Petrograd early in March, and up to Mar. 22 no information had been received at C.P.R. headquarters in Montreal as to his movements. It is expected that he will return to Canada via London.

F. M. Black, who has been appointed one of the Public Utility Commissioners for Alberta, in place of the late John Stocks, has been connected with P. Burns & Co., Calgary, Alta., for the past 15 years, latterly as Treasurer. He was President of the Calgary Board of Trade for the past year, and also served on Alberta Red Cross Society's finance committee.

G. A. Delacherois, whose appointment as Roadmaster, Shuswap and Okanagan Subdivisions, British Columbia District, Revelstoke, was announced in our last

M. K. McQuarrie
Engineer, Dominion Atlantic Railway

D. J. England
Trainmaster, Canadian Pacific Railway,
Calgary, Alta.

issue, was from Dec. 1909 to June 1915, Resident Engineer, C.P.R., Saskatoon, Sask.; June 1915 to Feb. 1916, Resident Engineer, Regina, Sask.; Feb. 1916 to Feb. 1917, Resident Engineer, Winnipeg.

Frederick McDowell, who has been appointed Storekeeper, Canadian Northern Ry., Winnipeg, was born there, Oct. 22, 1883, and entered C.N.R. service, Nov. 5, 1902, since when he has been, to May 1, 1905, storeman; May 1, 1905 to July 1, 1908, shipper; July 1, 1908 to Aug. 1, 1912, store foreman; Aug. 1, 1912 to Mar. 1, 1917, General Foreman, all at Winnipeg.

Fred C. Jackson, a civil engineer on the Hudson Bay Ry., is reported to be the discoverer of the Flin-Flon Lake copper district, 650 miles northwest of Winnipeg. He had never been on a prospecting expedition before Oct., 1915, when he staked out the present Mandy claim. The Tonopah Mining Co. of Nevada bought the claim from him, agreeing to develop it and to give the original finder a 15% interest. There is said to be nearly \$15,000,000 in chalcopyrite ore in sight.

Maurice B. Helston, who has been appointed Superintendent, District 4, Western Division, Canadian Northern Ry., Calgary, Alta., was born at Michigan City, Ind., Aug. 24, 1896, and entered railway service in 1885, since when he has been, to 1890, operator, Michigan Central Rd.; 1890 to 1898, dispatcher, same road; 1898 to 1909, dispatcher, and chief dispatcher, Northern Pacific Ry.; 1909 to 1914, chief dispatcher, Canadian Northern Ry.; 1914 to Feb. 1, 1917, Superintendent, Duluth, Winnipeg & Pacific Ry., Virginia, Minn.

J. G. Macklin, M.Can.Soc.C.E., for many years Engineer of the G.T.R. Midland Division, at Peterborough, Ont., died recently in England, where he had lived for some time. He was born in England and came to Canada as a young man. His first engineering experience here was on the construction of the cantilever bridge over the Niagara River, below the Falls. His last important engineering work was the planning and construction of the dam on the Richelieu River at Chambly, Que. He is survived by a son, Lieut. F. C. A. Macklin, of the Royal Engineers.

Donald John England, who has been appointed Terminal Trainmaster, C.P.R., Moose Jaw, Sask., was born at Glen Roy, Ont., July 23, 1880, and entered C.P.R. service, Sept. 6, 1903, since when he has been, to Oct. 21, 1905, switchman, Winnipeg; Oct. 21, 1905, to Apr. 1, 1906, Yard Foreman, Winnipeg; Apr. 1, 1906, to Nov. 27, 1907, Assistant Yardmaster, Winnipeg; Nov. 27, 1907, to Dec. 10, 1910, Night Yardmaster, Winnipeg; Dec. 10, 1910, to June 19, 1913, General Yardmaster, Winnipeg; June 19, 1913, to Apr. 5, 1916, Trainmaster, Winnipeg; Apr. 5, 1916, to Feb. 20, 1917, Trainmaster, Calgary, Alta.

Geo. H. Frost, founder and for many years publisher of the Engineering News, New York, died at Plainfield, N.J., recently of paralysis. He was born in Ontario and graduated from McGill University in 1860. He went to Chicago in 1863. He was a land surveyor, and for several years an engineer on the Chicago & Northwestern Rd. He founded the Engineering News in 1874 and published it until 1911. He was president of the Courier News Publishing Co. of Plainfield, and a member of the American and Canadian Societies of Civil Engineers and honorary member of engineering societies in several States.

Daniel Francis Coyle, whose appointment as Industrial Commissioner, Canadian Northern Ry., Toronto, was announced in our last issue, was born at Stayner, Ont., June 13, 1875, and entered railway service, Aug. 15, 1892, since when he has been, to Sept., 1896, stenographer, General Superintendent's office, Western Division, C.P.R., Winnipeg; Sept., 1896, to Aug. 15, 1901, private secretary to Manager, Western Lines, C.P.R., Winnipeg; Aug. 15, 1901, to Jan. 2, 1917, assistant to R. J. Mackenzie, who was in charge of the construction of all Canadian Northern Ry. lines west of the Great Lakes, for Mackenzie, Mann & Co., the general contractors.

Malcolm Keith McQuarrie, who was appointed Resident Engineer, Dominion Atlantic Ry., Kentville, N.S., recently, was born at Sault Ste. Marie, Ont., Aug. 17, 1884, and graduated from the University of Toronto in 1907. He entered C.P.R. service in 1905, and was, to 1908, transit man, Vancouver, B.C.; 1908 to 1909, Assistant Engineer revising location of the Alberni Branch, Esquimalt & Nanaimo Ry., Vancouver Island; 1909 to 1910, Engineer on construction, Hartford Jet. Branch, C.P.R., to Wellington Camp, B.C.; 1910, Assistant Engineer, Vancouver Terminals, C.P.R.; 1911 to 1916, Resident Engineer, Field to Kamloops, Revelstoke Division, C.P.R.

J. Harry Chown, whose appointment as Superintendent, Regina Division, Saskatchewan District, C.P.R., was announced in our last issue, was born at West Flamboro, Ont., Aug. 21, 1882, and entered C.P.R. service, Nov. 28, 1904, since when he has been, to Dec. 31, 1905, clerk in General Superintendent's office, Winnipeg; Jan. 1 to Dec. 16, 1906, chief clerk, Superintendent's office, Brandon, Man.; Dec. 16, 1906, to June 30, 1910, chief clerk, Superintendent's office, Kenora, Ont.; July 1, 1910, to June 17, 1912, chief clerk to General Superintendent, Moose Jaw, Sask.; June 17, 1912, to Feb. 28, 1914, Trainmaster, Kerrobert, Sask.; Mar. 1, 1914, to Jan. 25, 1917, Trainmaster, Moose Jaw, Sask.

Peter Siems, railway contractor, St. Paul, Minn., and founder of the Siems-Carey Co., died at Daytona, Fla., Mar. 3, aged 75. He was born in Holstein, Germany and emigrated to the United States in 1865, going to St. Paul in 1870. After laying out the public highways between Black Hills and Minneapolis, he entered railway contract work in 1884 with D. C. Shepherd and Co., which later became Shepherd, Siems & Co. In 1908 the company was reorganized under the name of Siems & Co., with Mr. Siems' sons as partners. He retired six years ago and F. W. Carey became identified with the concern. Last October this company concluded a contract to build 1,100 miles of railway for the Chinese Government. Mr. Carey is now in China as resident manager of the work.

Thos. B. Townsend, who died at Aldershot, Ont., Mar. 8, was born in England in 1834, and came to Canada in 1857. He was a civil engineer, and was for many years with the old Great Western Ry. of Canada. He had charge of the rebuilding of the Desjardins Canal bridge at Hamilton, which replaced the one destroyed in the serious accident many years ago. In 1860, he designed and supervised the building of a private car used by the then Prince of Wales, afterwards King Edward VII., during his tour in Canada. In 1872 he received an appointment in the Dominion Railway and principally on the Welland Canal, until

1881. A few years later he retired from professional work and farmed at Aldershot.

Thomas Francis Rahilly, who has been appointed Superintendent, Algoma Eastern Ry., Sudbury, Ont., was born at Dior-

ite, Mich., Oct. 6, 1892, and entered railway service, June 22, 1908, since when he has been, to July 20, 1908, section hand, Chicago & North Western Ry., Michigamme, Mich.; July 23, 1908, to May 11, 1913, freight clerk, Duluth,

South Shore & Atlantic Ry., St. Ignace, Mich.; May 12 to Aug. 27, 1913, clerk in Audit Office, same road, Marquette, Mich.; Aug. 28 to Nov. 2, 1913, chief clerk to Yardmaster, Sault Terminals, same road, Sault Ste. Marie, Ont.; Nov. 3, 1913, to Nov. 30, 1914, clerk in Comptroller's Office, Algoma Central & Hudson Bay Ry. and Algoma Eastern Ry., Sault Ste. Marie, Ont.; Dec. 1, 1914, to Apr. 15, 1916, Travelling Auditor, same companies; Apr. 15 to Dec. 1, 1916, Trainmaster, A.C. & H.B.R., Sault Ste. Marie, Ont.; Dec. 1, 1916, to Mar. 1, 1917, Comptroller, Algoma Eastern Ry., Sudbury, Ont.

John G. Sullivan, M.Can.Soc.C.E., who has been elected President, American Railway Engineering Association for the current year, was born at Bushnell's Basin, N.Y., Jan. 11, 1863, and graduated C.E. from Cornell University in June, 1888. He entered railway service in July, 1888, since when he has been, to Mar., 1889, rodman, Great Northern Ry.; Apr., 1889, to Aug., 1890, rodman, instrument man and assistant engineer, Spokane Falls & Northern Ry.; Aug., 1890, to May, 1893, Assistant Engineer, Great Northern Ry. coast lines; July, 1893, to Feb., 1894, Assistant Engineer, Alberta Ry. & Coal Co.; July to Oct., 1894, section foreman, Northern Pacific Ry.; Oct., 1894, to Apr., 1895, Locating Engineer, Butte Anaconda & Pacific Ry.; Apr. to Dec., 1895, Division Engineer, Kaslo & Slocan Ry.; Dec., 1895, to Feb., 1901, Locating and Reconnaissance Engineer, and Engineer in charge of construction, Columbia & Western Ry.; Feb., 1901, to Sept., 1905, Division Engineer of Construction, Western Lines, C.P.R.; Sept., 1905, to Feb., 1907, Assistant Chief Engineer, Panama Canal; Feb., 1907, to Sept. 15, 1908, Manager of Construction, Eastern Lines, C. P. R., Toronto; Sept. 15, 1908, to Jan. 1, 1911, Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal; Jan. 1 to Oct. 9, 1911, Assistant Chief Engineer, Western Lines, C.P.R., Winnipeg, and from the latter date, Chief Engineer, Western Lines, C.P.R., Winnipeg.

Guy Tombs, whose appointment as Assistant Freight Traffic Manager, Eastern Lines, Canadian Northern Ry., Montreal, was announced in our last issue, was born near Lachute, Que., Nov. 22, 1877, and entered transportation service in Sept., 1892, since when he has been, to Apr., 1895, junior import clerk, C.P.R., Montreal; Apr., 1895, to Aug., 1897, secretary to General Manager and Secretary, United Counties Ry., St. Hyacinthe, Que.; Sept., 1897, to May, 1899, chief clerk to Canadian Agent, Central Vermont Ry., Montreal; June, 1899, to June, 1900, rate clerk, Division Freight office, G.T.R., Montreal; June, 1900, to Apr., 1901, Travelling Freight Agent, Central Vermont Ry., St. Johns, Que., and St. Albans, Vt.; May, 1901, to Dec., 1903, General Freight and Passenger Agent, Great Northern Ry. of Canada, Quebec; in May, 1903, this road was acquired by Canadian Northern Ry. interests and the office removed to Montreal in Jan., 1904, and shortly afterwards the name was changed to Canadian Northern Quebec Ry., and the jurisdiction extended to cover the Quebec & Lake St. John Ry., Apr. 1, 1908; June, 1912, to Nov., 1916, General Freight Agent, Quebec Division, C.N.R., Montreal; Nov., 1916, to Feb., 1917, General Freight Agent, Eastern Lines, C.N.R., Montreal. From the inauguration of the Canadian Northern Steamships, Ltd., to the recent absorption of that company by the Cunard Steamship Co., he was also Montreal Representative, C.N.S., Ltd.

Russian railways to preserve them.

Canadian Northern Railway Lines Brought Under Dominion Control.

By a proclamation issued Feb. 20, and appearing in a special issue of the Canada Gazette, Feb. 28, sub-sections 2, 3 and 4 of the act granting aid to the extent of \$45,000,000 to the Canadian Northern Ry. System, passed in 1914, were declared to be in effect from and after Mar. 1. This brings into force the only part of the act which has not hitherto been in effect, and so brings within the Board of Railway Commissioners' jurisdiction the Canadian Northern Saskatchewan Ry., the Canadian Northern Western Ry. and the Canadian Northern Pacific Ry. lines by declaring them to be works for the general advantage of Canada. Sec. 15 of chap. 25 of the statutes of 1914 dealt with the various lines of the C.N.R. System which were not, at the time of the making of the agreement, confirmed by the act, works for the general advantage of Canada. The first subsection of section 15 declared the C. N. Manitoba Ry., the Irondale, Bancroft & Ottawa Ry., the Marmora Ry. & Mining Co., and the Quebec & Lake St. John Ry., which had been built under Manitoba, Ontario and Quebec charters, respectively, to be works for the general advantage of Canada; subsec. 2 declared the C. N. Western Ry.; subsec. 3 declared the C. N. Saskatchewan Ry., and subsec. 4 declared the C. N. Pacific Ry. to be works for the general advantage of Canada, and subsection 5 set out that the three latter subsections should become operative on the proclamation of the Governor in Council, upon a declaration by order in Council that the lines of the companies had been constructed and were being operated over.

The Saskatchewan Legislature, by chap. 11 of the statutes of 1912, as amended by chap. 11 of the statutes of 1913, arranged to guarantee the bonds of a railway to be incorporated under C.N.R. control, to build a number of branch lines in the province, and by chap. 43 of the statutes of 1912, did incorporate the C. N. Saskatchewan Ry. Under the provisions of these acts the Saskatchewan Government entered into a contract with the C. N. Saskatchewan Ry. to build the following lines: Luck Lake line, 35 miles; Wroxton westerly, 45 miles; Shellbrook westerly, 45 miles; Kipling to New Warren, 35 miles; Lampman northerly, 45 miles; Aylesbury westerly, 50 miles; a total of 225 miles. Surveys have been made for all these lines except that from Kipling to New Warren, and construction was proceeded with on the line from Wroxton westerly and the line from Aylesbury westerly. At the end of 1915, track had been laid for 41.01 miles on the line from Wroxton and for 8.66 miles on the line from Aylesbury. The first of these two lines extends from Wroxton, on the Rosburn branch, through Yorkville to Willowbrook, and the second starts from Aylesbury, on the Regina-Saskatoon line, but only the first named appears to be in operation.

The C. N. Western Ry. was incorporated by the Alberta Legislature in 1910, with power to build the Peace River branch, through Whitecourt and Grande Prairie, to the western boundary of the province; and a line northeasterly following the Saskatchewan River to the eastern boundary of the province, which is known as the St. Paul de Metis line, and some other lines. Under the provisions of an act to aid the construction of

railways, the Alberta Government entered into a contract for the construction of certain of these lines, under a guarantee of bonds. In reply to a question in the Legislature recently, the Premier stated that 153.16 miles of the guaranteed lines were in operation; track had been laid on an additional 16 miles, and 161.2 miles further grading had been done.

The C. N. Pacific Ry. was incorporated by the British Columbia Legislature under agreement to build a railway, under guarantee of bonds, from the Alberta-B.C. boundary to Vancouver, 500 miles; a line of 100 miles from Victoria to Barkley Sound, and other lines as authorized by the Lieutenant Governor in Council. Section 8 of the agreement, which was confirmed by the act of incorporation, provides: "In consideration of the guarantee of the securities, the C.N.R. covenants that the C.N.P.R. will agree that the Lieutenant Governor in Council may make rates for the carrying of freight and passengers on the line within the province, having regard to the fact that freight may be shipped into or out of the province from or to other places in Canada," and concludes: "The C.N.R. undertakes that it will not, and that the Pacific Co. will not, bring or promote any appeal to the Railway Commissioners for Canada from any order made under and pursuant to this section, and in the event of any such appeal being brought by others, that the C.N.R. and the Pacific Co. will represent to the commission on such appeal that it is satisfied with the rates the subject of such appeal in so far as they have been established within the provisions of this section." The existence of this section in the agreement was used as an argument by the Premier in the House of Commons in 1912, upon which an amendment proposed by Sir Wilfrid Laurier to bring the whole system under Federal jurisdiction at that time was defeated and it was also used when a similar motion was made during the consideration of the act of 1914.

The Minister of Railways for British Columbia has referred the matter to the Provincial Attorney General for an opinion on the scope of the order, and the Dominion Government has been asked for a statement as to what the order is intended to cover. Pending the receipt of further information, the B. C. Government declines to make any statement on the matter.

The Railway Club of Edmonton, Alta., was organized at a meeting held there, Mar. 2, when the following officers were appointed: President, W. A. Brown, General Superintendent, Canadian Northern Ry.; Vice Presidents, J. A. MacGregor, Superintendent, C.P.R.; M. Walton, Superintendent, Grand Trunk Pacific Ry.; Secretary, J. H. Cummings, local representative, Baltimore & Ohio Rd. The purpose of the club is to enable men engaged in transportation work to get together for the exchange of ideas and to enable them to give fitting reception to prominent railway men visiting the city.

The Railway Y. M. C. A.—At a recent meeting of directors, the International Secretary requested on behalf of the National Council, the release of David Thomson, Secretary, Railway Y. M. C. A., Kenora, Ont., to organize a new department of work for returned soldiers.

Canadian Transportation Men, Engineers, Etc. in the War.

The 256th Overseas Railway Construction Battalion, which left Toronto Mar. 21, about 1,000 strong, on its way to an eastern training ground, under command of Lt. Col. W. A. McConnell, is composed largely of civil engineers, surveyors, contractors and railway construction men.

Railway Battalions Arrive.—It was officially announced in Ottawa, Feb. 28, that the 228th Railway Construction Battalion, St. John; the 257th Railway Construction Battalion, Toronto, Ottawa, and the Maritime Provinces; the 143rd Railway Construction Battalion, Victoria, and the 218th Railway Construction Battalion, Edmonton, had arrived safely in England.

Sections of Skilled Railway Employees—Canadian Railway and Marine World for February contained particulars about No. 1 Section Skilled Railway Employees, being recruited under Capt. A. H. Kendall, formerly Master Mechanic, C.P.R., Toronto. No. 2 section is now being organized under Capt. R. McKillop, formerly Superintendent, Laurentian Division, C.P.R., Montreal. Each section will consist of 3 officers and 266 other ranks, the headquarters in each case being at Montreal. They will comprise station agents, yardmasters, locomotive men, locomotive firemen, conductors, brakemen and locomotive house mechanics. Their duties in France will be to operate military trains, conveying troops, guns, munitions, supplies, etc., to the rail heads, and it is quite possible that they will be assigned to work on one of the permanent French railways. The extra working pay allowed ranges from 60c to \$1 a day. All information can be obtained at the recruiting stations in Moncton, Quebec, Montreal, Ottawa, Toronto and Winnipeg. The companies are being filled up rapidly, and it is expected that they will go overseas at a very early date.

C.P.R.'s Contribution of Men.

The C.P.R. is credited with giving more men to the British Army than any other organization in Canada. On Jan. 1, 7,114 employees of the railway had enlisted, 176 had been killed and 415 had been wounded. In April, 1916, Lord Shaughnessy's elder son, Capt. the Hon. Alfred Shaughnessy, was killed in action, and his younger son, Capt. the Hon. W. J. Shaughnessy, is now overseas with the Irish Rangers from Montreal. Jas. McNaught, one of the company's solicitors in Montreal, was killed in action recently.

The company's western lines have done magnificently, 3,814 employees having enlisted, of whom 74 have been killed and 256 wounded. In the enlistments from the western lines, clerks head the list with a total of 778, Winnipeg shops are second with 362, the wipers are third with 287, firemen are fourth with 277, and brakemen are fifth, having 275. The police department has given 76 constables to the army. Many of these are veterans of other wars. The majority of them passed through the South African campaign and are winners of both the King's and Queen's medals.

Following is a classification of western lines employees who have enlisted: Surveyors, 1; assistant engineers, 2; resident engineers, 3; locomotive men, 41; locomotive firemen, 277; wipers, 287; conductors, 23; brakemen, 275; yardmen, 82; Winnipeg shops, 362; Ogden shops, 174; various shops, 293; clerks, 778; checkers, 122; porters, 179; foremen, 16; section-

men, 113; janitors and cleaners, 11; hotel, 25; agents and operators, 161; constables, 76; British Columbia coast steamships, British Columbia lake and river service, 98; bridge and building men, 83; construction department, 32; miscellaneous, 300.

Personal Notes.

W. E. Wilford, Commissary Agent, C.P.R., Calgary, Alta., has enlisted for active military service.

Harold Brown, formerly Dock Agent, Grand Trunk Pacific Ry., Vancouver, who left there for England on Jan. 18, has received a commission in the Royal Engineers' Inland Water Service.

Capt. the Hon. W. J. Shaughnessy, younger and only surviving son of Lord Shaughnessy, has been transferred from the Irish Rangers of Montreal to the Canadian Corps Staff in France.

F. L. C. Bond, A.M.Can.Soc. C.E., Division Engineer, Eastern Lines, G.T.R., Montreal, is major in the 256th Overseas Railway Construction Battalion, which left Toronto, Mar. 21, on its way to an eastern training ground.

Lieut. F. G. English, Essex Regiment, reported missing on the Somme on Nov. 14, and now reported, through the Netherland Red Cross Society, as killed, was General Agent, Freight and Express Department, G.T.R., London, Eng.

Major D. D. Parker, in addressing the Canadian Society of Civil Engineers, electrical section, at Montreal, Mar. 15, on the co-operation of the engineer and the infantryman in trench warfare, exhibited a working model of a front line trench.

Lt. Col. J. J. Creelman, of the Canadian Artillery, son of the late A. R. Creelman, K.C., General Counsel and director, C.P.R., Montreal, was decorated with the Distinguished Service Order, by the King, at Buckingham Palace, Mar. 5.

Flight Lieut. T. S. G. Pepler, of Toronto, previously reported missing, Mar. 6, was on Mar. 27 reported killed. He was a graduate of the Faculty of Applied Science, Toronto University, and was an assistant engineer for the Toronto Harbor Board before enlisting.

Lt. Col. G. B. Fearman, Chief Accountant, Dominion Power & Transmission Co., Hamilton, Ont., who went overseas some time ago in command of a battalion, has been appointed to command the regimental depot of the first Central Ontario Battalion at Shorncliffe, Eng.

Major Jas. McGregor, formerly Superintending Engineer, Halifax Ocean Terminals, Canadian Government Railways, who went overseas with the 239th Battalion, Overseas Railway Construction Corps, C.E.F., is now in the 3rd Battalion, Canadian Railway Corps, his address being Army Post Office, London, England.

Lt. Col. F. M. McRobie, General Manager and Secretary, Canadian Transfer Co. Ltd., is in command of the 244th Kitcheners' Own Overseas Battalion, C.E.F., which completed its training in Canada recently. Its headquarters were in Montreal, but it was recruited all over Canada, having had the same privilege in this respect as the Princess Patricia's.

Private Leo Clarke (acting corporal), who was awarded the Victoria Cross some time ago, and died in hospital before the award was announced, was for several years engaged in the Canadian Northern Ry. Survey Department at Toronto. The other officials of the company who have won distinction on the field are

Major H. B. Harstone, formerly of Edmonton, Alta., having been given the D.S.O., and **Corporal James Rodgers**, of Winnipeg, being awarded the Military Cross.

Lieut. C. R. Needs, of the Aviation Service, who was killed overseas in an aeroplane, Feb. 27, was born at Bristol, Eng., Mar. 14, 1886. He entered Canadian Northern Ry. service as a draughtsman in Oct. 1910, became rod man April 1, 1911, and instrument man May 1, 1911, his work being on the Toronto-Ottawa line. On Aug. 14, 1911, he was appointed Resident Engineer on the Sudbury-Port Arthur line, leaving the service Nov. 21, 1913, when the work was completed. After the outbreak of war he was engaged for a time as inspector of munitions at Galt, Ont.

R. McKillop, heretofore Superintendent, Laurentian Division, C.P.R., Montreal, who has been appointed officer commanding No. 2 section, Skilled Railway Employees, with rank of captain, was born in Scotland, Dec. 26, 1884, and entered C.P.R. service, July 23, 1905, since when he was, to Feb. 9, 1915, Assistant Engineer and Chief Draughtsman, Engineering Department, Montreal; Feb. 5 to Dec. 13, 1915, Division Engineer, Eastern Division, Montreal; Dec. 13, 1915, to July, 1916, Superintendent, District 2, Atlantic Division, Woodstock, N.B.; July, 1916, to Feb., 1917, Superintendent, Laurentian Division, Quebec District, Montreal.

Brevet Lt. Col. Wm. Beaumont Anderson, of the Royal Canadian Engineers, who has been appointed a member of the Distinguished Service Order, is a son of Lt. Col. W. P. Anderson, C.M.G., Reserve of Officers, Chief Engineer, Marine and Fisheries Department, Ottawa. He was born Sept. 9, 1877, and graduated from the Royal Military College, Kingston, Ont., in 1897. After serving at Halifax, he was for some time General Staff Officer, with headquarters at Montreal. He is now A.Q.M.G., at the Canadian Corps headquarters in France. His father served in the Fenian raids in 1866 and 1870, and has the General Service Medal with two clasps.

E. W. Du Val, Superintendent, Saskatoon Division, Saskatchewan District, C.P.R., Saskatoon, who has been given leave of absence for overseas duty, and biographical information about whom was published in our last issue, after taking an officer's training course at Regina, for a has qualified as a lieutenant and has been appointed to take the Saskatchewan University draft overseas, to reinforce the University Battalion in France. He is now at Saskatoon, enlisting, equipping and training the draft, and will probably go overseas in May. He has two brothers overseas, one in England after being wounded, the other on the Bulgarian front, having gone in from Salonica.

Sapper Wm. Reece (504,225), of Vancouver, of the 12th Field Company, Canadian Engineers, 4th Canadian Division, British Expeditionary Force, who was reported in the casualty lists of Mar. 10 as having been killed in action, was one of the party of seven who volunteered, on the night of Nov. 25, to carry out, under heavy fire, and at the imminent risk of their lives, the body of Lieut. Bruce H. A. Burrows, of Toronto, when the latter was killed by a high explosive shell, on the East Miraumont Road, about 50 yards

north of the Regina Trench, as he was going in at the head of a detachment of his men, to put up barbed wire, at what the commanding officer reported as a very important strategical point.

Lt. Col. J. W. Stewart, of Foley Bros. Welch & Stewart, railway contractors, Vancouver, B.C., who went overseas in command of the 239th Battalion, Canadian Overseas Railway Construction Corp. is reported in a London cable as being "in charge practically of all the railway construction forces in the war zone." Another cable says he has made a great success of railway construction in France, where he has now been given the widest responsibilities. One job which the authorities wanted done in a hurry would require six weeks, according to an official estimate, but Stewart said if they would give him 2,000 Canadians he would do it in a week. He actually completed it in four days. An Ottawa dispatch of Mar. 27 says he has been promoted to Brigadier General.

Major Geo. P. MacLaren, of the 256th Railway Construction Battalion, was presented on Mar. 20 by his former associates on the Canadian Northern Ry. with an address and a pair of prism binoculars prior to leaving for overseas. The address was read by H. K. Wicksteed, M. Can. Soc. C.E., Chief Engineer of Surveys, C.N.R., and many of the old guard who worked on the railway in its construction days were represented. Major MacLaren was with the C.N.R. for many years, having started on the surveys of the Halifax & South Western Ry., one of the now tributaries, in 1903 and having been with the company continuously since that time until his enrolment for overseas service. Latterly he was District Engineer in charge of construction between Pembroke and Capreol, Ont., 220 miles.

Lt. Col. W. A. McConnell, who has raised, and is commanding, the 256th Overseas Railway Construction Battalion, C.E.F., was born in Monck Tp., Ont., in 1878. At the age of 15 he started work on the construction of highways

and bridges with his father, who was a road and bridge builder. Later for a number of years he worked on railway construction as foreman of grading and track laying on the Canadian Pacific, Canadian Northern and Grand Trunk Pacific Railways. Previous to 1907 he spent some time at Toronto University, studying constructional engineering, but did not wait to graduate. Since 1907 he has been engaged in building construction-houses, stores, and factories in Toronto. He joined the Governor General's Body Guard in 1894 and while at Toronto University was a member of the engineering corps. When war started he joined the 109th Regiment as a private. In Jan. 1916 he was appointed a provisional lieutenant. In April, 1916, he attended an officers training class and qualified. On July 10, 1916, he was appointed captain in No. 2 Construction Battalion and later second in command of that battalion. On January 17, he was appointed lieutenant colonel to organize and command the 256th Railway Construction Battalion.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Eastern Ry.—A. L. SMITH, heretofore Superintendent, London Division, Ontario District, C.P.R., has been appointed President, A.E.R., vice W. C. Franz, and has also been appointed General Manager, vice D. F. Thomas. Office, Sudbury, Ont.

T. F. RAHILLY, heretofore Comptroller, has been appointed Superintendent, vice A. J. Donegan, resigned. Office, Sudbury, Ont.

M. J. CONNOR, heretofore Travelling Auditor, has been appointed Comptroller, vice T. F. Rahilly, transferred. Office, Sudbury, Ont.

Canadian Government Railways.—J. D. McNUTT, heretofore chief dispatcher, Truro, N.S., has been appointed Inspector of Train Dispatching, and will perform such other duties as may be assigned to him. Office, Moncton, N.B.

J. E. LeBLANC, heretofore Travelling Passenger Agent, Montreal, has been appointed District Passenger Agent, Montreal, vice J. A. Everell, who will devote his entire time to the Quebec & Saguenay Ry. for the coming summer.

J. H. COTE, heretofore ticket agent, Riviere du Loup, Que., has been appointed Travelling Passenger Agent, Montreal, vice J. E. LeBlanc, promoted.

T. SAMSON, heretofore ticket agent, Carrier station, Que., has been appointed Travelling Passenger Agent, Montreal, vice T. Coulombe, resigned.

Canadian Northern Railway.—W. A. CUNNINGHAM, formerly General Agent, Passenger Department, Canadian Northern Steamships, Ltd., Montreal, has been appointed City Ticket Agent, C.N.R., Montreal.

F. McDOWELL, heretofore General Foreman, Winnipeg Stores, has been appointed Storekeeper, with jurisdiction over all matters regarding Winnipeg stores, and responsible for the stock. He has charge of the staff and reports to the General Storekeeper. Office, Winnipeg.

M. B. HELSTON, heretofore Superintendent, Duluth, Winnipeg & Pacific Ry., Virginia, Minn., has been appointed Superintendent, District 4, Western Division, vice M. B. Murphy, resigned on his

appointment as Manager, Winnipeg Joint Terminals. Office, Calgary, Alta. Owing to typographical errors, this appointment was incorrectly announced in our last issue.

H. B. WOLLEN, Chief Inspector. Sleeping, Dining and Parlor Car, Hotel and News Department, Western Lines,

T. F. Rahilly
Superintendent, Algoma Eastern Railway

has been placed in charge of the department's office recently opened at Calgary, Alta.

Canadian Pacific Ry.—The position of Assistant to the President, heretofore occupied by J. S. DENNIS, has been abolished. He will hereafter be known as Chief Commissioner of Colonization and Development. Office, Montreal.

W. H. CURLE, heretofore Administrator under the Manitoba Workmen's Compensation Act, Winnipeg, has been appointed

General Solicitor, C.P.R. Office, Montreal.

E. P. FLINTOFT, heretofore Solicitor, has been appointed Assistant General Solicitor, Montreal.

G. JACKSON has been appointed General Yardmaster, West Toronto, Ont., vice J. Miles.

J. L. JAMIESON, heretofore Road Foreman of Locomotives, Medicine Hat, Alta., has been appointed Road Foreman of Locomotives, Ignace, Ont.

A. E. TASKER, heretofore Car Foreman, Field, B.C., has been appointed Car Foreman, Winnipeg.

J. R. C. MACREDIE, heretofore Resident Engineer, Connaught Tunnel, has been appointed Resident Engineer, Moose Jaw, Sask., vice T. C. McNabb, whose appointment as Superintendent, Revelstoke Division, British Columbia District, was announced in our last issue.

W. E. CLINE, heretofore Trainmaster, Lethbridge, Alta., has been appointed Trainmaster, Medicine Hat, Alta., vice H. M. Smith, transferred to Lethbridge, Alta.

S. G. DENMAN, heretofore Assistant Purchasing Agent, Vancouver, B.C., has been appointed Assistant Purchasing Agent, Calgary, Alta., vice J. T. H. Ferguson, transferred to Vancouver.

J. D. FRAINE, heretofore Trainmaster, Nelson, B.C., has been appointed Trainmaster, Calgary, Alta., vice D. J. England, transferred.

G. MOTH has been appointed Division Master Mechanic, Edmonton, Alta., vice A. E. Pales, transferred.

D. M. SMITH, heretofore Road Foreman of Locomotives, Kenora, Ont., has been appointed Road Foreman of Locomotives, Medicine Hat, Alta., vice J. L. Jamieson, transferred.

H. M. SMITH, heretofore Trainmaster, Medicine Hat, Alta., has been appointed Trainmaster, Lethbridge, Alta., vice W. E. Cline, transferred to Medicine Hat, Alta.

C. W. McCLEAR, heretofore coach carpenter, Vancouver, B.C., has been appointed Car Foreman, Crowsnest, B.C., vice A. E. Chesterman, transferred.

A. E. CHESTERMAN, heretofore Car Foreman, Crowsnest, B.C., has been appointed Car Foreman, Field, B.C., vice A. E. Tasker, transferred.

C. E. LEGG, heretofore General Agent,

Fort William, Ont., has been appointed Trainmaster, Nelson, B.C., vice J. D. Fraire, transferred.

J. T. H. FERGUSON, heretofore Assistant Purchasing Agent, Calgary, Alta., has been appointed Assistant Purchasing Agent, Vancouver, B.C., vice S. G. Denman, transferred to Calgary, Alta.

Grand Trunk Ry.—F. NEALON has been appointed acting dock agent, Vancouver, B.C., vice H. Brown, who has received a commission in the Royal Engineers' Inland Water Service.

W. WALKER, heretofore Assistant Land Commissioner, Montreal, has been appointed acting Division Engineer, Eastern Lines, vice F. L. C. Bond, who has enlisted for overseas military service. Office, Montreal.

H. PALMER has been appointed Assistant Land Commissioner, vice W. Walker, transferred. Office, Montreal.

E. C. POTTER has been appointed Chief Dispatcher, Richmond, Que., vice T. H. Mason, who has been employed as a dispatcher there.

D. J. McCUAIG has been appointed acting Master Mechanic, Ontario Lines, vice W. G. Sealey, assigned to other duties. Office, Toronto.

New York Central Rd.—F. H. HARDIN has been appointed Master Mechanic, Adirondack Division, Utica, N.Y., vice C. F. Deaner, assigned to other duties.

War Loan Subscriptions.

Among the largest subscribers to the Canadian War Loan bonds, offered for public subscription in March, were the following companies and persons connected with transportation and allied interests:—Steel Co. of Canada, \$2,000,000; Canadian Pacific Ry. Co., \$1,500,000; Imperial Oil Co., \$1,000,000; Bell Telephone Co., \$700,000; Canadian General Electric Co., \$500,000; J. K. L. Ross, director, C.P.R., \$500,000; Jas. Caruthers, President, Canada Steamship Lines, \$200,000; Elder, Dempster & Co., \$200,000; Sir Herbert Holt, director, C.P.R., \$200,000; M. J. Haney, director, Canada Steamship Lines, \$200,000; R. W. Leonard, ex chairman, National Transcontinental Ry. Commission, \$100,000; J. P. Steedman, director, Canada Steamship Lines, \$100,000; Victoria Rolling Stock & Realty Co., \$100,000; E. R. Wood, director, Canadian Northern Ry., \$100,000; Lord Shaughnessy, \$80,000; Canadian Iron Foundries, \$50,000; W. D. Matthews, director, C.P.R., \$50,000; Montreal Warehousing Co., \$50,000; Sir Edmund Osler, director, C.P.R., \$50,000; W. G. Ross, President, Montreal Harbor Commission, \$50,000; Senator J. M. Wilson, director, Montreal Tramways Co., \$50,000; Senator Curry, President, Canada Car & Foundry Co., \$25,000; H. Paton, President, Shedden Forwarding Co., \$25,000; Yarrows Limited, shipbuilders, Victoria, B.C., \$25,000; Mackay Companies, \$1,250,000; Montreal Light, Heat & Power Co., \$250,000; John Bertram & Sons Co., Dundas, Ont., \$800,000; Canadian Steel Foundries, Ltd., Montreal, \$250,000; Southern Canada Power Co., Montreal, \$50,000; Shedden Forwarding Co., Montreal, \$25,000; J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines, Ltd., Montreal, \$100,000; J. W. Pyke, J. W. Pyke & Co., Montreal, \$25,000; C. F. Sise, Bell Telephone Co., Montreal, \$20,000.

For an alleged violation of the hours of service act in the State of Vermont, the G.T.R. is being proceeded against in the District Court at Rutland.

The Enquiry into the Canadian Railways' Situation.

The Toronto Globe's Ottawa staff correspondent sent the following on Mar. 26: "That, in connection with the Canadian Northern and Grand Trunk Ry. systems,

M. B. Murphy
Manager, Winnipeg Joint Terminals

M. B. Helston
Superintendent, District 4, Western Division,
Canadian Northern Railway

the country is faced with two alternatives: either to continue for several years more the system of subsidies and loans in vogue for the past few years, or to nationalize the roads—is said to be the outstanding conclusion to be drawn from

a majority report of the commission appointed to make a survey of the whole railway situation of the Dominion. The report, it is understood, favors nationalization. A minority report, on the other hand, favors the retention of the roads under corporation control.

"In connection with the Grand Trunk, the majority report finds that while more than \$36,000,000 has been declared in dividends to the shareholders, little provision has been made for depreciation sinking fund. The members of the commission venture the opinion that a board of directors 3,000 miles away cannot be expected to effectively manage a Canadian railway. It is stated that the life of a car is only 20 years, and that as a result of the lack of provision for depreciation the G.T.R. is running only one car for every seven run by the C.P.R. The majority report is of the opinion that an expenditure of \$51,000,000 would be required to put the road on an economic earning basis. This would include the Grand Trunk Pacific. The amount estimated as necessary to put the Canadian Northern on a running basis is \$50,000,000."

Another Ottawa press dispatch credits Sir Henry Drayton, one of the commissioners, with stating Mar. 27 that the report was not finished and that nothing about it had been given out. The same dispatch says it is reported there that the chairman of the commission, A. H. Smith, President, New York Central Rd., favors the continuance of private ownership, with such financial adjustments as may be necessary to meet the exigencies of the situation, and that the two other commissioners, Sir Henry Drayton and W. M. Acworth, are in favor of nationalization.

Liquor Selling on U. S. Trains.—New York press despatch, Mar. 24.—W. H. Anderson, State Superintendent of the Anti Saloon League, states that he has sworn out, in Schenectady County, a complaint as the basis for a warrant for the arrest of A. H. Smith, President of the New York Central Rd., the particular alleged offence being the sale of two bottles of intoxicants, which, it is said, were carried off in the original packages. The object of the league is to stop the violation of the law, and the selling of liquor on trains, and to secure the settlement of the legal questions involved.

Canadian Government Railways' Employees' Provident Fund. Bliss A. Bourgeois, Assistant Comptroller and Treasurer, and W. P. Hutchinson, dispatcher, Moncton, N.B., have been elected members of the Provident Fund Board for the year ending Mar. 31, 1918. The other members are F. P. Gutelius, General Manager, Chairman; S. L. Shannon, Comptroller and Treasurer; H. H. Melanson, General Passenger Agent; C. B. Trites, Secretary.

Guelph Railway Matters.—The Ontario Legislature has struck out of the bill promoted by the City of Guelph, Ont., the sections providing for a change in the method of electing the city council, dissolving the boards of directors of the Guelph Junction Ry. and of the Guelph Radial Ry., and declaring that the new council shall have all the powers of the dissolved boards.

American Institute of Electrical Engineers.—H. W. Fisher, Chief Electrical Engineer, Standard Underground Cable Co., Perth Amboy, N.J., addressed the Toronto section, Mar. 16, on the manufacture of underground cables and their use under modern practice.

Electric Railway Department

The City of Toronto and its Electric Railways.

Three electric railway companies operate within the limits of the City of Toronto, in addition to the Toronto Civic Ry., which is, at present, in about four sections, with no physical connection with each other, or with any of the companies' lines. For several years past there has been considerable friction between the city and the various companies as to interpretation of agreements, franchises, etc. The Toronto civic lines were built in several districts, which had, at various times, been incorporated in the city, but only after strenuous efforts had been made to compel the Toronto Ry. Co. to build such lines, which the city held it was compelled to do under the terms of its franchise. After some litigation, the courts held that the company was not so compelled, and the civic lines resulted. The three companies operating in the city are the Toronto Ry., its subsidiary, the Toronto & York Radial Ry., and the Toronto Suburban Ry., the lines of the two latter being in portions annexed to the city subsequent to the granting of the franchise to the Toronto Ry. Co. The Toronto & York Radial Ry. is in three sections, north, east and west of the city, and these sections have no physical connection. The section to the north was originally the Metropolitan St. Ry., operating on Yonge St., passengers making connection with the Toronto Ry. near the C.P.R. North Toronto station. About two years ago, a portion of the franchise granted to the Metropolitan Ry., by York Tp., expired, and the City of Toronto, having in the meantime extended its limits, declined to renew that portion of the franchise on any terms and removed the track. There was for a considerable time after no track connecting the Toronto Ry. with the Toronto & York Radial Ry., which then had its southern terminus at Farnham Ave. The city declined the Toronto Ry.'s offer to lay the track and operate it under its franchise, which expires in 1921, maintaining that the company had no rights on that portion of the street. Litigation followed, with the result that the company laid the track and operates its cars over it. Another section runs from Sunnyside, on the southern water front, west to Port Credit, the first portion being originally the Toronto & Mimico Ry. This franchise within the city expired some few years ago, and the city nominally acquired the property and rights under arbitration proceedings, but has made no payment for the property. That portion is now being operated by the T. & Y.R.R. by arrangement with the city. The third section, on the eastern side of the city, runs along Kingston Road from Queen St., and on east to West Hill, 11½ miles. The first portion of the line was originally the Toronto & Scarborough Electric Ry., and on the expiry of the franchise for that section, the city acquired the portion within the extended city limits to Main St., East Toronto. This is still being operated by the company under arrangement with the city.

The Toronto Suburban Ry. operates west of the city, and along certain streets in West Toronto, now part of Toronto. Under the terms of its franchise the company has exclusive rights on certain streets in West Toronto, some of which

have never been exercised, and the company has recently practically completed its line to Guelph. There have been a number of disputes regarding the interpretation of agreements, as to the laying of pavement, etc., which have generally resulted in the company's favor.

The Toronto Ry. operates on the streets within the city, and its franchise expires in March, 1921. It appears to be the city's intention to take over the lines, etc., on the expiry of the franchise according to the original agreement, but for several years there has been considerable jockeying by both sides as to the improvements and additions which the city demands, and which, with an expiring franchise, the company is not anxious to grant. The City of Toronto is promoting a bill in the Ontario Legislature in an attempt to clear up several of these disputes, and which is, at the time of writing, being dealt with in committee.

Toronto & York Radial Ry.

Sec. 5 of the bill provides for the expropriation of the Metropolitan Division, within the city limits, and all the real and personal property used in connection with it and necessary for the operation, and including all franchises, rights and privileges which the company may have respecting the construction and operation of railway lines within the city limits, upon paying such compensation therefor as may be agreed upon between the company and the city, and in the event of disagreement, the compensation, to be fixed by the Ontario Railway and Municipal Board. It also provides for the construction of a double track on Yonge St., North Toronto, from the southern terminus of the T. & Y.R.R. to the northern city limits, and for the granting of running rights over same to the T. & Y.R.R., on terms to be mutually agreed upon. A subcommittee of the legislature was appointed to go into the whole question of expropriation, and after some discussion and the hearing of a variety of opinions, the section was reported with amendments that the city must take proceedings to expropriate within three months after the passing of the bill, and that each party has the right of one appeal to the Appellate Division of the Supreme Court of Ontario, to be made within ten days of the arbitration award. In the event of an agreement, the city is to grant running rights on terms to be mutually agreed upon, or to be decided by the Ontario Railway and Municipal Board, and should the city not accept the board's award, it is to pay the company's costs and any damages resulting from the proceedings. Any bylaw must be passed by the city within three months of the passing of the act, and the city will have three months from the making of the award, or from the date of any judgment of the Appellate Court on any appeal, in which to accept it. The subsection relating to the laying of double tracks on Yonge St. was also amended by providing that the track is to be of standard gauge.

Toronto Suburban Ry.

Sec. 4 of the city's bill provides that notwithstanding any agreement, statute, order or decision of any court, board or committee to the contrary, the company

shall from time to time construct and maintain a pavement upon that portion of Davenport Road within the city limits, occupied by the railway, of a character and quality similar to that constructed and maintained from time to time by the city on the remaining portion of the highway. This matter has been fought through the local and Dominion courts, and before the Judicial Committee of the Privy Council, resulting in final decision in favor of the company, and the object of the present proposed legislation is evidently to obtain and validate a different interpretation of the original agreement between the company and York Tp., than has been given by the courts. The private bills committee has held the question over for the present and suggested that the company and the city should get together on a joint scheme, and has suggested that the city should lay the pavement and the company pay the cost of maintenance, and the portion of the cost they would have to pay for a pavement laid under the old agreement.

A separate bill respecting the Toronto Suburban Ry. was also dealt with by the committee, providing that notwithstanding anything contained in the company's act of incorporation and amending acts, the extensions and branches authorized shall be commenced within two years of the passing of this act and shall be completed and put into operation within five years of the passing of this act, or be void respecting so much of the said extensions and branches as may then remain uncompleted. This clause refers to the construction of certain lines to the south of Dundas St., which the company was originally authorized to build. Under the agreement with the city, the company can be ordered to build the lines within six months of the date of notice, and, failing to comply, the charter reverts to the municipality. It is probable that all the lines which the company is authorized to build within the city limits may be included in the bill before it gets through the legislature.

Toronto Railway.

Sec. 8 provides that the Toronto Ry. shall build and place in operation 100 new cars during 1917, and 100 additional cars during 1918, and in default shall pay to the city \$100 a day for each and every car less than these numbers. The committee struck this section out of the bill, on the ground that it was a matter for the Ontario Railway and Municipal Board to deal with. This is a second attempt to obtain by legislation what the city has failed to obtain by any other means. The chief object sought in this regard seems to be the elimination of overcrowding, but apart from the question as to whether overcrowding can be cured by adding cars alone to a system, it is an admitted impossibility to obtain deliveries of cars or of materials for their manufacture within the time stated, under existing conditions. The passing of such a measure at such a time would reduce legislation to an absurdity.

Since the foregoing paragraph was put into type, the matter was reopened in committee Mar. 27, when the question of validating an order of the Ontario Railway and Municipal Board respecting ad-

ditional cars, which is given on another page, came up. There is a clause in the agreement between the city and the company, to the effect that cars utilized on the street railway must be built in Toronto, and all the company's cars have been so built. Under existing circumstances, the city is prepared to waive that, and claims that there is no difficulty in obtaining cars or material for their construction. It was therefore proposed that the city be compelled to purchase 100 cars in 1917, and a further 100 in 1918, and sell them to the company at a reasonable price. This was carried by 22 votes to 8, and the Board's order was validated by 19 votes to 9. The Chairman of the committee, Hon. I. B. Lucas, Attorney General, in referring to the first named proposal, is reported to have said, "I won't report such a foolish clause as responsible chairman of this committee. The city absolutely declines to be bound by this." As there appeared to be no sign of agreement, the committee adjourned on the understanding that a new clause would be drafted, which it was said would prove satisfactory.

Toronto Civic Ry.

Sec. 10 authorizes the city to pass certain bylaws for the creation of debts and for issue of Toronto consolidated loan debentures, without submitting them to a vote of the ratepayers. Among the items included are: \$140,000 to cover overdrafts and to complete work on the civic lines; \$17,000 for purchase of cars; \$125,000 to cover amount already spent and to complete work on the Bloor St. line.

Transportation of Postmen in Regina.

The question of the rate to be paid by the Post Office Department for carrying postmen on the Regina Municipal Railway has been in dispute for some time. Under the old arrangement the rate paid was \$25 a man per year, which it was found gave the railway only a little over 1c a ride. The management refused to continue the arrangement and asked an increase to \$50. The Post Office Department then offered \$35, and this was accepted by a majority vote at a city council meeting recently, though it was strongly opposed by Commissioner Thornton, under whom the railway is operated, and who showed that it costs slightly over 6c a ride for each person using the cars. The Mayor and three other councillors also opposed it, but were outvoted, the supporters of the \$35 rate advancing the hackneyed argument that the cars had to be run any way and that the city might as well have the revenue, overlooking the fact that the Post Office Act empowers the Postmaster General to make an allowance of \$50 a year to postmen in lieu of electric railway transportation. The new contract is for one year only and the postmen are to ride on the cars, without paying fares, only when on duty and not after 6 p.m.

Sunday Service Asked.—The Galt, Preston & Hespeler St. Ry. has been asked by a committee, representing farmers and other residents in the Freepoint and Centreville districts, between Preston and Kitchener, Ont., to take steps to secure power to operate a Sunday service, the residents referred to desiring better facilities to attend church services in Preston or Kitchener.

The Port Arthur Civic Ry. has bought 2 miles of trolley wire recently.

Electric Route Maps on British Columbia Electric Railway.

The British Columbia Electric Ry. has placed two large electrically lighted route maps outside the entrance of its interurban station at Carroll and Hastings Sts., Vancouver, with the object of showing the layout of the company's city and interurban line, and as a part of its policy of publicity in the interests of the public as well as of the company. These maps are painted on plate glass, each in three sections, separated by copper beading. The map on the west side shows the city lines, and the one on the east, the interurban lines. In each case the lines are shown in red, names in white, parks in green, water in light blue, all transparent, and land in opaque black. The company's stations are shown by red dots,

Answers to Questions on Electric Railway Topics.

Following are questions sent to the American Electric Railway Association's question box, with answers by A. Gaborry, Superintendent, Montreal Tramways Co.:

Are waiting rooms justified in city traffic, where the headway is less than 15 minutes?

Do not consider them necessary, unless as adjuncts to ticket offices necessary for the company's interests.

On interurbans running through sparsely settled territory, is the lighting of waiting room or shelters necessary?

Think waiting rooms should be lighted from trolley wire, in the interests of public propriety.

In the training in a limited time of

Entrance to British Columbia Electric Railway's Interurban Station, Vancouver.

and the head office by a large red dot. The frames containing the maps measure 10 ft. 1 in. long by 5 ft. 1 in. high, and are 6 ins. deep, made of angle steel frame 1½ by 1½ by 14 in., with back and sides of 22 gauge galvanized iron rivetted and soldered to angle frame with 3 in. copper strip round outer edge of glass. The frames are wired in three divisions, each carrying four 40 watt lamps, and the divisions are so arranged that the lamps can readily be removed for replacement.

Similar maps are utilized on the underground electric railways in London, Eng., but it is believed that these are the first to be used on this continent.

The Tractive Resistance on Curves of a 28 ton electric car has been made the subject of a study by the Railway Department of the Engineering Experiment Station of the University of Illinois. The results which are set forth in bulletin 92 establish, for this car, the relation between curve resistance and speed, and between curve resistance and rate of curvature; the ratio in both cases is direct. Tests were conducted upon each of seven curves on the Illinois Traction system, the curvature of which varied from 2 to 14½ degrees. Test runs were also made over tangent track adjacent to the curves. Copies of the bulletin may be obtained gratis by writing the Director of the Engineering Experiment Station, Urbana, Illinois.

technical graduates for executive positions, say as department heads, is it better to give them a brief tour of duty in all departments or keep them continuously in one department, and thereby give them a thorough training in that particular branch?

An experience in all departments tends to broaden a man's views, with a subsequent benefit to himself and his company.

What is the most practical and economical way to safeguard operation over bridges with draw spans?

Our drawbridges over canals are protected by derails at each side and cars must be brought to a dead stop before reaching derail switch.

Do you provide open or closed automobiles for the use of your executive officers?

Open autos.

Interurban Motors Limited has been organized by St. Thomas, Ont., business men, with a capital stock of \$100,000, the Managing Director being W. N. Warburton, General Manager, Secretary-Treasurer and Purchasing Agent, London and Lake Erie Ry. and Transportation Co., London, Ont., to carry freight and passengers, in connection with the electric railway mentioned, over short distances tributary to its line. Large passenger cars have been purchased and it is expected to begin operation in May.

The St. John Railway's Sale.

The New Brunswick Investment Co., which bought out the St. John Ry. Co.'s property recently, was incorporated Feb. 2, 1917, for the purpose of carrying out the transfer, its members all being in the employ of Wm. Thomson & Co., steamship owners and fire and marine insurance brokers, St. John, N.B. The terms of the sale were fully detailed in a circular issued to the railway company's shareholders, and published in Canadian Railway and Marine World for March, pg. 113.

The property has since been transferred to the New Brunswick Power Co., which controls water powers at Magaguadavic and Lepreaux. Its capitalization is as follows: First preference stock authorized, \$3,500,000, issued \$1,000,000; second preference stock authorized \$1,500,000, issued \$350,000; common stock authorized and issued \$2,000,000; first mortgage 5 bonds authorized, \$5,000,000; issued \$1,750,000.

L. R. Ross, Terminal Agent, Intercolonial Ry., St. John, is President; G. M. O. Peters, Treasurer, and H. M. Hopper, General Manager and Secretary. Messrs. Peters and Hopper held similar positions in the St. John Ry. Co. The Boston Safe Deposit and Trust Co., Boston, Mass., and the Royal Trust Co., St. John, N.B., are trustees for the bonds, the Boston Safe Deposit and Trust Co. being also registrar of the bonds.

Overcrowding on the Toronto Railway.

Canadian Railway and Marine World for March contained some information regarding the city's proceedings relative to the overcrowding of passengers on the Toronto Ry. cars. At that time a case was pending in the local police court, charging the company with maintaining a public nuisance. The proceedings were taken at the instance of the Medical Health Officer, under the local health act, and on behalf of the company it was maintained that the City Health Department had no jurisdiction in the matter, and that, in any case, a nuisance, as described under the health act, did not apply to a street car carrying passengers beyond its capacity. The magistrate eventually adopted this view, and the case was dismissed. A similar case, under a prior conviction by another magistrate, is now the subject of an appeal to the Judicial Committee of the Privy Council, and judgment has been reserved pending a reference to the Provincial Attorney General as to the jurisdiction in such matters. The company maintains that in regard to its operation as a public utility, it is under the Ontario Railway and Municipal Board's jurisdiction.

In 1914, the Ontario Railway and Municipal Board ordered the company, upon application of the city, to place additional cars in service, but these orders the company expresses itself as, owing to a variety of circumstances, unable to comply with. A further application made by the city recently has resulted in the board issuing orders, first, that the company shall place in operation on its system the remainder of 50 motor cars ordered by the board Nov. 6, 1914, 28 only having been so placed in operation by May 1, and further it orders as follows:

Upon the application of the City of Toronto for a reopening and a reconsideration of the board's order, Nov. 6, 1914, in respect of the number of addi-

tional cars to be furnished by the Toronto Ry. Co. to accommodate reasonably the passengers offered for transportation, and upon hearing the evidence adduced and counsel for the city and the company, it appearing that the equipment, appliances and service of the company in respect to the transportation of passengers are inadequate in that the company does not operate a sufficient number of cars; the board orders that the company place in operation 100 additional double truck motor cars by Jan. 1, 1918, and a further 100 additional double truck motor cars by Jan. 1, 1919; and to ensure the faithful and punctual performance of this order, the company shall from time to time on the request of the city inform the city of the things done by the company in and about the performance of this order, and that R. C. Harris, City Engineer, or his authorized representatives, shall from time to time have access to the company's premises, works and records in order that the city may verify the information so given, and may be fully advised as to the progress and efforts made in carrying out this order.

At the same time as this application was before the board, the city was applying to the Ontario Legislature on similar lines, but the section in the city's omnibus bill was struck out by the committee.

Owing to the recent fire at the company's car barn at King St. East, there is a considerable shortage of available cars for heavy traffic, and it is reported that the mayor stated recently that it was his intention to press for an addition of 500 cars immediately.

Jitney Traffic Notes.

A jitney bus service is being operated between the Post Office at Ottawa, Ont., and Hull, Que.

The Winnipeg Jitney Owners' and Drivers' Association started operating over some new routes Mar. 12.

Complaints have been made recently that jitney drivers in Hamilton, Ont., are charging higher fares, particularly in the late hours of the night.

After considering the appeal of the jitney men to amend the bylaw regulating the traffic passed recently, Vancouver City Council decided not to re-open the matter.

Several jitneys are being operated on Yonge St., North Toronto, to the point where the Toronto Ry. and the Toronto and York Radial Ry., Metropolitan Division, services end.

The California Railroad Commission has under a Supreme Court decision, taken complete jurisdiction over all jitney lines in the state operating outside incorporated municipalities. All jitney lines had to file schedules of service and rates by Mar. 1. The commission has asked the legislature to define clearly its power over jitneys.

Winnipeg jitney men appeared before the city council's license committee, Mar. 15, and asked for amendments in the bylaw regulating jitney traffic. They desire to have stricter control exercised among other things in the direction of preventing "casuals" entering the field at busy seasons and then dropping out when the rush is over, etc.

The City of Edmonton is asking the Alberta Legislature to authorize it to make special bylaws as to motor vehicles carrying passengers, particularly in the direction of limiting the number of passengers and the weight of freight to be

carried, defining how passengers and freight shall be carried on the vehicles; defining the routes upon which they may run; limiting the hours within which they may operate and providing for the giving of bonds by owners or lessees.

Mainly About Electric Railway People.

J. B. Hardy has been appointed Chairman of the Public Utilities Committee of the Fort William, Ont., City Council, which operates the Fort William Electric Ry., succeeding A. E. Wodeman, resigned.

Charles A. Drummond has been appointed Assistant Publicity Agent, Detroit United Ry., and assistant editor of Electric Railway Service, the company publication, succeeding A. H. Sarvis, resigned.

The Hon. James Leitch, K.C., a judge of the Supreme Court of Ontario, and formerly Chairman, Ontario Railway and Municipal Board, who died recently, left an estate of \$19,903, to be divided amongst his widow, son and four daughters.

Martin N. Todd, President, Galt, Preston & Hespeler St. Ry., and General Manager, Lake Erie & Northern Ry., returned to Galt, Ont., early in March, much improved in health, after spending some weeks in New Orleans and other southern points.

Leonard Tait, whose appointment as Secretary Treasurer, London St. Ry., London, Ont., was announced in our last issue, was born at Hamilton, Ont., Aug. 9, 1882, an entered transportation service, Nov. 1, 1899, since when he has been, to May 9, 1900, clerk, Freight Department, Michigan Central Rd., London, Ont.; May 10, 1900, to July 21, 1901, clerk, Freight Department, G.T.R., London, Ont.; July 22, 1901, to Nov. 14, 1904, clerk and telegraph operator, Freight Department, M.C.R., London, Ont.; Feb. 16, 1905, to Sept. 16, 1912, chief clerk and cashier, Freight Department, same road, London, Ont.; Sept. 17, to Nov. 15, 1912, Travelling Freight Agent, New York Central Lines, Toronto; Nov. 16, 1912, to Feb. 14, 1917, Secretary Treasurer, London & Lake Erie Ry. & Transportation Co., London, Ont.

F. X. Couture, whose appointment as Superintendent, Railway Department, Sherbrooke Ry. and Power Co., Sherbrooke, Que., was announced in our last issue, was born at Quebec, Que., in 1875, and from an early age to 1895, was engaged on a farm, receiving only six months of school instruction. He entered the Sherbrooke St. Ry. Co.'s service in 1897 as a laborer, during the construction of the line, and later served as motorman and conductor. From 1900 to 1904, he was in Quebec Central Ry. service, as carpenter, and in the locomotive department, returning to the Sherbrooke Ry. service in 1904, as General Foreman of rolling stock and electric lines, and in 1910 when the property was taken over by the Sherbrooke Ry. and Power Co., was retained as General Foreman of Rolling Stock, and promoted to Superintendent of Transportation in 1912.

The City of Vancouver received \$2,029.25 as percentage on the earnings in the city, for February, an increase of \$375.05 over that for Feb. 1916. During February, 2,441,792 passengers were carried on the city and suburban lines, compared with 2,334,233 for Feb. 1916.

Electric Railway Notes.

The Moncton Tramways, Electricity & Gas Co. has applied to the New Brunswick Public Utilities Commission for approval of its traffic rates.

The Port Arthur, Ont., Public Utilities Commission is reported to be considering the possibility of employing women conductors on the civic railway.

The Quebec Ry., Light & Power Co. has closed a contract for the supply of electric power to the legislative and other provincial buildings in Quebec City.

The female members of the British Columbia Electric Ry.'s office staff at Vancouver, held a dance Mar. 16, to raise funds for the Returned Soldiers' Club.

Plans for this second track work, so far as they affect the city of Toronto, have been filed at the city hall. The council is being asked for leave for grade crossings at McLennan and Summerhill Avenues.

The special commission appointed by the Quebec Legislature to prepare a new franchise for the Montreal Tramway's Co. is holding regular public meetings, at which the views of any person interested are heard.

The International Transit Co., Sault Ste. Marie, Ont., is in the market for a good second hand double truck, double end, controlled car, with a seating capacity for 44, and preferably arranged for p.a.y.e. operation.

It was stated in Winnipeg, Mar. 1, that there were no men eligible for military service employed on the Winnipeg Electric Ry., and that it might be necessary to employ women as conductors in order to maintain the staff.

The Montreal Tramways Co. has ordered 50 car bodies and trucks in the U. S., and the necessary equipment from the Canadian Westinghouse Co. An additional 50 similar cars were to be ordered by the end of March.

The British Columbia Electric Ry. has offered the city the free use of its park property, of five acres, on Twenty-first St., North Vancouver, in connection with the wartime thrift vegetable growing campaign now being promoted.

The Montreal Stock Exchange has listed the Ottawa Car Manufacturing Co.'s stock, consisting of 11,779 shares of \$100 each, and the Ottawa Traction Co.'s stock, consisting of 56,307 shares of \$100 each, for trading on the exchange.

The actual cost of the Lethbridge, Alta., Municipal Ry., to the city, during 1916, was \$27,924.89. The council has put \$30,905.46 in the estimates for this year, as the amount which the city will have to contribute to meet interest charges, etc.

The Brantford, Ont., City Council has passed a resolution recommending the employes on the city's electric railway to complete their term with the railway at the present rate of wages and recommending the commission to establish a minimum of 25c an hour at the expiration of the present agreement.

The Vancouver City Council railways and bridges committee has recommended the council to investigate all the street car lines operated by the B.C.E.R. and ascertain whether or not they were covered by proper operating agreements with the city.

G. Moir, formerly of Aberdeen, Scotland, in addressing the Grandview Rate-

payers' Association, Mar. 11, advocated the taking over by the City of Vancouver, of the British Columbia Electric Ry.'s entire city plant when the franchise expires in 1919.

The Alberta Legislature is being asked to amend the City of Calgary's charter, authorizing it to pass a bylaw regulating and governing the method or manner whereby passengers on the municipal railway shall pay their fares or whereby such fares may be collected by the city.

The Montreal Tramways Co. has secured a verdict of \$104 against the St. Francois Salane School Board. This amount was collected as taxes upon land which the board assessed as belonging to the Montreal Park & Island Ry. The company had only a right of way over the land and could not be assessed.

Superintendent Moir of the Edmonton Radial Ry. has instituted a regular weekly meeting of the heads of departments to discuss matters that may tend to the advancement of the interests of the line. This system has already been found to work to advantage in connection with the city's telephone plant.

The London, Ont., City Council has authorized the inclusion in a bill being presented in the Ontario Legislature of provision for the erection by the London Railway Commission of a grain elevator at Port Stanley, to be operated in conjunction with the London & Port Stanley Ry. The approximate cost of the elevator is \$100,000.

London, Ont., Street Ry. conductors and motormen have organized as a branch of the Amalgamated Association of Street and Electric Railway Employes of America. The men have applied to the company for an increase in wages. The present scale is from 21c to 26c an hour, and the men ask for a scale starting at 25c, and increasing to 30c.

Some months ago there was a collision between a jitney and a British Columbia Electric Ry. car at the Central Park crossing, Vancouver in which several persons were injured. They sought to recover damages from the B.C.E.R., and at the trial of the action recently the judge dismissed the action and held the driver of the jitney, in which the injured persons, were sitting, to have been responsible for the accident.

The report of P. A. Macdonald, Manitoba Public Utilities Commissioner, was submitted to the Legislature, Jan. 30. It covers the first year of his work as Commissioner, and outlines the work done during the year, reference being particularly made to the power possibilities of the province. These were investigated by the Commissioner and G. T. Guy, electrical engineer, the latter of whom makes a special report, which is included.

The International Ry., operating in Buffalo and Niagara Falls, N.Y., and Niagara Falls and Queenston, Ont., was recently compelled to suspend its services temporarily for some hours a day, owing to shortage of electrical power. The company takes power from the Niagara Falls Power Co. to operate its Niagara Falls local lines, and from the Niagara, St. Catharines & Toronto Ry., for its line between Queenston and Chippawa, Ont.

Following are officials of the Trans St. Marys Traction Co. for the current year: W. C. Franz, President; Jas. Hawson, Vice President; J. F. Taylor, Vice President, Toronto; A. Taylor, Secretary; E.

W. Shell, Treasurer; P. B. Nash, Comptroller; C. H. Speer, Purchasing Agent; J. H. Stewart, Superintendent, Sault Ste. Marie, Mich. All have offices at Sault Ste. Marie, Ont., except where otherwise mentioned. The electric railway is in Sault Ste. Marie, Mich.

The City of Vancouver is proposing to redraft its charter so as to give it power to supply light and power to the citizens. At present the British Columbia Electric Ry. is supplying light and power in the city, and there appears to be some clauses in the existing charter which forbid the city competing with the company. The City Solicitor said the company had no rights against the city except in regard to its tram system, but he pointed out that the company had other and vested rights which would have to be respected. The company might have these rights irrespective of any agreement with the city. A special committee was appointed by the Council Mar. 13, to redraft the parts of the charter affecting this matter.

The Port Arthur Public Utilities Commission has granted increases of wages to the following employes of the civic railway for the current year: Master mechanic, from \$125 to \$130 a month; armature winder, \$90 to \$100 a month; machinist, blacksmith and carpenter, 35c to 37 $\frac{1}{2}$ c an hour; painter, 32c to 34c an hour; pitman, first class, 30c to 33c an hour; pitman, second class, 25c to 30c an hour; laborers and car washers, 25c to 27 $\frac{1}{2}$ c an hour; night foreman, from 30c an hour to \$100 a month; track foreman, \$90 to \$100 a month; boundary office clerk (half paid by Port William), \$60 to \$80 a month; street railway cashier, \$50 to \$55 a month. The motormen and conductors received an increase of pay last summer.

Nipissing Central Ry. Fire.—The car barn at North Cobalt, Ont., was partially destroyed by fire, Mar. 4. The fire started at the north end of the building, which includes the car barn, shop, sub station and offices, and destroyed the car shed and offices, the shop, sub station and boiler plant, at the south end, being saved. Five cars in the shed were completely destroyed. Additional rolling stock is to be purchased as soon as possible, and the building will also be repaired. A partial service is being maintained with the cars that were in the shop and outside the building and not injured by the fire. The railway is operated by the Timiskaming and Northern Ontario Ry. Commission, for the Ontario Government. S. B. Clement, North Bay, Ont., Chief Engineer and Superintendent of Maintenance.

Dominion Power & Transmission Co.'s Wages.—The Dominion Power & Transmission Co., Hamilton, Ont., operating the Hamilton St. Ry., Hamilton & Dundas Radial Electric Ry., Hamilton, Grimsby & Beamsville Electric Ry., and Hamilton & Brantford Ry., announced on Mar. 9 a war bonus of 2c an hour to conductors and motormen, applying on all the lines. This is in addition to the amounts provided for in the agreement between the company and the men on Mar. 21, 1916, and is for an indefinite period, the advance having been entirely voluntary on the company's part.

Winnipeg Electric Ry. conductors and motormen met Mar. 31 to discuss wages, etc. The present wage schedule expires May 1st, and under its terms it may be continued from year to year, unless either party gives 30 days notice of any change desired.

Electric Railway Projects, Construction, Betterments, Etc.

Lacombe & Blindman Valley Electric Ry.—The Alberta Premier stated in the Legislature, Mar. 9, that 35 miles of grading had been completed from Lacombe along the valley of the Blindman River to Rimbey. The government had paid out of the funds realized by the sale of the guaranteed securities \$128,647.07. In default of the company paying interest on the bonds, the government paid to Nov. 6, 1916, \$20,517.16. The government holds a first mortgage on the railway property and franchise. (May, 1916, pg. 189, and Apr., 1916, pg. 158.)

London & Port Stanley Ry.—The City of London is applying to the Ontario Legislature for authority to pass bylaws without obtaining the consent of the ratepayers to issue \$25,000 of debentures to provide a freight motor car for the railway, and to confirm bylaw 5439 providing for the issue of \$75,000 of debentures for the London Railway Commission.

A suggestion has been made that the London Railway Commission's project to build a grain elevator at Port Stanley should be abandoned, and that 100 freight cars should be bought instead. P. Pockock, Chairman of the Commission, is reported to have said, Mar. 6: "We could use more freight cars, and perhaps that will be the next thing we will go after, when we have an elevator—an elevator is the need of the moment." The city council, on Mar. 5, decided to issue \$100,000 of debentures for the erection of the elevator and has applied to the Ontario Legislature to grant it the necessary authority to do so without a vote of the ratepayers. (Feb., pg. 73.)

Lake Erie and Northern Ry.—The new Union Station in Brantford, Ont., of which an illustrated description was given in Canadian Railway and Marine World, Aug. 1916, pg. 240, was opened for use Mar. 12. It is being used by the Brantford and Hamilton Ry., as well as by the L. E. and N. Ry.

Negotiations are still in progress between the company and the G. T. R. with reference to the route of the electric railway entry into Port Dover, Ont. It is desired to secure an entry over the tracks of the G.T.R., but in the event of this not being possible, the company will build its own line on St. Patrick St. (Mar. 1916, pg. 46.)

Ottawa Electric Ry.—The Ottawa Board of Control has received a letter from the company refusing to operate its cars over the Pretoria Ave. bridge and to extend its service to Ottawa East. The company stated that the location of the bridge and its type was decided upon without consultation with it, but apart from that the company says it is not prepared, owing to the short time which its franchise has to run to make extensions of its lines. The city council has appointed a committee to interview the company's officers with regard to this and a number of other matters in connection with the operation of the railway. (Dec., 1916, pg. 502.)

Peterborough Radial Ry.—The City of Peterborough is applying to the Ontario Legislature to authorize its Utilities Commission to have the control and management of the plant, property, business and assets of the Peterborough Radial Ry., in the event of the same being acquired by the city; that it shall have power to issue debentures to pay for the

same without the assent of the ratepayers, and that the commission shall have all the powers in regard to the railway which the council may confer upon it by bylaw. (Feb., pg. 73.)

Toronto, Barrie & Orillia Ry.—The Ontario Legislature in 1915 passed an act extending the time within which the company could build its projected railway between Toronto and Orillia, and providing that the section of line from Barrie to Utopia, on the C.P.R., was to be the first section to be built. Section seven of the act declared that the act was only to come into force upon proclamation by the Lieutenant Governor in Council. In adding this section the Legislature overlooked the fact that the extension of time was to run from the passing of the act, and therefore that it might run out before the act came into force. The Legislature is being asked to amend the act by substituting the words, "coming into force" for "passing" in sec. 3 of chap. 83. statutes of 1915. (Feb., 1916, pg. 115.)

Toronto Ry.—Plans for the Pape Ave. line have been submitted to the Ontario Railway and Municipal Board. The company is ready to go ahead with construction as soon as the board approves the plans. Under the board's order, the company had to start construction by April 1. (Feb., pg. 73.)

Transcona Electric Ry.—The Manitoba Legislature is being asked to incorporate a company with this title to build, and to operate with any power except steam, a line in the town of Transcona and in the rural municipalities of Springfield and East Kildonan to a point or points in Winnipeg or St. Boniface; to connect with any lines in operation or to be built by the Winnipeg Electric Ry., and to build branch lines to any other points in the municipalities named or elsewhere in the province, subject always to the Winnipeg Electric Ry.'s rights. The capital of the company is fixed at \$1,000,000, and the office is to be in Winnipeg. The provisional directors are: E. P. Garland, E. Frith, C. W. Chappell, R. Siderfin, L. Palk, Winnipeg. Mr. Palk is Assistant to the Manager, Winnipeg Electric Ry. (Mar., pg. 113.)

London and Lake Erie Railway and Transportation Co's Officials.

On account of his many other duties, the President, W. K. George, of Toronto, has resigned, and has been succeeded by G. B. Woods, of Toronto, heretofore Vice President, and the latter position has not been filled. The directors in addition to the President, are: W. K. George, J. B. Holden, Sydney Jones, Toronto; T. H. Purdom, K.C., Jno. Purdom, Jno. Milne, London, and J. W. Scott, Listowel.

W. N. Warburton, General Manager, has also been appointed Secretary Treasurer, and has appointed the other officials, as follows: Accountant, C. G. Newton, London; Chief Dispatcher, H. L. MacDonald, St. Thomas; Electrical and Line Superintendent, E. Rapson, St. Thomas; Mechanical Superintendent, F. Morley, St. Thomas; Roadmaster, William Evans, Lambeth.

The International Transit Co., Sault Ste. Marie, Ont., is considering changing its cars for p.a.y.e operation.

Three Rivers Traction Co's Operations.

The Shawinigan Water & Power Co.'s report for 1916 has the following reference to two of its subsidiary companies: "The directors are gratified with the healthy development of the city and district of Three Rivers. The North Shore Power Co., your subsidiary in that district, has extended its field of operation so as to include the principal manufacturing towns between Three Rivers and Quebec, and the expenditure made this year in new transmission lines will result in a largely increased revenue for this company.

"The Three Rivers Traction Co. during the year obtained a franchise from the Municipality of Cap de la Madeleine, on the east side of the St. Maurice River, and during the summer 3½ miles of new track were laid to connect that town with the city of Three Rivers. The expenditure has resulted in a satisfactory increase in revenue. The additions to the St. Maurice River Co.'s plant at the terminus of the Three Rivers Traction Co.'s line, are nearing completion. The increased capacity of the works will add materially to the labor required, and thus becomes a factor in the growth of the earnings of both of your company's subsidiaries doing business in the district."

Fares on Port Arthur and Fort William Civic Railways.

The Public Utilities Commission of Port Arthur and the Utilities Commission of Fort William, Ont., met in joint session, Mar. 1, and adopted a new schedule of fares for the civic railways, which is expected to be made effective early in April, as follows:

One fare in each city. This means that after crossing the boundary line on a car another fare will be collected.

Ordinary fare, 5c; 6 tickets for 25c, good from 6 a.m. to 12 p.m.

Workmen's fare, 5c, or 8 tickets for 25c, good from 5.30 to 8 a.m. and from 5.30 to 7 p.m., from Monday to Saturday inclusive. Sunday tickets, 8 for 25c, good from 5.30 a.m. to 12 p.m.

Children's fares, under 14 years of age, 10 tickets for 25c, bona fide students to be allowed this rate between 8 a.m. and 5 p.m. on school days; no double fare for children on main line on Sunday.

Night car fares, from 12 midnight to 5.30 a.m., 10c, good for a through ride.

The new schedule was discussed at a meeting of the Port Arthur Board of Trade, Mar. 6. Chairman Wideman and Secretary Rapsey, of the Utilities Commission, outlined the conditions existing on the street railway and the necessity for a change in fares. Discussion arose over the latter, the general consensus of opinion being that the fares should be raised high enough to make the road pay for itself, even if a 10c fare for all classes in each city be necessary. Mayor Cowan intimated that he would support at the meeting of the commission the resolution adopted by the joint committee from the Twin Cities, although it was hardly high enough in his estimation. A. W. Robarts suggested that a straight 5c fare for all might be a feasible solution. No resolutions were passed.

The City Council of Fort William passed a resolution Mar. 13, approving of the new fare schedule as recommended by the commission of both cities meeting in joint session.

Vancouver's Electric Railway Service and the Jitneys.

C. A. Abraham, who went from Winnipeg recently to manage the Vancouver Sun, has written home impressions of the latter city, in the course of which he says: "A very striking feature is the street car service and the jitneys. The street car service leaves little to be desired. It is, in fact, one of the best in the Dominion and far surpasses the transportation provided in most of the other large cities. The company has invested capital of \$48,000,000 on the mainland and on Vancouver Island. Probably it gets less for it and gives more than any other traction concern having a similar investment. In Vancouver the service is rapid and seems to meet the requirements of the people. The jitneys, at the same time, practically control the situation. They run where they like and when they like and into whom they like. Rarely anyone protests. A reverend gentleman did protest against their immorality in being unlighted, and the city has passed bylaws and restrictions—but the jitneys go on as ever. They take passengers from the street cars in fine weather, and then leave the whole business to the company when the weather is not good enough for a delicate auto driver to venture out. The street car company pays a percentage of its earnings to the city. It has to provide a certain service—which it does; it has to keep up streets and tracks and a hundred and one other things, while the jitney merely pays an auto license and gathers up passengers and takes in the money, apparently without restriction.

Brantford Municipal Ry's Report.

The Brantford, Ont., Railways Commission presented the following report to the City Council recently:

On Jan. 26, 1916, service ceased over the Paris-Galt section of the Grand Valley line, consequent upon the sale by the city to the Lake Erie & Northern Ry. Co., but notwithstanding that about 14 miles less line were under operation by the Commission during 1916 than in 1915, the revenue increased from \$95,898.76 in 1915 to \$97,737.98 in 1916, the shrinkage on the Grand Valley Line being more than offset by the gain on the city lines. The passenger earnings per mile run increased on the city lines from 16.3c in 1915 to 20.7c in 1916, and on the Grand Valley line from 25.9c in 1916 to 29.6c in 1916. The operating expenses on the other hand decreased from \$74,467.57 in 1915 to \$68,369.35 in 1916. The surplus of operating profit, being the revenue less all operating expenses, was, in 1915, \$21,431.19, and in 1916, \$29,368.63.

The interest and sinking fund required to be met was \$24,564 in 1916, against \$22,980.75 in 1915, the increase being caused by all the debentures having been disposed of and interest paid thereon. A new charge appears in the accounts of 1916 by reason of an agreement made by the commissioners with the council, and adopted Mar. 6, 1916, whereby they undertook to provide thereafter from revenue the annual sums necessary to meet the railway share of pavement instalments payable in the first instance by the city, such sums to be considered and treated as depreciation. This year \$6,000 was thus assumed. The net result of the year's operations is therefore a deficit of \$1,195.37, compared with

\$1,549.56 in 1915, notwithstanding the increased sinking fund and the assumption of the \$6,000 as above stated. The full amount of the interest and sinking fund has been paid over to the City Treasurer, and the full amount of the interest on the \$125,000 bonded debt has been promptly met. The city lines have been extended during the year to the new munition plant; a new snow sweeper has been procured and other minor improvement effected.

The special attention of council is called to the following matters arising from the commission's financial position: The sum invested by the city for property and the necessary supplies, stores, etc., for its operation, was on Dec. 31, 1916, \$435,549.57. The capital liability by way of bonds, debentures and maturing pavement instalments was, at the same date, \$422,897.47, leaving a balance, not covered by bonds or debentures, of \$12,652.10. The accumulated deficit of the operation since the commission took charge is \$2,739.93. These two sums aggregate \$15,392.03, and the council should provide funds for same in order to allow the commission to discharge its liability to the city treasury of \$10,328.83 and to the general public of \$5,068.20. Provision should be made by the council for funding the \$12,652.10, either at once, or by including it in any vote submitted to the people for further extensions or improvements to the railway system. The deficit might be allowed to stand for the present the commissioners hope the property is now on a self-sustaining basis.

OPERATING ACCOUNT FOR 1916.

Earnings—	
Passenger, City lines	\$63,916.38
Passenger, Grand Valley line	23,802.09
Freight	2,930.57
	\$92,718.47
Miscellaneous	2,088.94
	\$97,737.98
Expenditures—	
Power	\$19,839.68
Operating wages, maintenance and general expense	48,529.67
	68,369.35
Gross operating profit	\$29,368.63
Bond and debenture interest	\$19,750.00
Sinking fund	4,814.00
Instalment on pavement indebtedness, to be applied in lieu of depreciation*	6,000.00
	30,564.00
Deficit	\$ 1,195.37

*At the time of making this agreement it was confidently thought by the commission that the operating profit for the year would allow of the assumption of this item, but this expectation has not been realized, consequent upon the abnormal cost of supplies, increased wages paid car men and other employes, etc.

Passengers carried, city lines, 1,421,298; Grand Valley line, 180,011; total, 1,601,309. Earnings, city lines, \$92,718.47. Car miles run, city lines, 308,645; Grand Valley line, 97,376; total, 406,021. Earnings per car mile, city lines, 20.7c; Grand Valley line, 29.6c. Expenditure, exclusive of interest, sinking fund or depreciation, per cent. of earnings, all lines, 69.9, against 77.6 in 1915.

Guelph Radial Ry.—The auditor's report on the corporation finances for 1916 shows that the profits for the year received by the city from the operation of the G.R.R. were \$664.18.

The erection of a high level bridge between Windsor, Ont., and Detroit, Mich., is being advocated in those cities; the bridge to be used for foot passengers, vehicle and electric railway purposes.

The Ontario West Shore Railway Fiasco.

A request was made in the Ontario Legislature, Mar. 5, for a return of correspondence in the government's possession, relative to the Ontario West Shore Ry., and the enquiry made on behalf of the municipalities concerned, and also as to what steps the government had taken to arrest J. W. Moyes, against whom charges of fraud had been made. The railway was to have been built between Goderich and Kincardine, and four municipalities guaranteed about \$100,000 worth of bonds, with the idea that the trust company looking after the financial end of the transaction would see that the funds were not mishandled. They discovered later that about \$126,000 had been misappropriated, and it was stated that after the matter had been taken up with the Attorney General, J. W. Moyes had gone north from Toronto, apparently for his health, and had since disappeared. The Attorney General stated that to bring down the papers asked for would defeat the purpose in sight—the arrest of the person concerned. In his opinion there was no doubt that the money was obtained by fraud. The government had not been notified until Moyes had been away from Toronto for three days. He claimed that the parties interested should have moved sooner, and stated that they had been trying to get back the money from Moyes. Three days after that Moyes had left Toronto, the government was asked to keep him under observation, but that his arrest was not desired until the Ontario Railway and Municipal Board had reported on the investigation.

Marine Department

Canada Steamship Lines, Ltd., Annual Report and Meeting.

The following report was presented at the annual meeting in Montreal Mar. 7:

The improvement in the company's business noted in our last annual report has continued in a gratifying manner. Unprecedented developments in the world's affairs, as a result of the war, have given rise to many new and difficult problems in the management of your company. The high cost of fuel, food-stuffs and insurance, the difficulty in obtaining new tonnage and the scarcity of labor, not to mention the changing aspect of world politics, are matters which have caused grave concern. The management, however, has successfully met each situation as it arose and has brought about a result which your directors feel confident will meet with your approval. The balance sheet, operating and surplus accounts presented herewith will convey to you in a concise manner the result of your company's operations for the year under review and its present financial position.

Incidental to the operation of so large a fleet, your company suffered some losses from fire, stress of weather and the King's enemies, all of which were covered by insurance. Additional new tonnage has, however, been acquired and the position of your company in this respect is stronger than at our last annual report. Care has been taken to maintain in the highest state of efficiency, vessels, docks and other properties, and many improvements and betterments have been added. The work of consolidating the various units which were brought together when your company was formed has been completed, and your Vice President and Managing Director has reported that his efforts are being seconded by an efficient and loyal organization. During the year three payments of 1 3/4% were made in respect to deferred dividends on the preference shares, and a further payment on Mar. 1 of this year of 7% will leave a balance of 5 1/4% due, which, when paid, will wipe out all arrears to Dec. 31st, 1916.

Assets.	
Vessels, as at Dec. 31, 1915.....	\$17,628,237.32

James Carruthers, President, in moving the report's adoption, said: I might be pardoned if I mention the fact that the faith of those who have stood by our undertaking in the past has been amply justified. You who have furnished the capital, and your directors and management, who have devoted themselves to the welfare of our company, may well feel satisfied with the results so far accomplished. There is much, however, still to be done in developing existing trade routes and establishing new ones. The increased earnings are made up from nearly all branches of the service, but particularly from the operation of vessels on the high seas, and this field of development is practically unlimited.

The proportion of expenses to earnings continues to decrease steadily, showing that overhead expenses and operating costs are being kept down. The figures for the past three years are as follows: 1914, 80 1/2%; 1915, 71%; 1916, 67%. This decrease in operation has not been made by allowing the fleet to run down. We have kept our vessels, docks, etc., in good shape and have spent considerable amounts on same.

In the balance sheet there is an entry showing the amount of dividend arrears, in respect to the preference shares, viz., \$1,531,250. Of this \$875,000 has since been paid off, and I fully expect that the balance still due will be paid off at an early date. It is the intention of your directors to endeavor to build up a reasonable reserve, and also to provide for as much working capital as possible. This latter is a necessity caused by the expansion of the company's business. There seems to be no good reason why present conditions in our business should not continue for a long time to come. For 1917 I feel confident that we will do at least as well as we did in 1916. The quantities of ore, coal and other commodities to be moved are enormous and the amount of grain at the head of the lakes, waiting for the opening of navigation, is larger by several million bushels than it was at the same time last year. The general crops in the northwest, and wheat in particular, were largely underestimated. Instead of between 150,000,000 and 200,000,000 bush. of wheat, it is now known that the yield was approximately 225,000,000 bush. This, even at the price of \$1.50 a bush., means over \$100,000,000 more to our western farmers than was anticipated. Owing to the high prices all over the world for food-

stuffs of every description, and the enormous demand from Europe, there is the greatest possible incentive to our farmers in the east, as well as in the west, to produce as much as possible of everything in the way of staple foodstuffs: I do not doubt that our farmers will take the fullest advantage of the situation, benefiting themselves and the country at the same time, and I feel confident that, with favorable weather conditions, Canada should, in 1917, raise the largest crop in her history. During the year the number of shareholders in the company increased by over 33%. I have found the spirit of co-operation and devotion to the company's interests most marked among all the officers and employees.

J. W. Norcross, Vice President and Managing Director, in seconding the motion, said: It is hardly necessary for me to elaborate on the conditions which made it possible for us show the earnings set forth in the annual statement. The conditions which had to be met and overcome would require considerable detailed explanation. I will, therefore, simply pass over all detail and give a resume of the business done by the company for the past year. The inland freight service showed considerable improvement and the rates held fairly steady throughout the entire season. While the operating costs were higher than in 1915, our net earnings were considerably higher, and altogether showed very satisfactory results. This portion of the fleet is in excellent physical condition, and when putting these vessels into winter quarters, we took the opportunity to fit them out ready for business in the spring, so that no matter what date navigation opens our fleet will be ready for work. The passenger branch of the service showed a gross increase over the year previous, and, notwithstanding the difficulties and increased expenditures in the cost of operating, through the scarcity of labor, food and fuel, the net earnings have proved larger in proportion than in 1915, which was considered the banner year of the old Richelieu & Ontario Navigation Co.

Our ocean service, including the Bermuda and West India service, has shared in the general prosperity of ocean carriers, with the exception of the s.s. Bermudian. We did not make the enormous profits in this service that were made by Trans-Atlantic liners, for the reason that ours is a regular service, and during a portion of the year the ships came north with very little cargo, and the rates have only been increased as necessity required. During the off sugar season, our vessels could have made larger profits by trading in the Trans-Atlantic service, but I am sure that the conservative policy of keeping them on the route will, in the future, give us better earnings for a longer period than if we had deserted the route during the short season that north-bound cargoes were scarce. The portion of our fleet which formerly operated on the lakes, and which we fitted out for ocean service, has done well, and while, for the first two years, we paid a very high marine risk insurance on these ships, in some cases three times the regular rate, we now feel that with the money laid out as suggested to us by classification societies, we are about to largely improved physical condition of the vessels. Every vessel which we have at sea is in first class condition, and unless lost through war risks, will no doubt return handsome profits for the coming year. During 1916 we lost the s.s. Empress of Fort William and the s.s. Em-

press of Midland through hitting mines in the English Channel, but there were no lives lost. These ships were fully covered with war risk insurance and have been replaced with no loss to the company.

I do not think it advisable to forecast the possible earnings of the company for 1917, except to say that, up to the present, they have fulfilled our expectations. The company's financial condition and the physical condition of its property is excellent. I wish to thank the heads of the departments and their staffs for the excellent work and co-operation which they have shown during the past year, as this, to a large extent, has made it possible for us to put before you such a statement as was shown you today.

The directors were re-elected, except Sir H. Montagu Allan and Æmilius Jarvis, of Toronto, both of whom retired. Sir Montagu Allan, who has been in England for the past two years, will act as one of the London advisory committee. W. E. Burke, Assistant Manager, and F. S. Isard, Comptroller, were elected to fill the vacancies on the board, which is now constituted as follows: James Caruthers, President; J. W. Norcross, Vice President and Managing Director; C. A. Barnard, K.C., R. M. Wolvin, J. C. Newman, H. B. Smith, M. J. Haney, Hon. J. P. B. Casgrain, J. E. Dalrymple, G. H. Smithers, D. B. Hanna, J. P. Steedman.

Alaskan Fishing Fleet.—Owing to the automatic adjournment of the U. S. Congress, Mar. 3, a bill dealing with fisheries questions off the British Columbia-Alaska coast, and affecting the fish shipping industry at Prince Rupert, and the transportation of fish through Canada to the U. S., was not dealt with. It is stated in Washington, D.C., that it is believed the effect of the Canadian laws, if not offset, will be to bring the Alaskan fishing fleet, operating off Ketchikan, under Canadian registry. The U. S. Shipping Board has refused an application to transfer the motor driven fishing vessel Venture from the U. S. to the Canadian register, stating that while the Canadian regulations apparently offer tempting inducements for such transfers, they do not in reality give U. S. citizens an opportunity for free competition in the fisheries trade, but rather subject consumers of fish in U. S. territory through Canadian ports to the possibility of monopolistic price manipulation.

Salvage Claim Against Lloyd's.—The Larder Bros. Wrecking Co., Halifax, N.S., is claiming, in the Nova Scotia Supreme Court, from the committee of Lloyd's, and the individual members thereof, £20,000, being balance of money deposited with the committee under a salvage agreement between Lloyd's, the master of the s.s. Arachne, and the wrecking company. The s.s. Arachne, a British vessel, stranded near Point Plate, Miquelon Island, June 20, 1916, the master being censured and reprimanded severely for the non-accomplishment of simple navigation principles, which, although ordinary, are necessary.

Classification of Vessels.—U. S. underwriters have decided that all wooden and composite vessels are to be reclassified after inspection by the American Bureau of Shipping, prior to loading of the first grain cargo, and inspected again prior to Aug. 31, and prior to loading after an accident to a vessel. The season for wooden vessels will be from May 1 to Oct. 31. No change has been made the tariff rates.

U.S. Shipping on the Great Lakes.

The executive order of the United States prohibiting the transfer of U. S. ships to foreign registry came a trifle late. It is but another illustration of locking the door after the horse has been stolen. Following the passage of the Seamen's Act, the Trans-Pacific fleet of U. S. bottoms was sold, and in compliance with the Panama Canal Act, Great Lakes shipping was greatly decimated. In the latter case many vessels were sold by U. S. owners to British companies, the vessels being changed to British registry. Notwithstanding the fact that Canada has given nearly 100,000 tons of Great Lakes shipping to ocean services of the United Kingdom, the Dominion still has 218,019 tons of registered steel vessels on the Great Lakes, and is building many more vessels. The decline in U. S. tonnage on the Great Lakes is particularly unfortunate when bulk cargo was offering in great quantities on every pier and the freight rate per ton advanced all the way from 50 to 75%. It has been estimated that U. S. laws have been responsible for driving from the Great Lakes many thousand tons of steel ships badly needed at the present moment. While the attractive prices offered for tonnage has drawn an additional large number of vessels from that service, as far as the law and its effect are concerned, not one individual shipper, either farmer, manufacturer, merchant or middleman, has been helped to the value of a postage stamp, and under the new conditions freight rates as shown have more than doubled, but the controlling rate making power can disregard any ruling of any U. S. regulating commission. — Railway and Marine News, Seattle, Wash.

The Timiskaming Navigation Co.'s property, including four steamboats, Jubilee, Meteor, Silverland and Temiscamingue, and wharf and dock accommodation at Haileybury, has been sold by Jas. Hardy, Toronto, liquidator, to T. A. Simard, Ville Marie, Que. The company assigned about two years ago, and since then the property has been managed by P. Gibbons, on behalf of the liquidator. The Jubilee is a screw driven vessel with engine of 10 n.h.p., built at Kingston in 1897; length 84.2 ft., breadth 15.4 ft., depth 5 ft.; tonnage, 117 gross, 78 register; the Meteor is screw driven by engine of 165 n.h.p., and was built at Opemican, Que., in 1897; length 130.5 ft., breadth 27 ft., depth 7.4 ft.; tonnage, 299 gross; 204 register; Silverland is screw driven by engine of 13 n.h.p., and was built at Haileybury in 1909; length 85.4 ft., breadth, 17 ft., depth 6.7 ft.; tonnage, 92 gross, 52 register; the Temiscamingue is screw driven by engine of 21 n.h.p., and was built at Timiskaming, Que., in 1898; length 133 ft., breadth 22.5 ft., depth 6.5 ft.; tonnage, 295 gross, 213 register.

The Shipmasters and Officers Association of Canada has been organized in Vancouver, B.C., to promote the welfare and interests of masters and officers in the mercantile marine service. Law fees will be paid by the association in the event of any member requiring legal assistance in collision and other marine cases in which he is involved. The entrance fee is, for masters \$10 and for officers \$8, in addition to which there is a monthly fee of \$1. Commander C. Unwin, R.N.R., 539 Pender St. West, Vancouver, is the Secretary.

Coast, Lake and River Steamship Officers for 1917.

The following appointments made by navigation companies, engaged in Canadian navigation, for their various steamships and tugs, have been reported to Canadian Railway and Marine World. The first column gives the names of the vessels, the second, those of the captains, and the third, those of the chief engineers.

Shipping Federation of Canada's Annual Meeting.

At the annual meeting in Montreal recently, John Torrance, Chairman of the Executive Council, presided, in the absence of the President, A. A. Allan. The report showed that the regular line tonnage entered with the federation showed a decrease owing to the exigencies of war service, but the tramp tonnage entered showed an increase, which more than made up the loss of regular line tonnage, as follows:

	1915.	1916.
Regular line tonnage	510,070	474,636
Tramp tonnage	299,627	499,313
Tramp tonnage increase	199,686 tons	
Regular line tonnage decrease.....	35,434 tons	
Net increase in tonnage	164,252 tons	

Following are extracts from the President's report: The first steam vessel to arrive from the sea was the Italian s.s. Bayern, on May 1, three days later than the first arrival in 1915. The last ocean vessel to depart was the Norwegian s.s. Begna with a full cargo of grain for the Belgian Relief Commission, which cleared on the morning of Dec. 3. Vessels from the upper lakes passed through the harbor, eastward bound, as late as the middle of December. The number of ocean vessels which arrived at Montreal during the season was 685, a decrease of 130 from 1915. The number of trans-Atlantic vessels which arrived showed an increase over 1915, but a serious falling off is recorded in the coasting trade vessels, this being principally due to the scarcity of ocean tonnage, and vessels which formerly plied on the coasting trade have for the greater part left for other trades where higher rates are prevailing.

The passenger trade, both eastbound and westbound, was as good as could be expected, in fact, most of the passenger vessels on the route were at times overbooked on their eastbound voyages. High freight rates continued to be a factor, but taking the season as a whole, it may be recorded as a most erratic one for the lines trading to the port. Owing to the congestion of the ports in the United Kingdom and France, there was all through the season an uncertainty as to sailing dates. The volume of freight offering at times was more than bottoms could be procured to transport, and several lines had to charter outside steamers at abnormal charter rates to meet the demand of the exporters. Notwithstanding the volume of trade carried on during the season, speedy dispatch was given to all vessels entering the harbor, and no detention or congestion for any length of time occurred. Exports from Montreal showed abnormal increases in certain articles as compared with other years. Increases are noted in the following commodities: Grain, 28,422,275 bush.; flour, 2,962,775 sacks; eggs, 93,416 cases; cheese, 290,968 boxes; butter, 122,964 boxes. On the other hand, decreases in exports are noted in hay shipments of 740,434 bales, and apples, 19,187 barrels.

The standard of the pilotage district below Quebec has improved considerably during the past year. This is no doubt due to the energetic measures taken by the government to put the district on a sound footing, and it is our earnest hope that they will keep up this good work and help to efface the black marks which this district has placed on the route. The list of accidents on this route seem very large as compared with former years, but, with the exception of

one or two cases, they were not of a serious nature, most of the vessels only suffering minor damages.

Various improvements in Montreal harbor were progressed with during the season. The high level quay at Victoria Pier was completed and formally opened to ocean traffic. The contract for the improvements proposed to be carried out at St. John, N.B., has been cancelled by the government, and there is very little prospect of it being renewed for some time. When the contract is renewed it is estimated that three years will be required to complete the work. The Quebec Harbor Commissioners are making considerable progress with the new works for the improvement of the harbor, and the two new sheds which are under construction are expected to be completed this spring. Satisfactory progress has been made on the government graving dock at Lauzon, Que., and the government has given an assurance that, barring any unforeseen incident, they expect to have the dock in operation at the opening of navigation, 1918.

The report made by the commission appointed by the Canadian Government on the water levels of the River St. Lawrence proposed to dam the river at certain points, with a view to increasing the levels. The shipping interests did not look very favorably on this project, and, at considerable expense, obtained the opinion of three prominent engineers, who have had considerable experience in river hydraulics. They were of the unanimous opinion that damming the river would not increase the levels of the river to the extent proposed. Our engineers were also of the opinion that if these dams were constructed they would render navigation in the river extremely dangerous. Copies of the engineers' reports were forwarded to the government for their favorable consideration, and they have advised us that the proposed improvements as suggested by the Water Level Commissioners would not be proceeded with until the matter had again been further considered. I have lately come across an important report issued by the Chief of Engineers of the United States Army, regarding the diversion of water from Lake Michigan through the Chicago Drainage Canal. He points out that the volume of water which the State of Illinois is permitted to take from Lake Michigan is not to exceed 4,167 cu. ft. per second, but it is a well known fact that the sanitary district authorities have for years past been withdrawing a much larger amount. This represents a daily average flow of water from Lake Michigan of more than 690,000,000 cu. ft. a day, which is about equal to the entire low water flow of the Mississippi River at St. Paul. The continuous withdrawal of this volume of water, he estimates, will result in the lowering of Lakes Michigan and Huron to the extent of 5 in. or more, and of Lake Erie to nearly the same extent. To lower the levels of the lakes, as claimed above, would reduce the permissible load by 300 to 550 tons for lake vessels, and a great deal more for ocean vessels, and the International Waterways Commission places the loss to navigation interests at \$1,500,000 a year. You will see the serious position we are in.

The following officers were elected for the current year: President, A. A. Allan; Chairman, Executive Council, John Torrance; Treasurer, J. R. Binning; other

members of Executive Council: W. R. Eakin, R. W. Reford, A. Mackenzie, A. M. Irvine, D. W. Campbell. Assistant Treasurer, E. W. Foulds. Manager and Secretary, Thos. Robb. Bill of Lading Committee: W. I. Gear, John Torrance, J. R. Binning and D. A. Watt. Harbor Equipment Committee: A. A. Allan, W. I. Gear and John Torrance. Quebec District Committee: W. M. Macpherson, Chairman; Harold Kennedy, D. Barrow, and G. B. Ramsay, Secretary.

Prince Rupert-Cleeve Collision Investigated.

An investigation was held recently at Victoria by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Capt. W. Wingate and J. R. Stewart, as nautical assessors, into the cause of the collision between the Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert and the steam tug Cleeve in Vancouver harbor, Dec. 28, 1916. The judgment declares that the cause of the collision was an error of judgment on the part of W. N. Coughlin, master of the Cleeve, in putting his helm hard a starboard just a few minutes before the impact, this action being, in the court's opinion, the initial cause of the casualty, and, secondly, to an entirely mistaken idea on the part of the Cleeve's master that his vessel had the right of way. The court, however, while imputing the sole blame for the collision on the master of the Cleeve, does not in any sense mean to reflect on his character and ability as a seaman, and under the circumstances thinks that a warning to be more careful in future will meet the requirements. No blame can in any sense be attached to Duncan Mackenzie, master of the Prince Rupert, nor to any of her officers or crew.

Capt. J. R. Stewart, in dissenting from this judgment, stated that he could come to no other conclusion than that the position of the vessels some time before the collision was that of passing vessels, and the onus of preventing such a crossing rested with the Prince Rupert, as she had the Cleeve on her starboard bow. The master of the Cleeve, on seeing that a collision was inevitable, reversed his engines and threw his helm hard a starboard, which was contrary to rule 21 of the regulations for preventing collisions at sea, and as his action failed to show that he in any way lessened the disaster, Capt. Stewart considered both vessels to blame for the collision.

A press dispatch from Victoria stated, Mar. 13, that the master of the Cleeve had appealed, and that a rehearing of the case had been ordered to be held by Capt. Chas. Eddie, Examiner of Masters and Mates, Vancouver.

The Safest Route to America.—Since the diplomatic break between the United States and Germany, a number of U. S. citizens in Germany have been thoughtfully considering what is the safest way to return home. The Trans-Siberian is conducting a special advertising campaign in Copenhagen, with a view of attracting a number of travelers to take the longest way round as the safest way home. After the war, this means of traveling will doubtless be very much developed, and a complete chain established round the world, and there is also very little doubt that the C.P.R. will be a considerable factor both in its development and operation.

Shipbuilding in Canada for the British and Canadian Governments.

The activity in Canadian shipbuilding yards, which has been very marked for the past two years, has been greatly increased by the action of the British and Canadian Governments, which have both taken steps to secure vessels to replace losses of cargo carriers, incurred through German submarine warfare and also to add materially to the number of steam fishing vessels, which are being so largely used for scouting and patrol purposes. Jas. P. Esplen, who came out from

be regarded as a certainty that for some time to come, at least, no more licenses for export will be issued. In addition to the above mentioned vessels, the Port Arthur Shipbuilding Co., which has succeeded the Western Drydock & Shipbuilding Co., is building 3 more of the Norwegian type, making 6 in all for that plant.

Steam Trawlers and Drifters.

The Dominion Government has undertaken to have built in Canada, 36 steel

troller; and H. W. Cowan, Operating Manager. The orders are being distributed among existing shipbuilding plants from Quebec to Port Arthur, and it is probable that one or more plants which have not been in operation for some time will also be utilized. The materials, including engines and other machinery, are bought by the department and supplied to the builders.

In this connection it is interesting to note that Vice Admiral Sir Charles Coke of the Royal Naval Reserve, has arrived in Ottawa, with a staff of naval officers, to take command of the Canadian Naval Patrol Service on the Atlantic and Pacific. Admiral Coke relinquishes his Royal Navy rank temporarily, and becomes a Commander in the Canadian Naval Reserve, in charge of coast patrol.

The steam trawlers and drifters will, as before stated, be built on typical British lines, which are described as follows: Steam trawlers range from 110 to 150 ft. long, according to the fishing grounds which it is intended to work. The vessel is rigged with two masts and carries mainsail, mizzen-sail and foresail. The larger type of vessel has a raised quarter deck, extending sufficiently forward of the engine casing and wheel house for the trawl winch to be fitted thereon. There is a sunk fore-castle, or a topgallant fore-castle, under which the crew is berthed, while the captain and officers accommodation is aft, and there is a covered

wheel house fitted with a telegraph communicating with the engine room. In some vessels accommodation is provided for the captain underneath the wheel house, which serves also as a chart room. Every available space on deck, and below

A Steam Trawler, 125 feet long.

Great Britain recently, and who is making his headquarters in New York, as representative of the British Shipping Controller, has arranged with the Imperial Munitions Board, at Ottawa, to secure all cargo vessels that may be available in Canada for delivery by May 31, 1918, and which are now completed, or under construction, or which it may be possible to build before that time. It is said that five vessels have already been arranged for from British Columbia builders and that probably about the same number will be secured from builders in Nova Scotia, Quebec and Ontario. Further orders will doubtless be placed.

Towards the end of last summer, a demand sprang up for freight vessels for Norway. Between Sept. 19 and Nov. 15, 1916, the Dominion Government authorized the exportation to that country on completion, of 18 steel steam steamships, to be built by the following companies: Nova Scotia Steel & Coal Co., New Glasgow, N.S., 2; Canadian Vickers Limited, Montreal, 2; Polson Iron Works, Toronto, 4; Western Drydock & Shipbuilding Company, Port Arthur, 3; Wallace Shipyards, Limited, Vancouver, 4; Coughlan & Sons, Vancouver, 3. In addition to these the Thor Iron Works, Toronto, was authorized to export 2 steel freighters to the United States, on completion. It appears probable that the majority, if not all, of these 20 vessels, for the export of which licenses were granted, will be taken over for the British Government and it may

steam trawlers, and 100 wooden steam drifters, of standard British types. The trawlers will be about 125 ft. long between perpendiculars, 23 ft. beam, and 13½ ft. deep. They will have triple expansion engines of about 500 h.p. The

A Steam Herring Drifter.

work of having these vessels built has been delegated, by the Naval Service Department, to J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines, Ltd., Montreal, who is acting as Director of Naval Construction, and is being assisted by three of the company's other officials, W. E. Burke, Assistant Manager; F. S. Isard, Comp-

deck, of a modern steam trawler is utilized to the greatest advantage, in fact the vessel may be truly termed a *multum in parvo*. The decks are crowded with contrivances, many of them very ingenious, for the convenient and expeditious working of the trawl gear, while below deck space has to be allotted for carrying the maximum amount of coal, for

storing ice to preserve the catch of fish, and for storing the fish itself. The larger vessels are fitted with a reserve bunker, for use when steaming to distant fishing grounds. On the outward voyage the coal is worked from this bunker, so that the space can be used for storing fish on the homeward voyage. The fish room is divided up into several compartments, both vertically and horizontally, into which the various kinds of fish are carefully packed in ice, which preserves the catch in good condition during the return voyage, the ice being finely crushed before it is deposited in the ice room. In consequence of the vessels frequenting distant fishing grounds, sometimes as far as 1,000 or 1,200 miles from the home port it has been found necessary to adopt a system of insulation for the better preservation of the fish, especially during the summer. The entire structure is of unusual strength, the scantlings being considerably in excess of Lloyd's requirements for their 100 A1 class, while the vessels are double rivetted throughout, these precautions having been found necessary, to enable this class of vessel, not only to withstand all conditions of weather, but also the heavy strains consequent on having to tow or trawl with a maximum weight of gear, with all the contingent risks of fouling obstacles, such as sunken wreckage and protruding rocks at the sea bottom. For the same reason very powerful machinery is fitted, ample boiler power being an important consideration. The engines are of the triple expansion type, and the principal working parts are of excessive dimensions, to provide against the severe and sudden strains the machinery of necessity has to contend with. A very powerful double barrelled steam winch, capable of winding 2 steel warps, varying from 1,000 to 1,500 fathoms in length, is fitted in a convenient position, while, as before mentioned, there are special deck fittings of a most ingenious design, for working the fishing gear, the nature and position of which demand very careful study.

Steam herring drifters are used, round the coast of Great Britain, in the herring fisheries. The modern steam drifter is a smart, sturdy, little craft with two masts, fore and mizzen, the foremast being arranged to lower when the vessel is drifting with the nets, so as to offer less wind resistance. The majority of steam drifters are now built of steel (but those to be built in Canada will be of wood) and vary from 80 to 99 ft. between perpendiculars by about 18 ft. breadth and 9½ ft. depth to top of keel. They are fitted with compound surface condensing engines of from 200 to 250 i.h.p. and attain a speed of from 9 to 10 knots. The general design of these vessels is a somewhat intricate study, owing to the great change of trim to which they are subject. To allow for this they are given a draft of from 10 to 11 ft. aft and only a 4 ft. forward. This deep aft is necessary, on account of the machinery and bunkers being placed abaft the centre line of the vessel, so as to leave sufficient space for fish and net rooms forward and thus prevent the vessel from going down by the head, when returning to market with a heavy load of fish. The fish room is divided off at each side into sections or "pounds," the object of this being to break up the bulk of the fish, which would otherwise be damaged by the vessel's motion. The only deck machinery is a self contained steam capstan, fitted near the bow of the vessel, for hauling in the rope to which the nets are attached. These are very ingenious machines of special design and workmanship. A comfortable cabin is

provided in the after part of the vessel and the crew are berthed under the fore-castle forward, although in some cases the whole of the crew are accommodated in the after cabin. A separate galley is provided on the deck at the after part of the engine room casing.

Additional Shipbuilding Plants.

There are a number of rumors as to the establishment of new shipbuilding plants, probably only a few of which have any foundation in fact.

An Ottawa press dispatch says that negotiations are in progress with a view to the establishment in Canada of a branch of another of the large British shipbuilding firms, that the matter is occupying Sir Robert Borden's attention and that the plant will probably be located on the Atlantic seaboard.

The St. John Shipbuilding Co. is being organized at St. John, N.B., and will, it is said, be incorporated by Dominion charter, with an authorized capital of \$1,000,000. Thos. Nage is mentioned as the principal promoter.

Another project is spoken of for Newcastle, N.B. E. A. McCurdy being one of the promoters, and Lord Beaverbrook being mentioned as one of those interested.

International Shipbuilding Corporation Ltd. was incorporated recently, by Dominion charter, with authorized capital of \$2,000,000, and office in Montreal. The incorporators are all in the office of H. A. Lovett, K.C., there. It is said that United States people are interested among others.

Hamilton Shipbuilding and Ferry Co., a subsidiary of Canada Steamship Lines, Ltd., is said to be contemplating estab-

lishing a plant at Hamilton, Ont., and in this connection has informed the city council that a condition is that it should be given a lease of Wabasso Park, with a right to operate a ferry service.

The Canadian Shipbuilding Co.'s plant, which was established at Bridgeburg, Ont., as a Canadian General Electric Co.'s subsidiary, and which has not been operated for the past 10 years, or so, will it is reported, be started up again.

The National Shipbuilding Co., Ltd. has been incorporated, with an authorized capital of \$100,000, and office at Goderich, Ont., and will, it is said, take over the old Doty plant there.

Ocean & Inland Transportation Co., Ltd., has been incorporated under the Dominion Companies Act, with \$40,000 capital, and office at Montreal, to own and operate steam and other vessels, and to carry on a general navigation, salvage and towage business. The incorporators are: W. R. L. Shanks, F. G. Bush, G. R. Brennan, A. G. Yeoman and H. W. Jackson, Montreal.

The Australian Navigation Co., Ltd., incorporated under the Nova Scotia Companies Act, with office at Halifax, N.S., has been removed from the register and the company dissolved, as it is not carrying on business, and is not in operation.

H. Savigny, bridge tender on the Welland Canal, has been awarded \$300 for injuries sustained when the s.s. Mapleton collided with a bridge at Port Robinson last year.

The s.s. Westmount, which is being built for the Montreal Transportation Co. by the Collingwood Shipbuilding Co., will be launched on Apr. 5.

Reinforced Concrete Vessel Building in Norway.

A letter from the United States Consul-General at Christiania describes the application of reinforced concrete at a plant in Moss to the construction of vessels of relatively large displacement—up to 3,000 tons. The following quotations from the letter indicate the extent of the new development in the concrete field in Norway: "The inventor of this new style of vessel is said to be M. N. Fougner, an engineer, who claims to be able to build a ship of any size demanded. He is now building a lighter for a mining company at Sydvaranger for the oversea export of iron ore and the import of coal. The vessel, having a displacement of 3,000 tons, is to be ready before the end of this year. It is stated that these concrete ships can be sailed or engined like other vessels, and experts consider that a new epoch in shipbuilding has arrived.

"The ship, which arrived in Christiania last month, resembles a large barge, and is constructed entirely of concrete, with the exception of the ribs, which are of steel. This new method of constructing ships has attracted much attention. The Swedish Minister of Marine, M. Brostrom, one of Sweden's largest ship owners, immediately ordered a lighter of some thousand tons displacement, and he was present when it was launched at Moss. He was accompanied by four experts, all of whom expressed much satisfaction at the result. Two other lighters are on the stocks, and a large slip for a 4,000 ton craft is nearly completed. More than 200 men are working in the new yards, and five lighters have been contracted for in addition to the one completed and the two on the slips."

The Storstad-Empress of Ireland Collision.—The question as to whether the collision between the steamships Storstad and Empress of Ireland, which took place May 29, 1914, off Father Point, in the St. Lawrence, occurred within Canadian coastal waters or on the high seas, was settled by Mr. Justice MacLennan in the Admiralty Court at Montreal, Mar. 17, when he decided that it was more than three miles from the nearest coast line, and therefore on the high seas. This brings the settlement of claims under the Merchants Shipping Act of Great Britain, and the claims for loss of life have preference over all others. These total \$3,069,483. In addition to these there are claims for lost property, and one of \$2,500,000 by the C.P.R. for the loss of the Empress of Ireland and her cargo. The amount available for distribution, resulting from the sale of the Storstad, is \$175,000. The Storstad was engaged in the St. Lawrence coal trade for several years, and subsequent to the Empress of Ireland disaster, and to her sale, she was involved in another collision in the St. Lawrence. Since the commencement of the war she has been chartered for overseas trade, and was torpedoed by Germans, early in March, while en route to Rotterdam with supplies.

British Insurance of Neutral Vessels.—It is reported from England that Great Britain is making arrangements to insure all neutral vessels trading with the United Kingdom, for the purpose of stimulating trade. It is stated that a rate of 2 1/10% will be made, comparing with the 10% flat rate charged by underwriters in New York, for vessels sailing for belligerent countries.

U.S. Water Supply Regulations on Great Lakes Vessels.

The Secretary of the Treasury for the U. S. has issued a circular to owners, agents and masters of vessels operating on the Great Lakes concerning drinking and cooking water on such vessels as follows:

"On and after the official opening of navigation in 1917, any person, firm or corporation operating vessels in interstate traffic on the Great Lakes will be required to furnish on such vessels water for drinking or culinary purposes under one of the following conditions: (a) If water for drinking or culinary purposes is not obtained ashore, it must be treated by an approved method. (b) If water for drinking or culinary purposes is obtained ashore, it must be from an ap-

The Dominion Marine Association Expresses Its Appreciation.

The following is an extract from the Dominion Marine Association's executive committee's annual report, presented at the annual meeting in Toronto, Feb. 15, 1917, over the signatures of the President, W. E. Burke, Assistant Manager, Canada Steamship Lines, Ltd., and the Counsel, Francis King, M.A., of Kingston, Ont., and which was unanimously adopted:

"Canadian Railway and Marine World.

"The proprietor of this publication having formally offered the use of its columns for such items of news as the association would care to publish, your committee gratefully accepted the offer and adopted the following resolution:

"That in view of the thorough manner in which Canadian Railway and Marine World covers the marine field throughout Canada, the care which it exercises to secure accuracy, and the way in which its columns are freely at the Dominion Marine Association's disposal, it is hereby appointed the association's official organ."

proved source. On and after the official opening of navigation in 1917, the piping system on all vessels must be so arranged that no connection can be made between the drinking water system and any other water system. On and after the official opening of navigation in 1917, an approved sign, reading 'Do Not Drink This Water,' must be properly placed at every tap or other outlet not connected with the drinking water system."

A question has arisen as to whether this regulation will apply to any Canadian vessel sailing out of a U. S. port. It would appear that it will apply only to vessels engaged in interstate commerce, and that unless the regulation is extended in its operation, it will not affect Canadian vessels which cannot engage in interstate traffic. The Dominion Marine Association is going into the matter with the U. S. authorities.

St. John Shipbuilding Co.—It is reported that a company of this name, with a capital of \$1,000,000, is in process of organization at St. John, N.B., and will shortly be incorporated under the Dominion Companies Act, to build, own and operate wooden vessels, and later on steel ones.

Stranding of the s.s. Prince John.

Following is the judgment of Capt. C. Eddie, Commissioner, concurred in by Capt. J. McLeod and Commander J. T. Shenton, R.N.R., delivered at Vancouver, B.C., Feb. 28, regarding the stranding of the Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince John in Wrangell Narrows, Jan. 26. The court considers that navigation of the Wrangell Narrows must be regarded in the light of pilotage only, and it is quite evident that an intimate knowledge of the tides, buoyage and leading marks is an absolute necessity. From the evidence it would appear that the vessel was navigated with due caution, and the court considers that by keeping in view the water the vessel was drawing, 13 1/2 ft., the state of the tide, and the weather conditions, the master was justified in running the narrows. The immediate cause of the stranding resulted from a slight error of judgment on the master's part in not allowing sufficiently for the strength and set of the tide in negotiating the channel between Green Island and the buoy off Rock Point. The presence of ice in the channel contributed in no small measure towards rendering the aids to navigation ineffective, especially the spar buoys. The conduct of the master and crew, after the stranding, was highly commendable, prompt action being taken to inspire confidence in the passengers and to ensure the vessel's safety. The court considers that there is no ground for dealing with the certificates or the master or first mate and returns them forthwith.

After War Demands on Atlantic Shipping.—A London, Eng., press correspondent cabled recently: "That it will take almost two years to return to Canada, troops and stores across the Atlantic, and possibly longer, if arrangements are not made to get Dominion Government control over sufficient present tonnage or to arrange for the building of a standard Canadian Government fleet, is the estimate of a British shipping man who is not unconnected with the trans-Atlantic trade. In view of this fact, I learn that a committee is being formed in London to look into the matter. Long after peace is declared the tonnage on the Atlantic will be enormous. According to my informant, not only the allied countries will have to be looked after, with millions of pounds of goods now stacked up for want of transportation facilities, but Germany and her dupes will also require a large amount of tonnage. It is stated that the authorities will start a campaign shortly to encourage the wives and families of Canadian soldiers who are now resident in Britain to return home while steamship facilities are still available."

International Shipbuilding Corporation Ltd. has been incorporated under the Dominion Companies Act, with \$2,000,000 capital, and office at Montreal, to build, own and operate steam and other vessels, wharves, dry docks, docks, elevators, tramways, railways, etc., and to engage in a general navigation business. The incorporators are H. A. Lovett, K.C., G. W. Cole, N. Sheach, B. F. Bowler and P. F. Brown, Montreal.

Malahat Motorship Co., Ltd., has been incorporated under the British Columbia Companies Act, with \$100,000 capital, and office at Victoria, to build, own and operate all kinds of vessels, and to carry on a general vessel owning and navigation business.

Atlantic and Pacific Ocean Marine.

The Cunard Steamship Co. is announced to have received from the builders in England an addition to its fleet, named *Aurania*, sister vessel to the *Andania*. It is also reported that the company has placed orders for 4 steamships in the U. S., 2 to be built on the Atlantic coast and 2 on the Pacific coast.

The C.P.R. s.s. *Monteagle* arrived at Victoria, Mar. 6, from Yokohama, Japan, for the first time after her annual overhaul at Hong Kong, China. Several alterations have been made in the passengers' accommodation, chiefly in the addition of a ladies' lounge and the removal of the smoking room.

The Ulster Steamship Co.'s s.s. *Bray Head* was sunk by enemy torpedoes, Mar. 14, whilst en route from St. John, N.B., to Belfast. She sailed from St. John, Mar. 1, with a general cargo. At the time of writing (Mar. 22) the captain and the majority of the crew were reported as missing. The *Bray Head* was built at Belfast, Ireland, in 1894, and was 2,854 tons gross.

The Norwegian Government has decided to remove all so called neutrality markings from Norwegian vessels, as it has been shown that not only do such markings afford no protection from German interference, but actually make them an easy mark for submarine attack, being approached with impunity and attacked at leisure, whilst vessels without such markings are dealt with more warily.

Sir William Mackenzie, President, Canadian Northern Ry., is reported to have stated in Victoria, B.C., recently, in speaking of the projected Pacific Ocean service by the Cunard Steamship Co., which has already been mentioned in previous issues, that the Cunard Steamship Co. has placed orders for steamships to be built at Seattle, Wash., and that he believed they will, when ready, be placed in Pacific Ocean service.

A press report from St. John, N.B., stated recently that it was rumored that that port was to be the main outlet for the C.P.R. Atlantic service during the summer, and that freight from the west would be routed through to St. John for shipment, instead of being shipped from Montreal and Quebec, as heretofore. J. T. Walsh, Marine Superintendent, stated, Mar. 13, that C.P.R. vessels will run, as usual, to Montreal during the summer.

The Cunard Steamship Co.'s s.s. *Folia* was torpedoed and sunk by the enemy, off the Irish coast, Mar. 11. She was originally known as *Principe di Piedmonte*, and was built at Sunderland, Eng., in 1907, and was 6,356 gross tons, 4,044 register tons. She was purchased by Canadian Northern Steamships, Ltd., in Dec., 1913, renamed *Principello*, and leased to the Uranium Steamship Co., in which C.N.S., Ltd., was interested. In May, 1914, *Principello Steamships, Ltd.*, was incorporated to own the vessel, which, from the outbreak of the war to the sale of Canadian Northern Steamships, interests in May, 1916, was operated by Canadian Northern Steamships, Ltd.

A bill is before the Ontario Legislature in the interests of the City of Niagara Falls and Stamford Township, providing for the deepening of the Welland River from where it joins the Welland Ship Canal, to or near Lot 211, Stamford Tp., so that vessels may navigate safely. Amongst the work necessitated

would be the construction of a dam and lock at Lot 211, Stamford Tp., instead of at Port Robinson, as originally designed. It is proposed to create a commission, consisting of the mayor of Niagara Falls and the reeve of Stamford Tp., with powers to acquire land and raise money for the purpose desired, the expense to be borne in the proportion of three-fifths by Niagara Falls and the balance by Stamford Tp.

The American Star Line's s.s. *Algonquin*, which was sunk by a German submarine, Mar. 12, while en route from New York to London, was formerly a Canadian vessel. She was built at Glasgow, Scotland, in 1883, for the Canadian Northwest Steamship Co., Port Arthur, Thos. Marks & Son, managing owners, was purchased some years later by the St. Lawrence & Chicago Steam Navigation Co., and in 1912 was sold to the Port Colborne & St. Lawrence Navigation Co., a subsidiary of the Maple Leaf Milling Co. In 1915 she was purchased by A. B. Mackay, Hamilton, Ont., and subsequently sold to the American Star Line. Her dimensions were: length 245 ft., breadth 40 ft. 1 in., depth 20½ ft.; tonnage, 1,806 gross, 1,172 register.

The s.s. *Dundee* was torpedoed, Jan. 31, while en route from London, Eng., to Swansea, in ballast. The master, 21 men and the pilot were landed at Penzance on the same day, the second engineer was injured, and one fireman was killed. She was built in 1906 at Dundee, Scotland, for R. O. & A. B. Mackay, Hamilton, Ont., and was owned by the Dundee Steamship Co., Ltd., until she, with other of the Mackay vessels, was taken over by Inland Lines, Ltd., which company was eventually absorbed by the Richelieu & Ontario Navigation Co., now Canada Steamship Lines, Ltd. She was built on the channel system, with steel tank top where no wood ceilings are fitted, steel boiler house, two non-water-tight bulkheads, steam pump wells, and was equipped with complete electric light plant. Her motive power consisted of triple expansion engines with cylinders, 17½, 33 and 54 in. diam., by 36 in. stroke, 1,200 i.h.p. at 67 r.p.m., and supplied with steam by two Scotch boilers, 11 by 15 ft., at 180 lbs. The s.s. *Dundee*, with a number of other vessels owned by the company, was chartered for ocean service soon after the commencement of the war.

Great Britain Leases Greek Ships.—It is reported that Great Britain is arranging to lease Greece's merchant shipping on the basis of 30 shillings a ton per month, and insure them to the extent of £30 to £40 a ton. They will be leased for the duration of the war and six months later. Greece is to deposit a quarter of the vessels' value in London as a surety for the carrying out of the terms of the lease, and if it is unwilling to do this, the vessels will be commandeered at the rate of 7 shillings a ton. It is stated that there are about 700,000 tons of such shipping available, now being held in British and allied ports.

Quinte Steamships, Ltd., has been incorporated under the Ontario Companies Act, with \$40,000 capital, and office at Trenton, Ont., to own and operate steam and other vessels of every description, to carry on a general navigation and transportation business, etc. The provisional directors are: H. Dempsey, Ameliashburgh Tp.; H. R. Cory, J. C. Young, G. Alfrod and J. E. Rathbun, Trenton, Ont.

Maritime Provinces and Newfoundland.

The Reid Newfoundland Co.'s s.s. *Sagona* ran ashore in the Main a Dieu passage, Cape Breton, N.S., early in March. She was reported to be in on danger and the passengers and crew were removed in safety.

The C.P.R. will operate the s.s. *Empress* on its Bay of Fundy service, between St. John, N.B., and Digby, N.S., daily except Sunday, throughout the summer, leaving St. John and Digby at 7.15 a.m. and 2.15 p.m., and arriving at Digby and St. John at 10.15 a.m. and 5.15 p.m.

The Governor in Council has approved the Halifax Pilot Commissioners' amendment to a bylaw, dated Apr. 8, 1910, providing for the payment of \$1,000 instead of \$800 a year, to the Secretary Treasurer of the Commissioners. Payment of \$1,000 a year has been made illegally from Apr. 8, 1910, as the approval of the Governor in Council had not been previously obtained. The approval now given legalizes the payments illegally made.

The sealing fleet which left St. John's, Nfld., early in March, for the sealing grounds on the east coast of the island, and in the Gulf of St. Lawrence, consisted of 10 wooden and 2 small steel vessels. The large steel steamships usually used in this service are engaged at present by the Russian Admiralty in the White Sea.

The Boston & Yarmouth Steamship Co.'s s.s. *Yarmouth* is reported to have been sold to New York parties for service between New York and the West Indies. She is to be overhauled and refitted for that service in New York. She was built at Dumbarton, Scotland, in 1887, for the Dominion Atlantic Ry., and is screw driven by engine of 260 n.h.p. Her dimensions are: length 220.3 ft., breadth 35.2 ft., depth 21 ft.; tonnage, 1,452 gross, 725 register. She was operated, in connection with the Dominion Atlantic Ry., from Yarmouth, N.S., to Boston, Mass.

The National Shipbuilding Co., Ltd., has been incorporated under the Dominion Companies Act, with \$100,000 capital stock, and office at Goderich, Ont., to carry on a general shipbuilding, engineering and boiler making business. The incorporators are: W. H. Hutchinson, St. Catharines, Ont.; R. G. Stewart, E. A. Larmonth, J. D. Cunningham and L. Cote, Ottawa. W. H. Hutchinson, who is chiefly interested in the company, is a member of Baldry, Yerburgh & Hutchinson, Ltd., contractors for section 2 of the Welland Ship Canal. It is reported that, on behalf of the company, he has purchased the property formerly operated by the Doty Marine & Engine Co., at Goderich, from the town, which took it over from the old company, in default of payments due. It is stated that the amount paid for the property is about \$30,000.

A dispatch from Cleveland, Ohio, states that there will be an addition of 16 to the number of U. S. vessels on the Great Lakes equipped with wireless telegraphy. In all, 70 vessels will be so equipped, to keep in touch with 15 land stations of the Marconi Co., and with the U. S. station at Great Lakes, Ill. Another Marconi station is under construction at Alpena, and is expected to be ready for operation about May 1.

Province of Quebec Marine.

The Inland Revenue Department received tenders to Mar. 22, for the privilege of ferrying across the Ottawa River between Rockcliffe, Ont., and Gatineau Point, Que.

The Dominion Government is calling for tenders for a steamship service between Quebec and Harrington, to consist of four regular sailings from Quebec to Natashquan, one each month to Harrington Harbor, and one trip each season to Blanc Sablin.

The lightship no. 12, heretofore maintained at the junction of the St. Lawrence River ship channel, and the Ottawa River steamboat channel, near Dorval, has been withdrawn, as also has lightship no. 13, hitherto stationed about a mile above the Dixie front range lighthouse. On the reopening of navigation, gas buoys will be placed.

It is expected that work will be completed during April by Canadian Vickers, Ltd., on two covered shipbuilding berths, which will double the capacity of the plant at Maisonneuve. The dimensions of these sheds are 500 x 128 ft., and 400 x 100 ft., respectively, and they will enable vessels of approximately 12,000 tons to be built there.

The Canadian Government Railways car ferry Leonard, operating across the St. Lawrence, was caught in the ice, towards the end of February, and suffered propeller and other damages. One car of gasoline broke loose and fell overboard, broke through the ice and sank. The Leonard was subsequently towed to the Davie dock at Point Levis, by the Dominion Government s.s. Lady Grey, and the Quebec and Levis Ferry Co.'s s.s. Polaris, where the damage was repaired.

Ontario and the Great Lakes.

Forwarders, Ltd., Kingston, will not operate any steamships on the Great Lakes this year, both of its vessels, Port Colborne and W. H. Dwyer, being in other service overseas.

The Imperial Oil Co. has entered action at Toronto, against Canada Steamship Lines Ltd., for \$100,000 for negligence whereby the s.s. Midland Prince collided with, and damaged the s.s. Imperial.

The Port Huron and Sarnia Ferry Co.'s s.s. Hiawatha is being overhauled, and practically rebuilt prior to entering summer service. The space for automobiles and other vehicles is being considerably increased.

The Ontario Legislature is being asked to confirm a bylaw passed by the ratepayers of Midland, granting aid to the Midland Dry Dock Co. Ltd., for the maintenance of its plant there.

A press dispatch from St. Catharines states that the Department of Railways and Canals is releasing all engineers and office staffs engaged on the construction of the Welland Ship Canal, by Apr. 1. It has already been decided to discontinue the work for the present.

The Dominion Marine Association has recommended the extension of the north-west breakwater at Goderich, by some 400 or 500 ft. farther out in the same line at its western end, thus maintaining the width of the entrance and giving additional protection to the harbor from westerly seas.

The Northern Navigation Co. announce that the s.s. Rochester, owned by Canada

Steamship Lines, Ltd., will be operated Bay ports. The alterations on the steamships Noronic, Hamonic, and Huronic are being pushed forward, and it is expected that the full service will be in operation during the latter half of April. The plan of having a matron on board the company's vessels will be continued.

The U. S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level for February as follows: Superior, 602.42; Michigan and Huron, 580.49; St. Clair, 574.87; Erie, 571.35, and Ontario, 245.08. Compared with the average February levels for the past ten years, Superior was 0.68 ft. above; Michigan and Huron, 0.62 ft. above; Erie, 0.34 ft. below, and Ontario, 0.57 ft. below.

The Canadian Dredging Co., Keen & Millman, and D. Sullivan, Midland, took action recently against the barge Mike Corry, which ran aground near Midland in July, 1916, for services in the salvage operations. The claims are for \$800, \$195 and \$200 respectively. The barge was sold by order of the Admiralty Court, and the proceeds paid into court, but the amount received is not sufficient to meet the claims. Judgment was reversed.

The Welland Board of Trade on Mar. 7 passed a resolution recommending that the Department of Railways and Canals begin at once the necessary surveys for the building of a canal and river system of waterways from the foot of Lake Ontario to Montreal, of a character and capacity to conform to the plans of the Welland Ship Canal, now under construction, so that the work may be undertaken as soon as possible after the termination of the war.

The s.s. G. R. Crowe, which sailed from New York, Mar. 5, for an unnamed destination, ran aground on the east bank of the Ambrose Channel, off Coney Island. She was formerly owned by the St. Lawrence & Chicago Steam Navigation Co., Toronto, and was sold at the end of 1915 to A. B. Mackay, Hamilton, Ont., and was subsequently reported to have been sold to U. S. parties, and it was said that she was to be converted into an oil tank vessel for service to the Gulf of Mexico.

Since Jan. 1, 1916, the Marconi Wireless Telegraph Co. of Canada has equipped the following vessels operating on the Great Lakes, with wireless telegraphy: Charlton and Reginald, Victoria Harbor Lumber Co., Toronto; Glenshee, Great Lakes Transportation Co., Midland, Ont.; Riverton, Mathews Steamship Co., Toronto; James Reid, Reid Wrecking Co., Sarnia, Ont.; Icolite, Regiolite, Sarnolite, Royalite and Talaralite, Imperial Oil Co., Sarnia, Ont.; Turbinia, Rochester, Rapids King, Canada Steamship Lines, Ltd., Montreal; and the steamships Schoolcraft, G. R. Crowe and Luz Blanca.

The Montreal Transportation Co. has bought the s.s. Omega from the Omega Transportation Co., Detroit, Mich., and has renamed her Glennmount. She was first named Fayette Brown and was built at Wyandotte, Mich. in 1887 and lengthened in 1896. She is of composite construction with double bottom, three watertight bulkheads, steel boiler house and two cargo compartments with hatches spaced 24 ft. centres. The propelling machinery consists of triple expansion engines with cylinders 19, 30 and 52 ins. diam., by 40 ins. stroke, 700 i.h.p. at 80 r.p.m., driving a propeller, and supplied with steam by two Scotch boilers 11 by 11 ft. at 150 lbs. Her dimensions

are, length 306 ft., breadth 40 ft., depth 21 ft. 5 ins.; tonnage, 2,080 gross, 1,217 register.

Manitoba, Saskatchewan and Alberta.

The Peace River Tramway and Navigation Co. is reported to be planning for the placing of additional steamboats in the Peace River below the Chutes, and also on the Mackenzie River, this year. Last year the company built and placed in operation the s.s. D. A. Thomas. It is controlled by interests associated with Lord Rhondda (D. A. Thomas), who is interested in railway, oil and coal mining companies along the Peace River.

British Columbia and Pacific Coast.

The s.s. Kingsway, owned by the Steamer Kingsway, Ltd., Vancouver, arrived there recently with 20,000 lbs. of halibut from the northern banks.

The C.P.R. s.s. Princess Mary was taken off her run between Vancouver and Victoria, early in March for a general overhaul, and was replaced by the s.s. Princess Alice.

The C.P.R. is having two car floats built for its service between the main land and Vancouver Island. They will be of wood, 150 ft. long, 46 ft. broad, and 12 ft. deep, with capacity for 9 cars each.

H. R. Babington, of Prince Rupert, is reported to be negotiating for the purchase of the s.s. Queen City, formerly owned by the C.P.R. It is stated that he proposes to operate her between Prince Rupert and Queen Charlotte Islands.

The Grand Trunk Pacific Coast Steamship Co. will continue its service to Alaska. This service which was inaugurated last year was, in every way, successful. The steamships Prince George and Prince Rupert will be engaged on the route.

The C.P.R. is reported to have called for tenders for the building of a large freight barge of about 1,200 tons capacity, for bulk freight towage. It is stated that the plans provide suitable accommodation for engines, should it be decided to install them later on.

The Governor in council has approved the Vancouver Harbor Commissioners' bylaws 116 and 117, providing for the rates to be charged for all goods landed on or shipped over any wharf under the Commissioners' jurisdiction, and for storage, unloading and handling.

The repairs to the C.P.R. s.s. Princess Patricia, necessitated by her stranding on the Spanish Banks, while on her run between Vancouver and Nanaimo, were completed at Victoria at the end of February. Eight plates were removed on the starboard side and replaced, and 20 floor beams required straightening.

The Marine Department has established a gas lighted beacon on the outer edge of the Ogden Point breakwater at the entrance to Victoria harbor. It was expected that the light would be placed in operation about April 1, when the gas and bell buoy previously in operation near that point is to be withdrawn.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince John, which stranded in the Wrangell Narrows in January, was repaired at North Vancouver, and was replaced in service, Mar. 3. An investigation into the cause of the casualty was opened Feb. 28, the judgment being given on another page in this issue.

It was reported in Victoria recently that one of the questions which will be

taken up in England, during the visit of the Prime Minister and the Minister of Public Works, is that of constructing a dry dock at Esquimalt. It is stated that should the British Admiralty consider that such work is a necessity, orders will be given at once to make an immediate start on it.

The maintenance of the lights, buoys, and beacons along the coast is being attended to by the Dominion Government steamships Estevan, Leebro, and Newington, this year. The Newington is replacing the s.s. Quadra, which was wrecked last year. As mentioned in our last issue, the Government has placed \$150,000 in the estimates for the current year for the construction of two steamships to take the place of the Quadra, but, such construction is to remain in abeyance for the present.

The second of the auxiliary powered vessels which are under construction at North Vancouver, for the Canada West Coast Navigation Co., was launched Mar. 6, and named Geraldine Wolvin. The previous vessel launched at North Vancouver was named Mabel Brown. Other vessels for the same company are under construction on the Island, the Margaret Haney having been launched there a few weeks ago, and the Laura Whalen on Mar. 19. The fifth vessel to be launched will be the Jessie Norcross at North Vancouver, early in April.

In our last issue mention was made of the Victoria Board of Trade's complaint that vessels built at Victoria for Canada West Coast Navigation Co., were registered at Vancouver. Representations made by the board to the company elicited the statement that it was customary, wherever possible, that all vessels of a fleet be registered at the same port, and the company's financial arrangements had all been made on the basis of a Vancouver registry, where the company's head office is located. It was also stated that the interests managing the company hope to build another two vessels at Victoria, which would not be for Canada West Coast Navigation Co., when Victoria registry would probably be arranged.

The Panama Canal Channel through Culebra Cut is said to be now in better condition than ever before. The cut, which has been dredged through the slides, has a minimum depth of 33 ft. and the least width of a channel of 30 ft. depth is 180 ft. at the point opposite Gibraltar rock. This rock projects into the channel about 110 ft., and extends along the channel about 200 ft. It has been blasted away until it now rises only about 30 ft. above the water. Two dredges are at work on the removal of this rock and are dredging behind it to prevent its being pushed forward. Work of the dredging force of the canal on Sundays and holidays was discontinued on Dec. 3, except for the force engaged in blasting at Gibraltar. Since June 1, 1915, dredging was carried on in the cut continuously with three shifts a day, including Sundays and holidays until Dec. 3.

Lakeside Coal & Transportation, Ltd., has been incorporated under the Dominion Companies Act, with \$50,000 capital, and office at Montreal, to carry on a general coal and navigation business.

The Marine Navigation Co. of Canada, Ltd., has been incorporated under the Dominion Companies Act, with \$50,000 authorized capital, and office at Montreal, to carry on a general steamship and navigation business.

Mainly About Marine People.

Capt. John Bonar, a well known master on the Great Lakes and the Bay of Quinte, died at Cobourg, Mar. 5, aged 83.

F. S. Spence, who was, for some years prior to 1911, member of the Toronto Harbor Commission, died at Toronto, Mar. 7.

James S. Paige, formerly associated with the Fore River Shipbuilding Co., Quincy, Mass., has been appointed General Manager, Port Arthur Shipbuilding Co., Port Arthur, Ont.

Senator H. W. Richardson, Kingston, Ont., Vice President, Great Lakes Transportation Co., has been appointed a member of the Provincial Resources Committee, constituted by the Ontario Legislature's authority.

Lt. Col. W. P. Anderson, C.M.G., Chief Engineer Marine Department, was on a trip of inspection along the British Columbia coast during March and spent some time looking over the various proposals for harbor development at Vancouver.

C. Gregoir, Superintendent of the Port Arthur Shipbuilding Co.'s dry dock, Port Arthur, Ont., was presented with a diamond ring by the employes, Mar. 14, on leaving Port Arthur for Buffalo, N.Y., where he has been appointed Superintendent, Buffalo Dry Dock Co.

Capt. J. N. P. Ritchie, who died at Victoria, B.C., recently, aged 58, was formerly master of the C.P.R. s.s. Princess Patricia. He was born at Yarmouth, N.S., and commenced his sea life in 1875 on Atlantic sailing vessels. He settled in British Columbia in 1893, and was, for some time, master of the s.s. Joan, owned by the Esquimalt & Nanaimo Ry. Subsequently he served with the Canadian Pacific Navigation Co., and remained in the service when that company was taken over by the C.P.R.

Capt. Gilbert Johnston, Consulting Engineer, Canada Steamship Lines, Ltd., Montreal, died there, Mar. 13, aged 64, after a prolonged illness. He was born at Kingston, Ont., the son of Gilbert Johnston, foreman at the Calvin Co.'s shipbuilding yard at Garden Island. He entered the steamboat business at an early age, and was eventually master of the s.s. Hero. In 1894 he was appointed Mechanical Superintendent, Richelieu & Ontario Navigation Co., Montreal, retaining that position on the taking over of the company by Canada Steamship Lines, Ltd., until his practical retirement from active service in Apr., 1916, when he was appointed Consulting Engineer.

W. E. Burke, Assistant Manager, Canada Steamship Lines, Montreal, who has been elected a director of the company, was born at Belleville, Ont., Sept. 23, 1881, and entered steamships service May 1, 1905, since when he has been, to Dec. 1, 1905, purser, s.s. Picton, Richelieu & Ontario Navigation Co., Montreal to Toronto; Dec. 1, 1905, to Dec. 31, 1906, Soliciting Freight Agent, same company, Toronto; Dec. 31, 1906, to Dec. 31, 1907, Travelling Freight Agent, same company, Toronto; Dec. 31, 1907, to Apr. 10, 1909, Travelling Freight Agent, Mutual Steamship Co., Toronto; Apr. 10, 1909, to Apr. 1, 1910, General Freight Agent, Merchants Mutual Line, Toronto; Apr. 1, 1910, to Jan. 1, 1914, Traffic Manager, same company, Toronto; from Jan. 1, 1914, Assistant Manager, Canada Steamship Lines, Ltd., Montreal. He was President, Dominion Marine Association, for 1916.

Denis Murphy, President, Ottawa Transportation Co., died at Ottawa, Mar. 12 after an illness of several months, owing to a growth on the spleen. He was born at Cork, Ireland, Apr. 2, 1842, came to Canada in 1849, and was educated at Chatham, Que. He entered transportation service in 1856 as purser on McPherson & Crane's steamboat plying between Montreal and Kingston and was subsequently master of a steamship on the same route. In 1865 he was engaged by the Montreal & Ottawa Forwarding Co. as master of one of its steamships, and in the following year was appointed Ottawa manager of that company's business. In 1880 he entered the towing and transportation business in partnership with J. W. McRae and A. A. Buel, and traded as D. Murphy & Co. On account of the growth of the business, the Ottawa Transportation Co. was incorporated in 1892, with D. Murphy as President, which position he held to the time of his death. From 1902 to 1906, he was one of the members for Ottawa in the Ontario Legislature, and was a member of the Timiskaming & Northern Ontario Railway Commission from 1905. He was one of the largest shareholders in the Ottawa Electric Ry., and was identified with that company almost from its inception. Amongst other transportation concerns with which he was connected were: Shawinigan Water & Power Co., Montreal Terminal Ry., Chateauguay & Northern Ry., Canadian Railway Accident Insurance Co., etc. Brevet Colonel G. P. Murphy, C.M.G., his only son, formerly Managing Director of the Ottawa Transportation Co., is at home on leave from his military duties.

Shipbuilding Encouragement in Nova Scotia.—The Lieutenant Governor's speech from the throne, at the opening of the Nova Scotia Legislature recently, contained the following paragraph:

"It is most gratifying to observe, in almost every portion of the province, renewed activity in shipbuilding. The adaptability of the people of Nova Scotia to assist in providing ocean transportation is well recognized, and it is confidently hoped that our province will again become a ship building centre. It would be a matter for satisfaction if the present demand for tonnage resulted in the establishment of a permanent steel ship building industry in this province. The question of offering further aid to this end is engaging the government's serious attention."

Government Vessel for Pacific Coast Trade.—Ottawa press dispatch, Mar. 22.—For some time negotiations have been conducted by the Railways Department for the purpose of establishing steamship communication between Atlantic and Pacific ports. A contract has been made with the Wallace Shipyards, Ltd., of North Vancouver, for a vessel, 225 ft. long, with a freight capacity of 2,500 tons, to cost about \$200,000, and to be delivered within the next 10 months. Negotiations are in progress to have a similar vessel built in Victoria.

Requisitioning of Canadian Vessels.—In response to a question in the British House of Commons, Mar. 7, the information was given that the requisitioning of British vessels registered in the Dominions was under discussion with the Dominions' representatives then in England. In the meantime an arrangement had been made with the Canadian Government, under which no Canadian vessels were requisitioned except through or by the Canadian Government.

British Columbia Shipbuilding Commissioners Report.

The Commissioners appointed by the B.C. Government to administer the B.C. Shipping Act, have presented their first report over the signatures of H. P. Thompson, Superintendent, and W. J. Goepel, Deputy Finance Minister, as follows: Under section 53 of the act we have received application for the following ships: 1 Mabel Brown, 2 Geraldine Wolvin, 3 Jessie Norcross, 4 Marie Barnard, 5 Mabel Stewart, 6 Janey Caruthers, 7 Margaret Haney, 8 Laurel Whalen. All of these boats are being built for the Canada West Coast Navigation Co., Ltd., and are of the same standard size and specifications, which are as follows: Five-masted auxiliary schooners, length over all, 260 ft.; beam, 44 ft.; depth of hold, 19 ft. They will be equipped with auxiliary power, using oil-fuel, Bolinder type of engines which will develop 320 h.p. Under normal conditions the ships will make a speed of 7 knots under engine power and will each require a crew of about 15. The cargo-carrying capacity is estimated approximately at 1,500,000 ft. of lumber. The approximate cost of each of these vessels when completely equipped will be about \$200,000. They are informally advised that applications will be made for four additional ships of the same size and specifications, the engines, material and equipment having been purchased for their construction.

They are being constructed according to plans passed and under special survey of Lloyd's, with a view to obtaining the highest class in the register. They are being built under the supervision of Lloyd's surveyor, and when completed will be classed A1 for 12 years.

Ocean Steamships for Dominion Government.—With reference to the announcement made by the Minister of Customs recently, and which was dealt with in Canadian Railway and Marine World for January, as to the building of two steamships for the Dominion Government for service between the Pacific and Atlantic coasts, via the Panama Canal, we are officially advised that it has been decided to build two wooden vessels, and that contracts have been prepared and sent to those who are offering to build them, for consideration and signature. As soon as they are returned signed, the Minister will also sign and the matter will be completed. There is no truth in the reports that the Government is considering the purchase of a fleet of steamships, nor that it has made any purchase of vessels.

The George Hall Coal & Transportation Co. has been incorporated at Ogdensburg, N.Y., with authorized capital of \$1,500,000, to take over the steamships, and terminals at Ogdensburg, Prescott, Ont., and Montreal, heretofore operated by the George Hall Coal Co., and the George Hall Coal Co. of Canada Ltd., and to transport soft coal between Lake Ontario and St. Lawrence River ports.

First Steamship at Toronto.—The Kingston, Ont., Gazette of June 17, 1817, stated that the Frontenac, a steamboat launched at Ernesttown in Sept., 1816, had left on her first trip to the head of Lake Ontario on June 5, and would commence a regular service between Kingston and Queenston, calling at York (Toronto), on June 22, 1817.

Telegraph, Telephone and Cable Matters.

G. D. Perry, General Manager, Great Northwestern Telegraph Co., returned to Toronto, Mar. 25, after spending three weeks in Florida.

H. Hulatt, Manager of Telegraphs, G. T. R. and G. T. P. R., addressed the Montreal Electrical Association, Mar. 7, on the position of the inefficient after the war.

John D. Gaines, Superintendent, Commercial Cable Co.'s station at Shanghai, China, and Mrs. Gaines, who have been visiting in Nova Scotia, have returned to China.

C. A. Tinker, who died at Winnipeg, Mar. 13, was for 27 years Eastern Manager, Western Union Telegraph Co., New York, and retired from active service about 15 years ago. He acted as confidential cipher telegrapher to President Lincoln of the U.S. during the civil war.

Dr. A. G. Bell, who invented the telephone at Brantford, Ont., has been awarded the Civic Forum gold medal at New York recently for distinguished public service. He is the third recipient of this medal, the others being General G. W. Goethals and T. A. Edison.

The Great North Western Telegraph Co. has opened offices at Cap Rosier and Port Alfred, Que.; and Arran, Englefield and Wartime, Sask., and has closed its offices at Banning, Bears Pass, Chaffey's Locks, Lake Joseph and Sparrow Lake, Ont., and Grand Beach and Victoria Beach, Man.

John Wilkinson, heretofore Assistant Superintendent, Commercial Cable Co.'s station at Waterville, Ireland; has been appointed Superintendent of the office at London, Eng., vice E. G. Phillips, deceased. He entered the company's service in Oct., 1884, and served as an operator at Liverpool, Eng., until Feb., 1891, when he was appointed Assistant Superintendent there, being transferred to Waterville, Ireland, in Aug., 1911.

Among the Express Companies.

A board of conciliation appointed under the Industrial Disputes Investigations Act to consider the Canadian Northern Ex. Co.'s employees' demands for increases in wages, etc., is reported to have effected a settlement, whereby certain increases are granted.

The Canadian Northern Ex. Co. has opened offices at Bears Pass and Ruel, Ont.; Arran, Englefield and Wartime, Sask.; Lanfine, Alta, and Chu Chua, B.C.; and has closed its offices at Perthuis, Que.; Orillia, Mornington, Uptergrove and Allans station, Ont.; Dropmore and Vista, Man.

The Central Canada Ex. Co., which operates over the Alberta & Great Waterways Ry., the Canada Central Ry. and the Edmonton, Dunvegan & British Columbia Ry., has become a member of the Express Traffic Association of Canada, and arrangements are being made whereby all other express companies may way-bill shipments through to that company's offices under the terms of the Express Classification for Canada.

The Board of Railway Commissioners has extended to express companies subject to its jurisdiction the arrangement whereby certain tariffs of freight or

passenger tolls may be filed with the board by agents, other than officials of companies acting jointly for two or more railway companies, provided such joint agents be duly authorized to act for the several companies by power of attorney, as set forth in general order 14, July 30, 1908 (order 5117).

D. I. Roberts, President, United States Ex. Co., in liquidation, has entered suit against the Baltimore & Ohio Rd. for \$950,361, for damages for breach of contract, under which, from 1887 to 1914, the U. S. Ex. Co. did business over the B. & O.R. It is claimed that from the commencement of 1912, the B. & O.R. did not accord the U. S. Ex. Co. the exclusive privilege as called for by the contract. D. I. Roberts was formerly General Manager at Montreal of the Quebec, Montreal & Southern Ry. and the Napierville Jet. Ry., subsidiaries of the Delaware & Hudson Co.

At the Express Traffic Association of Canada's last meeting in Montreal, the retiring chairman, W. H. Burr, Traffic Manager, Dominion Ex. Co., was given a silver loving cup by the members, in appreciation of the services he had rendered the association since its inception some nine years ago. The new chairman, J. Pullen, President, Canadian Ex. Co., in making the presentation, paid a high tribute to Mr. Burr, pointing out that the success of the association had been due in no small measure to the latter's personal efforts in furthering its interests. Mr. Burr, in reply, stated that his position had always been a most congenial one, and attributed the association's success to the co-operation of the members, rather than to his own exertions.

Gilbert E. Bellerose, whose appointment as Traffic Supervisor, Canadian Ex. Co., Winnipeg, was announced in our last issue, was born at Penetanguishene, Ont., July 15, 1884, and entered transportation service in Apr., 1902, since when he has been, to June, 1903, in Car Service Department, G.T.R., Toronto; June, 1903, to Oct., 1909, clerk and messenger, road service, Dominion Ex. Co., at various points; Oct., 1909, to Nov., 1911, similar positions, Great Northern Ex. Co., Vancouver, B.C., and Spokane, Wash.; Dec., 1911, to June, 1915, messenger, road service, and depot agent, Dominion Ex. Co., Nelson, B.C., and Calgary, Alta.; Feb., 1915, to Feb., 1917, messenger, road service, Canadian Northern Ex. Co., Winnipeg.

Trail Delivery Limits.—The Board of Railway Commissioners passed order 25954, Mar. 22, as follows: Re the establishment of delivery limits by the Dominion Express Co. in the City of Trail, B.C. Whereas order 13357, Mar. 30, 1911, as amended by order 16331, April 18, 1912, prescribes the municipal boundaries as the cartage limits of all points where express companies subject to the legislative authority of the Parliament of Canada now or hereafter have cartage services, with leave reserved to the companies to apply to the board for the establishment of modified cartage zones in cities, towns, or villages (if any) where for any special reasons it might be unreasonable to require such services to be made throughout the entire area thereof. Upon the consent of the said City of Trail, filed—it is ordered that, until further order, the tolls of the Dominion Express Co. include the delivery of express freight on both sides of the following thoroughfares, in the city, viz.: Bay Ave.

from Victoria St. to Lot 7, Block 14, between Helena and Portland Sts.; Cedar Ave. from Victoria St. to Helena St.; Pine Ave. from Victoria St. to Helena St.; Helena St. from Bay Ave. to Pine Ave.; Victoria St. from Bay Ave. to Cedar Ave., and from Pine Ave. to Green Ave.; Green Ave. and Rosland Ave. to a point opposite Lot 131, where the C.P.R. connecting portion of Nelson St.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Independent Pneumatic Tool Co., Chicago, has issued its catalogue 10, describing Thor pneumatic tools and electric drills. It contains 94 pgs. of illustrated matter.

Mussens, Limited, railway, mining and contractors' supplies, Montreal, have removed their offices from 318 St. James St. to the second floor of the McGill Building, 211 McGill St.

Preston Car & Coach Co., Ltd.—The town of Preston, Ont., has passed a by-law to endorse the company's bonds for \$75,000, to enable it to rebuild the portion of its plant which was destroyed by fire recently.

Galena-Signal Oil Co.—S. A. Megeath has resigned as President and General Manager and now has charge of the com-

pany's refining and foreign business, with headquarters at 17 Battery Place, New York, N.Y. General Charles Miller has been elected President of the company, with headquarters at Franklin, Pa.

The Ohio Brass Co., Mansfield, Ohio, has issued "Steam Railroad Electrifications," a 34 pg. booklet, 8 x 10½ in., illustrating and briefly referring to 17 electrifications of steam railways, including Montreal & Southern Counties Ry., St. Clair Tunnel, G.T.R., London & Port Stanley Ry., on which some of the company's products were used.

The Du Pont Fabrikoid Co., Wilmington, Delaware, has purchased the Marokene Co. of Elizabeth, N.J., which manufactures a material similar to fabrikoid, which is used extensively by automobile, carriage and upholstery industries. All the sales transactions of the Marokene Co. will be under the direction of the Wilmington office, and the attention of J. K. Rodgers, Sales Manager, Du Pont Fabrikoid Co.

The Standard Underground Cable Co. of Canada, Ltd., has developed a new type of joint box, or housing, for use on submarine cables which has already been used on submarine cables supplied the Halifax Electric Tramway Co., the Ottawa waterworks, the Atlantic City Electric Co., on the U.S. ship canal at Atlantic City, N.J., the Wilmington & Philadelphia Traction Co., and the Penns-

grove Light, Heat & Power Co. in crossing the Delaware River at Wilmington, Del. The box is designed so that all mechanical stresses resulting from the action of tides, currents, etc., which usually tend to damage the cable at these points are taken off the joint proper by long "take-up" rods, on the joint box, parallel to the joint, and to which armor the rods are rigidly connected by heavy iron clamps.

Canadian Westinghouse Co., Ltd.—H. H. Westinghouse, President, having been elected Chairman of the Board, Paul J. Myler, heretofore Vice President, has been elected President. He was born at Pittsburg, Pa., April 24, 1869, and commenced work as a bookkeeper with a produce commission house, since when his record has been as follows: 1886, billing clerk, Westinghouse Air Brake Co.; 1894-1896, Assistant Auditor, Westinghouse Air Brake Co.; 1896, Secretary, Westinghouse Manufacturing Co. of Canada, with office at Hamilton, Ont.; 1898, General Manager, Westinghouse Manufacturing Co.; 1903, Vice President, Canadian Westinghouse Co., Ltd., in charge of Westinghouse interests in Canada. He is a director of the Bank of Toronto, Landed Banking & Loan Co., British Munitions Co., Ltd., Dominion Steel Foundry Co., Ltd., Travelers Life Insurance Co., North American Pulp & Paper Companies, Hamilton Steel Wheel Co., Ltd.,

Kalamazoo No. 17 Motor Car

For Section Gangs. A sturdy, easy-running car for rough use.

This section car is equipped with a single cylinder two-cycle air-cooled motor of five horse power. Motor is exceptionally smooth running; all vibration being eliminated and runs equally well in either direction.

Engine drives through short, heavy roller chain to perfected friction clutch on axle. Car is very light. Brake operates on all four wheels.

We manufacture a full line of railway motors for every purpose

and would like to quote on your requirements. Hyatt roller bearings on all motor cars.

Halifax Ocean Terminals and Connecting Railway.

By A. C. Brown, A.M.Can.Soc.C.E.

Halifax, which was founded in 1749, and is and has been since its foundation the chief city of Nova Scotia, is situated on one of the finest harbors in the world, and is the nearest equipped terminal port to Europe open all the year round, being over 250 miles nearer to Liverpool than any other terminal either in Canada or the United States. With such a splendid geographical situation it should be the main eastern gateway of Canada. The average course of steamers from Liverpool to New York brings them within about 19½ miles of Halifax, so with adequate terminal facilities and first class

1½ miles wide, except at the Narrows, where it joins Bedford Basin, where it is ¼ of a mile wide. Bedford Basin is 4 miles long and 2 miles wide. The entrance to the harbor is straight and the water deep, while inside there is enough room for the largest ships to manoeuvre with the greatest ease. There is a freedom from currents and severe storms, and the range of the tide is only 2½ ft. at ordinary spring tides. The harbor, too, is well protected, there being only one open entrance with the Atlantic Ocean. The configuration of the shore at the entrance effectually breaks up Atlan-

Pier 7, a bulkhead wharf 500 ft. long; Pier 8, 120 ft. wide with berths 650 and 740 ft. long; Pier 9, bulkhead 700 ft. long. At deep water: Pier 2, 240 x 700 ft.; Pier 3, 160 x 600 ft.; Pier 4, 95 x 540 ft.; Pier 5, 35 x 400 ft. With the exception of Pier 2, which is of reinforced concrete and is thoroughly modern in every respect, all the piers are of timber pile construction, and are generally in poor condition. In addition to this accommodation there are about 10 privately owned wharves from 200 to 600 ft. long, all being built of timber, with the exception of the Furness wharf, which is being

Complete Scheme for Halifax Ocean Terminals, looking from the Harbor.

rail connections, in the event of steamships making Halifax a port of call, passengers could be in Chicago by the time the ships arrived at New York. In addition to European trade, Halifax is well situated for trade with the West Indies, the ports of the United States, and, with the perfecting of the Panama Canal, for trade with the west coast ports of Canada. In addition to being splendidly situated as a terminal port and a port of call, Halifax has an almost ideal situation should a section of the harbor be at any time reserved as a "free port," that is, a port where ships could come and discharge cargoes free of duty and take up either cargoes left by other ships, or cargoes from the interior. So long as merchandise did not pass beyond the free port area no customs duties would be charged, the only charges being those for wharfage and warehouse space.

Halifax harbor consists of two parts, the outer harbor and Bedford Basin. The outer harbor is 7 miles long and about

1½ miles wide, so that no very large waves can enter the harbor.

In addition, however, to the fundamental need of accessibility and accommodation, special requirements of good terminal facilities, quays, sheds and railway approaches and yards are necessary before a harbor can be used. It is indispensable to the conditions of modern trade that there should be the least possible delay in the reception and dispatch of vessels, and everything must be done to procure continuity of operation, and for this reason the location, construction and equipment of quays within the harbor is of the utmost importance. The old railway wharves and yards at Richmond and the deep water terminals, are situated on a narrow and restricted foreshore, with inadequate railway connections and with no possibility of any great extensions on economic lines. The existing railway terminals provide the following accommodation: At Richmond: Pier 6, 80 ft. wide with berths 280 and 400 ft. long;

built of reinforced concrete.

In June, 1912, surveys, both land and hydrographical, were commenced, and a thorough investigation with test borings, soundings, wind and current observation made with the object of obtaining a suitable site for a system of terminals which should comply with the standard required by the Dominion Government, which may be briefly summed up as follows: 1. The location should be the best the harbor could provide. 2. The work should be first class and permanent. 3. As soon as possible accommodation for 9 modern steamships. 4. A possibility of future extensions. 5. All accommodation to be designed with due regard for possible increase in the size of vessels and the increase in trade. After a very careful engineering and economic study of the whole situation had been made, the Minister of Railways and Canals was able, in Nov., 1912, to make public the proposed scheme of terminals.

The ocean terminals are situated on the

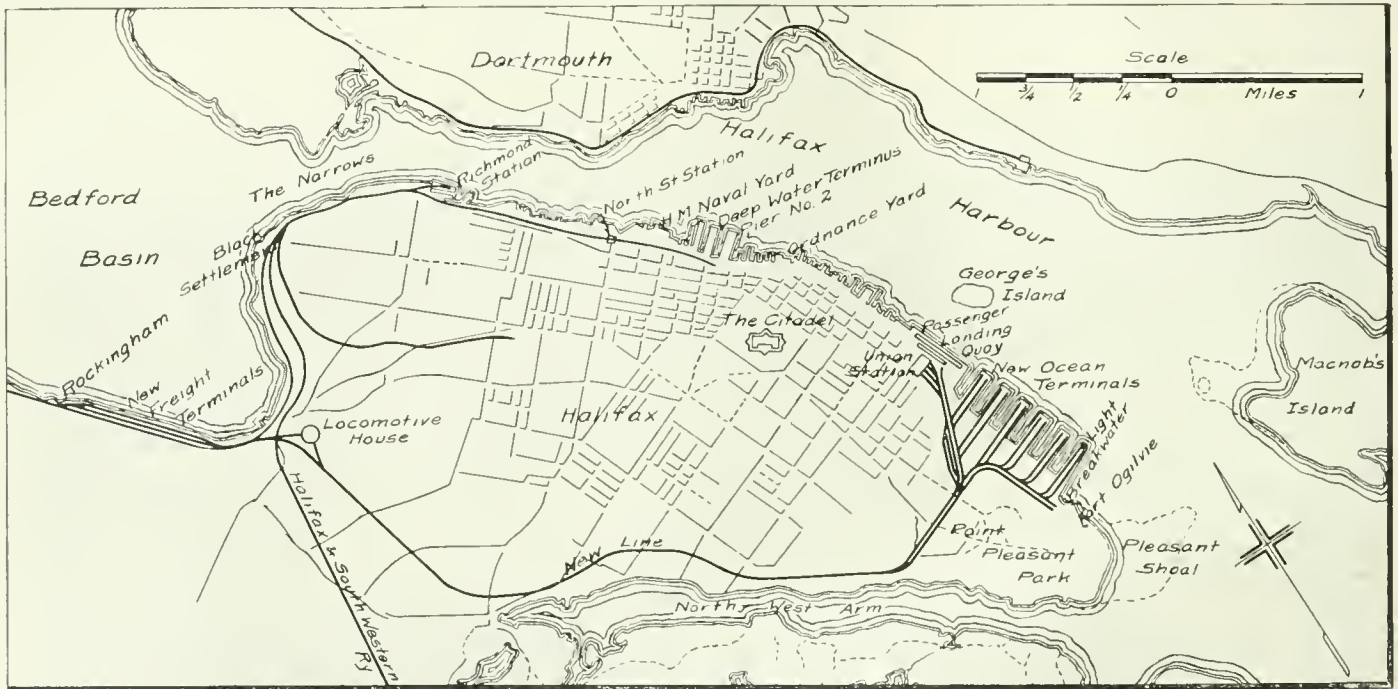

Halifax side of the harbor and extend southward from the Nova Scotia Tramways & Power Co.'s property for about 1¼ miles to Reid Rock. The terminals consist of a passenger landing quay 2,006 ft. long, 5 piers 1,250 ft. long by an average width of 350 ft., and a breakwater about 1,600 ft. long, on the north side of which will be constructed later 2 steamship berths. On the north side of the first basin are two berths, 500 and 700 ft. long. With the exception of these 2 berths, which will have 30 and 35 ft. at l.w.o.s.t, 45 feet. at l.w.o.s.t will be provided at all the berths. The whole system will be equipped with modern sheds, freight handling appliances, grain elevators, ample tracks and all requirements pertaining to modern terminals.

Connecting Railways.—In order to provide railway connections with the new terminals an extension of the Intercolonial Ry. was necessary. Many locations for this extension were studied, and finally, after careful consideration, it was

compensated 0.04% per degree of curvature, and the sharpest curve will be 4 degrees with standard spirals.

The yard at Point Pleasant will have the following capacity: Freight storage and classification, 840 cars; elevator tracks, 200 cars; passenger car cleaning and storage, 296 cars; train shed, 119 cars. At Fairview is a new freight receiving, classifying and departure yard, with a capacity of about 1,600 cars, to accommodate all inward and outward bound freight. A large union passenger station will be erected on the site of what was H.M. lumber yard, near South and Hollis Sts., convenient alike to both the business and residential centres of the city. In general, the passenger station will be a T-shaped granite structure, the building on the bulkhead passenger landing quay forming the head of the T. The portion known as the city station will face on a plaza located between South and Tobin Sts. In the bulkhead passenger landing quay building, connected with

very troublesome to drill and shoot, and several types of drills were used, including both electric and steam, which drilled holes from 2¼ in. diameter upward to 5½ in. The well drills, drilling a hole 5½ in. diameter, gave the most satisfactory results in the main cutting, as owing to the shattered and seamy condition of the rock and the presence of layers of sand and gravel, it was in most cases necessary to case the holes for a considerable depth. South of Quinpool Road to the terminal yard most of the drilling was done with well drills. Where the cut was deeper than 30 ft. it was drilled and shot for its full width in two lifts, and where it was less than 30 ft. deep it was drilled and shot in one lift. The holes were placed usually about 9 ft. apart in rows 6 ft. apart, staggered and drilling to 6 ft. below subgrade and loaded without springing. The drilling in the terminal yard was mostly side hill work and was done mainly with electric drills, drilling a hole 2¼ in. in diameter. The holes

Site of Halifax Ocean Terminals and Union Passenger Station, with Double Track Railway from Main Line at Rockingham.

decided to construct a line diverging from the Intercolonial Ry. at Fairview. Great care has been taken in the location and design of the bridges, for grade separation of railway and highway traffic, to preserve, as far as possible, not only the beauties and amenities of the Northwest Arm, which from a tourist point of view is the city's greatest asset, but also of the suburban district through which the railway passes. From the crossing over Chebucto Road the railway follows the east side of the Northwest Arm to Maplewood, and from thence passes easterly in a deep cutting to the site of the terminals. Grade crossings are eliminated, the railway crossing over the highways at Fairview Road by steel girder spans with concrete abutments and over Chebucto Road by steel girder spans encased in concrete, the remaining highways and streets being carried over the railway on ornamental reinforced concrete arches. The railway is about 5 miles long and is to be double tracked throughout, with 4 tracks at Bower Road and branching out into the yard with 16 tracks at Tower Road. The maximum grade for eastbound traffic is to be 6/10%

the station proper, accommodation will be provided for all classes of passengers. The main trunk sewer, known as freshwater sewer, which heretofore has discharged within a few hundred feet of Pleasant St., detracting somewhat from the desirability of the old Esplanade district, will be diverted and will discharge at the head of pier A, over 1,400 ft. from the street. When the terminals are completed over 115 acres of land will have been reclaimed from the area to form the piers and quay spaces.

Railway Construction.—The work of constructing the new railway was commenced toward the end of July, 1913, at Fairview, and a month later at the harbor end. A thoroughly up to date equipment, consisting in all of two 100-ton, two 60-ton, and one 70-ton steam shovels, complete, and a 20-ton steam locomotive crane, was gradually brought on to the work, which was prosecuted with great energy. The cuttings, which are long and deep, as much as 60 ft. in parts, consisted mostly of rock, a shale, very seamy and stratified, with an occasional trace of iron stone and trap rock. Owing to its shattered formation the rock proved

were drilled in 8 ft. squares and sprung. This was the most satisfactory piece of work as regards drilling and shooting on the whole cutting. The shooting of the rock in the Fairview end of the cutting presented many difficulties, the rock being very faulty, containing pockets of rotten, disintegrated rock, mud, clay, gravel and sand, as well as water. The cut was drilled and shot no less than three times before it could be completely excavated. The first time holes were drilled with well drills at 9 ft. centres in rows 16 ft. apart. It was intended to spring these, but most of them caved in and were lost; as many as possible, however, were shot and a shallow cut taken. The second time the holes were drilled 10 ft. apart in rows 8 ft. apart to 6 ft. below subgrade and shot without springing, but this was not entirely successful. The third time the holes were drilled 10 ft. apart in rows 5½ ft. apart, staggered, and to 6 ft. below subgrade without springing. Even this did not break the bottom of the cut properly, and the further use of piston drills was necessary for that purpose. A low freezing explosive was used on account of the presence

of very cold water in many of the drill holes. Most of the shooting was done in blasts of from 3 to 8 tons of 60% forsite (low freezing), calculated on a basis of from 1½ to 2 lb. of explosive to the cubic yard of material blasted, according to the nature of the rock. It was very clearly demonstrated in the extremely shattered rock encountered that the electrically driven drills were much superior to the steam driven. Owing to the impossibility of keeping the steam at an even pressure, the time of the stroke of the drill constantly altered, and if it was working slowly when it passed from a hard into a seam of disintegrated rock it jammed. With the electric drills, however, as the strokes were steady, very little of this trouble was encountered. It is worthy of record that although most of the blasting done was in close proximity to houses and streets, very little damage was caused, and there were no serious accidents either to the general public or to the workmen employed.

The material from the railway cutting was used to reclaim the freight yard on Bedford Basin, where there is now stand-

The breakwater, which is now completed, is 1,600 ft. long and 30 ft. wide at the top, and is of the mound type. It is situated at the extreme south end of the terminals. Three hundred ft. inside the end of it is a huge rock which extends to within 7 ft. of l.w.o.s.t., and immediately to the south of it is Point Pleasant Shoal, the end of which is marked by a buoy. The end of the breakwater is inside the line of the fairway so that it does not interfere with navigation. Point Pleasant is very shallow and affords a great protection to the terminals by breaking up much of the Atlantic swell. The waves which come round the end of the shoal and heretofore broke on the shore between it and the northern limit of the terminals are caught by the new breakwater. Observation has shown that since the completion of the breakwater a swell entering the harbor passes up the fairway parallel to the bulkhead passenger landing quay and past the ends of the piers. The breakwater consists of a rock dump, the centre core being run of cut material and the sides and end faced with heavy rip rap from 2 to 8 tons in

tively, making over 1¼ miles of quay wall. Forty-five feet of water at l.w.o.s.t. is being provided at the ocean berths except those on the north quay of basin 1, where the water is 35 and 30 ft. at l.w.o.s.t. The contract also includes the dredging of basins 1 and 2 and for and in front of the bulkhead passenger landing quay, the provision of from 1,000,000 to 1,500,000 cu. yd. of filling to make up the quay spaces and to fill pier A, reinforced concrete pile freight shed foundations and the construction of a new sewer outfall for the south end of the city.

The quay walls are constructed of cellular reinforced concrete blocks, faced with cut granite masonry from 1 ft. below low water to quay level and finished with a cut granite coping 3 ft. wide, no concrete is therefore exposed to the action of frost between high and low water, a most important feature in Halifax harbor where concrete between high and low water shows a great deterioration due to frost action. Mooring hooks or bollards, designed to correspond and fit in with the granite coping, and to safely withstand a pull of 75 tons, are to be placed

Cross Section of Timber Freight Sheds, Halifax Ocean Terminals.

ing room for 1,600 cars, and also for filling in quay spaces at the terminals and for the construction of the breakwater at the south end of the piers. Approximately 2,000,000 cubic yards of material was used to reclaim the freight yard on Bedford Basin at Fairview was constructed with 16 cu. yd. standard gauge side dump cars by the usual side dump methods, and faced with heavy rip rap placed by means of a 20-ton locomotive crane.

Bridges.—In connection with the railway running in from Fairview to the terminals, 16 bridges are called for. Of these 14 are highway bridges, arch type, constructed entirely of reinforced concrete. The one carrying the Halifax Ocean Terminals Ry. over the streets at Fairview is to be built of plate girders in a single span, and will have a concrete deck only. The other carrying the railway over Chebucto Road is to be built of plate girders in 3 spans, that is, 2 sidewalk spans and the roadway span. This bridge will be entirely cased in concrete. The single spans for highway bridges vary from 60 to 144 ft. At Young Ave., the double span arch is to be approximately 225 ft. between main abutments. All abutments and wing walls are built on solid rock and are of mass concrete. Work was commenced on these bridges in the latter part of June, 1916, and the work completed during the year was as follows: 10 bridge sites excavated complete; 6 bridge main abutments and wing walls complete; 2 reinforced concrete arches complete and backfilled.

weight. The top is roughly paved with heavy rock. The shore end of the breakwater was dumped by 16 cu. yd. standard gauge side dump cars from a temporary wooden trestle for a length of about 300 ft., and from that point from a steel span 40 ft. long, supported at its inner end by the breakwater itself and at its outer end by a scow, 34 ft. wide and 90 ft. long, subdivided by bulkheads and provided with a steam hoisting engine for moving the span, and a centrifugal pump for adjusting the scow by means of water ballast to suit all stages of the tide. The scow also carried a tail track for 3 empty cars, so that 4 cars could be dumped with one switching. The rip rap with which the sides are faced was placed by a 20-ton locomotive crane. The breakwater has been of great assistance in protecting the dock contractors' floating plant in basins 1 and 2, and the work of constructing it has been carried on without serious delay and without loss or damage to the contractors' plant since June, 1914, during which time Halifax harbor experienced average weather conditions.

Docks.—In Jan., 1913, the contract was let for the first and perhaps most important unit of the docks. This contract includes the construction of the bulkhead passenger landing quay 2,006 ft. long, north quay basin no. 1, 700 and 500 ft. long, and pier A, 1,250 ft. long, 320 ft. wide at the head and 360 ft. wide at the bulkhead, the north return wall 225 ft. long, and the bulkhead walls of basins nos. 1 and 2, 95 and 320 ft. long respec-

along the face of the quays at intervals of 88 ft., and closer where necessary. In order to balance the pull on the mooring hooks the walls at these points are to be anchored back to concrete blocks by 2¾ in. diameter steel anchor ties. Granite boat stairs and landings are to be provided at the pier heads, the heads of basins and at both ends of the landing quay. Wrought iron ladders are spaced at about every 264 ft. along the faces of the quays.

Temporary freight sheds have been erected at two berths on the north side of basin 1. One shed is 90 x 396 ft., and will eventually be extended to 506 ft., while the other shed is 90 x 440 ft. Both sheds are of timber construction with 22 ft. bays and 4 rows of 12 x 12 columns, the bays being spanned by 28 ft. trusses, and the centre bay by a 34 ft. monitor truss. The 2 in. shiplap roofing is carried on 6 x 12 purlins, 6 ft. centre to centre, and is covered by 2 ply roofing paper. The 3 in. flooring is carried on 6 x 12 mud sills, 4½ ft. centre to centre. Continuous sliding doors are provided front and rear, the front or basin side giving a clear opening 14 ft. high, and the rear doors 8 ft. high. Four continuous rows of windows 10 x 12 in. glass, 2 lights high, give ample light by day, and one 200 watt and two 100 watt lamps per bay are sufficient at night. Offices and laboratories for customs, railway and overseas officers are located in the west end of the first shed, while the longshoremen's toilet and gear room are in the west end of the other shed. Three tracks at the rear of

each shed will accommodate 36 cars at one shed and 42 cars at the other. The sheds are set back 24 ft. from cope line. Each shed when full will hold about 3,000 tons of miscellaneous freight.

The works are now well advanced, and although the first block was only set on the north quay on basin no. 1 on Sept. 27, 1915, the following work has since been done on the quay walls: 900 lin. ft. of wall on north quay basin no. 1, and 700 lin. ft. on north quay, pier A, have been completed to the top of the granite work, while in addition 200 ft. on north quay basin no. 1; 836 ft. south quay, pier A; 300 ft. north quay, pier A; 660 ft. on passenger landing quay, and 95 ft. of wall on west quay basin no. 1 have been completed to the top of the blockwork. This makes a total of 3,761 ft. of wall built to above high water, and from 52 to 60 ft. high in 15 months, or an average of over 270 lin. ft. of wall per month. All this block setting was done with one block setting crane, although there are now two on the works. Three berths on basin no. 1 are in use, the two on the north side being equipped with temporary freight sheds.

The foregoing is extracted from a paper read before the Canadian Society of Civil Engineers in Montreal recently.

Colliery and Logging Railways in British Columbia.

The B. C. Legislature has under consideration a bill to amend the Railway Act, by bringing within its jurisdiction colliery, logging and other railways not at present subject to it. The new section provides that it is to apply to any "company, persons, firm or corporation" operating a railway or tramway to which the present railway act does not apply, and that a "railway" within the meaning of the section is the undertaking of any company which is declared to be a railway by the Minister's certificate. The Minister may declare what provisions of the Railway Act are to apply to such railways, and no such railway can be operated without the Minister's consent, and then only upon conditions imposed by the Lieutenant Governor in Council.

It was explained on the second reading of the bill, Mar. 15, that it is the Government's desire to look after the construction and operation of short colliery railways, logging railways, and all other railways or tramways at present in operation, under private ownership.

St. John River Hydro Electric Co.—The New Brunswick Legislature has been asked to revive and amend the company's charter, which was granted in 1913, and to extend the time for the construction of the various works authorized. The company was empowered to develop a water power on the St. John River, between the entering in of the Shogomoc and the Pokiock Rivers, and to transmit the electric power. The dam to be built across the river is to be provided with a lock sufficient to permit of navigation being carried in. In return for the privilege the company is to pay a rental of \$4,000 a year and 25c a year per constant horse power sold for 20 years from the first delivery of power, when the rate is to be revised. The company's office is to be at Fredericton, the provisional directors named being: M. E. Agar, W. A. Clousie, R. M. McCarty, St. John, N.B.; F. J. Boyer, Victoria Corner, N.B.; R. B. Harrison, Fredericton, N.B., and H. Guernsey, London, Eng.

Birthdays of Transportation Men in May.

Many happy returns of the day to:

Jas. Bain, General Superintendent, Halifax & South Western Ry., Bridgewater, N.S., born at Pictou, N.S., May 24, 1860.

W. R. Baker, C.V.O., ex-Secretary, C.P.R., Montreal, born at York, Eng., May 25, 1852.

B. A. Bourgeois, Assistant to Comptroller and Treasurer, Canadian Government Railways, Moncton, N.B., born there May 24, 1869.

G. S. Cantlie, ex-General Superintendent of Car Service, C.P.R., Montreal, now in military service with Canadian Overseas Forces, born at Montreal, May 2, 1867.

B. T. Chappell, Superintendent, Pacific Division, Canadian Northern Ry., Vancouver, B.C., born at Charlottetown, P.E.I., May 1, 1878.

N. R. DesBrisay, District Passenger Agent, C.P.R., St. John, N.B., born at Minneapolis, Minn., May 18, 1888.

M. Donaldson, M.Can.Soc.C.E., Vice President and General Manager, Grand Trunk Pacific Ry., Winnipeg, born near Edinburgh, Scotland, May 1, 1851.

A. E. Duff, ex-District Passenger Agent, G.T.R., Toronto, now of Winnipeg, born at Sherbrooke, Que., May 1, 1872.

G. C. Dunn, Division Engineer, Grand Trunk Pacific Ry., Winnipeg, born at Quebec, May 13, 1862.

M. A. Fullington, A.M.Can.Soc.C.E., ex-Superintendent, Smiths Falls Division, Quebec District, C.P.R., Smiths Falls, Ont., born at Johnson, Vt., May 12, 1880.

Edward Garrett, Superintendent, Park & River Division, International Ry., Niagara Falls, Ont., born at Catarqui, Ont., May 24, 1868.

G. E. Graham, General Manager, Dominion Atlantic Ry., Kentville, N.S., born May, 1870.

G. H. Hedge, General Master Mechanic, Western Lines, Canadian Northern Ry., Winnipeg, born at Neath, Wales, May 26, 1865.

W. T. Huggan, Divisional Accountant and District Passenger Agent, Prince Edward Island Ry., Charlottetown, P.E.I., born at Halifax, N.S., May 24, 1851.

J. Irwin, Superintendent, Toronto District, Ontario Division, Canadian Northern Ry., Trenton, born at Clinton, Ont., May 28, 1866.

S. McElroy, Trainmaster, Canadian Northern Ry., Rainy River, Ont., born at Lindsay, Ont., May 1, 1875.

W. Marshall, Assistant Manager of Telegraphs, C.P.R., Winnipeg, born at Garden Island, Ont., May 18, 1859.

J. N. Murphy, Trainmaster, C.P.R., Brandon, Man., born at Mooretown, Ont., May 10, 1879.

W. J. Rooney, Divisional Superintendent of Telegraphs, Alberta and British Columbia Lines, Grand Trunk Pacific Ry., Edmonton, Alta., born at Toronto, May 22, 1882.

A. C. Shaw, Passenger Department, C.P.R., Montreal, born at Detroit, Mich., May 12, 1865.

W. H. Snell, General Passenger Agent, C.P.R., Montreal, born at Palmyra, Neb., May 23, 1872.

C. T. Stanger, District Freight Agent, C.P.R., Saskatoon, Sask., born in Rutland, Eng., May 11, 1887.

W. Stapleton, District Passenger Agent, Canadian Northern Ry., Saskatoon, Sask., born at Bristol, Eng., May 20, 1884.

E. Tiffin, General Western Agent, Canadian Government Railways, Toronto, born at Hamilton, Ont., May 5, 1849.

J. H. Walsh, General Manager, Quebec Central Ry., Sherbrooke, Que., born at Quebec, May 12, 1860.

H. K. Wicksteed, B.A.Sc., M. Can.Soc. C.E., Chief Engineer of Surveys, Mackenzie, Mann & Co., Ltd., Toronto, born at Quebec, May 25, 1855.

C. L. Wilson, Assistant General Manager, Toronto & York Radial Ry., Toronto, and Vice President, Canadian Electric Railway Association, born at Boston, Mass., May 23, 1871.

A. O. Wolff, Resident Engineer, Chapleau Division, Algoma District, C.P.R., Chapleau, Ont., born at Copenhagen, Denmark, May 14, 1887.

James Yeo, ex-Roadmaster, Intercolonial Ry., Riviere du Loup, Que., born at Bideford, Devonshire, Eng., May 1, 1830.

First Aid Competition on the G.T.R.

First aid teams from the principal terminals on the G.T.R. met in competition in Montreal recently for the Chamberlin silver shield. Montreal team, no. 1, from the Point St. Charles shops, proved successful; Stratford team won second honors; Battle Creek third, and Belleville fourth. Eighteen teams entered the competition. The Deputy Commissioner and the General Secretary, Canadian Branch, St. John Ambulance Association, complimented the teams on the efficiency shown. The shield was presented to the winning team by W. D. Robb, Superintendent of Motive Power, acting for President Chamberlin, who could not be present. He stated that the work done by the St. John Ambulance teams in the company's shops earned the commendation of the G.T.R. Executive, and that it planned to further extend the movement to bring in men working on trains.

The Grain Growers' Grain Co., with a separately incorporated export department in New York, will, according to a New York report, consolidate early in the autumn of this year, with the Alberta Farmers' Elevator Co., the latter company's assets being transferred to the former, and the capital stock increased to \$3,000,000. This will, says the report, bring under one management, 250 country elevators in Manitoba and Alberta, the company also operating under lease, two of the C.P.R. terminal elevators and warehouses at the head of the lakes. It is also stated that the Saskatchewan Co-operative Elevator Co., controlling 230 elevators, will also be absorbed.

The Quebec Passenger & Elevator Co. has been incorporated under the Quebec Companies Act, with a capital of \$50,000, and office at Quebec, to convey passengers, freight, baggage, luggage and merchandise by means of elevators, hoisting machines, vehicles, motor cars or other motive power, and for that purpose to do all that is necessary, provided that nothing shall confer on the company the power to build, own or operate any line of railway. The provisional directors are: Jas. M. McCarthy, C. E. Taschereau, J. P. Cantin, F. S. Lee and Nap. A. Giguere, Quebec.

Calabogie Power Development.—The Renfrew, Ont., Town Council has passed a bylaw confirming an agreement with M. J. O'Brien, railway contractor, etc., for a franchise for power development at Calabogie.

A Solution of the Canadian Railway Problem.

By Sir Thomas Tait

Sir Thos. Tait, at one time in the C.P.R. service, in which he was Manager of Transportation in 1903, when he resigned to become Chairman of the Victorian Railways Commission at Melbourne, Australia, a position he occupied for seven years, and who since his return to Canada, in 1911, has been President of the Fredericton and Grand Lake Ry. & Coal Co., which built a railway in New Brunswick that has been leased to the C.P.R., and which operates a colliery on the line, has issued a booklet under the title given above. In starting he says "The Dominion of Canada owns or controls and operates a railway system, the main lines of which extend from Sydney, Halifax, and St. John, on the Atlantic seaboard, to Quebec and Montreal, and from Quebec to Fort William and Winnipeg, and there is, therefore, today in Canada the administration by the state of about 4,000 miles of railway and competition between company railways and a state owned and operated railway system extending more than half way across the continent."

In view of Sir Thomas' experience as head of a state owned system in Australia, there is considerable significance in his second paragraph, in which he says: "In view of certain conditions which, it is to be regretted, prevail in this country and in which there appears no promise of early improvement, the efficient administration along business lines of state railways in Canada by the Government, even by means of a so-called 'independent' board of commissioners cannot be confidently anticipated. It is generally the experience in democratic countries having state railways, that it is impossible to eliminate political influence, exerted if for no other reason than to promote and advance the interests of the political party in power, and, undoubtedly in such countries as the United States and Canada, where political partisanship runs so strong, and political patronage has so long been the custom, prudent and efficient management of railways by the state would be found sooner or later to be impracticable owing to political interference and influence."

Sir Thomas continues: "Competition between state owned and operated railways and company railways is inequitable and unfair to the private investor in the latter. Money for construction and equipment can, generally speaking, be borrowed or obtained by the state on considerably better terms than by companies and, therefore, state railways are not expected or required to earn as large a return on their cost as investors in company railways, especially shareholders, look for and should receive. If everything else therefore be equal—an important and improbable proviso—the rates and fares on state railways do not require to be as high as on company railways. Due to the exercise of political influence, rates and fares on state railways are liable to be reduced, and indeed as a rule are reduced, and train services and other facilities are provided beyond what the traffic and other conditions warrant, and these lower rates and fares, and these unjustified facilities, must be conceded by competing company railways if they are to retain their fair share of the traffic."

"In view of the possibility, if not the probability, of the Dominion being compelled to take over the Canadian Northern system and the Grand Trunk Railway

from Winnipeg to Prince Rupert, with its branch lines, the question arises whether in such event the difficulties and disadvantages of state administration, on the one hand, and the injustice of state competition with private enterprise, on the other hand—both of which will be greatly aggravated and increased should the present state railway system be extended from Winnipeg to the Pacific Coast and throughout our western provinces—might not be avoided. The following is an outline of a scheme whereby both the advantages which may be derived from the ownership of railways by the state and the good results which should accompany efficient administration by a company may be obtained and to these should be added the great advantages, including a very large saving in operating expenses, which would result from all the more important railways of Canada being managed and operated as one great system.

"It is assumed that the Dominion can acquire all the common stock of both the Canadian Northern and the Grand Trunk Pacific companies for possibly a nominal consideration, or, having regard to the magnitude of the scheme, for a comparatively small sum. The Dominion to take over all the assets and assume all the liabilities of the Canadian Northern and the Grand Trunk Pacific systems and to guarantee interest on their bonds and debenture stock—supplemental to and not in cancellation of existing provincial and other guarantees of such securities.

"The Dominion to lease the C.P.R. system in perpetuity for a rental equivalent to an agreed annual return on its common stock and to guarantee the payment of all dividends or interest on all the securities of that system which are senior to its common stock, and to assume all the liabilities of that company, including all its guarantees on the securities of other railway companies, and the payment of all rentals for which the C.P.R. is responsible. The Dominion to take over all the assets of the C.P.R. Co., except those which are not closely connected with the operation of its railways and connections, which assets would be transferred to a separate company for the benefit of C.P.R. shareholders. These excluded assets would include: All lands, except those specified as "Surplus lands" in Schedule B of the company's annual report; interests in town sites; timber and mining rights; collieries and timber mills, improved farms and live stock; natural gas and petroleum rights; investments in Consolidated Mining and Smelting Co. and in West Kootenay Power and Light Co.; investments in coal and other mines; balance at credit of special income account; proceeds of land sales; deposits and loans; cash on hand and in banks, etc. in excess of current liabilities.

"The Dominion to lease the Grand Trunk system in perpetuity, for a yearly rental equivalent to certain rates of dividends per annum on its preference and common stocks to be agreed upon, and to guarantee the payment of all dividends or interest on all the securities of that system which are senior to its preference and common stock, and to assume all the liabilities of that company, including all its guarantees on the securities of other railway companies and the payment of all rentals for which the Grand Trunk Co. may be responsible. The Dominion to take over all the assets of the G.T.R.

"The five systems, viz., the existing government system, the Canadian Northern, the Grand Trunk Pacific and the Canadian Pacific and Grand Trunk systems to be administered for and on behalf of the Dominion, under an agreement with the Dominion, by a company to be known as the "Canadian Railways Co.," to be incorporated and constituted, as follows:

"The company to be incorporated as above to have a capital of, say, \$10,000,000 and a board of directors of nine members; 51% of the capital to be subscribed and paid for and to be held by the Dominion, and the balance, 49%, to be subscribed and paid for and to be held exclusively by citizens of Canada. The Dominion to guarantee 5% per annum dividend on the Company's stock. Four of the nine directors to be appointed by the Governor General in Council, four by the citizen shareholders of the company, representing 49% of the stock, and the ninth director to be appointed by the Supreme Court of Canada. The directors appointed by the Governor General in Council and by the Supreme Court not to be interested directly or indirectly in the Company's stock. No corporation, firm, or individual to be interested directly or indirectly in more than 100 shares of the citizens' stock. No stock to be transferred without the board's consent. The directors appointed by the Governor General in Council to hold office, one for five years, one for 6 years, one for 7 years and the fourth for 8 years, and to be eligible for re-election—subject, however, to dismissal by the Governor General in Council in the event of misconduct or incapacity, with right of appeal in such case to the Supreme Court of Canada. These four directors to be the most capable railway administrators obtainable—one of them with experience in operating, one in traffic, one in finance and accounting, and the fourth in legal work. The directors appointed by the citizen shareholders to be elected annually. The director appointed by the Supreme Court to hold office for 10 years and to be eligible for reappointment, subject, however, to dismissal by the Governor General in Council in the event of misconduct or incapacity, with right of appeal in such case to the Supreme Court. Vacancies due to death or resignation to be filled by the Governor General in Council, in the case of a director originally appointed by him, in the case of a director appointed by the citizen shareholders by the other three similarly appointed directors until the next annual meeting of the company and by the Supreme Court in the case of the director appointed by it. The chairman and vice chairman of the company to be appointed by the Governor General in Council from among the four directors similarly appointed and to hold office for eight and seven years, respectively. The chairman to be the chief executive officer of the company. The vice-chairman to assist the chairman and to represent him in his absence. The salaries of the members of the board of directors appointed by the Governor General in Council to be sufficient to secure the best men for the positions and the salaries of the other directors to be such as to make it worth the while of able and reliable men to become members of the board. The board to control and direct the company's policy and to have complete control of the ap-

pointment work of the company's officers and employes. In any year in which the net revenue of the whole system is sufficient to pay all the rentals and other charges payable by the Dominion in respect of the whole system, including interest at an agreed rate on the amount invested in the existing Government system and the interest payable on additional capital expenditure, the chairman and vice-chairman and other members of the board shall receive a bonus equivalent to an agreed percentage of their respective annual salaries and the citizen shareholders an agreed increase in their dividend, and in the event of the net revenue exceeding the said fixed charges in any year by a percentage to be fixed, the said members of the board shall receive an additional bonus equivalent to an agreed percentage of their respective salaries, and the citizen shareholders shall receive an agreed additional increase in their dividend for that year. Maximum salaries for the respective directors and a maximum dividend for the shareholders to be fixed.

"The Dominion to finance the whole system including the provision of the funds for new railways, for all additions and improvements to existing lines and for rolling stock and other equipment chargeable to capital account, as may be stated to be required by the board. In the event of a difference of opinion between the board and the Minister of Railways (representing the Dominion) in respect of any of such capital account requirement, the question to be submitted to the authority referred to in the next clause for investigation and report—the decision of such authority to be final.

The construction of a new railway not to be undertaken nor any commitment to it given until an investigation and report in regard to it have been made and the report laid on the table of the House of Commons by a competent authority—independent of politics—say, a board of three members thoroughly well qualified for the purpose.

Rates and fares and other charges for transportation and other services not to be increased without the approval of the Dominion Board of Railway Commissioners.

Except as specified in the next clause rates and fares and other charges not to be reduced without the consent of the board until a substantial reserve guarantee fund has been provided out of net revenue (in excess of the fixed charges, bonuses to directors and extra dividends to shareholders) and the net revenue has been sufficient in three successive years to pay all such fixed charges, bonuses to directors and extra dividends to shareholders, and then only to the extent which, based on the average traffic of the said three years, shall represent a reduction in the net revenue equal to the net revenue in excess of the said fixed charges, bonuses and extra dividends.

The Dominion may by order in council declare a matter (such as a reduction in transportation or other charges for services rendered or the construction of a new railway) to be one of general policy, and direct the board to give effect to such policy, but in the event of the board not concurring in whole or in part in such direction, the Dominion shall reimburse annually to the whole system 75% of the yearly increase in expenditure or of the decrease in revenue of the whole system occasioned by the carrying out of such direction in excess of such increase or decrease as would have been occasioned by the carrying out of such direction

to the extent only to which the board concurred in it.

"The company's accounts and books to be continuously audited by an auditor to

be appointed by the Governor General in Council, who shall certify to the balance sheet, profit and loss account and other annual statements of the company."

The Canadian Pacific Railway's Honor Roll No. 19.

Increases in Lake and Rail Rates from Eastern Canada to Fort William, Etc. Sustained by Board of Railway Commissioners.

The Assistant Chief Railway Commissioner, D'Arcy Scott, gave the following judgment, Mar. 29:

The Montreal Board of Trade has brought to the board's attention the tariffs filed by the railway companies increasing the lake and rail rates on sugar to Fort William and other lake points, effective April 2. The G.T.R., the C.P.R., and the Canadian Northern Ry. were called upon to justify the proposed increases at the sittings of the board at Ottawa on Mar. 20. At the hearing, in addition to the railway companies mentioned, the Montreal Board of Trade, the Toronto Board of Trade and the Canadian Manufacturers' Association were represented. After the question of increased rates on sugar had been gone into at the hearing it appeared that a number of other commodity rates, as well as the class rates, which had also been increased, were in the same position as the sugar rates. Therefore, whatever justification there might be for increasing sugar rates would apply to the other rates covered by the same tariffs.

In dealing with the tariffs I will refer only to those of the C.P.R. The other railways have filed tariffs practically similar to the C.P.R. ones. The C.P.R. tariff containing the increases is Supplement 6 to C.R.C. no. E. 3136, issued Feb. 26, 1917, effective April 2, 1917. An examination of the different lake and rail rates that have from time to time been effective since the board's establishment will be of interest in connection with this matter. The following statement gives the lake and rail commodity and class rates to Port Arthur and Fort William, shown in all tariffs filed by the C.P.R. from 1904 to and including the tariff under consideration, the increases in which the company now seeks to justify:

To Port Arthur and Fort William. Lake and Rail.

While the earliest date given is the first record of the rate in tariffs filed with this board, I am told by the Board's Chief Traffic Officer, who had an intimate knowledge of lake and rail rates long before the establishment of the board, that many of these class rates are much older than the earliest tariffs on record with the board would indicate. These rates are from stations in Eastern Canada to Lake Huron and Bay ports by rail, thence by boat to Fort William and Port Arthur or other lake ports. The point of transshipment from rail to lake boats for the head of Lake Superior for the C.P.R. is Port McNicoll, on Georgian Bay, and for the G.T.R., Point Edward, at the south end of Lake Huron. The rail haul, from Montreal for instance, is in direct competition with the all water movement via the St. Lawrence River and Great Lakes.

The justification of the proposed increases submitted by the railway companies was that the rates sought to be increased were exceptionally low rates, put in to meet water competition, which the companies had the right to cancel or increase at any time they decided to disregard the water competition, and that conditions had so changed that the railway companies did not desire any longer to meet water competition. This position is quite tenable, and the principle involved has been recognized by the board in a number of cases. (See judgment of Commissioner McLean in Blind River Board of Trade v. G.T.R., C.P.R., Northern Navigation and Dominion Transportation Companies, 15 Canadian Railway Cases, pg. 146).

The board has no jurisdiction over the rates charged on the division of lake and rail rates demanded by the different steamship companies operating boats on the St. Lawrence or the Great Lakes, other than the rates on the steamers operated by the C.P.R. I understand the steamship companies desire to charge higher rates during the coming season than they have been charging in the past. The extraordinary demand for ocean tonnage, due to the war, has caused Canada Steamship Lines, the corporation which operates the largest number of boats on the lakes, to remove its largest and best lake boats and put them into ocean service. Doubtless, other lake boat owners have done the same thing. The result is a scarcity of tonnage on the lakes. With increased water rates and a scarcity of lake tonnage, it is only natural that the railway companies should decide that the present was an opportune time to cancel their old water compelled rates.

It should be borne in mind that at the time the increase in rates was allowed

by the board in the Eastern Rates Case the lake and rail rates now under consideration were not increased. The rail portion of the proposed rates does not appear to be excessive, when compared with the local rail rates between the same points. The steamship divisions of the proposed rates are, I understand, to be the same percentages as have been in effect for a number of years. They appear in the judgment in the Blind River Case already referred to.

Local Rates to Point Edward.

	Per 100 lbs.	
	1st Class	5th Class
From Montreal	60c	30c
From Toronto	38c	19c

Railway Portion to Point Edward of Proposed Lake and Rail.

	Per 100 lbs.	
	1st Class	5th Class
From Montreal	42c	21c
From Toronto	25½c	12½c

The Montreal and Toronto rates in the new tariffs are blanket rates, and, therefore, a comparison of the rail portion of these rates with the local class rates from points covered by the Montreal or Toronto lake and rail rates, but much nearer to the point of transshipment to the boats than either Montreal or Toronto, as the case may be, would not appear as favorable to the new rates as the example given above.

Nevertheless, Montreal and Toronto, being the two largest shipping points, the comparison given above is a fair one. The new lake and rail rates will so far as is known be the following number of cents over the maximum all water rates for the season of 1917 in the classes mentioned:

5c per 100 lb.—1st class.
4c per 100 lb.—2nd class.
4c per 100 lb.—3rd class.
3c per 100 lb.—4th class.
2c per 100 lb.—5th to 10th class inclusive.

And the proposed rates will be under the present all rail rates to Fort William 45c per 100 lb. 1st class, and 12c per 100 lb. 5th class from Toronto; and 35c 1st class and 7c 5th class from Montreal.

It should be understood that the only rates the board has had under consideration in this matter are the local lake and rail rates to Fort William and other lake ports and are to be found in tariffs becoming effective on April 2, 1917. As already indicated, the railway companies may in their discretion meet water competition if they see fit to do so and may also determine the extent to which they shall meet it, and, therefore, the board cannot interfere with the tariffs filed.

Northern Colonization Ry.—The act passed at the Quebec Legislature's last session respecting the land grant made to this company, provided for the ratification of letters patent dated July 31, 1916, granting lands to the company to replace the 96,000 acres granted by letters patent dated Sept. 30, 1910, and receded to the government July 28, 1916, for reasons set out in an order in council dated June 22, 1916. The reason for the re-ceding of the lands as set out in the documents, which are given as a schedule to the act, is the flooding of them by the damming of the St. Maurice River under the Running Water Commission's direction.

Rapid Transit Railways.—E. V. Pannell, electrical engineer, read a paper on rapid transit railways some features of construction and cost, before the American Institute of Electrical Engineers, Toronto Section, Apr. 20.

Maximum Length of Trains on Canadian Railways.

Canadian Railway and Marine World for April contained a summary of a judgment given by Commissioner S. J. McLean of the Board of Railway Commissioners, on Mar. 24, on an application for an order to define the maximum length of trains to be hauled on Canadian railways. Following is the full text of the judgment:

The matter of the regulation of the length of freight trains was set down for hearing by the board of its own motion. At the hearing, certain points were set forth by the representatives of the or-

ganizations of railway employes as constituting the essence of their complaint. A written submission was subsequently made by the railways, and a written reply thereto was made by the representatives of the organizations of railway employes. Investigations have been made by the board's operating department of the practical working of long freight trains and the various factors involved.

Further emphasizes the importance of obtaining the highest possible efficiency from rolling stock. This is necessary, not only if the war needs are to be met, but also if the ordinary commercial needs of the country are to be met. Conditions are such that it is impossible to add to the rolling stock at once. The question is to do the best with what there is. One index of the existing condition is the sanction given by the board to the curtailment of passenger service in order to facilitate the freight movement. With the termination of the war and the getting back to more normal conditions, the matter of the regulation of the length of long trains can and will be gone into on its merits. In the meantime, there is no

Snow Ploughs for Canadian Government Railways.

The accompanying illustrations show one of the 20 steel snow ploughs which were added to the Canadian Government Railways' equipment during the past winter. They have the following general dimensions:

Length, over all	32 ft. 1 9-16 in.
Width, over top sills	8 ft. 9 1/2 in.
Height, rail to top of eaves angle.....	11 ft. 3 in.
Height, rail to top of cupola, about	14 ft. 10 in.
Width, over wings extended	16 ft.
Extreme width, cupola	8 ft. 9 in.
Extreme length, cupola	4 ft. 11 1/2 in.
Truck centre	18 ft.
Wheel base, leader truck.....	4 ft. 2 in.
Wheel base, rear truck	5 ft. 3 in.

Snow Plough, Transcontinental Division, Canadian Government Railways.

other one thing more important in transportation than the movement of freight. The fundamental importance of getting the most efficient movement out of the rolling stock is patent to all. Its importance is especially apparent to those who in their daily work recognize the duty of ensuring such a freight movement as will enable that proper prosecution of the industries peculiarly relating to the war, and of the other and ordinary industries whose proper maintenance is essential to the prosecution and financing of the war. Under the existing conditions, the board is not justified in directing a revision of the length of freight trains.

The matter was taken up by the board at a time when the country was subject to war conditions; and the continuance of the war has every day emphasized the burden the war puts on Canadian transportation facilities and the necessity of obtaining the very highest possible efficiency from them. The condition which the country went through since last year and which, unfortunately, it is still in,

The Napierville Junction Ry. Co. has been admitted to the Eastern Canadian Passenger Association's membership.

Weight, approximately	60,700 lbs.
Draft gear	Tandem springs
Couplers	5 x 7 shank, 8 1/2 in. end
Air brakes	Westinghouse, K.D. 812
Trucks (front end).....	30-ton truck
Wheels.....	Cast steel, 28 in. diam.
Journal boxes	Tender type
Trucks (rear end).....	30-ton standard
Wheels	M.C.B. 33 in.
Axles	M.C.B. standard
Brake shoes	Steel back
Springs	M.C.B. class
Brake beams	M.C.B.

These ploughs are practically duplicates of some built some little time ago for the Intercolonial Ry., except that the large draw bar castings on the front of the plough have been extended so as to facilitate the coupling of ploughs nose to nose. The ploughs previously built did not have this feature. In addition to this modification, the side wings were redesigned, and have curved plates, instead

of the straight plates previously used, in order that the ploughs will clear themselves more readily from the snow. The new ploughs also have an ice cutter applied to the front truck. These cutters are operated by air cylinders which remove the ice at the inside of the rails. The front operating device was changed, and instead of being lowered and raised by air, it is raised by means of levers and springs. The ploughs were built by the Canadian Car & Foundry Co.

Application for Authority to Raise Freight and Passenger Rates.

Canadian railways are applying to the Board of Railway Commissioners for a general increase in freight and passenger rates. Permission is asked to make brief supplements to existing tariffs, authoriz-

inefficiency of transportation facilities, and while at present, owing to scarcity in skilled labor and other causes due to the war, it may not be possible to maintain the transportation service in a condition of highest efficiency, it is an imperative duty on the part of everyone to see that the service is adequately sustained.

"The applicants claim that under the present revenues and rates applicable to their enterprises it is impossible to adequately sustain their service, to make needed betterments, or to meet the enormous decrease in net operating income attributable to the very substantial increased cost of fuel coal, materials, supplies, equipment of all kinds and wages, entering into the maintenance and operation of their railways. Since the rates of the railway companies are absolutely fixed under the Railway Act, the applicants are powerless to increase their revenues, to

publication of flat percentage advances to existing tariffs by supplementary tariffs filed with the board, and that such supplementary tariffs should be published and made effective at the earliest possible moment. Even should these advances be authorized, the increased revenues which the applicants will receive therefrom will not be sufficient to meet the additional outlay which they will be called upon to make in the purchase of the amount of one article—coal—used yearly by the applicants in Canada."

The railways are submitting with their application details of the great increases in railway operating expenses due to the rise in the price of fuel coal and other commodities, increased duties, war taxes and labor payments. Fuel coal alone will cost Canadian railways several million dollars more this year than in 1916. The consumption of coal by the Canadian roads is approximately 25,000 tons a day, or more than 9,000,000 tons a year. For this coal the railways will have to pay, during the next twelve months, a much higher price than at any time in their history. The railway coal contracts with the mines run from April to April, and new agreements just entered into call for an increase in price of about 100%. In addition to the high purchase price, the Canadian railways have to pay a customs duty of 55c a ton on locomotive fuel entering Canada, and a 7½% surtax as part of the War Revenue Act of 1915. With the doubling up in the price of coal, this surtax will automatically increase and prove a heavy additional burden. The railways also use millions of dollars worth of other products, the prices of which are steadily mounting. The price of locomotives has increased 90%, freight and passenger cars 50%, and rails \$10 a ton. Since the beginning of the war the railway pay rolls have shown marked advances. There has been a general increase in the wage scale and large expenditures on additional labor have been necessary to maintain efficiency, with many thousands of skilled employes enlisting and others engaging in commercial pursuits, where opportunities are considered larger and more profitable, as a result of the great activity and prosperous conditions in the business world.

Evidence will be presented to the Board of Railway Commissioners to prove beyond doubt that the railways cannot meet the pressure on their revenues resulting from these greater costs. Canadian railway officials state that a reasonable increase in freight rates would not in any way burden the community, but would in reality prove a national economy, in that it will assist the nation's business demands, and which would not otherwise be possible. The railways take the ground that they are the only concerns in the industrial world that are at present selling their product at the old rates, and at the same time paying more for everything they buy than they ever did before. The new and unexampled conditions, particularly in regard to the price of fuel, now existing make the wiping out of the favorable revenue showings made last year a certainty, if increased rates are not promptly granted, and a refusal of such an increase would, the railway executives state, cripple the railways. United States railways will place new tariffs in effect from June 1 next, by the Interstate Commerce Commission's authority, given recently. The conditions of railway operation on both sides of the international boundary line are similar, except that the Canadian lines must meet the heavy duty on fuel and other supplies used.

Snow Plough, Transcontinental Division, Canadian Government Railways.

ing an advance of 15% on all class and commodity freight rates, except on coal, and also on all passenger fares. A specific increase of 15c a ton on both bituminous and anthracite coal is requested, such advances to become effective upon less than 30 days notice. The grounds upon which this application are made are set forth as follows:

"Nothing is more essential to the welfare of Canada, whether considered in its own interests or as a part of the Empire, than that the railways operating within its borders should be in a position to respond immediately and effectively to the fullest demands made upon them, either by the general commerce of the country or in connection with the defence of the realm. Every industry, whether engaged in war preparation or in the manufacture of commercial commodities, and every individual in Canada, is affected either directly or indirectly by the efficiency or

equalize or even to approach the equalization of this increased cost in fuel coal and other commodities, and they are faced with a probable deficit in net operating income unless immediate relief is granted. Substantial increases in both freight and passenger rates are therefore imperatively necessary, and the emergency requires that the relief granted should be made in the most expeditious manner and with the least possible delay.

"If advances in rates be proposed and filed with the board, in compliance with its present rules governing the publication of tariffs, a long delay must necessarily ensue before such tariff publication can be prepared and made effective, and for these reasons it is deemed expedient that any advance permitted should be made by virtue of the War Measures Act and that the board upon the passage of any order in council as may be recommended by the board should permit the

The Cost of Railways in Eastern Canada and their Earnings.

By Sir Henry L. Drayton, K.C., Chief Railway Commissioner of Canada.

The following is taken from the judgment in the Eastern Rates Case, given by Sir Henry L. Drayton a short time ago and the decisions arrived at which were given in Canadian Railway and Marine World at the time:—

Speaking generally, there are three lines of railway, subject to the Board of Railways Commissioners' jurisdiction, operating in Eastern Canada. Of course, there are a good many other railways operating, but their activities are not of such an extent as to render them necessary to be considered in the large in this case. The Canadian Northern System has only emerged from the construction state, and its figures need not be considered. Its position is shortly stated by the company to be that they need every cent of revenue that they can obtain. There is little reason to doubt that the Canadian Northern is operating in Eastern Canada at a loss. There remains to be considered the figures of the Canadian Pacific and Grand Trunk Railway Companies.

Some shippers have claimed that, with the Canadian Pacific still making a proper and sufficient return, no increase in rates can be justified. As it occurs to me, the mere fact that the Canadian Pacific, as a result in part, as it may be, of its steamship operations, pays a good return to its shareholders, raises no argument one way or the other as to the reasonableness of freight rates in a given territory in which that company operates. The reasonableness of the return earned by the company on freight carried in Eastern Canada does not depend one way or another on profits and losses resulting from operations elsewhere. This company's divisions in Eastern Canada are the Atlantic, Eastern, Ontario and Lake Superior. These divisions, of course, include a territory a good deal larger than the territory served by the Grand Trunk in its Canadian operations.

The Atlantic Division includes all the lines between St. John in the east and Megantic, Que.—a territory in which the Grand Trunk has no tracks, while the Lake Superior Division extends to Port Arthur, 628 miles west of North Bay, the Grand Trunk's most northwesterly point. The Ontario Division carries the Canadian Pacific as far west as Windsor on the south and Chalk River on the north. There is but little local business on the Lake Superior Division, that portion of the system having been applicably termed a bridge between Eastern and Western Canada. The district carries, however, a considerable tonnage, with gross traffic returns in 1913 of \$10,141,496, dropping in 1914 to \$8,130,475. In the same two years the gross earnings on the Atlantic Division amounted to \$2,336,002 and \$2,297,485, respectively. Speaking generally, the Atlantic Division is operated at a loss, the operating ratio running from 98.7 in 1909 to 110.3 in 1912. This ratio, of course, just simply means the expenses incident to earning \$1 of revenue, with the result that in the first instance the company netted over and above its operating expenses 1.3 c. and in the next instance was out of pocket 10.3 c. for each dollar that it took in. In so far as the Atlantic Division is concerned, if the Canadian Pacific's figures were to be accepted throughout, a prima facie case is made

out for very radical advances in all rates. The districts most fairly comparable to the Grand Trunk System are the Eastern and Ontario Divisions. The gross freight earnings of the Canadian Pacific in these districts are considerably lower than those of the Grand Trunk, the Grand Trunk's gross freight revenue in Canada for 1909 being \$18,755,809, while the Canadian Pacific's gross earnings in Eastern and Ontario Divisions were \$11,325,562; and for 1913, \$27,552,505 as against \$17,448,481. Stated in other words the Canadian Pacific's gross earnings in these divisions are but little over three-fifths of those of the Grand Trunk. The freight earnings of the Canadian Pacific on these divisions for 1913 constitute merely 20% of its total freight revenues. Taking, however, the whole freight earnings of the Canadian Pacific, Port Arthur east, and comparing them with the earnings of the Grand Trunk in Canada from the years 1909 to 1914 inclusive, the following is the result:—

Year	G.T.R.	C.P.R.
1909	\$18,755,809.00	\$17,865,780.00
1910	21,399,003.00	20,861,825.00
1911	22,091,749.00	23,092,931.00
1912	24,082,910.00	27,905,169.00
1913	27,552,505.00	29,925,980.00
1914	26,134,717.00	27,079,389.00

During the whole period, if the gross earnings on the Atlantic Division (which were attended by no proper return at all and therefore only weighed down the general net figures) were deducted, the result is, with the exception of the year 1912, that the Grand Trunk returns are the greater. The Grand Trunk was a line primarily built for the necessities of Eastern Canada. It runs into all the large producing centres; it has a well established and well worked up business; and in the territory where the vast majority of the rates in review are in question, does the largest business and obtains the greatest earnings. There can be no question, in so far as Eastern Canada is concerned, that any injustice could possibly be done the shipper in accepting for primary consideration the actual results of the Grand Trunk's earnings as a basis of rates.

Mr. Walsh, of the Canadian Manufacturers Association, as well as others, who appeared in opposition to the railway's proposals, objected to any attempt at re-alignment of rates based upon the capital cost of that line as carried on the company's books, and as returned by the Government. The return to the Government shows capital charges consisting of common and preferred stock and bonds, amounting to no less than \$131,395 per mile of line. The objection is, of course, perfectly well taken. It would be impracticable to attempt in the first instance to put in effect any such rate basis and expect traffic to move under it.

The Grand Trunk is, as railways go, an old system. Many mistakes were of necessity made at its inception, and much reconstruction has taken place; and it would appear that no system, or at least no sufficient system, of depreciation has been followed to insure a fair physical representation on the books, and that while much money from time to time has undoubtedly been expended and properly expended, a proportion which cannot now very well be determined should not in any sense have been treated as new capital, but as a replacement of former values.

The line was, of course constructed through a well settled part of the country, and in districts where the purchasable right of way today would undoubtedly be expensive.

Probably, however, one of the most expensive sections of railway built in the whole of Eastern Canada is the Canadian Pacific cut-off line from Glen Tay to Agincourt, the right of way in this instance being purchased only recently and at a high and disproportionate cost to rights of way in other rural sections. The construction, however, of this line, expensive as it was, amounted to only \$13,174,658, with a resultant cost per mile of \$71,547, while the line built by the same railway from Toronto to Sudbury cost but \$56,689 a mile. Much of the construction in this case was also through a well settled part of Ontario where high farm values would govern. It must, however, be noted that construction in both these includes no terminals at either end, and, of course, does not include any allowance for rolling stock. Both lines, however, are built to a high standard and are considered efficient avenues of transportation.

The Government statistics of 1915 give the cost figures for the recently completed National Transcontinental and the Intercolonial. The Intercolonial's cost amounts to \$75,066 a mile. This cost, however, appears to include equipment and terminals. The cost of the National Transcontinental is shown at \$76,632 a mile, and does not include equipment.

Objection can well be raised by the Grand Trunk that it is entirely unfair to compare the cost of a right of way, much of which runs through farms well cultivated and with a heavy acreage value, with the cost of a right of way in Northern Ontario and in an undeveloped district. No such criticism, however, can be raised at all as against the Canadian Pacific's cut-off. The only criticism that could be offered as to the cost of that line being an eminently fair basis of value to the railways, lies in the fact that no terminal costs are included therein. Unfortunately, an examination of the company's books establishes the fact that it is impossible to arrive at what sum the Grand Trunk terminals have cost them. The capital account has not been kept in such a way as to distinguish such capital items.

During the inquiry, among other information which the company was required to furnish the Board, it was asked at what sum its trackage stood on the company's books. The answer given was that the capital account at Dec. 21, 1914, as shown in the annual report as account 4, amounted to £85,481,785, 2s. 5d., and that no separation had been made between the road and the equipment. It was also asked as to the value placed on its terminals, which are of course expensive, in Montreal, Toronto, and Hamilton; and the system in which the company's books were kept in this regard. The answer was that no separate records were kept. A valuation was made by the company showing the value of Montreal terminals for freight service, together with a proper proportion which should be charged for facilities common both to the freight and passenger service, which amounted to \$23,036,910, while at Toronto a like valuation amounted to

\$8,785,203; and the company also returned the cost of the equipment in service June 30, 1914, at \$54,897,037.62.

Perhaps the most recent estimate as to the cost of railway construction is that made by the Hydro-Electric Power Commission of Ontario, a cost which ran at approximately \$100,000 a mile of line, the estimated value being put at \$13,374,155 for a line 138 miles in length between Toronto and London. This cost, however, includes terminals and equipment. The Grand Trunk's returned cost of \$131,395 cannot, therefore, be sustained by the standard of any other line either built or projected.

In so far as returns in rates are concerned, it is, of course, necessary to consider not only the mileage owned by the company and represented by its capital stock and which the Government statistics return (table 3) as 3,326.67 miles of main line, but also the lines leased or operated under contract or trackage rights, making a total mileage of 3,560.00 miles. The same table shows, in connection with the Grand Trunk, 731.38 miles of second track operated. The evidence also shows the company as having 1,339.42 miles of sidings and yard tracks. Accepting, however, for the purpose of comparison, the revenue mileage as being 3,560.60 miles, the net earnings per mile of line of the Grand Trunk available for capital purposes are as follows—(the exact mileages varying slightly from year to year, but for the purposes of comparison the mileages of 1915 is adopted):—

Year.	Total Net Earnings.	Net Earnings Per Mile of Line.
1909	\$8,805,589.78	\$2,473.06
1910	9,175,376.88	2,576.92
1911	9,869,051.64	2,771.73
1912	10,914,365.20	3,065.31
1913	12,572,932.12	3,531.12
1914	10,892,131.33	3,059.35
1915	8,822,136.06	2,477.71

Not only Mr. Walsh, but others in opposition to the application, made the further objection that the Grand Trunk capital account included not only railways constructed in Canada, but also railways constructed in the United States, either owned or leased by the parent company, and large deductions of course were from time to time made; and that, so far as Canadian rates are concerned, they should be considered on their own basis apart from the losses of the part of the system in the United States. The further objection was made that the same capital covered advances to or investments in the Grand Trunk Pacific; and it became necessary for the Board to make an investigation into the company's books, having particular regard to this last question. The Grand Trunk has in fact a large investment in the Pacific line; an investment which freight rates in Eastern Canada should not be called upon to support. It is necessary to consider the period from 1906 to accurately ascertain how the matter stands on this issue. An examination discloses the fact that these advances have not been made out of earnings, but from capital account. Since 1906, the Grand Trunk has added no less than \$99,567,908 to that account. The subjoined statement shows the particulars of the issues. So far as the column containing entries of expenditures on capital account of the company proper is concerned, it is not necessary, for the purposes of the present inquiry to examine such expenditures in detail, and to pass upon the issue as to whether or not some items should not be so included. It will be noted that, with the exception of the years 1909 and 1914, the issue on capital account each year left a balance

available for other purposes, after all Grand Trunk expenditures proper were made, more than sufficient to provide for Grand Trunk Pacific expenditures. In the years 1909 and 1914 advances were not made by the Grand Trunk to the Pacific, but, on the other hand, balances owing by the Pacific to the Grand Trunk were reduced, as indicated by the asterisks:—

	Guaranteed Stock Sold.	Debenture Stock Sold.
1906	\$5,489,669	\$1,037,768
1907	2,818,350	2,298,770
1908	5,370,771	730,000
1909	1,216,666
1910	3,406,666	4,868,473
1911	6,329,314	8,030,000
1912	1,825,000	16,305,766
1913	1,384,301	4,389,188
1914	7,300,609
1915
Total	\$26,624,002	\$46,177,240

The transactions of the Grand Trunk Pacific may be divided into three heads:—Grand Trunk Railway proper, Grand Trunk Pacific Branch Lines, and Grand Trunk Pacific Development Co. The following statement covers the same period as that covered by the above statement of capital account and gives the balance between the Grand Trunk and these different companies, the amounts indicated by asterisks being in favour of the Grand Trunk Pacific:—

Balance at December 31.	Grand Trunk Pacific Branch Lines.	Grand Trunk Pacific Railway.	Grand Trunk Pacific Development Company.
1906	\$ 56,637	\$ 3,210,589	\$ 378,204
1907	64,301	3,521,706	163,749
1908	10,821,495
1909	*44,427	3,207,777
1910	1,305,145	5,710,818
1911	3,320,121	5,982,537
1912	4,850,655	8,795,889	3,464,222
1913	6,038,460	6,228,239	6,130,114
1914	11,588,574	*4,337,190	9,035,722
1915	13,045,556	3,575,483	11,073,960

The result is that \$43,684,720 of capital was available for purposes other than those of the Grand Trunk Co. of Canada proper, and that out of this sum there was advanced to the Grand Trunk Pacific undertaking, and remained there as of date Dec. 31, 1915, balances as follows:—

By the Grand Trunk Pacific	\$ 3,575,483.00
By the Grand Trunk Pacific Branch Lines	13,045,556.00
By the Grand Trunk Pacific Development Company	11,073,960.00
Total	\$27,694,999.00

The Board can, of course, give no consideration in the present case to these outside investments as having any bearing on the question of what freight rates ought to be. Under the caption of securities the company's books have the following items showing transactions from 1882 to 1914, exclusive of Grand Trunk Pacific items:—

Securities.	Cost.
Wellington, Grey and Bruce bonds.	\$ 1,388,610.87
Chicago and Grand Trunk Junction bonds	4,464,684.36
Chicago and Grand Trunk Junction indebtedness	1,559,031.80

	Notes Sold.	Total.	Expended on Capital.	Balance available for other purposes.
1906	\$6,527,368	\$ 583,294	\$5,944,084
1907	5,117,120	3,526,585	1,590,535
1908	6,100,771	1,645,256	4,455,515
1909	1,216,666	2,754,866	*1,538,200
1910	8,275,139	2,545,773	5,729,366
1911	14,359,314	6,582,065	7,797,249
1912	18,130,766	13,074,451	5,056,315
1913	9,733,333	15,506,822	14,998,586	508,236
1914	7,300,609	7,312,594	*11,985
1915	17,033,333	17,033,333	2,879,728	14,153,605
Total	26,766,666	99,567,908	55,883,188	43,684,720

Grand Trunk Western first mortgage bonds	7,568,934.69
Ottawa Terminal Ry. bonds	3,000,000.00
Lachine, Jacques Cartier and Maisonneuve Ry. note	1,035,661.52
North Western Grand Trunk bonds ..	5,572.32
Montreal and Southern Counties note	443,954.75
Total	\$37,366,606.11
Less—G. T. W. second mortgage bonds retired	631,975.00

Total \$36,734,631.11

Of these expenditures it may be said that approximately \$18,000,000 represent investments made for purposes other than transportation in Eastern Canada, making with the Grand Trunk Pacific different investments a total of \$45,694,999.

On the question raised as to deficits on the Grand Trunk lines in the United States, Mr. Tilley argued that the Chicago connection was a statutory obligation imposed upon the railway company. His submission in this issue is as follows: "And in addition to that it must be borne in mind that the connection with Chicago by the Grand Trunk was a statutory obligation imposed upon the railway company. In 1879, the Grand Trunk was authorized to transfer to the Government of Canada the line between Hadlow and Riviere-du-Loup, 24.50 miles for \$1,500,000. An agreement was entered into dated July 17, 1879, between the Government and Grand Trunk, by which this line was sold to the Government for that sum, and it was provided that the payment of the purchase money should only be made to cover expenditure for such purposes in connection with the Grand Trunk Railway as the Government should consider conducive to the public advantage, and that interest at 6% per annum should be allowed on any purchase money remaining unpaid. Then sec. 5 of the statute provided: That amongst the purposes which the Government considered will promote the interests of the Dominion is the extension, either by the building or purchase of an independent line, or by such other arrangements of a permanent character with other companies as will secure free access to and from Chicago, in the State of Illinois, for the through traffic of the Company. And the Minister of Railways and Canals may, by authority of the Governor in Council, make advances to the Company from the sum agreed to be paid for the said line at such times and in such amounts as in his opinion may be necessary to enable the Company to complete the arrangements contemplated in this section.' Thereafter in the years 1879 and 1880, steps were apparently taken by the Grand Trunk to acquire the various lines be-

tween Port Huron and Chicago, the various companies being consolidated under the name of the Chicago and Grand Trunk Railway Company. In 1900, this company defaulted in the principal of its first mortgage bonds, and being sold under foreclosure proceedings was finally acquired by the company which had been formed under the name of The Grand Trunk Western Railway Company. All the stock of this company is held by the Grand Trunk Railway Company of Canada."

Chapter 8 of the statutes of 1880 merely confirms the agreement Mr. Tilley refers to. Paragraph 5 of the agreement contains the only reference to this Chicago connection. The effect of the agreement is that the Government recognizes the propriety of the Grand Trunk applying its funds for either building or purchasing railways in the United States for the purposes of this connection. Any question which might arise as to the power of the company to make such investment as far as Canadian authority is concerned is set at rest by the Government's action, confirmed as it is by Parliament. The matter, however, is not carried further. Obligations to construct or purchase, statutory or otherwise, there are none. Certainly the result of the legislation and the agreement is not to render the Canadian shipper subject to the burden of making good losses in United States territory, or to justify higher rates in Canada than those which should obtain had the company's operations been confined to Canada.

Mr. Tilley further argued that the lines, although accompanied with loss, having regard to that portion of the through rates earned in the United States, were, nevertheless, of great value to the Company, and that the earnings on American freight, which otherwise would not have been carried by the Grand Trunk, more than offset the loss in United States territory.

A statement was made by Mr. Dalrymple, Vice President of the Grand Trunk, that these earnings would exceed \$4,000,000. This statement was but an estimate, and no details have been filed, although requested, the company stating that an exact statement cannot at the present time be obtained. In the report of the company's directors for the half year ended June 30, 1895, a division, however, was made. That statement shows that in the corresponding half year of 1894, 1,210,077 tons of through American freight were carried by the company, constituting a percentage of 31% of its total tonnage for that period, and that in 1895, 1,113,343 tons of American freight were carried, constituting 28% of the total freight business. The report of the half year ended Dec. 31, 1895, gives the American tonnage for the six months ended Dec., 1894, as 1,250,250; and for the same period in 1895 as 1,277,570, with percentages to the total freight business of 30% and 28% respectively. Subsequent reports do not contain similar information. In the report of the directors of 1894, paragraph 28 reads:—"But the value of the Chicago and Grand Trunk Ry. to the Grand Trunk System must not be measured by the results of 1894. During the decade from 1885 to 1894 the Grand Trunk proportion of traffic interchanged with the Chicago and Grand Trunk was \$29,749,732. This is the true measure of the advantages which are derived by the parent system from that line. In some of those years the Chicago and Grand Trunk provided a handsome surplus in addition to meeting

all interest charges; in other years there were deficits in meeting such charges; but, deducting the former from the latter, and including the abnormal deficit under traffic agreements of 1894, the Grand Trunk Co. has only paid altogether less than 3½%—which may be looked upon in the shape of a rebate—upon the traffic interchanged as above during the past decade, which traffic would otherwise have been in great measure lost to the system."

Mr. Tilley further pointed out that in presenting the report of 1914, the Chairman of the Board stated:—"It must be remembered with regard to our lines in the United States, that although during the past year they show unsatisfactory results, they nevertheless even then brought considerable benefit to the parent line. The Grand Trunk proper is situated in such a position that feeders from the outside are absolutely necessary, that disappointing as the results are for the moment on both the feeders and the parent line, the Grand Trunk proper would have been in a worse position but for the very feeders."

There is no doubt that the Grand Trunk does receive a large tonnage from these American connections. The Government statistics down to 1912 do not distinguish between tonnage received from connecting roads and other carriers, so as to distinguish the traffic received from United States roads as against traffic received from Canadian connections. This distinction is made in the statistics for 1913 and is continued. The statistics for the Grand Trunk are as follows:—

Year.	Originating on Road.		Received from other Roads in Canada.		Received from U.S. Roads.		Total Freight Tonnage.
	Tons.	%	Tons.	%	Tons.	%	
1913	9,065,232	42.1	2,823,204	13.4	9,153,370	44.5	21,041,806
1914	9,062,258	45.2	2,914,508	14.3	8,050,689	41.5	20,027,455
1915	8,090,873	43.6	2,232,641	12.1	8,172,509	44.39	18,496,023

The Grand Trunk statistics for 1915 include the operations of the former Canada Atlantic Ry. that were reported separately prior to 1915, although the road had been purchased by the Grand Trunk and became part of its Ontario system in 1905.

With the above figures may be contrasted those of the Canadian Pacific, which are as follows:—

Year.	Originating on road.		Received from other roads in Canada.		Receiver from U. S. roads.		Total Freight Tonnage.
	Tons.	%	Tons.	%	Tons.	%	
1913	21,044,667	71.7	6,458,718	21.7	1,968,429	6.6	29,471,814
1914	20,296,434	73.005	5,690,385	20.495	1,814,398	6.5	27,801,217
1915	15,179,618	70.6	4,909,355	22.9	1,401,623	6.5	21,490,596

It is at once apparent that with the greater total tonnage that the Canadian Pacific has, operating as it does to common gateways on the American frontier with the Grand Trunk, it receives, speaking in general terms, less than one-quarter of the American business the Grand Trunk enjoys. The Government statistics but confirm the conclusion contained in the company's reports. The manifest qualification must, however, be made and the fact emphasized that while the Grand Trunk proper does benefit by the business it obtains from its American subsidiary lines, that these lines in turn benefit from the connection with the parent company. The whole tonnage carried does not originate in Chicago or on the Chicago and other western connections, although the greater movement does originate in the territory thus served.

The directors' reports of June and December, 1915, for the first and latter half of the years 1894 and 1895, divided this

American tonnage as follows:—

	East Bound		West Bound
	No. of tons.	Per cent of total.	
June, 1894	898,885	36	311,192
June, 1895	803,581	36	309,762
June, 1895	890,511	32	359,739
Dec., 1894	873,904	32	25
Dec., 1895	873,904	31	398,666
Dec., 1895	873,904	31	24

It is, of course, in the interests of the shipping public that the railways serving them should be in such a position as to make the necessary additions to facilities which from time to time are of necessity required, and to provide adequate and proper rolling stock. The Grand Trunk receipts for 1914 and 1915 are of such a character that economical financing is rendered extremely difficult, if not impossible. It is undoubtedly true that earnings for these years cannot, as has already been pointed out, be regarded as characteristic, but the economies forced on the company, if continued, must result in inferior accommodation and service. Appropriations of all kinds have been cut.

The car question is one in which those opposed to the present application are largely and vitally interested. The year 1913 was good, with much tonnage; but, on Dec. 31 of that year, there were but 2,416 freight cars waiting for and undergoing shop and light repairs; while on Dec. 31, 1914, with the lighter business and movements of that year, the number of freight cars requiring like repairs had grown to 3,326; and, on Dec. 31, 1915, the number had increased to 4,092. A railway's register of box cars always includes a certain number of freight cars which either are being scrapped and replaced

and replaced by other cars. In order to maintain the present total of 43,805 freight cars owned by the Grand Trunk in a proper and serviceable condition, no less than 1,249 new freight cars have to be obtained at a returned cost of \$2,238,000.

Track also has to be renewed. In 1913, the renewals amounted to 177 miles; in 1914, 327 miles and in 1915 the work was cut to 67 miles. The average normal

by other cars, or which should be scrap-annual renewal for a mileage of main track of 4,311 miles is estimated to amount to 431 miles. In view of the company's past operations, this annual average may be unduly high, but beyond all question the economies of last year will have to be taken up in the future. It may be also noted that the expenditure for 1915 and the estimate for 1916 for renewal work on bridges and culverts is \$21,135 less than the yearly average for the years 1906 to 1915 inclusive. Other economies have been enforced in connection with locomotives, building, and the like, on which it is not necessary to dwell. Beyond all question, however, they cannot continue indefinitely without great loss and inconvenience to the shipping and travelling public. The railway's balances available for distribution from 1909 to 1915 have already been set out. They run from \$2,473.06 per mile of line, in 1909, to \$3,531.12 in 1913, dropping in

1915 to \$2,477.71.

If the costs of the National Transcontinental were applied to the Grand Trunk mileage, adding a conservative estimate of \$10,000 a mile for equipment, a value of \$86,632 a mile is arrived at; 6% on its capital to provide 4% for interest charges and 2% to enable necessary financing and expenditures to be made, would call for net earnings per mile of line of \$5,197.92.

In the same way, adopting as the standard the expensive line of the Canadian Pacific from Glen Tay to Agincourt, adding again \$10,000 for equipment, the net earnings per mile of line should be \$4,892.82. If the line from Toronto to Sudbury be taken as a basis, net earnings per mile of \$4,001.34 are required; while on the basis of the Intercolonial, the net results should be \$4,503.96. Irre-

spective entirely of the Grand Trunk's terminal expenses, which do not apply at any rate in nearly so marked a degree in the other lines now compared with it, it will be observed that the Grand Trunk's best earnings fall considerably short of the earnings required on any of the other standards. While present earnings are increasing, they are still considerably short of the result obtained in 1913.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

25963. Mar. 24.—Authorizing Canadian Northern Ry. to build across 13 highways in Tps. 18, 19 and 20, R. 7, e.p.m., Man.

25964. Mar. 26.—Authorizing C.P.R. to build joint spur for J. H. Lamarche and l'Institution des Sourd Muet, Lot 642, Montreal, subject to Royal Trust Co.'s consent as to removal of same.

25965. Mar. 24.—Authorizing Canadian Northern Ry. to build across and divert 6 road allowances in Tps. 19 and 20, R. 7, e.p.m., Man.

25966. Mar. 26.—Approving plan showing standard ballast dock for timber trestles, to be used on Canadian Northern Ry., Eastern Lines.

25967. Mar. 27.—Rescinding order 24481, Nov. 25, 1915, in so far as it exempts Kettle Valley Ry. from erecting and maintaining fences, gates and cattle guards between mileage 35.3 and 44, midway between Penticton, B.C., K.V.R. being required to erect fences along said portion by May 1.

25968. Mar. 26.—Approving agreement between Bell Telephone Co. and Evergreen Telephone Co., Renfrew Co., Ont., Mar. 14.

25969. Mar. 13.—Ordering Canadian Northern Ry. to appoint watchman at crossing of Main St., Vegreville, Alta., between 8 a.m. and 7 p.m. daily; wages to be paid by municipality, and relieving C.N.R. from speed limit of 10 miles an hour at crossing.

25970. Mar. 30.—Authorizing C.P.R. to build 8 tracks, one of which crosses Northwest Road at grade, one crossover, and to rearrange west leg of Y on Northwest Road for British Cordite Co., McDougall Tp., Ont.

25971. Mar. 28.—Authorizing Canadian Northern Ontario Ry. to build spur for Marsh & Henthorn, Belleville, Ont., and approving clearances.

25972. Mar. 28.—Dismissing application of Town of Napanee, Ont., for order directing Canadian Northern Ontario Ry. to build subway at Belleville Road crossing.

25973. Mar. 27.—Approving Canadian Northern Ry. Standard Passenger Tariff, C.R.C. no. W-1422, showing rate of 4c mile on branch lines in British Columbia.

25974. Mar. 29. Authorizing Nelson & Fort Sheppard Ry. to discontinue stopping trains at Porto Rico, B.C., mileage 23.8, and to substitute stop at mileage 22.6.

25975. Mar. 29.—Establishing free collection and delivery limits and additional toll zone of express companies in Toronto.

25976. Mar. 30.—Approving agreement between Bell Telephone Co. and Eastern Townships Telephone Co. in Richmond, Compton, Stanstead, Shefford, Drummond and Arthabaska counties, Que., Mar. 1.

25977. Mar. 30. Authorizing C.P.R. to make highway diversions at grade across track along eastern boundary of right of way in n.w. and s.w. 1/4 Secs. 36-9-1, w.3m., in lieu of road allowance on westerly boundary.

25978. April 2.—Approving plan and specifications of Henry Robertson award drain, so-called, under G.T.R. in Matilda Tp., Ont.

25979. April 2.—Authorizing G.T.R. to use bridges 15, 18 and 24, District 2, authorized to be built by order 24664.

25980. Mar. 30.—Ordering Canadian Northern Ry., C.P.R. and G.T.R., to provide interchange tracks on Pinnacle St., Belleville, Ont. This order is given fully on another page.

25981. Mar. 16.—Relieving Grand Trunk Pacific Ry. from providing further protection at highway between Secs. 29 and 30-44-6, w.4m., near Wainwright, Alta.

25982. April 2.—Authorizing Department of the Interior to make highway over C.P.R. at west end of yard at Banff, Alta., and about 700 ft. west of station.

25983. April 2.—Authorizing Essex Terminal Ry., Windsor, Essex & Lake Shore Rapid Ry. and C.P.R. to operate over crossing in Sandwich West Tp., Ont., without first stopping.

25984. Mar. 31. Relieving Grand Trunk Pacific Ry. from maintaining fences, gates and cattle guards immediately east of Wolf Creek station, Alta.

25985. Mar. 31.—Approving plan showing general layout of Canadian Northern Ry. structure

crossing Moose Jaw Creek (3rd crossing), and Manitoba St., Moose Jaw, Sask., dated Nov. 10, 1916, detail plans to be filed for approval.

25986. Mar. 31.—Authorizing C.P.R. to build spur across Hunter St. at grade and crossover connections with present spur for Quaker Oats Co., Peterborough, Ont.

25987. April 2.—Extending to June time within which Canadian Northern Ry. shall complete station at Norway Bay, Que.

25988. Mar. 31.—Ordering Canadian Northern Ry. to file within 30 days for Board's approval plans showing necessary alterations to Pointe Aux Trembles station.

25989. April 4.—Approving, in pursuance of powers conferred upon Board by sec. 26 of Exchequer Court Act, the sale of the Joliette & Lake Manuan Colonization Ry. and its rolling stock, equipment and other accessories.

25990. April 3.—Ordering Montreal & Southern Counties Ry. to stop train 131 from Marieville, on flag, at East Greenfield Park, and to keep record of stops made there for three months, to enable Board to determine whether service should be continued.

25991. April 5.—Authorizing Canadian Northern Ry. to build spur for Canadian Coöperage Mfg. Co., South Crosby Tp., Ont.

25992. April 4.—Ordering Grand Trunk Pacific Ry. to pay half cost of land acquired from C.P.R. Natural Resources Department for transfer track between G.T.P.R. and C.P.R. at Frobisher, Sask.

25993. April 3.—Approving plan showing proposed arrangement of signals at Canadian Northern Ontario Ry. crossing of Rideau Canal, Smiths Falls, Ont.

25994. April 4.—Authorizing Grand Trunk Pacific Branch Lines Co. to build spur for Munson-Oliphant Collieries, Ltd., in n.w. 1/4 Sec. 28-48-21, w.5m., Alta.

25995. April 5.—Authorizing C.P.R. to build 4 spurs, for William Davies Co., Ltd., near Don Station, Toronto.

25996. April 3.—Amending order 25946, Mar. 20, 1917, re Canadian Northern Quebec Ry. spurs for Imperial Oil Co. in Pointe aux Trembles Parish, Que.

25997. April 7.—Approving plan of La Bute Award Drain, to be built under C.P.R. in Camden Tp., Ont.

25998. April 10.—Authorizing Grand Trunk Pacific Branch Lines Co. to build spur for Buckeye Machine Co. in s.e. 1/4 Sec. 14-24-29, w.4m., Alta.

25999. April 10.—Amending order 25829, Jan. 26, re G.T.R. crossing at Grimsby Beach station, Ont.

26000. April 10.—Approving Public Works Departments amended plan, dated Jan. 31, showing bridge to be built across St. Charles River at Quebec; and rescinding order 26290, Sept. 19, 1916.

26001 to 26004. April 10.—Approving locations of C.P.R. stations at Vidora, Stalwart, Consul and Traynor, Sask., all in accordance with C.P.R. standard A2 station plan.

26005. April 3.—Authorizing Canadian Northern Ry. to build spur for Riordan Pulp & Paper Co., Hawkesbury, Ont.

26006, 26007. April 10.—Approving Bell Telephone Co. agreements with Fort Coulonze Rural Telephone Co., Pontiac County, Que., Mar. 30, and Sandwich South Tp., Ont., Dec. 22, 1916.

26008. April 12.—Re Canadian Northern Ry. lake and rail rates applying from points east of Toronto, via Toronto and lake lines to Port Arthur and thence to western points. This order is given fully on another page.

26009. April 14.—Approving Halifax & South Western Ry. bylaw 7 re passenger and freight tariffs and tolls and rescinding order 22696, Oct. 6, 1914, approving bylaw 6.

26010. April 14.—Approving agreement between Bell Telephone Co. and Lyndhurst Rural Telephone Co., Leeds County, Ont., Mar. 29.

26011. April 13.—Approving Canadian Northern Ry. bylaw, April 9, re tariffs of freight tolls on all freight carried on any part of its system, cepting to and from points west of Port Arthur or Westfort, Ont.

26012. April 14.—Authorizing C.P.R. to build at grade a passing siding across road allowance between Lots 22 and 23, Con. 3, Scarborough Tp., Ont.

26013. April 14.—Approving revision in location of C.P.R. spurs for Canadian Aeroplanes, Ltd., Toronto Ont.

26014. April 11.—Approving plans showing locomotive house to be built by Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.)

at Vancouver.

26015. April 13.—Authorizing C.P.R. to prosecute C. C. Curtis, Lacombe, Alta., for alleged fraudulent underbilling of certain shipments of freight.

26016. April 16.—Authorizing G.T.R. to build service track at grade across Kipling Ave., New Toronto, Ont.

26017. April 18.—Approving plan of abutments and superstructure for Canadian Northern Ry. undercrossing of farm lane, Lot 8, Con. 3, York Tp., Ont.; C.N.R. to provide hard gravel road through subway within the right of way limits, grade not to be greater than 1 in 10.

26018. April 17.—Authorizing North American Collieries, Ltd. (Pembina Colliery) to build 3 entries under Canadian Northern Ry. right of way in Sec. 30-53-7, w.5m., Alta.

26019. April 16.—Ordering C.P.R. to erect Standard Class A-2 station building at Whitla, Alta.; to be completed by Sept. 1, 1918.

26020. April 16.—Authorizing G.T.R. to build additional or passing track on and across Pine and John Sts., Dunnville, Ont.

26021. April 16.—Dismissing G.T.R. application for approval of location and detail plans of combination freight and passenger station to be built at Nelles Corners, Ont., and authorizing it to build additional track across public road between Lot 52, Con. 1, north of Talbot Road, Cayuga Tp., and Lot 2, Con. 9, Rainham Tp., Ont.

26022. April 17.—Authorizing G.T.R. to build siding for Dominion Abrasive Wheel Co., Mimico, Ont.

26023. April 17.—Authorizing C.P.R. to build spur at grade across Main St., Glen Morris, Ont.

26024. April 16.—Adding City of Brantford, Ont., as joint applicant and ordering that all proceedings and orders made apply to and be binding on Lake Erie & Northern Ry. as if it had been originally named as joint applicant in proceedings with Brantford Parks Board, defined in Public Parks Act (Ontario) as The Board of Park Management.

26025. April 18.—Ordering Canadian Northern Ry. to build standard third class station at Sibbald, Alta., by Sept. 1.

26026. April 18.—Rescinding order 25211, July 17, 1916, suspending increased rates on ores and concentrates, published in C.P.R. C.R.C. no. W-2168, effective Aug. 1, 1916, from points in British Columbia.

26027-26028. April 16.—Authorizing Canadian Northern Ry. to build across highways between Lots 34 and 35 and Lots 32 and 33, Con. C, Scarborough Tp., Ont.

26029-26030. April 16.—Approving Bell Telephone Co. agreements with Bromley Telephone Association, April 2, and Wolfstown Telephone Association, Aug. 25, 1915, both operating in Renfrew County, Ont.

26031. April 17.—Ordering G.T.R. to build subway about 300 ft. east of crossing of Lynn Road, Elizabethtown Tp., approaches and road diversions to be built by township and Leeds and Grenville counties and said counties as they shall agree, if they cannot agree, matter to be determined by board; 20% of cost to be paid out of railway grade and crossing fund, balance of total cost, 15% by counties, 15% by applicant, and 50% by G.T.R.

26032. April 17.—Approving agreement between Bell Telephone Co. and Madawaska Telephone Association, Renfrew county, Ont., Mar. 29.

26033. April 19.—Extending to July 1 time within which Kettle Valley Ry. shall erect fences between mileage 35.3 and 44, Midway to Penticton, B.C.

26034. April 16.—Dismissing complaints of C.P.R. and Spanish River Pulp & Paper Mills, Ltd., against cancellation of interswitching rate of \$1.50 a car at Espanola, published in Algoma Eastern Ry tariff C.R.C. 73; and authorizing Algoma Eastern Ry to charge interswitching rate of 1c per 100 lb., shown in Tariff, C.R.C. 169, from effective date of said tariff, Feb. 15.

General order 185. Mar. 30.—Re classification of veneer. This order is given fully on another page.

General order 186. April 4.—Dismissing complaint of Dominion Millers Association and Toronto Board of Trade re carload minimum weights on grain and grain products. This order is given fully on another page.

General order 187. April 12.—Re rail and water rates between Eastern and Western Canada. This order is given fully on another page.

Canadian Pacific Railway Construction, Betterments, Etc.

New Brunswick District.—The C.P.R., as lessee of the New Brunswick Coal & Ry. Co., is applying to the Minister of Railways for approval of site and plans for the reconstruction of a bridge across the Washademoak River, in Johnston Parish, N.B.

Ontario District.—The C.P.R. applied to the Board of Railway Commissioners, April 13, for approval of its plans for a revision of its North Toronto Branch, including the building of a second main line track across the G.T.R.—the old Toronto Belt Line Ry.—the construction of a second main line track at grade across Todmorden Road, in York Tp., and McLennan and Summerhill Aves., in Toronto. The City of Toronto opposes the plans on the ground that there should be one bridge at Summerhill Ave., instead of separate structures for each track, and that there should be a subway at the west end of the bridge. The Civic Guild advocated as an alternative plan the providing of subways and a general traffic bridge across the ravine. The matter will be looked into by the Board's Chief Engineer prior to any decision being reached.

Manitoba District.—The work to be done at Brandon during this year is estimated to cost approximately \$50,000. It includes the laying of an asphalt block pavement in front of the station, replacing the present wooden pavement; the building of a coal dock about double the size of the present one; the building of a sanding plant for locomotives; the installation of a washing out system for locomotives in the locomotive house, and the installation of an interlocking plant in the yards.

Saskatchewan District.—Tenders are under consideration for the erection of a building at Regina, Sask., for the Dominion Express Co.

Alberta District.—Work on track maintenance on the lines in the vicinity of Lethbridge has been started. A new shovel has been set at work at the ballast pit at Elcan.

Tenders are under consideration by the C.P.R. Department of Natural Resources for irrigation canal enlargements through Sections 12, 13, 24 and 25 in Tp. 7, Range 21, west of the 4th Meridian, Alta. The work is located about five miles west of Wilson station and about ten miles south of Lethbridge, and involves the excavation of approximately 150,000 cu. ft. of earth work.

We are officially advised that at places where the gradient was very irregular over the slide of Turtle Mountain, at Frank, the company is making improvements, the work being done by steam shovels loading rip rap. The work being done at present is not in the nature of grade reduction.

British Columbia District.—In addition to the betterments to be carried out during this year, mentioned in our April issue, it is reported that the following works will also be done: Concrete portals and concrete tunnels on two tunnels on the double track between Revelstoke and Taft; bank protection on the Kootenay Central Ry., between Golden and Colvalli; a steel bridge across the St. Marys River, on the Kinderley Subdivision; and bank protection and bridge improvement in the Kicking Horse Canyon.

A press report states that a contract has been let for the removal of the old immigration detention shed and the erec-

tion of a new ramp or sloping structure to connect with pier A on the Vancouver water front. The new approach will, it is said, lead from Burrard St., and will be similar to that leading from Granville St.

to pier D. Pier A is to be extended sufficiently to permit the erection of additional storage capacity to that formerly available in the old immigration shed. The estimated cost of the work is \$70,000.

The Canadian Pacific Railway's Honor Roll No. 20.

Bain, Thomas	Porter	Fort William	Wounded
Baldwin, Arthur Ernest	Operator	Nokomis	Wounded
Beaton, John	Bridgeman	British Columbia Dist.	Wounded
Blades, Roland	Clerk	Winnipeg	Died of wounds
Buakeley, Harry	Checker	Vancouver	Killed in action
Bowden, William Henry	Ashpitan	Lambton	Wounded
Brown, Harry Allen	Stower	Saskatoon	Died of wounds
Bryant, William Edward	Locomotive fireman	North Bay	Killed in action
Buck, Marry	Laborer	Winnipeg	Died of wounds
Buttimer, Richard L.	Clerk	Toronto	Wounded
Campbell, Andrew	Wiper	Bay Shore	Wounded
Chudleigh, Starks	Locomotive fireman	Calgary	Presumed Dead
Cockrem, Ernest Dadds	Locomotiveman	Souris	Wounded
Collingwood, Angus S.	Cashier	Moose Jaw	Killed in action
Cooper, Arthur	Constable	Kenora	Killed in action
Coventry, William V.	Engineer	Edmonton	Died of wounds
Currie, Frederick M.	Assistant foreman	Transcona	Killed in action
Dougall, Ralph	Car repairer	Bankhead	Wounded and missing
Douse, Edwin T.	Clerk	West Toronto	Wounded
Edgar, John Paisley	Billie	Winnipeg	Wounded
Evans, Harold C.	Waiter	Calgary	Killed in action
Eve, Frederick J.	Brakeman	Fort William	Wounded
Fairbairn, Robert	Storeman	Calgary	Wounded
Freeman, Charles H. H.	Wiper	Moose Jaw	Wounded
Gardner, Harry	Draftsman	Montreal	Shell shock
Gillis, Lawrence A.	Locomotive man	Kaslo	Wounded
Goodday, Reginald L. H.	Car repairer	Calgary	Wounded
Graham, Henry E.	Cleaner	Calgary	Killed in action
Guest, Harry	Porter	McAdam	Killed in action
Hadfield, James	Boilermaker	Sutherland	Wounded
Hamilton, John		Fort William	Killed in action
Harris, Albert	Sleeping car conductor	Revelstoke	Wounded
Hawley, Ernest Alfred	Teamster	Montreal	Wounded
Hebinton, David	Car Carder	Calgary	Wounded
Herdman, London A.	Stationery fireman	Ogden	Killed in action
Hicks, Stephen C.	Brakeman	Ignace	Killed in action
Hoon, Norman Fred.	Extra Gang foreman	Souris	Wounded
Horne, Thomas	Clerk	British Columbia Dist.	Wounded
Howe, George Frederick	Helper	Saskatoon	Wounded
Hume, James	Wiper	Calgary	Wounded
Hutton, Thomas	Trucker	Kenora	Wounded
James, Eber	Chef	Ogden	Wounded
Jones, William Samuel	Sectionman	Moose Jaw	Killed in action
Kissack, George	Waiter	Springstein	Wounded
Larkin, Frank William	Yardman	Toronto	Shell shock
Lalimer, Archie	Clerk	Moose Jaw	Wounded
Liburn, Harry Kent	Steward	Calgary	Died of wounds
Little, Charles Henry	Locomotive fireman	Brit. Col. Coast Service	Died of wounds
McAlister, James	Section foreman	Moose Jaw	Wounded
McCaffrey, James	Locomotive fireman	Tyndall	Wounded
McCurdy, Martin Everest	Car Tracer	Sutherland	Wounded
McGill, James	Conductor	Winnipeg	Wounded
McKay, Alexander Hugh	Watchman	Minnedosa	Wounded
McNaughton, Donald	Trainman	Shepard	Died of wounds
McTomney, John	Wiper	British Columbia Dist.	Killed in action
Mazines, Joseph	Boilermaker	West Calgary	Wounded
Malcolm, Daniel	Locomotive man	Ogden Shops	Wounded
Manners, William	Clerk	Moose Jaw	Wounded
Matheson, John Kennedy	Inspector	Calgary	Wounded
Meats, George Henry	Painter	Angus	Died of wounds
Mines, Albert Henry	Gripper	Ogden Shops	Wounded
Moodie, J. S.	Mate	Lethbridge	Wounded
Morrison, Donald John	Yardman	Brit. Col. Lake Steamers	Killed in action
Muleahy, Alfred	Checker	Glen Yard	Killed in action
Nightingale, John Graham	Locomotive fireman	Calgary	Wounded
O'Brien, Alexander R.	Watchman	Regina	Killed in action
Peterson, George	Clerk	Banff	Wounded
Potter, John Keith	Carpenter	Victoria	Wounded
Rimmer, Alfred	Teamster	Angus	Wounded
Ritchie, James	Lineman	Calgary	Wounded
Robertson, William	Porter	Cranbrook	Killed in action
Rashbrook, Sidney A.	Cleaner	Calgary	Wounded
Sale, Victor	Wiper	Toronto	Wounded
Sampson, Lewis F.	Wiper	Kenora	Killed in action
Sharples, James	Coalman	Peena	Wounded
Shortland, Frederick	Laborer	Fort William	Wounded
Simpson, Edward	Clerk	Strathcona	Wounded
Simmons, Arthur H.		Regina	Wounded
Sinclair, Andrew G.	Clerk	Govan	Wounded
Sinclair, William	Locomotive fireman	Winnipeg	Wounded
Skirten, William A.	Storeman	Ogden	Wounded
Sleep, William Henry	Locomotive fireman	Fort William	Wounded
Smeaton, George Robert	Waiter	Moose Jaw	Wounded
Smith, John	Brakeman	Winnipeg	Wounded
Solloway, Alfred Leo	Yard foreman	Winnipeg	Wounded and prisoner
Souter, Alexander	Clerk	Vancouver	Wounded
Spencer, Samuel	Red-Cap Porter	Winnipeg	Died of wounds
Stamper, William	Car repairer	Regina	Gassed
Stevens, Leonard	Constable	Moose Jaw	Wounded
Stevenson, Alexander	Waiter	Calgary	Killed in action
Stinson, Frank	Fitter	Lethbridge	Presumed dead
Tanton, William H.	Locomotive man	London	Wounded
Tomkins, Charles B.	Carpenter	West Toronto	Wounded
Tout, George	Wiper	Red Deer	Wounded
Smith, Alexander	Laborer	Moose Jaw	Wounded
Watson, William Pantou	Conductor	Minnedosa	Wounded
West Robert	Locomotive fireman	Moose Jaw	Wounded
Westington, William C.	Trimmer	Schreiber	Wounded
Whitehouse, Walter	Helper	East Calgary	Wounded
Willis, Hugh Lea	Porter	Calgary	Died of wounds
Wilson, Harry Cameron	Yardman	Fort William	Shell shock
Wishart, James	Clerk	Angus	Wounded
Worth, Harold	Stenographer	Toronto	Wounded

Mainly About Railway People Throughout Canada.

Ignatius Roth, Terminal Agent, C.P.R. Montreal, died there recently, after a short illness.

Holman D. Waldron, General Passenger Agent, Maine Central Rd., died Apr. 9, aged 60.

E. W. Beatty, K.C., Vice President and General Counsel, C.P.R., has been elected a director of the Royal Trust Co.

G. M. Bosworth, Vice President, C.P.R., returned to Montreal, April 4, after a short trip to Hot Springs, Va.

J. G. Scott, formerly General Manager, Quebec & Lake St. John Ry., has been re-elected President, Quebec Board of Trade.

G. McL. Brown, European Manager, C.P.R., London, Eng., was installed as Master of the Royal Kew Lodge of Freemasons recently.

G. A. Bell, heretofore Financial Comptroller, Railways & Canals Department, Ottawa, has also been appointed Assistant to the Minister.

A. M. Nanton, director, C.P.R., and Vice President, Winnipeg Electric Ry., has been elected a director of the Guarantee Co. of North America.

Grant Hall, Vice President and General Manager Western Lines C. P. R., returned to Winnipeg, April 15, after a trip of inspection over the company's lines.

C. A. Dunham, Signal Engineer, Great Northern Ry., and formerly Signal Engineer, G.T.R., Montreal, has been elected President, Railway Signal Association.

H. D. Waldron, General Passenger Agent, Maine Central Rd., died at Portland, Me., April 9, aged 60. He entered the company's service in 1877 as a telegraph operator.

William Bain, who died at Dixie, Ont., Apr. 21, aged 74, was for a number of years Soliciting Freight Agent, C. P. R., Toronto. He retired on superannuation a few years ago.

George Bury, Vice President, C.P.R., who has lived at 278 Stanley Street since removing to Montreal, has leased 512 Sherbrooke St. West, from the late T. J. Drummond's estate.

D. M. McIntyre, K.C., Chairman, Ontario Railway & Municipal Board, Toronto, has been elected a member of the council of Queen's University, Kingston, Ont., to serve for 6 years.

E. C. P. Cushing, Secretary to the President, C.P.R., was presented with a travelling bag and a purse of money, April 18, by a number of a company's officials, on his approaching marriage.

W. H. Curle, K.C., who was appointed General Solicitor, C.P.R., recently was entertained to dinner at the Manitoba Club, Winnipeg, by a number of friends, on leaving there for Montreal.

The Hon. W. E. Foster, M.L.A., who became Premier of New Brunswick recently, is President of the St. Martins Ry., which runs between Hampton, on the Intercolonial Ry., and St. Martins, 30 miles.

Lord Shaughnessy, says a London, Eng., press cable, won the gratitude of many wounded soldiers when he bought up the pit of the New Treatre for their benefit on the day of the St. Patrick's matinee for the Munster Comforts Fund.

D. B. Hanna, Third Vice President, Canadian Northern Ry., has removed to 37 Cluny Ave., Toronto, which he has bought from the estate of the late James

Bicknell, K.C., who lived there up to the time of his death.

J. D. Cameron, who died at Toronto, April 8, aged 77, was formerly a railway contractor on various lines in eastern Canada, having been concerned with various contracts on the Intercolonial Ry. and the Quebec & Lake St. John Ry.

J. E. Quick, General Baggage Agent, G.T.R., Toronto, was re-elected Secretary Treasurer of the American Association of General Baggage Agents, at its recent convention at Los Angeles, Cal.

E. B. Skeels, Resident Engineer, C.P.R., Lethbridge, Alta., from Aug., 1914, has resigned to enter an engineering and contracting business in Chicago, Ill. Prior to his appointment at Lethbridge, he was, from April, 1914, Resident Engineer, C.P.R., at Calgary, Alta.

Mrs. G. McL. Brown, wife of the European Manager, C.P.R., London, Eng., addressed meetings at St. John, N.B., Mar. 31, on the aims and work of the Canadian War Contingents Association and of the activities of the women in England.

T. A. S. Hay, M.Can.Soc.C.E., who died at Peterborough, Ont., Mar. 28, aged 68, was for many years Chief Engineer, Midland Ry., now part of the G.T.R., and was subsequently engaged in engineering on the construction of the Trent Canal, under the Department of Railways and Canals.

Elisha Lee, Assistant General Manager, Pennsylvania Rd., and better known as spokesman for the railways in the controversies with the railway brotherhoods, has been promoted to be General Manager, succeeding S. C. Long, deceased. Elisha Lee is a brother of Frank Lee, Principal Assistant Engineer, C.P.R., Winnipeg.

J. B. Harvey, C.E., who died at Ottawa, Ont., Mar. 31, aged 60, was engaged some years ago as a civil engineer on the construction of railways for the Reid Newfoundland Co., in Newfoundland, and later was in Dominion Government service on National Transcontinental Ry. construction, latterly he has been in the Militia Department's service.

C. R. Richards, Professor of Mechanical Engineering and head of the department since 1911, has been appointed Dean of the College of Engineering and Director of the Engineering Experiment Station of the University of Illinois to succeed W. F. M. Goss, who has resigned to become President of the Railway Car Manufacturer's Association of New York.

A. C. Harris, who has been Superintendent, Welland Ship Canal Construction Ry., has, in consequence of work on the canal construction being stopped until after the war, taken another position. He has been appointed by the Hydro Electric Power Commission of Ontario, as Railway Superintendent, in connection with the power canal from Queenston to Chippawa, it being the intention to have a construction railway built there.

W. Sayville, formerly Chief Clerk, B. C. Electric Ry., who has been appointed Comptroller, with office at Vancouver, entered the company's service in 1911. Prior to going to British Columbia, he had been in transportation service in England as chief assistant to the Secretary, Aire & Calder Navigation Co., which owns the port of Goole, and he was also in the underground electric railway service in London.

J. A. Jamieson, M.Can.Soc.C.E., who acted as consulting engineer during the construction of the Montreal Harbor Commissioners' elevators, was injured in a street car accident in Westmount early in April. Towards the end of the month he was reported to be improving rapidly.

R. G. Ward, chief clerk, G.T.R. station ticket office, Detroit, Mich., died there after a short illness, Mar. 29, within five days of completing 30 years of service with the company. He had served from April, 1887, successively as relieving agent, cashier, and ticket clerk, before being appointed to his last position.

Edward Percy Flintoff, whose appointment as Assistant General Solicitor, C.P.R., Montreal, was announced in our last issue, was born at Sarnia, Ont., Oct. 17, 1879, and entered C.P.R. service, Nov. 1, 1908, since when he has been, to Jan. 1, 1912, Assistant to Solicitor; Jan. 1, 1912, to July 1, 1913, Assistant Solicitor; July 1, 1913, to April 1, 1917, Solicitor, all at Montreal.

Hon. F. L. Beique, who has been elected a director of the C.P.R. Co., succeeding the late Hon. Robert Mackay, was born at St. Mathias, Que., May 20, 1845, and was admitted as an advocate in 1868, and created a Q.C. in 1885. He has practised in Montreal for many years, where he was a batonnier of the bar in 1891 and 1893. He has been concerned in several cases of note before the Judicial Committee of the Imperial Privy Council, and was a counsel for the Dominion in the Behring Sea arbitration. He has been a member of the Senate since Feb. 8, 1902.

Sir Sam Fay, General Manager, Great Central Ry. of England, has been appointed to the control of military and munition train movements in that country, in connection with the Department of Military Railways, of which Sir Eric Geddes is the Director-General, and Sir Guy Granet, Deputy Director-General. The change will secure complete co-ordination of the railway military transport work at home and at the front. E. A. Prosser, General Manager, Rhymney Ry., has been appointed Deputy Director of Military Train Movements at the War Office, under Sir Sam Fay.

John Robert Clarke Macredie, M.Can.Soc.C.E., whose appointment as Resident Engineer, C.P.R., Moose Jaw, Sask., was announced in our last issue, was born at St. John, N.B., June 13, 1880, and graduated from the University of New Brunswick in 1901 with the degree of B.Sc. During the summers from 1898 to 1900, he was engaged in minor positions on surveys in New Brunswick, and was, from 1901 to 1902, Resident Engineer of the mines and railway, Albert Ry. and Mfg. Co., Hillsboro, N.B.; 1902 to 1904, transit man, Maintenance of Way Department, C.P.R.; 1904 to 1909, Resident Engineer on construction, C.P.R.; 1909 to 1915, Assistant Engineer on construction, C.P.R.; 1915 to Feb., 1917, Resident Engineer on the east end of Connaught Tunnel, C.P.R.

Hugh Edwards Weyman, who has been appointed Master Mechanic, Levis County Ry., Levis, Que., was born at Guildford, Eng., Aug. 27, 1883. From Sept. 1899 to Sept. 1901, he was a student in mechanical engineering at the Great Central Ry. locomotive works, Manchester, Eng., and from Sept. 1901 to May 1906, was a student, and foreman, insulation department, British Westinghouse Co., Manchester, Eng.; May 1906 to Apr. 1908, foreman,

winding shops, Siemens Dyno Co., London, Eng.; Apr. 1908 to June 1910, Construction Engineer, Gardner Engine Co., Manchester, Eng.; June 1910 to Nov. 1914, General Foreman of electrical shops Canadian Allis Chalmers Ltd., Montreal; Jan. 1915 to Mar. 1916, Power House Engineer, St. Lawrence Bridge Co., at the Quebec Bridge site.

Henry A. Everett, of Cleveland, Ohio, who died at Pasadena, Cal., April 11, aged 60, was, for a number of years interested in electric railways both in Canada and the U.S. He was Managing Director Montreal St. Ry. from 1892 to 1894, and as such he supervised the changing of the Montreal St. Ry. from horse traction to electric traction. He was for some time Vice President and General Manager of the Toronto St. Ry., and was a member of the Kiely-Everett syndicate which secured the franchise from the city for the operation of the street railway, under which the company works at present. The syndicate later sold to the present company, and Mr. Everett was selected by the city to supervise the change of the system from horse to electric traction. He was President, London St. Ry. Co. for several years, retiring at the end of 1914, and was also at different times President, Cleveland Railways Co., and Toledo Railways and Light Co.

H. J. Humphrey, who has been appointed Superintendent, Brownville Division, New Brunswick District, C.P.R., Brownville Jet., Me., was born at Berry's Mills, N.B., Jan. 26, 1879, and entered railway service in June, 1896, since when he has been, to Aug., 1897, telegraph operator at various points, Intercolonial Ry.; Aug., 1897, to Aug., 1901, telegraph operator, Boston & Maine Rd.; Aug., 1901, to April, 1902, telegraph operator, Intercolonial Ry.; May 9, 1902, to Sept. 6, 1903, telegraph operator, C.P.R., Calgary, Alta.; Sept. 6, 1903, to June 1, 1907, dispatcher, C.P.R., Calgary, Alta.; June 1, 1907, to Nov. 1, 1909, dispatcher, C.P.R., Medicine Hat, Alta.; Nov. 1, 1909, to April 10, 1911, dispatcher, C.P.R., Calgary, Alta.; April 10, 1911, to July 1, 1912, Chief Dispatcher, C.P.R., Macleod, Alta.; July 1, 1912, to Jan. 8, 1915, Car Service and Fuel Agent, Saskatchewan Division, C.P.R., Moose Jaw; Jan. 8, 1915, to Jan. 1, 1916, Superintendent of Car Service, Western Lines, C.P.R., Winnipeg; Jan. 1 to Nov. 6, 1916, Superintendent of Car Service, Eastern Lines, C.P.R., Montreal; Nov. 6, 1916, to Feb., 1917, Superintendent, Farnham Division, Quebec District, C.P.R., Farnham; Feb. to April 2, 1917, Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal.

Canadian Vessel Tonnage.—An Ottawa press dispatch states that there was a slight reduction in the tonnage of vessels on the Canadian register for the first two months of 1917. The figures at the end of February were: Steam vessels, 794,314 tons; sailing vessels, 475,693; against 799,183 tons for steam vessels, and 476,983 tons for sailing vessels, at Dec. 31, 1916. During January, vessels aggregating 11,743 tons were transferred from the British to Canadian register, and there was 900 tons of new construction. In February, there was 1,164 tons of new construction; 1,464 tons of transfers from British to Canadian register, and 758 tons of transfers from foreign to Canadian register; 14 sailing vessels of 1,271 tons were struck off the register during January, and 4,440 tons of shipping was sold in the U.S.; 5,285 tons was lost through wrecks and 2,212 tons condemned.

Mobilization of Canadian Pacific Railway Securities for War Purposes.

The President, Lord Shaughnessy, has issued the following circular to the shareholders: "With the assent of your company the British Treasury included among the securities which were being borrowed in Great Britain, the various outstanding obligations of your company, and these obligations have already been used, to some extent, for the purpose of pledge in New York as security for the obligations of the United Kingdom of Great Britain and Ireland. It became evident, however, that the obligations of your company, being to a large extent issued in a currency foreign to the American market, could be more advantageously utilized if put in a form familiar to American investors. The need of the British Treasury for securities to obtain dollars has been imperative to carry on the war, and your company has felt it not only a duty to be of assistance in this situation, but also a privilege, in view of the present position of your company having been in a large part due to the investment of British capital ever since its formation. No company in the British Empire stands in higher credit among American investors than the C.P.R. Co., and His Majesty's Government had the assurance that your company's obligations, if offered in a form suitable to the American market, could be readily sold in the United States in large amounts and at favorable price.

"Acting under an understanding with your company which you will be asked to ratify at the forthcoming special meeting, the Lords Commissioners of His Majesty's Treasury have decided to take over or acquire, under their general powers in that behalf, or under regulations made pursuant to the Defence of the Realm (Consolidation Act of 1914) and amending enactments, from all persons ordinarily resident in the United Kingdom, their outstanding holdings of Canadian Pacific 4% consolidated debenture stock, Atlantic and North West 1st mortgage 5% bonds, Algoma Branch 1st mortgage 5% bonds, Ontario and Quebec 5% debenture stock, which the Imperial Government proposed to lodge with your company in exchange for such an amount of 20-30 year 5% collateral trust bonds of the company in dollar form as will equal, at par, the value, on a 5% basis, of the securities received from the Treasury, calculating the pounds sterling at the rate of £21 to \$100. If all of the above four issues should be acquired and deposited, your company would issue \$198,979,580 of bonds, payable as to principal and interest in gold in dollars in New York or Montreal at the option of the holder, with a fixed maturity of 30 years, but redeemable at par at the option of your company on and after the expiration of 20 years. It is also to be provided that the bonds may be redeemed, if requested by the government, at 105 and interest, at any time within the first five years of their life. The pledged collateral will be lodged at the specific prices of 80 for the C.P.R. 4% debenture stock and at par for the above mentioned 5% securities.

"Under the proposed arrangement the annual fixed charges of your company will remain as they are at present, interest on the collateral trust bonds being covered by interest on the securities deposited as collateral, and, although your company is taking liability for repay-

ment on a specified date, that liability is covered by an undertaking of the Imperial Government to provide the funds required for redemption of the bonds in whole or in part during the first five years, or after 20 years, or at maturity, as may be determined. Included in the 4% Consolidated Debenture Stock that the Imperial Government proposes to acquire and deposit is the amount of \$40,000,000 issued by your company recently, and loaned to the British Treasury, which the Imperial Government will purchase at 80% of its face value, the proceeds of the sale, viz., \$32,000,000, to be loaned to the Imperial Treasury for 5 years at an annual interest rate of 5¼%, payable semi-annually. Steps have been taken to secure the requisite authority from the Dominion Parliament. The details of the transaction will be fully set out in the formal agreement with the Imperial Government which will be submitted for your consideration and approval at the special general meeting called for the purpose."

It was announced from New York, Apr. 17, that with the object of keeping the market as clear of new offerings as possible for the reception of the forthcoming sale of U. S. Government bonds, J. P. Morgan and Co. and associates had cancelled the arrangements for handling the C.P.R. bonds, as on account of certain delays, it appeared likely that the latter could not be dealt with far enough ahead of the Government financing to prevent some interference. Arrangements had been made for offering the C.P.R. bonds at 97, and success was assured. It is expected that the matter will be taken up again when the Government financing has been completed.

Timiskaming and Northern Ontario Railway Report.

The Timiskaming and Northern Ontario Ry.'s report for the year ended Oct. 31, 1916, has just been issued by the commission which operates it, and an electric line—the Nipissing Central Ry.—for the Province of Ontario. Following are extracts:

Assets	
Cost of road	\$18,129,015.07
Cost of equipment	2,507,791.71
Nipissing Central Ry.	483,123.31
Empire lumber plant, Latchford	6,625.07
Working assets	750,567.52
Deferred debit items	17,561.99
	\$21,957,684.67
Liabilities	
Provincial loan account	\$21,183,687.59
Working liabilities	633,418.33
Deferred credit items	226,275.14
Balance profit and loss	14,303.61
	\$21,957,684.67
Earnings and Expenses	
Revenue from transportation	\$2,044,808.99
Revenue other than transportation	93,312.96
Total operating revenue	\$2,138,121.95
Maintenance of way and structures	\$349,024.48
Maintenance of equipment	248,702.04
Traffic expenses	22,465.69
Transportation expenses	842,058.75
Miscellaneous operations	42,562.89
General expenses	91,317.74
Credits	1,954.13
Total operating expenses	1,594,177.46
Net operating revenue	\$543,944.49
Ore royalties	49,877.62
Rent from joint facilities	18,620.45
Rent from lease of road	13,347.04
Interest	1,736.36
Miscellaneous income	1,029.78
Total income	\$628,555.74
Deductions from income	99,850.28
Total earnings	\$528,705.46

Compared with the year ended Oct. 31, 1915, the total operating revenue increas-

ed \$578,718.62; total operating expenses increased \$237,127.59, and net operating revenue increased \$349,591.03. Income from ore royalties increased \$4,805.19; rent from lease of road decreased \$3,254.33. Interest is a new item, and miscellaneous income decreased \$1,828.20. The deductions from income increased \$51,492.10, and the total earnings increased \$318,166.83. From the profit and loss account which was increased from \$415,664.24 to \$1,028,273.85, there was paid to the Treasurer of Ontario, \$1,000,000. Uncollectable accounts of \$10,000 were cancelled and \$3,021.36 was written off for retired road and equipment, leaving a balance of \$14,303.61.

Traffic Statistics	
Revenue passengers	485,759
Passengers carried one mile	26,972,091
Passengers carried one mile per one mile or road	\$2,107
Average distance carried (miles)	55.53
Average amount received	\$1.29
Average receipts per passenger per mile	2.32 cts.
Passenger service train revenue per train mile	\$1.33
Revenue freight carried (tons)	922,618
Tons carried one mile	173,842,519
Carried one mile per mile of road	329,201
Average distance of haul of one ton (miles)	188.42
Average revenue per ton	\$1.44
Average amount received per ton per mile of road	00.77 cts.
Freight revenue per train mile	\$2.18
Freight originating on the line (tons)	410,582
Received from Canadian lines (tons)	479,973
Received from U.S. lines (tons)	32,063
Total (tons)	922,618
Mileage of revenue passenger trains	475,833
Mileage of revenue mixed trains	60,430
Mileage of revenue freight trains	549,094
Total revenue train mileage	1,085,357

George Bury's Return to Canada.

George Bury, Vice President, Canadian Pacific Railway, arrived in St. John, N.B., April 25, and proceeded to Montreal, which he had left on Jan. 23 for England, whence he accompanied Lord Milner to Russia, on a special mission. He was in Petrograd during the revolution, and remained there for some time afterwards at the Russian Government's request. He returned to London, April 5, and presented a report to the British Government, for which he was warmly thanked by Premier Lloyd George.

In an interview in London, with a Montreal Star reporter, he is quoted as saying: "I am too old to fight, but I thought I could do my bit at assisting at a solution of Russian transportation problems." In another interview at St. John, he is reported as saying: "In Russia I travelled from a point where I saw reindeer caravans to a point where I saw caravans of camels, that is, from Lapland to the Caucasus. There is no doubt whatever that after the war Russia will have to build several hundred thousand miles of railways. Russia made the mistake of patterning her railways after those of Europe rather than America.

Grain Inspection at Western Points.

The following figures compiled by the Department of Trade and Commerce, show the number of cars of grain inspected on railways at Winnipeg and other points on the Western Division, for March, and for seven months ended Mar. 31, compared with those inspected for seven months ended Mar. 31, 1916.

	Mar. 1917	7 months to Mar. 1917	7 months to Mar. 1917
C.P.R.	6,871	82,727	125,854
C.P.R., Calgary	864	5,518	4,885
C.N.R.	4,754	44,236	65,807
G.N.R., Duluth	1,322	2,726	4,197
G.T.P.R.	892	15,715	31,691
Total	14,703	150,922	232,434

Increased Loading of Freight Cars on Canadian Pacific Railway.

The management of the C.P.R. Eastern Lines has taken steps to bring before the public the necessity for increasing the average loads of cars, so as to increase the efficiency of the rolling stock. A bulletin which has been issued gives the following facts:—

The railways statistics for 1907 and 1915 contain the following figures:

	1907.	1915.	Increase.
Total tons freight carried 1 mile	11,687,711,830	17,661,309,723	51.1%
Aggregate capacity of freight cars in tons	2,908,903	6,731,265	131.4%
Total freight cars	105,540	201,690	91.1%

The accompanying diagrams show that while the car capacity increased 5.8 tons, the contents increased only 3 tons, and that 48% of the additional capacity provided was not used. The public is asked to co-operate with the railways in an endeavor to remedy the existing car shortage. It can be done by utilizing to better advantage the present available rolling stock. Increasing the average car load to 23.4 tons, or 5 tons more than during 1915, would be equivalent to the placing of 54,800 additional cars in service. Light, bulky commodities, of which there are many, should be loaded to the full cubic

THE 1907 AVERAGE CAR

THE 1915 AVERAGE CAR

capacity of cars. Heavier freight should be loaded to the maximum carrying capacity authorized.

Alfred Price, Assistant General Manager, Eastern Lines, C.P.R., has favored us with the following particulars in regard to the loading of 80,000 lb. cars with wheat up to 94,000 lb. "Axles used for cars of this capacity are 5 1/2 in. in diameter, and according to the M. C. B. rules, such cars may be loaded to 10% in excess of their marked capacity, that is 88,000 lb. The opinion of experts is that the axles can safely carry 132,000 lb. including the tare, and as the tare of C.P.R. cars of this capacity is 38,000 lb. the difference, 94,000, can be safely carried. We accordingly have been loading such cars from and to points on our own line with 94,000 lb. of wheat and other commodities, the weight of which can be accurately determined. Between May 1 and Dec. 31, 1916, we loaded from our Port McNicoll, Ont., elevator, in 80,000 lb. cars, 17,769,391 bush. of wheat for export via Montreal and via St. John, N.B. Up to some time in November this wheat was taken to Montreal, 358.8 miles, and from then until the end of the year, to West St. John, 836.6 miles. In moving this wheat 11,366 cars were actually used, so that the average load carried was 93,803 lb. or 1,563 bush.; 94,000 lb. equals 1,566 bush., so that the cars were loaded up to within three bushels of the authorized limit. Under these instructions the company saved the use of 750 cars, and the haulage of dead tare to the extent of approximately 9,253,502 ton miles. There was not a single accident due to the cars carrying excess tonnage, although the total loaded car mileage was approximately 4,757,075."

Express Collection and Delivery Limits in Toronto.

In Canadian Railway and Marine World for April, a short summary was given of the Board of Railway Commissioners' judgment in an application by the City of Toronto for an extension of the express collection and delivery limits. As the judgment contains several points which are of interest to other cities similarly placed, a more extended summary is considered advisable. The judgment was given by D'Arcy Scott, Assistant Chief Commissioner, and subsequently order 25975 was passed, dated Mar. 29, as follows:

1. Until further order the tolls of express companies subject to the Board's jurisdiction for the carriage of express freight shall include collection or delivery by the companies, or their agents, in all thoroughfares in that portion of the city bounded continuously as follows, and including both sides of thoroughfares named as boundaries: By Keele St. from Humber Bay, Bloor St., Runnymede Rd., St. Clair Ave., Russell Hill Road, Lonsdale Road, Oriole Road, Gormley Ave., Lawton Ave., Glen Ave.; thence following the present eastern boundary and the C.P.R. and Belt Line Ry. to Danforth Ave. (Bloor St. bridge); Danforth Ave.,

Jones Ave., Gerrard St., Greenwood Ave., Queen St. and Morley Ave. to Ashbridge's Bay, and then along the Keating channel to the harbor; the water front from the Keating channel to Keele St. to be the southern boundary. Also in Weston Road from St. Clair Ave. to and including the Willys-Overland automobile works, Greenwood Ave. from Gerrard St. to the G.T.R., and Queen St. from Morley Ave. to Beech Ave.

2. Collection and delivery shall be made by the companies, or their agents, in all thoroughfares reasonably passable for express wagons outside of the aforesaid free area for any distance not exceeding half mile from the nearest free collection and delivery point, in any direction except southerly, at the following tolls for the said additional cartage service: For any one consignment of the aggregate weight of not more than 100 lb. from one shipper to one consignee, 15c; for each additional 100 lb., or fraction thereof, in the same consignment, 10c; provided that any consignee desiring to call at the express office for all his express freight, or to have it delivered by an independent carter of his own selection, shall so notify the express company in writing, and thereafter and until written withdrawal of such notice the express company shall not deliver to such consignee through its own cartage service.

3. This order shall become effective May 1, 1917, thereupon rescinding order 16468, May 6, 1912.

The express companies doing business in Toronto voluntarily established free delivery of parcels many years before the formation of the Board of Railway Commissioners. The original city limits have been extended from time to time, and al-

so the limits of the free delivery area, the latter being made to satisfy the exigencies of the moment, and not based on any principle which might be a guide to some permanent method to be provided for future expansion. The first order relating to express delivery limits in Toronto was issued May 6, 1912, and many important changes have taken place since then. The present limits do not follow the municipal boundaries, are not based on any principle of mileage from a central distributing office, nor are they arranged on density of population. Certain sections at present without such service are being unjustly discriminated against. If a delivery service had never existed and one was now being established, it would be a simple matter to arrange a central zone with boundary lines in all places of equal distance from the distributing centre, and with wider zones beyond the free zone with a toll based on mileage and the weight and bulk of parcels. Municipal boundaries may be taken as suitable limits in villages, towns and small cities, but in a city of the size of

of 15c for parcels not over 100 lbs., and 10c additional for each 100 lbs. or fraction thereof, for parcels in one consignment. This is a new practice being established, and as the toll area is somewhat of an experiment, the companies must keep an account of the number of consignments they deliver or collect on which toll is charged, the amounts collected, and the cost of the service, and a report giving such information must be made to the Board after operation for one year, so that the provisions now established may be reconsidered and revised if the Board thinks necessary. Companies should keep a list of persons outside the free area who do not wish the companies to deliver parcels. Anyone desiring to be on that list must notify the companies, and if the companies are not so notified they would have the right to exercise all the powers they have under the Railway Act for collecting tolls for such service. The toll, and this provision for notifying the companies will appear in the tariffs and will become part of the contract between the shipper and the

Welding a Locomotive Frame at the Grand Trunk Shops.

The locomotive frame shown in the accompanying illustration was handled in the G.T.R. shops at Point St. Charles, Montreal. It was first cut out by a cutting torch and then cleaned up with an air hammer and chisel. It was then pre-heated by an oil lamp to a good welding heat. Two men, using Swedish iron as a filler, then proceeded to weld it—one man inside the frame and the other man outside. The cost was as follows:

	Labor.	Material.
1 man cutting out and chipping,		
1 hr.	\$0.40	
2 men welding, 3 hrs. @ 40c each	2.40	
Blacksmith, 1 heat:		
Oxygen and gas: 60 ft. oxygen,		
10 ft. gas		\$1.12
Oxygen, 250 ft. @ \$1.75 per 100		
ft.		4.37
Swedish iron: 4 lbs. @ 8c32
	\$2.80	\$5.81
		2.80
Total		\$8.61

Locomotive Frame Before Welding.

Locomotive Frame After Welding.

Toronto, and the boundaries are from time to time enlarged, they alone cannot be taken as suitable limits for express service. There must be limits which an express company should not be expected to go in giving either a free or a toll delivery service. There should be a central zone in Toronto in which a free pick up and delivery service should be given, and additional areas in which similar service should be given for a toll based on mileage from the free zone, and the weight and bulk of the parcels dealt with. Because of established business interests based on free delivery service as given in the past, it would not now be fair to have a free zone based on mileage only, and the free zone will have to be rectangular in shape. It will consist of all the territory which now has a free service with the addition of sections south of St. Clair Ave., known as Wychwood and Bracondale, and both sides of all streets. It is much fairer to those living just outside the free zone that they get a service for a reasonable toll, than that they get no service, and the boundaries are the fairest that can, under the circumstances, be selected. The service outside the free area could be varied from time to time, but at present it should be within half a mile of the nearest free zone limit, except the southern limit, that is, there should be no delivery beyond the water front. The charge will be based on a minimum

companies. The service indicated will be subject to the usual condition that it need only be given on thoroughfares which are in a reasonably passable state for express wagons.

Canadian Freight Association Committees.

The following committees were elected at the annual meeting, April 11:
 Advisory: G. H. Shaw, G. E. Dewey, H. E. Macdonell and J. H. Meglemry.
 Executive: G. C. Martin, H. E. Macdonell, H. C. Martin and G. Tombs.
 Classification: M. H. Brown, J. Edward, L. Macdonald, H. E. Macdonell, R. E. Perry, J. Orr, A. O. Secord, E. N. Todd, G. Tombs and F. J. Watson.
 Freight Inspection: W. B. Bamford, M. H. Brown, G. H. Clark, G. T. Pettigrew, W. S. Elliott, R. W. Long, G. C. Martin, P. Mooney, R. J. S. Weatherston and R. W. Youngs.

Vegetable Growing on Railway Right of Way.—The C.P.R. employes on the Souris, Man., Division, have formed an organization to grow vegetables on unused portions of the company's right of way on the division. Seed will be purchased wholesale and distributed, and prizes will be offered for competition among the different sections.

National Cash Register Co. Changes its Advertising Policy.

After spending millions of dollars in both direct-by-mail and publication advertising, the National Cash Register Co. has decided to discontinue its gigantic direct-by-mail advertising department and to concentrate the bulk of its future advertising in the trade press and other papers. In making the announcement the National Cash Register Co. says: "In order to do this it has abandoned direct-by-mail advertising of its machines to \$1,600,000 probable purchasers in the United States and Canada, and has sold its mailing equipment, in favor of open advertising in the trade press, financial papers, magazines and newspapers, solely because the latter has brought better results and secured more sales than the former."

New Publications Received.

Canada in Flanders, vol. 2, by Lord Beaverbrook. Cloth; 5 x 7½ inches; 258 pages; with maps. Toronto, Hodder & Stoughton. 35c, postage 7c extra.
Pacific Ports.—Cloth; 5 x 7½ in.; 400 pages. Seattle, Wash., The Terminal Publishing Co. \$3 net.

Nut Reclaiming Machine in C. P. R. Shops.

At the C.P.R. shops at Ogden, Alta., it is the practice to remove all the nuts from the old bolts, thereby reclaiming at

Nut Reclaiming Machine, Ogden Shops, C.P.R.

Nut Reclaiming Machine, C.P.R.

least 25,000 lb. a month. The accompanying plans show the machine especially got up for this purpose, which, though simple, has proved very effective. We are indebted for this information to A. T. Shortt, Superintendent of Ogden shops.

Toronto, Hamilton & Buffalo Ry. Bonds. A press report states that the Ohio Supreme Court has refused to allow the New York Central Rd. to join with the Michigan Central, Canada Southern and Canadian Pacific Railways in jointly and severally guaranteeing the payment of principal and interest on \$2,000,000 of bonds of the Toronto, Hamilton & Buffalo Ry. and has ordered the Utilities Commission to modify its order. P. and C. Venner of New York, minority stockholders of the New York Central, appealed from the Utilities Commission's decision and their contention was upheld in part. The court held that the New York Central could guarantee bonds of its own companies, but not of other companies.

Piston Rod Remover in C.P.R. Shops.

The accompanying plans show a piston rod remover used at the C.P.R. shops, Ogden, Alta. It is operated by steam head and steam cylinder of 11 in. West-

inghouse air pump, with compressed air. The piston head is clamped down, and between the piston rod and the eccentric arm there is a plug which takes up all slack, therefore with strokes of the pump down, a pressure of 100 tons is exerted on the end of the rod. The view of the

Piston Rod Remover, Ogden Shops, C.P.R.

machine with the fork end and the stand for holding the piston, shows the method of removing the piston rod nut. The opposite side of the latter sketch shows the method of applying the nut. We are indebted for this information to A. T. Shortt, Superintendent of Ogden shops.

Morrissey, Fernie and Michel Ry.—The 16th annual meeting of shareholders was held at Toronto, Apr. 13. The balance carried forward from 1915 operations, together with the profits for 1916, have been set aside for depreciation. The directors were re-elected for the current year, as follows:—E. Rogers, E. C. Whitney, H. B. McGiverin, C. A. Thompson and W. H. Robinson.

Railway Rolling Stock Notes.

The C.P.R. has received 149 automobile furniture cars and 32 freight refrigerator cars from its Angus shops, Montreal.

The Timiskaming & Northern Ontario Ry. is in the market for 100 box cars, prices being asked for alternative types, and for 10 gondola cars of 80,000 lb. capacity.

The C.P.R. has ordered 10 vans, 31 steel under frame flat cars, 40 tons capacity, 159 steel underframe box cars, 40 tons capacity; 4 freight refrigerator cars, 1 steel snow plough and 1 automobile

Arm A, Piston Rod Remover, C.P.R.

furniture car, from its Angus shops, Montreal.

Canadian Government Railways, in addition to the locomotives already mentioned, have ordered 30 Mikado locomotives weighing 288,000 lbs., with cylinders 27 by 30 ins.; 10 Pacific type locomotives weighing 248,000 lbs. with cylinders 23½ by 28 ins., and 10 Santa Fe type locomotives weighing 320,000 lbs., with cylinders 26 by 32 ins., from the American Locomotive Co.

With reference to the report that the Dominion Government had purchased a

number of locomotives which had been used by Welland Ship Canal contractors, for shipment to France, we are advised that no locomotives have been so purchased. Some negotiations are in progress for acquiring some of the locomotives so used, but at the time of writing no definite arrangements have been made.

Some details were given in our April issue, regarding the 3,000 cars of 1,200 poods (approximately 43,200 lbs.) capacity, which the Russian Government has ordered from the Eastern Car Co. Of these cars, 2,400 will be built with air brakes, but without platformes and hand brakes, and 600 will have platform, hand brakes and air brakes. The axles will

have 140 by 254 m/m journals, chilled cast iron wheels, malleable iron journal boxes, M.C.B. journal bearings and wedges 5½ by 10 in., steel dust guards, elliptic springs for pedestals, open hearth steel buffers and malleable iron buffer housings, Russian style draw hook and coupling, two shutters on each side of car, and galvanized iron roof.

Canadian Government Railways have ordered an additional 50 Mikado (2-8-2) locomotives from the Canadian Locomotive Co.; 25 of these will be for use on the

Intercolonial Division, and 25 on the Transcontinental Division. Following are the chief details:

Weight on drivers, in working order.	213,500 lbs.
Weight in working order, total	283,000 lbs.
Wheel base, rigid	16 ft. 3 ins.
Wheel base, total	35 ft. 1 in.
Wheel base, engine and tender	68 ft.
Heating surface, firebox	242 sq. ft.
Heating surface, tubes	3,398 sq. ft.
Heating surface, total	3,640 sq. ft.
Grate area	56.6 sq. ft.
Driving wheels, diam	63 ins.
Driving wheels, centres	Cast steel
Driving journals	Main, 11 x 20 ins.; others 10 x 12 ins.
Cylinders, diam and stroke	27 by 30 ins.

Boiler, type	Extended wagon top, radial stay
Boiler pressure	180 lbs.
Tubes no. and diam.	240 2 ins.; 32 5¾ ins.
Tubes, length	20 ft.
Brakes	Westinghouse American Superheater—Locomotive Superheater Co., Type A
Rear frame	Cradle type
Trailing truck	Radial type with side bearings
Weight of tender, loaded	166,000 lbs.
Tank capacity	9,000 U. S. gals.
Tank, type	Water bottom with vestibule connection
Coal capacity	12 tons
Truck, type	Pedestal, equalized
Truck, wheels, diam.	34 ins.
Wheel, type	Steel tired, retaining ring, cast steel centres
Journals	M.C.B., 6 by 11 ins.
Brake beam	High speed with M.C.B. heads

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Steamship Lines, Ltd.—Appointments by that company will be found in the Marine Department farther on in this issue.

Canadian Government Railways.—W. A. COWAN, M.Can.Soc.C.E., who was acting Assistant General Superintendent, Transcontinental Division, from Feb. 1 to April 1, has resumed his position as Division Engineer, and the former position has been abolished. Office, Cochrane, Ont.

M. J. SHERIDAN, heretofore Roadmaster, Hearst Subdivision, Transcontinental Division, Grant, Ont., has been appointed Roadmaster, Cochrane Subdivision, Transcontinental Division, vice G. Duff, resigned. Office, Cochrane, Ont.

W. J. COLE has been appointed Roadmaster, Hearst Subdivision, Transcontinental Division, vice M. J. Sheridan, transferred. Office, Grant, Ont.

D. W. STEEPER, heretofore passenger conductor, Graham, Ont., has been appointed acting Assistant Superintendent, District 3, Transcontinental Division, vice R. King, promoted. Office, Graham, Ont.

R. KING, heretofore Assistant Superintendent, District 3, Transcontinental Division, has been appointed acting Superintendent of that district, vice R. S. Richardson, resigned for military railway service overseas. Office, Fort William, Ont.

H. A. IRVING, heretofore Trammaster, Sioux Lookout, Ont., has been appointed chief clerk to Superintendent, District 3, Transcontinental Division, Fort William, Ont.

Canadian Northern Ry.—W. A. CUNNINGHAM, heretofore City Ticket Agent Montreal, has been appointed Division Freight and Passenger Agent, C.N.R. and Halifax & South Western Ry., vice P. Mooney, promoted. Office, Halifax, N.S. This appointment was correctly announced in our March issue, but owing to a misunderstanding, a wrong announcement was made in our April issue.

F. C. TURNER, heretofore Travelling Passenger Agent, Montreal, has been appointed City Passenger Agent there, vice W. A. Cunningham, promoted.

A. R. GARDNER, heretofore clerk, General Passenger Department, Montreal, has been appointed Travelling Passenger Agent, Montreal, vice F. C. Turner, promoted.

JOHN IRWIN, Superintendent, Toronto District, has had his territory rearranged, and has been given jurisdiction over the Picton, Maynooth, Irondale, Tweed and Brockville Subdivisions. Office, Trenton, Ont.

C. L. HARRIS, heretofore Assistant Superintendent, Toronto District, has been appointed Superintendent, Toronto District, with jurisdiction over Rideau, Trenton, Muskoka and Orillia Subdivisions and Toronto Terminals. Office, Rosedale, Toronto.

G. A. HOAG, heretofore Assistant Superintendent, Trenton, Ont., has been appointed Assistant Superintendent, Toronto District, vice C. L. Harris, promoted, and his former position has been abolished. Office,

R. M. LALOR, heretofore chief clerk, Advertising Department, Toronto, has been appointed Travelling Passenger Agent, Toronto, vice H. L. McCaughey, transferred.

F. G. FLESHER, heretofore machinist at Port Mann, B.C., has been appointed Locomotive Foreman, Lucerne, B.C., vice T. C. Young, transferred.

T. C. YOUNG, heretofore Locomotive Foreman, Lucerne, B.C., has been appointed Locomotive Foreman, Port Mann, B.C., vice W. M. Armstrong, enlisted for active military service.

N. GREEN has been appointed Travelling Passenger Agent, New York, N.Y. This is a new position.

H. L. McCAUGHEY, heretofore Travelling Passenger Agent, Toronto, has been appointed Travelling Passenger Agent, Chicago, Ill.

Canadian Pacific Ry.—Hon. F. L. BEIQUE has been elected a director in place of the late Hon. Robert Mackay.

H. J. HUMPHREY, heretofore Superintendent, Laurentian Division, Quebec District, Montreal, has been appointed Superintendent, Brownville Division, New Brunswick District, vice A. Williams, transferred. Office, Brownville Jct., Me.

W. TANSLEY, heretofore acting Superintendent, London Division, Ontario District, London, has been appointed Superintendent, Laurentian Division, Quebec District, vice H. J. Humphrey, transferred. Office, Montreal.

A. WILLIAMS, heretofore Superintendent, Brownville Division, New Brunswick District, Brownville Jct., Me., has been appointed Superintendent, London Division, Ontario District, vice W. Tansley, acting Superintendent, transferred. Office, London, Ont.

F. T. ANDERSON, heretofore Assistant Local Freight Agent, Winnipeg, has been appointed General Agent, Fort William, Ont., vice C. E. Legg, whose appointment as Trainmaster, Nelson, B.C., was announced in our last issue.

D. PATERSON, heretofore in the Agricultural Agent's office, has been appointed Assistant Local Freight Agent, Winnipeg, vice F. T. Anderson, promoted.

J. H. SHEAHEN, heretofore Roadmaster, Revelstoke, B.C., has been appointed Roadmaster, Winnipeg.

W. G. McPHERSON, heretofore Gen-

eral Roundhouse Foreman, Moose Jaw, Sask., has been appointed Division Master Mechanic, Regina, Sask., vice S. W. Falkins, transferred.

W. M. ANSLEY, heretofore Trainmaster, Assiniboia, Sask., has been appointed Trainmaster, Regina, Sask., vice H. E. Haanel, transferred.

S. W. FALKINS, heretofore Division Master Mechanic, Regina, Sask., has been appointed Trainmaster, Assiniboia, Sask., vice W. M. Ansley, transferred.

JOHN MacRAE, heretofore Locomotive Foreman, North Bend, B.C., has been appointed Locomotive Foreman, Swift Current, Sask., vice S. Hayward, transferred.

A. E. DALES, heretofore Division Master Mechanic, Edmonton, Alta., has been appointed Division Master Mechanic, Calgary, Alta.

J. GRAHAM, heretofore Roadmaster, Nelson, B.C., has been appointed Roadmaster, Mountain West Subdivision, Revelstoke, B.C., vice J. H. Sheahen, transferred.

S. HAYWARD, heretofore Locomotive Foreman, Swift Current, Sask., has been appointed Locomotive Foreman, North Bend, B.C., vice John MacRae, transferred.

W. H. WORTMAN, heretofore Division Master Mechanic, Calgary, Alta., has been appointed Division Master Mechanic and Trainmaster, Cranbrook, B.C., vice G. Moth, whose appointment as Division Master Mechanic, Edmonton, Alta., was announced in our last issue.

G. YORK, heretofore Roadmaster, Kenora Division, Manitoba District, Winnipeg, has been appointed Roadmaster, Mountain East Subdivision, British Columbia District, vice J. Graham, transferred. Office, Golden, B.C.

Grand Trunk Ry.—L. I. STONE, heretofore Assistant Engineer, London Division, Ontario Lines, London, Ont., has been appointed Assistant Engineer, Toronto Terminals.

C. S. COYNE has been appointed Assistant Engineer, London Division, Ontario Lines, vice L. I. Stone, transferred. Office, London, Ont.

Grand Trunk Ry., Wabash Ry.—Capt. ROBERT AIKIN, heretofore master of the car ferry Detroit, has been appointed Superintendent Ferries, vice Capt. W. F. McGregor, retired on a pension. Office, Windsor, Ont.

Grand Trunk Pacific Ry.—H. A. WOODS, who has been on leave of absence since early in the year, has had his leave extended until June 1. He is staying at Mountain Lakes, N.J.

Michigan Central Rd.—J. E. JOHNSON has been appointed Division Engineer, Canada Division, vice S. D. Williams, Jr., transferred to Detroit, Mich., on special work. Office, St. Thomas, Ont.

Increased Freight Rates from Eastern to Western Points Suspended.

D'Arcy Scott, Assistant Chief Railway
Commissioner, gave the following judg-
ment, April 7:

The Canadian Freight Association
Tariff 2 of class rates, which is C.R.C.
no 1 and C.F.A. Tariff 3, of commodity
rates which is C.R.C. no. 2, issued respec-
tively Mar. 19 and 20, both effective
April 23, have been filed with the Board.
Both tariffs are to apply to rail, lake, and
rail traffic between Toronto, Montreal, St.
John, Halifax and other points in Eastern
Canada, and Fort William, Port Arthur,
Westfort, and stations west thereof, as
specified in the tariffs. Both tariffs show
increases in rates.

In framing the new tariffs the railways
have not increased the proportion of the
rate covering the rail haul from the head
of the lakes to destination, therefore, the
advances that are proposed in the new
tariffs are the same to all points west of
Fort William. As an example, the pro-
posed class rates to Winnipeg and to
Vancouver both show the same advance
in each class. The class rates advances
to all points west of Fort William are in
cents per 100 lb. 1st class, 6c; 2nd class,
3c; 3rd class, 3c; 4th class, 3c; 5th class,
2c; 6th to 10th classes, 1c. Advances
ranging from 1c to 6c per 100 lb. in rates
on different commodities are proposed in
the commodity tariff.

Protests against these increases have
been received by the Board from a num-
ber of boards of trade of western cities
and the Manufacturers Association's
Prairie Provinces Branch, and we are
asked to suspend the tariffs until the
railway companies have justified the pro-
posed increase and the organizations
which are protesting have an opportunity
of being heard. The railway companies'
answer to the request for suspension is set
out in the following extract from a
letter from E. W. Beatty, Vice President
and General Counsel, C.P.R., to the board,
dated April 5. He says:

"As previously explained to the board,
these tariffs include the local Fort Wil-
liam class and commodity rates, which
were filed by the various railway com-
panies with the board, effective April 2,
and approved after hearing by the board.
In so far as the rates beyond Fort Wil-
liam are concerned, no change whatever
is made, and, therefore, the basis of jus-
tification of the increases in the present
case is exactly the same as that already
approved by the board in the judgment
referred to. In other words, the rail car-
riers in this case are simply acting on
the well settled principle that it is com-
petent for them to disregard water com-
petition, either altogether, or to such ex-
tent as they may see fit, and in view of
the number of times that this principle
has already been upheld by the board, it
is submitted that the board would not be
justified in suspending the tariffs."

The board had before it at a sitting at
Ottawa on Mar. 20 the new rail and lake
tariffs of the railway companies show-
ing an increase in local rates to Fort
William, effective April 2. These tariffs
were not approved, as suggested by Mr.
Beatty; but the board, after hearing
those interested, decided that it should
not interfere with the tariffs, and the
new rates were allowed to become effec-
tive. The reasons for the board coming
to that conclusion are set out in my mem-
orandum of Mar. 29. The board's action
in the local rail and lake rates case should

not be taken by the railway companies
as a justification for the increase in rail
lake and rail rates to western points.
There may be principles applicable to the
proposed western rates, or circumstances
and conditions to be considered, which
had no application to the local rates to
Fort William. We should not prejudice
the case. We must wait till the parties
interested have been heard. This board
has always followed the practice of al-
lowing an opportunity for every one like-
ly to be prejudicially affected by an in-
crease in rates to be heard before the
rates are allowed to become effective. I
think we should follow that practice in
this case, and suspend the tariffs till after
the board hold sittings in the west, so
that those affected may have an oppor-
tunity of being heard.

It is a pity the railway companies do
not file important tariffs like those before
us, which are likely to be questioned, in
ample time to allow them to be discussed
before the board before the effective
dates named in the tariffs. Tariff 2 was
received on Mar. 19th, and Tariff 3 on
Mar. 23, by the board's traffic depart-
ment. Sittings of the board were held at
Regina on Mar. 15, and at Winnipeg on
Mar. 16. We might have heard com-
plaints at those, and other western points
if the board and the public had only had
notice of the railway companies' inten-
tions. If the railway companies are in-
convenienced by the suspension of these
tariffs, it is entirely due to their own
tardiness. It has been brought to our
attention that copies of these tariffs were
not sent to the boards of trade in the
west, and that some of those affected
first learned of the proposed increase
from the newspapers. The board has
taken up with the Canadian Freight As-
sociation the question of prompt notice
of tariffs, like those before us, being giv-
en to organizations of shippers, or con-
signees, which are specially concerned
with freight rates. Some arrangement
will be made whereby these organizations
will receive due notification in such cases
in the future. We were told at the Ot-
tawa sitting on Mar. 20 by a represen-
tative of one of the railway companies,
that the railway companies contemplated
filing tariffs shortly, increasing all rail
rates from eastern to western points. If
this is the intention, it would be well for
the railway companies to file these all
rail tariffs without delay, so that if any
objections are to be made to them the
parties objecting can be heard at the
western sittings which it will be neces-
sary for the board to hold to consider the
tariffs now before us. An order should
now go suspending C.F.A. Tariffs C.R.C.
1 and 2.

**Northern New Brunswick & Seaboard
Ry.**—A subscriber has asked for infor-
mation about this line. It extends from
Nepisquit Jct., on the Intercolonial Ry.,
3.4 miles east of Bathurst, N.B., to Bath-
urst Mines, 16.9 miles, and was built to
convey iron ore from the mines to the
seaboard, but it is not now in operation.
A gasoline car was operated last year
for passenger service, but this was dis-
continued during the winter and has not
been resumed. The officials are Edgar
McDougall, Montreal, President; Andrew
Whyte, Jr., Montreal, Secretary Treas-
urer; and W. F. C. Parsons, Middleton,
N.S., General Manager.

Canadian Pacific Railway Company's Six Months Report.

Following is the directors report for the half year ended Dec. 31, 1916:

The accounts show the following results:

Gross earnings	\$76,717,965.36
working expenses	45,843,199.50
Net earnings	\$30,874,765.86
Deduct fixed charges	5,132,551.09
Surplus	\$25,742,214.77
Contribution to pension fund	200,000.00
	\$25,542,214.77
Deduct net earnings of Pacific coast steamships, commercial telegraph, and news department, transferred to special income account	1,144,071.44
	\$24,398,143.33
Froh this there has been charged a quarterly dividend on ordinary stock of 1 $\frac{3}{4}$ %, Jan. 2, 1917.	\$4,550,000.00
	\$19,848,143.33
From this there has been declared the half-yearly dividend on preference stock of 2%, payable Mar. 31, 1917.	\$1,613,638.42
And a second quarterly dividend on ordinary stock of 1 $\frac{3}{4}$ %, payable Mar. 31, 1917.	4,550,000.00
	6,163,638.42
Leaving net surplus for the six months	\$13,684,504.91

In addition to the above dividends on ordinary stock, 1 $\frac{1}{2}$ % was paid from special income.

Details of Special Income for Six Month.

Balance at June 30, 1916	\$10,357,099.09
Less dividend paid Sept. 30, 1916	1,950,000.00
	\$8,407,099.09
Intrest on proceeds land sales	191,783.02
Interest on deposits and loans	898,068.07
Interest from Minneapolis, St. Paul & S. S. Marie Ry. bonds	79,860.00
Interest from Mineral Range Ry. bonds	25,080.00
Interest from Berlin, Waterloo, Wellesley & Lake Huron Ry. bonds	5,520.00
Interest from St. John Bridge & Extension Co. bonds	3,125.00
Interest from Esquimalt & Nanaimo Ry. bonds	96,640.00
Interest from Dominion Atlantic Ry. extension debenture stock	28,470.00
Interest from Dominion Atlantic Ry. 2nd debenture stock	18,493.34
Interest from Hull Electric Ry.	20,000.00
Dividend on Dominion Express Co. stock	100,000.00
Dividend on St. John Bridge & Railway Extension Co. stock	35,000.00
Dividend on Minneapolis, St. Paul & S. S. Marie Ry. common stock	445,322.50
Dividend on Minneapolis, St. Paul & S. S. Marie Ry. preferred stock	222,633.00
Dividends on West Kootenay Power & Light Co. preferred stock	1,925.00
Dividends on Consolidated Mining & Smelting Co. stock	178,243.75
Dividend on Berlin, Waterloo, Wellesley & Lake Huron Ry. stock	6,250.00
Dividends on Toronto, Hamilton & Buffalo Ry. stock	27,553.50
Earnings from ocean steamships and hotels	2,546,249.48
Revenue from company's interest in coal mine properties	182,362.75
Extraneous mail earnings	79,042.85
Net earnings of Pacific Coast steamships, commercial telegraph, news department	1,144,071.44
Received for space rented in office buildings	40,158.67
	\$14,822,451.54
Less: Payment to shareholders in dividend, Jan. 2, 1917	1,950,000.00
	\$12,872,451.54

From this a dividend has been declared, payable Mar. 31, 1917 1,950,000.00

The working expenses for the six months were 59.75% of the gross earnings, and the net earnings 40.25% compared with 55.43 and 44.57% respectively, in 1915.

Under the Interstate Commerce Commission regulations railway companies in the United States are now required to make their fiscal year correspond with the calendar year, and it is understood

that at the present session of the Dominion Parliament similar legislation will be passed with reference to railway companies in Canada. In order to conform to this requirement, which has the merit of facilitating the comparison of the cost of operations and other statistics, your directors recommend that Dec. 31 in each year be made the end of the company's fiscal year instead of June 30, as heretofore, and with this change in view your directors have adopted a by-law, which you will be asked to approve, changing the date of the annual general meeting of shareholders from the first Wednesday in October to the first Wednesday in May. The financial reports and accounts now submitted for your consideration cover the six months ended Dec. 31, 1916, and, therefore, the next annual report and statements to be placed before you a year hence will embrace the operations of the calendar year 1917.

You will also be asked to give your sanction to amendments to bylaws 47 and 49, providing for the issue of the company's 4 consolidated debenture stock and 4 preference stock, in dollar currency denominations as well as in sterling money of Great Britain. With the assent of your company the British Treasury included, among the securities which were being borrowed in Great Britain, the various outstanding obligations of your company, and these obligations have already been used, to some extent, for the purpose of pledge in New York, as security for the obligations of the United Kingdom of Great Britain and Ireland. It became evident, however, that the obligations of your company, being to a large extent issued in a currency foreign to the American market, could be more advantageously utilized if put in a form familiar to American investors. The need of the British Treasury for securities to obtain dollars has been imperative to carry on the war, and your company has felt it not only a duty to be of assistance in this situation, but also a privilege, in view of the present position of your company having been in a large part due to the investment of British capital ever since its formation. No company in the British Empire stands in higher credit among American investors than the C. P. R. Co., and his Majesty's Government had the assurance that your company's obligations, if offered in a form suitable to the American market, could be readily sold in the United States in large amounts and at a favorable price. Acting under an understanding with your company, the Yords Commissioners of His Majesty's Treasury have decided to take over or acquire, under their general powers in that behalf, or under regulations made pursuant to the Defence of the Realm Consolidation Act of 1914 and amending enactments, from all persons ordinarily resident in the United Kingdom, their outstanding holdings of Canadian Pacific 4 consolidated debenture stock, Atlantic and North West 1st Mortgage 5% bonds, Algoma Branch 1st mortgage 5% bonds, and Ontario and Quebec 5% debenture stock, which the Imperial Government proposes to lodge with your company in exchange for such an amount of 20-30 year 5% collateral trust bonds of the C.P.R. Co. in dollar form as will equal, at par, the value, on a 5% basis, of the securities received from the Treasury calculating the pounds sterling at the rate of £21 to \$100. If all of the above four issues should be acquired and de-

posited, your company would issue \$198,979,580 of bonds, payable as to principal and interest in gold in dollars in New York or Montreal at the option of the holder, with a fixed maturity of 30 years, but redeemable at par at the option of your company on and after the expiration of 20 years. It is also provided that the bonds may be redeemed, if requested by the Government, at 105 and interest, at any time within the first five years of their life. The pledged collateral will be lodged at the specific prices of 80 for the Canadian Pacific 4% debenture stock and at par for the above mentioned 5% securities. Under the proposed arrangement the annual fixed charges of your company will remain as they are at present, interest on the collateral trust bonds being covered by interest on the securities deposited as collateral, and, although your company is taking liability for repayment on a specified date, that liability is covered by an undertaking of the Imperial Government to provide the funds required for redemption of the bonds in whole or in part during the first five years, or after 20 years or at maturity, as may be determined. Included in the 4 consolidated debenture stock that the Imperial Government proposes to acquire and deposit is the \$40,000,000 recently issued by your company and loaned to the British Treasury, which the Imperial Government will purchase at 83% of its face value, the proceeds of the sale, viz., \$32,000,000, to be loaned to the Imperial Treasury for five years at an annual interest rate of 5 $\frac{1}{4}$ %, payable semi-annually. The company was not empowered by existing legislation to issue securities of the character described, and, therefore, application has been made to the Dominion Parliament for the requisite statutory authority. As no interest is injuriously affected, and your company is amply safeguarded, your directors commend to your favorable consideration and approval the formal agreement between the Imperial Government and your company which will be submitted to you at the special general meeting, and ask you to authorize and approve the creation and issuance of collateral trust bonds, pursuant to the terms of the agreement, and approve the form of trust deed to be given to secure the holders of such bonds as may be issued, and to do whatever else may be necessary to carry the provisions of the agreement into effect.

The sales of agricultural land during the half year were 328,574 acres for \$5,295,345, an average of \$16.12 an acre. Included in this area were 8,852 acres of irrigated land which brought \$49.78 an acre, so that the average price of the balance was \$15.18 an acre.

Acting upon the authority received from you in 1914, your directors have purchased practically all of the stock of the Spokane International Ry. Co., at a cost of about \$2,500,000, the former owners having liquidated all of the floating liabilities, so that the property is free from indebtedness excepting the outstanding bonds.

An ocean steamship of 9,400 tons carrying capacity, and a speed of 13 knots, now under construction at Newcastle-on-Tyne, has been purchased at a cost of £240,000 for delivery in July or August. This will make the tonnage of your ocean fleet practically the same as it was before the outbreak of war, but to provide for future requirements and to secure the advantage of the earliest construction

that circumstances will permit, an arrangement has been made under an agreement with John Brown & Co., the Fairfield Shipping and Engineering Co., and Harland & Wolff, Ltd., for the building, on a cost and percentage basis, of two steamships 605 ft. long between perpendiculars with a speed of 20 knots an hour, and two steamships 546 ft. long between perpendiculars with a speed of 16 knots an hour.

Connaught tunnel, at the summit of the Selkirk Mountains, has been completed and is now in successful operation. Your directors are satisfied that increased safety and economy in the operation of that portion of your railway will more expenditure involved in the work. The estimated value of 15 miles of railway abandoned by reason of the construction of the tunnel, viz., \$1,665,000, has been charged against revenue, thus reducing the capital account by that amount.

The yield of the harvest last autumn and the general business of the country, substantially exceeded anticipations, and the result is reflected in your gross and

net income during the half year.

Anticipating your approval, capital expenditure has been authorized in the current year to the amount of \$4,178,775. Of this, additional wharf accommodation and other facilities at Vancouver will absorb \$841,000; shops, stations and other buildings, \$397,000; transfer tracks, crossing sidings and enlargement of yards, \$792,000; craft for coastal service, \$134,000; telegraph lines, \$82,000; and the balance is required for a variety of additions and improvements over the whole system.

Your directors regret to announce the death in December last of their esteemed colleague and friend, Hon. Robert MacKay, who had been a member of the Board since 1903. Hon. F. L. Beique, K.C., senator, of Montreal, has been elected a director to fill the vacancy in the board. The undermentioned directors will retire from office at the approaching annual meeting. They are eligible for re-election: E. W. Beatty, K.C., Hon. F. L. Beique, K.C., Jas. Dunsmuir, C. R. Hosmer.

Investigation Into Pacific Great Eastern Railway Affairs.

A special committee appointed by the British Columbia Legislature to make an investigation into all matters connected with the financing of the Pacific Great Eastern Ry. commenced its sittings Mar. 15, when J. W. de B. Ferris, of Vancouver, was appointed chairman. The taking of evidence was begun Mar. 20, and the sittings have been continued regularly. On Mar. 27 the first report of 478 pages of evidence was submitted, which the Legislature ordered to be printed.

In brief, the story of the company is that on Feb. 10, 1912, an agreement was entered into between the then British Columbia Government and the international contracting firm of Foley, Welch and Stewart to build a railway from Vancouver to a junction with the Grand Trunk Pacific Ry at Prince George, the railway bonds to be guaranteed by the province. The Pacific Great Eastern Ry. Co. was incorporated by the B. C. Legislature, T. Foley, St. Paul, Minn; P. Welch, Spokane, Wash., J. W. Stewart, D'Arcy Tate, D. McLeod, and V. W. Smith, Vancouver, being incorporators. Foley, Welch and Stewart subsequently sold their contract with the government to the P. G. E. Ry. Co. for \$1 and the company entered into a general contract with P. Welch, to build the line on a cost plus 15% basis, the constructor having certain privileges as to keeping stores, hauling and transporting freight, etc. Smith and McLeod retired from the directorate, their places being taken by F. Wilson and E. White, and P. Welch also retired before the contract was let to him. The original capital of \$25,000,000, of which 100 shares were subscribed for and on which \$40,000 was paid up in cash, was divided as follows: 31,865 shares each to Foley, Welch, Stewart and D'Arcy Tate; 20 shares each to White and Wilson to qualify them as directors; 102,500 pledged to a bank, and 20,000 pledged to the B.C. Government as part security for the \$6,000,000 loan of 1916. The capital of the company was subsequently raised to \$40,000,000 by an order in council, and at the 1914 session of the legislature the guarantee of the company's bonds, which had

originally been at the rate of \$35,000 a unit, was increased by an additional \$7,000 a mile, for 480 miles. In the same year authority was given to the government to enter into an agreement with the company to build a line from Prince George to Peace River, 330 miles, on a guarantee of bonds for \$35,000 a mile. In 1916 the government agreed to lend the company \$6,000,000 to enable it to complete the line to Prince George.

Engineers, auditors, and others gave evidence as to general facts about the company, the specifications used in connection with the construction, the quantity of materials used, and the quantities paid for, the alleged over charging, etc. It was not until April 13, however, that the evidence began to develop somewhat sensational tendencies. On that day D'Arcy Tate, Vice President and General Counsel, stated that he had received \$500,000 in cash for his services in connection with negotiation with the Grand Trunk Pacific Ry., and the government, out of which he was to take care of the campaign funds so far as the government party was concerned. Mr. Tate is reported to have added: "We all know that these contributions are customary. I have made contributions to campaign funds for the past 15 years." Mr. Tate was asked by the Committee to give details of how he had expended this money, but he declined to do so on the ground that it was a payment to him by Stewart out of his own private funds, and had nothing to do with the funds of the P.G.E. Ry. The committee having considered the matter, decided to ask the legislature for authority to compel Mr. Tate to answer any questions that might be put to him upon the subject. This resolution was passed by the Legislature April 16, and when the committee resumed its sittings, April 17, it was stated that Mr. Tate declined to appear further before the committee and had gone to Seattle, Wash. It was also stated that P. Welch had left Vancouver, to Spokane, Wash. On resuming the hearing of evidence R. S. Thomas, Secretary of the Company, stated that he knew of three cheques amounting to

\$115,000 which had been used for campaign purposes, but he declined to say to whom the money went, and on persisting in refusing the matter was reported to the legislature, which on April 18, summoned him to the bar of the House. He there reaffirmed his decision not to answer further question on the matter, and was committed to the custody of the Sergeant-at-arms, during the pleasure of the house. On April 20, R. J. Cromie, of the P. G. E. Ry office, told the committee that all J. W. Stewart's private check books, etc., relating to a fund of \$763,000 had disappeared from the company's offices. Other witnesses who were to have been examined were not present, and the committee is considering what to do in the matter. E. P. Davis, K.C., on behalf of the Foley, Welch and Stewart interests, said that his clients were prepared to hand over all their holdings in the P. G. E. Ry. and the subsidiary companies, and were also prepared, if the government wished, to undertake completion of the line under Government management. They would be willing to do this if the government would release the company and its members from their obligation and personal covenant to complete the line.

Mr. Hanes, the North Vancouver member of the committee, gave notice that he would move a resolution which will probably form the basis of the recommendations of the committee to the legislature. He proposes that the government take immediate steps to cancel the 24,950,000 shares of capital stock in the company, that the government cancel the contract with the company for the construction of the line; that suits be entered against the Pacific Great Eastern Ry. and Foley, Welch & Stewart for the return of the guarantees alleged to have been overpaid; that the P. G. E. Ry. be sued for directors' profits and subscriptions; that P. Welch be sued for excess payments made under wrongful classification; that legislation be enacted to take over the construction and ownership of the railway as a government line; and that tenders be advertised for its completion. The possibility of criminal prosecutions in connection with the matter will, it is said, be taken up by the committee later.

United States Railway Organization for the War.

Representatives of the American Railway Association, including the presidents of the leading roads in the United States, met in New York, April 12, at the call of the Council of National Defence and named a board of five to direct the operation of U. S. railways throughout the war. The members of the board are Fairfax Harrison, of the Southern Ry., chairman; Howard Elliott, of the New York, New Haven and Hartford; Samuel Rea, of the Pennsylvania; Hale Holden, of the Chicago, Burlington & Quincy; and Julius Kruttschnitt, of the Southern Pacific. Daniel Willard, of the Baltimore & Ohio, who is also chairman of the Defense Council's Advisory Commission, will be an ex-officio member of the board. The interstate Commerce Commission will be asked to name another member.

Mr. Harrison announces that the general committee will be divided into six departments, each to correspond with one of the military departments of the army. The six subcommittees will include 28 railway executives, whose work will be supervised by the central executive committee of five.

Canadian Transportation Men, Engineers, Etc. in the War.

Inland Water Transport.—It is said that over 80% of the Royal Engineers' inland water transport section, the new Imperial unit authorized to be recruited in Canada, is made up of men from British Columbia.

Signal Flags for French Railways.—The Moncton, N.B., General Patriotic League are engaged in making flags, similar to those in use on the Canadian Government Railways, for use on military railways in France, which are under the charge of Canadians. It reported that 100 dozen of these flags had been completed by April 20.

Arrivals in England.—It was officially announced, April 8, that the following troops had arrived safely from Canada: The 256th Overseas Railway Construction Battalion, under command of Lt. Col. W. A. McConnell, and which is composed largely of civil engineers, surveyors, contractors and railway construction men; No. 2 Construction Battalion, under command of Lt. Col. Donald Sutherland, railway contractor, and an Inland Water Transport section.

Timiskaming and Northern Ontario Ry.—Ninety-one employes of the railway had joined the Canadian Expeditionary Forces to Oct. 31, 1916, representing 10% of those engaged in the service. The commission gave a bonus to those enlisting, the amount paid out to Oct. 31, being \$11,598.66. The commission has voted \$10,000, and the employes have subscribed \$12,064.52 to the Canadian Patriotic Fund. The employes have also contributed \$10,245.36 for Red Cross purposes.

PERSONAL NOTES.

W. M. Armstrong, Locomotive Foreman, Canadian Northern Ry., Port Mann, B.C., has enlisted for active military service.

Malcolm MacLeod, son of M. H. MacLeod, General Manager and Chief Engineer, Canadian Northern Ry., Winnipeg, has joined the Royal Flying Corps, at Camp Borden, Ont.

Major G. A. E. Bury, son of George Bury, Vice President, C.P.R., has been gazetted in England as Deputy Assistant and Quartermaster General, Canadian Expeditionary Force.

Major B. M. Humble, general list, has been gazetted in England as Lieutenant Colonel, while employed as officer in charge of headquarters for Canadian railway troops.

Acting Lt. Col. B. R. Hepburn, M.P., formerly President, Lake Ontario & Bay of Quinte Steamship Co., Picton, Ont., has been gazetted in England as Colonel while employed as Deputy Director of Timber Operations.

G. McL. Brown, European Manager, C.P.R., London, Eng., has, according to a press cable, been appointed to the staff, as a lieutenant colonel and will go to France to superintend wharves and docks for the British army.

Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry., commanding the 255th Overseas Battalion, Queen's Own Rifles, Toronto, has been appointed to command the Queen's Own Battalion of the Canadian Defence Force, which is being raised for home service.

Capt. W. S. MacTier, of the Canadian Infantry, son of A. D. MacTier, General Manager, Eastern Lines, C.P.R., Montreal, has been wounded a second time. He was first wounded in the foot by shrap-

nel in May, 1915. His casualty is a compound fracture of the thigh.

Honorary Colonel W. I. Gear, Vice President, the Robert Reford Co., Ltd., shipping agents, etc., Montreal, has taken charge of recruiting for a battalion of the 1st Canadian Regiment, Grenadier Guards, which is to be raised in the Montreal district as part of the Canadian Defence Force.

J. W. Stewart's Work.—London, Eng., cablegram, April 8: In an article in the Weekly Dispatch dealing with transport questions in Mesopotamia, General Sir O'Moore Creagh incidentally says that the sending out to France of that wonderful Canadian hustler, Lt. Col. Stewart, was a splendid stroke.

Major Ian M. R. Sinclair, of the Canadian Infantry, son of Angus Sinclair, railway contractor, Toronto, was reported April 7 to have been slightly wounded in action. This is the fourth time his name has appeared in the casualty lists. He was wounded in the battle at the Orchard in May, 1915, and again in May 1916, and subsequently was reported as suffering from shell shock.

Col. Sir John Norton Griffiths, K.C.B., D.S.O., of the Norton-Griffiths Construction Co., which formerly held the contract for harbor improvement work at St. John, N.B., has been decorated with the Star of Rumania, with the rank of commander, with swords, by the King of Rumania, in recognition of his services to the army in connection with the destruction of borings in the Rumanian oil fields.

A press cable from England, referring to the opening, by Princess Victoria, of a recreation hut in the Canadian Forest-

ry Camp at Windsor, which was built by the Forestry Corps in seven days, mentions Lt. Col. Penhorwood as being present. He was formerly Manager of New Ontario Dock Co. and agent, G.T.R. at Sault Ste. Marie, Ont., and was given command of the 51st Regiment, Sault Ste. Marie Rifles, which he raised.

Reuben S. Richardson, Superintendent, District 3, Transcontinental Railways Division, Canadian Government Railways, Fort William, Ont., has resigned to go overseas, as Lieutenant in No. 2 Section, Skilled Railway Employes. He was born at Napanee, Ont., Apr. 9, 1865 and entered transportation service in 1878, since when, in 1884, he filled various positions from messenger to freight clerk, operator, ticket clerk, switchman and baggage master, Canadian Express Co. and G. T. R., at various points; 1884 to 1887, brakeman, conductor, station agent and Soliciting Freight and Passenger Agent, Bay of Quinte Ry., at various points; 1897 to 1901, brakeman, conductor and Terminal Yardmaster, Canada Atlantic Ry., Ottawa; 1901 to 1907, General Yardmaster and acting Trainmaster, C.P.R., Smiths Falls and North Bay, Ont.; 1907 to 1911, Assistant Superintendent, Canadian Northern Ry., Montreal, Quebec and Ottawa; 1911 to 1913, Superintendent of Operating and Construction, MacDonnell and O'Brien, contractors on the National Transcontinental Ry., La Tuque, Que., 1913 to May 1915, General Yardmaster of Terminals and Assistant Superintendent, Intercolonial Ry., Halifax, N.S., Moncton and St. John, N.B., and from May 1915 to Mar. 27, 1917, Superintendent, District 3, Transcontinental Division, Canadian Government Railways, Fort William, Ont.

Grain in Store at Terminal Elevators, Interior Terminal Elevators and at Public Elevators in the East.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Alberta & Great Waterways Ry.—Track laying was reported to have been completed to beyond the 264th mile post April 4, and was expected to have reached the hill overlooking McMurray at mileage 280 by April 30. While the grading on the 10 miles into McMurray has been completed, there have been some land slides during the winter which will have to be cleaned up before the rails can be laid.

The line starts from the Edmonton, Dunvegan & British Columbia Ry. at Carbondale Jct., 143 miles from Edmonton, and runs northerly and easterly via Lac la Biche to McMurray, 290 miles. The Egg Lake Branch is projected easterly from Dewar, 101.4 miles from Carbondale Jct. This branch will probably, if certain projects are carried through to the extent outlined by the several charters in which the J. D. McArthur interests are concerned, form part of the Central Ry. of Canada, which has now secured charters in Alberta, Saskatchewan and Manitoba.

The A. & G.W.R. is being operated by the contractor at present. From the hill overlooking McMurray freight is carried on barges on the Clearwater River to McMurray. (April, pg. 135.)

Athabasca Valley Ry.—The route laid out for the projected railway is from Busley, on the Edmonton, Dunvegan & British Columbia Ry., 44.7 miles from Edmonton, northwesterly to Fort Assiniboine, 50 miles. This line would open up a well settled district. The Alberta Government is said to have promised to give a subsidy towards construction this session if at all possible. This line is also to be included in the J. D. McArthur system. (Feb., pg. 50.)

Brule Lake Ry.—The Alberta Legislature has ganted an extension of time for three years for the building of this projected railway from Brule Lake, mileage 994 on the Grand Trunk Pacific Ry., southeasterly through sections 26 and 24, Tp. 49, Range 27, thence northeasterly through sections 19, 20 and 29, Tp. 49, Range 26, both west of the 5th Meridian.

Central Canada Ry.—This is the title of the original company chartered in Alberta, which has already started building as a branch of the Edmonton, Dunvegan & British Columbia Ry. The piece of line already built extends from McLennan to Peace River, 48.5 miles. A bridge, estimated to cost over \$1,000,000, is under construction at this point in order to carry the line northerly and westerly. The substructure will consist of three deep water piers, which are now practically completed; there will be three other river piers, with a shore pier on either bank and trestle approaches. The total length of the bridge will be 1,736 ft., the superstructure consisting of six 200 ft. deck trusses, and a 200 ft. through truss span over the navigable channel, giving a clearance of 60 ft. above high water. It is expected that the bridge will be completed in the autumn. (April, pg. 135.)

Central Canada Ry. and Power Co.—The railway proposed to be built by this company will start at East Selkirk, Man., and will extend to the Red Lake mining camp, crossing the Winnipeg River midway between Lac du Bounet and Fort Alexander. The company's act authorizes the building of a line from St. Boniface to the Winnipeg River, thence northerly and westerly to the western bound-

dary of the Province. The present proposition is to build a sufficient mileage to give connection to the Rice Lake mining areas, which are being opened up, leaving the St. Boniface—Selkirk section to be taken up later. A press report states that surveys are being made.

The extension from Rice Lake to the western boundary of the province has to be considered in connection with the Central Canada Saskatchewan Ry., and the Central Canada Ry. in Alberta, all J. D. McArthur companies. Taken together these three lines would give a continuous route from St. Boniface to and beyond the Peace River, when linked up. (April, pg. 135.)

Chippawa-Queenston Power Development Construction Ry.—A construction railway is to be built in connection with the power canal which the Hydro Electric Commission of Ontario is about to construct between Chippawa and Queenston, Ont. The work will be under the control of H. G. Acres, Hydraulic Engineer, Hydro Electric Power Commission of Ontario. A. E. Harris, heretofore Superintendent Welland Ship Canal Construction Ry., has been appointed Superintendent.

Crowsnest and Tent Mountain Ry. Co. has been incorporated by the Alberta Legislature to build a railway from the C. P. R. west of Macleod, Alta., southerly to sec. B. tp. 7, range 6, west of the 5th meridian near Tent Mountain, about six miles. (April, pg. 135.)

Dolly Varden Mines Ry. Co.—The British Columbia Legislature has authorized this company to build a line to be operated by steam, electricity or any other motive power, of either standard or 3 ft. gauge, from the Wolfe group of mineral claims, reported 18 miles up the Kitzault River, along a public highway, to lot 3635, at Alice Arm, with branch lines not to exceed in any one case 10 miles. The act contains various provisions prohibiting the public right of way on the highway, and a pack trail, and authorizes the sale of the railway or any part, subject only to the approval of the Minister of Railways. Provision has been made for the government taking over the line in certain eventualities.

Esquimalt and Nanaimo Ry.—We are officially advised that nothing definite has yet been settled as to when the betterment on the line for which appropriations have been made, will be put in hand. (April, pg. 135.)

Essex Terminal Ry.—We are officially advised that the company has had surveys made for a line from Ojibway, the present terminus, to Amherstburg, Ont., but whether or not any construction will be undertaken this year is at present uncertain. This line, if built, will be, like the rest of the company's lines, operated by steam, there being no foundation for the press reports that the company is proposing to build an electric railway from Essex to Amherstburg. (Feb. pg. 50.)

Fort Frances and English River Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Fort Frances northwesterly and along the easterly side of the Lake of the Woods to Kenora, there crossing the C.P.R., and on northerly, crossing the National Transcontinental Ry., to English River. McCracken, Henderson, Greene and Herridge, Ottawa, are solicitors for applicants.

Grand Trunk Pacific Ry.—The Dominion Parliament is being asked to extend the time for the building of the following lines in addition to those mentioned in a previous application made by the G.T.P. Branch Lines Co.: From tp. 12, range 16 or 16 west of the 1st Meridian to Brandon, thence to Regina, with a line from Brandon to the southern boundary of Manitoba near Turtle Mountain; from between 111 and 113 degrees of longitude to Calgary, Alta., thence to the southern boundary of Alberta near Coutts; from near Regina westerly to Moose Jaw, 45 miles. (April, pg. 135.)

Grand Trunk Ry.—At a sitting of the Board of Railway Commissioners at Hamilton, Ont., April 12, an agreement was reached respecting the construction of a subway under the G.T.R. at St. Pauls Ave., Brantford, at an estimated cost of \$50,000 for a full sized subway, or \$14,000 for one for foot passengers only. In the event of a full sized subway being ordered the city will be able to extend its street railway into the Terrace Hill district. St. Pauls Ave. was closed up at the railway under an arrangement made in 1905. The company raised no objections to a subway being constructed but objected to being called upon to contribute towards its cost. The commission deferred judgment on the class of subway to be provided and the apportionment of costs between the city and the railway. (April, pg. 136.)

Great Northern Ry.—The main work of construction of the station building on the False Creek flats, Vancouver, B.C., has been completed, and good progress is being made on the completion of the interior. It is expected that the building will be ready for occupation by the G. N. Ry., and the Northern Pacific Ry. staffs by June 1. Work on the freight sheds is rapidly approaching completion, and the erection of the other terminal facilities will be put in hand at once. (April, pg. 136.)

Grenville, Harrington and Northern Ry.—The route of this projected railway as specified in the act incorporating the company, passed at the Quebec Legislature's last session, is from Grenville, northerly to Labelle, in Labelle County, with such branches not exceeding 25 miles in length as the directors may deem expedient. The provisional directors are, G. Dansereau, Grenville, Que.; J. Y. Kendall, J. A. Jacob, S. E. Melkman, Montreal; L. L. Legault, Lachute, Que. (Feb. pg. 51.)

Intercolonial Ry.—Owing to the pressure a steel bridge near St. Germaine, Que., collapsed, Mar. 28. It is being reconstructed.

Tenders are under consideration for building of a reinforced retaining wall at the north-east corner of Main St. subway, Moncton, N.B. (Mar., pg. 101.)

Maine Central Rd.—We have been officially advised that the company's application to the Maine Legislature for authority to build a line from the present main line at Bancroft to a possible connection with the Canadian Government Railways' system near Meductie, was refused. The project for the building of this piece of line is at present therefore in a very indefinite stage, and what may be the outcome it is impossible to foresee.

Michigan Central Rd.—The Ontario Legislature has confirmed an agreement made between Essex County Council and

the company respecting the use of a spur line to convey sand and gravel under the Highways Improvement Act; and to permit the council to enter into similar agreements with other railways under the same act. (April, pg. 136.)

The Northern Pacific Ry. is about to erect a freight house on its wharf on the Fraser River, opposite the city market, near the intersection of Front and 6th St., New Westminster, B.C. The building will be reached by a new spur track, starting from opposite 6th St. The top of the present wharf will be cut down about 2 ft. for a considerable area and new timbers will be put in to carry the foundation members of the new structure. The building will be a one story lumber structure, 50 x 200 ft., the exterior walls of which will be covered with corrugated iron, and the roof with pitch and gravel. The rolling doors will be of corrugated steel. A space 20 ft. deep, the whole width of the building, 50 ft., will be partitioned off at one end, for an office. This space will be ceiled throughout with fir ceiling, and will be lighted by 10 windows. One half of the area will be reserved for the public offices and the other for the inside staff. Two lavatories will be provided, one for office staff and the other for freight house employees. The building will be lighted by electricity and heated by stoves. The estimated cost is \$11,500. (Mar., pg. 101.)

Pacific Great Eastern Ry.—At the British Columbia Legislature's 1916 session, provision was made for the raising of \$10,000,000 on Provincial security, and the loan of \$6,000,000 out of these funds to the Company. Since then there has been a general election with a change of government. The new government proposes to change the manner in which the aid to be given by this loan will reach the company. (April, pg. 136.)

Pas, Man.—In connection with the proposed development of some extensive copper deposits north of Pas, a press report states that 98 miles of railway are to be built. Hayden, Stone and Co., Boston, Mass., are said to be interested.

Prince Edward Island Ry.—In reply to questions at a meeting of the Charlottetown Board of Trade, April 3, the Minister of Railways is reported to have said that cars for the P.E.I. Ry. should be built in the shops at Charlottetown, but that cars for mainland lines could not be built there until the gauge of the railway was altered to standard. This work would be undertaken at the earliest possible date. It is reported that the car ferry service between Port Borden, P.E.I., and Cape Tormentine, N.B., will be inaugurated early in May. (April, pg. 136.)

St. John and Quebec Ry.—We are officially advised that some surveys have been made with the object of securing a connection with the Maine Central Rd. at or near Bancroft, Me. The starting point of the branch line would probably be Meductie, a station on the St. J. and Q. Ry., mileage 50.4 from Fredericton, N.B. The project is not yet sufficiently advanced to be regarded as finally decided upon. (See also Maine Central Rd.) (April, pg. 136.)

We are officially advised that a subsidy agreement has been entered into upon the regular statutory conditions between the Dominion Government and the St. John and Quebec Ry. for the construction of the following lines: From Andover to Centreville, 26 miles; from Centreville to Gagetown, 120 miles, and from Gagetown to the C.P.R. at Westfield, 45 miles. The Centreville-Gagetown line is complete

and is being operated by the Canadian Government Railways as an Intercolonial Ry. branch; the Gagetown-Westfield section is under construction, and a contract has just been let for building the Andover-Centreville section.

The St. Maurice Lumber Co. has been incorporated by the Quebec Legislature with office at Three Rivers, and power, among other things, to build and operate a railway. The company has power to take over the property contracts and rights of the St. Maurice Lumber Co. which has its head office in New York. It is also authorized to build a dam or dams on the St. Maurice River, in the vicinity of Des Forges rapids, on the Bastian River near Notre Dame des Anges; and on the Pentecost River, near Pentecost Village, to develop the same, and distribute electric power therefrom within the limits of Champlain and St. Maurice. Three Rivers, Portneuf and Saguenay Counties; to construct wharves and docks within the same area, and to operate steam and other vessels on any navigable water therein; and to build railways or tramways to connect the company's mills and industrial establishments with the C.P.R., the Canadian Northern Ry., or any other railway passing through the counties named. (April, pg. 106.)

Saskatchewan and Hudson Bay Ry.—It has been explained that this is the Saskatchewan provincial section of a railway projected from the southern boundary of Alberta, adjoining the State of Washington, to run through Alberta and Saskatchewan. The company has a Dominion charter to build the entire line, and provincial charters for the several sections. The S. and H. B. Ry. was given incorporation to fix the point of entry into Saskatchewan, which is to be at a different point than that contemplated when the Dominion act was obtained. It is reported that the farmers settled in a considerable stretch of country through which the line is projected have entered into an agreement to provide \$4,000 a mile toward the cost of construction. (April, pg. 166.)

Springfield, N.S.—A press report states that the Davison Lumber Co., Bridgewater, N.S., propose to build 12 miles of railway in connection with the development of certain timber limits at Springfield, N.S.

Toronto, Hamilton and Buffalo Ry.—The Hamilton Board of Works has approved of the building of an industrial spur by the company to the National Abrasive Co.'s premises at the corner of Biggar Av. and Lottridge St., Hamilton, Ont. (Feb., pg. 51.)

Dominion Railway Act Revision. The special committee appointed by the House of Commons to revise and consolidate the Railway Act, met in Ottawa, April 12, under the chairmanship of J. E. Armstrong. The work of consolidation was started about three years ago by S. Price, K.C., acting as special counsel for the Department of Railways, and was completed by Strachan Johnston, K.C. The revised bill contains 456 sections and clauses.

Timiskaming & Northern Ontario Railwaymen's Patriotic Association.—In addition to subscriptions by the commissioners and the office staff, the staff all being members of the 50,000 Club, Toronto, the employees, to Jan. 1, have subscribed \$16,721.71 to the Red Cross; \$23,169.55 to the Canadian Patriotic Fund, and \$10,754.21 to enlisted employees direct.

Freight and Passenger Traffic Notes.

The C.P.R. is said to be arranging to put a daylight passenger train on its Crownst Pass line to run between Lethbridge and Cranbrook.

W. A. Cunningham, Division Freight and Passenger Agent, Halifax and Southwestern Ry. has been authorized by the Board of Railway Commissioners to prepare and issue freight and passenger tariffs of every description for the railway and any vessels it may control or operate.

Jas. Orr, General Freight Agent, Canadian Northern Ry., has been authorized by the Board of Railway Commissioners to prepare and issue tariffs in respect of the tolls upon freight traffic of every description to be charged by the company, for all freight traffic that may be carried upon its railway, or any part of its system, excepting to and from points west of Port Arthur or Westfort, Ont.

There will be some increase in the number of passenger trains on the Canadian Pacific, the Grand Trunk Ry., the Canadian Northern Ry., and the Intercolonial Railway, with the usual May change of schedules, although the number of trains in operation prior to November last, when the big cut was made, will not be restored. It is expected that the number of passenger trains will be restored to the usual summer schedule by June or July.

It was announced, April 16, that the G.T.R. had placed an embargo on all carload freight for export via Montreal, except freight consigned to the Imperial Government, and also in cases where specific steamship space has been secured, and acceptance authorized by the General Foreign Freight Agent at Montreal, or the Assistant Foreign Freight Agent at Toronto. The C.P.R. has modified its embargo against freight traffic in Montreal terminals, except Cote St. Paul.

The C.P.R. has arranged to run an inter-hotel train, daily, in each direction, between Calgary and Glacier, during the tourist season, from about June 30 to Sept. 8, leaving Calgary at 7.20 a.m. and arriving at Glacier at 6 p.m. Eastbound, Glacier will be left at 8 a.m. and Calgary reached at 8.45 p.m. The equipment will be baggage car, first class car, three parlor cars and an open top observation car; this car being open on both sides and without a roof. The train will be hauled by an oil-burning locomotive. A stop of one hour will be made at Field for luncheon.

The Edmonton, Dunvegan and British Columbia Ry. is operating from Edmonton to Spirit River, 367 miles, of which 357 miles is over its own tracks. The company operates for the first 10 miles over the Grand Trunk Pacific Ry. under an agreement, pending the laying out of its own terminals in Edmonton. It has built one branch, viz., from Spirit River to Grand Prairie, 49.8 miles, making a total of 406.8 miles in operation. Under the title of the Central Canada Ry, there have been built by the J. A. McArthur interests, 48.5 miles of railway from McLennan to Peace River, on which the company is operating a train service, thus making 455.3 of line actually being operated as independent railways. The third line in which the same contracting firm is interested is the Alberta and Great Waterways Ry., which has a present total length of 290.2 miles from Carbondale Jct., 14.7 miles from Edmonton, to McMurray. The contractors are operating a train service over a section of this line.

Canadian Northern Railway Construction, Betterments, Etc.

Canadian Northern Quebec Ry.—Plans for the erection of a new railway station at Pointe aux Trembles were submitted to Montreal City Council, April 10.

Canadian Northern Ontario Ry.—The Minister of Lands informed the Legislature, April 4, that the company had not complied with the provisions of sec. 7 of its land grant act by executing and delivering an agreement in respect of the land grant as provided in sec. 22 of 4th Edward 7, chap. 18.

Application was made to the Board of Railway Commissioners recently for approval of revised location plans of the line through Scarboro and York Tps. to facilitate entrance to North Toronto station. Two questions were reserved for consideration by the Board's Chief Engineer, viz.: the width of a subway at Dawes Road and the crossing of Don Mills Road. The question involved in the latter matter is whether there should be one or two level crossings. At present there is one crossing by the C.P.R., while if the proposed plans were approved the C.N.R. would also have a crossing. Township representatives thought the junction with the joint line could be made in such a way that there would be only one crossing, while it pointed out for the company that the plans as submitted obviated a 1% gradient, which would seriously interfere with operation, as the maximum gradient on the line to Ottawa and Montreal is only .05%. There is a difference in height of 17 ft. between the C.P.R. and the C.N.R., and the C.P.R. objects to pay for a 6,000 ft. cut to meet the C.N.R. level. The Board's Chief engineers will inspect the plan and report.

Canadian Northern Ry.—The installation of the machinery in the new machine shop at Edmonton,  is reported to have been completed.

Work is reported to have been resumed on the bridge across Sturgeon River, on the Oliver-St. Paul de Metis line in Alberta, and it was expected that the bridge would be completed by April 30. The rails laid on the line from Oliver to Sturgeon River are said to be of light weight, and will be replaced with heavier steel as soon as possible. Grading is practically completed to St. Paul de Metis.

Canadian Northern Pacific Ry.—Application has been made to the Board of Railway Commissioners by the City of Prince George, B.C., to order the construction of a transfer switch to give connection between the Grand Trunk Pacific Ry. and the Canadian Northern Pacific Ry. at Rainbow, mileage 282 from Edmonton, Alta. The estimated cost of the work is \$200,000, and the C.N.R. suggests that the cost be apportioned equally between the two companies. The commissioners directed the immediate deposit of plans for the work and will probably shortly issue an order.

The company's proposal for its station in New Westminster was to locate it on Columbia St. west of 10th St. It is reported that this site is regarded as being too far west for general convenience, and that it would be necessary to cross five tracks to get in or out of it. The Mayor had a meeting with Grant Hall, Vice President and General Manager, Western Lines, C.P.R., April 6, as a result of which a proposition for the building of a union station is to be submitted to the company.

The company is reported to have let a contract to the Fraser River Pile Driving Co. to build a bulkhead out to the harbor line on its waterfront property at New Westminster, B.C. The area to be enclosed will, it is said, be about 20 acres, part of which will be used for railway yards and part for industrial sites.

Rapid progress is reported to have been made with the laying out the company's terminals at False Creek, Vancouver. The 2,500 piles necessary to carry the foundations of the station have all been driven, over which a wooden platform, 35,000 sq. ft. in area, is being laid to support the concrete floor. Concrete is already being poured on this area. The work is being done by day and night gangs.

Vancouver Island Lines.—A press report states that the ferry slip at Patricia Bay, Vancouver Island, was put into use April 6, when several car loads of steel rails were unloaded from the mainland. The slip is 108 ft. long, and is built in three parts, the shore end resting on shoes, and two central hinges supported by screw mechanism, which can be mechanically operated to any desired elevation. The outer end of the apron is operated at present by hand power, but as soon as the mechanism arrives it will be operated by electric power to be supplied by the B. C. Electric Ry. This transfer apron is said to be larger than any of those in operation on the coast at present. It can be adjusted so as to permit of light angles of intersection at extremes of tide level. The slip is completed so that a berth 308 ft. long is afforded for the steam transfer ferries or any barges which may be used. Creosoted piling has been used entirely below high water mark, where it is anticipated the teredo would attack the structure if the timber were not protected.

The viaduct at Burnside Ave., at the Victoria end of the line from Patricia Bay is completed with the exception of the back filling, which was expected to be finished by April 30.

At Selkirk Water, Victoria, the large pier for carrying the rolling lift bridge is well under way. The caisson's cutting edge has been sunk 17 ft. in the material at the bottom of the harbor and the caisson has been excavated to the desired depth and piling for the foundations of the pier has been driven. These piles have been driven 75 and 80 ft. for the foundation of the concrete pier. The bottom of the concrete will be 24 ft. below low water mark, so that no future excavation of the channel will expose the pile foundations to the depredations of the teredo. The south pier at the rest end of the lift bridge is now being proceeded with.

It is expected to have about 10 miles of track laid on the Victoria-Port Alberni line early in May, rails for that mileage having been delivered. (April, pg. 143.)

Transport of Canadian Troops Through the United States.—The Dominion Government has issued the following memorandum: "The United States Government has given permission for the passage of Canadian troops on the C.P.R. through the State of Maine and on the Canadian Northern Ry. through the State of Minnesota, between Canadian points in both cases."

Timiskaming and Northern Ontario Railway Betterments, Etc.

The Ontario Legislature passed a resolution April 5, directing that all expenditure for the construction of the T. and N. O. R. and works be chargeable upon the consolidated revenue fund, and that the Lieut. Governor in Council may advance to the T. and N. O. R. Commission such monies as may be required for construction purposes. It subsequently voted \$626,593.17 for betterments and for the provision of additional facilities along the line. Of this \$143,393.17 was voted for general construction work, and the remainder for the following purposes:

Extension of Kirkland Lake branch, \$125,000; freight car repair shed at North Bay, \$8,000; sidings, etc., at Swastika, \$20,000; passenger station and freight shed at Monteith, \$12,000; station and freight shed at Kelso, \$1,000; additional sidings at Porquis Jet., \$20,000; additional sidings at Iroquois Falls, \$6,000; extension at South Porcupine, \$2,000; additional sidings, \$10,000; ice house, \$3,000, baggage and express building at Cochrane, \$8,000; new sidings, \$15,000; shelter stations, \$1,200; replacing timber bridges with steel and concrete structures, \$100,000; fencing right of way, \$13,000; additional road crossings, \$4,000; additional weight of rails and fastenings, \$15,000; improvements to station grounds, \$3,000; freight shed and office additions, \$5,000; new mechanical coaling plant, \$27,000; rearrangement of track in connection with coaling plant, \$8,000, and addition to machine shop with tools, \$15,000 at North Bay; on account of reduction of curvature with change of line \$60,000. We are officially advised that the plans for the works provided for by these votes are being prepared. None of the work covered by them has yet been undertaken.

In connection with the votes for revision of main line, S. B. Clement, Chief Engineer and Superintendent of Maintenance, in his report to the commissioners for the year ended Oct. 31, 1916, says: "Surveys for revision of main line were made at several points during the year. In some places these were entirely new surveys, while in others former revision surveys were improved. Of the various lines surveyed, three were chosen for construction during the year; mileage 54 to 55, mileage 63 to 66.5, and at mileage 81, but only the grading on the first of these was completed. The revision between mileage 54 and 55 is 3,920 ft. long. It reduces the distance approximately 30 ft., grades no change, curves reduced 3, maximum curve reduced from 6° 42' to 3° 30', and curvature 76° 9'. The diversion, mileage, 63 to 66.5, is 3.4 miles long and will reduce the distance 866 ft. North bound gradients from 1 to 0.4 and southbound from 1% to level, number of curves 6, and maximum curvature from 7° to 3° and the total curvature by 309° 15'. The diversion at mileage 81 is 1,300 ft. long, and reduces the distance 50 ft., curvature 58° and the maximum curve from 6° to 2°. As this work was not completed in 1916, it would appear likely that it will be proceeded with during this year out of the votes made. This work is part of the general plan for the revision of the entire line between North Bay and Liskeard, in order to make the standard uniform throughout the whole distance to Cochrane.

The Lethbridge, Alta, Board of Trade is asking the Canadian Pacific Ry. to open a down town ticket office.

Traffic Orders by the Board of Railway Commissioners.

196
Canadian Northern Passenger Tariff.
25973. Mar. 27. Approving application of Canadian Northern Ry., under sec. 331 of the Railway Act, for approval of its Standard Passenger Tariff, C. R. C. no. W-1422, showing a rate of 4c a mile on branch lines in British Columbia.

Interchange Tracks at Belleville.
25980. Mar. 30. The application of City of Belleville for an order directing the Canadian Pacific and Grand Trunk Railways to establish interswitching facilities between their respective railways in Belleville. It is ordered that the said railways be required to provide interchange tracks on Pinnacle St., in Belleville, as shown on the plan filed by the C. P. R., that company to construct the tracks at its own expense; and the work to be completed by May 1. That no cars be allowed to stand on either of the interchange tracks on the highway; and that the travelled portion of the highway from 10 ft. south of the most southerly track to 10 ft. north of the most northerly track of the interchange tracks on Pinnacle St., be maintained by the C. P. R. Company in good condition for teaming across the tracks. That where traffic is between Belleville and a shipping point or destination common to the said railway companies, or any two of them, where interswitching facilities are provided, the company upon whose line, including private sidings tributary thereto, the traffic is loaded, be entitled to the line haul and the privilege of effecting the required delivery on the line of the other company by means of interswitching at destination; provided that the said company can afford facilities and privileges equal to those of the competing carrier at no greater charge.

Transfer Track at Frobisher, Sask.
25992. April 4. Re application of C. P. R. for an order directing the Grand Trunk Pacific Ry to pay a portion of the cost of the land acquired from the C.P.R. Natural Resources Department for the construction of a transfer track between the Canadian Pacific and Grand Trunk Pacific Railways at Frobisher, Sask., required to be constructed under order 22244, July 21, 1914. Upon hearing the application at Winnipeg, June 12, 1916, and reading the written submissions filed on behalf of the companies, and applying the principle laid down by the board in the case of the G.T.R. against the C.P.R. (Junction Cut, Hamilton), B.R.C. Ruling, Vol. 5, 294, that lands not only not put to an immediate railway use, but as the board finds will not reasonably and probably be required for such purposes by the senior company, should be dealt with as the lands of a private individual. It is ordered that the Grand Trunk Pacific Ry. be required to pay one-half the cost of the land acquired from the C.P.R. Natural Resources Department for the construction of the transfer track between the said railways and Frobisher.

Canadian Northern Lake and Rail Rates.

26008. April 12. The complaint of J. P. H. Stevenson, Toronto, against the refusal of the Canadian Northern Ry. to apply from Toronto the lake and rail rates published in its tariff C.R.C. no. E-771 from points east of Toronto. It is ordered that the lake and rail rates published in the said tariff applying from points on the C. N. R. east of Toronto, via Toronto and lake lines to Port Arthur and thence via C. N. R. to western points,

cannot be exceeded from Toronto, via the said lake and rail route to the same destinations. And it is ordered that the C. N. R. publish and file forthwith a tariff showing such rates from Toronto, via the said lake and rail route, to points on its railway west of Port Arthur, Ont.

C.P.R. Ores and Concentrates Rates.

26026. April 18. Re complaint of British Columbia Mining Association against increased rates on ores and concentrates published in C.P.R. Tariff C.R.C. no. W-2168, to take effect Aug. 1, 1916, from points of shipment in British Columbia; and order 25211, July 27, 1916, suspending the said increased rates until further order. Upon the report and recommendation of the Board's Chief Traffic Officer, no objections having been filed by the complaint, it is ordered that order 25211 be rescinded.

Interswitching Charges at Espanola.

26034. April 16. Re complaints of P. R. and Spanish River Pulp and Paper Mills against cancellation of interswitching rate of \$1.50 a car at Espanola, published in Algoma Eastern Ry. Tariff, C. R. C. no. 73. It is ordered that the complaints be dismissed; and the Algoma Eastern Ry. is hereby granted leave to charge the interswitching rate of 1c per 100 lb shown in its tariff C.R.C. 169, from effective date of said tariff, viz., Feb. 15, 1917.

Joint Commodity Rates on Hay and Straw.

26035. April 17. Re complaint of Montreal Board of Trade against proposed cancellation by the Canadian Pacific and Grand Trunk Railways of joint commodity rates on hay and straw, car loads, from stations in Ontario and Quebec to points in the Eastern United States. It is ordered that Supplement 1 to G. T. R. Tariff C.R.C. no. E-3304 and Supplement 2 to C. P. R. Tariff C.R.C. no. E-2931, issued to become effective May 1, be suspended.

C.P.R. Rates on Veneer Lumber.

General Order 185. Mar. 30. Re complaint of Guelph Patent Cask Co., of Scotstown, Que., against rates charged on thin or veneer lumber, it is ordered that the classification of veneer, as it appears in item 2 at pg. 133 of Canadian Freight Classification 16, be amended, by a supplement to the classification, by restricting the 5th class rating to veneer not exceeding 1/16 in. in thickness, and adding the 7th class rating for thickness exceeding 1/16 in. and not exceeding 1/8 in., carloads in each case.

C. P. R. Minimum Weights on Grain.

General order 186. April 4. The complaints of Dominion Millers' Association and Toronto Board of Trade against increased carload minimum weights on grain and grain products for domestic consumption published by the railway companies to take effect April 2, 1917, in the following schedules, viz.: C.P.R.—Supplement 35 to C.R.C. no. E. 1196; supplement 47 to C.R.C. no. E.2480; supplement 41 to C.R.C. no. E. 2715; supplement 8 to C.R.C. no. E.2907; supplement 7 to C.R.C. no. E. 3120. G. T. R.—Supplement 25 to C.R.C. no. E. 1087; supplement 42 to C.R.C. no. E. 2566; supplement 5 to C.R.C. no. E. 3041; supplement 7 to C.R.C. no. E. 3289, together with similar schedules published and filed by other railway companies. It is ordered (1) That, excepting flour, the complaints against the minimum weights be dismissed.

(2) That the proposed minimum weight of 50,000 lb. a car for flour when loaded in cars of the capacity of 60,000 lb. or 70,000 lb. be disallowed. (3) That the complaints against the minimum weights for flour when loaded in cars of the capacity of 80,000 lb. or 100,000 lb. be dismissed. (4) That the railway companies be permitted to increase the minimum weight for flour to 45,000 lb. a car, when loaded in cars of the capacity of 60,000 or 70,000 lb. That the minimum weight authorized by clause 4 hereof, also the minimum weights for flour in cars of greater capacity and for other grain products, be not made effective before April 30, 1917. That should the railway company, for its own convenience, furnish a larger capacity car, in lieu of a car of 60,000 or 70,000 lb. capacity required by the shipper, the minimum weight shall be that for the car so required, provided that the weight actually loaded does not exceed the maximum load for the type of car so required.

Rail and Water Rates Suspended.

General order 187. April 12. Re complaints of the boards of trade of Vancouver, Edmonton, and Winnipeg, the Saskatchewan Branch of the Retail Merchants Association of Canada, the Montreal Board of Trade and the Canadian Manufacturers Association, against the proposed increase in the rail and water rates between Eastern and Western Canada. It is ordered that the through rail and water class rates applying between Eastern and Western Canada, and the through rail and water commodity rates from Eastern to Western Canada, via Port Arthur, Fort William, or Westfort; also the rail and water commodity rates from Eastern Canada to Port Arthur, Fort William or Westfort, for furtherance, named in Tariffs C.R.C. 1 and 2, published by G. C. Ransom, agent, to become effective April 23, be suspended, pending a hearing by the board. And it is further ordered that the through rail and water class rates, applying between Eastern and Western Canada, and the through rail and water commodity rates from Eastern to Western Canada, via Port Arthur, Fort William or Westfort; also the rail and water commodity rates to Port Arthur, Fort William or Westfort, Ont., for furtherance, in effect immediately prior to the close of navigation in 1916, be restored and continued in effect until further order.

New York Central Rd. Cutoff.—A reduction of two to five days on freight shipments between New York, New England, and the west, together with relief of freight congestion at various points and provision for growth of commerce for many years, is the promised result of the N.Y.C.R.'s Castleton cutoff. After ten years of planning the road has reached the point of readiness for construction. The new cutoff, 20 miles long, will double the N.Y.C.R.'s freight capacity and nearly double the passenger capacity. The bridge to be thrown across the Hudson two miles south of Castleton, N.Y., which will cost \$5,000,000, must be completed by 1920. The whole project involves the expenditure of \$20,000,000.

Section Men's Wages.—The Michigan Central Rd. has increased the wages of section men on its Canadian division from \$1.90 and \$1.95 to \$2.10 and \$2.25 a day, the larger amount being for men in cities and large towns.

Electric Railway Department

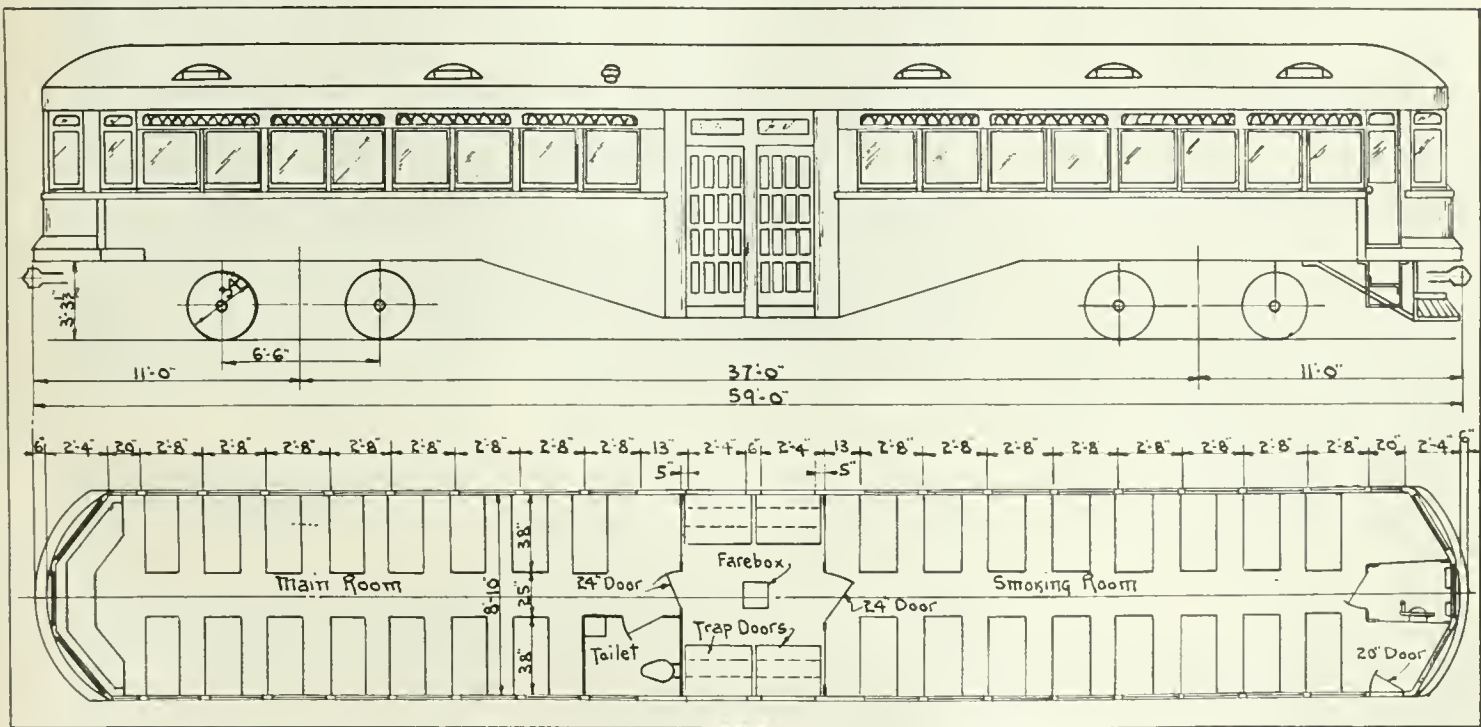

The Toronto Suburban Railway's Line to Guelph Opened.

The official inspection of the extension of the Toronto Suburban Ry. from Lambton to Guelph, by the Ontario Railway and Municipal Board, took place April 12. A car was run through from Lambton on the previous day and the official party joined it at Guelph. The car left Guelph about 10 a.m., April 12, and arrived at Lambton about 2 p.m. The party included A. B. Ingram, Deputy Chairman, and H. W. Middlemist, Chief Engineer, Ontario Railway and Municipal Board. Lt. Col. G. C. Royce, General Manager, H. T. Hazen, M.Can.Soc.C.E., Chief Engineer, E. T. Wilkie and T. Malm of the Toronto Suburban Ry.'s engineering staff. A. F.

and paralleling the C.P.R. to Cooksville station, where it crosses Dundas St., and turns northwesterly, proceeding in almost a straight line to Meadowvale, crossing the Credit River and passing under the C.P.R. near Churchville, thence proceeding through Huttonville and Norval to Georgetown. From the latter place the line parallels the G.T.R. to Acton and runs through Eden Mills nearly direct to Guelph. Surveys for the extension were completed to Georgetown, 25.5 miles, in 1911, and through to Guelph and Berlin in the following year. Construction was started in July, 1912, and grading was completed in 1913, but no track was laid

tain waiting, baggage and express rooms and dispatching offices, providing railway station facilities.

The Lambton car barn, which was fully described and illustrated in Canadian Railway and Marine World for May, 1916, consists of inspection, repair, machine, paint, and blacksmith shops, boiler room, coal store and men's lavatory, in addition to the administrative offices, the whole occupying a space 184½ x 128 ft. The repair shop has three tracks and the inspection shop four tracks, each to accommodate two cars. The machine shop is equipped with all the necessary tools for the repair and upkeep of the equip-

Centre Entrance Interurban Car, Toronto Suburban Railway.

Stewart, M.Can.Soc.C.E., Chief Engineer, Eastern Lines, Canadian Northern Ry., and Ewen Mackenzie, General Contractor for the line.

A temporary service was commenced over the line, April 14, two cars being operated, each making a round trip daily, except Sunday. It is expected that a complete service will be put on during May, but the company has to a certain extent been handicapped owing to a fire which destroyed a number of cars intended for this service, at the Preston Car and Coach Co.'s works, a few weeks ago.

This extension, which is 48.29 miles long, starts from Lambton, the end of the original line, and running through Lambton Park, crosses the Humber River by a trestle and girder bridge, a little south of the C.P.R., and following the Toronto Niagara Power Co.'s right of way for a short distance, it swerves to the south in order to curve under the C.P.R. tracks at the crossing of Mimico Creek. The location is then practically parallel with Dundas St., partly south and partly north through Summerville and Dixie, turning south again a little west of Dixie station,

until 1914, when 41.50 miles were laid westerly from Islington, the remaining mileage westerly to Guelph and easterly from Islington to Lambton being laid in 1915. The line is, for the most part laid on private right of way, and is of standard gauge, single track with turnouts, and the rail used is 60 lb.

The overhead equipment work is of the catenary suspension type, and power is received from the Toronto Niagara Power Co.'s line at 25,000 volts, a.c. 3 phase, 25 cycle and stepped down and passed through 500 k.w. rotary converters which deliver it to the line at 1,500 volts d.c. There are three substations on the line, one each at Islington, Georgetown and Guelph, the last mentioned being at the corner of Dundas and Bay Sts. The Georgetown station has 1,000 k.w. capacity, in two 500 k.w. units, while each of the other two have a single 500 k.w. unit, with provision for the addition of a similar unit in the future. The three stations are brick and concrete construction. The Islington station is provided with living accommodation for the operator and the Georgetown and Guelph stations con-

ment. The boiler house is equipped with a 75 h.p. boiler of the locomotive type and the coal storage is conveniently arranged for handling coal direct from the tracks. The administrative offices are arranged over the store and lavatory, and consist of five offices with a public waiting space. The buildings are heated by a low pressure vacuum steam heating system for about 4,500 sq. ft. of radiation.

The cars, probably the first of this type to be operated on suburban service in Canada, with the possible exception of some on the British Columbia Electric Ry., are of the centre entrance type. The principal dimensions are:

- Length over buffers 59 ft.
- Length over ends 58 ft.
- Width over steel sheathing 8 ft. 10 in.
- Width overall 9 ft.
- Height from top of rail to underside of side sill at bolster 3 ft. 2½ in.
- Height from rail to top of first step, tread 1 ft. 4¼ in.
- Height of step risers 10½ in.

The car is divided into two sections, the forward compartment being for smokers and the rear compartment for general use, including lavatory accommodation. They are provided for through ser-

vice and are arranged for single end service only. The design of the steel framing presents a striking feature in the omission of continuous centre sills between the buffers. Although this is a novelty in interurban service, it conforms to the most modern practice in the design of side girder steel cars where light weight is imperative and single end operation desired. The interior finish is cherry, with smooth flat surfaces as far as possible; headlining throughout is of three ply poplar veneer, all body sash are of the raising type and single storm sash are to be fitted for the side windows. The centre window in the front vestibule is in two parts, the upper part made to drop with provision for holding it at different heights. The two corner windows in each end are made to drop and are not provided with cross bars. Five automatic ventilators are provided in each compartment and a globe ventilator in the lavatory. Each car is equipped with 31 walk-over seats, and one circular seat in two sections in the rear of the general compartment. The smoking compartment has low backed seats upholstered in green pantasote, and the general compartment has high backed seats with head roll upholstered in green plush. The trucks are 6½ ft. wheel base with 34 in. rolled steel wheels, M.C.B. axle journals 4¼ by 8 in. Ten of these cars were ordered from the Preston Car and Coach Co., two have been delivered and three were destroyed by fire at the car shops a few weeks ago. Two other cars have also been ordered, to be built at the Toronto Ry. shops, of a type similar to those used on the Toronto Suburban Ry. between West Toronto and Weston, for operation between Lambton and Cooksville. The centre entrance type of cars was fully described and illustrated in Canadian Railway and Marine World for March, 1916.

London Street Railway Employes Wages.

The London St. Ry. Co.'s conductors and motormen organized recently as a division of the Amalgamated Association of Street Electric Railway Employes of America, and followed that up by asking recognition of the union, and for a very large increase in wages, viz.: for from 30c to 35c an hour, according to term of service, against from 21c to 26c, which they were then getting. After negotiations between a committee of the employes, regardless of whether they were members of the union or not, and the company's officials, an all round increase of 2c an hour was agreed on from April 1, 1917, to May 1, 1918, and from year to year thereafter unless changes by mutual consent. Following is a comparison of the old and new scale:

	Old Scale.	New Scale.
While on spare list	21c	23c
Remainder of first year in service	23c	25c
Second year	24c	26c
Third year	25c	27c
After third year	26c	28c

Conductors or motormen working snow ploughs or sweepers, or training new men, to be paid 2c an hour extra when so engaged.

The following are some of the principal provisions in the agreement. The company will not object to any of its employes joining the Amalgamated Association, etc. The company will meet any committee of its employes at any time, whether they are the properly accredited

officers of the association or not, such committees to consist exclusively of the company's employes. Conductors or motormen who may be suspended, or discharged, shall have the right to have their cases taken up by a committee or employes. Seniority in the service shall be given, so that conductors and motormen may select their runs. The company will pay half cost of uniforms, the same to be obtained from the Superintendent. The company will take immediate steps to provide lavatory accommodation on the respective lines. Each conductor to be supplied with \$15 change.

Winnipeg Electric Railway Protests Against Jitney Competition.

Wilfrid Phillips, General Manager, Winnipeg Electric Ry., has written Winnipeg's City Clerk recently as follows: "I am instructed by the directors of the company to draw your attention to our communication addressed to you on the subject of 'Jitneys' on May 21, 1915, and to again point out to you the unfair treatment which we are being subjected to by the city council permitting and encouraging jitneys to operate practically without regulation and in unrestricted competition with our company.

"When the company entered into the contract authorized by bylaw 543 it assumed very onerous burdens of taxation and otherwise, and was limited as to the rate of fares collected, in consideration of being given exclusive rights to carry passengers upon the streets of the city. The company contends that the action of the city in permitting and encouraging jitney competition is in direct breach of that contract. The company in the last two years (being the years of jitney competition) paid to the city approximately \$545,747.92 for general taxes, percentage of gross revenue and pavement charges. During these years it has also cost the company \$20,000 annually for keeping its tracks clear of snow, thus affording a clean road for the jitneys, and also a car tax of \$20 a car, amounting to \$12,920. These are some of the amounts which the company has to pay for the privilege of carrying on the business of carrying passengers over the streets of Winnipeg at fixed fares, and on the other hand the jitneys are allowed free and unlimited competition upon payment of the sum of \$20 a year per car. The company is at a loss to understand why the council objected to the legislation proposed by the Province of Manitoba to bring the jitneys under the operation of the Public Utilities Commission. They are a public utility in the ordinary sense of the word, just as much as the street railway, and the intention of that act was that all public utilities should be under the jurisdiction of the commission. In view of all that has taken place the company has concluded, and it is justified in concluding, that the city is encouraging the jitney competition and seeks to financially embarrass this company.

"I am, therefore, instructed by the directors to notify the city that as this unfair competition is being encouraged by the city the company must take a firm stand to enforce its rights. Unless the council takes immediate steps to carry out its part of the contract, the company will be obliged to consider refusing to pay any further sums as percentages of gross revenue, as taxes on its cars, or as pavement charges, and in any event will insist that the city reimburse the com-

pany the amount lost through jitney competition during the period this competition has been permitted by the city. This loss amounts to at least \$1,000,000.

"The company has always provided for the citizens of Winnipeg a first class, efficient street railway system, and one that ranks high with other systems on this continent. The direct result of permitting the jitney competition to continue will be to so financially embarrass the company that it will not be able to keep its system efficient and up to date, and will not be able, due to inability to procure additional capital, to make extensions to the system generally, and will not be able to provide the citizens of Winnipeg with efficient and up to date transportation which it has always heretofore done."

The city bylaw granting the company its franchise contains the following clause: "The city will not during the currency of this agreement grant any permit or franchise to any other operation of a street car system in the city or in any way authorize the construction of a street railway system by any other person or persons or corporation. No other street railway company than the applicants shall be granted hereinafter by the council permission to use electricity or any other kind of motive power except animal, but in case the applicants refuse or neglect to build or operate any line or part of the line provided for in this bylaw or subsequently required by the council to be built and operated under the conditions aforesaid, the city may grant to any other company or party the right to build and operate such line, crossing where necessary, but not on the same street paralleling the lines of the applicant, and to use electricity as the motive power thereon."

Mainly About Electric Railway People.

Bion J. Arnold, Chicago, Ill., has been engaged to investigate the Harrisburg Railway Co.'s operating conditions.

Ernest Rogers has been appointed chief clerk, British Columbia Electric Ry., Vancouver, B.C., vice W. Saville, promoted.

I. L. Matthews has been elected chairman of the Public Utilities Commission, Port Arthur, Ont., vice A. E. Wideman, resigned.

F. C. McMath, President, Canadian Bridge Co., Walkerville, Ont., has been appointed a member of the Detroit, Mich. appointed a member of the Detroit, Mich., St. Ry. Commission.

W. Saville heretofore chief clerk, has been appointed Comptroller, British Columbia Electric Ry., Vancouver, B.C., vice H. W. Dyson resigned. He has been in the company's service since May, 1911, and prior to that, was in transportation service in England for several years.

B. Greenway, Engineer Maintenance of Way, Regina Municipal Ry., has resigned. He is reported to have been appointed Superintendent of Grand Forks St. Ry., Grand Forks, N.D. Prior to going to Regina, Mr. Greenway was Superintendent of the Brandon, Man., Municipal Ry.

H. W. Dyson has resigned as Comptroller, British Columbia Electric Ry., Vancouver, B.C., to become General Manager, Yorkshire and Canadian Trust, Ltd. He entered the company's service in 1910 as Assistant Comptroller, and succeeded G. Kidd as Comptroller on the latter's promotion to General Manager.

Electric Locomotives, Montreal Tramways Co.

The Montreal Tramways Co. is adding to its equipment two electric locomotives, one of which, built at its Youville shops, has been placed in service and the other is being built in the same shops. The main constructional features are as follows:

The underframe, side and end sills are of heavy 12 in. channel, with built up plate bolsters, and a through centre sill of 2½ ft. x 6 in. I-beams. The I beams project through the end sill, and are boxed in to provide a pocket for the coupler head. The framing members are tied to-

Electric Locomotive, Montreal Tramways Company

gether, and the whole space between the sills is filled with reinforced concrete, which thus forms a floor to which the body is bolted. Openings are left in the concrete for pipes and wiring to pass through.

The cab is of reinforced wood construction, with a floor raised 2 in. off the concrete, leaving space for wiring and piping. The two sheet steel hoods cover details of electrical and air brake equipment. Hinged covers are provided on these hoods for inspection of equipment and ventilation of the rheostats. Small covers are also provided for filling the sand boxes, which are placed directly over the bolsters and are provided with air sand valves, for distribution to the wheels. Provision is made for the sand outlet to follow the wheels around curves.

The trucks are the company's standard freight car type, with 6½ ft. wheel base. The electrical equipment consists of 4 Westinghouse 112-B motors, with 2 K-14 controllers, fitted with a line switch. A commutating switch is arranged so that two running speeds can be obtained. This makes the operation of the locomotive very flexible, as it secures the advantage of large draw bar pull, with low power consumption, at low speed, for shunting, and a fairly high speed for main line operation. The air brakes are standard Westinghouse type A.M.M., designed for train operation.

One of these locomotives has been placed on the lines in the east end of Montreal, where quite a large traffic from the harbor and the Canadian Northern Ry. to various manufacturing plants is being handled. The other will be placed on the north end lines, to handle cars from the C.P.R. to suburban points.

Headlights for Ontario Electric Railway Cars.

A bill introduced at the Ontario Legislature's recent session by G. H. Gooderham, M.L.A. for South Toronto, was slightly amended and passed as follows:

1. The Ontario Railway Act is amended by adding the following as section 107a:

107a.—(1) It shall be unlawful to use on a car of a street railway or of a railway operated by electricity on the highway any lighted device of over 4 candle power equipped with a reflector unless the same shall be so designed, deflected or arranged that no portion of the beam

of reflected light when measured 75 ft. or more ahead of the lamp shall rise above 42 in. from the level surface on which the car stands.

(3) Subsections 1 and 2 shall not come into force until a day to be named by the Lieutenant Governor by his proclamation.

Interurban Motors Limited.

Canadian Railway and Marine World for April gave some information about the formation of a company with the above title, to carry passengers and freight in connection with the London & Lake Erie Ry. & Transportation Co.'s electric railway, which runs from London to St. Thomas, in fact, to provide feeders for that line. Interurban Motors, Ltd., has its headquarters at St. Thomas, Ont., and an authorized capital of \$100,000, the officers being: President, W. H. Moody, St. Thomas; Vice President, W. H. Finch, Aylmer; Secretary-Treasurer, W. H. Jolly, St. Thomas; Mechanical Director, J. T. Webster, St. Thomas; and Managing Director, W. N. Warburton, London, the latter being also General Manager, Secretary-Treasurer and Purchasing Agent of the London & Lake Erie Ry. & Transportation Co. Reo motor cars, made at Lansing, Mich., each with capacity for 26 passengers besides the motorman and conductor, have been bought. The first service, which will be started about May 1, will be between St. Thomas and Aylmer, and will be carried on by 2 passenger cars and 2 freight cars, the latter each of 3 tons capacity. Later on services will be established between Union and Sparta, and between Lambeth and Delaware.

The special commission appointed by the Quebec Legislature to draw up a new franchise for the Montreal Tramways Co. has met from time to time during the past month. Delegations have attended the several meetings presenting the views of various public bodies, and giving suggestions as to what they thought necessary to relieve congestion in the way of

Electric Locomotive, Showing Dimensions, Montreal Tramways Company.

(2) For every contravention of subsection 1 the person offending shall incur a penalty of not less than \$10 or more than \$100 recoverable under The Ontario Summary Convictions Act.

new lines, etc. The commissioners left Montreal Mar. 27, on a trip to Detroit, Cleveland and other cities in the United States to study the electric railway situation there, returning to Montreal April 5.

The London and Lake Erie Ry. and Transportation Co's Financial Position, Etc.

This railway which was built by the South Western Traction Co., extends from London to Port Stanley, Ont., by a slightly circuitous route of 28 miles, passing on its way through a section of St. Thomas, where connection is made with the municipal electric railway there. The railway showed a loss of \$832 for the year ended June 30, 1915. Since the re-opening of the London and Port Stanley Ry. as an electric line, the company's revenue is said to have declined considerably, one of the company's officials being reported to have said that the L. and L. E. Ry. and T. Co. was being put out of business by the L. and P. S. Ry. competition.

P. Pooock, Vice Chairman of the London Ry. Commission, is reported to have said: "If we can buy the L. and L. E. Ry. and T. Co. for the price which we have offered for it, I think its purchase would be a sound business proposition. If the road goes out of business it would be a serious loss to the city, as it taps a rich district from which much business comes to the city. He added that he did not think any attempt would be made to use the L. & L. E. R. & T. Co.'s line as a substitute for double tracking the L. & P. S. R. It would be run rather, he stated, as a separate branch out of London, and that he believed that the L. & L. E. R. & T. Co.'s line holds great possibilities in the extension of the hydro radial scheme.

A report states that the difference between the price asked by the company and that offered by the London Railway Commission is about \$42,000; the company offering to sell at 35c on the dollar and the Commission offering to pay 30c. It is stated that in the event of the commission purchasing the line the engineers recommend the taking up of the line between St. Thomas and Port Stanley, and the substitution of a straight piece of line for the existing track between London and Talbotville.

A director of the company is reported to have made the following statement with respect to negotiations that have taken place with the London Railway Commission, or the Hydro Electric Power Commission of Ontario respecting the purchase of the line:—

"The price at which the directors offered the railway was 60c on the dollar of the bonded indebtedness, which is \$840,000. The purchase price would be \$504,000. Sir Adam Beck did not wish the Commission to assume the whole payment, which resulted in discussion of other means by which the sale could be effected. It was proposed that the commission should pay 40%, or \$336,000, that Westminster and Southwold Townships should pay 5%, or \$42,000 each, and that an application should be made to the Ontario Government for a grant to the City of London, in view of the great loss sustained by the city through the London & Port Stanley Ry. The city had prior to 1856 invested about \$1,000,000 and received no return whatever until 1872, when Sir John Carling negotiated a lease to the Great Western Ry. From 1872 until 1914 it did not pay half a cent. on the dollar. The debt carried by the city then represented over \$2,000,000. In 1914 it was electrified at an expense exceeding another \$1,000,000. The City of London has borne the whole load and Western Ontario has derived the benefit. When built it was a colonization road running

south to the lake. London should have received recognition for this expenditure when the municipal loan fund was distributed in 1873, but did not. It was agreed that if such an application was successful the London & Lake Erie should be paid a further 10%, making in all 60c on the dollar, or \$504,000. Less than that has not been discussed by the directors in Toronto, who hold the majority of the bonds. Sir Adam Beck made an offer of 35%, being 5% less than the commission's share would be if the price on 60% was distributed between it and the townships and the Ontario Government as suggested."

A proposition for the sale of the St. Thomas—Port Stanley section of the line, about 8 miles, was laid before the St. Thomas City Council, April 11. The price asked for that section of the line, together with 4 cars is \$168,000, which represents 60% on one third of the company's bonded indebtedness. It is suggested that the operation of this 8 miles of railway in conjunction with the city's own electric railway, which showed a deficit of \$7,327 for the year ended June 30, 1915, would pay expenses. The matter was taken into consideration and a joint meeting to discuss it was arranged.

Jitney Traffic Notes.

Residents of West Kildonan, Man., have organized a jitney service to run on Main St. from the Winnipeg city limits to the Kildonan Park, with a return fare of 5c.

The discussion during the passage through the Alberta Legislature of the City of Edmonton's bill, which among other things gives power to regulate jitney traffic, it was stated that it was necessary for the financial security of the municipal electric railway that the city should be able to control the traffic; and that the jitneys take the cream off the traffic during fine weather and did not go out on stormy days.

West Kildonan and Assiniboia municipalities, adjoining Winnipeg, are charging a license fee for jitneys operating in the municipalities. The City of Winnipeg owns and maintains two public parks, one in each of these municipalities, the privileges of which are enjoyed by the residents. The Winnipeg Parks Board is trying to arrange so that jitneys running to the parks from the city will not have to pay the extra license fee.

The New Westminster, B.C., City Council proposed to pass a bylaw to subsidize jitneys running from the city to points in the Fraser Valley the difference between the old license fee and the new, which was increased this year to \$15, so that jitneys plying to and from Vancouver might be forced to contribute a little more to the upkeep of the streets, and it was felt that this fee might be too high for the cars running to Fraser Valley points. The City Solicitor advised the council that it has no authority to do anything of the kind.

The Winnipeg City Council has passed a bylaw providing that no jitney shall use a card with the legend "Anywhere." The driver must in future carry a card showing his tariff rates. These cards must also show the name and address of the owner and the provincial license number. In case of a dispute the driver must give one of these cards to the passenger objecting. The driver must also inform his fare in advance what his charges will be when the run is off his regular route.

Fares on regular routes are 5c between 6 a.m. and 12 midnight, and 10c between midnight and 6 a.m.

Alleged Contempt of Court by the Toronto Railway's General Manager.

Under a judgment obtained on Jan. 15, 1903, the Toronto Ry. is required to supply the City of Toronto with a statement of values of its property, and the city claims that this has not been done according to the judgment. Action was taken some time ago, by the city, and the committal of R. J. Fleming, General Manager of the company to jail for contempt of court, for not supplying the information, as directed, was asked. This was granted, and an order made directing the sheriff to take him into custody, after April 6, and that he be imprisoned until he had purged his contempt. The case was taken to the Appellate Division of the Supreme Court of Ontario, on the grounds that the court had no jurisdiction, the matter being purely one for the Ontario Railway and Municipal Board to decide, and also that it was not proper to commit the General Manager for the company's disobedience of the court's order.

In allowing the appeal, Apr. 3, Chief Justice Meredith stated that the Ontario Railway and Municipal Board had no jurisdiction, exclusive or otherwise, in the matter, but that no case had been made out on the material presented, for the committal of the General Manager. There was nothing in the evidence to show that he had anything to do with the compilation or furnishing of the information desired, except the mere statement that he was General Manager of the company, but, if it were shown that the disobedience of a court's order by a corporation was an act of its manager, then, no doubt, a committal order might properly be made. The Chief Justice expressed surprise that the city had not taken the simple course of moving against the company by way of asking for sequestration, or a fine, and allowed the appeal, without prejudice to the city's right to renew its application upon further material.

On April 10, the city again moved to have R. J. Fleming, General Manager, Toronto Ry., committed to the common jail for the County of York because the company neglected and refused to comply with an order made on Jan. 14, 1903, by Mr. Justice Ferguson, whereby he ordered the company to furnish the city with the statement referred to in the agreement between the city and the company, showing what details, if any, as might be settled by the senior judge of York County, or in the alternative for an order that a writ of sequestration might issue directed to certain commissioners to be named, to sequester the property and effects of the company for contempt of Mr. Justice Ferguson, or in the alternative for an order that the company may be fined, or such other order as the court may deem meet.

The British Columbia Electric Ry. has renamed its station, Eburne, on its Lulu Island line, Marpole, after R. Marpole, General Executive Assistant, C.P.R., Vancouver.

London and Port Stanley Ry. employes met in London, Ont., April 5 to perfect their organization in connection with the Amalgamated Association of Street and Electric Railway Employes of America.

Rebuilding Long Broom Sweepers.

The Levis County Ry. has rebuilt two of its long broom snow sweepers recently. They are 14 years old and have seen probably the most severe service of any in existence, in some years being in continuous service for 6 weeks at a time without a day's break. The weather conditions in Levis are about the worst to contend with on the American continent. The summer, although short, is often exceedingly hot, and the winter long, with severe frosts and an average of 110 to 120 in. of snow. The district served by the company is fairly open, one-third on

tions was approximately \$250 each car. The whole of the work was carried out under the direction of H. E. Weyman, Master Mechanic, and by order of A. K. MacCarthy, Manager.

The Edmonton Radial Railway Deficits, Etc.

The Edmonton Radial Ry., which is owned by the City of Edmonton, Alta., was opened for traffic Nov. 9, 1908, with a two car service along Jasper St. and Norwood Boulevard, there being then 2 miles of double track and 4 miles of sin-

sweepers. During 1916 the car mileage was 2,031,490; number of passengers carried 10,564,799; and gross receipts \$520,255.40. In order to meet operating charges and capital charges, which amounted to \$146,970.19, the city's general funds were called upon to provide something over \$120,000. The total deficiency, which has had to be met by the tax payers to the end of 1916 is \$700,000. The total debenture debt for the railway at the end of 1916 was \$3,074,856.20, against which there is a balance at the credit of the sinking fund of \$366,698.82. The interest charges are \$146,970.69, and the fixed charges for repayment of principal are \$86,140.65.

These facts and figures have been brought out in the course of the controversy now going on in the city as to the prospects of the railway. It is pointed out that the cost of operation was reduced during 1916 from 21.5c a car mile to 18.4c, and it is claimed that with continued economical management, and an increased population, the expenses will ultimately be met. Others claim that there has been unfairly charged against the railway, the cost of paying the 4 ft. strip between tracks, and for some time the railway was charged with the entire cost of maintaining this strip. This has now been reduced to 25% of the cost. Power costs over \$100,000 a year, on the present basis.

J. H. Moir, Superintendent, estimates that with an additional 5,000 passengers a day the railway would be self-sustaining. In referring to the question of one-man cars, he says: The era of their general adoption on street railways is not far distant. However, he sees difficulties ahead of the scheme when applied to the Edmonton system, where the basis of traffic is the rush-hour long haul period to the outlying residential points. On some of the lines railway tracks must be crossed, and extra precautions would

300 h.p. rotary snow plough, Levis County Ry., operating in 9 ft. of snow

high ground and two-thirds on low ground, along the south shore of the St. Lawrence River, and all too well situated for snow and storms.

These sweepers had both their exposed ends rotted and broken away, also the ends of the side sills, the end sills and two end crossings, as well as the front body posts, otherwise the main bodies of the cars were in fairly good condition. The reconstruction was so arranged that the main body of the car would be untouched, including the part of the side sills and the crossings which were good, also bearing in mind future depreciation of these parts, so that they can be replaced with steel, when it becomes necessary, with little expense.

All the rotten or damaged parts were removed (some fell out) and a new steel underframe was constructed, so that it could be slid under the body and bolted to it. This steel underframe has side sills of 6 x 6 x 5/8 in. angle, end sills and all crossings of 5 in. I beams. Two 4 in. I beams were inserted between the end sill and crossing, and a 4 in. channel was placed between them to carry the draw bar arrangement. The wheel frame was rivetted. The total weight of the broom gear, draw bars and side wings was thus placed on the steel frame. The frame was then slid under the car body, which was lowered on to it and bolted. Steel angle body corner posts were then erected and riveted and the old remaining side sills, crossings, etc., were braced and connected by 6 in. angle plates. The rest of the car was finished off with the necessary wood. The cost of these altera-

gle track laid. At the end of the first year of operation there were 8 miles of track, with 10 cars in operation. The total car mileage was 253,740, the number of passengers carried was 1,812,746, and the gross earnings were \$80,461.56. At present the system has the following mileage: permanent double track, 34.9 miles; permanent single track, 0.280; temporary double track, 7.6; temporary single track, 9.5; sidings, 0.211; spurs, etc., 1.0; and terminals, Y's and loops, 0.3—a total trackage of 53.9 miles. Of this 29.3 miles were built during 1913, as were also the elaborate car barns at Cromdale, where 60 cars can be accommodated. The rolling stock consists of 79 p.a.v.e. passenger cars, 7 work and street sprinkling cars, and 2 street

have to be taken by means of watchmen. Furthermore, the scramble for cars in the rush hours, owing to the exodus to the outlying portions of the city, already taxes the resources of the two-man cars. In the event of half the present schedule being operated with one-man cars, the saving in wages would not amount to more than \$27,000.

H. W. Dyson, who resigned his position as Comptroller, British Columbia Electric Ry., Vancouver, recently, to become General Manager, Yorkshire & Canadian Trust Co., Ltd., there, went to Vancouver from England in 1910, as assistant to George Kidd, then Comptroller, now General Manager. Mr. Dyson was appointed Comptroller in 1914.

Additional Cars for Montreal Tramways Company.

As stated in Canadian Railway and Marine World for April, the Montreal Tramways Co. has ordered 100 cars to be built in the United States to be operated in pairs, the first car in each pair to be equipped with four motors, and the trailer car to be equipped with two motors. The value of the new equipment is placed at \$1,250,000, and delivery is expected to commence in June. Following are the chief details:

Weight, total	Motor, 43,800 lb.
	Trailer, 36,740 lb.
Capacity	Motor, 42
	Trailer, 45
Bolster centres	Motor, 21 ft.
	Trailer, 21 ft.
Length over bumpers	Motor, 45 ft. 3 in.
	Trailer, 44 ft. 3 in.
Length over vestibule	Motor, 44 ft. 3 in.
	Trailer, 43 ft. 3 in.
Width over all	8 ft. 5 in.
Rail to trolley base	11 ft. 4½ in.
Body	Steel with wood posts.
Interior trim	Cherry.
Headlining	Agasote.
Roof	Arch.
Air brakes	Westinghouse.
Fare boxes	Coleman stationary.
Heaters	Consolidated car.
Lightning arresters	Westinghouse.
Motors	Westinghouse 533-T-4, motor cars, 4; trailers, 2; outside hung.
Control	Westinghouse P.K. multiple.
Couplers	Tomlinson.
Designation signs	Keystone.
Seating upholstery	Rattan.
Trolley retrievers	Keystone.
Trucks, type	76 E.
Wheels	Standard cast iron, 30 in.

The cars will also be equipped with fenders, hand brakes, sanders, heat regulators, etc., and the door signal will be interlocked with the control circuit. The lighting will be by 94 watt lamps with reflectors and automatic compensating device for burned out lamps.

In a recent interview, J. E. Hutcheson, General Manager, stated that the coupling up of single car units into two-car trains is the most effective way to relieve traffic congestion. The factors controlling the transportation of passengers by cars are: speed between stops, number of stops, interference of vehicular and pedestrian traffic, delays at street intersections, time for loading, spacing between car units. The greatest time saving is effected by the use of two-car trains, in the last three mentioned factors. There is no more delay at intersections, two cars can be loaded as quickly as one, and the free roadway is doubled, enabling every motorman to move more quickly between stops. The total power of motors per train is 330 h.p., but 600 h.p. can safely be developed for short periods, and 400 h.p. is necessary to operate on the heavier cross town grades. The air brakes are so designed as to provide a high degree of safety, and so that they can be applied to all the wheels of both cars by either conductor or motorman. In case of the accidental separation of the cars, the brakes are automatically applied. The Westinghouse type P.K. control has the advantage of removing from car platforms all heavy current carrying parts, eliminating controller burnouts and circuit breaker flashes, and giving increased space on the platform by the use of a small master controller, and incidentally reducing the weight of the platforms, less car wiring, greater ease for the motorman properly to manipulate the small master controller, thereby avoiding abuse of the motors, greater ease of application of automatic emergency features on master controllers, etc. The control is especially adapted to meet the requirements of service in congested districts. The doors are interlocked with

the power system, so that the car cannot be started until all doors are closed. All automatic features on the cars are operated from storage batteries so that their normal operation continues if the power is off, or the trolley leaves the wire. The electric heaters are controlled by a thermostat, and an automatic switch is installed to maintain an even heating in the cars.

In addition to the 25 double equipments of type 533 40 h.p. motors equipped with the P.K. control, required for the fore-mentioned cars, the company has ordered 25 P.K. control equipments for use with some motors supplied previously by the Canadian Westinghouse Co.

Nipissing Central Railway Annual Report.

Following are extracts from the annual report of this railway for the year ended Oct. 31, 1916, issued by the Timiskaming and Northern Ontario Ry. Commission, which operates it for the Ontario Government.

Assets.	
Cost of road	\$306,338.12
Cost of equipment	74,290.98
Townsite property, North Cobalt	242,700.20
Working assets	45,383.53
Deferred debit items	2,064.13
Value of franchise	141,383.32
	\$812,160.28
Liabilities.	
Capital stock	\$530,000.00
Advance from T. & N.O.R.	247,639.50
Working liabilities	33,101.35
Deferred credit	4.30
Profit and loss balance	1,415.13
	\$812,160.28
Transportation revenue	\$109,937.34
Non-transportation revenue	1,460.61
Total operating revenue	\$110,397.95
Maintenance of way and structures	\$11,248.74
Maintenance of equipment	4,998.11
Power	18,556.07
Conducting transportation	28,821.55
Traffic	531.40
General and miscellaneous	10,578.76
Total operating expenses	74,734.63
Net operating expenses	\$35,663.32
Other income	499.95
Total income	\$36,163.27
Deductions from income	13,965.82
Net	\$22,197.45

Compared with the year ended Oct. 31, 1915, transportation revenue increased \$3,478.85; and the other than transportation revenue increased \$208.48, while the expenditures increased \$183.17, giving a net increased revenue from operation of \$3,504.16. The "other income" increased \$281.95, making a total increased income of \$3,786.11. The deductions from income, which represent rental paid for leased line, increased \$6,710.84. The "net result" shows \$27.19 less than the previous year. Out of profit and loss \$20,000 was paid to the T. and N. O. Ry. Commission.

Traffic Statistics.	
Passenger car hours	26,785
Passenger car miles	274,241
Total passengers carried	1,439,896
Average daily receipts	\$297.64
Average receipts per car hour—passenger	\$3.55
Average receipts per car mile—passenger, cents	0.347
Earnings per passenger, cents	0.06½

The Board of Railway Commissioners, on April 17, heard complaints of residents of Chambly and St. Hubert and other points complaining of the fares charged and the service given on the Montreal & Southern Counties Ry. The commission will make an investigation into the company's equipment and facilities for handling traffic before making any order.

How Car Fares are Distributed in Winnipeg.

The accompanying diagram was used by the Winnipeg Electric Ry. recently, in one of a series of advertisements which it has been running in Winnipeg papers, with the following reading matter appended:

"Take a look at the circle! It tells an

interesting story, for it represents 4c, or one white car ticket—the average amount paid by Winnipeggers for a car ride. And, further, it tells graphically and truthfully just how we spend that 4c, in order that the people of Winnipeg may be served. The darkened portion is the amount of that 4c which the company earns as profit on its service."

Net	78,510	108,250	167,032

The New Brunswick Power Co., owning the St. John Ry, informed the St. John, N.B., City Council, April 11, that it could not supply 8 workmen's tickets for 25c as requested by the council but that it was considering the propriety of abolishing the sale of 6 tickets for 25c in favor of a straight 5c fare, and of doing away with certain transfer points.

Windsor, Essex & Lake Shore Rapid Ry. Fire.—A fire in the Kingsville, Ont., car barn, on April 25, badly damaged an electric locomotive and three passenger cars, among other things.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—The Brantford, Ont., City Council's estimates committee expect that \$18,314 will be received during the year from the Brantford Municipal Ry.'s operations.

British Columbia Electric Ry.—We are officially advised that the company is not undertaking the construction of any new street car lines at present. It was reported that a mile of new track on the North Burquitlam road, in Burnaby municipality was to be built this year. (Jan., pg. 30.)

Edmonton Radial Ry.—The Mayor of Edmonton, Alta., is reported to have stated recently that the municipal railway's operation in 1916 showed a deficit of \$119,607.35, against \$105,750.73 in 1915.

Lacombe and Blindman Valley Electric Ry.—The Alberta Legislature has authorized the Government to increase its guarantee of the company's bonds from \$7,000 to \$14,000 a mile. The guarantee is for 39.1 miles, and the time for the completion of the work is extended until Dec. 31 next. The grading is practically completed for 35 miles, in the direction of Rimbey, Alta. The additional guarantee is to be held for the completion and equipment of the railway. (April, pg. 155.)

London and Port Stanley Ry.—It is reported that certain property has been acquired for the railway's purposes in St. Thomas, Ont., with a view to the erection of a building, for offices, and station purposes at the north-east corner of Talbot St. (April, pg. 155.)

Moneton Tramways, Electricity and Gas Co.—Negotiations have been resumed between the company and the Moneton, N.B., City Council. As well as with the residents of Sunny Brae and Lewisville, respecting extensions of the company's electric railway. A. B. Coryell, is Superintendent. (Mar., pg. 113.)

The Montreal Tramways Co. is reported to have arranged for re-financing \$7,000,000 of notes which become due April 1. The plan is said to involve the issue of new 6% two year notes for \$3,350,000, the balance being paid in cash. The issue price of the new notes is reported to have been 98.

Peterborough Radial Ry.—The Ontario Legislature has authorized the Peterborough, Ont., City Council to permit its utilities commission to operate the Peterborough Radial Ry. in the event of its being taken over by the city; to issue debentures to pay for the same without first securing the ratepayers' assent and providing that the utilities commission's powers in respect of the railway shall be defined in bylaws to be passed by the council. (April pg. 155.)

Port Arthur Civic Ry.—We are officially advised that the city's public utilities commission is resurfacing about 2,000 ft. of track on Cumberland St. from Arthur to Bay Sts., Port Arthur, Ont. M. M. Inglis, Manager. (Dec. 1916, pg. 502.)

Shawigan Water and Power Co.—The Quebec Legislature last session granted the company power to extend its operations in several directions, but inserted the following section: "Notwithstanding anything in the present act contained the company shall not have the power of constructing, acquiring or operating tramways in the districts of Three Rivers and Quebec, the Island of Montreal, or on

the south shore of the St. Lawrence, or of conducting electricity within the counties of Charlevoix, Levis and Ottawa."

St. John Ry.—The New Brunswick Power Co., owning the St. John Ry., asked the St. John City Council, April 11, for two years extension of time for laying new pavement on Union St., West St. John. This is a work proposed to be done by the council and if it is undertaken the track section will have to be raised. Commissioner Fisher said he did not favor the postponement. The matter will come up for consideration again.

St. Thomas Ry.—A press report states that the City Council proposes to extend its line on Queen and Centre Streets, St. Thomas, Ont.

Saskatoon Municipal Ry.—Extensions are reported to be proposed, together with the purchase of some extra equipment. It is said that \$19,640 has been voted by the city council for this purpose. (Dec., 1916, pg. 502.)

Toronto, Barrie and Orillia Ry.—The Ontario Legislature has refused to grant the company's application for an amendment to its act of incorporation, which would have the effect of extending the time within which it was to be built. The company was originally incorporated in 1910 as the Monarch Ry. Co., the title being changed in 1913. It had power to build a railway from Toronto via Barrie to Orillia. A franchise was obtained for a line in Barrie from the town council and surveys were made for an extension of this line to connect with the C.P.R. at Utopia. No construction has been done. (April, pg. 155.)

Toronto Suburban Ry.—The Ontario Legislature's Committee reported at the recent session that the preamble of the company's bill asking for an extension of time for the building of a number of lines had not been proved and it was ordered that the fees paid, less charges, be permitted. The effect of this is that the authority which the company had to build additional lines has been done away with, and that its lines will consist of those within the City of Toronto, which can be acquired on the expiration of the franchise; the line to Weston and Woodbridge and the newly completed line from Lambton to Guelph. (Feb. pg. 73.)

Transcona Electric Ry.—The bill introduced in the Manitoba Legislature for the incorporation of a company with this title, on coming up for a second reading, met with considerable opposition. The debate was adjourned and was not resumed before the close of the session.

One-Man Cars in Alberta.—An amendment to the Alberta Statute law introduced in the Legislature, April 4, proposed to enact, that in the operation of every street railway or electric railway within the limits of any municipality in the province, every car in its operation shall have a conductor and a motorman. The Lethbridge City Council appeared in opposition, and urged that such legislation would mean an increased charge to the public to maintain the present services. In Lethbridge, it would be necessary to employ at least 10 additional men to comply with the proposed regulation. The amendment, which was asked for in the interests of the labor party, was withdrawn on the Attorney-General's motion.

Electric Railway Notes.

The Ontario Railway and Municipal Board has approved the Gueph Radial Ry.'s standard freight tariff, which became effective April 15.

The British Columbia Electric Ry. employs in Vancouver make a regular monthly contribution from their pay for patriotic purposes. For March it was \$4,800.

The Hamilton St. Ry. according to a press report, proposes to put on cars on certain routes between fixed hours which will run through from point to point, without intermediate stops, in order to relieve traffic on congested lines at busy hours.

London, Eng., street cars and omnibuses are said to have about 2,500 women conductors, nearly half of whom were formerly in domestic service. About a fourth were formerly shop clerks or office workers. One hundred and fifty new women conductors are being employed weekly.

The Independent Labor Party of Hamilton, Ont., passed a resolution April 13, appointing a committee to look into matters relating to the Hamilton, Grimsby, and Beamsville Electric Ry., with a view to asking the city to take it over at one of the periods when it has an option to do so.

The Calgary, Alta., City Council, passed a resolution April 17, declining to endorse a recommendation of the city commissioners that the local union of street railway men be recognized, and directing the commissioners to negotiate an agreement with all the employes of the Municipal Ry. irrespective of any union. The employes of the railway outside the union number, it was stated, 112, being a slight majority of the total number, and they belong to the Calgary Municipal Street Ry. Association.

The Manitoba Legislature has passed an act respecting the examining and licensing of electrical contractors and journeymen electricians. Subsec. 4 of sec. 3 provides that the act does not apply to such work on street railway cars or locomotives or on railway cars or locomotives which are the property of municipal departments or of public service corporations, and where such work is installed by employes under the direction of officers of such municipal departments or public service corporations.

The London Railway Commission has been advised that there is no power under the present laws to assess it for municipal taxation. The railway operates in the cities of London and St. Thomas, the village of Port Stanley and some rural municipalities. As a steam railway provision was made for its taxation, but there is said to be no mention in the act for collecting a business tax on electric railways. Further than this it is claimed that as a municipally owned railway it is exempt from all other municipal taxation.

The Galena Signal Oil Co., Franklin, Pa., announces that G. A. Barnes has been appointed Manager, and F. R. Stakelum, Assistant Manager, of its electric railway department, with offices at Franklin.

Electrolysis.—A paper on a street railway negative return system for the mitigation of electrolysis, by L. A. Herdit and E. G. Burr, was read before the Canadian Society of Civil Engineers, in Montreal, April 19.

Marine Department

Launching of Montreal Transportation Co's Steamship Westmount.

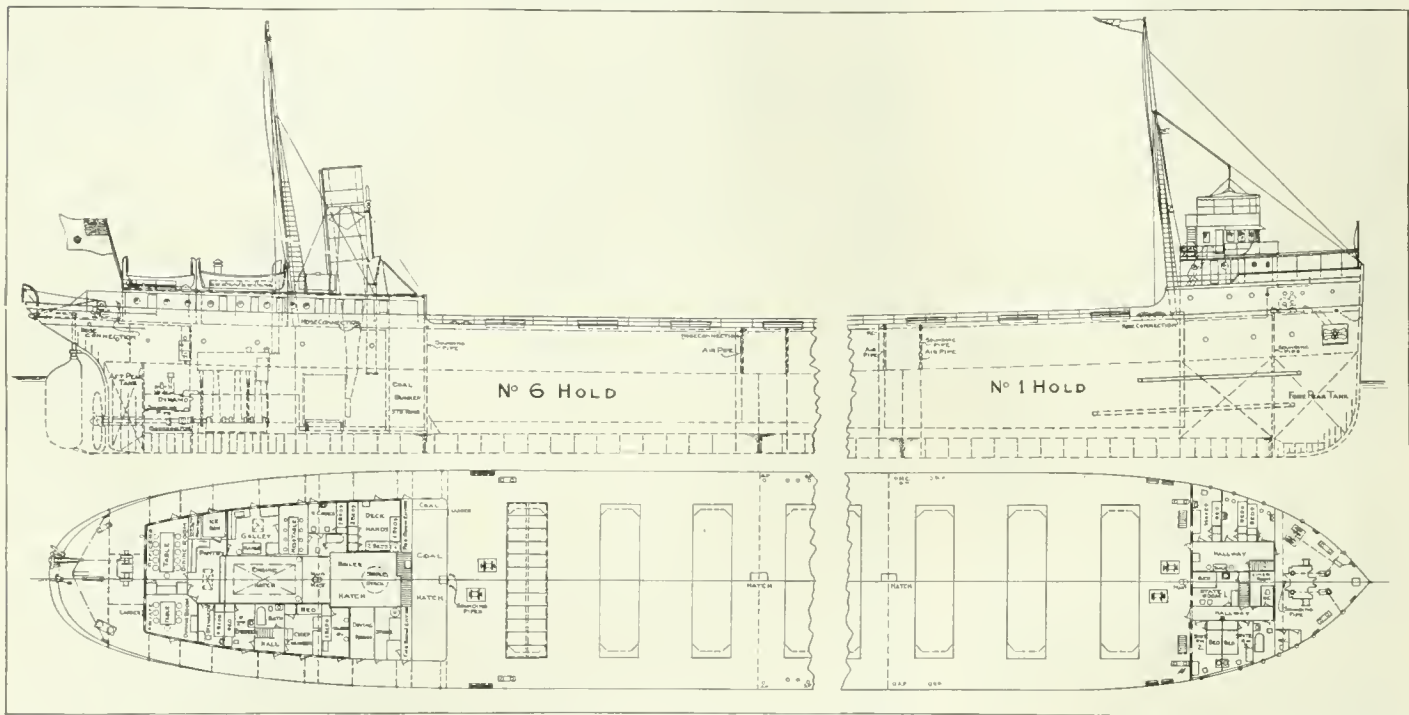

The Montreal Transportation Company's bulk freight steamship, Westmount, was launched at the Collingwood Shipbuilding Co.'s yards, Collingwood, Ont., April 5. Among those on the platform, which had been erected in front of the vessel's bow, were: L. L. Henderson, President, Montreal Transportation Co.; Mrs. Henderson, who christened the vessel; Capt. H. M. McMaster, Marine Superintendent, M. T. Co., Kingston; J. S. Bonar, Tug Superintendent, M. T. Co.; Montreal; E. A. Turner, agent, M. T. Co., Kingston; Capt. S. Hill, appointed master of the vessel; H. B. Smith, President, J. S. Leitch, General Manager, and S. H. Lindsay, Secretary, Collingwood Shipbuilding Co., Mrs. Lindsay, M. McD.

operations being accomplished by the shore plant. There are 16 cargo hatchways, each 38 ft. wide, and 9 ft. long. They are spaced 24 ft. apart, centre to centre, to suit the standard spacing of the loading and unloading devices on shore. Between the hatchways strong arch girders, or web frames, extend right round the sections. By the adoption of these girders, stanchions are dispensed with, and the holds left unobstructed, a necessary feature where coal and ore cargoes are unloaded by clam shell buckets, as is the case on the Great Lakes. For the same reason there are no deckhouses, spars or other obstructions for the length of the cargo holds.

The ordinary transverse bottom and

for water ballast. The remaining bulkheads are a cross bunker screen bulkhead, a screen bulkhead between the engines and boilers, and a watertight after peak bulkhead. The upper deck stringer and plating between the hatch and ship's sides are supported by longitudinal channel girders instead of transverse beams. This arrangement is a new feature in a vessel framed on the transverse system, and has the advantage of introducing additional longitudinal strength at a very desirable part.

A short forecabin is fitted above the upper deck right forward. On the port side, under the forecabin deck, are cabins for the first and second officers, the quartermasters, and watchmen. In a corres-

Montreal Transportation Co's s.s. Westmount

Duff, Manager, Great Lakes Steamship Service, C.P.R., and Acton Burrows, Managing Director Canadian Railway and Marine World. After the launching, which was most successfully performed, the invited guests were entertained at luncheon by the Collingwood Shipbuilding Co.

The Westmount, one of the largest vessels ever built in Canada, is of the large single deck type, which has been evolved to meet the conditions prevailing on the Great Lakes in regard to the transportation of bulk cargoes of coal, ore, and grain. Her leading particulars are: Length over all, 550 ft. 8 in.; length on b. f., 537 ft.; breadth moulded, 58 ft.; depth moulded 31 ft.; load deadweight, 11,000 tons; load draught to suit canals, 19 ft. 6 in.

The vessel, in common with others of her class, embodies a number of features introduced to facilitate loading and unloading operations, the short season for navigation on the lakes making quick dispatch in port a matter of the utmost importance. No loading or discharging appliances are provided on board, these

side frames are of channel sections and are spaced 3 ft. apart. The double bottom, which is 5 ft. deep, extends for the full length between the peak bulkheads. Side tanks of the same width extend on each side up to the level of the main deck stringer, and thus form a double skin to a height well above the deep load line. The side tanks provide large additional capacity for water ballast, and their inner plating transforms the hold into a compartment of hopper form section, eminently suitable for mechanical unloading operations. The tank top plating, which carries the cargo's weight is supported by the centre girder and by 4 continuous longitudinal girders on each side of the centre line. Intercoastal deep floor plates are fitted in the transverse direction at every second frame, i.e., 6 ft. apart, there being a deep floor at each arch girder and one between.

There are two complete collision bulkheads forward, the space between these forming a deep tank. The cargo hold is divided by screen bulkheads into 6 compartments, and the double bottom by 4 watertight divisions into 5 compartments

ponding position on the starboard side, are the owners' staterooms. On the forecabin deck above is a large steel deckhouse, containing an observation room and captain's quarters. The top of this house forms the navigating bridge, upon which stands the wheelhouse. The accommodations provided at the after end of the ship are arranged in a large steel house, surrounding the engine and boiler casing, and comprise the engineers' quarters galley, dining rooms for the owner, officers, and crew respectively, and berths for various members of the crew. The firemen's accommodations are on the main deck, at the starboard side, just abaft the engine room casing.

A powerful steam windlass, of quick-warping direct grip type, is located on the upper deck forward under the forecabin. The cables are 2 1/4 in. in diameter, each being attached to a stockless anchor of 8,000 lb. weight. The anchors are stowed in pockets, so that they may not foul lock gates or other obstacles when the vessel is navigating narrow waterways.

The main and emergency steam steer-

ing engines are right aft, on the main deck. Both gears consist of a 9 x 9 in. steam engine which actuates the rudder directly through a toothed quadrant connected to the rudder stock. This gear is controlled by wires led from the steering wheel in the pilot house, or that on top of the same. The emergency gear is always under steam, and can be put into operation in a few seconds, by a crank on the bridge steering standard, which at the same time throws out of action the main gear.

The 6 deck winches, 4 of them 8 x 10 in. single drum mooring winches, are placed two at each end of the row of hatchways. The drums of the mooring winches are arranged in the athwartship direction, fairleaders of special design being provided at the ship's side to lead the mooring ropes. Another 8 x 10 in. single

house, to show whether all the running lights are in order.

The propelling machinery, which has also been built by the Collingwood Shipbuilding Co., is at the after end of the vessel. Steam is generated by 3 single ended cylindrical boilers of Scotch marine type, each having a diameter of 13 ft. and a length of 11 ft. The boilers are designed for a working pressure of 185 lb. per sq. in. and are provided with forced draught. From the boilers the steam passes to a single set of triple expansion reciprocating engines, having cylinders 24, 40 and 66 in. in diameter respectively, by 42 in. stroke. The engines are capable of developing about 2,400 i.h.p., which will drive the ship at a speed of about 13 miles an hour in loaded and 15 miles an hour in light condition. The auxiliary machinery includes 1 centrifu-

Outturns of Grain Cargoes on the Great Lakes.

In connection with the Board of Grain Commissioners' regulations regarding outturns of grain from vessels in Canada, the Dominion Marine Association had an interview with the Board at Montreal, April 12, when a satisfactory arrangement was made. Some of the receiving houses objected to the old regulations, more particularly to those dealing with outturns of grain other than wheat. A compromise settlement was made on the basis of a contribution of 15 lb. on all grains other than flax, instead of a quarter of a bushel as hitherto, and this was accepted by all parties. This leaves the arrangement for wheat as before, but substantially raises the contribution for other grains.

A conference was also had with the Buffalo Grain Clearance Corporation, at Buffalo, N.Y., April 11, representatives being present from the Lake Carriers' Association, as well as from the Dominion Marine Association. It was unanimously resolved that the corporation be continued and that it should carry on the service hitherto furnished to vessels. The following outline of the plan for continuing the service was proposed:

1. The contribution of the vessels shall be on the basis of $\frac{1}{2}$ bush. per 1,000 bush. from and to all ports.

2. In order to provide funds for operating and for the purposes mentioned in clause 4, the vessels shall respectively pay \$200 on first arrival with grain cargo, subject to this contract. (Majority opinion seems to be that this item should be a fixed amount, but may be on a sliding scale, based on capacity of vessels or other conditions.)

3. The 12c and 24c of the former contract may be increased to 15c and 30c.

4. Such contribution on first arrival shall be evidenced by receipt showing terms on which contribution is made, substantially that such contributions are to be repaid as soon as practicable after close of season, subject to the deduction of such amount from each contribution as may be necessary to give the corporation a sum, including its surplus earnings, sufficient to repay the voluntary contributions already received this year from carriers; to pay the deficit of 1916, excluding capital; and to pay back to the corporation a quarter of its exhausted capital.

5. This agreement is for one year only and any surplus earnings over refunds and total deficits shall be credited pro rata to the subscribers of 1917, and new arrangements made for 1918.

These terms were unanimously approved by the Dominion Marine Association representatives, at Montreal, April 12, and were ratified at Buffalo, April 16.

Admiralty Dry Docks for Canada.—A London, Eng., press cable of April 20, says: "Hon. Robt. Rogers, Canadian Minister of Public Works, has taken up the question of building Admiralty drydocks at Esquimalt and Halifax with Sir Edward Carson, First Lord, and Bonar Law, Chancellor of the Exchequer, and is seemingly hopeful that something will result. Canada is entitled to this consideration, says Mr. Rogers, not only owing to the part she has played in the present war, but because of the efforts of the Canadian Government to encourage shipbuilding in Canada. There should be no reason why British ships when in Canadian waters should go to United States ports for repairs."

Montreal Transportation Co.'s s.s. Westmount prior to launching.

drum winch is located in the windlass room forward, and an 8 x 10 in. winch, with 2 drums, is on the upper deck aft. One drum of the after winch is intended to take the 3½ in. mooring hawsers, while the other takes the 4½ in. wire hawser, which is attached to the stern anchor of 4,000 lb. weight. The latter, which is also of the stockless type, is stowed on an inclined platform, so that it can be instantly lowered in case of emergency.

The boat outfit consists of two 22 ft. metallic lifeboats, and one 18 ft. gasoline launch, for use in harbor, capable of attaining a speed of 8 miles an hour. All the boats are placed aft at the level of the deckhouse top, and are attached to sliding davits and equipped with releasing hooks.

The vessel has 2 steel pole masts, one forward and one aft, for signalling purposes, and to carry the running lights. Awnings are fitted over the forecastle deck, and the pilot house, and at the sides of the after deck house. Draught gauges are provided at each end of the ship, so that the draught forward and aft may be read in disturbed water or at night.

The ship is lighted throughout by about 200 electric lights. Two electric generators, each having a capacity of about 10 kilowatts, are situated on a flat at the after end of the main engine room. An electric indicator is placed in the pilot

gal and 2 duplex ballast pumps, 1 sanitary pump and deck pump, 1 duplex main feed pump, and 1 duplex auxiliary feed and fire pump. The air, circulating, and bilge pumps are directly driven from the main engines. In addition to the steam pumps, hand bilge and fire pumps are provided both forward and aft.

Proposed Channel in St. Clair River.—

The International Joint Waterways Commission has under consideration an application, endorsed by U.S. War Office engineers, for the right to make a channel about 400 ft. wide, and of proper depth, along the water front at Port Huron, Mich., and to build a compensating dam under water a little below this point in the St. Clair River, so as to maintain the levels of Lakes Huron and Michigan. The proposed works are considered to be beneficial to the navigation of a difficult part of the river, and the principal matter for consideration is the probable effect on the water levels above and below. Expressions of opinion by the organizations concerned are being sought.

Vessels Registered.—The lists of vessels registered, which were until recently published in each issue of Canadian Railway and Marine World, are not now available, their issue having been suspended in consequence of the war.

Shipping Letters from the Head of the Great Lakes.

F. & W. Jones, lake transportation brokers, etc., Fort William, Ont., wrote on April 14 as follows:

Ice conditions are still somewhat severe at the Canadian head of the lakes. In Thunder Bay ice is thicker than has been known during the past 10 years. Where tests have been made it is reported as 48 to 50 inches. The icebreaker James Whalen went into service on April 10 and has done good preliminary work. A passage has been cut past the Welcome Islands which will be kept open from now on thus allowing the ready movement of ice floes, as the ice breaks up and moves out. Ice in the Kaministikwia and Mission Rivers is unchanged at from 3 to 4 ft. thick and quite solid. Ice breakers, however, are ready to open up passages as soon as conditions are favorable or vessel requirements demand. Advices here agree that it will be early in May before navigation at those ports can be considered open, probably May 1 to May 5. There are only four Canadian and one U. S. vessels wintering here, all of small tonnage capacity. These are all practically to clear at a few days notice.

Coal.—Stocks, both bituminous and anthracite, at all docks are greatly depleted, this is more particularly so with regard to commercial coal. At one time it was a serious question whether stocks would hold out. Dealers, however, have been conserving their stocks during the greater part of the winter, sharing out deliveries to retailers proportionately, in a manner to best secure an equal division of the supplies on hand from time to time. This has undoubtedly worked out well in effect and while shortage of coal has been experienced at some western points no serious complaints have developed. No great rush of coal cargoes is expected at the immediate opening of navigation. Usually at this time docks are in possession of advice of their early prospects, but up to date no advices have come to hand and enquiries do not show that any very substantial contracts have been placed for commercial coal for early arrival. There is certainly nothing indicative of any great movement for the opening. It will, however, be necessary to bring in a large quantity of coal, both bituminous and anthracite, during the whole season of navigation to replenish depleted stocks and provide for next winter's demand.

Grain.—The all rail winter movement of grain has been disappointing, approximately only 13,000,000 bush. of all grains have gone forward since the close of navigation on Dec. 12, up to the time of writing. The normal capacity for railway movement of winter grain is from 20,000,000 to 30,000,000 bush. There should therefore have been nearly double the amount moved than has been moved. Demand for grain has been good throughout, notwithstanding the high prices ruling from time to time, but shippers have been seriously hampered by the continual car shortage and embargoes by the railways. These embargoes have been largely due to congestion at the seaboard. Had it been possible to move grain freely from ocean points to Europe, conditions would in a measure have righted themselves and car shortage would not have been so evident. There has also been a very heavy movement of munitions and war supplies eastbound, which in itself would account for the absorbing of a great number of cars. The actual figures of winter movement are as fol-

lows: Wheat, 6,360,080 bush.; oats, 5,712,728 bush.; barley, 162,662 bush.; flax, 333,484 bush.; mixed grain, 575,658 bush.; total, 12,944,612 bush.

Elevator stocks at Fort William and Port Arthur at date of writing are as follows: Wheat, 23,109,035 bush.; oats, 10,140,137 bush.; barley, 1,318,379 bush., flax 1,624,270 bush.; total, 36,191,821 bush. There is estimated to be still in farmers' hands and in storage west of Fort William and Port Arthur some 50,000,000 bush. of wheat and possibly 20,000,000 bush. of other grains to come forward. This would make a total of approximately 100,000,000 bush. of all grain in sight at date, available for lake movement. It is expected that the British Government movement of grain at the opening of navigation will be somewhat heavy, possibly 10,000,000 to 12,000,000 bush. Other shippers will in all probability require to move a like quantity. So the demand for space is likely to be maintained. Nothing further has developed with regard to the proposal of the British Government to purchase the surplus stocks of Canadian wheat at a fixed price, which offer failed to mature. Many conjectures are afloat but nothing reliable is really known, it is however generally thought amongst those usually well informed that the government purchases will continue to be made along former lines. If any change is made it will probably be of a somewhat drastic nature and based upon lines demanded by war emergencies, but the trade feels confident that every consideration will be given to trade interests.

Ore.—The movement of iron and copper ore from these districts has been moderately but surely developing and activity has been much in evidence at the—several mining centres. Steady shipments of copper ore have gone west throughout the winter with most satisfactory results. The movement of iron pyrites by lake last season was approximately 70,000 tons. This season it will probably be twice that amount. The mining situation in Thunder Bay district has acquired considerable impetus, a large number of fresh claims have been registered during the past few months and many of the old claims are getting ready for re-operation, the minerals mostly in evidence being iron pyrites, copper, silver and gold.

The shipbuilding industry at these ports is showing great activity in common with all other shipyards. The Port Arthur Shipbuilding Co. is running at full pressure and arrangements are under way whereby the capacity will shortly be doubled and at its increased output there are in sight sufficient orders to keep it fully occupied for several years.

Radio Time Signals at the Panama Canal.—The U.S. Navy Department has installed at the Darien radio station a time transmitting clock arranged to send time signals by radio. It is adjusted daily to Washington observatory time by radio signal, with a maximum error of five-tenths of a second, but ordinarily not exceeding one-tenth. The signal begins at 12.55 p.m., 75th meridian time and continues for 5 minutes. The wave length used is 4,000 metres and is so sent that any ship with ordinary commercial receiving apparatus capable of tuning as high as 4,000 metres should be able to receive it.

The Sale of the Icebreaker J. D. Hazen to Russia.

The Auditor General's report, in dealing with expenditures for the year ended Mar. 31, 1916, criticizes expenditures on the icebreaker J. D. Hazen, which was built by Canadian Vickers, Ltd., Montreal, and eventually sold to the Russian Government. It is stated that the contract was entered into between the Dominion Government and Canadian Vickers, Ltd., in Mar., 1914, the price being \$998,583. On Aug. 25, 1916, the Auditor General wrote the Deputy Minister of Marine, calling attention to the fact that the Marine Department proposed to release the contractors, in order to enable them to sell the vessel to the Russian Government. At that date payments on progress estimates were \$349,504. The letter continued: "You are aware of the fact that the cost of construction of vessels has increased probably 35 to 40% since the making of this contract, and in cancelling the same the Dominion Government would be parting with a valuable asset, and I do not see how you can justify the placing in the hands of Canadian Vickers, Ltd., an opportunity to make a profit of possibly \$300,000 or \$400,000. If it is intended as a friendly act to one of the allies to give them the benefit of such an excellent contract, I would suggest that the constructing company be not released, but that the contract be assigned to the Russian Government, unless it is ascertained that the price to be paid by them to Canadian Vickers, Ltd., is not in excess of the contract with the Dominion Government."

The Auditor General also asked for information as to the terms and conditions of the sale, but had received no reply when the report was written.

United States Shipbuilding Programme.

It is announced that the U. S. Government has authorized the immediate construction of a large number of steamships for trans-Atlantic service. The whole matter is in charge of the U.S. Shipping Board, which is taking up the task of organizing the necessary material and labor and distributing the work to the best advantage. The reports state that it is planned to build, if necessary, 3,000 wooden steamships of approximately 3,000 tons each, the first 1,000 to be completed and in service within 18 months. These vessels are to be engine for a speed of about 10 knots an hour. It is the intention to standardize construction, as far as possible, to expedite construction, and when they are ready for operation, the board will either sell, charter or operate them, as may be desirable. Work is reported to have been commenced at several yards. Each vessel will be equipped with anti-submarine guns and wireless telegraph.

The U. S. Navy Department received tenders during April for 34 submarines. Congress has authorized the construction of 38, and 10 have already been ordered at Portsmouth, N.H. The Electric Boat Co. submitted an offer to build 18 vessels in from 16 to 26 months at \$1,524,000 for those built on the Atlantic coast, and \$1,592,000 for those built on the Pacific coast, or as an alternative to build on a cost plus 15% profit basis. Other offers named prices of \$1,288,000 and \$1,299,000 and most of them were accompanied by the alternative cost and percentage basis.

Coast, Lake and River Steamship Officers for 1917.

The following appointments, made by navigation companies, engaged in Canadian navigation, for their various steamships and tugs, have been reported to Canadian Railway and Marine World, in addition to those given in the April issue. The first column shows the names of the vessels, the second those of the captains, and the third, those of the chief engineers.

Encouragement of Shipbuilding in Nova Scotia.

The Premier of Nova Scotia introduced a bill into the Legislature recently providing for the encouragement of shipbuilding in the province. The bill provides for a shipbuilding commission of five members and a secretary to investigate the facilities for shipbuilding in the province and for the manufacture of articles incidental thereto, and to make suggestions for the adoption of rules and regulations to facilitate the development of such industry. The commission is to be empowered to engage technical assistance, and to make arrangements with other similar commissions or departments in Canada, to work together, and it may be created a corporate body under the name of the Nova Scotia Shipbuilding Commission, with all the powers of a corporation. If so formed, it will have power to build, purchase and own vessels, or acquire shares in same, and to operate vessels of all kinds, to establish shipbuilding plants, to purchase existing undertakings for shipbuilding purposes, and to promote and finance companies for such purposes. Power will also be given the commission to issue bonds and other securities, and for the purpose of establishing the commission, the government will be authorized to raise \$2,000,000 by the issue of debentures or consolidated stock of the province, for the expenses of the commission, and for subsidies granted to any company engaged in the building, equipment or operation of ships.

Saskatchewan River Navigation.

A considerable amount of freight is expected to be moved this year on the Saskatchewan River to Pas, Man. The Ross Navigation Co., Ltd., has contracted to carry 3,000 tons of copper ore for the Mandy Mining Co., from Sturgeon River to Pas. Specially constructed barges are being built for handling the ore. Teams have been engaged all winter hauling the ore from the mine to Sturgeon River, where it is to be loaded on to the barges, and the 3,000 tons are all ready piled up there, awaiting the opening of navigation. The Ross Navigation Co. is also building a stern wheel steamboat 85 ft. long, which will be ready for the opening of navigation. It will handle package freight and passenger traffic, from Pas to the various ports of call on the Saskatchewan River and adjoining lakes. It is the company's intention to establish a freight and passenger service between Pas and the farming settlements along the Saskatchewan River, 200 miles west of Pas. That district has been settled up and farmed for the past 10 years, but owing to the great distance from the railways the progress that should have been made has been retarded.

Possible Requisition of Steamships.—

There was a general report during April, to the effect that the British Government had decided to requisition all British vessels, freight and otherwise, and that this would affect about 25 vessels from Canada now engaged in ocean service. It was stated that should the British Government actually decide on this course, the Canadian Government would follow and requisition all vessels on the Great Lakes, utilizing such of them in ocean service, as were fit for the purpose, at a fixed rate. As stated in our last issue, the British Government announced some time ago, that no Canadian vessels would be requisitioned, except through or by the Canadian Government.

Dominion Government Vessels for Ocean Service.

Canadian Railway and Marine World for April stated that the Dominion Government had ordered from Wallace Shipyards, Ltd., North Vancouver, B.C., a wooden sailing vessel, with auxiliary power, for service between Pacific and Atlantic coast ports, via the Panama Canal. We are officially advised that this vessel will be similar, in every respect, to those now being built in the same yards for Canada West Coast Navigation Co., and that an order for a second one of the same type will be placed by the Government very shortly.

The vessel will be of the five masted schooner type, without top sails, and of the following dimensions: length over all 255 ft., length of keel 225 ft., depth moulded 21 ft. 4 in., breadth, extreme, 44 ft. The gross tonnage will be about 1,500 tons, and the dead weight capacity about 2,500 tons, with a lumber carrying capacity of 1,500,000 ft. b.m. The latest and best practice of builders of U.S. schooners designed for the lumber trade will be followed, and it will be of heavy construction. It will be provided with 2 large hatches, and 4 cargo winches of the latest type for the rapid handling of cargo. The power equipment will include two 160 h.p. Bolinder semi-Diesel engines, driving twin screws.

The Ville Marie Navigation Co., Ltd., has been incorporated under the Quebec Companies Act, with \$45,000 capital, and office at Ville Marie, Que., to carry on a general navigation business on inland waters in the county of Pontiac, and to own and operate steam and other vessels. The incorporators are: R. Filteau, P. Ethier, A. Jolicoeur, A. Renaud, Ville Marie; A. A. Cote, St. Brune des Guigues; W. Chenier, E. de la Chevrotiere, and A. E. Guay, Ville Marie.

Atlantic and Pacific Ocean Marine.

The Cunard Steamship Co. is reported to be arranging to place orders in the U.S., for the building of 114 passenger steamships, ranging from 8,000 to 17,000 tons, at an estimated cost of \$120,000,000.

A. B. Mackay, Hamilton, is stated to be planning the construction of a wooden vessel for ocean service at a cost of about \$200,000. He was responsible for the recent construction of the schooner Letitia T. Mackay at Meteghan, N.S., which is now in ocean service.

It is stated that the British Government has requisitioned 50% of the space on the C.P.R. steamships Empress of Russia, Empress of Asia, Empress of Japan and Monteaegle. It is said that this action does not affect outward traffic. We are officially advised that the company has received no notification to this effect.

The Osaki Shosen Kaisha of Japan has two 10,000 ton steamships approaching completion at Nagasaki. It is stated that they are to be named Victoria Maru and Vancouver Maru, and placed in service between Japan and Pacific ports on this side, by October or November. They will be equipped for a speed of 12 to 14 knots an hour, and will have accommodation for 12 cabin and about 200 steerage passengers.

A new York press dispatch states that what is said to be the first British steamship to be launched in the U.S. went down the ways at Staten Island, April 7, and was named War Captain. She is owned by the Cunard Steamship Co., and is of the following dimensions: length 274 ft., beam 42 ft., depth 24 ft.; tonnage 3,500 gross, 2,200 register. She is to be used for freight and is expected to be in operation during June.

The s.s. Trans Os Montes arrived at New York, April 2, from England, under charter to the Quebec Steamship Co., a subsidiary of Canada Steamship Lines, Ltd., for service between New York and Bermuda. She was formerly the Nord-deutscher Lloyd s.s. Buelow, and along with other enemy steamships, took shelter from the British in Portuguese ports on the outbreak of war. On Portugal joining the "entente allies," she seized all enemy vessels in her ports, and subsequently handed them over to Great Britain for operation. The British Government then arranged with Furness Withy and Co. for their charter and management.

Maritime Provinces and Newfoundland.

Pugsley's Shipping, Ltd., Eatonville, N.S. and Artisan Shipping Co., Ltd., Lunenburg, N.S., have been removed from the register of companies in Nova Scotia for non-compliance with the Companies Act requirements.

The Canada Atlantic and Plant Steamship Co. is reported to have sold its s.s. Halifax to New York parties. The sale of the s.s. Evangeline has already been reported, so that at present the company appears to be without vessels, and it is not known whether it will resume its service between Halifax and Boston or not.

In connection with the St. John harbor improvement works, W. Murdock, City Engineer, St. John, N.B., in his annual report, suggests that a new dock site be selected at Rodney slip, and extend 2,000 ft., reaching the upper end of Navy Island. It is claimed that this site is

well in from storms and entirely free from ice and strong currents, and would give 3,800 lin. ft. of wharf frontage, with 35 ft. depth of water.

It is reported that tenders will be called for shortly, for the extension of the Negrotown Point breakwater to Part-ridge Island, N.B., and for the building of a sea wall to the eastward of the island. It is stated that work on this will be commenced as soon as the contracts are awarded, and the whole completed as soon as possible. The plans and specifications have already been completed. It is also stated that plans and specifications are under way for a new start on the dry dock and other improvements at Courtenay Bay, St. John.

The International Shipbuilding Corporation, Ltd., incorporated recently with \$2,000,000 capital and office at Montreal, is reported to have purchased a sawmill, planing mill and foundry at Newcastle, N.B., and it is stated that it will commence the building of wooden vessels there about June. It is also stated that the company is having surveys made in Newfoundland for ore, and that it is the intention to establish a steel industry at Newcastle in connection with the shipbuilding industry, so that eventually steel vessels will be built there as well as wooden ones.

As throughout Canada, shipbuilding in Newfoundland is proceeding as rapidly as possible, in order to make good the losses entailed by the unrestricted submarine warfare practised by the enemy, and to meet the extra demands being made on shipping in general, on account of the war. Naturally the vessels under construction are sailers, in the construction of which Newfoundland was one of the pioneers. Six vessels are under construction on the southwest coast, in addition to a number of small schooners under 40 tons. These are mainly for the transportation of fish, in which Newfoundland had a large trade with Mediterranean ports prior to the war, and in which she has suffered severe losses.

Province of Quebec Marine.

The schooner Montmorency opened the navigation season in the St. Lawrence, April 3, when she arrived at Levis, from Tadousac. Some ice was encountered but the voyage was made without difficulty.

The icebreaking work of the Dominion Government steamers in the St. Lawrence River, was interfered with during April, owing to a strike of firemen on board the s.s. Lady Grey for higher wages. The work was continued by the s.s. Mont-calm.

The Lachine Canal was emptied April 7, and filled again on the following day, the customary inspection of the locks being postponed. Owing to the exceptionally high level of the river, it was not possible to drain the canal completely, and high water was expected to continue for several days, and to hold the canal empty for so long would have caused considerable inconvenience to manufacturers dependent on it for power.

Vincent A. White Navigation Co. Ltd. has been incorporated under the Dominion Companies Act, with \$32,000 capital and office at Sussex, N.B. to own and operate steam and other vessels and other marine property and conduct a general navigation business. Meredith A. White Navigation Co. Ltd., has also been

Ontario and the Great Lakes.

The Port Arthur Shipbuilding Co. is reported to have increased the wages of all its employes by 10%.

The Welland Canal was opened to navigation April 18, the s.s. Natironce was the first vessel to pass through.

The Goderich Dry Dock and Shipbuilding Co., according to a press report, proposes building a ship repair plant at Goderich.

Canada Steamship Lines, Ltd., on representations from the City of Hamilton, has offered to run its s.s. Syracuse from Hamilton on a weekly trip through to the Saguenay, without change, during the coming season.

The Imperial Oil Co. is suing Canada Steamship Lines, Ltd., for \$100,000 for damage sustained by the s.s. Imperial, when, it is alleged through negligence, the s.s. Midland Prince collided with it last year.

The s.s. H. N. Jex, owned and operated by J. F. Sowards, Kingston, was the first vessel to enter Kingston harbor this season, coming in from Oswego, N.Y., with coal. Capt. M. Shaw was presented with the customary hat by the harbor master.

The first vessel to arrive in Toronto harbor, this year, from an outside point, was Canada Steamship Lines' s.s. Macassa, from Hamilton, on Mar. 30. Capt. Jas. Henderson was presented with the customary silk hat by the harbor master.

It is announced that the U.S., in providing for the lighting of the Fighting Island channel in the Detroit River, is making a number of changes in the aids to navigation. Permanent lights and buoys are being placed, so as to permit of the channel being used for its entire length as a straight channel without the necessity for range line courses as hitherto.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level, for March, as follows: Superior 602.33, Michigan and Huron 580.46, St. Clair, 574.79, Erie 571.53, Ontario 245.17. Compared with the average March levels for the past ten years, Superior was 0.76 ft. above; Michigan and Huron 0.55 ft. above; Erie 0.26 ft. below, and Ontario 0.68 ft. below.

It is reported from Detroit, Mich., that the U.S. War Department, which controls the operation of the canal system, has issued a notice that as a protective measure during the war, no power boat, yacht or other pleasure vessel will be permitted to pass through the St. Clair Flats Canal, all such vessels being restricted to the use of the old channel, which will be lighted and buoyed for their service.

The Department of Naval Service has announced that radiotelegraph regulation 104 has been amended by providing that the subsections relative to the disconnection of aerials in vessels lying in Canadian harbors will not, until further notice, apply to Canadian or British vessels in Canadian harbors on the Great Lakes. Such vessels must, however, strictly observe the other provisions of the regulations.

The Hackett Wrecking and Towing Co., Amherstburg, is reported to have sold its steel steam tug F. B. Hackett to New York parties. The vessel is registered in the U.S., and negotiations for its sale to Canadian parties were broken off, as the necessary permission to sell could not be obtained. The cost of the vessel is given as \$40,000 when she was built in 1908, and the price now paid for her is said to be \$75,000.

The s.s. Mahoning, owned by the Anchor Line, Buffalo, N.Y., is reported to have been sold to Boland & Cornelius, of Buffalo, and it is reported that she is to be cut down to Welland Canal size and operated between Lake Erie ports and Montreal in the coal trade, a trade for which \$3 tonnage is being bid. The Mahoning was built at Wyandotte, Mich., in 1892, and is 274 by 40 by 23 ft. It is also reported that the same company's steamships Codorus and Tioga are also being negotiated for.

The Northern Navigation Co.'s s.s. Germanic was destroyed by fire at her wharf at Collingwood, Mar. 30. She was built at Collingwood, Ont., in 1899 of oak, with diagonal strapping on the frames, steel arches, etc., and she was equipped with a steeple compound engine, with 2-17-2-28 cylinders, 21 in. stroke, supplied with steam by a firebox boiler 10 ft. 1½ in. by 12½ ft., at 100 lbs. Her dimensions were, length 184 ft., breadth 32 ft., depth 12 ft. 1 in., tonnage 1014 gross, 676 register.

The s.s. Stadacona, which was reported torpedoed by the enemy off the French coast, April 19, was stated, in the information supplied to the majority of Canadian papers, to be owned by Canada Steamship Lines, Ltd. This, of course, is incorrect, as the company's s.s. Stadacona is at present on the Great Lakes, being included in the list of vessels which the company will operate there this year, and published in Canadian Railway and Marine World for April. Capt. G. H. Page is master, and W. W. Norcross is chief engineer.

The U.S. District Court of the New York Western District, in Admiralty, has ordered the sale of the s.s. Rochester, owned by the Richelieu & Ontario Navigation Co. of the United States, in satisfaction of claims of approximately \$500,000 by a number of members of a convention party from Rhode Island, who alleged that they had suffered serious illness from the effects of drinking impure water whilst on a trip in 1913. The sale was advertised to take place April 17, but was postponed to May 1. The Rochester was for a time operated in lake traffic between U.S. and Canadian ports, and since the end of 1915 has been laid up at Sarnia. It is understood that she is under charter to the Northern Navigation Co., and it is stated that that company will in all probability purchase her. She was built at Wyandotte, Mich., in 1910, her dimensions being: length 246 ft., breadth 42 ft., depth 15½ ft.; tonnage, 1,603 gross, 867 register.

Reports on the ice conditions in the Great Lakes, on April 10, indicated that there was less ice this year at that date, than at the same time in 1916, although it was somewhat heavier in Lake Superior and at the Straits. Ice still continued over the extreme western portion of Lake Superior, with open water off Apostle Islands, and icefields were also in existence from Keeweenaw Point to Whitefish Point. The ice in St. Marys River was decreasing steadily and the fields had practically disappeared along the east shore of Lake Michigan. The s.s. Algoma passed through the ice from Ignace to Detour, April 8, and arrived at Sault Ste. Marie, April 17. The ice fields on the west shore of Lake Huron had disappeared, and those on the east shore were broken up and moving with the winds. In Lake Erie the fields on the east had broken up and were moving, while the ice remained at Buffalo, and westerly. The fields had practically dis-

appeared from Lake Ontario, with slight exceptions in the extreme east, and the harbors were open.

Manitoba, Saskatchewan and Alberta.

We are officially advised that the Peace River Tramway and Navigation Co. has decided, in view of general conditions, not to take any definite action towards providing further transportation facilities beyond its present field of operations on the Peace River, Alta., during the pre-

British Columbia and Pacific Coast.

The C.P.R. s.s. Kokanee, operating on the lakes and rivers, is under repair, her place being taken by the s.s. Kuskanook. The s.s. Minto is replacing the s.s. Bonnington at present.

C. J. Rogers, Purchasing Agent, White Pass & Yukon Route, is credited with the statement that the two vessels which are being built for the company's Atlin service, details of which have been given in a previous issue, will be ready for service by June 1.

A small steamboat is reported under construction at the Vandyke Shipyard.

Auxiliary Ship Mabel Brown

Built at North Vancouver, B.C. for Canada West Coast Navigation Co., Ltd., and chartered for a voyage to Australia with 1,534,000 ft. of lumber.

sent year. The company will operate its s.s. D. A. Thomas and its launch Lady Mackworth on the Peace River from Hudson's Hope, B.C., the head of navigation on this river, and for 570 miles to Vermilion Chutes, downstream.

The Winnipeg Board of Control had before it recently the Harbor Commission's request for a grant of \$960 for work in the harbor, a request having also been sent to the St. Boniface Council for \$240 for similar work. It was decided that the board should have the commission's annual report before making the grant. The Dominion Government has appropriated \$200,000 for the work in the harbor, and of this \$50,000 has been spent in the erection of a dock at the foot of River St. Two other docks are to be built in the near future.

Vancouver, for the International Petroleum Co., of Talara, Peru. The dimensions are: length 85 ft., beam 18½ ft., depth 6 ft. It is stated that she will be completed by Aug. 1, and sail for Peru about Aug. 15.

The two car floats which the C.P.R. is having built at Chemainus, by C. Hoard, Victoria, are for operation between Vancouver and Vancouver Island, James Island, Howe Sound and other outlying ports beyond the reach of actual railway connection. They will be 150 x 46 ft., and 12 deep, with capacity for 9 cars each.

An order in council has been passed limiting the speed of any vessel entering or leaving Prince Rupert harbor, to 8 knots an hour between Point Charles and the Canadian Fish and Cold Storage Co.'s

plant, and to 4 knots an hour when passing another vessel with a scow or scows alongside. The penalty for infringement of these regulations is \$50 for each offence.

At a meeting of the West Vancouver council at the end of March, it was decided not to discontinue the ferry service for the present, but to give as good a service as possible during the summer. However, should conditions not improve and the receipts not prove more satisfactory, other arrangements may have to be made by the autumn.

The C.P.R. steam tug Nitinat has been chartered by the British Columbia Salvage Co. for salvage work on the Kosmos Line s.s. Seostris, wrecked off Ocos, Guatemala. The company lost the steam tug Pilot there recently while engaged in this work. The Nitinat is being equipped with wireless telegraphy, etc., and as soon as she is ready will leave for the south.

The trial trip of the auxiliary schooner Mabel Brown, the first of a number of similar vessels under construction at Vancouver and Victoria for Canada West Coast Navigation Co., took place at the end of March, and it was announced that everything was satisfactory. She was later docked at North Vancouver for her final touching up, after which she left for Chemainus for her cargo.

The Grand Trunk Pacific Coast Steamship Co. is reported to have purchased the schooner rigged vessel Tillamook, which is equipped with auxiliary power, in the U.S., for service between Prince Rupert, B.C., and Ketchikan, Alaska. It is stated that the vessel is practically a new one, of about 800 tons, arranged chiefly for freight traffic, but with a limited accommodation for passengers. It was expected that she would be in service by the end of April.

The British Columbia Supreme Court decided, April 3, at Victoria, that the s.s. Leona, which capsized and sank near Active Pass in Oct., 1916, was lost in the perils of the sea, and it therefore allowed the claim of the Vancouver Portland Cement Co. for \$60,000 with interest, against the Maritime Insurance Co., for loss of the cargo. For the defence it was urged that the vessel was overloaded and therefore unseaworthy, and notice was given of an appeal.

The Canada Atlantic Transit Co. and the Panama Canal Act.—Under the provisions of the Panama Canal Act, railway companies operating in the U.S. are compelled to sever any connection they may have with steamship companies, unless under authority of the Interstate Commerce Commission, which is granted under certain conditions. One of the railways to come under this regulation is the Grand Trunk Western Ry., the western end of the G.T.R., and this company was ordered to sever the connection with the Canada Atlantic Transit Co., a G.T.R. subsidiary. On a rehearing of the case recently, the Interstate Commerce Commission granted the company authority to continue its interest in the Canada Atlantic Transit Co., and found that the C.A.T. Co.'s existing service by water is being operated in the interest of the public and is of advantage to the convenience and commerce of the people, and that an extension of the time for the operation of such service will neither exclude, prevent nor reduce competition on the route by water. The company is required to file its tariffs in accordance with the provisions of the act to regulate commerce as amended by the Panama Canal Act.

Canada Steamship Lines' Appointments.

In accordance with the revised organization for conducting the company's business, the following appointments have been made effective from April 23:

L. A. W. DOHERTY, heretofore Freight Traffic Manager, has been appointed General Traffic Manager, with jurisdiction over freight and passenger traffic. Office, Montreal.

JOHN F. PIERCE, heretofore Assistant Passenger Traffic Manager, has been appointed Assistant Traffic Manager, in charge of freight and passenger traffic, Kingston, Ont., and east, including all passenger traffic originating in the U.S. Office, Montreal.

PERCY GRANT, heretofore Division Freight Agent, Hamilton, Ont., has been appointed Assistant Traffic Manager, in charge of freight and passenger traffic, west of Kingston, Ont. Office, Toronto.

JOHN V. FOY, heretofore Assistant General Passenger Agent, Toronto, has been appointed General Passenger and Freight Agent. Office, Toronto.

J. W. CANVIN, heretofore General Agent, Passenger Department, New York, has been appointed General Agent, New York.

JOS. M. SHEA, heretofore New England Passenger Agent, Boston, Mass., has been appointed General Agent, Boston, Mass.

W. F. CLONEY, heretofore General Agent, Passenger Department, Rochester, N.Y., has been appointed General Agent, Rochester, N.Y.

H. W. CRAWFORD, heretofore District Passenger Agent, Chicago, Ill., has been appointed General Agent, Cleveland, Ohio.

A. C. SHERIDAN, heretofore District Passenger Agent, Buffalo, N.Y., has been appointed General Agent, Buffalo, N.Y.

GEO. S. MEAGHER, heretofore Agent, G.T.R., Clayton, N.Y., has been appointed General Agent, Clayton, N.Y.

C. LEIDICH, heretofore Agent at Detroit, Mich., has been appointed District Passenger Agent, Detroit, Mich.

Vancouver Dry Docks, Ltd.—An announcement of the incorporation of this company was made in a recent issue. It is reported that Charles Meek, who is chiefly interested in the company, has made arrangements for the erection of a plant in Vancouver, to consist of a double section floating dry dock capable of handling vessels up to 18,000 tons displacement, sufficient to accommodate the largest vessels at present on the coast. It is expected that the dock will be in operation within a year, and that it will be worked in connection with an extensive shipbuilding plant. We were officially advised from Ottawa, April 20, that no subsidy agreement had been entered into between the government, represented by the Public Works Department, and Vancouver Dry Docks, Ltd.

Smuggling of Intoxicants at Lake and River Ports.—The Dominion Government has sent instructions to all customs collectors at lake and river ports along the boundary between Canada and the U.S., and at seaports, that they take rigid precautions to stop smuggling of intoxicants on vessels arriving from foreign ports. Complaints have been made that parcels are being brought into Canada without passing through the customs. Collectors are to take drastic action against persons offending, and masters are to be notified that their vessels are liable to detention if used illegally.

The Dominion Government Purchases Lake Steamships.

The Dominion Government has bought the s.s. J. A. McKee, from the Algoma Central Steamship Line, Ltd., Sault Ste. Marie, Ont., and the s.s. Thomas J. Drummond, from the Great Lakes Transportation Co., Midland, Ont., for operation under the Department of Railways and Canals, for carrying coal from Sydney, N.S., to St. Lawrence ports for the Government, or for general cargo purposes as the need may arise.

The s.s. J. A. McKee was built at Wallsend on Tyne, Eng., in 1908, for the Western Steamship Co., Toronto, and is of steel construction with steel tank top, three water tight and two non water tight compartments, steel boiler house, hatches 24 ft. centres, and is equipped with triple expansion engines with cylinders 20½, 33 and 54 dia. by 36 in. stroke, 70 i.h.p., supplied with steam by two Scotch boilers 13½ ft. dia. by 10½ ft. long, at 180 lbs. Her dimensions are, length 248 ft., breadth 43 ft. 1 in., depth 25 ft. 10 in.; tonnage, 2,158 gross, 1,374 register.

The s.s. Thomas J. Drummond was built at Dumbarton, Scotland, in 1910, for the Algoma Central Steamship Line, Ltd., and is of steel construction on the channel system, steel tank top, three water tight and two non water tight compartments, steel boiler house hatches spaced 24 ft. centres, and equipped with triple expansion engines with cylinders 20½, 33 and 54 in. dia., by 36 in. stroke, 1,200 i.h.p., and supplied with steam by two Scotch boilers 14 ft. dia. by 10½ ft. long at 190 lbs. Her dimensions are, length 247¾ ft., breadth 43 ft. 8 in., depth 26 ft.; tonnage, 2,201 gross, 1,664 register.

New Steamships for C.P.R. Ocean Service.

The C.P.R. has bought for £240,000 an ocean steamship of 9,400 tons carrying capacity, and with a speed of 13 knots an hour, at present under construction at Newcastle upon Tyne, Eng., for delivery in July or August. This will make the tonnage of the C.P.R. ocean fleet about the same as it was at the outbreak of the war. In order to provide for future requirements, and to secure advantage of the earliest construction that circumstances will permit, an arrangement has been made with John Brown & Co., Ltd., The Fairfield Shipbuilding & Engineering Co., Ltd., and Harland & Wolff, Ltd., for building, on a cost and percentage basis, two steamships, 605 ft. long between perpendiculars, with a speed of 20 knots an hour, and two steamships, 546 ft. long between perpendiculars, with a speed of 16 knots an hour.

The C.P.R. discontinued its service to the Gulf Islands, Mar. 31, and the s.s. Otter, which was utilized on that route has been docked at Victoria for overhaul and repairs. The mail contract which the C.P.R. held for the Gulf Islands route expired Feb. 1, and the company notified the authorities that it was the intention to withdraw the service. After some representations by local deputations, the company agreed to continue the service until Mar. 31, when it was finally withdrawn. The Government has made arrangements for the handling of mails, but early in April, no arrangement had been made for a passenger and freight service.

Shipbuilding in Canada for the British Government.

Canadian Railway and Marine World for April contained information in reference to arrangements made by Jas. P. Esplen, representing the British Shipping Controller, for the Imperial Munitions Board at Ottawa to secure all cargo steamships that may be available in Canada for delivery by May 31, 1918, and which are now completed, or under construction, or which it may be possible to build before that time. It was also stated that five vessels had been arranged for from British Columbia builders, that probably about the same number would be secured from builders in Nova Scotia, Quebec and Ontario, and that further orders would doubtless be placed. We are now in a position to state that the Imperial Munitions Board has arranged to have built for the British Government, at various plants between Montreal and Victoria, B.C., 26 steel steamships, ranging from 2,900 to 8,800 tons capacity, and with a total tonnage of 130,000. It is not probable that any more orders will be placed for steel steamships, at least for some time to come, on account of the impossibility of securing any further supply of steel plates for several months hence.

The Imperial Munitions Board will also place orders, as soon as possible, for as many wooden steamships, ranging from 3,000 to 3,500 tons capacity, as can be built in Canada. Standard designs and specifications for them have been under discussion between the Imperial Munitions Board, a representative of the British Shipping Controller, and shipbuilding companies, and are about completed. Most of these wooden steamships will necessarily be built on the Pacific coast, on account of its advantages in regard to the supply of the timber required, but some will probably also be built on the Atlantic coast. In connection with this, the Minister of Finance has arranged to advance \$10,000,000 to the British Government, as a loan, which will be used in paying for the wooden steamships.

It is stated that R. P. Butchart, of Victoria, will have charge of the business organization of the wooden shipbuilding for the Imperial Munitions Board.

The Imperial Munitions Board at Ottawa is closely co-operating with the United States Shipping Board in regard to the building of wooden steamships and it is said that standardized types of vessels have been agreed upon and that there will be a common schedule of prices and contracts.

As stated in Canadian Railway and Marine World for April, the Dominion Government, between Sept. 19 and Nov. 15, authorized the exportation to Norway, on completion, of 18 cargo steamships, to be built at New Glasgow, N.S., Montreal, Toronto, Port Arthur, Ont., and Vancouver, B.C., and for the exportation to the United States of two others to be built at Toronto. Arrangements are now being made to acquire nearly, if not all these, for the British Government.

The 100 steam wooden drifters, for which orders have been placed by the Naval Service Department, to be built at plants between Montreal and Port Arthur, as mentioned in our last issue, will be 84 ft. long, and will have engines of about 250 h.p.

A Port Arthur press dispatch of Aug. 20 says: "Jas. Whalen, President of the Port Arthur Shipbuilding Co., has returned from the east and announced contracts secured for work totalling more than

\$5,000,000. The capacity of the local plant is being doubled, and even at that work now in hand will keep it busy until well on into 1918.

Mainly About Marine People.

John Eadie has been appointed General Manager, Wallace Shipyards, Ltd., North Vancouver, B.C.

L. A. W. Doherty
General Traffic Manager, Canada Steamship Lines Limited

J. F. Pierce
Assistant Traffic Manager, Canada Steamship Lines Limited

George J. Plunkett, Vice President, Plunkett Navigation Co., Cobourg, Ont., died there, Mar. 29, aged 69.

Hon. J. D. Hazen, Minister of Marine, was the guest of Admiral Sir John and

Lady Jellicoe, in London, Eng., towards the end of March.

H. S. Carmichael, Passenger and Freight Manager, Canadian Pacific Ocean Services Ltd., London, Eng., arrived in Canada, April 13, on a business trip.

W. G. Ross, Chairman, Montreal Harbor Commissioners, attended an executive committee meeting of the American Association of Port Authorities, in New York, April 4.

Capt. Robert Aikin, heretofore master of the G.T.R. and Wabash Ry. car ferry Detroit, has been appointed Superintendent of Ferries, G.T.R.-Wabash Ry., vice Capt. W. F. McGregor, who has retired on a pension, Office, Windsor, Ont.

L. A. W. Doherty, who has been appointed General Traffic Manager, Canada Steamship Lines, Ltd., Montreal, was born at Toronto, April 10, 1878, and entered transportation service in July, 1896, since when he has been, to 1887, clerk to Assistant Freight Traffic Manager, C.P.R., Toronto; 1897 to 1906, chief clerk to General Freight Agent, C.P.R., Toronto; 1907 to 1908, chief clerk to Assistant Freight Traffic Manager, C.P.R., Toronto; 1908 to 1910, Assistant Manager, Inland Navigation Co., Hamilton, Ont.; 1911 to Feb. 27, 1913, Traffic Manager, Inland Lines, Ltd., Hamilton, Ont.; Feb. 27, 1913 to Jan. 1914, Freight Traffic Manager, Richelieu and Ontario Navigation Co., Toronto; Jan. 1914 to Apr. 23, 1917, Freight Traffic Manager, Canada Steamship Lines Ltd., Toronto.

Denis Murphy, President, Ottawa Transportation Co., who died in Ottawa, Mar. 12, left an estate valued at \$1,945,233.69. His widow receives the Ottawa residence and an income of \$20,000 a year for life. His son, Col. G. P. Murphy, and his daughter receive \$400,000 each, and a similar amount is divided among the three daughters of his deceased daughter, Mrs. G. R. Warwick, Toronto. C. E. Russell, General Manager and Secretary-Treasurer, Ottawa Transportation Co., receives \$1,000. There are a number of legacies to other relatives, friends and servants. Among his principal holdings were: Ottawa Traction Co., 3,120 shares, \$249,600; Shawinigan Water and Power Co., 3,773 shares, \$452,760; C.P.R., 1,013 shares, \$156,002; Ottawa Transportation Co., 422 shares, \$33,760; Ottawa Car Mfg. Co., 168 shares, \$23,520.

John Franklin Pierce, who has been appointed Assistant Traffic Manager, Canada Steamship Lines, Ltd., Montreal, was born at Chatham, Ont., on Sept. 6, 1877, and entered transportation service, Oct. 14, 1896, since when he has been, to Oct. 1904, clerk, Richelieu and Ontario Navigation Co., Montreal; Oct. 1904 to Oct. 1910, chief clerk, same company, Montreal; 1910 to 1912, Travelling Passenger Agent, same company, Boston, Mass.; 1912 to 1913, District Passenger Agent, same company, Boston, Mass.; 1913 to Dec. 1, 1914, Assistant General Passenger Agent, and General Baggage Agent, Canada Steamship Lines, Ltd., Montreal; Dec. 1, 1914 to April 1916, General Passenger Agent and General Baggage Agent, same company, Montreal; April 1916 to April 23, 1917, Assistant Passenger Traffic Manager, same company, Montreal.

Leonard Fisheries Ltd. has been incorporated under the Dominion Companies Act, with \$1,000,000 capital and office at Montreal, to carry on a general fishing and packing business, and in connection therewith to own and operate steam and other vessels, wharves, docks, etc.

Wooden Shipbuilding in Nova Scotia.

B. L. Tucker, lumber merchant, Parrsboro, N.S., is reported to have said in Montreal recently:—"There are now from 38 to 40 wooden ships on the stocks in Nova Scotia and we are well along to a big revival of the old busy, prosperous days. They are tern schooners of a carrying capacity of from 700 to 900 tons and are being turned out with the greatest dispatch. We have just launched a fine ship at Parrsboro and there is another on the stocks so recently vacated. There are five other vessels being built within a few miles of Parrsboro. The opposite shore of the Basin of Minas also is dotted with ship yards. Yards which four years ago were deserted and looked as if they would remain to be pointed out to the tourist as mementos of a past activity, have been born again at Meteghan, Weymouth and other parts along the Bay of Fundy. And the same is true of the Atlantic coast, Liverpool, Mahone and so on.

"While the builders are making big profits and have orders for all the ships they can build, the owners of these wooden ships have found their regular gold mines. Freight rates went sky rocketing and in two to three trips across to the United Kingdom the ships paid for themselves. On account of the submarine menace a number of the schooners have been held in Great Britain by the Admiralty—but that is one of the fortunes of these stirring times.

"Coupled with the rebirth of the old ship yards, has been the rejuvenation of the masters of wooden ships. All over the province were to be found aged sea captains who could spin wonderful sea yarns of the days when Nova Scotian ships were as familiar a sight in Rio, Shanghai, the Canaries, and Antwerp as they were in Halifax. Now the good old days have returned. With the building of schooners has come the demand for captains. Skilled sea captains cannot be developed in a day and many an old sea dog who had sighed over the passing of the 'good old days' has found himself again on the prancing deck of a saucy 'Sally Sue.' Nova Scotia is coming into her own again."

Standardized Ships for Great Britain.

Sir Leo Chiozza Money, Parliamentary Secretary to the British Shipping Controller, is credited with the statement that all ships now under construction in the United Kingdom or abroad are for the particular interests of the nation. He is also reported to have said: "The programme of shipbuilding construction laid down by the Government is a very big thing. It will be carried out as well by the estimative scheme as by standardization. What we want at present is what we commonly call tramp steamships, but something more than the ordinary vessel of that class. The question of speed is very important. It must be laid down that the new vessels must exceed in swiftness the underwater speed of the submarine. This is because underneath the surface the submarine cannot use her guns. There is a good deal to be said on this ground alone in favor of the policy of building the new type of standard ship."

On the same subject a correspondent of the British press writes: "From conversations I have had with leading shipbuilders I find that they are not altogether satisfied with the public idea about

the standard cargo ships which are being built as the swiftest way of meeting the dearth of shipping caused by the German submarine. I find that there is a very strong feeling among shipbuilders that, before constructing the new standard type, material should be provided for the completion of ships already in the stocks. The fact is that there are a number of ships in various stages still awaiting their steel plates. Some of these ships are standing as they were at the beginning of the war. Regarding the standard ships which are being laid down, not only in the yards accustomed to cargo boat construction, but in all the big yards, there are two varieties, but there is not much difference in type. The speed will be somewhat faster than the present carriers of that size. They will be the property of the state under the management of the Shipping Controller. They are being paid for on a new system, with a definite sum for on-cost charges and profit, to which will be added the cost of labor and material. The design was arranged by a conference of shipbuilders with the Controller, and one shipbuilder on the Clyde and one on the Tyne each drew the standard design for these localities."

U.S. Water Supply Regulations on Great Lakes Vessels.—The text of the regulation affecting water supply on vessels trading in interstate commerce on the Great Lakes was given in full in our last issue, and comment was made to the effect that the regulation was not thought to include Canadian vessels, as they are precluded from engaging in interstate traffic in the U.S. It has, however, been learned that the U.S. Health Department has indicated definitely that the new regulation will apply to Canadian vessels entering U.S. ports, as well as to U.S. vessels. The Dominion Marine Department has taken the matter up, and after having had a number of vessels examined, has come to the conclusion that it would be impossible to make the required alterations in time for the opening of navigation. Negotiations are pending with the U.S. Government, with a view to arranging for a suspension of the regulation as regards Canadian vessels, until arrangements can be made for the required alterations to be made at reasonable expense.

The Ocean and Inland Transportation Co., Ltd., Montreal, the incorporation of which was announced in our last issue, has been organized. The President of the company is C. I. deSola, Montreal, who has for many years represented Swan, Hunter and Wigham Richardson, Ltd., shipbuilders, of Newcastle, Eng., and is also Consul for Belgium. The company will undertake chiefly the chartering and buying and selling of steamships and other work connected with the management and insurance of vessels.

CANADIAN PACIFIC RAILWAY CO.

Notice to Shareholders.

The date of the Annual General Meeting of the Shareholders of the Company having been changed by Bylaw from the first Wednesday in October to the first Wednesday in May in order to conform to the practice now generally adopted in the United States under regulations of the Interstate Commerce Commission of making the fiscal year of railway companies correspond with the calendar year

and which it is expected will be made applicable to Canadian railways by amendment to the Railway Act of Canada, the THIRTY-SIXTH ANNUAL GENERAL MEETING of the Shareholders for the election of Directors to take the places of retiring Directors and for the transaction of business generally, will be held on the second day of May next at the principal office of the Company at Montreal at twelve o'clock noon. A statement of the Company's financial position and the results of its operations during the half-year ended December 31st, 1916, will be submitted for the approval of the Shareholders.

Special Meeting.

The Meeting will be made Special for the purpose of considering and, if advisable, of authorizing the issue, upon the necessary statutory authority being obtained, of Collateral Trust Bonds of the Company for the purpose of acquiring securities of the Company and of Companies whose lines are leased to or operated under working arrangements with the Company, which are proposed to be compulsorily purchased by the Government of the United Kingdom of Great Britain and Ireland under regulations issued pursuant to the provisions of the Defence of the Realm (Consolidation) Act, 1914, and amending enactments, and if such issue is authorized, to sanction and approve the Agreement between the Government and the Company and to authorize and approve a form of Trust Deed to be given to secure the payment of such Collateral Trust Bonds, the whole as more particularly set out in a circular to be issued to the Shareholders prior to the date of the Meeting.

The Common Stock Transfer Books will be closed in Montreal, New York, and London at 3 p.m. on Tuesday, the tenth day of April. The Preference Stock Books will be closed in London at the same time.

All books will be re-opened on Thursday, the third day of May.

By order of the Board,
ERNEST ALEXANDER, Secretary.
Montreal, 29th March, 1917.

June, 1917.

Reports of the Board Appointed to Enquire into the Canadian Railway Situation.

The reports of the board appointed by the Dominion Government in July, 1916, to enquire into the railway situation in Canada were submitted to Parliament on May 2. The reports, with appendices, make up a book of 191 pages, 6 $\frac{1}{2}$ x 9 $\frac{1}{2}$ in. The board as originally appointed consisted of A. H. Smith, President, New York Central Rd., New York; Sir Henry L. Drayton, Chief Commissioner, Board of Railway Commissioners, Ottawa, and Sir George Paish, of London, Eng, formerly editor of *The Statist*. Sir George Paish having resigned, on account of inability to undertake the work, W. M. Acworth, of London, Eng., a college lecturer and author of some works on railway subjects, was appointed in his place. The three members of the board presented a brief report, which after reciting the matters to be enquired into says:—

In Sept. and Oct., 1917 two of the commissioners, the Chairman, A. H. Smith, and Sir Henry Drayton, spent some weeks inspecting the railways, travelling upwards of 10,000 miles, visiting all important points from Halifax to Vancouver and Prince Rupert, and taking the opportunity of meeting and conferring with many representative citizens. We desire to express our appreciation of the manner in which the officers of the various companies facilitated our journey and assisted us to obtain a knowledge of local conditions. We have had a physical examination made, in such detail as circumstances have permitted, of the Canadian Northern and the Grand Trunk Pacific Railways, by a corps of engineers under the supervision of Prof. Swain of Harvard University and the Massachusetts Institute of Technology. In addition to the information which we have obtained from our own enquiries and inspections and those of our staff, we have received voluminous reports and statistics from the different companies in reply to our enquiries on specific points. Two of our number have held formal hearings in Toronto into the affairs of the Canadian Northern Ry. Co., and in Montreal into the affairs of the Grand Trunk and Grand Trunk Pacific Companies. Since Mr. Acworth's arrival we have frequently met in Ottawa and in New York for discussion of the remaining matters referred to us. We have taken the situation as it is, and find ourselves in agreement as to the necessity for constructive aid to bring the railways through the present crisis. We differ, however, as to the extent and method of government help desirable, and as to the increase and character of government liability and interest now and for the future. It has, therefore, been found necessary to submit a report of the two concurring commissioners, with a brief statement of the minority recommendation.

THE DRAYTON-ACWORTH REPORT.

The report signed by Sir Henry L. Drayton and W. M. Acworth, covers 82 pages of the book, in which the subject

is dealt with under the following headings:—

1.—Canadian Railways—Mileage, capital, and state aid; apportionment of mileage; revenue, gross and net; investment in road and equipment; return on capital; government aid in general—to Canadian Northern, to Canadian Pacific, to Grand Trunk, to Grand Trunk Pacific; total public investment; proportion of public investment; growth of Canadian railways.

2.—The Grand Trunk System—Grand Trunk Pacific finance; Grand Trunk liability for Grand Trunk Pacific; Grand Trunk Co.'s proposal; the Grand Trunk case; inception of the National Transcontinental; letter from the President of the Grand Trunk; hearing of Grand Trunk officials at Montreal; Grand Trunk Pacific case; commissioner's conclusions; the parent Grand Trunk Co.; Grand Trunk maintenance expenditure; Grand Trunk capital expenditure required; effect on Canadian business; commissioner's recommendation.

3.—The Canadian Northern System—Position in 1914; annual report for 1916; estimates for 1914 and 1917; comparison with Canadian Pacific; prospective requirements of Canadian Northern; value of Canadian Northern undertaking—cash investment, physical basis, going concern; conclusion as to Canadian Northern.

4.—Possible methods of public control—Government operation discussed and rejected; the Canadian Pacific position one obstacle; further reasons against government operation; receivership discussed and rejected; transfer to a new body recommended; suggested transfer of all the railways to the Canadian Pacific discussed; suggested transfer of the whole or a portion of Canadian Northern to Canadian Pacific discussed; possibility of forming a commercial company discussed—the Mexican precedent, the New York Subway precedent; Canadian railways should be under Canadian control.

5.—The Dominion Ry. Co.—Government operation not recommended; recommendation of independent board of trustees; constitution of board, and tenure of office; board to be non-political; board to be permanent and self-perpetuating—Australian experience; railways not a proper subject for direct parliamentary control; growth of extra-parliamentary functions of the state; private interests and public interest; control of Dominion Railway by Railway Commission; relation between trusts and their employes; incorporation of the Dominion Ry. Co.; Transfer of stocks to trustees; the Canadian Northern shareholders; charges of misappropriation unfounded; Canadian Northern successes and failures; arbitration recommended; the Grand Trunk shareholders—terms of purchase recommended, real value of Grand Trunk property; the Intercolonial and National Transcontinental—transfer of National Transcontinental recommended, transfer of Intercolonial recommended (in the

local interest, in the general interest, in the interest of good management), minor recommendations, legal position of trustees; operation and finance of Dominion Ry. Co., operation to be on a commercial basis, wide powers to be given to trustees, financial responsibility of government, prospects of Dominion Railway, specimen economics resulting from combination.

6.—The Dominion and the provinces—publicity—general—Railway Commission control; Commission to report on charters, and on subsidies and guarantees; overlapping of Dominion and provincial control; audit and publication of accounts; railway councils; railways in excess of existing requirements; highway improvement; the Hudson Bay Ry.; steamship connections; tendency of railway rates to rise; necessity for immediate action.

Sir Henry L. Drayton and W. M. Acworth summarize their conclusions and recommendations as follows:—

The mileage of Canadian railways is very great in proportion to the population of the country. It has increased out of proportion to the increase of population. Canada's natural waterways make railways less absolutely necessary than in other countries. The net return is so low as to prove that more railways have been built than can be justified on commercial grounds under present conditions.

The public investment in railways is very large. The total amount of public capital involved in direct construction of Government lines, and cash aid, land grants and guarantees to private companies, is \$968,451,000, not counting the value of lands still unsold. Public aid to the principal companies, including subsidies, land grants, and guarantees, amounts to over \$680,000,000. In the case of the Grand Trunk Pacific it amounts to nearly two thirds of the total investment; in the case of the Canadian Northern to over three quarters. There have been three phases of company development: unaided enterprise, assistance by subsidies and land grants, assistance by guarantees. A guarantee policy is dangerous and its wisdom questionable. The development of Canada justified two transcontinental lines. It did not justify three. The Grand Trunk and Canadian Northern should have been amalgamated.

The Grand Trunk Pacific system has cost nearly \$200,000,000. The interest charges amount to over \$8,800,000 a year. The net income last year was \$826,653. The liability of the Grand Trunk Co. for interest amounts to over \$5,000,000 a year at present, and will rise to over \$7,000,000 in 1923. We cannot recommend that the Grand Trunk Co. be unconditionally released from their liability. The responsibility for the National Transcontinental line rests mainly with the Government, but that for the Grand Trunk Pacific proper belongs primarily to the Grand Trunk. The Government has voluntarily relieved the Grand Trunk of all responsibility for the National Trans-

continental. In respect to the Grand Trunk Pacific proper the government is fully entitled, morally, as well as legally, to call upon the Grand Trunk Co. to fulfil its contract. The Grand Trunk Co. proper has made unjustifiable charges to capital. Its lines have not been adequately maintained. More than \$21,000,000, which ought to have been spent on maintenance in past years, has not been spent. New capital expenditure of over \$30,000,000 is immediately required. The country is suffering from the company's inability to give adequate service. The G.T.R. ought to be managed in Canada, and not from London. We recommend that the control both of the Grand Trunk Pacific and of the Grand Trunk be assumed by the people of Canada on terms hereafter set out.

The Canadian Northern has been financed mainly by the issue of guaranteed securities. Till 1914 it met the interest from its own resources. Since that date the government has assumed very heavy obligations on behalf of the company. There is little prospect that the company would be able in the near future to relieve the government of these obligations. The company's estimate of its future capital requirements is too low; and its estimates of probable growth of earnings have been and still are unduly sanguine. We estimate that as a separate undertaking it would require fully \$70,000,000 of new capital within the next five years. We do not recommend that further public aid be given to the Canadian Northern as at present constituted. The Canadian Northern common stock represents no cash investment, and has no present value, either on the basis of the cost of reproduction of the property, or on the basis of its earning power. We recommend that the public take control of the Canadian Northern Co. on terms hereafter set out.

On the assumption that the people of Canada take control of the Grand Trunk, Grand Trunk Pacific, and Canadian Northern, we consider possible methods of management and operation. We do not consider that operation by a minister directly responsible to parliament would be in the public interest. It would not secure better service or lower rates. If the Government operated these railways, it would be bound in fairness to the Canadian Pacific shareholders to take over their railway also. The Canadian Pacific gives good service and should not be interfered with. Special objections to direct government ownership and operation are: That Canadian railways operate more than 7,000 miles of line subject to the foreign jurisdiction of the United States; that the Canadian government resources are required for war purposes. We therefore reject the idea of direct government ownership and operation.

We do not recommend that the Grand Trunk, Grand Trunk Pacific and Canadian Northern Companies be allowed to go into the hands of a receiver. We recommend that the control of these three companies be transferred to a new body.

We have discussed and rejected the following suggestions:—Transfer of all three railways to the Canadian Pacific; transfer of the Canadian Northern or a portion of it to the Canadian Pacific. There is no possibility of forming a new commercial company to take over the three railways. Neither the Mexican precedent, under which the government becomes a majority shareholder, nor the New York Subway precedent, under which the public authority shares the profits with the private shareholder, is applicable to this case.

Having come to the conclusion that di-

rect ownership and operation by the government is to be avoided, and that ownership and operation by a commercial company is not possible, we recommend that a new public authority, a board of trustees be incorporated by act of parliament as the "Dominion Railway Company"; and that the Canadian Northern, Grand Trunk and Grand Trunk Pacific be transferred to this body. We recommend that the Government assume responsibility to the Dominion Railway Co. for the interest on the existing securities of the transferred companies. We recommend that the Intercolonial and National Transcontinental be also transferred to the Dominion Railway Co., for reasons which we give hereafter. We recommend that the whole of the Dominion railways be operated by the trustees as one united system, on a commercial basis, under their own politically undisturbed management, on account of, and for the benefit of, the people of Canada.

We recommend that there be five trustees, three railway members, one member selected on the ground of business and financial experience, and one as specially possessing the confidence of railway employes; that the original trustees be named in the act constituting the board; and that their tenure of office be substantially the same as that of judges of the Supreme Court. We recommend that the original trustees retire after 3, 4, 5, 6, 7 years, respectively, according to a prescribed scheme; that they be eligible for reappointment; and that all appointments subsequent to the original statutory appointments be by the Governor General in Council on the nomination of the trustees themselves. We lay stress of the importance of the board being non-political, permanent, and self-perpetuating; and in this connection point to the experience of the Australian State Railways.

We give reasons for concluding that railways are not a proper subject for direct parliamentary control. We point to a general tendency in modern democracies to withdraw certain subjects from this control. And we show that under parliamentary control the general interest of the whole community tends to be subordinated to the particular local and individual interests. We recommend that the Board of Railway Commissioners be extended to include the Dominion Railway Co.'s system. We give the reasons for our recommendation that one of the trustees shall be appointed on the ground of his possessing the confidence of the railway employes.

We recommend the transfer to the trustees of the common stocks of the Canadian Northern, Grand Trunk and Grand Trunk Pacific subject to certain conditions and reservations made hereafter. We recommend the transfer to the trustees of the Intercolonial and National Transcontinental Railways for reasons which we give hereafter.

We deal with the question of the compensation to Canadian Northern shareholders. We find the charge that Messrs. Mackenzie and Mann have misappropriated public moneys unfounded. We find that the Canadian Northern shareholders possess a system of which the lines are well located and economically constructed, and that they have raised the necessary money with considerable financial skill and at moderate rates of interest, but that they erred in unwisely duplicating lines and reaching out into unremunerative territory. We recommend that the question be considered whether Canadian Northern shareholders shall be permitted to retain a moderate proportion of the \$60,000,000 shares which they

now hold; that the precise proportion, if any, and the relation of that proportion to their share of any future profits of the Dominion Railway Co. be fixed by arbitration.

We recommend that the entire share capital of the Grand Trunk, guaranteed, preference and ordinary, be surrendered to the trustees in exchange for an annuity based on a moderate but substantial proportion of \$3,600,000, the average sum paid as dividend in the last 10 years; and that this annuity should increase by 40 or 50 after the first seven years. We recommend that the precise figure be fixed by agreement and that it be left to the directors of the Grand Trunk Co. to apportion the annuity among the five classes of Grand Trunk shareholders, and to procure such assents of their shareholders as are legally required to complete the transfer. We give reasons for considering that this recommendation is generous to the Grand Trunk shareholders, and why the shareholders in their own interest will do well to accept it.

We recommend the transfer to the trustees of the National Transcontinental, in order that it may take the place it was built to take as part of a great inter-ocean highway, and because its financial position would be hopeless if it terminated in a dead end at Winnipeg. We recommend the transfer of the Intercolonial, in the interest of the Maritime Provinces to which the Intercolonial at present can only give a local service with no adequate terminals beyond Montreal; in the interest of the taxpayer who has a right to demand efficient and economical expenditure of his money; and in the interest of the railway staff who will secure the wider opportunities of a great system. We recommend that in future the Intercolonial be required to pay local taxes on the same basis as the other railways; and that the inhabitants on the line receive statutory protection against increase of local railway rates.

We make recommendations as to non-railway property of the transferred undertakings, getting in minority holdings of shares and outstanding titles to land, arrangement with the holders of Canadian Northern 5 convertible income debentures. We deal with the legal position of the trustees; and point out that the Canadian Northern, Grand Trunk and Grand Trunk Pacific companies will continue to exist; and that consequently the rights of their security holders will remain undisturbed. We recommend that the trustees take over each railway as soon as the transfer can be effected, with the purpose of ultimately operating them all as a single unified system. We deal with the finances of the Dominion Railway Co. and point out that the Intercolonial, with no bonded indebtedness, has a considerable net revenue, and offers security on which new capital can be raised. We recommend the creation of a general and refunding mortgage of unlimited amount, to be issued as required. We recommend that the act of parliament provide that the operation of the company shall be on a commercial basis, and that the trustees make no general reduction in rates until the property earns a reasonable net return. We recommend that there be given to the trustees the widest powers in the management of property.

We have endeavored to estimate the annual liability of the government to meet interest unearned during the first few years of the new scheme, and we put it at about \$12,500,000 a year. We think this amount should diminish steadily but not slowly; and that with proper econo-

mic and politically undisturbed management the attainment of a satisfactory financial result is only a question of time. We give specimens of the large economies which should result from combined operation.

We recommend the enlargement of the functions of the Board of Railway Commissioners, that it have jurisdiction over all Dominion railways; and report to parliament on all proposed grants of charters, subsidies, and guarantees. We deal with the conflict of Dominion and provincial jurisdictions. We recommend that, to prevent this in future, the Governor in

Council should in certain cases disallow provincial acts, and that no railway company should operate under both Dominion and provincial charters. We recommend that there be a continuous public audit of the Dominion Railway accounts, and that full and comprehensive reports be made annually to parliament. We recommend the establishment of railway councils to bring together the railway management and representatives of public interests.

We point out that the existing railways are in excess of public requirements and show how much traffic is required to make a railway profitable. We show that

the cost of hauling grain to the station is sometimes as great as that of carriage from the station to Liverpool, and recommend that the question of highway improvement and motor haulage be taken into consideration.

We recommend that future expenditures on the Hudson Bay Ry. be reduced to the lowest possible amount.

We point out that railway rates are more likely to rise than fall in future. And we lay stress on the necessity for immediate action lest Canada should suffer from railway congestion even worse than that of the past winter.

Report of the Chairman, Alfred H. Smith.

Following is the report presented by the Chairman, A. H. Smith, President, New York Central Rd.:—

This commission was asked to report upon the general problem of transportation in Canada. Several subdivisions of the subject quite naturally suggested themselves, and were made a part of the problem to which the commission was requested to give attention. Practically all of the subdivisions have received consideration, but the general problem is essentially a question of what to do with the railways of Canada. To a constructive solution of this important problem, the commission has given its attention.

The General Problem of Transportation in Canada:—For a proper understanding of the problem, a knowledge is necessary of the history of railway development in Canada, especially as affected by the public policy, which has found expression in governmental acts. Canada early recognized that its growth depended upon the construction of railways. The large productive areas of the country could be served only in a limited way by its splendid system of waterways. Even before the Eastern provinces became united into the Dominion of Canada, the Grand Trunk had become an important railway line, serving the people both of Canada and the United States. The Intercolonial, as is well known, was constructed out of public funds, and largely for the purpose of bringing more closely together, commercially and politically, two more or less separated sections of the Dominion. Long in advance of its justification upon a commercial basis, an all-Canadian transcontinental line was projected by the government and completed with extensive public aid by a private company as the Canadian Pacific. Because of the great distances which separate parts of Canada's producing territories from the consumers' market, development of the country's resources depended upon railway building, while cheap transportation was necessary to enable the people to compete with other producers. The people of Canada, therefore, gave such aid as was necessary to procure for themselves railway lines that would bring the country's resources into use and keep themselves in touch with the outer world.

Cheap transportation depends upon careful investment and efficient management. In the usual case, these are most likely to be found where private initiative and proper incentive to effort are employed. So far, Canada, for the most part, has pursued the policy of leaving to private enterprise the management of its transportation machinery. The Intercolonial, which has been under governmental control since its beginning, is an exception. But this line, I am informed, usually pays nothing to the govern-

ment as a return upon money invested in the property. On the contrary, it has frequently called upon the government for aid in meeting expenses of operation. The investment in this line is large, some authorities placing it as high as \$348,000,000, including loss of interest. Evidently its rates are too low or its expenses are too high, but the use of this line, at the rates enforced, is regarded in some quarters as a right of the people in the Maritime Provinces. If the Canadian people have ever made an agreement, or adopted a policy which may be construed as creating that right, the contention may be correct; it is, at any rate, within the power of government to grant such a privilege. The fact is referred to merely to point out in connection with what I shall say later that a railway may be built either as a commercial enterprise and for ordinary commercial purposes, or as a public undertaking and for other purposes, which are within the proper scope of Government. The two should not be confused. But it should be kept in mind that when government builds and operates a railway which does not pay its way, including proper maintenance and interest upon investment, taxation is relied upon to support transportation upon that line. The burden is shifted from the user to the general public, but the processes by which this is done are often so complex as to obscure the facts, and actual costs are not ascertainable.

The Canadian Pacific affords a later example of the internal development policy of the government. That road had its beginning in a transcontinental project that was proposed to be carried out directly by the government. At an early date, and it seems to me wisely, that purpose was altered; it was decided to have the road completed by a private company. But the undertaking was large, the population sparse, the prospect of profit remote, so that the government not only turned over to the company the uncompleted road upon which it had expended a large sum, but it also extended to the company generous aid in the shape of land grants, cash subsidies, guarantees, and loans. It is true that value was given to the land grants largely through the building of the road and the opening of the territory to settlement. The important point here is that the Canadian Pacific owes its later and continued success, not only to the skill and enterprise of its builders and managers, but to the fact that through liberal direct aid, it was able to begin business with a small charge against its earnings on account of borrowed capital. Thus favorably started, the company was able to devote its energies and surplus income to the development of the road and the country.

A new transportation problem arose with the settlement of the prairie pro-

vinces, where the land is devoted chiefly to raising grain and live stock. Owing to the long hauls that intervene between the producer and consuming markets, freight charges absorbed a considerable part of the proceeds. The Great Lakes afforded the least expensive route to the east and tidewater. But these lakes are open only part of the year, and navigation closes before the season's crops can be moved from the lake ports. With the filling up of the country and consequent increase in production, came a general demand for additional means of transportation. While land speculation probably had no little influence, the farmer felt the effect of inadequate facilities, and any project that promised relief appears to have found approval among citizens who were able, through their legislatures, to bring public aid to the development of these enterprises. Railways, therefore, were not only actively in demand, but railway builders were popular and had little or no difficulty in obtaining public support for proposed new lines. The Canadian Pacific stood as an example of success to be repeated by newer railways. Unfortunately, too little attention appears to have been given to the underlying facts which actually made that road what it was. Experienced men apparently believed that a second Canadian Pacific might be had if they could but lay a transcontinental road, build great hotels, passenger terminals, and operate ocean steamers. These things were only the outward evidences and not the cause of Canadian Pacific's prosperity. It may even be that they contributed little to the strength of that company's financial condition, if due account be taken of all the costs, investment as well as operating, involved in carrying on such enterprises.

In May, 1903, a royal commission on transportation, of which Sir William Van Horne was chairman, was appointed "to consider questions affecting transportation of Canadian products to the markets of the world through and by Canadian ports, with a view of placing the Canadian producer in a position to compete, and compete successfully, through all Canadian ports with the producers and exporters of other countries." The report of this commission is interesting. It clearly reflects the effect of the outlook which great opportunities and a land boom had upon the minds of the people. All kinds of transportation projects were recommended. For instance, the Grand Trunk Pacific was to be extended to Moncton; the Intercolonial was to be extended to Georgian Bay, etc. New canals were to be built, and old ones widened and deepened. This commission also recommended a bounty for Canadian-built ships, toll-exempt canals, additional waterways to be opened at public expense, and the acquisition of water terminal

lands out of public funds. In other words, it was clearly the intent that transportation should be stimulated by subsidies from the public treasury. It would now seem that there could not have been in sight enough traffic to justify the extensive development here recommended. However, many of the things proposed in this report have been done, and other ambitious schemes not here mentioned have since been brought out. The point in mind is that without making a specific declaration of the fact, as far as I know, Canada's policy for years appears to have been to promote the public welfare by means of building or aiding in the building of transportation lines throughout the Dominion.

It is unfortunate that Canada did not have a policy of regulation in this period which could have prevented needless duplication of lines and facilities. Competing lines have been built where effective regulation could have saved a large part of the investment, while completely satisfying every reasonable and proper need for service. Instead of co-ordination and conservation under government supervision, railways were permitted to duplicate plant in fields not yet productive enough to support the one; the government, on the other hand, was, in one way or another, aiding both projects, if it had not indeed itself promoted either or both projects. Very naturally, it has not and could not have obtained the benefit which should have followed a correct programme of government aid. The policy of government aid makes the need for regulation of railway building more necessary even than where private capital is depended upon, for in the latter case the proposal must at least have a promise of commercial success before capital can be induced to come in and give its support. To the absence of such regulation must be charged responsibility for no small part of the railway problem of today.

We may well enquire here as to the effect of this policy upon the three principal systems. The Grand Trunk Ry. Co., feeling no doubt that its own traffic field had been invaded by the government-aided Canadian Pacific, desired in turn to enter the promising western territory. Accordingly, it proposed to build a line from North Bay to the Pacific coast. Public aid was required and granted in a way to ensure the building of the road. If any serious thought was given to co-ordinating existing or proposed roads, and to utilizing them for the public good, it did not find public expression in any constructive way. The G.T.R. Co. evidently felt confident in the success of its plans, for it pledged its own credit in aid of the extension, and entered into contracts which it now finds quite beyond its ability to carry out.

Canadian Northern interests, directed by Mackenzie, Mann & Co., who since an early date had been operating local lines in Manitoba, seized the opportunity afforded them for expansion and rapidly extended their rails throughout the prairie region. The records show that the Canadian Northern had a large mileage on the prairies before the projection of the Grand Trunk Pacific; so that when the extension plans of the Grand Trunk became a part of the national policy, as they did become, the Canadian Northern was added to the number of those which wanted to own a transcontinental system and one as fully complete and self-contained as was that of the Canadian Pacific. Hence, we find two new companies, both built largely upon public credit,

striving for first place in a field which, as for transcontinental transportation, or even as for connecting Eastern and Western Canada, was already occupied. Besides having the Great Lakes waterway, there could have been barely enough business to support one additional line, and that only by the exercise of economy in operation and prudence in investment.

The Canadian Pacific, enjoying splendid credit, with adequate powers and resources, and keenly alive to the possibilities of losing business to competitors challenging its supremacy everywhere, then entered the contest by undertaking to build new lines in an effort to protect its sources of revenues. The stimulation felt throughout the country by the influx of settlers and by the importation of so much new capital not only created a boom, but it quite naturally affected prices for labor and materials, sending these soaring; the increased prices in turn contributed largely to the higher costs which are now reflected in the construction accounts of the new roads.

This brings us fairly to a recognition of the fact that while the policy of public aid to railways had originally been founded on the urgent need for transportation to open up a new county, to develop its resources, and to unify Canada commercially and politically, it was carried far beyond the limits warranted by the original exigency. It appears to me that the responsibility is as much the government's as the private companies'. Without enabling legislation and the extension of government credit from which all received their essential support, the companies could not have expanded and overbuilt. This policy, in so far as it aimed at the development of Canada, appeals to me as sound, and fully justified in its inception, but it needed to be supplemented by some form of supervision that would have ensured to the people the benefits of that policy without the losses that have followed the effort to assist development indiscriminately.

The situation must be faced as it exists. It is not possible to undo what has been done; the money which has been spent cannot be recalled. The immediate and obvious thing to do is to adopt a constructive and discriminating programme, first, for correcting the conditions which necessitate the continuing loss and waste, even where that would require the abandonment of useless property, and, second, for controlling new construction. The scrap heap is frequently the most economical disposition available for inefficient plant and machinery.

Status and Usefulness of the Three Transcontinental Railway Systems:—The Canadian Pacific Ry. System; the Grand Trunk Ry. System (including the Grand Trunk Ry., the Grand Trunk Pacific Ry. and their several branches); the Canadian Northern Ry. System.

The Canadian Pacific Ry. is essentially self-contained and self-sustaining. I agree with my colleagues as to its financially strong position. It has world-wide commercial strength. As a result of the aid and privileges extended by government, together with the prudence and progressiveness of its management, which has extended its field of activity over nearly all Canada, and through its steamship lines and commercial organizations throughout a large part of the world, it is a success. The C.P.R. is well built, well maintained and has adequate terminals and equipment. It is efficiently operated. It is somewhat at a disadvantage in crossing the mountains, and elsewhere it has gradients that, compared with more re-

cently built lines, do not make for as good trainload and operating efficiency. It is assumed that the C.P.R. will make improvements as the need for them arises, for it is fully able to do so. Accorded reasonable treatment, that company will continue, I am sure, to give good service, and I believe the best interests of Canada will be served by continuing the present status of the C.P.R. The introduction of government railway competition, which might have no regard for investment or cost of operation, would be unfair and, in the end, would react disastrously upon the Canadian people. The regulating power affords to the people of Canada adequate protection in the matter of rates and services, and such power should likewise protect the company.

The Grand Trunk Railway Co.'s fortunes are bound up with the Grand Trunk Pacific. It stands as guarantor for large sums of money invested in the railway, and has advanced millions from its own resources in an effort to develop the western line and its subsidiary properties. The Grand Trunk Pacific Development Co. has absorbed many millions of Grand Trunk capital without definite prospect of return, and to the Grand Trunk Pacific Branch Lines Co. large construction advances have been made. Not only is the Grand Trunk committed for many millions, but the government has directly invested large sums of money in this property and guarantees other large sums, the total of which exceeds \$127,000,000.

The Grand Trunk Pacific was located on a scale that would do credit to any single track line. There is not enough business to justify such an outlay, and the prospect for business which will warrant the cost seems quite remote. For long distances, sections of this line parallel one or more other lines. That part of the Grand Trunk Pacific lying between the Rocky Mountains and the Pacific coast is in a country which appears to have abundant natural resources. In time, these may be developed to the advantage of this road. The port of Prince Rupert is suited for a large ocean traffic, which is non-existent. The development of Alaskan trade seems to present the most immediate possibility for this port and railway. The road west of Winnipeg has some disadvantages on account of expensive trestles and instability of embankments. It has good grades, but inadequate terminals at important places. It has sufficient equipment but lacks feeders. From the Rocky Mountains to Winnipeg, the presence of a parallel road raises a question as to whether the Grand Trunk Pacific line is not the best adapted by location and physical condition to handle the trunk line traffic. If it is not the best, then the disposition of this part of the road, with its branches, naturally depends upon its usefulness as a road serving local interests. From Winnipeg east to North Bay and Port Arthur, the Transcontinental and Grand Trunk Pacific railways together can give efficient service as a connecting link between the railways of Eastern and Western Canada. This road also affords a good line for traffic moving via the Great Lakes. In fact, it is probably the best route of any for hauling bulk commodities at low costs.

Officers of the Grand Trunk Ry. Co. claim that the government is morally bound to relieve the company of the Grand Trunk Pacific, because the government is responsible for the failure of the project, having permitted a rival company to enter the field. The rival line, however, has been constructed at a lower cost per mile, and manages to get enough

traffic to pay its operating expenses and a large part of its fixed charges, which cannot be said of the Grand Trunk's system west of North Bay. I feel that I am not called upon to discuss the merits of the Grand Trunk's claim against the government. I have no doubt the government has observed at least the letter of its contract. Standing alone, with efficient operating conditions imposed, there is no reason, within my knowledge, why the Grand Trunk Ry. proper should not become a profitable operation. It occupies a good territory, reaching some of the best traffic centres in the United States and Canada, and has American connections that ought to contribute to its welfare. The company needs terminal improvements in cities and modern equipment, especially locomotives. The need for equipment is pressing, and should be met.

The Canadian Northern Lines, particularly in the prairie provinces, appear to be advantageously located in view of traffic conditions. Inspection of the property brings out the fact that this road was built with proper regard for economy, and the creation of a permanent public service utility. In some instances, the system has extended its lines where it should have obtained a traffic interchange agreement or the joint use of facilities instead, at least until the traffic had grown enough to justify further expansion. A public policy intended to develop and serve the country as a whole, at the lowest cost, would have enforced arrangements which would have obviated the needless duplication of facilities. The line from Yellowhead Pass to Vancouver, in part at least, may be unnecessary, but it is there by the joint action of government and the company. The character and capacity of this line through the Fraser River Canyon, where it is alongside the Canadian Pacific for about 200 miles, would suggest that no more money should be spent for double tracking or revising grades on either of the railways for years to come. From Yellowhead Pass to Edmonton, the proximity of the Grand Trunk Pacific places two lines where one affords abundant capacity.

The invasion of the east by the Canadian Northern now appears to have been unwise, but condemnation thereof must be tempered with a knowledge of the conditions which forced this extension. There was a public demand for railways. All Canada was enthusiastic over the prospects of a rapid growth in wealth and population. Railways were on a competitive basis, and the public stood ready to back any new railway enterprise, since that meant a rival carrier, and, incidentally, a new business in construction. There was no regulation which enforced co-operation among rival lines. The Canadian Northern, seeking to expand and become a profit earner, quite naturally desired to get all the traffic it could, and to hold all it got for as long a haul as possible. As a result, it undertook to do what appeared to be necessary under the conditions then existing—that is, to extend its line to both oceans.

An inspection of this company's property shows that generally it is of a type of construction well suited to its needs, and that the builders have installed it at a cost which, by comparison, seems small. Nowhere was there evidence of waste in the construction work itself. It is true that the company had some construction under way, or planned, that appeared wasteful because unnecessary, but this is due, I understand, to the unregulated competitive system, or to bargains with

public authorities. The building of expensive terminals in cities already supplied with adequate facilities affords an example of duplication for which the public must eventually pay. However, in the absence of restraint and regulation by consistent public authority, it is difficult to determine how the company could have avoided this.

The precarious financial situation of the Canadian Northern is due, in part, to its uncompleted condition, and to the fact that needed capital cannot be obtained on its own resources, especially during the period when capital is so greatly in demand by powerful governments. This system is not at present able to earn all of its fixed charges. As important parts of the system have but recently emerged from the construction period, it would be truly remarkable if it were able to do so. It does earn a very large proportion of such charges, and probably could earn all of them but for the burden of eastern extensions and duplications that have been placed upon it. Practically all commercial enterprises, and particularly railways, must go through a development period. The Canadian Northern is short of equipment. With the return to normal conditions, and provided with the capital necessary for equipment and for additional local facilities, this road can, in my judgment, work its way out in a reasonable time.

Reorganization.—We are asked to make suggestions in regard to "the reorganization of any of the said railway systems or the acquisition thereof by the state; and in the latter case, the most effective system of operation, whether in conjunction with the Intercolonial Ry. or otherwise." The first practical question is, therefore, the need of reorganization of any of these three transcontinental systems; the second is whether they should be acquired by the state; and the third is whether the status of the Intercolonial can be changed; and, if so, can the road be advantageously grouped with either of the three systems.

In such suggestions as I shall make, I am influenced by consideration of the public policy as evidenced by past governmental acts. I further assume that the existence of these roads through the direct government aid and sanction is conclusive evidence of the fact that the people really desire them. That they were built in advance of their need for ordinary commercial uses—a fact which is emphasized by the present abnormal economic situation—does not appear to me a sufficient reason for condemning the policy of national development, or the wisdom and integrity of those who have built the roads under that policy. Neither do I think that there exists any condition to warrant taking up a new and untried public policy, which may lead to greater difficulties than those which are now faced.

The history and standing of the Canadian Pacific Ry., and its public service as a carrier today is sufficient assurance that it does not need reorganization. The scope of its business, extending to other lands by steamships and commercial connections, and the control of many thousand miles of railways in the United States, would afford sufficient reasons, if none other existed, for dismissing the idea of its acquisition by the state. So much of the Intercolonial as is serviceable to the Canadian Pacific appears to be now used by it, either as a local connection or through trackage rights. Moreover, the two have existed separately for many years as competitors and no new

reason appears why the relations of the Intercolonial and Canadian Pacific should be changed for the future, unless the people of Canada are satisfied that better results would be obtained for the territory served by the Intercolonial if it were in the hands of the Canadian Pacific.

The Grand Trunk Ry. Co. has stated that it is beyond its power to assume and carry the obligations which would be imposed upon it if it should try to become such a transcontinental system as the plans of 1903 contemplated. The company has not attempted to bring about the organization of a system approximating that of the Canadian Pacific or even the Canadian Northern, nor can it do so. In view of the parent company's inability to carry out its original plans, and to discharge its obligation, the question is, what disposition is to be made of the various roads which were intended to be, but did not become parts of one operating system. My colleagues have recommended that the stockholders of the Grand Trunk Ry. Co. be paid an annuity which is to be a "moderate but substantial portion of \$3,600,000, the average dividend payment for the last ten years." This recommendation is in spite of the facts noted in the report that there are arrears in maintenance which require the expenditure of \$21,000,000, and that the company has charged to capital items which should properly have been charged against income, these facts indicating that there have been some dividends paid which have not been earned. Considering this situation and also the obligation of the company in the west, I am not impressed with the justice of paying an annuity to the stockholders in exchange for a surrender of this property. I also would be liberal to them, but I would allow them to keep their property and give them a chance to work out their own salvation. To that end, I would recommend that a settlement be effected between the government and the G.T.R. Co. The railway cannot carry out its part of the contracts, and it should be relieved of further embarrassment. On the other hand, the stockholders of the G.T.R. should be required to curtail or forego their dividends for the present, and the entire earnings be applied to the rehabilitation of the road through a term of years. The government thus gives up a present claim which the debtor cannot pay anyway; in turn, it will enjoy improved and extended service which may be worth far more to the welfare of the people. I should also give the government some claim upon the future earnings of the Grand Trunk, so that it may share in any future prosperity which this action makes possible.

Reorganization of the Grand Trunk is desirable only in so far as it shall be required to put itself in shape to discharge efficiently its functions as a carrier. Whether it shall retain all of the subsidiaries which it has accumulated through the past 50 years depends in large measure on what they can contribute to the main property. Careful study of each of the subsidiaries will lead to definite conclusions from the standpoint of the Grand Trunk and its future welfare. What the Grand Trunk needs most of all is to be relieved upon equitable terms of the embarrassment that it has incurred through the failure of the transcontinental scheme. The acquisition by the state of the G.T.R. proper presents much of the embarrassment that would obtain in the effort to acquire the Canadian Pacific, for here also, in addition to the question of equity involved, there is the problem of some 2,000 miles of railway owned in the

United States; and the fact that the Grand Trunk's principal seaport is in the U.S.

The investigation of the Canadian Northern by the commission has disclosed evidence of skill in construction and efficiency in management, considering the means and equipment available. The company even now earns a large part of its fixed charges although important parts of the system have been in operation for but a year. I think there is ample justification for confidence that the affairs of the company will improve with the return of normal conditions. I see no reason for a change of management or a reorganization, excepting as hereinafter suggested.

It may be well here to consider the relation of the Intercolonial to the other roads, and the possibility of operating it in conjunction with any of them. We have shown its relation to the Canadian Pacific. The main line of the Intercolonial is about 1,000 miles, from Montreal to Halifax. It has occupied the territory for 50 years and has become adapted to it. There are apparently no operating economies available by combining it with another system that are not available to it alone. Assuming proper regulation, there appears to be no traffic interchange that could be better assured by merger. I am informed that the Maritime Provinces consider the use of the Intercolonial as a right to which they are entitled. Moreover, the government has built the Transcontinental, a part of which was in compliance with plans of the Grand Trunk, while the rest of it is so placed that it ought to continue to be operated in conjunction with the Intercolonial. The present status of the Intercolonial and the eastern part of the Transcontinental should be continued as a government operation. The results of such operation should, however, be reported to the people of Canada in exactly the same form as is required from other railways. And these roads should be subject to the same reasonable regulation as is exercised over all other railways.

Mention might be made here of the railway that the government is building from the Saskatchewan River to Hudson Bay. The object in the construction of this road has been stated to be that of obtaining a shorter haul from the western provinces to Europe. The bulk of the traffic to follow this route must necessarily be diverted from the roads extending from Winnipeg to the east, so that the project seems to be an instance of competitive construction which cannot be justified in this case, even on the ground that it opens up new territory.

There are numerous local railway projects, within provincial limits, which at the moment seem to have little effect upon this general railway problem. Disposition of these may well await developments as to their necessity and utility when they assume operation. There is little that can be said just now as to their probable relation to the existing means of transportation.

The Great Lakes and the St. Lawrence River furnish a natural route from the western country to the east, and to the Atlantic ocean for a part of the year. Numerous steamship lines between Port Arthur and Georgian Bay or the lower lakes and St. Lawrence River ports afford adequate transportation under normal conditions, though somewhat affected by customs requirements and other factors. In view of the heavy movement of grain in the last three months of navigation, regulations governing shipping

should be as favorable as practicable, for the hauling of grain over the long distances to the eastern seaboard by an all rail route involves a problem in car supply and cost which renders such a haul unprofitable for rail lines. The success of the Canadian Pacific steamship lines has led to the suggestion by some that the other railways ought also to establish steamship lines. I do not believe that this success was primarily due to the railway ownership of the ships. Temporarily the war seems to have put a stop to plans for railway owned steamships. If, at the close of the war, it is to be tried again, it would seem advisable first to ascertain whether other ships cannot be induced to schedule sailings before railways incur the responsibility of making additional investment in ships. There are ships running in regular postal routes with subventions. Perhaps the government might well require, in connection with its subventions, that ships give equal service to the railways without discrimination among them, thus removing another cause for the employment of duplicate facilities.

In visiting the various ports, I was impressed with the facilities installed and being installed. At Halifax, particularly, important works were actively under way, necessitated, I believe, by the overseas traffic for war purposes. It is likely that the future development of steamship terminals in connection with railways will be difficult to fix until normal conditions resume. Meanwhile, the Atlantic seaports are so much involved in the emergencies of war as to place them beyond the scope of this inquiry. In any event, such works of harbor improvement and development as are the result of war measures will be there at the close of the war as a foundation for what the future may hold.

I am unable to join my colleagues in their recommendations. They propose that practically all of the railways in Canada, except the Canadian Pacific and the United States lines, shall be turned over to a corporation to be managed by a board of trustees appointed by government. They insist that this board is to be permanent and self-perpetuating. I do not know by what means one parliament can bind its successors to a given policy, especially in so simple a matter as changing the organization of a government board. My friends seek to avoid government ownership and operation, in fact condemn it as inadvisable, but propose a plan which contains so many elements of danger in the direction which is sought to be avoided that I am unable to join them. Their plan would add about a billion dollars to the direct debt of Canada. The interest on this is about \$40,000,000, adding very largely to government expenses. Judging from the experience Canada has had with its government railways, it is fair to assume that this would remain a permanent burden. Operated by private companies, this interest would ultimately be borne by the companies without recourse to the government funds, and at the same cost of service to railway patrons as would obtain under government operation.

Their plan also leaves out some of the railways. This is unfair to the investors whose property is to be subjected to government competition. It also discriminates in the method by which the respective properties are to be acquired. I cannot approve the proposed centralization of control. There are problems local to separate regions which often require prompt action and co-operation between the railways and the people served. There

is a need everywhere for that prompt and efficient service which can come only from a knowledge of local conditions and responsibility for meeting them. I cannot believe that centralization, remote responsibility and control, will ensure good service to the people of Canada. The recommendation creates a Dominion Railways Co. owned by the Dominion Government, to take over those roads. There are about 7,000 miles in the United States controlled by Canadian companies. The Canadian railways depend for no inconsiderable portion of their revenue on United States traffic. A fundamental defect of the plan, therefore, is in placing the government in the railway business, not only in Canada, but also operating railways in the United States subject to both federal and state regulation.

Through private railway management, Canada has obtained about one mile of railway for each \$30,000 of government aid of guarantees, which is but a fraction of the cost of government railway undertakings. In some instances, a large proportion of the aid was in land, the value of which was produced by the building of the railway and the settlement thereby made possible. Compared with the total outlay involved in producing railways by the government for itself, as, for instance, the case of the Intercolonial or the Transcontinental, from three to six times that amount have been used to realize equal results. This shows distinctly the value of enlisting and retaining private enterprise.

The Obvious Remedy.—Let us review the salient facts concerning each company: The Canadian Pacific is amply able to take care of itself. It can and does provide competition with the other railways. In order to be most serviceable to Canada, it should be continued, subject only to such equitable regulation as is accorded to all lines. The Grand Trunk succeeded in the east and failed in the west. The Canadian Northern succeeded in the west and was jeopardized by its eastern expansion. There is extensive duplication of lines in the west; the unsuccessful Grand Trunk Pacific lines are found among the successful Canadian Northern lines. Public policy demands the unification of these lines, for great economies could be thereby accomplished. There is extensive duplication in the east; the new Canadian Northern lines among the older lines of the Grand Trunk proper. Great economies in proposed investment and operating expenses await the joint working of these properties. There is wasteful duplication in the connecting region between North Bay and Winnipeg, where the Canadian Northern line parallels the government line. Economy awaits the joint working of these lines.

Consideration of all phases of the problem leads me to recommend the following remedies for the existing situation:—Let the Canadian Pacific alone; let the Grand Trunk operate the eastern lines now held by that company and the Canadian Northern; let the Canadian Northern operate the western lines now held by that company and the Grand Trunk Pacific system; let the government operate the connections or procure their operation by private companies; all of which should be done under arrangement that are equitable and yet look to the not distant day when the country will have survived the war and resumed its prosperous growth.

There may be several ways by which this can be brought about, but the one that has appealed to me is that which seems to be the least disturbing of values and credit and involves no untried

schemes or protracted disputes. Therefore, I beg to make the following suggestions:—Amend the regulating policy so that the Board of Railway Commissioners may have jurisdiction over all railways in the matter of maximum and minimum rates, the issuance of securities, the building of new railways, or the extension of lines, and other matters properly within the scope of governmental supervision. Create a board of trustees, consisting of two government officials and three private citizens, to act for the government in the matters hereinafter proposed.

Relieve the Grand Trunk Ry. Co. of its obligation to lease the Transcontinental, and require the company to relinquish all claims upon the Transcontinental; require it to lease to the board of trustees the Grand Trunk Pacific Ry. properties at a rental amounting to the net annual fixed charges; require it also to take under lease the Canadian Northern properties east of North Bay and Parry Sound, and pay as a rental the net fixed charges on those properties. The lease should be for 21 years. The Grand Trunk's investments, other than railway, in the west may be disposed of by the company as it may elect, and in accordance with its best interests.

Require the Canadian Northern Ry. Co. to confine its operation to the field west of Winnipeg. Relieve it of the line east of Winnipeg by leasing for 21 years to the governmental board of trustees, at a rental of the net annual fixed charges. Require it to take a lease of, and to operate for the same period the Grand Trunk Pacific Ry., and its branch lines, paying as rental the net annual fixed charges upon those properties; except that until seven years after the end of the war they shall have the immunity that was promised the Grand Trunk Pacific for a period of seven years after construction, and that they shall not be required to assume any of the extraneous investments of the Grand Trunk System in the west.

Lease the lines between North Bay and Winnipeg (except the Canadian Pacific's) for 21 years to either the Canadian Northern or the Grand Trunk (or, in event neither applies, to any other qualified company), requiring the lessee to furnish the necessary capital for new equipment, and to maintain and operate the lines on the best terms that can be made; terms that would give the best service needed at lowest cost to the government being regarded as best. Either the government or the lessee should build a connecting line of about 30 miles near Long Lake, Ont., to protect the better working of the two lines. The government and companies should have the option of terminating, after 10 years, any of the leases upon equitable terms.

The foregoing recommendations are made with a view to obtaining for Canada maximum of efficiency at a minimum outlay. The continuance of government aid, to some of the railways at least, will be necessary under any plan. The plan herein proposed seeks to reduce this to the lowest possible point and to centralize it upon those parts of the existing lines which are not self supporting, and which, in the nature of things, cannot be self supporting for years. These connecting links, "bridges," as they have been called, exist, it seems to me, as a result of that public policy which has been discussed at some length. The government may well afford to take them over and maintain them as necessary parts of the public investment in the country's development. They are not of sufficient importance to

bring about those dangers inherent in government operation of this kind on a large scale, and holding them will not endanger private enterprise. It may be necessary in working out this plan to grant some additional and temporary aid to the Canadian Northern, and it will be necessary to effect some compromise with the Grand Trunk Ry. Co. which will enable this company to continue. Aid should be extended upon the recommendation of the board of trustees, who should be charged with the duty of investigating the need of and approving the aid to be rendered by the government; they should also see that the government receives for that aid such security as will give it a reversion in case of default.

The recommendations here submitted are to be considered as a general outline of what appears to be a fair solution of the transportation problem. Enabling legislation will be required in any case, and I realize that there are many technical and legal questions which will require careful attention at expert hands. If the general plan is adopted, my thought is that the board of trustees which I have suggested be charged with the duty of acting for the government in all matters requiring new contracts, and shall protect the interest of the government in every way while leasing, operating, or financing the property under their care to the best advantage, due consideration being given to the rights of the other parties at interest.

If for any reason it should prove inexpedient to carry out the foregoing suggestions, and if the government should find it wise or necessary to possess itself of, and to hold any considerable part of the railway properties, I should recommend as an alternative plan the formation of a private company to take over other operations of those properties, either as a whole or in groups. Even where a road does not earn its fixed charges the government could profit in the long run by making the terms of an operating lease sufficiently attractive to induce private enterprise to undertake its management. The terms of the contracts would naturally depend upon the extent of the property and the prospect of earnings, but they could be so drawn as to prove attractive to private capital and at the same time relieve the government of the expense and embarrassment of government operation. Such contracts might be based upon a profit sharing plan on a fair basis, which would leave the company a hope of reward commensurate with its efforts and give the public also a share in the prosperity which they must help to create.

I should like to add one other thought. The railways of Canada are in desperate need of equipment. Whatever decision is made with reference to the railways, the transportation problem is now acute in so far as equipment is concerned. I would, therefore, recommend that the government undertake at once to provide an ample supply of freight cars and locomotives against immediate and imperative needs. These cars and locomotives may be had, if desired, under trust agreements. It will be a simple matter to turn the cars and locomotives over to the operating companies under lease, or contract of purchase which may be exercised when conditions are more nearly normal.

Concluding, I would be loath to suggest recourse to any radical changes in the domestic policy of the Dominion of Canada in this time of war and stress. Remedial measures are often more efficacious than revolutionary ones, and more

equitable. I have been impressed by the seriousness of your transportation problem, and in sincerity express my belief that the problem can be successfully and satisfactorily remedied by just and mutual recognition of difficulties and full and free co-operation between the government and the railways. Fair and broad treatment of the question will, I am convinced, bring capital and personal genius commensurate with the exigencies of the present situation, and capable of developing a happy solution. I believe that the best results hitherto have been obtained by the efficiency and economy of private initiative, energy, and capital. It is no longer assumed that the self interest of the railway investor and operator is antagonistic to the interest of the public; rather, we have all learned, governments and corporations like, that the two are inseparably linked and must stand or fall together. Upon these fundamental truths I base my firm conviction that the brightest outlook for the future of your great Dominion can be assured through the extension of private railway enterprises. The hope of honor and the reward of public approval must be open to human kind to get the best results from human endeavor.

Facing the urgency of the need, considering the part which the government has taken and the responsibility which it shares, and keenly alive to the magnitude and the importance of the tasks now placed upon the railways and the greater tasks which they will face, I see no safe alternative but that the government shall continue, with discrimination and resort to all available safeguards, and under a policy of proper regulation and co-operation of effort, to aid the necessitous railways of the Dominion until such time, which I hope and believe will not be far distant, when these will become self supporting and the problem will be solved.

President Chamberlin Questions Statements Respecting G.T.R.

E. J. Chamberlin, President G.T.R. and G.T. Pacific Ry., made the following statement May 6: "I have read the majority report of Sir Henry Drayton and W. M. Aeworth, who with A. H. Smith, President, New York Central Rd., were appointed a commission to examine the Canadian railway situation. I have not, however, seen the report of Mr. Smith dissenting from the views of the other commissioners. I am extremely surprised at some of the statements made in the report with regard to the position of the G.T.R. Co., of Canada, which, with all respect to the commissioners signing the majority report, I am compelled to say are inaccurate and misleading. So far as that company is concerned its credit at the present time is high, and its financial position not at all as stated in the report.

"During the past five years the G. T. has borrowed in New York for capital purposes over \$15,000,000, and had it not been for the war, which created abnormal conditions, further capital would have been procured and expended if prices had been satisfactory and deliveries could have been obtained. In view of statements contained in the report, and calculated to impair this credit of the company, I think it only just to the holders of G. T. securities that they should be assured of the absolute safety of their investment. At a later date a full statement with regard to the company's position will be made."

Steam Railway Statistics for Year Ended June 30, 1916.

In the following table the column headed gross earnings includes passenger and freight earnings, as well as miscellaneous earnings; the latter not being shown separately; the next four columns give the operating expenses classified under their various headings, while the last gives the net earnings, which are arrived at by deducting the totals of the four columns referred to from the figures in the gross earnings column. The minus (—) mark before figures in the net columns shows that there was a deficit in the operations of the line to the extent of the figures given. The cents have been omitted in all cases, and the figures in the totals show the aggregate earnings, etc., including the cents, omitted from the detailed items.

Name of railway	Mileage	Passenger earnings	Freight earnings	Gross earnings	Maintenance of way and structures	Maintenance of equipment	Traffic and transportation expenses, etc.	General expenses	Net earnings

(1) The Wabash Ry., while operating in Canada, does not own any railway in the country, but runs over the G.T.R. from Windsor to the Niagara River, under a lease. It does both a through and local business in Canada, the officials and agents acting jointly for the G.T.R. and Wabash Ry.

Error in Steam Railway Statistics.

In the table of steam railway statistics on the preceding page, the total mileage in Canada at June 30, 1916, is shown as 57,434.05 miles, instead of 37,434.05 miles, the latter being the correct figures.

Passenger Train Service Ordered by Board of Railway Commissioners.

The Great Northern Ry., having applied for an order relieving it from maintaining a train service from Cloverdale North to Port Kells, B.C., and thence west to the bridge over the Fraser River, as required by order 9342, Jan. 18, 1910, as amended by order 12312, Sept. 5, 1910, the case was heard at Vancouver, June 26, 1916. The Board of Railway Commissioners gave judgment April 26, 1917, as follows: That the said orders, in so far as they direct the Great Northern Ry. to establish a train service on its Vancouver, Victoria and Eastern, and New Westminster and Southern Railways from Cloverdale North to Port Kells and from Port Kells to the Fraser River bridge at New Westminster, be rescinded, and the company is granted leave to establish a new time table covering the lines: from Sumas via Abbotsford and Cloverdale to Vancouver; from Guichon via Cloverdale to New Westminster; and from Haselmere to Abbotsford, upon the condition that the permission granted is without prejudice to the company being required, should conditions justify it, to serve the district between Cloverdale and Port Kells Jet.

Grand Trunk Ry.—On the application of the Aylmer, Ont., Board of Trade, for an order directing the G.T.R. to serve the territory between Tilsonburg Jct. and St. Thomas with its Tilsonburg Subdivision trains 263 and 268. The board ordered, May 2, that the G.T.R. be directed to extend the train now running from Brantford to Tilsonburg, arriving at Tilsonburg at 6.50 p.m. through to St. Thomas, return to Tilsonburg Jct., and there connect with the train from Hamilton, as at present arranged; the train service to be shown in the new summer time table and continued for three months as a trial service.

Victoria Jubilee Bridge Tolls.—The South Shore Board of Trade at a meeting held in St. Lambert, Que., May 2, arranged to hold a public meeting at an early date to decide what action should be taken to have the tolls on Victoria Bridge abolished. A return submitted to the House of Commons, May 1, shows that a new tariff had been agreed upon April 7, as follows: Eight tickets for foot passengers for 25c, instead of 6 tickets; a 15c rate for motor cycles; a 25c rate for automobiles, and the issue of tickets at the rate of 10 for \$2, 20 for \$3, good for one month, and 50 for \$5, good for three months. For motor trucks, the rates agreed upon were 40c for those of two tons and under, 60c for those between two tons and four tons, and 90c for all over four tons.

Safety First Pictures.—The Canadian Government Railways has converted the official car, Yamachiche, into a moving picture theatre, for giving safety first demonstrations to its employees. Demonstrations have already been given at New Glasgow, Stellarton, Pictou, Sydney, North Sydney, Truro, Halifax, N.S., St. John and Moncton, N.B.

Birthdays of Transportation Men in June.

Many happy returns of the day to:

Jas. Anderson, Manager, Sandwich, Windsor & Amherstburg Ry., Windsor, Ont., born at Ayr., Ont., June 20, 1851.

F. F. Backus, General Manager, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Rochester, N.Y., June 4, 1860.

W. C. Bowles, General Freight Agent, Western Lines, C.P.R., Winnipeg, born at Montreal, June 3, 1875.

J. H. Boyle, Superintendent, Farnham, Division, Quebec District, C.P.R., Farnham, born at Waterloo, Que., June 26, 1869.

F. P. Brady, General Manager, Lines from Quebec Bridge westerly, Canadian Government Railways, Cochrane, Ont., born at Haverhill, N.H., June 22, 1853.

H. W. Brodie, General Passenger Agent, Lines West of Revelstoke, C.P.R., Vancouver, B.C., born at Fredericton, N.B., June 8, 1874.

G. W. Coburn, Resident Engineer, C.P.R., Brandon, Man., born at Upper Melbourne, Que., June 24, 1877.
